About This Bulletin

The graduate and professional Bulletins are the catalogs of programs, degree requirements and policies of the following schools of Washington University in St. Louis: Architecture & Urban Design; Art; Arts & Sciences; Business; Engineering; Law; Medicine; and Social Work & Public Health.

The University College Bulletin is the catalog of University College, the professional and continuing education division of Arts & Sciences at Washington University in St. Louis. The catalog includes programs, degree requirements, course descriptions and pertinent university policies for students earning a degree through University College.

The 2019-20 Bulletin is entirely online but may be downloaded in PDF format for printing. Individual pages may be downloaded in PDF format using the "Download This Page as a PDF" option on each page. To download the full PDF, please choose from the following:

The degree requirements and policies in the 2019-20 Bulletin apply to students entering Washington University during the 2019-20 academic year.

Every effort is made to ensure that the information, applicable policies and other materials presented in the Bulletin are accurate and correct as of the date of publication (October 25, 2019). Washington University reserves the right to make changes at any time without prior notice. Therefore, the electronic version of the Bulletin may change from time to time without notice. The governing document at any given time is the then-current version of the Bulletin, as published online.
About Washington University in St. Louis

Who We Are Today

Washington University in St. Louis — a medium-sized, independent university — is dedicated to challenging its faculty and students alike to seek new knowledge and greater understanding of an ever-changing, multicultural world. The university is counted among the world’s leaders in teaching and research, and it draws students from all 50 states, the District of Columbia, Guam, Puerto Rico and the Virgin Islands. Students and faculty come from more than 100 countries around the world.

The university offers more than 90 programs and almost 1,500 courses leading to bachelor’s, master’s and doctoral degrees in a broad spectrum of traditional and interdisciplinary fields, with additional opportunities for minor concentrations and individualized programs. For more information about the university, please visit the University Facts page of our website.

Enrollment by School

For enrollment information, please visit the University Facts page of our website.

Committed to Our Students: Mission Statement

Washington University’s mission is to discover and disseminate knowledge and to protect the freedom of inquiry through research, teaching and learning.

Washington University creates an environment that encourages and supports an ethos of wide-ranging exploration. Washington University’s faculty and staff strive to enhance the lives and livelihoods of students, the people of the greater St. Louis community, the country and the world.

Our goals are as follows:

• To welcome students, faculty and staff from all backgrounds to create an inclusive community that is welcoming, nurturing and intellectually rigorous;
• To foster excellence in our teaching, research, scholarship and service;
• To prepare students with the attitudes, skills and habits of lifelong learning and leadership, thereby enabling them to be productive members of a global society; and
• To be an institution that excels by its accomplishments in our home community, St. Louis, as well as in the nation and the world.

To this end, we intend to do the following:

• To judge ourselves by the most exacting standards;
• To attract people of great ability from diverse backgrounds;
• To encourage faculty and students to be bold, independent and creative thinkers;
• To provide an exemplary, respectful and responsive environment for living, teaching, learning and working for present and future generations; and
• To focus on meaningful, measurable results for all of our endeavors.

Trustees & Administration

Board of Trustees

Please visit the Board of Trustees website for more information.

University Administration

In 1871, Washington University co-founder and then-Chancellor William Greenleaf Eliot sought a gift from Hudson E. Bridge, charter member of the university’s Board of Directors, to endow the chancellorship. Soon it was renamed the “Hudson E. Bridge Chancellorship.”

Led by the chancellor, the officers of the university administration are detailed on the university website.

Academic Calendar

The academic calendar of Washington University in St. Louis is designed to provide an optimal amount of classroom instruction and examination within a manageable time frame, facilitating our educational mission to promote learning among both students and faculty. Individual schools, particularly our graduate and professional schools, may have varying calendars due to the nature of particular fields of study. Please refer to each school’s website for more information.

Washington University recognizes the individual student’s choice in observing religious holidays that occur during periods when classes are scheduled. Students are encouraged to arrange with their instructors to make up work missed as a result of religious observance, and instructors are asked to make every reasonable effort to accommodate such requests.

**Campus Resources**

**Student Support Services**

The **Learning Center** is located on the ground floor of Gregg House on the South 40, and it is the hub of academic support at Washington University in St. Louis. We provide undergraduate students with assistance in a variety of forms. Most services are free, and each year more than 2,000 students participate in one or more of our programs. For more information, visit the Learning Center website [here](https://learningcenter.wustl.edu) or call 314-935-5970. There are three types of services housed within the Learning Center:

- **Academic Mentoring Programs** offer academic support in partnership with the academic departments in a variety of forms. Academic mentoring programs are designed to support students in their course work by helping them develop the lifelong skill of "learning how to learn" and by stimulating their independent thinking. Programs include course-specific weekly structured study groups facilitated by highly trained peer leaders as well as course-specific weekly walk-in sessions facilitated by academic mentors in locations, at times and in formats convenient for the students. The Learning Center also offers individual consulting/coaching for academic skills such as time management, study skills, note taking, accessing resources and so on. Other services include fee-based graduate and professional school entrance preparation courses.

- **Disability Resources** supports students with disabilities by fostering and facilitating an equal access environment for the Washington University community of learners. Disability Resources partners with faculty and staff to facilitate academic and housing accommodations for students with disabilities on the Danforth Campus. Students enrolled in the School of Medicine should contact their program’s director. Please visit the Disability Resources website [here](https://students.wustl.edu/disability-resources) or contact the Learning Center at 314-935-5970 for more information.

- **TRIO: Student Support Services** is a federally funded program that provides customized services for undergraduate students who are low income, who are the first in their family to go to college, and/or who have a documented disability. Services include academic coaching, academic peer mentoring, cultural and leadership programs, summer internship assistance and post-graduation advising. First-year and transfer students are considered for selection during the summer before they enter their first semester. Eligible students are encouraged to apply when they are notified, because space in this program is limited. For more information, visit the TRIO Program website [here](https://students.wustl.edu/trio-program).

**Medical Student Support Services.** For information about Medical Student Support Services, please visit the School of Medicine website [here](https://medicine.wustl.edu). **Office for International Students and Scholars.** If a student is joining the university from a country other than the United States, this office can assist that individual through their orientation programs, issue certificates of eligibility (visa documents), and provide visa and immigration information. In addition, the office provides personal and cross-cultural counseling and arranges social, cultural and recreational activities that foster international understanding on campus.

The Office for International Students and Scholars is located on the Danforth Campus in the Danforth University Center at 6475 Forsyth Boulevard, Room 330. The office can be found on the Medical Campus in the Mid Campus Center (MCC Building) at 4590 Children’s Place, Room 2043. For more information, visit the Office for International Students and Scholars website [here](http://oiss.wustl.edu) or call 314-935-5910.

The **Office of Military and Veteran Services** is located in Umrah Hall on the Danforth Campus. This office serves as the university’s focal point for military and veteran matters, including transitioning military-connected students into higher education,
providing and connecting students with programs and services, and partnering across campus and in the community. Services include advising current and prospective students on how to navigate the university and maximize Department of Defense and Veterans Affairs (VA) educational benefits, transition support, Veteran Ally training for faculty and staff, veteran-unique programming, and connecting students to campus and community resources. Military-connected students include veterans, military service members, spouses, dependent children, caregivers, survivors and Reserve Officer Training Corp cadets. There are two university policies that apply to students who still serve in the Armed Forces and students who use VA educational benefits:

• The Policy on Military Absences, Refunds and Readmissions (https://veterans.wustl.edu/policies/policy-for-military-students) applies to students serving in the U.S. Armed Forces and their family members when military service forces them to be absent or withdraw from a course of study.
• The Policy on Protections for VA Educational Benefit Users (https://veterans.wustl.edu/policies/policy-for-va-students) applies to students using VA education benefits when payments to the institution and the individual are delayed through no fault of the student.

Please visit the Military and Veteran Services website (https://veterans.wustl.edu) or contact Military and Veteran Services at 314-935-2609 or veterans@wustl.edu for more information.

**Relationship and Sexual Violence Prevention (RSVP) Center.**
The RSVP Center offers free and confidential services including 24/7 crisis intervention, counseling services, resources, support and prevention education for all students on the Danforth Campus. The RSVP Center operates from a public health model and uses trauma-informed practices to address the prevalent issues of relationship and sexual violence. By providing support for affected students, it is our goal to foster post-traumatic growth and resilience and to help ensure academic retention and success. Our prevention efforts call for community engagement to engender an intolerance of violence and an active stance toward challenging cultural injustices that perpetuate such issues. Learn more at the RSVP Center website (https://rsvpcenter.wustl.edu).

**WashU Cares.** WashU Cares assists the university with handling situations involving the safety and well-being of Danforth Campus students. WashU Cares is committed to fostering student success and campus safety through a proactive, collaborative and systematic approach to the identification of, intervention with and support of students of concern while empowering all university community members to create a culture of caring. If there is a concern about the physical or mental well-being of a student, please visit the WashU Cares website (https://washucares.wustl.edu) to file a report.

**The Writing Center.** The Writing Center, a free service, offers writing advice to all Washington University undergraduate and graduate students. Tutors will read and discuss any kind of work in progress, including student papers, senior theses, application materials, dissertations and oral presentations. The Writing Center staff is trained to work with students at any stage of the writing process, including brainstorming, developing and clarifying an argument, organizing evidence, and improving style. Rather than editing or proofreading, tutors will emphasize the process of revision and teach students how to edit their own work.

The Writing Center is located in Olin Library on Level 1. Appointments (http://writingcenter.wustl.edu) are preferred and can be made online.

**Student Health Services, Danforth Campus**

Habif Health and Wellness Center, formerly known as Student Health Services, provides medical and mental health care for undergraduate and graduate students. Habif staff members include licensed professionals in Medical Services, Mental Health Services and Health Promotion Services. Please visit Dardick House on the South 40 or the Habif Health and Wellness Center website (http://shs.wustl.edu) for more information about Habif’s services and staff members.

**Hours:**
- Monday, Tuesday and Thursday 8 a.m.-6 p.m.
- Wednesday 10 a.m.-6 p.m.
- Friday 8 a.m.-5 p.m.
- Saturday 9 a.m.-1 p.m.

A nurse answer line and after hours mental health crisis line are available to answer any medical or mental health questions a student may have when Habif is closed. For after-hours care, please call 314-935-6666.

**Medical Services** staff members provide care for the evaluation and treatment of an illness or injury, preventive health care and health education, immunizations, nutrition counseling, physical therapy, and travel medicine and sexual health services. Habif Health and Wellness Center providers are participating members of the Washington University in St. Louis Physician’s Network. Any condition requiring specialized medical services will be referred to an appropriate specialist. Habif accepts most health insurance plans and will be able to bill the plan according to plan benefits. The student health insurance plan requires a referral for medical care any time care is not provided at Habif (except in an emergency). Call 314-935-6666 or visit the Habif website to schedule an appointment (http://shs.wustl.edu).

Appointments are also available for the assessment, treatment, and referral of students who are struggling with substance abuse.

The Habif Health and Wellness Center pharmacy is available to all Washington University students and their dependents who participate in the student health insurance plan. The pharmacy
accepts most prescription insurance plans; students should check with the pharmacist to see if their prescription plan is accepted at the pharmacy.

The Habif Health and Wellness Center lab provides full laboratory services. Approximately 20 tests can be performed in the lab. The remainder of all testing that is ordered by Habif is completed by LabCorp. LabCorp serves as Habif's reference lab, and it is a preferred provider on the student health insurance plan. This lab can perform any test ordered by Habif providers or outside providers.

All incoming students must provide proof of immunization for measles, mumps, and rubella (i.e., two vaccinations after the age of one year old; a titer may be provided in lieu of the immunizations). Proof of receiving a meningococcal vaccine is required for all incoming undergraduate students. A PPD skin test in the past six months is required for students entering the university from certain countries; this list of countries may be found on the Habif website. It is also recommended that, during the five years before beginning their studies at Washington University, all students will have received the tetanus diphtheria immunization, the hepatitis A vaccine series, the hepatitis B vaccine series, and the varicella vaccine. Medical History Forms (http://shs.wustl.edu) are available online. Failure to complete the required forms will delay a student's registration and prevent their entrance into housing assignments. Please visit the Habif website for complete information about requirements and deadlines (http://shs.wustl.edu).

Mental Health Services staff members work with students to resolve personal and interpersonal difficulties, including conflicts with or worry about friends or family, concerns about eating or drinking patterns, and feelings of anxiety and depression. Staff members help each person figure out their own situation. Services include individual, group and couples counseling; crisis counseling; psychiatric consultation; and referral for off-campus counseling. Call 314-935-6666 or visit the Habif website to schedule an appointment (http://shs.wustl.edu).

Health Promotion Services provides free programs and risk reduction information related to issues such as stress, sleep, sexual health and alcohol/other drugs. For more information, visit the Zenker Wellness Suite in Sumers Recreation Center to learn about the programs on campus led by student peer health educators. Call 314-935-7139 or send an email to wellness@wustl.edu for more information.

In 2018, this department launched the WashU Recover Group to provide an opportunity for students in recovery from substance use to connect with other students with similar experiences. The group provides local resources, support, meetings and activities. Members have 24/7 access to a private facility to study, meet and socialize. The group is not a recovery program; it is a confidential resource that students can add to their support system. For more information, send an email to recovery@wustl.edu.

Important Information About Health Insurance, Danforth Campus

Washington University has a student health fee that was designed to improve the health and wellness of the entire Washington University community. This fee supports health and wellness services and programs on campus. In addition, all full-time, degree-seeking Washington University students are automatically enrolled in the Student Health Insurance Plan upon completion of registration. Students may opt out of this coverage if they provide proof of existing comprehensive insurance coverage. Information concerning opting out of the student health insurance plan (http://shs.wustl.edu) can be found online after June 1 of each year. Habif provides billing services to many of the major insurance companies in the United States. Specific fees and co-pays apply to students using Medical Services and Mental Health Services; these fees may be billable to the students' insurance plan. More information is available on the Habif Health and Wellness Center website (http://shs.wustl.edu).

Student Health Services, Medical Campus

For information about student health services on the Medical Campus, please visit the Student Health Services page (http://bulletin.wustl.edu/medicine/resources/student-health) of the medical school Bulletin.

Campus Security

The Washington University campus is among the most attractive in the nation, and it enjoys a safe and relaxed atmosphere. Your personal safety and the security of your property while on campus is a shared responsibility. Washington University has made safety and security a priority through our commitment to a full-time professional police department, the use of closed-circuit television, card access, good lighting, shuttle services, emergency telephones, and ongoing educational safety awareness programs. The vast majority of crimes that occur on college campuses are crimes of opportunity, which can be prevented.

The best protection against crime is an informed and alert campus community. Washington University has developed several programs to help make your experience here safe and secure one. An extensive network of emergency telephones — including more than 200 "blue light" telephones — is connected directly to the University Police Department and can alert the police to your exact location. In addition to the regular shuttle service, an evening walking escort service and a mobile Campus Circulator shuttle is available on the Danforth Campus.

The Campus2Home shuttle will provide a safe ride home for those living in four designated areas off campus — Skinker-DeBaliviere, Loop South, north of The Loop and just south of the campus — from 6:00 p.m. to 4:00 a.m. seven days a week. The shuttle leaves from the Mallinckrodt Center every 30 minutes and
Nondiscrimination Statement

Washington University encourages and gives full consideration to all applicants for admission, financial aid and employment. The university does not discriminate in access to or treatment or employment in its programs and activities on the basis of race, color, age, religion, sex, sexual orientation, gender identity or expression, national origin, veteran status, disability or genetic information.

Policy on Discrimination and Harassment

Washington University is committed to having a positive learning and working environment for its students, faculty and staff. University policy prohibits discrimination on the basis of race, color, age, religion, sex, sexual orientation, gender identity or expression, national origin, veteran status, disability or genetic information. Harassment based on any of these classifications is a form of discrimination; it violates university policy and will not be tolerated. In some circumstances, such discriminatory harassment may also violate federal, state or local law. A copy of the Policy on Discrimination and Harassment (http://hr.wustl.edu/policies/Pages/DiscriminationAndHarassment.aspx) is available on the Human Resources website.

Sexual Harassment

Sexual harassment is a form of discrimination that violates university policy and will not be tolerated. It is also illegal under state and federal law. Title IX of the Education Amendments of 1972 prohibits discrimination based on sex (including sexual harassment and sexual violence) in the university's educational programs and activities. Title IX also prohibits retaliation for asserting claims of sex discrimination. The university has designated the Title IX Coordinator identified below to coordinate its compliance with and response to inquiries concerning Title IX.

For more information or to report a violation under the Policy on Discrimination and Harassment, please contact the following individuals:

Discrimination and Harassment Response Coordinator

Apryle Cotton, Assistant Vice Chancellor for Human Resources
Section 504 Coordinator
Phone: 314-362-6774
apryle.cotton@wustl.edu

Jessica Kennedy, Director of Title IX Office
Title IX Coordinator
Phone: 314-935-3118
jw kennedy@wustl.edu

You may also submit inquiries or a complaint regarding civil rights to the United States Department of Education's Office of Civil Rights at 400 Maryland Avenue, SW, Washington, DC 20202-1100; by visiting the U.S. Department of Education website (https://www.ed.gov); or by calling 800-421-3481.
Student Health

Drug and Alcohol Policy

Washington University is committed to maintaining a safe and healthy environment for members of the university community by promoting a drug-free environment as well as one free of the abuse of alcohol. Violations of the Washington University Drug and Alcohol Policy (http://hr.wustl.edu/policies/Pages/DrugandAlcoholPolicy.aspx) or Alcohol Service Policy (http://pages.wustl.edu/prograds/alcohol-service-policy) will be handled according to existing policies and procedures concerning the conduct of faculty, staff and students. This policy is adopted in accordance with the Drug-Free Workplace Act and the Drug-Free Schools and Communities Act.

Tobacco-Free Policy

Washington University is committed to providing a healthy, comfortable and productive work and learning environment for all students, faculty and staff. Research shows that tobacco use in general, including smoking and breathing secondhand smoke, constitutes a significant health hazard. The university strictly prohibits all smoking and other uses of tobacco products within all university buildings and on university property, at all times. A copy of our complete tobacco-free policy (http://hr.wustl.edu/policies/Pages/tobaccofreepolicy.aspx) is available on the Human Resources website.

Medical Examinations

Entering students must provide medical information to the Habif Health and Wellness Center. This will include rwg completion of a health history and a record of all current immunizations. The university strongly recommends appropriate vaccination for meningococcal disease.

If students fail to comply with these requirements prior to registration, they will be required to obtain vaccinations for measles, mumps and rubella at the Habif Health and Wellness Center, if there is no evidence of immunity. They will be assessed the cost of the vaccinations. Students will be unable to complete registration for classes until all health requirements have been satisfied.

If students are unimmunized, they may be barred from classes and from all university facilities, including housing units, if in the judgment of the university their continued presence would pose a health risk to themselves or to the university community.

Medical and immunization information is to be given via the Habif Health and Wellness Center (http://shs.wustl.edu) website. All students who have completed the registration process should access the website and create a student profile by using their WUSTL Key. Creating a student profile enables a student to securely access the medical history form. Students should fill out the form and follow the instructions for transmitting it to the Habif Health and Wellness Center. Student information is treated securely and confidentially.

Student Conduct

The Student Conduct Code sets forth community standards and expectations for Washington University students. These community standards and expectations are intended to foster an environment conducive to learning and inquiry. Freedom of thought and expression is essential to the university’s academic mission.

Disciplinary proceedings are meant to be informal, fair and expeditious. Charges of non-serious misconduct are generally heard by the student conduct officer. With limited exceptions, serious or repeated allegations are heard by the campuswide Student Conduct Board or the University Sexual Assault Investigation Board where applicable.

Complaints against students that include allegations of sexual assault or certain complaints that include allegations of sexual harassment in violation of the Student Conduct Code are governed by the procedures found in the University Sexual Assault Investigation Board Policy (https://wustl.edu/about/compliance-policies/governance/usasb-procedures-complaints-sexual-assault-filed-students), which is available online or in hard copy from the Title IX coordinator or the director of Student Conduct and Community Standards.

Students may be accountable to both governmental authorities and to the university for acts that constitute violations of law and the Student Conduct Code.

For a complete copy of the Student Conduct Code (https://wustl.edu/about/compliance-policies/academic-policies/university-student-judicial-code), visit the university website.

Undergraduate Student Academic Integrity Policy

Effective learning, teaching and research all depend upon the ability of members of the academic community to trust one another and to trust the integrity of work that is submitted for academic credit or conducted in the wider arena of scholarly research. Such an atmosphere of mutual trust fosters the free exchange of ideas and enables all members of the community to achieve their highest potential.

In all academic work, the ideas and contributions of others must be appropriately acknowledged, and work that is presented as original must be, in fact, original. Faculty, students and administrative staff all share the responsibility of ensuring the honesty and fairness of the intellectual environment at Washington University.

Scope and Purpose

This statement on academic integrity applies to all undergraduate students at Washington University. Graduate
students are governed by policies in each graduate school or division. All students are expected to adhere to the highest standards of behavior. The purpose of the statement is twofold:

1. To clarify the university's expectations with regard to undergraduate students' academic behavior; and
2. To provide specific examples of dishonest conduct. The examples are only illustrative, not exhaustive.

Violations of This Policy Include but Are Not Limited to the Following:

1. **Plagiarism**
   Plagiarism consists of taking someone else's ideas, words or other types of work product and presenting them as one's own. To avoid plagiarism, students are expected to be attentive to proper methods of documentation and acknowledgment. To avoid even the suspicion of plagiarism, a student must always do the following:
   - Enclose every quotation in quotation marks and acknowledge its source.
   - Cite the source of every summary, paraphrase, abstraction or adaptation of material originally prepared by another person and any factual data that is not considered common knowledge. Include the name of author, title of work, publication information and page reference.
   - Acknowledge material obtained from lectures, interviews or other oral communication by citing the source (i.e., the name of the speaker, the occasion, the place and the date).
   - Cite material from the internet as if it were from a traditionally published source. Follow the citation style or requirements of the instructor for whom the work is produced.

2. **Cheating on an Examination**
   A student must not receive or provide any unauthorized assistance on an examination. During an examination, a student may use only materials authorized by the faculty.

3. **Copying or Collaborating on Assignments Without Permission**
   When a student submits work with their name on it, this is a written statement that credit for the work belongs to that student alone. If the work was a product of collaboration, each student is expected to clearly acknowledge in writing all persons who contributed to its completion.

   Unless the instructor explicitly states otherwise, it is dishonest to collaborate with others when completing any assignment or test, performing laboratory experiments, writing and/or documenting computer programs, writing papers or reports, or completing problem sets.

   If the instructor allows group work in some circumstances but not others, it is the student's responsibility to understand the degree of acceptable collaboration for each assignment and to ask for clarification, if necessary.

   To avoid cheating or unauthorized collaboration, a student should never do any of the following:
   - Use, copy or paraphrase the results of another person's work and represent that work as one's own, regardless of the circumstances.
   - Refer to, study from or copy archival files (e.g., old tests, homework, solutions manuals, backfiles) that were not approved by the instructor.
   - Copy another's work or permit another student to copy one's work.
   - Submit work as a collaborative effort if they did not contribute a fair share of the effort.

4. **Fabrication or Falsification of Data or Records**
   It is dishonest to fabricate or falsify data in laboratory experiments, research papers or reports or in any other circumstances; to fabricate source material in a bibliography or "works cited" list; or to provide false information on a résumé or other document in connection with academic efforts. It is also dishonest to take data developed by someone else and present them as one's own.

   Examples of falsification include the following:
   - Altering information on any exam, problem set or class assignment being submitted for a re-grade.
   - Altering, omitting or inventing laboratory data to submit as one's own findings. This includes copying laboratory data from another student to present as one's own; modifying data in a write-up; and providing data to another student to submit as one's own.

5. **Other Forms of Deceit, Dishonesty or Inappropriate Conduct**
   Under no circumstances is it acceptable for a student to do any of the following:
   - Submit the same work, or essentially the same work, for more than one course without explicitly obtaining permission from all instructors. A student must disclose when a paper or project builds on work completed earlier in their academic career.
   - Request an academic benefit based on false information or deception. This includes requesting an extension of time, a better grade or a recommendation from an instructor.
   - Make any changes (including adding material or erasing material) on any test paper, problem set or class assignment being submitted for a re-grade.
   - Willfully damage the efforts or work of other students.
   - Steal, deface or damage academic facilities or materials.
• Collaborate with other students planning or engaging in any form of academic misconduct.
• Submit any academic work under someone else’s name other than one’s own. This includes but is not limited to sitting for another person's exam; both parties will be held responsible.
• Engage in any other form of academic misconduct not covered here.

This list is not intended to be exhaustive. To seek clarification, students should ask the professor or the assistant in instruction for guidance.

Reporting Misconduct

Faculty Responsibility
Faculty and instructors are strongly encouraged to report incidents of student academic misconduct to the academic integrity officer in their school or college in a timely manner so that the incident may be handled fairly and consistently across schools and departments. Assistants in instruction are expected to report instances of student misconduct to their supervising instructors. Faculty members are expected to respond to student concerns about academic dishonesty in their courses.

Student Responsibility
If a student observes others violating this policy, the student is strongly encouraged to report the misconduct to the instructor, to seek advice from the academic integrity officer of the school or college that offers the course in question, or to address the student(s) directly.

Exam Proctor Responsibility
Exam proctors are expected to report incidents of suspected student misconduct to the course instructor and/or the Disability Resource Center, if applicable.

Procedure
Jurisdiction
This policy covers all undergraduate students, regardless of their college of enrollment. Cases will be heard by school-specific committees according to the school in which the class is listed rather than the school in which the student is enrolled. All violations and sanctions will be reported to the student's college of enrollment.

Administrative Procedures
Individual undergraduate colleges and schools may design specific procedures to resolve allegations of academic misconduct by students in courses offered by that school, so long as the procedures are consistent with this policy and with the Student Conduct Code.

Student Rights and Responsibilities in a Hearing
A student accused of an academic integrity violation — whether by a professor, an assistant in instruction, an academic integrity officer or another student — is entitled to do the following:
• Review the written evidence in support of the charge
• Ask any questions
• Offer an explanation as to what occurred
• Present any material that would cast doubt on the correctness of the charge
• Receive a determination of the validity of the charge without reference to any past record of misconduct

When responding to a charge of academic misconduct, a student may do the following:
• Deny the charges and request a hearing in front of the appropriate academic integrity officer or committee
• Admit the charges and request a hearing to determine sanction(s)
• Admit the charges and accept the imposition of sanctions without a hearing
• Request a leave of absence from the university (however, the academic integrity matter must be resolved prior to re-enrollment)
• Request to withdraw permanently from the university with a transcript notation that there is an unresolved academic integrity matter pending

A student has the following responsibilities with regard to resolving the charge of academic misconduct:
• Admit or deny the charge. This will determine the course of action to be pursued.
• Provide truthful information regarding the charges. It is a Student Conduct Code violation to provide false information to the university or anyone acting on its behalf.

Sanctions
If Found Not in Violation of the Academic Integrity Policy
If the charges of academic misconduct are not proven, no record of the allegation will appear on the student's transcript.

If Found in Violation of the Academic Integrity Policy
If, after a hearing, a student is found to have acted dishonestly or if a student has admitted to the charges prior to a hearing, the school’s academic integrity officer or committee may impose sanctions, including but not limited to the following:
• Issue a formal written reprimand
• Impose educational sanctions, such as completing a workshop on plagiarism or academic ethics
• Recommend to the instructor that the student fail the assignment (a given grade is ultimately the prerogative of the instructor)
• Recommend to the instructor that the student fail the course
• Recommend to the instructor that the student receive a course grade penalty less severe than failure of the course
• Place the student on disciplinary probation for a specified period of time or until defined conditions are met. The probation will be noted on the student's transcript and internal record while it is in force.
• In cases serious enough to warrant suspension or expulsion from the university, refer the matter to the Student Conduct Board for consideration.

Additional educational sanctions may be imposed. This list is not intended to be exhaustive.

Withdrawing from the course will not prevent the academic integrity officer or hearing panel from adjudicating the case, imposing sanctions or recommending grade penalties, including a failing grade in the course.

A copy of the sanction letter will be placed in the student's academic file.

Appeals
If a student believes the academic integrity officer or the committee did not conduct a fair hearing or if a student believes the sanction imposed for misconduct is excessive, they may appeal to the Student Conduct Board within 14 days of the original decision. Appeals are governed by Section VII C of the Student Conduct Code.

Records
Administrative Record-Keeping Responsibilities
It is the responsibility of the academic integrity officer in each school to keep accurate, confidential records concerning academic integrity violations. When a student has been found to have acted dishonestly, a letter summarizing the allegation, the outcome and the sanction shall be placed in the student's official file in the office of the school or college in which the student is enrolled.

In addition, each school's academic integrity officer shall make a report of the outcome of every formal accusation of student academic misconduct to the director of Student Conduct and Community Standards, who shall maintain a record of each incident.

Multiple Offenses
When a student is formally accused of academic misconduct and a hearing is to be held by an academic integrity officer, a committee, or the Office of Student Conduct and Community Standards, the person in charge of administering the hearing shall query the Office of Student Conduct and Community Standards about the student(s) accused of misconduct. The director shall provide any information in the records concerning that student to the integrity officer. Such information will be used in determining sanctions only if the student is found to have acted dishonestly in the present case. Evidence of past misconduct may not be used to resolve the issue of whether a student has acted dishonestly in a subsequent case.

Reports to Faculty and Student Body
School and college academic integrity officers are encouraged to make periodic (at least annual) reports to the students and faculty of their school concerning accusations of academic misconduct and the outcomes, without disclosing specific information that would allow identification of the student(s) involved.

Graduate Student Academic Integrity Policies
For graduate student academic integrity policies, please refer to each individual graduate school.

Statement of Intent to Graduate
Students are required to file an Intent to Graduate at WebSTAC (https://acadinfo.wustl.edu) prior to the semester in which they intend to graduate. Additional information is available in the dean's offices of each school and in the Office of the University Registrar (http://registrar.wustl.edu).

Student Academic Records and Transcripts
The Family Educational Rights and Privacy Act of 1974 (FERPA) — Title 20 of the United States Code, Section 1232g, as amended — provides current and former students of the university with specific rights of access to and control over their student record information. In compliance with the statute, appropriate federal regulations, and guidelines recommended by the American Association of Collegiate Registrars and Admissions Officers, the university has adopted procedures that implement these rights.

A copy of the university policies regarding educational records and the release of student record information is available from the Office of the University Registrar (http://registrar.wustl.edu) and the university website (https://wustl.edu).

Transcript requests for Danforth Campus students may be submitted to the Office of the University Registrar through WebSTAC. The School of Medicine registrar (http://
registrar.med.wustl.edu/services/transcripts-and-certification) accepts requests for transcripts and certification records for students and alumni of Audiology and Communication Sciences, Biomedical Informatics, Biostatistics, Clinical Investigation, Genetic Epidemiology, Health Administration, Health Behavior Research, Nurse Anesthesia, Occupational Therapy, Pediatric Nurse Practitioner, Physical Therapy, Population Health Sciences, Psychiatric Epidemiology, the School of Dentistry and the School of Medicine. Instructions and additional information are available on the University Registrar website (http://registrar.wustl.edu).

University Affiliations

Washington University is accredited by the Higher Learning Commission (https://www.hlcommission.org) (800-621-7440). Washington University is a member of the American Academy of Arts & Sciences, American Association of University Women (AAUW), American Council of Learned Societies (ACLS), American Council on Education (ACE), Association of American Colleges & Universities (AACU), Association of American Universities (AAU), College Board, Council for Higher Education Accreditation (CHEA), Hispanic Association of Colleges & Universities (HACU), Independent Colleges and Universities of Missouri (ICUM), National Association of Independent Colleges and Universities (NAICU), National Council for State Authorization Reciprocity Agreements (NC-SARA), Oak Ridge Associated Universities (ORAU), and the University Research Association (URA).

The College of Arts & Sciences is a member of the American Association of Collegiate Registrars and Admissions Officers (AACRAO), International Center for Academic Integrity (ICAI), National Association of Fellowship Advisors (NAFA), National Association of Advisors for Health Professions (NAAHP), and the Midwest Associate of Pre-Law Advisors (MAPLA).

The College of Architecture was one of the eight founding members of the Association of Collegiate Schools of Architecture (ACSA) in 1912.

The Graduate School is a founding member of both the Association of Graduate Schools and the Council of Graduate Schools.

The Graduate School of Architecture & Urban Design's Master of Architecture degree is accredited by the National Architectural Accreditation Board (NAAB), and its Master of Landscape Architecture degree is accredited by the Landscape Architecture Accrediting Board (LLAB).

The Sam Fox School of Design & Visual Arts is a founding member of and accredited by the National Association of Schools of Art and Design (NASAD).

The Olin Business School is a charter member (1921) of the Association to Advance Collegiate Schools of Business International (AACSB).

In McKelvey School of Engineering, many of the professional degrees are accredited by the Engineering Accreditation Commission of ABET (http://abet.org).

University College is a member of the University Professional and Continuing Education Association, the North American Association of Summer Sessions, the Association of University Summer Sessions, and the Center for Academic Integrity. Business-related programs in University College are not accredited by the Association to Advance Collegiate Schools of Business (AACSB International).

The School of Law is accredited by the American Bar Association. The School of Law is a member of the Association of American Law Schools, the American Society of Comparative Law, the Clinical Legal Education Association, the Southeastern Association of Law Schools, the Central Law Schools Association, the Mid-America Law Library Consortium, the American Association of Law Libraries, and the American Society of International Law.

The School of Medicine is a member of the Liaison Committee on Medical Education.

The Brown School at Washington University is accredited by the Council on Social Work Education and the Council on Education for Public Health.

The University Libraries are a member of the Association of Research Libraries.

The Mildred Lane Kemper Art Museum is nationally accredited by the American Alliance of Museums.
The Graduate School confers all Master of Arts (AM) and Doctor of Philosophy (PhD) degrees at Washington University. Every AM program and 31 PhD programs are housed in Arts & Sciences departments. In addition, the Graduate School cooperates with the schools of Business, Engineering, Medicine, and Social Work and the Goldfarb School of Nursing on the administration of 30 PhD programs housed in those schools.

**Governance**

The Graduate Council serves as the legislative branch of the Graduate School. The Council consists of one faculty representative and one graduate student representative from each degree-granting program; it is chaired by the dean of the Graduate School and the vice provost for graduate education. Much of the work of the Council occurs in committees, on which students serve alongside faculty members. This model of shared governance — equal representation and equal responsibility for faculty and graduate students — is believed to be unique among U.S. universities.

**Doctoral Degrees**

The PhD is not only an exploration of the body of knowledge of a given discipline; it is also an original contribution to that discipline. To the extent that doctoral education has been successful, the student's relationship to learning is significantly changed. Having made a discovery, developed an insight, tested a theory, or designed an application, the PhD recipient is no longer a student but rather a colleague of the faculty. It is for this reason that the PhD is the highest degree offered by a university.

The core mission of PhD programs at research universities is to educate the future faculty of other research universities and institutions of higher education. Graduates of Washington University participate in research and teaching; they also make valuable contributions to society by applying the analytical and creative skills required for scholarship to careers in the business, government and nonprofit sectors. The Graduate School therefore works with other university offices to ensure that students have the opportunity to develop these transferable skills.

Among the critical components the university provides for these purposes are a small and select graduate student body, faculty members dedicated to scholarly work, and the physical facilities needed for research. In these regards, Washington University compares favorably to the finest graduate institutions in the world. However, the key ingredients of PhD completion must be provided by the student: a love of learning and a desire to increase the sum of human knowledge. In addition, motivation and perseverance are prerequisites for success in PhD programs.

**Academic Information**

**General Requirements**

To earn a PhD at Washington University, a student must complete all courses required by their department; maintain satisfactory academic progress; pass certain examinations; fulfill residence and mentored experience requirements; write, defend, and submit a dissertation; and file an Intent to Graduate form on WebSTAC (https://acadinfo.wustl.edu).

**Enrollment and Registration**

Students newly admitted to the Graduate School receive information on creating a WUSTL Key from the university registrar. The WUSTL Key is used to register for courses online via WebSTAC during open registration periods. All registrations require online approval by the student's faculty adviser and are monitored by the Graduate School.

**Regular Enrollment**

Students admitted to a PhD program in the Graduate School must maintain full-time continuous enrollment throughout the approved length of their programs. Most of our PhD programs will be completed within five or six years. During those years, students will be considered full-time if they have one of the following statuses:

- They are registered for 9 or more course units; or
- They are registered in a zero-unit course (LGS 9000 Full-time Graduate Research/Study or LGS 9001 Full-time Graduate Study in Absentia) that indicates the student's full-time engagement in research or academic writing.

LGS 9000 is based on the recommendation from the advisor stating the student is making satisfactory progress toward the degree.

During a student's period of regular registration, they may have a need or opportunity to study away from Washington University. Recommendations from departments for students' registration in absentia will be considered by the Graduate School on a case-by-case basis. If approved by the Graduate School, the student will be registered for LGS 9001 Full-time Graduate Study in
Absentia. Students may be allowed to register for LGS 9001 for up to four consecutive or nonconsecutive fall/spring semesters. Semesters in which a student is registered in absentia are counted as part of the student's program length.

Fully funded, full-time PhD students registered within their program length and making satisfactory academic progress will receive full funding; tuition remission; and the 90 percent health insurance, dental insurance and wellness fee subsidies. Tuition each semester will be calculated based on the number of registered course units.

**Enrollment Extension**

Students may be permitted to register for one additional year beyond their program length. When recommended by their department and approved by the Graduate School, these students will be registered in a zero-unit course LGS 9002 (Full-time Graduate Study Extension) that confers full-time enrollment status. Students registered for LGS 9002 will not receive Graduate School stipend support, but they are eligible to receive other benefits available to full-time PhD students in the Graduate School, including health insurance and wellness fee subsidies.

Students may be registered for LGS 9002 for a maximum of two semesters. There will be no exceptions to this limit. Students who do not complete their programs within this time limit must either withdraw from the program or be designated as Degree Candidacy Extended.

**Degree Candidacy Extended**

Upon the recommendation of their departments and the approval of the Graduate School, students who do not complete their PhD degrees after the one-year enrollment extension may remain doctoral candidates for up to five years. Departmental recommendations and Graduate School approval are required for each year of extended degree candidacy. Extended degree candidates are not registered for any courses, have no enrollment status, and receive none of the benefits available to registered Washington University students, including student loan deferment.

**Part-Time Students**

PhD candidates are not admitted as part-time students. Part-time status will be calculated strictly on the basis of registration in fewer than 9 course units without LGS 9000 registration and will be permitted only in extraordinary circumstances.

**Courses and Tuition Remission**

The Graduate School will approve tuition remission for up to 72 course units. The 72-unit calculation includes courses transferred from other graduate programs.

Students pursuing a certificate or an unrelated master's degree in addition to their PhD must consult the departments and advisers about credit sharing between the programs. Tuition remission for units in excess of 72 will not be provided by the Graduate School.

To be eligible for tuition remission, courses must be offered at the graduate level, taken for a grade, and approved in advance by the student's adviser and program as necessary for the student's degree. Depending on the program, graduate-level courses begin with courses numbered in the 400s or 500s. Audited courses and courses taken pass/fail are not eligible for tuition remission. Students should consult their advisers regarding course selection.

When certain conditions apply, graduate students may be permitted to register for Arts & Sciences courses numbered below 400, but they may not ordinarily be covered by tuition remission unless approved by the dean of the Graduate School or their designee. Full-time students in the Graduate School who wish to take graduate courses in University College or Summer School must obtain the approval of both their academic adviser and the dean of the Graduate School. Tuition remission may be available for such approved courses.

**Grades**

Credit-conferring grades for students in the Graduate School are these: A, outstanding; B, good; C, conditional (an A, B or C grade may be modified by a plus or minus); S, satisfactory; and U, unsatisfactory (used almost exclusively for credit hours earned by doing research). Other grades are F, failing; N, not submitted yet; X, final examination missed; and I, incomplete. The mark of I becomes a permanent part of the student's record after the lapse of one calendar year unless the program in which the mark was assigned requests an extension of time.

The Graduate School uses a 4-point scale for calculating grade point averages, with $A = 4$, $B = 3$, and $C = 2$. A plus adds 0.3 to the value of a grade, whereas a minus subtracts 0.3 from the value of the grade.

Zero-unit LGS 9000-level courses will have only the satisfactory/unsatisfactory grade option. A successful grade (S) will be assigned to these courses when a student is approved for subsequent registration or completes the degree or when the Graduate School dean approves a special grade report submitted by the student's adviser.

**Retaking a Course**

Graduate students may be allowed to retake a course once with prior permission from their department or program. The department can refuse the student's request. If permission to retake a course is granted, both registrations will show on the transcript. The grade for the first enrollment will always be replaced by the symbol R. Whether or not it is lower than or equal to the original grade, the grade for the second enrollment will be used to calculate the grade-point average. The grade for the first enrollment will not be replaced with an R until the second enrollment is completed and its grade has posted. A
student who retakes a course without prior permission might not receive permission retroactively. No student may use the retake option to replace a grade received as a sanction for violation of the Academic Integrity Policy. The R option may be invoked only once per course, and the original grade option must be retained.

**Transfer Credit**

Credit for previous courses will be transferred to a student's Washington University record only to fulfill departmental course/credit requirements. Departments may request transfer credit from official transcripts after a student's admission to a PhD program.

**Satisfactory Academic Progress**

Satisfactory academic progress for students in PhD programs is monitored by the Graduate School as well as by the degree program. Failure to maintain satisfactory academic progress may result in immediate dismissal or in placement on academic probation for the ensuing year. Most financial awards — and all federally funded awards — are contingent on the maintenance of satisfactory academic progress. Moreover, satisfactory academic progress is a prerequisite for service on any committee authorized by the Graduate School. The following are minimal standards of satisfactory academic progress for PhD students; degree programs may set stricter standards but must not relax these.

1. Students are expected to proceed at a pace appropriate to enable them to finish within the time limits discussed below. Students are expected to have completed all PhD requirements except for the dissertation by no later than the end of the fourth year of full-time graduate study.
2. Students are expected to maintain a cumulative grade-point average of at least 3.0 on a 4.0 scale. Note that plus and minus marks alter the numerical value of a letter grade.
3. Students are expected not to carry at one time any more than 9 credit hours for which the grades of I (incomplete), X (final examination missed), or N (not yet submitted) are recorded. The Graduate School may deny a student with more than 9 unfinished credits permission to register.
4. After four years of full-time graduate study, doctoral students who cannot identify three faculty members who are willing to serve on their Research Advisory Committee are not considered to be making satisfactory academic progress. The Title, Scope and Procedure form must be filed before the fifth year in order to identify the membership of the student's Research Advisory Committee.
5. Students may take five or six years to complete the PhD, depending on the program. A one-year extension is available if circumstances warrant. Extensions are obtained by application by the student to the degree program, endorsement by the degree program to the Graduate School, and approval by the Graduate School.

**Qualifying Examinations**

Progress toward the PhD is contingent upon the student passing examinations that are variously called preliminary, qualifying, general, comprehensive or major field exams. The qualifying process varies according to the program. In some programs, it consists of a series of incremental, sequential and cumulative exams over a considerable time. In others, the exams are held during a relatively short period of time. Exams may be replaced by one or more papers. The program, which determines the structure and schedule of the required examinations, is responsible for notifying the Graduate School of the student's outcome, whether successful or unsuccessful.

**Residence Requirement**

Each student must spend at least one academic year enrolled full-time at Washington University. Any exceptions must be approved by the dean of the Graduate School.

**Mentored Experience Requirement**

Doctoral students at Washington University must complete a department-defined Mentored Experience. The Mentored Experience Requirement is a doctoral degree milestone that is notated on the student transcript when complete. Each department has an established Mentored Experience Implementation Plan in which the number of semesters that a student must engage in a Mentored Teaching Experience or a Mentored Professional Experience is defined. The Mentored Experience Implementation Plans outline how doctoral students within the discipline will be mentored to achieve competencies in teaching at basic and advanced levels. Some departments may elect to include the Mentored Professional Experiences as an avenue for completing one or more semesters of the Mentored Experience Requirement. Doctoral students will enroll in LGS 600 (Mentored Teaching Experience) or LGS 603 (Mentored Professional Experience) to signify their progression toward completing the overall Mentored Experience Requirement for the degree.

**The Dissertation**

As evidence of the mastery of a specific field of knowledge and of the capacity for original scholarly work, each candidate must complete a dissertation. The subject must be approved by a Research Advisory Committee that consists of at least three tenured or tenure-track faculty members. This committee is ordinarily led by the student's major adviser and must be approved by the Graduate School.

A Title, Scope and Procedure form for the dissertation must be signed by the committee members and by the program chair. It must be submitted to the Graduate School at least six months before the degree is expected to be conferred or before
beginning the fifth year of full-time enrollment, whichever is earlier.

A Doctoral Dissertation Guide and a Template (http://graduateschool.wustl.edu/guides-0), which give instructions regarding the format of the dissertation, are available on the Graduate School's website; both should be read carefully at every stage of thesis preparation.

The Graduate School requires each student to make the full text of the dissertation available to the committee members for their review at least one week before the defense. Most degree programs require two or more weeks for the review period; students should check with their faculty.

**Dissertation Defense**

Approval of the written dissertation by the Research Advisory Committee is necessary before the student can orally defend the dissertation. The committee that examines the student consists of at least five members, who normally meet two independent criteria:

1. Four of the five must be tenured or tenure-track Washington University faculty; one of these four may be a member of the emeritus faculty. The fifth member must have a doctoral degree and an active research program, whether at Washington University, at another university, in government or in industry.
2. Three of the five normally come from the student’s degree program; at least one of the five must not.

All committees must be approved by the dean of the Graduate School or by their designee, regardless of whether they meet the normal criteria.

The committee is appointed by the dean of the Graduate School upon the request of the degree program. The student is responsible for making the full text of the dissertation accessible to their committee members for their review in advance of the defense. Faculty and graduate students who are interested in the subject of the dissertation are normally welcome to attend all or part of the defense but may ask questions only at the discretion of the committee members. Though there is some variation among degree programs, the defense ordinarily focuses on the dissertation itself and its relation to the student’s field of expertise.

**Dissertation Submission**

After the defense, the student must submit an electronic copy of the dissertation online to the Graduate School. The submission website requires students to choose among publishing and copyrighting services offered by ProQuest's ETD Administrator, but the university permits students to make whichever choices they prefer. Students are asked to submit the Survey of Earned Doctorates separately. The degree program is responsible for delivering the final approval form, signed by the committee members at the defense and then by the program chair or director, to the Graduate School. Students who defend their dissertations successfully have not completed their PhD requirements; they finish earning the degree only when their dissertation submission has been accepted by the Graduate School.

**Graduation Information**

Students are responsible for filing an Intent to Graduate form in order to have each earned degree conferred. The Intent to Graduate is available online through WebSTAC (https://acadinfo.wustl.edu). Deadlines for filing an Intent to Graduate are listed on the Graduate School’s website. No degree will be awarded if this form has not been filed. Students who do not complete their degree requirements by their intended graduation date must refile for the next graduation date.

**Specific Circumstances**

**Changes in Program of Study**

Students are usually admitted to the Graduate School to study toward specific degrees. Therefore, a change in the degree objective (e.g., from AM to PhD) is subject to the approval of both the student’s program and the Graduate School. A request for a change in the subject of study (e.g., from economics to history) requires the approval of both programs concerned as well as that of the Graduate School. Students may be required to fill out a new application for admission before making such changes, but they will not be charged a second application fee.

**Student Grievance Procedures**

From time to time, students may feel that they have legitimate complaints regarding academic matters or an interaction with a faculty member. It is important that students and faculty have a common understanding of how such complaints may be expressed and resolved. Students with complaints regarding academic matters should initially seek resolution from their faculty adviser, then from their director of graduate studies, and finally from the chair of their degree program. Complaints that remain unresolved may be addressed to any of the deans in a student’s school. The final court of appeal for all students in the Graduate School is the dean of the Graduate School.

All complaints regarding academic and professional integrity should be addressed to an associate dean of the Graduate School.

Washington University policies state that members of the university community can expect to be free from discrimination and harassment. Students, faculty, staff and outside organizations working on campus are required to abide by specific policies prohibiting harassment.

An allegation of discrimination or harassment may be appealed to the vice chancellor for Human Resources, who will determine whether to convene the Title IX Grievance Committee to hear the case. Visit the Discrimination and Harassment page (http://
Leaves of Absence

Students may request and be approved for a leave of absence during their regular registration period if they are not registered in absentia. Leaves of absence must be endorsed by the degree program and approved by the Graduate School for up to one year. Extensions must be reapproved.

Approved leaves of absence are not counted as part of a student's program length and will not be approved for semesters beyond the program length, including enrollment extension. While on leave of absence, students are not registered and have no student status at Washington University. Students who begin a leave during any semester will be dropped from all course registration for that semester and will receive no course credit for work completed during that semester prior to the leave.

Leaves of absence may be personal or medical. In the case of a medical leave, the student must present authorization from Habif Health and Wellness Center at the beginning and again at the end of the leave. At the end of any leave of absence, a student is reinstated into the Graduate School under the conditions prevailing at the time the leave was granted. Being on leave suspends student status and financial support from the university. Taking a leave therefore may adversely affect loan deferment, visa status, the right to rent university-owned housing, and so on. Most visa types would prevent international students from remaining in the United States while taking a leave of absence; such students should consult the Office for International Students and Scholars (http://oiss.wustl.edu) as well as their faculty adviser, their program's director of graduate studies, and perhaps a dean.

Prior to taking a leave of absence, students should consider their need for health insurance coverage. The continuation of student health insurance and access to the Habif Health and Wellness Center depends on such factors as the kind of leave (medical or personal), the length of time the student has already been covered during the current insurance year, and the student's location during the leave. Students should consult the Habif Health and Wellness Center website (http://shs.wustl.edu/Pages/default.aspx) for current policies related to leaves of absence; these policies may change annually if insurance carriers change.

Withdrawals

Students wishing to withdraw from their programs must give notice in writing by filling out the Graduate School's Withdrawal form (https://graduateschool.wustl.edu/sites/graduateschool.wustl.edu/files/Withdrawal.pdf). This form must include the date when the withdrawal should be considered effective. Without such information, there may be serious financial repercussions for the student and/or the university.

Dismissals

A program may wish to dismiss a student for a number of reasons, including willful misrepresentation to gain admission to graduate study, breaches of academic integrity, academic failure, or behavior destructive of the welfare of the academic community. Dismissals are recommended by the degree program and are not final until approved by the Graduate School. Any student who believes their dismissal was undeserved may appeal to the dean of the Graduate School, who may accept or decline the program's recommendation to dismiss the student.

Interdisciplinarity

Interdisciplinary Courses

PhD students can discuss with their advisers individual courses available outside their school that may advance their research or professional goals. A university tuition agreement signed by all of the deans of the university’s graduate and professional schools fosters interdisciplinary study across the schools and allows enrollment in classes outside the student’s home school. Many undergraduate and graduate courses are available for graduate student enrollment, subject to the following eligibility guidelines:

- Students must be enrolled full-time in graduate degree programs and have the approval of their faculty adviser or administrative officer to take a course outside their home school.
- Courses will be open to students outside the discipline only if the students have met the required prerequisites and have the approval both of their department and the course instructor.
- Finally, courses in the evening divisions, including University College and its Summer School, are not part of this agreement. Courses that require individualized instruction and/or additional fees (e.g., independent studies, individual music lessons) are also excluded.

Joint and Dual Degree Programs

The university has set up numerous programs that permit students to earn two graduate and/or professional degrees at the same time. One of these programs includes a PhD:

- Medical Scientist Training Program (MD/PhD in various disciplines)

The Graduate School uses the term joint degree to refer to programs in which one or more credit hours are counted toward both degrees. The Graduate School uses the term dual degree to refer to programs in which no credit hours are counted toward both degrees. Interested students must apply to and be admitted by each degree program separately, but ideally all applications should be made before beginning graduate or professional study. Joint and dual degrees are ordinarily
conferred simultaneously, after all of the requirements for both
degrees have been met.

Students wishing to pursue joint or dual degrees other than
these may be permitted to do so, but such requests are
considered on a case-by-case basis.

Admission to an individualized joint degree program between
two Graduate School disciplines on the Danforth Campus must
be recommended by the directors of graduate studies for both
disciplines and approved by the dean of the Graduate School.
Admission to an individualized joint degree program involving
another school of the university must be recommended by the
directors of graduate studies for both disciplines and approved
by the deans of both schools. Recommendations should address
a variety of academic and administrative concerns, including the
timeline for the completion of both degrees and the responsibility
for funding the student and remitting the tuition. Students should
not undertake study toward an individualized joint degree
program until it has been fully approved.

**Graduate Certificates**

The certificates offered to full-time students in the Graduate
School are all interdisciplinary in nature:

- American Culture Studies (p. 26)
- Data Science in the Humanities (p. 53)
- Early Modern Studies (p. 48)
- Film and Media Studies (p. 96)
- Language Instruction (p. 139)
- Latin American Studies (p. 108)
- Quantitative Data Analysis (p. 132)
- Translation Studies (p. 48)
- Urban Studies (p. 148)
- Women, Gender, and Sexuality Studies (p. 150)

Graduate certificates are open to students in PhD programs at
Washington University, and they require 15 to 18 credit hours.
Interested students must fill out an application for admission
to a certificate program (https://graduateschool.wustl.edu/
sites/graduateschool.wustl.edu/files/Application%20Certificate
%20Program_2016.pdf) and receive the approval of their degree
program's chair, the certificate program's director, and the dean
of the Graduate School. The application form is posted on the
Graduate School's website. Tuition remission may be available
for the credit hours required to complete a certificate program if
the student's total units do not exceed 72. Earning a certificate
does not increase a student's expected time to degree or amount
of Graduate School support. No student will be admitted to,
given tuition remission for, or awarded more than one graduate
certificate.

**Financial Information**

The amounts and vehicles of financial support for graduate
students are usually decided by individual schools. Washington
University is committed to funding most PhD students for four
to six years, depending on the time needed to complete their
particular program. Funding typically consists of full tuition
remission and 11 to 12 months of a stipend to defray living
expenses. Monetary support may come from the university
or from outside sources, and it may be administered by an
individual faculty member or by the staff of the program or the
school.

**Financial Support**

**Tuition Scholarships**

Scholarships to cover part or all the costs of tuition are available
to both new and continuing students. Since the perception
of academic merit is the sole criterion for the award of tuition
scholarships, such scholarships are not subject to taxation under
federal tax law at this time.

**Research Assistantships**

Except in unusual cases, research assistantships are available
only to doctoral students who have completed at least one full
year of graduate study. These positions are generally (but not
exclusively) found in the natural and social sciences, and they
are offered through departments, committee-run programs and
research centers. Research assistantships allow participation
in collaborative enterprises of research and in the discipline's
community of scholars.

**Traineeships**

Many degree programs, especially in the biological and
behavioral sciences, fund students by means of traineeships.
These positions may be awarded on an annual basis, or they
may be renewable for periods of up to three years, subject
to satisfactory academic progress. Traineeships frequently
emphasize research; however, in the applied social sciences,
they may combine theory, research and clinical experience in the
field.

**Fellowships**

Fellowships, which provide a living stipend, may be awarded
to a student by the Graduate School, the student's degree
program or the student's adviser. In addition, a student may
apply for and win certain fellowships that are awarded directly
to the student. These require administration by the Graduate
School, which also administers two unique university-wide
fellowships: the Chancellor's Graduate Fellowships (http://
pages.wustl.edu/cgfp) and the Spencer T. and Ann W. Olin
Fellowships (http://pages.wustl.edu/olinfellowship). These
awards provide year-round funding for the student's defined
program length. Prospective students must apply for these
fellowships at the time of their application for admission, not after they have enrolled at Washington University as graduate students.

**Loans**

Federally underwritten loans are another centrally administered resource for students who are U.S. citizens or permanent residents. Unsubsidized Stafford loans can be arranged for graduate students. Applicants for these loans are required to submit the Free Application for Federal Student Aid (FAFSA). The Graduate School determines eligibility and processes loan applications for all PhD students at Washington University. For more information about applying for loans, please visit the Graduate School’s Financial Support webpage.

**Financial Costs**

**Tuition Charges and Refunds**

The maximum tuition fee is the equivalent of 9 semester hours. Students who enroll for 9 or more hours per semester are automatically regarded as full-time students and are charged a flat full-time rate. Students enrolled for fewer than 9 units are charged on a per-unit basis. The tuition rate is subject to annual change.

Requests for refund of tuition paid by a student who is withdrawing from a degree program should be made by submitting a Withdrawal Form to the Graduate School office. Requests for refund of tuition paid by a student who is withdrawing from a specific course should be submitted in writing to the Graduate School registrar. The last date of class attendance is ordinarily used in determining the amount that can be refunded. Students withdrawing within the first two weeks of classes will receive a full refund; those withdrawing before the end of the fourth week pay 20 percent; those withdrawing before the end of the eighth week pay 40 percent. There is no refund after the eighth week of the semester except for reasons of health. Such reasons must be certified or verified by Habif Health and Wellness Center, in which case the university will make a prorated refund of tuition if notice of withdrawal is received before the end of the 12th week of the semester. Students who have had their full tuition remitted for them by their school or by a third party will not receive any refund.

**Health Fees**

All full-time students on the Danforth Campus are charged a mandatory health fee that gives them access to Habif Health and Wellness Center. In addition, they must either enroll in the student health insurance plan or present proof of comparable coverage. Both the health fee and the health insurance premium are subject to annual change. The Graduate School subsidizes both costs for most full-time fully supported students.

There is also a health fee for full-time students in degree programs based on the Medical Campus, and it includes coverage equivalent to a health insurance plan. Details can be found on the Student & Occupational Health Services website.

**Master's Degrees**

There are different ways to earn a master's degree at Washington University:

- Students who have not previously earned a master's degree in the same field as their PhD may earn the Master of Arts (AM) on the way to their PhD. This option is available in some disciplines but not in all of them.

- Students who have not previously earned a master's degree in the same field as their PhD may be awarded an AM for work done in a PhD program that they are leaving without completing. This option is available in some disciplines but not in all of them.

- There are a number of Arts & Sciences disciplines that admit students to pursue a terminal master's degree. Half of these are daytime programs for full-time students; these are described by their departments in other sections (p. 25) of this Bulletin. The other half of these terminal master's programs are designed primarily for part-time students and offer their classes in the evening; these are described by University College (p. 155) in its section of this Bulletin.

- Undergraduate students in Arts & Sciences at Washington University may apply for the accelerated AB/AM program, in which graduation with a Bachelor of Arts (AB) is followed by one year of graduate study leading to the AM. This option is described in the Accelerated AB/AM (p. 21) section of this Bulletin.

**Academic Information**

**General Requirements for Master of Arts Degrees**

The minimum requirement of the Master of Arts degree (AM) is 30 credits. If the AM is awarded in a program of study in which Washington University awards a PhD with an identical disciplinary title, the minimum requirement is 36 credits.

Any master's degree program can require a master's thesis, make the thesis optional, or decline to offer a thesis. No more than 6 credits toward the AM can be awarded for master's thesis research. A master's thesis must be defended before a committee of no fewer than three faculty members. A master's degree without a thesis must include an examination that tests competence in the field of study. Degree programs are free to include additional requirements. Master's students must also
maintain satisfactory academic progress and fulfill residence requirements.

Registration
Students newly admitted to the Graduate School receive information about creating a WUSTL Key from the university registrar. The WUSTL Key is an account that is used to register for courses online via WebSTAC during open registration periods. All registrations require online approval by the student's faculty adviser and are monitored by the Graduate School.

Credit Hours
Full-time students register for 9 to 12 hours per semester. Master's students who have completed their courses and need additional time to complete other degree requirements will be registered for LGS 9000 Full-time Graduate Research/Study.

Courses
To count toward a master's degree, courses must be offered at the graduate level, taken for a grade, and approved in advance by the student's adviser and program as eligible to count toward the student's degree. Depending on the program, graduate-level courses begin with courses numbered in the 400s or 500s. Audited courses and courses taken pass/fail (or credit/no credit) cannot be counted toward the degree. Students should consult their advisers regarding these options.

Grades
Credit-conferring grades for students in the Graduate School are as follows: A, outstanding; B, good; C, conditional (an A, B or C grade may be modified by a plus or minus); S, satisfactory; and U, unsatisfactory (this is used almost exclusively for credit hours earned by doing research). Other grades are F, failing; N, not submitted yet; X, final examination missed; and I, incomplete. The mark of I becomes a permanent part of the student's record after the lapse of one calendar year unless the program in which the mark was assigned requests an extension of time.

The Graduate School uses a 4-point scale for calculating grade point averages, with A = 4, B = 3, and C = 2. A plus adds 0.3 to the value of a grade, whereas a minus subtracts 0.3 from the value of a grade.

Retaking a Course
Graduate students may be allowed to retake a course once with prior permission from their department or program. The department can refuse the student's request. If permission to retake a course is granted, both registrations will show on the transcript. The grade for the first enrollment will always be replaced by the symbol R. Whether or not it is lower than or equal to the original grade, the grade for the second enrollment will be used to calculate the grade-point average. The grade for the first enrollment will not be replaced with an R until the second enrollment is completed and its grade has posted. A student who retakes a course without prior permission might not receive permission retroactively. No student may use the retake option to replace a grade received as a sanction for violation of the Academic Integrity Policy. The R option may be invoked only once per course, and the original grade option must be retained.

Transferred Credits
A maximum of 6 credit hours may ordinarily be transferred from an institution of recognized graduate standing toward the fulfillment of requirements for the master's degree from Washington University, except that a maximum of 15 credit hours may be transferred toward the fulfillment of the requirements for the degree Master of Arts in Education (MAEd) from institutions that have entered into special cooperative agreements with Washington University for this purpose.

Applications to transfer credits for a master's degree are not ordinarily approved until one full semester of study (12 credit hours) has been completed at Washington University. Academic credits applied to complete requirements for the bachelor's degree are ordinarily not transferable toward the fulfillment of advanced degree requirements at Washington University. Likewise, academic credits counted toward requirements for any completed graduate degree are ordinarily not transferable toward a subsequent degree of equivalent or lower level.

Satisfactory Academic Progress
Satisfactory academic progress is monitored by the Graduate School as well as the degree program. Failure to maintain satisfactory academic progress may result in immediate dismissal or in placement on academic probation for the ensuing year. Most financial awards and all federally funded awards are contingent on the maintenance of satisfactory academic progress. Moreover, satisfactory academic progress is a prerequisite for service on any committee authorized by the Graduate School. The following are minimal standards of satisfactory academic progress for master's students; degree programs may set stricter standards but must not relax these.

1. Students are expected to proceed at a pace appropriate to enable them to finish within the time limits customary in their degree program. At most, students enrolled in master's degree programs have four calendar years, dated from their first registration in a graduate degree program at Washington University, to complete degree requirements.

2. Students are expected to maintain a cumulative grade point average of at least 3.0 on a 4.0 scale in courses that count toward their credit hours. Thus, among courses of equal weight, each grade of C must be balanced by at least one A. (Note that plus and minus marks alter the numerical value of a letter grade.)

3. Students are expected not to carry at one time any more than 9 credit hours for which the grades of I (incomplete), X (final examination missed), or N (not yet submitted) are recorded. The Graduate School may deny a student with more than 9 unfinished credits permission to register.
Residence Requirement

The residence requirement for master's degree students is that each student must spend at least one academic year registered for full-time credits (9 to 12 credits in the fall followed by 9 to 12 credits in the spring) at Washington University. Any exceptions to this requirement must be approved by the dean of the Graduate School. All daytime programs prefer that students remain full-time and in residence throughout their work toward the degree.

Thesis

The thesis topic is subject to approval by the student's faculty adviser and by the chair of the degree program. As soon as the thesis topic has been approved (but no later than six months before the thesis defense is likely to occur), students should submit the Title, Scope and Procedure form (http://graduateschool.wustl.edu/forms) to the Graduate School. It must be signed by the three-member committee before whom the student will defend the thesis as well as by the chair of the degree program. At least three members of the thesis committee must be Washington University faculty; at least two of them must be appointed in the student's degree program; and at least two of them (not necessarily the same two) must be tenured or tenure-track, including the committee chair or co-chair. Exceptions must be approved by the dean of the Graduate School or their designee.

A Master's Thesis Guide and a Template (http://graduateschool.wustl.edu/guides-0) that provide instructions regarding the format of the thesis are available on the Graduate School’s website; both should be read carefully at every stage of thesis preparation.

The Graduate School requires each student to make the full text of the thesis available to the committee members for their review at least one week before the defense. Most degree programs require two or more weeks for the review period; students should check with their faculty.

After the defense, the student must submit an electronic copy of the thesis online to the Graduate School. The degree program is responsible for delivering the Master's Approval form, signed by the committee members at the defense and then by the program chair, to the Graduate School. Students who defend their theses successfully have not completed their master's requirements; they finish earning the degree only when their thesis submission has been accepted by the Graduate School.

Graduation Information

Students are responsible for filing an Intent to Graduate form in order to have their earned degree conferred. The Intent to Graduate form is available online through WebSTAC (https://acadinfo.wustl.edu). Deadlines for filing an Intent to Graduate are listed on the Graduate School’s website. No degree will be awarded if this form has not been filed. Students who do not complete their degree requirements by their intended graduation date must refile for the next graduation date.

Specific Circumstances

Changes in Program of Study

Students are usually admitted to the Graduate School to study toward specific degrees. Therefore, a change in the degree objective (e.g., from AM to PhD) is subject to the approval of both the student's program and the Graduate School. A request for a change in the subject of study (e.g., from economics to history) requires the approval of both programs concerned as well as that of the Graduate School. Students may be required to fill out a new application for admission before making such changes, but they will not be charged a second application fee.

Student Grievance Procedures

From time to time, students may feel that they have legitimate complaints regarding academic matters or an interaction with a faculty member. It is important that students and faculty have a common understanding of how such complaints may be expressed and resolved. Students with complaints regarding academic matters should initially seek resolution from their faculty adviser, then from their director of graduate studies, and finally from the chair of their degree program. Complaints that remain unresolved may be addressed to any of the deans in a student's school. The final court of appeal for all students in the Graduate School is the dean of the Graduate School.

All complaints regarding academic and professional integrity should be addressed to an associate dean of the Graduate School.

Washington University policies state that members of the university community can expect to be free from discrimination and harassment. Students, faculty, staff and outside organizations working on campus are required to abide by specific policies prohibiting harassment.

An allegation of discrimination or harassment may be appealed to the vice chancellor for Human Resources, who will determine whether to convene the Title IX Grievance Committee to hear the case. Visit the Discrimination and Harassment page (http://hr.wustl.edu/policies/pages/sexualharassment.aspx) for more information.

Leaves of Absence

Students who wish to suspend their graduate study should apply for a leave of absence. A student's application for a leave of absence must be endorsed by the degree program and then approved by the Graduate School.

Such a leave may be personal or medical. In the case of a medical leave, the student must present authorization from Habif Health and Wellness Center at both the beginning and end of the leave. At the end of a leave of absence, a student is reinstated into the Graduate School under the conditions prevailing at the
time the leave was granted. Being on leave suspends full-time student status and financial support from the university. Taking a leave therefore may adversely affect loan deferment, visa status, the right to rent university-owned housing, and so on. Most visa types would prevent international students from remaining in the United States while taking a leave of absence; such students should consult the Habif Health and Wellness Center depends on such factors as the kind of leave (medical or personal), the length of time the student has already been covered during the current insurance year, and the student’s location during the leave. Students should consult the Habif Health and Wellness Center (http://oisss.wustl.edu) as well as their faculty adviser, their program’s director of graduate studies, and perhaps a dean.

Prior to taking a leave of absence, students should consider their need for health insurance coverage. The continuation of student health insurance and access to Habif Health and Wellness Center depends on such factors as the kind of leave (medical or personal), the length of time the student has already been covered during the current insurance year, and the student’s location during the leave. Students should consult the Habif Health and Wellness Center (http://shs.wustl.edu) website for current policies with regard to leaves of absence; these policies may change annually if insurance carriers change.

Withdrawals

Students wishing to withdraw from their programs must give notice in writing by filling out the Graduate School’s Withdrawal form (https://graduateschool.wustl.edu/sites/graduateschool.wustl.edu/files/Withdrawal.pdf). This form must include the date when the withdrawal should be considered effective. Without such information, there may be serious financial repercussions for the student and/or the university.

Dismissals

A program may wish to dismiss a student for a number of reasons, including willful misrepresentation to gain admission to graduate study, breaches of academic integrity, academic failure, or behavior destructive of the welfare of the academic community. Dismissals are recommended by the degree program and are not final until approved by the Graduate School. Any student who believes their dismissal was undeserved may appeal to the dean of the Graduate School, who may accept or decline the program’s recommendation to dismiss the student.

Interdisciplinarity

Joint and Dual Degree Programs

The university has set up numerous programs that permit students to earn two graduate and/or professional degrees at the same time. Five of these programs include an AM degree:

- Joint Master of Social Work / Master of Arts in Jewish Studies
- Joint Master of Social Work / Master of Arts in Education
- Joint Master of Business Administration / Master of Arts in East Asian Studies
- Joint Juris Doctoris / Master of Arts in East Asian Studies
- Master’s Program for Medical Students (MD/AM in Biology & Biomedical Sciences)

The Graduate School uses the term “joint degree” to refer to programs in which one or more credit hours are counted toward both degrees. The Graduate School uses the term “dual degree” to refer to programs in which no credit hours are counted toward both degrees. Interested students must apply to and be admitted by each degree program separately, but ideally all applications should be made before beginning graduate or professional study. Joint and dual degrees are ordinarily conferred simultaneously, after all requirements for both degrees have been met. For details of the programs listed above, students should consult the websites of the two disciplines.

Accelerated AB/AM Program

This program allows qualified Washington University undergraduates to complete a Master of Arts (AM) degree in a one-year accelerated program after completing a Bachelor of Arts (AB) degree. The undergraduate and graduate degrees are awarded sequentially, with admission to the master’s degree program, if approved, occurring during the fall semester following the completion of the undergraduate degree during the preceding December, May or August. The application deadline is August 1; applications may be submitted at any time during the senior year up to the deadline. The GRE is not required. The program is available only to students currently in their senior year and only for continuous enrollment the next year. There is no option for deferred admissions.

To complete an AM in one year, students may apply five courses taken at the 400 level or above as an undergraduate (with a maximum of 16 units) toward master’s degree programs that require 36 or more units for completion. For master’s programs that require fewer than 36 units, three courses at the 400 level or above (with a maximum of 12 units) may be applied. Master’s programs that require more than 36 units may require an additional semester or summer of enrollment. Undergraduate courses must be acceptable to the department or program offering the master’s degree and must be completed with a final grade of B or higher. All admissions are provisional until the successful completion of the AB. Some departments may not participate in this program, and some departments that do not otherwise offer a master’s degree may provide this opportunity to Washington University undergraduates. Please consult the home department and the Information for Accelerated AB/AM Applicants (PDF) (http://graduateschool.wustl.edu/sites/graduateschool.wustl.edu/files/Acelerated%20AB%20AM %20Program.pdf) for more detailed information.

The actual awarding of each degree is contingent on the successful completion of all requirements for that degree. The application for admission must be made to the department, which forwards the application and the department’s recommendation for admission to the Graduate School. There
is no application fee. Students accepted into the program will retain their student ID numbers and will not need to replace their ID cards. In every other respect, they will be treated as new students in the Graduate School and should familiarize themselves with the relevant sections of this Bulletin.

Financial Information

Master's degree programs vary considerably in the extent to which they are eligible for financial support from the Graduate School or degree program. Typical awards for day students include scholarships for part or all of their tuition charges. Part-time employment and student loans are possible sources of support.

Financial Support

Tuition Scholarships

Scholarships to cover part or all the costs of tuition are available to both new and continuing students. Since the perception of academic merit is the sole criterion for the award of tuition scholarships, such scholarships are not subject to taxation under federal tax law at this time.

Loans

Federally underwritten loans are another resource for students who are U.S. citizens or permanent residents. Unsubsidized Stafford loans can be arranged for graduate students. Applicants for these loans are required to submit the Free Application for Federal Student Aid (FAFSA). The Graduate School determines eligibility and processes loan applications for all full-time master's students in daytime programs. For more information about applying for loans, please visit the Graduate School's Financial Support (https://graduateschool.wustl.edu/funding-support) webpage.

Financial Costs

Tuition Charges and Refunds

The maximum tuition fee is the equivalent of 9 semester hours. Students who enroll for 9 or more hours per semester are automatically regarded as full-time students and are charged a flat full-time rate. Students enrolled for fewer than 9 units are charged on a per-unit basis. The tuition rate is subject to annual change.

Requests for refund of tuition paid by a student who is withdrawing before the end of the fourth week pay 20 percent; those withdrawing before the end of the eighth week pay 40 percent. There is no refund after the eighth week of the semester except for reasons of health. Such reasons must be certified or verified by Habif Health and Wellness Center, in which case the university will make a prorated refund of tuition if notice of withdrawal is received before the end of the 12th week of the semester. Students who have had their full tuition remitted for them by their school or by a third party will not receive any refund.

Health Fees

All full-time students in Arts & Sciences are charged a mandatory health fee that gives them access to Habif Health and Wellness Center. In addition, they must either enroll in the student health insurance plan or present proof of comparable coverage. Both the health fee and the health insurance premium are subject to annual change.

American Culture Studies

The Graduate Certificate in American Culture Studies (AMCS) enables doctoral students to develop multidisciplinary expertise and encourages them to bring that added competence to bear in dissertation research that, while satisfying the demands of their principal disciplines, is broad-based and informed by studies from across the humanities and the social sciences.

AMCS brings together a community of graduate students and faculty with overlapping interests in American topics. Through formal and informal intellectual exchange, they share knowledge, methods and ideas across the boundaries that define the traditional academic disciplines. This intellectual community promotes the give-and-take of ideas, making graduate study more stimulating and graduate research more original and creative.

Students who satisfy certificate requirements will receive the Graduate Certificate in American Culture Studies along with the award of the PhD. This is one of several interdisciplinary certificates offered by the Graduate School. The certificate helps its holders to build academic careers — including careers that involve interdisciplinary teaching — and to develop distinctive research profiles.
Faculty

The American Culture Studies program is enriched by its diverse community of faculty, lecturers, students and staff. Please visit our AMCS Directory webpage (https://amcs.wustl.edu/people/88) for a description and list of our teaching and affiliated faculty and other important members of our community.

Degree Requirements

Graduate Certificate in American Culture Studies

The Graduate Certificate in American Culture Studies is awarded to students who complete the PhD in a department of the Graduate School and who satisfy the following requirements:

- Complete fifteen (15) credits of course work, structured as follows and in consultation/cooperation with the student and their home department:
  - The core seminar (3 credits), Introduction to American Culture Studies (AMCS 645).
  - Two multidisciplinary courses (6 credits) on American topics (400 level or above) designed in explicitly multidisciplinary terms. Courses that satisfy this requirement will be determined in consultation with the graduate director.
  - Two extradepartmental courses (6 credits) on American topics (400 level or above) based in fields that complement course work in the home department, to be determined in consultation with the graduate director.
  - Routine consultation with an AMCS faculty adviser outside of the home department, in addition to consultation with the student's principal PhD adviser. This faculty member is often the program's director of graduate studies.
  - Completion of a PhD dissertation in the home department, with the AMCS faculty adviser serving as one of the "outside" readers on the oral defense committee and the dissertation defense committee.
  - Maintenance of good standing within the AMCS program through regular participation in program functions and events.
    - Americanist Forums. Attendance at the monthly Monday (3-5 p.m.) colloquium series is mandatory, with exceptions related to residency, leaves, fieldwork and dissertation research.

For more information about program activities and requirements, please visit our Graduate Studies (https://amcs.wustl.edu/phd-certificate) webpage.

Anthropology

The graduate program in Anthropology at Washington University is a PhD program designed to educate and develop scholars and researchers who study the human condition through time and across cultures. Our graduates apply these skills to academics, business, government, and nongovernmental jobs and careers. Although candidates may receive an AM degree during the course of their study, the department does not admit students seeking a terminal master's degree. The anthropology department has a strong tradition of graduate student satisfaction and close mentoring by faculty advisers. In addition, graduates of the Washington University Anthropology PhD program have a solid history of placement in highly desirable academic and nonacademic positions.

The department has a strong three-field approach, with active programs in Archaeology, Sociocultural Anthropology, and Biological Anthropology. Program strengths in Archaeology include the origins of agriculture and pastoralism, paleoethnobotany, zooarchaeology, geoarchaeology, landscape archaeology, and environmental archaeology. Sociocultural Anthropology foci include politics, pluralism and religion, indigenous political movements, the politics of gender and sexuality, fertility and population, global health and the environment, and medical anthropology. Program strengths in Biological Anthropology include human and primate evolution, the ecology and conservation of modern primates, human physiology, biological variation in living human populations, quantitative studies of morphology and genetics, and human life history.

PhD, University of Chicago

Degree Requirements

Universal Departmental Requirements

The following is an abbreviated list of requirements for the PhD in Anthropology. Each subdiscipline also has its own additional guidelines and requirements. A more complete description of the requirements (including additional subdisciplinary requirements) can be found on the Department of Anthropology website (https://anthropology.wustl.edu). All students in the PhD program are expected to satisfy the academic performance requirements of the Graduate School, which can be found in the General Requirements (p. 15) section of this Bulletin. Similarly, all subdisciplinary requirements are in addition to those set out here for the department as a whole.

Degree Length and Course Units

Students are expected to complete the degree in six years. All students must earn a minimum of 60 units of graduate-level course work credit for the PhD, but they must not exceed 72 units of credit. A typical semester course load for the first year of study is 12 units (i.e., four 3-credit courses per semester). The semester course load for the second and third years is typically 9 units. Graduate students must take a minimum of 9 units of credit to be considered full-time by the Graduate School. Most students will meet the 60-unit requirement by the end of the third year, but they must still maintain full-time status throughout the PhD program.

Master’s Degree

Students are expected to receive their Master of Arts (MA) degree by the end of their second year or fourth semester of full-time study. The requirements for the MA in Anthropology are as follows:

1. Theory Requirement. All students are required to take Anthro 472 Social Theory and Anthropology during their first year. Under special circumstances, this requirement may be delayed or waived by petitioning the departmental faculty. This request should be initiated through the student’s advisor.

2. Two Subdisciplinary Course Requirements. Graduate students earning a PhD in Anthropology are expected to have familiarity across the subdisciplines of anthropology. To this end, all students must complete at least one course
taught by a faculty member of the anthropology department in each of the two subdisciplines other than their own; Anthropology 472 may satisfy the sociocultural requirement. Courses taken in other subdisciplines should strengthen one’s understanding of the subfield, complement one’s own research, and, ideally, enhance one’s ability to teach across subfields. Students with good cause to substitute prior extensive course work in the subdiscipline — especially in the context of a master’s degree from another university — for one or both of the other subdisciplinary requirements may petition the relevant subdisciplinary faculty to do so.

3. **Courses With Six Faculty.** All graduate students are required to have had courses with at least six different departmental faculty members. Team-taught courses may count for both faculty members.

4. **Credit Hours.** The anthropology department requires 36 credit hours for the award of an MA degree without thesis.

5. **Petition for the Award of the Master’s Degree.** Once a student has completed all requirements for the MA degree, the student and their adviser submit a petition to the chair; the chair circulates the petition to the entire faculty and forwards it to the graduate school. This petition should include documentation of the satisfactory completion of all of the Graduate School requirements (including cumulative credits, thesis [if applicable], and grade-point average), of the other requirements in this list, and of any special requirements set by the student’s subdiscipline.

---

**Doctoral Candidacy**

Although the department only accepts students who wish to pursue the PhD, students are not officially admitted to candidacy for the PhD immediately upon entry into the program. Admittance to candidacy for the PhD program requires the successful completion of the requirements of the MA degree as well as the of requirements listed below. Continuation for the PhD requires that the student be advanced to doctoral candidacy. Proposal defenses and admission to doctoral candidacy are expected by the end of the third year.

1. **Course Units.** Students must have completed 48 units before filing the petition to advance to candidacy.

2. **Forming the Doctoral Research Advisory Committee.** Students are encouraged to work with a variety of faculty while shaping their dissertation proposal. Prior to scheduling the dissertation proposal defense during the third year, students should formally assemble a Doctoral Research Advisory Committee (i.e., a Doctoral Committee) in consultation with their adviser. This committee must consist of a minimum of three full-time tenured or tenure-track members of the anthropology faculty, who must approve the dissertation proposal defense and also sign — along with the department chair — the Notice of Title, Scope, and Procedure of Dissertation. This committee typically forms the basis of the Dissertation Defense Committee.

3. **Student-Specific Requirements for Doctoral Candidacy.** Prior to admission to candidacy, students may be asked by their committees to fulfill additional requirements that are directly relevant to their doctoral dissertation research. These may include a foreign language or specialized training outside of the anthropology department in areas such as statistics, computer programming or laboratory techniques. Students will be formally notified by their adviser of such additional requirements.

4. **Defense of the Doctoral Proposal.** All students must defend a doctoral proposal prior to admission to PhD candidacy. PhD proposal defenses should be carried out by December 15 of the student's third year, and they must be carried out no later than the end of the third year. Proposals must be defended before a faculty committee consisting of a minimum of three full-time tenured or tenure-track members of the anthropology faculty (see "Forming the Doctoral Research Advisory Committee" above).

5. **Petition for Admission to Doctoral Candidacy.** Once a student’s doctoral proposal has been successfully defended and once all other requirements set by the graduate school, the anthropology department, the subdiscipline, and the student’s committee have been met, the student and adviser should submit a petition to the chair for advancement to candidacy; the chair will then inform the entire faculty and forward the petition to the Graduate School.

---

**Mentored Teaching Experience**

As part of the training and professionalization of graduate students in Anthropology, the department requires all students to participate in a minimum of five Mentored Teaching Experiences (MTEs). All students participating in the MTEs are required to attend the teaching orientation offered by the Washington University Teaching Center during the summer after the first year of graduate study. First-year students will not participate in an MTE, but they subsequently will complete at least five MTEs during years two through six. All teaching for the MTEs must be done in the anthropology department, and students will register under LGS 600 during the semesters in which they complete MTEs.

---

**The Doctoral Dissertation**

In addition to the general guidelines below, specific details about timelines for each subdiscipline can be found on the Department of Anthropology website (https://anthropology.wustl.edu).

In all cases, the dissertation must constitute an integrated, coherent work, with parts that are logically connected. It must have a written introductory chapter that sets forth the general theme and core questions of the dissertation research and that explains the relationship among the constituent chapters or parts. The introduction will typically include, as is appropriate to the discipline, a review of the literature relevant to the dissertation; an explanation of theories, methods and/or
procedures utilized by the author; and a summary discussion of the contribution of the dissertation project to knowledge in the field. In its final deposited form, the dissertation must constitute an archivable product that meets the standards prescribed by the university.

The dissertation may consist (in whole or in part) of co-authored chapters and articles, but the candidate must be a major contributor to the research and writing of any such papers and must describe their ideas, individual efforts, and contributions to the larger work. In order to be in compliance with the university’s policy on plagiarism and academic integrity, a dissertation that incorporates co-authored work must also include in its introduction an explanation of the role of the candidate in the research and in the writing of the co-authored work.

Whether this dissertation format is appropriate for a given dissertation in the Department of Anthropology (within a subdiscipline that accepts such a dissertation) must be determined a priori by the student and their doctoral committee. Should it be deemed appropriate, the dissertation must have an introductory chapter that provides the themes and core questions of the dissertation research and that explains the relationships between the constituent chapters and parts; it must also have a concluding chapter that brings together the information and ideas expressed in the thesis, relates them to the introduction, and shows how they constitute a coherent whole.

If a dissertation includes previously published materials (authored or co-authored), the candidate must provide a full referencing of when and where individual papers have been published. Because prior publication and multiple authorship have implications with respect to copyright, PhD candidates should discuss copyright with advisers and obtain copyright clearance from any co-authors well in advance of defending the dissertation. Written permission must be obtained in order to include articles copyrighted by others within the dissertation.

It is the responsibility of the student and the student’s dissertation committee to ensure that the dissertation meets all requirements regarding authorship, academic integrity, and copyright, as here outlined.

**The Dissertation Defense**

Prior to submitting the final dissertation to the Graduate School, the student must successfully defend their dissertation in an oral examination before a committee approved by the Graduate School.

In addition to the general guidelines below, specific details about timelines and procedures for each subdiscipline can be found on the Department of Anthropology website (https://anthropology.wustl.edu).

**Committee approval.** The examining committee consists of at least five members, who normally meet two independent criteria:

- Four of the five must be tenured or tenure-track Washington University faculty; one of these four may be a member of the emeritus faculty. The fifth member must have a doctoral degree and an active research program, whether at Washington University, at another university, in government or in industry.
- Three of the five must come from the student's degree program (Anthropology); at least one of the five must not.

All committees must be approved by the Dean of the Graduate School or by their designee.

**Procedure.** Attendance by a minimum of four members of the Dissertation Defense Committee, including the committee chair and an outside member, is required for the defense to take place. This provision is designed to permit the defense to proceed in case of a situation that unexpectedly prevents one of the five members from attending. Students should not plan in advance to have only four members in attendance; if one of those four cannot attend, the defense must be rescheduled. Note that the absence of all outside members or of the committee chair would necessitate rescheduling the defense.

**Submission of the Dissertation**

Students who defend their dissertations successfully have not completed their PhD requirements; they finish earning the degree only when their dissertation submission has been accepted by the Graduate School. The exact dates for the deadline to submit the dissertation to the Graduate School are set yearly.

**Specific Subdiscipline Requirements**

Please visit the following websites for more information regarding specific subfield requirements:

- Archaeology (https://anthropology.wustl.edu/graduate-program-archaeology)
- Biological Anthropology (https://anthropology.wustl.edu/graduate-program-biological-anthropology)
- Sociocultural Anthropology (https://anthropology.wustl.edu/graduate-program-sociocultural-anthropology)

**Art History and Archaeology**

The Department of Art History and Archaeology offers the degrees of **Master of Arts (AM) and Doctor of Philosophy (PhD).** Particular areas of strength include ancient art, European art of the Renaissance and early modern periods, Asian art, and modern and contemporary art of Europe and the Americas. The size of our graduate program ensures that our students receive an exceptional level of advising and mentoring. Every student has a faculty adviser; the research of PhD students is supervised by a Research Advisory Committee, a core group of three members of the faculty. PhD students gain teaching
experience within the department or in other programs (as a mentored teaching experience or as instructors of record) as part of their professional preparation.

Our faculty prepares students to acquire skills in empirical and theoretical methods in art history; museum, archival and site research; visual and textual analysis; and descriptive and analytic writing. Students also take advantage of curatorial or research internships at the university’s Kemper Art Museum, the Saint Louis Art Museum and other local institutions, as well as art museums outside the region. The department supports students’ professional development and research projects through funded field trips to major art centers and financial subvention of travel for research and presentation of conference papers. Such education and support prepares our students for a variety of professional opportunities at the highest level.

Students with a PhD from the department go on to teaching or administrative appointments in colleges and universities; positions as curators, registrars and educators in art museums; and jobs with auction houses, arts publications and art appraisers. Students with the AM degree from the department have pursued doctoral studies at Washington University or in other PhD programs, and they have also taken a variety of positions in arts journalism, art libraries, art advising, secondary school teaching and commercial art galleries.

PhD, Princeton University
Guest Scholars, Pulitzer Foundation

Tamara Schenkenberg
Curator
PhD, University of Wisconsin–Madison

Cara Starke
Director
MA, Williams College

Degree Requirements

Applicants for admission to the graduate program are normally expected to have completed 18 hours of undergraduate study in art history. However, the department welcomes applications from students with less background in art history who show strong preparation in such fields as classics, history, philosophy, literature, anthropology and Asian studies.

Master of Arts in Art History and Archaeology

Requirements for the AM degree

Requirements for this program normally involve 12 courses over four semesters, including the required graduate seminar, Methods in Art History, as well as a capstone course in the fourth semester in which the candidate revises two seminar papers for presentation to the faculty as Qualifying Papers. In addition, students must pass a reading proficiency exam in a modern foreign language (or exempt this requirement through graded courses in the language). Students in ancient art and Asian art may have additional language requirements. Students continuing for the PhD are strongly advised to demonstrate reading proficiency in a second modern foreign language before the start of their fifth semester in the graduate program.

PhD in Art History and Archaeology

Requirements for the PhD degree

Students completing their AM degree at Washington University and continuing as PhD students will have two more semesters of course work, normally in the form of three seminars plus Comprehensive Exam Preparation (two courses) and Dissertation Prospectus (one course). To be admitted to PhD candidacy, a student must also demonstrate reading proficiency in a second modern foreign language, pass the Comprehensive Exam, and successfully defend the Dissertation Prospectus. Students in ancient art and Asian art may have additional language requirements.

Thus, by the end of the sixth semester of graduate study at Washington University, students will normally have achieved the following:
• Completed all required courses;
• Demonstrated reading proficiency in no fewer than two modern foreign languages;
• Passed the Comprehensive Exam in the major area;
• Passed the Comprehensive Exam in the minor area (or have exempted this requirement through related course work);
• Determined a three-person Research Advisory Committee for the dissertation; and
• Successfully defended the Dissertation Prospectus.

Students admitted to the PhD program who have an approved master's degree from another university will normally take courses at Washington University for four more semesters, including the Comprehensive Exam Preparation courses and the Dissertation Prospectus course. Thus, these students will normally complete course work and the other requirements for PhD candidacy listed above by the end of the fourth semester of graduate study at Washington University.

Biology & Biomedical Sciences

The Division of Biology & Biomedical Sciences at Washington University offers exceptional doctoral education at one of the nation's preeminent biomedical research centers. The Division includes 11 doctoral programs:

- Biochemistry, Biophysics and Structural Biology
- Computational and Systems Biology
- Developmental, Regenerative and Stem Cell Biology
- Evolution, Ecology and Population Biology
- Human and Statistical Genetics
- Immunology
- Molecular Cell Biology
- Molecular Genetics and Genomics
- Molecular Microbiology and Microbial Pathogenesis
- Neurosciences
- Plant and Microbial Biosciences

A collaborative, interdisciplinary approach to research and education is a hallmark of Washington University and the Division. As a universitywide consortium, the Division transcends departmental lines and removes traditional boundaries of scientific fields. Faculty and graduate students regularly cross disciplines, devising novel questions and approaches that might otherwise go unexplored. The Division currently consists of 670 graduate students and more than 500 faculty members from 37 departments.

Washington University in St. Louis provides unique opportunities for translating basic science to practical application. In addition, the Division's associations with internationally prominent local institutions provide exciting opportunities: students in the biomedical sciences enrich their work with the clinical perspective of our outstanding medical school; students in plant, population, evolutionary and ecological sciences benefit from our close affiliation with the internationally renowned Missouri Botanical Garden (http://www.missouribotanicalgarden.org) and the Danforth Plant Science Center (http://www.danforthcenter.org/default.asp).

To help prepare graduates for a career in academia, government, industry or another field of their choice, educational opportunities are offered for skills development and career exploration. Through our Career Talks program, professionals from a variety of fields (e.g., biotech start-ups, patent law) provide presentations and Q&A sessions to students throughout the year. In addition, through partnerships with groups such as the Teaching Center, the BALSA Group, and ProSPER, students have additional opportunities to develop experiences relevant to future career goals.

Programs and Faculty

Biochemistry, Biophysics and Structural Biology (http://dbbs.wustl.edu/divprograms/biophysics/Pages/BBSB.aspx)

Areas of study: DNA repair, replication and recombination, allostery and enzymology, molecular signaling, cell cycle regulation, biochemistry of host-pathogen interactions, mechanisms of microbial immune invasion, mechanisms of neural degeneration, nucleic acid-protein interactions, nanotechnology and chemical biology, cellular transport and trafficking, computational biophysics.

Visit our website for information about our Biochemistry, Biophysics and Structural Biology faculty (http://dbbs.wustl.edu/divprograms/biophysics/Pages/Faculty.aspx).

Computational and Systems Biology (http://dbbs.wustl.edu/divprograms/compbio/Pages/default.aspx)

Areas of study: systems biology, genomics, sequence analysis, regulatory networks, synthetic biology, metagenomics, metabolomics, proteomics, epigenomics, transcriptomics, lipidomics, single cell dynamics, high-throughput technology development, applied math and mathematical models of biological processes, computational biology, comparative genomics, personalized medicine, genome engineering, machine learning, big data science, next generation sequencing and its applications, bioinformatics.
Visit our website for information about our Computational and Systems Biology faculty (http://dbbs.wustl.edu/divprograms/compbio/Pages/Faculty.aspx).

Developmental, Regenerative and Stem Cell Biology (http://dbbs.wustl.edu/divprograms/devbio/Pages/default.aspx)

Areas of study: development, stem cell biology, regenerative biology, cell biology, genetics, cell signaling, the biology of cancer, epigenetics, circadian rhythms, systems biology.

Visit our website for information about our Developmental, Regenerative and Stem Cell Biology faculty (http://dbbs.wustl.edu/divprograms/devbio/Pages/Faculty.aspx).

Evolution, Ecology and Population Biology (http://dbbs.wustl.edu/divprograms/eepb/Pages/default.aspx)

Areas of study: population ecology, community ecology, plant and animal evolution, microbial evolution, evolution of behavior, phylogenetics, systematics, theoretical and experimental population genetics.

Visit our website for information about our Evolution, Ecology and Population Biology faculty (http://dbbs.wustl.edu/divprograms/eepb/Pages/Faculty.aspx).

Human and Statistical Genetics (http://dbbs.wustl.edu/divprograms/hsg/Pages/default.aspx)

Areas of study: human genetics, statistical genetics, functional genomics, molecular genetics, Mendelian disease, complex disease, human disease models, systems biology.

Visit our website for information about our Human and Statistical Genetics faculty (http://dbbs.wustl.edu/divprograms/hsg/Pages/Faculty.aspx).

Immunology (http://dbbs.wustl.edu/divprograms/immunology/Pages/default.aspx)

Areas of study: cellular immunology, molecular immunology, lineage development, autoimmunity, cancer immunotherapy, transcription factors, epigenomics, immunity (mucosal, innate, bacterial, viral and parasite), immune evasion, antigen processing and presentation, dendritic cells, T-cell signaling, antigen receptor diversification.

Visit our website for information about our Immunology faculty (http://dbbs.wustl.edu/divprograms/immunology/Pages/Faculty.aspx).

Molecular Cell Biology (http://dbbs.wustl.edu/divprograms/cellbio/Pages/default.aspx)

Areas of study: cell adhesion, protein trafficking and organelle biogenesis, cell cycle, receptors, signal transduction, gene expression, metabolism, cytoskeleton and motility, membrane excitability, molecular basis of diseases.

Visit our website for information about our Molecular Cell Biology faculty (http://dbbs.wustl.edu/divprograms/cellbio/Pages/Faculty.aspx).

Molecular Genetics and Genomics (http://dbbs.wustl.edu/divprograms/genetics/Pages/default.aspx)

Areas of study: genetics, genetic basis of disease, genomics, epigenetics, genetic engineering, genome editing, model organism genetics, development, cell biology, molecular biology, complex traits, bioinformatics, systems biology.

Visit our website for information about our Molecular Genetics and Genomics faculty (http://dbbs.wustl.edu/divprograms/genetics/Pages/Faculty.aspx).

Molecular Microbiology and Microbial Pathogenesis (http://dbbs.wustl.edu/divprograms/micro/Pages/default.aspx)

Areas of study: host-pathogen interactions, cellular microbiology, molecular microbiology, microbial pathogenesis, pathogen discovery, emerging infectious diseases, microbial physiology and biochemistry, comparative genomics, gene expression and regulation, microbiome and host interactions, virology, bacteriology, mycology, parasitology.

Visit our website for information about our Molecular Microbiology and Microbial Pathogenesis faculty (http://dbbs.wustl.edu/divprograms/micro/Pages/Faculty.aspx).

Neurosciences (http://dbbs.wustl.edu/divprograms/neo/Pages/default.aspx)

Areas of study: neurobiology, neurology, functional imaging, behavior, cognition, computational neuroscience, electrophysiology, sensory systems, motor systems, neuroglia, neuronal development, learning, memory, language, synaptic plasticity, mind, consciousness, neurodegeneration, diseases of the nervous system, neuronal injury, clinical neuroscience, motor control, biological rhythms, connectivity mapping.

Visit our website for information about our Neurosciences faculty (http://dbbs.wustl.edu/divprograms/neo/Pages/Faculty.aspx).
Plant and Microbial Biosciences
(http://dbbs.wustl.edu/divprograms/PlantMicroBioSci/Pages/default.aspx)

Areas of study: cell biology, development, physiology, signaling, metabolic regulation, photosynthesis, bioenergy, protein structure and function, synthetic biology, biogeochemistry, environmental microbiology, ecology, population genetics, molecular evolution.

Visit our website for information about our Plant and Microbial Biosciences faculty (http://dbbs.wustl.edu/divprograms/PlantMicroBioSci/Pages/Faculty.aspx).

Degree Requirements

PhD Degrees

Each program has its own steering committee, which provides students with guidance, addresses their needs, and monitors their progress. The committee also helps each student customize the course of study to match their individual needs. Each of the 11 programs establishes its own degree requirements.

Across all of the programs, the course of study consists of five distinct parts:

Courses

This generally requires two to five semesters and usually consists of four to nine courses in areas fundamental to the student's program. Students are expected to maintain a B average in graduate courses.

Laboratory Rotations

Selecting a thesis adviser is the most important decision a student makes in graduate school. To help each student make an informed, thoughtful choice, the Division builds in flexibility to explore options. Students usually participate in three lab rotations during their first year. Additional rotations can be arranged, and rotation lengths are flexible. Students usually begin their thesis research by the end of their first year.

Qualifying Examination

After required courses are completed, each student takes a preliminary or qualifying examination to assess their mastery of the field and their ability to integrate information across fields. Upon successful completion of the qualifying exam, the student concentrates on thesis research.

Thesis Research

Thesis research begins once the student has chosen a laboratory in which to work. With their mentor — the laboratory’s principal investigator — the student devises a thesis project and chooses an advisory committee. Typically between the end of their second year and the middle of their third year, students present their thesis proposals to the thesis committee. Upon successful approval of the thesis proposal, the student officially becomes a doctoral candidate. For the rest of the student’s program of study, the thesis committee monitors progress and meets at least once a year to provide analysis and advice. It also serves as the thesis defense committee when the thesis is ready for presentation. Most students complete and defend their dissertations by the end of their sixth year.

Scientific Scholarship

Keeping abreast of scientific developments is critical for faculty and students alike. The Division offers many ways to stay current. More than 15 weekly biology seminars provide excellent opportunities to meet outstanding scientists from outside Washington University. Several annual symposia bring internationally recognized speakers to campus. Journal clubs meet weekly for students, postdoctoral fellows and faculty to present and discuss current scientific literature. A number of Special Emphasis Pathways (http://dbbs.wustl.edu/curstudents/SpecialEmphasisPathways/Pages/SpecialEmphasisPathways.aspx) allow students to enhance their PhD program. Program retreats allow for informal interaction among students and faculty. The Division also provides funds for each student to defray the costs of attending a national scientific meeting.

Business Administration

Washington University's Olin Business School is one of the nation's leading research institutions, with a faculty whose research productivity consistently ranks among the highest in the business school community. Olin faculty members are recognized the world over for their important contributions to the creation of new knowledge. We also take great pride in our commitment to excellence in teaching.

Our PhD students are guided by highly productive researchers who are among the nation's top scholars. Faculty work closely with students to help them hone their research skills, often building one-on-one mentoring relationships that include the co-authoring of research papers.

The development of strong problem-solving skills equips our students to strategically address complex, unstructured business issues that result in innovative thinking and new ideas for research that have value to the academic community and application in the business world. Olin's PhD program in business provides the following:

• A challenging core curriculum and a strong background in basic disciplines
• Emphasis on collaborative relationships between faculty and students, which enhances the educational process and the search for the student’s first faculty appointment
• Personalized advising for the successful completion of PhD program requirements and a customized course of study that fits the student's particular area of interest
• A collegial network built on mutual respect and a shared school of thought
• A competitive edge in the business education market

Faculty

Dean

Mark Taylor (https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=mark.p.taylor)  
PhD, Birbeck College, University of London

Endowed Professors

Nicholas S. Argyres (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=argyres)  
Vernon W. and Marion K. Piper Professor of Strategy  
PhD, University of California, Berkeley

William P. Bottom (https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=bottomb)  
Joyce and Howard Wood Distinguished Professor of Organizational Behavior  
PhD, University of Illinois at Urbana-Champaign

J. Stuart Bunderson (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=bunderson)  
George and Carol Bauer Professor of Organizational Ethics and Governance  
PhD, University of Minnesota

Siddhartha Chib (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=chib)  
Harry C. Hartkopf Professor of Econometrics and Statistics  
PhD, University of California, Santa Barbara

Kurt T. Dirks (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=dirks)  
Bank of America Professor of Managerial Leadership  
PhD, University of Minnesota

Philip H. Dybvig (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=dybvig)  
Boatmen's Bancshares Professor of Banking and Finance  
PhD, Yale University

Hillary Anger Elfenbein (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=helfenbein)  
John K. Wallace Jr. and Ellen A. Wallace Distinguished Professor  
PhD, Harvard University

Richard M. Frankel (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=frankel)  
Beverly and James Hance Professor of Accounting  
PhD, Stanford University

Barton H. Hamilton (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=hamiltonb)  
Robert Brockings Smith Distinguished Professor of Entrepreneurship  
PhD, Stanford University

Ohad Kadan (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=kadan)  
H. Frederick Hagemann, Jr. Professor of Finance  
PhD, Hebrew University

Panos Kouvelis (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=kouvelis)  
Emerson Professor of Operations and Manufacturing Management  
PhD, Stanford University

Hong Liu (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=liuh)  
Fossett Distinguished Professor in Finance  
PhD, University of Pennsylvania

Glenn M. MacDonald (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=macdonald)  
John M. Olin Distinguished Professor of Economics and Strategy  
PhD, University of Rochester

Judi McLean Parks (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=mcleanparks)  
Reuben C. and Anne Carpenter Taylor Professor of Organizational Behavior  
PhD, University of Iowa

Todd T. Milbourn (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=milbourn)  
Hubert C. and Dorothy R. Moog Professor of Finance  
PhD, Indiana University
Jackson A. Nickerson (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=nickerson) Frahm Family Professor of Organization and Strategy PhD, University of California, Berkeley

Stephen M. Nowlis (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=nowlis) August A. Busch Jr. Distinguished Professor of Marketing PhD, University of California, Berkeley

Robert A. Pollak (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=pollak) Hernreich Distinguished Professor of Economics PhD, Massachusetts Institute of Technology

P.B. (Seethu) Seetharaman (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=seethu) W. Patrick McGinnis Professor of Marketing PhD, Cornell University

Anjan Thakor (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=thakor) John E. Simon Professor of Finance PhD, Northwestern University

Guofu Zhou (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=zhou) Frederick Bierman and James E. Spears Professor of Finance PhD, Duke University

Robyn LeBoeuf (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=leboeuf) PhD, Princeton University (Marketing)

Xiumin Martin (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=xmartin) PhD, University of Missouri-Columbia (Accounting)

J. Lamar Pierce (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=pierce) PhD, University of California, Berkeley (Strategy)

Stephen Ryan (https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=stephen.p.ryan) PhD, Duke University (Economics)

Fuqiang Zhang (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=fzhang22) PhD, University of Pennsylvania (Operations and Manufacturing Management)

Associate Professors

Mariagiovanna Baccara (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=mbaccara) PhD, Princeton University (Economics)

Markus Baer (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=baer) PhD, University of Illinois at Urbana-Champaign (Organizational Behavior)

Cynthia Cryder (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=cryder) PhD, Carnegie Mellon University (Marketing)

Daniel Elfenbein (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=elfenbein) PhD, Harvard University (Organization and Strategy)

Armando Gomes (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=gomes) PhD, Harvard University (Finance)

**Professors Emeriti**

Nicholas Baloff  
(Business and Public Administration)

Stuart I. Greenbaum (http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=greenbaum)  
Former Dean and Bank of America Professor Emeritus of Managerial Leadership  
PhD, Johns Hopkins University

James T. Little (https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=littlejr)  
Donald Danforth Jr. Distinguished Professor Emeritus of Business  
PhD, University of Minnesota

Ambar Rao  
Fossett Distinguished Professor Emeritus of Marketing

J. George Robinson  
Professor Emeritus of Marketing

Robert L. Virgil Jr.  
Dean Emeritus of the John M. Olin Business School and Professor Emeritus of Accounting

John E. Walsh Jr.  
(Management)
Degree Requirements
PhD in Business Administration
PhD students must complete 36 credit hours; maintain satisfactory academic progress; pass certain examinations; fulfill residence and teaching requirements; and write, defend and submit a dissertation.

Upon the successful completion of business PhD study, the student is awarded a PhD from the Graduate School at Washington University.

Core Foundation
• A strong foundation in microeconomics or psychology, probability & statistics, and quantitative methods
• Exposure to the student’s area of specialization and the required research tools
• Successful completion of the core exam

Specialization
• Courses in one or more areas of study
• In-depth knowledge in the chosen field
• Active association with the research process through faculty mentoring
• Completion of the field exam

Research
• Participation with faculty in research activities
• Research paper presentation
• Individual research pursuing a specialized topic of interest
• Preparation and defense of the dissertation

Chemistry
The Department of Chemistry offers a PhD in Chemistry, with research specializations available in biological, organic, inorganic, physical and nuclear chemistry. Doctoral students often work at the interface of two or more subfields of chemistry; they may also work at the interface of different scientific disciplines. Lab assignments are therefore made according to each student’s research project. Chemistry students may work in a lab outside the department or alongside students from other departments in a chemistry lab.

The department's research strengths in each subfield of chemistry are as follows:
• Biological: biophysical, bioorganic, bioinorganic, biochemistry
• Organic: synthetic, organometallic, bioorganic, physical organic, asymmetric catalysis
• Inorganic: coordination, organometallic, materials, bioinorganic, main group

• Physical: computational, laser spectroscopy, theoretical, magnetic resonance
• Interdisciplinary: biophysical, physical organic, materials
• Nuclear and radiochemistry: stability of nuclei, radioisotopes for medical studies

Washington University’s graduate student stipends are in the top 25 percent of stipends at similar universities, and St. Louis has a low cost of living. The department has an excellent record of placing its graduates in a wide variety of jobs: academic, industrial, governmental, legal, consulting, writing/editing and entrepreneurial.

Degree Requirements

PhD in Chemistry

Requirements:

• 72 semester hours of graduate credit in courses and research
• Satisfactory performance on oral cumulative examinations
• Satisfactory performance in annual pre-thesis committee meetings
• Demonstration of teaching competence
• Dissertation research and preparation of dissertation
• Satisfactory performance on a final oral dissertation defense

On average, students take between five and six years to complete the PhD.

Requirements specific to Chemistry include attendance at Thursday evening research presentations during the student’s first fall semester, presenting and passing an oral examination within the first four semesters, and annual re-certification in laboratory safety.

Almost all students participate in mentored teaching experiences during their first two years and must perform satisfactorily. Students must also make annual research presentations to their advisory committee, prepare a satisfactory dissertation research proposal, and pass an oral examination.

Classics

The Department of Classics is committed to the threefold study of Greco-Roman antiquity via its languages and literatures, its history, and its art and architectural remains. The Master of Arts (AM) in Classics is ideal preparation either for the PhD or for a career in secondary teaching, and it has a strong placement record in both areas. The Doctor of Philosophy (PhD) program prepares candidates primarily for careers in
research and university teaching. The department also supports students’ exploration of alternative careers while pursuing the AM or PhD. Both programs provide rigorous instruction in Greek and Latin languages and literatures, exposure to the subfields of Classics, opportunities to cultivate special fields of research, and teaching experience in departmental courses.

Although both graduate programs are built around preparation in the core fields of Classics, opportunities exist for collaboration with numerous other departments and programs. PhD candidates have the option to pursue one of several special interdisciplinary tracks: Ancient History, Ancient Performance, Ancient Music, and Ancient Philosophy. Washington University also possesses several special collections of interest to the Classics researcher: the John Max Wulfing Coin Collection, an internationally recognized resource that can be applied to studies in numismatics, history, economics and art; a small collection of papyri housed in Olin Library; a substantial archive of epigraphical materials; and an important collection of Greek painted pottery.

Contact: Zoe Stamatopoulou

Email: classics@wustl.edu  
Website: https://classics.wustl.edu

Faculty

Endowed Professor

Timothy Moore  
John and Penelope Biggs Distinguished Professor of Classics  
Director of Undergraduate Studies  
PhD, University of North Carolina

Professor Moore’s work concentrates on several areas of classical antiquity, including the comic theater of Greece and Rome, Greek and Roman music, and Roman historiography. Current projects include a database and book on music in Greek and Roman theater and articles on music and poetic rhythm in ancient Rome. He also has interests in the history of theater, especially American musical theater and Japanese Kyogen comedy.

Professor and Chair

Catherine Keane  
Department Chair  
PhD, University of Pennsylvania

Professor Keane’s interests range broadly over Greek and Roman literature and culture, but her research centers on the comic genres and their engagement with moral, social, and literary problems, particularly the Roman verse satirists Lucilius, Horace, Persius, and Juvenal and the epigrammatist Martial.

Associate Professors

William Bubelis  
Curator of the Wulfing Coin Collection  
PhD, University of Chicago

Professor Bubelis’ research in Greek history focuses on the intersection of economy, religion and public institutions. His work utilizes the evidence of inscriptions (epigraphy), coins (numismatics) and other material remains alongside the literary texts of ancient historians, poets, orators and the like. While most of his scholarship has engaged with classical Athens, Bubelis avidly explores the societies of the eastern Mediterranean across antiquity, including Iron Age Cyprus and the Achaemenid Persian Empire to Hellenistic Egypt.

Zoe Stamatopoulou  
Director of Graduate Studies  
PhD, University of Virginia

Professor Stamatopoulou’s research and teaching encompass several aspects of ancient Greek literature and culture, but her work focuses primarily on archaic and classical poetry (Homer, Hesiod, lyric poetry, drama). She is also interested in the symposium, in ancient biographies of poets, and in the reception of archaic Greece in Imperial Greek literature (especially Plutarch).

Assistant Professors

Nicola Aravecchia  
PhD, University of Minnesota

Professor Aravecchia’s research interests encompass the art and archaeology of Greco-Roman and Late Antique Egypt. He has taught courses in classical languages, ancient history, art and archaeology in the United States, Egypt and Australia. His current work focuses on the origins and development of Early Christian architecture in rural Egypt. Since 2005, he has been involved in archaeological projects in the Dakhla Oasis, located in the Western Desert of Upper Egypt.

Thomas Keeline  
PhD, Harvard University

Professor Keeline works primarily on Latin literature, the history of classical scholarship and education from antiquity to the present, rhetoric, textual criticism, lexicography and metrics.

Luis Alejandro Salas  
PhD, University of Texas

Professor Salas specializes in Greek and Roman medicine, philosophy and intellectual history. He is also interested in Aristotelian psychology. His research focuses on medical and philosophical sectarianism, especially in the work of Galen of Pergamum.
Lecturers

Joan Carr
PhD, Saint Louis University

Lance Jenott
PhD, Princeton University

Professor Jenott has taught courses on the New Testament, studies in Christian origins, and Coptic language and literature. His other interests include Second Temple Judaism, Greco-Roman philosophy, classical civilizations, and theories and methods in the study of religion. Dr. Jenott is the author of *The Gospel of Judas: Coptic Text, Translation, and Historical Interpretation of the 'Betrayer's Gospel*', and he is the co-author of *The Monastic Origins of the Nag Hammadi Codices*. He is currently working on a commentary on the Gospel of Judas for the Hermeneia Series by Fortress Press.

Grizelda McClelland
Assistant Dean, College of Arts & Sciences
PhD, Washington University

Rebecca Sears
PhD, University of Michigan

Rebecca Sears' research interests include ancient music, papyrology, Latin poetry (particularly Ovid's *Metamorphoses*) and ancient magic. She is currently working on a textbook for the University of Michigan Press that will discuss important technical and cultural features of both Greek and Roman music as well as the reception and reconstruction of ancient music. In addition to her love of classical languages and cultures, she is a violinist who has performed in benefit concerts throughout New England.

Kathryn Wilson
PhD, University of Pennsylvania

Professor Wilson's research interests focus on the intersection of poetry and science. She is especially interested in Hellenistic literature and the relationship between different intellectual enterprises occurring during that time. She is also interested in the evolution of the genre of didactic poetry.

Professors Emeriti

Carl W. Conrad
PhD, Harvard University

Robert D. Lamberton
PhD, Yale University

George M. Pepe
PhD, Princeton University

Susan I. Rotroff
Jarvis Thurston & Mona Van Duyn Professor Emerita
PhD, Princeton University

Degree Requirements

**AM in Classics**

Candidates may obtain an AM degree in Classics by completing 36 graduate units of credit, completing a reading list, and taking a series of examinations. Students applying to continue in the Classics department’s PhD program must also write a master’s thesis. Others may choose to complete the AM with or without a thesis.

**Courses: 36 units, including the following:**

**Specific required courses: 6 units**

- Classics 502 Research and Publication on the Greco-Roman World (3 units), a proseminar on materials, methods and professional issues in Classics (offered every two years)
- Classics 510 Comparative Greek and Latin Grammar (3 units) (offered every two years, alternating with Classics 502)

**Other course requirements: 24 units (for AM with thesis)**

- At least 6 units in Greek (L09) (two options are offered every semester)
- At least 6 units in Latin (L10) (two or more options are offered every semester)

Most remaining courses will be in Greek, Latin and Classics. All must be at the 400 level or above, and the majority — especially during the second year of study — should be at the 500 level. With the guidance of the director of graduate studies, students may take 3 course units outside of the Classics department.

**Research credits: 6 units**

The master's thesis counts for 6 units. Any student opting not to write a thesis will fulfill these units with additional courses.

**Modern Language Competence**

This competence can be in German, French or Italian; the requirement may be fulfilled by courses or examination.

**Program Exams**

- Greek Reading List
- Latin Reading List

Students not planning to go on to a PhD program in Classics may opt to take the Reading List exam in one language (Greek or Latin) only. Those who pursue this option must still complete at least 6 units in the other language at the 400 level or above. The examination will require the student to demonstrate competence in translation and interpretation as well as in knowledge of the relevant scholarship.
Teaching Option
AM students may have the opportunity to assist faculty as paid student workers in undergraduate courses. They are also eligible to enroll in the department’s graduate course in Classics pedagogy.

PhD in Classics
The Classics PhD requires 60 graduate units of courses and research in combination. Up to 24 of these units may be transferred from an outside AM program in Classics at the discretion of the Graduate Committee. (Requirements listed below include requirements for the AM in Classics at Washington University.) All units must be at the 400 level or above, and the majority should be at the 500 level. With the guidance of the director of graduate studies, students may take up to 12 units outside of the Classics department to enhance their graduate study. Students may choose to pursue one of four special interdisciplinary tracks: Ancient Performance, Ancient Music, Ancient History, or Ancient Philosophy. Every PhD candidate also completes a teaching requirement through assignments as assistant in instruction and instructor of record.

Courses: 54 units, including the following:

Specific required courses: 9 units
- Classics 502 Research and Publication on the Greco-Roman World (3 units), a proseminar on materials, methods and professional issues in Classics (offered every two years)
- Classics 505 Seminar in Classics Pedagogy for Graduate Students (3 units) (offered every two or three years)
- Classics 510 Comparative Greek and Latin Grammar (3 units) (offered every two years, alternating with Classics 502)

Other course requirements: 27 units
- At least 12 units in Greek (L09) (two options are offered every semester)
- At least 12 units in Latin (L10) (two or more options are offered every semester)
- At least 3 units in ancient history (at least one course will be offered every two years)

Elective courses: 18 units
This requirement includes courses for individual tracks, optional independent studies in preparation for exams, and other courses to be chosen after consultation with the director of graduate studies.

Research Credits: 6 units
The master’s thesis counts for 6 units.

Program Exams
- Greek Reading List
- Latin Reading List
- Comprehensive Exam
- Special Field Exam

Teaching
Eight semesters of mentored teaching experiences are required, including at least two courses as the instructor of record.

Modern Language Competence
This competence can be in German and French or in German and Italian; the requirement may be fulfilled by courses or examination in each case.

Dissertation Requirements
- Dissertation prospectus
- Dissertation prospectus colloquium
- Dissertation
- Dissertation defense

Comparative Literature
The Comparative Literature program at Washington University offers a Master of Arts (AM); a Doctor of Philosophy (PhD); a combined PhD with Chinese, English, French, German, Japanese or Spanish; a graduate certificate in Translation Studies; and a graduate certificate in Early Modern Studies. Additionally, a track within the PhD program for international writers targets promising authors, translators, and public intellectuals from around the world who wish to enhance their career by coupling it with academic preparation in comparatist literary studies in the United States. In close cooperation with other humanities programs, Comparative Literature enables students to tailor a course of study appropriate to their areas of interest, strengths, and long-term goals.

At its core, Comparative Literature aims to provide students with a grounding in contemporary and historically significant methodologies and approaches to comparative literature, including especially those pertinent to the following four areas: transcultural studies; translation studies; literature, politics and society; and new and old media. Students combine this core with the thorough study of at least one primary literature, usually nationally or geographically defined, and two secondary fields. Depending on the focus of their degree and course of study, graduates typically apply for academic positions in comparative literature programs; language, literature, and culture departments; and such programs as gender studies, theater, performing arts, and area studies. Some graduates may choose to pursue employment in publishing and arts-related fields outside of academia.

Degree Requirements

PhD in Comparative Literature

The PhD in Comparative Literature program requires 60 units of course credit plus a dissertation. Course distribution normally entails the following: at least 12 core credits in comparative literature seminars, including Comp Lit 502; 12 credits in one nationally, ethnically, or geographically defined literature; and 6 credits in a second such literature. The program also requires the study of a third discipline relevant to the student's intellectual and critical concerns, such as a third literature, music, the plastic arts, philosophy, history, or film. As a minimum, students need to demonstrate — in addition to superior skills in English — superior ability in at least a second language and reading skills in a third language. Beyond the minimum, the choice and number of languages required correspond to each student's three areas of concentration. Beyond taking courses, students will take three comprehensive examinations that have both a written and oral component and that will help guide the student toward the dissertation; the third examination is a dissertation proposal.

Students interested in pursuing one of the combined degrees should apply to the appropriate language and literature program (Chinese, English, French, German, Japanese or Spanish), indicating their interest in the joint degree. The application will be vetted by the respective program and by Comparative Literature. The joint degree requires students to complete all requirements in the home discipline plus four courses in core categories in Comparative Literature, including Comp Lit 502. Students in the joint-degree programs are expected to include a comparatist component in their dissertations.

AM in Comparative Literature

The AM in Comparative Literature may be earned along the way to the PhD: Comparative Literature normally does not admit students who intend to pursue the AM only. It requires 36 units of course credit, including CompLit 502 and three additional courses in Comparative Literature on the graduate level. The remaining 24 units may be pursued in Comparative Literature or in affiliated departments or programs. All students earning an AM in Comparative Literature must demonstrate superior skills in English and, as a minimum, reading ability in one additional language pertinent to their areas of interest. These 36 units count toward the PhD requirement. Students participating in a mentored teaching experience may teach in Comparative Literature and/or in one of our allied programs, including language instruction. To be qualified to serve as an assistant in instruction in a language department, students may be required to take the relevant course in language pedagogy. The program strives to give students a variety of teaching experiences that prepare them for the academic market in their areas of concentration.
Graduate Certificate in Translation Studies

With its interest in crossing the borders between languages, cultures, and national literatures, the discipline of comparative literature implicitly performs and assesses theoretically the function and value of "translation" in the widest sense of the term. The Graduate Certificate in Translation Studies offered by Comparative Literature explicitly supports both the practical turn to translation and the critical and theoretical assessment of translation in the context of globalization, multiculturalism, cultural hybridity, postcolonial theory, and interdisciplinarity. The certificate requires 15 course credits overall, 6 of which may count toward both the certificate and the PhD degree and 9 of which may be allocated only to the certificate. Applicants must already be enrolled in a PhD program at Washington University.

Graduate Certificate in Early Modern Studies

The Graduate Certificate in Early Modern Studies enables students to develop interdisciplinary and transnational expertise outside of their home department; such expertise can generate innovative work at the dissertation level and beyond. Through courses, reading groups, summer seminars, conferences, and teaching opportunities, certificate students will come into a wider intellectual community of early modern faculty and graduate students from several departments. Students who satisfy certificate requirements will enter the Graduate Certificate in Early Modern Studies along with a PhD in their home department. The certificate takes advantage of two long-standing strengths in Early Modern Studies at Washington University: a long tradition of interdisciplinary work and a commitment to cross national and geolinguistic boundaries. In particular, Comparative Literature, where the certificate is housed, has created strong cross-departmental links between Eastern and Western departments and programs.

Dance

The Master of Fine Arts (MFA) program in Dance in the Performing Arts Department at Washington University offers an innovative approach to dance technique, composition, improvisation and production. It involves an energetic interplay of studio work with professionally distinguished dance instructors, seminars with faculty who are experts in their fields, and independent studies in choreography. This two-year program will expand students' dance skills while engaging them with current concepts of dance as an art form, as an expression of culture and identity, and as a mode of critical thinking. The overarching goal of this program is to develop each dancer's personal artistic practice while encouraging a global perspective on dance studies, performance, pedagogy and choreography.

The department offers performance experience through its repertory company, Washington University Dance Collective, for which students may audition.

Members of our dance faculty have performed with such companies as American Ballet Theatre; Alvin Ailey American Dance Theater; Dance Theatre of Harlem; National Ballet of Washington, D.C.; Dayton Contemporary Dance Company; and Utah Repertory Dance Theatre. In addition, a distinctive feature of our MFA program is that it is run in collaboration with St. Louis' Center of Creative Arts (COCA) (http://www.cocastl.org), so it involves a sharing of facilities and faculty borne out of a common vision of the importance of the performing arts. As the leading dance school in the region, COCA is also the largest multidisciplinary arts organization in St. Louis, and it has a world-renowned faculty. We have a long history of engaging the talents of contemporary guest choreographers and répétiteurs from ballet and from modern and performance art who bring a broad range of challenging new processes, concepts and choreography to our students.

**Degree Requirements**

**MFA in Dance**

**Degree Requirements:** 60 units (15 units/semester) during two years to degree

At the end of their first year, students will propose a culminating project — typically a dance concert or another public presentation of creative work largely expressed in dance — and submit a paper about its production, including analysis and critique, that they will defend orally.

**I. Technical Development:** 15 units

10 units from the following:
• Dance 401 Theory and Technique of Modern Dance V (3 units; may be repeated once)
• Dance 402 Theory and Technique of Modern Dance VI (3 units; may be repeated once)
• Dance 415 High Intermediate Ballet I (2 units; may be repeated once)
• Dance 416 High Intermediate Ballet II (2 units; may be repeated once)
• Dance 428 Classical Ballet III (2 units; may be repeated once)
• Dance 429 Classical Ballet IV (2 units; may be repeated once)

Plus an additional 5 units from the above or from the following:
• Dance 403 Jazz III (2 units; may be repeated once)
• Dance 407 Topics in Dance Techniques (variable credit; 3 units max)
• Dance 418 Variations in the Ballet (1 unit)
• Dance 423 Pointe Technique (1 unit)

II. Choreography and Performance: 20 units
• Dance 508 Dance Composition Laboratory I: Exploring Process and Format (3 units)
• Dance 509 Dance Composition Laboratory II: Exploring Alternative Venues and Audience Connections (3 units)
• Dance 510 Approaches to Improvisation and Spontaneous Composition (3 units)
• Dance 511, 5112, 5113 Independent Choreography Project I, II, III (3 units per course, for a total of 9 units)
• Dance 512 Performance Artistry (1 unit; must be taken twice, for a total of 2 units)

III. Research and Integrated Learning: 12 units

Required:
• Dance 520 Research Methods Colloquium (3 units)

Plus 9 units from the following:
• Dance 413 Modern Dance and the African American Legacy II (2 units)
• Dance 426 Performing the Political in American Dance (3 units)
• Dance 433 Performing Gender and Sexuality in America (3 units)
• Dance 506 Topics in Contemporary Arts Practice Research (3 units)
• Dance 517 Workshop in Dance as Cultural Identity (3 units)
• Dance 519 Guest Artist Residency Workshop (1 unit; may be repeated once)
• Dance 530 Theories of the Body in Performance (3 units)
• Dance 543 Critical Thinking in Western Theatrical Dance (3 units)

IV. Electives: 7 units

Students must complete 7 units at the 400 level or above, with at least one course at the 500 level. These units may be from any areas of the performing arts or relevant areas in other departments or programs.

MFA students are encouraged to pursue courses that support or help to define their individual trajectories as artists. These courses may include 400- or 500-level Performing Arts Department courses in costumes, stage lighting and design, or theater history. Students may also wish to pursue study in the departments of Women, Gender, and Sexuality Studies; Music; Psychological & Brain Sciences; Anthropology; Art History and Archaeology; or other areas relevant to the student's particular development.

V. Mentored Teaching Experience (MTE)
• LGS 600
Each MTE will be fashioned around the student's interests, when possible, and guided by a full-time member of the dance faculty. For more information, visit the Mentored Teaching Experiences webpage.

VI. Final Project: 6 units
• Dance 550 Final Project I (3 units); to be taken during the fall semester of the student's second year
• Dance 551 Final Project II (3 units); to be taken during the spring semester of the student's second year

At the end of the first year, the MFA student will propose a plan for the final project and form a final project committee that will evaluate the final project. A concert is the typical format of the MFA final project. This concert or public presentation will be followed by the submission of a written Production Book that includes analysis and critique. In some cases, the written documents may include research related to the production, or a complementary research paper may accompany the Production Book. The student will present an oral defense of the work in front of an invited audience and submit a final version of the written component, as well as a DVD of the concert or public presentation, for archival purposes within the department.

Data Science in the Humanities

In response to increasing graduate involvement in the Humanities Digital Workshop (HDW) and its associated faculty-
led projects, we offer a Graduate Certificate in Data Science in the Humanities (DASH), which combines traditional humanities inquiry with computational methods and analysis. All graduate students in the humanities, regardless of their home PhD program, are welcome to pursue this certificate. A data-driven approach can complement and enrich any humanities field, and the certificate features appreciable cross-disciplinary engagement. Recent HDW projects have been supervised by faculty in fields as diverse as history; music; German; Asian and Near Eastern languages and literature; American studies; philosophy-neuroscience-psychology; women, gender, and sexuality studies; and English. Our goals are to enrich the analytic skills that students can bring to bear on research in their home disciplines and to enable them to contribute thoughtfully and resourcefully in other disciplines of the humanities.

The curriculum addresses data management, statistics, text analysis, geospatial analysis, digital prosopography, data visualization and information design. This curriculum will acquaint any PhD student with new methodologies and techniques, and it will foster an awareness of the theoretical implications of using them.

This certificate program is distinguished by its emphasis on collaborative research and pedagogical development. Students will participate on a faculty project in the HDW; most fulfill this requirement through the HDW summer workshop, an eight-week program that pairs faculty with a small group of graduate and undergraduate fellows. The collaborative environment, combined with weekly project meetings and skills workshops, makes these immersive summer programs an unusual counterpoint to traditional graduate education. The DASH certificate also requires 3 units of mentored teaching experience in a digital humanities course, ensuring that pedagogical development accompanies more traditional courses.

Application

Students interested in pursuing the DASH graduate certificate should contact the program director (jfloewen@wustl.edu?subject=DASH Grad Certificate). PhD students in good standing should apply before the end of their second year. Master's students are not eligible. Applicants should write a letter detailing their interest in data science or digital humanities as well as any relevant background; their letter should be supplemented by a letter of support from the director of graduate studies of their home doctoral program. Upon review, the DASH program director will make recommendations for admission to the dean of the Graduate School for final approval. In order to receive the DASH graduate certificate, students must fulfill all of the PhD requirements of their home department. The certificate is granted to the student upon completion of the PhD.

PhD, Indiana University
Degree Requirements

Graduate Certificate in Data Science in the Humanities

15 units are required to complete the DASH graduate certificate. Most students are able to count 6 units dually between the requirements of the certificate and the doctoral degree requirements. Students should consult with their doctoral adviser and the DASH graduate certificate adviser to determine which courses may be applied to both degrees.

To obtain the required 15 units, students must take the following:

- 6 units from the core curriculum (https://dash.wustl.edu/graduate-certificate/core-curriculum)
- 3 units from participating in a faculty project in the Humanities Digital Workshop (HDW), which most students will undertake during the HDW summer program (https://hdw.artsci.wustl.edu/fellows/summer-fellows)
- 3 units of teaching practicum in either DASH 1, DASH 2, DAMS + PROTA, or IPH 312 (Intro to Digital Humanities)
- 3 units from the list of electives (https://dash.wustl.edu/graduate-certificate/electives)

Earth and Planetary Sciences

The Department of Earth and Planetary Sciences offers PhD and AM degrees. This is one of the few departments in the country with an integrated program of graduate instruction and research that treats Earth as a planet and that makes direct use of knowledge gained by exploring the solar system. Our field is changing rapidly and becoming more interdisciplinary as links emerge among geology, geochemistry, geophysics and geobiology. New opportunities are developing as research in natural hazards, energy sources and the environment become more important to the global economy and as new space missions are developed to explore the solar system. The relatively small size of the department engenders a friendly and personal place that offers a lot of personal interaction with faculty and researchers. Our graduate students have the opportunity to use cutting-edge laboratory equipment, high-speed parallel computers, and the latest planetary mission data throughout the course of their research. They travel to field sites around the world and publish research in the leading scientific journals.

The PhD program is open to qualified students who have previously specialized in earth sciences, physics, chemistry, biology, environmental science, soil science, mathematics or engineering. Both students with traditional degrees in geoscience areas and those with diverse academic backgrounds regularly enroll in our program because of the inherently interdisciplinary nature of our field. Doctoral education has a strong research emphasis that begins immediately upon arrival and that emphasizes modern, quantitative approaches to studying Earth, planetary, and environmental systems. Graduate research may involve field and laboratory studies as well as theory and advanced computation. Students earn the AM degree during the first phase of the PhD program; the department generally does not admit students for a terminal AM degree. After degree completion, our graduates go on to careers in academia, research laboratories, government agencies and the private sector, serving as leaders in the field of earth and planetary sciences.

Degree Requirements

PhD in Earth and Planetary Sciences

The degree requirements for a PhD in Earth and Planetary Sciences are intended to ensure that all students develop independence and originality of thought and that they acquire knowledge of sufficient breadth and depth to be scientific leaders in the field. Students are required to complete eight courses, five of which must be taken in the Department of Earth and Planetary Sciences. Students entering with an AM degree in a closely related field may waive two of these course requirements if approved by the faculty.

Students begin research early in the program, completing a small project during their second semester. At this time, each student selects a faculty member to serve as the major adviser as well as two additional faculty members to provide further guidance; these three faculty members comprise the student's Research Advisory Committee. During their second year, students continue their research as they work toward the oral examination that occurs at the end of their second year, which requires the preparation of a research paper, an oral presentation of research results, and a question-and-answer session with the Research Advisory Committee. Students are also required to obtain experience in teaching during their studies. The PhD program culminates in the writing of a dissertation and its defense in an oral presentation.

AM in Earth and Planetary Sciences

The department offers two tracks for the completion of the AM degree. Both tracks require the completion of six courses, four of which must be taken in the Department of Earth and Planetary Sciences. One track toward the AM degree is a component of the PhD degree program, with students being awarded an AM upon successful completion of the oral examination that occurs during the second year of the program. The other track is for students seeking a terminal AM degree. This track requires the completion of a master's thesis and its defense in an oral presentation by the end of the second year of study.

East Asian Languages and Cultures

The Department of East Asian Languages and Cultures (EALC) offers advanced degrees in the traditional and modern literatures and cultures of East Asia, based on substantial knowledge of at least one East Asian language. EALC offers the Master of Arts (AM) in Chinese and Japanese as well as the Doctor of Philosophy (PhD) in Chinese Language and Literature, Japanese Language and Literature, Chinese and Japanese.
Comparative Literature, and Japanese and Comparative Literature.

The goal of these programs is to produce scholars who are well trained in their chosen languages, firmly grounded in the relevant linguistic and literary traditions, and thoroughly conversant with the critical discourses (indigenous and Western) relevant to their fields. With research strengths that cover premodern poetry and poetics, gender and sexuality, religious texts and traditions, narrative, memoir, dramatic literature, postmodernity and more, our internationally recognized faculty is poised to offer graduate students careful and consistent mentoring. By admitting only a select number of graduate students each year, our programs allow individualized guidance. After the completion of these programs at the PhD level, candidates have extended firsthand exposure to the modern societies whose languages, literatures and cultures they study as well as significant teaching experience in both language and literature classes.

Degree Requirements

Master of Arts in Chinese or Japanese

The Master of Arts in Chinese or Japanese requires 36 units of graduate study in Chinese or Japanese, which may include courses from related fields such as East Asian Studies and Comparative Literature, including the following:

1. Language proficiency through the fourth level and two semesters of classical Chinese or Japanese (No more than 12 units in language preparation may be applied.)
2. At least two semesters of literary history courses
3. At least one course in critical theory, methodology or research methods
4. Either a master's thesis, a master's essay, or the successful completion of a comprehensive written exam

The degree is completed in four semesters.

PhD in Chinese Language and Literature or PhD in Japanese Language and Literature

The PhD in Chinese Language and Literature or Japanese Language and Literature combines the study of Chinese or Japanese literature with literary theory and critical methodology. Students are required to take courses in Chinese or Japanese literature, in another East Asian literature or culture, and in literary and cultural theory and critical methodology; some of these courses may focus on other literatures. Doctoral students must demonstrate native or near-native competence both in English and in either Chinese or Japanese. If needed for research in the chosen area of specialization, sufficient proficiency in one or more additional languages may be required.

Students must pass a qualifying examination at the end of their first year and three comprehensive examinations at the end of their third year. In addition, before the beginning of the fourth year, students must submit a dissertation prospectus for committee approval. Mastery of the relevant research language(s) must be demonstrated before students undertake their comprehensive examinations. All students gain teaching experience in both language and literature with extensive hands-on instruction in pedagogical methodologies.

PhD in Chinese and Comparative Literature or PhD in Japanese and Comparative Literature

The PhD in Chinese and Comparative Literature and the PhD in Japanese and Comparative Literature are offered jointly with the Comparative Literature program. The focus of these programs is comparison of the contents, theoretical basis, and methodologies of Chinese or Japanese literature and a second literature (Western or non-Western), within the contexts of a familiarity with the cultural and historical backgrounds of the literary works and of the critical and historical methodology of modern literary study. Whether or not applicants enter the program with a relevant master's degree, the requirements for our AM in Chinese or Japanese must be met as part of the requirements for the joint PhD degree. Required courses, qualifying examination, comprehensive examinations, dissertation prospectus, demonstration of language proficiency, and teaching opportunities are analogous to those in the PhD programs solely in Chinese or Japanese.

East Asian Studies

The East Asian Studies program consists of faculty members with Asian specializations drawn from various departments, including Anthropology, Art History and Archaeology, East Asian Languages and Cultures, Film and Media Studies, History, and International and Area Studies. The program offers the Master of Arts (AM) in East Asian Studies, which involves a broad-ranging study of East Asia across regional, historical and disciplinary boundaries. Students may pursue language study in Chinese, Japanese or Korean.

Degree Requirements

Master of Arts in East Asian Studies

The Master of Arts in East Asian Studies, which requires 30 units of graduate study, offers advanced interdisciplinary courses in Chinese, Japanese and Korean studies in areas that include literature, history, anthropology and art history. Students are
required to take the core seminar, normally during their first semester, and at least two substantial writing seminars. Students must achieve at least third-year proficiency in one Asian language, with no more than 12 units of language applying to the degree. For the exit requirement, a student may choose to write a master's thesis or master's essay, or they may take the exit exam. The degree can be completed in three or four semesters; with the thesis option, the degree requires four semesters.

**Joint Law and East Asian Studies Program**

The Joint Law and East Asian Studies program, which leads to the Juris Doctoris (JD) and Master of Arts degrees, combines the regular curriculum of the School of Law and special strengths in international legal studies with the broad offerings of the interdisciplinary East Asian Studies program. The joint program offers an integrated curriculum with courses that may be applied toward both degrees. Nine units are cross-counted between the degrees; the program can be completed in seven semesters. Applicants must apply to and be accepted by both programs.

**Joint Business and East Asian Studies Program**

The Joint Business and East Asian Studies program, which leads to an MBA from the Olin Business School and an AM in East Asian Studies, offers the opportunity to develop an expertise in business practice within an East Asian context. Six units are cross-counted between the degrees; the program can be completed in six semesters. Applicants must apply to and be accepted by both programs.

**Economics**

The Department of Economics at Washington University has a strong reputation for preparing high-quality PhD students for academic positions as well as for private- and public-sector jobs. We are seeking qualified students from any field who possess strong analytical abilities in mathematics and statistics and who are willing to complete a challenging Doctor of Philosophy (PhD) degree in Economics. At this time, we do not offer a terminal Master of Arts (AM) in our program.

The department offers students financial support while they remain in good academic standing.

Degree Requirements

PhD in Economics

General Course Requirements

The PhD in Economics takes five years to complete and requires at least two years of courses in 500-level classes with a 3.0 grade-point average. Students may transfer up to 24 units of graduate credits completed elsewhere but are advised to make such a transfer only after consultation with the director of graduate studies.

Courses taken must include the following:

1. Microeconomic Theory and Macroeconomic Theory: 12 units (Econ 501, Econ 502, Econ 503, Econ 504); and
2. Quantitative methods and econometrics: 9 units (Econ 511, Econ 512, Econ 5161).

</tbody>
</table>

Year 2
- Preliminary exams in late August, retake preliminary exams (if necessary) in January
- Field courses
- Research paper proposal

Year 3
- Complete research paper
- Field courses
- Dissertation proposal

Year 4
- Write dissertation
- Prepare and present job market paper

Year 5
- Enter the job market
- Finish and defend the dissertation

More information on degree requirements can be found on the Department of Economics (http://economics.wustl.edu) website.

Education

The Department of Education offers full-time programs for graduates who desire either a master’s degree for teacher certification or a Doctor of Philosophy (PhD) in Education. The teacher certification master’s programs are ideal for recent graduates who have few if any formal courses in education. The Master of Arts in Teaching (MAT) is for students seeking secondary teacher certification in a specific subject area; the Master of Arts in Education (MAEd) is for students seeking elementary teacher certification. Students interested in the elementary certification program may also consider the MAEd/MSW (http://bulletin.wustl.edu/brownschool/ msw-maed) joint-degree program with the Brown School. The teacher education program principles include a commitment to an equitable and just education for all students; a knowledge of both the subject(s) to be taught and best practices in pedagogy; and the enactment of the role of teacher-as-enquirer.

Doctoral study in education is aimed at strengthening and deepening the student’s analytical understanding of education in both research and practice. The PhD in Education focuses on three main strands of study: Social Contexts of Educational Research; Science and Mathematics Education; and Applied Linguistics in Education. In addition, students may select concentrations in the following areas: mathematics and science education; policy studies; urban education and American culture studies; second language research; and English language learners.

Students working toward a PhD in Education are expected to acquire an understanding of education as a complex social, cultural and moral/political activity and as a field of study with rich literature bases and strong ties to disciplinary knowledge, classroom practice and a variety of technologies. Our faculty bring special interests and expertise to the examination of educational interactions in such sites as schools, families and other cultural institutions. Students are expected to acquire theoretical and empirical expertise in an area of concentration even as they demonstrate their broader understanding of educational processes and problems. Finally, students are expected to acquire methodological competence in empirical inquiry and to pursue questions that are of interest and import for the student individually as well as for a larger educational community.

Graduates of the PhD program should be prepared to join the community of professional educators who contribute to our understanding of the complexity of education and to continue inquiring into educational processes and problems wherever they choose to work.

In addition, through University College, the department offers part-time students the opportunity to earn teacher certification (elementary and secondary) through a non-degree post-AB program; it also offers those currently working in the classroom the opportunity to earn an MAEd through evening classes. For more information about part-time programs, visit the University College – Education (p. 157) page of this Bulletin.

Marshall S. Snow Professor in Arts & Sciences; Vice Chancellor for International Relations
PhD, University of Chicago

Degree Requirements

Master of Arts in Education

The Master of Arts in Education (MAEd) program for students seeking elementary teacher certification requires 48 credit hours of professional education courses; this includes 8 credit hours of student teaching during the final semester. The courses are typically completed in three semesters and one summer course.

- The first fall semester consists of foundation courses in education, including educational psychology and teaching reading courses.
- Spring is the curriculum and instruction block, which includes courses in the basic subject areas as well as a field seminar requiring 50 hours of school observation.
- Summer includes a course in the education and psychology of exceptional children.
- The second fall (and final semester) includes 12 weeks of student teaching as well as courses for reading and creating a teaching portfolio.

When students successfully complete the program and the state-mandated certification assessments, they are eligible for initial
teacher certification in Missouri for elementary education grades 1 through 6.

**Master of Arts in Teaching**

The Master of Arts in Teaching (MAT) program for students seeking secondary teacher certification requires at least 36 hours in professional education courses plus 12 graduate credit hours in their teaching subject area during semesters when their schedules allow. The courses are typically completed in four semesters.

- The first fall semester includes professional education courses in adolescent development and a foundations of education course, along with appropriate courses in the content area.
- The second semester includes educational psychology courses, with 30 school observation hours and appropriate content area courses.
- The third semester includes a field experience seminar requiring 50 hours of school observation, a curriculum and instruction course for the content area, a reading intervention course, and a possible content area course.
- The final (fourth) semester consists of 12 to 14 weeks of student teaching (8 credit hours) as well as courses for reading in the content area and a teaching-learning process course.

When students successfully complete the program and the state-mandated certification assessments, they are eligible for initial teacher certification in Missouri for their selected subject area.

Students may be certified in the following areas: For grades 9 through 12: Biology, Chemistry, Earth Science, Physics, Mathematics, Social Science (e.g., history, political science, psychology, anthropology), English; For grades K through 12: Art, Dance, Foreign Language (Latin, Chinese, French, German, Japanese, Russian, Spanish). There are specific subject area requirements for each subject, which students may fulfill from both their undergraduate courses and the 12 credit hours of subject area graduate courses required for the MAT program. It is strongly suggested that students apply for a subject in which they have completed (or will complete) a bachelor's degree (or earned the credits equivalent to an undergraduate major).

**Doctor of Philosophy in Education**

Our doctoral program focuses on three major strands of study: Social Contexts of Educational Research; Science and Mathematics Education; and Applied Linguistics in Education. Students are afforded an opportunity to build unique programs of study by combining concentrations from urban education and American culture studies, mathematics and science education, policy studies, second language acquisition, or English language learners. These concentrations are supplemented by core studies in history and methodology and by a seminar shared by all doctoral students. Many courses have fieldwork and research components, opportunities to attend and present at local and national conferences, and seminars. Required and elective courses provide the student with a broad understanding of scholarship and research in education, and they prepare the student for meeting the qualifying examination requirements and for dissertation research and writing.

Students are required to take graduate-level courses in history, methodology, and doctoral seminars as well as in their major strand of study and additional concentrations. By the third year, students should be completing their courses and submitting a qualifying portfolio of written work before moving on to the dissertation phase of the program. Students must have a dissertation proposal approved, generally by the fourth year, before they continue with the bulk of their research and writing for the dissertation. A dissertation is then completed and defended, usually between the fifth and seventh year of study.

Integrating teaching and research with scholarly development involves the doctoral candidate in the central responsibilities of the professional educator. An advantage of a small department within Arts & Sciences is that students have multiple opportunities to work closely with many of the faculty in the department. In addition, the university offers a climate that supports interdisciplinary conversations across schools, departments and programs. As Education faculty, we encourage students to pursue learning experiences and contacts with faculty in other programs. Students encounter a diversity of disciplinary perspectives within and outside of the Department of Education so that they may attain a broad understanding of the field.

**McKelvey School of Engineering**

McKelvey School of Engineering is ranked among the top 50 engineering schools in U.S. News & World Report, and it focuses its intellectual efforts through a new convergence paradigm, particularly as applied to medicine and health (http://bulletin.wustl.edu/medicine/overview), energy and environment, entrepreneurship (http://engineering.wustl.edu/our-school/initiatives/Pages/entrepreneurship.aspx) and security.

For further information about PhD programs in engineering, please visit the following pages:

- Biomedical Engineering (p. 65)
- Computational & Data Sciences (p. 67)
- Computer Science & Engineering (p. 71)
- Electrical & Systems Engineering (p. 74)
- Energy, Environmental & Chemical Engineering (p. 77)
- Imaging Science (p. 80)
Biomedical Engineering

Biomedical engineering (BME) seeks to advance and integrate life science knowledge with engineering methods and innovations that contribute to improvements in human health and well-being. Our vision is that lasting knowledge of biomedical systems and paradigm-shifting engineering technology will arise from integrating engineering concepts and basic science knowledge from the molecular level to the whole-body level. We believe that those taught to work across multiple disciplines and to integrate modeling and experimental systems approaches will be uniquely positioned to advance and generate new disciplines in biomedical engineering.

With this vision in mind, we are committed to educating the next generation of biomedical engineers. We have leveraged our interdisciplinary strengths in engineering and clinical and life sciences to build a biomedical engineering department around research programs of excellence and translational potential: Biomedical & Biological Imaging; Cancer Technologies; Cardiovascular Engineering; Molecular & Cellular Systems Engineering; Neural Engineering; Orthopedic Engineering; and Regenerative Engineering in Medicine. These areas provide exciting opportunities for students with a variety of backgrounds and interests.

Students seeking the PhD in Biomedical Engineering may choose to study in one of seven multidisciplinary research programs that represent frontiers in biomedical engineering. Our core faculty work collaboratively with more than 90 affiliated faculty to offer students the opportunity to learn in a diverse and rich spectrum of BME research areas. Students graduating with the PhD in Biomedical Engineering are prepared to pursue paths in research and development in academic and industry settings, and they are also ready to contribute to teaching and research translation. The MD/PhD in Biomedical Engineering, which is offered jointly with the top-ranked School of Medicine, gives students in-depth training in modern biomedical research and clinical medicine. The typical MD/PhD career combines patient care and biomedical research but leans toward research.

Faculty

Chair

Lori A. Setton  
Lucy and Stanley Lopata Distinguished Professor of Biomedical Engineering  
PhD, Columbia University  
Biomaterials for local drug delivery; tissue regenerations specific to the knee joints and spine

Endowed Professors

Rohit V. Pappu  
Edwin H. Murty Professor of Engineering  
PhD, Tufts University  
Macromolecular self assembly and function; computational biophysics  
Yoram Rudy  
Fred Saigh Distinguished Professor of Engineering  
PhD, Case Western Reserve University  
Cardiac electrophysiology; modeling of the cardiac system

Professors

Jianmin Cui  
PhD, State University of New York–Stony Brook  
Ion channels; channel structure-function relationship; biophysics  
Daniel Moran  
PhD, Arizona State University  
Motor control; neural engineering; neuroprosthetics; movement biomechanics  
Quing Zhu  
PhD, University of Pennsylvania  
Biophotonics and multimodality ultrasound and optical imaging

Associate Professors

Dennis L. Barbour  
MD, PhD, Johns Hopkins University  
Auditory physiology; sensory cortex neurocircuitry; novel perceptual diagnostics and therapeutics  
Princess Imoukhuede  
PhD, California Institute of Technology  
Ligand-receptor signal transduction; angiogenesis; computational systems bioengineering
Baranidharan Raman (https://engineering.wustl.edu/Profiles/Pages/Barani-Raman.aspx)
PhD, Texas A&M University
Computational and systems neuroscience; neuromorphic engineering; pattern recognition; sensor-based machine olfaction

Jin-Yu Shao (https://engineering.wustl.edu/Profiles/Pages/Jin-Yu-Shao.aspx)
PhD, Duke University
Cell mechanics; receptor and ligand interactions; molecular biomechanics

Jon Silva (https://engineering.wustl.edu/Profiles/Pages/Jonathan-Silva.aspx)
PhD, Washington University
Ion channel biophysics

Kurt A. Thoroughman (https://engineering.wustl.edu/Profiles/Pages/Kurt-Thoroughman.aspx)
PhD, Johns Hopkins University
Human motor control and motor learning; neural computation

MS, Washington University

Lecturer
Noah Ledbetter (https://bme.wustl.edu/faculty/Pages/Noah-Ledbetter.aspx)
PhD, University of Utah

Senior Emeritus Professor
Frank Yin (https://bme.wustl.edu/faculty/Pages/Frank-Yin.aspx)
MD, PhD, University of California, San Diego

Degree Requirements
PhD and Combined MD/PhD in Biomedical Engineering

The department offers programs that lead to the Doctor of Philosophy (PhD) in Biomedical Engineering as well as combined MD/PhD degrees. The latter degrees are conferred jointly with the School of Medicine.

The doctoral degree requires a minimum of 72 credits beyond the bachelor's level, with a minimum of 36 being course credits (including the core curriculum) and a minimum of 24 credits of doctoral dissertation research.

The core curriculum that must be satisfied by all PhD students consists of the following:

- One graduate-level course in life science from an approved list
- One graduate-level course in mathematics from an approved list
- One graduate-level course in computer science from an approved list or exemption by proficiency
- Four BME courses from an approved list

Please visit the Biomedical Engineering (BME) website (https://bme.wustl.edu/graduate/phd/Pages/default.aspx) for a comprehensive list of the approved courses.

Up to 9 credits of BME 601C Research Rotation and/or BME 501C Graduate Seminar may be counted toward the 36 credits of graduate courses required for the PhD, so a total of 27 additional credits (usually nine courses, including the core curriculum) are required for the PhD. Up to two 400-level courses may be counted toward the nine courses required...
for the PhD (not including independent study courses, journal clubs or seminar-based courses). Graduate courses may be transferred in (up to 24 credits) but must be evaluated and approved by the director of doctoral studies. The evaluation and approval may occur at any time, but course transfer does not become official until after one year in residence at Washington University.

Students seeking the **PhD in Biomedical Engineering** enroll in two to three courses each semester and participate in one or two laboratory rotations during the first year. Ten months after they enroll in the program, students take their oral qualifying exam, which consists of a presentation of their research done to date in the mentor’s laboratory followed by an oral exam addressing any issues directly related to their rotation report or their oral presentation. Upon successfully passing the qualifying examination, they advance to candidacy and complete the balance of their requirements. During the second and third years, students complete their remaining courses, participate in one semester of a mentored teaching experience, and begin their thesis research. By the end of the third year, students must complete their thesis proposal. Students must also complete one accepted and one submitted first-author publication and complete a dissertation.

Students pursuing the combined **MD/PhD in Biomedical Engineering** must complete the degree requirements in both schools. MD/PhD students typically complete the first two years of the medical school preclinical curriculum while also performing one or more research rotations, then the remaining requirements for the doctoral degree, and finally the clinical training years of the medical degree. The department generally gives graduate course credits for some of the medical school courses toward fulfillment of course requirements for the PhD degree. This is arranged on an individual basis between the student, their academic adviser and the director of doctoral studies.

**Computational & Data Sciences**

The Division of Computational & Data Sciences (DCDS) at Washington University in St. Louis trains students interested in problems from across a range of disciplines that share a common reliance on data and computing.

The introduction of now-standard tools from statistical analysis and hypothesis testing transformed the practice of natural and social science in the mid-20th century. Emerging tools from computational and data science have the potential to bring about an even larger transformation of scientific practice, especially in the social sciences. The questions raised by data generated by and about human behavior are engaging and profound. However, many if not most of these questions can only be tackled using a multidisciplinary approach that combines a deep knowledge of the capabilities and operation of data science techniques with the domain expertise needed to apply them effectively to the problems under consideration.

Doctoral students in Computational & Data Sciences receive strong methodological training in modern computational and statistical methods, and they also acquire expertise in a particular social science application area.

The program is inherently interdisciplinary and brings together leading experts from across the university who are using data to solve some of the greatest challenges that our world faces today. Faculty include both data and computing experts as well as domain experts from different application areas.

Track Chair, Psychological & Brain Sciences
Professor and Associate Chair, Psychological & Brain Sciences
PhD, Stanford University

Degree Requirements
PhD in Computational & Data Sciences

Upon joining the PhD program, each student is assigned an initial adviser from the DCDS faculty. This adviser meets with the student to assess their background and to advise them on course selection. Immediately prior to each fall semester (starting in 2019), DCDS faculty conduct a “boot camp” in mathematics, statistics and programming to help bring incoming students up to the level needed to succeed in the initial course work and the program.

All students complete a common core curriculum as well as a domain depth requirement in a social science area. The focus of the first year is on acquiring a common set of tools and an understanding of the ranges and types of problems students may work on as they progress through the program. The entire incoming cohort takes a unique two-semester seminar sequence solely for DCDS students, which includes both general topics and a series of data-driven dives into the types of research questions that may be encountered in each of the domain areas.

In addition, students will be exposed to research in different areas through “rotations” that start in November of their first year. By the end of the summer following their first year, each student will put together an advisory committee of at least two DCDS faculty members (preferably from different tracks) and identify the specific track in which they plan to do research and pursue their degree.

Curriculum
Required Core Courses (24 credit hours)

- CSE 502 (3 credits): This is an existing fundamental course in algorithms and data structures, including significant implementation in an object-oriented programming language (currently Java). We expect that many students will already have this background; the course is intended as a pathway for students with very little computational training.

- Quantitative Methods (QM I and II (6 credits)): This two-semester sequence covers essential probability and statistics, including hypothesis testing, inference and experimental methodology using a modern statistical computing language like R. The introductory courses offered by the departments of Psychological & Brain Sciences (PBS 5066) and Political Science (PS 581) will be cross-listed and count for QM I credit. QM II is a course that includes maximum-likelihood methods, Bayesian and nonparametric models, generalized linear models and sampling techniques. The course is currently taught as Political Science 582 and will be cross-listed across participating departments.

- CSE 5XX: “Data Wrangling”: We are in a new era in terms of the volume and modalities of data generated by efforts to measure human behavior. This will be a new cross-listed course that introduces students to the tools and techniques used to collect, maintain and process large-scale data sets of the kind generated in the course of studying people and social systems.

- Machine Learning I and II: CSE 417T and 517A (3 credits): This is a two-semester sequence in machine learning. Together, the two courses cover the fundamental principles of supervised learning, including generalization, overfitting, regularization, cross-validation, model selection, core ML techniques and algorithms, including linear models like logistic regression, gradient descent, tree-based and ensemble methods, kernel methods, deep neural networks and topics in unsupervised learning.

- Computational and Data Sciences (CDS) Seminar I and II (6 credits): This two-semester seminar sequence is cross-listed across participating departments and team-taught by participating faculty.
  - CDS Seminar I will be structured around topics and ideas that do not need detailed specific-content background. The topics covered will include ethics, the nature of research, robustness and reproducibility of research, and presentations from across the different areas of interest to give students an understanding of research in human and social data analytics across the university.
  - CDS Seminar II will be structured as a series of deep dives into data-driven approaches in each of the domain areas, including a module on computational
methodologies. In each of these modules, the students will either be given a specific data set to investigate or a specific hands-on task to complete (e.g., developing a visualization, assessing how easy a computational tool is for social scientists to use). Students will work in teams on these projects.

**Domain Depth Tracks**

Students will choose one of four focus tracks: Political Science, Psychological & Brain Sciences, Social Work & Public Health, or Computational Methodologies. Depending on the track, students must complete the following domain depth requirements:

1. **Political Science track**: Students must complete three substantive classes in one subfield (e.g., American politics, comparative politics, international relations) from a specified list for each subfield as well as a research design course (PS 540).

2. **Psychological & Brain Sciences track**: Students must complete three substantive classes in one subfield (e.g., brain, behavior and cognition, clinical science, social/personality, development and aging). With permission, students may substitute the Psychological & Brain Sciences Research Methods Course (PBS 5011) for one of the substantive classes, depending on their background in psychological science.

3. **Social Work & Public Health track**: Students must complete a three-course core doctoral seminar series, including conceptual foundations of social science, advanced research methods, and a theory seminar, either in public health or social work. Students will also be required to take an advanced substantive course from an approved list in their area of interest.

4. **Computational Methodologies track**: Students must take CSE 541T Advanced Algorithms and either CSE 511A Introduction to Artificial Intelligence or CSE 515T Bayesian Methods in Machine Learning. In addition, students must take two substantive classes in their area of interest (i.e., political science, psychological & brain sciences, or social work & public health) from among the classes acceptable for students in that track as noted above.

**Sample Curriculum**

A typical progression of classes is described below, with separate examples for students who enter with and without more extensive computational backgrounds.

### Further Requirements

Additional requirements for this program are as follows:

- A minimum of 72 credit hours beyond the bachelor’s level, with a minimum of 37 being course credits (including the core curriculum)
• A minimum of 24 credit hours of doctoral dissertation research
• Students must maintain a cumulative average grade of B (3.0 grade-point average) for all 72 credit hours.
• Required courses must be completed with no more than one grade below a B-.
• Up to 24 graduate credit hours may be transferred with the approval of the Graduate Studies Committee, chaired by the director of graduate studies.

In addition to fulfilling the course and research credit requirements, students must do the following:
• Complete at least two three-month-long research rotations.
• Pass a qualifying exam.
• Successfully defend a thesis proposal.
• Present and successfully defend a dissertation.
• Complete a teaching requirement consisting of two semesters of mentored teaching experience.

Computer Science & Engineering

The Department of Computer Science & Engineering offers PhD programs in Computer Science and in Computer Engineering. Computer science research encompasses the fundamentals of software and algorithm design, machine learning and bioinformatics, visual and cyber-physical computing, and human-computer interaction. Computer engineering focuses on the interaction of software and hardware in the design of computing systems and networks. Our research groups have extensive interdisciplinary ties across the university, with collaborations in medicine, science, the humanities and social work. Recent graduates have accepted research and teaching faculty positions as well as research and engineering positions in leading technology companies.

Both PhD programs require a combination of courses, research and teaching. The required courses are often completed early in the program, since students are integrated into research groups during their first year and the program’s emphasis is on creative research. The program has milestones that involve both written and oral components, and these provide structure for the five- to six-year degree. The program considers applicants with either bachelor’s or master’s degrees and has had successful applicants in the past whose backgrounds were outside of the field of computer science.

Faculty

Chair
Roch Guérin (https://engineering.wustl.edu/Profiles/Pages/Roch-Guerin.aspx)
Harold B. and Adelaide G. Welge Professor of Computer Science
PhD, California Institute of Technology
Computer networks and communication systems

Professors
Sanjoy Baruah (https://engineering.wustl.edu/Profiles/Pages/Sanjoy-Baruah.aspx)
PhD, University of Texas at Austin
Real-time and safety-critical system design, cyber-physical systems, scheduling theory, resource allocation and sharing in distributed computing environments
Aaron Bobick (https://engineering.wustl.edu/Profiles/Pages/Aaron-Bobick.aspx)
James M. McKelvey Professor and Dean
PhD, Massachusetts Institute of Technology
Computer vision, graphics, human-robot collaboration
Michael R. Brent (https://engineering.wustl.edu/Profiles/Pages/Michael-Brent.aspx)
Henry Edwin Sever Professor of Engineering
PhD, Massachusetts Institute of Technology
Systems biology, computational and experimental genomics, mathematical modeling, algorithms for computational biology, bioinformatics
Jeremy Buhler (https://engineering.wustl.edu/Profiles/Pages/Jeremy-Buhler.aspx)
PhD, Washington University
Computational biology, genomics, algorithms for comparing and annotating large biosequences
Roger D. Chamberlain (https://engineering.wustl.edu/Profiles/Pages/Roger-Chamberlain.aspx)
DSc, Washington University
Computer engineering, parallel computation, computer architecture, multiprocessor systems
Yixin Chen (https://engineering.wustl.edu/Profiles/Pages/Yixin-Chen.aspx)
PhD, University of Illinois at Urbana-Champaign
Mathematical optimization, artificial intelligence, planning and scheduling, data mining, learning data warehousing, operations research, data security
Patrick Crowley (https://engineering.wustl.edu/Profiles/Pages/Patrick-Crowley.aspx)
PhD, University of Washington
Computer and network systems, network security
Ron K. Cytron (https://engineering.wustl.edu/Profiles/Pages/Ron-Cytron.aspx)
PhD, University of Illinois at Urbana-Champaign
Programming languages, middleware, real-time systems

Christopher D. Gill (https://engineering.wustl.edu/Profiles/Pages/Christopher-Gill.aspx)
DSc, Washington University
Parallel and distributed real-time embedded systems, cyber-physical systems, concurrency platforms and middleware, formal models and analysis of concurrency and timing

Raj Jain (https://engineering.wustl.edu/Profiles/Pages/Raj-Jain.aspx)
Barbara J. & Jerome R. Cox Jr. Professor of Computer Science
PhD, Harvard University
Network security, blockchains, medical systems security, industrial systems security, wireless networks, unmanned aircraft systems, internet of things, telecommunications networks, traffic management

Tao Ju (https://engineering.wustl.edu/Profiles/Pages/Tao-Ju.aspx)
PhD, Rice University
Computer graphics, visualization, mesh processing, medical imaging and modeling

Chenyang Lu (https://engineering.wustl.edu/Profiles/Pages/Chenyang-Lu.aspx)
Fullgraf Professor in the Department of Computer Science & Engineering
PhD, University of Virginia
Internet of things, real-time, embedded, and cyber-physical systems, cloud and edge computing, wireless sensor networks

Neal Patwari (https://engineering.wustl.edu/Profiles/Pages/Neal-Patwari.aspx)
PhD, University of Michigan
Application of statistical signal processing to wireless networks, and radio frequency signals

Weixiong Zhang
PhD, University of California, Los Angeles
Computational biology, genomics, machine learning and data mining, and combinatorial optimization

Assistant Professors
Ayan Chakrabarti (https://engineering.wustl.edu/Profiles/Pages/Ayan-Chakrabarti.aspx)
PhD, Harvard University
Computer vision computational photography, machine learning

Roman Garnett (https://engineering.wustl.edu/Profiles/Pages/Roman-Garnett.aspx)
PhD, University of Oxford
Active learning (especially with atypical objectives), Bayesian optimization, and Bayesian nonparametric analysis

Chien-Ju Ho (https://engineering.wustl.edu/Profiles/Pages/Chien-Ju-Ho.aspx)
PhD, University of California, Los Angeles
Design and analysis of human-in-the-loop systems, with techniques from machine learning, algorithmic economics, and online behavioral social science

Brendan Juba (https://engineering.wustl.edu/Profiles/Pages/Brendan-Juba.aspx)
PhD, Massachusetts Institute of Technology
Theoretical approaches to artificial intelligence founded on computational complexity theory and theoretical computer science more broadly construed

Ulugbek Kamilov (https://engineering.wustl.edu/Profiles/Pages/Ulugbek-Kamilov.aspx)
PhD, École Polytechnique Fédérale de Lausanne, Switzerland
Computational imaging, image and signal processing, machine learning and optimization

Brian Kocoloski (https://cse.wustl.edu/faculty/Pages/faculty.aspx?bio=115)
PhD, University of Pittsburgh
Scalable parallel computing, cloud computing, operating systems, virtualization
Angelina Lee (https://engineering.wustl.edu/Profiles/Pages/I-Ting-Angelina-Lee.aspx), PhD, Massachusetts Institute of Technology
Designing linguistics for parallel programming, developing runtime system support for multithreaded software, and building novel mechanisms in operating systems and hardware to efficiently support parallel abstractions

Alvitta Ottley (https://cse.wustl.edu/faculty/Pages/faculty.aspx?bio=109), PhD, Tufts University
Designing personalized and adaptive visualization systems, including information visualization, human-computer interaction, visual analytics, individual differences, personality, user modeling and adaptive interfaces

William Yeoh (https://engineering.wustl.edu/Profiles/Pages/William-Yeoh.aspx), PhD, University of Southern California
Artificial intelligence, multi-agent systems, distributed constraint optimization, planning and scheduling

Miaomiao Zhang (https://cse.wustl.edu/faculty/Pages/faculty.aspx?bio=183), PhD, University of Utah
Medical image analysis, statistical modeling, and machine learning

Ning Zhang (https://cse.wustl.edu/faculty/Pages/faculty.aspx?bio=182), PhD, Virginia Polytechnic Institute and State University
System security, software security

Professor of the Practice

Dennis Cosgrove (https://cse.wustl.edu/faculty/Pages/Dennis-Cosgrove.aspx), BS, University of Virginia
Programming environments and parallel programming

Lecturers

Steve Cole, Senior Lecturer
PhD, Washington University in St. Louis
Parallel computing, accelerating streaming applications on GPUs

Marion Neumann (https://cse.wustl.edu/faculty/Pages/Marion-Neumann.aspx), Senior Lecturer
PhD, University of Bonn, Germany
Machine learning with graphs; solving problems in agriculture and robotics

Jonathan Shidal (https://cse.wustl.edu/faculty/Pages/Jon-Shidal.aspx), Lecturer
PhD, Washington University
Computer architecture and memory management

Douglas Shook (https://cse.wustl.edu/faculty/Pages/Doug-Shook.aspx), Lecturer
MS, Washington University
Imaging sensor design, compiler design and optimization

William Siever (https://cse.wustl.edu/faculty/Pages/Bill-Siever.aspx), Principal Lecturer
PhD, Missouri University of Science and Technology
Computer architecture, organization, and embedded systems

Todd Sproull (https://cse.wustl.edu/faculty/Pages/Todd-Sproull.aspx), Senior Lecturer
PhD, Washington University
Computer networking and mobile application development

Senior Professors

Jerome R. Cox Jr.
ScD, Massachusetts Institute of Technology
Computer system design, computer networking, biomedical computing

Jonathan S. Turner
PhD, Northwestern University
Design and analysis of internet routers and switching systems, networking and communications, algorithms

Professors Emeriti

Takayuki D. Kimura
PhD, University of Pennsylvania
Communication and computation, visual programming

Seymour V. Pollack
MS, Brooklyn Polytechnic Institute
Intellectual property, information systems

Degree Requirements

PhD in Computer Science or Computer Engineering

Students can choose to pursue a PhD in Computer Science or a PhD in Computer Engineering. The requirements vary for each degree. Here are the core requirements:

• Complete 72 units of regular courses (at least 33 units), seminars (at least 3 units), and research credits (at least 24 units), including 9 units of breadth requirements for both the PhD in Computer Science degree and the PhD in Computer Engineering degree.

• Satisfy fundamental teaching requirements by participating in mentored teaching experiences, pedagogical teaching requirements (by completing a certain number of qualifying pedagogy workshops), and scholarly communication requirements (by participating in the Doctoral Student Research Seminar).

• Pass milestones that demonstrate the ability to understand research literature, to communicate orally and in writing,
and to formulate a detailed research plan. These milestones include an oral qualifying examination, a portfolio review for admission to candidacy, and a dissertation proposal defense that culminates in a dissertation defense.

For more information, please refer to the Doctoral Program Guide (https://cse.wustl.edu/graduate/current-students/Pages/phd-students.aspx) on our website.

Electrical & Systems Engineering

The Department of Electrical & Systems Engineering offers PhD degrees in Electrical Engineering and in Systems Science & Mathematics. Research activity in the department is focused in the following three areas:

• Applied mathematics, systems & control
• Electronics & optics
• Signal processing, imaging & communications

Students working in any of these areas will enjoy the benefits of programs that balance fundamental theoretical concepts with modern applications. In our department, students find ample opportunities for close interactions with faculty members working on cutting-edge research and technology development.

Prospective PhD students with previous degrees in engineering who are interested in PhD studies and research in mathematics or statistics are encouraged to apply for PhD studies in Mathematics and Statistics. For more details, visit the Graduate Programs in Mathematics and Statistics (http://wumath.wustl.edu/graduate) webpage.

Website: http://ese.wustl.edu

Faculty

Chair
Bruno Sinopoli (https://engineering.wustl.edu/Profiles/Pages/Bruno-Sinopoli.aspx)
Professor PhD, University of California, Berkeley
Cyberphysical systems, analysis and design of networked embedded control systems, with applications to sensor actuators networks

Endowed Professors
Ar ye Nehorai (https://engineering.wustl.edu/Profiles/Pages/Ar ye-Nehorai.aspx)
Eugene and Martha Lohman Professor of Electrical Engineering
PhD, Stanford University
Statistical signal processing, machine learning, imaging, biomedicine

Joseph A. O’Sullivan (https://engineering.wustl.edu/Profiles/Pages/Joseph-OSullivan.aspx)
Samuel C. Sachs Professor of Electrical Engineering
Dean, UMSL/WashU Joint Undergraduate Engineering Program
PhD, Notre Dame University
Information theory, statistical signal processing, imaging science with applications in medicine and security, and recognition theory and systems

Lan Yang (https://engineering.wustl.edu/Profiles/Pages/Lan-Yang.aspx)
Edward H. & Florence G. Skinner Professor of Engineering
PhD, California Institute of Technology
Nano/micro photonics, ultra high-quality optical microcavities, ultra-low-threshold microlasers, nano/micro fabrication, optical sensing, single nanoparticle detection, photonic molecules, photonic materials

Professors
Shantanu Chakrabartty (https://ese.wustl.edu/faculty/Pages/default.aspx?bio=101)
PhD, Johns Hopkins University
New frontiers in unconventional analog computing techniques using silicon and hybrid substrates, fundamental limits of energy efficiency, sensing and resolution by exploiting computational and adaptation primitives inherent in the physics of devices

Jr-Shin Li (https://engineering.wustl.edu/Profiles/Pages/Jr-Shin-Li.aspx)
Das Family Distinguished Career Development Professor
PhD, Harvard University
Mathematical control theory, optimization, quantum control, biomedical applications

Hiro Mukai (https://engineering.wustl.edu/Profiles/Pages/Hiro-Mukai.aspx)
Professor
PhD, University of California, Berkeley
Theory and computational methods for optimization, optimal control, systems theory, electric power system operations, differential games

Neal Patwari (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=189)
Professor
PhD, University of Michigan
Intersection of statistical signal processing and wireless networking for improving wireless sensor networking and radiofrequency sensing

Heinz Schaettler (https://engineering.wustl.edu/Profiles/Pages/Heinz-Schaettler.aspx)
PhD, Rutgers University
Optimal control, nonlinear systems, mathematical models in biomedicine
**Associate Professors**

ShiNung Ching (https://engineering.wustl.edu/Profiles/Pages/ShiNung-Ching.aspx)
Das Family Distinguished Career Development Assistant Professor
PhD, University of Michigan
Systems and control in neural medicine, nonlinear and constrained control, physiologic network dynamics, stochastic control

Jung-Tsung Shen (https://engineering.wustl.edu/Profiles/Pages/Jung-Tsung-Shen.aspx)
Das Family Distinguished Career Development Assistant Professor
PhD, Massachusetts Institute of Technology
Theoretical and numerical investigations on nanophotonics, optoelectronics, plasmonics, metamaterials

**Assistant Professors**

Ulugbek Kamilov (https://ese.wustl.edu/faculty/Pages/default.aspx?bio=120)
PhD, École Polytechnique Fédérale de Lausanne, Switzerland
Computational imaging, signal processing, biomedical imaging

Matthew D. Lew (https://engineering.wustl.edu/Profiles/Pages/Matthew-Lew.aspx)
PhD, Stanford University
Microscopy, biophotonics, computational imaging, nano-optics

Chuan Wang (https://ese.wustl.edu/faculty/Pages/default.aspx?bio=123)
PhD, University of Southern California
Flexible electronics, stretchable electronics, printed electronics, nanomaterials, nanoelectronics, optoelectronics

Shen Zeng (https://ese.wustl.edu/faculty/Pages/default.aspx?bio=121)
PhD, University of Stuttgart
Systems and control theory, data-based analysis and control of complex dynamical systems, inverse problems, biomedical applications

Xuan “Silvia” Zhang (https://engineering.wustl.edu/Profiles/Pages/Xuan-%28Silvia%29-Zhang.aspx)
PhD, Cornell University
Robotics, cyber-physical systems, hardware security, ubiquitous computing, embedded systems, computer architecture, VLSI, electronic design automation, control optimization, and biomedical devices and instrumentation

**Senior Professors**

Paul S. Min (https://ese.wustl.edu/faculty/Pages/Paul-Min.aspx)
PhD, University of Michigan
Routing and control of telecommunication networks, fault tolerance and reliability, software systems, network management

DSc, Washington University in St. Louis
Computer engineering, lower-power VLSI design, computer architecture, signal processing, microprocessors systems design

William F. Pickard (https://ese.wustl.edu/faculty/Pages/William-Pickard.aspx)
PhD, Harvard University
Biological transport, electobiology, energy engineering

Daniel L. Rode (https://ese.wustl.edu/faculty/Pages/Daniel-Rode.aspx)
PhD, Case Western Reserve University
Optoelectronics and fiber optics, semiconductor materials, light-emitting diodes and lasers, semiconductor processing, electronics

Ervin Y. Rodin (https://ese.wustl.edu/faculty/Pages/Ervin-Rodin.aspx)
PhD, University of Texas at Austin
Optimization, differential games, artificial intelligence, mathematical modeling

Barbara A. Shrauner (https://ese.wustl.edu/faculty/Pages/Barbara-Shrauner.aspx)
PhD, Harvard University (Radcliffe)
Plasma processing, semiconductor transport, symmetries of nonlinear differential equations

Donald L. Snyder (https://ese.wustl.edu/faculty/Pages/Donald-Snyder.aspx)
PhD, Massachusetts Institute of Technology
Communication theory, random process theory, signal processing, biomedical engineering, image processing, radar

Barry E. Spielman (https://ese.wustl.edu/faculty/Pages/Barry-Spielman.aspx)
PhD, Syracuse University
High-frequency/high-speed devices, radiofrequency and microwave integrated circuits, computational electromagnetics

Tzyh Jong Tarn (https://ese.wustl.edu/faculty/Pages/TJ-Tarn.aspx)
DSc, Washington University
Quantum mechanical systems, bilinear and nonlinear systems, robotics and automation, life science automation

**Professors of Practice**

Dedric Carter (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=149)
PhD, Nova Southeastern University
MBA, MIT Sloan School of Management
Professors Emeriti
R. Martin Arthur
Newton R. and Sarah Louisa Glasgow Wilson Professor of Engineering
PhD, University of Pennsylvania
Ultrasonic imaging, electrocardiography

David L. Elliott
PhD, University of California, Los Angeles
Mathematical theory of systems, nonlinear difference, differential equations

Degree Requirements
PhD in Electrical Engineering or Systems Science & Mathematics

The Department of Electrical & Systems Engineering at Washington University in St. Louis offers two PhD programs. Both the PhD in Electrical Engineering and the PhD in Systems Science & Mathematics are academic doctoral degrees designed mainly for full-time students interested in an academic, laboratory and/or industrial research and development career in a specialization within electrical engineering, systems, control or applied mathematics.

Students pursuing the Doctor of Philosophy degrees in Electrical Engineering or Systems Science & Mathematics must complete a minimum of 72 credit hours of post-baccalaureate study consistent with the residency and other applicable requirements of Washington University and the Graduate School. These 72 units must consist of at least 36 course units and at least 24 units of research and may include work done to satisfy the requirements of a master's degree in a related discipline. Up to 24 units may be transferred to Washington University from another institution.

Each candidate for the PhD degree in Electrical Engineering and the PhD degree in Systems Science & Mathematics must do the following:

- Complete at least 36 credit hours of post-baccalaureate courses.
- Pass a written qualifying examination, to be taken before the second academic year of the program.
- Pass an oral preliminary research examination, to be completed within two years of passing the written qualifying examination and at least one year prior to completing the dissertation.
- Satisfy the general residency requirement for PhD degrees offered by the Graduate School.
- Satisfy the general teaching requirement for PhD degrees offered by the Graduate School.
• Write a doctoral dissertation that describes the results of original and creative research in a specialization within electrical engineering or systems science and mathematics.
• Pass a final oral examination in defense of the dissertation research.
• Take ESE 590 Electrical & Systems Engineering Graduate Seminar each semester.

Energy, Environmental & Chemical Engineering

The Department of Energy, Environmental & Chemical Engineering (EECE) provides integrated and multidisciplinary programs of scientific education in cutting-edge areas, including the PhD in Energy, Environmental & Chemical Engineering. Research and educational activities of the department are organized into four clusters: aerosol science & engineering; engineered aquatic processes; multiscale engineering; and metabolic engineering & systems biology. These overlapping clusters address education and research in four thematic areas: energy; environmental engineering science; advanced materials; and sustainable technology for public health and international development. In addition to the core faculty in the department, faculty in the schools of Medicine, Arts & Sciences, Business, Law, and Social Work collaborate to provide students with a holistic education and to address topical problems of interest.

The department is a key participant in the university's Energy, Environment & Sustainability (http://sustainability.wustl.edu) initiative, and it supports both the International Center for Energy, Environment and Sustainability (InCEES (http://incees.wustl.edu)) and the McDonnell Academy Global Energy and Environment Partnership (MAGEEP (http://mageep.wustl.edu)). Major externally funded research centers in the department include the Consortium for Clean Coal Utilization (http://cleancoal.wustl.edu), the Nano Research Facility (NRF) and Jens Environmental Molecular and Nanoscale Analysis Laboratory (Jens Lab) (https://nano.wustl.edu), and the Solar Energy Research Institute for India and the United States (SERIUS (http://www.serius.org)).

Faculty

Chair and Endowed Professor
Pratim Biswas (https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx)
Lucy and Stanley Lopata Professor
PhD, California Institute of Technology
Aerosol science and engineering, air quality and pollution control, nanotechnology, environmentally benign energy production

Endowed Professors
Richard L. Axelbaum (https://engineering.wustl.edu/Profiles/Pages/Richard-Axelbaum.aspx)
Stifel and Quinette Jens Professor
PhD, University of California, Davis
Combustion, advanced energy systems, clean coal, aerosols, nanoparticle synthesis, rechargeable battery materials, thermal science
Milorad P. Dudukovic (https://engineering.wustl.edu/Profiles/Pages/Milorad-Dudukovic.aspx)
Laura and William Jens Professor
PhD, Illinois Institute of Technology
Chemical reaction engineering, multiphase reactors, visualization of multiphase flows, tracer methods, environmentally benign processing
Daniel E. Giammar (https://engineering.wustl.edu/Profiles/Pages/Daniel-Giammar.aspx)
Walter E. Browne Professor of Environmental Engineering
PhD, California Institute of Technology
Aquatic chemistry, environmental engineering, water quality, water treatment
Vijay Ramani (https://eece.wustl.edu/faculty/Pages/faculty.aspx?bio=108)
Director of Graduate Studies
Roma B. and Raymond H. Witcoff Distinguished University Professor
PhD, University of Connecticut
Electrochemical engineering, energy conversion

Professors
Young-Shin Jun (https://engineering.wustl.edu/Profiles/Pages/Young-Shin-Jun.aspx)
PhD, Harvard University
Aquatic processes, molecular issues in chemical kinetics, environmental chemistry, surface/physical chemistry, environmental engineering, biogeochemistry, nanotechnology
Randall Martin (https://engineering.wustl.edu/news/Pages/Martin-to-join-ECEE-faculty-.aspx)  
PhD, Harvard University  
Characterizing atmospheric composition to inform effective policies surrounding major environmental and public health challenges ranging from air quality to climate change

Palghat A. Ramachandran (https://engineering.wustl.edu/Profiles/Pages/Palghat-Ramachandran.aspx)  
PhD, University of Bombay  
Chemical reaction engineering, applied mathematics, process modeling, waste minimization, environmentally benign processing

Yinjie Tang (https://engineering.wustl.edu/Profiles/Pages/Yinjie-Tang.aspx)  
PhD, University of Washington, Seattle  
Metabolic engineering, bioremediation

Jay R. Turner (https://engineering.wustl.edu/Profiles/Pages/Jay-Turner.aspx)  
Vice Dean for Education  
DSc, Washington University  
Air quality planning and management; aerosol science and engineering, green engineering

Jian Wang (https://eece.wustl.edu/faculty/Pages/faculty.aspx?bio=126)  
PhD, California Institute of Technology  
Aerosol properties and processes, nucleation and new particle formation, aerosols in the marine environment, effects of aerosols on cloud microphysical properties and macrophysical struct

Associate Professors

Marcus Foston (https://engineering.wustl.edu/Profiles/Pages/Marcus-Foston.aspx)  
PhD, Georgia Institute of Technology  
Utilization of biomass resources for fuel and chemical production, renewable synthetic polymers, and development of advanced aerosol instruments

Tae Seok Moon (https://engineering.wustl.edu/Profiles/Pages/Tae-Seok-Moon.aspx)  
PhD, Massachusetts Institute of Technology  
Metabolic engineering and synthetic biology

Brent Williams (https://engineering.wustl.edu/Profiles/Pages/Brent-Williams.aspx)  
Raymond R. Tucker Distinguished InCEES Career Development Associate Professor  
PhD, University of California, Berkeley  
Aerosols, global climate issues, atmospheric sciences

Fuzhong Zhang (https://engineering.wustl.edu/Profiles/Pages/Fuzhong-Zhang.aspx)  
PhD, University of Toronto  
Metabolic engineering, protein engineering, synthetic and chemical biology

Assistant Professors

Peng Bai (https://engineering.wustl.edu/Profiles/Pages/Peng-Bai.aspx)  
PhD, Tsinghua University, China  
develop next-generation batteries, probe the in situ electrochemical dynamics of miniature electrodes down to nanoscales, capture the heterogeneous and stochastic nature of advanced electrodes, and identify the theoretical pathways and boundaries for the rational design of materials, electrodes and batteries through physics-based mathematical modeling and simulation

Rajan Chakrabarty (https://engineering.wustl.edu/Profiles/Pages/Rajan-Chakrabarty.aspx)  
PhD, University of Nevada, Reno  
Characterizing the radiative properties of carbonaceous aerosols in the atmosphere; and researching gas phase aggregation of aerosols in cluster-dense conditions

Jason He (https://eece.wustl.edu/faculty/Pages/faculty.aspx?bio=198)  
PhD, Washington University  
Environmental biotechnology, bioenergy production, biological wastewater treatment, resource recovery, bio electrochemical systems, sustainable desalination technology, anaerobic digestion, forward osmosis and membrane bioreactors

Fangqiong Ling (https://eece.wustl.edu/faculty/Pages/faculty.aspx?bio=178)  
PhD, University of Illinois at Urbana-Champaign  
Microbial ecosystem analysis and modelling, process modelling, machine learning, NextGen sequencing bioinformatics, environmental microbiology, and bioreactor design

Kimberly M. Parker (https://engineering.wustl.edu/Profiles/Pages/Kimberly-Parker.aspx)  
PhD, Stanford University  
Investigation of environmental organic chemistry in natural and engineered systems

Elijah Thimsen (https://engineering.wustl.edu/Profiles/Pages/Elijah-Thimsen.aspx)  
PhD, Washington University  
Gas-phase synthesis of inorganic nanomaterials for energy applications, and novel plasma synthesis approaches
Research Assistant Professor

Benjamin Kumfer (https://engineering.wustl.edu/Profiles/Pages/Ben-Kumfer.aspx)
DSc, Washington University
Advanced coal technologies, biomass combustion, aerosol processes and health effects of combustion-generated particles

Lecturers

Janie Brennan (https://engineering.wustl.edu/Profiles/Pages/Janie-Brennan.aspx)
Director of Undergraduate Studies
PhD, Purdue University
Biomaterials, chemical engineering, engineering education

Trent Silbaugh (https://engineering.wustl.edu/Profiles/Pages/Trent-Silbaugh.aspx)
PhD, University of Washington
Chemical engineering

Avni Solanki (https://eece.wustl.edu/faculty/Pages/faculty.aspx?bio=181)
PhD, University of Florida
Wastewater, sustainable development, environmental engineering, and engineering education

Joint Faculty

Doug Allen
PhD, Purdue University
USDA Research Scientist, Danforth Plant Sciences Center
Metabolic networks of oilseed plants

Nathan Ravi
PhD, Virginia Polytechnic Institute
Cataract, ocular biomaterials

Adjunct Faculty

Robert Heider
MME, Washington University
Process control and process design

Gary Moore
MS, Missouri University of Science and Technology
Environmental management

Nicholas J. Nissing
BS, Washington University
Product development and process design

Keith Tomazi
PhD, University of Missouri-Rolla
Process development engineering

Grigoriy Yablonsky
PhD, Boreskov Institute of Catalysis
Chemical reaction engineering and heterogeneous catalysis

Research Associate

Raymond Ehrhard
BS, Missouri University of Science and Technology
Water and wastewater treatment technologies, process energy management

Senior Professor

Rudolf B. Husar
PhD, University of Minnesota
Environmental informatics, aerosol science and engineering

Degree Requirements

Doctor of Philosophy (PhD) in Energy, Environmental & Chemical Engineering (EECE)

The doctoral degree requires a total of 72 credits beyond the bachelor's degree. Of these, a minimum of 36 must be graduate courses and a minimum of 30 must be doctoral thesis research units. To be admitted to candidacy, students must have completed at least 18 credits at Washington University, have an overall grade-point average of at least 3.25, and pass the qualifying examination. All students are required to enroll in the department seminar every semester to receive passing grades. The first-year students must complete the core curriculum, perform two research rotations, and find a permanent research adviser. Then, within 18 months after the qualifying exam (generally in their third year), students should defend their thesis proposal.

After the successful proposal defense, students should provide their research updates through annual meetings or reports with their thesis committee until their graduation. While conducting doctoral research, students should perform professionally in a research lab and be in compliance with safety and regulatory requirements for their research projects. During the doctoral program, students must satisfy their fundamental and advanced teaching requirements by participating in mentored teaching experiences in the department for two or three semesters, by attending professional development workshops from the Teaching Center, and by presenting at least two formal presentations at the local level or at a national or international conference. Upon completion of the thesis, students must present the thesis in a public forum and successfully defend the thesis before their thesis committee.

For more detailed guidelines, please refer to the EECE doctoral studies handbook available on the EECE Graduate Degree Programs webpage (https://eece.wustl.edu/graduate/programs/Pages/PhD-Energy-Environmental-Chemical-Eng.aspx).
Imaging Science (Interdisciplinary PhD)

The PhD in Imaging Science program at Washington University in St. Louis is one of only two such programs in the United States. This program offers an interdisciplinary curriculum that focuses on the technology of imaging with applications that range from cancer diagnosis to virtual reality.

What is Imaging Science?

Imaging Science is an interdisciplinary academic discipline that broadly addresses the design and optimization of imaging systems and the extraction of information from images. It builds on contributions from traditional fields including biomedical engineering, electrical engineering and computer science as well as from physics, applied mathematics, biology and chemistry.

What Can You Do with a PhD in Imaging Science?

The high demand for personnel with training in imaging science is reflected in government policy and funding opportunities. Many academic, industrial and national laboratory positions exist for highly qualified candidates. Graduates of the program will be prepared for careers in academic research or in industry that requires expertise in the quantitative principles of imaging.

Curriculum Focus

- Mathematical and computational principles of image formation
- Image analysis
- Image understanding
- Image quality assessment

This interdisciplinary program is unique and brings together expert faculty from the McKelvey School of Engineering (https://engineering.wustl.edu/Pages/home.aspx) and the School of Medicine (https://medicine.wustl.edu) to provide students with the freedom and flexibility to learn from leading imaging experts and to engage in impactful research.

History

Washington University has been a leader in the technology and advancement of imaging science for more than 125 years. In the 1920s, Washington University researchers were the first to use X-rays to view the gallbladder. In the 1970s, research by Michel Ter-Pogossian at the university's Mallinckrodt Institute of Radiology led to the development of the PET scanner.

Professor
PhD, University of Pennsylvania
Biomedical Engineering

Professor Emeritus

Martin Arthur (https://ese.wustl.edu/faculty/Pages/Martin-Arthur.aspx)
Newton R. and Sarah Louisa Glasgow Wilson Professor of Engineering
PhD, University of Pennsylvania
Electrical & Systems Engineering
Degree Requirements
PhD in Imaging Science

Requirements
To complete the PhD in Imaging Science, students must do the following:

• Maintain an average grade of B (3.0 grade-point average) for all 72 units (up to 24 graduate units may be transferred with approval)
• Complete courses with no more than one grade below B-
• Complete at least one semester-long research rotation
• Become integrated with a research group
• Pass a qualifying exam
• Successfully defend a thesis proposal
• Present and successfully defend a dissertation
• Complete the mentored teaching experience required by their administrative home department

Courses
Required Core Courses (22 units)
• BME/CSE/ESE Mathematics of Imaging Science (3 units)
• BME 593 Computational Methods for Imaging Science (3 units)
• ESE 506 Seminar in Imaging Science and Engineering (1 unit)
• ESE 589 Biological Imaging Technology (3 units)
• BME/ESE 5907 Theoretical Imaging Science (3 units)
• BME/CSE/ESE Image Analysis and Data-Driven Imaging (3 units)
• BME/ESE/CSE Practicum in Computational Imaging (3 units)
• BME 601 Research Rotation (3 units) (refer to Research Rotations (p. 84) section)

At least 12 units in elective imaging courses that span any of the following categories must be completed:

• Computational Imaging & Theory
• Imaging Sensors & Instrumentation
• Image Formation & Imaging Physics
• Translational Biomedical Imaging
• Medical Physics

Progression of Courses (Typical)
First Semester
• BME/CSE/ESE Mathematics of Imaging Science (3 units)
• ESE 506 Seminar in Imaging Science & Engineering (1 unit)
Second Semester
• BME 601 Research Rotation (3 units) (refer to Research Rotations (p. 84) section)
• Elective (3 units)

Third Semester
• BME 593 Computational Methods for Imaging Science (3 units)
• ESE 589 Biological Imaging Technology (3 units)
• Elective (3 units) or optional second research rotation (BME 601, 3 units)

Fourth Semester
• BME/ESE/CSE Practicum in Computational Imaging (3 units)
• Elective or doctoral research (3 units)
• Elective or doctoral research (3 units)

Elective Courses — Computational Imaging & Theory
• BME/ESE Adaptive Imaging
• BME/ESE Wave Physics and Applied Optics for Imaging Scientists
• CSE 501N Programming Concepts and Practice
• CSE 511A Introduction to Artificial Intelligence
• CSE 512A Statistical Computing for Scientific Research
• CSE 513T Theory of Artificial Intelligence & Machine Learning
• CSE 515T Bayesian Methods in Machine Learning
• CSE 517A Machine Learning
• CSE 519T Advanced Machine Learning
• CSE 543T Algorithms for Nonlinear Optimization
• CSE 546T Computational Geometry
• CSE 554A Geometric Computing for Biomedicine
• CSE 555A Computational Photography
• CSE 559A Computer Vision
• CSE 566S High Performance Computer Systems
• ESE 518 Optimization Methods in Control
• ESE 523 Information Theory
• ESE 524 Detection and Estimation Theory
• ESE 588 Quantitative Image Processing

Elective Courses — Imaging Sensors & Instrumentation
• BME Imaging Instrumentation
• CSE 568M Imaging Sensors

Elective Courses — Image Formation & Imaging Physics
• BME 591 Biomedical Optics I
• BME 592 Biomedical Optics II
• BME 494 Ultrasound Imaging
• BME 5XX Advanced Topics in Ultrasound Imaging (To be developed)
• BME 5XX Magnetic Resonance Imaging (To be developed)
• BME 5XX Imaging in Nuclear Medicine (To be developed)
• ESE 582/BME 5820 Fundamentals and Applications of Modern Optical Imaging

Elective Courses — Translational Biomedical Imaging
• BME Therapeutic Applications of Biomedical Imaging
• BME 502 Cardiovascular MRI-Physics to Clinical Application

Elective Courses — Medical Physics
• BME 507 Radiological Physics and Dosimetry
• BME 5071 Radiobiology
• BME 5072 Radiation Oncology Physics
• BME 5073 Radiation Protection and Safety

Approved Life Science Courses
• BME 503A Cell & Organ Systems
• BME 530A Molecular Cell Biology for Engineers
• BME 538 Cell Signal Transduction
• BME 5902 Cellular Neurophysiology
• Biol 404 Laboratory of Neurophysiology
• Biol 4071 Developmental Biology
• Biol 4580 Principles of Human Anatomy & Development
• Biol 4810 General Biochemistry
• Biol 4820 General Biochemistry II
• Biol 5068 Fundamentals of Molecular Cell Biology
• Biol 5319 Molecular Foundations of Medicine
• Biol 5051 Foundations in Immunology (4 units)
• Biol 5053 Immunobiology (4 units)
• Biol 5062 Central Questions in Cell Biology
• Biol 5146 Principles and Applications of Biological Imaging
• Biol/Chem 5147 Contrast Agents for Biological Imaging
• Biol 5224 Molecular, Cell, and Organ Systems
• Biol 5285 Fundamentals of Mammalian Genetics
• Biol 5352 Developmental Biology
• Biol 548 Nucleic Acids and Protein Biosynthesis
• Biol 5488 Genomics
• Biol 5571 Cellular Neurobiology (4 units)
• Biol 5651 Neural Systems
• Biol 5581 Neural Basis of Acoustic Communication
• Biol 5663 Neurobiology of Disease

Approved Mathematics Courses — Any graduate-level course within the Department of Mathematics and Statistics is approved.

Research Rotations
During their first year, students are required to register for and complete at least one research rotation (3 units) with program faculty mentors. The research rotation(s) allow students to sample different research projects and laboratory working environments before selecting the group in which they will carry out the PhD dissertation research.

A rotation will be chosen in consultation with program faculty and must be mutually agreeable to both the student and the mentor. At the completion of each rotation, the student must submit to the mentor and director a written report approved by the mentor.

Qualifying Exam
A written qualifying exam will be administered during the spring of the student’s second year of graduate school. The examining committee, who will develop and grade the exams, will consist of three members of the Imaging Science PhD Program Committee. The director of the graduate program will approve the committee, whose members will be suggested by the thesis adviser.

Students will choose three out of the following four exam topics:
• Mathematics of Imaging Science
• Imaging Physics & Image Formation Methods
• Image Analysis & Data-Driven Imaging
• Theoretical Image Science

Finding a Thesis Research Mentor
Because the PhD is a research degree, the student is expected to become integrated within a research group. By the end of the first year of study, students should have found a thesis adviser who will oversee their PhD research and assume financial responsibility for their stipend, tuition, health insurance and student fees. The thesis adviser must be a faculty member in the Imaging Science PhD Program Committee with the title of professor, associate professor or assistant professor. Failure to find a research adviser by May 1 will result in the student being placed on probation that can last up until August 31. During that time, the student must continue to seek a research adviser. Failure to find a research adviser by August 31 will lead to dismissal from the PhD program and termination of funding.

The student’s admission application should include transcripts and letters of evaluation. The Graduate Admissions Committee will review all applications and construct a ranked list of candidates. This list and the associated application packages will be forwarded to the dean of the Graduate School for approval for admission to the program. Following approval by the dean of the Graduate School and the director of the graduate program, the chair of the Graduate Admissions Committee will notify the students accepted by letter.
Research Presentation/Thesis Proposal

Before the end of the student's third year, the student will give an oral presentation of their proposed PhD project, with the necessary background to support it, to the Thesis Committee. This committee will consist of six members. Four members must be members of the Imaging Science PhD Program Committee. At least one committee member must be chosen from outside the Imaging Science PhD Program Committee, and this individual must be a tenured or tenure-track faculty member at Washington University. The committee will be chaired by the PhD mentor. At least two weeks prior to the presentation, the student will present to the Thesis Examination Committee a written document outlining the research background, proposed procedures, preliminary results and plans for completion. The required document will be typically between 15 and 30 pages in length, and it must contain a comprehensive bibliography.

The student will be placed on probation if they fail to pass their Thesis Proposal by the sixth semester. The student will be given a second opportunity to pass the exam during their seventh semester. If the student passes the second exam and meets the other program requirements (e.g., grades), they may continue the program without prejudice. If the student fails the exam a second time, they will be terminated from the PhD program.

Dissertation

The student will prepare a written dissertation for examination by the Thesis Examination Committee and will defend the dissertation before this committee. Should a member of this committee be unable to participate, the director of the graduate program, in consultation with the PhD mentor, will choose a replacement. If the committee members feel that the dissertation has deficiencies, they may recommend that the candidate address them and send the revised dissertation to the committee members for approval. The committee may also recommend that the candidate present another oral defense of the modified work. The Thesis Committee will inform the director of the graduate program, and they will warn the student in writing that the student must submit a revised dissertation and pass the oral defense (if recommended) in order to complete the PhD program. If, after revision and reexamination, the Thesis Committee still finds deficiencies and cannot reach unanimous agreement to approve the dissertation, the Graduate School's Policy on Dissenting Votes will apply.

Teaching Requirements

Students in the PhD program will receive formal pedagogical training by attending a minimum of two Teaching Workshops offered by the Washington University Teaching Center (http://teachingcenter.wustl.edu/graduate-students/workshops). They will be expected to fulfill the teaching requirements of their designated administrative home department. The teaching requirements must be completed before the student submits their doctoral dissertation to the Graduate School.

Materials Science & Engineering

The Institute of Materials Science & Engineering (IMSE) at Washington University in St. Louis offers a unique, interdisciplinary PhD in Materials Science & Engineering that crosses traditional departmental and school boundaries. The field of materials science and engineering focuses on the study, development and application of new materials with desirable properties, with the goal of enabling new products and superior performance regimes. Disciplines in the physical sciences (e.g., chemistry, physics) frequently play a central role in developing the fundamental knowledge that is needed to design materials for a variety of engineering applications (e.g., mechanical engineering, electrical engineering, biomedical engineering). Building on training that spans from fundamental-to-applied sciences, materials scientists and engineers integrate this fundamental knowledge in order to develop new materials and match them with appropriate technological needs.

The IMSE is well positioned to address the needs of a student seeking a truly interdisciplinary experience. The IMSE brings together a diverse group of faculty from departments in Arts & Sciences, the McKelvey School of Engineering, and the School of Medicine. The IMSE also oversees shared research and instrument facilities, develops partnerships with industry and national facilities, and facilitates outreach activities.

Current focused areas of research and advanced graduate education within the IMSE include the following:

- Biomedical, bio-derived and bio-inspired materials
- Materials for energy generation, harvesting and storage
- Materials for environmental technologies and sustainability
- Materials for sensors and imaging
- Nanomaterials and glasses
- Optoelectronic, low-dimensional, and quantum materials

Faculty

Director

Katharine M. Flores  
Professor - Mechanical Engineering & Materials Science  
PhD, Stanford University

Professor Flores' primary research interest is the mechanical behavior of structural materials, with particular emphasis on understanding structure-processing-property relationships in bulk metallic glasses and their composites.
**Professors**

**Richard Axelbaum** ([https://engineering.wustl.edu/Profiles/Pages/Richard-Axelbaum.aspx](https://engineering.wustl.edu/Profiles/Pages/Richard-Axelbaum.aspx))
The Stifel & Quinette Jens Professor of Environmental Engineering Science  
PhD, University of California, Davis  
Rich Axelbaum studies combustion phenomena, ranging from oxy-coal combustion to flame synthesis of nanotubes. His studies of fossil fuel combustion focus on understanding the formation of pollutants, such as soot, and then using this understanding to develop novel approaches to eliminating them. Recently, his efforts have been focused on addressing global concerns over carbon dioxide emissions by developing approaches to carbon capture and storage.

**Pratim Biswas** ([https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx](https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx))  
Lucy & Stanley Lopata Professor & Department Chair - Energy, Environmental & Chemical Engineering  
PhD, California Institute of Technology  
Professor Biswas's research interests include aerosol science and engineering; nanoparticle technology; air quality engineering; environmentally benign energy production; combustion; materials processing for environmental technologies; environmentally benign processing; environmental nanotechnology; and the thermal sciences.

**William Buhro** ([https://chemistry.wustl.edu/people/william-buhro](https://chemistry.wustl.edu/people/william-buhro))  
George E. Pake Professor in Arts & Sciences and Department Chair - Chemistry  
PhD, University of California, Los Angeles  
Professor Buhro's areas of interest include synthetic inorganic and materials chemistry; optical properties of semiconductor nanocrystals, including quantum wires, belts and platelets; metallic nanoparticles; magic-size nanoclusters; nanoparticle growth mechanisms; and charge and energy transport in nanowires.

**Shantanu Chakrabartty** ([https://engineering.wustl.edu/Profiles/Pages/Shantanu-Chakrabartty.aspx](https://engineering.wustl.edu/Profiles/Pages/Shantanu-Chakrabartty.aspx))  
Professor - Electrical & Systems Engineering  
PhD, Johns Hopkins University  
Shantanu Chakrabartty’s research explores new frontiers in unconventional analog computing techniques using silicon and hybrid substrates. His objective is to approach the fundamental limits of energy efficiency, sensing and resolution by exploiting computational and adaptation primitives inherent in the physics of devices, sensors and the underlying noise processes. Professor Chakrabartty is using these novel techniques to design self-powered computing devices, analog processors and instrumentation with applications in biomedical and structural engineering.

**Guy Genin** ([https://engineering.wustl.edu/Profiles/Pages/Guy-Genin.aspx](https://engineering.wustl.edu/Profiles/Pages/Guy-Genin.aspx))  
Harold and Kathleen Faught Professor of Mechanical Engineering  
PhD, Harvard University  
Guy Genin studies interfaces and adhesion in nature, physiology, and engineering. His current research focuses on interfaces between tissues at the attachment of tendon to bone, between cells in cardiac fibrosis, and between protein structures at the periphery of plant and animal cells.

**Jianjun Guan** ([https://engineering.wustl.edu/Profiles/Pages/Jianjun-Guan.aspx](https://engineering.wustl.edu/Profiles/Pages/Jianjun-Guan.aspx))  
Professor - Mechanical Engineering and Materials Science  
PhD, Zhejiang University  
Professor Guan's research interests are in biomimetic biomaterials synthesis and scaffold fabrication; bioinspired modification of biomaterials; injectable and highly flexible hydrogels; bioimageable polymers for MRI and EPR imaging and oxygen sensing; mathematical modeling of scaffold structural and mechanical properties; stem cell differentiation; neural stem cell transplantation for brain tissue regeneration; and bone and cardiovascular tissue engineering.

**Sophia E. Hayes** ([https://chemistry.wustl.edu/people/sophia-e-hayes](https://chemistry.wustl.edu/people/sophia-e-hayes))  
Professor - Chemistry  
PhD, University of California, Santa Barbara  
Professor Hayes studies physical inorganic chemistry; materials chemistry; solid-state NMR; magnetic resonance; optically-pumped NMR (OPNMR); semiconductors; quantum wells; magneto-optical spectroscopy; quadrupolar NMR of thin films and tridecameric metal hydroxide clusters and thin films; carbon capture, utilization and storage (CCUS); CO₂ geosequestration; CO₂ capture; in situ NMR; and metal carbonate formation.

**Kenneth F. Kelton** ([https://physics.wustl.edu/people/kenneth-f-kelton](https://physics.wustl.edu/people/kenneth-f-kelton))  
Arthur Holly Compton Professor of Arts & Sciences - Physics  
PhD, Harvard University  
Professor Kelton is involved in the study and production of titanium-based quasicrystals and related phases; fundamental investigations of time-dependent nucleation processes; modeling of oxygen precipitation in single crystal silicon; structure of amorphous materials; relation between structure and nucleation barrier; and hydrogen storage in quasicrystals.

**Harold Li** ([https://radonc.wustl.edu/faculty/harold-li](https://radonc.wustl.edu/faculty/harold-li))  
PhD, Friedrich-Alexander-Universität Erlangen-Nürnberg, Germany  
Associate Professor - Radiation Oncology  
Harold Li's research lab, funded by the NIH since 2008, develops high-resolution dosimetry systems for radiation therapy dosimetry. In addition, he leads the MRgRT group in developing
both experimental and computational methods for radiation therapy patient dosimetry subject to a permanent magnetic field.

Vijay Ramani
(https://engineering.wustl.edu/Profiles/Pages/Vijay-Ramani.aspx)
Roma B. & Raymond H. Wilkoff Distinguished University Professor of Environment & Energy
PhD, University of Connecticut

Vijay Ramani's research interests lie at the confluence of electrochemical engineering, materials science, and renewable and sustainable energy technologies. The National Science Foundation, Office of Naval Research, and Department of Energy have funded his research, with mechanisms including an NSF CAREER award (2009) and an ONR Young Investigator Award (ONR-YIP; 2010).

Srikanth Singamaneni
(https://engineering.wustl.edu/Profiles/Pages/Srikanth-Singamaneni.aspx)
Professor - Mechanical Engineering & Materials Science
PhD, Georgia Institute of Technology

Professor Singamaneni's research interests include plasmonic engineering in nanomedicine (in vitro biosensing for point-of-care diagnostics, molecular bioimaging, nanotherapeutics); photovoltaics (plasmonically enhanced photovoltaic devices); surface-enhanced Raman scattering (SERS)-based chemical sensors, with particular emphasis on the design and fabrication of unconventional and highly efficient SERS substrates; hierarchical organic/inorganic nanohybrids as multifunctional materials; bioinspired structural and functional materials; polymer surfaces and interfaces; responsive and adaptive materials; and scanning probe microscopy and surface force spectroscopy of soft and biological materials.

Lan Yang
(https://engineering.wustl.edu/Profiles/Pages/Lan-Yang.aspx)
Edwin H. & Florence G. Skinner Professor - Electrical & Systems Engineering
PhD, California Institute of Technology

Professor Yang's research interests are fabrication, characterization, and fundamental understanding of advanced nano-/micro-photonic devices with outstanding optical properties. Currently, her group focuses on the silicon-chip based ultra-high-quality micro-resonators made from spin-on glass. The spin-on glass is a kind of glass obtained by curing a special liquid using sol gel or wet chemical synthesis to form a layer of glass. The main advantage of the spin-on glass is the easy tailoring of the nano-/micro-structure of the glass by controlled variation in the precursor solutions. It enables them to fabricate various nano-/micro-photonic devices from advanced materials with desired properties.

Assistant Professors

Damena Agonafer
(https://engineering.wustl.edu/Profiles/Pages/Damena-Aghonafer.aspx)
Assistant Professor - Mechanical Engineering & Materials Science
PhD, University of Illinois

Professor Agonafer's research interests include the areas of phase routing strategies for chemical separation and phase change heat transfer processes as well as electrochemical storage applications. His research interest is at the intersection of thermal-fluid sciences, electrokinetics and interfacial transport phenomena, and renewable energy. His goal is to bring transformational changes in the areas related to electrochemical energy storage, cooling of high-powered micro and power electronics, and water desalination by tuning and controlling solid-liquid-vapor interactions at micro/nano length scales.

Peng Bai
(https://eece.wustl.edu/faculty/Pages/faculty.aspx?bio=122)
Assistant Professor - Energy, Environmental & Chemical Engineering
PhD, Tsinghua University, Beijing

Professor Bai's research focuses on the development of next-generation batteries. Knowledge and tools developed in the Bai Group also apply to and benefit the design of other electrochemical energy systems, like supercapacitors and fuel cells.

Alexander Barnes
(https://chemistry.wustl.edu/people/alexander-barnes)
Assistant Professor - Chemistry
PhD, Massachusetts Institute of Technology

Professor Barnes studies magnetic resonance; dynamic nuclear polarization; structural biology; rational drug design; HIV eradication; Alzheimer’s disease; cancer; electrical engineering; gyrotron technology; molecular biology; and biophysical chemistry.
**Mikhail Y. Berezin** (http://dbbs.wustl.edu/faculty/Pages/faculty_bio.aspx?SID=6263)
Assistant Professor - Radiology
PhD, Moscow Institute of Oil and Gas/Institute of Organic Chemistry

Professor Berezin's research interests lie in the investigation and application of molecular excited states and their reactions for medical imaging and clinical treatment. Excited states are the cornerstone of a variety of chemical, physical and biological phenomena. The ability to probe, investigate and control excited states is one of the largest achievements of modern science. The lab focuses on the development of novel, optically active probes ranging from small molecules to nanoparticles as well as the development of optical instrumentation for spectroscopy and imaging and their applications in medicine.

**Rajan Chakrabarty** (https://engineering.wustl.edu/Profiles/Pages/Rajan-Chakrabarty.aspx)
Assistant Professor - Energy, Environmental & Chemical Engineering
PhD, University of Nevada, Reno

Rajan Chakrabarty's research focuses on two distinct themes: (1) investigating the role of atmospheric aerosols in earth's energy balance using novel instrumentation, diagnostic techniques and numerical models; and (2) understanding aerosol formation in combustion systems toward the synthesis of high-porosity and surface-area materials for energy applications.

**Julio D'Arcy** (https://chemistry.wustl.edu/people/julio-m-darcy)
Assistant Professor - Chemistry
PhD, University of California, Los Angeles

The overarching goals of the D'Arcy laboratory are to discover and apply novel functional nanostructured organic and inorganic materials utilizing universal synthetic chemistry protocols that control chemical structure, nanoscale morphology, and intrinsic properties. We are interested in capacitive and pseudocapacitive nanostructured materials such as conducting polymers, metal oxides, and carbon allotropes possessing enhanced chemical and physical properties (i.e., charge carrier transport, ion transport, surface area, thermal and mechanical stability). Our concerted material discovery process is a multipronged approach; organic and inorganic nanostructured materials are synthesized via solution processing, electrochemistry, vapor phase deposition, and combinations thereof. Alternatively, we also develop self-assembly techniques that result in tailored materials.

**Marcus Foston** (https://engineering.wustl.edu/Profiles/Pages/Marcus-Foston.aspx)
Assistant Professor - Energy, Environmental & Chemical Engineering
PhD, Georgia Institute of Technology

Professor Foston's research objective is to create a top-tier, world-recognized research program in the research and education of emerging technologies for the exploitation of lignocellulosic biomass — in particular, the lignin fraction of biomass — as a sustainable source for energy, chemicals and materials production.

**Erik Henriksen** (https://physics.wustl.edu/people/erik-henriksen)
Assistant Professor - Physics
PhD, Columbia University

We are an experimental condensed matter research lab with interests primarily in the quantum electronic properties of graphene and other novel two-dimensional systems. We utilize state-of-the-art nanofabrication techniques in combination with measurements made at low temperatures and high magnetic fields to explore both the fundamental electronic structures and emergent quantum phenomena of low-dimensional materials.

**Nathaniel Huebsch** (https://imse.wustl.edu/people/nathaniel-huebsch)
Assistant Professor - Biomedical Engineering
Professor Huebsch's research focus is in basic and translational stem cell mechanobiology, with specific focus on hydrogels to control cell-mediated tissue repair and 3D heart-on-a-chip models derived from human-induced pluripotent stem cells.

**Matthew Lew** (https://engineering.wustl.edu/Profiles/Pages/Matthew-Lew.aspx)
Assistant Professor - Electrical & Systems Engineering

Professor Lew and his students build advanced imaging systems to study biological and chemical systems at the nanoscale, leveraging innovations in applied optics, signal and image processing, design optimization, and physical chemistry. Their advanced nanoscopes (microscopes with nanometer resolution) visualize the activity of individual molecular machines inside and outside living cells. Examples of new technologies developed in the Lew Lab include (1) using tiny fluorescent molecules as sensors that can detect amyloid proteins; (2) designing new “lenses” to create imaging systems that can visualize how molecules move and tumble; and (3) new imaging software that minimizes artifacts in super-resolution images.

**Mark Meacham** (https://engineering.wustl.edu/Profiles/Pages/Mark-Meacham.aspx)
Assistant Professor - Mechanical Engineering & Materials Science
PhD, Georgia Institute of Technology

Mark Meacham's research interests include microfluidics, microelectromechanical systems (MEMS), and associated transport phenomena, with application to the design, development, and testing of novel energy systems and life sciences tools, from scalable micro-/nano-technologies for improved heat and mass exchangers to MEMS-based tools for the manipulation and investigation of cellular processes. He is also interested in the behavior of jets and/or droplets of complex fluids during ejection from microscopic orifices, which is critical to applications
as disparate as biological sample preparation and additive manufacturing.

**Rohan Mishra** ([https://engineering.wustl.edu/Profiles/Pages/Rohan-Mishra.aspx](https://engineering.wustl.edu/Profiles/Pages/Rohan-Mishra.aspx))  
Assistant Professor - Mechanical Engineering & Materials Science  
PhD, Ohio State University

In his lab at Washington University, Professor Mishra plans to identify and develop a quantitative measure of structure-property correlations in materials (e.g., epitaxial thin films and materials with reduced dimensionality) using a synergistic combination of scanning transmission electron microscopy and atomic-scale theory to create the rational design of materials with properties tailored for electronic, magnetic, optical and energy applications.

**Ryan Ogliore** ([https://physics.wustl.edu/people/ryan-ogliore](https://physics.wustl.edu/people/ryan-ogliore))  
Assistant Professor - Physics  
PhD, California Institute of Technology

Professor Ogliore's research group uses microanalytical techniques to study extraterrestrial materials in order to better understand the formation and evolution of our solar system as well as other stars.

**Jai Rudra** ([https://engineering.wustl.edu/Profiles/Pages/Jai-Rudra.aspx](https://engineering.wustl.edu/Profiles/Pages/Jai-Rudra.aspx))  
Assistant Professor - Biomedical Engineering

Jai Rudra's lab is interested in the development of nanoscale biomaterials such as nanofibers, nanoparticles, virus-like particles, and hydrogels for engaging the immune system to induce protective antibody and cell-mediated immune responses against diseases such as tuberculosis, melanoma and flavivirus infections (i.e., West Nile and Zika). He is also investigating the development of vaccines against drugs of addiction such as cocaine. Biomaterials immunoengineering is a multidisciplinary field that lies at the intersection of materials science, chemistry, immunology and vaccinology. Professor Rudra’s lab collaborates with virologists, immunologists, and clinicians not only to develop synthetic vaccination platforms but also to understand how biomaterials interact with the immune system and continue to develop novel materials and creative tools to tackle multidisciplinary problems in vaccine development and immunotherapy.

**Bryce Sadtler** ([https://chemistry.wustl.edu/people/bryce-sadtler](https://chemistry.wustl.edu/people/bryce-sadtler))  
Assistant Professor - Chemistry  
PhD, University of California, Berkeley

The Sadtler research group seeks to understand and control structure-property relationships in adaptive, mesostructured materials. Through hierarchical design of the atomic composition, nanoscale morphology, and mesoscale organization of the individual components, we can direct the emergent chemical reactivity and physical properties of these complex systems. Research projects combine solution phase growth techniques to synthesize inorganic materials, external fields to control the growth and assembly of mesoscale architectures, and super-resolution imaging to provide spatiotemporal maps of the optical response and photocatalytic activity during the morphological evolution of these structures. Knowledge gained from these fundamental studies will be used to create functional materials, including plasmonic substrates that enhance absorption in thin-film semiconductors, mesostructured photocatalysts for solar fuels generation, and chemical sensors based on self-assembled photonic structures.

**Simon Tang** ([http://www.orthoresearch.wustl.edu/content/Laboratories/3043/Simon-Tang/Tang-Lab/Overview.aspx](http://www.orthoresearch.wustl.edu/content/Laboratories/3043/Simon-Tang/Tang-Lab/Overview.aspx))  
Assistant Professor - Orthopaedics  
PhD, Rensselaer Polytechnic Institute

With the overall theme of understanding the biological regulation of skeletal matrix quality, our research group integrates engineering and biology approaches for (1) understanding the effect of disease mechanisms on the structure-function relationships of skeletal tissues and (2) developing translatable therapeutic and regenerative strategies for these diseases. The investigation of these scientific questions includes the application of finite element analyses, multiscale tissue mechanics, and the functional imaging of skeletal tissues for regenerative medicine with in vitro and in vivo biological systems.

**Elijah Thimsen** ([https://engineering.wustl.edu/Profiles/Pages/Elijah-Thimsen.aspx](https://engineering.wustl.edu/Profiles/Pages/Elijah-Thimsen.aspx))  
Assistant Professor - Energy, Environmental & Chemical Engineering  
PhD, Washington University

The Interface Research Group focuses on advanced gas-phase synthesis of nanomaterials for energy applications. We are currently exploring nonthermal plasma synthesis and atomic layer deposition. The goal is to discover and then understand useful interfacial phenomena. Examples of applications that we are currently interested in include transparent conducting oxides, photovoltaics, lithium-sulfur batteries, and coatings for high-temperature combustion.

**Chuan Wang** ([https://engineering.wustl.edu/Profiles/Pages/Chuan-Wang.aspx](https://engineering.wustl.edu/Profiles/Pages/Chuan-Wang.aspx))  
Assistant Professor - Electrical and Systems Engineering

Chuan Wang’s focus areas of research include (1) flexible and stretchable electronics for displaying, sensing and energy harvesting applications; (2) low-cost additive manufacturing of flexible and stretchable electronics using inkjet printing; and (3) high-performance nanoelectronics and optoelectronics using 2D semiconductors.

**Patricia Weisensee** ([https://mems.wustl.edu/faculty/Pages/default.aspx?bio=112](https://mems.wustl.edu/faculty/Pages/default.aspx?bio=112))  
Assistant Professor - Mechanical Engineering & Materials Science  
PhD, University of Illinois at Urbana-Champaign
Patricia Weisensee's work focuses on the interaction of liquids and micro- and nano-structured solids. Her research is both fundamental and applied and spans a wide range of applications in the fluid and thermal sciences, from droplet impact over phase change heat transfer to electronics cooling.

**Degree Requirements**

**Interdisciplinary PhD in Materials Science & Engineering**

To earn a PhD degree, students must complete the Graduate School requirements, along with specific program requirements. Courses include the following:

- Four IMSE Core Courses (12 credits)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MEMS 5608</td>
<td>Introduction to Polymer Science and Engineering</td>
<td>3</td>
</tr>
<tr>
<td>Physics 537</td>
<td>Kinetics of Materials</td>
<td>3</td>
</tr>
<tr>
<td>EECE 502</td>
<td>Advanced Thermodynamics in EECE</td>
<td>3</td>
</tr>
<tr>
<td>Chem 465</td>
<td>Solid-State and Materials Chemistry</td>
<td>3</td>
</tr>
<tr>
<td>or Physics 472</td>
<td>Solid State Physics</td>
<td></td>
</tr>
</tbody>
</table>

Total Units 12

- IMSE 500 First-Year Research Rotation (3 credits)
- Three courses (9 credits) from a preapproved list of Materials Science & Engineering electives
- A minimum of 12 credits of graduate-level technical elective courses in Mathematics or any science or engineering department, to reach a total of at least 36 academic credits
  - A maximum of 3 credits of IMSE 502 Independent Study will be permitted toward the free electives requirement.
  - A maximum of 2 credits of IMSE 505 Material Science Journal Club will be permitted toward this requirement.
  - Any 400-level courses not included on the preapproved list of Materials Science & Engineering electives must be approved by the Graduate Studies Committee.
- A maximum of 12 credits of 400-level courses may be applied toward the required 36 academic credits. Undergraduate-only courses (below the 400 level) are generally not permitted by the Graduate School and may not be used to fulfill this requirement.
- IMSE 501 IMSE Graduate Seminar every semester of full-time enrollment
- 18 to 36 credits of IMSE 600 Doctoral Research (Students must identify an IMSE faculty member willing and able to support their thesis research on a materials-related topic.)
- Students must maintain a grade-point average of at least 3.0 for all graded courses and have no more than one grade of B- or below in a core course or a Materials Science & Engineering elective.

**Additional program requirements include the following:**

- Complete research ethics training by the end of the third semester
- Successfully complete teaching requirements
  - Attend two or more Teaching Center Workshops
  - Complete 15 units of mentored teaching experience
- Pass the IMSE Qualifying Examination (oral and written components)
- Maintain satisfactory research progress on a topic in materials science, as determined by the thesis adviser and the mentoring committee
- Successfully complete the thesis proposal and presentation, with approval from the thesis examination committee
- Successfully complete and defend a PhD dissertation, with final approval from the thesis examination committee

**Failure to meet these requirements will result in dismissal from the program.**

**Course Plan**

**Year 1**

**Fall Semester (13 credits)**

- Advanced Thermodynamics in EECE (EECE 502)
- Introduction to Polymer Science and Engineering (MEMS 5608)
- IMSE Independent Study (IMSE 502) or elective
- IMSE Graduate Seminar (IMSE 501)
- Elective (optional)

**Spring Semester (13 credits)**

- Solid-State and Materials Chemistry (Chem 465)
- Kinetics of Materials (Physics 537)
- Elective (optional)
- IMSE First-Year Research Rotation (IMSE 500)
- IMSE Graduate Seminar (IMSE 501)

**Summer**

- Begin thesis research
- Prepare for IMSE Qualifying Examination (August)
  - Written document and oral presentation on research rotation
- Oral examination on fundamentals from core courses

**Years 2 and Beyond**

- Electives (discuss with PhD adviser)
- IMSE Graduate Seminar (IMSE 501)
- Doctoral Research (IMSE 600)
- Teaching requirements
• Attend two or more Teaching Center Workshops
• Complete 15 units of mentored teaching experience
• Regular meetings (at least twice per year) with the faculty mentoring committee
• Thesis proposal and presentation (fifth semester)
• Dissertation and oral defense

**Mechanical Engineering & Materials Science**

The Department of Mechanical Engineering & Materials Science offers a PhD in either Mechanical Engineering or Aerospace Engineering. The department's research strengths include biomechanics, materials, energy, fluid mechanics and rotary-wing aerodynamics. The doctoral student, with their adviser, designs the program of study and the research project. The dissertation is defended at the end of the research effort. A typical time to PhD after an undergraduate engineering degree is four to five years, but the length of the program may vary depending on the individual and the area of study.

PhD, University of Illinois at Urbana-Champaign  
Computational fluid dynamics and computational physics

J. Mark Meacham (https://engineering.wustl.edu/Profiles/Pages/Mark-Meacham.aspx)  
PhD, Georgia Institute of Technology  
Micro-/nanotechnologies for thermal systems and the life sciences

Rohan Mishra (https://engineering.wustl.edu/Profiles/Pages/Rohan-Mishra.aspx)  
PhD, Ohio State University  
Computational materials science
Professors of the Practice

Harold J. Brandon
DSc, Washington University
Energetics, thermal systems

Swami Karunamoorthy
DSc, Washington University
Helicopter dynamics, engineering education

Teaching Professor

Emily J. Boyd
PhD, University of Texas at Austin
Thermofluids

Joint Faculty

Richard L. Axelbaum (EECE)
Stifel & Quinette Jens Professor of Environmental Engineering Science
PhD, University of California, Davis
Combustion, nanomaterials

Elliot L. Elson (Biochemistry and Molecular Biophysics)
Professor Emeritus of Biochemistry & Molecular Biophysics
PhD, Stanford University
Biochemistry and molecular biophysics

Michael D. Harris (Physical Therapy, Orthopaedic Surgery and MEMS)
PhD, University of Utah
Whole body and joint-level orthopaedic biomechanics

Kenneth F. Kelton (Physics)
Arthur Holly Compton Professor of Arts & Sciences
PhD, Harvard University
Study and production of titanium-based quasicrystals and related phases

Senior Professors

Phillip L. Gould
PhD, Northwestern University
Structural analysis and design, shell analysis and design, biomechanical engineering

Kenneth L. Jerina
DSc, Washington University
Materials, design, solid mechanics, fatigue and fracture

Salvatore P. Sutera
PhD, California Institute of Technology
Viscous flow, bio Rheology

Barna A. Szabo
PhD, State University of New York–Buffalo
Numerical simulation of mechanical systems, finite-element methods

Lecturers

Sharniece Holland
PhD, University of Alabama
Additive manufacturing and mathematics

Jeffery Krampf
MS, Washington University in St. Louis
Fluid mechanics, modeling, and design

J. Jackson Potter
PhD, Georgia Institute of Technology
Senior design
H. Shaun Sellers  
PhD, Johns Hopkins University  
Mechanics and materials

Louis G. Woodhams  
BS, University of Missouri-St. Louis  
Computer-aided design

Senior Research Associate

Ruth J. Okamoto  
DSc, Washington University  
Biomechanics, solid mechanics

Adjunct Instructors

Ricardo L. Actis  
DSc, Washington University  
Finite element analysis, numerical simulation, aircraft structures

Robert G. Becnel  
MS, Washington University  
FE Review

John D. Biggs  
MEng, Washington University  
Thermal science

Andrew W. Cary  
PhD, University of Michigan

Mechanical Engr. design

Professor Emeritus

Wallace B. Diboll Jr.  
MSME, Rensselaer Polytechnic Institute  
Dynamics, vibrations, engineering design

Degree Requirements

PhD in Mechanical Engineering or Aerospace Engineering

Policies & Regulations

A key objective of the doctoral program is to promote cutting-edge multidisciplinary research and education in the areas of mechanical engineering and materials science. Students are selected for admission to the program by a competitive process, and they typically start in the fall semester. On arriving at Washington University in St. Louis, the student will be advised by the temporary adviser on all procedural issues. The student will choose a permanent adviser by the end of the first year of residency in the program.

Summary of Requirements for Doctoral Students

The following is a brief summary of the requirements for students in the Mechanical Engineering & Materials Science doctoral programs:

1. Pass the qualifying exams. Qualifying exams should be taken by the end of the third semester.
2. Prepare and defend a research proposal. The research proposal should be defended by the end of the fifth semester.
3. Write and successfully defend the doctoral dissertation.
4. Complete a minimum of 36 hours of course credit and a minimum of 24 credits of doctoral research; a total of 72 credits is required to earn the PhD degree.
5. Satisfy the applicable teaching requirements of the Graduate School.
Degrees Offered

The Department of Mechanical Engineering & Materials Science (MEMS) offers the following doctoral degrees:

- PhD in Mechanical Engineering
- PhD in Aerospace Engineering
- DSc in Mechanical Engineering, Aerospace Engineering, or Materials Science

The Doctor of Science (DSc) has similar requirements to the PhD but without the teaching requirement. For a list of differences, please refer to the DSc and PhD Comparison (PDF) (https://mems.wustl.edu/graduate/programs/Documents/DoctoralComparisonSection.pdf).

- One may also pursue a PhD in Materials Science — through the Institute of Materials Science & Engineering (IMSE) — while working with professors from the Department of Mechanical Engineering & Materials Science. For details about this program, visit the IMSE Graduate Program (http://imse.wustl.edu/graduate-program) webpage.

For more information about MEMS PhD degrees, visit the MEMS Graduate Degree Programs (https://mems.wustl.edu/graduate/programs/Pages/default.aspx) webpage.

English

The Department of English offers the degrees of Master of Arts (AM) and Doctor of Philosophy (PhD) in English and American Literature and Doctor of Philosophy (PhD) in English and Comparative Literature. Candidates for admission apply to the PhD program; we do not accept students for a terminal AM. The PhD is a six-year program.

The graduate program in English and American literature at Washington University in St. Louis is innovative, approachably sized and generously funded, with all incoming students receiving full tuition scholarships plus University Fellowships. Our faculty includes Guggenheim Fellows, winners of the National Book Critics Circle Award and members of the American Academy of Arts and Sciences. As a participant in the Carnegie Initiative on the Doctorate, we exemplify an integrated community of scholars and writers, and are home to one of the top ten MFA programs in the United States. We sponsor multiple reading groups, regular faculty and student colloquia, and an extensive lecture series. The Hurst Visiting Professorship brings eight or more distinguished creative and critical voices to the department each year. Recent Hurst Professors have included Jerome McGann, Jed Esty, Charles Altieri, Carla Kaplan, Michael Wood, James Longenbach, Peter Coviello, Daniel Vitkus, Rita Felski and Rita Copeland. These professors present public talks, and they also lead small workshops open only to graduate students.

Our program is rooted in the materials of literary history, from medieval to post-postmodern times, and we embrace the importance of interdisciplinarity. We believe that intellectual community is fostered by concrete working relationships between professors and students, and we offer collaborative teaching opportunities with experienced faculty. Graduate students in good standing can expect six years of full funding in all.

### Degree Requirements

**PhD in English and American Literature or English and Comparative Literature**

The AM/PhD program in English at Washington University in St. Louis is a six-year course of study leading to a doctorate in English and American Literature or in English and Comparative Literature. All English graduate students take a minimum of 12 elective 3-credit courses at the 400 or 500 level, along with two compulsory classes: Introduction to Graduate Study and Practicum in the Teaching of Composition. Aside from these two classes, there are no specific course requirements, although students must take at least two courses in historical periods before 1780 (not in the same period) and at least two in historical periods after 1780 (again, not in the same period).

For students entering in the fall semester of 2014 and after, at least six of the 12 elective courses must be 500-level, graduate-only seminars; four such 500-level seminars must be taken by students who entered in the fall of 2013 or before. Students are encouraged to enroll in courses of special interest in other departments or programs, whether or not they are cross-listed with the English department; however, at least eight of their 12 electives must be home-based English courses, including (save in exceptional cases) at least six of their seminars.

The English department requires a minimum of competency in one foreign language, ancient or modern, for all doctoral candidates. “Competency” is understood as a basic comprehension of the grammar, structure and core vocabulary of a language. Native speakers of another language or students who have had two full years of undergraduate language study with a grade average of B+ or better will be considered to have satisfied the competency requirement. Other students may demonstrate competency either by taking an introductory reading course designed for graduate students or by passing a translation exam administered by the appropriate language department.

It is assumed that all entering graduate students are aiming for the PhD; the English department does not admit students aiming...
for a terminal AM degree. The AM is awarded during the course of study when a student has completed 36 credit hours, usually at the end of the second year. To satisfy the Graduate School requirement of demonstrated excellence, candidates for the AM may also be asked to submit a graded seminar essay (or the equivalent) for review by the English Graduate Committee.

Students entering the program with a master's degree in hand normally follow the standard first-year curriculum. At the end of their third semester, the director of graduate studies will review their AM credits taken elsewhere and determine how many credits (normally a limit of 9-12) may be applied toward the PhD at Washington University. Although students receiving transfer credit may be able to complete the PhD in fewer than six years, it is to their advantage to enter the program as first-year students, since this ensures them four full semesters of study without teaching responsibilities. If, after three semesters and the review of transfer credit, the director of graduate studies determines that the student has fulfilled the course requirements for the PhD, the student may elect not to take classes in semester four and instead begin major field reading instead; their 6 credits of major field preparation during semester four will complete the requirements for the Washington University AM degree.

Students who wish to receive the combined PhD degree in English and Comparative Literature (http://english.artsci.wustl.edu/graduate/combined_phd) may do so by fulfilling the English department's requirements for combined degrees. More information about the combined degree may be found on the departmental website.

During the first seven semesters, credits are earned by taking courses, independent study and directed reading. More precisely, students complete 13 courses (39 credits) total across years one and two; the Practicum in Teaching (3 credits) in the fall of year three; 6 credits of directed reading in the spring of year three; and 6 credits of directed reading in the fall of year four.

**Film and Media Studies**

The program in Film and Media Studies (FMS) provides students who are interested in the history, criticism and theories of moving-image-based visual culture from the 19th through the 21st centuries an opportunity to extend their formal intellectual development and to explore film and electronic media as evolving global phenomena. The certificate and the master's degree in FMS advance a student's scholarly understanding of all forms of the moving image and their artistic, cultural, industrial, philosophical, political and social implications.

The certificate is by application and is open to PhD students in other academic units. It consists of 15 course units in FMS. Six units of the certificate may be counted in the student's PhD requirements. The master's degree emphasizes multiple approaches of academic study that may lead to curating, researching, teaching and other professional activities centered on film and other moving image media.

Students already enrolled at Washington University with a major in FMS may wish to consider the master's program as part of an accelerated AB/AM option. Washington University students who are admitted in the combined AB/AM program may have up to 9 units of FMS course credit at the 400 level considered for application to the Master of Arts (AM) degree requirements. Students who are currently enrolled as undergraduates at Washington University and who are seeking the combined AB/AM degree should use the standard application form of the Graduate School to apply.

Students applying to the FMS master's program from outside of the university should follow the standard application procedures of the Graduate School (available on the Graduate School Forms webpage). Graduate Record Exam scores that indicate an aptitude for graduate study are required, and applicants will also need to supply strong letters of recommendation from three instructors who can speak to the applicant's academic skills relevant to graduate study in FMS. Applicants who have completed an undergraduate degree and who show outstanding promise in writing about film and media but who do not have a formal background in film/media studies may also be admitted. All applicants to the master's program in FMS should have a strong academic foundation in critical writing and thinking. At least one writing sample of no less than 3,000 words is required, and the applicant must also compose a letter of approximately 500 words describing their interest in FMS and how their intellectual background has prepared them for graduate study in FMS.

All applicants to the certificate, AB/AM, and master's degree programs in FMS are welcome to consult with the director of graduate studies about the application process.

**Phone:** 314-935-4056
**Email:** gstudlar@wustl.edu
**Website:** http://fms.artsci.wustl.edu/grad-programs

**Faculty**

**Director**
Gaylyn Studlar (http://fms.artsci.wustl.edu/people/gaylyn-studlar)
David May Distinguished Professor in the Humanities
PhD, University of Southern California

**Associate Professor**
Colin Burnett (http://fms.artsci.wustl.edu/people/colin-burnett)
PhD, University of Wisconsin-Madison
**Assistant Professors**

Reem Hilu (http://fms.artsci.wustl.edu/people/reem-hilu)
PhD, Northwestern University

Diane Wei Lewis (http://fms.artsci.wustl.edu/people/diane-wei-lewis)
PhD, University of Chicago

**Senior Lecturer**

Richard Chapman (http://fms.artsci.wustl.edu/people/richard-chapman)

**Lecturer**

John Powers (http://fms.artsci.wustl.edu/people/john-powers)

**Emeritus Professor**

William Paul (http://fms.artsci.wustl.edu/people/william-paul)
PhD, Columbia University

**Degree Requirements**

**Graduate Certificate in Film and Media Studies**

**Required courses for the graduate certificate:** 15 units

**Core Courses (9 units):**

- Film 501 Advanced Moving Image Analysis and Criticism (3 units)
- Film 421 Film Historiography (3 units) or Film 502 Seminar in History of Film and/or Electronic Media (rotating topics) (3 units)

One of the following theory courses is required as part of the core:

- Film 419 Theories of Mass Media (3 units)
- Film 420 Film Theory (3 units)
- Film 450 American Film Genres (3 units) (genre theory)
- Any 400- or 500-level course in film or electronic media theory

Certificate students also have two electives (6 units) that may be taken at the 400 or 500 level and developed in an advising plan, subject to the approval of the Film and Media Studies (FMS) adviser and of the director of graduate studies (DGS) of the student's home unit.

**Two Electives (6 units):**

Each 3-unit elective course in FMS must be at the 400 level or higher.

Electives may be courses that originate in FMS, that are cross-listed with FMS, or that are offered in another unit and approved by the student's FMS adviser.

A student may choose to take one independent study of 3 units (Film 500) with an FMS faculty member as an elective. This study should relate to a specialized topic mutually agreed upon by the student, their FMS adviser, and the chair of the graduate certificate program. Although students are expected to benefit from elective courses offered by FMS core and affiliated faculty, they may take other film-related courses offered by other departments and by faculty not affiliated with FMS. To be included in the graduate certificate courses, classes that fall within this category require approval by the student's adviser in FMS and their home unit's DGS.

**Master of Arts in Film and Media Studies**

**Course of Study**

Students must fulfill the basic requirements for the Master of Arts (AM) degree (p. 21) as set forth in this Graduate School Bulletin. In addition, AM candidates must take the course of study described below, which consists of 36 units of credit and a comprehensive examination.

There is one course of study for the AM in FMS. There is no thesis option for this degree. Students complete 36 semester units (12 courses) defined by the three areas listed below. During their final semester of courses, students take a comprehensive written examination and meet with the examining committee for an oral defense. The examining committee will consist of the DGS, the student's adviser, and one other faculty member who is either core or affiliated with FMS. These exams are based on reading and screening lists as well as on courses. The student must meet expectations for broad knowledge of the field appropriate for a master's degree student in the humanities. Normally, if the student expects a May graduation date, then they must complete the examinations by April 7 of the spring semester. All courses should be completed by the end of the semester in which the examination is scheduled.

Students should consult with the DGS during their first semester in the program to obtain the master's students' reading and screening list, and they should also consult regularly with their advisers. Students entering the program from outside the university should expect to take two years to finish the master's degree if they take 9 units per semester; it may take less time if they take more units per semester.

**Area I: Required Courses (15 units total)**

The requirements for Area I may be fulfilled through the following courses:

- **Visual Analysis**
  Film 501 Advanced Moving Image Analysis and Criticism

- **Moving Image Theory**
  Film 419 Theories of Mass Media or Film 420 Film Theory or Film 502 Seminar in Film and Media Theory (rotating topics)
that offers critical analyses of current films or bibliographic information addressing one area of research in the field. The practicum student might participate in other activities related to moving image exhibition, archival preservation or grant application writing. The practicum may also be oriented toward teaching, with the creation of a course syllabus and sample lectures delivered by the graduate student in a venue organized by faculty.

Students may initiate other projects, but any practicum requires a faculty mentor and, in circumstances in which there is a collaborating organization, a letter of endorsement of the practicum from the student's on-site supervisor at the organization. This supervisor will also provide a letter upon completion of the practicum detailing the student's work and its quality. The faculty adviser will award the grade for the practicum.

Germanic Languages and Literatures

The Department of Germanic Languages and Literatures offers a comprehensive program in the language, literature and culture — past and present — of Germany and German-speaking countries. Our faculty pursue a multiplicity of approaches in their research and offer seminars (https://german.wustl.edu/recent-seminars) that provide a healthy balance of theory and the history of German literature and culture. The department offers numerous opportunities for interdisciplinary study (https://german.wustl.edu/interdisciplinary-certificates), including a one-of-a-kind joint PhD program with Comparative Literature (p. 48) and an innovative certificate program that gives students the option of developing an expertise in one of six associated fields.

Both faculty and students teach and do research in a wide range of related disciplines, including art history; comparative literature; digital humanities; European studies; film and media studies; higher education administration; Jewish studies; Medieval and Renaissance studies; religious studies; and women, gender, and sexuality studies.

We consider international exchange to be a crucial component of graduate education. We maintain an exchange agreement on all levels (faculty, graduate and undergraduate) with the University of Tübingen, in addition to graduate student exchanges with the universities of Berlin, Cologne and Munich. These arrangements enable us to guarantee a year abroad for all of our PhD candidates. At the same time, they enrich our program by bringing German exchange students to campus to study and teach alongside the full-time students in our program. Exchange is further facilitated by the Max Kade Center (http://german.wustl.edu/max-kade-center), which, in addition to numerous other activities, plays host each spring to a writer- and a critic-in-residence. The department also invites a distinguished visiting professor to campus every other year.
Departmental faculty are known across campus and across the discipline for their close mentoring of graduate students, who are integrated into the department through their participation in numerous activities, from the graduate student symposium and the department’s biennial international symposium (https://german.wustl.edu/biennial-symposium) to outreach programs like German Day (http://german.wustl.edu/events/german-day). We also give close attention to instructor development through our unique pedagogy internships, through recurring workshops, and through a classroom mentoring program that ensures that all assistants in instruction receive feedback and advice from a large number of faculty members. Graduate students have the opportunity to teach in our undergraduate German program at all levels, in both German and English, and many also have a chance to teach courses or sections in other programs.

The combination of our extremely competitive funding packages and the low cost of living in St. Louis ensures that students have the resources they need to focus on their academic work. As a consequence, our graduate students not only produce first-rate dissertations (https://german.wustl.edu/recent-dissertations), they also go on to accept positions (http://german.wustl.edu/graduate/placement) at top research universities and liberal arts colleges across the country.

Their success is facilitated by the outstanding research collections available at the Washington University library (http://library.wustl.edu), including the Mike Lützeler Collection of Contemporary German Literature (https://libguides.wustl.edu/contemporarygermanliteraturecollection) and the Suhrkamp/Insel Collection (http://libguides.wustl.edu/c.php?g=47129&p=302734). Other resources include the Gontard Collection (18th to 20th centuries) in the Rare Book Collection of Olin Library, the internationally famous Reformation Collection at Concordia Seminary, and the Vatican Manuscript Collection at Saint Louis University. The Saint Louis Art Museum (http://www.slam.org) and the Washington University Mildred Lane Kemper Art Museum (http://kemperartmuseum.wustl.edu) have extensive holdings in German expressionist and contemporary art.

For questions about the graduate application process (https://german.wustl.edu/graduate-application-and-admissions), please contact our academic coordinator (https://german.wustl.edu/people/cecily-stewart-hawksworth), Cecily Stewart Hawksworth, or our director of graduate studies (https://german.wustl.edu/faculty-staff/gerhild-williams), Professor Gerhild Williams.

Faculty

Chair

Erin McGlothlin (https://german.wustl.edu/people/erin-mcglothlin)
Associate Professor of German
PhD, University of Virginia
Contemporary literature; Holocaust studies; Jewish studies; narrative theory

Endowed Professors

Paul Michael Lützeler (https://german.wustl.edu/people/paul-michael-lutzeler)
Rosa May Distinguished University Professor in the Humanities
Director of the Max Kade Center
(Fall 2019: On Leave)
PhD, Indiana University
Contemporary and exile literature; Romanticism; literary discourses on Europe

Lynne Tatlock (https://german.wustl.edu/people/lynne-tatlock)
Hortense and Tobias Lewin Distinguished Professor in the Humanities
(2019-20 Academic Year: On Leave)
PhD, Indiana University
17th-, 19th- & 20th-century novel and book history; gender; nationalism; translation

Gerhild Williams (https://german.wustl.edu/people/gerhild-williams)
Vice Provost
Barbara Schaps Thomas and David M. Thomas Professor in the Humanities
Associate Vice Chancellor for Academic Affairs
Director of Graduate Studies
PhD in Comparative Literature, University of Washington
Early modern German and French literature and culture; demonology; Ottoman Eurasia
Professor
Matt Erlin (https://german.wustl.edu/people/matt-erlin)
Professor of German
(Spring 2020: On Leave)
PhD, University of California, Berkeley
18th- & 19th-century German literature; intellectual history; digital humanities; material culture

Associate Professors
Caroline Kita (https://german.wustl.edu/people/caroline-kita)
(Fall 2019: On Leave)
PhD, Duke University
Austrian literature; Jewish studies; music and sound studies; theater

Christian Schneider (https://german.wustl.edu/people/christian-schneider)
(On Leave)
PhD, Heidelberg University
Medieval literature; narrative theory; courtly culture; history of knowledge

Assistant Professors
Kurt Beals (https://german.wustl.edu/people/kurt-beals)
PhD, University of California, Berkeley
20th- and 21st-century German literature and media; poetry; translation; experimentalism; digital media

André Fischer (https://german.wustl.edu/people/andr%C3%A9-fischer)
PhD, Stanford University
19th and 20th-century German literature and thought; European cinema; practices of modern myth-making; aesthetics of modernism; film philosophy

Lecturer
Mary Allison (https://german.wustl.edu/people/mary-allison)
PhD, University of Wisconsin-Madison

Postdoctoral Teaching Fellow
Claire Ross (https://german.wustl.edu/people/claire-ross)
PhD, Washington University
Migrant and minority discourses; intertextuality

Professor Emeritus
James Fitzgerald Poag (https://german.wustl.edu/people/james-fitzgerald-poag)
PhD, University of Illinois
Early and high Middle Ages; history of the German language; medieval Bible exegesis; medieval law and literature; medieval romance; middle high German; mysticism

Degree Requirements
Master of Arts (AM) in German and Higher Education Administration

The AM in German and Higher Education Administration (HEA) offers qualified students with a strong background in German the opportunity to combine advanced study of German language, literature and culture with courses in higher education administration. In its fusion of discipline-specific postgraduate study with practical career-oriented preparation in a rapidly growing area of higher education, the program enables students to develop new career paths while further expanding their knowledge of German language, literature and culture.

Program Requirements
The AM requires 24 graduate-level course units in German language and culture and at least 12 units of higher education administration and other relevant courses in psychological and brain sciences, statistics, education, business, social work, nonprofit management and other disciplines. Courses will be supplemented by internships with academic and administrative units on the Washington University campus and with other higher education institutions in North America or the German-speaking world. During the final semester of courses, the student will complete a capstone project.

Suggested Sequence of Courses
(actual course progression may follow a different schedule)

Fall semester, 1st year:
• Two graduate-level German courses (6 units)
• An elective related to HEA from a designated list (3 units)

Spring semester, 1st year:
• Two graduate-level German courses (6 units)
• Educ 4022 Higher Education Administration: History, Research, and Practice (3 units)
• Internship

Summer, after 1st year:
• Internship at a higher education institution, possibly in Germany or Austria (depending on student interest and objectives)

Fall semester, 2nd year:
• Two graduate-level German courses (6 units)
• An elective relating to HEA from a designated list (3 units)
• Internship

Spring semester, 2nd year:
• Two graduate-level German courses (6 units)
• Capstone project (3 units)
• Internship

**HEA Electives**
These electives must be chosen from an approved list of courses in psychological and brain sciences, statistics, education, business, social work, nonprofit management and other disciplines. At least one of the chosen electives must focus on management/leadership, financial management or legal issues in the field.

**Semester Internships**
Students in the program intern in various units on campus, and this results in a total of three Washington University internship experiences over the course of the degree. These internships in units such as Student Affairs, Residential Life, Admissions, and the College of Arts & Sciences entail approximately 10 to 15 hours of mentored engagement per week.

**Summer Internship**
For students with a strong interest in international education, the German department can (depending on adequate funding) provide opportunities for them to intern at another university or higher education institution in a German-speaking country. In other cases, it may be in the student's best interest to intern at a North American institution.

**Capstone Project**
During their last semester, each student produces an individual project (e.g., a research paper, a proposed initiative or program) under the guidance of a faculty member. Although this project does not have the same length or scope as a traditional AM thesis, it is considered a significant and meaningful capstone experience.

**PhD in Germanic Languages & Literatures**
A summary of program requirements is provided below.

*German students who are interested in our exchange programs should contact Cecily Stewart Hawksworth (cecyhawksworth@wustl.edu) for more information.*

**Courses**
The PhD requires 51 units of courses (including 36 AM credits) home-based in German. Students who complete interdisciplinary graduate certificates will be required to enroll in additional units as specified by the certificate-granting department or program. Students may not exceed 72 hours of course credit.

Each student must take courses in the full range of German literature and culture, and these will be chosen in consultation with the director of graduate studies. The following courses are required (exceptions are only possible upon review by the Graduate Committee):

• German 453 Theories of Literary and Cultural Analysis (3 units)
• German 456 History of the German Language (3 units)
• German 457 Introduction to Linguistics and the Structure of German (3 units)
• German 5051 Introduction to the Teaching of German (1 unit)
• German 5052 Teaching Practicum (1 unit)
• German 5053 Seminar in Theories of Foreign Language Pedagogy / Theories of Second Language Acquisition (2 units)
• German 5061 Apprenticeship in the Teaching of Literature and Culture I (1 unit)
• German 5062 Apprenticeship in the Teaching of Literature and Culture II (1 unit)

In addition, students are required to take one additional course in German literature prior to 1700.

These rules regarding required courses to be taken at Washington University apply to students joining the department with a bachelor's degree. Students entering with a master's degree may already have fulfilled some of these requirements. The fulfillment of Washington University requirements with courses completed elsewhere should be discussed with the director of graduate studies, who will make a determination about transfer units.

**Interdisciplinary Studies**
Graduate students may wish to take courses in areas other than German. Of special interest are graduate offerings in art history; comparative literature; English; the digital humanities; film and media studies; higher education administration; history; music; philosophy; romance languages; and women, gender, and sexuality studies.

Students interested in completing one of our interdisciplinary certificates are generally required to complete additional seminars.

**Examinations**
**Master’s Examination**
Students who enter with a bachelor's degree must complete an oral and written master’s examination at the end of their second year. A student's performance on the exam serves the faculty as one important element affecting the decision of whether the student will receive permission to proceed with their graduate studies.
Qualifying Examinations and Dissertation Proposal

Students taking the qualifying exams should display general knowledge and understanding of the primary materials, historical contexts, scholarly questions and theoretical frameworks that are likely to drive their future dissertations. This process consists of three parts: two written qualifying papers and the dissertation proposal. Students typically choose a team of three faculty members at the beginning of the process, and this team will guide them through the exam procedure and serve as their readers. In the first exam, the student is required to situate their primary materials and their author(s) in their respective historical contexts and periods, with specific points of emphasis to be determined together with their advising team. The second exam serves to frame the student’s primary materials in theoretical terms. Within two months after passing the second qualifying exam, the student is required to write a 10- to 15-page dissertation proposal and present it orally to their advising team.

Foreign Language Requirement

Students planning to work primarily on post-1700 materials must display reading proficiency in French. The requirement may be satisfied by examination or by enrolling in and successfully completing French 400-401. Students are strongly encouraged to pursue reading knowledge in languages other than French if necessary to conduct particular research for their dissertation.

Students planning to work on pre-1700 materials must pass a reading exam in Latin. Reading knowledge of French is also strongly encouraged.

Teaching

PhD candidates are required to complete a minimum of six semesters and a maximum of eight semesters of mentored teaching experiences (or the equivalent) at Washington University under the guidance of the pedagogy specialist.

For information beyond what is presented here, please contact our director of graduate studies, Gerhild Williams, by email at gerhildwilliams@wustl.edu.

History

The Department of History offers the Doctor of Philosophy (PhD) in History. Although the department offers any historical specialization covered by a tenured faculty member, it specializes in African history; American political culture; the ideas, culture and society of Central Europe; early modern Europe; East Asia; international urban history; the Middle East; religion in the medieval Mediterranean world; slavery and freedom in national and transnational contexts in 17th-through 19th-century America; and human rights and social justice in the modern United States. These core fields draw on the expertise of substantial segments of the faculty and provide significant opportunities for innovative graduate study that bridges conventional historical fields and fosters interdisciplinary research.

The graduate program admits only a small number of graduate students each year to promote a close working relationship between students and faculty. We invite applications from mature and self-directed students with well-defined research interests. Our seminars are small and flexible, and we encourage students to develop creative, self-tailored programs of doctoral study. The history department funds most doctoral candidates for six years at highly competitive levels and is committed to providing additional financial resources to support advanced research.

Our graduates are accomplished professionals in academia, private high schools, nonprofits, business and the public sector.

Assistant Professor of Modern Chinese History and Culture
PhD, Johns Hopkins University
(East Asian Languages and Cultures)
Degree Requirements

PhD in History

Requirements and Academic Assessment

Doctoral candidates ordinarily spend two to three full academic years in residence. Before the dissertation defense takes place, doctoral candidates must have completed 72 units of graduate credit. Over the course of their doctoral program, graduate students may not register for more than 72 units of credit without special consideration. Of the 72 required units, no more than 24 units may be transferred from previous graduate work elsewhere.

Languages and Quantitative Skills

Each graduate student's need for linguistic and quantitative skills is determined during their first semester in consultation with their adviser. This determination is subject to review by the Graduate Studies Committee. The student's examining committee will ascertain, by the time of the qualifying examination, that sufficient progress toward acquiring these skills for dissertation research has been made.

The minimum requirement is normally competence in the language of the documents or culture in which the student proposes to do dissertation research as well as competence either in one other language (other than English) or in the practice of a quantitative or other technical skill. Students normally demonstrate competency by successfully taking a particular course, by passing a translation examination, or by using foreign-language primary sources to write a research paper.

Grades

The performance of students in the Graduate School is marked by the grades A, B, C (Conditional) and F. The grade of C indicates unsatisfactory work and will be awarded academic credit only if matched by an equivalent number of units graded A. Plus or minus grades may be given, except for grades of B- or C+. Some courses may be graded S (Satisfactory) or F.

Graduate students should expect to earn a grade of A or A- as a mark of good progress through the program.
In such cases, requirements for the MA degree are as follows:

- Students must satisfactorily complete a minimum of 36 hours of credit. Because the department does not offer a separate MA degree, we do not require an MA thesis. Therefore, none of the required 36 hours will be awarded for thesis research.
- Students must successfully complete the course Literature of History (L22 5471).
- Students must develop expertise in two fields of historical study: one primary field and one secondary field.
- Students must pass an oral examination in these two fields of history.

**Academic Probation and Dismissal**

The Department of History closely follows the guidelines of the Graduate School of Arts & Sciences as described in the Policy on Probation and Dismissal for Academic Reasons.

All students in the PhD program are expected to satisfy the academic performance requirements of the Graduate School, which can be found in the General Requirements section of the Graduate School Bulletin.

---

**Annual Letters of Review and the Second-Year Review**

The history department uses annual letters of review and the second-year review to keep students informed about our expectations of their progress and to identify any problems. At the end of each academic year (except the second year), students receive annual letters of review based on the observations of all faculty members with whom they have worked during the academic year, whether in a class, in a directed readings course, or in a mentored teaching experience. The letters will identify any areas in which the student needs to improve and provide clear steps for addressing any concerns. In January of the second year, students receive a second-year review letter. The department uses the second-year review to identify students who are not performing at a satisfactory level. In consultation with the student’s primary adviser, the department then sets goals for that student to meet by the end of the second semester of the second year. If these goals are not met, then the student will not be allowed to proceed to the PhD qualifying examinations; instead, the student will be offered an opportunity to secure an MA degree before leaving the PhD program.

In such cases, requirements for the MA degree are as follows:

- Students must satisfactorily complete a minimum of 36 hours of credit. Because the department does not offer a separate MA degree, we do not require an MA thesis. Therefore, none of the required 36 hours will be awarded for thesis research.
- Students must successfully complete the course Literature of History (L22 5471).
- Students must develop expertise in two fields of historical study: one primary field and one secondary field.
- Students must pass an oral examination in these two fields of history.

**Additional History Department Requirements and Explanations**

A full-time graduate student is not allowed more than one incomplete per semester, and that incomplete must be removed by the end of the following semester. Within this requirement, faculty and students may wish to enter into contracts specifying conditions for the removal of the incomplete.

To remain in good standing, a student should take the qualifying examinations by the first semester of the fourth year, at the very latest.

The Department of History’s Graduate Studies Committee manages all departmental decisions regarding placement on probation, removal from probation, recommendations for dismissal after a probationary period, and recommendations for immediate dismissal due to extreme underperformance. The Graduate Studies Committee consists of the Director of Graduate Studies and three or four additional history department faculty members appointed by the chair of the history department at the beginning of each academic year.

Otherwise, there are no additional requirements beyond those of the Graduate School.

These guidelines will remain posted on the Department of History website (https://history.wustl.edu/graduate-requirements-grades), and hard copies will be distributed at the annual history department orientation for new PhD students held in August each year.

**Jewish, Islamic, and Middle Eastern Studies**

Jewish, Islamic, and Middle Eastern Studies is an academic department, unique in North America, in which Jewish Studies and Islamic Studies are integrated. It is an interdisciplinary department with the purpose of allowing students to explore the historical experience; the literary, religious and cultural expression; and the political and material life of the Jewish, Islamic and Middle Eastern civilizations. Whether students favor the study of language, literature, religion, history or politics, they will find in our courses a way to deepen their appreciation of these complex and diverse societies and cultures. Students will also be encouraged to explore the interaction of Jews and Muslims with neighboring societies and cultures in the Middle East, Europe, North Africa and other parts of the world.

The department offers both a Master of Arts in Jewish Studies and a Master of Arts in Islamic and Near Eastern Studies.

The department does not currently offer a home-based PhD program. Students who would like to pursue a PhD in one of the fields of Jewish Studies or Islamic and Near Eastern Studies may do so under the auspices of a PhD-granting department or program (e.g., History, Anthropology, Comparative Literature) in cooperation with participating faculty from Jewish, Islamic,
and Middle Eastern Studies. In such instances, the prospective student should apply directly to the appropriate disciplinary department or program at Washington University.

Professor of Spanish and Comparative Literature
PhD, Duke University
Degree Requirements

The Department of Jewish, Islamic, and Middle Eastern Studies at Washington University in St. Louis offers two terminal master's degrees: a Master of Arts in Jewish Studies (p. 107) and a Master of Arts in Islamic and Near Eastern Studies (p. 107). Although both programs have their own curricula, the department's integrated nature provides students with a unique opportunity to explore the shared experiences and interactions of Jews and Muslims in their various cultural and historical contexts. Both Master of Arts (AM) programs are two-year, full-time programs that foster breadth and depth of study and that include a graduation requirement of advanced language proficiency. Close mentoring relationships allow for tailoring a program of study to a student's specific interests and goals. Due to the excellence of our AM programs, many of our graduates have subsequently been accepted into highly prestigious PhD programs.

Master of Arts in Jewish Studies

The AM program in Jewish Studies offers students an opportunity for dedicated interdisciplinary study of the history, literatures and cultures of the Jewish people from biblical to modern times. It is designed for students who have some college-level preparation in the field and who wish to deepen their expertise in preparation for a PhD program. It is also well-suited for those planning on professional careers in education, law, publishing, business or social work. Our faculty offer graduate-level instruction in Islamic and Near Eastern history; Islam in world history; Islamic religion and law; the anthropology of Islam; premodern Muslim political theory and practice; Near Eastern urban studies; and both classical and modern Arabic literatures. Admission to the AM program normally requires proficiency in the Arabic language equivalent to one year of college-level study. After a typical two years of courses, students will be expected to have successfully completed third-year Arabic before receiving the AM degree.

Degree Requirements

• A minimum of 36 credits from graduate-level courses, which may include up to 6 units transferred from another institution (Note: First- and second-year language classes do not count toward these 30 credits.)
• The successful completion of third-year Arabic
• The ability to use Hebrew source material and scholarly articles as demonstrated in at least one major seminar paper
• A second major research paper to be written either in a second seminar or in an independent study supervised by one of the faculty associated with the program (Note: Students have the option of writing a master's thesis in place of the two major research papers; please refer to Policies and Timelines (p. 108) below.)
• At the end of the program of study, the successful completion of an oral examination, lasting no more than one hour, based on either the two research papers submitted (and revised) for this purpose or the master's thesis

Please note the departmental Policies and Timelines (p. 108) below.

Master of Arts in Islamic and Near Eastern Studies

The AM program in Islamic and Near Eastern Studies offers students an opportunity for dedicated interdisciplinary study of the history, literatures and cultures of the Middle East from the Middle Ages to the present. It is designed for students who ideally have some college-level preparation in the field and who wish to deepen their expertise in preparation for a PhD program. It is also well-suited for those planning on professional careers in education, law, publishing, business, government and private agencies whose work touches upon some aspect of Islamic and Near Eastern Studies. Our faculty offer graduate-level instruction in Islamic and Near Eastern history; Islam in world history; Islamic religion and law; the anthropology of Islam; premodern Muslim political theory and practice; Near Eastern urban studies; and both classical and modern Arabic literatures. Admission to the AM program normally requires proficiency in the Arabic language equivalent to one year of college-level study. After a typical two years of courses, students will be expected to have successfully completed third-year Arabic before receiving the AM degree.

Degree Requirements

• A minimum of 36 credits from graduate-level courses, which may include up to 6 units transferred from another institution (Note: First- or second-year language classes do not count toward these 30 credits.)
• The successful completion of third-year Arabic
• The ability to use Arabic source material and scholarly articles as demonstrated in at least one major seminar paper
A second major research paper to be written either in a second seminar or in an independent study supervised by one of the faculty associated with the program. **Note:** Students have the option of writing a master's thesis in place of the two major research papers; please refer to Policies and Timelines (p. 108) below.

At the end of their program of study, the successful completion of an oral examination, lasting no more than one hour, based on either the two research papers submitted (and revised) for this purpose or the master's thesis.

Please note the departmental Policies and Timelines (p. 108) below.

**Policies and Timelines Applying to Both AM Programs**

To complete our AM programs — including the third-year language requirement — within the typical course of two years, students need to be highly self-motivated and should develop close working relationships with their academic advisers. Students may elect to graduate **with** or **without** writing a master's thesis. The master's thesis, which is usually about 80 to 100 pages long, represents original work of highly polished quality and is significantly more substantive than a research paper. (For guidelines, please refer to the Master's Thesis Guide [http://graduateschool.wustl.edu/guides-0] issued by the Graduate School.) Instead of the thesis, students may decide to (re)submit and defend two significantly revised research papers written in the program, each of which should be at least 30 pages long.

**Master's students planning to graduate without a thesis:**

**Second Year**

- **First week of fall semester:** Meet with adviser to discuss graduation plans
- **First week of spring semester:** Meet with adviser to determine the two research papers, select the three members of the defense committee, agree on submission deadlines, and schedule the defense
- **End of March to Early April:** Oral defense

**Master's students planning to graduate with a thesis:**

**First Year**

- **End of spring semester:** Approach a primary thesis adviser (who may be [but does not have to be] the academic adviser)

**Second Year**

- **Fall and spring semesters:** Enroll in L75 JIMES 591 Directed Writing: Thesis

- **First week of spring semester:** Confirm a thesis committee of three readers, in conversation with the academic adviser, and schedule the oral defense
- **Friday before spring break:** Final draft of thesis due to thesis adviser
- **End of March to early April:** Oral defense

**Latin American Studies**

The **Graduate Certificate in Latin American Studies** offers Washington University students the opportunity to pursue a multidisciplinary specialization on this region of the world while completing their PhD degree. The certificate combines discipline-based learning with cultural studies, thus allowing for a rigorous approach to Latin America's social, economic and political history. At the same time, students are exposed to new theories and current debates on the topics of nation formation, governance, colonialism, development, regionalism, public health, modernization, globalization and neoliberalism.

At the national level, programs in Latin American Studies date back to the late 1940s, when the area studies paradigm became central to the internationalization of academic focus in the context of the Cold War. Today, as globalization has made internationalization an even more pressing concern, Latin American Studies is part of a new need for the better understanding of other world regions. In fact, Latin American countries consistently play an important role within the intellectual and political spheres of the United States. Latin America is the single largest source of immigrants to the United States today. It contains the third-largest trade partner of the United States (Mexico); one of the most vibrant emergent economies in the world (Brazil); countries that have been at the core of U.S. foreign policy for decades (Colombia, Venezuela, Cuba, and the Andean region, for instance); and a vibrant population and culture that are increasingly the focus of U.S. students.

**Application**

Students are required to apply to be considered for the certificate program, and their applications will be evaluated by the Graduate Certificate Committee on a rotating basis. This application is submitted at the beginning of the student's doctoral courses in Arts & Sciences and requires a support letter from the director of graduate studies of their PhD home department or program. The chair of the Graduate Certificate Committee will forward recommendations for admission to the dean of the Graduate School for final approval. All applicants to the certificate program are expected to be in good academic standing as defined by the Graduate School.

Degree Requirements

Graduate Certificate in Latin American Studies

Students interested in earning the Graduate Certificate in Latin American Studies must complete 15 graduate units. Six of those units may also count toward the PhD requirements with the prior approval of the PhD home department director of graduate studies. The graduate certificate is awarded concurrently with the PhD degree. Students in the Latin American Studies graduate certificate program must fulfill all requirements of the PhD required by their respective home departments and the Graduate School, in addition to the following certificate requirements:

Complete a total of 15 graduate credits:

• 3 credits from one (1) Latin American Studies program core course
• 3 credits from one (1) 400-level course from the Latin American Studies core program
• 9 credits from three (3) Latin American Studies program–related courses in at least two departments or schools outside the student's major department

Other requirements:

• Students must have proven proficiency in Spanish or Portuguese in accordance with the guidelines established by the Department of Romance Languages and Literatures.
• Students must spend at least one summer abroad conducting research in Latin American Studies.
• Students must participate actively in the Latin American Colloquium for at least one semester. This participation is to include the presentation of a research paper, which should ideally result from the summer research mentioned above.

Mathematics and Statistics

The Department of Mathematics and Statistics offers two master's degrees, one in Mathematics and one in Statistics, and two doctoral degrees, one in Mathematics and one in Statistics. The areas of study for Mathematics include algebra, algebraic geometry, real and complex analysis, differential geometry, and topology. The areas of study for Statistics are mathematical statistics, survival analysis, modeling, statistical computing for massive data, Bayesian regulation, bioinformatics, longitudinal and functional data analysis, statistical computation, asymptotic theory, objective Bayes, bootstrap, post-selection inference, and the application of statistics to medicine. Because it is difficult to make up coherent programs for students entering in the middle of the year, students are ordinarily admitted only in the fall. When they first arrive, graduate students have the opportunity to share common concerns and to become acquainted. One of the most attractive features of our program is the friendly and supportive atmosphere that develops among our graduate students. Advanced courses in the Washington University mathematics and statistics department can build on the common background shared by all students. As a result, these courses are richer and nearer to the level of PhD work than typical advanced courses.

Students typically complete the PhD program in five years. A student who comes here with advanced preparation may finish in less time. On the other hand, some students find that it is advisable for them to take preparatory math courses before attempting the qualifying courses. In special cases, the time schedule may be lengthened accordingly. Each student should...
plan to develop a close relationship with their thesis adviser so that the adviser may have a realistic idea of the student’s progress.

Graduate study in mathematics or statistics is not for everyone. Entering students usually find that the time and effort required to succeed goes well beyond anything they encountered as undergraduates. Success requires both ample mathematical ability and the determination to grapple with a subject for many days or weeks until the light of understanding shines through, and the experience can be daunting. Those who continue in their studies are largely those for whom the pleasure of attaining that understanding more than compensates for the required effort. For such persons, the life of a mathematician can be richly rewarding.

The application deadline is December 15, 2019.

AM Mathematics, Washington University
Undergraduate mathematics education

Degree Requirements

Master of Arts in Mathematics

General requirements: There are 36 units of graduate-level course work required, with or without a thesis; 6 units may be for thesis research. The minimum residence requirement is one full academic year of graduate study. If the department consents, a student may transfer up to 6 hours from other universities. A grade point average of B or better must be maintained in graduate course work.

Course requirements: There are four basic graduate course sequences in pure mathematics: Math 5021–5022, 5031–5032, 5041–5042 or 5043, and 5051–5052. A candidate for the AM in Mathematics must include two of these sequences (12 hours) in the required 36 hours. Each student, in consultation with their advisor, selects the remaining 24 hours according to the student’s interests and needs.

Master of Arts in Statistics

General requirements: There are 36 units of course work required and an optional thesis; 3 units may be for thesis research. The minimum residence requirement is one full academic year of graduate study. A grade point average of B or better must be maintained in graduate courses.

Optional thesis requirements: To be eligible for the thesis option, a student must maintain a cumulative grade point average of 3.5 or higher in the first 18 units of courses satisfying the program requirements.

Course requirements: The student must take (or have taken) the following six required courses in mathematics or their equivalents:

One of the following two sequences:

<table>
<thead>
<tr>
<th>Required</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Probability; Mathematical Statistics</td>
<td>6</td>
</tr>
<tr>
<td>or Theory of Statistics I &amp; II</td>
<td></td>
</tr>
</tbody>
</table>

plus:

<table>
<thead>
<tr>
<th>Required</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Linear Statistical Models</td>
<td>3</td>
</tr>
<tr>
<td>Advanced Linear Statistical Models</td>
<td>3</td>
</tr>
<tr>
<td>Bayesian Statistics</td>
<td>3</td>
</tr>
<tr>
<td>Statistical Computation</td>
<td>3</td>
</tr>
<tr>
<td>or a suitable substitute elective approved by the department</td>
<td></td>
</tr>
</tbody>
</table>

If an equivalent course has been taken and proficiency in the course material has been demonstrated, other 400-level and above electives may be substituted in consultation with the adviser. Additional 400-level or higher electives will be chosen by the student in consultation with their adviser to make up the 36 units.

PhD in Mathematics

No one can earn a doctorate merely by completing a specified course of study; the doctoral candidate must demonstrate high scholarship and the ability to perform significant original research in mathematics.

General requirements: Completion of the PhD requires four full years of graduate study (72 hours), with at least 48 hours spent in residence at Washington University. The student must spend at least one academic year as a full-time student; this requirement cannot be met wholly by summer sessions or part-time study. The student may, with departmental permission, transfer a maximum of 24 graduate credits from other universities. The typical course load is 9 credit hours per semester. A grade point average of B or better is required in graduate course work.
Graduate students in mathematics may ordinarily expect up to five years of support. Continuation of support each year is dependent upon normal progress toward the degree and the satisfactory performance of duties.

For the well-prepared student, "normal progress" usually means the following:

• At the end of the second year, the student has successfully completed the specific course requirements and passed six qualifying exams.
• At the end of the third year, the student has successfully completed the candidacy requirement.
• At the end of the fourth year, the student has completed the 72-hour course requirement and is making substantial progress on a thesis.

Students must also complete the Teaching Seminar course (L24 597). This course prepares them for both Assistant to the Instructor work and academic teaching duties, which are integral to all scholarly activities. The course spans three semesters, usually starting in the second semester. Each student will have departmental duties (e.g., grading, proctoring) of no more than 15 hours per week as Assistant to the Instructor. Students must also complete a Professional Development course (L24 598).

Please note that the sequence outlined above is for "well-prepared" students. The exact point at which any student enters the sequence depends on their ability and background. When warranted, deviation from the normal sequence is permissible, and a tailored program that fits the student's ability and background will be followed.

Specific course requirements: The 72 hours of course work must include eight of the following nine courses: Math 5031–5032 (Algebra I and Algebra II), Math 5051–5052 (Real Analysis and Functional Analysis), Math 5021–5022 (Complex Analysis I & II), and Math 5045–5047 (Algebraic Topology, Differential Topology, and Differential Geometry). Students may omit one of the following courses when satisfying the course requirement: Math 5022, 5047, or 5052. To satisfy the breadth requirement, the student must pass the required courses with a B or better. The courses are typically offered in the following time frame:

Fall: Algebra I, Real Analysis, Complex Analysis I, Algebraic Topology, Differential Geometry

Spring: Algebra II, Functional Analysis, Complex Analysis II, Differential Topology

In exceptional circumstances, departmental permission may be requested to replace required courses with suitable alternatives. The student may also petition the department to waive one or more of these courses because of work completed previously.

It is in each student's best interest to take the courses that contain the material covered in the qualifying exams as soon as their individual program allows. Sequels to these courses, at the 500 level, are frequently offered; the qualifying exam courses are generally prerequisites to these 500-level courses.

Language requirement: All students must demonstrate proficiency in English.

If English is not the student's native language, they must pass an oral English proficiency exam with a grade of 3 or better. If the student does not score a 3 the first time they take the exam, the director of the English Language Program at the International Office will recommend that the student take one or more classes to improve reading, writing, pronunciation, listening or speaking skills. After the recommended classes have been completed, the student is required to retake the English proficiency exam. Once the student has demonstrated the ability to handle teaching a class (by scoring a 3 or better on the exam), they will qualify for Assistant to the Instructor or Course Instructor duties.

Qualifying examinations and candidacy requirements:

The qualifying exam and candidacy requirement constitute two separate requirements. The qualifying exam is a series of six written tests that cover a range of topics; the candidacy requirement is an oral presentation and thesis proposal.

The written tests cover the material in one semester of courses: 5021, 5022, 5031, 5032, 5045, 5046, 5047, 5051 and 5052. To satisfy the written exam requirement, the student must pass six out of the nine possible qualification exams, with the requirement that two be from Math 5021, 5022, 5051 or 5052; two be from Math 5041, 5042 or 5043; and two be from Math 5031 and 5032. To satisfy the qualification examination requirement, the student must pass the final exam for the course with an A- or better.

Because each course varies somewhat in content from year to year, it is recommended that the student take the exams at the conclusion of the course in which they are enrolled. No advantage is gained by delaying the exam. It is required to finish all six qualification exams by the end of the second year of study.

Some students will enter the PhD program with previously acquired expertise in one or more of the required courses. This sometimes happens with students who transfer from other PhD programs or who come from certain foreign countries. Such students may formally petition the chair of the graduate committee to be exempted from the appropriate course and its qualifying exam. The petition must be accompanied by hard evidence (e.g., published research, written testimony from experts, records of equivalent courses, examinations and the grades achieved on them). The graduate committee will make the final judgment on all exemption requests.

Once the written phase of the qualifying process is complete, the student is ready to begin specialized study. By the third year of study, the student must complete the candidacy requirement. The student must form a preliminary thesis committee that includes their advisor and at least two other faculty members.

In discussion with the advisor and the preliminary thesis committee, the student will select a topic and a body of literature.
related to this topic. The student will prepare a one-hour oral presentation related to the topic and a two-page thesis proposal that demonstrates mastery of the selected topic. The oral presentation is designed to expedite specialized study and to provide guidance toward the thesis. The preparatory work for the thesis proposal often becomes the foundation on which the thesis is constructed.

After the student completes the candidacy requirement, work on the thesis begins.

**The dissertation and thesis defense:** The student's dissertation is the single most important requirement for the PhD degree; it must be an original contribution to mathematical knowledge. This is the student's opportunity to conduct significant independent research.

It is the student's responsibility to find a thesis advisor who is willing to guide their research. Since the advisor should be part of the candidacy requirement, the student should have engaged an advisor by the beginning of the third year of study.

Once the department has accepted the dissertation (on the recommendation of the thesis advisor), the student is required to defend their thesis through a presentation accompanied by a question-and-answer period.

**PhD in Statistics**

**Degree Requirements Summary**

A total of 72 graduate units are required, consisting of the following:

- 24 required course work units total in fundamental topics and exam fields
- 12 elective course work units
- Three qualifying exams: two in statistics, one in mathematics
- Graduate School Teaching Requirement for PhD Students
- Oral presentation
- Dissertation research, thesis preparation, and defense (30 course work units)

**General requirements:** Completion of the PhD requires four full years of graduate study (72 hours), with at least 48 hours spent in residence at Washington University. The student must spend at least one academic year as a full-time student; this requirement cannot be met wholly by summer sessions or part-time study. The student may, with departmental permission, transfer a maximum of 24 graduate credits from other universities. The typical course load is 9 credit hours per semester. A grade point average of B or better is required in graduate course work.

Graduate students in statistics may ordinarily expect up to five years of support. Continuation of support each year is dependent upon normal progress toward the degree and the satisfactory performance of duties. Teaching experience is an increasingly important component of graduate education for students who seek academic employment. The PhD in Statistics program provides the opportunity for students to work as Assistants to the Instructor and to learn how to teach technical topics to students with a wide range of backgrounds.

For the well-prepared student, "normal progress" usually means the following:

- At the end of the second year, the student has successfully passed the two statistical qualifying exams associated with Math 5061–5062 and Math 5071–5072 as well as the mathematical qualifying exam associated with Math 5051–5052. They have also completed the courses Math 459 and Math 475.
- At the end of the third year, the student has completed the candidacy requirement.
- At the end of the fourth year, the student has completed the 72-hour course requirement and is making substantial progress on a thesis.

Students must also complete the Teaching Seminar course (L24 597). This course prepares them for both Assistant to the Instructor work and academic teaching duties, which are integral to all scholarly activities. The course spans three semesters, usually starting in the second semester. Each student will have departmental duties (e.g., grading, proctoring) of no more than 15 hours per week as Assistant to the Instructor. Students must also complete a Professional Development course (L24 598).

Please note that the sequence outlined above is for "well-prepared" students. The exact point at which any student enters the sequence depends on their ability and background. When warranted, deviation from the normal sequence is permissible, and a tailored program that fits the student's ability and background will be followed.

**Specific course requirements:** The 72 hours of course work must include two basic graduate-level sequences in statistics: Math 5061 Theory of Statistics I–Math 5062 Theory of Statistics II and Math 5071 Advanced Linear Models I–Math 5072 Advanced Linear Models II; the following statistics courses: Math 459 Bayesian Statistics and Math 475 Statistical Computation; and the following graduate-level mathematics sequence: Math 5051–5052. In exceptional circumstances, departmental permission may be requested to replace one of these sequences with a suitable alternative. The student may also petition the department to waive one or more of these sequences because of work completed previously.
Prerequisites, if needed, are advanced undergraduate courses in abstract linear algebra and real analysis. Such courses would count as 0 credits toward the PhD degree.

It is in each student's best interest to take the three sequences that contain the material covered in the qualifying exams as soon as their individual program allows. Sequels to these courses, at the 500 level, are frequently offered; the qualifying exam courses are generally prerequisites to these 500-level courses.

Prior to finding a research advisor, students are welcome to take any of the Department of Mathematics and Statistics 400- and 500-level statistics electives, and they may also take reading courses with statistics faculty members (Math 500/Math 590). Statistics electives offered by the department include the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 420</td>
<td>Experimental Design</td>
<td>3</td>
</tr>
<tr>
<td>Math 434</td>
<td>Survival Analysis</td>
<td>3</td>
</tr>
<tr>
<td>Math 449</td>
<td>Numerical Applied Mathematics</td>
<td>3</td>
</tr>
<tr>
<td>Math 456</td>
<td>Financial Mathematics</td>
<td>3</td>
</tr>
<tr>
<td>Math 459</td>
<td>Bayesian Statistics</td>
<td>3</td>
</tr>
<tr>
<td>Math 460</td>
<td>Multivariate Statistical Analysis</td>
<td>3</td>
</tr>
<tr>
<td>Math 461</td>
<td>Time Series Analysis</td>
<td>3</td>
</tr>
<tr>
<td>Math 462</td>
<td>Mathematical Foundations of Big Data</td>
<td>3</td>
</tr>
<tr>
<td>Math 475</td>
<td>Statistical Computation</td>
<td>3</td>
</tr>
<tr>
<td>Math 495</td>
<td>Stochastic Processes</td>
<td>3</td>
</tr>
<tr>
<td>Math 551</td>
<td>Advanced Probability I</td>
<td>3</td>
</tr>
<tr>
<td>Math 552</td>
<td>Advanced Probability II</td>
<td>3</td>
</tr>
<tr>
<td>Math 523C</td>
<td>Information Theory and Statistics (ESE 523)</td>
<td>3</td>
</tr>
</tbody>
</table>

Prior to finding a research advisor, students may submit a request to the graduate committee to take a course outside of the department. A decision on such requests will be made in consultation with statistics faculty members.

Students are encouraged to take reading courses with department faculty to learn about the research interests of potential advisors. After the student has found a research advisor and a research topic, the advisor may suggest that the student take some additional courses from other departments that may be useful for the student’s research program.

Elective courses taken in other departments allow students to supplement their statistics course work with other topics that may be helpful for their research and professional development. Some popular elective courses offered by other departments include the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESE 405</td>
<td>Reliability and Quality Control</td>
<td>3</td>
</tr>
<tr>
<td>ESE 407</td>
<td>Analysis and Simulation of Discrete Event Systems</td>
<td>3</td>
</tr>
</tbody>
</table>

Language requirement: All students must demonstrate proficiency in English.

If English is not the student’s native language, they must pass an oral English proficiency exam with a grade of 3 or better. If the student does not score a 3 the first time they take the exam, the director of the English Language Program at the International Office will recommend that the student take one or more classes to improve reading, writing, pronunciation, listening or speaking skills. After the recommended classes have been completed, the student is required to retake the English proficiency exam. Once the student has demonstrated the ability to handle teaching a class (by scoring a 3 or better on the exam), they will qualify for Assistant to the Instructor or Course Instructor duties.

Qualifying examinations and candidacy requirements:
The qualifying exam and candidacy requirement constitute two separate requirements. The qualifying exam is a series of three written tests that cover a range of topics; the candidacy requirement is an oral presentation and thesis proposal.

The written tests cover the material in the two basic statistics course sequences, Math 5061–5062 and Math 5071–5072, and in the mathematics sequence Math 5051–5052. Each spring, at the end of the Math 5061–5062 and Math 5071–5072 sequences, all students enrolled in the course take a two-hour final exam; this exam usually covers the second half of the sequence. Doctoral candidates take an additional one-hour exam that covers the entire sequence. To pass the qualifying exam, the student must pass the three-hour combined exam. In the case of the Math 5051–5052 sequence, to satisfy the qualification examination requirement, the student must pass the final exam for the course with an A- or better.
Because each sequence varies somewhat in content from year to year, it is recommended that the student take each set of exams at the conclusion of the sequence in which they are enrolled. No advantage is gained by delaying the exam for a year. It is desirable to make every effort to finish all three exams by the end of the second year of study.

Some students will enter the PhD program with previously acquired expertise in one or more of the three basic sequences. This sometimes happens with students who transfer from other PhD programs or who come from certain foreign countries. Such students may formally petition the chair of the graduate committee to be exempted from the appropriate course and its qualifying exam. The petition must be accompanied by hard evidence (e.g., published research, written testimony from experts, records of equivalent courses, examinations and the grades achieved on them). The graduate committee will make the final judgment on all exemption requests.

Once the written phase of the qualifying process is complete, the student is ready to begin specialized study. The candidacy requirement is designed to expedite this process. Along with a committee of at least two faculty members, the student selects one major and one minor topic and a body of literature dealing with each. The student then usually spends a semester studying the selected material. At the end of this period, the student demonstrates mastery of the two selected topics by means of satisfactory oral expositions to a faculty committee. One member of this committee will in all likelihood become the student's thesis advisor and may have already agreed to be the advisor. The preparatory work for the presentation often becomes the foundation on which the thesis is constructed.

After the student completes the oral presentation, work on the thesis begins.

The dissertation and thesis defense: The student's dissertation is the single most important requirement for the PhD degree; it must be an original contribution to the knowledge of statistics, probability, and/or applied probability. This is the student's opportunity to conduct significant independent research.

It is the student's responsibility to find a thesis advisor who is willing to guide their research. Since the advisor should be part of the oral presentation committee, the student should have engaged an advisor by the beginning of the third year of study.

Once the department has accepted the dissertation (on the recommendation of the thesis advisor), the student is required to defend their thesis through a presentation accompanied by a question-and-answer period.

Movement Science

The PhD in Movement Science is an interdisciplinary program designed to prepare students for productive research careers in academia and industry. The program offers training to investigators who seek to answer questions about human movement, its functions and its dysfunctions. The program is organized around three core content areas: biocontrol (neuroscience), bioenergetics (exercise physiology) and biomechanics. Our students are trained to investigate and improve movement impairments in people with chronic diseases such as obesity, stroke, diabetes, neuropathy, Parkinson's disease and low back pain.

The Movement Science program is administered through the Physical Therapy program. Applicants come from a variety of academic backgrounds, including physical therapy, exercise science, kinesiology, biomedical engineering, neuroscience and occupational therapy. Students learn from and collaborate with scientists from multiple departments, such as anesthesiology, medicine, psychiatry, orthopedics, biomedical engineering, psychology, neurology and biology.

Accepted students receive full tuition remission, a stipend and health insurance. The Movement Science program is supported by National Institutes of Health training grant T32HD007434.

Degree Requirements

PhD in Movement Science

Students will complete the required courses and electives during the first two years of the program. In addition to courses, the requirements to complete the PhD degree include the following:

• **Qualifying examination**: Part one of the qualifying exam requires the student to develop a research proposal pertinent to the projected area of dissertation research that is based on a question/problem provided by the student’s mentor(s). Part two of the qualifying exam is an oral examination that consists of a presentation of the proposal by the student followed by a question-and-answer period with the faculty reviewers.

• **Laboratory research**: Students will develop, implement and complete original laboratory research appropriate for a doctoral dissertation.

• **Doctoral dissertation**: Students will successfully provide an oral defense of their dissertation proposal, complete a written doctoral dissertation, and defend an oral presentation of the doctoral dissertation.

On average, students complete the degree in four and a half years.

Music

The Department of Music offers programs of study leading to the Doctor of Philosophy (PhD) in Music and the Master of Arts (AM) in Music, with emphasis in either musicology or music theory. Each graduate program combines a course of advanced studies in one area of music studies with supporting studies in related fields of music. The number of graduate students admitted each year is small so that each student is assured individual attention. There is traditionally a close rapport and mutually supportive interaction among graduate students in all areas of study.

The AM and PhD programs in musicology offer concentrations in historical musicology and ethnomusicology. Department faculty interests cover all eras of European art music, American popular musics, film and theatre music, jazz, and African and African diasporic musics. Methodological approaches cover a range of critical perspectives, placing music within its cultural and historical contexts and developing the student’s ability to think and write about music and music-making. Intensive study in music theory is a required component of the program, and diverse opportunities for performance are offered as well.

The AM and PhD programs in music theory focus on the creative analysis and critical examination of assumptions about music and musical discourse. The graduate program prepares students to undertake research in musical analysis and in the language and methodology of music theory. Preparation includes guiding each student in developing their own modes of thought and expression. Faculty interests include improvisation and intermedia, texture and form, music cognition and computational modeling, composition, Schenker, and the interplay of text and music in German art song.

Degree Requirements

Master of Arts in Music (Musicology)
The Master of Arts in musicology requires 36 units of graduate study, including 12 units of music history and bibliography, 6 units of music theory, 18 units of electives, keyboard proficiency, reading knowledge of one foreign language, a written general examination, and a thesis.

PhD in Music (Musicology)
The PhD degree in musicology requires a total of 72 units of graduate study: 33 units of music history and bibliography, 12 units of music theory, 6 units outside music, and 20 units of electives and dissertation research. Also required are keyboard proficiency, reading knowledge of two foreign languages (German and either French, Italian, Latin, or a substitute, according to the student's needs), a written general examination, six to eight semesters of mentored teaching, written and oral qualifying examinations (which occur after the completion of 60 units), the dissertation, and the final oral defense of the dissertation. Students who have completed a master's degree at another institution may receive up to 24 units of transfer credit toward the PhD.
Master of Arts in Music (Music Theory)

The Master of Arts in music theory requires 36 units of graduate study, including 15 units of music theory, 9 units of music history and bibliography, 12 units of electives, keyboard proficiency, reading knowledge of one foreign language, a written general examination, and a thesis.

PhD in Music (Music Theory)

The PhD degree in music theory requires a total of 72 units of graduate study: 30 units of music theory, 15 units of music history and bibliography, 6 units of composition, 6 units outside music, 6 units of qualifying projects, and 9 units of electives or dissertation research. Also required are keyboard proficiency, reading knowledge of two foreign languages (German and either French or Italian; a computer language may be substituted for the second language, according to the student’s needs), a written general examination, six to eight semesters of mentored teaching, the dissertation, and the final oral defense of the dissertation. Students who have completed a master's degree at another institution may receive up to 24 units of transfer credit toward the PhD.

Nursing Science

The Department of Nursing Science is a collaboration between Goldfarb School of Nursing at Barnes-Jewish College and the Graduate School at Washington University. The Goldfarb School of Nursing emphasizes the reciprocation among research, clinical practice, and teaching based on the belief that clinical practice advises research, research advises clinical practice, and both research and clinical practice advise teaching. The school’s commitment to the preparation of the next generation of nurse scientists is reflected in the strong research emphasis of the PhD program in the science of nursing.

The goal of the PhD program is to educate nurse-scientists whose career goals include the conducting of nursing research. Students bring a unique combination of nursing knowledge and clinical experiences to doctoral study, and these serve as the basis for the development of programs of study that are both compatible with the core doctoral curriculum and individualized to allow for the gaining of in-depth knowledge in a specialized area of study. The PhD program in nursing science provides a solid foundation for graduates to pursue rigorous programs of nursing research that are clinically significant and that contribute to the advancement of nursing science.

Degree Requirements

PhD in Nursing Science

The PhD in Nursing Science requires 71 graduate credits in course work and research. Students will complete four core areas of study plus a required minor/cognate and a dissertation. The four core areas are Nursing Science, Research Methods, Statistics, and Mentored Research Experience. The minor has two options from which students may choose: Omics
Sciences or Informatics. Courses in the Nursing Science and Research Methods core will be taught by faculty at Goldfarb School of Nursing. Courses in the Statistics core and the minor courses will be taught by faculty at Washington University. The Mentored Research Experience will be taught by scientists at both Goldfarb School of Nursing and Washington University.

The program is designed to be full-time, with two years of course work (56 credits) followed by a preliminary examination, a qualifying examination, and two years of dissertation work (15 credits). A fifth year is an option if it is necessary to complete the proposed dissertation work.

**Philosophy**

The Department of Philosophy houses two doctoral programs: a PhD in Philosophy and an interdisciplinary PhD in Philosophy-Neuroscience-Psychology (PNP). The Philosophy program covers a broad array of philosophy, with particular strengths in ethics, moral psychology, and political philosophy; philosophy of mind, philosophy of language, philosophy of science, and metaphysics; and the history of philosophy. The PNP program draws on a core faculty in philosophy and on Washington University’s exceptional psychology and neuroscience faculty.

The department accepts about 10 percent of the applicants to these programs and maintains about 25 students in both programs. We are especially open to interdisciplinarity, and we are committed to providing methodologically and substantively broad philosophical development. Applicants from a wide range of backgrounds are welcome; the most successful applicants have evidence of philosophical talent and promise.

Both programs take at most six years, during which all PhD students are fully supported. The first six or seven semesters are dedicated primarily to courses, which may include independent studies and courses in other programs, such as classics, law, political science and women’s studies. Students in their first seven semesters must also complete two qualifying papers that bridge the gap between seminar papers and professional publications. In addition, the department houses two dissertation workshops: one that is required for Philosophy students in their third year and beyond and the other for PNP students in all years. Students in their fourth year devise a dissertation prospectus and defend the prospectus in an oral exam. The fifth year then typically offers fellowship support for the drafting of the full dissertation, before a sixth year is given over to revisions, a required colloquium, and job applications.

The department also works hard to prepare its students as teachers and as potential academic job applicants. Students are required to participate in mentored teaching experiences for two of their six years in residence, and they may serve as the instructors of record for their own courses in University College or Summer School. Placement efforts begin during first-year orientation and intensify during the spring of the student’s fifth year.

PhD, University of Notre Dame

Casey O’Callaghan (https://philosophy.wustl.edu/people/casey-o’callaghan)
PhD, Princeton University

**Associate Professors**

Anne Margaret Baxley (https://philosophy.wustl.edu/people/anne-margaret-baxley)
Director of Undergraduate Studies
PhD, University of California, San Diego

Eric Brown (https://philosophy.wustl.edu/people/eric-brown)
PhD, University of Chicago

Allan Hazlett (https://philosophy.wustl.edu/people/allan-hazlett)
Director of Graduate Studies
PhD, Brown University

Brett Hyde (https://philosophy.wustl.edu/people/brett-hyde)
PhD, Rutgers University
Anya Plutynski (https://philosophy.wustl.edu/people/anya-plutynski)
PhD, University of Pennsylvania

McDonnell Postdoctoral Fellows
Austin Andrews (https://philosophy.wustl.edu/people/austin-andrews)
PhD, University of California, Berkeley

Will Fleisher (https://philosophy.wustl.edu/people/will-fleisher)
PhD, Rutgers University

Lecturers
Janella Baxter (https://philosophy.wustl.edu/people/janella-baxter)
PhD, University of Illinois at Chicago

Nicholas Koziolek (https://philosophy.wustl.edu/people/nic-koziolek)
PhD, University of Chicago

Boyd Millar (https://philosophy.wustl.edu/people/boyd-millar)
PhD, University of Toronto

Professors Emeriti
Lucian W. Krukowski (https://philosophy.wustl.edu/people/lucian-krukowski)
PhD, Washington University

Jerome P. Schiller (https://philosophy.wustl.edu/people/jerome-schiller)
PhD, Harvard University

Joseph S. Ullian (https://philosophy.wustl.edu/people/joe-ullian)
PhD, Harvard University

Richard A. Watson (https://philosophy.wustl.edu/people/richard-watson)
PhD, University of Iowa

Carl P. Wellman (https://philosophy.wustl.edu/people/carl-wellman)
Hortense and Tobias Lewin Distinguished Professor Emeritus in the Humanities
PhD, Harvard University

Degree Requirements

PhD in Philosophy-Neuroscience-Psychology
Successful completion of 72 units of courses and seminars at the 400 level or above (with the exception of Phil 301G Symbolic Logic) in a way that meets both the detailed course requirements and the following minima:

1. 33 units of Philosophy courses
2. 18 units of empirical courses/laboratory experience
3. Participation in the PNP Dissertation Seminar (PNP 501) during semesters in which it is offered
4. Regular attendance at Philosophy PNP Colloquia, except with the permission of the director of PNP
5. Completion of Mentored Teaching Experience (4 semesters)
6. Successful completion of two qualifying papers
7. Satisfaction of colloquium requirement imposed by the department
8. Completion and defense of a dissertation prospectus (typically during the fourth year)
9. Completion and defense of a dissertation

Additional Information
For additional information, visit our PNP Graduate Program (http://pnp.artsci.wustl.edu/graduate) webpage. Please contact the department for further requirements.

PhD in Philosophy

1. Every student must complete the logic requirement, either by passing the exam given during orientation or by receiving at least a B in Phil 301G Symbolic Logic or Phil 405 Philosophical Logic.
2. Every student must complete at least 42 units of graduate-level (400-level or above) philosophy courses, each with at least a B-. No units can be transferred from other institutions. These units must include the following distribution requirements:
   a. Phil 502 Proseminar in Philosophy, taken during the first semester
   b. At least two additional 500-level seminars
   c. At least two core surveys in theoretical philosophy (Phil 4141 Advanced Epistemology, Phil 4142 Advanced Metaphysics, Phil 4065 Advanced Philosophy of Language, Phil 4210 Topics in Advanced Philosophy of Science)
   d. At least two core surveys in practical philosophy (Phil 4315 Normative Ethical Theory, Phil 4310 20th-Century Metaethics, Phil 4320 British Moralists, Phil 4400 Advanced Social and Political Philosophy)
   e. At least one core survey in ancient philosophy (Phil 451 Plato, Phil 452 Aristotel, Phil 4530 Hellenistic Philosophy)
   f. At least one core survey in modern philosophy (Phil 4550 Continental Rationalism, Phil 4560 Empiricism, Phil 4575 Kant's Moral Theory, Phil 4570 Kant's Critique of Pure Reason)
3. Completion of Mentored Teaching Experience (4 semesters)
4. Successful completion of two qualifying papers
5. Satisfaction of colloquium requirement imposed by the department
6. Completion and defense of a dissertation prospectus (typically during the fourth year)
7. Completion and defense of a dissertation

Additional Information

For additional information, visit our Philosophy Graduate Program (https://philosophy.wustl.edu/graduate-program) webpage. Please contact the department for further requirements.

Physics

The Department of Physics offers Master of Arts (AM) and Doctor of Philosophy (PhD) programs in Physics. Research in this department covers a wide area of experimental and theoretical physics and benefits from close contacts with nuclear and inorganic chemists in the chemistry department, planetary scientists in the earth and planetary sciences department, applied scientists in the McKelvey School of Engineering and the Institute of Materials Science & Engineering, and biological scientists both on the Danforth Campus and at the School of Medicine. The department is a major participant in the McDonnell Center for the Space Sciences and the Institute of Materials Science & Engineering.

Experimental research areas include the following:
- Astrophysics (observations of cosmic rays, gamma rays, X-rays, dark matter detection, high-precision tests of gravity)
- Space sciences (laboratory analysis of meteorites, stardust, interplanetary dust particles)
- Condensed matter and materials physics (graphene and other two-dimensional atomic crystals, quantum information and atomic physics with condensed matter devices, nanostructured materials, metallic glasses and liquids, magnetism and superconductivity, high-pressure physics, nuclear magnetic resonance)
- Biophysics (computational neurophysics, systems cell biology).

Theoretical research areas include the following:
- Biophysics (nonequilibrium dynamics in biological cells, theory of the microbiome)
- Condensed matter physics (strongly correlated electron systems, topological phases, excited states of many-electron systems, density functional theory and glasses)
- Elementary particle physics (astroparticle physics, dark matter, theoretical cosmology, strong interactions, non-Hermitian Hamiltonians, quark physics beyond the Standard Model)
- Nuclear theory (nuclear matter, correlations in nuclei).

Students are usually admitted to the PhD program rather than the AM program. They spend their first two years taking graduate courses, finding a dissertation adviser, and starting research. During that time, they receive a stipend and complete two semesters of mentored teaching experiences. After achieving the required course grades and passing an oral examination at the end of their second year, students are normally paid from research funds while working on their research and writing a dissertation. The PhD program typically takes between five and six years to complete.

Degree Requirements

The information below summarizes the physics department’s degree requirements. These requirements are in addition to those established by the Graduate School. For more information about requirements for doctoral degrees (p. 15) or master’s degrees (p. 21) in the Graduate School, please visit the appropriate sections of this Bulletin.

Master of Arts in Physics

36-Unit Academic Credit Course Requirement

Courses that count toward academic credit are as follows:

- Any regular 400- or 500-level lecture courses in the physics department, including Physics 597/598 Supervised Teaching of Physics and Physics 582 Research Seminar
- Courses outside of the physics department, if approved by the master’s program director
- Reading courses, for which students should register for Physics 589/590 Selected Topics in Physics
- Supervised research, for which students should register for Physics 593/594 Introduction to Methods in Physics (This can be used for a maximum of 6 units of academic credit.)

Students can take up to six 400-level physics classes toward their academic credit requirements without special permission from the graduate studies committee. However, they should discuss the merits of doing so with their adviser.

Core Course Requirements

For qualification, students must pass five core 500-level physics courses. In those courses, the student must maintain an average of a B (a grade-point average of 3.0), with no more than one grade lower than B-. A given core course may be taken only once. If more than five courses are taken, the average will be determined from the best five course grades.

Students must take the following three courses:

<table>
<thead>
<tr>
<th>Required</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Classical Eletrodynamics I</td>
<td>3</td>
</tr>
<tr>
<td>Quantum Mechanics I</td>
<td>3</td>
</tr>
<tr>
<td>Statistical Mechanics</td>
<td>3</td>
</tr>
</tbody>
</table>

They must also take at least two of the following:

<table>
<thead>
<tr>
<th>Required</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Methods of Theoretical Physics I</td>
<td>3</td>
</tr>
<tr>
<td>Classical Eletrodynamics II</td>
<td>3</td>
</tr>
</tbody>
</table>
PhD in Physics

Outline of Requirements

- Complete 36 units of academic credit (detailed below), maintaining an average grade of at least B (3.0 GPA).
- Pass the PhD qualification procedure. This must be done before a student can formally join a research group, and it is normally completed before the start of the third year.
- Complete the teaching requirements.
- Write a thesis (doctoral dissertation).
- Pass an oral dissertation defense examination.

36-Unit Academic Credit Course Requirement

Courses that count toward academic credit are as follows:

- Any regular 400- or 500-level lecture courses in the physics department, including Physics 597/598 Supervised Teaching of Physics and Physics 582 Research Seminar
- Courses outside of the physics department, if approved by the student’s adviser and the director of graduate studies
- Reading courses, for which students should register for Physics 589/590 Selected Topics in Physics
- Supervised research, for which students should register for Physics 593/594 Introduction to Methods in Physics

Students can take up to four 400-level physics classes toward their academic credit without special permission from the graduate studies committee. However, they should discuss the merits of doing so with their adviser.

PhD Qualification: Course Requirements

For qualification, students must pass six core 500-level physics courses. In those courses, the student must maintain an average of a B (3.0 GPA), with no more than one grade lower than B-. A given core course may be taken only once. If more than six core courses are taken, the average will be determined from the best six course grades.

Students must take the following four courses:

<table>
<thead>
<tr>
<th>Required</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Theoretical Physics</td>
<td>3</td>
</tr>
<tr>
<td>Classical Electrodynamics I</td>
<td>3</td>
</tr>
<tr>
<td>Quantum Mechanics I</td>
<td>3</td>
</tr>
<tr>
<td>Statistical Mechanics</td>
<td>3</td>
</tr>
</tbody>
</table>

They must also take at least two of the following:

<table>
<thead>
<tr>
<th>Required</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Methods of Theoretical Physics II</td>
<td>3</td>
</tr>
<tr>
<td>Classical Electrodynamics II</td>
<td>3</td>
</tr>
<tr>
<td>Classical Mechanics or Nonlinear Dynamics</td>
<td>3</td>
</tr>
<tr>
<td>Quantum Mechanics II</td>
<td>3</td>
</tr>
</tbody>
</table>

These requirements can be modified or waived for students with previous graduate experience (e.g., a master's degree in physics).

PhD Qualification: Oral Examination Requirement

To qualify, the student must give a presentation to a committee of three physics faculty members (i.e., the prospective research adviser and two others). The student should demonstrate a basic understanding of a major topic of current research in the selected area of study, which will have been chosen in consultation with the student’s prospective thesis adviser. One week before the oral exam, the student must prepare a written paper (approximately 1500-3000 words) summarizing the content of the presentation and give it to the committee. The student’s responses to questions raised by the examination committee are graded as adequate or not. Students have a chance to answer inadequately answered questions in writing within 48 hours after the examination. The student is not allowed to receive assistance in preparing the written response from any other individuals. The answers should either be given in person to the chair of the examination committee or emailed to the chair as a PDF file so that it is time stamped. The committee will determine whether the written answers are sufficient.

The committee must be chosen and approved by the department chairman by the end of a student's third semester (typically in December of the second year). The oral examination should be taken by the end of a student's fourth semester (typically in May of the second year). If the student fails the oral examination, they can take it again one additional time.

Teaching Requirements

These requirements must be completed before the student submits their doctoral dissertation to the Graduate School:

- Complete L31 Physics 597: Graduate students are required to take L31 Physics 597 Supervised Teaching of Physics prior to serving as an assistant in instruction. Students typically take Physics 597 during their first fall semester.
- Complete at least two semesters of mentored teaching experiences
- Complete four hours of oral presentations: Graduate students must complete a total of four hours of specialized oral presentations. Examples of such presentations include teaching a class (e.g., when substituting for a professor); giving seminars, such as the weekly graduate seminar; or
giving oral presentations at conferences, journal clubs, and the like.

**Dissertation Requirements**

Please refer to the Graduate School's Doctoral Dissertation Guide (PDF) on the Graduate School website.

**Political Science**

The doctoral program in political science at Washington University is one of the top programs in the country. Graduate students take classes and engage in research with a faculty recognized nationally and internationally as among the most expert, active and productive in the country.

Our graduate program is relatively small. We admit around eight to 10 students into the PhD program each year, and most of these complete the doctorate, generally in five to six years. There are approximately 40 graduate students currently in residence.

Washington University’s PhD program in Political Science is designed to prepare students for academic careers in research and teaching at major institutions across the country. Although our program stresses the importance of political methodology (applied statistics) and formal theory (game theory and mathematical modeling), our program is designed to teach all students in these methods, regardless of their mathematical background.

We have active research groups in American politics and institutions, comparative politics, international political economy, positive and normative theory, and political methodology. It is important to emphasize that we do not regard these subfields as separate entities. Many of our faculty have research and teaching interests that transcend political science subfields as well as traditional disciplinary boundaries. We have strong connections with other departments at Washington University (including the departments of Economics and Anthropology), with the School of Law, and with various interdisciplinary research centers on campus.

PhD, University of Rochester

John Sprague (https://polisci.wustl.edu/people/john-sprague)
Sidney W. Souers Professor Emeritus of Government
PhD, Stanford University

Degree Requirements

PhD in Political Science

Students in the PhD program are expected to acquire the following:

- A broad understanding of several fields of political science as a discipline
- Methodological competence sufficient to be productive professionals
- Specialized expertise in a particular field of concentration.

The procedures and requirements described below are designed to facilitate the achievement of these objectives. In addition to the formal requirements stated here, we provide a list of recommendations that students should follow to succeed in the program. For a detailed year-to-year outline of requirements and recommendations, please refer to the section “Specific Requirements for Each Year in the Program” at the end of the Guide to Graduate Studies, located on the Graduate Program website (http://polisci.wustl.edu/graduate).

Exceptions to any of these requirements must be approved by the director of graduate studies (DGS) in consultation with the Graduate Committee and, as needed, the respective Field Committee.

General Course Requirements

In general, all students must successfully complete the following core courses with a grade of B or better:

- Math Camp (offered during the August before the first semester)
- Mathematical Modeling in Political Science (5052) (first semester)
- Research Design (540) (first semester)
- Quantitative Methods I (581) (second semester)
- Game Theory (505) (second semester)
- Quantitative Methods II (582) (third semester)
- Research Workshop I and II (a year-long course taken during the student’s fifth and sixth semesters)

According to the Probation and Dismissal Policy, if a student fails to obtain a B in one of the required courses, they will be placed on probation and have the opportunity to retake the course.
the following year. Failure to obtain a B after taking the course for the second time will result in dismissal from the program. Furthermore, failure to obtain a B in another required course while on probation is considered extreme underperformance and will result in dismissal from the program.

In addition to required courses, students will be taking courses in different fields. Courses are mainly concentrated during the first two years. Students should plan to take four courses per semester during their first year and three courses per semester during their second year.

Incompletes

Students are strongly discouraged from accumulating incompletes. The Graduate School prohibits more than 9 credit hours’ worth of incomplete courses. The department supports this policy and will consider the number of incompletes that students have accumulated when evaluating their work and making decisions about financial support.

Fields

The department divides the discipline of political science into six fields:

- American politics
- Comparative politics
- Formal theory
- International politics
- Political and social theory
- Quantitative methods

Before writing the dissertation, students must pass a qualifying examination (refer to next section) and fulfill requirements for certification in one major and one minor field. The major and minor field certifications are intended to ensure that students possess broad familiarity with the literature and material in the fields presented.

Field requirements are met by completing the required courses with a grade of B+ or better. A major field requires completing five courses in that field with a grade of B+ or better; a minor field requires completing three courses in that field with a grade of B+ or better.

Students are expected to complete course requirements for the major and minor by the end of their fourth semester. Exceptions can be granted by the DGS on a case-by-case basis but not beyond the student’s sixth semester.

Field Requirements

American Politics

- Major: Students must satisfactorily complete (with a grade of B+ or better) at least five graduate-level seminars in American politics, including American Political Institutions (520) and American Political Behavior (5678).
- Minor: Students must satisfactorily complete (with a grade of B+ or better) at least three graduate-level seminars in American politics, including American Political Institutions (520) and American Political Behavior (5678).

Comparative Politics

- Major: Students must satisfactorily complete (with a grade of B+ or better) at least five graduate-level seminars in comparative politics, including Approaches to Comparative Politics (510).
- Minor: Students must satisfactorily complete (with a grade of B+ or better) at least three graduate-level seminars in comparative politics, including Approaches to Comparative Politics (510).

Formal Theory

- Major: Students must satisfactorily complete (with a grade of B+ or better) at least five graduate-level seminars in formal theory, including Game Theory (505), Seminar in Political Economy (5551), and three other 500-level courses requiring one of the above as a prerequisite or offered in the economics department.
- Minor: Students must satisfactorily complete (with a grade of B+ or better) at least three graduate-level seminars in formal theory, including Game Theory (505), Seminar in Political Economy (5551), and one other 500-level course requiring one of the above as a prerequisite or offered in the economics department.

International Politics

- Major: Students must satisfactorily complete (with a grade of B+ or better) at least five graduate-level seminars in international politics. This includes the 500-level graduate sequence and 400- and 500-level political science and economics courses authorized by the International Politics Committee.
- Minor: Students must satisfactorily complete (with a grade of B+ or better) at least three graduate-level seminars in international politics. The includes the 500-level graduate sequence and 400- and 500-level political science and economics courses authorized by the International Politics Committee.

Political and Social Theory

- Major: Students must satisfactorily complete (with a grade of B+ or better) at least five graduate-level courses in political theory; the theory faculty recommends at least two of the History of Political Thought courses (5090, 5092 and 5093) and at least two seminars in political theory.
- Minor: Students must satisfactorily complete (with a grade of B+ or better) at least three graduate-level courses in political theory authorized by the Political Theory Committee.

Quantitative Methods
Major: Students must satisfactorily complete (with a grade of B+ or better) at least five methods courses, including the required sequence (581 and 582) and additional elective methodology courses authorized by the Quantitative Methods Committee.

Minor: Students must satisfactorily complete (with a grade of B+ or better) at least three methods courses, including the required sequence (581 and 582) and an additional elective methodology course authorized by the Quantitative Methods Committee.

According to the Probation and Dismissal Policy, if a student fails to meet field requirements as a result of grades or for other reasons by the end of their fourth semester, then they will be placed on probation for one semester. Failure to meet the field requirements by the end of that semester results in dismissal from the program.

Qualifying Exams

All students must take a qualifying exam that covers all required courses, including Math Camp, Mathematical Modeling in Political Science, Research Design, Quantitative methods I and II, and Game Theory. The exam is scheduled for the month of January before the start of the student's fourth semester. The aim of this exam is to ensure a minimum level of competence in basic research practices for all students. Successful completion of this exam does not satisfy requirements for methods, formal theory, or any other field.

The exam will include a technical component and an applied component. The latter will consist of analyzing a dataset to answer a substantive question. The substantive questions offered to the students will be related to the American politics, comparative politics and international relations courses offered over the previous three semesters. The committee for the qualifying exams is not field-specific and can include any of the tenured or tenure-track faculty.

The committee will assign grades of pass or fail, and students will be notified of the results of the exam by the DGS.

According to the Probation and Dismissal Policy, failing to pass this exam will result in the student being put on probation and a second exam administered two months later (in March) at a date specified by the DGS. Failing the retake will result in dismissal from the program.

Research Paper Requirement

During their second and third years, each student is required to produce a solo-authored research paper. The expectation is that this paper will be in the same field as the student's dissertation and at the level of quality for submission to a peer-reviewed journal.

Students need to identify two advisers (i.e., the research paper chair and a second reader) and obtain their signatures on the Research Paper Proposal Form after taking the qualifying exam (i.e., by the end of January of their second year). In consultation with these advisers (i.e., the committee), they need to develop a research design (motivation, theory, design, data sources) by the last day of classes of the spring semester of their second year. By the end of the spring semester, the student needs to schedule a formal defense of the proposal with their committee and submit a form with the advisers' signatures after the defense to the departmental administrative assistant responsible for graduate affairs.

The third-year paper is due to the committee by the first day of classes of the third year. The committees will grade these submissions within the first two weeks of the semester. At this point, students will either receive a "revise and resubmit" or a "reject and resubmit" from their committee. A "reject and resubmit" is a judgment by the faculty that the paper does not reflect satisfactory progress toward the research paper. Students receiving this evaluation will be placed on academic probation, and a failure to significantly improve the project will result in dismissal from the program. In extraordinary circumstances, a "conditional accept/high pass" can be granted.

Students will enroll in the year-long Research Workshop during their third year. The fall semester of this workshop is devoted to helping students revise their papers for final submission.

The final papers are due to the DGS and both readers by the start of the sixth semester. Students are required to defend this paper publicly. The DGS will organize a public presentation for all research papers within the first three weeks of the semester.

The Third-Year Committee will evaluate the quality of the research paper and its potential for submission to and acceptance in a peer-reviewed journal. Students who received a "reject and resubmit" during the first round should anticipate stricter scrutiny from faculty at this stage. The paper can be graded as pass or fail. A failing grade in this defense by students who previously received a "reject and resubmit" will result in dismissal from the program. Failing grade without a prior "reject and resubmit" will result in the student being place on probation until they resubmit and successfully pass the research paper requirement, which must occur before the end of the spring term. Failing to do so will result in dismissal from the program.

In the event of disagreement between the chair and the reader, the DGS will select a third reader in consultation with the faculty in the student's area of study to evaluate the paper and make a decision about the final grade. The research paper chair and the reader(s) will inform the student and the DGS of the final grade, together with an explanation, within two weeks after the defenses have been completed.

Dissertation Committee and Prospectus Requirement

Students are required to form a Dissertation Committee that consists of at least three faculty members by the start of the fifth semester (January of their third year). Forming a committee
requires selecting a dissertation chair and at least two other faculty members and then submitting the Dissertation Committee Proposal Form, which includes the signatures of all committee members. With the assistance of the DGS, students will make sure the composition of the committee also meets the Graduate School requirements.

Students will enroll in the year-long Research Workshop during their third year. The spring semester of this workshop is devoted to helping students develop their dissertation prospectuses.

Students are required to have defended the dissertation prospectus by the end of the sixth semester (May of their third year). Dissertation prospectus defenses will be announced in advance and will be open to the public. Students who fail to schedule a defense or who fail the defense will be put on probation and may re-defend their prospectus by August 1. Failing to schedule or failing the re-defense results in dismissal from the program.

Students are encouraged to apply for the National Science Foundation Dissertation Improvement Grant and to other outside funding agencies to pursue additional financial support for their dissertation research.

Summary Timeline

(Please refer to “Specific Expectations for Each Year in Program” in the Guide to Graduate Studies on the Graduate Program website (http://polisci.wustl.edu/graduate) for more details.)

• End of second semester: Evaluation of class performance and meeting with the DGS
• End of third semester: Required courses (with the exception of the Research Workshop) completed
• Beginning of fourth semester (January): Qualifying exam; submit Research Paper Form (seeking chair and reader)
• End of fourth semester: Major and minor field requirements completed; defend research paper prospectus to chair and second reader
• Before the start of fifth semester (August): Submit research paper
• Beginning of sixth semester (January): Resubmit and defend research paper; submit Dissertation Committee Proposal Form
• End of eighth semester: Defend Dissertation Prospectus (resubmitted prospectus must be defended before the start of the seventh semester)

Dissertation and Defense

The requirements for the completion of the dissertation are described in the general Degree Requirements (https://graduateschool.wustl.edu/degree-req) by the Graduate School, which are applicable to all Washington University doctoral candidates.

Graduation

Students need to graduate by May of their sixth year. Failure to do so results in the student being placed on probation. The student then has a chance to finish their dissertation by August of their seventh year. Failing that, they will be dismissed from the program.

Foreign Language Requirement

There is no uniform foreign language requirement set by the Graduate School or by the department. The extent and substance of foreign language competence required will be determined by the Graduate Committee in consultation with the student and their adviser.

Mentored Teaching Experience and Mentored Professional Experience Responsibilities

Students collaborate with a faculty member for a mentored teaching experience (MTE), a mentored professional experience, or a combination of the two, depending on their stage of development.

Mentored teaching responsibilities vary from course to course but in all cases may consist of attending class and grading papers and assignments. Examples of other responsibilities include running discussion sections or reviews, disseminating course materials and holding office hours.

Mentored professional experiences vary across faculty members but in all cases consist of participating in research activities. Graduate students are expected to participate in the MTE for an average of 13.5 hours per week. During some weeks, this will involve considerably fewer hours; during other weeks (usually around midterms and finals), it will involve considerably more.

Faculty are expected to set expectations for grading at the beginning of each semester, and graduate students should plan accordingly for weeks of heavier grading or other responsibilities.

According to the Probation and Dismissal Policy, poor performance in the fulfillment of mentored teaching or mentored professional responsibilities will result in the student being placed on probation. Lack of improvement while on probation will result in dismissal from the program.

Mentored Experience Requirement

All students need to meet the Graduate School’s mentored experience requirement by the time they graduate. This requirement includes the following:

• Participating in departmental intellectual life, which includes but is not limited to meeting with outside speakers, attending talks and in-house conferences, presenting their own research, assisting with graduate student recruitment, and helping to organize in-house conferences (e.g., CPAC)
The Department of Psychological & Brain Sciences also offers that results in publishable findings.

requirement, and consistently high-quality research productivity of a teaching experience that fulfills the doctoral teaching content areas), a subject matter exam, at least two semesters courses (including statistics, methods, ethics and several core requirements for a PhD. In addition, the PhD includes required to complete a master's degree with a thesis as part of the next generation of academic researchers and educators in psychological and brain sciences. Graduate study may be undertaken in the following general areas: Behavior, Brain & Cognition; Clinical Psychology; Aging & Development; and Social & Personality Psychology. The traditions of Washington University and the department encourage interdisciplinary graduate study, both between the subfields of psychological and brain sciences and across other disciplines. Therefore, although students must affiliate with at least one of the areas within psychological and brain sciences, they are frequently affiliated with multiple areas within psychological and brain sciences. In addition, many graduate students in Psychological & Brain Sciences also engage in interdisciplinary learning, scholarship and research. For example, cross-disciplinary opportunities and research are available in the Division of Biology and Biomedical Sciences (e.g., neuroscience, genetics); in the programs of Linguistics and of Cognitive, Computational, and Systems Neuroscience; in African-American Studies; and in Philosophy-Neuroscience-Psychology, as well as in several departments in the School of Medicine and McKelvey School of Engineering. The Department of Psychological & Brain Sciences teaches students for full-time study toward the PhD and does not offer a terminal master's degree. However, students are required to complete a master's degree with a thesis as part of the requirements for a PhD. In addition, the PhD includes required courses (including statistics, methods, ethics and several core content areas), a subject matter exam, at least two semesters of a teaching experience that fulfills the doctoral teaching requirement, and consistently high-quality research productivity that results in publishable findings.

The Department of Psychological & Brain Sciences also offers the Graduate Certificate in Quantitative Data Analysis, which is open to graduate students of various disciplines. Advanced skills and knowledge in quantitative analysis, methods and interpretation are critical assets for scholars in a wide range of disciplines within the social sciences. Further, many of the important practical, analytical and conceptual skills are shared across disciplines. Many of the graduate programs in the social sciences include basic quantitative analysis skills within the core required curriculum of their department, but many students would benefit from advanced preparation in this domain. The certificate program will provide an organized means for students to achieve an advanced level of knowledge and skill in quantitative social science data analysis, interpretation and visualization that can be applied and shared in a variety of occupational domains.

The Graduate Certificate in Quantitative Data Analysis will require students to master both an introductory level and a more advanced level of quantitative skills and knowledge. Some of the introductory-level courses might overlap with courses that are already required within a student's individual PhD program curriculum, but the advanced level will require students to go beyond the basic expectations of their graduate program in order to achieve greater depth and breadth of knowledge and abilities.

Students interested in the Graduate Certificate in Quantitative Data Analysis should first apply for admission to the Washington University department in which they wish to obtain a graduate degree. After being admitted, students should notify their department adviser and the Graduate Certificate in Quantitative Data Analysis program director (dbarch@wustl.edu) of their plans to obtain the certificate. In addition, students should submit an Application for Admission to Certificate Program form to the Graduate School office and send a copy to the Graduate Certificate in Quantitative Data Analysis office.

Degree Requirements
PhD in Psychological & Brain Sciences

The following is a brief listing of the requirements for the PhD in Psychological & Brain Sciences. A more detailed description of these requirements may be found in our Graduate Student Handbook (http://psychweb.wustl.edu/graduate). Of note, students in the clinical science training program have somewhat different requirements; please refer to the Clinical Program Handbook (http://psychweb.wustl.edu/graduate/clinical-psychology) as well (available on the clinical program website).

All students must do the following:

• Complete required graduate-level courses (courses must be completed for a student to be considered ABD). A typical semester course load for the first two years is 12 to 13 credit hours, unless teaching or research responsibilities suggest a load of 9 to 10 credit hours.

• Obtain teaching experience commensurate with preparation for an academic career. There is a teaching requirement that all students must meet, the details of which are outlined in our Graduate Student Handbook.

• Attend a 1-credit (one hour per week) seminar on research ethics. This typically happens during the fall semester of a student's first or second year in the program.

• Attend at least five (5) professional development workshops over the entire course of the program.

• Complete a qualifying research project during the first two years of graduate study. This is often referred to as the master's thesis.

• Pass a subject matter examination. This examination must be passed before work on the dissertation can begin.

• Complete a dissertation project and defend it in an oral examination. The research requirements for the PhD are described in more detail in our Graduate Student Handbook.

Graduate Certificate in Quantitative Data Analysis

The goal of the certificate is to ensure that students have both a solid basis in probability and statistics, inference and quantitative
research design as well as some depth of experience in a more advanced topic area. As such, students completing the certificate are required to take at least five courses. Consult the required course listings below. Of note, some courses appear in more than one area, but a course can only be used to fill one of the requirements. In consultation with the certificate adviser, students may substitute equivalent courses or more demanding mathematical treatments of the same course material. For programming prerequisites, visit our Quantitative Data Analysis website (http://psychweb.wustl.edu/Graduate_Certificate_in_Quantitative_Data_Analysis).

Core Area Courses (at least one from each area)

### Probability and Statistics

The fifth course can be from any of the three focus areas, or it can be a second course from the Probability and Statistics group.

Public Health Sciences

The Brown School's PhD program in Public Health Sciences prepares students to think critically as public health scientists, to succeed as independent investigators, and to understand and address public health challenges for the nation and the world. It provides hands-on research experiences and mentoring from day one of the program; a curriculum that builds methodological and analytical skills and that offers deep knowledge of the field's theoretical and conceptual underpinnings, philosophy and history; and professional acculturation and network building.

Our doctoral program involves intense study in population health and social science research methods as well as personalized mentoring by some of the leading scholars in the field. Our faculty are on the forefront of research in such areas as health disparities, chronic disease prevention, epidemiology and biostatistics, global health, health policy, systems science, urban design and the built environment, dissemination and implementation science, and mental health. Our curriculum prepares students for leadership in research in a rapidly changing society. We provide a diversity of experience and faculty with a cross-section of interests that enhance transdisciplinary learning. We have created a collaborative
and entrepreneurial community with a strong commitment to conducting research that will have social impact.

A completed master's degree in public health, social work, or related social or health science is required of all applicants for admission. The deadline for applications to the PhD in Public Health Sciences is December 1 of the year preceding enrollment.

For additional information, please refer to the Doctoral Programs Viewbook (https://brownschool.wustl.edu/Academics/PhD-in-Public-Health-Sciences/Pages/default.aspx) on the Brown School website.

Renee M. Cunningham-Williams (https://brownschool.wustl.edu/faculty-and-research/pages/renee-cunningham-williams.aspx)
Associate Professor; Director, NIDA T32 (TranSTAR) Pre- and Postdoctoral Training Program
PhD, Washington University
Epidemiological, prevention, and intervention research; health and mental health disparities; pathological gambling and comorbidity; risk taking, substance use and antisocial behaviors; crisis intervention

Director, PhD Program in Public Health Sciences
Professor; Director, Center for Public Health Systems Science
PhD, University of Illinois
Systems science; evaluation of public health programs; tobacco control policy
Jenine Harris (https://brownschool.wustl.edu/faculty-and-research/pages/jenine-harris.aspx)
PhD, Saint Louis University
Social network analysis; social media in public health

Darrell Hudson (https://brownschool.wustl.edu/faculty-and-research/pages/darrell-hudson.aspx)
PhD, University of Michigan
Social determinants of health; health disparities

Lora Iannotti (https://brownschool.wustl.edu/faculty-and-research/pages/lora-iannotti.aspx)
PhD, Johns Hopkins University
Child nutrition; infectious diseases; poverty pathways

Kimberly Johnson (https://brownschool.wustl.edu/faculty-and-research/pages/kimberly-johnson.aspx)
PhD, University of Minnesota
Human genetics and cancer; epidemiology

Jason Purnell (https://brownschool.wustl.edu/faculty-and-research/pages/jason-purnell.aspx)
PhD, Ohio State University
Health disparities; economic determinants of health

Jean-Francois Trani (https://brownschool.wustl.edu/faculty-and-research/pages/jean-francois-trani.aspx)
PhD, Institut d'Etudes Politiques de Paris, France
Global health; human rights; disabilities

Degree Requirements
PhD in Public Health Sciences
• 72 credit hours; 21 credits transferable from a relevant master's program
• Two years enrolled in full-time courses
• Complete and defend a dissertation
• Three teaching practicums for course credit
• Three research practicums for course credit

Rehabilitation and Participation Science
The Rehabilitation and Participation Science (RAPS) PhD program aims to develop rehabilitation scientists whose research questions are chosen based explicitly on their potential to generate fundamental knowledge that will enhance health, improve quality of life, and reduce illness and disability. Our doctoral model is based on that of mentored research, wherein students devote the majority of their time to research activities beginning in the first semester and become increasingly independent. Students may choose rehabilitation scientists as mentors who will help focus their study in rehabilitation neuroscience, pediatric rehabilitation, outcome science, community health or productive aging.

This program is designed to be completed in four to five years of full-time study. The maximum time allowed for completion is seven years, and there is no provision for part-time study. A tuition stipend and fellowship is provided for up to five years.

Graduates of the RAPS PhD program will be prepared for careers as academic research scientists.

Kerri Morgan (https://www.ot.wustl.edu/about/our-people/kerri-morgan-63)
Assistant Professor of Occupational Therapy and Neurology
PhD, Washington University School of Medicine, Program in Physical Therapy
Research Units

It is expected that all students will be involved in research beginning in their first semester and continuing through completion of the degree. Prior to completion of courses and the qualifying exam, each student is expected to spend at least 15 to 20 hours per week actively engaged in research. After passing the qualifying exam, students are expected to focus full-time on their dissertation and other research projects. It is anticipated that these efforts will lead to refereed publications and the student becoming an independent scientist.

Romance Languages and Literatures

The Department of Romance Languages and Literatures offers PhD programs in French Language and Literature and in Hispanic Studies, preparing students for careers in university teaching and research as well as for diverse career options in areas that include higher education administration, libraries and special collections, and humanities and arts organizations. With our faculty’s wide-ranging expertise, graduate students have opportunities to specialize in many areas of French, Francophone, Latin American, and Iberian cultures. We offer a broad range of study from medieval through contemporary, with opportunities to concentrate in a variety of different areas that reflect the areas of expertise of our faculty, including migrations and communities; popular literacy and cultural memory; early modern and modern cultural production; the intersections of literature, art, and the sciences; modernities and postmodernities; visual cultures and performance; and linguistics and language learning. The department also offers the Graduate Certificate in Language Instruction, which is open to PhD students in other disciplines as well as to those in the department’s own graduate programs.

In both programs, students receive six years of funding.

Professor of French
PhD, University of California, Los Angeles
Degree Requirements

Students in both PhD programs take a required seminar in language teaching methodology, in addition to the requirements specified below. Optional pedagogical or interdisciplinary study can be acquired by means of one of the Graduate School's certificate programs.

**PhD in French Language and Literature**

For the PhD in French Language and Literature, students take courses in all areas of French and Francophone studies and may take up to two courses outside of French for a total of 60 credits at the graduate level. During their third semester, students take the AM exam. During the semester after they finish their courses, students take their PhD exams, which consist of three written examinations and one oral examination by the full faculty, followed by a dissertation prospectus defense before their thesis committee of three faculty members. Students then have approximately two years to complete the research and writing of their dissertations, which they defend during the last semester of their program.

**PhD in Hispanic Studies**

For the PhD in Hispanic Studies, students take courses in all areas of Latin American and Iberian studies. During the fifth semester, students take comprehensive exams that are based on reading lists developed in consultation with faculty. After passing their comprehensive exams, students submit and defend a dissertation prospectus. Students then research, write, defend, and submit their doctoral dissertation. Details of the program stages and requirements are available on the Hispanic Studies Graduate Programs page (https://rll.wustl.edu/hispanic-studies-graduate-programs) of the Romance Languages and Literatures website.

**Graduate Certificate in Language Instruction**

To provide our graduate students with additional qualifications and formal development that will make them strongly prepared for a range of demanding academic positions, the Department of Romance Languages and Literatures offers the Graduate Certificate in Language Instruction for students enrolled in PhD programs at Washington University.

The Graduate Certificate in Language Instruction is an interdisciplinary certificate related to the fields of applied linguistics, second language acquisition, psychology, neuroscience and other disciplines that have important implications for the way that foreign languages are taught. Study within these different fields provides a fascinating examination of how second languages are learned and how the second language is generated by learners. An understanding of second language acquisition processes both enriches our knowledge of how the mind works and serves to better inform the ways that foreign language teachers design and implement curricular approaches for different levels and skills.

PhD students must apply to be considered for the certificate program at the beginning of their doctoral courses. Applications will be evaluated by a faculty committee twice a year, in October and March. The certificate consists of five courses: three required courses and two electives.

The goal of the five-course sequence is to provide certificate students with a solid base in the theoretical and instructional implications of research on language acquisition across different linguistic subsystems (i.e., phonology, lexis, syntax and pragmatics) and different linguistic modalities (i.e., spoken and written). This formation will also prepare students to be involved in language program design and curricular development.

For more information, visit the Graduate Certificate in Language Instruction page (https://rll.wustl.edu/graduate-certificate-language-instruction), contact Professor Joe Barcroft (https://rll.wustl.edu/people/joe-barcroft), or call 314-935-5175.

**Social Work**

The objective of the PhD in Social Work is to prepare scholars for teaching and research careers in social work and related social and behavioral sciences. The program is highly interdisciplinary, and students have the opportunity to learn from faculty at the forefront of advances in practice and policy impact in areas such as social and economic development, gerontology, health disparities, mental health, child and family welfare, violence prevention and intervention, and international social work. Our PhD program combines intensive study with personalized mentoring to prepare the next generation of scholars across the nation and around the world with the skills needed to effect change and advance social justice.

We have a very high completion rate. Most of our graduates go on to academic positions, where they pursue a rigorous research agenda while teaching and providing service and leadership to the school and the profession. Thus, we prepare doctoral students with the advanced quantitative and qualitative methodological training and professional skills needed to conduct research projects, successfully publish findings, present at highly regarded academic conferences, and apply the latest knowledge and instructional strategies in the classroom. The Brown School's collaborative community is strongly committed to providing an exciting and supportive learning environment. A completed master's degree in social work or a related field is required of all applicants for admission. Post-master's experience in social work at the micro, mezzo or macro level is highly valued.

Associate Professors

Derek Brown (https://brownschool.wustl.edu/faculty-and-research/pages/derek-brown.aspx) PhD, Duke University Health economics; stated preference methods & health-related quality of life; child abuse and neglect; Medicaid
PhD, Wayne State University  
Positive youth development; African Americans; academic achievement; mental health; religiosity

PhD, Brown School at Washington University  
Racial/ethnic disparities in health and mental health care; implementation science; integration of physical and mental health services; mental health services

Alexis Duncan (https://brownschool.wustl.edu/faculty-and-research/pages/alexis-duncan.aspx)  
PhD, Saint Louis University  
Psychiatric epidemiology; obesity and eating disorders; substance use and related disorders; comorbidity; child abuse and neglect; behavior genetics

Amy A. Eyler (https://brownschool.wustl.edu/faculty-and-research/pages/amy-eyler.aspx)  
PhD, Oregon State University  
Physical activity; childhood obesity; policies and preventative health

Patrick J. Fowler (https://brownschool.wustl.edu/faculty-and-research/pages/patrick-fowler.aspx)  
PhD, Wayne State University  
Housing and homelessness; child maltreatment and child welfare system; developmental psychopathology; policy and program evaluation; prevention science; violence exposure

Ross Hammond (https://brownschool.wustl.edu/Faculty-and-Research/Pages/Ross-Hammond.aspx)  
Betty Bofinger Brown Associate Professor  
PhD, University of Michigan  
Modeling complex dynamics in social, economic, and public health systems; obesity etiology and prevention; food systems and food security; tobacco control

Jenine Harris (https://brownschool.wustl.edu/faculty-and-research/pages/jenine-harris.aspx)  
PhD, Saint Louis University  
Dissemination research; social network analysis; social media; public health systems

Darrell Hudson (https://brownschool.wustl.edu/faculty-and-research/pages/darrell-hudson.aspx)  
PhD, University of Michigan  
Health disparities; mental health; health behavior; health education; violence and injury prevention

Lora Iannotti (https://brownschool.wustl.edu/faculty-and-research/pages/lora-iannotti.aspx)  
Associate Dean for Public Health  
PhD, Johns Hopkins University  
Young child nutrition; micronutrient deficiencies; infectious diseases and poverty pathways; evaluation research

Kimberly Johnson (https://brownschool.wustl.edu/faculty-and-research/pages/kimberly-johnson.aspx)  
PhD, University of Minnesota  
Epidemiology; human genetics; cancer

MSW, Syracuse University  
International & national community economic development; urban issues; international, state, and regional planning; international social development; multicultural education

Patricia Kohl (https://brownschool.wustl.edu/faculty-and-research/pages/patricia-kohl.aspx)  
Associate Dean for Social Work  
PhD, University of North Carolina at Chapel Hill  
Child welfare; evidence-based practice; engaging hard to reach populations in treatment; parent training

Von Nebbitt (https://brownschool.wustl.edu/faculty-and-research/pages/von-nebbitt.aspx)  
PhD, Brown School at Washington University  
Urban African-American children and youth, with a primary research agenda of increasing empirical and theoretical knowledge of the effects of living in urban public housing

David A. Patterson (https://brownschool.wustl.edu/faculty-and-research/pages/david-patterson.aspx)  
PhD, University of Louisville  
Alcohol and other drug treatment retention and effectiveness; implementation of evidence-based practices; Native American and Indigenous People’s health and wellness; underrepresented minority college success

Jason Purnell (https://brownschool.wustl.edu/faculty-and-research/pages/jason-purnell.aspx)  
PhD, Ohio State University  
Health behavior; information and communication technologies; health disparities

Lindsay Stark  
PhD, Columbia University  
Violence prevention; child welfare; women’s health

Jean-Francois Trani (https://brownschool.wustl.edu/faculty-and-research/pages/jean-francois-trani.aspx)  
PhD, Institut d’Etudes Politiques de Paris, France  
Mental health; disabilities; international social work
Assistant Professors

Christine Ekenga (https://brownschool.wustl.edu/faculty-and-research/pages/christine-ekenga.aspx)
PhD, New York University
Chronic disease epidemiology; cumulative risk assessment; environmental health; occupational health; disaster epidemiology and public health preparedness

Vanessa Fabbre (https://brownschool.wustl.edu/faculty-and-research/pages/vanessa-fabbre.aspx)
PhD, University of Chicago
Aging and the life course; health and mental health; gender and sexuality; interpretive methodology

Sojung Park (https://brownschool.wustl.edu/faculty-and-research/pages/sojung-park.aspx)
PhD, University of Michigan
Health and well-being of older adults; environmental gerontology; community-based long-term care; cross-national/cross-cultural studies

Deborah Salvo
PhD, Emory University
Physical activity and spatial epidemiology; obesity prevention and nutrition; chronic disease prevention; global health disparities

Degree Requirements

PhD in Social Work

A completed master’s degree in social work, public health or a related social science field is required of all applicants for admission; a minimum of two years of post-master’s practice and/or research experience is strongly recommended. The deadline for applications to the PhD in Social Work is December 1 of the year preceding enrollment.

Students need a minimum of 72 graduate credit hours for a PhD from the Brown School. These can include 21 master’s-level credits. While in the program, the student takes a variety of theory and research methods courses, plus 15 units of elective credits outside the traditional social work curriculum. Electives may include classes in psychology, psychiatry, public health, anthropology, education, law, economics or political science. Teaching practicums, research assistantships, and the writing of an "area statement" round out the required credits. Competence is assessed through a qualifying examination and the defense of the dissertation. We are unable to offer distance learning or part-time study.

The curriculum at the Brown School emphasizes substantive, theoretical and methodological preparation. Courses (http://bulletin.wustl.edu/brownschool/#courses) may include the following:

- The Role and Use of Theory in Applied Social Research
- Foundations of Data Analysis
- Applied Linear Regression Analysis
- Structural Equation Modeling

The first year of study includes basic principles in research, statistics and measurement as well as theoretical orientations and content underlying the knowledge base of social work and social welfare.

The second year turns to a more individualized program of study. A curriculum plan is developed by each student and their adviser, and it focuses on an area of specialization within the field of social work.

The orientation of the PhD program is interdisciplinary, requiring 15 credits of course work in the social sciences. Social science courses related to the student's developing area of specialization are selected. Courses in research methodology, research and teaching practica as well as specialized courses also help to build the student's expertise as a social work scholar.

Speech and Hearing Sciences

The PhD in Speech and Hearing Sciences prepares students for academic and research careers in the field. Established in 1947, the program is dedicated to fostering scientific inquiry in speech and hearing sciences and related disciplines. The program is administered jointly between the Graduate School and the Program in Audiology and Communication Sciences in the Washington University School of Medicine.

Program Director and Professor
PhD, University of Michigan

Faculty List

For our full faculty list, please visit our faculty webpage (http://pacs.wustl.edu/our-faculty).

Degree Requirements

PhD in Speech and Hearing Sciences

Curriculum

The curriculum combines interdisciplinary academic courses, teaching experiences and research, and it culminates in a
dissertation. Each student’s experience can be tailored to their individual interests.

Generally, 24 hours of graduate credit can be transferred toward the PhD from another institution; graduates of our Doctor of Audiology (AuD) and Master of Science in Deaf Education (MSDE) programs are provided with advanced standing and may transfer up to 48 or 36 credits, respectively.

**Teaching Experiences**

Teaching experiences prepare students to become effective teachers and communicators of their discipline and their own research. All PhD students receive instruction in pedagogy and complete teaching experiences at the introductory and advanced levels under the guidance of a faculty mentor.

**Research**

Students immerse themselves in the world-class research environment of Washington University. As they conduct their own original research, which culminates in a dissertation, they participate in colloquia, Grand Rounds, brown bag seminars, research seminars, journal clubs and similar opportunities. The program fosters opportunities to publish and to participate in professional conferences. During the final year of the program, students present and defend their dissertations.

The Program in Audiology and Communication Sciences (PACS) is affiliated with the Department of Otolaryngology, which operates one of the nation's largest hearing and deafness research programs. Topics include adult aural rehabilitation, biology of hearing and deafness, childhood deafness, cochlear implants, dizziness and balance, and hearing aids.

**Theater and Performance Studies**

The master's program in Theater and Performance Studies at Washington University in St. Louis is one of the strongest programs of its kind. Students are offered rigorous scholarly training, opportunities to meet and work with visiting scholars and artists, and support in developing their own independent research projects, all within a collaborative, collegial environment that prizes critical thinking and creative practice.

Our students enroll in small, intensive seminars in theater history and performance theory as well as studio courses in directing, playwriting and theatre for social change. There are ample opportunities for interdisciplinary study, and we have strong relationships with affiliate faculty in allied departments and programs, including Film and Media Studies, English, Music, Comparative Literature, African and African-American Studies, and Women, Gender, and Sexuality Studies.

Our faculty has been recognized with numerous accolades for both their artistic and scholarly work, and the small size of each admitted class allows for individual attention and one-on-one mentorship. We routinely place our graduates in top PhD programs in the field, including those at Brown, Stanford, Northwestern, University of California San Diego, and University of Minnesota. Other graduates have pursued careers in the arts, social justice work and education. We invite students who have studied theater and performance as undergraduates as well as students who are following new paths in their scholarship to learn more about our program.

PhD, Columbia University
Modern Dance Technique, Theory and Composition, Dance History and Ethnology

Degree Requirements

Master of Arts in Theater and Performance Studies

Degree Requirements: 36 units (12 courses at the 400 level or above)

*Note: Students must be enrolled in 9 graduate credits each semester to retain full-time status.

I. Required courses: 15 units (5 courses)

1. L15 Drama 5101, Introduction to Graduate Study. A general introduction to advanced scholarship in theater and performance studies, this course is designed to familiarize first-year graduate students with expectations for advanced research and professional writing. It is also intended to provide an overview of theater and performances studies, focusing on the relationship between these two scholarly domains, major works of scholarship that have defined the field, and current debates redrawing its contours.

2. L15 Drama 449, Seminar in Dramatic Theory. An in-depth exploration of core works of dramatic theory from the ancient world to the present, this course focuses on texts that enunciate what theater is, has been and should be. Readings address theater’s role in society, the anti-theatrical prejudice, the aesthetic pleasures of drama and theater, theater as a means of educating the citizen, and the relationship between dramatic form and social and political revolution.

3. L15 Drama 497, Performance Theory. This course introduces students to contemporary theories of performance, with “performance” understood as both metaphor and event. From a multidisciplinary perspective, students will consider how cultures produce meanings — and, indeed, perform those meanings — to create and/or disrupt their own social coherence. Theorists studied include J.L. Austin, Victor Turner, Erving Goffman and Judith Butler.

4. Theater/Performance History. One 400- or 500-level historically-based seminar from a list of approved courses
taught **within** the Performing Arts Department. (Topics vary by semester.)

5. **Theater Practice.** At least one (but no more than three) 400- or 500-level course(s) in theater practice: dramaturgy, directing, playwriting or design. Students may meet this requirement with L15 Drama 506 Problems in Contemporary Arts Practice Research.

**II. Electives: 18 units (6 courses)**

Students are invited to develop a broad-based or a specialized curriculum in theater and performance studies, choosing courses from within the Performing Arts Department (including Dance) or as many as four courses (12 units) from without. The program works closely with faculty affiliates in other departments, including Anthropology; Classics; English (and non-Anglophone languages and literatures); Film and Media Studies; Music; Women, Gender, and Sexuality Studies; and the Sam Fox School of Design & Visual Art.

**III. Master’s Research (3 units)**

The capstone to the master’s degree is the completion of an essay of publishable length (typically 25 double-spaced pages) and quality. This essay is based on a seminar paper written during the student’s first three semesters in the program, and it is extensively revised and expanded under the guidance of an adviser. After the revised seminar paper has been submitted to and approved by the director of graduate studies, the student will meet with a committee of three faculty members for an oral exam.

**Accelerated Master of Arts in Theater and Performance Studies**

This program allows qualified Washington University undergraduates to complete a Master of Arts (AM) degree in a one-year accelerated program after earning the Bachelor of Arts (AB) degree in drama. The undergraduate and graduate degrees are awarded sequentially, if approved, with admission to the Accelerated AM program occurring during the fall semester after completion of the AB degree during the preceding December, May or August. Applications may be submitted at any time during the student’s senior year through August 1, and GRE tests are not required. The program is available only to senior students and only for continuous enrollment the next year. There is no option for deferred admission.

The requirements for the Accelerated AM are identical to those for the traditional AM, as detailed above. To complete the AM in one year, students may apply five undergraduate courses at the 400 level or above (a maximum of 16 units) toward the master’s degree. Undergraduate courses must be acceptable to the Director of Graduate Studies, and they must be completed with a final grade of B or higher.

Interested students should contact the Director of Graduate Studies, Paige McGinley (pmcginley@wustl.edu), during their sophomore or junior year for additional information and application instructions.

**Urban Studies**

Why is the study of urban life — of living in cities — an important area of study? The answer is simple. As a result of increasing urbanization (i.e., the dynamics that result from people moving into densely populated areas), worldwide projections show that increases in urban populations are occurring everywhere. World cities are growing by one million people per week, and demographers suggest that, by 2050, more than two-thirds of the planet’s population will be urban dwellers. The issues that affect our densely populated cities and the people who inhabit them will be the focus of substantive research and policy debates in the 21st century. Because we seek to prepare our students to be leaders on the world stage, the in-depth study of urbanism and urbanization on both the national and international scales is critical.

The Graduate Certificate Program in Urban Studies is administered by the Urban Studies program and the Graduate School. The Urban Studies program director, Professor Carol Camp Yeakey, is responsible for the Graduate Certificate Program.

(Education)
Specifically, the graduate certificate requires the successful completion of five courses (two core courses and three electives) for a total of 15 graduate units. A maximum of two of these five courses may also be counted toward the PhD.

Women, Gender, and Sexuality Studies

Our graduate certificate program allows students in PhD programs to enhance their disciplinary studies with a concentration in gender studies.

The Women, Gender, and Sexuality Studies (WGSS) program offers graduate certificate students the means of meeting and working with graduate students in other departments. Graduate certificate students are on the program's mailing lists, and they are invited to participate in a variety of events, including special guest lectures, conferences, faculty searches and informal gatherings.

The mentored teaching experience in WGSS takes place over two semesters. During the first semester, students undergo mentored teaching preparation in which they observe the class they will teach, they are mentored by the instructor, and they attend instructor meetings devoted to examining content and pedagogy. In addition, they develop a syllabus — often in consultation with their WGSS teaching mentor and their department adviser — that is reviewed carefully by WGSS faculty. These students may also be undergoing mentored teaching experiences in their own departments during this first semester. During the next semester, they teach the WGSS course, and they are observed by WGSS faculty and, in some cases, by faculty in their own departments. These faculty use a rubric for their assessment that is made available to the student; students receive a written assessment that they then discuss with the observing WGSS faculty member. Sometimes students are observed and assessed more than once. Participation in this program broadens students' teaching experiences and their credentials for future job opportunities. The following departments are involved in this program: Anthropology, Art History, Education, English, German, History, Philosophy, Political Science, and Romance Languages and Literatures.

(Romance Languages and Literatures)
the Graduate School of Arts and Sciences office, with a copy also given to the WGSS office. The earlier that the WGSS department knows who these students are, the earlier these students can be included in mailings about program activities, lectures, conferences and other events. Certificate application forms are available in the Graduate School office.

The graduate certificate in WGSS requires the completion of five courses, at least two of which must be drawn from 400-level or above home-based WGSS courses. The other three required courses must be drawn from 400-level or above home-based or cross-listed WGSS courses or from other program-approved, gender-based courses (students will consult with the program director for approval). Since a certificate requires three courses beyond those required for a student's home degree, participation in the certificate program may require an extra semester of graduate classes. Those students who are not interested in the certificate but who want to concentrate on gender within their disciplines to enhance their credentials and enrich their training may do so by pursuing a graduate minor in accordance with the policies of their individual departments. Other students may participate in WGSS courses without commitment to a concentration.

Writing

The Writing program offers a Master of Fine Arts (MFA) in Writing in three genres: creative nonfiction, fiction and poetry. Applicants must apply to each genre separately and will be enrolled in only one. However, through themed craft courses, MFA students may take courses with faculty and students in other genres. The MFA in Writing is a two-year program.

The Writing program, which is ranked ninth in the country by Poets & Writers, is highly selective, enrolling 10 to 15 students each year. There is a low faculty-to-student ratio, with writing courses generally capped at 12. Students are generously funded, with all incoming students receiving full tuition scholarships plus University Fellowships. Our faculty includes Guggenheim Fellows, National Book Award finalists, and winners of the National Book Critics Circle Award. Graduates of our program have won the PEN/Hemingway Award and the Drue Heinz Literature Prize, among other honors.

Each year, our reading series brings a diverse group of poets, fiction writers and nonfiction writers to the department. In addition, the Hurst Professor program brings in six distinguished visitors each year to present their newest work, lecture on the craft of writing, and work one-on-one with our MFA students. Edward P. Jones, Frank Bidart, Joy Williams, Jorie Graham, Aleksandar Hemon, Lucie Brock Broido, George Saunders, Louise Glück, Kelly Link, C.D. Wright, Richard Powers, Claudia Rankine, Deborah Eisenberg, Paul Muldoon, Charles Baxter, Timothy Donnelly and Lydia Davis are just some of our recent visiting Hurst Professors.

Degree Requirements

Master of Fine Arts in Writing

The Writing program leads to the Master of Fine Arts (MFA) in Writing. It is a two-year program that requires satisfactory completion of 42 semester hours, a thesis, and an oral examination dealing principally with the thesis.

Courses

Of the 42 credit units required, 24 consist of the graduate nonfiction, fiction or poetry workshop taken every semester. The remainder are primarily literature and craft courses from the
English department. However, in consultation with the director of the program, graduate-level courses from any department that will enrich the student’s writing are acceptable, as long as the student has the appropriate preparation and the permission of the instructor.

During their first year, students enroll for 24 units: the graduate workshop in their genre (6 units) plus two additional 3-unit courses each semester. During the second year, while participating in the mentored teaching experience, students typically take a total of 18 units: the workshop each semester (12 units), thesis hours (3 units), and an additional course.

Thesis

The required work for the MFA culminates in a thesis, which may take different forms but is usually a volume (or most of a volume) of poems, stories or essays; a novel (or most of a novel); or a memoir or other long-form creative nonfiction work (or most of one).

Oral Examination

Near the end of the second year, after the thesis has been submitted in its final form, the department will schedule an oral examination that deals principally with the thesis.

University College

Graduate Study

University College administers the Doctor of Liberal Arts, Master of Liberal Arts, Master of Arts and Master of Science in coordination with the Graduate School. University College administers the Master of Science in Clinical Research Management in coordination with Washington University School of Medicine. University College also offers a range of graduate-level certificate programs (http://ucollege.wustl.edu/programs/17).

To earn the Doctor of Liberal Arts degree (http://ucollege.wustl.edu/programs/graduate/doctor-liberal-arts) at Washington University, a student must complete 45 credit hours after earning a relevant master's degree, pass a written and oral comprehensive examination, and write and defend a thesis.

Master's degree programs (http://ucollege.wustl.edu/programs/10) in University College consist of 30 to 36 units of graduate-level course work, including, in some cases, a 6-unit master's thesis or a 3-unit directed research project.

Normally, up to 6 units of related graduate-level study with a grade of B or higher may be transferred to a graduate program. All other course work must be taken at Washington University. Only courses taken for a letter grade may be applied to a graduate program of study. Courses taken as pass/fail or audit will not count toward a graduate program of study. Students must maintain a cumulative grade-point average of 3.0 to be eligible to receive a graduate degree.

Please visit the University College website (http://ucollege.wustl.edu) or call 314-935-6700 for more detailed information, requirements and policies concerning specific graduate degree programs.

Admission

Admission to the Doctor of Liberal Arts program is extremely competitive. Candidates must already hold a master's degree in a relevant subject from an accredited institution of higher learning. The application deadline is April 1 for the fall semester and October 15 for the spring semester. Please visit the University College website for more detailed admissions requirements and information about the Doctor of Liberal Arts (http://ucollege.wustl.edu/programs/graduate/doctor-liberal-arts).

Admission to master's degree programs is competitive and open on a selective basis to qualified individuals who have earned a baccalaureate degree. University College and the Graduate School review completed applications and make admissions decisions on a rolling basis for master's degree programs. The process typically takes four to six weeks. Master's degree applicants should submit materials according to the following schedule to ensure a timely decision: November 15 for spring, April 15 for summer and July 15 for fall. Please visit the University College website (http://ucollege.wustl.edu) for additional program-specific admission requirements.

Graduate Degrees in University College

- Doctor of Liberal Arts (DLA) (http://ucollege.wustl.edu/programs/graduate/doctor-liberal-arts)
- Master of Arts (AM) in American Culture Studies (https://ucollege.wustl.edu/programs/graduate/masters-american-culture-studies)
- Master of Arts (AM) in Biology (https://ucollege.wustl.edu/programs/graduate/masters-biology)
- Master of Arts in Education (MAEd) (https://ucollege.wustl.edu/areas/education/masters)
- Master of Arts (AM) in Human Resources Management (https://ucollege.wustl.edu/programs/graduate/masters-human-resources-management)
- Master of Arts (AM) in International Affairs (https://ucollege.wustl.edu/programs/graduate/masters-international-affairs)
- Master of Arts (AM) in Nonprofit Management (https://ucollege.wustl.edu/programs/graduate/masters-nonprofit-management)
- Master of Arts (AM) in Statistics (https://ucollege.wustl.edu/programs/graduate/masters-statistics)
• Master of Arts (AM) in Teaching and Learning (http://bulletin.wustl.edu/grad/ucollege/matl)
• Master of Liberal Arts (MLA) (https://ucollege.wustl.edu/programs/graduate/masters-liberal-arts)
• Master of Science (MS) in Biology for Science Teachers (https://ucollege.wustl.edu/node/1278)
• Master of Science (MS) in Clinical Research Management (https://ucollege.wustl.edu/programs/graduate/masters-clinical-research-management)

The AM, MAEd, and MS in Biology degrees are conferred by the Graduate School. The MS in Clinical Research Management is conferred by University College.

* Note: University College students may apply a maximum of 6 units of pass/fail credit from graduate-level courses in the Olin Business School to a master's degree program in University College. The course work must be authorized by both University College and the Graduate School, and the student must have received Pass or High Pass in the Olin School course. Courses with grades of Low Pass are not eligible. This policy applies only to courses completed on a pass/fail basis in the Olin Business School prior to a student's admission to a University College graduate program of study administered by University College and conferred by the Graduate School. Once admitted to a University College program of study, students who are authorized to take courses in the Olin School and apply them toward their program of study are required to convert pass/fail grades to letter grades at the time of registration.

Website: http://ucollege.wustl.edu

UCollege - American Culture Studies

Master of Arts in American Culture Studies

The Master of Arts in American Culture Studies addresses the intellectual and moral questions of American identity and belonging that no single disciplinary perspective can comprehensively and satisfyingly resolve. What does it mean to live and work in an American culture devoted to individual success and autonomy and at the same time be a citizen of a nation devoted to collective needs and well-being?

The Master of Arts in American Culture Studies provides the instruction, both in specific disciplines and in cross-disciplinary conversations, to help students answer important questions about American society. It also introduces some of the social, political and cultural issues that have shaped American culture and identity. Most fundamentally, it provides a critical skill set that fosters the analysis of an array of cultural objects — a place, an event, a work of art, a political institution — from a rich and diverse foundation of knowledge and perspectives.

Students' studies culminate in a self-directed project that allows them to explore an area of personal interest while participating in a multidisciplinary scholarly community. Part of the excitement of this kind of learning is the opportunity to engage in creative, rigorous exchange with faculty in the humanities and social sciences at Washington University in St. Louis as well as with leading practitioners in the St. Louis professional and policy world.

Studies may span American literature, history, politics, religion, philosophy, art, music and film.

UCollege - Biology

University College offers both a Master of Arts in Biology and a Master of Science in Biology for Science Teachers.

Master of Arts in Biology

The Master of Arts in Biology program helps students to update and deepen their knowledge of the biomedical sciences, prepare for employment in related fields, and advance their professional standing while obtaining a graduate science degree on a part-time basis through evening, weekend and online courses.

Designed to be adaptable to each individual's unique background and goals, the program provides a flexible curriculum and close individual advising for each student. Students include science and health professionals, teachers, technicians, and individuals in biology-related businesses.

Students in this program have the option of choosing a concentration in neurobiology for deeper, more focused study.

Master of Science in Biology for Science Teachers

The Master of Science (MS) in Biology is designed to fit the schedules of working teachers. It consists of two three-week summer institutes in residence at Washington University. The remaining course work performed during the academic years is completed online. Summer housing is available for out-of-town students and included in the cost of the program.

**UCollege - Education**

University College offers a Master of Arts in Education–Instructional Process as well as Post-Baccalaureate Teacher Certification.

**Master of Arts in Education–Instructional Process**

Washington University’s Department of Education offers a part-time Master of Arts degree focused on an Analysis of Practice for practicing educators in a variety of settings. This Analysis of Practice allows educators to consider multiple and enhanced approaches for data collection, analysis, and reflection on educational issues involving educational assessment data, video microanalysis, learning sciences research and educational foundation concepts. We offer three strands of study that work to enhance the educator’s professional development in a particular area of focus.

**Post-Baccalaureate Certification**

The Post-Baccalaureate Certification program provides students who have completed a bachelor's degree with the course work necessary to obtain a Missouri teaching certificate. All course work is available through University College during afternoon and evening hours with the exception of student teaching, which is available during the fall (elementary) or spring (middle school, secondary and K-12) semester. Required course work is taken for undergraduate credit. Certification through this program is available in the following teaching areas:

- Secondary Education (grades 9-12): biology, chemistry, earth science, English, mathematics, physics or social science
- Middle School (grades 5-9): English, mathematics, science or social studies
- K-12: art, dance or world languages (Chinese, French, German, Japanese, Latin, Russian, Spanish)
- Elementary Education (grades 1-6)

**UCollege - Human Resources Management**

**Master of Arts in Human Resources Management**

Human resources managers are an integral part of the leadership team charged with directing complex organizations and a diverse workforce. Managing people and organizations requires both functional skills in human resources as well as expertise in strategic planning and organizational development. The Master of Arts in Human Resources Management prepares individuals in a variety of employment settings to join other organizational leaders at the table of decision makers.

The Master of Arts in Human Resources Management provides the student with skills and information in key operational areas such as human relations and communications, compensation and benefits, training and development, employee and labor relations, and staffing and retention. Additionally, the program teaches professionals how to contribute to organizational development, change, risk management and strategic planning.

**UCollege - International Affairs**

**Master of Arts in International Affairs**

Breathtaking changes in political, economic and social relations have taken place over the past several centuries. Living and working in a rapidly changing global environment presents great opportunities to advance the human condition, promote growth and development, create political liberties, recast bargains between governments and their societies, transform social welfare, and advance the boundaries of knowledge and scientific exploration.

Yet, the same context presents great risks as people fear loss of identity, worry about economic subordination and loss to those beyond their borders, encounter environmental degradation, and confront potential decline in personal and social autonomy. Our heightened economic, political, social, cultural and environmental interdependence generates serious challenges in areas such as social justice, health, security, development, human rights, social welfare, inequality, diversity and technology. These challenges create the possibility for conflict but also for cooperation and compromise.

The Masters of Arts in International Affairs offers an interdisciplinary approach to understanding global issues. The program draws on teaching and expertise from Washington University faculty and experienced practitioners in the St. Louis region, and it provides knowledge and skills for understanding and working with some of the most difficult international and cross-cultural problems faced by states, societies and communities. Students have the opportunity to tailor their studies to explore topics such as global politics, global economics, development, international security and conflict, international...
business, human rights, the role of gender, the environment and sustainability, and issues of regional importance.

Whether students are studying full-time or part-time, a range of on-campus and online courses makes it possible for them to shape their degree according to their interests and schedules.

UCollege - Liberal Arts
Master of Liberal Arts (MLA)

The Master of Liberal Arts (MLA) program fosters intellectual breadth through courses that address a broad range of cultural issues from different academic perspectives. Students may explore questions of identity through art, literature and religion. They may analyze the politics of race in fiction, historical documents, the visual arts and music. They may debate ethical choices presented by fiction writers, jurists, philosophers and scientists from antiquity through the present. MLA seminars examine literary, artistic and cinematic masterpieces; historic moments of discovery and change; traditions of thought; cultural differences; and civic responsibilities.

MLA students sharpen their thinking about contemporary values and choices through courses that ask them to reflect on the individual's relation to society, technology and the spread of ideas, challenges to freedom, inspiration and creativity.

Students pursue course work and independent research with Washington University scholars from a number of academic disciplines, including architecture, art, film, history, literature, music, philosophy, religion and science.

The MLA program emphasizes critical thinking and inquiry, close reading, intensive writing and problem solving, all of which are hallmarks of a liberal arts education and essential skills for a range of professional contexts.

Doctor of Liberal Arts (DLA)

The Doctor of Liberal Arts (DLA) program is designed for the experienced adult learner who wishes to pursue rigorous interdisciplinary study along with independent scholarly reading and research. The degree is designed to cultivate interdisciplinary skills, intellectual habits, analytical and critical reasoning, effective writing, and broad-based decision making. This degree neither constitutes a professional credential nor provides training for an academic career.

UCollege - Nonprofit Management
Master of Arts in Nonprofit Management

Nonprofit organizations confront the challenges and opportunities that mission-driven organizations face today in areas such as succession planning, volunteerism, resource development and competitive funding. The Master of Arts in Nonprofit Management addresses these areas by drawing on the expertise of experienced practitioners in the St. Louis area.

The graduate program in Nonprofit Management provides a range of courses that address the major responsibilities and challenges of nonprofit and human resources management. It prepares students to work effectively in the field, and it enhances the management skills of those seeking careers in related fields. Administered jointly by the Graduate School and University College, the program is designed for working adults attending school on a part-time basis.

This program provides students with the skills and resources needed to lead mission-driven organizations as productive examples of social entrepreneurship. Students are grounded in the historical context of nonprofit management and philanthropy, and they acquire skills in all operational areas of nonprofit management, including financial management, law, grant writing, volunteer management, resource development, research and statistical analysis, and marketing communications. At the strategic level, the program teaches leadership, organization development, strategic planning, marketing communications, and the skills of social entrepreneurship.

Website: http://ucollege.wustl.edu/programs/graduate/masters-nonprofit-management

UCollege - Statistics
Master of Arts in Statistics

The Master of Arts in Statistics prepares students to perform in an information-rich, data-driven workforce that requires both general and specialized skills in statistical analysis. The 36-unit program, designed primarily for part-time study, covers the essential elements of statistical studies, with courses
in probability, statistical computation and model building, experimental design, survival analysis, Bayesian statistics and stochastic processes. These courses and the required practicum provide a foundation for further doctoral-level study in mathematics and statistics or in other academic disciplines such as anthropology, biology, economics, political science and psychology.

In addition to providing a solid theoretical foundation, the program also offers applied value by providing tools, strategies and technical skills in areas such as predictive analytics and big data to help professionals in many fields analyze large volumes of data, make reliable and productive business decisions, and use technology efficiently. The program offers flexibility and a wide range of elective and applied courses that emphasize statistical analysis in mathematics, computer science, engineering, clinical investigation, biostatistics, economics and business. Students may choose from a broad-based pool of elective courses across disciplines, or they may organize elective course work and design the required practicum in one of the optional tracks that correspond to strong industry demand for statisticians: Biology and Health, Business and Finance, or Engineering and Materials.

Degrees Offered

A
Aerospace Engineering (PhD) (p. 91)
American Culture Studies (Certificate) (p. 26)
American Culture Studies (University College: AM) (p. 156)
Anthropology (PhD) (p. 27)
Art History and Archaeology (AM, PhD) (p. 31)

B
Biochemistry, Biophysics, and Structural Biology (PhD) (p. 34)
Biology (University College: AM, MS) (p. 156)
Biomedical Engineering (PhD) (p. 65)
Business Administration (PhD) (p. 36)

C
Chemistry (PhD) (p. 44)
Chinese (AM) (p. 56)
Chinese & Comparative Literature (PhD) (p. 56)
Chinese Language and Literature (PhD) (p. 56)
Classics (AM, PhD) (p. 45)
Comparative Literature (PhD) (p. 48)
Computational & Data Sciences (PhD) (p. 67)
Computational & Systems Biology (PhD) (p. 34)
Computer Engineering (PhD) (p. 71)
Computer Science (PhD) (p. 71)

D
Dance (MFA) (p. 51)
Data Science in the Humanities (Certificate) (p. 53)
Developmental, Regenerative & Stem Cell Biology (PhD) (p. 34)

E
Earth and Planetary Sciences (PhD) (p. 55)
East Asian Studies (AM) (p. 58)
Economics (PhD) (p. 60)
Education (Elementary and Secondary Teacher Certification, MAEd, MAT, PhD) (p. 62)
Education (University College: MAEd-IP, Post-Baccalaureate Certification) (p. 157)
Electrical Engineering (PhD) (p. 74)
Energy, Environmental & Chemical Engineering (PhD) (p. 77)
English and American Literature (PhD) (p. 94)
English and Comparative Literature (PhD) (p. 48)
Evolution, Ecology & Population Biology (PhD) (p. 34)

F
Film and Media Studies (Certificate, AM) (p. 96)
French & Comparative Literature (PhD) (p. 48)
French Language and Literature (PhD) (p. 139)

G
German & Comparative Literature (PhD) (p. 48)
German and Higher Education Administration (AM) (p. 98)
Germanic Languages and Literatures (PhD) (p. 98)

H
Hispanic Studies (PhD) (p. 139)
Hispanic Studies & Comparative Literature (PhD) (p. 48)
History (PhD) (p. 102)
Human & Statistical Genetics (PhD) (p. 34)
Human Resources Management (University College: AM) (p. 157)

I
Imaging Science (PhD) (p. 80)
Immunology (PhD) (p. 34)
International Affairs (University College: AM) (p. 157)
Islamic and Near Eastern Studies (AM) (p. 105)

J
Japanese (AM) (p. 56)
Japanese & Comparative Literature (PhD) (p. 56)
Japanese Language and Literature (PhD) (p. 56)
Jewish Studies (AM) (p. 105)

L
Language Instruction (Certificate) (p. 139)
Latin American Studies (Certificate) (p. 108)
Liberal Arts (University College: MLA, DLA) (p. 158)

M
Materials Science & Engineering (PhD) (p. 85)
Mathematics (AM, PhD) (p. 110)
Mechanical Engineering (PhD) (p. 91)
Molecular Cell Biology (PhD) (p. 34)
Molecular Genetics & Genomics (PhD) (p. 34)
Molecular Microbiology & Microbial Pathogenesis (PhD) (p. 34)
Movement Science (PhD) (p. 117)
Music (AM, PhD) (p. 118)

N
Neurosciences (PhD) (p. 34)
Nonprofit Management (University College: AM) (p. 158)
Nursing Science (PhD) (p. 120)

P
Philosophy (PhD) (p. 121)
Philosophy-Neuroscience-Psychology (PhD) (p. 121)
Physics (PhD) (p. 123)
Plant & Microbial Biosciences (PhD) (p. 34)
Political Science (PhD) (p. 127)
Psychological & Brain Sciences (PhD) (p. 132)
Public Health Sciences (PhD) (p. 136)

Q
Quantitative Data Analysis (Certificate) (p. 132)

R
Rehabilitation and Participation Science (PhD) (p. 138)

S
Social Work (PhD) (p. 141)
Speech and Hearing Sciences (PhD) (p. 145)
Statistics (AM, PhD) (p. 110)
Statistics (University College: AM) (p. 158)
The staff members of the Graduate School are here to help students complete graduate degrees successfully. They are committed to being of service to students, and they can be of inestimable assistance in navigating a program of graduate study.

Nevertheless, students should always ask questions first of their degree program's administrative faculty and staff. Many of the Graduate School's general policies are carried out by discipline-specific implementation plans, and much of the paperwork that enables a student to proceed must come to the Graduate School from the faculty and staff of the program rather than from the student.

For a listing of the administrative staff of the Graduate School, please refer to the Administrators (p. 161) section of this page.

Website: http://graduateschool.wustl.edu/administration

Administrators

Dean and Vice Provost for Graduate Education

William F. Tate (http://graduateschool.wustl.edu/staff/william-f-tate-iv)
Edward Mallinckrodt Distinguished University Professor in Arts & Sciences

Director, Enrollment and Assessment

Angela Wilson
Assistant Dean & Registrar

Admissions

Eligibility

Washington University encourages and gives full consideration to all applicants for admission and financial support without regard to race, color, age, religion, sex, sexual orientation, gender identity or expression, national origin, veteran status, disability or genetic information.

Evidence considered by each admissions committee includes not only the quality of previous course study but also its relevance to the applicant's prospective program. Research experience in the discipline is always viewed favorably.

The Graduate School is strongly interested in recruiting, enrolling, retaining and graduating students from diverse backgrounds. Applications for admission by students from
diverse backgrounds to any of the Graduate School’s degree programs are encouraged and welcomed. To the greatest extent possible, students with disabilities are integrated into the student population as equal members.

**Application Process**

Degree programs set their own application deadlines, which must occur no later than January 15. Many deadlines are much earlier; applicants should check with their prospective programs. It is generally advantageous to the applicant to complete the application well in advance of the deadline.

Admissions and financial aid awards are for a specific academic year. Admitted students can request a deferral of admission for up to one year, but such special requests require approval of the admitting program and of the Graduate School. Applicants to whom admission is not offered may reapply after gaining additional evidence of qualification.

Degree programs in Arts & Sciences rarely admit applicants for the spring semester. Students interested in beginning graduate study in the spring should consult their prospective program’s faculty and staff.

The application (http://graduateschool.wustl.edu/apply) is available online through the Graduate School website.

Applications are ready for final consideration after the following items have been submitted:

1. The application
2. Transcripts of all undergraduate and graduate courses taken by the applicant. The application review process will be greatly expedited by uploading unofficial copies of transcripts. Official transcripts will be required before a student can enroll.
3. Official TOEFL scores (for international applicants whose native language is not English)
4. Three reference forms and letters of recommendation completed by persons closely acquainted with the applicant
5. Application fee or fee waiver
6. Any additional material or the interview required by the degree program

Admissions recommendations are made by the faculty of each degree-granting program. Disciplines naturally require different preparation and various aptitudes in their applicants, so the admissions process is necessarily decentralized.

Students may be admitted to study for the PhD degree directly from baccalaureate study or after undertaking other graduate or professional education, whether at Washington University or at another accredited institution.

**Admission of International Students**

International students considering application to Washington University for graduate study should have a general familiarity with academic practices and university customs in the United States. All international students are required to present evidence of their ability to support themselves financially during graduate study. International students whose native language is not English must submit score reports from the Test of English as a Foreign Language (TOEFL) offered by ETS (https://www.ets.org). The test should be taken in time for results to reach Washington University directly from ETS before the application deadline.

To be eligible for a TOEFL waiver, the applicant must have completed at least three years of study toward their degree from a regionally accredited university located in an English-speaking country. Please also note that the entire length of study must have been completed at the institution.

**Categories of Admission**

Students are admitted to the Graduate School as full-time candidates for a specific degree program. There are also two ways to take graduate courses without admission to candidacy for a degree: as a Student Not Candidate for a Degree (SNCD) or as an Unclassified Graduate Student.

**Student Not Candidate for a Degree (SNCD)**

SNCD admission may be granted to qualified students who hold a bachelor’s degree or its equivalent, who wish to enroll in graduate courses on a non-degree basis, and who receive approval from a degree program. Examples include international exchange students who are studying at the university for a limited duration, students in good standing at other graduate schools, and students who wish to test their capabilities in a graduate setting. Students in this category are assigned faculty advisers and are accorded the same privileges as degree candidates. Applicants for SNCD study in the Graduate School should follow all application procedures outlined in the section headed “Application Process.” Continuation as an SNCD is subject to the same academic and other standards that apply to degree candidates. In special cases, SNCDs might be eligible for financial aid.

**Unclassified Graduate Student**

A student who wishes to enroll for selected graduate-level courses without admission to the Graduate School is generally permitted to do so by registering as an Unclassified Graduate Student with the registrar of the Graduate School. Application for admission is not required for such registration, and permission to register as an Unclassified Graduate Student does not constitute admission. Permission to take more than 6 hours of graduate credit in any one program requires the approval of that program’s director of graduate studies. Unclassified students are not eligible for student services, including financial aid.
Acceptance of Admission and Award Offers

Washington University, along with most other graduate schools in the United States, subscribes to the following resolution of the Council of Graduate Schools:

Acceptance of an offer of financial support (such as a graduate scholarship, fellowship, traineeship, or assistantship) for the next academic year by a prospective or enrolled graduate student completes an agreement that both student and graduate school expect to honor. In that context, the conditions affecting such offers and their acceptance must be defined carefully and understood by all parties.

Students are under no obligation to respond to offers of financial support prior to April 15; earlier deadlines for acceptance of such offers violate the intent of this Resolution. In those instances in which a student accepts an offer before April 15 and subsequently desires to withdraw that acceptance, the student may submit in writing a resignation of the appointment at any time through April 15. However, an acceptance given or left in force after April 15 commits the student not to accept another offer without first obtaining a written release from the institution to which a commitment has been made. Similarly, an offer by an institution after April 15 is conditional on presentation by the student of the written release from any previously accepted offer. It is further agreed by the institutions and organizations subscribing to the above Resolution that a copy of this Resolution or a link to the URL should accompany every scholarship, fellowship, traineeship, and assistantship offer.

Students to whom admission and financial awards are offered in March are requested to give notice in writing of the acceptance or rejection of their offers no later than April 15. Students to whom offers are made after April 15 are asked to reply within two weeks of receipt of the notice. Offers can be withdrawn if the deadline passes without any response from the student. Requests to extend deadlines or to reinstate withdrawn offers should be addressed to the degree program, which must endorse them before forwarding them to the Graduate School dean for final approval.

Policies

Graduate students are governed by policies established by the university, the Graduate School, and the student’s department, division or program. Therefore, the policies identified here and elsewhere in this Bulletin are not to be considered a complete list. However, every attempt has been made to identify the location of those policies that affect most or all students in the Graduate School.

In this Bulletin, the University Policies (p. 9) page covers many of the policies that apply to both graduate and undergraduate students, specifically in the areas of nondiscrimination, student health, student conduct, academic integrity, intent to graduate, and academic records and transcripts. In addition, it refers to the university’s Compliance and Policies (https://wustl.edu/about/compliance-policies) page. Graduate students should follow that page’s links to the Information Technology, Computers and Internet Policies and to the Intellectual Property and Research Policies; most of the former and many of the latter will apply to all graduate students.

The Graduate School website includes a Policies & Procedures (http://graduateschool.wustl.edu/policies-procedures) page that includes links to the full text of several of its policies, including those related to the following:

- Academic and professional integrity for graduate students
- Alcohol service at events sponsored by graduate student organizations
- Consensual faculty-student relationships
- Dissenting votes at a dissertation defense
- Involuntary leave
- New child leave
- Part-time employment
- Probation and dismissal for academic reasons
- Student grievance procedures
- Time off
- Transfer of credit

Please note that the majority of these policies cover the same topics as quite different versions found elsewhere in the Bulletin or on the university’s website but that are applicable only to undergraduate students. Reviewing these documents through the Graduate School website is the best way to guarantee access to the relevant policy for graduate students.
Interdisciplinary Opportunities

Washington University offers courses through interdisciplinary programs that include studies in a variety of disciplines that cross traditional academic boundaries and support academic areas outside of the schools.

• A limited opportunity for some Washington University students to enroll in courses at Saint Louis University and the University of Missouri-St. Louis is available through the Inter-University Exchange Program (p. 164).
• The Skandalaris Center (p. 165) offers co-curricular programming and practical, hands-on training and funding opportunities to students and faculty in all disciplines and schools.

Inter-University Exchange Program

The Inter-University Exchange (IE) program between Washington University, Saint Louis University (SLU) and the University of Missouri-St. Louis (UMSL) began in 1976 as an exchange agreement encouraging greater inter-institutional cooperation at the graduate level. Over time, this program has evolved to include undergraduate education. The basic provisions of the original agreement are still in place today, and participation continues to be at the discretion of each academic department or unit.

At Washington University, there are several schools that do not participate in this program (i.e., degree-seeking students in these schools are not eligible to participate in the IE program, and courses offered in these schools are not open to SLU and UMSL students attending Washington University through the IE program). They are the School of Law, the School of Medicine, University College and the Summer School. The Washington University schools that are open to participation in the IE program may have specific limitations or requirements for participation; details are available in those offices.

The following provisions apply to all coursework taken by Washington University students attending SLU or UMSL through the IE program:

• Such courses can be used for the fulfillment of degree or major requirements. (Students should consult with their dean’s office for information about how IE course work will count toward their grade-point average, units and major requirements.)
• Such courses are not regularly offered at Washington University.
• Registration for such courses requires preliminary approval of the student’s major/department adviser, the student’s division office or dean, and the academic department of the host university.
• Students at the host institution have first claim on course enrollment (i.e., a desired course at SLU or UMSL may be fully subscribed and unable to accept Washington University students).
• Academic credit earned in such courses will be considered as resident credit, not transfer credit.
• Tuition for such courses will be paid to Washington University at the prevailing Washington University rates; there is no additional tuition cost to the student who enrolls in IE course work on another campus. However, students are responsible for any and all fees charged by the host school.
• Library privileges attendant on enrolling in a course on a host campus will be made available in the manner prescribed by the host campus.

Instructions

Washington University students must be enrolled full-time in order to participate in the IE program and have no holds, financial or otherwise, on their academic record at Washington University or at the host institution.

1. The student must complete the IE program application form. Forms are available from the Office of the University Registrar and on its website (link below).
2. The student must provide all information requested in the top portion of the form and indicate the course in which they wish to enroll.
3. The student must obtain the approval signature of the professor teaching the class or the department chair at SLU or UMSL, preferably in person.
4. The student also must obtain the approval signatures of their major adviser at Washington University and the appropriate individual in their dean’s office.
5. Completed forms must be submitted to the Office of the University Registrar in the Women’s Building a minimum of one week before the start of the term.

Course enrollment is handled administratively by the registrars of the home and host institutions. Washington University students registered for IE course work will see these courses on their class schedule and academic record at WebSTAC under departments I97 (SLU) and I98 (UMSL). Final grades are recorded when received from the host institution. The student does not need to obtain an official transcript from SLU or UMSL to receive academic credit for IE course work at Washington University.
Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship

The Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship (http://skandalaris.wustl.edu) is the place on campus Where Creative Minds Connect.

Mission

The Skandalaris Center aims to inspire and develop creativity, innovation, and entrepreneurship at Washington University in St. Louis.

Who We Serve

Our initiatives serve all Washington University students, alumni, faculty, staff, and, on occasion, the community. We call this the SC Network.

Our Initiatives

Our initiatives are divided into three parts:

1. Get Connected (p. 165)
2. Get Trained (p. 165)
3. Get Funded (p. 165)

Get Connected

A great way to get started in creativity, innovation, and entrepreneurship at Washington University is to get connected with peers and various resources:

Join a Student Group or Fellowship

There are 14 student organizations committed to various aspects of creativity, innovation, and entrepreneurship. Some are limited to undergraduate or graduate student participation, and some support all.

Join the Skandalaris Center Email List

The email newsletter is the most up-to-date and complete record of upcoming opportunities.

- Join the email list (https://skandalaris.wustl.edu/get-connected/stay-connected-with-skandalaris).

Get Trained

The Skandalaris Center offers many programs that provide real-world, practical training in creativity, innovation, and entrepreneurship. Below are a few program examples:

1. Summer Entrepreneurial Internship Program (http://skandalaris.wustl.edu/training/internship)
   This 10-week summer program offers undergraduate students in any school the opportunity to experience entrepreneurship in a real-world setting through a paid internship at an early stage startup. Each week on Wednesdays, students participate in unique activities, including site visits to startups or co-working spaces, panel discussions, and visits to St. Louis neighborhoods. Applications generally run from early January to early February each year.

2. Student Entrepreneurial Program (STEP) (http://skandalaris.wustl.edu/training/step)
   STEP provides a unique opportunity for students to own and operate a business on or off campus. Student owners can supplement the valuable business and entrepreneurial skills they learn in the classroom while gaining real-world experience as they manage and lead their own businesses.

3. IdeaBounce® (https://skandalaris.wustl.edu/training/ideabounce)
   IdeaBounce® is both an online platform and an event for sharing venture ideas and making connections. This is an opportunity for participants to pitch their idea (no matter how “fresh”), get feedback on it, and make connections. In-person events happen around twice per semester.

4. The Hatchery (http://skandalaris.wustl.edu/training/hatchery)
   Various schools at Washington University offer entrepreneurial training for credit. One such course is The Hatchery (Business Planning for New Enterprises). It is offered by the Olin Business School in both the fall and spring semesters, and it is open to all students at the university.
   Students form teams around a commercial or social venture idea proposed by a student or community entrepreneur. The deliverables for the course include two presentations to a panel of judges and a complete business plan. The deliverables in the course are similar to the deliverables in the Skandalaris Center’s business plan competitions and can be a valuable first step toward competitions and funding for a new venture.

Get Funded

The Skandalaris Center offers the following business plan competitions for Washington University students:

- The Suren G. Dutia and Jas K. Grewal Global Impact Award (GIA) (http://skandalaris.wustl.edu/funding/global-impact-award)
The GIA awards scalable, impactful, quick-to-market Washington University-affiliated startups.

- **Who Can Apply:** Washington University students, postdocs, residents, and recent alumni
- **Award:** Up to $50K

Skandalaris Venture Competition (SVC) (https://skandalaris.wustl.edu/funding/skandalaris-venture-competition)

The SVC provides expert mentorship to new ventures and startups to ready them for commercializing their idea, launching, and pitching to investors.

- **Who Can Apply:** Current Washington University students
- **Award:** Up to $15K
