Department of Biochemistry and Molecular Biophysics

The faculty of the Department of Biochemistry and Molecular Biophysics perform research in a broad spectrum of biomedically relevant areas, including DNA and RNA structure and enzymology; protein folding, misfolding and aggregation; cellular mechanics, membrane receptor-mediated signaling, and hemostasis, thrombosis and vascular biology. The department offers training opportunities at the crossroads of biochemistry, biophysics, systems biology, computational science and pharmacological sciences.

The department's approaches to research focus on understanding the energetics, structure and mechanisms of biological processes. Investigators employ a variety of experimental methods such as X-ray crystallography, NMR, optical spectroscopy, thermodynamics and rapid kinetics, in combination with computational approaches, to unravel the molecular underpinnings of processes of relevance to health and disease. Novel single-molecule methods are providing new insight into the molecular details of enzyme mechanisms and macromolecule dynamics. High-throughput screening of chemical libraries and synthetic medicinal chemistry to develop small molecule probes of biological systems provide new avenues for translational research and the development of experimental therapeutics.

The faculty in the department organize and teach basic science courses in the medical school curriculum, including Molecular Foundations of Medicine (Biochem 502). In the Graduate School curriculum, the faculty teach courses in Nucleic Acids & Protein Biosynthesis (Biol 548), Chemistry and Physics of Biomolecules (Biol 5357), and Macromolecular Interactions (Biol 5312). The overarching theme of these courses is to understand the principles of the molecular interactions that underlie the biological process of health and disease. Students in the School of Medicine and the Graduate School are eligible for these courses and may elect to pursue biomedical research under the direction of our faculty. A full listing of advanced courses topics (https://biochem.wustl.edu/studentinfo/courses) can be found on our website.

We are developing a new way to sequence DNA, under the "$1000 Genome Project." This project involves the addition of experimental fluorescent probes to DNA polymerase, with the goal of watching a single molecule flicker as it copies DNA. Student involvement may be at the level of making mutations and purifying mutant enzymes, testing ways to prepare the templates, or testing observations of working molecules.

T7 RNA polymerase is used to express our proteins, and we have double and triple mutants of it that improve expression of problematic proteins, but we only have theory as to how they work better: We think they are slower, and that slower is better. Student involvement may be in constructing comparative strains that use the enzyme, and measuring the speed somehow, in vivo and in vitro.

Systems Biophysics. We combine simulation and experiment to understand the conformational changes proteins undergo and how these changes allow information to flow, both within single proteins and within networks of interacting proteins. Two major application areas are (1) understanding hidden allosteric sites and the opportunities they present for drug design and (2) understanding the molecular mechanisms of vision, especially the origins of inherited forms of blindness. To facilitate these applications, we also develop enhanced sampling algorithms for simulating long timescale dynamics of proteins and nucleic acids.

Peter M.J. Burgers, PhD
South Building, 1st Floor
Phone: 314-362-3872
Molecular biology of DNA replication, DNA damage response mechanisms, and DNA repair in eukaryotes.

John Cooper, MD, PhD
South Building, 2nd Floor
Phone: 314-362-0287
Molecular mechanisms of cell motility and cytoskeleton assembly.

Carl Frieden, PhD
McDonnell Sciences Building, 2nd Floor
Phone: 314-362-3344
Use of single-molecule biophysical techniques such as magnetic and optical trapping to study DNA transcription.

Mechanistic studies of DNA motor proteins and telomere binding proteins; single-molecule approaches.

Cytoskeletal molecular motors in health and disease. We are currently studying the effects of mutations that cause heart disease.

RNA structure/function. RNA protein interactions. NMR spectroscopy.

The rational structure-based ligand design and synthesis of chemical tools useful for studying cancer and infectious disease.

The research involves bioinformatics to identify homologs of HDACs in parasites, molecular modeling to generate homology models of target proteins, virtual screening to identify potential inhibitors and bioassays to quantitate efficacy. Projects can be customized to fit individual preferences.

The main research interests are the physical principles and molecular mechanisms determining biomolecular function.

We combine single-molecule fluorescence spectroscopy and concepts from polymer physics to investigate intrinsically disordered proteins; we develop innovative methods to study macromolecular conformations and dynamics within cells and in membraneless organelles.

B

Jacques Ulrich Baenziger, PHD, MD
Professor Emeritus of Biochemistry and Molecular Biophysics
(primary appointment)
PHD Washington Univ in St. Louis 1975
MD Washington Univ in St. Louis 1975
Wayne Morris Barnes, PHD
Associate Professor of Biochemistry and Molecular Biophysics (primary appointment)
BA University of CA Riverside 1969
PHD Univ of Wisconsin Madison 1974

Gregory R. Bowman, PHD
Assistant Professor of Biochemistry and Molecular Biophysics (primary appointment)
Adjunct Assistant Professor of Chemistry (Courtesy Affiliation)
BS Cornell University 2006
PHD Stanford University 2010

Peter M Burgers, MS, PHD
Marvin A. Brennecke Professor of Biological Chemistry (primary appointment)
MS Leiden University 1972
BS Leiden University 1969
PHD Leiden University 1977

John A Cooper, MD, PHD
Head of the Department of Biochemistry
Professor of Biochemistry and Molecular Biophysics
Professor of Cell Biology and Physiology
MD Johns Hopkins University 1982
BS Brown University 1977
PHD Johns Hopkins University 1983

Sudha Mahajan Cowsik, PHD, MS
Instructor in Biochemistry and Molecular Biophysics (primary appointment)
PHD Institute of Medical Science 1976
BS Panjab University 1969
MS Panjab University 1970

Roland Ellwood Dolle, PhD, MS
Associate Professor of Biochemistry and Molecular Biophysics (primary appointment)
PHD University of Pennsylvinia 1984
MS State University of New York 1980
BS Arizona State University 1978

Thomas E Ellenberger, PHD, DVM
Professor of Biochemistry and Molecular Biophysics (primary appointment)
Chairman of the Executive Council of the Division of Biology and Biomedical Sciences
PHD Harvard University 1989
DVM Iowa State University 1983

Elliot L Elson, PHD
Emeritus Professor of Biochemistry and Molecular Biophysics (primary appointment)
BA Harvard University 1959
PHD Stanford University 1966
Professor of Biochemistry and Molecular Biophysics (primary appointment)
Professor of Radiation Oncology
BS Ohio State University 1989
PHD Duke University 1993
Alexander Kozlov, PHD, MS
Instructor in Biochemistry and Molecular Biophysics (primary appointment)
PHD Moscow State University 1994
MS Moscow State University 1983
Andrzej Modest Krezel, PHD, MS
Associate Professor of Biochemistry and Molecular Biophysics
(Pending Executive Faculty Approval) (primary appointment)
PHD Univ of Wisconsin Madison 1991
MS University of Warsaw 1986

Weikai Li, PHD, MS
Assistant Professor of Biochemistry and Molecular Biophysics
(primary appointment)
BS East China Univ of Sci & Tech 1993
PHD Yale University 2004
MS University of Tenn Chattanooga 1998
Timothy M Lohman, PHD
Brennecke Professor of Biophysics in Biochemistry and Molecular Biophysics (primary appointment)
PHD Univ of Wisconsin Madison 1977
BA Cornell University 1973

Garland R Marshall, PHD
Professor of Biochemistry and Molecular Biophysics (primary appointment)
Professor of Biomedical Engineering
PHD Rockefeller University 1966
BS California Institute Technolo 1962
Joseph B Monahan, PHD
Adjunct Assistant Professor of Biochemistry and Molecular Biophysics (primary appointment)
PHD Univ South Carolina Columbia 1983
BS State Univ of NY Buffalo 1977

Michael D Onken, PHD
Assistant Professor of Biochemistry and Molecular Biophysics (primary appointment)
PHD Washington Univ in St. Louis 2000
BA Washington Univ in St. Louis 1990

Linda J Pike, PHD

Alumni Endowed Professor of Biochemistry and Molecular Biophysics (primary appointment)
PHD Duke University 1980
BS University of Delaware 1975
Andrea Soranno, PHD, MS
Assistant Professor of Biochemistry and Molecular Biophysics (primary appointment)
PHD University of Milan 2008
MS University of Milan 2005
Gabriel Waksman, MS, PHD
Adjunct Professor of Biochemistry and Molecular Biophysics (primary appointment)
BS School Not Listed 1979
MS School Not Listed 1980
PHD School Not Listed 1982
Katherine Anne Henzler Wildman, PHD
Adjunct Associate Professor of Biochemistry and Molecular Biophysics (primary appointment)
PHD University of Michigan 2003
BS Cornell University 1998
Rui Zhang, PHD
Assistant Professor of Biochemistry and Molecular Biophysics (primary appointment)
PHD Baylor University 2010
BS Nanjing Medical University 2005

Courses
The Department of Biochemistry and Molecular Biophysics also offers courses through the Graduate School. For a full listing of courses offered, please visit the university online course catalog (https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L41&crslvl=5:9). Visit online course listings to view offerings for M15 Biochem (https://courses.wustl.edu/CourseInfo.aspx?sch=M&dept=M15).

M15 Biochem 502 Molecular Foundations of Medicine
This course is designed primarily for medical students and will cover fundamental aspects of biochemistry and cell biology. The course begins with a treatment of protein structure and the function of proteins in the cytoskeleton and cell motility. The principles of enzyme kinetics and regulation are then discussed, and basic pathways for the synthesis and metabolism of carbohydrates and lipids are introduced. This leads in to a discussion of membrane structure and the function cellular organelles in biological processes including energy production, protein degradation and protein trafficking. Small group case study sections serve to link the basic science to the clinic. Credit 46.5 units.
M15 Biochem 5068 Fundamentals of Molecular Cell Biology
This is a core course for incoming graduate students in Cell and Molecular Biology programs to learn about research and experimental strategies used to dissect molecular mechanisms that underlie cell structure and function, including techniques of protein biochemistry. Enrolling students should have backgrounds in cell biology and biochemistry, such as courses comparable to L41 Biol 334 and L41 Biol 4501. The format is two lectures and one small group discussion section per week. Discussion section focuses on original research articles. Same as M04 5068 and Arts & Sciences L41 Biol 5068. Credit 47 units.

M15 Biochem 5357 Chemistry and Physics of Biomolecules
This course covers three major types of biomolecular structure: proteins, nucleic acids and membranes. Basic structural chemistry is presented, as well as biophysical techniques used to probe each type of structure. Selected topics include: protein folding, protein design, x-ray crystallography, NMR spectroscopy, nucleic acid bending and supercoiling, nucleic acid:protein interactions, RNA folding, membrane organization, fluidity, permeability and transport, and membrane channels. Weekly discussion section will cover problem sets and present current research papers. One of the required courses for the Biochemistry and for the Molecular Biophysics graduate programs. Prerequisites: Prior course work in Biochemistry and in Physical Chemistry is recommended, but not required. Credit 46.5 units.
