Interdisciplinary Opportunities

Washington University School of Medicine excels in applying a multidisciplinary approach to all its endeavors, allowing faculty to easily cross administrative boundaries to address the health industry’s biggest challenges. To achieve this goal, the medical school provides a limited number of Interdisciplinary courses.

Interdisciplinary experiences can additionally be found in many of our joint programs of study.

For more information about joint degrees offered through the medical school, please visit the Joint section of the Degrees & Programs Offered (http://bulletin.wustl.edu/medicine/degrees/#joint) page.

Courses

For a full listing of First-Year Selective courses (M04), please visit the Office of Medical Student Education (http://bulletin.wustl.edu/medicine/departments/medical-student-education) page.

M80 InterDis 501 Clinical Epidemiology and Biostatistics
This course will be presented in the first year by clinicians and will emphasize important principles of applying biostatistics and epidemiology rules to the study of human diseases. Practical applications of statistical tools in biomedical and clinical settings will be discussed along with other subjects such as clinical study design. This course will consist of formal lectures followed by a discussion session in which students will meet in small groups to discuss pertinent papers with particular emphasis on methodologies.
Credit 28 units.

M80 InterDis 601 Clinical Epidemiology and Biostatistics
This course will be presented in the first year by clinicians and will emphasize important principles of applying biostatistics and epidemiology rules to the study of human diseases. Practical applications of statistical tools in biomedical and clinical settings will be discussed along with other subjects such as clinical study design. This course will consist of formal lectures followed by a discussion session in which students will meet in small groups to discuss pertinent papers with particular emphasis on methodologies.
Credit 17 units.

M80 InterDis 807 Physical Medicine and Rehabilitation
The elective is designed to provide the student with a broad introduction to the field of physical medicine and rehabilitation. Major objective of this clinical elective is to achieve greater knowledge of the neurological and musculoskeletal diseases and their treatment, and gain understanding of basic principles of rehabilitation. The student will learn the clinical and rehabilitative care of patients with strokes, traumatic brain injury, spinal cord trauma and diseases, and limb amputations. Student will gain clinical skills in evaluating management of functional impairments. Students will be expected to participate in daily rounds on inpatient rehabilitation units with the clinical care team, follow 3-5 patients, attend multidisciplinary team conferences and family meetings, attend outpatient rehabilitation clinics in spinal cord, stroke, traumatic brain injury, and amputee. Teaching and supervision is provided by the psychiatry and neurology faculty of the Division of Rehabilitation. Rehabilitation and neurology residents are involved in student teaching as well. Students are required to participate in didactic teaching conferences within the PM&R residency. This rotation is particularly useful for students considering careers in rehabilitation, neurology, geriatrics, primary care, neurosurgery, or any other field that will require experience in the evaluation and management of patients with physical impairment and disabilities.

M80 InterDis 809 Ambulatory Care - Jacqueline Maritz Lung Center
Valid start weeks for four-week blocks are: Weeks 17, 21, 25, 29, 33, 37 and 41. The Jacqueline Maritz Lung Center houses the ambulatory care activities of the Divisions of Pulmonary Medicine, Thoracic Surgery, and Allergy/Immunology, as well as the pulmonary function laboratory. The student will rotate through (1) both general pulmonary and subspecialty clinics in Pulmonary Medicine (cystic fibrosis, transplantation, emphysema, etc.), (2) Thoracic Surgery clinic, (3) Allergy/Immunology clinic, and (4) interpretation of pulmonary function tests. Chest imaging is also emphasized in the evaluation process. The rotation can be streamlined to meet areas of emphasis desired by individual students.

M80 InterDis 827 Introduction to Global Health
This is a cross-disciplinary "crash course" in global health for students considering a career in global health and should be particularly useful for those students planning to complete international electives before graduation or during residency. The course consists of a mix of lectures, workshops, discussions, debates, laboratory sessions, clinics and simulation labs for two weeks. Topics will include significant coverage of high-burden infectious and tropical diseases (primarily case-based) in addition to discussion of emerging and neglected global health topics including mental health, noncommunicable diseases, radiology and maternal health. Active participation in all activities and discussions is expected in order to obtain credit for this course. The course is taught by faculty from around the medical school with extensive experience in global health and will include opportunities to network with faculty and residents actively engaged in clinical, research, policy and implementation work around the world. This course has been run for two years previously for residents only and now is being opened up to senior medical students as well. No specific clinical requirements or call is required. Attendance and active participation for each session throughout the two weeks is required, and students should not schedule residency interviews or other time off during this block. Interested students should contact the course director by June 15 at itrehan@wustl.edu with a brief paragraph describing their interests/background in global health, any plans they have for international electives, and residency plans. Ideally all interested students will be accepted into the course but, given the need to keep the class size small, we may need to turn some students away.
Valid start weeks for this four-week course are Weeks 33 and 37. The Fourth Year Capstone Course is highly structured and is schedule sensitive. In order to provide students with the absolute best experience possible, students are required to attend all sessions. In general the morning sessions will start at 8:00 a.m. and run until approximately noon. Afternoon sessions will generally run from 1:00 p.m. until about 5:00 p.m. The afternoons are hands-on activities which are faculty/staff intensive. By the end of this four-week course, students should be able to demonstrate improved cognitive and clinical skills needed to enter the internship year of graduate medical training. The target group for this course is primarily students entering clinical residency training positions. As outlined in the course objectives, topics to be covered include acute clinical problems commonly faced on the inpatient service or emergency room, review of key diagnostic testing, basic procedural skills and patient and family communications regarding informed consent and end-of-life issues. Course work will be divided between self-study, didactic and small group discussions and "hands-on" skills practice and simulation. Parts of the course will be tailored to individuals entering internal medicine, pediatrics and surgical disciplines. Students will be assessed by performance on simulation exercises and a written exam. Learning Objectives: By the end of this course: 1. The student will be able to respond to common acute patient problems as tested with simulation by rapidly assessing the patient, requesting relevant information from the patient, medical record, and nursing staff, generate a differential diagnosis and order appropriate diagnostic testing and initial treatment for the problem. 2. Demonstrate competence in a set of designated technical skills commonly needed in residency including basic suturing, chest tubes, central line, thoracentesis, and IV placement. 3. Demonstrate the ability to interpret diagnostic tests, such as chest x-ray and EKG, commonly used for initial evaluation of acute medical problems. 4. Demonstrate and discuss the key elements of obtaining informed consent, dealing with difficult patient and family situations, end-of-life issues, and pain management. Alternative clinical skills sessions will be offered on an ad hoc basis for students. These will be available in March and April depending on demand and faculty availability. These will not be "for credit."

Credit 154 units.

M80 InterDis 851 The Business of Medicine
This two-week, interactive course is designed to enhance medical student awareness of the healthcare industry by exploring the market forces, business structures, and health policy that impact physicians and their patients. From clinical practice management issues all the way up to "big picture" views of health care, the course modules are intended to prepare students for the challenges they will face in their own practices as well as for leadership roles in improving patient care on a large scale. The course will be a blend of case-method sessions, targeted mini-lectures, expert panels, and field trips, all designed to invite student participation and engagement with representatives from a broad spectrum of the health care industry. Course subscriptions will be limited to 20 students, creating an opportunity for direct, personal interaction with guest speakers, faculty, and each other.
