## Research Electives

### Obstetrics and Gynecology Research Electives

During the fourth year, opportunities exist for many varieties of advanced clinical or research experiences.

#### Basic Research

During this six-week elective, students will have the opportunity to immerse themselves in bench research in one of our labs (<https://reproductivesciences.wustl.edu/laboratories/>). The main criteria for this rotation is that the student must have prior experience as an undergraduate or postgraduate in a laboratory, not including course work. This rotation is designed for the student who is planning a career in academic medicine as a physician-scientist and who is interested in considering reproductive science as a field.

Eligible students interested in a basic research experience should call our office at 314-286-1775 (prior to signing up for a course) to discuss the schedule and expectations of this rotation.

#### Clinical Research

Eligible students interested in a clinical research experience are encouraged to apply for the TI2, Meharry, or Institute for Public Health programs through Washington University.
