This course introduces students to concepts and issues relevant to German business and economics and helps them to develop the language skills necessary to succeed in the German business world. We concentrate on the basic elements of the German economic system, looking at Germany as a site of production and exchange, the legal structure of German firms, the relations between labor and management, and strategies for product development and marketing in national and international contexts. Students also are introduced to specific German business practices, including forms of communication, management styles and general corporate culture. Students learn business vocabulary, writing skills for business correspondence, oral presentation techniques, and reading and comprehension strategies for German newspapers and news reports. All discussions, readings and assignments are in German. Prerequisite: German 302D. Credit 4 units. A&S : LA  A&S : IQ, LCD, LS  BU : IS

L21 German 4100 German Literature and Culture, 1150–1750
Exploration of medieval and early modern literature and culture within sociohistorical contexts. Genres and themes vary and may include visual culture; representation; the development of fictionality and historical writing; questions of race, gender and class; courtly culture; law; magic and marvels; and medical and scientific epistemologies. Readings may include such genres as the heroic epic, drama, “Minnesang,” the courtly novel, the Arthurian epic, fables, the novella, religious or devotional literature, witch tracts, pamphlets, political writings, the “Völschub,” the picaresque novel, and the essay. Discussion, readings and papers in German. Prerequisite: see Overview and Majors pages. Credit 3 units. A&S : TH, WI  A&S : IQ, HUM, LCD, WI, LS

L21 German 4101 German Literature and Culture, 1750–1830
Exploration of the literature and culture of the Enlightenment, Storm and Stress, Weimar Classicism, and Romanticism within sociohistorical contexts. Genres and themes vary and may include the representation of history, absolutism and rebellion, the formation of bourgeois society, questions of national identity, aesthetics, gender, romantic love, and the fantastic. Reading and discussion of texts by authors such as Lessing, Goethe, Schiller, Kant, Novalis, Güntherode, the Brothers Grimm, Kleist, E.T.A. Hoffmann, Eichendorff, Bettina von Arnim. Discussion, readings and papers in German. Prerequisite: see Overview and Majors page. Credit 3 units. A&S : TH, CD, WI  A&S : IQ, HUM, LCD, WI, LS  FA : Lit

L21 German 4102 German Literature and Culture, 1830–1914
Exploration of 19th-century literature and culture within sociohistorical contexts. Genres and themes vary and may include the representation of history, liberalism and restoration, nationalism, industrialization, colonialism, class, race and gender conflicts, materialism, secularization and fin-de-siècle. Reading and discussion of texts by authors such as Büchner, Heine, Marx, Storm, Keller, Meyer, Fontane, Droste-Hülshoff, Nietzsche,Ebner-Eschenbach, Schnitzler, Rilke. Discussion, readings and papers in German. Prerequisite: see Overview and Majors pages.
Credit 3 units. A&S : TH, CD, WI   A&S : IQ, HUM, LCD, WI, LS
EN : H   FA : Lit

L21 German 4103 German Literature and Culture, 1914 to
the Present
Exploration of modern and contemporary literature within
sociohistorical contexts. Genres and themes vary and may
include the representation of history, the crisis of modernity,
the two World Wars, the Weimar Republic, the Third Reich,
genерational conflicts, the women's movement and postmodern
society. Reading and discussion of texts by authors such as
Wedekind, Freud, Mann, Kafka, Brecht, Seghers, Böll,
Bachmann, Grass, Wolf. Discussion, readings and papers in
German. Prerequisite: see Majors page.
Credit 3 units. A&S : TH, CD, WI   A&S : IQ, HUM, LCD, WI, LS
FA : Lit

L21 German 4104 Studies in Genre
Exploration of the definition, style, form and content that
characterize a specific genre. Investigation of the social,
cultural, political and economic forces that lead to the formation
and transformation of a particular genre. Examination of
generic differences and of the effectiveness of a given genre
in articulating the concerns of a writer or period. Topics and
periods vary from semester to semester. Discussion, readings
and papers in German; some theoretical readings in English.
Prerequisite: see Majors page.
Credit 3 units. A&S : TH, CD, WI   A&S : IQ, HUM, LCD, WI, LS
FA : SSP

L21 German 4105 Topics in German Studies
Focus on particular cultural forms such as literature, film,
historiography, social institutions, philosophy, the arts or on
relationships between them. Course examines how cultural
meanings are produced, interpreted and employed. Topics
vary and may include national identity, anti-Semitism, cultural
diversity, construction of values, questions of tradition, the
magical, the erotic, symbolic narrative and the city. Course may
address issues across a narrow or broad time frame. Discussion,
readings and papers in German; some theoretical readings in English.
Prerequisite: see website.
Credit 3 units. A&S : TH, CD, WI   A&S : IQ, HUM, LCD, WI, LS
FA : SSP

L21 German 4106 Studies in Gender
Investigation of the constructions of gender in literary and other
texts and their sociohistorical contexts. Particular attention to the
genedered conditions of writing and reading, engendering of the
subject and indicators of gender. Topics and periods vary from
semester to semester and include gender and genre, education,
religion, politics, cultural and state institutions, science, sexuality
and human reproduction. Discussion, readings and papers in
German; some theoretical readings in English. May be repeated
with different content. Prerequisite: see Overview and Majors
pages.
Credit 3 units. A&S : TH, SD, WI   A&S : IQ, HUM, LCD, SD,
WI, LS

L21 German 411 German Language Seminar: History of the
German Language
Treatment of the historical development of German phonology,
morphology, syntax and lexicon. Focus on the emergence of
New High German. Examination of the relationship of standard
German to its dialects and to other Germanic languages,
particularly English. Conducted in German; papers in German.
Prerequisite: German 302D or the equivalent or permission of
instructor.
Credit 3 units. A&S : LA

L21 German 414 German Language Seminar: Structure of
the German Language
Advanced course for undergraduates that enables better
understanding of the language and sublanguages of modern
German in terms of linguistic theory. Particular attention to
semiotics and pragmatics, i.e., to German viewed as a “sign” of
human communication, value, interaction. Conducted in German;
papers in German. Prerequisite: German 302D or the equivalent
or permission of instructor.
Credit 3 units. A&S : LA

L21 German 453 Theories of Literary and Cultural Analysis
This seminar familiarizes advanced undergraduate and
graduate students with concepts and methodologies that are
foundational for research in the humanities. Our discussions
are organized around a range of conceptual categories that
have constituted the focus of scholarly reflection in the past
few decades, categories such as text, genre, image, medium,
discourse, discipline, subjectivity, gender, race, culture, politics
and history. Our consideration of these categories also requires
us to examine key currents in recent literary theory and cultural
criticism, including (post)structuralism, psychoanalysis, Marxist
theory, feminism and gender theory, postcolonial studies,
cognitive science, book history, visual studies and media theory.
Although this seminar does not aim to offer an intellectual
history, seminar members acquire a sense of some of the key
trends in cultural theory since 1945 as well as an awareness of
the limits and possibilities that characterize each of them. The
course also includes an introduction to the tools of scholarly
research. Readings and discussions in English. Prerequisite:
permission of the department.
Credit 3 units. A&S : TH   A&S : IQ, HUM, LCD   EN : H

L21 German 457 Introduction to Linguistics and the
Structure of German
Introduction to the structure of the German language and to
linguistic theory: phonology, morphology, syntax, semantics,
as well as semiotic, pragmatic and sociolinguistic theories. Undergraduate students sign up for German 414. Credit 3 units. A&S : LA A&S : IQ, LCD

L21 German 493 The Task of the Translator
This course offers an introduction to the theory and practice of translation, consisting of three main components. First, students have the opportunity to translate a wide range of fiction and nonfiction texts from a variety of genres (short stories, philosophy, journalism, academic prose). The focus is on translation from German to English, but we also translate from English to German. Next, we read selections from key works on the theory of translation, from Martin Luther’s 16th-century treatise on his Bible translation to 20th-century essays by philosophers such as Walter Benjamin. Finally, we read and discuss excerpts from some of the most celebrated literary and philosophical translations of the past 200 years, including German translations of authors ranging from Shakespeare to J.K. Rowling as well as English translations of authors such as Goethe and Kafka. The course aims to give students a sense of the challenges and rewards of translation as well as a deeper understanding of the relationship between language, thought and culture. Credit 3 units. A&S : TH A&S : IQ, HUM, LCD

L21 German 497 Independent Work for Senior Honors
Research for an Honors thesis, on a topic chosen in conjunction with the adviser. Emphasis on independent study and writing. Open to students with previous course work in German at the 400 level, an overall 3.0 grade point average, and at least a B+ average in advanced work in German. Prerequisites: senior standing and permission of the undergraduate adviser. Credit 3 units.

L21 German 498 Independent Work for Senior Honors
Continuation of German 497. Completion of thesis. Quality of the thesis determines whether the student receives credit only or Honors in German. Prerequisite: German 497. Credit 3 units.

Greek
The Department of Classics offers course work in the language, history, literature, archaeology and culture of ancient Greece. At the heart of these courses are classes in the Greek language. Students of beginning Greek master the grammar in two semesters and go on immediately, in the third semester, to read Plato and Homer. Thereafter students have the opportunity to study numerous Greek authors, including the great tragedians, the historians Herodotus and Thucydides, and the New Testament, as well as ancient inscriptions. We maintain a strong program in Greek, from the textbook to graduate seminars, where our most advanced undergraduates are often working alongside graduate students in our vigorous and growing graduate program; they also have the opportunity to do their own research or to assist in faculty members’ research projects. It is a remarkable and dynamic environment, one that the students find both rewarding and stimulating. Resources on campus supporting the study of ancient Greek include collections of Greek papyri and art and the Wulfing Coin Collection, one of the largest collections of ancient coins owned by an American university. The Department of Classics offers as well a variety of courses in Greek history, literature, archaeology and culture, addressed both to the general undergraduate population and to those pursuing majors and minors within the department.

Additional Information
Study Abroad: Study abroad for a semester in Rome or Athens is an option selected by many students studying Greek. Washington University is a member of the Intercollegiate Center for Classical Studies (ICCS) consortium, and many majors attend the one-semester ICCS program in Rome. A knowledge of Latin or Greek to at least the intermediate level is required for admission to the Rome program. Students interested in studying at the Intercollegiate Center in Rome should consult Professor Tim Moore. Students interested in the College Year in Athens Program should consult Professor Robert Lamberton.

Contact Person: Cathy Marler
Phone: 314/935-5123
E-mail: classics@artsci.wustl.edu
Departmental website: http://classics.artsci.wustl.edu

For a list of affiliated faculty, please see the Department of Classics faculty (p. 289) page.

There is no major in this area. Students interested in Greek should explore either the major in Classics (p. 290) or the major in Ancient Studies (p. 290) offered through the Department of Classics (p. 289). There is no minor in this area. Students interested in Greek should explore either the minor in Classics (p. 290) or the minor in Ancient Studies (p. 290) offered through the Department of Classics (p. 289).

L09 Greek 101D Beginning Greek I
Intensive introduction to the morphology and syntax of classical (ancient) Greek, including extensive readings in literary texts. Credit 4 units. A&S : LA A&S : IQ, LCD LS BU : HUM, IS
L09 Greek 102D Beginning Greek II
Continuation and completion of the program begun in Greek 101D. Prerequisite: Greek 101D or permission of the instructor.
Credit 4 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L09 Greek 190D Intensive Beginning Greek I
An intensive study of Attic Greek.
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L09 Greek 210 Intensive Beginning Greek II
Completion of work begun in Greek 190D followed by readings in original Greek poetry and prose. Successful completion of Greek 210 with a grade of B+ or better allows the student to proceed directly to Greek 318C.
Credit 5 units. A&S : LA A&S : IQ, LS BU : HUM, IS

L09 Greek 215D Intermediate Greek I
Reading of Greek prose texts accompanied by review of morphology and syntax and exercises in vocabulary building. Prerequisite: Greek 102D or permission of the instructor.
Credit 3 units. A&S : LA A&S : IQ, LS BU : HUM, IS

L09 Greek 301 Intermediate Greek: The New Testament in Context
A reading of texts from the New Testament as well as others of relevance to the religions of the Roman Empire. Prerequisite: Greek 317C or permission of the instructor.
Credit 3 units. A&S : LA BU : HUM, IS

L09 Greek 316C Intermediate Greek II
Readings in various forms of Greek poetry and prose as foundation for advanced study of Greek literature. Prerequisite: Greek 215D or permission of the instructor.
Credit 3 units. A&S : LA BU : HUM, IS

L09 Greek 317C Introduction to Greek Literature
Introduction to Attic prose through the reading of Plato’s Apology and related texts. Prerequisite: Greek 102D with a grade of B+ or higher or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD, LS BU : HUM, IS FA : Lit

L09 Greek 318C Introduction to Greek Literature
Introduction to epic poetry through the reading of selections from Homer’s Iliad and Odyssey. Prerequisite: Greek 210, Greek 316C or Greek 317C.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD, LS BU : IS FA : Lit

L09 Greek 350W Writing about Greek Literature
Greek courses at the 300 level with enhanced writing requirements may be taken under this designation as writing-intensive courses. Required: permission of instructor.
Credit 3 units. A&S : LA WI A&S : IQ, LCD, WI

L09 Greek 350W Advanced Writing about Greek Literature
Greek courses at the 300 level with enhanced writing requirements may be taken under this designation as writing-intensive courses. Required: permission of instructor.
Credit 3 units. A&S : LA WI A&S : IQ, LCD, WI

L09 Greek 400 Independent Study
Credit 3 units.

L09 Greek 435 Classical Historical Prose
Credit 3 units. A&S : TH
L09 Greek 436 Attic Prose of the 4th Century BC
Selected texts of Attic orators Xenophon, Plato or Aristotle; specific readings for each semester in Course Listings. May be repeated for credit for study of a different author or text. Credit 3 units. A&S : TH FA : Lit

L09 Greek 437 Topics in Greek Poetry
Selected poetic texts from elegy, iambic, melic, pastoral, epic (other than Iliad and Odyssey) and other genres; specific readings for each semester in Course Listings. May be repeated for credit for study of different texts. Credit 3 units. A&S : TH A&S : IQ, HUM, LCD, LS FA : Lit

L09 Greek 438W Topics in Greek Literature
Advanced Greek seminars with enhanced writing requirements may be taken under this designation as writing-intensive courses. Required: permission of instructor. Credit 3 units. A&S : TH WI

L09 Greek 451 Plato
Credit 3 units. A&S : LA

L09 Greek 499 Study for Honors
Prerequisites: junior standing, grades of A– or better in courses in Greek numbered 300 and above, and permission of the department chair. Either Greek 499 or Latin 497 must be taken by all Honors candidates. Credit 3 units. A&S : TH

The Major in Hebrew
Total units required: 47. First- and second-level language study (20 units) plus 27 upper-level units, no more than 12 of which may be language courses.

Required courses:
The prerequisites for a major in Hebrew include successful completion of the first two levels of language study:

HBRW 105D Beginning Modern Hebrew I 5
HBRW 106D Beginning Modern Hebrew II 5
HBRW 151D Advanced Beginning Modern Hebrew I 3
HBRW 213D Intermediate Modern Hebrew I 5
HBRW 214D Intermediate Modern Hebrew II 5
Or its equivalent

AND either

JINE 208F History, Text and Identity: Introduction to Jewish Civilization 3
or JINE 350 Israeli Culture and Society

Required upper-level courses for the major include language courses at the third-year or higher levels. Hebrew majors must take at least two semesters of fourth-level Modern Hebrew:

HBRW 401W Seminar in Hebrew Literature 3
HBRW 4010 Fourth-Level Modern Hebrew I 3
HBRW 402 Fourth-Level Modern Hebrew II 3
HBRW 420 Topics in Modern Hebrew Literature 3

as well as a minimum of one semester of classical Hebrew:

HBRW 384 Introduction to Biblical Hebrew 3
HBRW XXX Topics in Biblical Hebrew Texts 3
OR HBRW 440 Topics in Rabbinic Texts: Mishnah and Gemara 3

All students are expected to maintain a minimum grade of B– in language classes.
In addition, Hebrew majors must complete 15 units of relevant upper-level literature, culture and civilization courses, chosen in consultation with their adviser. (Please note that many courses in Near Eastern literatures and cultures can be found under Religious Studies, Comparative Literature or Jewish, Islamic and Near Eastern Studies.) Unless a student is writing an honors thesis or fulfilling a capstone requirement for a second major, he or she also is required to take the departmental capstone course during the senior year.

**Additional Information**

**Study Abroad:** Students are strongly encouraged to participate in Washington University-approved study abroad programs in Israel, Egypt and other countries of the Middle East. Study abroad is usually during the junior year and after a minimum of one year of language study at Washington University. Students who participate in Washington University-sponsored and/or -approved overseas programs normally are able to apply most or all of these units to their undergraduate degree, although no more than 9 upper-level units may be applied to the major. However, all transfer of credit is subject to review and approval by the department and the Overseas Programs office.

**Transfer Credit:** Normally no more than 6 units of credit earned at an institution other than Washington University (this does not include Washington University-approved study-abroad programs) may be applied to the major. No more than 3 units can be earned through transfer credit or Study Abroad. Note that at least 12 units of the minor may not be counted toward any other major or minor.

**HBRW 101D Beginning Biblical Hebrew I**
This course prepares the student to read Biblical literature in Hebrew.
Same as L75 JINE 101D
Credit 3 units. A&S: LA, A&S IQ: LCD, LS

**HBRW 105D Beginning Modern Hebrew I**
For the student with no knowledge of Hebrew. Students with background in Hebrew are required to take the placement exam and encouraged to consider MHBR 151D. Foundation for modern conversational Hebrew. Skills for writing and speaking introduced. Five class hours a week plus laboratory work. Limit: 15 students per section.
Same as L75 JINE 105D
Credit 5 units. A&S: LA, A&S IQ: LCD, LS SB: HUM, IS

**HBRW 106D Beginning Modern Hebrew II**
Foundation for modern conversational Hebrew. Skills for writing and speaking introduced. Three class hours a week plus laboratory work. Limit: 15 students per section.
Same as L75 JINE 106D
Credit 5 units. A&S: LA, A&S IQ: LCD, LS SB: HUM, IS

**HBRW 151D Advanced Beginning Modern Hebrew I**
Designed for the student with some background in Hebrew. Emphasis is on review of grammar, increased fluency and vocabulary enrichment. This course prepares students for MHBR 106D. Limit 15 students.
Same as L75 JINE 151D
Credit 3 units. A&S: LA, A&S IQ: LCD, LS SB: HUM, IS

**HBRW 200 Topics in Asian & Near Eastern Languages & Literatures**
A&S: TH, CD SB: BA, HUM, IS SA: Lit
HBRW 213D Intermediate Modern Hebrew I
Reading and discussion on the intermediate level of selected topics pertaining to contemporary Israel. Review and further study of grammar and development of conversational skills. Prerequisite: grade of B– or better in MHBR 106D or placement by examination. Same as L75 JINE 213D
Credit 5 units. A&S: LA, A&S IQ: LCD, LS SB: HUM, IS

HBRW 214D Intermediate Modern Hebrew II
Intermediate modern Hebrew reading and discussion of modern Hebrew fiction. Development of language skills in special drill sessions. Conducted in Hebrew. Prerequisite: MHBR 213D or equivalent. Same as L75 JINE 214D
Credit 5 units. A&S: LA, A&S IQ: LCD, LS SB: HUM, IS

HBRW 300 Introduction to the Hebrew Bible/Old Testament
Same as L23 Re St 300
Credit 3 units. A&S: TH, A&S IQ: HUM SB: ETH, HUM FA: SSP

HBRW 306 Modern Jewish Writers
Same as L16 Comp Lit 306
Credit 3 units. A&S: TH, A&S IQ: HUM SB: HUM

HBRW 320D Third-Level Modern Hebrew I
Improves proficiency in the oral and written use of modern Hebrew through reading and discussion of short stories, Israeli newspaper articles, and other selected materials. Students discuss, in Hebrew, current events and public issues related to contemporary Israeli society. Prerequisite: grade of B– or better in MHBR 214D or placement by examination. Same as L75 JINE 320D
Credit 3 units. A&S: LA, A&S IQ: LCD, LS SB: HUM, IS

HBRW 322D Third-Level Modern Hebrew II
Same as L75 JINE 322D
Credit 3 units. A&S: LA, A&S IQ: LCD, LS SB: IS

HBRW 324 Hebrew of the Media
Reading and discussion of newspaper articles. Viewing and analysis of television news programs and films. Prepares students to become familiar with the language and typical issues of the Israeli media and to discuss in writing and speech the issues in the news. Prerequisite: MHBR 322 or by departmental approval.

HBRW 340 Israeli Women Writers
Study of selected novels and shorter fiction by women. Attention to the texts as women’s writing and as products of Israeli literature. No knowledge of Hebrew necessary; all readings in English translation. Same as L77 WGSS 340, L75 JINE 340
Credit 3 units. A&S: TH, CD, SD, WI, A&S IQ: HUM, LCD, SD, WI SB: HUM FA: Lit

HBRW 350 Israeli Culture and Society
Same as L75 JINE 350.
Credit 3 units. A&S: TH, CD, SD, A&S IQ: HUM, LCD SB: HUM FA: SSP

HBRW 384 Introduction to Biblical Hebrew
This course enables students to read the Bible in the original Hebrew. Review of Hebrew grammar. History of the Hebrew language. Intended for students with a foundation in modern Hebrew. Prerequisite: MHBR 214D or instructor’s permission. Same as L75 JINE 3841
Credit 3 units. A&S: LA, A&S IQ: LCD, LS SB: HUM, IS

HBRW 387C Topics in Hebrew Literature
Hebrew works read in English translation. Prerequisite: sophomore standing; previous courses in literature recommended. Same as L75 JINE 387C
Credit 3 units. A&S: TH FA: Lit

HBRW 400 Asian & Near Eastern Languages & Literatures Senior Seminar
Same as L81 ANELL 400
Credit 3 units. A&S: TH, CD, A&S IQ: HUM, LCD FA: Lit SA: Lit

HBRW 4010 Fourth-Level Modern Hebrew I
Introduction to modern Israeli literature and literary analysis for the advanced student of Hebrew. Topics include selected genres, influential writers and the relationship between literature and society. Conducted in Hebrew. Prerequisite: grade of B– or better in MHBR 321D, or permission of instructor. Same as L15 Drama 4010, L75 JINE 4010
Credit 3 units. A&S: LA, WI, A&S IQ: LCD, WI SB: HUM, IS
HBRW 401W Seminar in Hebrew Literature
This course is designated as writing-intensive.
Same as L75 JINE 401W
Credit 3 units. A&S: LA, WI. A&S IQ: HUM, LCD, LS, WI

HBRW 402 Fourth-Level Modern Hebrew II
Students with advanced proficiency maintain and develop reading, speaking and writing skills. Class conducted in Hebrew. Readings focus on key works of Hebrew poetry and fiction from earlier in this century and from contemporary Israel; additional reading and discussion of essays and editorials from current Israeli press, viewing of films and current news broadcasts produced in Israel. Prerequisite: MHBR 4010.
Same as L75 JINE 402
Credit 3 units. A&S: LA, A&S IQ: LCD, LS SB: IS

HBRW 420 Topics in Modern Hebrew Literature
Various themes in Hebrew belles lettres, e.g., the intertwining of politics and literature, the survival of rabbinic metaphors.
Same as L75 JINE 420
Credit 3 units. A&S: LA A&S IQ: LCD FA: Lit

HBRW 421 Study of Selected Texts in Modern Hebrew Literature
Major works in Hebrew belles lettres by writers such as Bialik and Agnon studied in detail and depth.
Credit 3 units. A&S: TH, A&S IQ: HUM, LCD FA: Lit

HBRW 440 Topics in Rabbinic Texts: Mishnah and Gemara
The course aims to introduce students to independent reading of selected rabbinic texts in the original language. We focus on a number of topics representing the range of rabbinic discussion, including legal, narrative and ethical issues. At the same time, we study the necessary linguistic tools for understanding rabbinic texts. Prerequisite: BHBR 385 or MHBR 401 or instructor’s permission.
Same as L75 JINE 440, L23 Re St 4401
Credit 3 units. A&S: TH, A&S IQ: HUM, LCD

HBRW 488 Independent Work for Senior Honors
This course to be taken in the fall semester. Prerequisites: senior standing, eligibility for honors and permission of the department.
Credit 3 units.

HBRW 489 Independent Work for Senior Honors
This course to be taken in the spring semester. Prerequisites: senior standing, eligibility for honors and permission of the department.
Credit 3 units.

HBRW 4973 Guided Readings in Hebrew
Prerequisites: senior standing and permission of the instructor and the department chair.
Same as L75 JINE 4973
Credit variable, maximum 5 units. A&S: LA

HBRW 4982 Guided Readings in Akkadian
Prerequisites: permission of the instructor and the department chair.
Same as L75 JINE 4987
Credit variable, maximum 6 units.

HBRW 4983 Guided Readings in Hebrew
Prerequisites: senior standing and permission of the instructor and the department chair.
Same as L75 JINE 4983
Credit variable, maximum 5 units. A&S: LA

HBRW 4984 Guided Readings in Aramaic
Prerequisites: permission of the instructor and the department chair.
Same as L75 JINE 4984
Credit variable, maximum 6 units.

HBRW 4985 Guided Readings in Biblical Hebrew
Same as L75 JINE 4985
Prerequisites: permission of the instructor and the department chair.
Credit variable, maximum 6 units.

Hindi
The Department of Jewish, Islamic and Near Eastern Languages and Cultures offers a minor in Hindi (South Asian Language and Culture).

Language Placement: Placement tests are required for all students entering our language programs. Students who test into Intermediate Hindi and satisfactorily complete (with a grade of B– or better) at least one semester of language study may petition for 3 units of retroactive credit; students who test into third year or above and satisfactorily complete (with a grade of B– or better) at least one semester of language study may
petition for 6 units of retroactive credit. Credit is limited to 3 units for testing into intermediate and 6 units for testing into third year or above. Please note that students with native language proficiency as determined by the individual language section, as well as students who enroll in a course below their placement level, are ineligible for retroactive credit units. Students who misrepresent the extent of their background to gain entrance to a course at the elementary or intermediate level will be dropped from that course.

Phone: 314/935-5110 or 314/935-8567
E-mail: jinelc@artsci.wustl.edu

Additional Information

The minor in South Asian Languages and Culture requires the completion of 18 credits, a minimum of 9 of which must be at the 300 level or above, and no more than 12 of which may be in language. Minimum requirements for the minor include two years of Hindi language and the successful completion of at least 9 units in literature/culture courses chosen in consultation with the minor adviser. Please note that students must earn a minimum of B– in language courses in order to proceed to the next level. Students who place out of language courses because of previous language training, or because they are native speakers of the language, must complete 15 units with literature and culture courses as approved by their minor adviser. No more than 3 units of credit earned at an institution other than Washington University may be applied to the minor. The pass/fail grade option is not allowed for any minor courses. Please note that no more than 3 units of the required 18 units for the minor may be courses that also are used to satisfy the requirements of a major.

Study Abroad: Students are strongly encouraged to participate in Washington University-approved study abroad programs. Study abroad is usually during the junior year and after a minimum of one year of language study at Washington University. Students who participate in Washington University-sponsored and/or approved overseas programs are normally able to apply most or all of these units to their undergraduate degree although no more than 3 units may be applied to the minor. However, all transfer of credit is subject to review and approval by the department and the Study Abroad Office.

Transfer Credit: Normally no more than 3 units of credit earned at an institution other than Washington University (this does not include Washington University-approved study-abroad programs) may be applied toward the minor.

L73 Hindi 111D Beginning Hindi I
An introduction to the most widely spoken language of South Asia. Along with an understanding of grammar, the course offers practice in all four skills: listening, speaking, reading and writing. The Hindi (Devanagari) script is used for reading and writing. Note: students with some previous Hindi language background must take a placement examination. Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L73 Hindi 112D Beginning Hindi II
Continuation of 101D, devoted to the further development of basic skills — listening, speaking, reading and writing — with a particular emphasis on the acquisition of speaking proficiency. Prerequisite: Hindi 111D or placement by examination. Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS
L73 Hindi 151D Advanced Beginning Hindi I
Designed for the student with some background in Hindi. Emphasis on review of grammar, increased fluency and vocabulary enrichment. Prerequisite: placement by examination or instructor’s permission. Credit 3 units. A&S : LA  A&S : IQ, LCD  BU : IS

L73 Hindi 201 Intermediate Hindi I
Continuing practice in listening, speaking and grammatical understanding. The Hindi (Devanagari) script is used for reading and writing. Prerequisite: grade of B– or better in Hindi 112D or placement by examination. Credit 5 units. A&S : LA  A&S : IQ, LCD, LS  BU : HUM, IS

L73 Hindi 202 Intermediate Hindi II
Continuation of Hindi 201. Prerequisite: grade of B– or better in Hindi 201 or placement by examination. Credit 5 units. A&S : LA  A&S : IQ, LCD, LS  BU : HUM, IS

L73 Hindi 299 Undergraduate Independent Study
Prerequisites: Hindi 202 and permission of the instructor and the department chair. Credit variable, maximum 6 units. Credit variable, maximum 6 units.

L73 Hindi 301 Advanced Hindi I
This course is designed to help students gain advanced proficiency in the oral and written use of Hindi through reading and discussion of short stories, newspaper articles and other selected materials. Prerequisite: grade of B– or better in Hindi 202 or placement by examination. Credit 3 units. A&S : LA  A&S : IQ, LCD, LS  BU : IS

L73 Hindi 302 Advanced Hindi II
This course is a continuation of Hindi 301. It is designed to continue students’ advanced proficiency in the oral and written use of Hindi through reading and discussion of short stories, newspaper articles and other selected materials. Prerequisite: grade of B– or better in Hindi 301 or placement by examination. Credit 3 units. A&S : LA  A&S : IQ, LCD, LS

L73 Hindi 330 Topics in South Asian Literature and Culture
An introduction to major texts of South Asian literature, both traditional and modern, in their cultural context. Specific topics, texts and themes may vary from year to year. The course assumes no previous acquaintance with the material. All readings are in English or English translation. Credit 3 units. A&S : TH  A&S : IQ, HUM, LCD

L73 Hindi 350 Introduction to South Asian Literature in Translation
Credit 3 units. A&S : TH  CD  BU : HUM

L73 Hindi 399 Independent Study
Prerequisite: permission of instructor and the department. Credit variable, maximum 6 units.

L73 Hindi 400 Asian & Near Eastern Languages & Literatures Senior Seminar
Same as ANELL 400
Credit 3 units. A&S : TH  CD  A&S : IQ, HUM, LCD  AR : Lit  FA : Lit

L73 Hindi 499 Independent Study
Prerequisite: permission of instructor and the department. Credit variable, maximum 6 units. Credit variable, maximum 6 units.

History
The History Department engages its students through a study of the past. We are committed to the idea that the most compelling stories are often the most revealing ones. In addition to teaching students the particular skills of historical inquiry, we provide them with tools that serve them beyond their majors and beyond the university.

The discipline of history poses challenging questions about the ways that human beings have made the worlds they live in. There are many approaches to history. Some historians study politics, whether that means political parties or the ways that people who never held public office nonetheless act to shape public life. Others study the lived experience of everyday Americans or the popular culture that reflects how people understand the world around them. Still others are especially interested in the kinds of stories about the past that we tell ourselves, for those stories reveal a great deal about our own society as well as that of a different time. While it is not true that history repeats itself, it is true that without knowledge of the past we are unable to understand the present.

The History Department encourages all undergraduates to incorporate the discipline of historical thinking into their liberal arts education. Students will learn to organize and interpret data, to write with precision and clarity, to develop logical and convincing arguments, and to combine careful research with creativity. In all of our courses, we emphasize the kinds of skills that will help students to succeed both in classes at Washington University and in their postgraduate careers.

For our majors and minors, we offer the opportunity to work closely with a faculty mentor to develop a coherent yet challenging program of study. The history major is structured to be flexible, and we encourage students both to pursue established interests and to explore topics, time periods and
locales that may be less familiar. We offer a broad range of courses from the ancient world to the present, and across Africa, Asia, the Mideast, Europe and the Americas. We have many opportunities for small-group learning and discussion, including freshman seminars, our Historical Methods seminar, writing-intensive seminars and advanced seminars. Prior to graduation, every major is expected to demonstrate mastery of the field through an advanced seminar, an independent research project, formal fieldwork in the historical and archival professions, or writing a senior honors thesis.

Some history majors go on to pursue graduate work in the field and become professional historians. But most find that the knowledge and skills they build through history courses fit them for a wide range of careers. Our graduates have attended law or medical school, and have pursued careers in government, education, research, business, communications, international agencies, publishing, museums and archives, public advocacy and many other fields.

The Major in History
Total units required: 28

Major requirements:
Introductory courses
One introductory course, chosen from:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>History 101C</td>
<td>Western Civilization</td>
<td>3</td>
</tr>
<tr>
<td>History 102C</td>
<td>Western Civilization</td>
<td>3</td>
</tr>
<tr>
<td>History 163</td>
<td>Freedom, Citizenship and the Making of American Life</td>
<td>3</td>
</tr>
<tr>
<td>History 164</td>
<td>Theory and Practice of World History: Health and Disease</td>
<td>3</td>
</tr>
</tbody>
</table>

One additional introductory course, chosen from any 100 or 200 course home-based or cross-listed in history AND taught by history department faculty.
NOTE: A score of 5 on the AP European, U.S. or World History examination will constitute completion of History 102, 163 and/or 164 respectively, and 3 units of credit equivalent to History 102, 163 and/or 164 will be awarded, for a maximum of 6 credits toward the major and/or minor. A score of 4 on any of these exams may earn 3 units of elective credit but will not be counted toward the major or minor.

300/400 Level Courses

At least 18 300- or 400-level units, plus a capstone experience (for a minimum of 22 advanced units).

Requirements at this level include:

• at least one course designated “premodern” and one course designated “modern”
• at least one course from three of the following geographical areas: Africa, East Asia, South Asia, Europe, Latin America, Middle East, the United States, or transregional history
• History 301 Historical Methods, a required methods course for all majors

Capstone Experience

History majors must, prior to graduation, complete a capstone experience consisting of EITHER:

• Successful completion of the Senior Honors Thesis; OR
• An advanced seminar; OR
• An independent research project with a significant writing component (History 500); OR
• Directed fieldwork in the historical or archival profession, with a significant writing component (History 4001/4002)

Additional Information

Fieldwork: History majors are eligible for fieldwork at the Missouri Historical Society or at other museums. Opportunities also are sometimes available in the special collections at Olin Library, with local businesses and at historical sites.

Study Abroad: Students are encouraged to participate in various overseas studies programs, which normally may fulfill up to 6 units of credit for the major or minor.

Senior Honors: Students who have a strong academic record may work toward Latin Honors. It is recommended that students pursuing honors complete two advanced seminars in the junior year. Students graduating with Latin Honors must meet GPA requirements and satisfactorily complete History 399 Senior Honors Thesis and Colloquium: Writing-Intensive Seminar, while writing a thesis during the senior year.

The Minor in History

Units required: 18

Required courses:

The minor in history consists of two Introductory courses plus 12 additional units, 9 of which must be at the 300 and 400 level. All 18 units must be separate courses not double-counted toward the major or another minor. No more than two courses may originate outside the department. As stipulated by the College of Arts & Sciences, courses in the minor may not be taken credit/no credit.

At least one introductory course, chosen from:

<table>

</table>

One additional introductory course chosen from any 100 or 200 course home-based or cross-listed in history AND taught by faculty in the Department of History.

NOTE: A score of 5 on the AP European, U.S. or World History examination will constitute completion of History 102, 163 and/or 164 respectively, and 3 units of credit equivalent to History 102, 163 and/or 164 will be awarded, for a maximum of 6 credits toward the major and/or minor. A score of 4 on any of these exams may earn 3 units of elective credit but will not be counted toward the major or minor.

Additional Information

Courses in the minor are excluded from the credit/no credit option. No more than two courses may originate outside the department.

L22 History 101C Western Civilization

This course surveys the period from ca. 3500 BCE to 1650 CE in the West. As we examine the civilizations of Mesopotamia, the ancient Mediterranean and medieval and early modern Europe, we focus on themes of cultural contact, conflict and change in order to understand the complex roots of conventional "Western" history. Introductory course to the major and minor.

Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L22 History 102C Western Civilization

This course provides an introduction to the history of modern Europe. It begins by following Europeans from the upheavals of the Enlightenment to the French Revolution, and from the industrial revolution to the era of nation-state building; continues by exploring how Europeans became embroiled in the scramble for empire, the era of "totalitarianism," and two disastrous world wars; and ends by examining how Europeans coped with the divisions of the Cold War, the collapse of communism, and the challenges of unification and resurgent nationalism. Introductory course to the major and minor.
L22 History 1116 Freshman Seminar: Race, Ethnicity and Nation in Latin America and the Caribbean
This course examines the historical formation of racial and ethnic discourses, identities, and communities in Latin America and the Caribbean from the colonial period to the present. The course focuses on how race relations have shaped Latin American and Caribbean society over time, as well as how race and racial identities have been central to the construction of Latin-American national identities in the 19th and 20th centuries. Topics covered include: slavery and blackness; creole and creolization; new categories of people such as Indians, mestizos and mulattos; nation-building and racial discourse, including racial democracy, cosmic race, racelessness, gender and honor, and mestizaje; immigration to Latin America; and U.S. and Latin-American race relations in comparative perspective.
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : HUM FA : SSP

L22 History 131C Early Political Thought: Text and Tradition
A selected survey of the political and moral thought of Europe from the rise of Athenian democracy to the Renaissance, with emphasis on analysis and discussion of writers such as Thucydides, Plato, Aristotle, St. Augustine, Castiglione and Machiavelli. The course aims to introduce students to basic texts in the intellectual history of Western Europe, understood both as products of a particular time and place and as self-contained arguments that strive to instruct and persuade. The texts are simultaneously used to chart the careers of such fundamental notions as liberty, virtue and justice. Preference given to Text and Tradition and IPH students.
Same as IPH 203C
Credit 3 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD

L22 History 132C Topics in European History: Text and Tradition
A course in European history and thought since 1600 that addresses two themes: the search for a moral code and the legitimate role of the state. Both are ancient inquiries, but they acquired important and novel interpretations in the West after the Reformation and the gunpowder revolution, and the rise of the modern statecraft grounded in both. One uniquely Western approach to these questions was the search for the primitive or "natural" situation of mankind, and readings in this genre provide some of the texts for the course. Parallel to presentation of the political history of modern Europe, such writers may be discussed as Locke from the 17th century, Montesquieu and Rousseau from the 18th, Marx and Darwin from the 19th, and the writings of anthropologists and philosophers from the 20th. Preference given to Text and Tradition and IPH students.

L22 History 137 Freshman Seminar: The Emperor Nero: Prince, Monster, Artist
Same as Classics 137
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD EN : H

L22 History 154 Freshman Seminar: Saints and Society
The topic of this course is saints and society in medieval and early modern Europe. It explores the complex relationships between exceptional holy men and women, the historical settings in which they lived, and the religious and cultural traditions on which they drew. It considers saints as both embodiments of the highest ideals of their societies and radical challenges to ordinary patterns of social existence.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH

L22 History 156 Freshman Seminar: England in the Age of Shakespeare
This course examines certain themes central to our understanding of Shakespeare's England, such as monarchy, order, power and the limits on action; national identity; gender; and family. Students read and discuss modern historical scholarship, a range of contemporary sources, and Shakespeare's plays, and the relationship between them.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM

L22 History 163 Freedom, Citizenship and the Making of American Life
This course offers a broad survey of American history from the era before European settlement of North America to the late 20th century. The course explores the emergence and geographic expansion of the United States and addresses changes in what it meant to be an American during the nation's history. Tracing major changes in the nation's economic structures, politics, social order and culture, the course chronicles, among other issues, changes in the meanings of freedom, citizenship and American identity. Introductory course to the major and minor.
Credit 3 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD BU : HUM FA : SSP

L22 History 164 Theory and Practice of World History: Health and Disease
Health and disease are universal human experiences yet vary profoundly across time and place. Extending from ancient times to the present, this course surveys that variety from a global perspective. We explore medical traditions from around the world, then examine how these responded to major epidemic diseases such as the Black Death. We study the globalization
of disease and the emergence of scientific medicine after 1450, then turn to the interrelated histories of health and disease in the modern era. Throughout, we attend carefully to how the biological aspects of health and disease have shaped world history, while at the same time exploring the powerful mediating role of social, cultural, economic and political factors — from religious beliefs and dietary practices to inequality, poverty, empire and war — in determining the myriad ways in which health and disease have been experienced and understood.

Introductory course to the major and minor.
Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD  BU : IS   FA : SSP

L22 History 176 Freshman Seminar: A Nation Apart? Jewish Identity in an Age of Nationalism
Same as JINE 176
Credit 3 units.  A&S : TH, SD  A&S : IQ, HUM, SD

L22 History 180 Freshman Seminar in Religious Studies: Miracles
This course is for freshman only. Topics vary from semester to semester.
Same as Re St 180
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : ETH  FA : SSP

L22 History 2010 The Great Economists
Same as IPH 201B

L22 History 201A Text and Tradition: Puzzles and Revolutions
Same as IPH 201A
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : SCI  FA : SSP

L22 History 2030 Freshman Seminar: The Enigma of Thomas Jefferson
Who was Thomas Jefferson and why has his reputation undergone so many changes? This course is an exercise in understanding how professional historians and the general public discover and use the past. It therefore sets four primary goals: to recover the past on its own terms; to understand the many different methods and standards applied in interpreting the past; to understand how and why each generation changes the way it views the past as it seeks to make it “useable”; and to develop the skills of exposition and argumentation necessary to describe and analyze complex historical issues and to express critical ideas effectively.
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L22 History 2060 East Asia Since 1500
This course seeks to explain the emergence of three of the most dynamic societies in early modern (1500–1800) and modern (1800–present) times: China, Korea and Japan. In addition to offering an introductory overview of East Asian history, this course provides an alternative view to American and European interpretations of early modern and modern world history. Rather than imagining East Asia as a passive actor in history, this course explores the ways in which East Asia has shaped global modernity.
Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD

L22 History 2081 History, Text and Identity: Introduction to Jewish Civilization
The anthropologist Clifford Geertz once famously invoked Max Weber in writing that “man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs.” The main goal of this course — designed as an introduction to Jewish history, culture and society — is to investigate the “webs of significance” produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester we focus on the following historical settings: 7th century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period we investigate the social and political conditions of Jewish life; identify the major texts that Jews possessed, studied and produced; determine the non-Jewish influences on their attitudes and aspirations; and explore the efforts that Jews made to define what it meant to be part of a Jewish collective.
Same as JINE 208F
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : ETH, IS  FA : SSP

L22 History 2090 Freshman Seminar: The City in Early Modern Europe
Cities were important political, economic and population centers in early modern Europe. For its diverse inhabitants, a city functioned as a source of identity and support and as a site for...
L22 History 2093 Freshman Seminar: Mobilizing Shame: Violence, the Media and International Intervention
Deciding when and when not to intervene in the affairs of a foreign and autonomous state has become a hot-button issue in light of the occupation of Iraq and Afghanistan, and of the more recent lending of support to Libyan rebels. In this course, students examine the emergence of the “international community,” the development of human rights, the rise of the war correspondent as a mythical figure, the creation of supranational political and military institutions, the influence of the media on public sympathies, and the changing nature of global politics, just to name a few of the case studies examined.
Credit 3 units. A&S : TH, SD  A&S : IQ, HUM  BU : BA, HUM  FA : SSP

L22 History 209C America to the Civil War
The American experience from the age of Columbus to that of Lincoln; development of distinctive American patterns of thought, culture, society, politics and religion. Topics include efforts to cope with the wilderness; colonial maturity and the development of revolutionary ideology; defining the American character; literature and art for a new republic; the impulses of religion, idealism and perfectionism.
Credit 3 units. A&S : TH  A&S : IQ, HUM  BU : HUM  FA : SSP

L22 History 210 America from the Civil War
This course is an overview of American history from the end of the Civil War to the present. Main topics include: Reconstruction, the Industrial Revolution and the rise of big business, Progressivism, American Imperialism and WW II, the '20s, the Great Depression and the New Deal, WW II and the Cold War, suburbanization, the Civil Rights Movement, Vietnam, and contemporary America.
Credit 3 units. A&S : TH  A&S : IQ, HUM  BU : HUM  FA : SSP

L22 History 214C Introduction to Islamic Civilization
Same as JINE 210C
Credit 3 units. A&S : TH, CD  A&S : IQ, HUM, LCD  BU : ETH, IS  FA : SSP

L22 History 2152 The Theory and Practice of Justice: The American Historical Experience
This introductory course uses historical case studies combined with readings in law, literature and philosophy to illuminate key episodes in which definitions of justice were contested in 19th- and 20th-century America. Some of the conflicts explored include: Civil War era debates over southern secession; whether reparation should be offered to freed people to redress the injustices of racial slavery; the denial of voting rights to women as a case of “taxation without representation”; 20th-century controversies over legal bans on racial intermarriage; free speech vs. hate speech in the 1960s and '70s; and recent debates over affirmative action and gay marriage.
Credit 3 units. A&S : TH, SD  A&S : IQ, HUM, SD  BU : BA, ETH, HUM  FA : SSP

L22 History 2157 Freshman Seminar: The Meaning of Pakistan: History, Culture, Art
Pakistan is the second-largest Muslim nation and the sixth most populous country in the world. Flanked by two rapidly growing superpowers and continually at the forefront of another global entanglement over Afghanistan, Pakistan has been forged through successive world historical epochs: colonialism, decolonization, the Cold War, neo-liberalism and the War on Terror. This course situates Pakistan in the context of U.S. imperialism, Indian regional hegemony, Chinese globalization and then turns to the powerful and diverse struggles launched by its own citizens against these external forces.
Credit 3 units. A&S : TH, SD  A&S : IQ, HUM, SD

L22 History 217C The Atlantic World, 1000–1800
Survey of the peoples, cultures and civilizations that bordered and traveled the Atlantic Ocean from Norse voyages up to the Napoleonic Wars. Examines the importance of the Atlantic as a frontier, an economic resource, a highway and an impetus to technological innovation. Considers also the political, cultural, economic and demographic effects of increasing contact among Europeans, Americans and Africans.
Credit 3 units. A&S : TH, CD  A&S : IQ, HUM, LCD

L22 History 218 Culinary Citizenship: Food, Identity and Belonging in the 20th Century
"If we are what we eat, who are we?" In this course we examine the ways in which 20th-century histories of colonialism, nation building and immigration have shaped the identity politics of what people eat today. This course is built around the premise that the production and consumption of food is, and has historically been, intimately related to the politics of identity and belonging. What people eat and don’t eat, establishes boundaries and borders. In this class we explore how some of these borders have been constructed, particularly the imagination of national cuisines, and how some of these lines have been challenged and crossed by empires and migrant communities. We also use food as a lens to examine the interaction between globalization, markets and local/global identities. The temporal and spatial scope of this class runs from the latter 19th century to the end of the
L22 History 2188 African Urban History
This introductory course explores the origins and growth of African cities through the historical process of urbanization in sub-Saharan Africa. By focusing on the form and function of cities and examining their changing relations with the surrounding countryside, we explore the fundamental urban issues and tensions that have helped to shape the history of Africa. Some of the topics to be covered include environmental issues, the creation of states, religion, cross-cultural contact, colonization, public health, gender relations and decolonization.
Credit 3 units. A&S : TH A&S : IQ, HUM

Black women, much like their male counterparts, have shaped the contours of African-American history and culture. This course explores the lived experiences of Black women in North America through a focus on the critical themes of violence and sexuality. We examine African-American women as the perpetrators and the victims of violence, as the objects of sexual surveillance and exploration of the range of contemporary debates concerning the intersections of race, class and gender, particularly within the evolving hip-hop movement.

L22 History 2503 Freshman Seminar: Nation and Religion in Russia
Through the prism of Russian Orthodoxy, Islam and Judaism, students explore the role of nation and religion in shaping political, cultural and social developments in Russia in the second half of the 19th century and in the 20th century. We investigate how historical actors have articulated national and religious affiliation to maintain — or undermine — the viability of a vast, ethnically diverse, multiconfessional state.
Credit 3 units. A&S : TH, CD

L22 History 2590 Freshman Seminar: From the “City on a Hill” to 9/11: Religion and Social Justice in America
From the Puritans’ search to build the “city on a hill,” to the growing conflation of Islam with terrorism, Americans have long nurtured a self-identity as “God’s chosen people,” an idea that has helped them justify and normalize a theology of both conquest and suffering. This course analyzes how religion served to both buttress and contest notions of social domination, punishment, reform and revolution in the United States from the colonial era to the present. Attention is paid to the voices of established religious leaders for whom the Church was their home, as well as religious dissidents who were often outcast as lunatics. Topics include the American Jeremiad, abolitionism, slave rebellions, Native American Catholicism, Fundamentalism, the Catholic Worker Movement, Pacifism, the Black Freedom Struggle, the Moral Majorly and Post-9/11 military and gender interventions with the Islamic world.

L22 History 2650 Renaissance Florence from Dante to Machiavelli
The city of Florence has long held an important place in the history of the western world. Hailed as the birthplace of the Renaissance and of the modern state, Florence exerts a seemingly natural appeal as an object of study. But why did these things happen in Florence and why at this particular time? This course explores these issues as well as others through the close reading of a wide range of texts produced by Florentines who left enduring marks on the history of Europe and the world.

L22 History 2674 Sophomore Seminar: Slavery and Memory in American Popular Culture
Sophomores receive priority registration. The history of slavery has long created a sense of unease within the consciousness of many Americans. Recognizing this continued reality, this
L22 History 270 Globalization and its Discontents
Today, the heady promises of globalization appear to have failed us. The notion of global markets and global citizens seems to have remained at best, an ideal. Meanwhile the world’s majority has witnessed a staggering decline in education, nutrition, health and even physical mobility. Nowhere have these developments passed unquestioned: from the rise of the so-called Maoist insurgency in India to the Occupy movement in the United States, people and especially the youth have expressed their outrage in creative and unconventional ways. In this course we plot the long and necessarily violent history of forging global interconnections. We next focus on the past 40 years to theorize the new social formations spawned by specific aspects of contemporary globalization such as the internet and the English language. Finally we look to the environmental and social abuses committed in the name of global connectivity and the massive protests against those atrocities. The lens for our analysis is India, South Asia and their relationship with the United States. We approach a range of novels, films and popular cultural artifacts as we build our own understanding of the nature, critique and promise of globalization.

L22 History 2801 Ben Franklin’s America
In this course, we explore Ben Franklin’s America, from the earliest stirrings of political and religious dissent in the first decades of the 18th century to the post-Revolutionary debates over the meaning of republican virtue, American character and representative government. We read primary sources from a variety of figures who contributed to the century-long debate over these subjects, and then we hear from Franklin himself, as he offers his own insight into these issues, observing the changes taking place around him.

L22 History 2845 Freshman Seminar: States of Nature: The Natural Order of Society in Western Thought
This small-group discussion course gives full attention to the major moments and movements of modern European history, 1650 to the present. We also examine some fundamental texts in the Western traditions, from the Enlightenment to Romanticism; from Marxism to Darwinism and feminism; to the diverse thought of the 20th century. Its organizing idea is that an evolving notion of “nature” and “the natural order” has impacted Europe’s definition of the state, and shaped its image of a just society. This course fulfills one of the introductory course requirements for the major in History, however, students cannot get credit for both this course and History 102C.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : IS

L22 History 2904 East Asia Since 1500
This course seeks to explain the emergence of three of the most dynamic societies in early modern (1500-1800) and modern (1800-present) times: China, Korea, and Japan. In addition to offering an introductory overview of East Asian history, this course provides an alternative view to American and European interpretations of early modern and modern world history.
Credit 3 units. A&S : TH BU : IS FA : SSP

L22 History 2905 Freshman Seminar: Empire at Play: Gaming, Gambling and Material Culture in Late Imperial China
This course offers a new perspective on what people played, how they played and why. A series of historical changes in late imperial China, including domestication, consumerism, gender divisions, sexual fetishes, war and finances, Westernization, and diasporas, have shaped the activities that people enjoyed. This course examines game play and material culture as a lens to examine Ming-Qing history and people, especially the people’s anxiety, excitement, taboos, desires and daily life that were shaped by the broader social environment.
Credit 3 units. A&S : TH A&S : IQ, HUM EN : H

L22 History 299 Undergraduate Internship in History
Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement, which the student obtains from the Career Center and which must be filled out and signed by the Career Center and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., eight to 10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours. Students may not receive credit for work done for pay but are encouraged to obtain written evaluations about such work for the student’s academic adviser and career placement file.

L22 History 3042 Two Renaissance Cities: Approaches to Early Modern Culture
This course explores Renaissance texts, images and contexts. We compare the experience and the artifacts of two cities, one Italian and one outside Italy, in order to assess the viability of “the Renaissance” as a pan-European cultural label; we note the pressures of urban and court life on cultural production; and we observe the interaction of intellectual and aesthetic self-confidence with the concerns of politics and patronage. Credit 3 units. A&S: TH

L22 History 3043 Renaissance Europe
The Renaissance was a time of tremendous cultural change, global expansion and political and religious conflict that gave birth to the modern world. Yet, these dynamic developments were produced by an anxious society, where limited technological capabilities and an increasingly rigid system of social and gender divisions discouraged innovation and encouraged repressive measures. This course seeks to answer the question of how these contradictory impulses shaped the European Renaissance. Credit 3 units. A&S: TH, SD A&S: IQ, HUM, SD BU: ETH

L22 History 3060 East Asia Since 1500
This course seeks to explain the emergence of three of the most dynamic societies in early modern (1500–1800) and modern (1800–present) times: China, Korea and Japan. In addition to offering an introductory overview of East Asian history, this course provides an alternative view to American and European interpretations of early modern and modern world history. Rather than imagining East Asia as a passive actor in history, this course explores the ways in which East Asia has shaped global modernity. Credit 3 units. A&S: TH, CD A&S: IQ, HUM, LCD BU: IS

L22 History 3066 The American City in the 19th and 20th Centuries
This course explores the cultural, political and economic history of U.S. cities in the 19th and 20th centuries. The course focuses on New York, Chicago, St. Louis, Los Angeles and Atlanta, although other cities may be included. Students conduct significant primary research on sections of St. Louis, developing a detailed history of one of the city’s neighborhoods. Much of the course readings address broad themes such as immigration, industrialization, deindustrialization and race and gender relations in American cities. Credit 3 units. A&S: TH, SD A&S: IQ, HUM, SD BU: HUM FA: SSP

L22 History 3072 Cracks in the Republic: Discontent, Dissent and Protest in America, 1950–1975
This course examines the rise and impact of several major political, social and cultural protest movements in the United States during the middle part of the 20th century. It focuses on the Beats, Civil Rights, New Left, Anti-Vietnam War, Counter-Culture, Black Nationalism, Ethnic Consciousness, Women’s Liberation and Gay/Lesbian Liberation, and contextualizes these movements within major national and international developments including Jim Crow and de facto segregation, middle-class ennui and the Cold War. We pay special attention to the role of youth activism and the methods of dissent and protest used to challenge the status quo. Throughout the course we ask and seek answers to the following questions: What was the nature of these movements? What were their differences and similarities? How was the United States changed significantly during this period and what remained relatively the same? Were those
engaged in activism unrealistic in their assumptions, discontent, dissent and protest, or was it a time when many Americans, even those who were passive or who opposed the protesters, reflected upon issues of privilege and political, economic and social power?

L22 History 3122 Race, Caste, Conversion: Social Movements in South Asia
It is a truism that caste-based injustice is one of the abiding forms of inequality in South Asia. But what precisely is a caste, and how is injustice to be removed? In this course, students explore different theories of caste, beginning with the race-infected theories of the 19th century; and different approaches to the remediation of inequalities, including social reform, religious conversion, political organization and legal remedies. Students also compare caste reform with gender reform and consider how the experience of caste is inflected by gender.
Credit 3 units. A&S : TH, CD, SD

L22 History 313C Islamic History: 600–1200
The cultural, intellectual and political history of the Islamic world, beginning with the prophetic mission of Muhammad and concluding with the Mongol invasions. Topics covered include: the life of Muhammad; the early Muslim conquests; the institution of the caliphate; the translation movement from Greek into Arabic and the emergence of Arabic as a language of learning and artistic expression; the development of new educational, legal and pietistic institutions; changes in agriculture, crafts, commerce and the growth of urban culture; multiculturalism and inter-confessional interaction among Jews, Christians, Muslims, Zoroastrians and others; large-scale movements of nomadic peoples; synoptic glances at Islamic polities in Sicily, Spain, North Africa, the Near East as well as Central and South Asia.
Credit 3 units. A&S : TH, CD, SD

L22 History 3149 The Late Ottoman Middle East
This course surveys the Middle East in the late Ottoman period (essentially the 18th and 19th centuries, up to World War I). It examines the central Ottoman state and the Ottoman provinces as they were incorporated into the world economy, and how they responded to their peripheralization in that process. Students focus on how everyday people’s lived experiences were affected by the increased monetarization of social and economic relations; changes in patterns of land tenure and agriculture; the rise of colonialism; state efforts at modernization and reform; shifts in gender relations; and debates over the relationship of religion to community and political identity.
L22 History 314C Islamic History: 1200–1800
An introduction to Islamic polities and societies from the Mongol conquests to the 13th century to the collapse and weakening of the colossal “gunpowder” empires of the Ottomans, Safavids and Mughals in the early 18th century. Broadly speaking, this course covers the Middle Period (1000–1800) of Islamic history, sandwiched between the Early and High Caliphal periods (600–1000) on the one hand and the Modern Period (1800–present) on the other hand. Familiarity with the Early and High Caliphal periods is not assumed. The course is not a “survey” of this period but a series of “windows” that allow you to develop both an in-depth understanding of some key features of Islamic societies and a clear appreciation of the challenges (as well as the rewards!) that await historians of the Middle Period. Particular attention is given to the Mamluk and Ottoman Middle East, Safavid Iran and Mughal India.
Credit 3 units.    A&S : TH, CD    A&S : IQ, HUM    LCD    BU : IS

L22 History 3150 The Middle East in the 20th Century
This course surveys the history of the Middle East since World War I. Major analytical themes include: colonialism; Orientalism; the formation of the regional nation-state system; the formation and political mobilization of new social classes; changing gender relations; the development of new forms of appropriation of economic surplus (oil, urban industry) in the new global economy; the role of religion; the Middle East as an arena of the Cold War; conflict in Israel/Palestine; and new conceptions of identity associated with these developments (Arabism, local patriotism, Islamism).
Credit 3 units.    A&S : TH, CD, SD    A&S : IQ, HUM, LCD    BU : IS

L22 History 3151 The Palestinian-Israeli Conflict, 1881–Present
This class traces the roots of the Palestinian-Israeli conflict back to Europe, Istanbul and late Ottoman Palestine. We observe how the Palestinian-Israeli conflict developed as a regional conflict during this period; move on to the British mandate period, and then cover events in Israel and the Palestinian territories once the land was united following the 1967 war, including the rise of the PLO and its impact on Israel.
Credit 3 units.    A&S : TH    BU : IS

L22 History 3152 Urban History Since 1500
The course examines major themes and debates in Chinese urban history since the mid-19th century. Topics include: the Western impact; the construction of modernity; elite activism and authoritarianism; consumerism and nationalism; shifting gender roles; political mobilization and social networking; and the Communist revolution. Understanding and analyzing the nuance and difference in views and interpretations in historical writings (historiography) are essential.
Credit 3 units.    A&S : TH    A&S : IQ, HUM    FA : SSP

L22 History 3152 Early Modern China: 1350–1800
This course examines political, socioeconomic and intellectual — cultural developments in Chinese society from the middle of the 14th century to 1800. This chronological focus largely corresponds to the last two imperial dynasties, the Ming (1368–1644) and Qing (1644–1911). Thematically, the course emphasizes such early-modern indigenous developments as increasing commercialization, social mobility and questioning of received cultural values.
Credit 3 units.    A&S : TH, CD    A&S : IQ, HUM, LCD    BU : IS

L22 History 3153 Historical Landscape and National Identity in Modern China
This course attempts to ground the history of modern China in physical space such as imperial palaces, monuments and memorials, campus, homes and residential neighborhoods, recreational facilities, streets, prisons, factories, gardens, and churches. Using methods of historical and cultural anthropological analysis, the course invests the places where we see with historical meaning. Through exploring the ritual, political and historical significance of historical landmarks, the course investigates the forces that have transformed physical spaces into symbols of national, local and personal identity. The historical events and processes we examine along the way through the sites include the changing notion of rulership, national identity, state-building, colonialism and imperialism, global capitalism and international tourism. Acknowledging and understanding the fact that these meanings and significances are fluid, multiple, contradictory and changing over time are an important concern of this course.
Same as East Asia 3163
Credit 3 units.    A&S : TH, CD    A&S : IQ, HUM, LCD

L22 History 3154 The Chinese Diaspora to 1949
China has had one of the most mobile populations in world history. This course explores migration patterns and networks in the creation of Chinese diasporas in the early modern and modern eras (1500–present). Rather than focus exclusively on the history of China or the Chinese overseas, this course more broadly considers practices and networks that sustained and linked internal and external migrations. Specific topics include: the internal migration that has helped to consolidate the borders of the modern Chinese state, such as Chinese migration to the southwest in the 18th century, to Taiwan in the 19th and 19th centuries, and into western China in recent decades as well as overseas Chinese migration to Southeast Asia, Australia, Europe and the Americas, including St. Louis. In addition to examining
how Chinese immigrants have adapted to local conditions both within and outside China, this course explores the practices that have created and sustained diasporic networks in nearly every part of the world today.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD

L22 History 316C Modern China: 1890s to the Present
A survey of China’s history from the clash with Western powers in the 1800s to the present-day economic revolution. This course examines the background to the 1911 revolution that destroyed the old political order. Then it follows the great cultural and political movements that lead to the Communist victory in 1949. The development of the People’s Republic is examined in detail, from Mao to the global economy.

L22 History 3190 The Eastern Question: 1815-2002
This course surveys Great Power diplomacy in the Eastern Mediterranean Basin and in the Caucasus from the Congress of Vienna to 9/11. Topics include: Russo-Turkish Wars; Balkan Wars of National Liberation; Crimean War; Congress of Berlin; World Wars I and II; Cold War; and Post-1989 regional conflicts.
Credit 3 units.

L22 History 3192 Modern South Asia
This course covers the history of the Indian subcontinent in the 19th and 20th centuries. We look closely at a number of issues including colonialism in India; anticolonial movements; the experiences of women; the interplay between religion and national identity; and popular culture in modern India. Political and social history are emphasized equally.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : HUM, IS FA : SSP

L22 History 3202 Japan From Earliest Times to 1868
A survey of the history of the Japanese archipelago from prehistory to the Meiji Restoration of 1868, this course is designed to acquaint students with pre-industrial Japanese society and the discipline of history. In addition to tracing political, social and cultural narratives across time, we focus on three themes: the emergence of a centralized state and the subsequent transition from aristocratic to warrior to commoner rule; interactions with the world beyond Japan’s borders; and issues of gender and sexuality.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : IS EN : H

L22 History 320C Japan Since 1868
For some, “Japan” evokes “Hello Kitty,” animated films, cartoons and sushi. For others, the Nanjing Atrocity, “Comfort Women,” the Bataan Death March and problematic textbooks. For still others, woodblock prints, tea ceremony and cherry blossoms, or Sony Walkmans and Toyotas. Still others may hold no image at all. Tracing the story of Japan’s transformations, from a pre-industrial peasant society managed by samurai-bureaucrats into an expansionist nation-state and then to its current paradoxical guise of a peaceful nation of culture led by conservative nationalists, provides the means for deepening our understanding of historical change in one region and grappling with the methods and aims of the discipline of history.

L22 History 321C Introduction to Colonial Latin America until 1825
This course surveys the history of Latin America from the pre-Columbian civilizations through the Iberian exploration and conquest of the Americas until the Wars of Independence (roughly 1400–1815). Stressing the experiences and cultural contributions of Americans, Europeans and Africans, we consider the following topics through primary written documents, firsthand accounts and excellent secondary scholarship, as well as through art, music and architecture: Aztec, Maya, Inca and Iberian civilizations; models of conquest in comparative perspective (Spanish, Portuguese and Amerindian); environmental histories; consolidation of colonialism in labor, tributary and judicial systems; the “Empire of Towns”; race, ethnicity, slavery, caste and class; religion and the Catholic Church and Inquisition; sugar and mining industries, trade and global economies; urban and rural life; the roles of women, gender and sexuality in the colonies. Geographically, we cover Mexico, the Andes and, to a lesser extent, Brazil, the Southwest, Cuba, Haiti and the Southern Cone.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : HUM, IS FA : SSP

L22 History 3221 Latin America in the 20th Century
This course provides an introduction to the history of Latin America from the time of the European conquest until the revolutions of independence — roughly from 1492 to 1825. Through the critical reading and discussion of primary and secondary sources, as well as films, we examine topics such as: the diversity of Amerindian societies before 1492; the complex and often violent encounter between Amerindians, Europeans
and Africans; the economic and political underpinnings of the Spanish and Portuguese American empires; the shifting racial, political and social colonial identities; the late colonial uprisings; and the multilayered struggles for independence in the early 19th century.
Credit 3 units. A&S : TH BU : IS

**L22 History 322C Modern Latin America**
Latin-American history from Independence to the present.
Topics covered include the Wars of Independence; slavery and indigenous people in new Latin-American nations; postcolonial Latin-American state and society; ideas of race and ethnicity in Latin America and the Caribbean; U.S.–Latin American relations; Peron, Vargas and Populism; the Mexican and Cuban Revolutions; the Cold War in Latin America; Latin American arts and popular culture; terror and violence under military dictatorships and popular resistance movements; and the left-turn in recent Latin-American politics.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : IS FA : SSP

**L22 History 3230 Black Power Across Africa and the Diaspora: International Dimensions of the Black Power Movement**
This seminar explores the Black Power Movement as an international phenomenon. By situating Black Power within an African World context, this course examines the advent and intersections of Black Power politics in the United States, parts of Africa (including Ghana, Algeria, Nigeria and Tanzania), the Caribbean (Jamaica, Bermuda, the Bahamas and Cuba), South America (Brazil) and Canada. Particular emphasis is placed upon unique and contested definitions of “Black Power” as it was articulated, constructed and enacted in each region.

**L22 History 3262 The Early Medieval World: 300–1000**
A principal theme of this course is the Christianization of Europe. From the emergence of the Christian church in the Roman Empire and the conversion of the emperor Constantine in 312 through the turbulent adoptions of Christianity by different cultures in the Early Middle Ages; the rise of Islam in the 7th century; the Arab conquests of north Africa and southern Europe; and the Byzantine empire, especially in Constantinople.

**L22 History 3266 Scholarship and the Screen: Medieval History and Modern Film**
Historical films are surprisingly accurate reflections of modern historiographical trends in the study of the Middle Ages. This course uses films on the Middle Ages, medieval documentary evidence, scholarship from the time the film was released, and current scholarship. It explores the shifts in historical interpretation of the Middle Ages over the past century and engages in debates over what evoking the past means for the scholar and the filmmaker.

**L22 History 3271 Topics in the History of Developing Areas**
This course explores in depth the histories of Argentina, Chile, Uruguay and Paraguay (with some content on Brazil, Bolivia and Peru). This course covers the pre-Columbian civilizations of Mapuche, Tupi, Guarani and others through the founding of Buenos Aires; independence; nation-building, civilization and barbarism in the 19th century; liberalism and the Catholic Church; love and sex; women, gender, sexuality and masculinity; cultural practices (such as Tango and Caranaval); visual culture as history; neocolonialism and economics; race relations, immigration, Asian communities and the Jewish diaspora; modernity, urbanism; populism, Peron and Evita; Urban terrorism and state terrorism; Allende and Pinochet; military dictatorships and the return to democracy; neoliberalism and the Shock Doctrine; the Pink Turn; LGBT rights movements; and the Southern Cone today. Students engage a variety of primary and
secondary sources, including classics such as *Facundo*, the account of Doña Maria (a Peronist organizer), several films and documentaries (such as *Nuestros desaparecidos* and *Machuca*) and other sources.

**L22 History 331 19th-Century China: Violence and Transformation**
This course traces the history of China over the course of the 19th century, with an emphasis on social and cultural history. This was one of the most tumultuous centuries in Chinese history, during which China faced threats from abroad in the form of Western and Japanese imperialism, and from within, in the form of environmental degradation and rebellions resulting in an unprecedented loss of human life. The 19th century has thus often been portrayed as a period of sharp decline for China. At the same time, we explore the ways in which the origins of the dynamic society and economy found in China today, as well as the worldwide influence of overseas Chinese, can be traced to this century of turmoil.

**L22 History 3320 Explosion on Contact: Combustible Politics of Medical Science in America from Colonial Times-Present**
From Cotton Mather in 1721 weighing in on the rectitude of smallpox vaccination in Massachusetts to actor Michael J. Fox joining the 2006 Amendment 2 stem-cell debate in Missouri, Americans have fought vehemently about the politics of medical science. Arguments over what counts as legitimate medical science, and about the proper relationship of such science to public policy, have been central in U.S. political contestation over such seemingly unrelated themes as: immigration, race, imperialism, gender, sexuality, reproduction, crime and punishment, land use, ethics, and religion.
Credit 3 units. A&S : TH A&S : IQ, HUM

**L22 History 333 The Holocaust: History and Memory**
Origins, causes and significance of the Nazi attempt to destroy European Jewry within the context of European and Jewish history. Related themes: the Holocaust in literature; the psychology of murderers and victims, bystanders and survivors; and contemporary implications of the Holocaust for theology and politics.
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : ETH, HUM, IS FA : SSP

**L22 History 334 Gender, Health and Resistance: Comparative Slavery in the African Diaspora**
Slavery is a field of historical study that continues to undergo considerable transformation within scholarly investigation. As such, scholars have sought to initiate much broader understandings of the evolution of slavery across both time and geographical space. This course utilizes a comparative approach to examine the experiences of enslavement common throughout the African Diaspora, particularly within the United States, the Caribbean and parts of Latin America. Some themes briefly covered within this course include gender, sexuality, community, resistance, medicine, labor and culture. As a comparative course, students are challenged to go beyond the traditional narrative of the African-American experience in order to fundamentally understand the linkages of oppression, survival and even liberation, which arguably shaped the lives of enslaved and free populations within and across the Diaspora.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD

**L22 History 334C Crusade, Disputation and Coexistence: Jews in Christian Europe**
This course investigates some of the major themes in the history of the Jews in Europe, from the High Middle Ages to the eve of the French Revolution. Jews constituted a classic, nearly continuous minority in the premodern Christian world — a world that was not known for tolerating dissent. Or was it? One of the main purposes of the course is to investigate the phenomenon of majority/minority relations, to examine the ways in which the Jewish community interacted with and experienced European societies, cultures and politics. We look at the dynamics of boundary formation and cultural distinctiveness; the limits of religious and social tolerance; the nature and contexts of persecution; and the prospects for Jewish integration to Europe during the course of the Enlightenment era. Our course also highlights the particular historical experiences, cultural and religious developments, and communal patterns of the Jews during this time.

L22 History 3350 Out of the Shtetl: Jews in Central and Eastern Europe Between Empire, State and Nation
Is there an East/West divide in Jewish history (perhaps more than one)? What did it mean to emerge from the small market towns and villages of Central and Eastern Europe to confront modern states, empires and nations? This course examines the Jewish historical experience in the countries that make up Central and Eastern Europe (the Bohemian lands, Hungary, Poland, Russia and Romania) from the 16th century to the collapse of the Soviet empire. It looks at patterns in Jewish culture, society and politics as well as the changing dynamic of Jewish interactions with state, society and community.

L22 History 335C Becoming “Modern”: Emancipation, Anti-Semitism and Nationalism in Modern Jewish History
This course offers a survey of the Jewish experience in the modern world by asking, at the outset, what it means to be — or to become — modern. We begin with the Enlightenment and the formation of the modern state and end with American and Israeli settings at the close of the 20th century. The cultural, social and political lives of Jews have undergone tremendous transformations and dislocations over this time — a period marked by innovation, tragedy and success. Among the themes that we explore in depth are: the campaigns for and against Jewish “emancipation”; acculturation and religious reform; traditionalism and modernism in Eastern Europe; the rise of political and racial anti-Semitism; mass migration and the formation of American Jewry; varieties of Jewish national politics; Jewish-Gentile relations between the World Wars; the destruction of European Jewry; the emergence of a Jewish nation-state; and Jewish culture and identity since 1945.

L22 History 336C History of the Jews in Islamic Lands
This course is a survey of Jewish communities in the Islamic world, their social, cultural and intellectual life from the rise of Islam to the Imperial Age. Topics include: Muhammad, the Qur’an and the Jews; the legal status of Jews under Islam; the spread of Rabbinic Judaism in the Abbasid empire; the development of new Jewish identities under Islam (Karaites); Jewish traders and scholars in Fatimid Egypt; the flourishing of Jewish civilization in Muslim Spain (al-Andalus); and Sephardi (Spanish) Jews in the Ottoman empire. On this background, we look closely at some of the major Jewish philosophical and poetical works originating in Islamic lands. Another important source we study are documents from the Cairo Genizah, reflecting social history, the status of women and other aspects of daily life. Primary and secondary readings (in translation) are supplemented by audiovisual materials.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L22 History 3402 Money and Morals in the Age of Merchant Capital
Current events have showcased both the tremendous power and the moral questions surrounding global capitalism. Neither of these elements is new. Between the late medieval period and the 18th century, Europe underwent an economic transformation that, while creating an expansive and dynamic European economy, also prompted much debate and discussion about the changing patterns of production, consumption and social relations that went hand-in-hand with new economic practices. As state officials worked to make economic policies fit in with national priorities, other writers proclaimed that stock market bubbles, shady business practices, and the materialism and fickleness of consumers signaled the decline of morality and civilization. This course examines both theory and practice to develop a cultural history of merchant capitalism. Topics covered include: merchant training, the creation of public financial and stock markets, proto-industrialization, European colonization and trade, mercantilism, the figure of the merchant in literature, and Adam Smith’s The Wealth of Nations.

L22 History 3406 Introduction to Digital Humanities: Cultural Analysis in the Information Age
It is a truism that computers have changed our lives and the way we think and interact. But in fact systematic efforts to apply current technologies to the study of history and culture have been rare. This course enables students to consider how these technologies might transform the humanities. We explore the various ways in which ideas and data in the humanities can be represented, analyzed and communicated. We also reflect on how the expansion of information technology has transformed and is continuing to transform the humanities, both with regard to their role in the university and in society at large. Readings and classwork are supplemented by small assigned digital projects culminating in a project chosen by the students themselves.

L22 History 3482 Medieval Jewish Travelogues, Chronicles and Biographies
Medieval Hebrew literature includes a wide range of narratives, many of which are commonly classified as chronicles, travelogues, biographies or diaries. In this course, we explore a variety of authors and narratives from the 9th to the 17th centuries, originating from Muslim and Christian lands, the Middle East and Europe. We ask to what extent these texts mirror the personal experiences of their authors and to what extent they must be regarded as literary fictions. In addition, we discuss the question of how premodern Jewish writers reflected on history. All texts are read in English translation. Prerequisite: JINE 208F or instructor’s permission.

L22 History 3490 Europe in the 20th Century
In 1914, several European nations dominated much of the world through vast overseas empires in which they exercised military, political and economic power. This course explores the decline, fall and slow return of the “new Europe” by examining the history of Europe from World War I to the present. It considers the decline of Europe brought about by two devastating wars, and the crucial impact of war and genocide in shaping European politics, society and culture; the place of Europe in the Cold War; and the European retreat from empire in the post-war era.

L22 History 3520 Conquest and Colony: Cultural Encounters in the New World
This course studies the contrasting patterns of colonization in the New World, as this hemisphere was once termed by Europeans. Traditionally, such comparative studies have focused on the cultural differences among the European colonizers — the English, the French, the Spanish and so on. As the different groups confronted and dealt with each other in the 16th and 17th centuries, they established widely varying patterns of living that would have an impact on the histories of their descendents for generations to come.
Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD

L22 History 3530 Re-forming Ireland, 1500–1700
Ireland in the 16th and 17th centuries was radically transformed. Not only were the political structures and the political culture of resurgent Gaeldom destroyed. Religious loyalties consolidated new Irish identities as protestantism — in the form of new waves of settlers and new flurries of English governmental interventions — obliterated inherited distinctions and divisions and defined all Roman Catholics as the enemy.
Credit 3 units.  A&S : TH, SD  A&S : IQ, HUM, SD  BU : IS

L22 History 3531 Early-Modern England
Around 1500, England was an overwhelmingly agrarian society dominated by crown and aristocracy; by 1700, political power had been redistributed by revolution while commercialization, “science” and empire-building were well under way. Through lecture and discussion and through readings in a variety of autobiographical and other writings, including some of the great works of literature, we examine how contemporaries sought to shape, or to come to terms with, their world.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : HUM  FA : SSP

L22 History 3532 Faith and Power in Early Modern England
This course examines the often-explosive relations between religious faith and political power in 16th- and 17th-century England: a time of the conquest of Ireland; the burning of martyrs; the hanging of witches and puritan experiments in New and old England. It explores the painful process by which a general commitment to religious unity and coercion eroded to allow space to the individual conscience.
Credit 3 units.  A&S : TH

L22 History 3559 Socialist and Secular? A Social History of the Soviet Union
This class explores daily life and cultural developments in the Soviet Union, 1917 to 1999. Focusing on the everyday experience of Soviet citizens during these years, students learn about the effects of large-scale social and political transformation on the private lives of people. To explore daily life in the Soviet Union, this class uses a variety of sources and media, including scholarly analysis, contemporaneous portrayals, literary representations and films. Students receive a foundation in Soviet political, social and cultural history with deeper insights into select aspects of life in Soviet society.

L22 History 3561 Andean History: Culture and Politics
Since pre-Columbian times, the central Andean mountain system, combining highlands, coastal and jungle areas, has been the locus of multiethnic politics. Within this highly variegated geographical and cultural-historical space, emerged the Inca Empire, the Viceroyalty of Peru — Spain’s core South American colony, and the central Andean republics of Ecuador, Peru and Bolivia. Taking a chronological and thematic approach, this course examines pre-Columbian Andean societies, Inca rule, Andean transformations under Spanish colonialism, post-independence nation-state formation, state-Indian relations, reform and revolutionary movements, and neoliberal policies and the rise of new social movements and ethnic politics. This course focuses primarily on the development of popular and elite political cultures, and the nature and complexity of local, regional and national power relations.

L22 History 3593 The Wheels of Commerce: From the Industrial Revolution to Global Capitalism
John Maynard Keynes once said, “The ideas of economists and political philosophers both when they are right and when they are wrong, are more powerful than is commonly understood.
Indeed the world is ruled by little else. Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economist.” In this course we focus our attention on the blind spot that Keynes so astutely identified. We study seminal works in the history of political economy (Smith, Malthus, Marx, Keynes, Krugman, etc.) and explore the social, economic and political histories in which they were grounded. We begin with the Industrial Revolution in Britain, the works of Adam Smith, and the emergence of economics as a discipline. We end with the globalization of the 1970s, the works of Joseph Stiglitz and the challenges that a more interconnected world has posed for both the organization of the economy and the practice of economics as a discipline.

L22 History 3598 The First World War and the Making of Modern Europe
World War I ushered our age into existence. Its memories still haunt us and its aftershocks shaped the course of the 20th century. The Russian Revolution, the emergence of new national states, fascism, Nazism, World War II and the Cold War are all its products. Today, many of the ethnic and national conflicts that triggered war in 1914 have resurfaced. Understanding World War I, in short, is crucial to understanding our own era.

L22 History 3621 Colonial America to the Revolution
This course examines the history of the North American British colonies, up to the American Revolution. We pay particular attention to the political, economic and cultural differences separating colonial regions — New England, the Mid-Atlantic, the Chesapeake and the southern colonies of Georgia and the
Carolinneas — while also examining their shared British identity. Drawing from readings consisting of both primary texts and scholarly readings, we also examine how colonists’ place on the periphery of the British empire shaped their vision of what it meant to be “British,” and what role that vision played in shaping the colonial response to British rule, and eventually, their decision to fight for Independence. Credit 3 units. A&S : TH EN : H

L22 History 365 The New Republic: The United States, 1776–1850
A survey of American history from the eve of the Revolution to the eve of the Civil War. Topics covered include: the Revolution and its ambiguous legacies; the rise of democracy; the starkly paradoxical “marriage” of slavery and freedom; the creation of much of the America that we know; mass political parties; sustained capitalist growth; individualistic creeds; formalized and folkloric racism; technological innovation; literary experimentation; distinctively American legal, scientific and religious cultures; and the modern movements of labor, feminism and African-American empowerment. Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM, IS FA : SSP

L22 History 366 The Civil War and Reconstruction: 1848–1877
This course is a survey of American history from 1848 to 1877, focusing on the Civil War and Reconstruction. The bloody conflict and its causes and consequences are explored from multiple perspectives: those of individuals such as Lincoln, McClellan, Davis, Douglass and Lee, who made momentous choices of the era; of groups such as the Radical Republicans and the black freed people who helped shape the actions of individuals; and of the historians, novelists, filmmakers and social movements that have struggled to define the war’s legacy for modern America. Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : HUM FA : SSP

L22 History 3660 Narratives of Discovery
This course examines Europe’s encounter with the newly discovered lands and peoples of Africa, Asia and America through the writings of the travelers themselves. We read stories of exploration and conquest, cultural and commercial exchanges, religious visions and cannibal practices. Credit 3 units. A&S : TH A&S : IQ, HUM

L22 History 3669 The Making of Modern Europe, 1945 to the Present
The history of Europe from the end of World War II to the present day. Topics include: the place of Europe in the Cold War; the divergent paths and experiences of Western and Eastern Europe; the emergence of the European Union; the 1968 student uprisings throughout Europe; the “revolutions” of 1989 throughout Eastern Europe; the collapse of the Soviet Union and reunification of Germany; the Balkan Wars of the 1990s and current social problems related to the minority ethnic and religious groups living in European nations. Credit 3 units. A&S : TH A&S : IQ, HUM

L22 History 367 America in the Age of Inequality: The Gilded Age and the Progressive Era, 1877–1919
This course explores dramatic changes in American society during the half-century from the Civil War to the end of World War I. We discuss industrialization; mass immigration from Europe, Asia and Latin America; the vast movement of rural people to cities; the fall of Reconstruction and rise of Jim Crow; the expansion of organized labor; birth of American Socialism; and the rise of the American empire in the Caribbean and the Philippines. The course, in addition, analyzes the many and varied social reform efforts of the turn of the 20th century, from women’s suffrage to anti-lynching campaigns; from trust-busting and anti-immigrant crusades to the settlement house movement.
L22 History 3670 The Long Civil Rights Movement
The Civil Rights Movement is known as a southern movement, led by church leaders and college students, fought through sit-ins and marches, dealing primarily with non-economic objectives, framed by a black and white paradigm, and limited to a single tumultuous decade. This course seeks to broaden our understanding of the movement geographically, chronologically and thematically. It pays special attention to struggles fought in the North, West and Southwest; it seeks to question binaries constructed around “confrontational” and “accommodationist” leaders; it reveals how Latinos, Native Americans and Asian Americans impacted and were impacted by the movement; and it seeks to link the public memory of this movement with contemporary racial politics.
Credit 3 units.

L22 History 3672 Medicine, Healing and Experimentation in the Contours of Black History
Conversations regarding the history of medicine continue to undergo considerable transformation within academia and the general public. The infamous Tuskegee syphilis experiment serves as a marker in the historical consciousness regarding African Americans and the medical profession. This course taps into this particular evolution, prompting students to broaden their gaze to explore the often delicate relationship of people of African descent within the realm of medicine and healing. Tracing the social nature of these medical interactions from the period of enslavement through the 20th century, this course examines the changing patterns of disease and illness, social responses to physical and psychological ailments, and the experimental and exploitative use of black bodies in the field of medicine. As a history course, the focus is extended toward the underpinnings of race and gender in the medical treatment allocated across time and space — the United States, Caribbean and Latin America — to give further insight into the roots of contemporary practice of medicine.

L22 History 368 Modern America Since 1929
This course offers an intensive survey of U.S. history since World War I, concentrating on key turns in the development of American life: social and political strains of the 1920s as part of the “new era” commenced by the Great War; responses to the Great Depression and the construction of a limited welfare state in the 1930s and 1940s; the rise of Cold War anti-Communism in foreign and domestic affairs in the wake of World War II; the advent of a new period of social reform and disruptive protest in the 1950s and 1960s; the turn toward the political right since the 1970s; and the aftermath of the Cold War.
Credit 3 units.
L22 History 3711 The History of Popular Culture in the United States
This course surveys major developments in the history of popular culture in America, stretching from the mid-19th century to the present. It explores topics such as literature, drama/theater, dance halls, movies, radio, advertising, television, music and the internet; it covers different types of popular culture such as printing, performance, image and audio; it looks at how popular culture has been depicted in terms of icons, myths, stereotypes, heroes, celebrities and rituals; it addresses the rise of mass production and consumption; it examines the ways in which race, class, gender, ethnicity and sexuality have been perceived and are portrayed in popular culture; and it illustrates how the content of popular culture shapes and reflects our personal, social, political and intellectual beliefs and values. Modern, U.S. Prerequisite: see History overview. Credit 3 units. A&S : TH A&S : IQ, HUM BU : BA

L22 History 372C Law in American Life: 1776 to the Present
Among the many contradictions of American history, none has been more recurrent than the tension of justice and law — of aspiration and reality — as Americans have sought to make good on the promises of the Revolution. Although we pride ourselves as a nation devoted to the principle of “equal justice under the law,” the terms “equal” and “justice” have prompted bitter debate, and the way we place them “under law” has divided Americans as often as it has united them. It is the purpose of this course to examine the many and conflicting ways in which Americans have sought to make “law” achieve the goals of the republic established in 1776. Viewing “law” as the contested terrain of justice, cultural construction, social necessity and self-interest, this course pays close attention to the way Americans have used, abused or evaded “law” throughout their national history. Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : ETH, IS FA : SSP

L22 History 373 History of United States Foreign Relations to 1914
This course explores the major diplomatic, political, legal and economic issues shaping U.S. foreign relations in the 18th, 19th and early 20th centuries, up until the U.S. entry into World War I. Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM, IS EN : H FA : SSP

L22 History 3730 American Politics and Society in the 1970s
This course provides both a chronological and thematic approach to the history of 1970s America. Class time focuses on only a few of the most significant shifts in American politics, culture and society. The course encourages students to think more deeply about: the fate of liberalism in post-1960s America; the rise of ethnic identity and its impact on the rights revolution; gender and the politics of sexuality; religion and the rise of the South; Nixon and Watergate; Carter and political malaise; urban decay; environmentalism; and the United States’ earliest encounters with terrorism. Credit 3 units. A&S : TH A&S : IQ, HUM EN : H

This course explores the major diplomatic, political, legal and economic issues shaping U.S. foreign relations with the wider world from the 1920s to the “fall of Communism” in 1989. Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM, IS FA : SSP

Same as WGSS 3754
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : BA

L22 History 3751 Women, Gender and Sexuality in Postwar America
We explore the history of the United States since 1945 by focusing on the ways that gender and sexuality have shaped the lives of Americans, particularly the diverse group of women who make up more than half the nation’s population. Topics include: domesticity and the culture of the 1950s; gendering the Cold War; the gender politics of racial liberation; the sexual revolution; second-wave feminism and the transformation of American culture; the new right’s gender politics; and the impact of new conceptions of sexual and gender identity at century’s end. Course texts include scholarly literature, memoirs, novels and film. Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD FA : SSP

L22 History 3752 Women in American History
This course provides an introduction to the major themes in U.S. women’s history from the period of colonial exploration and conquest to the present. In this course we learn about the terms, questions and methods used by women’s historians, and we use both primary and secondary sources to explore the diversity of women’s experiences as they have been shaped by such factors as region, ethnicity, class, race, sexuality and politics, as well as ways in which women have acted as agents in shaping their own lives. Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : BA FA : SSP
L22 History 3784 Before "the Clinic was Born": Medicine Among European Jews from the Middle Ages to the Modern Period
This course offers a survey of European medical history in general and of the Jewish medical world in particular, from the middle ages to the threshold of modernity.
Same as JINE 3782
Credit 3 units. A&S : TH A&S : IQ, HUM

L22 History 3789 Building St. Louis History
This course aims to provide a national and local understanding of how Americans and St. Louisans dealt with the problems of racism, poverty and sexism from 1945 to the present. While history courses traditionally require that students analyze the credibility and subjectivity of each historical source, this course further challenges students to use the methods of oral history to compare evidence from oral historical memory with written texts. By comparing St. Louis history with that of the rest of the nation, students analyze regional differences and understand the unique historical conditions that shaped this city. CBTL course.
Credit 4 units. A&S : TH, SD A&S : IQ, HUM, SD

L22 History 3802 The Supreme Court in American Life, 1789–2006
From Marbury vs. Madison in the early 19th century to Dred Scott vs. Sanford on the eve of the Civil War and, more recently, Roe vs. Wade or Bush vs. Gore, the Supreme Court — its composition, its rulings and their legitimacy — has provoked intense, widespread legal, political, even ethical debate. This course is an historical survey of the Supreme Court’s history and of the Court’s broader resonance in American life and society, from the court’s first session in 1789 to the present.
Credit 3 units. A&S : TH A&S : IQ, HUM

L22 History 382C The American School
An analysis of the development of American schooling within the context of American social history. Focus on three general themes: differing conceptions of schooling held by leading American educational thinkers, changing relationships among schools and such other educational institutions as the church and the family, policy issues that have shaped the development of schooling in America. Prerequisite: sophomore standing.

L22 History 3840 Migration and Modernity: Human Mobility, Identity and State Formation — Russian/Soviet/post-Soviet Context
Same as IAS 384

L22 History 385 Topics in American History: The Urban Crisis: Historical Perspectives on Modern American Cities.
Since World War II, American cities have undergone enormous changes. Industrial decline, rumbling neighborhoods, rigid segregation, racial trauma and suburban sprawl all have contributed to a troubled urban world. This course equips students with a historical perspective on the urban crisis. Rather than simply identifying urban problems, we use the tools of historical inquiry to grapple with the underlying causes of these problems. Students learn the value of history as a method for illuminating the social, cultural, political and economic forces that underlie the current urban crisis. Students also apply their historical understandings toward the creation of an informed position on metropolitan policy and planning issues.
Credit 3 units. A&S : TH BU : ETH FA : SSP

L22 History 3853 History of Electronic Media
This course traces the history of electronic media as they have become the dominant source for entertainment and information in contemporary culture, starting with over-the-air broadcasting of radio and television through to cable and the “narrowcasting” achieved by digital technologies. While some attention is paid to other national industries, the chief focus of the course is on electronic media in the United States to determine, in part, the transformative role they have played in the cultural life of the nation. The course explores the relationship of the electronic media industries to the American film industry, determining how their interactions with the film industry helped mutually shape the productions of both film and electronic media. Required screenings.
Same as Film 350

L22 History 3878 Britain and Its Empire from 1688 to 1870
This course is an introduction to the history and culture of modern Britain and Ireland. We see how this damp archipelago off the northwestern coast of Europe extended its reach across the seas and throughout the world. The expansion of English power throughout the British Isles — and of British power throughout the world — was made possible by a combination of political stability, unifying nationalism and economic might, and we trace these developments from the assertion of
L22 History 3879 Britain and Its Empire Since 1870
The United Kingdom of Great Britain and Ireland entered the 20th century as an economic and political superpower; after enduring civil war, two world wars, de-industrialization and the loss of its empire, however, it ended the century on very different terms. This course examines, explains and attempts to characterize this process, focusing upon two seemingly contradictory themes: (1) the tendency of historians, politicians and other analysts to read this period as an age of national decline, and (2) the improvements to the lives of the vast majority of Britons.
Credit 3 units. A&S : TH  A&S : IQ, HUM  BU : IS

L22 History 3880 Terror and Violence in the Black Atlantic
From the period of bondage through the 21st century, terror and racialized violence have consistently been used as a form of social control. This course is constructed to explore the historical foundations of extreme threats of violence inflicted among populations of African descent. The fabric of American culture has given birth to its own unique brand of terrorism, of which this class spends considerable time interrogating. Yet, in recognizing that these practices are commonly found in other parts of the Black Atlantic, students are encouraged to take a comparative view to better tease out the wider strands of violence operative in places such as England, the Caribbean and Latin America.
Within this course, we explore the varied ways in which music, films, newspapers and historical narratives shed light on these often life-altering stories of the past. Some of the themes touched upon include: the use of punishment/exploitation during the era of slavery; lynching, sexual violence, race riots, police brutality, motherhood, black power and community activism. Same as AFAS 3880
Credit 3 units. A&S : TH, SD  A&S : IQ, HUM, SD  AR : SSP  FA : SSP

L22 History 3891 East Asia Since 1945: From Empire to Cold War
This course examines the historical forces behind the transformation of East Asia from war-torn territory under Japanese military and colonial control into distinct nations ordered by Cold War politics. We begin with the 1945 dismantling of the Japanese empire and continue with the emergence of the People’s Republic of China, the Republic of China (Taiwan), the two Koreas and Vietnam, all of which resulted from major conflicts in post-war Asia. We conclude with a look at East Asia in the post-Cold War era.
Credit 3 units. A&S : TH, CD

L22 History 38A8 Women, Men and Gender in Africa: Writing-Intensive Seminar
This seminar explores the ways in which gender relations have been produced, reproduced and transformed through the everyday actions of women and men in Africa. The focus is both on agency and on structures of power, as we move from a consideration of gender relations during the 19th-century jihads in West Africa to problems of love, sexuality and marriage in contemporary South Africa.
Credit 3 units. A&S : TH, CD, WI  A&S : IQ, HUM, LCD  BU : BA

L22 History 38B9 Understanding Lincoln: Writing-Intensive Seminar
This course explores the life, art (political and literary) and historical significance of Abraham Lincoln. It focuses first on how he understood himself and foregrounds his inspired conception of his own world-historical role in the Civil War. The course also traces how the larger world furnished the contexts of Lincoln’s career, how his consciousness, speeches and writings, and presidential decisions can be understood against the backdrop of the revolutionary national democratic upheavals of the 19th century. Finally the course investigates how the 16th president, so controversial in his day, has remained a subject of cultural contestation, with historians, novelists, poets, cartoonists, filmmakers, advertisers and politicians struggling over his memory and meaning, to the present.
Credit 3 units. A&S : TH, WI  A&S : IQ, HUM, WI

L22 History 38C8 Religion and Politics in South Asia: Writing-Intensive Seminar
This writing-intensive seminar explores environmental change in relation to human actions in the United States. It provides a vision of American history from the perspective of the land itself. It traces transformations in the organization and uses of landed property from the 18th-century surveys of western lands through the expansion of slavery and the cotton kingdom; the construction of irrigation systems in the west; the emergence of new technologies of production and communication in 19th
century cities to the mass production of suburban housing; and finally to the rise of Disneyland and Las Vegas. Credit 3 units. A&S : TH, WI A&S : IQ, HUM, WI

L22 History 38R8 The Russian Revolution: Writing-Intensive Seminar
The “10 Days that Shook the World” divided Russian, European and American society from 1917 until the dissolution of the U.S.S.R. in 1991. This seminar examines major interpretations of the Russian Revolution through readings and a series of written exercises including a formal book review, a comparative essay and an analytical research paper. Credit 3 units. A&S : TH, WI A&S : IQ, HUM, WI BU : IS

L22 History 38YM Imagining the African Diaspora: Slavery, Black Radicalism and Globalization: Writing-Intensive Seminar
This course introduces students to the African diaspora as both a practice and a subject of study. From Latin America to the United States, the Atlantic world and Asia, students critically consider the construction of the African diaspora across time and space, and the foundational role of people of African descent in the making of the modern world. While the overarching framework of the course is historical, we assume an interdisciplinary approach, examining memoirs and historical works as well as film, music and the performing arts. We think about how the African diaspora complicates our understandings of home, identity, race, geography, gender and politics. This course does not aim to establish a single understanding of the African diaspora but to appreciate its “flexibility” as both a practice and concept. Credit 3 units. L22 History 3960 Women and Social Class
This course examines the intersection of class and gender from the late 19th century to the present. It begins by asking how a focus on women challenges conventional notions of class. Some of the topics covered include women, race and class; class and family formation; women, class and globalization; class and feminist politics; women and work; class and domestic labor; women and unionization; and class and sexual identity. The emphasis is on women and class in the U.S., but includes analysis of women and class in a broader, global context. This course examines these topics using non-fictional and fictional texts. Prerequisite: one 100- or 200-level Women, Gender, and Sexuality Studies course or permission of instructor.
Same as WGSS 396
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : BA

L22 History 39F8 Gender and Sexuality in 1950s America: Writing-Intensive Seminar
Historians have recently begun to reconsider the dominant view of the 1950s as an era characterized by complacency and conformity. In this writing-intensive seminar we use the prism of gender history to gain a more complex understanding of the intricate relationship between conformity and crisis, domesticity and dissent that characterized the 1950s for both women and men.
Credit 3 units. A&S : TH, SD WI A&S : IQ, HUM, SD BU : BA

L22 History 39H8 England’s Internal Empire, 1500-1700: Writing-Intensive Seminar
The establishment and the costs of English hegemony over the British Isles. Political and cultural aggression, religious conflict, and social and economic development all contributed to identity
Arts & Sciences

formation, whether in the triumphant metropolitan core or in the embittered Celtic periphery.
Credit 3 units. A&S : TH, WI

L22 History 39J8 Mapping the Early Modern World: Writing-Intensive Seminar
Societies use maps not just to see the world, but also to assign meaning and order to space: both nearby spaces and spaces on the other side of the world. In this writing-intensive seminar, we study how maps were created, circulated and interpreted between the 16th and 18th century, when Europeans came into contact with new regions throughout the world and reshaped their own backyards through the rise of the modern state and the development of national identity.
Credit 3 units. A&S : TH, WI A&S : IQ, HUM, WI

L22 History 39K8 The Many Enigmas of Thomas Jefferson: Writing-Intensive Seminar
Who was Thomas Jefferson, and why has his reputation undergone so many changes? Why has this hero of abolitionists and a man hated by slaveholders become a figure condemned today for being a slaveholder with an African-American mistress? How did an apostle of small government and states’ rights become the patron saint of the New Deal and the Democratic Party, and then an inspiration for anarchists? Why have examinations of his private “greatness” and study of his ideas shifted to scrutiny and criticism of his private lapses?
Credit 3 units. A&S : TH, WI

L22 History 39S8 Rivers: A Comparative Approach to Chinese and World History: Writing-Intensive Seminar
This course uses rivers as geographical frames of reference to address a variety of issues, including physical and social mobility, agriculture and commerce, the state, environmental history and construction of cultural meanings. Each week begins with a focus on the West River, which flows through two provinces in southern China. Readings on the West River are matched with readings that address similar topics but focus on other important rivers in the world. The temporal focus is approximately 1500–1900, a period that witnessed the zenith of rivers as modes of transportation and commerce.
Credit 3 units. A&S : TH, WI

L22 History 39SC Imperialism and Sexuality: India, South Asia and the World: Writing-Intensive Seminar
What is the connection between the appropriation of other people’s resources and the obsession with sex? Why is “race” essential to the sexual imperatives of imperialism? How has the nexus between “race,” sexuality and imperial entitlement reproduced itself despite the end of formal colonialism? By studying a variety of colonial documents, memoirs produced by colonized subjects, novels, films and scholarship on imperialism, we seek to understand the history of imperialism’s sexual desires and its continuation in our world today.
Credit 3 units. A&S : TH, CD, SD, WI A&S : IQ, HUM, LCD

L22 History 39SL Blacks, Latinos and Afro-Latinos: Constructing Difference and Identity: Writing-Intensive Seminar
The growth of the Latino population in the United States is changing conversations about race. While some worry about job competition between black and Latino workers, others celebrate the future of a “majority minority.” Students taking this course examine the history of the racialization of African Americans and Latinos under British, Spanish and American empires, paying attention to both the construction of the racial “Other” by European elites, as well as the reclaiming of identities by the racially marginalized through various social movements, culminating in the Black and Brown liberation movements of the 1960s and the mobilization of Afro-Latinos since the 1970s.
Credit 3 units. A&S : TH, CD, SD, WI A&S : IQ, HUM, LCD

L22 History 39X9 To Russia and Return: Travel, Literature and History: Writing-Intensive Seminar
For 300 years, scholars have relied upon the accounts of eyewitness travelers to make Russia less mysterious. One famous traveler was responsible for the idea of despotic tsars, others deemed the Muscovy “rude and barbarous,” while still another shaped the end of Russian serfdom. This course introduces students to the full sweep of modern Russian history through readings in selected travelers and scholarship based on them. Prior course work on Russia is not required.

<td>The History of the Mexican Revolution</td>
<td></td>
<td></td>
<td>A&amp;S : TH, A&amp;S : IQ, HUM</td>
</tr>
<tr>
<td></td>
<td>This course covers the Mexican Revolution in larger historical, transnational and temporal contexts than the official military phase (1910-1920). It explores the origins of the Revolution in the 19th century, the development of the Porfirian dictatorship, the military phase, the post-revolutionary attempts to create nationhood, and the demise of the revolutionary spirit by 1968. While much of the course focuses between 1900-1940, significant time is spent on the aftermath of the Revolution and events and institutions that referenced it throughout the 20th century. Topics include: agrarian social movements and Zapata; “great man” histories of Villa and Carranza vs. the histories from “below” of the common people; the roles of women, gender and sexuality in the “erotic revolution” that coincided with the Revolution; the Mexican Revolution as a world historical event; environmental history of the Revolution; nationalism, physical culture and masculinity cults; education, sex education, reform programs, discipline and punishment; material culture, film and photography; the Maximato; the Cristero Revolts; Cárdenas and the 1930s; revolutionary literature; student movements and 1968; rock ‘n’ roll and counterculture; the PRI; LGBT rights; and the revolution as a still-ongoing event. Students produce a long-term formal paper or related project based on the primary and secondary sources available in class, as well as their own individual research, on some aspect of the Revolution. They also have an opportunity to engage historiographies of the period that most interest them.</td>

<td>The Black Panther Party remains one of the most iconic groups of the 1960s and 1970s. Perhaps one of the most understudied aspects of the Panther’s legacy is their radical influence upon other American racial and ethnic groups, including Asian Americans, Mexican Americans, Puerto Ricans and American Indians, among others. This seminar considers the emergence of ethnic and racial nationalism among these various groups, as a result of their contact and relationship(s) with the Black Panther Party. Considering the politics of groups such as the Red Guard, the Brown Berets, the Young Lords and the American Indian Movement, this course charts the rise and fall of rainbow radicalism as a general offspring of the Black Power Movement and part and parcel of what is commonly referred to as “the New Left.” It also considers these groups in relation to the State by probing the dynamic push and pull between repression and democracy. Ultimately, this course grants insight into the contemporary racial domain and current political landscape of America as we discuss how these groups helped to shape modern identity formations, discourses on multiculturalism and definitions of “minority,” “diversity” and “equality.”</td>

L22 History 4121 American Religion, Politics, Culture: Historical Foundations
This research-oriented seminar involves in-depth historiographical investigation of leading scholarship at the busy intersections of American religion, politics and culture. The first semester places the emphasis on historical foundations and is tilted toward that academic literature. Some sessions include a visiting scholar engaged in cutting-edge research — a feature that allows seminar members to work with important scholars from beyond the university. Possible topics include: church-state relations, religion and foreign policy, religion and civil rights, religion and the science wars, the rise of the Religious Right, and the role of religion in national elections. The seminar is taught under the auspices of the John C. Danforth Center on Religion and Politics and is offered in two complementary parts (though enrollment in either one of the two is certainly possible). Its ambition is to build up a community of inquirers engaged in the core questions that animate the Danforth Center. Prerequisite: advanced undergraduate or graduate standing in AMCS, History or Religious Studies or permission of instructor.

L22 History 423 Slavery in Latin America and the Caribbean
Slavery is a field of historical study that continues to undergo considerable transformation within scholarly investigation. As such, scholars have sought to initiate much broader understandings of the evolution of slavery across time and space. This course utilizes a comparative approach to examine the experiences of enslavement common throughout the African Diaspora, particularly across parts of the Atlantic. Some themes briefly covered within this course include: the concept of the African Diaspora, gender, community, resistance, medicine, labor, crop/regional variation and culture. As a comparative course, students are challenged to go beyond the traditional narrative of the African-American experience to fundamentally understand the linkages of oppression, survival and even liberation that arguably shaped the lives of enslaved and free populations within and across the Diaspora.

L22 History 4365 Political and Religious Power
The last century scattered many people’s hopes for rational progress in politics. Outbreaks of horror pushed a number of European and American thinkers to reconsider the relation of religious and “secular” power. This seminar reflects on just four of them: Carl Schmitt, Michel Foucault, Giorgio Agamben and Judith Butler. We read major texts by each of these thinkers as they ask about divine and human violence, the limits of rational government, the transformations of power, and how societies decide which lives count as human.

L22 History 4404 Psychoanalysis and its Literary Cultures
This course examines interactions between texts from the domains of literature and psychoanalysis. We read theory and literature side by side, in order to ask the following questions: Does the relationship between literary text and theory necessarily entail the subjection of literature to analysis, or can one, as Pierre Bayard asks, apply literature to psychoanalysis? What can psychoanalytic readings tell us more broadly about the act of reading? How can psychoanalysis enrich our sense of the ethical import of reading and writing, and how can literature challenge psychoanalytic goals and values? In terms of psychoanalytic authors, we focus on Freud, Lacan, Klein, Winnicott and Bayard. In terms of literature, we range widely from Sophocles to Henry James.

L22 History 4442 The Jewish Experience in Eastern Europe
A study of Jewish culture, society and politics in Poland-Lithuania, Hungary, the Czech lands, Russia, Romania and the
Ukraine, from the 16th century through the 20th century. Among the topics covered are: economic, social and political relations in Poland-Lithuania; varieties of Jewish religious culture; Russian and Habsburg imperial policies toward the Jews; nationality struggles and anti-Semitism; Jewish national and revolutionary responses; Jewish experience in war and revolution; the mass destruction of East European Jewish life; and the transition from Cold War to democratic revolution.

L22 History 4480 Russian Intellectual History
This seminar-style discussion and research course examines major currents in Russian intellectual life from the age of Peter the Great to the revolutions of 1905. Its primary focus is on Russians’ perception of themselves as a part of Western Civilization. Authors include: the Ukrainian humanists; the so-called Russian Enlightenment; romantic nationalists; Slavophiles and Westernizers; the literature of the Golden Age; nihilists; and the early Marxists. Students enrolling in the course should attempt to acquire a copy of (out of print) Marc Raef, ed., *Russian Intellectual History: an Anthology.*

L22 History 449C Imperial Russia
The Russian tsars, from Peter the Great to Nicholas II, built the empire that became the Soviet Union. Now that the U.S.S.R. is gone, historians focus not only on the governance of the Russians, but also on the fate of scores of nationalities ruled by them. This course also explores the changing reputation of Russia’s rulers, especially the women rulers of the 18th century; the rise of an intelligentsia committed to radical reform; the fate of millions of serfs, and the government’s efforts to steer a path between Muscovite traditions and a dynamic West.

L22 History 4560 Marxism After Marx: Philosophy and Radicalism in the 20th Century
As claims around the supposed “post-modernity” of our contemporary situation have ebbed, so scholars have returned once more to perhaps the defining philosophical and political voice of modernity, Karl Marx. This course prepares students to engage in current debates in the humanities over the nature of the political, the dynamics of class, the relative importance of the economy to “culture” and the historical situatedness of philosophical knowledge, all through close readings of the Western Marxist philosophical tradition. That tradition, developing in Continental Europe and later the United States,
sought to revitalize Marx’s account of historical development through attention to art, literature and the broader Western philosophical canon, often with the intention of accounting for the failures of Soviet Communism. The course begins with a condensed primer to Marx’s original ideas, before turning to the extension of Marxist philosophy in the ideas of Lenin, Lukács, the Frankfurt School, Louis Althusser, the British “New Left,” Lucio Colletti and Antonio Negri, before addressing more contemporary authors including Fredric Jameson and Alain Badiou.

L22 History 4564 American Pragmatism
This course examines the history of American pragmatism through three of its primary founders, the philosophers Charles Peirce, William James and John Dewey. It considers pragmatism as a response to the experience of uncertainty brought on by the modernity and contextualizes it amid late 19th- and early 20th-century thought and politics, namely, scientific methodology, evolutionary theory, the probabilistic revolution, Transcendentalism, the rise of secularism, slavery, Abolitionism and the Civil War. Major essays by each thinker are read as well as three intellectual biographies and one critical survey.

L22 History 4675 Beyond the Harem: Women, Gender and Revolution
This course examines the history and current situations of women in Middle Eastern societies. The first half of the course is devoted to studying historical changes in factors structuring women’s status and their sociopolitical roles. The second half of the course focuses on several case studies of women’s participation in broad anti-colonial social revolutions and how these revolutions affected the position of women in those societies. Evaluation of students encourages their participation, analytical engagement and improvement throughout the term.

L22 History 4689 American Intellectual History to 1865
This course presents an overview of American intellectual history from the early 17th century and the founding of the first English settlements in North America to the mid-19th century and the American Civil War. We investigate how different thinkers responded to and helped shape key events and processes in colonial and early American history, concentrating in particular on developments in religious, political, social, scientific and educational thought. We cover major topics such as: Puritanism, the Enlightenment, Evangelicalism, Romanticism and the inner Civil War. We address concepts central to the formation of the nation’s identity including those of the covenant, republicanism, citizenship, equality, freedom, liberty, natural law, transcendentalism, order, reason, progress and democracy.
Credit 3 units. A&S : TH A&S : IQ, HUM

L22 History 469 American Intellectual History Since 1865
This course concentrates on social, cultural, philosophical and political thought since the end of the Civil War, and investigates how American thinkers have responded to the challenge of modernity. After an examination of the end of the old religious order and the revolt against Victorianism, it analyzes the subsequent rise of pragmatism, progressivism, literary modernism, radical liberalism, political realism, protest movements and the New Left, neo-conservatism and the New Right, and the current state of intellectuals in post-9/11 America. The format combines mini-lectures with in-depth discussions of primary texts by Harold Frederic, Charlotte Perkins Gilman, Jane Addams, Henry Adams, George Santayana, Charles Peirce, William James, John Dewey, Walter Lippmann, W.E.B. Du Bois, Randolph Bourne, Malcolm Cowley, Edmund Wilson, Richard Wright, Sidney Hook, Reinhold Niebuhr, Hannah Arendt, Daniel Bell, C. Wright Mills, James Baldwin, Betty Friedan, Noam Chomsky and Christopher Lasch, among many others.

L22 History 4735 Modeling the Second World War
Models and simulations of trends, events, institutions and processes are useful tools for historians and social scientists. They can illustrate complex interactions between individuals and groups, map broad political and social trends, and possibly predict the outcome of specific events. Students in this research seminar choose an aspect of the geographic, political, diplomatic, military, economic or social history of World War II to research and model through computer simulation, multimedia presentations, or a role-play exercise. These models and simulations are based on primary sources from the period.

L22 History 4907 Advanced Seminar: Women and Social Movements in the United States
In this course we examine U.S. women's participation in diverse movements during the 19th and 20th centuries, ranging from suffrage and feminism, to the labor movement, civil rights activism, and conservative and queer movements. Among our questions: How does the social position of different groups of women shape their participation in social movements? Why are certain social movements successful, and how do we define success? What does looking at women's experience in particular tell us about social movements in general? Credit 4 units. A&S : TH, SD  FA : SSP

L22 History 4914 Advanced Seminar: Japan in World War II — History and Memory
This course examines the history of World War II in Asia and how it has been remembered in the post-war era. We trace the war, from the first Japanese military attack on China in 1931 through the U.S. atomic bombings of Hiroshima and Nagasaki in 1945. We also examine several post-war controversies concerning how the war has been forgotten and remembered in Japan, in the rest of Asia and in the United States. Goals include grasping the empirical history of the war as a step to becoming familiar with the theories and methods of memory studies in History. Credit 4 units. A&S : TH  A&S : IQ, HUM, LCD  FA : SSP

L22 History 4918 Advanced Seminar: Sexuality in America
Does sex have a history, and if so, how can we study it? This seminar examines important themes in the history of sexuality: the relationship between sexual ideologies and practices; racial hierarchy and sexuality; the policing of sexuality; construction of sexual identities and communities; and sexual politics at the end of the century. Students also spend time discussing theoretical approaches to the history of sexuality, as well as methodological issues, including problems of source and interpretation. Credit 4 units. A&S : TH  A&S : IQ, HUM  FA : SSP

L22 History 4920 Advanced Seminar: American Education
Same as Educ 440
Credit 3 units. A&S : TH, SD  FA : SSP

L22 History 4941 Advanced Seminar: The Inquisition in Europe, Asia and Latin America, 1200–1700
This seminar studies the history of the Inquisition from its beginnings in southern France in the first half of the 13th century up to the investigations undertaken by Dominicans and Franciscans in 17th-century Mexico and Peru. Along the way the seminar focuses upon other inquisitions in Europe (especially those made in Italy, Spain and Germany), and the hunt for heresy in Goa and the Philippines. This seminar reads inquisitional manuals (books on how to conduct an inquisition) and original inquisitional documents (the records of the trials and interrogations). Consequently, the history of heresy and witchcraft, as understood by people in the past and historians in the present, is discussed. Credit 4 units. A&S : TH  A&S : IQ, HUM  FA : SSP

L22 History 4942 Advanced Seminar: Europe’s “Jewish Question”: Emancipation, Anti-Semitism and Jewish-Christian Confrontation
The so-called “Jewish Question” was a product of European modernity. It emerged in conjunction with the formation of modern states, Enlightenment projects for political reform, the decline of religious influence in society, and struggles over Jewish emancipation. In this seminar, students examine the unusual career of this obsession from the 16th through the 20th century by focusing selectively on a number of illustrative episodes: Christian Hebraism and the Reformation; the Enlightenment assault on religious power; European debates on Jewish emancipation; the emergence of the “Jewish Question” in the 19th century; anti-Semitism as a modern political phenomenon; the renewed discourse of Jewish “ritual murder” at the turn of the 20th century; Zionism and other forms of Jewish nationalism; and the question of anti-Zionism in the reformulation of the “Jewish Question” during the past half-century. Credit 4 units. A&S : TH  A&S : IQ, HUM  FA : SSP

L22 History 4946 Advanced Seminar: “The Federalist” and Its Critics
An intensive examination of the debates generated over the ratification of the United States Constitution. At the center of the debate were the 85 Federalist essays composed by Alexander Hamilton, James Madison and John Jay under the collective pseudonym of “Publius.” Though of limited impact at the time, The Federalist essays framed the agenda for continuing debate and have become a foundation of American political thought. Their support of an unprecedented national plan of an entirely revamped system of national government raised issues of politics, philosophy, economics and human psychology. For that reason, this course title announces that we study the interaction of political philosophy and the practical realities of politics. Credit 4 units. A&S : TH  A&S : IQ, HUM  FA : SSP

L22 History 4952 Advanced Seminar: Modern British History
The seminar is devoted to the consideration of new interpretations of such questions as political reform, the industrial revolution, the status of women and imperialism in 19th-century Britain. Credit 4 units. A&S : TH
L22 History 4963 Advanced Seminar: Encounter and Empire: European Colonialism, 1500–1800
This seminar examines the first age of European world empires, from the Spanish and Portuguese explorations and conquests in the Americas, Africa and Asia, to the rise of the Dutch and English merchant empires, to the 18th-century exploration of the Pacific and revolutions in the Atlantic World. We use primary sources to examine ideas about cultural diversity, colonial society and the natural world, while, through secondary sources, we examine themes of cultural transfer, economic development, political contestation and control, and scientific discovery.
Credit 4 units. A&S : TH A&S : IQ, HUM

L22 History 4965 Advanced Seminar: Magic, Heresy and Witchcraft in the Middle Ages, 350–1550
This course concerns itself with addressing and familiarizing students with some of the major issues, debates, problems, themes and methods, adopted and adapted by historians of the Middle Ages.
Credit 4 units. A&S : TH A&S : IQ, HUM

L22 History 4967 Advanced Seminar: Migration and Travel in China, 1500–1900
Despite the growing importance of native-place identities during the late Imperial era, China had an increasingly mobile population. This course examines the movement of people in China approximately from 1500 to 1900, including voluntary and forced migration, travel associated with trade, travel for civil service examinations and official postings, exile, urban sojourning, religious pilgrimages, and touring. In addition, this course focuses on relations between locals and sojourners or migrants, as well as the perceived dangers that geographical mobility posed for the state and the social order.
Credit 4 units. A&S : TH

L22 History 4970 Advanced Seminar: Early Medieval History, Italy and France in the Early Middle Ages
The topic of this seminar is the kingdoms formed as successor states to the Western Roman empire by the Gothic, Frankish and Lombard peoples in the territories of modern France and Italy. The course compares the varied models used in these kingdoms for the accommodation of Roman and Germanic cultures.
Credit 4 units. A&S : TH FA : SSP

L22 History 4974 Advanced Seminar: Gender, Property and Law in American Society
This course aims to explore the intersections of gender relations, work and property in law, custom and culture from the colonial period to the late 20th century. We read a wide range of articles and books, all of which in some way address the relationships among gender ideologies, social practices and property relations in American society.

L22 History 4976 Advanced Seminar: The American Trauma: Representing the Civil War in Art, Literature and Politics
This seminar is an interdisciplinary examination of how Americans represented the Civil War during and after the titanic conflict, with special attention given to the period between 1865 and 1915. The course explores how painters, novelists, photographers, sculptors, essayists, journalists, philosophers, historians and filmmakers engaged the problems of constructing narrative and reconstructing national and individual identity out of the physical and psychological wreckage of a war which demanded horrific sacrifice and the destruction of an enemy that could not be readily dissociated from the self.
Credit 4 units. A&S : TH A&S : IQ, HUM EN : H

L22 History 4977 Advanced Seminar: A Long Road to Uhuru and Nation: The Social History of Modern Kenya
This seminar challenges the popular Western view that the African continent is a single place and that Africans are homogenous or inherently tribal. Focusing on the lived experiences of imperial rule, the struggle for independence, and the process of nation building, it explores the development of an African country. The seminar focuses on how common men, women and adolescents wrestled with the problem of turning a colony into the modern Kenyan nation. Admission to the seminar requires permission of the instructor and at least one previous upper-level course in African history.
Credit 4 units. A&S : TH, CD A&S : IQ, HUM, LCD

L22 History 4979 Advanced Seminar: Gender, Race and Class in South Africa, 1880–Present
By focusing on the complex historical dynamics of race, gender and class in South Africa over the past 120 years, this course is aimed at understanding the development of segregation, apartheid and racial capitalism, as well as the emergence of multiple forms of resistance to counter white minority rule. Topics include: white settler expansion and the defeat of the African peasantry; the rise of mining capital and the emergence of a racially divided working class; the origins of African and Afrikaner nationalism; migrant labor and the subordination of African women; and the prospects for a nonracial, nonsexist democracy in a unified South Africa.
Credit 4 units. A&S : TH, SD A&S : IQ, HUM, SD

L22 History 4981 Advanced Seminar: Historical Perspectives on Human Rights and Globalization
This course offers a historical perspective on the modern international human rights regime, using materials drawn from diplomatic, legal, political and cultural studies. Successful completion of this seminar involves designing, researching, and writing a 25- to 30-page paper on a historically oriented, human rights-related topic of your choice.
L22 History 4982 Advanced Seminar: Women and Confucian Culture in Early Modern East Asia
This course explores the lives of women in East Asia during a period when both local elites and central states sought to Confucianize society. We focus on Ming (1368–1644) and Qing (1644–1911) China, but also examine these issues in two other early-modern East Asian societies: Yi/Choson (1329–1910) Korea and Tokugawa (1600–1868) Japan.
Credit 4 units. A&S : TH

L22 History 4983 Advanced Seminar: Renaissance Florence and Venice
Venice was the most famously stable city-state in Renaissance Italy, Florence the most notoriously unstable one. This course explores how those contrasting political environments and experiences shaped social relations and cultural production (and vice versa) in those two cities.
Credit 4 units. A&S : TH A&S : IQ, HUM

L22 History 4984 Advanced Seminar: The Problem of Freedom: The Age of Democratic Revolution in the Americas
Ever since the improbable alliance of the English pirate and slave trader Sir Francis Drake and the fugitive slave Cimarrons on the Atlantic coast of Panama many centuries ago, the history of freedom in the New World has unfolded in unlikely fits and starts. The course explores two related conjectures: first, that maroon politics (the often short-lived alliances between slaves, quasi-free blacks and white allies), slave rebellion, provincial secession and civil war were the widespread and normative conditions of post-colonial regimes throughout the New World; and second, that the problem of freedom was especially challenging in a New World environment in which freedom was fleeting and tended to decompose. Special attention is given to antislavery insurgencies, interracial politics and alliances in the United States and the perspectives on freedom they produced, but the readings also include materials on debates over freedom in the Caribbean and South America over the course of the long age of democratic revolution, 1760–1888.
Credit 4 units. A&S : TH, SD A&S : IQ, HUM, SD

L22 History 4987 Advanced Seminar: Antislavery — The Legal Assault on Slavery in St. Louis
This seminar begins with a survey of the legal and constitutional arguments made against slavery in English and American courts since the 1600s, and examines the culture and tactics of antislavery as it emerged in Antebellum America, as well as the meaning of the Dred Scott decision. Students research a particular freedom suit from the online manuscript court records of the St. Louis Circuit Court.
Credit 4 units. A&S : TH A&S : IQ, HUM

L22 History 4988 Advanced Seminar: The French Revolution
This course functions as both an advanced readings seminar and as a research paper colloquium. As a readings seminar, the course covers major scholarly debates on different aspects of the French Revolution. Other topics for the seminar include such issues as: the revolution and women; the reign of terror; and the Vendean civil war. As a research colloquium, each student undertakes research on an important aspect of the revolution and presents a paper to the seminar.
Credit 4 units. A&S : TH A&S : IQ, HUM

L22 History 4990 Advanced Seminar: History of the Body
Do bodies have a history? Recent research suggests that they do. Historians have tapped a wide variety of sources — including vital statistics, paintings and photographs, hospital records, and sex manuals — to reconstruct changes in how humans have conceptualized and experienced their own bodies. We pay particular attention to the intersection of European cultural history and history of medicine since 1500.
Credit 4 units. A&S : TH, SD A&S : IQ, HUM, SD

L22 History 4993 Advanced Seminar: Women and Religion in Medieval Europe
This course explores the religious experience of women in medieval Europe and attempts a gendered analysis of the Christian Middle Ages. In it, we examine the religious experience of women in a variety of settings — from household to convent. In particular, we try to understand how and why women came to assume public roles of unprecedented prominence in European religious culture between the 12th century and the 16th, even though the institutional church barred them from the priesthood and religious precepts remained a principal source of the ideology of female inferiority.
Credit 4 units. A&S : TH A&S : IQ, HUM

L22 History 4994 Advanced Seminar: Religion and Society in Modern Europe, 1750–1930
This course explores the changing relationships of religion, society and the state after the age of the Enlightenment and before the age of totalitarianism in Europe — a very long 19th century. This seminar focuses chiefly on changes in Christian society in Western Europe, but students may choose to write their seminar papers on religious minorities or other parts of Europe.
Credit 4 units. A&S : TH A&S : IQ, HUM

L22 History 4995 Advanced Seminar in History: The Dred Scott Case and Its Legacy After 150 Years
March 2007 marked the 150th anniversary of what has been called “the worst ever rendered by the Supreme Court.” Chief
L22 History 4998 Advanced Seminar: Holy War
This seminar studies the history of holy war in Christianity and Islam (and related notions in Judaism) in the Middle Ages. Readings and discussion compare and contrast the theory and practice of holy war among Christians and Muslims from the 7th century until the 15th. What did it mean to perform Jihad in the 12th century or to be a crucisignatus in the 13th? How revolutionary was the First Crusade? Why did Latin Christianity and Sunni Islam elaborate theories of holy war against Christian and Muslim heretics? These and other questions direct the reading and enliven the discussions of the seminar.
Credit 4 units. A&S : TH A&S : IQ, HUM

L22 History 49BV Advanced Seminar: Topics in Environmental History
This course is an introduction to the study of environmental history. The semester begins with a general inquiry into the methods of the field and then we use what we have learned to move into a focused subtopic. Readings include seminal works in the field, as well as philosophical, scientific and science fiction texts that help us to explore more abstract questions dealing with the relationship between humankind and the natural world.
Credit 4 units. A&S : TH A&S : IQ, HUM

L22 History 49CA Advanced Seminar: Religion and the Secular: Struggles over Modernity
A generation ago, scholars and observers around the world felt assured that modernization would bring the quiet retreat of religion from public life. But the theory of secularization now stands debunked by world events, and a host of questions has been reopened. This course provides students with a forum to think through these issues as they prepare research papers on topics of their own choosing.
Credit 4 units. A&S : TH, CD A&S : IQ, HUM, LCD EN : H

L22 History 49DH Advanced Seminar in History: An Imperial Project?
This course studies the processes by which England’s hegemony over its neighbors to the north and west was established in the early-modern period — a period that saw the incorporation of Wales with England, the conquest of Ireland and union with Scotland. The class reads Spenser, Milton, Defoe, as well as into the proliferating scholarship of the past 30 years on what has been called “the British problem” to understand the political destruction of Gaeldom; the development of a Protestant ascendency in Ireland; English and Scottish understandings of Union. Keeping in view the changing English senses of nationhood, it considers the meanings of “empire” in this period. Credit 4 units. A&S : TH A&S : IQ, HUM

L22 History 49DK Advanced Seminar in History: Thomas Jefferson
Who was Thomas Jefferson, and why has his reputation undergone so many changes? Why has this hero of abolitionists and a man hated by slaveholders in his own lifetime become a figure detested today for being a slaveholder with an African-American mistress? How has the hero of the New Deal and patron saint of the Democratic Party become an inspiration for anarchists? Why have examinations of his public “greatness” and study of his ideas shifted to scrutiny and criticism of his private lapses? This course is an exercise in understanding how professional historians and the general public discover and use the past.
Credit 4 units. A&S : TH

L22 History 49JK Advanced Seminar: Blood and Sacred Bodies: Ritual Murder and Host Desecration Accusations
This seminar follows the history of the ritual murder of Christians and Muslims from the origins in 12th- and 13th-century Europe to the 20th century. It pays close attention to the social and political functions of the narratives; their symbolic importance in Christianity’s salvific drama; attacks on such beliefs from both within and outside the community of the faithful; the suppression and decline of the ritual murder accusation; the integration of Jews into European societies in the 19th century; and the reappearance of the blood libel in the aftermath of emancipation.
Credit 4 units. A&S : TH, CD A&S : IQ, HUM, LCD

This seminar covers the history of the U.S.-Mexico borderlands from its indigenous past to the era of colonial encounters and national consolidations. Emphasizing the formation of the borderlands as a process, the course examines a variety of economic, political, sociocultural and legal factors that have shaped and reshaped the development of the border region.
Credit 4 units. A&S : TH A&S : IQ, HUM EN : H

L22 History 49MG Advanced Seminar: Planning Global Cities
This team-taught advanced seminar addresses the history and theory of a variety of metropolitan environments from the mid-19th century to the present. Readings move from the 19th
L22 History 49NR Advanced Seminar: Egypt and the Arab Spring: Middle Eastern Revolution in Historical Perspective

The uprisings of the Arab Spring of 2011 captivated global media and observers. The movements brought down established regimes in Tunisia, Libya, Yemen and Egypt. The focus of this course is to understand the historical background and primary contemporary issues that have shaped Egypt’s Arab Spring, and to examine the huge popular effort to document Egypt’s revolution. Each student designs, researches and writes a 25-page paper on a topic of his/her choice related to the Arab Spring. Prior knowledge of the Middle East suggested but not required.

Credit 4 units. A&S : TH, CD A&S : IQ, HUM, LCD

L22 History 49SA Advanced Seminar: Slavery in America: The Politics of Knowledge Production

This course focuses on the long history of black chattel slavery in America, from origins to emancipation. The course foregrounds the struggles over power, life and death that were at the heart of slavery’s traumatic and grotesquely violent 250-year career in North America, with attention to hemispheric context. At the same time, it highlights the fiercely contested historical battleground where scholars have argued about how to define American slavery — as a system or site of labor; reproduction; law; property and dispossession; racial and gender domination; sexual abuse and usurpation; psychological terror and interdependency; containment and marooning; selfhood and nationality; agency; revolutionary liberation; and millennial redemption.

Credit 4 units. A&S : TH, SD A&S : IQ, HUM, LCD

L22 History 49SC Advanced Seminar: Incredible India?

Today, India’s Department of Tourism works to attract visitors from far and wide with the slogan, “Incredible India!” — a publicity campaign that extols the country’s exceptionalism. Yet, images of India as unique and exotic, exceptional yet unchanged, are anything but new. They have been absolutely foundational to everything from British explorer Richard Burton’s translation of the Kama Sutra, to the hit TV series Jewel in the Crown, the global explosion of Bollywood, the scholarly study of the “subaltern,” and the proliferation of yoga studios in North America and Europe. How, and why, did India become “incredible”? Reaching to intellectual and social history and to cultural studies methods, this course explores the mechanisms for the production of popular perceptions about India. Where do these perceptions originate and how to retain coherance and continuity? What do they tell us about ourselves, our desires and our relationship to globalization? What are the intellectual traditions, the institutional sites and the visual/narrative forms that support what some might describe as a transnational public relations campaign? Students use a diverse range of primary and secondary sources and compose original research papers.

Credit 4 units. A&S : TH, CD A&S : IQ, HUM, LCD

L22 History 49YM Advanced Seminar: Blacks and Indians in Latin America

The goal of this course is to introduce students to the study of indigenous and African-based resistance and rebellion in the Americas and the Caribbean from the colonial period to the 19th century. Throughout the course, we discuss how concepts such as “agency,” “popular or subaltern politics” and “resistance” have been variously interpreted by scholars of both indigenous and African diasporic societies. By beginning in the early colonial period when “Indians” and “Blacks” became new social and racial categories, we think about the relevance and changing meanings of such categories over time, and look beyond national and/or linguistic borders.

Credit 4 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD

Interdisciplinary Project in the Humanities (IPH)

The Interdisciplinary Project in the Humanities (IPH) is a rigorous program for highly motivated students whose interests lead them beyond traditional academic categories. The major, which usually leads to a degree with honors, combines an introductory core — a concentrated study of texts central to the European and American philosophical, religious and literary traditions — with an area of concentration: an advanced sequence of courses and research tailored to the special interests of each student in the program. For students pursuing concentrations in (for example) American intellectual history, in the European avant-garde in the 20th century, or in Renaissance political thought (to take three among many possible concentrations), the introductory core provides a crucial foundation for advanced interdisciplinary work. The core also provides a useful background for students undertaking comparative concentrations — for example, in Buddhist, Christian and Muslim mystical literature, or in the influence of Russian fiction in East Asia.

All students in the major learn to write and speak clearly and flexibly; they are given broad exposure to a range of canonical texts; they are trained in the historical and formal analysis of those and other texts; they become skilled in at least one foreign language; and they are given considerable experience in independent research. Their work in the humanities bridges disciplines and fosters in them the two fundamental interpretive
skills of contextualization and criticism. Students in the program will be well prepared for a range of graduate programs in the humanities, for professional careers in law and public service, and for the vital work of critical citizenship and adult intellectual discovery.

The Major in the Interdisciplinary Project in the Humanities

Total units required: 41-44

Prerequisites for the major include four of the Text and Tradition core courses, shown below, or a humanities-based FOCUS (p. 404) course plus two of the IPH courses in the core.

**Core Program**

Students typically enter the core program in the freshman year, but generally not later than the spring of the sophomore year. The core consists of either four courses drawn from the program in Text and Tradition or two courses in the Text and Tradition program in combination with a FOCUS program in the humanities. (Some of the current FOCUS offerings in the humanities include Cuba: From Colonialism to Communism, Writers as Readers/Readers as Writers, and Literary Culture of Modern Ireland. See FOCUS (p. 404) information.) Students in the core program apply for admission to the major early in the sophomore year by submitting a portfolio of three previously written essays and a letter of recommendation from a T&T professor.

Once admitted to the program, each student designs, in consultation with the IPH faculty, a program of advanced course work. In the second semester of the sophomore year, students enroll in an upper-level course in social or political history, or in the history of a literary or other aesthetic form, or of some institution or cultural practice (e.g., history of science or history of philosophy); in this semester they also undertake their first sustained research projects under the mentorship of a member of the IPH faculty.

In the junior year, students take a cluster of two courses addressing a single historical period from the perspective of different disciplines. In the spring semester, they complete the writing-intensive Interdisciplinary Humanities Colloquium and participate in a group thesis tutorial and a thesis-related course in anticipation of their capstone project. In February and March, students seeking honors take the written and oral comprehensive exam.

In the senior year, students take the Theory and Methods seminar (fall) as well as the capstone colloquium (spring); in addition, they complete and present their capstone project under the mentorship of a member of the IPH faculty. By the middle of their senior year, students take at least one 400-level Textual and Historical (TH) course in a foreign language in order to secure their foreign-language competency.

**Areas of Concentration**

Some degree of specialization is a useful aspect of education in the humanities. With their faculty mentors, students construct a coherent, interdisciplinary sequence of five courses for advanced study. Each student’s sequence, or “area of concentration,” which must always include at least one course in political or cultural history, will normally be taken between the third and seventh semesters of the program. Recent concentrations have included modernism and politics; Muslim ethics and jurisprudence; philosophy of education; opera; and the history of the novel. Some students will pursue concentrations that reflect the longstanding research interests of a number of faculty in the humanities. Among these latter, fully developed concentrations are the tracks in Renaissance Studies and Literature and History.

Students in the Renaissance Studies track enroll either in Text and Tradition or in the Renaissance FOCUS program during their first year. They have a wide range of courses from which to construct their period-specific cluster; as they develop their senior project, they are able to work closely with faculty from several different departments who make up Washington University’s active group of Renaissance scholars. Students in the Renaissance concentration are strongly encouraged to begin work on a second foreign language so that they have some experience both with Greek or Latin and with one of Western Europe’s modern vernaculars.

Students in the Literature and History track are expected to complete 9 units of course work in history and 9 units in literature; most satisfy the bulk of this requirement in the course of completing their sophomore history course, junior period cluster, advanced foreign language course, and thesis and thesis-related courses.

Required courses, in addition to the above listed for the major are:

**Required courses:**

Total units required: 41-44
The remaining 9–12 credits required for the major will be made up from the area of concentration courses, to be determined through discussions with the director of IPH.

**The Minor in Text and Tradition**

Text and Tradition is a minor open to first-year and sophomore students in the College of Arts & Sciences by special registration. It provides a compact, integrated sequence of five courses. In this program you read, reflect on and analyze, both orally and in writing, the basic texts of Western literary, philosophical, scientific and political culture.

If students are majoring in a science, the Text and Tradition minor gives a firm grounding in the humanities. All courses in the program fulfill distribution requirements, and each of the teachers offering a course in the program also serves as a student adviser. Students fulfill the requirements of the program by completing five Text and Tradition courses, usually by the end of the sophomore year. This satisfies the requirements for an interdisciplinary minor in Text and Tradition.

**Units required:** 15

**Required courses:**

Five of the following 10 courses:

- **IPH 201A** Puzzles and Revolutions: Text and Tradition 3
- **IPH 201B** The Great Economists: Text and Tradition 3
- **IPH 201C** Classical to Renaissance Literature: Text and Tradition 3
- **IPH 203C** Early Political Thought: Text and Tradition 3
- **IPH 205C** Literary Modernities: Text and Tradition 3
- **IPH 207C** Modern Political Thought: Text and Tradition 3
- **IPH 209** Scriptures and Cultural Traditions 3
- **IPH 310** An Intellectual History of Sex and Gender 3
- **IPH 318** Lincoln: Then and Now 3
- **IPH 360** The Traffic in Women and Contemporary European Cinema 3

**Elective courses:**

Students may elect to substitute for one of the above Text and Tradition courses for a course that is text-centered and emphasizes primary sources. Prior consultation and approval is required.

**Additional Information**

Enrollment by application only. Students must earn a grade of C or better for the course to count toward the minor.

**L93 IPH 201A Puzzles and Revolutions: Text and Tradition**

One major force in human history, including the arts, has been inquiry into the natural world. Especially after 1600, natural science has, by virtue of its role in the development of technology and the improvement of health, has brought about great changes on all scales of human existence, first in Western Europe and then globally. In this course, the changing character of inquiry into the natural world, from antiquity forward, are the object of study. Does natural science enable us, for example, to study nature as it is in itself, or are perspectives or frameworks inescapable? How is it that natural science has, especially since 1800, proved so useful in the development of technology? How has it impinged on the arts? The requirements include writing several short papers and brief responses to the readings.

Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : SCI  FA : SSP

**L93 IPH 201B The Great Economists: Text and Tradition**

Examination of the great economic thinkers, the problems they sought to solve, the historically conditioned assumptions that they bring to their work, and the moral issues they raise. The class reads from the works of Adam Smith, Ricardo, Malthus, Marx, Veblen, Keynes, Schumpeter, Galbraith, and others as well as commentary from Heilbroner. These readings are paired with selected texts on the social and moral issues of their times. Open only to participants in Text and Tradition.

Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : SCI  FA : SSP

**L93 IPH 201C Classical to Renaissance Literature: Text and Tradition**

A selected survey of the political and moral thought of Europe from the rise of Athenian democracy to the Renaissance, with emphasis on analysis and discussion of writers such as Thucydides, Plato, Aristotle, St. Augustine, Castiglione and Machiavelli. The course aims to introduce students to basic texts in the intellectual history of Western Europe, understood both as products of a particular time and place and as self-contained arguments that strive to instruct and persuade. The texts are simultaneously used to chart the careers of such fundamental notions as liberty, virtue and justice. Preference given to Text and Tradition and IPH students.

Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : SCI  FA : SSP

**L93 IPH 203C Early Political Thought: Text and Tradition**

As we study some of the most influential of ancient works we address the basic questions of liberal education. Why ought the classics be read in the first place? How is it that Western culture has come to value certain fundamental questions, even to the point of encouraging opposition? Texts include selections from the Old Testament, Homer, Aeschylus, Sophocles, Virgil, Ovid, Petrarch, Montaigne and Shakespeare. Preference given to Text and Tradition and IPH students.

Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : SCI  FA : SSP

**L93 IPH 202A Darwin and the Modern Ache**

D.H. Lawrence reminds us how exciting and instructive it can be to watch the way our fictions take in a new cultural idea as
important as Darwinism; as the theory shocks our defenseless bodies, our literature reacts with fresh forms and consciousness that enable us to feel the wound of moral, metaphysical, psychological, biological insecurity and humiliation without becoming merely helpless readers and carriers of our pain. We still feel longings for a creation by design in a post-Darwinian world shaped by thinkers most responsive to evolutionary theory, Nietzsche, Freud, Marx. This semester we study some modern texts most sensitive and susceptible to what Hardy calls the “modern ache” of Darwin’s thought, of Ibsen, Hardy, Conrad, Strindberg, Kafka, D.H. Lawrence and Robert Frost. Preference given to Text and Tradition and IPH students.

Credit 3 units. A&S : TH, FA : SSP

L93 IPH 205C Literary Modernities: Text and Tradition

Through a wide sampling of Western literary works, the course explores themes and tones characteristic of the rise of modern consciousness from the Renaissance forward: we trace debates on aesthetics, the transformation of autobiography, writers’ persistent distrust of books, and their relentless assaults on perversions of cultural idealism. Books by such authors as Cervantes, Diderot, Rousseau, Goethe, Balzac, Dostoevsky, Twain, Freud, Kafka and Beckett. Preference given to Text and Tradition and IPH students.

Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : Lit

L93 IPH 206 The Idea of America

Credit 3 units. A&S : TH FA : SSP

L93 IPH 207C Modern Political Thought: Text and Tradition

A course in European history and thought since 1600 which addresses two themes: the search for a moral code, and the legitimate role of the state. Both are ancient inquiries, but they acquired important and novel interpretations in the West after the Reformation and the gunpowder revolution, and the rise of the modern statecraft grounded in both. One uniquely Western approach to these questions was the search for the primitive or “natural” situation of mankind, and readings in this genre provide some of the texts for the course. Parallel to presentation of the political history of modern Europe, such writers may be discussed as Locke from the seventeenth century, Montesquieu and Rousseau from the eighteenth, Marx and Darwin from the nineteenth, and the writings of anthropologists and philosophers from the twentieth. Preference given to Text and Tradition and IPH students.

Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L93 IPH 209 Scriptures and Cultural Traditions

Certain books, “sacred scriptures,” have shaped human culture in powerful and complex ways. Religious communities believe that Scriptures are ancient texts that are ever-flowing sources of timeless truths. We do close readings of crucial Scriptural texts and explore how they are interpreted and why they have had such a profound impact on human communities, in social organization and the behavior of individuals, in literature, art and politics. This year the course focuses on the canonical texts of Judaism, Christianity and Islam. Preference given to Text and Tradition and IPH students.

Credit 3 units. A&S : CD A&S : IQ, HUM, LCD BU : ETH

L93 IPH 211A Digital Humanities: Information Representation, Analysis and Modeling

It is a truism that computers have changed our lives, the way we think, but in fact systematic efforts to apply current technologies to the thinking about history and culture have been rare. This course enables students to consider how these technologies might transform the humanities. Students explore the various ways that ideas and data in the humanities can be represented, analyzed and communicated. Topics include forms of information, modeling and simulation, geographic (GIS) and temporal representations of data, and ways of creating and using audio and visual information. Readings and classwork are supplemented by small assigned digital projects culminating in a project chosen by the students themselves. Students should be comfortable with using the Internet and a word processor. No other special computing skills are required.

Credit 3 units. FA : SSP

L93 IPH 214 Text and Tradition: Cross-Currents I

This course revisits the cultural and intellectual terrain of Classical to Renaissance Literature (Hum 201) and Early Political Thought (Hum 203), purposefully mixing a different set of texts of very different kinds. We delve closely into how works belonging to the same cultural moment but different genres can reflect upon one another, and we address how works issued from different periods can speak to one another. Along the way, we work on refining our talents as close readers and careful writers, and we think carefully about the critic’s role in creating canons and inventing intertextual dialogues. Authors studied include Aristophanes, Euripides, Plato, Seneca, Boethius, Dante and Petrarch.

Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : Lit

L93 IPH 220 Introduction to Research in the Humanities

This course gives students interested in the humanities the opportunity to learn about areas of current faculty research in literature, history, philosophy, art history, music and other areas of the humanities. What are the archives for research in the humanities? How do humanities scholars develop a research agenda and what analytic tools do they bring to bear on their work? What are the biographies of new ideas in literature, history and the arts?

Credit 1 unit. A&S : TH A&S : IQ, HUM BU : HUM FA : Lit
L93 IPH 228 Introduction to Aural Cultures: Silence, Noise, Music
This interdisciplinary course explores a range of issues related to contemporary hearing and the aural worlds of the past. Our basic aim is to consider the many ways in which sound becomes meaningful. We discuss diverse figures and topics ranging from John Cage (the composer-philosopher of silence and random sounds), Gregorian Chant and Bach, to Muzak, the development of recording technology, and recent research in music cognition. Other subjects discussed include aesthetics, politics, performance practice, taste, popular music, sound and music in film, and music in other cultures. The ability to read music is not required. Pairs well with the Introduction to Visual Culture.
Credit 3 units. A&S : LA  A&S : IQ, HUM

L93 IPH 230 Visual Culture
In this interdisciplinary course, we explore the long history of vision and visual representation from antiquity to the present so as to shed light on how people at different moments have understood vision, have seen their own seeing and have encoded this seeing in different artifacts and media — from ancient cave painting to modernist paintings and motion pictures.
Credit 3 units. A&S : TH  A&S : IQ, HUM  FA : AH

L93 IPH 255 Freshman Seminar: Luxury: The Culture and Ethics of Expensive Taste
As the current economical downturn began, newspapers reported on shoppers leaving designer stores with merchandise hidden in unmarked, brown bags. But the idea that the consumption of luxury goods carries with it moral implications is far from new. In this seminar, we trace the history of the concept of luxury as it crossed economic, cultural and political borders and debates over several centuries. Taking a cue from Aristotle, we focus on Renaissance and Enlightenment France and England, a period when the emergence of a “middling class” brought forward the dangers and the benefits of a wide-scale circulation of exotic foods, rich fabrics, porcelain and other expensive commodities.
Credit 3 units. A&S : TH  A&S : IQ, HUM  FA : SSP

L93 IPH 260 Opera: The Extravagant Art
Opera combines media like no other art form: music, drama, visual spectacle and virtuosic vocal performance. In this course, we ask such enduring questions as: Why sing stories and not merely speak them? Why have so many cultures turned to musical theater to portray iconic narratives and characters? By exploring works ranging from Baroque opera to Broadway musicals (including Monteverdi, Mozart, Donizetti, Verdi, Bizet, Sondheim and Adams), you gain a panoramic view of this tradition and develop the skills to understand and interpret the rich interaction of music, text and drama at the heart of opera.
No previous musical experience required.
Credit 3 units. A&S : TH  A&S : IQ, HUM  EN : H

L93 IPH 299 Research Internship in the Humanities
Credit variable, maximum 3 units.

L93 IPH 301 Sophomore Research Tutorial
A practical introduction to research in the humanities. Students develop and complete a project in a research area of possible long-term interest.
Credit 2 units. A&S : TH  A&S : IQ, HUM

L93 IPH 3042 Two Renaissance Cities: Approaches to Early Modern Culture
Same as History 3042
Credit 3 units. A&S : TH

L93 IPH 305 The Cultural History of the Robot
This course surveys the history of the desire to perfect or eliminate what is most human through the creation of artificial men and women. Familiar questions — Can robots feel? Can we tell who is a robot? — are considered alongside the traditional use of robots to understand or emblemize justice, sin, progress and modernity, self-awareness or simplicity, indifference, virtuosity, authorship, invention and art itself. Examples are drawn from both fictional and real robots in literature and in film. Texts may include: Homer, Hesiod, Spenser, Descartes, Hobbes, Vaucanson, Villiers de l’Isle-Adam, Shelley, Hoffmann, Capek, Filisberto-Hernandez, Lem, Lang and Scott. This course is intended primarily for sophomores considering a major in the Interdisciplinary Project in the Humanities. Freshmen are considered by permission of the instructor.
Credit 3 units. A&S : TH  BU : ETH  FA : SSP

L93 IPH 306 Opera: Text and Con-text
We focus on operas drawn primarily from the French, Italian and German traditions that served as watershed moments in the history of literature, music, philosophy and criticism. We read source texts (including famed literary works by Molière, Beaumarchais, Scott, Hugo, Béroul, Maeterlinck, Mérimée, Hoffmann and James), view performances in their entirety, discuss the literary works, philosophy and criticism that the works inspired, and consider the American reception of the works, including their influence on pop culture. Students gain a sense of opera’s vital role at the intersection of the arts (text, music and dance) and the disciplines (History, Philosophy, Cultural Studies, Postcolonial Studies, Gender Studies), learning to approach the study of the genre from multiple perspectives. Preference is given to IPH majors and Text and Tradition students, though others are welcome.
L93 IPH 310 An Intellectual History of Sex and Gender
When did sexuality begin? Is it safe to assume that gender constructions are universal and timeless? In this course, we engage with a broad range of readings that serve as primary texts in the “history of sexuality and gender.” Our aims are threefold: to analyze the literary evidence we have for sexuality and gender identity in Western culture, to survey modern scholarly approaches to those same texts and to consider the ways in which these modern theoretical frameworks have become the most recent set of “primary” texts on sexuality and gender.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : IS FA : Lit

L93 IPH 313A The Legend of King Arthur in the Middle Ages
This course examines the medieval tradition of King Arthur that arose in northern Europe from the “dark ages” to the invention of printing. The objective of this course is to achieve a thematic, historical and structural insight into some of the best examples of medieval storytelling and understand why they continue to cast a spell over readers today. You may want to try your own hand at Arthurian storytelling after you have learned the building blocks. The course also lays a foundation for the study of pre-modern literature, the medieval and early modern world, and the national cultures of France, Germany and Britain.

L93 IPH 315 Independent Study in the Interdisciplinary Project in the Humanities
Credit 3 units.

L93 IPH 318 Lincoln: Then and Now
A study of Abraham Lincoln’s writings and of how they emerge from his reading and his experiences. We read his speeches and other writings to investigate his political and social philosophy. And we look at this legacy, politically and culturally.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : Lit

L93 IPH 319 The European Avant Garde: Interdisciplinary Studies in the Humanities, 20th Century
The first half of the 20th century witnessed the emergence of artistic movements characterized by revolt against tradition, emphasis on radical experimentation and redefinition of the art work. This course familiarizes students with the avant-garde’s main currents: Italian Futurism, English Vorticism, Russian Constructivism, “stateless” Dadaism and French Surrealism. We ask ourselves how to define the avant-garde, how it is related to modernity and whether its aesthetic is necessarily political. Texts include Futurist Manifestos, Cendrars’ Trans-Siberian Prose, Stein’s Tender Buttons, Breton’s Nadja. We also examine artworks such as Duchamp’s “Large Glass” and films such as Buñuel’s Un Chien Andalou.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : Lit

L93 IPH 3311 Laughter from Joubert to Bataille: Interdisciplinary Studies in the Humanities
In this course we trace a tradition of writing on laughter. While we read texts that might explain laughter by way of comedy or humor, we are interested in laughter itself. What does the body in laughter look like? How does laughter sound? Where, when and how do laughter happen? What is laughter’s relation to language, to song, to thought? What kind of communities does laughter form? We read texts by Joubert, Erasmus, Hobbes, Descartes, Chesterfield, Kant, Bergson, Freud, Bataille, Sarraute and Ellison. We listen to music such as Louis Armstrong’s “Laughin’ Louie” and we watch films including Laughing Gas, The Man Who Laughs and A Question of Silence.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : Lit

L93 IPH 332 Visual Culture
In this interdisciplinary course, we explore this long history of vision and visual representation from antiquity to the present so as to shed light on how people at different moments have understood vision, have seen their own seeing and have encoded this seeing in different artifacts and media. More specifically, we explore the role of the visual in the historical production of subjectivity and collectivity; the political, religious and ideological uses and abuses of vision; the relation of images to words and stories; the implication of sight in competing systems of truth, enlightenment and scientific progress; and the function of seeing within different media of art, entertainment and virtualization — from ancient cave painting, medieval icons and early modern church designs to modernist paintings and motion pictures.

L93 IPH 340 Introduction to Digital Humanities: Cultural Analysis in the Digital Age
It is a truism that computers have changed our lives and the way we think and interact. But in fact systematic efforts to apply current technologies to the study of history and culture have been rare. This course enables students to consider how these technologies might transform the humanities. We explore the various ways in which ideas and data in the humanities can be represented, analyzed and communicated. We also reflect on how the expansion of information technology has transformed and is continuing to transform the humanities, both with regard to their role in the university and in society at large. Readings and classwork are supplemented by small assigned digital projects culminating in a project chosen by the students themselves.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : Lit, SSP
L93 IPH 3560 Russia and the West
There are few problems as enduring and central to Russian history as the question of the West — Russia’s most passionate romance and most bitter letdown. In this seminar we read and think about Russian culture from the 17th to the 20th centuries through the lens of this obsession. The course focuses on the transfer of ideas and migrant communities. We study the intellectual products of Russian interactions with the West — constitutional projects, scientific and economic thought, the Westernizer-Slavophile controversy, and revolutions. We consider the presence of European communities in Russia: German and British migrants who filled important niches in state service, trade and scholarship; Italian sculptors and architects who designed some of Russia’s most famous and symbolically potent monuments; Parisian aristocratic expatriates in the wake of the French Revolution; Communist workers and intellectuals, refugees from Nazi Germany; and foreign journalists who, in the late Soviet decades, trafficked illicit ideas, texts and art works. In the end, we follow Russians into successive waves of emigration to Europe and the United States.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  FA : SSP

L93 IPH 360 The Traffic in Women and Contemporary European Cinema
What binds society together? One of the most influential answers to this question was offered by French anthropologist Claude Lévi-Strauss. He argued that the fabric of a society is formed by a network of exchanges among kinship groups, which circulate three kinds of objects: economic goods, linguistic signs and women. In this course, we inquire into the place of women in this argument. We trace rudiments of the traditional marriage system (a father figure still “gives away” the bride in the marriage ceremony), its range of displacements in a global economy (transnational wives, nannies and domestic servants), the role of new media in the formation of new systems of trafficking (internet brides), and the place of the debate on gay marriage within the larger conversation. We read texts by Friedrich Engels, Sigmund Freud, Marcel Mauss, Claude Lévi-Strauss, Gayle Rubin, Luce Irigaray, Judith Butler, Barbara Ehrenreich and Arlie Russell Hochschild; and we watch a number of films that dramatize the traffic in women in the context of contemporary Europe: Coline Serreau’s Chaos, Lukas Moodysson’s Lilja 4-ever, Cristian Mungiu’s Occident, Nilita Vachani’s When Mother Comes Home for Christmas, Fatih Akin’s Head-on, Jean-Pierre and Luc Dardenne’s The Silence of Lorna.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  FA : SSP

L93 IPH 370 Women Writers at Court: Japanese Examples in Comparative Context
Court women in 10th- and 11th-century Japan produced literary works that have dominated the vernacular canon from their day to the present, a situation without parallel elsewhere in the premodern world. This course combines readings of poetry, poetic diaries and prose narrative by Japanese women with an exploration of the political, cultural and social conditions that permitted women to flourish as writers. We also consider characteristics of courtly literature and issues of gender, genre and canonicity more broadly, drawing on the circumstances and writings of women in the medieval West for comparison.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  FA : Lit

L93 IPH 3951 Shakespeare’s Sonnets: Framing the Sequence
We begin by exploring ways of reading a small number of individual sonnets, proceeding thereafter to think about patterns of meaning in language and image across broader groupings and the sequence as a whole. We investigate the influence of earlier sonnet tradition, especially Petrarch’s sonnets, and the relationship of the poems to modes of sexuality and selfhood. Finally, we ask how some of Shakespeare’s most creative readers — including Wilde, Booth and Vendler — have responded to the challenges of the Sonnets. Students work on writing their own commentary on a group of poems.

Credit 3 units.  A&S : TH  A&S : IQ, HUM

L93 IPH 403 Senior Thesis Tutorial
Credit 3 units.

L93 IPH 405 Theory and Methods in the Humanities
This course familiarizes advanced undergraduate and graduate students with some of the basic issues in humanistic study. It follows the conversations between Marxist, psychoanalytical, anthropological, historictic and linguistic approaches. Our work highlights the boundaries between these fields and identify incursions across them. Some of the questions that animate our discussions are: what does truth mean in the humanities? What is an object of study and how does one go about identifying it? Is it useful to view the past as a strange country? What is interpretation and what are its procedures? Preference given to Text and Tradition and IPH students.
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L93 IPH 4111 Pastoral Literature: Interdisciplinary Studies in the Humanities, Antiquity
This course open with a survey of the classical tradition in pastoral/bucolic. We consider questions of genre, intertextuality and ideology, and we ask how the lives and loves of herders became favored ground for literary meditation on issues of surface and depth, reality and illusion, artifice and sincerity. This portion involves intensive reading in translation of Theocritus, Vergil and Longus. In the second half of the semester, we consider the survival, adaptation and deformation of ancient...
pastoral themes, forms and modes of thought in British and American writing from the 19th and 20th centuries. We read works of Mark Twain, Kenneth Grahame, Thomas Hardy and Tom Stoppard.
Credit 3 units. A&S : TH A&S : IQ, HUM

L93 IPH 4171 Roman Remains: Traces of Classical Rome in Modern British Literature
This course examines the use of the Roman textual and material inheritance in poets, novelists and critics of the late 19th and 20th centuries working in Britain, and asks how modernity addresses the claims of the classical tradition. We place Thomas Hardy’s Poems of 1912–13 next to Vergil’s Aeneid, then survey Hardy’s relationship to the visible remains of Rome and the people it conquered — roads, barrows, forts — in the landscape of Dorset. After examining the representation of the Celtic hill-fort in fiction, and the legacy of Vergilian representations of the countryside in poetry, we consider representations of Rome in light of modern imperialism (Joseph Conrad’s Heart of Darkness and Ezra Pound’s Homage to Sextus Propertius) and examine the place of Vergil in T. S. Eliot’s critical and poetic practice.
Credit 3 units. A&S : TH A&S : IQ, HUM

L93 IPH 419A Economic Life in Modern Social and Cultural Theory
Social and cultural theorists have developed many perspectives on economic life, ranging from actor-network theory to new institutionalism. Yet recent ethnographic work, for instance in consumption studies and in the anthropology of financial markets, has raised all sorts of problems for theorists. Our course ask whether we really can generalize about economic life and, if so, how far such generalizations might extend into fields such as intimate relations or artistic production. Readings include work by Bourdieu, Callon, Geertz, Hochschild, Mauss and Zelizer.
Credit 3 units. A&S : SS A&S : IQ, SSC

L93 IPH 425 Humanities by the Numbers
To what extent can computational techniques that draw on statistical patterns and quantification assist us in literary analysis? Over the semester, we juxtapose the close reading of historical documents or literary works with the “distant reading” of a large corpus of historical data or literary texts. We ask how the typically “human” scale of reading that lets us respond to literary texts can be captured on the “inhuman” and massive scales at which computers can count, quantify and categorize texts. While this class introduces students to basic statistical and computational techniques, no prior experience with technology is required. Prerequisites: two 200-level or one 300-level course in literature or history. This is a topics-type course and the specific documents and works examined vary from semester to semester. Please see semester Course Listings for current offerings.
Credit 3 units. A&S : TH A&S : IQ, HUM

L93 IPH 444 Psychoanalysis and its Literary Cultures
This course examines interactions between texts from the domains of literature and psychoanalysis. We read theory and literature side by side, in order to ask the following questions: Does the relationship between literary text and theory necessarily entail the subjection of literature to analysis, or can one, as Pierre Bayard asks, apply literature to psychoanalysis? What can psychoanalytic readings tell us more broadly about the act of reading? How can psychoanalysis enrich our sense of the ethical import of reading and writing, and how can literature challenge psychoanalytic goals and values? In terms of psychoanalytic authors, we focus on Freud, Lacan, Klein, Winnicott and Bayard. In terms of literature, we range widely from Sophocles to Henry James.
Credit 3 units. A&S : TH A&S : IQ, HUM

L93 IPH 450 Interdisciplinary Topics in the Humanities
This seminar introduces students to the study of literature by attending to the materials and material conditions of its production, distribution, regulation and consumption. We ask how literary analysis changes when we think about the physical character of the books we read: their size, their format, the various editions in which they were issued, and the social conditions under which they were produced and consumed. We also analyze schooling in literacy and literature, the nature of censorship, the ways in which authors and publishers had a legal and financial interest in the books they produced. Our primary texts mostly come from early modern England — the world of Shakespeare, Jonson and Milton — but we also look at texts from before and beyond this world and at secondary literature that help us think through the problems of literature in all of its materiality.

Credit 3 units. A&S : TH A&S : IQ, HUM

L93 IPH 456 Marxism After Marx: Philosophy and Radicalism in the 20th Century
As claims around the supposed post-modernity of our contemporary situation have ebbed, so scholars have returned once more to perhaps the defining philosophical and political voice of modernity, Karl Marx. This course prepares students to engage in current debates in the humanities over the nature of the political, the dynamics of class, the relative importance of the economy to “culture,” and the historical situatedness of philosophical knowledge, all through close readings of the “Western Marxist” philosophical tradition. That tradition, developing in Continental Europe and later the United States, sought to revitalize Marx’s account of historical development.
International and Area Studies

International and Area Studies (IAS) offers an interdisciplinary major that allows undergraduate students to develop a broad understanding of the world, while exploring the diversity and richness of other cultures. One of the hallmarks of the contemporary era is the complex relationship between globalization and local differences. New information technologies and worldwide markets connect people, ideas and products throughout the globe. Yet even in this context of globalization, strong attachments to local languages, cultures and societies remain. In some ways, differences among people — whether of government, economy, religion or ethnicity — are becoming more pronounced.

How can we understand these tensions between the global and the local? International and Area Studies courses explore this question in a combination of ways that makes it unique among undergraduate majors at Washington University. IAS is committed to an interdisciplinary perspective that spans the humanities and social sciences and encourages both a contemporary and a historical point of view. It introduces IAS majors to comparative local, international and global perspectives on issues of major import in the 21st century. The major challenges students to master a foreign language as well as the cultural contexts in which the language is spoken, but it also requires study of more than one world area. In addition to conventional course work, IAS offers training in practical skills such as online publishing, web design and team research; encourages exploration of contemporary foreign affairs through speakers, conferences and faculty panels; and provides an introduction to international careers.

The program’s support for foreign study and research is robust given that IAS is responsible for the administration of Overseas Programs. Consequently, IAS majors and minors frequently take advantage of one of Washington University’s overseas programs during the junior year or the summer. The major also encourages students to explore internships with an international focus with an eye to preparing them for careers in the public and private sector, including academia, diplomacy, business, education and law.

There are six concentrations available to IAS majors: (1) IAS with a concentration in Development Studies and Global Political Economy; (2) IAS with a concentration in Eurasian Studies; (3) IAS with a concentration in European Studies; (4) IAS with a concentration in Global Cultural Studies; (5) IAS with a concentration in Latin American Studies; and (6) IAS with a concentration in Sustainable Development.

The Major in International and Area Studies

There are six concentrations available to IAS majors: (1) Development Studies and Global Political Economy; (2) Eurasian Studies; (3) European Studies; (4) Global Cultural Studies; (5) Latin American Studies; and (6) Sustainable Development.

Click here for the Concentration in Development Studies requirements (p. 539).
Click here for the Concentration in Eurasian Studies requirements (p. 540).
Click here for the Concentration in Global Cultural Studies requirements (p. 542).
Click here for the Concentration in Sustainable Development requirements (p. 544).

Please see the separate European Studies (p. 393) page and the separate Latin American Studies (p. 580) page for information on these concentrations.

Total units required: 36 graded credits plus four semesters of any modern foreign language.

Required courses:
• These depend on the concentration.

Elective courses:
• Depending on the concentration, three to four lower-level courses (3 credits each, typically at the 100 or 200 level, may be at 300 or 400 level).
• Depending on the concentration, eight or nine upper-level courses (3 credits each, at the 300 or 400 level).

Regulations:
• Completion of all IAS course work with a grade of C+ or higher; all courses for the major must be taken for a letter grade.
• Students must show depth in at least one world area by taking at least two courses in one of these world areas and one course in another (Africa, East Asia, Europe, Latin America, Middle East and South Asia).
• Students must choose their upper-level course work from a minimum of three academic disciplines (for example, Anthropology, Art History, Economics, Film, History, Literature, Music, Philosophy and Political Science).
• No more than 6 credits may be from a semester of study abroad (9 credits from a year of study abroad, or a semester plus a summer of study abroad) (400-level credits must be earned on campus or in Washington University courses taught abroad).
• For those who do not study abroad, an additional 3 credits at the 300 or 400 level are required.
• Students must fulfill the standard language IAS requirement with a language consistent with their study abroad location.
• No more than 3 credits may be from directed readings, research or internships excluding the honors thesis.
• The advanced credits must be unique to the IAS major.
• Students whose prime major is IAS must participate in a capstone experience. The options are Research and Editorial Methods in International and Area Studies, a Senior Honors Thesis, or an International and Area Studies Portfolio. For more details, please see the IAS Capstone Experiences section on the department’s website.

Additional Information

Language Requirement: All IAS majors and minors must satisfy a foreign language requirement which entails the successful completion of four semesters of a language appropriate to their concentration while at Washington University. For some students, this may mean the first four semesters of a language;
for others who place into advanced language classes this may include literature, culture, oral communications and linguistic courses in the target language, once they complete the basic language sequence. Advanced courses in literature, social sciences and culture used to satisfy this requirement may be counted as advanced credit for IAS majors and minors as long as they are cross-listed with IAS or approved for IAS study abroad credit and are not applied toward a language major or minor. A maximum of two of these classes may be completed while abroad on a Washington University approved program in the target language (may be within the same semester abroad). Native speakers of a foreign language must satisfy the four-semester requirement in another language appropriate to their concentration. Heritage speakers must seek appropriate placement by the coordinator of the language program and complete the four-semester requirement.

Study Abroad: Majors are strongly encouraged to study abroad in one of Washington University’s overseas programs during junior year or the summer. Some credit for courses taken abroad may be applied to the major. For those who do not study abroad, an additional 3-credit course at the 300 or 400 level is required.

Senior Honors: Students must confidently expect to graduate with an overall GPA of 3.65 or higher. Students must have maintained a 3.65 grade point average through the sixth semester in order to qualify for Senior Honors. Students should enroll in IAS 485 Preparation for IAS Honors Thesis in the fall of senior year (under the corresponding section number of the faculty member overseeing the thesis), and in IAS 486 IAS Senior Honors Thesis in the spring of senior year in order to be properly tracked by the IAS capstone coordinator.

The Minor in International and Area Studies

There are three concentrations available to IAS minors:

1. IAS with a concentration in European Studies (p. 396)
2. IAS with a concentration in Latin American Studies (p. 580)
3. IAS with a concentration in Russian Studies (p. 728)

Additional Information

Language Requirement: All IAS majors and minors must satisfy a foreign language requirement, which entails the successful completion of four semesters of a language appropriate to their concentration while at Washington University. For some students, this may mean the first four semesters of a language; for others who place into advanced language classes this may include literature, culture, oral communications and linguistic courses in the target language, once they complete the basic language sequence. Advanced courses in literature, social sciences and culture used to satisfy this requirement may be counted as advanced credit for IAS majors and minors as long as they are cross-listed with IAS or approved for IAS study abroad credit and are not applied toward a language major or minor. A maximum of two of these classes may be completed while abroad on a Washington University approved program in the target language (may be within the same semester abroad). Heritage speakers must seek appropriate placement by the coordinator of the language program and complete the four-semester requirement.

Study Abroad: Students are strongly encouraged to study abroad in one of Washington University’s overseas programs during junior year or the summer. Some credit for courses taken abroad may be applied to the minor.

L97 IAS 107 A World on the Move: Post-Conflict Migrations

Migration is the human face to our modern era of globalization, entailing incredible costs, risks and returns for migrants along with important consequences for host societies, sending societies and the wider world. This course offers a new perspective on how and why people move by examining general theories and practices of migration and then analyzing various geographic locations, policies and individual experiences through the detailed study of two cases of global movement that occurred after the end of World War II and again after September 11, 2001. While close attention is paid to Europe, as both host and home to many migrants during these two key moments, we also spend time visiting North Africa, the Middle East, South Asia, Latin America and the United States to follow the paths of important migrant groups during these eras. We contextualize the historical factors that led to these migrations, the social and economic consequences of these large movements of people, but spend the bulk of our time looking at the multiple perspectives of peoples involved from migrants themselves (both forced and voluntary), refugees and displaced people, soldiers, government officials from both host and home societies, representatives from the host society and more.

L97 IAS 120 An Awakening Giant: Brazil and Its Impact on Globalization

The famous composer Tom Jobim supposedly once said to an inquisitive journalist wondering about the “Brazilian sound” of bossa nova as the new wave of jazz: “Well, you know, Brazil is not for beginners.” This pithy phrase has been used countless times as a way of introducing the complexity of this massive country, Brazil. The professor sees it another way. Brazil is, in fact, perfect for beginners, because Brazil encapsulates the two meanings of the word “awesome.” It is both incredibly cool and beautiful as well as overwhelming and complex. The aesthetic draws the “beginner” in and inspires him/her to want to learn and hopefully become culturally competent in the rest. This class has two goals: (1) link forms of everyday life to the macro-level of
Brazilians society and (2) to understand how Brazil has connected and impacted globalization. An example that embodies both goals is soccer. We read and discuss soccer as a way of engaging sports at the level of spectacle (the upcoming World Cup and Olympics in Brazil) and the underlying social fabric of Brazilian hierarchy. Soccer is also the most popular sport around the world and provides insight into not only Brazil’s dynamic position in globalized industries but also Brazil’s significance in the trafficking of theories of humanity, i.e. race, class and gender. At a more general level, Brazil demands our attention. A country self-sufficient in energy and one of the few nation-states that was not directly affected by the recent economic crisis, Brazil is serious.

L97 IAS 125 Migration and the Migrant Experience
Regular migrations of people across international borders continue to perplex governments, policy expert and human rights advocates. This course uses the lived experiences of the millions of people who have moved and currently move between Mexico and the United States each year to think about migration’s meanings in local, multinational and global contexts. What does the relocation of individuals, families and communities tell us about boundaries, nation states and globalization? What does it mean to be a transnational citizen? What is the relevance — and responsibility — of nation states in the new “global” world?
Credit 3 units. A&S : TH, CD A&S : IQ, LCD

L97 IAS 127 Migration in the Global World: Stories
The expression “Stories of Migration” has a variety of meanings. A “story” is a narrative that has a beginning, middle and an end; an account of imaginary or real people and events told for entertainment, a report of an item of news in a newspaper, magazine or broadcast; or an account of past events in someone’s life or in the development of something. This course is restricted to and required of participants in the International Leadership Program. A story also can be a way to make sense of the world, and, as we discuss throughout the semester, a tool to change the world. This course is based on the premise that in order to shape the future of migration in the global context, it is imperative to understand how stories of migration emerge, are told, passed on, shared, translated, disseminated, collected, challenged and retold. For these purposes we examine a wide range of stories of migration from the past decade. We experiment with both low-tech and high-tech media in order to come up with different ways to showcase stories of migration, and to assess the actual repercussions that these stories of migration have. While we address migration in the global context, we focus on three regions: the U.S. Mexican border, the Mediterranean and St. Louis. We study immigrant communities in these different locations and analyze a variety of narrative forms and structures in order to discern the impact that stories of migration have both locally and globally. Course materials include novels, memoirs, journalism, essays, short stories, graphic novels, radio programs, film and performance pieces. This course is restricted to freshmen in the International Leadership Program.

L97 IAS 129 Perspectives on Migration: History, Memory and the Making of Modern Europe
Politicians in several European countries recently declared that “multiculturalism has failed,” emphasizing immigration as the cause of contemporary social and political conflict and denying the historical role of migration on the European continent. However, from Teutonic and Slavic settlement migration in the first 10 centuries AD to recent guest worker programs and immigration from former colonies, encounters between different cultures, religions and forms of social organization have been a staple of European societies’ development and contributed to producing the continent’s geopolitical map as we know it today. In this course we trace significant mass movements of people in Europe and the historical and political repercussions of these migrations to try to understand why some migrations are remembered and others are not. We also study how notions of “otherness” and “diversity” have come to be central points of contention within current discourses in Europe. Primary sources, autobiographical narratives, scholarly analyses and a range of visual material including maps are the basis for class lectures and individual and group work assignments in this course.
This course is restricted to and required of participants in the International Leadership Program.
Credit 3 units. A&S : TH A&S : IQ, HUM

L97 IAS 135 Chinatown: Migration, Identity and Space
“Chinatown,” as a cultural symbol and a spatial entity, links various topics and studies in this course. Our survey starts with a historical and geographical glimpse of five Chinatowns in the US through the real life stories of their residents. This is followed by an in-depth study of Chinese restaurants and food all over the world using texts, images, and films that reveal how Chinese cuisine is inherited in and adapted to each local culture and society. The seminar culminates in a discussion of Chinese migration and settlement, the representations of identity, and the cultural and spatial constructions in particular historical and social contexts. The assignments include fieldtrips to Chinese businesses, and a debate on whether or not Olive Boulevard constitutes a Chinatown in St Louis.
Credit 3 units. A&S : IQ, LCD

L97 IAS 140 Freshmen Seminar: East Asia in the World
The goal of this course is to provide students with an introduction to East Asia as well as a look at the region’s role in a global setting. The course first covers the geopolitical history of 20th-century East Asia, from its colonial constellation into Cold War nation-states. We then use an interdisciplinary approach to investigate contemporary problems accompanying the
emergence of regional economies and institutions. We grapple with the question of when people in East Asia — China, Taiwan, the Koreas and Japan — act as a member of a transnational region and when they act in ideological, national or local terms. We evaluate different disciplinary approaches in order to understand the combination of knowledge and skills necessary for drawing meaningful research conclusions. In reading articles produced by a range of scholars and institutions, the course is also an introduction to the politics of the production of knowledge about East Asia. This course is restricted to freshmen in the International Leadership Program.

L97 IAS 1501 Seminar for the International Leadership Program
This seminar, which is restricted to and required of participants in the International Leadership Program, is a continuation of the fall IAS 1502 course.
Credit 1 unit.

L97 IAS 1502 Seminar for the International Leadership Program
This seminar, which is restricted to and required of participants in the International Leadership Program, is a companion to the core ILP fall course. The ILP seminar fosters critical thinking, provides leadership opportunities and builds community among students in the program. In seminar, students craft an international awareness campaign and are visited by guest lecturers.
Credit 1 unit.

L97 IAS 155 Mapping the World: Introduction to Human Geography
What is human geography and why is it important? This course addresses these questions by introducing students to the fundamentals of the discipline of human geography. A geographic perspective emphasizes the spatial aspects of a variety of human and natural phenomena. This course first provides a broad understanding of the major concepts of human geography, including place, space, scale and landscape. It then utilizes these concepts to explore the distribution, diffusion and interaction of social and cultural processes across local, regional, national and global scales. Topics include language, religion, migration, population, natural resources, economic development, agriculture, and urbanization. In addition to providing a general understanding of geographic concepts, this course seeks to engender a greater appreciation of the importance of geographic perspectives in an increasingly interconnected and globalized world. No prerequisites.
Credit 3 units.

L97 IAS 160 World Politics and the Global Economy
Globalization, the accelerating rate of interaction between people of different countries, creates a qualitative shift in the relationship between nations, communities and economies. Conflict and war is one form of international interaction. Movement of capital, goods, services, production, information, disease, environmental degradation and people across national boundaries are other forms of international interactions. This course introduces major approaches, questions and controversies in the study of global political-economic relations. In a small group seminar we examine the building blocks of world politics, the sources of international conflict and cooperation, and the globalization of material and social relations. This course is restricted to freshmen in the International Leadership Program.

L97 IAS 165C Survey of Latin-American Culture
This class is an introduction to Latin American Studies. By the end of the semester, students are able to recognize some of the main issues in Latin-American politics, history and culture, both in the region at large and in the specific regions and sub-regions within it. Students develop research tools to approach the study of Latin America. The class begins a discussion on the concept of Latin America and then proceeds to case studies regarding the cultures of different regions. Prerequisite: None. This class is required of majors and minors in Latin-American Studies and fulfills some requirements of IAS majors.

L97 IAS 174 Medicine East and West: Comparing Healthcare in the United States and China
This course provides a foundational introduction to comparative health studies by examining the health care systems of the United States and China. Using the tools and interpretive frameworks of the field of medical anthropology, students in this course are exposed to a broad range of topics dealing with health and health care in Eastern and Western contexts. These include the study of medical pluralism, meaning of illness, health care financing, preventive care, political-economic perspectives and sociobehavioral perspectives on health and wellness. Students taking this class are better prepared to understand and address ongoing health care concerns affecting U.S. and Chinese society.

L97 IAS 185 The US in the World: Solidarity and Exceptionalism: Social Movements in the 1960s-70s
This course examines the interplay of ideas, tactics, and rhetoric between global liberation struggles in the 1960-1970s. Looking at the social movements around the world, class texts interrogate central ideological arguments/debates and practical solidarities that arose between movements, as well as concepts of exceptionalism. Course material examines both US movements for how they connected with global struggles
and global movements for how they engage the US and each other. Key movements organizing the course units include, among others: the Black Panther Party and African Nationalist Movements; US Anti-War efforts and the National Liberation Front (Viet Cong); Student Movements in Europe, Brazil, the US, and Congo-Zaïre; the American Indian Movement and Australian Aboriginal Movements.

Credit 3 units.

L97 IAS 208 History, Text and Identity: Introduction to Jewish Civilization
The anthropologist Clifford Geertz once famously invoked Max Weber in writing that “man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs.” The main goal of this course — designed as an introduction to Jewish history, culture and society — is to investigate the “webs of significance” produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester we focus on the following historical settings: 7th century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period we investigate the social and political conditions of Jewish life; identify the major texts that Jews possessed, studied and produced; determine the non-Jewish influences on their attitudes and aspirations; and the explore the efforts that Jews made to define what it meant to be part of a Jewish collective.

L97 IAS 215C Introduction to Russian Civilization
This course provides an overview of the main currents and developments in Russian culture and the arts from the earliest records to the present day. Exploring literary texts, film, music, architecture, the visual arts and popular culture, we discuss the self-identity of a people neither European nor Asian. Topics include the introduction of Orthodox Christianity, the “Tatar yoke,” reactions to the “Europeanization” of Russia, Soviet propaganda and post-Soviet everyday life. Does the Russian Federation of today represent a complete break with the past or a reemergence of certain cultural constants? Knowledge of Russian language not required. Freshmen welcome.

L97 IAS 216 Introduction to South Asian Civilization
We begin this course by considering the geographical and social frameworks that defined this area as a coherent region for a variety of travelers, scholars, writers, artists and state-builders. The course next traces conflict and consensus over culture and rule, placing particular emphasis on state-building in the Mughal and British empires. We explore how these empires reshaped political, cultural and religious life in the subcontinent. The rise of nationalism and the simultaneous burst of caste, gender and religious critiques of the notion of “India” dominate the third part of the course. Finally, we turn to developments within and between the independent states of India, Pakistan, Bangladesh and Sri Lanka. Throughout the semester, students conduct independent research on a variety of contemporary topics relating to empire, South Asian globalization and the politics of knowledge.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : IS

L97 IAS 218 Culinary Citizenship: Food, Identity and Belonging in the 20th Century
If we are what we eat, who are we? In this course we examine the ways in which 20th-century histories of colonialism, nation building and immigration have shaped the identity politics of what people eat today. This course is built around the premise that the production and consumption of food is, and has historically been, intimately related to the politics of identity and belonging. What people eat, and don’t eat, establishes boundaries and borders. In this class we explore how some of these borders have been constructed, particularly the imagination of national cuisines, and how some of these lines have been challenged and crossed by empires and migrant communities. We also use food as a lens to examine the interaction between globalization, markets and local/global identities. The temporal and spatial scope of this class runs from the latter 19th century to the end of the 20th century and span societies from the Americas, Asia and Europe.
Credit 3 units. A&S : TH A&S : IQ, HUM
L97 IAS 223 Korean Civilization
A comprehensive introduction to the study of Korea. Following a historical survey, the course examines key cultural themes and social institutions and explores aspects of Korea’s relationship with its East Asian neighbors. Attention also is paid to contemporary issues, social problems and cultural trends. Same as Korean 223C

L97 IAS 244 Introduction to European Studies
This course provides an introduction to the study of contemporary Europe through an historical examination of the moments of crisis, and their political and cultural aftermath, that shaped modern Europe and continue to define it today. These crises include: the revolutions of 1848, the advent of 19th-century nationalisms, the Great War, the Spanish Civil War, the rise and defeat of state fascism, the Cold War, the formation of the EEC and Union, May 1968, and the return of right-wing politics. After the study of these traditions, the final portion of the semester considers contemporary Europe since 1991, considering such subjects as Green politics, internal migration and immigration, and the culture of the European Union.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD

L97 IAS 260 Migrations in Past and Present: Introduction to Migration Studies
The course, grounded in a multidisciplinary approach, provides an introduction to the study of migration, featuring significant mass movements in the past 150 years and crucial concepts of historical and theoretical analyses of the movement of people. Course units explore continuities, trends and shifts in human migration and migration policy and how they affect individual immigrants’ lives. A variety of sources, such as oral history, films, novels, legal documents and scholarly secondary analysis help students to consider different perspectives on internal and international migrations, from the individual migrant to civil society, from political regulation to economic consideration. Throughout the course, students deepen their understanding of migration as a result of social transformation, force or individual choice. We study concepts of the nation-state and citizenship, the political economy of migration, gender, sexuality and migration, and notions of identity and social inclusion more generally to build a sound critique of contemporary discourses on immigration.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD

L97 IAS 270 Sophomore Seminar: Globalization and Its Discontents
Today, the heady promises of globalization appear to have failed us. The notion of global markets and global citizens seems to have remained at best, an ideal. Meanwhile the world’s majority has witnessed a staggering decline in education, nutrition, health and even physical mobility. Nowhere have these developments passed unquestioned: from the rise of the so-called Maoist insurgency in India to the Occupy movement in the United States, people and especially the youth have expressed their outrage in creative and unconventional ways. In this course we plot the long and necessarily violent history of forging global interconnections. We next focus on the past 40 years to theorize the new social formations spawned by specific aspects of contemporary globalization such as the internet and the English language. Finally we look to the environmental and social abuses committed in the name of global connectivity and the massive protests against those atrocities. The lens for our analysis is India, South Asia and their relationship with the United States. We approach a range of novels, films and popular cultural artifacts as we build our own understanding of the nature, critique and promise of globalization. This is a sophomore-only seminar.

L97 IAS 301 Decolonization in the Twentieth Century
This course surveys the art and architecture of societies where Muslims were dominant or where they formed significant minorities from the 7th through the 20th centuries. It examines the form and function of architecture and works of art as well as the social, historical and cultural contexts, patterns of use, and evolving meanings attributed to art by the users. The course follows a chronological order, where selected visual materials are treated along chosen themes. Themes include the creation of a distinctive visual culture in the emerging Islamic polity; the development of urban institutions; key architectural types such as the mosque, madrasa, caravanserai, palace and mausoleum; art objects and the arts of the illustrated book; cultural interconnections along trade and pilgrimage routes; westernization and modernization in art and architecture. L97 IAS 306 Modern Jewish Writers
What is Jewish literature? While we begin with — and return to — the traditional question of definitions, we take an unorthodox approach to the course. Reading beyond Bellow, Ozick and Wiesel, we look for enlightenment in unexpected places: Egypt, Latin America, Australia. Recent works by Philip Roth, Andre Aciman, Simone Zeilitch and Terri-ann White are supplemented by guest lectures, film, short stories and significant essays. We focus on issues of language, memory and place. Background knowledge is not required, though it is warmly welcomed.

L97 IAS 3063 Islam, Culture and Society in West Africa
This course explores the introduction of Islam into West Africa beginning in the 10th Century and explores its expansion and development in the region, placing emphasis on the 19th century to present day. It focuses on the development of West African Muslim cultural, social, religious and political life, to understand not only how the religion affected societies, but also how West African local societies shaped Islam. The course also aims to introduce students to a critical understanding of Islamic writing in West Africa. It also examines the organization of Muslim Sufi orders in West Africa through time and space. The course is organized around a series of lectures and readings as well as print and visual media.

### L97 IAS 315 Indian Barbie, Asian Tigers and IT Dreams: Politics of Globalization and Development in South Asia
This course explores how South Asia is at the heart of current debates about globalization, development, empire, gender, sexuality and ethnic identity. We raise questions such as: What has led to sex trafficking in Nepal? Can information technology solve India’s social problems and unemployment? What is biopiracy and how are South Asian activists challenging the global corporatization of world food and water supplies? Readings, films and discussions take us to countries such as Bangladesh, Nepal, Pakistan, Sri Lanka and India.

L97 IAS 3206 Global Gender Issues
This course compares the life experiences of women and men in societies throughout the world. We discuss the evidence regarding the universal subordination of women, and examine explanations that propose to situate women’s and men’s personality attributes, roles and responsibilities in the biological or cultural domains. In general, through readings, films and lectures, the class provides a cross-cultural perspective on ideas regarding gender and how gendered meanings, practices, performances serve as structuring principles in society.

L97 IAS 3221 The Jewish Experience in Italy, 1850–1945
This course examines the social and political history of the Jews of Italy from the period of Italian unification through the end of World War II. We look through two different prisms: first, the constant of Jews’ minority status in a Catholic country at a time when Church doctrine was hostile to them, and second, their changing status during significant moments in the brief history of the Italian monarchy. Under the latter rubric we study the rehabilitation of the Jews under liberal political philosophies, their problematic relationship with Fascism, and finally the arrival of the Holocaust in Italy and efforts to defend Jews against Nazi genocide. We approach these topics wherever possible through primary texts, including essays, memoirs and novels. Reading knowledge of Italian is not required. Readings in English; some readings in Italian for Italian majors. Discussion in English. Prerequisite for Italian majors: Italian 307D; no prerequisite for students in other majors. Three five-page papers.
Same as Ital 3221
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD

L97 IAS 3224 Topics in Italian: Basilisks to Botticelli: the Birth, Development and Politics of Museums in Italy
This course investigates the rise and cultural authority of museums in Italy from the Renaissance to the 20th century. The course unfolds chronologically, beginning with the distant precursors and etymological roots of the museum in ancient Alexandria and Rome. We trace the origins of the museum in the art collection and patronage that surged during the Renaissance, including the 16th- and 17th-century Curiosity Cabinet with its fossils, mythical basilisks, gems and weapons and church displays of religious and classical art. We study the establishment during the Enlightenment in Italy of the first public art museums epitomized by the Vatican Museums, the Uffizi Gallery and the Capitoline Museums. We conclude by examining the impact on national and cultural identity of Fascist propaganda museums instituted under Mussolini’s regime. No prerequisites.

L97 IAS 3231 Black Power Across Africa and the Diaspora: International Dimensions of the Black Power Movement
This seminar explores the Black Power Movement as an international phenomenon. By situating Black Power within an African World context, this course examines the advent and intersections of Black Power politics in the United States, parts of Africa (including Ghana, Algeria, Nigeria and Tanzania), the Caribbean (Jamaica, Bermuda, the Bahamas and Cuba), South America (Brazil) and Canada. Particular emphasis is placed upon unique and contested definitions of “Black Power” as it was articulated, constructed and enacted in each region.

<td>L97 IAS 3291 History of German Cinema</td>
<td>This course explores the major developments of German cinema throughout the 20th century. More specifically, this course engages with issues relating to German film culture's negotiation of popular filmmaking and art cinema, of Hollywood conventions and European avant-garde sensibilities. Topics include the political functions of German film during the Weimar, the Nazi, the post-war, and the post-wall eras; the influence of American mass culture on German film; the role of German émigrés in the classical Hollywood studio system; and the place of German cinema in present-day Europe and in our contemporary age of globalization. Special attention is given to the role of German cinema in building and questioning national identity, to the ways in which German feature films over the past 100 years have used or challenged mainstream conventions to recall the national past and envision alternative futures. Films by directors such as Murnau, Lang, Fassbinder, Herzog, Tykwer and many others. All readings and discussions in English. May not be taken for German major or minor credit. Required screenings. Same as Film 328</td>

L97 IAS 3350 Becoming “Modern”: Emancipation, Anti-Semitism and Nationalism in Modern Jewish History
This course offers a survey of the Jewish experience in the modern world by asking, at the outset, what it means to be — or to become — modern. We begin with the Enlightenment and the formation of the modern state and end with American and Israeli settings at the close of the 20th century. The cultural, social and political lives of Jews have undergone tremendous transformations and dislocations over this time — a period marked by innovation, tragedy and success. Among the themes that we explore in depth are: the campaigns for and against Jewish “emancipation”; acculturation and religious reform; traditionalism and modernism in Eastern Europe; the rise of political and racial anti-Semitism; mass migration and the formation of American Jewry; varieties of Jewish national politics; Jewish-Gentile relations between the World Wars; the destruction of European Jewry; the emergence of a Jewish nation-state; and Jewish culture and identity since 1945.
Same as History 335C

L97 IAS 3351 Spanish-American Literature I
A survey of major figures and literary trends in Spanish America from 1492 to Modernismo (1880). Emphasis on the writings of either Colón or Columbus, Cortés, Bernal Diaz, Las Casas, Inca Garcilaso de la Vega and Aztec reactions to the Conquest in the early period and on Sor Juana in colonial times. After the period of independence from Spain (1810–24), the focus is on the literary representation of the making of the new nations, and cultural autonomy. Readings include chapters of a picaresque novel, the representation of dictatorship, civilization vs. barbarism, the gaucho epic, and 19th-century fiction. Lectures and class discussions of the readings; exams, papers and short reports. Prerequisites: Span 307D; concurrent registration in Span 308D is recommended. In Spanish.

L97 IAS 3416 German Thought and the Modern Era
In this introduction to the intellectual history of the German-speaking world from roughly 1750 to the present, we read English translations of works by some of the most influential figures in the German tradition, including Kant, Hegel, Marx, Nietzsche, Freud, Adorno, Heidegger, Arendt, Habermas, and others. Our discussions focus on topics such as secularization,
what it means to be modern, the possibility of progress, the role of art and culture in social life, the critique of mass society, and the interpretation of the Nazi past. We consider the arguments of these thinkers both on their own terms and against the backdrop of the historical contexts in which they were written. Open to first-year students, non-majors and majors. Admission to 400-level courses (except German 401, 404 and 408D) is contingent on completion of this course or German 340C. Qualifies for major or minor credit when taken in conjunction with one-hour discussion section in German. The discussion section provides and introduction to critical German vocabulary and is open to students with prior knowledge of German (German 210D or equivalent, or placement by examination). Credit 3 or 4 units. Same as German 341

Credit variable, maximum 4 units.  A&S : TH   A&S : IQ, HUM

L97 IAS 342 Literature of Modern and Contemporary China
An introduction to the major writers and works of Chinese literature from the turn of the 20th century to the present, including fiction, poetry and film. We look at these works in their relevant literary, sociopolitical and cultural contexts (including Western influences). Required for all Chinese majors, and recommended for all Japanese and East Asian Studies majors. No prerequisites; all readings in English translation. Same as Chinese 342

Credit 3 units.  A&S : TH, CD, SD  A&S : IQ, HUM, LCD, SD  BU : ETH  FA : Lit

L97 IAS 3425 Classical to Contemporary Chinese Art
Surveying Chinese art and architecture from the 10th century through today, this course examines classical and imperial works as the foundation for modern and contemporary art. Engaging with the theoretical issues in art history, we also pay particular attention to questions of gender, social identity, cultural politics and government control of art. No prerequisites. Same as Art-Arch 3425

Credit 3 units.  A&S : TH  A&S : IQ, HUM  FA : AH

L97 IAS 343 Text, Memory and Identity
This course explores issues of collective memory and identity through the study of texts such as national myths and official histories taught in schools. The focus is on texts themselves and how they are produced (e.g., by the state, popular culture) and consumed. The course has two components, methodological and analytical. In the first, we read a number of theoretical works devoted to definitions of the text from a historical and structural point of view. In the second, we analyze various key works that have played a crucial role in the formation of communities of memory and identity and the borders that separate them. The course is comparative, multidisciplinary and international in its scope.

L97 IAS 344 Introduction to European Studies
This course provides an introduction to the study of contemporary Europe through a historical examination of the moments of crisis, and their political and cultural aftermath, that shaped modern Europe and continue to define it today. These crises include: the revolutions of 1848, the advent of 19th-century nationalisms, the Great War, the Spanish Civil War, the rise and defeat of state fascism, the Cold War, the formation of the EEC and Union, May 1968, and the return of right-wing politics. After the study of these traditions, the final portion of the semester considers contemporary Europe since 1991, considering such subjects as Green politics, internal migration and immigration, and the culture of the European Union. This course is required for IAS students in the European Studies track.

L97 IAS 3554 Political Economy of Democracy
In the last few years a number of important books have appeared that combine elements of economics reasoning and political science, in an effort to understand the wide variation in economic development in the world. This course deals with the logic apparatus underpinning these books. In addition, the course introduces the student to the theoretical apparatus that can be used to examine democratic institutions in the developed world, and the success or otherwise of moves to democratization in the less developed world.

L97 IAS 356 Andean History: Culture and Politics
Since pre-Columbian times, the central Andean mountain system, combining highlands, coastal and jungle areas, has been the locus of multiethnic polities. Within this highly variegated geographical and cultural-historical space, emerged the Inca Empire, the viceroyalty of Peru — Spain’s core South American colony — and the central Andean republics of Ecuador, Peru and Bolivia. Taking a chronological and thematic approach, this course examines pre-Columbian Andean societies, Inca rule, Andean transformations under Spanish colonialism, post-independence nation-state formation, state-Indian relations, reform and revolutionary movements, and neoliberal policies and the rise of new social movements and ethnic politics. This course focuses primarily on the development of popular and elite political cultures, and the nature and complexity of local, regional and national power relations.

L97 IAS 357 The Holocaust in the Sephardic World
The course aims to provide students with a comprehensive understanding of the Holocaust, of its impact on the Sephardic world, of present-day debates on the “globalization” of the Holocaust, and of the ways in which these debates influence contemporary conflicts between Jews, Arabs and Christians in Southern Europe and North Africa. We turn to the history of these conflicts and study the Sephardic diaspora by focusing
on the consequences that the 1492 expulsion had within the Iberian Peninsula, in Europe and in the Mediterranean world. We study Sephardic communities in Europe and North Africa and their interactions with Christians and Muslims before World War II. Once we have examined the history of the Holocaust and its impact on the Sephardic world in a more general sense, our readings focus on the different effects of the Holocaust’s “long reach” into Southeastern Europe, the Balkans and North Africa, paying close attention to interactions among Jews, local communities and the Nazi invaders. Finally, we address the memory of the Sephardic experience of the Holocaust and the role of Holocaust commemoration in different parts of the world. We approach these topics through historiographies, memoirs, novels, poetry and film.

L97 IAS 3601 The Traffic in Women and Contemporary European Cinema
What binds society together? One of the most influential answers to this question was offered by French anthropologist Claude Lévi-Strauss. He argued that the fabric of a society is formed by a network of exchanges among kinship groups, which circulate three kinds of objects: economic goods, linguistic signs, and women. In this course, we inquire into the place of women in this argument. We trace rudiments of the traditional marriage system (a father figure still “gives away” the bride in the marriage ceremony), its range of displacements in a global economy (transnational wives, nannies and domestic servants), the role of new media in the formation of new systems of trafficking (internet brides), and the place of the debate on gay marriage within the larger conversation. We read texts by Friedrich Engels, Sigmund Freud, Marcel Mauss, Claude Lévi-Strauss, Gayle Rubin, Luce Irigaray, Judith Butler, Barbara Ehrenreich and Arlie Russell Hochschild; and we watch a number of films that dramatize the traffic in women in the context of contemporary Europe: Coline Serreau’s Chaos, Lukas Moodysson’s Lilja 4-ever, Cristian Mungiu’s Occident, Nilita Vachani’s When Mother Comes Home for Christmas, Fatih Akin’s Head-on, Jean-Pierre and Luc Dardenne’s The Silence of Lorna.

L97 IAS 363 Russian Literature and Opera: Transpositions and Transgressions
This interdisciplinary course surveys the intersections between Russian literature and opera from the 19th century to the present. Literary works in a variety of genres (short stories, narrative poems, plays and novels) by Russian authors (with Pushkin as a clear favorite) have inspired generations of leading Russian composers, resulting in significant operatic
adaptations, including Tchaikovsky’s *Eugene Onegin*, based on Pushkin, Prokofiev’s *The Gambler*, based on Dostoevsky, and Shostakovich’s *The Nose*, based on Gogol. For each pairing of author and composer, we read and discuss the literary text before considering the ways in which the original was refined, trimmed and generally transformed for the operatic stage. We frequently view opera productions and consider issues of staging, embodiment and fidelity to the original. The broader goal of the class is to consider the possibilities and limits of artistic media, specifically the points of agreement or dissonance between literature and music.

**L97 IAS 364 Anarchism: History, Theory and Praxis**

This course analyzes the origins, historical trajectories and influence of anarchism from its classical period (1860s–1930s) until the present. It examines the major personalities, complex ideas, vexing controversies and diverse movements associated with anarcho-collectivism, anarcho-communism, individualist anarchism, anarcho-syndicalism, anarchist feminism, green anarchism, lifestyle anarchism and poststructuralist anarchism. In doing so, it explores traditional anarchist concerns with state power, authority, social inequality, capitalism, nationalism, imperialism and militarism. It also analyzes anarchism’s conception of individual and collective liberation, mutual aid, workers’ organization, internationalism, direct democracy, education, women’s emancipation, sexual freedom and social ecology. Special attention is given to past and contemporary globalizing processes and their relation to the dissemination and reception of anarchism in the global South.

**L97 IAS 3672 Medicine, Healing and Experimentation in the Contours of Black History**

Conversations regarding the history of medicine continue to undergo considerable transformation within academia and the general public. The infamous Tuskegee syphilis experiment serves as a marker in the historical consciousness regarding African Americans and the medical profession. This course taps into this particular evolution, prompting students to broaden their gaze to explore the often delicate relationship of people of African descent within the realm of medicine and healing. Tracing the social nature of these medical interactions from the period of enslavement through the 20th century, this course examines the changing patterns of disease and illness, social responses to physical and psychological ailments, and the experimental and exploitative use of black bodies in the field of medicine. As a history course, the focus will be extended towards the underpinnings of race and gender in the medical treatment allocated across time and space--the U.S., Caribbean, and Latin America--to give further insight into the roots of contemporary practice of medicine.

**L97 IAS 3691 Kill Assessment: An Investigation into Death, Genocide and Other Forms of Violence**

Is violence best understood as a set of “random acts” marginal to society? Or, do societies need violence to make culture systematic and hierarchy functional? This course is not about the psychology of individual pathology; rather, we think about violence as a potential category of culture. We address two major issues throughout this course. First, we discuss different types of violence: physical/material violence and symbolic violence. Second, we become familiar with ways that social groups turn violence into an aesthetic object and an artistic project. To accomplish our task, we take both an ethnographic and theoretical approach, so that we may better ground
our understanding of violence in various people's everyday experiences as well as develop a broader, more complete idea of what violence entails. Specific readings include the following topics: United States and Brazilian hip-hop, Puerto Rican reggaeton, video games, contemporary Latin American plastic arts, U.S. hate crimes, rape and other form of domestic violence, violence “workers” in Latin America, genocides in Rwanda, Guatemala and Armenia, drug lords in Rio de Janeiro, Los Angeles, Mogadishu and Somalia, and the legality of lethal injections in capital punishment in the United States.

This course explores the major diplomatic, political, legal and economic issues shaping U.S. Foreign Relations in the 18th, 19th and early 20th centuries, up until the U.S. entry into World War I.
Same as History 373

L97 IAS 374 Russian Literature and Empire
In this course we explore Russian literary works (from the 19th century to the present day) that address issues of empire. We consider the building of the Russian empire during tsarist times with the conquest of Siberia, Ukraine, the Crimea, the Caucasus, Central Asia and the Far East; then we look at the remaking of the Russian empire as the Soviet Union under the “anti-imperialist” communist regime; we conclude with a glance at the legacy of empire in contemporary Russia, with a focus on the Chechen Wars. Some of the topics we discuss include the poetics of space, orientalism, authority and rebellion, imperial bureaucracy, religious identities, migration and deportation, and multiculturalism. We do close readings of works by Pushkin, Lermontov, Gogol, Tolstoy, Chekhov, Babel, Platonov, Iskander, Almatov, Petrushevskaya and others. Primary readings are supplemented with critical articles and several films. All readings are in English translation. No prerequisites.

L97 IAS 3750 Topics in Russian Culture: Madmen or Visionaries? (WI)
Where is the borderline between “insanity” and the “visionary” experience? What is the correlation between madness and creativity? How does the Russian conception of madness compare to the Western one? In general, how do our cultural experiences shape our perception of madness? These are some of the questions we address in this course as we explore the role and representation of madness in Russian culture and literature. Class discussions focus on close readings of formative works by Pushkin, Gogol, Dostoevsky, Tolstoy, Chekhov, Gippius and Nijinsky. These primary literary texts are supplemented by critical and theoretical articles as well as film. This is a Writing-Intensive course: workshops are required. All readings are in English translation. No prerequisites.
Credit 3 units.  A&S : TH, CD, WI  A&S : IQ, HUM, LCD

L97 IAS 3762 Cinema and Society
This survey of French and Francophone cinema examines the history of the medium from its origins through some of its more recent trends, focusing on its socially activist tendencies. Films viewed have explicit social and political messages, oftentimes highly critical of established ideological currents. Among the film auteurs studied are Gance, Clair, Renoir, Truffaut, Godard, Varda, Sembene and Jaoui. There is an optional extra session for group film viewing. Films are on reserve in Olin Library. Grading consists of presentations of the films and directors; a mid-term exam and a final paper. Prerequisite: French 307D. Taught in French.

L97 IAS 378 Creolizing the Global: Identity, Migration, Culture
This course seeks to provide students with a broad understanding of the ways in which globalization has influenced identity and cultural expression. Characterizing these changes through the lens of creolization, the course offers students a basic theoretical grounding for understanding globalization as a process of creative combination and mixture while maintaining awareness of the structures of inequality that continue to discipline bodies and exert power. The course proceeds from a basic introductory unit establishing the key conceptual terms of study — creolization and globalization — to a series of discrete units that focus on particular locations and times that bring out tensions and revisions of the course’s themes: identity, migration and culture.

L97 IAS 3783 Modern Art, Theory and Criticism, 1905–1960
Same as Art-Arch 3782
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : HUM  FA : AH

The course surveys major tendencies in painting and sculpture from Fauvism in France and Expressionism in German to the beginnings of Postmodernism in photo-based work in the U.S. About two-thirds of the course treats European art, about one-third treats American art. Photography, architecture and work in other forms are considered selectively when pertinent to the individual class topics. Within the lecture topics, emphasis is on avant-garde innovation; the tension in modernist art between idealism and critique; reaction by artists to current events; relationship between art and linguistics, philosophy, literature, economics and science; the role of geopolitics in art production; intersections of art and society; the role of mass culture; issues of race and gender in the production and reception of art; the challenge to the concept of authorship and creativity posed by Postmodernism at the end of this period. Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211, or Art-Arch 215; one 300-level course in Art History preferred; or permission of instructor. Same as Art-Arch 3783
Credit 3 units.  A&S : TH  A&S : IQ, HUM  EN : H  FA : AH

L97 IAS 379 Nabokov and Others: Emigration, Literature, Identity
In this course we read and discuss literary works from Russian emigrations of the 20th century: the so-called “White Russian” emigration in the wake of the 1917 Revolution; the exile of dissidents and defectors from behind the Iron Curtain; Jewish emigration in the 1970s and ’80s; and migrations and displacements after the disintegration of the Soviet Union. Through our exploration of novels, short stories, poetry, memoirs, literary essays, and film, we “travel” to Europe (Paris, Berlin, Prague), the U.S.A. and Israel. The works of Vladimir Nabokov are the centerpiece of the course; we also read shorter pieces by Marina Tsvetaeva, Ivan Bunin, Joseph Brodsky, Dina Rubina, Gary Shteyngart and others. Main topics discussed include memory, place, nostalgia, alienation, assimilation, citizenship and various constructs of personal and cultural identity. All assignments are in English or English translation. There are no prerequisites, although an interest in the IAS topic “Migration and Identity” is helpful.
Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD

L97 IAS 3800 Surveys of Hispanic Cultures
This course surveys cultures in specific contexts (Latin America and Spain) and in different historical periods, from the Middle Ages to the present. The course provides students with critical and methodological tools in order to carry out an articulate and informed cultural analysis. Prerequisite: Span 307D; concurrent registration in Span 308D is recommended. In Spanish. Topics vary from semester to semester. See section description for current offering. Same as Span 380

L97 IAS 381 Mexican Visual Culture
This course explores the ways in which different aspects of visual culture were used to construct national, regional,
political, social and cultural identities in Mexico in the wake of the Mexican Revolution. The omnipresence of the visual in the everyday life of Mexicans — including state-sponsored muralism, cinema, photography, graphic press, wide-circulating comic books and nationalist architecture — allows for the study of different ways in which citizens become embedded both in official national projects and in projects of political dissidence. The class thus uses the Mexican case study to introduce students to the study of the visual as a social practice, through theoretical discussions that run parallel to the study of different visual manifestations.

Credit 3 units. A&S : TH A&S : IQ, HUM

L97 IAS 382 Latin-American DissemiNations: Migrations and Identities in the 20th and 21st Centuries
Latin America has been, historically, a region defined by its migrations. Throughout its history, Latin America has received waves of immigrants from around the world and has been the site both of internal migrations (country to city and country to country) and a considerable diaspora that has created new communities in the United States and Europe. Through the reading of fiction, film, art and memoirs, this class seeks to study the cultural impact that different waves of migration has had both in the establishment of political and imaginary borders and in the constitution of new national, regional and transnational identities. The class approaches case studies that encompass the effect of internal migrations in the region (such as the racial politics of Bolivian immigration to Argentina); the social redefinitions of Latin-American countries due to new waves of immigrants (such as the increasing Asian immigration to Panama); the articulation of a Latin America in exile (for instance, through the experiences of exiles from the Southern Cone dictatorships); and the construction of new “Latino” identities in the United States and Europe (such as the debates around Chicano identity constructed on the works of Gloria Anzaldúa and Richard Rodríguez), among others. Through these case studies, students not only get snapshots of different “Latin-American Crossings.” The class also tackles the question of new, fluid notions of Latin-American culture and identity, as well as changing notions of race, ethnicity, class and gender, as they are being redefined in the contemporary world. Prerequisite: IAS 165C Survey of Latin-American Culture.

L97 IAS 383 Reading the Scores: Understanding Brazilian Music through Social Categories
This course examines Brazilian culture and history through the lens of music and music-making. This final term “music-making” is a key term throughout the semester, as, for the purposes of this course, our interest in music is social and cultural. That is to say, we concern ourselves with sound production as a contextualized social activity, not simply notes and arrangements printed on the page. We discuss various genres of music — from folk to pop to traditional to elite “classical” pieces. Fundamentally speaking, this is a writing-intensive course, which means that we dedicate a significant amount of time and energy to the task of writing (a lot of revising and editing) about music and culture.

L97 IAS 384 Migration and Modernity: Human Mobility, Identity and State Formation — Russian/Soviet/post-Soviet Context
This class introduces students to a broad history of 19th- and 20th-century Russia and the Soviet Union alongside problems of migration. In this class, students are introduced to the historical, social and political dimensions of migration within, to and from the Russian Empire, the Soviet Union and its successor states. We look at the intersection of the movement of people with long-term economic, social and political transformations, but also pay attention to crucial events and phenomena of Soviet history that set large-scale migrations in motion. Course materials, for instance, address mass movements related to modernization and internal colonization, analyze the role of revolutionary change and warfare for forced displacement, and study the implications of geopolitical changes in the aftermath of the breakdown of the U.S.S.R. for human rights discourses. Alongside the historically grounded overview, the class explores concepts of citizenship, diaspora, nationality policy, gender specific experiences of migration, and the ethics and political economy of migration politics, thereby highlighting how current trends in Russian society are indicative of broader discourses on difference and social transformation.

L97 IAS 386 Empire in East Asia: Theory and History (WI)
An introduction to how historians and anthropologists incorporate theoretical insights into their work, this course first "reverse engineers" the main arguments in several insightful books and articles on empire in Asia, all of which are informed by the work of Michel Foucault. Retaining our theoretical knowledge, we then focus on the more empirical aspects of the Japanese empire in Korea, including settler colonialism, the colonial economy, representations of colonialism and the long-term ramifications of empire. We conclude with a general assessment of the history of empire. In these ways, this course seeks to equip students with a knowledge of empire in East Asia in the late 19th and 20th centuries while simultaneously investigating the nature of that knowledge.

L97 IAS 3884 Terror and Violence in the Black Atlantic
From the period of bondage through the 21st century, terror and racialized violence have consistently been used as a form of social control. This course is constructed to explore the historical foundations of extreme threats of violence inflicted among populations of African descent. The fabric of American culture has given birth to its own unique brand of terrorism, of which this class spends considerable time interrogating. Yet, in recognizing that these practices are commonly found in other parts of the Black Atlantic, students are encouraged to take a comparative view to better tease out the wider strands of violence operative in places such as England, the Caribbean and Latin America. Within this course, we explore the varied ways in which music, films, newspapers and historical narratives shed light on these often life altering stories of the past. Some of the themes touched upon include: the use of punishment/exploitation during the era of slavery, lynching, sexual violence, race riots, police brutality, motherhood, black power and community activism.

L97 IAS 3941 Worldwide Translation: Language, Culture, Technology
This course will consider the crucial role played by translation across the world today: from new technologies and digital media, to the global demands of professionals working in fields as diverse as literature, law, business, anthropology, and health care. We will begin by exploring the concept of translation as a mechanism of transmission between different languages by looking at works of literature, film, and journalism. Our course will examine how different cultures have historically required translation in their encounter with each other, studying how translation constitutes a necessary bridge both from a colonial and postcolonial point of view. We will also analyze from practical and real-world perspectives whether concepts such as war, human rights, democracy or various deadly illnesses have the same meaning in different societies by considering the diverse frames of reference of linguists, lawyers, anthropologists, and medical doctors across the world. Finally, we will focus on translation from a technological perspective by examining various modes of transfer of information required for the functioning of digital media such as Google, Twitter or various Iphone applications. Readings will include works by Robert McCrum, Talal Asad, Lawrence Venuti, Michael Cronin and Vicente Rafael among others.

L97 IAS 395C African Civilization: 1800 to the Present
Beginning with social and economic changes in 19th Century Africa, this course is an in-depth investigation of the intellectual and material culture of colonialism. It is also concerned with the survival of pre-colonial values and institutions, and examines the process of African resistance and adaptation to social change. The survey concludes with the consequences of decolonization and an exploration of the roots of the major problems facing modern Africa.

L97 IAS 4003 Interrogating Health, Race and Inequalities: Public Health, Medical Anthropology and History
Interrogating Health, Race and Inequalities is intended for graduate students in the School of Social Work and in Arts & Sciences as well as advanced undergraduates in Arts & Sciences who have previous course work in medical anthropology, public health or urban policy. The fundamental goal of the course is to demonstrate that health is not merely a medical or biological phenomenon but more importantly the product of social, economic, political and environmental factors. To meet this goal the course is designed to examine the intersection of race/ethnicity and health from multiple analytic approaches and methodologies. Course readings draw from the fields of public health, anthropology, history and policy analysis. Teaching activities include lectures, group projects and presentations, videos and discussions led by the course instructors. These in-class activities are supplemented with field trips and field-based projects. By the end of the course it is expected that students have a strong understanding of race as a historically produced social construct as well as how race interacts with other axes of diversity and social determinants to produce particular health outcomes. Students gain an understanding of the health disparity literature and a solid understanding of multiple and intersecting causes of these disparities.

L97 IAS 400P International and Area Studies Portfolio
The International and Area Studies Portfolio is a capstone option for prime majors in IAS; this course is restricted to those in the IAS major. It is meant to be an examination of a specific global issue from an interdisciplinary perspective, and it should demonstrate what you have learned in your IAS major. This capstone requires students to take two IAS-approved 400-level seminars (at least one of which must be taken in the senior year) taught by professors in two different disciplines, and synthesize them in a three- to five-page written statement and a graphical representation in the form of a poster presentation, website or other approved digital medium. (The choice of the two 400-level classes for the capstone should be made in close consultation with the adviser and should, except in exceptional cases, conform to the two disciplines requirement.) At the end of the semester, you present your portfolio to classmates and a faculty panel. Enrollment in this course should be in either the semester that the second 400-level class is completed or the semester following (this can be either the fall or spring of the senior year).

L97 IAS 402 The Meaning of National Security in the 21st Century
The 21st century has brought with it new challenges to national security. Standard assumptions about nations and the borders that separate them have been brought into question, and one of the results of this is that the very meaning of national security is undergoing change. Instead of threats to security coming from outside national boundaries, they now often exist within and across borders. This course focuses on contemporary ideas about these issues. It includes a brief overview of current discussions of national security, but it is primarily devoted to examining the conceptual resources we have for making sense of national security in a new world.

L97 IAS 4034 Culture, Illness and Healing in Asia
This course examines the place of health, illness and healing in Asian societies. We explore how people experience, narrate and respond to illness and other forms of suffering — including political violence, extreme poverty and health inequalities. In lectures and discussions we discuss major changes that medicine and public health are undergoing and how those changes affect the training of practitioners, health care policy, clinical practice and ethics. The course familiarizes students with key concepts and approaches in medical anthropology by considering case studies from a number of social settings including China, India, Indonesia, Japan, Korea, Taiwan, Tibet, Thailand, Vietnam and Asian immigrants in the United States. We also investigate the sociocultural dimensions of illness and the medicalization of social problems in Asia, examining how gender, ethnicity, socioeconomic status, disability and other forms of social difference affect medical knowledge and disease outcomes. This course is intended for anthropology majors, students considering careers in medicine and public health, and others interested in learning how anthropology can help us understand human suffering and formulate more effective interventions.

<td>The AIDS Epidemic: Inequalities, Ethnography and Ethics</td>
<td>In the year 2000, HIV became the world's leading infectious cause of adult death, and in the next ten years, AIDS will kill more people than all wars of the twentieth century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not knowledge or resources, but global inequalities and the conceptual frameworks with which we understand health, human interaction, and sexuality. This course emphasizes the ethnographic approach for cultural analysis of responses to HIV/AIDS. Students will explore the relationship between local communities and wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power, and culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates, ethics and responsibilities, drug</td>

<tr>
<td>Coming from Turkey, North and West Africa, Pakistan and elsewhere, Muslim immigrants in Europe are changing what it means to be a European. In the process, they have brought questions of cultural identity into the international media. Examining literature, the press and secondary studies, this writing-intensive course studies the ways in which national governments and institutions have chosen to deal with the arrival of large numbers of Muslims as permanent residents. We consider what the various controversies and prejudices surrounding their presence mean for the future of European culture. Such issues as citizenship, assimilation, the right to cultural difference and the use of cultural and religious symbols are among our major interests. No foreign language background is assumed. Priority is given to IAS majors for this WI course. Credit 3 units.</td>

L97 IAS 4302 Divergent Voices: Italian Women Writers
This course examines select novels and theoretical and political writings by and about Italian women writers from the 17th century to the present day. The aim of the course is to familiarize students with the rich literary production, cultural influence, and artistic and political views of Italian women writers through history. In order for students to understand the distinct circumstances that influenced the production of these texts, special attention is paid to the historical, political and cultural contexts that influenced authors and their work. A major emphasis is placed on the acquisition of skills of literary analysis by exploring themes, styles, and rhetorical and narrative structures. Students are expected to familiarize themselves not only with the primary texts of the course but with secondary sources as well. A workshop environment is encouraged wherein instructor and students work cooperatively toward the realization of course goals. Taught in English.

| L97 IAS 4434 | The Inconvenient Indio: Imagining Indigenous Cultures in Peru and Bolivia     | In the cultural history of the Andean nations, the Indio has always been a powerful yet perpetually unstable signifier, whose meaning is constantly redefined by non-Indians. An archaic residue for some, the bedrock of a new society for others, the Indio conjures contradictory imaginaries of articulation, combination, disjunction and metamorphosis that have shaped a wide range of debates: from assimilation and mestizaje in the context of nation-building and modernity, to the politicizing of ethnic identities in the context of immigration and globalization. Focusing on Peru and Bolivia, this course will examine these cultural imaginaries and the debates in which they appear, as well as the models of community and identity they suggest. In doing so, we will discuss topics such as the discourse of illness, indigenismo, transculturation, heterogeneity, violence and memory. Materials to be analyzed include poetry by César Vallejo and Carlos Oquendo de Amat; essays by José Carlos Mariátegui and Ángel Rama; José María Arguedas’s novel LOS RÍOS PROFUNDOS; Jorge Sanjinés’s film EL CORAJE DEL PUEBLO; and theatrical performances by Grupo Yuyachkani. Prerequisite: Span 307D and Span 308D and at least two 300-level literature course taught in Spanish. One-hour preceptorial for undergraduates; in Spanish. Same as Span 443. | Grade of B– or higher in Spanish. | 3 units | A&amp;S : TH A&amp;S : IQ, HUM |

The class studies major writings by Oscar Wilde, W. B. Yeats, J. M. Synge, James Joyce and Flann O’Brien within the contexts of the language movement, colonialism, cultural nationalism, the socialist movement and the 1913 Lockout, the Easter Rising and the War for Independence, the Civil War, the founding of the Irish Free State, the Partition and the Irish Theocracy. Wilde’s notions of the primacy of art with regard to politics and their elaboration by W. I. Thompson and Declan Kiberd represent an organizing principle in the course. The class sees two films, offers oral reports and writes papers. Same as E Lit 4492

Credit 3 units. A&S : TH

This course examines how immigration is being transformed by changes in information and communication technology. With these new technologies, immigrants can stay in contact with family and friends much more easily, travel to and maintain relationships in their home countries, and form bonds with other immigrants in the new country. How do these changes affect how immigrants view themselves in their new countries? Are they more or less likely to settle permanently? Do they change their patterns of political participation? We answer these and other questions using literature from sociology, communication, psychology, anthropology and political science. Students are expected to explore internet sources as well as traditional materials.

L97 IAS 457 Gender and Modernity in Latin America
The purpose of this course is to introduce students to the particular forms modernity assumes in Latin-American countries and to the ways in which national cultures, identity politics and gender issues interweave during the 20th century. The course discusses three particular articulations of this topic: (1) gender and the national question in Argentina: Eva Peron; (2) gender and visual arts: Frida Kahlo; and (3) gender and ethnicity: Rigoberta Menchu. Through these iconic figures students are introduced to the specific features that characterized three very different but representative cultural scenarios in Latin America. In each case, the context for the emergence of these highly influential public figures is studied from historical, social and cultural perspectives. In order to explore the cultural and political significance of Eva Peron, Frida Kahlo and Rigoberta Menchu, the course uses literary texts (speeches, letters, diaries, etc.), visual materials (photography, films and paintings) and critical bibliography.
Credit 3 units. A&S : TH A&S : IQ, HUM

L97 IAS 4572 Primitivism and Modernity in Latin America
This course is an interdisciplinary approach to (a) the critique of modernity in peripheral societies and (b) to the associated notions of otherness (particularly the ideas of the primitive, the barbarian, the archaic, the savage) that complement the discursive construction of modernity in Latin America. Special emphasis is placed on ethnicity and identity issues and on questions related to the symbolic representation of otherness, alterity, premodernity, exoticism and “the primitive.” Because the topic calls for the analysis of the interweaving of aesthetic, ethical and political issues, students are exposed to bibliographical sources that elaborate on philosophical, anthropological and historical problems related to the region. The course is based on a combination of theoretical, critical and literary texts that explore perspectives on/from Latin America in which issues of cultural difference, social inequality and racial diversity are predominant. Some of the materials analyzed in class are essays, fiction and travel literature, as well as critical and theoretical articles on colonialism, magical realism, modernity and postmodernity. The course is conducted in English.
Credit 3 units. A&S : TH A&S : IQ, HUM

L97 IAS 4581 Bubblegum, Baseball and Boom: Latin-American Cities Go Pop
The goal of this course is two-fold. First, it aims at greater familiarization with urban Latin America vis-à-vis popular culture (“bubblegum”), sports (“baseball”) and post-dictatorship/violence literature (“boom”). Second, the course offers a range of theoretical texts in social sciences, cultural studies and literary criticism focused on Latin America empirically but of a larger, more general value. In addition, this is a writing-intensive course, the mechanics of which help structure the nuts-and-bolts of the course. Students are evaluated on how they are able to articulate the ideas and descriptions embedded in the reading material to their own interpretations and their own mini-projects. This is an advanced undergraduate/graduate course, in which students must come prepared to engage in an intense schedule of reading, writing and discussion.

L97 IAS 460 Postmodern Narratives in Latin America
This course analyzes some critical and theoretical texts on modernity/postmodernity as well as representative novels and films of the post-Boom era that illustrate the topics of urban violence, sexuality and marginality in several Latin-American countries.
Credit 3 units. A&S : TH A&S : IQ, HUM

L97 IAS 461 Latin-American Cultural Studies: Critical and Theoretical Approaches
The goal of the course is to provide students with critical and theoretical tools that could be used for the analysis of Latin-American cultural history from a transdisciplinary perspective, from colonial times to the present. Some of the concepts discussed in class are: colonialism and coloniality, national culture, dependency theory, cultural antropofagia, lettered city, miscegenation, heterogeneity, hybridity, transculturation, peripheral modernity, media and mediation, postmodernity, postcoloniality and collective memory.
Credit 3 units. A&S : TH A&S : IQ, HUM

L97 IAS 4611 Latin American Populism and Neo-Populism
A salient feature of Latin America in the 20th and early 21st centuries has been the recurrence of populism. Mass-based political and social movements animated by nationalist and reformist impulses dominated Latin American politics in the 1920s, 1930s-'60s, and 1980s to the present. This course provides a general historical and theoretically informed analysis of the origins, internal dynamics and outcomes of classical populist and neopopulist governments and parties. Among the notable populist and neopopulist cases to be examined include: Peronism in Argentina, Velasquismo in Ecuador, Cardenismo in Mexico, APRA in Peru, Vargusmismo in Brazil, Garcia/Fujimori in Peru, Menen/Kirchners in Argentina, and Hugo Chavez in Venezuela. Issues pertaining to leader-follower relations,

L97 IAS 462 Latin America and the West
From the perspective of postcolonial theory, the course covers different aspects related to Latin America’s cultural history, from the Discovery to the present. Some of the issues discussed in class are: the colonial encounter, Baroque culture and the emergence of Creole societies in the “New World,” the connections between Enlightenment and nationalism, as well as the interweaving of “coloniality” and modernity. Prerequisite: IAS 165C Survey of Latin-American Culture or an advanced-level course on Latin America.
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L97 IAS 4622 Labor and Labor Movements in Global History
Moving away from a traditional national approach to labor history, this course seeks to explore the connections between work, types of workers, labor movements and labor politics from a global historical perspective. It focuses on the period from the mid-19th century until the present. Global phenomena such as expanding world trade, international labor markets, industrialization, urbanization, colonialism, imperialism, capital and labor mobility, and the spread of radical ideologies are analyzed to assess their impact on the nature of work, labor organization and workers’ collective action. Labor in the global south receive special attention. This course requires no prior knowledge of global labor history. However, some background in labor studies and labor history is recommended.
Credit 3 units.  A&S : SS, SD  A&S : IQ, SSC, SD  EN : S

L97 IAS 463 Seminar on Urban Cultures in Latin America
The course focuses on the key role urban development and urban cultures have had in Latin America, with particular emphasis on contemporary times. The goal of the course is to discuss the connections between the formation and expansion of cities, the definitions of citizenship, and the role of modernity in the development of “high” and “popular” cultures within different historical and geocultural contexts. Particular attention is paid to the issues of race, class and gender. The course, which uses an interdisciplinary and comparative approach, also focuses on the phenomena of marginality, cultural resistance, nationalism and consumerism as well as on the role played by the media in contemporary Latin-American societies. Some of the cultural expressions analyzed in the course are music (rock, pop, rap), sports, film and video. Prerequisite: IAS 165C Survey of Latin-American Culture.
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L97 IAS 464 Nation and Desire in Latin America
The purpose of this course is to analyze the process of nation formation in Latin America from the imaginaries of the “Creole nation” to the first half of the 20th century. Class discussion encompasses the study of theories on nation formation and nationalism as well as textual representations of national projects, such as Simon Bolivar’s letters and discourses, selections from Facundo, Civilization and Barbarism by Domingo F. Sarmiento; selected texts by Andres Bello, Alfonso Reyes, et al; Ariel, by J.E. Rodo; Pedro Henriquez Urena’s Seis ensayos en busca de nuestra expresion; Jose Vasconcelos’ La raza cosmica; José Carlos Mariategui’s Siete ensayos de interpretacion de la realidad peruana; and José Marti’s “Nuestra America” and other essays. Some of the main topics discussed are the leading role of Creole elites in the consolidation of national cultures, the marginalization of women as well as indigenous and Afro-Hispanic populations, and the role of nationalism in the shaping of modern societies. Colonialism, Occidentalism, liberalism, positivism, nationalism and modernity are some of the concepts that are explored both theoretically and in their particular discursive usages. Finally, the concept of nation(alism) is studied as a political/rhetorical device and as the resulting expression of agency, interest and desire, in peripheral societies.

L97 IAS 4714 The Last Good Fight: The Spanish Civil War in Culture and History
Why should we care today about ideological conflicts in the 1930s? What is the relationship between art and propaganda? Can poetry be a weapon of war? What happened when women went to war in the 1930s? Do foreign nations have the right and the responsibility to intervene in civil conflicts? How are national traumas remembered and forgotten? Do post-conflict generations need to tend to the unsolved conflicts of the past? What is transitional justice? The Spanish Civil War (1936–1939) provides a unique opportunity for an in-depth study of these questions. The conflict lies at the crux of the ideologies (Socialism, Communism, Anarchism, Fascism) that clashed in the early 20th century and shaped the remainder of the century. The war also has inspired and continues to inspire countless artists, writers and filmmakers across the globe, from Picasso’s 1937 Guernica, to Guillermo del Toro’s 2008 film Pan’s Labyrinth. We examine the history and representation of the conflict within Spain and in the international arena. We analyze a variety of texts (novels, propaganda, wartime magazines, posters, songs, popular poetry, short stories and film), paying close attention to the historical context that led to the conflict, and its representation in the media, both in Spain and abroad, in order to understand the national and international repercussions of this crucial event in 20th-century history. We also discuss oral histories and new forms of media (online forums, virtual libraries, etc.) that have become an important venue in the debates on the memory of the event. Credit 3 units.

L97 IAS 4761 Politics of Global Finance
Global finance underwent stunning transformations over the past 30 years. The changes contribute to interdependence, challenge national sovereignty, alter state-society relations, affect economic development, and influence the distribution of wealth and power in the global political economy. The seminar examines the political economy of monetary relations, the globalization of capital markets, and their effects upon domestic and international affairs.
Credit 3 units. A&S : SS   A&S : IQ, SSC   FA : SSP

L97 IAS 477 Cultures of Memory in Post-war Germany and Japan
Post-war German and Japanese societies have long grappled with the issue of how to confront and commemorate World War II. This interdisciplinary course, team-taught by specialists in these fields, explores key aspects of postwar culture under four central rubrics: defeat, guilt, memory and renewal. We examine constructions of memory in a diverse range of texts, including historical, literary and cinematic narratives. Several key questions guide our discussions. What is the relationship between perpetration and suffering? How do different cultures represent and repress wartime experience and how do these articulations and omissions shape memory? How are memories of war participation and trauma shared and transmitted across generations? What do we remember and why?

L97 IAS 4771 Cosmopolitan and Native Modernisms: The United States and Europe Between the Wars
This seminar focuses on two contrasting currents within American and European modernism between the two world wars: native and cosmopolitan. Alternating between the U.S. and France, it begins in the years before World War I and concludes with the rise of virulent forms of cultural nationalism in the late 1930s. We consider the subjects, personalities, aesthetic strategies, and political and social investments associated with these alternative modernisms, linked to a search for roots, on the one hand, and for spatial and social mobility. Comparing “homegrown” and expatriate experience, we consider divergent attitudes toward identity, gender, nation, time and nature, analyzing these two fundamental responses to modernity in relation to one another. Prerequisites: Art-Arch 112 or Art-Arch 211; one 300-level course in Art History preferred; or permission of instructor.

L97 IAS 4792 Globalization and National Politics
This seminar examines globalization and its interaction with national politics. The movement of ideas, capital, goods, services, production and people across national borders provide a skeletal framework for the global political economy. Politicians, policy makers and societies discover new opportunities, but also dilemmas as expanding interdependence challenge traditional notions of sovereignty and national policy autonomy.

L97 IAS 483 Bodily Injuries: Violence, Fear and Representation in Latin America
The course focuses on the definitions, uses and “languages” of violence in Latin America, particularly during the last decades of the 20th century and the beginning of the 21st century. Students are introduced to philosophical, ethical and political issues related to the existence of “structural” violence and to the problems connected to the symbolic representation of this phenomenon in literature, fictional/documentary films and visual arts. One of the course’s objectives is to problematize the conceptualization of violence and to promote critical thinking.
about its emergence, significance and effects on local/global societies. Some of the topics analyzed are the body in its multiple manifestations (the body politic, the social body, the individual body, the treatment of the corpse, etc.), the narrativization of violence (violence as discourse, documentation and fictional elaborations, violence and the media, violence and ideology, etc.), violence and the city, citizenry and otherness, biopolitics, etc. Finally, violence is presented in different contexts and associated to different activities (ordinary crime, narco-cultures, maras, political movements, domestic environments) and different situations (e.g. violence in rural areas, violence in the borderlands, violence and migration). In all cases, the course calls for a reflection on the interrelations between private/public spheres, gender politics, ideological/aesthetic values and individual/institutional levels. The role of memory and emotions are emphasized as a crucial element for the construction/mobilization of subjectivity and for the elaboration of agendas that challenge the State’s monopoly of legitimate violence and propose alternative and often perverse forms of association and mobilization at the margins of institutional configurations.

L97 IAS 488 Europe on the Move: Mobility in the 19th Century
The long 19th century was a time of radical changes in all spheres of society. Numerous innovations ushered in an irrevocable acceleration of globalization. The revolution in transport and communication — which started with improved mail services, the construction of a modern road network, the steam ship and the telegraph — would eventually cumulate in the development of a European railroad system. Railroads proved to be important carriers of globalization, contributing to a dramatic boost of worldwide economic exchange. The rising mobility of ever larger population groups was followed by an international exchange of ideas, technical and cultural innovation, workforce and tourists as part of a “fundamental experience of modernity” (W. Kaschuba). This course deals with the impact of the mobility revolution on social and cultural changes in East Central Europe before World War I — focusing on Prussia/the German Reich and the Russian Empire. After a brief introduction into the concept of mobility history and the Prussian and Russian societies of the long 19th century we discuss mobility opportunities before the railroad revolution. Thereafter we focus on the emergence of railroad nets in Prussia and Russia. A focus is on the role of mobility in literature/arts and for changing urban and rural landscapes. In a last step the students work on the international aspects of railroad travel, especially tourism.
Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD

L97 IAS 4880 Narrating Mexico City
The city has been one of the central topics of modern Mexican literature. Ever since the emergence of the modern capital at the end of the 19th century, urban culture became one of the central concerns of Mexican and Latin American intellectuals across the continent. With the emergence of the Megalopolis and the new centrality of questions of violence, postmodernity and urban experience, Mexican literature and film have contributed, in the past 20 years, new ways to approach, discuss and narrate the city. This class seeks to tackle different meanings of Mexico City in cultural discourse by exploring novels (Federico Gamboa, Carlos Fuentes, Fernando del Paso, Juan Villoro), urban chronicles (Carlos Monsiváis) and films ( Los Olvidados, Amores Perros). Prerequisites: Span 307D and Span 308D and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.

Credit 3 units.  A&S : TH  A&S : IQ, HUM  FA : Lit

L97 IAS 495A Research and Editorial Methods in International and Area Studies
This practicum trains IAS majors in the basic scholarly research and editorial methodologies central to the interdisciplinary fields encompassed by International and Area Studies. Students in the class serve as the editorial board for the online IAS Undergraduate Journal and run the IAS undergraduate research conference. Course work covers the interdisciplinary principles of international studies, basic editorial techniques, promotional strategies using conventional and digital media, running the IAS conference, and editing and publishing the undergraduate journal. There are guest lectures on editing by professionals in the field. The practicum consists of a two-semester sequence. In the fall, students earn 1 credit for the work involved in planning and promoting the IAS journal and conference. The substantive course work in the spring brings 3 credits. This course sequence fulfills the Capstone Requirement for the IAS major for fourth-year students enrolled as senior editors. Interested students must apply for admission to the practicum instructor by April 13 of their junior year. Credit 1 unit.

L97 IAS 495B Research and Editorial Methods in International and Area Studies
This practicum trains IAS majors in the basic scholarly research and editorial methodologies central to the interdisciplinary fields encompassed by International and Area Studies. Students in the class serve as the editorial board for the online IAS undergraduate journal and run the IAS undergraduate research conference. Course work covers the interdisciplinary principles of international studies, basic editorial techniques, promotional strategies using conventional and digital media, running the IAS conference, and editing and publishing the undergraduate journal. There are guest lectures on editing by professionals in the field. The practicum consists of a two-semester sequence. In the fall, students earn 1 credit for the work involved in planning and promoting the IAS journal and conference. The substantive course work in the spring brings 3 credits. This course sequence fulfills the Capstone Requirement for the IAS major for fourth-year students enrolled as senior editors. Interested students must apply for admission to the practicum instructor by April 13 of their junior year. Credit 3 units.

L97 IAS 4970 Guided Readings in Korean
This course normally is taken after successful completion of Korean 418, or by instructor’s permission. May be repeated once. Prerequisite: instructor’s permission.
Same as Korean 497
Credit variable, maximum 3 units.  A&S : LA

L97 IAS 4975 Collecting Cultures: Taste, Passion and the Making of Art Histories
Same as Art-Arch 4975
Credit 3 units.  A&S : TH  A&S : IQ, HUM  EN : H  FA : AH

L97 IAS 4977 Advanced Seminar in History: A Long Road to Uhuru and Nation: the Social History of Modern Kenya
Same as History 4977
Credit 4 units.  A&S : TH, CD  A&S : IQ, HUM, LCD

L97 IAS 4979 Advanced Seminar in History: Gender, Race and Class in South Africa, 1880–Present
Same as History 4979
Credit 4 units.  A&S : TH, SD  A&S : IQ, HUM, SD

L97 IAS 498 Guided Readings in Chinese
Prerequisites: graduate standing and permission of the instructor and the graduate adviser. Course normally taken after successful completion of Chinese 428. May be repeated once for credit. Credit variable, maximum 3 units.
Same as Chinese 498
Credit variable, maximum 3 units.  A&S : LA
L97 IAS 4981 Advanced Seminar in History: Historical Perspectives on Human Rights and Globalization
Same as History 4981
Credit 4 units. A&S : TH  A&S : IQ, HUM

L97 IAS 4982 Advanced Seminar in History: Women and Confucian Culture in Early Modern East Asia
Same as History 4982
Credit 4 units. A&S : TH

L97 IAS 4988 Advanced Seminar in History: the French Revolution
Same as History 4988
Credit 4 units. A&S : TH  A&S : IQ, HUM

L97 IAS 499 Guided Readings in Japanese
Prerequisites: senior standing and permission of the instructor and the Department Chair. Course usually taken after successful completion of Japan 459. May be repeated once. Credit variable, maximum 3 units.
Same as Japan 499
Credit variable, maximum 3 units. A&S : LA

L97 IAS 4994 Advanced Seminar in History: Religion and Society in Modern Europe, 1750–1930
Same as History 4994
Credit 4 units. A&S : TH  A&S : IQ, HUM

L97 IAS 4995 Advanced Seminar in History: Incredible India?
Today, India’s Department of Tourism works to attract visitors from far and wide with the slogan, "Incredible India!"--a publicity campaign that extols the country’s exceptionalism. Yet, images of India as unique and exotic, exceptional yet unchanging, are anything but new. They have been absolutely foundational to everything from British explorer Richard Burton’s translation of the Karma Sutra, to the hit TV series "Jewel in the Crown," the global explosion of Bollywood, the scholarly study of the “subaltern,” and the proliferation of yoga studios in North America and Europe! How, and why, did India become “incredible”? Reaching to intellectual and social history, and to cultural studies methods, this course explores the mechanisms for the production of popular perceptions about India. Where do these perceptions originate and how do they retain coherence and continuity? What do they tell us about ourselves, our desires, and our relationship to globalization? What are the intellectual traditions, the institutional sites, and the visual/narrative forms that support what some might describe as a trans-national public relations campaign? Students will utilize a diverse range of primary and secondary sources and compose original research papers.
Same as History 49SC
Credit 4 units. A&S : TH, CD  A&S : IQ, HUM, LCD

L97 IAS 49BV Advanced Seminar in History: Topics in Environmental History
This course is intended to be an introduction to the study of environmental history. The semester begins with a general inquiry into the methods of the field and then we use what we have learned to move into a focused subtopic. Readings include seminal works in the field, as well as philosophical, scientific and science fiction texts that help us to explore more abstract questions dealing with the relationship between humankind and the natural world.
Same as History 49BV
Credit 4 units.

L97 IAS 49CA Advanced Seminar in History: Religion and the Secular
A generation ago, scholars and observers around the world felt assured that modernization would bring the quiet retreat of religion from public life. But the theory of secularization now stands debunked by world events, and a host of questions has been reopened. This course provides students with a forum to think through these issues as they prepare research papers on topics of their own choosing.
Same as History 49CA
Credit 4 units.

L97 IAS 49MG Advanced Seminar in History: Planning Global Cities
This team-taught advanced seminar addresses the history and theory of a variety of metropolitan environments from the mid-19th century to the present. Readings move from the 19th-century state-centered urbanism of Paris or Vienna, through the colonial remaking of cities such as Manila or Caracas and their connections to urban reform and the City Beautiful movement in the United States, then through the rise of planning, zoning, auto-centered cities, federal interventions like urban renewal, the emergence of the preservation movement and new urbanism.
Same as History 49MG
Credit 4 units.

L97 IAS 49NR Advanced Sem in History: Egypt &the Arab Spring: Middle Eastern Revolution in Historical Perspective
The uprisings of the Arab Spring of 2011 captivated global media and observers. The movements brought down established regimes in Tunisia, Libya, Yemen and Egypt. The focus of this course is to understand the historical background and primary contemporary issues that have shaped Egypt’s Arab Spring,
and to examine the huge popular effort to document Egypt’s revolution. Each student designs, researches and writes a 25-page paper on a topic of his/her choice related to the Arab Spring. Prior knowledge of the Middle East suggested but not required.

Same as History 49NR
Credit 4 units. A&S : TH, CD A&S : IQ, HUM, LCD

L97 IAS 49YM Advanced Seminar in History: Blacks and Indians in Latin America
Same as History 49YM
Credit 4 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD

Concentration in Development Studies (IAS)

The Major in International and Area Studies — Concentration in Development Studies and Global Political Economy

This track focuses on the challenges of development. Why do some societies develop while others languish? What accounts for disparities in wealth and opportunity in the world? What explains differences in political, civil and economic liberties? What are the implications of such differences? These are more than purely economic puzzles as growth and development create surplus that can be allocated to other tasks. A gap exists between how neoclassical economic theory describes development and empirical observation. History matters. What happens today, or yesterday, can dramatically influence the future. Political and social institutions vary across societies and such difference can influence incentives and behavior. Culture can affect curiosity, propensity for risk-taking, ability to embrace rather than resist change, and attitudes toward change in societies. All these forces can affect economic and political development. This track explores the interaction of politics, history, culture, society and economics as we try to understand what governments and societies do to promote or hinder growth and development, and how those actions influence social arenas.

This track requires 36 units of course work:

- 3 units of introductory political science course work
- 3 units of introductory economics course work
- 3 units of elective introductory course work
- 3 units of research methods course work
- 24 units of advanced course work from a minimum of three academic disciplines (at least three must be at the 400 level)

A single course may satisfy more than one of these distribution requirements. Some of these requirements may be completed while abroad.

Additional requirements:

- Students must satisfy the foreign language requirement: the successful completion of four semesters of one language appropriate to their concentration.
- We strongly encourage students to study abroad. For those students who do not study abroad, an additional 3-unit course at the 300 or 400 level is required.
- A student’s study abroad location and their regional specialization should be consistent with their chosen language of study, if feasible (e.g., students who wish to study in Latin America must satisfy their language requirement with either Spanish or Portuguese).
- Throughout the course of completing the Development Studies major, students must show depth in at least one world area by taking a minimum two courses focused on the same area, and breadth by taking a third course focused on a different area. We consider world areas to be Africa, East Asia, Europe, Latin America, Middle East and South Asia.
- All prime IAS majors must complete a capstone experience.

Introductory courses:

- **Political Science** (3 units):
  - Pol Sci 103B International Politics 3
  - or Pol Sci 102B Introduction to Comparative Politics

- **Economics** (3 units):
  - Econ 1011 Introduction to Microeconomics 3
  - or Econ 1021 Introduction to Macroeconomics
  - or MEC 292 Global Economy

- **Elective** (3 units): any of the Political Science or Economics courses listed above OR
  - Anthro 160B Introduction to Cultural Anthropology 3
  - or History 164 Theory and Practice of World History: Health and Disease
  - or Pol Sci 106 Introduction to Political Theory
  - or Pol Sci 2010 Introduction to Environmental Policy

These two courses may be substituted for IAS 102B or IAS 103B:

- IAS 314B International Politics 3
- IAS 328B Gateway to Development 3

Research methods (choose one from this list, 3 units):

- QBA 120 Managerial Statistics I (Business School) 3
- or QBA 121 Managerial Statistics II
- Econ 413 Introduction to Econometrics 3
Arts & Sciences

Math 2200 Elementary Probability and Statistics 3
Math 3200 Elementary to Intermediate Statistics and Data Analysis 3
Psych 300 Introduction to Psychological Statistics 3
Pol Sci 363 Quantitative Political Methodology 3

Advanced courses (choose six courses from current relevant internationally focused course offerings in the following departments.* All courses must be approved by the IAS adviser in order to count for the major):

- African and African-American Studies
- Anthropology
- Applied Statistics
- East Asian Languages and Cultures
- Economics
- Education
- Environmental Studies
- History
- International and Area Studies
- Jewish, Islamic and Near Eastern Languages and Cultures
- Political Science
- University College — International Affairs; Sustainability

*Students may petition to have courses in the following departments or disciplines count toward the major: art history, film and media studies, literature, music, philosophy, and women, gender and sexuality studies.

Additional Information

Language Requirement for the Major in Development Studies/International and Area Studies: All IAS majors and minors must satisfy a foreign language requirement that entails the successful completion of four semesters of a language appropriate to their concentration while at Washington University. For some students, this may mean the first four semesters of a language; for others who place into advanced language classes this may include literature, culture, oral communications and linguistic courses in the target language, once they complete the basic language sequence. Advanced courses in literature, social sciences and culture used to satisfy this requirement may be counted as advanced credit for IAS majors and minors as long as they are cross-listed with IAS or approved for IAS study abroad credit and are not applied toward a language major or minor. A maximum of two of these classes may be completed while abroad on a Washington University approved program in the target language (may be within the same semester abroad). Native speakers of a foreign language must satisfy the four-semester requirement in another language appropriate to their concentration. Heritage speakers must seek appropriate placement by the coordinator of the language program and complete the four-semester requirement.

Study Abroad: Majors are strongly encouraged to study abroad in one of Washington University’s Overseas Programs during junior year or the summer. Some credit for courses taken abroad may be applied to the major. For those who do not study abroad, an additional 3-credit course at the 300 or 400 level is required.

Senior Honors: Students must confidently expect to graduate with an overall GPA of 3.65 or higher in order to qualify for Senior Honors. Students should enroll in IAS 485 Preparation for IAS Honors Thesis in the fall of senior year (under the corresponding section number of the faculty member overseeing their thesis), and in IAS 486 IAS Senior Honors Thesis in the spring of senior year in order to be properly tracked by the IAS capstone coordinator.

Concentration in Eurasian Studies (IAS)

The Major in International and Area Studies — Concentration in Eurasian Studies: New Silk Roads

This track focuses on the social, cultural and economic interconnections among the peoples of Eurasia. We define Eurasia as the vast landmass stretching east/west from China to Europe and north/south from Siberia into the Caucasus, the Crimean Peninsula, Central Asia and the Himalayas. Ancient trade routes that crisscrossed the interior spaces of Europe and Asia, known collectively as the Silk Road, served as a globalizing thoroughfare for the movement of peoples, cultural practices, religious values and commodities. Recent infrastructural improvements in these areas, as well as international economic, environmental and political concerns, have once again opened up transnational economic networks and cross-cultural exchange along these “new silk roads.” For this concentration, students pull from a variety of disciplines to study not only specific geographical regions but also vital intersections and interrelationships among regions and peoples.

This track requires 36 units of course work:

- 3 units of recommended core course work
- 3 to 6 units of introductory course work
- 27 to 30 units of advanced course work from a minimum of three academic disciplines (at least two must be at the 400 level), and dealing with three different regions (Eastern, Western and Central Eurasia) or with a transregional focus.

A single course may satisfy more than one of these distribution requirements. Some of these requirements may be completed while abroad.
**Additional requirements:**

- Students must fulfill the standard IAS language requirement with Arabic, Chinese, Hebrew, Hindi, Persian, Russian or another Eurasian language as decided in consultation with their IAS adviser.
- We strongly encourage students to study abroad. For those students who do not study abroad, an additional 3-unit course at the 300 or 400 level is required. Russian studies study abroad programs are an especially good fit for this concentration, though other programs also may apply.
- All prime IAS majors must complete a capstone experience.

**Recommended core course** (3 units):

- Anthro 3775 Ancient Eurasia and the New Silk Roads 3

**Introductory courses** (choose one to two from this list; 3 to 6 units):

- Anthro 204B Anthropology and the Modern World 3
- Chinese 227C Chinese Civilization 3
- Comp Lit 204 Crossing Borders: An Introduction to Comparative Literature 3
- History 2157 Freshman Seminar: The Meaning of Pakistan: History, Culture, Art 3
- JINE 208F History, Text and Identity: Introduction to Jewish Civilization 3
- JINE 210C Introduction to Islamic Civilization 3
- IAS 216 Introduction to South Asian Civilization 3
- IAS 223 Korean Civilization 3
- Russ 215C Introduction to Russian Civilization 3

**Advanced courses** (choose nine to 10 courses from the current internationally focused course offerings in the following areas of study. All courses must be approved by the student’s IAS adviser in order to count for the major):

- **Anthropology**
  - Anthro 3051 Anthropology of Tibet and the Himalayas 3
  - Anthro 3053 Nomadic Strategies and Extreme Ecologies 3
  - Anthro 305B Greater Central Asia in Crisis 3
  - Anthro 3122 From Country to Heavy Metal: Ancient Civilizations of the Old World 3
  - Anthro 3731 Digital Frontiers of the Past: Ancient States and Borders through Spatial Technology 3
  - Anthro 4041 Islam and Politics 3
  - Anthro 4243 “Terrorism” and “The Clash of Civilizations” 3
  - Anthro 448 Contemporary Issues in Cultural Anthropology 3

- **Art History**

### Concentration in Global Cultural Studies (IAS)

**The Major in International and Area Studies — Concentration in Global Cultural Studies**

This track focuses on the practical and theoretical issues arising from cross-cultural encounters around the world. It studies these by examining traditional cultural products (literature, film, visual art and music), but also by investigating their broader political and social contexts. This track addresses compelling issues of cultural interchange for students interested in cultures for their own sake, as well as in careers in NGOs and international business and law. It is committed to interdisciplinary approaches to contemporary problems, and students may take courses in the traditional language-and-literature disciplines, as well as in anthropology, art history, film, history, music and philosophy.

This track requires 36 units of course work:

- 6 units of disciplinary introductions and methods course work
- 6 units of world area course work (any level)
- 24 units of advanced course work from a minimum of three academic disciplines (at least one course must focus on gender, race or class, and at least two must be at the 400 level)

A single course may satisfy more than one of these distribution requirements. Some of these requirements may be completed while abroad.

### Additional Information

**Language Requirement for the Major in Eurasian Studies/International and Area Studies:** All IAS majors and minors must satisfy a foreign language requirement that entails the successful completion of four semesters of a language appropriate to their concentration while at Washington University. For some students, this may mean the first four semesters of a language; for others who place into advanced language classes this may include literature, culture, oral communications and linguistic courses in the target language, once they complete the basic language sequence. Advanced courses in literature, social sciences and culture used to satisfy this requirement may be counted as advanced credit for IAS majors and minors as long as they are cross-listed with IAS or approved for IAS study abroad credit and are not applied toward a language major or minor. A maximum of two of these classes may be completed while abroad on a Washington University approved program in the target language (may be within the same semester abroad). Native speakers of a foreign language must satisfy the four-semester requirement in another language appropriate to their concentration. Heritage speakers must seek appropriate placement by the coordinator of the language program and complete the four-semester requirement.

**Study Abroad:** Majors are strongly encouraged to study abroad in one of Washington University’s Overseas Programs during junior year or the summer. Some credit for courses taken abroad may be applied to the major. For those who do not study abroad, an additional 3-credit course at the 300 or 400 level is required.

**Senior Honors:** Students must confidently expect to graduate with an overall GPA of 3.65 or higher in order to qualify for Senior Honors. Students should enroll in IAS 485 Preparation for IAS Honors Thesis in the fall of senior year (under the corresponding section number of the faculty member overseeing the thesis), and in IAS 486 IAS Senior Honors Thesis in the spring of senior year in order to be properly tracked by the IAS capstone coordinator.
• Students must satisfy the foreign language requirement: the successful completion of four semesters of one language appropriate to their concentration.
• We strongly encourage students to study abroad. For those students who do not study abroad, an additional 3-unit course at the 300 or 400 level is required.
• A student’s study abroad location and their regional specialization should be consistent with their chosen language of study, if feasible (e.g., students who wish to study in Latin America must satisfy their language requirement with either Spanish or Portuguese).
• All prime IAS majors must complete a capstone experience.

Disciplinary introductions and methods (choose two from this list*; 6 units):

- **WGSS 100B** Introduction to Women and Gender Studies 3
- **WGSS 105** Introduction to Sexuality Studies 3
- **Music 1021** Musics of the World 3
- **Art-Arch 111** Introduction to Asian Art 3
- **Art-Arch 215** Introduction to Modern Art, Architecture and Design 3
- **Art-Arch 250** African Art: From Traditional to the Contemporary 3
- **Phil 131F** Present Moral Problems 3
- **Anthro 160B** Introduction to Cultural Anthropology 3
- **Anthro 204B** Anthropology and the Modern World 3
- **Comp Lit 204** Crossing Borders: An Introduction to Comparative Literature 3
- **History 164** Theory and Practice of World History: Health and Disease 3
- **Film 220** Introduction to Film Studies 3
- **IAS 260** Migrations in Past and Present: Introduction to Migration Studies 3
- **Introduction to Literature courses as appropriate (English, Comp Lit or foreign language)** 3

* Students may petition to have courses that are not listed count for this requirement.

World area courses:

Throughout the course of completing the Global Cultural Studies major, students must show depth in at least one world area by taking a minimum two courses focused on the same area, and breadth by taking a third course focused on a different area. We consider world areas to be Africa, East Asia, Europe, Latin America, Middle East and South Asia.

Of these three courses, one must be at advanced level and will count toward the 24 credits of advanced work needed to complete the major.

The other two courses may be taken at any level; however, if advanced courses are used to fulfill any of these 6 credits, they will not be counted toward the required 24 credits of advanced course work. See below for examples of lower-level classes that may be used to satisfy this requirement.

- **History 102C** Western Civilization 3
- **History 2157** Freshman Seminar: The Meaning of Pakistan: History, Culture, Art 3
- **IAS 165C** Survey of Latin-American Culture 3
- **IAS 208** History, Text and Identity: Introduction to Jewish Civilization 3
- **IAS 209B** African Studies: An Introduction 3
- **IAS 210C** Introduction to Islamic Civilization 3
- **IAS 215C** Introduction to Russian Civilization 3
- **IAS 216** Introduction to South Asian Civilization 3
- **IAS 223** Korean Civilization 3
- **IAS 226C** Japanese Civilization 3
- **IAS 244** Introduction to European Studies 3
- **East Asia 227C** Chinese Civilization 3

Advanced courses (choose eight courses from current relevant internationally focused course offerings in the following departments. All courses must be approved by your IAS adviser in order to count for the major):

- African and African-American Studies
- American Culture Studies
- Anthropology
- Art History
- Drama
- Film and Media Studies
- History
- Interdisciplinary Project in the Humanities
- International and Area Studies
- Languages and Literatures
- Music
- Political Science
- Religious Studies
- Women, Gender and Sexuality Studies

Concentration in Sustainable Development (IAS)

The Major in International and Area Studies — Concentration in Sustainable Development

This concentration focuses on the practical challenges and ethical dilemmas the world faces in health, environment, population and uneven development. Students can select from courses in environmental studies, anthropology, history, economics, philosophy, political science, and women, gender and sexuality studies. This concentration is particularly designed for students with an interest in international development policy and practice at the grass-roots level, and students are strongly encouraged to study abroad for a summer or semester in an approved IAS program in the developing world (Africa, Middle East, Latin America and Asia) where they will undertake independent research. Programs offered by the School for International Training (SIT) may be a particularly good fit for this concentration.

This track requires 36 units of course work:
• 6 to 12 units of introductory course work
• 24 to 30 units of advanced course work from a minimum of three academic disciplines (at least two must be at the 400 level)

The 36 units must be selected according to the following distribution requirements:
• 6 units of global health
• 6 units of environmental/sustainable development
• 3 units of ethics and justice
• 3 units of gender studies

In addition, students must show depth in at least one world area by taking a minimum two courses focused on the same area, and breadth by taking a third course focused on a different area. We consider world areas to be Africa, East Asia, Latin America, Middle East and South Asia.

A single course may satisfy more than one of these distribution requirements. Some of these requirements may be completed while abroad.

Additional requirements:
• Students must satisfy the foreign language requirement: the successful completion of four semesters of one language appropriate to their concentration.
• We strongly encourage students to study abroad. For those students who do not study abroad, an additional 3-unit course at the 300 or 400 level is required.
• Students’ study abroad location and their regional specialization should be consistent with their chosen language of study, if feasible (e.g., students who wish to study in Latin America must satisfy their language requirement with either Spanish or Portuguese).
• All prime IAS majors must complete a capstone experience.

Pol Sci 2010 Introduction to Environmental Policy 3
WGSS 100B Introduction to Women and Gender Studies (*) 3
WGSS 105 Introduction to Sexuality Studies (*) 3

*May only be taken as a third or fourth introductory course.

Advanced courses (choose eight to 10 courses from current internationally focused course offerings in the following departments. All courses must be approved by the student’s IAS adviser in order to count for the major):

- African and African-American Studies
- Anthropology
- Comparative Literature
- Earth and Planetary Sciences
- East Asian Languages and Cultures
- Economics
- Environmental Studies
- History
- International and Area Studies
- Philosophy
- Political Science
- Women, Gender and Sexuality Studies

Additional Information

Language Requirement for the Major in Sustainable Development/International and Area Studies: All IAS majors and minors must satisfy a foreign language requirement that entails the successful completion of four semesters of a language appropriate to their concentration while at Washington University. For some students, this may mean the first four semesters of a language; for others who place into advanced language classes this may include literature, culture, oral communications and linguistic courses in the target language, once they complete the basic language sequence. Advanced courses in literature, social sciences and culture used to satisfy this requirement may be counted as advanced credit for IAS majors and minors as long as they are cross-listed with IAS or approved for IAS study abroad credit and are not applied toward a language major or minor. A maximum of two of these classes may be completed while abroad on a Washington University approved program in the target language (may be within the same semester abroad). Native speakers of a foreign language must satisfy the four-semester requirement in another language appropriate to their concentration. Heritage speakers must seek appropriate placement by the coordinator of the language program and complete the four-semester requirement.

Study Abroad: Majors are strongly encouraged to study abroad in one of Washington University’s Overseas Programs during junior year or the summer. Some credit for courses taken abroad may be applied to the major. For those who do not study abroad, an additional 3-credit course at the 300 or 400 level is required.

Senior Honors: Students must confidently expect to graduate with an overall GPA of 3.65 or higher in order to qualify for Senior Honors. Students should enroll in IAS 485 Preparation for IAS Honors Thesis in the fall of senior year (under the corresponding section number of the faculty member overseeing your thesis), and in IAS 486 IAS Senior Honors Thesis in the spring of senior year in order to be properly tracked by the IAS capstone coordinator.

Italian

Students who are lovers of ancient Rome or Renaissance Florence, of soccer, pasta or Petrarch will find something for them in the Italian program. Our undergraduate curriculum affords preparation in language, literature and culture as well as opportunities for travel and study abroad. We offer a rich variety of courses in Italian language, literature and culture, with particular attention to their relation to history, politics and the arts. Our summer, semester and year-long study abroad programs in the Castelraimondo (Le Marche) and Padua also will enable students to immerse themselves in Italian culture, thereby deepening their understanding of it. The study of Italian will prepare students for a career in international business, international medicine, international law, international relations or diplomacy, as well as in the fine arts and teaching. Italian majors who plan to apply to professional schools or to pursue graduate studies in Italian literature, comparative literature, philosophy, history, art history, music, film or other related fields are encouraged to pursue independent research in the senior year. Writing a senior honors thesis will provide students with a unique opportunity to apply the knowledge they acquire in their courses to a topic of their choosing, through close collaboration with a member of our faculty. In this and all aspects of students’ preparation, we take an active interest in them, providing support and encouragement throughout their studies as they become dynamic, conscientious and informed members of today’s global community. Nor is our program limited to the courses we teach. We also offer ongoing series of lectures, films and artistic performances, as well as student-organized social activities through ITALO, our student organization, all of which contribute to the intellectually dynamic and personally rewarding social environment of our section. Benvenuti a tutti!

**The Major in Italian**

**Total units required:** 30 (27 for second majors). Of these 30 units, three may be taken outside of the Italian department (L36) with the approval of the major adviser.

**Required courses (in Italian):**

- Ital 307D Grammar and Composition I 3
- Ital 308D Grammar and Composition II 3
- Ital 323C Italian Literature I 3
- Ital 324W Italian Literature II — Writing-Intensive 3
- Ital 327 History of the Italian Language 3
- Two Italian 400-level seminars 6

Students who take Ital 201 at the university may count it as one course toward the major (out of nine for the second or 10 for the prime).

**Additional Information**

Students must maintain an average of B– or better and must maintain a B or better in Italian. Courses taken credit/no credit do not count toward the Italian major.

**Study Abroad:** Students are strongly encouraged to participate in a study abroad program. Our six-week summer program is in Castelraimondo in the Marche region (http://rll.wustl.edu/italian/castelraimondo). Our semester abroad program is affiliated with Boston University’s Centro in Padua. These programs are considered in residence.

**Senior Honors:** Students are encouraged to work toward Latin Honors (cum laude, magna, summa). To qualify for Latin Honors in the major by thesis, a student must complete special literary research and prepare and orally defend an Honors thesis, which is judged by an Honors faculty committee. To qualify for Latin Honors by course work, a student must enroll in: 1) Italian 4951 (Senior Honors, fall of senior year); and 2) Italian 495 (Senior Honors, spring of the senior year). Recommendations for Honors are based on performance and the quality of the thesis, plus the student’s cumulative grade point average. (See departmental guidelines for more information about Latin Honors.)

**Transfer Credits:** 18 of the 30 units required for the major must be taken in residence. Non-WUSTL courses may count toward the major only with departmental permission.

**The Minor in Italian**

**Total units required:** 21

**Required courses (in Italian):**

- Ital 307D Grammar and Composition I 3
- Ital 308D Grammar and Composition II 3

**Two of the following courses:** (6 units)

- Ital 323C Italian Literature I 3
- Ital 324W Italian Literature II — Writing-Intensive 3
- Ital 327 History of the Italian Language 3

**Elective courses:**

- Ital 299 Independent Study (Summer Institute)
- Ital 301 Oral Communication I
- Ital 319 Advanced Conversational Italian
- Ital 3221 Topics: The Jewish Experience in Italy
- Ital 3224 From Basilisks to Botticelli: The Development and Politics of Museums in Italy
- Ital 332 Topics in Film Studies: Italian Cinema
- Ital 350 Special Topics in Italian Literature and Culture
- Ital 428 The New Sicilian School
- Ital 430 Divergent Voices: Italian Women Writers
- Ital 433 Literature of the Italian Enlightenment
- Ital 437 Caffe, Cadavers, Comedy and Castrati: Italy in the Age of the Grand Tour
- Ital 473 Machiavelli and Guicciardini
- Ital 481 Dante
- Ital 483 Boccaccio: Decameron
- Ital 485 Ariosto: Orlando Furioso
- Ital 491 Postmodernism
- Ital 492 The Italian Detective Novel

**Additional Information**

Students must maintain an average of B– or better and must maintain a B or better in Italian. Courses taken credit/no credit do not count toward the Italian major.

Students are strongly encouraged to participate in a study abroad program. Please refer to the Italian page on the Romance Languages home page (http://rll.wustl.edu) for more information on Italian study abroad programs.

**L36 Ital 1015 Introductory Italian for Visual Arts**

This course offers an introduction to the study of Italian in an art and art-historical context. Students learn methods of oral communication in everyday situations and a working vocabulary for the visual arts: drawing, painting, sculpture, architecture, photography, the museum, etc. By semester’s end students are able to talk and write about works of art — either their own or others’ — in Italian.

**Credit 4 units.** A&S : LA A&S : IQ, LCD, LS
L36 Ital 101D Elementary Italian, Level I
Beginning language program stressing rapid acquisition of spoken ability, with some attention to the development of reading, writing and listening skills as well. Designed for students with no prior knowledge of Italian or minimal experience in another Romance language. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L36 Ital 102D Elementary Italian, Level II
Continuation of Ital 101D. Course stresses rapid acquisition of spoken ability with increased attention to the development of reading, writing and listening skills. Prerequisite: Ital 101D or placement by examination. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L36 Ital 106D Accelerated Beginning Italian I
Designed for students whose previous study of French or Spanish enables them to grasp the principles and rules of Italian grammar more efficiently. Emphasis on all four language skills: speaking, listening, reading, writing. Prerequisites: undergraduates, four years of high school French or Spanish, or French/Span 201D; no prerequisite for graduate students in Romance languages; graduate students in other fields admitted by permission of instructor. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L36 Ital 107D Accelerated Elementary Italian II
Continuation of Italian 106D. Designed for students whose previous study of French or Spanish enables them to grasp the principles and rules of Italian grammar more efficiently. Emphasis on all four language skills: speaking, listening, reading, writing. Prerequisite: Italian 106D or permission of instructor. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L36 Ital 201D Italian, Level III
This course offers an intensive review of the basics of Italian grammar and introduces new features of Italian necessary for the advancing student. Readings appropriate to the third semester complement the grammar study. Students speak and write in Italian at all times in an effort to integrate what they have learned. Regular compositions and exams, as well as a final exam. Prerequisite: Ital 102D or higher. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L36 Ital 215 Conversation/Culture
This course examines popular culture through a focus on what is said and performed. The course consists of thematic units focusing on everyday occurrences and themes that mark the Italian experience, such as conversation in the Italian bar; poignant views of life expressed in films and other media; daily experiences depicted in poems and songs; public and private politics; the role of the meal in real life, art and literature. As students advance through each thematic module, they develop a creative project in which they put into practice (by a skit/presentation/text/art work) what they have learned. Prerequisite: Ital 102D or the equivalent. Credit 3 units. A&S : LA A&S : IQ, LCD BU : IS

L36 Ital 216 Conversation
A continuation of Ital 215, this course emphasizes the development of speaking skills in Italian through study of aspects of contemporary Italian culture in particular art, music, film and politics. Credit 2 units.

L36 Ital 247 Freshman Seminar
Taught in English. Small group seminar devoted to readings and study of other texts such as films, paintings, etc.; discussion and writing. Topics vary; interdisciplinary focus. Credit 3 units.

L36 Ital 249 Refracted Light: How Others View Italy
Throughout the centuries Italy has both enjoyed and suffered the fascinated gaze of foreigners, who have written about it, painted it, made music and films about it. Drawing principally on prose writings from the 18th through the 20th centuries, in such varied genres as the short story, the novel, the mystery novel, travel writing and the memoir, this course examines the images of Italy that non-Italians project. Beyond learning about Italy, students consider their own “idea” of Italy, examine their own frame of reference and cultural biases, interrogate a variety of stereotypes, and ponder how well one can truly understand a place as an outsider or reader. Authors studied include Stendhal, Dickens, James and Forster and Mann, as well as such contemporary writers as Michael Dibdin and Shirley Hazzard. Credit 3 units. A&S : TH A&S : IQ, HUM, LCD BU : HUM

L36 Ital 2991 Undergraduate Independent Study
Prerequisite: Ital 201D and permission of the department. No more than 6 units may be earned by a student. Credit 3 units.

L36 Ital 301 Oral Communication I
Designed to offer students an opportunity to practice and refine their conversational skills while expanding their practical vocabulary. Wide variety of topics for discussion; brief oral reports. Regular homework assignments with emphasis on web-based research and learning. Prerequisite: Ital 201D. Credit 3 units. A&S : LA A&S : IQ, LCD BU : IS EN : H
L36 Ital 307D Grammar and Composition I
This course features advanced lessons in Italian grammar and vocabulary and an introduction to prose analysis, with the goal of improving both reading and writing in Italian. The basis of our work is a series of readings of major 19th- through 21st-century literary works. Grammar exams and regular composition assignments. Essential for further study of Italian language and literature, this course must be taken before or concurrently with Ital 323C and 324C. Prerequisite: Ital 201D or permission of instructor.
Credit 3 units. A&S : IA, LA A&S : IQ, LCD, LS BU : HUM, IS

L36 Ital 308D Grammar and Composition II
A continuation of Italian 307D, this course features advanced lessons in Italian syntax and vocabulary and an introduction to the analysis of poetry and theatrical texts, with the goal of improving both reading and writing in Italian. The basis of our work is a series of readings having a common theme, desire requited and unrequited. We think about what poets desire, how they give verbal expression to it, and how the success or failure of their pursuit informs their writing. Likewise we look at how playwrights exploit this theme as a plot device. Readings include poetry by Petrarch, Michelangelo, Tasso and Montale, as well as two comedies. Grammar exams and regular composition assignments; final exam. Essential for further study of Italian language and literature, this course must be taken concurrently with Italian 323C or 324C. Prerequisite: Ital 307D or permission of instructor.
Credit 3 units. A&S : IA, LA A&S : IQ, LCD, LS BU : HUM, IS

L36 Ital 310 Advanced Italian Grammar in Padua
This advanced Italian grammar course is taught every year in the Boston University program in Padua, Italy, with which Washington University is affiliated. The course allows students to further their mastery of Italian grammar and syntax, in order to achieve a level of full satisfaction of comprehension and active communication. Readings include newspaper articles and literary essays; students write brief compositions while taking weekly tests. Open only to Washington University students enrolled in the Padua, Italy, program with Boston University.
Credit 4 units.

L36 Ital 311 Introduction to Contemporary Italy
This course is taught every year in the Boston University program in Padua, Italy, with which Washington University is affiliated. The course focuses on refining students’ ability to express themselves in Italian while presenting an overview of the history and society of contemporary Italy. Readings include works by authors who are particularly significant to Italian literature of the 20th century, as well as an array of other materials. Open only to Washington University students enrolled in the Padua, Italy, program with Boston University.
Credit 4 units.

L36 Ital 319 Advanced Conversational Italian
Designed to offer students with strong proficiency in Italian an opportunity to practice and refine their conversational skills through the study, rehearsal and performance of theatrical scenes or an Italian comedy from the repertoire of such chief literary figures as Machiavelli, Goldoni, Pirandello, Natalia Ginzburg and Dario Fo. Prerequisite: Ital 215 or placement by examination.
Credit 3 units. A&S : LA A&S : IQ, LCD BU : IS

L36 Ital 321 Independent Study
Credit variable, maximum 3 units.

L36 Ital 322 Topics
Same as Drama 3221. A multidisciplinary course focusing on a significant aspect of Italian culture. The topic differs from semester to semester and may draw on art, film, history, gender studies, literature, music, philosophy, politics, science. Prerequisite: previous or concurrent enrollment in Ital 307D.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD BU : HUM

L36 Ital 3221 Topics: The Jewish Experience in Italy
This course examines the social and political history of the Jews of Italy from the period of Italian unification through the end of World War II. We look through two different prisms: first, the constant of Jews’ minority status in a Catholic country at a time when Church doctrine was hostile to them, and second, their changing status during significant moments in the brief history of the Italian monarchy. Under the latter rubric, we study the rehabilitation of the Jews under liberal political philosophies, their problematic relationship with Fascism, and finally the arrival of the Holocaust in Italy and efforts to defend Jews against Nazi genocide. We approach these topics wherever possible through primary texts, including essays, memoirs and novels. Reading knowledge of Italian is not required. Readings in English; some readings in Italian for Italian majors. Discussion in English. Three five-page papers. Please note: the Ital 5221 cross-listing course is for graduate students only. Prerequisite for Italian majors: Ital 307D; no prerequisite for students in other majors.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD

L36 Ital 3224 Topics: From Basilisks to Botticelli: The Birth, Development and Politics of Museums in Italy
This course investigates the rise and cultural authority of museums in Italy from the Renaissance to the 20th century. The course unfolds chronologically, beginning with the distant precursors and etymological roots of the museum in ancient Alexandria and Rome. We trace the origins of the museum in the art collection and patronage that surged during the Renaissance, including the 16th- and 17th-century Curiosity Cabinet with its fossils, mythical basilisks, gems and weapons and church displays of religious and classical art. We study
the establishment during the Enlightenment in Italy of the first public art museums epitomized by the Vatican Museums, the Uffizi Gallery and the Capitoline Museums. We conclude by examining the impact on national and cultural identity of Fascist propaganda museums instituted under Mussolini's regime. No prerequisites.
Credit 3 units. A&S : TH A&S : IQ, HUM

L36 Ital 323C Italian Literature I
Introductory survey of Italian literature from its beginnings in the Middle Ages through the late Renaissance. Analysis of the predominant genres: lyric, religious narrative, novella, treatise, chivalric epic. Previous or concurrent enrollment in Ital 307D or 308D recommended. Prerequisite: Ital 201D.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD BU : HUM, IS FA : Lit

L36 Ital 323W Italian Literature I — Writing-Intensive Seminar
Introductory survey of Italian literature from its beginnings in the Middle Ages through the late Renaissance. Analysis of the predominant genres: lyric, religious narrative, novella, treatise, chivalric epic. This is a writing-intensive version of the previously offered course Ital 323C. Prerequisite: Ital 201D. Previous or concurrent enrollment in Ital 307D or 308D recommended.
Credit 3 units. A&S : TH, WI A&S : IQ, HUM, LS EN FA : H

L36 Ital 324W Italian Literature II — Writing-Intensive
Framed by the age old questions of Italian national identity and language, this introductory literature course undertakes a chronological survey of the history of Italian literature from the 1600s to the present day. We study select works by major authors, including Galileo Galilei’s “heretical” dialogues, the realistic comedies of Carlo Goldoni, poems and essays by the Romantic poet Giacomo Leopardi, the revolutionary dramas of Luigi Pirandello, the Futurist’s celebration of speed, war and technology in the visual and literary arts, and the postmodern fiction of Italo Calvino. This is a writing-intensive version of the previously offered course Ital 324C. Prerequisite: Ital 201D. Previous or concurrent enrollment in Ital 307D or 308D recommended.
Credit 3 units. A&S : TH, WI A&S : IQ, HUM, LCD, WI, LS

L36 Ital 327 History of the Italian Language
In this course we trace the evolution of Italian from its very earliest written manifestations to its increasing internationalization in the 20th and 21st centuries. We study the natural evolution of Italian up until the 16th century; its codification as a literary language during the 16th century; the debates over the institution of a national language that coincided with the unification of Italy in the 19th century; the recovery of dialects as literary languages in the 20th century; and the more recent incorporation of words and phrases originating outside of Italy. Along the way we come to understand the reasons why we study a particular form of Italian in school, and we consider the implications of these choices not only for our own learning but for Italian literature and its sense of nationhood.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD, LS

L36 Ital 332 Topics in Film Studies: Italian Cinema
The evolution of Italian cinema from its origins to the present. Study of cinematic works and periods from a variety of theoretical perspectives. Specific areas of discussion include: cinema as a revolutionary aesthetic; mass culture vs. high art; early genre; divismo (stardom); the avant-garde; the advent of film sound; the representation of politics and history; neorealism; postwar popular genre; modernism; metacinema; literary adaptation; postmodernism. Discussions are based on works by major Italian filmmakers such as Passtrone, Bissetti, Rossellini, De Sica, Visconti, Fellini, Antonioni, Monicelli, Leone, Pasolini, Bertolucci, Nichetti, Moretti. Some emphasis on the relationship between literature and film. Course conducted in English: Italian majors read in Italian, others in English translation. Two to three hours of film-viewing plus three class hours a week. Taught in English. Prerequisite for Italian majors: Ital 307D or permission of instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD BU : IS FA : AH, Lit

L36 Ital 334 Topics in Italian Cinema
A companion to Ital 332, this course focuses on a select topic in the history of Italian cinema, such as the work of a single director or a significant cinematic movement. Course conducted in English. Italian majors read in Italian, others in English translation. Prerequisite for Italian majors: Ital 307D. Prerequisite for nonmajors: Ital 332, Film 220, or permission of instructor.
Credit 3 units. A&S : TH BU : IS FA : AH

L36 Ital 404 Senior Independent Study in Italian
Prerequisites: senior status; Ital 307D, 308D, 323C, 324C; and permission of instructor.
Credit 3 units. A&S : TH

L36 Ital 419 Feminist Literary and Cultural Theory
This course is intended to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. NOTE: This course is in the core curriculum for the Women, Gender and Sexuality Studies graduate certificate. Prerequisite: advanced
course work in WGSS or in literary theory (300-level and above) or permission of the instructor.
Credit 3 units.  A&S : TH  A&S : IQ, HUM

**L36 Ital 428 The New Sicilian School**
The unification of Italy in the mid-19th century led to the creation of a new “Sicilian School,” the first since that of the court poets associated with Frederick II in the 13th century. These new Sicilian writers have given us many narrative masterpieces, focusing on common concerns such as the island’s identity over two millennia and the impact of Italian nationalism; the rise of bourgeois culture and the decline of indigenous patriarchal structures; the rule of law and the role of the Mafia; and the politics of language. We read novels by Verga, Pirandello, Vittorini, Brancati, Tomasi di Lampedusa and Sciascia. Course taught in Italian or English.
Credit 3 units.  A&S : TH, WI  A&S : IQ, HUM, LCD  FA : Lit

**L36 Ital 430 Divergent Voices: Italian Women Writers**
This course examines select novels and theoretical and political writings by and about Italian women writers from the 17th century to the present day. The aim of the course is to familiarize students with the rich literary production, cultural influence, and artistic and political views of Italian women writers through history. In order for students to understand the distinct circumstances that influenced the production of these texts, special attention is paid to the historical, political and cultural contexts that influenced authors and their work. A major emphasis is placed on the acquisition of skills of literary analysis by exploring themes, styles and rhetorical and narrative structures. Students are expected to familiarize themselves not only with the primary texts of the course but with secondary sources as well. A workshop environment is encouraged wherein instructor and students work cooperatively toward the realization of course goals. Taught in English.
Credit 3 units.  A&S : TH, SD  A&S : IQ, HUM, LCD  FA : Lit

**L36 Ital 432 Divergent Voices: Italian Women Writers**
This course examines select novels, poetry and political writings by such noted authors as Sibilla Aleramo, Dacia Maraini, Luisa Muraro and Anna Banti. Special attention is paid to the historical, political and cultural contexts that influenced authors and their work. Textual and critical analysis focuses on such issues as historical revisionism in women’s writing, female subjectivity and the origins and development of contemporary Italian feminist thought and practice. Taught in English.
Credit 3 units.  A&S : TH, SD, WI  A&S : IQ, HUM, LCD, SD  FA : Lit

**L36 Ital 433 Literature of the Italian Enlightenment**
This course aims to explore the spectrum of intellectual and literary discourse of the Italian Enlightenment by examining a wide array of texts and genres. Readings include selections from Enlightenment and popular periodicals, scientific tracts on human anatomy, women’s fashion magazines, the reformed theater of Carlo Goldoni, as well as Arcadian poetry, and literary criticism. We study the rise and characteristics of “coffee culture” during this age. We pay special attention to the “woman question,” which stood at the center of 18th-century Italian intellectual discourse, and which was critical to the contemporary drive to define the enlightened nation-state. The class is conducted as a workshop in which students and instructor collaborate in the realization of course goals. Readings in Italian or English; discussion in English. Prerequisite: Ital 323C or Ital 324C.
Credit 3 units.  A&S : TH, WI  FA : Lit

**L36 Ital 437 Caffe, Cadavers, Comedy and Castrati: Italy in the Age of the Grand Tour**
Taught in English. With French libertine philosopher the Marquis de Sade, German novelist Johann Wolfgang von Goethe, Romantic poet Lord Byron and other illustrious travelers of high birth and good fortune who sought finishing enrichment by making their Grand Tour to Italy from the mid-18th through the early 19th centuries, we explore the richness and variety of Italian life and culture as depicted by both Grand Tourists as well as their Italian interlocutors. Chief among our destinations are Venice, Bologna, Florence and Rome. Attractions typical of the early modern Tour circumscribe our journey. Coffee houses first appeared in the eighteenth century and, in ways strikingly similar to their function today, became the real and symbolic centers of social, intellectual and civil exchange. We explore 18th-century coffee culture through comedies and Enlightenment and popular journals that took them as their theme, as well as through a study of the coffee houses themselves, a number of which are still in existence. Theaters, concert halls, gaming houses, literary and scientific academies, galleries, churches and universities are part of the standardized itinerary we follow. During the period, anatomy and physiology attained new legitimacy as crucial scientific disciplines and we visit both the anatomical theater at the University of Bologna, where the annual Carnival dissection took place, as well as the first museum of anatomy and obstetrics founded in the Bolognese Institute of Sciences in 1742 by Pope Benedict XIV. We visit archeological excavation sites, in particular Pompeii, first unearthed in 1748. Fashion, an obsessive preoccupation of the day, also is a point of interest in our travels. Through primary and recently published secondary sources we also encounter the remarkable authority of Italian women unmatched anywhere else in Europe at the time. Readings in Italian or English. Prerequisite: at least one 300-level literature course.
Credit 3 units.  A&S : TH, WI  A&S : IQ, HUM, LCD  BU : HUM
### L36 Ital 456 Romance Philology
Same as French 456  
Credit 3 units.  A&S : LA

### L36 Ital 473 Machiavelli and Guicciardini
The development of modern political science in 16th-century Italy. We address questions of both theory and methodology in Machiavelli’s and Guicciardini’s political visions. We also pay close attention to the Florentine context of their work, as well as to the influence of historical examples, both classical and contemporary, in the development of their analyses. Finally, we ask how the examples they set, and the theories they promulgate, can have resonance in addressing political questions in our own age. Readings in Italian or English; discussion in English.  
Credit 3 units.  A&S : TH , WI  A&S : IQ , HUM , LCD  FA : Lit

### L36 Ital 481 Dante
This course features an in-depth approach to Dante’s “Inferno,” the first, and in many ways the most famous, of the three parts of the “Divina Commedia.” We study the structure of the poem as well as the structure of Dante’s Hell, his verse form and use of the vernacular, his notion of sin and punishment and its relation to the theological traditions of which he is an heir. Because so much of the poem is rooted in and extends Dante’s autobiography — literary, sentimental and political — we also read two other important texts by him, his early “Vita nuova” (New Life) and his political treatise, “Monarchy.” Reading knowledge of Italian helpful but not required. Course conducted in English.  
Credit 3 units.  A&S : TH  A&S : IQ , HUM , LCD  FA : Lit

### L36 Ital 483 Boccaccio: Decameron
The unrivaled master of late medieval Italian prose, Boccaccio is also a strikingly modern author whose works address such questions as the relationship between literature and history; God and man; storyteller and audience; gender, language and power; literature and truth. With these and other concerns in mind, we read his masterpiece, the Decameron, a collection of 100 tales set in the Black Plague of 1348. We then contrast it to his late Corbaccio, ostensibly a misogynist novel but a text that finally resists such a flattening judgment. Readings in Italian or English; discussion in English. Prerequisite: 3 units of literature.  
Credit 3 units.  A&S : TH , WI  A&S : IQ , HUM , LCD  FA : Lit

### L36 Ital 485 Ariosto: Orlando Furioso
A close reading of this Renaissance masterpiece with attention to questions of structure and sources, the themes of love and madness, the representation of court life. Readings in Italian or English; discussion in English.  
Credit 3 units.  A&S : TH  A&S : IQ , HUM , LCD  FA : Lit

### L36 Ital 491 Postmodernism
This course explores the complex significance of Italian Postmodernism through an examination of the theoretical arguments and literary works that have shaped the cultural and political debate of the past 50 years. Students study, among others, the critical theories of “open work” (Umberto Eco), “literature as lie” (Manganelli), and “weak thought” (Gianni Vattimo) that developed from the neo–avant-garde movement of the 1960s. Analysis focuses on the novels of four authors who have had a defining influence on Italian postmodern thought and narrative forms: Carlo Emilio Gadda, Italo Calvino, Luigi Malerba and Umberto Eco. Course conducted in English; Italian majors read in Italian, others in English translation. Prerequisite for Italian majors: Ital 307D or permission of instructor.  
Credit 3 units.  A&S : TH

### L36 Ital 492 The Italian Detective Novel
The detective novel has an unusual and exceptionally brief history in Italy. Only within the past 35 years has an Italian version or, more precisely, subversion of the genre emerged and come to dominate the Italian literary scene. Prominent Italian writers such as Italo Calvino, Umberto Eco, Leonardo Sciascia and Luigi Malerba have deconstructed the conventions of the detective novel in order to portray the disorder and arbitrary meaning of the postmodern world. This course explores the history of the “anti-detective” novel in Italy and the philosophical and political questions the genre evokes. Readings in Italian and English. Conducted in English.  
Credit 3 units.  A&S : TH , WI  FA : Lit

### L36 Ital 495 Senior Honors

### Japanese
The Department of East Asian Languages and Cultures offers a major and a minor in Japanese Language and Culture. As a major in Japanese, a student can expect to gain proficiency in the language, study the area’s literary and cultural landmarks, and gain familiarity with Asian history and civilizations. All students majoring in Japanese normally must complete the fourth-level modern language course or its equivalent. They also must complete a prerequisite 200-level foundational course, at least one semester of classical Japanese, and the literature survey sequence. In addition, all primary majors must
complete the required EALC Capstone Experience. Minors must complete at least two years of modern Japanese. They also must complete the prerequisite 200-level foundational course and the literature survey sequence.

The department strongly encourages overseas study during students’ junior year. All majors and minors are expected to maintain at least a B– average in all departmental courses.

**Language Placement:** Placement tests are required for all students entering our language programs, with the exception of those students who have had no previous knowledge of the language and are planning to enroll in the first semester of the first year of instruction. Students who test into second-year Japanese and satisfactorily complete (with a grade of B– or better) at least one semester of language study may petition for 3 units of retroactive credit; students who test into third year or above and satisfactorily complete (with a grade of B– or better) at least one semester of language study may petition for 6 units of retroactive credit. Credit is limited to 3 units for testing into second year and 6 units for testing into third year or above.

Please note that students with native language proficiency as determined by the individual language section, as well as students who enroll in courses below their placement level, are ineligible for retroactive credit units. Students who misrepresent their language proficiency so as to gain entrance to a course at the elementary or intermediate level will be dropped from that course.

**Phone:** 314/935-4448
**E-mail:** ealc@artsci.wustl.edu
**Departmental website:** http://ealc.wustl.edu/

For a list of affiliated faculty, please see the Department of East Asian Languages and Cultures faculty (p. 336) page.

**The Major in Japanese Language and Culture**

**Units required:** 27 upper-level (300-level or above) units, no more than 12 of which may be in language.

**Prerequisites:**
1. First- and second-level Modern Japanese or the equivalent
2. Japan 226C Japanese Civilization

**Requirements:**
2. A minimum of one semester of Pre-modern Japanese (Japan 460 Pre-Modern Japanese I or Japan 461 Pre-Modern Japanese II) or the equivalent. Japanese 460 can only be counted as a language course; Japanese 461 may be counted as either a language or a literature course.
4. Three additional upper-level courses in Japanese literature and/or culture
5. Senior Capstone Experience. All students for whom Japanese is a primary major may satisfy their capstone requirement in one of two ways, both of which require participation in the EALC Senior Symposium in the spring.
   a) Successful completion of a senior honors thesis. This option, which also entitles the student to Latin Honors, requires a minimum of a 3.65 GPA. The thesis is researched and written over two semesters, for a total of 6 units, which are in addition to the 27 upper-level units required for the major.
   b) Successful completion of an approved 400-level seminar course, to be taken in the senior year. (This course may be included among the three additional required upper-level courses for the major.)

Please note that all majors, including second majors, must participate in the EALC Senior Symposium.

**Additional Notes**
1. Students must earn at least a B– in language courses in order to continue to the next level. They must also maintain at least a B– average in all required courses for the major. Students who do not meet this requirement may either repeat the course(s) in question or earn at least a B– in an approved equivalent course or courses (either during the summer or in a study abroad program).
2. Courses for the major may not be taken Credit/No Credit.
3. Normally, no more than 6 units of transfer or study abroad non-language courses may be applied to the major.
4. Normally, no more than 3 units of Independent Study may be counted toward the required upper-level 27 units.

**The Minor in Japanese Language and Culture**

**Units required:** 18 units, no more than 12 of which may be in language.

**Requirements:**
- At least two years of modern Japanese or the equivalent
- At least 9 units must be 300-level or above
- And the following three courses:
   - Japan 226C Japanese Civilization 3
   - Japan 332C The Classical Voice in Japanese Literature 3
   - Japan 333C The Modern Voice in Japanese Literature 3
Additional Information

- Students must earn at least a B– in their language courses in order to continue to the next level. They also must maintain at least a B– average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course(s) in question or successfully complete an approved equivalent course or courses (either during the summer or in a study abroad program).
- Courses for the minor may not be taken Credit/No Credit.
- Normally, no more than 3 units of transfer or study abroad non-language courses may be applied to the minor.

L05 Japan 103D First-Level Modern Japanese I
An introduction to spoken Japanese following a systematic study of grammatical structures presented in context. Emphasis is on developing skills in oral communication through performance. Students with some previous Japanese language background must take the placement examination.
Credit 5 units.  A&S : LA  A&S : IQ, LCD, LS  BU : HUM, IS

L05 Japan 104D First-Level Modern Japanese II
Continuation of Japan 103D. An introduction to spoken Japanese following a systematic study of grammatical structures presented in context. Emphasis is on developing skills in oral communication through performance. Prerequisite: grade of B– or better in Japan 103DQ.
Credit 5 units.  A&S : LA  A&S : IQ, LCD, LS  BU : HUM, IS

L05 Japan 213 Second-Level Modern Japanese I
Continued development of communication skills with special emphasis on speaking. Students develop reading/writing skills with an additional 300 kanji during the year. Prerequisite: grade of B– or better in 104DQ or placement by examination.
Credit 5 units.  A&S : LA  A&S : IQ, LCD, LS  BU : HUM, IS

L05 Japan 214 Second-Level Modern Japanese II
Continuation of Japan 213. Continued development of communication skills with special emphasis on speaking. Students develop reading/writing skills with an additional 300 kanji during the year. Prerequisite: grade of B– or better in Japan 213 or placement by examination.
Credit 5 units.  A&S : LA  A&S : IQ, LCD, LS  BU : HUM, IS

L05 Japan 221 Topics in Japanese Literature and Culture
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD

L05 Japan 222 Topics in Pre-Modern Japanese Literature
Credit 3 units.  A&S : TH

L05 Japan 226C Japanese Civilization
The development of Japanese culture from antiquity to the present: an overview of Japanese cultural history, focusing on the interplay of crucial aspects of contemporary Japanese society and Japanese social psychology.
Credit 3 units.  A&S : TH, CD, SD  A&S : IQ, HUM, LCD

L05 Japan 299 Independent Study
Prerequisite: Japan 213 and permission of the department. Credit variable, maximum 6 units.

L05 Japan 320C Japan Since 1868
Same as History 320C
Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD  BU : IS  FA : SSP

L05 Japan 324 A User’s Guide to Japanese Poetry
This course introduces the art and craft of Japanese poetry, one of the world’s great literary traditions. Exploring the many styles of traditional verse — the poetic diary, linked verse, haiku and others — and their historical contexts, we gain insights into Japanese aesthetics and study the unique conventions of Japanese poetic production that have evolved over a span of some 1500 years. The course also incorporates a “haiku workshop,” in which we engage in group-centered poetry writing and critiquing. No prior knowledge of Japanese is required.
Credit 3 units.  A&S : LA  A&S : IQ, LCD  BU : HUM

L05 Japan 332C The Classical Voice in Japanese Literature
This survey of Japanese literature covers antiquity to the 17th century. Emphasis on the ideological and cultural contexts for the emergence of a variety of traditions, including poetry, diaries, narrative and theater. Required of all Japanese majors and recommended for all Chinese majors. No knowledge of Japanese language is required. Sophomore standing and above recommended.
Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD  BU : HUM  FA : Lit

L05 Japan 333C The Modern Voice in Japanese Literature
This survey explores the emerging modern voice in Japanese literature, with emphasis on prose fiction. After a brief introduction to earlier centuries, we focus on the short stories and novels of the 20th century. Among the authors considered are Natsume Soseki, Nagai Kafu, Tanizaki Jun’ichiro and Nobel laureates Kawabata Yasunari and Oe Kenzaburo. Discussions center on issues of modernity, gender and literary self-representation. Required of all Japanese majors and recommended for all Chinese majors. No knowledge of Japanese language required.
L05 Japan 336 The Floating World in Japanese Literature
This survey of Japanese literature covers the 17th to the 19th century. Primary focus is on the Genroku era (1688–1703), which witnessed the growth of lively urban centers and the emergence of a robust literary voice. Emphasis on the ideological and cultural contexts for the development of a variety of new innovations in the genres of poetry (haiku), theater (kabuki and bunraku) and prose (kana zoshi). Recommended for both Japanese and Chinese majors. No knowledge of Japanese language is required. Sophomore standing and above recommended.
Credit 3 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD, SD

L05 Japan 346 Japanese Literature in Translation II
Credit 3 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD, SD

L05 Japan 370 Women Writers at Court: Japanese Examples in Comparative Context
Same as IPH 370
Credit 3 units. A&S : TH A&S : IQ, HUM FA : Lit

L05 Japan 412 Third-Level Modern Japanese I
Emphasis on further development of speaking, listening, reading and writing skills. Prerequisite: grade of B– or better in Japan 214 or placement by examination. Credit 4 units for undergraduates, 3 units for graduate students.
Credit variable, maximum 4 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L05 Japan 413 Third-Level Modern Japanese II
Continuation of Japan 412. Emphasis on further development of speaking, listening, reading and writing skills. Prerequisite: minimum grade of B– in Japan 412 or placement by examination. Credit 4 units for undergraduates, 3 units for graduate students.
Credit variable, maximum 4 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L05 Japan 418 Gender and Sexuality in East Asian Religions
Same as Re St 418
Credit 3 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD EN : H

L05 Japan 445 Japanese Fiction: Writing-Intensive Seminar
A study of the themes, styles and genres of Japanese fiction as revealed in representative works of major authors such as Soseki, Tanizaki and Kawabata. Topics include the question of the Japanese literary canon, the varieties of Japanese literary selfhood, literature by and about women, and tradition versus modernity. All works read in English translation. Prerequisites: junior standing and 6 units of literature.
Credit 3 units. A&S : TH, CD, WI A&S : IQ, HUM, LCD, WI

L05 Japan 446 The Japanese Theater
An investigation, using English materials, of the major developments and forms of the Japanese theater, from Noh and its antecedents to the rise of a modern drama. In this course we are less concerned with the performative aspects of theatrical arts (though these are introduced via videos) than with the ways in which dramatic texts influenced and borrowed from the literary tradition. Readings from major theatrical texts, secondary studies on Japanese theater, and literary sources. Prerequisite: junior standing or permission of instructor.
Credit 3 units. A&S : TH, FA : Lit

L05 Japan 448 Japanese Poetry
A comprehensive survey of Japanese poetry from the 8th century to the present day. Topics include the development of the great tradition of court poetry in the Heian period (ca. 800–1200) and its full flowering during the medieval period (ca. 1200–1600), the influence of the Zen aesthetic, the emergence of linked verse and haiku, and the transformation of the classical tradition with the advent of the modern era. All works are read in English translation, although knowledge of Japanese is useful. Graduate students and Japanese majors are expected to read original materials extensively. Prerequisites: junior standing and 6 units of literature course work.
Credit 3 units. A&S : TH

L05 Japan 449 Modern Japanese Women Writers: WI
Japanese women have been scripted by Western (male) imagination as gentle, self-effacing creatures. From their (re)emergence in the late 19th century to their dominance in the late 20th, Japanese women writers have presented an image of their countrywomen as anything but demure. Struggling to define their voices against ever-shifting expectations and social contexts, the women they create in their fiction are valiant, if not at times violent. This course examines the various manifestations of the female image in female-authored modern Japanese fiction. Writers considered are Higuchi Ichiyo, Hirabayashi Taiko, Uno Chiyoko, Enchi Fumiko, Yamada Eimi and others. A selection of novels and shorter fiction are available in English translation, and students need not be familiar with Japanese. Prerequisites: 6 units of literature/women’s studies.
L05 Japan 4491 Modern Japanese Women Writers
Japanese women have been scripted by Western (male) imagination as gentle, self-effacing creatures. From their (re)emergence in the late 19th century to their dominance in the late 20th, Japanese women writers have presented an image of their countrywomen as anything but demure. Struggling to define their voices against ever-shifting expectations and social contexts, the women they create in their fiction are valiant, if not at times violent. This course will examine the various manifestations of the female image in female-authored modern Japanese fiction. Writers to be considered are Higuchi Ichiyo, Hirabayashi Taiko, Uno Chiyó, Enchi Fumiko, Yamada Eimi and others. A selection of novels and shorter fiction will be available in English translation and students need not be familiar with Japanese. Prerequisite: 6 units of literature/women’s studies and junior standing, or permission of the instructor. Credit 3 units. A&S : TH, CD, SD, WI A&S : IQ, HUM, LCD, SD, WI BU : HUM

L05 Japan 458 Fourth-Level Modern Japanese I
Mastery of more sophisticated skills in spoken and written Japanese. Newspaper articles, editorials, essays, short stories, etc., are selected for readings and discussions in accordance with the interests and needs of participating students. Prerequisite: grade of B– or better in Japan 413 or placement by examination. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L05 Japan 459 Fourth-Level Modern Japanese II
Continuation of Japan 458. Mastery of more sophisticated skills in both spoken and written Japanese. Newspaper articles, editorials, essays, short stories, etc., are selected for readings and discussions in accordance with the interests and needs of participating students. Required of all students desiring subsequent tutorial assistance from the Department. Prerequisite: grade of B– or better in Japan 458 or placement by examination. Credit 4 units for undergraduates, 3 units for graduate students. Credit variable, maximum 4 units. A&S : LA A&S : IQ, LCD, LS

L05 Japan 460 Pre-Modern Japanese I
Readings in classical literary texts using materials from standard modern annotated editions. Kambun introduced in second semester. Prerequisite: Japan 412-413 or concurrent registration. Credit 3 units. A&S : LA A&S : IQ, LCD

L05 Japan 461 Pre-Modern Japanese II
A continuation of Japan 460. Readings in classical literary texts using materials from standard modern annotated editions as well as the introduction of skills necessary for reading original texts, including kambun and hentaigana. Prerequisites: Japan 413 or concurrent registration; Japan 460 or equivalent. Credit 3 units. A&S : LA A&S : IQ, LCD

L05 Japan 462 Fifth-Level Modern Japanese I
A course intended for students with advanced proficiency in written and spoken Japanese who have had extensive study experience in Japan. The course objectives are: to achieve mastery of communication skills, to deepen understanding of Japanese structural patterns, and to expand vocabulary and control of idiomatic expressions. Emphasis on readings in contemporary texts and extensive practice with different styles of oral discourse. Class conducted exclusively in Japanese. Required of all students who wish to do subsequent independent study or guided readings in Japanese. Prerequisite: successful completion of Japan 459 (minimum grade of B–) or placement by written and oral examinations. Credit 3 units. A&S : LA A&S : IQ, LCD BU : IS

L05 Japan 463 Fifth-Level Modern Japanese II
A course intended for students with advanced proficiency in Japanese who have had extensive study experience in Japan. Emphasis on improving skills in both written and spoken Japanese acquired in Japan 462. Class conducted exclusively in Japanese. Prerequisite: grade of B– or better in Japan 462 or placement test in written and spoken Japanese. Credit 3 units. A&S : LA A&S : IQ, LCD

L05 Japan 464 Japanese Textual Analysis
This course introduces the advanced student of Japanese to a variety of prose narratives in the modern language. Readings, which include literary texts and topical essays on aspects of Japanese society and culture, reflect the needs and interests of the enrolled students. Focus is on close reading and syntactic analysis of the selected texts. Regular translation exercises gauge the mastery of grammar, syntax and idiomatic usages. All readings are in Japanese, with class discussion conducted predominantly in English. A final translation project, chosen by the student in consultation with the instructor, is required. Prerequisite: Japan 458 or instructor’s permission. Credit 3 units. A&S : LA A&S : IQ, LCD

L05 Japan 466 Legal and Business Japanese
An intensive exposure to legal and business texts in Japanese, with the aim of developing reading fluency in these areas and mastering the requisite specialized vocabulary. Of particular interest to students in the joint J.D.–M.A. and dual M.B.A.–M.A. programs, but open to all students with advanced proficiency.
in written and spoken Japanese. Prerequisite: Japan 459 or permission of instructor based on placement examination. Credit 3 units. A&S : LA   BU : IS

L05 Japan 471 Topics in Japanese Culture
Same as East Asia 471
Credit 3 units. A&S : TH   A&S : IQ, HUM   EN : H   FA : SSP

L05 Japan 486 Independent Work for Senior Honors
This course is taken in the fall semester. Prerequisites: senior standing, eligibility for honors, and permission of the department. Credit 3 units.

L05 Japan 487 Independent Work for Senior Honors
This course is taken in the spring semester. Prerequisites: senior standing, eligibility for honors, and permission of the department. Credit 3 units.

L05 Japan 491 Topics in Japanese Literature & History
Prerequisite: permission of instructor.
Credit 3 units. A&S : TH   A&S : IQ, HUM, LCD

L05 Japan 4911 Modern Japan and the Invention of Tradition
Same as East Asia 4911
Credit 3 units. A&S : TH   A&S : IQ, HUM

L05 Japan 499 Guided Readings in Japanese
Prerequisites: senior standing and permission of the instructor and the department chair. Course usually taken after successful completion of Japan 459. May be repeated once. Credit variable, maximum 3 units. A&S : LA

and disciplinary approaches and offer courses in language, literature, history, religion, politics and culture.

The department is cross-disciplinary in character, with an emphasis on literary, historical and religious studies. It houses nationally recognized language and literature programs in Arabic, Hebrew, Persian and Hindi/Urdu, which are available as independent undergraduate degree programs. It also features distinctively intertwined interdisciplinary undergraduate majors in Jewish, Islamic and Near Eastern Studies. In addition to undergraduate majors and minors, the department currently offers M.A. programs in Jewish Studies and in Islamic and Near Eastern Studies, and it plans to mount its own Ph.D. programs in the near future.

Assistant Professor of Modern Arabic Literature
PhD, Yale University

As majors in one of the Near Eastern languages and literatures (Arabic, Hebrew, Persian or Jewish, Islamic and Near Eastern Studies), students can expect to gain proficiency in one or more Near Eastern languages, study the area’s literary and cultural landmarks, and gain familiarity with Jewish, Islamic and Near Eastern history and civilizations.

**The Majors**

For information on the major in Arabic, see the Arabic (p. 226) page of this bulletin.

For information on the major in Hebrew, see the Hebrew (p. 447) page of this Bulletin.

For information on the major in Jewish, Islamic and Near Eastern Studies, see the Jewish, Islamic and Near Eastern Studies (p. 558) page of this Bulletin.

For information on the major in Persian Language and Literature, see the Persian Language and Literature (p. 629) page of this Bulletin.

**The Minors**

For information on the minor in Arabic, see the Arabic (p. 227) page of this Bulletin.

For information on the minor in Hebrew, see the Hebrew (p. 448) page of this bulletin.

For information on the minor in Jewish, Islamic and Near Eastern Studies, see the Jewish, Islamic and Near Eastern Studies (p. 559) page of this Bulletin.

For information on the minor in Persian Language and Literature, see the Persian Language and Literature (p. 630) page of this Bulletin.
For information on the minor in South Asian Languages and Culture (Hindi), see the Hindi (p. 451) page of this Bulletin.

For Arabic courses, see the Arabic (p. 227) page of this Bulletin.

For Hebrew courses, see the Hebrew (p. 448) page of this Bulletin.

For Jewish, Islamic and Near Eastern Studies courses, see the Jewish, Islamic and Near Eastern Studies (p. 559) page of this Bulletin.

For Persian courses, see the Persian (p. 630) page of this Bulletin.

Jewish, Islamic and Near Eastern Studies

Jewish, Islamic and Near Eastern Studies is an interdisciplinary program whose purpose is to explore the historical experience; literary, religious and cultural expression; and political and material life of the Jewish, Islamic and Near Eastern civilizations. Our program is unique in the United States because it integrates Islamic studies and Jewish studies. Whether students favor the study of language, literature, religion, history or politics, they will find in our courses a way to deepen their appreciation of these complex and diverse societies and cultures. Students also will be encouraged to explore the interaction of Jews and Muslims with neighboring societies and cultures in the Middle East, Europe, North Africa and other parts of the world.

Our majors and minors have gone on to do many diverse things after graduation. Many have entered professional schools in such fields as law, journalism, education, the ministry or rabbinate, government and communal or social work. Others have gone on to do graduate work in either Jewish or Islamic studies or related disciplines. Still others have combined their interest in Jewish, Islamic and Near Eastern studies with careers in business, medicine or scientific research. All have found the major to have been an intellectually and emotionally rewarding experience and an important component of their overall development.

For a list of affiliated faculty, please see the Department of Jewish, Islamic and Near Eastern Languages and Cultures faculty page.

The Major in Jewish, Islamic and Near Eastern Studies

While the major emphasizes an integrated approach to the field, incorporating both Jewish and Islamic perspectives, students are required to select one of three tracks: Jewish and Near Eastern Studies, or Islamic and Near Eastern Studies, or Comparative Jewish and Islamic Studies. To complete a major in Jewish, Islamic and Near Eastern Studies, a student must fulfill the following basic requirements:

**Total units required:** 27 plus two years of language study.

**Required courses:**

- For Jewish and Near Eastern Studies: two years of Hebrew language.
- For Islamic and Near Eastern Studies: two years of Arabic language or Persian language.
- For Comparative Jewish and Islamic Studies, two years of one language in one tradition (at least one of which must be in residence) and one year of another language in the other tradition.
- For all majors: JINE 208F History, Text and Identity: Introduction to Jewish Civilization and JINE 210C Introduction to Islamic Civilization.
- For all majors: a combined capstone course/senior seminar (normally 3 units). Required of all majors, even those writing an honors thesis.

**Elective courses:**

- In addition, students must complete 21 units in the major at the 300 level or above, including:
  - For Jewish and Near Eastern Studies: a minimum of 3 units in the Islamic experience.
  - For Islamic and Near Eastern Studies: a minimum of 3 units in the Jewish experience.
  - For Comparative Jewish and Islamic Studies: a minimum of 9 units in the Jewish experience and a minimum of 9 units in the Islamic experience.
  - For majors in the non-comparative tracks: of the remaining 15 units, students are strongly encouraged to take at least one course in history, one in literature or cultural studies, and one in religious studies.

Courses taken pass/fail may not count toward the major.

**Additional Information**

**Study Abroad:** Students majoring in Jewish, Islamic and Near Eastern Studies are encouraged to participate in the Washington University Study Abroad program. The university currently sponsors preapproved programs of study at the Hebrew University in Jerusalem, the University of Haifa and the American University of Cairo. Study abroad options (which may require approval on a case-by-case basis) also exist for Prague (CET)
and American University of Beirut (AUB). A maximum of 9 units of advanced course work (300 level and above) may be applied toward the JINES major from study abroad or courses taken at another university. Credit will be awarded only to those courses that have been approved by the JINES study abroad adviser.

**Senior Honors:** Jewish, Islamic and Near Eastern Studies majors who have a cumulative GPA of 3.65 or higher after six semesters are eligible to apply for candidacy for departmental senior honors. Once they receive departmental approval, candidates must satisfactorily complete a senior honors thesis in order to be considered for departmental honors.

The senior honors thesis is a research project that is significantly larger than the usual term paper. It is usually about 50 to 60 pages long. In writing this thesis, the candidate is expected to make use of both primary and secondary sources and to demonstrate critical and analytic skills. The candidate also is encouraged to make use of any foreign language skills she or he may possess for the research. Proper citation of sources and a clear and consistent stylistic format will be expected.

Candidates, in consultation with their advisers, should choose their area of interest and find an appropriate faculty member to serve as their thesis supervisor in the spring semester of their junior year. They then need to apply for the honors program in writing to the director of Jewish, Islamic, and Near Eastern Studies by September 1. The written application should contain a tentative description of the project, the supervisor’s endorsement of the candidacy, and the candidate’s unofficial transcript with the latest GPA clearly indicated. This early planning allows candidates to use the summer months to conduct preliminary research. Candidates must enroll in JINE 499 Study for Honors in Jewish, Islamic, and Near Eastern Studies in both the fall and spring semesters of their senior year (normally for a total of 6 credit hours).

The Minor in Jewish, Islamic and Near Eastern Studies

**Units required:** 15 in at least five courses

**Required courses:**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Title</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>JINE 208F</td>
<td>History, Text and Identity: Introduction to Jewish Civilization</td>
<td>3</td>
</tr>
<tr>
<td>JINE 210C</td>
<td>Introduction to Islamic Civilization</td>
<td>3</td>
</tr>
</tbody>
</table>

**Elective courses:**

At least 9 of the remaining 12 units must be earned in courses at the 300 level or above. A maximum of 6 credit hours from language courses (Arabic, Hebrew, Persian) can be applied toward the minor. Please note that because 9 of the 15 units need to be at the 300 level or beyond for the minor, and because we also require either Islamic Civilization or Jewish Civilization, this means that a student normally can apply 3 credits of first- or second-year language at most, and then possibly 3 more credits from higher language courses subject to the approval of his or her adviser.

A maximum of 3 units of lower-level course work and 3 units of advanced course work (300 level and above) may be applied toward the JINES minor from study abroad or another university. Credit will be awarded only to those courses that have been approved by Washington University.

No more than 3 units may be taken in JINE 500 Independent Study.

**Additional Information**

we devote time to discussing practical questions such as how to use the library's catalog and (electronic) reference sources, as well as techniques for structuring and writing students’ essays. Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : ETH

L75 JINE 176 Freshman Seminar: A Nation Apart? Jewish Identity in an Age of Nationalism
This course invites you to explore the varieties and limits of Jewish identity in a world in which nations appear to be the driving forces of history. In the "age of nationalism," beginning in the second half of the 18th and continuing to the end of the 20th century, traditional forms of Jewish identity as well as the place of Jews within the social fabric became problematic. Who were the Jews as individuals and as a collective? A nation? A religious group? Neither exactly? And what was their relationship to the emerging, modern nations of Europe to be? Did the process of emancipation resolve the problem? To what extent was antisemitism a response to the dilemma of defining and situating Jews in the new European order? How has the existence of a Jewish nation state in the Middle East affected Jewish identity in other parts of the world? Finally, how has globalization altered the relationship of Jews to the state as well as toward other Jews? Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD

L75 JINE 1771 Freshman Seminar: The Exodus in the Jewish Experience
This course investigates how the Exodus has been, and continues to be, a crucial source of identity for both Jews and Judaism. We explore how the Exodus has functioned as the primary model from which Jews have created historical self-understanding and theological meaning. We investigate how and why this story continues to be vital to Jews throughout the unfolding of the Jewish experience. How does the Exodus remain pertinent? How has the Exodus been reimagined multiple times throughout the history of Judaism? Why has the Passover celebration been transformed radically in different Jewish communities? We analyze many types of expression: historical sources, liturgy, art, commentaries, theology, literature, film, mysticism and music. Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD A&S : IQ, HUM

L75 JINE 175 Discovering the Other and the Self: Jewish Travel Literature and Autobiographical Writing, 1200-1800
Travel literature usually describes "other" places and peoples — otherness and the unfamiliar are its major themes. At the same time, travel writers reflect on notions of the Self and the home. Autobiography is a representation of one's self. However, the self can only be explored in relation to others. Reading early Jewish travel accounts and autobiographies from the Middle Ages to the 18th century, this class addresses questions such as: How did premodern Jews perceive themselves in a world dominated by Christians and Muslims? Where did they locate themselves between East and West? Did Jewish travelers going from the lands of Christendom to those of Islam share certain "Western" perceptions of the Islamic world? How did a Jew from Renaissance Italy negotiate between Jewish and Italian identities? Were Egyptian Jews to him distant relatives, or ultimately foreigners, "Orientals"? How did a German Jewish businesswoman view her role within a rapidly changing, yet male-dominated society? All primary sources are read in translation. In the course of their study, attention is paid to peculiarities of literary genre and the problem of how to differentiate between fact and fiction. Throughout the semester...
modern Western reader, in turn its creative thinking proves to be smart, playful, at times even slippery, and yet substantial. Addressing the literary, historical and cultural context in which Rabbinic Midrash developed, we get to know a variety of Midrashic collections and styles covering a time span from late antiquity to the Middle Ages. All primary sources are read in translation. Throughout the semester we devote time to discussing practical questions such as how to use the library’s catalog and (electronic) reference sources, as well as techniques for structuring and writing students’ essays.
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L75 JINE 180 Freshman Seminar: Jewcy: Jewish Culture in the 21st Century
This course examines cultural expressions of American Jewish identity within an ethnographic context. We analyze processes of assimilation, Americanization and innovation, as well as Jewish contributions to popular American culture and entertainment, from Irving Berlin to Madonna, and the The Joys of Yiddish to jewlicious.com. Moving from tradition to modernity, pluralism and transdenominationalism and back to tradition (sometimes with a vengeance) we explore challenges to Jewish identity and creative responses through the cultural lens.
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L75 JINE 200 Internship
For students with at least one course in Jewish and Near Eastern Studies who wish to do an internship. Prerequisite: permission of the director of the program. A “learning agreement” must be submitted and approved prior to beginning internship work.
Credit 3 units.

L75 JINE 2001 Asian and Near Eastern Languages and Literatures

L75 JINE 208D Intermediate Arabic II
Continuation of Arab 207D. Study of grammar of literary Arabic and reading of annotated classical and modern prose texts; elementary composition; practice in speaking and comprehending modern Arabic. Prerequisite: grade of B– or better in Arab 207D or placement by examination. Five class hours a week with additional drill or laboratory hours arranged by instructor.
Same as Arab 208D
Credit 5 units.  A&S : LA  A&S : IQ, LCD, LS  BU : HUM, IS

L75 JINE 208F History, Text and Identity: Introduction to Jewish Civilization
The anthropologist Clifford Geertz once famously invoked Max Weber in writing that “man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs.” The main goal of this course — designed as an introduction to Jewish history, culture and society — is to investigate the “webs of significance” produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester we focus on the following historical settings: 7th century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period we investigate the social and political conditions of Jewish life; identify the major texts that Jews possessed, studied and produced; determine the non-Jewish influences on their attitudes and aspirations; and the explore the efforts that Jews made to define what it meant to be part of a Jewish collective.

L75 JINE 2091 Scriptures and Cultural Traditions
Same as IPH 209
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD  BU : ETH
L75 JINE 210C Introduction to Islamic Civilization
A historical survey of Islamic civilization in global perspective. Chronological coverage of social, political, economic and cultural history are balanced with focused attention to special topics, which include: aspects of Islam as religion; science, medicine and technology in Islamic societies; art and architecture; philosophy and theology; interaction between Islamdom and Christendom; Islamic history in the Middle East, South Asia, Southeast Asia and Central Asia as well as Africa; European colonialism; globalization of Islam and contemporary Islam. Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : ETH, IS FA : SSP

L75 JINE 213D Intermediate Modern Hebrew I
Same as HBRW 213D
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L75 JINE 214C Introduction to Comparative Literature
This course permits the close examination of a particular theme or question studied comparatively, that is, with a cross-cultural focus involving at least two national literatures. Topics are often interdisciplinary; they explore questions pertinent to literary study that also engage history, philosophy and/or the visual arts. Although the majority of works studied are texts, the course frequently pursues comparisons of texts and images (painting, photography, film). Requirements may include frequent short papers, response papers and/or exams. Same as Comp Lit 215C
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : Lit

L75 JINE 214D Intermediate Modern Hebrew II
Intermediate modern Hebrew reading and discussion of modern Hebrew fiction. Development of language skills in special drill sessions. Conducted in Hebrew. Prerequisite: MHBR 213D or equivalent. Same as HBRW 214D
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L75 JINE 2157 Freshman Seminar: The Meaning of Pakistan: History, Culture, Art
Same as History 2157
Credit 3 units. A&S : TH, CD, SD A&S : IQ, HUM, SD

L75 JINE 216 Introduction to South Asian Civilization
We begin this course by considering the geographical and social frameworks that defined this area as a coherent region for a variety of travelers, scholars, writers, artists and state-builders. The course next traces conflict and consensus over culture and rule, placing particular emphasis on state-building in the Mughal and British empires. We explore how these empires re-shaped political, cultural and religious life in the sub-continent. The rise of nationalism and the simultaneous burst of caste, gender and religious critiques of the notion of “India” dominate the third part of the course. Finally, we turn to developments within and between the independent states of India, Pakistan, Bangladesh and Sri Lanka. Throughout the semester, students conduct independent research on a variety of contemporary topics relating to Empire, South Asian Globalization and the Politics of Knowledge. Same as IAS 216
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : IS

L75 JINE 216D Intermediate Persian I
Same as Pers 216D
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L75 JINE 217D Intermediate Persian II
Continuation of Persian 216D. Emphasis on enhancing skills in speaking, reading, writing and understanding modern Persian. Reading of annotated classical and modern texts; elementary composition. Prerequisite: Persian 216D or equivalent. Five class hours a week with additional drill or laboratory hours as assigned. Same as Pers 217D
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L75 JINE 225C Introduction to Indic Culture and Civilization
Credit 3 units. A&S : TH BU : ETH FA : SSP

L75 JINE 240 Representations of the Holocaust in Literature and Film
As the Holocaust recedes into the historical past, our knowledge of the event becomes increasingly dominated by literary and cinematic representations of it. This course focuses on such depictions of the Holocaust in literature and film and raised a number of provocative questions: What does it mean to represent the horror of the Holocaust? Can one effectively depict the event in realistic terms, or do unrealistic representations work better? What happens to the history of the Holocaust when it becomes the subject of a fictional text? Who is authorized to speak for the victims? Are representations of perpetrators appropriate? What types of representations help us to remember the Holocaust in the 21st century? We grapple with these challenging questions by examining both literary texts by American, European and Israeli authors from a range of genres, including survivor memoirs, fictional narratives, a graphic novel, drama and poetry, and a number of films that depict the Holocaust.
Credit 3 units. A&S : TH A&S : IQ, HUM
L75 JINE 300 Introduction to the Hebrew Bible/Old Testament
Same as Re St 300
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : ETH, HUM  FA : SSP

L75 JINE 301 Advanced Hindi I
Same as Hindi 301
Credit 3 units.  A&S : LA  A&S : IQ, LCD, LS  BU : IS

L75 JINE 3012 Biblical Law and the Origins of Western Justice
This course explores how law developed from the earliest periods of human history and how religious ideas and social institutions shaped law. The course also illuminates how biblical law was influenced by earlier cultures and how the ancient Israelites reshaped the law they inherited. It further analyzes the impact of biblical law on Western culture and investigates how the law dealt with those of different social classes and ethnic groups, and we probe how women were treated by the law.
Credit 3 units.  A&S : TH, CD, SD  A&S : IQ, HUM, LCD

L75 JINE 301C Kings, Priests, Prophets and Rabbis: The Jews in the Ancient World
We trace Israelite and Jewish history from its beginnings in the biblical period (ca. 1200 BCE) through the rise of rabbinic Judaism and Christianity until the birth of Islam (ca. 620 CE). We explore how Israel emerged as a distinct people and why the rise of the imperial powers transformed the political, social and religious institutions of ancient Israel. We illuminate why the religion of the Bible developed into rabbinic Judaism and Christianity and how rabbinic literature and institutions were created.
Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD  BU : BA, HUM  FA : SSP

L75 JINE 302 Introduction to the History and Culture of Ancient Mesopotamia
This course introduces students to the first great human civilization, Ancient Mesopotamia. Combining textual evidence and material remains we survey all major facets of Mesopotamian culture: the environment, political history and "everyday life" including portraits of several material, social and economic aspects of society: religion, myth, art, science and medicine. The course focuses on helping the student to understand empathetically the Mesopotamian worldview, to interact with primary materials (in translation), and to evaluate the ideas of historians dedicated to investigating this culture. Because some of the practices of this ancient culture are quite different from our own (e.g. magic, divination, the gods), yet others have made important contributions to world civilization (including the West, e.g. writing and astronomy), the course also is an important experience in cross-cultural learning.
Credit 3 units.  A&S : TH  BU : ETH, HUM

L75 JINE 3020 Advanced Hindi II
This course is a continuation of Hindi 301. It is designed to continue students' advanced proficiency in the oral and written use of Hindi through reading and discussion of short stories, newspaper articles and other selected materials. Prerequisite: grade of B– or better in Hindi 301 or placement by examination.
Same as Hindi 302
Credit 3 units.  A&S : LA  A&S : IQ, LCD, LS

L75 JINE 305B Greater Central Asia in Crisis

L75 JINE 3061 Modern Jewish Writers
What is Jewish literature? While we begin with — and return to — the traditional question of definition/s we take an unorthodox approach to the course. Reading beyond Bellow, Ozick and Wiesel, we look for enlightenment in unexpected places: Egypt, Latin America, Australia. Recent works by Philip Roth, Andre Aciman, Simone Zeilitch and Terri-ann White are supplemented by guest lectures, film, short stories and significant essays. We focus on issues of language, memory and place. Background knowledge is not required, though it is warmly welcomed.
Same as Comp Lit 306
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : HUM

L75 JINE 3062 Islam, Culture and Society in West Africa
This course explores the introduction of Islam into West Africa beginning in the 10th century and explores its expansion and development in the region, placing emphasis on the 19th century to present day. It focuses on the development of West African Muslim cultural, social, religious and political life, to understand not only how the religion affected societies, but also how West African local societies shaped Islam. The course also aims to introduce students to a critical understanding of Islamic writing in West Africa. It also examines the organization of Muslim Sufi orders in West Africa through time and space. The course is organized around a series of lectures and readings as well as print and visual media.
Same as AFAS 3062
Credit 3 units.  A&S : TH  BU : ETH, HUM

L75 JINE 312 Introduction to the History and Cultures of Turkey
Since ancient times, the Anatolian Peninsula, the land surrounded by the Black Sea, the Aegean and the Mediterranean Seas, has been a home and a passageway to a multitude of diverse peoples. This course is intended to offer an overview of Turkey, its history, peoples, cultures, socioeconomic and political structures and institutions within the context of modern and contemporary global trends since the 19th century through the prism of longue durée developments and processes. As an introductory and preparatory course, it aims primarily at familiarizing students with scholarly themes, questions and problems which aids those who wish to further delve into studying the deep and complex fabric of the Turkish society, culture and history.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  EN : H

L75 JINE 3122 From Country to Heavy Metal: Ancient Civilizations of the Old World
This course explores the archaeology of Europe, the Near East and Central Asia from approximately 10,000 years ago to classical times (ending before Ancient Greece). This prehistoric epoch saw major developments among various civilizations of the Old World, such as the introduction of agriculture, animal domestication, the growth of cities, and technological developments such as pottery, metallurgy and horse-riding. A major focus is the trajectory of cultural innovations of regional populations through time, and the complexity of their social, political and ritual practices. We also investigate the variation in human adaptive strategies to various environmental and social contexts, from hunter/gatherers to early Neolithic farmers, to the interactions between nomadic populations and larger scale, urban societies in the Bronze and Iron Ages.
Same as Anthro 3122

L75 JINE 321 Topics: The Jewish Experience in Italy, 1850-1945
This course examines the social and political history of the Jews of Italy from the period of Italian unification through the end of the Second World War. We look through two different prisms: first, the constant of Jews' minority status in a Catholic country at a time when Church doctrine was hostile to them and second, their changing status during significant moments in the brief history of the Italian monarchy. Under the latter rubric we study the rehabilitation of the Jews under liberal political philosophies, their problematic relationship with Fascism, and finally the arrival of the Holocaust in Italy and efforts to defend Jews against Nazi genocide. We approach these topics wherever possible through primary texts, including essays, memoirs and novels. Reading knowledge of Italian is not required. Readings in English; some readings in Italian for Italian majors. Discussion in English. Prerequisite for Italian majors: Italian 307D; no prerequisite for students in other majors. Three five-page papers.
Same as Ita 3221
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD

L75 JINE 335C Becoming “Modern”: Emancipation, Anti-Semitism and Nationalism in Modern Jewish History
This course offers a survey of the Jewish experience in the modern world by asking, at the outset, what it means to be — or to become — modern. We begin with the Enlightenment and the formation of the modern state and end with American and Israeli settings at the close of the twentieth century. The cultural, social and political lives of Jews have undergone tremendous transformations and dislocations over this time — a period marked by innovation, tragedy and success. Among the themes that we explore in depth are: the campaigns for and against Jewish “emancipation;” acculturation and religious reform; traditionalism and modernism in Eastern Europe; the rise of political and racial antisemitism; mass migration and the formation of American Jewry; varieties of Jewish national politics; Jewish-Gentile relations between the World Wars; the destruction of European Jewry; the emergence of a Jewish nation-state; and Jewish culture and identity since 1945. Same as History 335C
Credit 3 units.  A&S : TH, CD, A&S : IQ, HUM, LCD, BU : ETH, HUM, FA : SSP

L75 JINE 341 The Jewish People in America
History of the Jews in North America from the colonial era to the present. Close reading of primary sources, with an emphasis on the central issues and tensions in American Jewish life; political, social and economic transformations; and religious trends. Credit 3 units.  A&S : TH, A&S : IQ, HUM, BU : HUM

L75 JINE 3415 Jewish-Gentile Relations in the United States, 1830-1970
Throughout their history Jews faced non-Jewish majorities, and America was no different. Yet unlike Europe, the United States has been, overall, a very hospitable place for Jews, and many of them came to see their new country as “the Promised Land.” The course focuses on the relations between Jews and their non-Jewish neighbors from the beginning of a significant Jewish immigration to the United States in the 1830s. The course ends in the 1970s in order to analyze what most historians interpret as a rightward and inward turn of American Jewry (especially after 1967) and link it to the larger wave of ethnic revival in America. As a whole, the course looks at the interethnic and interreligious dimensions of American Jewish life and relates them to the larger American context. How did American Jews view their fellow countrymen and how did these opinions, in turn, affect Jewish integration into the larger society? How did the gamut of relations with other groups, which ran from animosity to coalition building and amity, change the country’s political and cultural landscape? How did political and class differences within Jewish communities influence the character of interaction with other communities? Can we learn from the Jewish case about more general patterns of majority-minority relations in America? Credit 3 units.  A&S : TH, A&S : IQ, HUM, BU : BA

L75 JINE 3422 Art of the Islamic World
This course surveys the art and architecture of societies where Muslims were dominant or where they formed significant minorities from the 7th through the 20th centuries. It examines the form and function of architecture and works of art as well as the social, historical and cultural contexts, patterns of use, and evolving meanings attributed to art by the users. The course follows a chronological order, where selected visual materials are treated along chosen themes. Themes include the creation of a distinctive visual culture in the emerging Islamic polity; the development of urban institutions; key architectural types such as the mosque, madrasa, caravanserai, palace and mausoleum; art objects and the arts of the illustrated book; cultural interconnections along trade and pilgrimage routes; Westernization and modernization in art and architecture.

L75 JINE 344 Imagining the Holocaust in Contemporary Jewish Literature
Recent public discourse on the Holocaust has displayed an anxiety that, with the gradual dying out of the survivor generation, the Holocaust too will soon pass into oblivion and one day be forgotten. Accompanying this anxiety about the vanishing eyewitness and the crisis of forgetting is often a parallel skepticism about narratives of the Holocaust that are not rooted in the direct experience of the survivor. Despite an injunction against fictional and imaginative representations of the Holocaust by survivors such as Elie Wiesel, however, the past 20 years have seen a wave of imaginative literature about the Holocaust written by non-survivors. This course examines recent post-Holocaust literature, both fictional and autobiographical, by contemporary Jewish writers from Europe, Israel and the United States, including works by Art Spiegelman, David Grossman, Aharon Appelfeld, Nathan Englander, Anne Michaels, Nava Semal, Patrick Modiano, Jurek Becker and others.
Central to our inquiry into this literature is the questions of language, narrative structure, referentiality, artistic representation, intergenerational trauma, vicarious memory and post-Holocaust Jewish identity. This course surveys the art and architecture of societies where Muslims were dominant or where they formed significant minorities from the 7th through the 20th centuries. It examines the form and function of architecture and works of art as well as the social, historical and cultural contexts, patterns of use, and evolving meanings attributed to art by the users. The course follows a chronological order, where selected visual materials are treated along chosen themes. Themes include the creation of a distinctive visual culture in the emerging Islamic polity; the development of urban institutions; key architectural types such as the mosque, madrasa, caravanserai, palace and mausoleum; art objects and the arts of the illustrated book; cultural interconnections along trade and pilgrimage routes; Westernization and modernization in art and architecture.

L75 JINE 346 Islamic Law
This course presents a general overview of Islamic law and an introduction to the study of religious legal authority which values consensus. It then explores the formation of the major schools of law. Next it debates the notions of “ijtihad” and “taqlid” and discuss how open and independent legal decisions have been in the Islamic world. It also traces the transmission of legal knowledge in religious institutions across time and place by focusing on medieval Muslim societies and by closely examining the education of a modern-day Ayatollah.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  EN : H

L75 JINE 348 Medieval Jewish Travelogues, Chronicles, and Biographies
Medieval Hebrew literature includes a wide range of narratives, many of which are commonly classified as chronicles, travelogues, biographies or diaries. In this course, we explore a variety of authors and narratives from the 9th to the 17th centuries, originating from Muslim and Christian lands, the Middle East and Europe. We ask to what extent these texts mirror the personal experiences of their authors and to what extent they must be regarded as literary fictions. In addition, we discuss the question of how premodern Jewish writers reflected on history. All texts are read in English translation. Prerequisite: JINE 208F or instructor’s permission.
Same as BHBR 348
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L75 JINE 349 Yidishkayt: Yiddish Literature in English Translation
This course traces the emergence, development, flourish and near-decline of Yiddish literature, beginning with some of the earliest writings to appear in Yiddish in the late Middle Ages and early modern period, continuing with 19th-century attempts to establish a modern Yiddish literature and the 20th-century emergence of both a classical canon and a literary avant-garde, and ending with post-Holocaust attempts to retain a Yiddish literary culture in the near absence of Yiddish-speaking communities. Focusing on the role of Yiddish as the “national” language of Ashkenaz, the course examines the ways in which Yiddish literature has responded to the social conditions of European Jewish life, exploring among others the relationship as various flood and creation accounts are among those we read. Cultural background information is examined to situate each myth in its ancient context. Various theories of interpreting myth also are explored in order to appreciate the power and the many uses of these multivalent stories. Several basic questions underlie all that we do throughout the semester: What is myth? How should we understand the conceptualization of the category “myth” (in other words, How does myth work?), and Does myth still play a role in our own modern cultures?
between Yiddish and the non-Jewish cultures in which it existed, the tensions between secular trends versus religious tradition, life in the shtetl and in the metropolis, immigration from the old world to the new, and Yiddish literary responses to the Holocaust.

Credit 3 units. A&S : TH A&S : IQ, HUM

L75 JINE 350 Israeli Culture and Society
An examination of critical issues in contemporary Israeli culture and society, such as ethnicity, speech, humor, religious identity and the Arab population, using readings in English translation from a variety of disciplines: folklore, literary criticism, political science, sociology, psychology, anthropology. Prerequisite: sophomore standing or permission of instructor.

L75 JINE 3581 Musica Ebraica: Jewish Identities in Western Music from 1600 to the 21st Century
The course explores Western music from the 17th century to the 21st century through the prism of musical works that were written by Jews and for Jews and of musical compositions reflecting their composers' identifying themselves as Jews. Jewish art music from these periods are examined against the background of musical development in general, the social, political and religious context of the composers, and written reflections about Jewish music. Examples of Jewish art music are analyzed through different approaches in order to determine the cultural interrelationships between Jews and non-Jews, Jewish cultural autonomy, and the perception of Jewishness in music.

Credit 3 units. A&S : LA, CD A&S : IQ, LCD BU : HUM

L75 JINE 3582 Music in Jewish Culture and Society
The common term “Jewish Music” raises numerous questions that emanate from the difficulty to define “Jewish” identity of any given music. This course deals with various approaches to the definition of Jewish music, perceived as a cultural and sociological component in the Jewish communities throughout the Diaspora. We survey the functions in which music is performed in traditional Jewish communities, especially Jewish liturgy, and the substantial vicissitudes in these musics after the European Enlightenment, European colonialism in north-Africa, and in the Mediterranean. We study the background and the different characteristics of selected Jewish communities — Ashkenazic, Sephardic, Italian, Yemenite and others — as well as instrumental music, questions of gender and the relationship between music and text.” A secondary goal of this course is the study of the bibliography and discography of Jewish musics.

Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD

L75 JINE 3583 The Soundtrack of Israeli History
This course explores connections between Israeli history, nationality and culture, and between Israeli art music. Such an encounter between reveals the reflection of, and responses to, local social developments in various historic and constitutive moments in Israeli history such as: the fifth Aliya (wave of immigration) in the 1930s, the statehood years, the waning of nationalistic sentiments in the late 1950s, the aftermath of Israeli wars, the negotiation between Israeli and Jewish identities, and even artistic expressions of postmodernity within the Israeli context. These histories are surveyed through historical studies as well as through their musics and against the background of developments in 20th-century music.

Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD

L75 JINE 3584 Music in the Holocaust: Portrayals in Sound from Past and Present
The course explores Germany’s road to totalitarianism through three different stages seen through its musical contexts: the embedment of “music libels” against Jews in 19th-century European culture in general and German culture in particular; the association of Jewish culture with the threat of modernism until World War II; and Nazi policies in the 1930s regarding music and their repercussion on musical activities in the different ghettos (especially Terezin and Lodz). The last segment of this class deals with the challenge of commemorating the holocaust through music.

L75 JINE 3587 City of Peace: Baghdad in Medieval Times (ca. 762–1250)
The subject of this course is an exploration of the city of Baghdad in medieval times from its foundation in the 8th century to its sack by the Mongols in the 13th. Starting from the background history of its location in Mesopotamia, we study the reasons of its foundation in that location and examine its
topography, city planning and layout, institutions, citizens, neighborhoods, markets, libraries and workshops to discuss life in the city. Because Baghdad was the seat of the Abbasid caliphate at the time, we examine its role as the hub of the empire (in politics, administration, economy and literature), and its links to and rivalries with other provincial cities. Credit 3 units.

L75 JINE 4020 Jerusalem, the Holy City
An examination of the role that Jerusalem has played in three religious traditions — Judaism, Christianity and Islam — through a study of archaeology, history, literature, politics and theology from antiquity to contemporary times. A senior seminar in Jewish, Islamic and Near Eastern Studies. During winter break, the class goes to Jerusalem as part of the course. Student portion of travel costs TBA. Students unable to make the trip receive a reduction to 4 units of course credit. Preference given to seniors majoring in Jewish, Islamic and Near Eastern Studies. Others may enroll with instructor’s permission.
Credit 5 units. A&S : TH, CD, SD

L75 JINE 403 Gender and Sexuality in Judaism
A critical inquiry into the Jewish sociocultural construction of gender, past and present. Topics include the nature of the Jewish convenantal community and male circumcision as a sign of membership; the matrilineal principle of ancestry; genital emissions and purity; marriage and divorce; and male and female roles, including leadership roles. Documents by and about Jewish women, their daily lives and their sacral lives, are among the materials explored. JINE 208F is recommended.

L75 JINE 405 Diaspora in Jewish and Islamic Experience
The polarities of diaspora and home — periphery and center, wandering and rest, exile and return — have played important roles in the historical experience and religious culture of both Jews and Muslims. For long stretches of time, Jewish culture has been marked by the historical condition of statelessness combined with a theology of redemptive return. Paradoxically, it was the significant political and military success of Islam in its first millennium that helped to create a far-flung diaspora well removed from its center in Arabia. The institution of pilgrimage to Mecca counterbalanced a sense of distance and remove. More recently, modern nationalisms, war, and postcolonial politics — including the Israeli-Palestinian conflict — have done much to underscore the continuing dilemmas of diaspora and home in both Jewish and Islamic identity. The goal of the seminar is to offer a comparative, historical perspective on this theme and to encourage students to examine an aspect of the diaspora experience in depth. [ Note: This course fulfills the capstone requirement for Jewish, Islamic and Near Eastern Studies. It also qualifies as a History Department advanced seminar. ].

L75 JINE 4060 Convivencia or Reconquista? Muslims, Jews and Christians in Medieval Iberia
Senior Seminar. This seminar provides an opportunity to explore in some depth various facets of the convivencia (“dwelling together”; coexistence) of Muslims, Jews and Christians in medieval Iberia. While we pick up the timeline with the emergence of an Ibero-Islamic society in the 8th century CE, the seminar’s historical horizon stretches up to the turn of the 15th to the 16th century, when Spanish Jews and Muslims were equally faced with the choice between exile and conversion to Christianity. Until about the mid-11th centuries Muslims dominated most of the Iberian Peninsula. From roughly the mid-11th through 15th centuries, Christians ruled much and eventually all of Spain and Portugal. Through a process termed, from a Christian perspective, as reconquista (“reconquest”), Catholic kingdoms acquired large Muslim enclaves. As borders moved, Jewish communities found themselves under varying Muslim or Christian dominion, or migrated from one realm to the other. Interactions between the three ethno-religious communities occurred throughout, some characterized by mutual respect and shared creativity and others by rivalry and strife. The course focuses on these religious and cultural contacts, placing them in various historical and geographic contexts. It raises questions concerning the ambiguities of religious change and concerning the interplay of persecution and toleration.
The goals of this seminar are (1) to foster better understanding of areas of historical contact and intersections between Jewish and Islamic civilizations and (2) to start the work of developing a common framework for the comparative study of the two traditions. We examine examples of sustained and meaningful contact such as Muslim-Jewish symbiosis in early Islam as well as interaction on the level of philosophical and theological discourses between medieval Jews and Muslims. We also attempt to identify instances of affinity between the two traditions through comparative study of their exegetical, messianic, legal and mystical dimensions. Seniors in Jewish, Islamic and Near Eastern Studies are given preference in admission. This is the capstone course in JINES. Advanced students from other departments and programs should contact the instructor prior to enrollment.

L75 JINE 4070 Judaism and Islam in Comparative Perspective
The historical trajectories of Rabbinic Judaism and Islam are intimately intertwined. Moreover, a strong argument can be made that Rabbinic Judaism and Islam bear some obvious affinities with one another. Nevertheless, the two traditions generally continue to be studied in isolation from one another. The goals of this seminar are (1) to foster better understanding of areas of historical contact and intersections between Jewish and Islamic civilizations and (2) to start the work of developing a common framework for the comparative study of the two traditions. We examine examples of sustained and meaningful contact such as Muslim-Jewish symbiosis in early Islam as well as interaction on the level of philosophical and theological discourses between medieval Jews and Muslims. We also attempt to identify instances of affinity between the two traditions through comparative study of their exegetical, messianic, legal and mystical dimensions. Seniors in Jewish, Islamic and Near Eastern Studies are given preference in admission. This is the capstone course in JINES. L75 JINE 409 Beyond Geography: The Meaning of Place in the Near East
This course considers the importance of place in the Middle East with particular reference to Jewish and Islamic traditions. Topics include the creation of holy sites, the concept of sacred space, the practice of pilgrimages, and the tropes of exile and return. Texts range from analytical essays to novels, memoirs and poetical texts. In the course of their study, attention is paid to peculiarities of genre and difficulties involved in formulating historical assessments. In this sense, we also aim at developing critical reading skills in relation to secondary literature. Seniors in Jewish, Islamic and Near Eastern Studies are given preference in admission. Advanced students in other fields are asked to contact the instructor prior to enrollment.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD

**L75 JINE 485 Topics in Jewish Studies:**
Consult Course Listings for current topic. Prerequisite: permission of instructor. Credit 3 units. A&S : TH

**L75 JINE 4851 Topics in American Jewish Studies**
Credit 3 units. A&S : TH A&S : IQ, HUM

**L75 JINE 487 Topics in Jewish and Near Eastern Studies: Readings in Midrash**
The aim of this course is to learn to read Midrash, the literature of classical Rabbinic Biblical interpretation. Addressing the literary, historical and cultural context in which rabbinic Midrash developed, we get to know a variety of Midrashic collections covering a time span from late antiquity to the Islamic Middle Ages. These works were composed according to a complex set of exegetical and literary rules illustrated by the selected readings. Certain Midrashic genres reflect their origins in academic discourses, while others were delivered as public sermons, drawing on parables, legends and folk lore. Among the topics studied are: How did the Rabbis read the Bible? What is the relationship between the plain meaning of the Biblical text and the polyphone interpretations of Midrash? Is Midrash a commentary or a literary discourse in its own right? Initially the Midrashic logic may seem elusive from the viewpoint of a modern Western reader, in turn its creative thinking proves to be smart, playful, at times even slippery, and yet substantial. All texts are read in translation. Credit 3 units. A&S : TH A&S : IQ, HUM

**L75 JINE 4872 Colonial Cities and the Making of Modernity**
Same as History 4872
Credit 3 units. A&S : TH CD A&S : IQ, HUM, LCD FA : SSP

**L75 JINE 4901 Topics in Islamic Thought: Proseminar in Methods and Approaches in Islamic Studies**
This seminar is an introduction to the methods, research tools and theoretical assumptions that Islamicists have used to study diverse aspects of Islamic societies and civilizations, past and present. Critical reading and discussion of scholarly works are paired with bibliographical research assignments. Permission of the instructor required. Credit 3 units. A&S : TH A&S : IQ, HUM

**L75 JINE 492 Advanced Seminar: Europe’s “Jewish Question”: Emancipation, Anti-Semitism and Jewish-Christian Confrontation**

L75 JINE 497 Guided Readings in Arabic
Same as Arab 497
Credit variable, maximum 5 units.  A&S : LA

L75 JINE 4970 Empire and Messianism in the Middle East
Senior Seminar: This course looks at imperial politics in its relations to monotheistic messianic movements and ideologies in the Islamic Mediterranean from the late antiquity to the 16th century. Messianic beliefs offered political hope, rallied opposition against the existing rule, defined and ordered lived reality for imperial subjects, presented a political leitmotiv for rulers, and advocated a just sociopolitical order to be realized in the immediate or indefinite future. Thus, this course attempts to see how politics became messianic by its very ability to promise a better future. Despite the chronological scope of the course, we examine only specific ideas, practices and movements as case studies to study in depth various facets of messianic movements and thought in their geographic and historical context. We use primary sources, which are the main methodological focus of the course, and secondary literature. We aim to develop skills in identifying, reading, analyzing and dealing with primary sources in their variety and critically engaging modern scholarship on the political role of Messianism. Students write a term paper and several reports on preassigned readings, and make regular class presentations. Admission preference is given to graduating seniors in JINELC, but the course is open to all advanced students provided that they consult the instructor prior to enrolling. Knowledge of a relevant primary source language is highly desired but not required.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  EN : H

L75 JINE 4972 Guided Readings in Persian

Prerequisites: Senior standing and permission of the chair of the program.
Credit 3 units.  A&S : TH  A&S : IQ, HUM
L75 JINE 4991 Study for Honors in Jewish, Islamic, and Near Eastern Studies
Offered in the Spring semester in conjunction with L75-499.
Prerequisites: Senior standing and permission of the Chair of Jewish, Islamic and Near Eastern Department.
Credit 3 units. A&S : TH A&S : IQ, HUM

L75 JINE 49CA Advanced Seminar: Religion and the Secular: Critical Perspectives from South Asia
A generation ago, scholars and observers around the world felt assured that modernization would bring the quiet retreat of religion from public life. But the theory of secularization now stands debunked by world events, and a host of questions has been reopened. This course provides students with a forum to think through these issues as they prepare research papers on topics of their own choosing.
Same as History 49CA

L75 JINE 49NR Advanced Seminar: Egypt and the Arab Spring: Middle Eastern Revolution in Historical Perspective
The uprisings of the Arab Spring of 2011 captivated global media and observers. The movements brought down established regimes in Tunisia, Libya, Yemen and Egypt. The focus of this course is to understand the historical background and primary contemporary issues that have shaped Egypt’s Arab Spring, and to examine the huge popular effort to document Egypt’s revolution. Each student designs, researches and writes a 25-page paper on a topic of his/her choice related to the Arab Spring. Prior knowledge of the Middle East suggested but not required.
Same as History 49NR
Credit 4 units. A&S : TH, CD A&S : IQ, HUM, LCD

L75 JINE 49SC Advanced Seminar: Incredible India?
Today, India’s Department of Tourism works to attract visitors from far and wide with the slogan, “Incredible India!” — a publicity campaign that extols the country’s exceptionalism. Yet, images of India as unique and exotic, exceptional yet unchanging, are anything but new. They have been absolutely foundational to everything from British explorer Richard Burton’s translation of the Karma Sutra, to the hit TV series “Jewel in the Crown,” the global explosion of Bollywood, the scholarly study of the “subaltern,” and the proliferation of yoga studios in North America and Europe. How, and why, did India become “incredible”? Reaching to intellectual and social history, and to cultural studies methods, this course explores the mechanisms for the production of popular perceptions about India. Where do these perceptions originate and how to they retain coherence and continuity? What do they tell us about ourselves, our desires and our relationship to globalization? What are the intellectual traditions, the institutional sites, and the visual/narrative forms that support what some might describe as a trans-national public relations campaign? Students utilize a diverse range of primary and secondary sources and compose original research papers.
Same as History 49SC
Credit 4 units. A&S : TH, CD A&S : IQ, HUM, LCD

Korean
The Department of East Asian Languages and Cultures offers a minor in Korean Language and Culture.
Language Placement: Placement tests are required for all students entering our language programs, with the exception of those students who have had no previous knowledge of the language and are planning to enroll in the first semester of the first year of instruction. Students who test into second-year Korean and satisfactorily complete (with a grade of B– or better) at least one semester of language study may petition for 3 units of retroactive credit; students who test into third year or above and satisfactorily complete (with a grade of B– or better) at least one semester of language study may petition for 6 units of retroactive credit. Credit is limited to 3 units for testing into second year and 6 units for testing into third year or above. Please note that students with native language proficiency as determined by the individual language section, as well as students who enroll in courses below their placement level, are ineligible for retroactive credit units. Students who misrepresent their language proficiency so as to gain entrance to a course at the elementary or intermediate level will be dropped from that course.

Phone: 314/935-4448
E-mail: ealc@artsci.wustl.edu
Departmental website: http://ealc.wustl.edu/
For a list of affiliated faculty, please see the Department of East Asian Languages and Cultures faculty (p. 336) page.

The Department of East Asian Languages and Cultures does not offer a major in this area. Please visit the EALC (p. 336) page for a list of available majors.
The Minor in Korean Language and Culture

Units required: 18 units, no more than 12 of which may be in language.

Requirements:

• At least two years of Korean language.
• At least 9 units must be 300 level or above.
• At least two literature/culture courses such as:
  - Korean 223C Korean Civilization 3
  - Korean 352 Literature of Modern and Contemporary Korea 3

Additional Information

• Students must earn at least a B– in their language courses in order to continue to the next level. They must also maintain at least a B– average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course(s) in question or successfully complete an approved equivalent course or courses (either during the summer or in a study abroad program).
• Courses for the minor may not be taken Credit/No Credit.
• Normally, no more than 3 units of transfer or study abroad nonlanguage courses may be applied to the minor.

L51 Korean 117D First-Level Modern Korean I
Introduction to the modern spoken and written language of Korea. Acquisition of the fundamentals of grammar, morphology and oral communication skills. Note: students with some previous Korean language background must take the placement examination.
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L51 Korean 118D First-Level Modern Korean II
Emphasis is placed upon the understanding, speaking, reading and writing of Korean. Continuation of the acquisition of the fundamentals of grammar and morphology. Prerequisite: grade of B– or better in Korean 117D or placement by examination.
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L51 Korean 217 Second-Level Modern Korean I
Second-year course in standard modern Korean. Emphasis is placed upon speaking, reading and writing of modern Korean. Prerequisite: grade of B– or better in Korean 118D or placement by examination.
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L51 Korean 218 Second-Level Modern Korean II
Continuation of second-year course in standard modern Korean. Prerequisite: grade of B– or better in Korean 217 or placement by examination.
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L51 Korean 223C Korean Civilization
A comprehensive introduction to the study of Korea. Following a historical survey, the course examines key cultural themes and social institutions and explore aspects of Korea’s relationship with its East Asian neighbors. Attention also is paid to contemporary issues, social problems and cultural trends.
Credit 3 units. A&S : TH, CD, SD

L51 Korean 299 Independent Study
Prerequisite: permission of the instructor and the department chair. Credit variable, maximum 6 units.
Credit variable, maximum 6 units.

L51 Korean 320 Korean Culture and Society through Language
Credit 3 units. A&S : LA, CD

L51 Korean 346 Topics in East Asian Religion
Same as Re St 346
Credit 3 units. A&S : TH A&S : IQ, HUM

L51 Korean 352 Literature of Modern and Contemporary Korea
This undergraduate course surveys the major writers and works of 20th-century Korean literature. During the 20th century, Korea went through a radical process of modernization. From its colonization by Japan, to its suffering of a civil war within the cold war order, to its growth into a cultural and economic powerhouse, Korea’s historical experience is at once unique and typical of that of a third-world nation. By immersing ourselves in the most distinctive literary voices from Korea, we examine how the Korean experience of modernization was filtered through its cultural production. In class discussion, we pay special attention to the writers’ construction of the self and the nation. How do social categories such as ethnicity, class, gender and race figure in the varying images of the self? And how do these images relate to the literary vision of the nation? Along the way, we observe the prominent ideas, themes and genres of Korean literature. This class combines discussion with lecture with students strongly encouraged to participate. All literary texts are in English translation and no previous knowledge of Korean is required.
Credit 3 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD, SD BU : IS
L51 Korean 355 Topics in Korean Literature and Culture
Credit 3 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD, SD

L51 Korean 417 Third-Level Modern Korean I
Third-year course in standard modern Korean. Emphasis is placed upon reading and writing of modern Korean. Prerequisite: grade of B– or better in Korean 218 or placement by examination. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L51 Korean 418 Third-Level Modern Korean II
Continuation of third-year course in standard modern Korean. Emphasis is placed upon reading and writing. Prerequisite: grade of B– or better in Korean 417 or placement by examination. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L51 Korean 4181 Gender and Sexuality in East Asian Religions
In this course we explore some of the primary gender ideals and realities, images and self-representations in the religions of China, Japan and Korea, with a discussion of Confucianism but primary emphasis on East Asian Buddhism (esp. Zen and Pure Land), Daoism, Shinto and popular religious traditions such as Shamanism. Selected reading and discussion materials include scriptural texts, poetry, fiction, drama (in English translation), painting and archeological evidence, films and videos, and secondary scholarly and ethnographic studies. Prerequisite: At least one introductory course in East Asian religions or civilizations (Chinese, Japanese or Korean) is recommended. Same as Re St 418
Credit 3 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD EN : H

L51 Korean 427 Fourth-Level Modern Korean I
Fourth-year course in standard modern Korean (advanced level). Emphasis is placed on developing proficiency in all four areas of language skills (speaking, listening, reading and writing) beyond the intermediate level. Prerequisite: grade of B– or better in Korean 418 or placement by examination. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L51 Korean 428 Fourth-Level Modern Korean II
Continuation of the fourth-year course in Standard Modern Korean. Emphasis is placed upon the further development of speaking, listening, reading and writing, beyond the intermediate level. Prerequisite: grade of B– or better in Korean 427 or placement by examination. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L51 Korean 437 Contemporary Korean I: Topics in Korean Literature and Culture
Advanced- to high advanced-level Korean course in standard modern Korean. Emphasis is placed on developing an advanced level of reading proficiency in Korean and writing ability in Korean for an academic or professional purpose. Prerequisite: grade of B– or better in Korean 418 or placement by examination with instructor’s permission. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L51 Korean 438 Contemporary Korean II: Topics in Korean Literature and Culture
Continuation of Korean 437. Advanced- to high advanced-level Korean course in standard modern Korean. Emphasis is placed on developing an advanced level of reading proficiency in Korean and writing ability in Korean for an academic or professional purpose. Prerequisite: grade of B– or higher in Korean 437 or placement by examination with instructor’s permission. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L51 Korean 455 Topics in Korean Literature and Culture
Varied topics in Korean Literature and Culture. Subject matter varies by semester, see current semester Course Listings for topic. Credit 3 units. A&S : LA CD A&S : IQ, LCD

L51 Korean 495 Guided Readings in Korean
This course normally is taken after successful completion of Korean 418 or by instructor’s permission. May be repeated once. Prerequisite: instructor’s permission. Credit 2 units.

L51 Korean 497 Guided Readings in Korean
This course normally is taken after successful completion of Korean 418 or by instructor’s permission. May be repeated once. Prerequisite: instructor’s permission. Credit variable, maximum 3 units.

Latin
The Department of Classics offers course work in the language, history, literature, archaeology and culture of ancient Rome. At the heart of the these courses are classes in the Latin language. Students of beginning Latin master the grammar in two semesters and go on immediately, in the third semester, to read authors such as Cicero and Vergil. Students who have studied Latin in high school begin with a placement exam, and many can begin their studies in more advanced courses. Students have the opportunity to study numerous Latin authors, including the great poets Vergil and Ovid, the historians Livy.
and Tacitus, and the novelists Apuleius and Petronius. More advanced undergraduates often work alongside graduate students in our vigorous graduate program; and they also have the opportunity to do their own research or to assist in faculty members’ research projects. It is a remarkable and dynamic environment, one that the students find both rewarding and stimulating. Resources on campus supporting the study of Latin include the Wulfing Coin Collection, one of the largest collections of ancient coins owned by an American university.

**Additional Information**

**Study Abroad:** Study abroad for a semester in Rome or Athens is an option many Classics majors select. Washington University is a member of the Intercollegiate Center for Classical Studies (ICCS) consortium, and many majors attend the one-semester ICCS program in Rome. A knowledge of Latin or Greek to at least the intermediate level is required for admission to the Rome program. Students interested in studying at the Intercollegiate Center in Rome should consult Professor Tim Moore. Students interested in the College Year in Athens Program should consult Professor Robert Lamberton.

**Contact Person:** Cathy Marler
**Phone:** 314/935-5123
**E-mail:** classics@artsci.wustl.edu
**Departmental website:** http://classics.artsci.wustl.edu

For a list of affiliated faculty, please see the Department of Classics faculty (p. 289) page.

There is no major in this area. Students interested in Latin should explore either the major in Classics (p. 290) or the major in Ancient Studies (p. 290) offered through the Department of Classics (p. 289).

There is no minor in this area. Students interested in Latin should explore either the minor in Classics (p. 290) or the minor in Ancient Studies (p. 290) offered through the Department of Classics. (p. 289)

**L10 Latin 101D Beginning Latin I**
Introduction to morphology and syntax of classical Latin.
Credit 4 units.  A&S : LA  A&S : IQ, LCD, LS  BU : HUM, IS

**L10 Latin 102D Beginning Latin II**
Continuation of program begun in Latin 101D.
Credit 4 units.  A&S : LA  A&S : IQ, LCD, LS  BU : HUM, IS

**L10 Latin 190D Intensive Elementary Latin I**
An accelerated study of Latin grammar. For students with previous knowledge of Latin, graduate students outside of Classics, and for students willing to work at an accelerated pace.
Credit 5 units.  A&S : LA  A&S : IQ, LCD, LS  BU : IS

**L10 Latin 210 Intensive Elementary Latin II**
Completion of work begun in Latin 190D followed by readings in original Latin poetry and prose. Successful completion of Latin 210 with a grade of B+ or better allows the student to proceed directly to Latin 318C.
Credit 5 units.  A&S : LA  A&S : IQ, LCD, LS  BU : IS

**L10 Latin 301 Introduction to Latin Literature I**
Intensive review of Latin grammar and syntax and development of reading skills and translation techniques through short readings from original texts in prose and poetry such as Caesar and Ovid. Prerequisite: Latin 102D, placement by examination or permission of instructor.
Credit 3 units.  A&S : LA  A&S : IQ, LCD, LS  BU : HUM

**L10 Latin 3161 Introduction to Latin Literature II: Elementary Prose and Poetry**
Appreciation of literary forms through study of selected elementary literary texts in Latin prose and poetry. Prerequisite: Latin 301, placement by examination or permission of the instructor.
Credit 3 units.  A&S : LA  A&S : IQ, LCD, LS

**L10 Latin 3171 Survey of Latin Literature: The Republic**
A broad overview of the major literary achievements of the last two centuries of the Roman Republic with emphasis on figures such as Catullus, Lucretius, Caesar and Cicero. Prerequisite: Latin 102D with a grade of B+ or better, or Latin 301C, or Latin 3161 (or 316C), or placement by examination, or permission of the instructor.
Credit 3 units.  A&S : LA  A&S : IQ, LCD, LS

**L10 Latin 3181 Survey of Latin Literature: The Empire**
A broad overview of the major literary achievements of the first century of the Roman Empire with emphasis on figures such as Vergil and Livy. Prerequisite: Latin 102D with a grade of B+ or better, or Latin 3161 (or Latin 316C), or Latin 3171 (or Latin 317C), or placement by examination, or permission of instructor.
Credit 3 units.  A&S : LA  A&S : IQ, LCD, LS

**L10 Latin 350W Writing about Latin Literature**
Latin courses at the 300 level with enhanced writing requirements may be taken under this designation as writing-intensive courses. Required: permission of instructor.
Credit 3 units.  A&S : TH, WI  A&S : IQ, HUM, LCD, WI
L10 Latin 370 Topics in Latin Literature
Study in selected problems, eras or generic sequences; specific topic for each semester in Course Listings. May be repeated for credit for study of different topics. Prerequisites: Latin 318C or permission of instructor.
Credit 3 units.  A&S : TH  BU : HUM

L10 Latin 400 Independent Study
Credit 3 units.

L10 Latin 401 Medieval Latin
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS  FA : Lit

L10 Latin 413 Latin Philosophical Writers
Readings among various writers of philosophy in Latin, ranging from Cicero to Seneca to Augustine. Texts vary, therefore, course may be taken more than once.
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS  FA : SSP

L10 Latin 415 Cicero
Credit 3 units.  A&S : TH  FA : SSP

L10 Latin 416 Seneca
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD

L10 Latin 419 Julius Caesar and His Image
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS

L10 Latin 4215 Plautus
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS  FA : SSP

L10 Latin 422 Lucretius
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS  FA : SSP

L10 Latin 431 Vergil: The Aeneid
Credit 3 units.  A&S : TH  FA : Lit

L10 Latin 432 Horace on Poetry
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L10 Latin 433 Ovid
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS

L10 Latin 441 Roman Satire
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS

L10 Latin 444 Latin Prose Composition
Readings in Cicero coupled with exercises in composition of Latin prose, with attention to grammatical and idiomatic accuracy as well as elegance of style.
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS  FA : SSP

L10 Latin 451 The Roman Historians
Credit 3 units.  A&S : TH  FA : SSP

L10 Latin 471 Elegiac Poetry
Credit 3 units.  A&S : TH  FA : Lit

L10 Latin 493 Readings in Latin Prose
A survey of the major genres of Latin prose, history, oratory and philosophy. Authors may include Caesar, Cicero, Seneca, Tacitus. Aim is to develop reading faculty and understanding.
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS  FA : Lit

L10 Latin 494W Topics in Latin Literature
Advanced Latin seminars with enhanced writing requirements may be taken under this designation as writing-intensive courses. Required: permission of instructor.
Credit 3 units.  A&S : TH, WI  A&S : IQ, HUM, LCD, WI, LS

L10 Latin 495 Topics in Republican Latin
May be repeated for credit for study of different topics.
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS  FA : SSP

L10 Latin 496 Tacitus
Credit 3 units.  A&S : TH  FA : SSP

L10 Latin 4961 Topics in Empire Latin
May be repeated for credit for study of different topics.
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS  FA : SSP

L10 Latin 4962 Juvenal and Martial
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD, LS

L10 Latin 497 Honors Course I
Prerequisites: junior standing, a grade of A– or better in courses in Latin numbered 300 or above, and permission of the department chair. Either Latin 497 or Greek 499 must be taken by all Honors candidates.
Credit 3 units.

L10 Latin 498 Honors Course II
Prerequisites: junior standing, a grade of A– or better in courses in Latin numbered 300 or above, and permission of the department chair. Either Latin 497 or Greek 499 must be taken by all Honors candidates.
Latin American Studies

Students who have particular interest in the cultures and societies of Latin America, but would like to study them from a comparative, interdisciplinary perspective, may major in International and Area Studies (IAS) with a concentration in Latin American Studies. This program offers a wide range of courses, covering different aspects of pre-Hispanic, colonial and modern cultures, and connecting the study of ancient traditions with contemporary debates. Survey courses and seminars incorporate approaches from cultural theory; historical, political and anthropological analysis; and cultural studies. Washington University, with its Latin American Studies program, was one of the 10 founding institutions funded by a Ford Foundation grant in 1964. Students in this track generally acquire a high level of competency in Spanish and/or Portuguese, depending on field of specialization. Our overseas programs in Chile, Ecuador and Mexico would be especially appropriate for students of Spanish as well as for those interested in conducting field work in these regions.

The Major in Latin American Studies/International and Area Studies

Total units required: 33 graded credits plus four semesters of a Latin-American language.

Required courses:

- IAS 165C Survey of Latin-American Culture (3 credits)
- Latin American history course: either LatAm 321C Introduction to Colonial Latin America or LatAm 322C Modern Latin America (3 credits)
- Latin American political science course: either LatAm 326B Latin-American Politics or LatAm 423I Contemporary Issues in Latin America (3 credits)
- Latin-American anthropology course at the 300 or 400 level (3 credits)
- Latin-American Pre-Columbian Cultures course at the 300 or 400 level (3 credits)
- Three elective courses at the 300 or 400 level (9 credits total)
- Latin-American Seminar: a 400-level course home-based in LAS (3 credits). Prime majors not pursuing honors must use this course as a capstone experience and obtain a grade of B or better.
- Advanced Latin American Studies course work (6 credits). May be fulfilled by 400-level courses cross-listed with LatAm or by a combination of one such course and thesis work.

Regulations/requirements:

- Completion of all course work with a grade of C+ or higher; all courses for the major must be taken for a letter grade.
- Students must choose their upper-level course work from a minimum of three academic disciplines (for example, Anthropology, Art History, Economics, Film, History, Literature, Music, Philosophy and Political Science).
- No more than 6 credits may be from a semester of study abroad (9 credits from a year of study abroad, or a semester plus a summer of study abroad) (400-level credits must be earned on campus or in Washington University courses taught abroad).
- For those who do not study abroad, an additional 3 credits at the 300 or 400 level are required.
- Students must fulfill the standard IAS language requirement with a Latin-American language consistent with their study abroad location.
- No more than 3 credits may be from directed readings, research or internships excluding the honors thesis.

- Students whose prime major is IAS must participate in a capstone experience. The options for the LAS major differ slightly from those of the other IAS major concentrations. See the LAS website for particulars.

Additional Information

Language Requirement for the Major in Latin American Studies/International and Area Studies: All majors in Latin American Studies are required to complete four semesters of course work in Spanish or Portuguese, regardless of their placement when arriving at the university. Native speakers of Spanish and Portuguese may claim an exemption to this requirement with the authorization of the director of Undergraduate Studies. LAS majors are encouraged to consider a minor or a double major in Spanish.

Study Abroad: Majors are strongly encouraged to study abroad in one of Washington University’s overseas programs during junior year or the summer. Some credit for courses taken abroad may be applied to the major. For those who do not study abroad, an additional 3-credit course at the 300 or 400 level is required.

Senior Honors: Students who have a strong academic record may apply to work toward honors by writing an honors thesis during senior year.

The Minor in Latin American Studies/International and Area Studies

The minor in Latin American Studies is part of the Program in International and Area Studies.

Total units required: 18 graded credits plus four semesters of a Latin American language.

Requirements:

- IAS 165C Survey of Latin-American Culture (3 credits)
- Latin-American history survey course: either LatAm 321C Introduction to Colonial Latin America or LatAm 322C Modern Latin America (3 credits)
- Latin-American politics survey course: either LatAm 326B Latin-American Politics or LatAm 423I Contemporary Issues in Latin America (3 credits)
- Two upper-level elective courses at the 300 or 400 level (6 credits total)
- Latin-American Seminar: a 400-level course home-based in LAS (3 credits)

Regulations:

- Completion of all minor course work with a grade of C+ or higher; all courses for the minor must be taken for a letter grade.
• No more than 3 credits may be from independent study or research.
• No more than 3 credits may be from a semester or summer of study abroad (6 credits from a year of study abroad, or a semester plus a summer).
• All advanced credits must be unique to the Latin American Studies minor (i.e. not counted toward any other major or minor).

Additional Information

Language Requirement for the Minor in Latin American Studies/International and Area Studies: All minors in Latin American Studies are required to complete four semesters of course work in Spanish or Portuguese, regardless of their placement when arriving at Washington University. Native speakers of Spanish and Portuguese may claim an exemption to this requirement with the authorization of the director of Undergraduate Studies. LAS minors are encouraged to consider a minor or a major in Spanish.

Study Abroad: Students are strongly encouraged to study abroad in one of Washington University’s overseas programs during junior year or the summer. Some credit for courses taken abroad may be applied to the minor.

L45 LatAm 331 Hispanic Art/Arte Hispano
This course focuses on the most important movements, artistic expressions and its representatives of the art history of Latin America and Spain. From the pre-Columbian art of the Mayas, Aztecs and Incas, to the syncretism of Postcolonial Latin American art, the Mexican Muralism and the self-reconstruction portraits of Mexican artist Frida Kahlo to the Chicano Art in the United States. From the Medieval paintings of religious Spain, to the criticism of the Spanish nobility by Diego Velazquez, the Spanish Civil War of Guernica by Pablo Picasso, to the Surrealism of Salvador Dalí and Antonio Gaudi. The students visit the St. Louis and the Kemper Art Museums. Prerequisite: Span 308D. May be used for elective credit in the Spanish major or minor. In Spanish.

L45 LatAm 3315 The Ancient Maya: Archaeology and History
Same as Anthro 3351

L45 LatAm 3352 Spanish-American Literature of the Long 19th Century
This survey examines the changing roles of literature and its creators during the period that saw the end of the powerful Spanish empire and the emergence of the political framework of independent nations we are familiar with today. Students are introduced to prominent themes such as independence writing,
L45 LatAm 335C Spanish-American Literature I
A survey of major figures and literary trends in Spanish America from 1492 to Modernismo (1880). Emphasis on the writings of either Colón or Columbus, Cortés, Bernal Diaz, Las Casas, Inca Garcilaso de la Vega and Aztec reactions to the Conquest in the early period and on Sor Juana in colonial times. After the period of independence from Spain (1810–24), the focus is on the literary representation of the making of the new nations and cultural autonomy. Readings include chapters of a picaresque novel, the representation of dictatorship, civilization vs. barbarism, the gaucho epic, and 19th-century fiction. Lectures and class discussions of the readings; exams, papers and short reports. Prerequisite: Span 307D; concurrent registration in Span 308D is recommended. In Spanish. Same as Span 335C
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD, LS

L45 LatAm 336C Spanish-American Literature II
A survey of major Latin American literary works focusing on canonical works of the 20th and 21st centuries in their cultural and historical contexts. The course includes discussions of major literary movements such as the avant-gardes, the Boom and the post-Boom. Other topics may include the literary and cultural responses to revolution, dictatorship and the evolving definitions of Latin American. Authors may include Quiroga, Neruda, Guillén, Vallejo, Borges, Cortázar, Ruiz, Carpentier, García Márquez, Poniatowska, Fuentes, Ferré and others. Prerequisite: Span 307D; concurrent registration in Span 308D is recommended. Same as Span 336C
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD, LS BU : IS FA : Lit

L45 LatAm 3520 Conquest and Colony: Cultural Encounters in the New World
Same as History 3520
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD

L45 LatAm 356 Andean History: Culture and Politics
Since pre-Columbian times, the central Andean mountain system, combining highlands, coastal and jungle areas, has been the locus of multietnic polities. Within this highly variegated geographical and cultural-historical space, emerged the Inca Empire, the Viceroyalty of Peru — Spain’s core South American colony, and the central Andean republics of Ecuador, Peru and Bolivia. Taking a chronological and thematic approach, this course examines pre-Columbian Andean societies, Inca rule, Andean transformations under Spanish colonialism, post-independence nation-state formation, state-Indian relations, reform and revolutionary movements, and neo-liberal policies and the rise of new social movements and ethnic politics. This course focuses primarily on the development of popular and elite political cultures, and the nature and complexity of local, regional and national power relations. Same as IAS 356
Credit 3 units. A&S : SS, CD A&S : IQ, SSC, LCD

L45 LatAm 3691 Kill Assessment: An Investigation into Death, Genocide and Other Forms of Violence
Is violence best understood as a set of “random acts” marginal to society? Or, do societies need violence to make culture systematic and hierarchy functional? This course is not about the psychology of individual pathology; rather, we will think about violence as a potential category of culture. We will address two major issues throughout this course. First, we will discuss different types of violence: physical/material violence and symbolic violence. Second, we will become familiar with ways that social groups turn violence into an aesthetic object and an artistic project. To accomplish our task, we will take both an ethnographic and theoretical approach, so that we may better ground our understanding of violence in various people’s everyday experiences as well as develop a broader, more complete idea of what violence entails. Specific readings include the following topics: U.S. and Brazilian hip-hop, Puerto Rican reggaeton, video games, contemporary Latin American plastic arts, U.S. hate crimes, rape, and other form of domestic violence, violence “workers” in Latin America, genocides in Rwanda, Guatemala, and Armenia, drug lords in Rio de Janeiro, Los Angeles, and Mogadishu, Somalia, and the legality of lethal injections in capital punishment in the U.S.
Same as Anthro 3691
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L45 LatAm 3800 Surveys of Hispanic Cultures
This course surveys cultures in specific contexts (Latin America and Spain) and in different historical periods, from the Middle Ages to the present. The course provides students with critical and methodological tools in order to carry out an articulate and informed cultural analysis. Prerequisite: Span 307D; concurrent registration in Span 308D is recommended. In Spanish. Topics vary from semester to semester. See Course Listings for current offering.

**L45 LatAm 443 The Inconvenient Indio: Imagining Indigenous Cultures in Peru and Bolivia**
In the cultural history of the Andean nations, the Indio has always been a powerful yet perpetually unstable signifier, whose meaning is constantly redefined by non-Indians. An archaic residue for some, the bedrock of a new society for others, the Indio conjures contradictory imaginaries of articulation, combination, disjunction and metamorphosis that have shaped a wide range of debates: from assimilation and mestizaje in the context of nation-building and modernity, to the politicizing of ethnic identities in the context of immigration and globalization. Focusing on Peru and Bolivia, this course examines these cultural imaginaries and the debates in which they appear, as well as the models of community and identity they suggest. In doing so, we discuss topics such as the discourse of illness, indigenismo, transculturation, heterogeneity, violence and memory. Materials analyzed include poetry by César Vallejo and Carlos Oquendo de Amat; essays by José Carlos Mariátegui and Ángel Rama; José María Arguedas’s novel *Los Ríos Profundos*; Jorge Sanjinés’s film *El Coraje del Pueblo*; and theatrical performances by Grupo Yuyachkani. Prerequisites: Span 307D and Span 308D and at least two 300-level literature course.

L45 LatAm 457 Gender and Modernity in Latin America
The purpose of this course is to introduce students to the particular forms modernity assumes in Latin American countries and to the ways in which national cultures, identity politics and gender issues interweave during the 20th century. The course discusses three particular articulation of this topic: (1) Gender and the national question in Argentina: Eva Peron; (2) Gender and Visual Arts: Frida Kahlo; and (3) Gender and Ethnicity: Rigoberta Menchu. Through these iconic figures students are introduced to the specific features that characterized three very different but representative cultural scenarios in Latin America. In each case, the context for the emergence of these highly influential public figures is studied from historical, social and cultural perspectives. In order to explore the cultural and political significance of Eva Peron, Frida Kahlo and Rigoberta Menchu, the course utilizes literary texts (speeches, letters, diaries, etc.), visual materials (photography, films and paintings) and critical bibliography.

L45 LatAm 463 Seminar on Urban Cultures in Latin America
The course will focus on the key role urban development and urban cultures have had in Latin America with particular emphasis on contemporary times. The goal of the course is to discuss the connections between the formation and expansion of cities, the definitions of citizenship, and the role of modernity in the development of “high” and “popular” cultures within different historical and geo-cultural contexts. Particular attention will be paid to the issues of race, class and gender. To course, which will utilize an interdisciplinary and comparative approach, will also focus on the phenomena of marginality, cultural resistance, nationalism and consumerism as well as on the role played by the media in contemporary Latin American societies. Some of the cultural expressions to be analyzed in the course are music (rock, pop, rap), sports, film and video. Prerequisite: L97 165C Survey of Latin American Culture.

L45 LatAm 488 Narrating Mexico City
The city has been one of the central topics of modern Mexican literature. Ever since the emergence of the modern capital at the end of the 19th century, urban culture became one of the central concerns of Mexican and Latin-American intellectuals across the continent. With the emergence of the megalopolis and the new centrality of questions of violence, postmodernity and urban experience, Mexican literature and film have contributed, in the past 20 years, new ways to approach, discuss and narrate the city. This class seeks to tackle different meanings of Mexico City in the cultural discourse of Mexico, by exploring novels (Carlos Fuentes, José Emilio Pacheco, Juan Villoro), poems (Manuel Mapes Arce, Vicente Quirarte, Fabio Morábito), urban chronicles (Carlos Monsiváís, Elena Poniatowska, José Joaquín Blanco) and films (Amores Perros, Todo El Poder, Vivir Mata). Prerequisites: Span 307D, Span 308D and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Same as Span 488

Legal Studies
The Legal Studies minor is an interdisciplinary program that allows students to study the role of law and legal institutions in society. It is an academic program about law rather than vocational training in law.

Students who minor in Legal Studies study about law in courses from anthropology, economics, history, philosophy, political science and other liberal arts disciplines. The curriculum emphasizes the forces that shape law and the ways that peoples of different cultures and from different historical periods have used and interpreted the law.

Because Legal Studies is interdisciplinary in nature and offers a variety of courses, each student can design a course of study that addresses his/her individual needs and interests.

Students may choose to take advantage of internships available in law and government. Legal Studies is an excellent pre-law program. It also prepares students well for other graduate study, as well as for careers in academia, business, politics or social services.

Contact Person: Frank Lovett
Phone: 314/935-5829

There is no major available in this area. Students interested in undergraduate, preprofessional preparation for the study of law should contact the pre-law adviser in the College of Arts & Sciences, who is available to help plan a course of study and prepare a strategy for applying for admission to law school.

The Minor in Legal Studies

Units required: 18

The minor in Legal Studies requires six courses (18 graded units), at least three of which must be upper-division (300 or 400 level). Two of the six courses may be drawn from the student’s major, but as in all College programs, they cannot be double-counted (i.e., applied to both the major and minor). The six courses also must be distributed across three of four thematic subject areas. For details, please see the Legal Studies course listing, or consult the Director of Legal Studies.

L84 Lw St 105G Introduction to Logic and Critical Analysis
Introduction to the elementary tools of logic required for constructing and critically evaluating arguments and the claims they support. Topics include: the nature of an argument; argument structure; how arguments can fail both in structure and in content; formal and informal fallacies; propositional logic and predicate calculus; and critical analysis of rhetorical strategies for presenting arguments. Students are encouraged to develop critical reasoning skills that can be widely applied.
Same as Phil 100G

L84 Lw St 131F Present Moral Problems
An investigation of a range of contemporary moral issues and controversies that draws on philosophical ethics and culturewide moral considerations. Topics may include: racism, world hunger, war and terrorism, the distribution of income and wealth, gender discrimination, pornography, lesbian and gay rights, abortion, euthanasia, and capital punishment. The aim of the course is to present diverse points of view regarding these topics and to provide conceptual and theoretical tools that enable the student to make headway in thinking carefully and critically about the issues.
Same as Phil 131F
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : ETH  FA : SSP

L84 Lw St 2030 Freshman Seminar: The Enigma of Thomas Jefferson
Who was Thomas Jefferson, and why has his reputation undergone so many changes? This course is an exercise in understanding how professional historians and the general public discover and use the past. It therefore sets four primary goals: to recover the past on its own terms; to understand the many different methods and standards applied in interpreting the past; to understand how and why each generation changes the way it views the past as it seeks to make it “usable”; and to develop the skills of exposition and argumentation necessary to describe and analyze complex historical issues and to express critical ideas effectively.
Same as History 2030
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L84 Lw St 233F Biomedical Ethics
A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.
Same as Phil 233F
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : ETH  FA : SSP

L84 Lw St 235F Introduction to Environmental Ethics
A general survey of current issues in environmental ethics, focusing on problems such as the obligation to future generations, protection of endangered species, animal rights, problems of energy and pollution, wilderness, global justice and business obligations. Students also learn some ethical and political theory.
Same as Phil 235F
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : ETH  FA : SSP

L84 Lw St 260 Game Theory in Science and Culture
Same as Pol Sci 260
Credit 3 units.  A&S : SS  A&S : IQ, SSC

L84 Lw St 299 Undergraduate Internship in Legal Studies
Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement which the student obtains from the Career Center
and which must be filled out and signed by the Career Center and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., 8-10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours. Students may not receive credit for work done for pay but are encouraged to obtain written evaluations about such work for the student’s academic advisor and career placement file.

Credit variable, maximum 3 units.

**L84 Lw St 3012 Biblical Law and the Origins of Western Justice**
Same as JINE 3012
Credit 3 units. A&S : TH, CD, SD  A&S : IQ, HUM, LCD

**L84 Lw St 312 Argumentation**
This advanced writing course examines the strategies of argumentation, exploring such elements of argument as the enthymeme, the three appeals, claim types and fallacies. Prerequisites: Writing 1 (WRIT 100) and junior standing. A note for students and advisers: when registering refer to WebStac for updated information on section times and available seats.

Same as Writing 312
Credit 3 units. A&S : LA, WI  A&S : IQ, HUM, WI

**L84 Lw St 315 Introduction to Social Psychology**
Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory and political psychology, among other issues. Prerequisite: Psych 100B.

Same as Psych 315
Credit 3 units. A&S : SS  A&S : IQ, SSC  BU : BA  FA : SSP

**L84 Lw St 3255 The Development of the American Constitution**

**L84 Lw St 331 Theories of Justice**
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Same as Pol Sci 331
Credit 3 units. A&S : SS  A&S : IQ, SSC  BU : HUM  FA : SSP

**L84 Lw St 3325 Topics in Politics: Constitutional Politics**
The principal purpose of this course is to introduce students to the politics of constitutional interpretation. We first discuss the origins of the constitution, the structure operation and work of courts, and judicial decision making. Afterward, we examine various areas of the law relating to institutional powers and constraints (e.g., federalism, presidential powers, Congressional authority). In so doing, we develop an understanding for the legal doctrine in each area of the law and also examine explanations for the legal change we observe.

**L84 Lw St 344 Courts and Civil Liberties**
This course focuses on constitutional law principles in the Bill of Rights, and examines how Supreme Court decisions influence these principles in everyday life. We explore how the courts, and particularly the Supreme Court, have interpreted these rights in light of changing times and emerging issues. Topics include the First Amendment; free exercise of religion and the establishment clause; freedom of speech, assembly and association; freedom of the press; the Fourth Amendment and the rights of those accused and convicted of crimes; the right to privacy, including reproductive freedom and the right to die; equal protection and civil rights, including race, gender, sexual orientation; immigrants’ rights and voting rights; and civil liberties after September 11. Recommended for the Liberal Arts and Business (LAB) Certificate.

Same as Pol Sci 344

**L84 Lw St 3441 Defendant’s Rights**
This course explores the operations of the American criminal justice system. Substantial emphasis on the constitutional rights accorded to the criminally accused. Readings consist primarily, but not exclusively, of Supreme Court cases.

Same as Pol Sci 3441
Credit 3 units. A&S : SS  A&S : IQ, SSC  BU : BA, ETH  FA : SSP

**L84 Lw St 346 Philosophy of Law**
This course first focuses on the philosophical foundations of law, examining both the relationship between law and rules, as well as the types of legal reasoning. Second, the course focuses on philosophical issues that arise in the key substantive areas of law: contracts, torts, property, criminal law and constitutional law, as well in specialized areas such as family and employment law. The course ends with a brief discussion of several problems in legal ethics. Prerequisite: one previous philosophy course, or permission of the instructor.
L84 Lw St 3561 Women and the Law
We explore the development of women's legal rights by examining the ways in which social constructions of gender, race, class and sexuality have shaped American legal concepts within the limited bounds of traditional legal reasoning. We begin by placing our current legal framework, and its gender, race and other societal assumptions, in an historical and Constitutional context. We then examine many of the critical questions raised by feminist theory, feminist legal thought and other critical perspectives. For example, is the legal subject gendered as male, and, if so, how effectively can women use the law to gain greater social equity? What paradoxes have emerged in areas, such as employment discrimination, family law or reproductive rights, as women have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? The course is thematic, but we spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women.

L84 Lw St 358 Law, Politics and Society
This course offers an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system (in contrast to legal mythology), as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce students to legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law.

L84 Lw St 392 History of Political Thought II: Legitimacy, Equality and the Social Contract
Government is often justified as legitimate on the grounds that it is based on the consent of the governed. In History of Political Thought II, “Legitimacy, Equality and the Social Contract,” we examine the origins of this view, focusing our attention on canonical works in the social contract tradition, by Thomas Hobbes (1588–1679), John Locke (1632–1704), Jean-Jacques Rousseau (1712–1778), David Hume (1711–1776) and Immanuel Kant (1724–1804). This course is the second in a three-semester sequence on the history of political thought. Students are encouraged but not required to take all three courses. Prerequisite: one previous course in political theory or political philosophy.
Same as Pol Sci 392
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA

L84 Lw St 393 History of Political Thought III: Liberty, Democracy and Revolution
How, if at all, should the political institutions of the modern state express and secure the liberty and equality of citizens? What is the political significance of private property? Is world history to be understood as progress toward one best form of government — capitalist democracy, perhaps, or communism? What forces drive history? We address these and other timeless political questions through close reading and rigorous analysis of classic texts in the history of Western political thought. Authors studied include Hegel, Marx, Tocqueville, John Stuart Mill and Nietzsche. Prerequisite: one previous course in political theory or political philosophy. The course is the third in a three-semester sequence on the history of political thought, and students are encouraged but not required to take the courses in chronological sequence.
Same as Pol Sci 393
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA

L84 Lw St 4002 Directed Fieldwork in Legal Research
A fieldwork project in empirical and/or archival legal research under the direction of a member of the Washington University faculty. The fieldwork may be planned and undertaken individually or as part of a formal project. Permission of supervising faculty member and director of the program is required.
Credit variable, maximum 6 units. A&S : TH

Linguistics
At Washington University, Linguistics is a special interdepartmental program that offers an undergraduate major and minor. The core of the Linguistics program is the study of the form language takes. We examine how words are built from sounds, how sentences are built from words, and how all this structure manages to communicate meaning. With a good understanding of these formal properties, we can pursue other questions about language. How does language change over time? Do diverse languages have more in common than meets the eye? What functions does language play in society? What is its relation to thought? What are its biological and psychological underpinnings? And just how do children manage to acquire language so well in the first place?
Linguistics takes a scientific approach to the study of language and develops skills in data analysis and scientific experimental methods. Linguistics students may or may not speak many
languages, but they definitely will learn how to collect and analyze data about languages in an effort to answer these questions.

Several courses offered through the School of Medicine’s Program in Audiology and Communication Sciences also count as electives: PACS 234, PACS 401, PACS 433, PACS 434 and PACS 436. Under certain circumstances, students may count toward their major a limited number of relevant classes not listed here. Such circumstances include study abroad and preparation for a specialized capstone. A specific plan of study must be worked out in advance with advisers in the Linguistics Program.

Language requirement: Majors should normally have foreign language competency equivalent to one year of study at the college level. Classes taken to fulfill this requirement do not normally count toward the 30 total units required for the major.

Additional Information

Capstone: A senior project is required of primary majors. This normally will be done while taking Ling 495 or 500, or by completing the Senior Honors program (Ling 499).

Senior Honors: Students with a university GPA of 3.65 and a Linguistics GPA of 3.65 at the end of their junior year may apply to enter the honors program by submitting a proposal for a senior thesis. If admitted into the program, the student registers for 3 units of Ling 499 in each semester of the senior year. The student must complete the thesis and pass an oral defense by the middle of March.

The Minor in Linguistics

Units required: 15, of which 9 must be in courses numbered 300 or higher

Required course:

Ling 170D Introduction to Linguistics 3

Elective courses: 12 units. At least 6 units must come from this list:

Ling 309 Syntactic Analysis 3
Ling 311 Introduction to Semantics 3
Ling 312 Phonetics 3
Ling 313 Phonological Analysis 3
Ling 317 Introduction to Computational Linguistics 3
Ling 320 Historical and Comparative Linguistics 3
Ling 339 Introduction to Sociolinguistics 3

Remaining units may come from any course acceptable as an elective for the major.

L44 Ling 170D Introduction to Linguistics

Language is one of the fundamental capacities of the human species, and there are many interesting and meaningful ways in which it can be studied. This course explores the core components of linguistic theory: speech sounds (phonetics and phonology), word formation (morphology), sentence structure (syntax) and meaning (semantics). It also provides an overview of interdisciplinary ideas and research on how language is acquired and processed, its relation to the mind-brain and to society, and the question of whether the essential properties of language can be replicated outside the human mind (specifically, in chimpanzees or computer programs).

Credit 3 units.  A&S : LA  A&S : IQ, SSC  BU : BA, HUM  EN : S

L44 Ling 225D Latin and Greek in Current English

This course provides a study of the impact of Latin and Greek on the English language through intensive study of the Latin and Greek roots, prefixes and suffixes that are most commonly found in English technical and non-technical vocabulary. Some attention is also paid to the linguistic principles by which these elements have entered the English language.

Same as Classics 225D

Credit 3 units.  A&S : LA  A&S : IQ, HUM  BU : HUM

L44 Ling 234 Introduction to Speech and Hearing Sciences and Disorders

Same as Educ 234

Credit 3 units.

L44 Ling 242 American Sign Language From a Psycholinguistic and Cultural Perspective

This course examines deaf culture and aspects of psycholinguistics of a signed language versus a spoken language. This is not an American Sign Language class, whereby you finish the course knowing how to sign. However, the focus is on two main aspects. One focus is the importance of language to culture and the effect of being in a minority
group. A second focus is on language and cognition within the context of a language in the visual modality. Current and past research serves as the foundation for the examination of what makes a signed language a true, natural, human language within members of a culture, as well as on the more cognitive aspects of spatial relations and memory. The implications of understanding cross-modal similarities and differences of human language are explored through research articles, discussion of modern technology, e.g. fMRI and BlackBerry, as well as through demonstrations.

Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD

L44 Ling 301G Symbolic Logic
Same as Phil 301G
Credit 3 units. A&S : LA A&S : IQ, NSM, AN BU : HUM FA : SSP

L44 Ling 306G Philosophy of Language
A survey of major philosophical problems concerning meaning, reference and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues are selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor.

Same as Phil 306G
Credit 3 units. A&S : LA A&S : IQ, HUM BU : HUM FA : SSP

L44 Ling 309 Syntactic Analysis
The ability to produce and understand an infinite number of sentences is perhaps the most fascinating aspect of the human language faculty. Syntax is the study of how the brain organizes sentences from smaller phrases and words. This course explores syntactic analysis from several perspectives within generative linguistics, focusing primarily on the Government and Binding framework but also introducing Minimalist and Optimality Theoretic approaches. Topics discussed include phrase structure, transformations, case theory, thematic roles and anaphora. Assignments help students learn to construct and compare analyses of syntactic problems in English and other languages. Prerequisite: Ling 170D or 440, or permission of instructor.

Credit 3 units. A&S : LA A&S : IQ, SSC EN : S

L44 Ling 311 Introduction to Semantics
Semantics is the branch of linguistics that studies how speakers assign meaning to words, sentences and larger units of discourse. We combine perspectives from both linguistics and philosophy to explore a variety of topics including polysemy, compositionality, quantification, anaphora, definite descriptions, attitude reports, presupposition and implicature. Prerequisite: Ling 170D or Phil 301G or permission of instructor.

Credit 3 units. A&S : LA A&S : IQ, SSC

L44 Ling 312 Phonetics
Phonetics is the study of the sounds of the languages of the world. The primary goal of the course is to learn how speech sounds are produced, so that the student can describe them in articulatory terms, write them out in a standard notational system, and produce them accurately. Other topics include a basic introduction to the acoustics of speech and the use of personal computers to display, analyze and synthesize human speech. The course should prove useful to students desiring a deeper understanding of one of the fundamental underpinnings of linguistics, but also has practical applications in such fields as foreign language learning and the appreciation and acquisition of new dialects and accents. Prerequisite: Ling 170D or permission of instructor.

Credit 3 units. A&S : LA A&S : IQ, SSC

L44 Ling 313 Phonological Analysis
There are several important abilities involved in the use of human language, one of these being the ability to organize speech sounds. The system that the brain uses to accomplish this task is the subject matter of phonology. This course explores phonology from several perspectives within generative linguistics, including both traditional rule-based and current Optimality Theoretic approaches. Topics discussed include phonological features, lexical phonology, prosodic morphology, tone and metrical stress. Assignments help students learn to analyze phonological problems in a variety of languages and to evaluate the consequences of using different analytic approaches. Prerequisite: Ling 170D or 440, or permission of instructor.

Credit 3 units. A&S : LA A&S : IQ, SSC BU : BA

L44 Ling 317 Introduction to Computational Linguistics
Use of computers to analyze, understand and generate human language. Emphasis on appreciating practical applications such as text analysis; search and creation of dictionaries and corpora; information retrieval; machine translation; and speech interfaces. Survey of rule-based and statistical techniques. Students acquire programming skills appropriate for solving small- to medium-scale problems in linguistics and text processing, using a language such as Python. Students have regular programming assignments and complete a semester project. No previous knowledge of programming required. Prerequisites: Ling 170D or permission of instructor.

Credit 3 units. A&S : LA A&S : IQ, SSC EN : S
L44 Ling 320 Historical and Comparative Linguistics
Historical linguistics focuses on how languages change over time. Comparative linguistics focuses on their similarities and differences. In this course we trace some of the differences and changes in sound (phonetics and phonology), word formation (morphology), sentence structure (syntax) and meaning (semantics). Topics include linguistic universals; the structural and genetic classification of languages; the techniques of reconstructing proto-languages; and the causes of language change. Examples from Indo-European languages (for example, Greek, English and Spanish) and from Native American languages (for example, Quechua and Mayan) are emphasized. Prerequisite: Ling 170D. Credit 3 units. A&S : LA A&S : IQ, SSC FA : Lit

L44 Ling 339 Introduction to Sociolinguistics
Studies of language in social context are presented, including research related to diglossia, bilingualism, pidginization, creolization and dialectology. Discourse analyses and conversational analyses of face-to-face conversation are examined in methodological and analytical terms. Beyond assigned readings, critical discourse analyses, the ethnography of speaking, the sociology of language, and accommodation theory are also considered. Students are required to develop a course project related to one or more studies of language in use. Experimental studies of sociophonetics and sociohistorical linguistics are presented during lectures to demonstrate advanced interdisciplinary research with potential educational and legal relevance. Prerequisite: Ling 170D. Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD

L44 Ling 341 Linguistic Diversity in the United States
Linguistic diversity has always existed within the United States, and this course begins with a survey of many of the indigenous Native American languages that existed prior to European colonization. The emphasis of this course is linguistic research, as we examine diverse studies of language across the nation with respect to regional differences, racial and ethnic differences, historical differences, and differences in education and economic status. American bilingualism is explored, as are many of the dialects that have evolved in different parts of the nation. Students study a range of sophisticated linguistic analyses of language diversity in different parts of the United States at different points in the nation’s history. The culmination of the course explores practical linguistic applications in legal and educational contexts. Prerequisites: Ling 170D and some familiarity with elementary statistics. Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD

L44 Ling 3701 Introduction to Hispanic Linguistics
An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages. Same as Span 370 Credit 3 units. A&S : LA A&S : IQ, LCD

L44 Ling 396 Linguistics Seminar
Readings on a selected topic in theoretical linguistics with an emphasis on discussion, presentation and writing. Prerequisite: varies with topic. Credit 3 units. A&S : TH A&S : IQ, SSC

L44 Ling 396W Linguistics Seminar: Writing-Intensive
Readings on a selected topic in theoretical linguistics with an emphasis on discussion, presentation and writing. Prerequisite: varies with topic. Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI

L44 Ling 408 Psychology of Language
This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B. Same as Psych 493 Credit 3 units. A&S : SS, WI A&S : IQ, SSC FA : SSP

L44 Ling 4315 Culture, Language and the Education of Black Students
Same as Educ 4315 Credit 3 units. A&S : SS, CD A&S : IQ, SSC, LCD FA : SSP

L44 Ling 466 Second-Language Acquisition
There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first- and second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners'
Arts & Sciences

errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required.
Credit 3 units.   A&S : LA   A&S : IQ, HUM

L44 Ling 4691 Second Language Reading and Writing:
Theory, Research and Practice
Same as Span 4691
Credit 3 units.   A&S : SS   A&S : IQ, SSC   EN : S

L44 Ling 478 Topics in Linguistics
Meets with designated linguistics course, but with additional writing and research required for graduate credit and certification.
Credit 3 units.   A&S : LA   A&S : IQ, SSC

L44 Ling 495 Senior Seminar in Linguistics
The Senior Seminar affords students an opportunity to integrate the various fields of linguistics. Readings, discussions and presentations let students address issues that combine the content and the research methods of areas such as phonetics, phonology, morphology, syntax, diachrony and semantics. Students have individual projects within the scope of the semester’s particular topic, but the class as a whole helps in choosing, developing and refining the treatment. This course fulfills the requirement for a senior capstone for primary majors in Linguistics. It is the normal option for students who wish to take the capstone as a regular class rather than as sponsored independent study.
Credit 3 units.   A&S : SS   A&S : IQ, SSC

L44 Ling 499 Independent Work For Senior Honors
Prerequisites: senior standing and permission of the Linguistics program. Variable credit, maximum 6 units.
Credit variable, maximum 6 units.

Literature and History

Literature and History offers the opportunity to explore an integrated program of literary, political and historical studies under the auspices of the Interdisciplinary Project in the Humanities (p. 489) (IPH). Students interested in Literature and History can pursue it as a fully developed track within the IPH. (A full description of the requirements for completing the Literature and History program may be found in the general listing for the IPH.) This rigorous major emphasizes the interconnectedness of these disciplines and draws on the disciplinary methods of literary analysis and historical investigation.

Studying literature and history can bring a greater coherence, substantively and methodologically, to work in the humanities and social sciences. Because the program is small, it affords the opportunity to work closely with the faculty adviser. Students also can take advantage of courses from other interdisciplinary programs, such as American Culture Studies (p. 167) and European Studies (p. 393).

Steering Committee

Joseph Loewenstein
Professor
PhD, Yale University
(English, Interdisciplinary Project in the Humanities)

Steven Zwicker
Stanley Elkin Professor in the Humanities
PhD, Brown University
(English)

Students interested in Literature and History can pursue it as a fully developed track within the Interdisciplinary Project in the Humanities. A full description of the requirements for completing the Literature and History program may be found in the general listing for the Interdisciplinary Project in the Humanities (p. 491).

There is no minor in this area. Interested students are encouraged to please explore the minor in Text and Tradition offered by the Interdisciplinary Project in the Humanities (p. 492).

There are no courses associated with this program. See Interdisciplinary Project in the Humanities.

Mathematics

Mathematics has always held a central position in the liberal arts, and over time it has come also to play an important role in more and more aspects of our lives. Mathematical analysis and modeling are involved in many areas, far beyond the traditional association of mathematics with just the physical sciences and engineering. This fact is reflected in the diversity of the
students who study at least some mathematics during their time at Washington University — students who recognize the importance of quantitative skills in a world that becomes more and more technological.

Students major in mathematics for many reasons. Some are planning academic careers in mathematics that involve teaching or research. Others plan to work as actuaries or at other jobs in industry or government. Some plan careers in secondary education. Many majors do not intend to become "mathematicians" at all, but simply realize that quantitative training is a valuable asset in many kinds of work. Still others just view mathematics as an interesting concentration in their liberal arts education, even though they plan to enter such professional fields as medicine or law.

The mathematics program gives majors and minors a broad introduction to the subject. Mathematics majors also are able to choose among several tracks that add different emphases to their programs and reflect their individual interests or professional goals. Majors are encouraged to complete additional work (perhaps even a minor or second major) in other related areas.

Mathematics (Economics Emphasis)

Four economics courses:
- Econ 1011 Introduction to Microeconomics 3
- Econ 1021 Introduction to Macroeconomics 3
- Econ 413 Introduction to Econometrics 3
AND either
- Econ 4011 Intermediate Microeconomic Theory 3
or Econ 4021 Intermediate Macroeconomic Theory

And:
- Math 309 Matrix Algebra 3
- Math 3200 Elementary to Intermediate Statistics and Data Analysis 3
or Math 493 Probability
- Math 310 Foundations for Higher Mathematics 3
- Math 4111 & Math 4121 Introduction to Analysis and Introduction to Lebesgue Integration 6

Two additional upper-level mathematics from among:
- Math 318 Introduction to Calculus of Several Variables 3
- Math 429 Linear Algebra 3
- Math 456 Topics in Financial Mathematics 3
or any 400-level statistics course

Total 21 upper-level units

Notes

1. Upper-level mathematics courses are those numbered 300 or higher. A course with a lower number does not count toward upper-level mathematics requirements even if it is cross-listed as an upper-level course in another department or program: for example, if Math 2220 were cross-listed by another department as 3**, then registering for that course would not satisfy an upper-level mathematics requirement.

2. Required courses must be completed with a grade of C– or better.

3. Math 318 Introduction to Calculus of Several Variables and Math 308 Mathematics for the Physical Sciences cannot both be used to fulfill major requirements.

4. Courses transferred from other accredited colleges and universities with department approval can be counted. However,
   - courses transferred from a two-year college (such as a community college) cannot be used to satisfy upper-level requirements
   - at least half the upper-level units required in a major must be earned at Washington University or in a Washington University-approved Overseas Study Program.

5. Courses from University College cannot be used to fulfill major requirements.

6. At most 3 units for independent study or research work can count toward the major requirements.

7. At least 18 of the required upper-level units in a major must be satisfied using courses not double-counted toward the requirements of any other major or minor program.

8. Certain approved substitutions are found at the Undergraduate link on the department’s web page at http://wumath.wustl.edu. However, in all cases, at most one substitution can be approved that involves a course not home-based in the Department of Mathematics.

Additional Information

Independent Study: Majors with a plan for independent work or a research project may apply for independent study with a faculty member. Majors are encouraged (but not required) to consider a senior project or an honors project.

Graduation with Awards for Distinction or Latin Honors:
The department offers the awards Distinction in Mathematics, High Distinction in Mathematics, and Highest Distinction in Mathematics. Recommendations for students to receive Latin Honors (which are awarded by the College of Arts & Sciences, not the department) are keyed to the requirements for the Distinction Awards, as indicated below:

- Core Course Work for All Distinction Awards. (Core Course Work alone earns no award)
  
  a) at least 3.65 GPA in upper-level mathematics (L24) courses
  
  b) completion with grades of B or better (not B–) of
     
     i) one of the course sequences Math 4111-4121, 429-430, 493-494, 449-450
     
     and ii) three additional 400-500 level regularly scheduled mathematics courses.

- Distinction in Mathematics. Awarded for Core Course Work plus
  
  a) completion of one additional regularly scheduled mathematics course at the 400-500 level with grade of B or better (not B–), or
  
  b) passing the first actuarial exam (P1) from Society of Actuaries

- High Distinction in Mathematics. Awarded for Core Course Work plus satisfactory completion of an honors thesis. Details about honors theses are available on the department’s web page.

- Highest Distinction in Mathematics. Awarded for Core Course Work plus satisfactory completion of an honors thesis plus either:
a) course work includes completion of at least one of the graduate sequences Math 5021-5022, 5031-5032, 5041-5042, 5051-5052 and passing the graduate qualifying exam for that course sequence, or
b) course work includes all the requirements for the Honors Program in Statistics.

• Latin Honors. For any major in the College of Arts & Sciences, the department will recommend that the A.B. degree be awarded with Latin Honors if the student has the overall GPA of 3.65 required by the college and has earned the department award of High or Highest Distinction. The level of Latin Honors (summa cum laude, magna cum laude or cum laude) is determined by the college. See the Arts & Sciences Academic Honors and Awards (p. 145) section of this Bulletin for further details.

More details are available on the department’s web page.

Note: Students who entered Washington University before fall 2011 should click the menu item Prior Bulletins on the left to review the College’s requirements that were in place for the appropriate year of matriculation and visit the department’s web page for the older departmental requirements.

Study Abroad: Students interested in an intensive semester or year abroad studying mathematics should consider the Budapest Semesters in Mathematics Program.

The Minor in Mathematics

Additional Information

1. Required courses must be completed with a letter grade of C– or better.
2. Math 318 (p. 595) and Math 308 (p. 595) cannot both be used to fulfill minor requirements.

3. Courses transferred from a two-year college (such as a community college) cannot count as upper-level courses toward the minor.
4. University College courses cannot count to fulfill minor requirements.
5. At least 6 of the upper-level units required in a minor must be earned at Washington University or in a Washington University-approved Overseas Study Program.
6. At least 6 of the required upper-level units required must be satisfied using courses not double-counted toward the requirements of any other major or minor program.
7. At least three of the four upper-level courses required in the minor must be courses “home-based” in the Math Department; one approved course from another department may be substituted. Approved substitutions can be found on the department web page.

L24 Math 100 Foundations for Calculus
A limited enrollment class for students planning to take calculus but who need additional precalculus preparation. The course aims to build both the technical skills and the conceptual understanding needed to succeed in calculus. Course emphasizes links between the graphical, numeric and algebraic viewpoints. A variety of approaches are used to present the material. Prerequisites: two years of high school algebra and a course in geometry (or the equivalent).
Credit 3 units. A&S : NS   A&S : IQ , NSM    FA : NSM

L24 Math 1011 Introduction to Statistics
Basic concepts of statistics. Data collection (sampling, designing experiments), data organization (tables, graphs, frequency distributions, numerical summarization of data), statistical inference (elementary probability and hypothesis testing). Prerequisite: two years of high school algebra.
Credit 3 units. A&S : NS, QA   A&S : IQ , NSM, AN   FA : NSM

L24 Math 109 Mathematics and Music
Credit 3 units. A&S : NS, QA   A&S : IQ , NSM, AN   FA : NSM
### L24 Math 131 Calculus I
Derivatives of algebraic, trigonometric and transcendental functions, techniques of differentiation, Mean Value Theorem, applications of the derivative. The definite integral and Fundamental Theorem of Calculus. Areas. Simpler integration techniques. Prerequisites: high-school algebra and precalculus, including trigonometry. Credit 3 units. A&S : NS, QA A&S : IQ, NSM, AN FA : NSM

### L24 Math 132 Calculus II
Continuation of Math 131. A brief review of the definite integral and Fundamental Theorem of Calculus. Techniques of integration, applications of the integral, sequences and series, Taylor polynomials and series, and some material on differential equations. Prerequisite: Math 131 or a B or better in a one-year high school calculus course, or permission of the department. Credit 3 units. A&S : NS, QA A&S : IQ, NSM, AN FA : NSM

### L24 Math 201 Freshman Seminar: How Mathematics Thinks: Multivariable Calculus
An introduction to multivariable calculus covering most of the material in Math 233 but at a greater level of rigor. For purposes of major requirements, this course can replace Math 233 Calculus III. Enrollment limited to 15. Open only to freshmen with a score of 5 on the AP Calculus Exam (BC version). However, some students with this score may nevertheless be better served by Math 233. Consultation with the department or instructor recommended before enrolling. Students cannot receive credit for both Math 201 and Math 233. Credit 4 units. A&S : NS, QA A&S : IQ, NSM, AN

### L24 Math 217 Differential Equations

### L24 Math 220 Finite Mathematics
Topics selected from number theory, combinatorics and graph theory. Methods of proof and practical applications: for example, calendars, scheduling, communications, encryption. Prerequisite: high school algebra. Credit 3 units. A&S : NS, QA A&S : IQ, NSM, AN FA : NSM

### L24 Math 2200 Elementary Probability and Statistics
An introduction to probability and statistics. Discrete and continuous random variables, mean and variance, hypothesis testing and confidence limits, nonparametric methods, Student’s t, analysis of variance, regression and contingency tables. Graphing calculator with statistical distribution functions (such as the TI-83) may be required. Prerequisite: Math 131. Credit 3 units. A&S : NS, QA A&S : IQ, NSM, AN FA : NSM

### L24 Math 233 Calculus III
Multivariable calculus. Topics include differential and integral calculus of functions of two or three variables: vectors and curves in space, partial derivatives, multiple integrals, line integrals, vector calculus at least through Green’s Theorem. Prerequisite: Math 132 or a score of 4-5 on the Advanced Placement Calculus Exam (BC version). Credit 3 units. A&S : NS, QA A&S : IQ, NSM, AN FA : NSM

### L24 Math 266 Math for Elementary School Teachers
An introductory course in linear algebra that focuses on topics selected from number theory, combinatorics and graph theory. Methods of proof and practical applications: for example, calendars, scheduling, communications, encryption. Prerequisite: high school algebra. Credit 3 units. A&S : NS, QA A&S : IQ, NSM, AN

### L24 Math 302 Elementary Geometry From an Advanced Point of View
A rigorous modern treatment of Euclidean geometry and an introduction to non-Euclidean geometry. Prerequisite: Math 310 or permission of instructor. Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

### L24 Math 308 Mathematics for the Physical Sciences
Continuation of Math 233 emphasizing topics of interest in the physical sciences. Topics in multivariable and vector calculus (div, grad, curl); line, surface integrals and connections to electromagnetism; Fourier series and integrals; boundary value problems (diffusion and wave equations); additional topics if time permits. Students may not receive credit toward a math major or minor for both Math 308 and Math 318. Prerequisite: Math 233 or permission of instructor. Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

### L24 Math 309 Matrix Algebra
An introductory course in linear algebra that focuses on Euclidean n-space, matrices and related computations. Topics include: systems of linear equations, row reduction, matrix operations, determinants, linear independence, dimension, rank, change of basis, diagonalization, eigenvalues, eigenvectors, orthogonality, symmetric matrices, least square approximation, quadratic forms. Introduction to abstract vector spaces. Prerequisite: Math 132. Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

### L24 Math 310 Foundations for Higher Mathematics
Introduction to the rigorous techniques used in more advanced mathematics. Topics include postpositional logic, use of quantifiers, set theory, methods of proof and disproof (counterexamples), foundations of mathematics. Use of these
tools in the construction of number systems and in other areas such as elementary number theory, combinatorial arguments and elementary proofs in analysis. Prerequisite: Math 233. Credit 3 units. A&S: NS  A&S: IQ, NSM  FA: NSM

L24 Math 310W Foundations for Higher Mathematics with Writing
See the description for Math 310. Math 310W is a writing-intensive version associated with Math 310. Students participate in the regular Math 310 lectures and are responsible for all the exams and assignments associated with Math 310. Students in Math 310W have one additional meeting each week to deal with writing issues. At least three papers (four to five pages in length) are required, each with at least one revision. Prerequisite: Math 233 or permission of instructor. Credit 4 units. A&S: NS, WI  A&S: IQ, NSM, WI

L24 Math 312 Differential Equations and Dynamical Systems
Qualitative theory of ordinary differential equations. Picard’s existence and uniqueness theorem, the phase plane, Poincare-Bendixon theory, stationary points, attractors and repellors, graphical methods. Physical applications, including chaos, are indicated. Prerequisite: Math 217. Credit 3 units. A&S: NS  FA: NSM

L24 Math 318 Introduction to Calculus of Several Variables
Selected topics for functions of several variables involving some matrix algebra and presented at a level of rigor intermediate between that of Calculus III and higher-level analysis courses. Students may not receive credit toward a mathematics major or minor for both Math 308 and 318. Prerequisites: Math 233 and Math 309. Credit 3 units. A&S: NS  A&S: IQ, NSM  FA: NSM

L24 Math 3200 Elementary to Intermediate Statistics and Data Analysis
An introduction to probability and statistics. Discrete and continuous random variables, mean and variance, hypothesis testing and confidence limits, Bayes’ rule, decision making, maximum likelihood, logistic regression, ROC curves and survival analysis. Prerequisites: Math 3200, or a strong performance in Math 2200 and permission of the instructor. Credit 3 units. A&S: NS  A&S: IQ, NSM  FA: NSM

L24 Math 331 Algebraic Systems
Polynomials, binomial expansions, factoring, rings (integers and polynomials), unique factorization and other topics relevant to the high school curriculum. Designed for future secondary school teachers and other students looking for a course in algebra at a less abstract level than Math 430. Prerequisite: Math 310 or permission of instructor. Credit 3 units. A&S: NS  A&S: IQ, NSM  FA: NSM

L24 Math 3351 Elementary Theory of Numbers
Divisibility properties of integers, congruences, quadratic reciprocity, Diophantine equations. Introduction to continued fractions and a brief discussion of public key cryptography. Prerequisite: Math 310 or permission of instructor. Credit 3 units. A&S: NS  A&S: IQ, NSM  FA: NSM

L24 Math 3350 Topics in Applied Mathematics
Topics change with each offering of the course. Past topics have included “Mathematics and Multimedia,” “The Mathematics and Chemistry of Reaction-Diffusion Systems,” “Mathematical Biology,” “Simulation Analysis of Random Processes” and “Introduction to Monte Carlo Methods.” Prerequisites vary, but always include at least Math 233 and usually Math 309. Credit 3 units. A&S: NS  A&S: IQ, NSM  FA: NSM

L24 Math 3370 Introduction to Combinatorics
Basics of enumeration (combinations, permutations and enumeration of functions between finite sets), generating functions; the inclusion-exclusion principle, partition theory and introductory graph theory. As time permits, additional topics may include Ramsey’s Theorem, probabilistic methods in combinatorics and algebraic methods in combinatorics. Prerequisites: Math 132, 309 and 310, or permission of the instructor. Credit 3 units. A&S: NS  A&S: IQ, NSM, AN

L24 Math 371 Graph Theory
Introduction to graph theory including the basic definitions and theorems and some more advanced topics that drive much current research in graph theory: Ramsey’s Theorem, random graph theory and, if time permits, Szemerédi’s regularity lemma. Graphs are studied as abstract objects; however, graph theory is also of interest to applied mathematicians because graphs are natural models for networks (social, electric). Prerequisite: Math 310 or a roughly equivalent course, or permission of
instructor. Students should know what a proof is and how to produce one. Some informal understanding of probability is helpful, but students need not have taken a probability course. Credit 3 units. A&S : NS A&S : IQ, NSM

L24 Math 400 Undergraduate Independent Study
Approval of instructor required. Credit variable, maximum 3 units.

L24 Math 403C Mathematical Logic I
A first course in mathematical logic, an introduction to both proof theory and model theory. The structure and properties of first-order logic are studied in detail, with attention to such notions as axiomatic theory, proof, model, completeness, compactness and decidability. Prerequisite: Phil 301G or equivalent, or a background in mathematics. Same as Phil 403
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L24 Math 404C Mathematical Logic II
Gödel's Incompleteness Theorem: its proof, its consequences, its reverberations. Prerequisite: Philosophy 403 or a strong background in mathematics. Same as Phil 404
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L24 Math 407 An Introduction to Differential Geometry
A study of properties of curves and surfaces in 3-dimensional Euclidean space. The course is essentially a modern recounting of a seminal paper of Gauss. Prerequisites: Math 233 and Math 309
Credit 3 units. A&S : NS

L24 Math 408 Nonparametric Statistics
Statistical methods that make few or no assumptions about the data distribution. Permutation tests of different types; nonparametric confidence intervals and correlation coefficients; jackknife and bootstrap resampling; nonparametric regressions. If there is time, topics chosen from density estimation and kernel regression. Short computer programs are written in a language such as R or C. Prerequisites: Math 3200 and Math 493, or permission of instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L24 Math 4111 Introduction to Analysis
The real number system and the least upper-bound property; metric spaces (completeness, compactness and connectedness); continuous functions (in R^n; on compact spaces; on connected spaces); C(X) (pointwise and uniform convergence; Weierstrass approximation theorem); differentiation (mean value theorem; Taylor's theorem); the contraction mapping theorem; the inverse and implicit function theorems. Prerequisite: Math 310 or permission or instructor. Credit 3 units. A&S : NS, QA A&S : IQ, NSM

L24 Math 4121 Introduction to Lebesgue Integration
Riemann integration; measurable functions; measures; Lebesgue measure; the Lebesgue integral; integrable functions; L^p spaces; modes of convergence; decomposition of measures; product measures. Prerequisite: Math 4111 or permission of the instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM

L24 Math 415 Partial Differential Equations
Introduction to the theory of PDE's with applications to selected classical problems in physics and engineering. Linear and quasilinear first-order equations, derivation of some of the classical PDE's of physics, and standard solution techniques for boundary and initial value problems. Preliminary topics such as orthogonal functions, Fourier series and variational methods introduced as needed. Prerequisites: Math 217 and 309, or permission of instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM

L24 Math 416 Complex Variables
Analytic functions, elementary functions and their properties, line integrals, the Cauchy integral formula, power series, residues, poles, conformal mapping and applications. Prerequisites: Math 318, Math 308 or ESE 317, or permission of instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L24 Math 4171 Topology I
An introduction to the most important ideas of topology. Course includes necessary ideas from set theory, topological spaces, subspaces, products and quotients, compactness and connectedness. Some time is also devoted to the particular case of metric spaces (including topics such as separability, completeness, completions, the Baire Category Theorem, and equivalents of compactness in metric spaces). Prerequisite: Math 4111 or permission of instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM
L24 Math 418 Introduction to Topology and Modern Analysis II
Continuation of Math 417. May include some algebraic topology (depending on material covered in 417). Prerequisite: Math 417. Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L24 Math 420 Experimental Design
A first course in the design and analysis of experiments, from the point of view of regression. Factorial, randomized block, split-plot, Latin square and similar design. Prerequisite: Math 3200 or permission of instructor. Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L24 Math 429 Linear Algebra
Introduction to the linear algebra of finite-dimensional vector spaces. Includes systems of equations, matrices, determinants, inner product spaces, spectral theory. Prerequisite: Math 310 or permission of instructor. Math 309 is not an explicit prerequisite but students already should be familiar with such basic topics from matrix theory as matrix operations, linear systems, row reduction and Gaussian elimination. Material on these topics in early chapters of the text are covered very quickly. Credit 3 units. A&S : NS, QA A&S : IQ, NSM FA : NSM

L24 Math 430 Modern Algebra
Introduction to groups, rings and fields. Includes permutation groups, group and ring homomorphisms, field extensions, connections with linear algebra. Prerequisite: Math 429 or permission of the instructor. Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L24 Math 434 Survival Analysis
Life table analysis and testing; mortality and failure rates; Kaplan-Meier or product-limit estimators, hypothesis testing and estimation in the presence of random arrivals and departures; and the Cox proportional hazards model. Techniques of survival analysis are used in medical research, industrial planning and the insurance industry. Prerequisite: Math 309 and 3200, or permission of the instructor. Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L24 Math 4351 Number Theory and Cryptography
The course covers many of the basics of elementary number theory, providing a base from which to approach modern algebra, algebraic number theory and analytic number theory. It also introduces one of the most important real-world applications of mathematics, namely the use of number theory and algebraic geometry in public key cryptography. Topics from number theory involve divisibility (Euclidean algorithm, primes, Fundamental Theorem of Arithmetic), congruences (modular arithmetic, Chinese Remainder Theorem, primality testing and factorization). Topics from cryptography include RSA encryption, Diffie-Hellman key exchange and elliptic curve cryptography. Topics about algebraic numbers may be included if time permits. Prerequisites: Math 233, 309 and 310 (or permission of instructor. Credit 3 units. A&S : NS A&S : IQ, NSM

L24 Math 436 Algebraic Geometry
Introduction to affine and projective algebraic varieties; the Zariski topology; regular and rational mappings; simple and singular points; divisors and differential forms; genus; the Riemann-Roch theorem. Prerequisites: Math 318, 429 and 430, or permission of the instructor. Credit 3 units. A&S : NS FA : NSM

L24 Math 439 Linear Statistical Models
Theory and practice of linear regression, analysis of variance (ANOVA) and their extensions, including testing, estimation, confidence interval procedures, modeling, regression diagnostics and plots, polynomial regression, colinearity and confounding, model selection, geometry of least squares. The theory is approached mainly from the frequentist perspective and use of the computer (mostly R) to analyze data is emphasized. Prerequisite: Math 3200 and a course in linear algebra (such as Math 309 or Math 429), or permission of instructor. Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L24 Math 4392 Advanced Linear Statistical Models
Review of basic linear models relevant for the course; generalized linear models including logistic and Poisson regression (heterogeneous variance structure, quasilikelihood); linear mixed-effects models (estimation of variance components, maximum likelihood estimation, restricted maximum likelihood, generalized estimating equations), generalized linear mixed-effects models for discrete data, models for longitudinal data, optional multivariate models as time permits. The computer software R is used for examples and homework problems. Implementation in SAS is mentioned for several specialized models. Prerequisites: Math 439 and a course in linear algebra (such as Math 309 or 429), or consent of instructor. Credit 3 units. A&S : NS A&S : IQ, NSM

L24 Math 449 Numerical Applied Mathematics
Computer arithmetic, error propagation, condition number and stability; mathematical modeling, approximation and convergence; roots of functions; calculus of finite differences; implicit and explicit methods for initial value and boundary value problems; numerical integration; numerical solution of linear systems, matrix equations and eigensystems; Fourier transforms; optimization. Various software packages may be introduced and used. Prerequisites: CSE 200 or 131 (or other computer background with permission of the instructor); Math 217 and 309.
Credit 3 units. A&S : NS A&S : IQ, NSM

L24 Math 450 Topics in Applied Mathematics
Topic may vary with each offering of the course. Prerequisite: Math 449 or permission of the instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L24 Math 456 Topics in Financial Mathematics
An introduction to the principles and methods of financial mathematics, with a focus on discrete-time stochastic models. Topics include no-arbitrage pricing of financial derivatives, risk-neutral probability measures, the Cox-Ross-Rubenstein and Black-Scholes-Merton options pricing models, and implied volatility. Prerequisites: Msth 233 and Match 3200 or permission of instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM

L24 Math 459 Bayesian Statistics
Introduces the Bayesian approach to statistical inference for data analysis in a variety of applications. Topics include: comparison of Bayesian and frequentist methods, Bayesian model specification, choice of priors, computational methods such as rejection sampling, and stochastic simulation (Markov chain Monte Carlo), empirical Bayes method, hands-on Bayesian data analysis using appropriate software. Prerequisite: Math 493 and either Math 3200 or 493; or permission of the instructor. Some programming experience may also be helpful (consult with the instructor).
Credit 3 units. A&S : NS A&S : IQ, NSM

L24 Math 470 Graph Theory
Graph theory entails aspects of counting theory, combinatorics, algebra, geometry and even some analysis. This course presents many of the most basic concepts and then develops several modern applications. Topics include fundamental results and uses of graphs, Euler’s theorem, the adjacency matrix, eigenvalues and the Laplacian, isoperimetric problems, paths and flows, randomness in graphs, symmetric graphs, subgraphs, Harnack inequalities, Sobolev inequalities. Prerequisites Math 310 and 318 (or equivalent background with permission of the instructor).
Credit 3 units. A&S : NS A&S : IQ, NSM

L24 Math 475 Statistical Computation
An introduction to programming in SAS (Statistical Analysis System) and applied statistics using SAS: contingency tables and Mantel-Haenszel tests; general linear models and matrix operations; simple, multilinear and stepwise regressions; ANOVAs with nested and crossed interactions; ANOVAs and regressions with vector-valued data (MANOVAs). Topics chosen from discriminant analysis, principal components analysis, logistic regression, survival analysis and generalized linear models. Prior acquaintance with SAS at the level introduced in Math 3200 is assumed. Prerequisites: Math 3200 and 493 (or 493 concurrently), or permission of instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L24 Math 481 Group Representations
Ideas and techniques in representation theory of finite groups and Lie groups.
Credit 3 units. A&S : NS

L24 Math 493 Probability
Mathematical theory and application of probability at the advanced undergraduate level; a calculus-based introduction to probability theory. Topics include the computational basics of probability theory, combinatorial methods, conditional probability including Bayes’ theorem, random variables and distributions, expectations and moments, the classical distributions, and the central limit theorem. Prerequisites: Math 318 or 308 and permission of the instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM

L24 Math 494 Mathematical Statistics
Theory of estimation, minimum variance and unbiased estimators, maximum likelihood theory, Bayesian estimation, prior and posterior distributions, confidence intervals for general estimators, standard estimators and distributions such as the Student-t and F-distribution from a more advanced viewpoint, hypothesis testing, the Neymann-Pearson Lemma (about best possible tests), linear models, and other topics as time permits. Prerequisites: Math 3200 and 493, or permission of the instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L24 Math 495 Stochastic Processes
Content varies with each offering of the course. Past offerings have included such topics as random walks, Markov chains, Gaussian processes, empirical processes, Markov jump processes and a short introduction to martingales, Brownian motion and stochastic integrals. Prerequisites: Math 318 and 493, or permission of instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM

L24 Math 496 Topics in Statistics
Topic varies with each offering.
Credit 3 units. A&S : NS

L24 Math 496A Topics in Algebra
Topic varies with each offering.
Credit 3 units. A&S : NS A&S : IQ, NSM
L24 Math 499 Study for Honors
Prerequisites: junior or senior standing, eligibility for honors work in mathematics and permission of the department's Director of Undergraduate Studies.
Credit 3 units. FA: NSM

---

The Program

Requirements for the Medicine and Society Program:
Once admitted to the program, students must complete the following:

- Freshman Medicine and Society Seminar
- Community Health Internship
- Anthro 260 Topics in Health and Community
- A Major in Anthropology or a Minor in Anthropology or Public Health
- Senior Capstone or Honors Thesis

Students who are accepted into the Medicine and Society Program are enrolled in a year-long Freshman Seminar on culture, health and society in the Department of Anthropology. This seminar provides the academic foundation for future community health work in St. Louis. Beginning in the sophomore year, students identify and select a community health site for internship placement. The internship opportunity provides students with a location for focusing their interest and involvement in community health and allows students to participate in the work of the host organization. During the junior and senior years, academic and service activities intensify at the internship site, culminating in a Senior Honors thesis or Capstone project based upon original research and investigation. All students in the Medicine and Society Program are encouraged to graduate with honors, based upon their independent research and academic achievement.

This course of study provides an excellent foundation for future graduate work in medicine, public health or any of the allied health professions such as nursing or physical and occupational therapy. Students who complete the program also will be highly competitive for admission to other professional schools such as law, business or social work.

Personnel:

Medicine and Society is directed by Bradley Stoner, a medical anthropologist and infectious disease physician at Washington University. Dr. Stoner has extensive experience as a physician and public health researcher and holds a joint appointment in the Department of Internal Medicine at Washington University School of Medicine. He oversees student training in medical anthropology and placement in the community internship sites. Dr. Stoner is assisted in these efforts by Rebecca Lester, who serves as assistant director of the program. Students also have full access to other faculty in anthropology and related disciplines who offer courses of relevance and interest.

Contact Person: Dr. Bradley Stoner
Phone: 314/935-5673
E-mail: bstoner@artsci.wustl.edu
Departmental website: http://publichealth.artsci.wustl.edu

---

Medicine and Society

The Medicine and Society Program is an exciting opportunity for undergraduate students in Arts & Sciences who are interested in exploring the interface of culture, behavior and health from a social science perspective. The program addresses the important social and cultural foundations of health and illness in human societies, with a specific emphasis upon service and research opportunities. The program is supported by a grant from the Danforth Foundation and administered through the Department of Anthropology.

Eligibility:
The Medicine and Society Program is a four-year program designed for students entering their freshman year. Upon acceptance to Washington University in the spring, students may apply online for admission to the program by indicating their interest in Medicine and Society. A description of the program and how to apply online is in Getting Started, a brochure sent to students in mid-May.

Admission to this program is highly competitive. Academic credentials, aptitude and interest in a health-related career, and personal statements all will be considered in selecting 20 participants to join the freshman cohort. The program will particularly appeal to students with a long-term commitment to careers in the health professions and related areas.

Curriculum:

Medicine and Society has its intellectual and programmatic roots in the field of medical anthropology, which is broadly defined as the study of human health and illness across culture, time and space. Medical anthropologists examine the role of culture and society in shaping illness experiences. Foci of inquiry may include such issues as traditional health beliefs and practices; cultural clashes between traditional medicine and biomedicine; political and economic foundations of health disparities; alternative and complementary medicine; social and behavioral factors affecting disease rates; and public health responses to emerging health problems. These topics all share a focus on community as a primary area of inquiry and population as a primary unit of analysis.
The Medicine and Society Program is not a major/minor program; it is a four-year program that is available by application only.

Current students who are interested in the Medicine and Society curriculum are advised to investigate a major (p. 195) or minor in anthropology (p. 197) with a focus on medical anthropology or the optional Global Health and the Environment track (p. 195) of the anthropology major or minor.

Please see the requirements in the Medicine and Society Overview page where required courses are listed. See the Anthropology (p. 198) section for specific course information.

Medieval and Renaissance Studies

Interested students may pursue a minor in Medieval and Renaissance Studies or a major in Renaissance Studies under the auspices of the Interdisciplinary Project in the Humanities (IPH). The major offers students the opportunity to gain a broad understanding of the early modern world, the seedbed of modern Western civilization, through the integrated study of Renaissance literature, history, philosophy, art history and music. (A full description of the requirements for completing the Renaissance Studies track in the Interdisciplinary Project in the Humanities may be found in the general listing for the IPH (p. 489).)

Courses are drawn from a wide range of departments. This allows students to develop their own course of study, to select areas of concentration that are of particular personal interest, and to work closely with faculty from different areas. Students study the themes and social issues of the period through art, history, literature and popular culture. Topics examined include the rise of urban life, the flowering of vernacular languages and new literary genres, the growing emphasis on education, the reconception of pictorial representation and architectural space, the expression and subversion of power in politics and culture, and the transformation of religious doctrines and institutions.

Contact Person:  Interdisciplinary Project in the Humanities

Departmental website:  http://iph.wustl.edu/

Steering Committee

Derek M. Hirst
William Eliot Smith Professor
PhD, Cambridge University
(History)

Joseph Loewenstein
Professor
PhD, Yale University
(English)
Students seeking a major concentration in Medieval or Renaissance Studies are advised to pursue it under the aegis of either the Interdisciplinary Project in the Humanities (p. 489) or in one of the other departments or programs in the Humanities. They should achieve foreign language competency in French, Spanish, German, Italian, Latin, Arabic or Greek, and are strongly urged to pursue their studies across several departments and programs.

The Minor in Medieval and Renaissance Studies

The Minor in Western Medieval Studies and the Minor in Renaissance Studies have the same structure. Students must complete two years of college-level language study in Spanish, French, Italian, Latin, German, Arabic or Greek and are encouraged to continue their foreign language study further. They are expected to take six additional courses; three should come from the following list:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Art-Arch 113</td>
<td>History of Western Art, Architecture and Design</td>
<td>3</td>
</tr>
<tr>
<td>History 101C</td>
<td>Western Civilization</td>
<td>3</td>
</tr>
</tbody>
</table>
Students interested in pursuing the minor in Medieval and Renaissance Studies should contact the offices of the Interdisciplinary Project in the Humanities (p. 489).

Additional Information
In addition, students must take three courses in either Medieval or Renaissance Studies (depending on the concentration chosen) from at least two different departments or programs. Students will select these three courses in consultation with their minor adviser: Michael Sherberg for Western Medieval Studies and Joseph Loewenstein for Renaissance Studies.

See the Interdisciplinary Project in the Humanities (p. 489).

Mind, Brain and Behavior
How do we think? What is human consciousness? What is the relationship between the mind, the brain and behavior? During the past few decades, an explosive growth of knowledge in the cognitive sciences has begun to yield answers to fundamental mysteries about the nature of human thought. Students in this two-year program investigate new theories and problems emerging from this interdisciplinary area of study.

The Mind, Brain and Behavior (MBB) program, which is open to incoming freshmen in the College of Arts & Sciences, is a two-year program that engages students with the research culture of the university. The program builds upon areas of research strength and increasing faculty collaboration within the university. It brings together faculty from several departments and students who share an interest in an area of study to create a lively intellectual and social community; to foster a culture of inquiry; and to enable students, early in their undergraduate career, to participate in research. For more information on the application process: college.artsci.wustl.edu/firstyearprograms.

During the first year, freshmen take two core courses that provide an introduction to the interdisciplinary study of the mind-brain (MBB 120A Introduction to Study of the Mind-Brain: Psychological, Biological and Philosophical Perspectives and MBB 122 Introduction to the Study of the Mind Brain II). These courses are taught collaboratively by faculty members from different disciplines. In the sophomore year, students are able to undertake research under the supervision of a faculty member who serves as a research mentor for the MBB program (MBB 300 Research in Mind, Brain and Behavior). Sophomores may choose among several research options, each combining independent work with opportunities to work collaboratively.

Participation in Mind, Brain and Behavior is fully compatible with all majors and preprofessional programs. Enrollment in Mind, Brain and Behavior is limited to 45 students each year.

The Mind, Brain and Behavior (MBB) program, which is open to incoming freshmen in the College of Arts & Sciences, is a two-year program that engages students with the research culture of the university. There is no major in this area.

The Mind, Brain and Behavior (MBB) program, which is open to incoming freshmen in the College of Arts & Sciences, is a two-year program that engages students with the research culture of the university. There is no minor in this area.

L96 MBB 120A Introduction to Study of the Mind-Brain: Psychological, Biological and Philosophical Perspectives
A consideration of three primary areas of research in cognitive science: attention, memory and language. These topics are used to illustrate the techniques by which mental abilities are investigated and explained in psychology and neuroscience: the focus, in particular, is on the use of reaction time studies, brain imaging and cell recordings to isolate the basic components that make up complex functions. In addition to the central concepts and theories in each area, the course addresses philosophical implications of this research concerning how the mind and brain are related, how the mind-brain encodes or represents information, and the nature of consciousness. And there is an emphasis on applying these findings to important problems,
such as Alzheimer’s disease and deficits due to brain damage. The class is taught by three members of the faculty from different disciplines and combines a whole-group lecture with small discussion classes. The goal is to give students a good understanding of the interdisciplinary nature of cognitive science and to help them develop the ability to think and write critically about scientific research into the mind-brain. Prerequisite: admission to the Mind, Brain and Behavior program. Credit 3 units. A&S : NS A&S : IQ, NSM BU : SCI

L96 MBB 122 Introduction to the Study of the Mind Brain II
In this course, participants in the Mind, Brain and Behavior Program continue their exploration of cognitive science. We explore different frameworks for thinking about how the different branches of cognitive science relate to each other. The course contains an introduction to relevant topics in the philosophy of science and the philosophy of mind. Prerequisite: MBB/PNP 120. Credit 3 units. A&S : SS A&S : IQ, SSC

L96 MBB 300 Research in Mind, Brain and Behavior
An introduction to research for students in the Mind, Brain and Behavior program. Students work under the supervision of a mentor. Prerequisite: admission to the Mind, Brain and Behavior program, completion of MBB/PNP 122, and permission of the mentor. Credit variable, maximum 3 units. Credit variable, maximum 3 units. A&S : NS A&S : IQ, NSM

Music

The Department of Music offers a music program of exceptional quality and diversity. In this varied course of study, where music is approached as a liberal and fine art, rather than as an isolated, separate subject, students may pursue practical and creative music making or study musical traditions and individual works. Music courses are open to all students in the university. We offer students the opportunity to develop performance skills in voice or instruments through private instruction or through participation in small or large ensembles. Private music lessons with our prominent faculty, including members of the St. Louis Symphony Orchestra, are available in voice, piano, organ, harpsichord, guitar, lute and all orchestral and jazz instruments. Music majors can explore critical issues of tradition, individual composers, compositional craft, aesthetic interpretation and music’s social and cultural significance through a wide range of courses from introductory classes to highly specialized seminars. Instruction is available in jazz, popular music, world musics, the history and literature of Western music, ethnomusicology, music theory and analysis, musical composition, and electronic music. All performance, creative and academic endeavors in music are supported by a thorough grounding in musicianship and keyboard skills.

Music majors may take advantage of study abroad programs in music in Italy, England and France. Summer research projects under faculty direction also are available. Several options are available for students interested in music: the Bachelor of Arts degree with a major in music, the Bachelor of Music degree, a minor in music and a minor in jazz studies. Students may take the A.B. degree in combination with a major in another field or as their primary major in a broad liberal arts education. Majoring in music can prepare students well for graduate work and for a variety of musical careers and other professions.

Performance Opportunities

Ensembles: The department sponsors numerous performing ensembles that draw members from the university and the surrounding community. Students must audition for admission to the ensembles. All ensembles are available for graded credit, for credit/no credit or off roster. Ensembles give one or more public performances each semester. Students who are enrolled for credit in one of the department’s ensembles may be entitled to a scholarship that covers a portion of the fee for applied music lessons.

Vocal Ensembles: Concert Choir, Chamber Choir, Opera Production.

Instrumental Ensembles: Flute Choir, Jazz Band, Chamber String Ensembles, Symphony Orchestra, Wind Ensemble, Jazz Combos.

Applied Music: Students may take lessons in voice, piano, organ, harpsichord, guitar, lute and all orchestral and jazz instruments in the appropriate course sequences. A separate fee is charged for private instruction. Music majors and minors receive an applied music scholarship to cover all or a portion of the fee, respectively. If students enroll for credit in one of the department’s ensembles, they are entitled to a scholarship for a portion of the applied music fee each semester they are enrolled. In addition, the department has a limited number of partial scholarships based on need and merit.

The Bachelor of Music Major

Total units required: 65–71

Declaration of this major must be approved by the department before the end of a student’s sophomore year. Majors are required to complete a minimum of 27 to 39 units in advanced
courses, depending on the area of concentration. Students may earn the B.Mus. degree with concentration in performance, composition, music theory or music history and literature, or they may pursue a general program combining two or more areas.

Each concentration requires a major senior project, such as a thesis, recital, lecture-demonstration or composition portfolio. All majors also must pass a keyboard proficiency examination.

### Applied Music and Ensemble Requirements:

In addition to the courses listed above, B.Mus. students also must register for applied music lessons and at least one ensemble every semester once the major has been declared. Students with a performance emphasis must take at least 2 units of applied music lessons per semester; all others must take at least 1 unit per semester.

### Elective courses:

Each of the five B.Mus. concentrations includes additional requirements, as follows:

#### Performance Emphasis:

<table>

Music 416 Contemporary Music 3
Music 401 Elementary Technique of Electronic Music 6
& Music 402 and Advanced Techniques of Electronic Music
Upper-level applied music in jazz 3
Total units 35

Additional Information

The minor requires 20 units of credit in courses offered by the Department of Music of which at least 9 must be at 300 level or above. Upper-level credits may be obtained in Ensemble Performance or Applied Music if the requisite standard is attained. Other upper-level credits in Music or kindred studies (such as African and African-American Studies) may be approved at the discretion of the department chair.

L27 Music 100B Preregistration: Brass Applied Music
Credit variable, maximum 2 units.

L27 Music 100D Preregistration: Percussion Applied Music
Credit variable, maximum 2 units.

L27 Music 101E Introductory Survey of Western Music I
A survey of “art” music in Western culture from the Middle Ages to the mid-18th century. Emphasis in the first term is on sacred and secular music of the church, court and middle-class society in its historical and cultural context. Regular listening and writing assignments are designed to develop the capacity to hear perceptively and write critically about the music studied. No prior knowledge of musical notation required. This course is not recommended for music minors or majors. For a one-semester course covering Western classical and popular music and music from other cultures, see Music 114E.
Credit 3 units. A&S : LA A&S : IQ, HUM BU : HUM FA : AH

L27 Music 1021 Musics of the World
This course provides an introduction to the field of ethnomusicology as well as a survey of selected musics from around the world. We investigate not only musical sound itself but how music interacts with other cultural domains, such as religion/cosmology, politics, economics and social structure. The course uses case studies from regions around the world (such as Indonesia, India, the Middle East, sub-Saharan Africa and Latin America) to illustrate the conceptual problems and methodologies raised by the cross-cultural study of music, as well as to acquaint you with the rich variety of music around the globe.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : HUM
L27 Music 1022 Popular Music in American Culture
American popular music from the 1800s to the present, with emphasis on technology, social and political contexts, and popular music as a realm of interracial encounter. Musics covered include early jazz, classic blues, swing, classic pop, rock ‘n’ roll, soul, disco, hip-hop and the changing relationship between popular music, film and television. Credit 3 units. A&S : LA, SD A&S : IQ, HUM, SD BU : HUM

L27 Music 1023 Beethoven in His Time and Ours
Ludwig van Beethoven not only composed some of the most significant works of Western classical music — he continues to make his mark as the prototypical “troubled genius,” symbol for a wide range of political causes, subject of numerous films, and classical music’s main representative in American pop culture. We begin with an exploration of Beethoven’s life, music and historical context and continue by tracing how, after his death, Beethoven became a cultural hero whose image took on a life of its own. Throughout, we unravel the interaction of music, culture and mythmaking. No previous musical experience required. Credit 3 units. A&S : TH A&S : IQ, HUM EN : H

L27 Music 102E Introductory Survey of Western Music II
A survey of “art” music in Western culture from the middle of the 18th century to the present. Music of composers from Haydn and Mozart to George Crumb and John Cage are studied in its historical and cultural context. Regular listening and writing assignments are designed to develop the capacity to hear perceptively and write critically about the music studied. No prior knowledge of musical notation required. This course is not recommended for music minors or majors. Credit 3 units. A&S : LA A&S : IQ, HUM BU : HUM

L27 Music 103E Theory I: Introduction to Music Theory
Vocabularies and skills basic to music theory introduced through concentrated work in notation, the development of specific compositional skills, and musical analysis. Concepts of musical structure and aesthetic experience are explored through the study of music from three periods of the western tradition: medieval liturgical chant, music of the Classical period, and music of the early 20th century. Ability to read musical notation required. Keyboard skills desirable. Music 103E is the entry-level course for all music minors and majors. Credit 3 units. A&S : LA A&S : IQ, HUM BU : HUM

L27 Music 104E Music Theory II
A systematic introduction to the basic principles of tonality as manifested in western European music of the 18th and early 19th centuries. Topics include pitch, time, line and linear elaboration, counterpoint, harmony, phrase, form and chromaticism. The principles are explored through both musical composition and interpretation of musical art works. Prerequisite: Music 103E. Credit 3 units. A&S : LA A&S : IQ, HUM BU : HUM

L27 Music 105 History of Jazz
History of jazz to the present, including its African elements. Credit 3 units. A&S : LA A&S : IQ, HUM BU : HUM

L27 Music 107 Listening Laboratory
Optional analytical listening sessions to supplement Music 101E and 102E respectively. Taped listening assignments. Required of music majors and of students in the first-year seminar section. Concurrent registration in Music 101E or 102E is required. Credit 1 unit. A&S : LA A&S : IQ, HUM

L27 Music 109 Ragtime

L27 Music 1091 Jazz Theory I
Jazz Theory I introduces the jazz music language as a preparation for the study of improvisation. The course study consists of basic music theory including music-reading skills and notation, scales, intervals and triads. An introduction to extended tertian chords as derived from the 21 modes of the major, melodic and harmonic minor scales forms the basis of the jazz harmonic language. The study of chord progression and chord substitution, song form and the blues prepares the student for a detailed study of the modern jazz language. Credit 3 units. A&S : LA A&S : IQ, HUM BU : HUM

L27 Music 1092 Jazz Theory II
Jazz Theory II outlines the harmonic, rhythmic and improvisational practices from the Bebop period of the late 1940s to the jazz music of the present day. Discussions include intermediate to advanced chord substitution, quartal and bitonal harmony, modal improvisation, pentatonic scales and polyrhythmic drumming, concentrating on the work the major improvisers of the 1950s to 1970s. Prerequisite: Music 1091. Credit 3 units. A&S : LA A&S : IQ, HUM BU : HUM

L27 Music 109M Mathematics and Music
An elementary introduction to the connections between mathematics and musical sound. Review of integers, ratios, prime numbers, functions, rationality, exponents, logarithms, trigonometry. Review of scales, clefs, key signatures, intervals, time signatures. Frequency and pitch. The connection between intervals and logarithms. Tuning and temperament, just intonation. Scales and modular arithmetic. The mathematics of harmony; the sound of the low prime numbers and their roles.

Same as Math 109

Credit 3 units.

L27 Music 110G Study in Guitar
Students taking guitar off roster/not for credit.

L27 Music 110P Studies in Piano
Students taking Piano not for credit/roster.

L27 Music 110S Study in Strings
Students taking Strings not for credit.

L27 Music 110V Study in Voice
Students taking voice not for credit.

L27 Music 110W Study in Woodwinds
Students taking woodwinds not for credit.

L27 Music 113 Fundamentals of Music
This course provides a broad overview of music fundamentals designed to enhance the student's experience of music as well as provide a foundation for further study in music theory. Students become acquainted with the basic vocabulary and building blocks of music: intervals, rhythms, scales, triads, chords and harmony.

Credit 2 units.

L27 Music 114E Exploring Music
A wide-ranging introduction to music in its many forms. Western classical and popular music are studied along with music from other cultures to highlight the varied conceptions, functions and practices of music in different times and places. Discussion of specific pieces facilitates growth in basic musical skills and provide insights into music's multifaceted historical/cultural resonances. No previous musical background required. Includes regular reading and listening assignments.

Credit 3 units.

L27 Music 115 Reading Music
Elements of music notation for those with little or no music-reading skill. Designed to develop a basic acquaintance with the principles of notation for students enrolled in introductory courses, applied music and ensembles as well as those with a general interest in learning to read music.

Credit 1 unit.
sight-reading skills developed. Prerequisite: permission of instructor for nonmajors. One and one-half class hours a week. Credit 1 unit.

**L27 Music 1242 Keyboard Skills II**
An introduction to basic techniques of keyboard harmony using intervals, scales and root position chords. Transposition and sight-reading skills developed. Prerequisite: permission of instructor for nonmajors. One and one-half class hours a week. Credit 1 unit.

**L27 Music 128 Selected Area for Special Study**
In-depth study in areas of special interest. Credit 3 units. A&S : TH BU : HUM

**L27 Music 129 Composition Workshop**
Introduction to certain compositional techniques of the 20th century in a workshop combining writing and performance. Prerequisite: permission of instructor. Two and one-half class hours a week. Credit variable, maximum 3 units.

**L27 Music 130 Composition Workshop**
Concentrated work in free composition for undergraduates. Conducted as independent study under the weekly supervision of instructor. May be repeated for credit. Class hours variable, one to three hours per week. Prerequisite: Music 103E or permission of instructor. Credit variable, maximum 3 units.

**L27 Music 1501 Rattle and Hum: Reading Music in Literature**
Same as CFH 150
Credit 3 units. A&S : LA A&S : IQ, HUM FA : Lit

**L27 Music 151G Introductory Guitar**
Credit variable, maximum 2 units.

**L27 Music 151P Introductory Piano**
Credit variable, maximum 2 units.

**L27 Music 151S Introductory Strings**
Credit variable, maximum 2 units.

**L27 Music 151V Introductory Voice**
Credit variable, maximum 2 units.

**L27 Music 151W Introductory Winds and Percussion**
Credit variable, maximum 2 units.

**L27 Music 159 Piano Class**
Intended for students with little to no formal musical training. An introduction to keyboard fundamentals through the study of note reading, intervals, technique and repertoire. Students may self-enroll or be placed by audition. There is a $150 lab fee for the course. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the fee is prorated accordingly. Credit 1 unit. A&S : LA

**L27 Music 160 Piano Class**
Continuation of L27 Music 159. Prerequisite Music 159 or permission of instructor. There is a $150 lab fee for the course. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the fee is prorated accordingly. Credit 1 unit. A&S : LA

**L27 Music 170G Jazz Guitar**
Credit variable, maximum 2 units.

**L27 Music 170J Jazz Brass**
Credit variable, maximum 3 units.

**L27 Music 170P Jazz Piano**
Credit variable, maximum 2 units.

**L27 Music 170S Jazz Strings**
Credit variable, maximum 2 units.

**L27 Music 170V Jazz Voice**
Credit variable, maximum 2 units.

**L27 Music 170W Jazz Winds and Percussion**
Credit variable, maximum 2 units.

**L27 Music 175G Guitar**
Credit variable, maximum 2 units.

**L27 Music 175O Organ**
Credit variable, maximum 2 units.

**L27 Music 175P Piano**
Credit variable, maximum 2 units.
L27 Music 175S Strings
Credit variable, maximum 2 units.

L27 Music 175V Voice
Credit variable, maximum 2 units.

L27 Music 175W Winds and Percussion
Credit variable, maximum 2 units.

L27 Music 177C Voice Class: Fundamentals of Singing Technique
Voice Class teaches basic techniques of Bel Canto vocal production that apply to singing solo repertoire and singing in choral ensembles. Basic techniques include breathing in singing, resonance, articulation and registration. Study of the International Phonetic Alphabet, very basic skills for reading music and vocal health issues also are included. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly. Credit 1 unit. A&S : LA

L27 Music 178C Voice Class II: Fundamentals of Singing Technique
Voice Class teaches basic techniques of Bel Canto vocal production that apply to singing solo repertoire and singing in choral ensembles. Basic techniques include breathing in singing, resonance, articulation and registration. Study of the International Phonetic Alphabet in English and Italian, skills for reading music, in-depth study in musical interpretation, and acting skills. More advanced work in poetic analysis and line reading. Prerequisite: Music 177C or approval by instructor by audition. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly. Credit 1 unit. A&S : LA

L27 Music 221 Music Theory III
Concentrated study of the principles of tonal counterpoint and their application to the interpretation of Bach keyboard suites. Class work includes both writing and analysis. Prerequisite: Music 104E. Credit 3 units. A&S : LA A&S : IQ, HUM

L27 Music 2211 Opera Projects
Students may contract with a faculty supervisor for credit for work on opera productions or research. Contracts must be signed by the student and the faculty supervisor before the work can commence. Prerequisite: permission of the instructor. Credit variable, maximum 2 units.

L27 Music 222 Music Theory IV
Continuation of Music 221 with study of 18th- and 19th-century harmonic, textural and structural procedures (Bach through Brahms). Prerequisite: Music 221. Credit 3 units. A&S : LA A&S : IQ, HUM

L27 Music 2231 Musicianship I
Basic ear training, sight singing and dictation skills. Three hours a week. Prerequisite: Music 104E. Credit 1 unit.

L27 Music 2232 Keyboard Skills III
Intermediate skills in score reading as well as the introduction of inversions, figured bass and improvising melodies. Prerequisites: Music 1242 and permission of instructor for nonmajors. One and one-half class hours a week. Credit 1 unit.

L27 Music 2241 Musicianship III
Continuation of Music 2231. Intermediate-level ear training, sight singing and dictation skills. Prerequisite: Music 2231. Two and one-half class hours a week. Credit 1 unit.

L27 Music 2242 Keyboard Skills IV
Intermediate skills in score reading as well as the introduction of inversions, figured bass and improvising melodies. Prerequisite: permission of instructor for nonmajors. Concurrent registration in Music 2231 and 2241 required of all music majors. One and one-half class hours a week. Credit 1 unit.

L27 Music 227 Selected Area for Special Study
In-depth study in areas of special interest. Prerequisite: permission of instructor. Credit 3 units.

L27 Music 228 Selected Area for Special Study
In-depth study in areas of special interest. Prerequisite: permission of instructor.
### L27 Music 229 Composition I
Beginning work in free composition for undergraduates. Conducted as independent study. May be repeated for credit. Prerequisite: permission of instructor. Credit variable, maximum 3 units.

### L27 Music 230 Composition II
Concentrated work in free composition for undergraduates. Conducted as independent study under the weekly supervision of instructor. May be repeated for credit. Class hours variable, one to three hours a week. Prerequisite: 103E or permission of instructor. Credit variable, maximum 3 units.

### L27 Music 231C Small Chamber Ensembles
Students interested in performance of chamber music are organized into various ensembles and assigned a coach. A public chamber music concert is given once each semester. May be repeated for credit. Prerequisite: permission of the instructor. Special fee $135, and special registration procedures. See Applied Music section on Overview (p. 609). Credit variable, maximum 1 units.

### L27 Music 232W Chamber Winds
A group of select woodwind and brass players who form brass and woodwind choirs and smaller ensembles such as quintets and quartets. The weekly rehearsals are coached. The ensembles perform on student recitals and at various campus functions. Credit 1 unit.

### L27 Music 233 Jazz Band
Study of the literature of big band jazz. Concerts presented each semester. May be repeated for credit. Prerequisite: audition. Two and one-half rehearsal hours a week. Credit 1 unit.

### L27 Music 234S Symphony Orchestra
Performance and reading of works for orchestra. May be repeated for credit. Prerequisite: admission by audition. Two and one-half class hours a week including sectionals. Credit 1 unit.

### L27 Music 235F Flute Choir
Weekly two-hour rehearsals of flute ensemble literature of many styles, Bach to bop. Developing skills of tone production, technique, intonation, sight reading and musicianship. One performance per semester required. Prerequisite: audition. Special fee applicable. Credit variable, maximum 1 units.

### L27 Music 236J Jazz Combo
Students are placed in small combos for regular, weekly coaching. May be repeated for credit. Prerequisite: permission of department. Credit variable, maximum 1 units.

### L27 Music 237 Concert Choir
A study of the repertory of the vocal ensemble from the Renaissance to the 20th century, with performance in public concerts. May be repeated for credit. Prerequisite: audition and consent of instructor. Four class hours a week. Credit variable, maximum 2 units.

### L27 Music 238 Chamber Choir
Study and performance of advanced repertoire for small vocal ensemble from Renaissance to the present. May be repeated for credit. Prerequisites: audition and consent of instructor. Credit 1 unit.

### L27 Music 2601 Opera: The Extravagant Art
Same as IPH 260 Credit 3 units. A&S : TH A&S : IQ, HUM EN : H

### L27 Music 270G Jazz Guitar
Credit variable, maximum 2 units.

### L27 Music 270J Jazz Brass
Credit variable, maximum 3 units.

### L27 Music 270P Jazz Piano
Credit variable, maximum 2 units.

### L27 Music 270S Jazz Strings
Credit variable, maximum 2 units.

### L27 Music 270V Jazz Voice
Credit variable, maximum 2 units.

### L27 Music 270W Jazz Winds and Percussion
Credit variable, maximum 2 units.

### L27 Music 275G Guitar
Credit variable, maximum 2 units.

### L27 Music 275O Organ
Credit variable, maximum 2 units.
L27 Music 275P Piano
Credit variable, maximum 2 units.

L27 Music 275S Strings
Credit variable, maximum 2 units.

L27 Music 275V Voice
Credit variable, maximum 2 units.

L27 Music 275W Winds and Percussion
Credit variable, maximum 2 units.

L27 Music 295 Independent Study: Language and Arts
Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit. Variable credit, maximum 3 units.

L27 Music 296 Independent Study: Textual and Historical Studies
Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit. Variable credit, maximum 3 units.

L27 Music 298 Directed Internship
Students receive credit for a faculty-directed and approved internship, usually with a music professional or musical organization. The primary objective of the internship is to obtain professional experience outside the classroom. Students obtain a Learning Agreement from the Career Center and have it signed by the Career Center, the faculty sponsor and the site supervisor, if appropriate. A final written project is agreed upon before work begins and is evaluated by the faculty sponsor at the end of the internship. Students may not receive credit for work done for pay but are encouraged to obtain written evaluations of such work for the student’s academic adviser and career placement file. Credit should correspond to actual time spent in work activities; e.g., eight to 10 hours per week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours. Consult department for faculty selections in this course. Credit variable, maximum 3 units.

L27 Music 299 Performance Project
Students may contract with a faculty supervisor for credit for work on musical performance projects or research on musical performance. Contracts must be signed by the student, the faculty supervisor and the department chair before the student’s work on the project commences. Consult department for faculty selections in this course. Variable credit, maximum 3 units.

L27 Music 3011 Music History I
A study of music history and literature from the Middle Ages to 1750. Composers treated include Machaut, Dufay, Josquin, Palestrina, Monteverdi, Vivaldi, Handel and Bach. Prerequisite: Music 103.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM

L27 Music 3012 Music History II
A study of music history and literature from 1750 to 1850. Composers treated include Haydn, Mozart, Beethoven, Schumann and his contemporaries. Prerequisite: Music 3011 or Music 104E.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM

L27 Music 3013 Music History III
A study of music history and literature from 1850 to the present. Composers treated include Liszt, Wagner, Brahms, Tchaikovsky, Mahler, Debussy, Stravinsky, Schoenberg, Boulez, Stockhausen, Cage, Glass, Reich and Adams. Prerequisite: Music 3012 or Music 104.
Credit 3 units. A&S : TH, WI A&S : IQ, HUM, WI BU : HUM

L27 Music 3021 Music of the African Diaspora
This course explores musical cross-fertilization between the African continent and South America, the Caribbean and Europe. Beginning with traditional musics from selected regions of the African continent, the course examines the cultural and musical implications of transnational musical flows on peoples of the African diaspora and their multicultural audiences.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : IS

L27 Music 3022 Native-American Musical Traditions of the Western United States
Exploration of music and its historical and contemporary contexts among Native American cultures of the Southwest and the Northern Plains, chiefly Navajo and Lakota, but with some considerations of Pueblo, Shoshone and other nations. Examinations of intertribal pow-wow movements, crossover musics, European appropriation and refashioning of Native American culture in Hollywood and elsewhere.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : IS
L27 Music 3023 Jazz in American Culture
This course addresses the role of jazz within the context of 20th-century African-American and American cultural history, with particular emphasis on the ways in which jazz has shaped, and has been shaped by, ideas about race, gender, economics and politics. We make use of recordings and primary sources from the 1910s to the present in order to address the relationship between jazz performances and critical and historical thinking about jazz. This course is not a survey, and students already should be familiar with basic jazz history. Prerequisite: Music 105 or permission of instructor.
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : HUM

L27 Music 3024 From Cage to Glass and Beyond
Explores the various directions composers took in the second half of the 20th century, including "chance" music of John Cage, minimalism of Philip Glass and postmodernism. Includes concert attendance. Prerequisite: ability to read music is advisable but not required.
Credit 3 units. A&S : TH

L27 Music 3025 Women of Music
Popular music and art music around the world, from the perspective of women. The roles of women as creators, performers, sponsors and consumers. The representation of women in music and how it relates to cultures of the past and present.
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD

L27 Music 3027 Close Harmony: A Cappella Musical Traditions
An examination of ensemble music for unaccompanied voices. Although it focuses on the Western art tradition (e.g., Renaissance sacred and secular polyphony), it also addresses genres of "world music" (Yankton Sioux choral peyote songs, Makwayera singing of Zimbabwe) and less "high style," more popular unaccompanied vocal textures (e.g., shape-note, barbershop, spirituals, the Comedian Harmonists, male gospel quartets, doowop). Study of the historical and cultural contexts of the various musical types balances examination of representative musical works. Prerequisite: the ability to read music, permission of instructor; Music 103 is highly recommended, but not required.
Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 3028 Music of the 1960s
The music of the 1960s played a significant and widely noted role in an era of global political and social upheaval. This course surveys a broad range of music produced during the decade, spanning the world but with emphasis on Anglo-American popular music. While a music course traditionally deals with a single genre such as "world music," classical or jazz, this course analyzes several genres together to show how each influenced the others and how all were informed by broader social and cultural concerns. The course thus both familiarizes students with diverse musical traditions and introduces them to a new way of thinking about music and culture. Topics discussed include the transnational music industry; the contested concept of "folk" and "traditional" music; music and political protest; music and migration; and music's relation to ethnic and class identity.
Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 3031 Music and Healing
In this course, we broadly consider issues of music and healing, drawing from the fields of medical ethnomusicology, medical anthropology, music therapy, and psychology. Our case studies are multi-sited, as we interrogate musical healings and healing music from diverse global and historical perspectives. We approach our study of musical practices with the understanding that the social, cultural and political contexts where "music" and "healing" are themselves created inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We read a variety of academic literature and use media texts and listening examples to develop interdisciplinary and cross-cultural analyses of music and healing. Issues of national consciousness, postcolonialism, gender, sexuality, race, ethnicity, class, religion, disability and the role of history/memory remain central to our explorations of music and healing.
Credit 3 units. A&S : CD A&S : IQ, LCD

L27 Music 3051 Text and Music
How do composers respond to the structure and meaning of text? Can spoken language become musical sound? Can musical sounds become textual signifiers? The course explores these questions by examining a broad range of texted music: Gregorian chant, Japanese Noh drama, English madrigals, Bach cantatas, 19th-century German lieder, operas by Mozart and Wagner, American musical theater, high modernist works by Schoenberg, Stockhausen, Berio and Lansky, as well as popular music. Some knowledge of music theory is required, and familiarity with German is helpful, though all texts are provided with English translations. A lot of listening and reading, several short and analytical assignments, three essays. Prerequisite: one year of music theory or permission of instructor.
Credit 3 units. A&S : TH

L27 Music 3091 Jazz Improvisation I
An introduction to improvising music in the jazz tradition, including diatonic and chromatic harmony, extended chords, modes and jazz scales. Exercises in basic aspects of the blues and in the styles of be-bop and modern jazz. Prerequisite: Music 1091.
Credit 3 units.

L27 Music 3112 Choral Music before 1800
A study of choral music of the Western world, from the medieval period through the 18th century, examining both the repertoire itself and the evolution of the chorus. Topics include the development of various choral forms, the role of choral music in sacred and secular settings, the changing nature of choirs over the centuries, and the hallmarks of choral style and performance practice in the Medieval, Renaissance, Baroque and Classical periods. Choral music for small and large forces, both for voices alone and with accompaniment, are surveyed. Works from each period are examined from textual, analytical and cultural perspectives. Composers studied include Palestrina, Monteverdi, Handel, J. S. Bach, Mozart and Haydn, as well as lesser-known contemporaries. Prerequisite: ability to read music is helpful, but not required.
Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 3132 Romantic Revolutions in European Music and Culture
The early 19th century in Europe witnessed sweeping changes in social, political and cultural life, but some of the most fascinating happened in music. This course considers intersections between Romantic thinking about music — which inspired an idealistic vision of the art form as a source of quasi-spiritual experience — and other contemporary “revolutions.” To what extent was Romantic music a “holy art” that offered a refuge from the world? In what ways was it a worldly participant in larger currents in society and culture? By exploring these questions and more, students develop the skills and framework needed to incorporate works of music into their investigation of enduring issues in history and the humanities. Although this course requires listening and viewing of musical works, it is designed for students with intellectual curiosity but without prior musical background. We also require weekly readings, occasional presentations, three short papers and spirited class discussion.
Credit 3 units. A&S : TH

L27 Music 315 Selected Areas for Special Study I
Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 317 Selected Area for Special Study
In depth study in areas of special interest.
Credit 3 units. A&S : TH

L27 Music 319 Reading the Scores: Understanding Brazilian Music through Social Categories
Same as IAS 383
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI BU : IS

L27 Music 320 The American Musical Film
Same as Film 359
Credit 3 units. A&S : LA A&S : IQ, HUM BU : HUM

L27 Music 321 Music Theory V
Problems in writing and analysis defined through the study of 19th-century works. Prerequisite: Music 222.
Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 3231 Advanced Musicianship
Individualized instruction in advanced ear training, sight singing and dictation skills. Prerequisite: Music 2241.
Credit 3 units.

L27 Music 3232 Keyboard Skills V
Advanced skills in score reading, figured bass and improvisation, as well as drills, including seventh chords and modulation. Prerequisite: Music 2242. One and one-half class hours a week.
Credit 1 unit.

L27 Music 3242 Keyboard Skills VI
Advanced skills in score reading, figured bass and improvisation, as well as drills, including seventh chords and modulation. Prerequisite: Music 2242. One and one-half class hours a week.
Credit 1 unit.

L27 Music 325 Instrumentation and Orchestration
A study of the principles of instrumentation and orchestration. In-class assignments aid in the understanding of the capabilities and limitations of the orchestral instruments. Analysis of orchestral scores provides insight into efficient and creative use of the orchestra. In addition, scoring for both vocal and chamber ensembles are covered. Final orchestration projects are read and recorded by the Washington University Symphony Orchestra. Prerequisite: Music 103E or permission of the instructor.
Credit 3 units.

L27 Music 326 Orchestration
A practicum in writing for orchestra and groups of orchestral instruments. Prerequisite: Music 325.
Credit 3 units.

L27 Music 328 History of the Film Score
Same as Film 360
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : AH

<td>Islam, Music, Muslim Media</td>
<td>How do Muslim individuals and communities understand and negotiate the relationship between sound and spirituality? How does Islamic philosophy challenge Western definitions of music? How do music and cultural practices reflect and shape diverse Muslim identities and political struggles? To what extent can we speak of an “Islamic world,” musical or otherwise? In this course, we investigate Islamic musics and musical practices in the lives and experiences of Muslims throughout the world. We approach our study of Muslim musical practices with the understanding that the social, cultural and political contexts where music is created, disseminated and consumed inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We engage with a variety of academic, musical and media texts to develop interdisciplinary analyses about Islam, music, sound experience and Muslim subjectivities. Issues of nationalism and transnationalism, class, race and ethnicity, gender and sexualities, colonialism and postcolonialism, history and memory remain central to our exploration of spirituality and religion in Muslim musical and cultural practices. L27 Music 3951 Independent Study: Language and Arts
Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit. Consult department for faculty selections in this course.
Credit variable, maximum 3 units.

L27 Music 3961 Independent Study: Textual and Historical Studies
Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit. Consult department for faculty selection.
Credit variable, maximum 3 units.

L27 Music 400 Independent Study
Credit 3 units.

L27 Music 401 Elementary Technique of Electronic Music
Individual and small group instruction in “classical” procedures and relevant electronic technology. Prerequisite: open to music majors; to others by permission of instructor. Credit contingent upon completion of Music 402.
Credit 3 units.

L27 Music 402 Advanced Techniques of Electronic Music
Practical composition studies to build technique in electronic music. Prerequisite: Music 401.
Credit 3 units.

L27 Music 411 Music of Medieval Period
An intensive survey of Western monophonic and polyphonic music from the beginnings of Christian chant to ca. 1450. Prerequisites: Music 3011 or permission of instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 412 Music of the Renaissance Period
A survey of music literature from ca. 1450 to ca. 1600. Prerequisite: Music 3011 or permission of instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 413 Music in the 18th Century
Musical activity in Europe during the 18th century is the subject of this course, which brings the high baroque, galant and classical eras into a single narrative. Patronage, publishing, star performers and highly specific musical publics were central to the music-making across the century. How these forces shaped the professional and creative lives of major 18th-century composers is a principal theme of the course. A broad range of 18th-century instrumental and vocal music is surveyed, including works by Corelli, F. Couperin, Vivaldi, Rameau, Telemann, Handel, Hasse, Haydn, Mozart, D. Scarlatti and several members of the Bach family. Extensive listening assignments and score analysis are supplemented by readings drawn from recent scholarship and examination of 18th-century music publishing and other period sources in facsimile.
Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 414 Music of the Classic Period
An intensive survey of music literature from ca. 1750 to ca. 1830 with attention to the music of Haydn, Mozart, Beethoven and some of their predecessors. Prerequisite: Music 3012 or permission of instructor.
Credit 3 units. A&S : TH

L27 Music 415 Music of the Romantic Period
Credit 3 units. A&S : TH
L27 Music 416 Contemporary Music
Survey of musical styles from the end of the 19th century to the Postmodernism of the 1980s. Developments in music considered in context of intellectual history of the century with specific attention to parallels with literature and visual arts. Readings from a variety of sources and extensive listening assignments. Prerequisite: Music 3013 or permission of instructor. Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 421 Introduction to the Analysis of 20th-Century Music
An introduction to theory and analysis of music from the 20th-century repertoire. In-class analysis and individual assignments emphasize aural understanding and tools for modeling pitch structures in post-tonal and 12-tone works. In the latter portion of the course focus turns toward works in which pitch structures play a smaller role. Prerequisite: Music 222 (for undergraduates) or Music 423 (for graduates). Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 422 Analysis I
A study of structural principles underlying music of all periods: motivic usage, melodic shape, varieties of texture and structure with an emphasis on fugue, variation forms and proportional forms such as rondo and sonata-allegro. Prerequisite: graduate standing or permission of instructor. Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 423 Analysis II
Continuation of Music 422, concentrating on approaches to larger and more complex works of classically tonal music, including 18th-century symphonies and string quartets, late works by Beethoven, chamber music and symphonies of Brahms and symphonies of Mahler. Prerequisite: Music 423 or permission of instructor. Credit 3 units. A&S : TH

L27 Music 424 Counterpoint I
Concentrated independent study in 16th-century contrapuntal composition. Prerequisite: Music 222. Credit 3 units.

L27 Music 425 Counterpoint II
Concentrated independent study in 18th-century contrapuntal composition. Prerequisite: Music 222. Credit 3 units.

L27 Music 426 Selected Areas for Special Study
In-depth study in areas of special interest. Prerequisite: senior standing, graduate standing or permission of instructor. Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 428 Selected Areas for Special Study II
In-depth study in areas of special interest. Prerequisite: senior standing, graduate standing or permission of instructor. Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 4281 The Italian Madrigal
The most important musical genre of the late Renaissance, the madrigal, intersects with poetry, theater and the visual arts, and thus, constitutes an ideal point of entry to early modern Italy. This course explores the stylistic development of the madrigal from its origins in the early 16th century to its demise some hundred years later. The course is structured around close readings of madrigals by Verdelot, Arcadelt, Willaert, Wert, Marenzio, Luzzaschi, Fontanelli, Gesualdo and Monteverdi. Secondary readings focus on the relation between words and music; the construction of subjectivity; concepts of mode; theories of chromaticism; and performance practice, framed in the context of 16th-century society and culture. Prerequisite: Music 3011, graduate standing or permission of instructor. Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 4282 The “Crossover” Tradition in Anglo-American Music Theater
The musical stage in the United States and Britain has remained a vital artistic and commercial arena over the past 100 years despite the emergence of mass media formats such as film and television. Audiences continue to clamor for stage stories where actors sing or singers act, and composers, writers, producers and directors have created a stunning variety of musical theater styles to meet the demand. This course surveys important English-language operas, operettas and singer-centered musicals from the turn of the 20th century to the start of the 21st with an emphasis on “crossover” works that blur the lines between opera and the commercial musical stage. All the works included in the course continue to be performed today, forming a core repertory of music theater works in English that emphasize singers and singing. The overlapping, ever-changing spheres of the opera house and Broadway and West End theaters provide the geography of the course, which is peopled by performers, creators and audiences. In-class analysis of 14 works focuses on how the singing voice has been used as an expressive vehicle and how theater singers have adapted to an age of amplification and recording. Works studied include Carousel, Sweeney Todd, The Phantom of the Opera, Show Boat, Candide, Street Scene, The Pirates of Penzance, The Light in the Piazza, My Fair Lady, Albert Herring, Porgy and Bess, The Most Happy Fella, Margaret Garner and The Student Prince. In-class singing is encouraged as a means to get inside the musical and dramatic values of these works. Prerequisites: ability to read music, and graduate or upper-division standing. Credit 3 units. A&S : TH A&S : IQ, HUM
L27 Music 429 Composition II
Concentrated independent work in composition for experienced undergraduate composers. May be repeated for credit. Prerequisite: permission of instructor. Variable credit, maximum 3 units. Credit variable, maximum 3 units.

L27 Music 430 Composition IV
Concentrated independent work in free composition for experienced undergraduates. May be repeated for credit. Class hours variable, one to three hours a week. Prerequisite: permission of instructor. Variable credit, maximum 3 units. Credit variable, maximum 3 units.

L27 Music 437 Piano Pedagogy I
The study of the fundamentals of teaching from beginning to advanced levels. A syllabus is developed through discussion of lesson plans for each level. The class participates actively in demonstrations. Credit 3 units.

L27 Music 4371 Opera Production
Intensive training in the principles and techniques of the opera stage. Prerequisites: two years of vocal training and audition or Drama 343. Credit variable, maximum 3 units.

L27 Music 4372 Voice Pedagogy
Preparation of participants to train the singing voice through examinations of physical, phonological, neurological and psychological aspects of vocal function, followed by observation and practice teaching. Prerequisite: permission of instructor. Credit 3 units.

L27 Music 4375 Vocal Literature
A survey of song literature through listening and performing. Prerequisite: permission of instructor. Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 4376 Opera Literature: Various Composers Each Semester
A study of a composer’s principal stage masterpieces, with an emphasis on the different genres and theatrical conventions to which they belong, and on the writings for voices. Credit 3 units. A&S : TH

L27 Music 438 Piano Pedagogy II
This course explores the repertoire, techniques, and teaching methods appropriate for the intermediate to early-advanced level piano student. Repertoire projects emphasize progressive technique and musical skills for the advancing student. Studio and master-class teaching experience. Credit 3 units.

L27 Music 4381 Literature of the Piano
An analytical survey of piano literature from Bach to Boulez. Prerequisite: graduate or senior standing or permission of the instructor. Credit 3 units. A&S : TH A&S : IQ, HUM EN : H

L27 Music 439 Diction I
Principles of Italian, French and German pronunciation covered in an interrelated approach; application of these principles to songs. Prerequisite: permission of instructor. Credit 3 units. A&S : LA A&S : IQ, HUM

L27 Music 4392 Pedagogy III
Students survey texts and materials addressing group dynamics and learning theories. Teaching experience is gained through observation and some supervised teaching of various levels of group piano. Credit 3 units.

L27 Music 440 Diction II
Principles of Italian, French and German pronunciation covered in an interrelated approach; application of these principles to songs. Prerequisite: permission of instructor. Credit 3 units. A&S : LA A&S : IQ, HUM

L27 Music 4539 Advanced Conducting I
Advanced training in conducting skills, including opportunities to conduct ensembles on campus. Prerequisite: graduate standing or permission of instructor. Credit 2 units.

L27 Music 4540 Advanced Conducting II
Advanced training in conducting skills, including opportunities to conduct ensembles on campus. Prerequisite: graduate standing or permission of instructor. Credit 3 units.

L27 Music 4561 Soundtrack Studies: Music, Voices, Noise
This course considers the interaction of film, sound and music from the silent era to the present by screening representative films from around the world and exploring current directions in scholarship from the disciplines of film studies and musicology. Topics include: historical and critical understandings of the sound track, major film sound theorists (such as Michel Chion), technological shifts (such as synchronized sound, Dolby and digital surround sound), the uses of Richard Wagner (both his music and his ideas), the relationship between a film genre (noir)
and sound and music and the relationship between a musical genre (opera) and film, and the juxtaposition of popular and classical, Western and non-Western musical styles in art cinema. Films to be screened include Meek’s Cutoff, Blow Out, Days of Heaven, Sous le toits de Paris, Love Me Tonight, Casablanca, Alien, Apocalypse Now, La cérémonie, Le Cercle rouge, The Pillow Book, The Scent of Green Papaya, and The Bourne Ultimatum. The course is in seminar format. Readings from recent scholarly work on film sound and music inform class discussions of the screened films. Close analysis of how music, sound and image interact in film making and the film experience lies at the heart of the course. The ability to read music is not required. A primary goal of the course is the development of specific listening skills that are useful when working in this area. Targeted writing assignments ask students to write about film sound and music from a variety of critical and historical perspectives. Prerequisites: graduate status or completion of Film 360 The History of the Film Score, or AMCS 360 or Music 328 and permission of the instructor. Required screenings. Same as Film 456

Credit 3 units. A&S : TH A&S : IQ, HUM

L27 Music 478 Voice
Credit variable, maximum 3 units.

L27 Music 4991 Senior Project: Musicology or Analysis
Supervised research in music history or analysis culminating in a major paper. Required of Bachelor of Music students whose program focuses on music history or analysis. Prerequisite: senior standing.
Credit 3 units. A&S : TH

L27 Music 4992 Senior Project: Performance, Composition or Theory
Supervised work in performance, composition or theory culminating in some combination of a paper, composition and/or performance. Required of Bachelor of Music students
whose program focuses on performance, composition or theory. 
Prerequisite: senior standing. 
Credit 3 units. A&S : LA

L27 Music 4993 Honors Project: Musicology or Analysis 
Prerequisites: senior standing, a grade point average of 3.0 or higher and permission of the faculty supervisor, director of undergraduate studies and the chair of the department. 
Credit 3 units. A&S : TH

L27 Music 4994 Honors Project: Performance, Composition or Theory 
Prerequisite: senior standing, a grade point average of 3.0 or higher and permission of the faculty supervisor, the director of undergraduate studies and the chair of the department. 
Credit 3 units. A&S : LA

Pathfinder Program in Environmental Sustainability 
The Pathfinder Program in Environmental Sustainability focuses on an interdisciplinary study of the environment with a small group of motivated undergraduates and a senior faculty member and is meant to meet selected College of Arts & Sciences breadth course requirements. Through case studies, field trips and carefully selected ancillary courses, students examine the issues surrounding environmental sustainability and the preservation of the environment for future generations. The Pathfinder Program supports the concept that taking interrelated courses and learning both analytical and technical skills as a freshman and sophomore helps prepare students for in-depth study in their academic majors.

Professor 
Raymond E. Arvidson 
James S. McDonnell Distinguished University Professor PhD, Brown University (Earth and Planetary Sciences)

There is no minor available in this area. The Pathfinder Program in Environmental Sustainability is available to entering freshmen.

L54 Path 201 Land Dynamics and the Environment 
Use of case studies such as anthropogenic changes to the Lower Missouri River, effects of mining in the Ozarks, and excessive uses of water in arid terrains in the Southwestern United States to explore key issues associated with environmental sustainability. Scientific concepts related to the dynamics of the environment and development of policies needed to maintain land and resource sustainability. Lectures, discussion sessions, student presentations, appropriate field trips and interactive computer exercises using simulation models. Prerequisite: admission to the Pathfinder Program in Environmental Sustainability. 
Credit 3 units. A&S : NS  A&S : IQ, NSM  BU : SCI  FA : NSM

L54 Path 202 Case Study: Southwestern United States 
Issues associated with the Mojave Desert’s environmental sustainability. Investigation of the fragile desert environment and its degradation from anthropogenic uses. Politics associated with the Mojave National Preserve. Fieldwork conducted during spring break. Prerequisite: admission to Pathfinder Program in Environmental Sustainability. 
Credit 2 units. A&S : SS  A&S : IQ, SSC  FA : NSM

L54 Path 301B Case Study: Hawaii 
Credit 1 unit. A&S : SS  A&S : IQ, SSC  BU : SCI  FA : NSM

Performing Arts 
Performing arts at Washington University comprise dance and drama.

Dance 
Students may select Dance (p. 306) as a major through the Performing Arts Department. This course of study combines intensive studio work in technique and theory of modern dance, ballet and composition with seminars examining dance as a global phenomenon with forms reflecting culturally specific historical, aesthetic and anthropological features. The program also includes a broad range of courses such as stagecraft, music resources, improvisation, anatomy for dancers, pedagogy, dance therapy, musical theater dance, world dance forms, jazz and tap. Students also may choose to minor in modern dance or ballet.
Drama

The Drama (p. 314) major combines the historical, cultural, and literary study of theater and performance with a full array of courses regarding theatrical production, including acting, directing, performance art, design (set, costume, lighting, sound) and playwriting.

The theater and performance studies faculty offer courses in theater history, performance studies, and dramatic and performance theory. Majors also may take, for credit, drama-centered courses in such departments as African and African-American Studies, Classics, English, and Asian and Near Eastern Languages and Cultures; several courses in the Film and Media Studies program are cross-listed with Drama. Our courses analyze theater and performance as resonant and significant cultural practices, both historically and currently. Courses combine rigorous critical analysis with attention to the corporeal and material embodiment of actual performance.

In small, individualized classes (capped by a maximum of 16 students) characterized by a high number of weekly contact hours (generally six), professionally and academically experienced faculty teach a rigorous system of production courses. A carefully graduated four-semester sequence in acting culminates in a capstone class for seniors (Acting IV) focused on individual projects. A two-tiered directing sequence issues into a public showing of student-directed work, and some students have chosen to direct a fully designed production as their Senior Honors thesis. Recent graduates of the acting and directing sequence have been placed in prestigious M.F.A. programs, internships and jobs in regional American theaters, as well as in various professional schools and graduate programs. A nationally recognized program in design and technical theater works students through a structure of costume, scene, lighting and sound design courses, with several electives on such topics as mask making and baroque costume that are informed by historical and cultural study. A highly successful playwriting program, enriched by the annual A.E. Hotchner Playwriting Competition and annual workshops run by leading American dramaturges, has produced playwrights whose work is now being performed in nationally recognized venues such as Chicago’s Steppenwolf Theater.

The culture of performance is abundantly rich at Washington University. The Ovations series of Edison Theatre brings professional theater, dance and music productions to campus, frequently enhanced by workshops especially designed for students. A wide array of student theater groups, with a particular focus on improvisation, provides many opportunities for student-generated performance on campus.

Since 1991, the Performing Arts Department and Globe Education (London) have been running a national summer program held at Shakespeare’s Globe, in London. This four-week program includes a 3-unit course on the textual, historical and cultural study of Shakespeare; a 3-unit course on acting Shakespeare (with particular attention to acting on the Globe stage); master classes taught by Globe personnel; play going in London and Stratford; and more. We also offer an intensive semester-long playwriting program in New York City held at Primary Stages, one of Off-Broadway’s leading producers of new works and home of the Einhorn School of Performing Arts.

### Additional Information

This is an interdisciplinary minor, drawing on the distinctive methodologies and training inherent in several disciplines. This minor encourages the student already interested in the performing arts to explore those outside Euro-American traditions. However, students majoring in fields such as anthropology, political science, psychology, education, comparative literature, history and foreign languages may find this minor a useful complement to their primary discipline.

### The Minor in Ballet

For the Minor in Ballet, see the Dance (p. 307) page of this Bulletin.

### The Minor in Modern Dance

For the Minor in Modern Dance, see the Dance (p. 307) page of this Bulletin.

### The Minor in Drama

For the Minor in Drama, see the Drama (p. 316) page of this Bulletin.

### Dance

For Dance courses, see the Dance (p. 308) page of this Bulletin.

### Drama

For Drama courses, see the Drama (p. 316) page of this Bulletin.

### Persian Language and Literature

The Department of Jewish, Islamic and Near Eastern Languages and Cultures offers a major and a minor in Persian. As a major in Persian, students can expect to gain proficiency in the language, study the area’s literary and cultural landmarks, and gain familiarity with Near Eastern history and civilizations. As majors, students are expected to maintain a B average in all departmental courses.

The prerequisites for a major include successful completion of the first two levels of language study:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pers 116D</td>

### Language Placement

Placement tests are required for all students entering our language programs. Students who test into Intermediate Persian and satisfactorily complete (with a grade of B– or better) at least one semester of language study may petition for 3 units of retroactive credit; students who test into third year or above and satisfactorily complete (with a grade of B– or better) at least one semester of language study may petition for 6 units of retroactive credit. Credit is limited to 3 units for testing into intermediate and 6 units for testing into third year or above. Please note that students with native language proficiency as determined by the individual language section, as well as students who enroll in a course below their placement level, are ineligible for retroactive credit units. Students who misrepresent the extent of their background to gain entrance to a course at the elementary or intermediate level will be dropped from that course.

Phone: 314/935-5110 or 314/935-8567
E-mail: jinelc@artsci.wustl.edu
Departmental website: http://jinelc.wustl.edu

For a list of affiliated faculty, please see the Department of Jewish, Islamic and Near Eastern Languages and Cultures faculty (p. 556) page.

### The Major in Persian Language and Literature

Total units required: 47. First- and second-level language study (20 units) plus 27 upper-level units, no more than 12 of which may be language courses.

#### Required courses:

The prerequisites for a major in Persian include successful completion of the first two levels of language study:

Required upper-level courses for the major include language courses at the third year or higher levels. Students normally complete four years of Persian, or three years of study in Persian and one year in a second language. All students are expected to maintain a minimum grade of B– in language classes.
In addition, Persian majors must complete 15 units of relevant upper-level literature, culture and civilization courses, chosen in consultation with their adviser. (Please note that many courses in Near Eastern literatures and cultures can be found under Religious Studies, Comparative Literature, Anthropology, or Jewish, Islamic and Near Eastern Languages and Cultures.) Unless a student is writing an honors thesis or fulfilling a capstone requirement for a second major, he or she also is required to take the department’s capstone course during the senior year.

Additional Information

Study Abroad: Students are strongly encouraged to participate in Washington University-approved study abroad programs in Israel, Egypt and other countries of the Middle East. Study abroad is usually during the junior year and after a minimum of one year of language study at Washington University. Students who participate in Washington University sponsored and/or approved overseas programs are normally able to apply most or all of these units to their undergraduate degree, although no more than 9 upper-level units may be applied to the major. However, all transfer of credit is subject to review and approval by the department and the Study Abroad office.

Transfer Credit: Normally no more than 6 units of credit earned at an institution other than Washington University (this does not include Washington University-approved study abroad programs) may be applied to the major and no more than 3 units toward the minor.

Senior Honors: Qualified majors are encouraged to apply for Senior Honors before the end of the junior year. Students wishing to pursue this option need to meet the minimum honors requirements stated in this bulletin; have outstanding performance in language work; and satisfactorily complete, during the senior year, Pers 488 Independent Work for Senior Honors (fall) and, if possible, Pers 489 Independent Work for Senior Honors (spring), to be taken in addition to all other departmental requirements. Honors work will be supervised by a three-member departmental Honors Committee composed of a primary adviser and two additional faculty, which plans with each student special language work as needed and an independent honors research paper in the student’s area of academic interest.

The Minor in Persian Language and Literature

Units required: 18–29

Required courses: The minor in Persian Language and Literature requires the completion of 18 credits, no more than 12 of which may be in language, and a minimum of 9 units at the 300 level or above. Minimum requirements for the minor include two years of Persian language:

and the successful completion of at least 9 units of literature/culture courses chosen in consultation with the minor adviser.

Additional Information

Please note that students must earn a minimum of B– in language courses in order to proceed to the next level. Students who place out of language courses because of previous language training or because they are native speakers of the language must complete 15 units of literature and culture courses as approved by their minor adviser. No more than three units of credit earned at an institution other than Washington University may be applied to the minor. The pass/fail grade option is not allowed for any minor courses. Please also note that no more than 3 units of the required 18 units for the minor may be courses that also are used to satisfy the requirements of a major.

L47 Pers 116D Beginning Persian I
Introduction to modern Persian; concentrates on rapidly developing basic skills in speaking, reading, writing and understanding modern Persian. Five class hours a week and additional drill or laboratory hours as assigned by instructor. Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L47 Pers 117D Beginning Persian II
Introduction to modern Persian; concentrates on rapidly developing basic skills in speaking, reading, writing and understanding modern Persian. Five class hours a week and additional drill or laboratory hours as assigned by instructor. Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L47 Pers 200 Topics in Asian & Near Eastern Languages and Literatures
Same as ANELL 200
Credit 3 units. A&S : TH, CD AR : Lit BU : BA, HUM, IS

L47 Pers 216D Intermediate Persian I
Rapid development of skills in speaking, reading, writing and understanding modern Persian. Reading of annotated, classical and modern texts; elementary composition. Prerequisite: Pers 117D or equivalent. Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L47 Pers 217D Intermediate Persian II
A continuation of Persian 216D. Emphasis on enhancing skills in speaking, reading, writing and understanding modern Persian.
Reading of annotated classical and modern texts; elementary composition. Prerequisite: Pers 216D or equivalent. Five class hours a week with additional drill or laboratory hours as assigned. Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L47 Pers 316 Advanced Persian I
Selected readings from classical Persian prose and poetry. Prose readings from historical, mystical and ethical literature by such authors as Bayhayghi, 'Attar and Sa'di. Poetry from significant lyrical genres, such as qaṣida and ghazal, as well as examples from heroic and romantic epics. Continued emphasis on developing skills in writing, speaking and understanding Persian. Frequent use of traditional music, slides and videos to enhance cultural awareness. Prerequisite: Pers 217D or equivalent. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L47 Pers 317 Advanced Persian II: Readings from Modern Literature
Selected readings from modern Persian prose and poetry. The section on prose includes readings from key 19th- and 20th-century texts carrying the debate on social and literary reform. Examples from novels, short stories and plays by such authors as Hedayat and Sa'di studied. Poetry selections include works of traditional figures, such as Iraj Mirza. Focus on reformists such as Nima, Shamlu and Forough. Class discussion emphasized and the use of music, slides and videos continued. Emphasis on developing skills in writing, speaking and understanding Persian. Prerequisite: Pers 316 or equivalent. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : HUM FA : Lit

L47 Pers 361 City of Peace: Baghdad in Medieval Times (ca. 762–1250)
Same as JINE 361
Credit 3 units. A&S : TH A&S : IQ, HUM EN : H

L47 Pers 400 Asian & Near Eastern Languages and Literatures Senior Seminar
Same as ANELL 400
Credit 3 units. A&S : TH CD A&S : IQ, HUM, LCD AR : Lit FA : Lit

L47 Pers 425 Topics in Persian Literature
The richness and vigor of classical Persian literature continue into the 20th century. Economic growth, political change and modernization of education characterize the modern period. The literature produced in these circumstances provides a fascinating example of stimulation, struggle and change in an age-old literary tradition. The present course investigates the lively moments of this engagement with modernity in the novels, short stories and poems of such writers as Hedayat, Danishvar, Sepehri and Farrukhzad. (All readings in translation.) Credit 3 units. A&S : TH A&S : IQ, HUM, LCD, LS BU : HUM FA : Lit

L47 Pers 456 Topics in Classical Persian Literature and Culture
An in-depth study of literary/cultural concepts, generic patterns or intellectual currents in Persian literature from the 10th to 18th centuries. Persian primary sources compose the bulk of the reading. Each semester, a certain genre, time period, literary/intellectual figure or text forms the main focus. Advanced reading knowledge of Persian required. Prerequisite: senior standing. Credit 3 units. A&S : TH A&S : IQ, HUM, LCD FA : Lit

L47 Pers 457 Topics in Modern Persian Literature and Culture
An in-depth study of the modern developments in literary/cultural concepts, generic patterns or intellectual currents in Persian literature from 18th century to present. Persian primary sources compose the bulk of the reading. Each semester, a certain genre, time period, literary/intellectual figure or text forms the main focus. Advance reading knowledge of Persian required. Prerequisite: senior standing. Credit 3 units. A&S : TH A&S : IQ, HUM, LCD EN : H FA : Lit

L47 Pers 488 Independent Work for Senior Honors
Prerequisite: senior standing. Credit 3 units.

L47 Pers 489 Independent Work for Senior Honors
This course is taken in the spring semester. Prerequisite: senior standing, eligibility for honors and permission of the department. Credit 3 units.

L47 Pers 4972 Guided Readings in Persian
Prerequisites: senior standing and permission of the instructor and the department chair. Credit variable, maximum 3 units. Credit variable, maximum 3 units. A&S : LA

L47 Pers 4982 Guided Readings in Persian
Prerequisites: senior standing and permission of the instructor and the department chair. Credit variable, maximum 3 units. Credit variable, maximum 3 units. A&S : LA

Philosophy
Philosophy tackles central questions in human life, such as: What counts as human knowledge? How should I live? What...
is truth? How is the mind related to the body? What is a just society? These difficult but fundamental questions are rigorously explored in philosophy and worked through by drawing on the historical tradition and utilizing careful reasoning. Because philosophers have shaped many of the central ideas on which Western civilization is based, the study of philosophy plays a vital role in a well-rounded liberal arts education.

Philosophy courses at Washington University provide opportunities to gain deeper knowledge of the history of philosophy, from the work of the ancient philosophers Plato and Aristotle through key thinkers such as Descartes and Kant to the present. Students can study the interface between philosophy and other disciplines (such as psychology, environmental studies, women’s studies, law and political science); they also can examine the methods of inquiry and underlying conceptual frameworks of scientific work itself. Courses in logic equip students to think and argue clearly and rigorously, while courses in analytic philosophy allow for the exploration of fundamental questions about knowledge and metaphysics. The department offers a variety of courses in ethics, where students can consider different theoretical approaches to current political, social, medical and environmental problems.

The Major in Philosophy

Total units required: 27 units, of which at least 6 units must be at the 400 level, and an additional 15 units must be at the 300 level or above.

Majors are encouraged to take more than this minimum number of courses, especially if they are considering graduate work in philosophy. Majors and minors are encouraged to fulfill the writing-intensive requirement by taking Phil 390 Philosophical Writing. All majors are required to complete a capstone experience in philosophy, either an Honors thesis (Phil 499) or the Philosophy Capstone Course (Phil 3991). Majors who are planning to do graduate work in philosophy should attain at least reading proficiency in German, Greek, Latin or French.

Required courses:

Majors must complete at least one Core Course in each of the three areas below. Students who do not take Phil 390 will be required to take one additional Core Course. The Core Courses, by area, are:

Contemporary/Analytic Philosophy:

<table>

</tbody>
</table>

On occasion it may be appropriate to substitute a 400-level course in one of these areas for a 300-level core course; individual petitions for substitutions will be considered by the undergraduate director. Generally, for a course to count either as "core" or as partly satisfying the requirement for 6 units at the 400 level, it must be home-based in Philosophy. At most, 3 units of credit in Phil 499 or 500 can be counted toward the required 6 units of 400-level course work.

Optional tracks: The department offers the following three special tracks through the major: the Philosophy Research Focus, the Law and Policy Track and the Philosophy of Science Track.

Philosophy Research Track

The Philosophy Research Track is especially recommended for students who plan to pursue graduate studies and an advanced degree in philosophy — a must for anyone interested in a career as a university or college philosophy teacher. It will give the student a broad background in philosophy, which is a competitive advantage when applying to graduate programs in the field.

Requirements:

- At least 36 units total
- Phil 100 Logic
- One 100-level class in addition to Phil 100G Logic and Critical Analysis, preferably Phil 120F Problems in Philosophy or Phil 125C Great Philosophers
- In Contemporary/Analytic: Phil 301G Symbolic Logic; one of either Phil 3113 Theory of Knowledge or Phil 3481 Introduction to Metaphysics; and one of either Phil 306G Philosophy of Language, Phil 315 Philosophy of Mind or Phil 321G Philosophy of Science
- In History: Any two core courses (a 400-level History course may be substituted for a second 300-level course)
- In Value Theory: Phil 331F Classical Ethical Theories and one of Phil 4315 Normative Ethical Theory and Phil 4310 20th-Century Metaethics (these can satisfy a 400-level requirement)
- Phil 390 Philosophical Writing or another Core course
- Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
- At least 30 units at 300-level or above (including core courses)*
- At least 6 of those 30 units at 400-level**
- Courses taken pass/fail cannot count toward the major.

Law and Policy Track

This track is especially recommended for students who intend to pursue a career in law or public policy. The track involves taking certain specific courses for the major, and possibly a few extra courses, that will provide the student with additional preparation and a competitive edge when applying to law school, post-graduate programs in public policy, and related jobs.

Requirements:

- At least 27 units total
- Phil 100G Logic and Critical Analysis or Phil 301G Symbolic Logic
- One core course in Contemporary/Analytic and one core course in History
- Phil 340F Social and Political Philosophy and Phil 346 Philosophy of Law
- Phil 4210 Advanced Philosophy of Science I and Phil 4211 Advanced Philosophy of Science II
- Any three of the Supplementary Courses listed below, which must include Phil 390 Philosophy Writing-Intensive if a writing-intensive requirement is to be fulfilled in Philosophy
- Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
- At least 27 units at 300 level or above (including core courses)*
- At least 6 of those 27 units at 400-level**
- Courses taken pass/fail cannot count toward the major.

Philosophy of Science Track

The Philosophy of Science track is available only as a second major in combination with work in one or more of the sciences. It is intended for those students with a scientific background who have an interest in pursuing philosophical issues relating to the natural and physical sciences.

Requirements:

- At least 27 units total
- In Contemporary/Analytic: Phil 301G Symbolic Logic and Phil 321G Philosophy of Science
- In History: Any one of the core courses listed below
- In Advanced Philosophy of Science: Both core courses Phil 4210 Advanced Philosophy of Science I and Phil 4211 Advanced Philosophy of Science II
- Any three of the Supplementary Courses listed below, which must include Phil 390 Philosophy Writing-Intensive if a writing-intensive requirement is to be fulfilled in Philosophy
- Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
- At least 27 units at 300 level or above (including core courses)*
- At least 6 of those 27 units at 400-level**
- Courses taken pass/fail cannot count toward the major.

**History Courses:**
- Phil 347C  Ancient Philosophy                     | 3     |
- Phil 349C  Descartes to Hume                      | 3     |
- Phil 357C  Kant and 19th-Century Philosophy       | 3     |
- Phil 358G  Conceptual Foundations of Modern Science | 3     |

**Advanced Philosophy of Science Courses:**
- Phil 390  Philosophical Writing                   | 3     |
- Phil 426  Theories of Concepts                    | 3     |

**Supplementary Courses**

**General Philosophy Courses**
- Phil 390  Philosophical Writing                   | 3     |
- Phil 426  Theories of Concepts                    | 3     |

**Logic and Method Courses:**
- Phil 403  Mathematical Logic I                    | 3     |
- Phil 404  Mathematical Logic II                   | 3     |
- Phil 405G Philosophy of Logic                     | 3     |

**Epistemology and Metaphysics Courses:**
- Phil 307  Metaphysics and Epistemology            | 3     |
- Phil 414G Advanced Metaphysics                    | 3     |
- Phil 433G Cognition and Computation               | 3     |

**Life and Science Courses:**
- Phil 423  Philosophy of Biological Science        | 3     |
- Phil 452  Aristotle                               | 3     |

**Mind and Science Courses:**
- Phil 315  Philosophy of Mind                       | 3     |
- Phil 418  Current Controversies in Cognitive Science | 3     |
- Phil 419  Philosophy of Psychology                 | 3     |
- Phil 421G Philosophy of Neuroscience               | 3     |
- PNP 495G PNP Seminar (with approval of topic)     | 3     |

**Additional Information**

**Senior Honors:** Eligible majors are encouraged to work toward Senior Honors. To qualify, students must have the agreement of a faculty member to serve as thesis adviser. In addition, they must have, at the end of the junior year, at least a 3.5 GPA in the major, a 3.5 GPA in advanced philosophy courses (300 level and above), and a 3.65 overall GPA. For important additional information regarding Senior Honors, consult the web page.

**The Writing-Intensive Seminar:** Majors are encouraged to fulfill their Writing-Intensive requirement by taking Phil 390, which is specially designated as Writing-Intensive. It is typically taken in the junior year and is limited to 15 students. Significant attention is devoted to conceiving, researching, writing, revising, critiquing, and presenting philosophical essays. A philosophy major who does not take a philosophy writing-intensive seminar must take a fourth core course, in any of the three core areas. Priority is given to Philosophy majors and minors who have not yet completed their Writing-Intensive requirement.

**Capstone Experience:** All Philosophy majors are required to complete a capstone experience, either by writing an honors thesis or by taking the Philosophy Capstone Course (Phil 3991).

**PLEASE be aware that the Capstone Course is offered ONLY in the spring semester,** so students will need to plan their class schedules accordingly, if they decide not to do an honors thesis. To qualify for doing an honors thesis, students must have, at the end of the junior year, at least a 3.5 GPA in the major, a 3.5 GPA in advanced philosophy courses, and a 3.5 overall GPA. Alternatively, majors should sign up for Phil 3991 (a 3-credit course), which will draw together a variety of different philosophical areas. Only Philosophy majors of senior standing may take this course; preference is given to students not pursuing honors.

* At least 30 units of the required upper-level courses must be completed with a minimum of a C–.

** Three of these credits (one course) must not be from Honors Thesis or Independent Study.

**Study Abroad:** Students can pursue the philosophy major while studying abroad. The department has special study abroad arrangements with University College, London; Kings College, London; Trinity College, Dublin (Ireland); Sussex University (U.K.); Utrecht University (the Netherlands); and the University of Auckland (New Zealand). Information about study abroad and about specific overseas programs is available from the departmental website and the Study Abroad adviser.

**The Minor in Philosophy**

**Units required:** 18

**Required courses:**

Philosophy minors are required to complete at least 12 units at the 300 level or above, which must include at least one course in each of the following three "core" areas:

**Contemporary/Analytic Philosophy:**
- Phil 301G Symbolic Logic                           | 3     |
- Phil 306G Philosophy of Language                  | 3     |
- Phil 3113 Theory of Knowledge                     | 3     |
- Phil 315  Philosophy of Mind                       | 3     |
Arts & Sciences

Phil 321G Philosophy of Science 3
Phil 3481 Introduction to Metaphysics 3

History of Philosophy:
Phil 347C Ancient Philosophy 3
Phil 349C Descartes to Hume 3
Phil 357C Kant and 19th-Century Philosophy 3
Phil 358 Conceptual Foundations of Modern Science 3

Value theory:
Phil 331F Classical Ethical Theories 3
Phil 340F Social and Political Philosophy 3
Phil 346 Philosophy of Law 3

Additional Information

Minor interdisciplinary requirements are governed by the College of Arts and Sciences.

Minors are encouraged to take the writing-intensive course Philosophical Writing (Phil 390). A philosophy minor must receive a grade of C– or above in each course. Many philosophy courses also can be taken as part of a History and Philosophy of Science minor or a Legal Studies minor.

The Minor in Philosophy of Science

Units required: 18

Required courses:
Phil 301G Symbolic Logic 3
Phil 321G Philosophy of Science 3
Phil 4210 Advanced Philosophy of Science I 3
Phil 4211 Advanced Philosophy of Science II 3
Total units 12

Elective courses:

One course from the following three:
Phil 347C Ancient Philosophy 3
Phil 349C Descartes to Hume 3
Phil 358 Conceptual Foundations of Modern Science 3

One course from the following:
Phil 307 Metaphysics and Epistemology 3
Phil 315 Philosophy of Mind 3
Phil 390 Philosophical Writing 3
Phil 403 Mathematical Logic 1 3
Phil 404 Mathematical Logic II 3
Phil 4051 Philosophy of Logic 3
Phil 4141 Advanced Epistemology 3
Phil 4142 Advanced Metaphysics 3
Phil 418 Current Controversies in Cognitive Science 3

L30 Phil 100G Logic and Critical Analysis
Introduction to the elementary tools of logic required for constructing and critically evaluating arguments and the claims they support. Topics include: the nature of an argument; argument structure; how arguments can fail both in structure and in content; formal and informal fallacies; propositional logic and predicate calculus; and critical analysis of rhetorical strategies for presenting arguments. Students are encouraged to develop critical reasoning skills that can be applied widely. Credit 3 units. A&S : LA, QA A&S : IQ, NSM, AN BU : HUM FA : SSP

L30 Phil 1061 Introduction to Political Science
Same as Pol Sci 106
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L30 Phil 120F Problems in Philosophy
Introduction to philosophical methods and concepts through an investigation of major issues in Western philosophy such as: what counts as knowledge; truth and belief; the existence of God; the mind-body problem; materialism and idealism; moral theory and concepts of justice. A range of historical and contemporary views on these issues is considered. The aim of the course is to prepare students to think and write about philosophical problems on their own. Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP

L30 Phil 125C Great Philosophers
In this course we focus on some of the most important texts in the history of Western philosophy in order to discuss a wide range of central philosophical problems. We typically consider, for example, the existence of God, the justification of claims to knowledge, and the requirements of a good human life, including the demands of morality. Among the philosophers most likely studied are Plato, Aristotle, Descartes, Hume, Kant, Marx, Nietzsche and Wittgenstein. Our goal is not just to appreciate the genius of some great philosophers but also to grapple with the current philosophical problems they have bequeathed to us. Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP
### L30 Phil 131F Present Moral Problems
An investigation of a range of contemporary moral issues and controversies that draws on philosophical ethics and culturewide moral considerations. Topics may include: racism, world hunger, war and terrorism, the distribution of income and wealth, gender discrimination, pornography, lesbian and gay rights, abortion, euthanasia, and capital punishment. The aim of the course is to present diverse points of view regarding these topics and to provide conceptual and theoretical tools that enable the student to make headway in thinking carefully and critically about the issues.

Credit 3 units.  
A&S : TH  A&S : IQ, HUM  BU : ETH  FA : SSP

### L30 Phil 233F Biomedical Ethics
A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.

Credit 3 units.  
A&S : TH  A&S : IQ, HUM  BU : ETH  FA : SSP

### L30 Phil 235F Introduction to Environmental Ethics
A general survey of current issues in environmental ethics, focusing on problems such as the obligation to future generations, protection of endangered species, animal rights, problems of energy and pollution, wilderness, global justice, and business obligations. Students also learn some ethical and political theory.

Credit 3 units.  
A&S : TH  A&S : IQ, HUM  BU : ETH  FA : SSP

### L30 Phil 239F Topics in Philosophy and Environment
Philosophical questions are central to study of the environment. Such questions span many philosophical fields including metaethics, value theory, applied ethics, aesthetics, political philosophy and philosophy of science. Given such a diversity of important questions, this course focuses on a different intersection of philosophy and environment each time it runs. It aims to develop students' understanding of the complex philosophical claims and problems that lie behind environmental values, practices and policies. Examples of topics considered are: wilderness, food and agriculture, and animals.

Credit 3 units.  
A&S : TH  A&S : IQ, HUM

### L30 Phil 299 Internship in Philosophy
Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement, which the student obtains from the Career Center and which must be filled out and signed by the Career Center, the site supervisor and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., eight to 10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours.

Credit variable, maximum 3 units.  
FA : SSP

### L30 Phil 3001 Philosophy of Medicine: Introduction to Philosophy of Clinical Medicine
Credit 2 units.  
A&S : TH  A&S : IQ, HUM

### L30 Phil 301G Symbolic Logic
In the first half of the course we study some features of truth — functional and first-order classical logics, including studying the model theory and metatheory for first-order logic in much greater depth than in Phil 100. In the second half of the course we go on to study three different styles of proof system — tableaux, axiomatic and natural deduction. This course continues where Phil 100 An introduction to Logic and Critical Analysis leaves off. It is recommended for students who already have taken that introductory course, or for students who already have a strong background in mathematics. Priority given to majors in Philosophy and PNP.

Credit 3 units.  
A&S : LA  A&S : IQ, NSM, AN  BU : HUM  FA : SSP

### L30 Phil 306G Philosophy of Language
A survey of major philosophical problems concerning meaning, reference and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues are selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisites: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.

Credit 3 units.  
A&S : LA  A&S : IQ, HUM  BU : HUM  FA : SSP

### L30 Phil 308 Introduction to Semantics
Same as Ling 311

Credit 3 units.  
A&S : LA  A&S : IQ, SSC

### L30 Phil 309 Topics in the Wilderness
Philosophical questions are central to study of the environment. Such questions span many philosophical fields including
metaethics, value theory, applied ethics, aesthetics, political philosophy and philosophy of science. Given such a diversity of important questions, this course focuses on a different intersection of philosophy and environment each time it runs. It aims to develop students’ understanding of the complex philosophical claims and problems that lie behind environmental values, practices and policies. Examples of topics considered are: wilderness, food and agriculture, and animals. Credit 3 units. A&S : TH A&S : IQ, HUM

L30 Phil 310 Contemporary Jewish Thought
Same as JINE 310
Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : Lit, SSP

L30 Phil 3101 Topics in Philosophy of Religion
Same as Re St 3101
Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH

L30 Phil 3113 Theory of Knowledge
This course focuses on issues in epistemology with the aim of providing a survey of contemporary work. The course begins with a close reading of Descartes’ first three Meditations. These should help us set some of the problems that figure in more recent work and provide an introduction to certain fundamental epistemological concepts. No particular background is assumed, but participants are expected to come to class prepared to discuss topics at an advanced level. Readings are taken from original sources and can be challenging. Although most assignments are reasonable short, you should allow time for careful reading and rereading. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.. Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP

L30 Phil 315 Philosophy of Mind
An introduction to philosophical analyses of the nature of mind, especially those developed by contemporary philosophers. The focus is on questions such as the following: What is a mind? How does it relate to a person’s brain? How does it relate to a person’s body and the external world? Can a mind exist in a very different kind of body (e.g., a computer or a robot)? Does thinking require a language-like code? If so, can nonlinguistic species think? What is it to have a mental image or to experience pain? Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.. Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L30 Phil 316 Mind and Morals
This course explores a number of issues at the intersection of ethics and cognitive science. Possible topics include: Are we rational? Do we know our own thoughts and motivations? Can one believe that one ought to do something without being motivated to do it? Do emotions impair or enhance our ability to reason? How do moral beliefs develop through childhood? Are traits such as intelligence and character unchangeable, and what implications follow if they are (or are not)? Does retaining my identity over time require having the same mind, and, if so, am I the same person now as I was as a child? Are nonhuman animals worthy of moral consideration? If brain activity is determined by causal laws, can we have free will? Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.. Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP

L30 Phil 316L Mind and Morals
Same as Re St 3101
Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP

L30 Phil 3113 Theory of Knowledge
Same as Re St 3101
Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH

L30 Phil 31313 Theory of Knowledge
This course focuses on issues in epistemology with the aim of providing a survey of contemporary work. The course begins with a close reading of Descartes’ first three Meditations. These should help us set some of the problems that figure in more recent work and provide an introduction to certain fundamental epistemological concepts. No particular background is assumed, but participants are expected to come to class prepared to discuss topics at an advanced level. Readings are taken from original sources and can be challenging. Although most assignments are reasonable short, you should allow time for careful reading and rereading. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.. Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP

L30 Phil 315 Philosophy of Mind
An introduction to philosophical analyses of the nature of mind, especially those developed by contemporary philosophers. The focus is on questions such as the following: What is a mind? How does it relate to a person’s brain? How does it relate to a person’s body and the external world? Can a mind exist in a very different kind of body (e.g., a computer or a robot)? Does thinking require a language-like code? If so, can nonlinguistic species think? What is it to have a mental image or to experience pain? Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.. Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L30 Phil 327 Philosophy of Religion
Credit 3 units. A&S : TH A&S : IQ, HUM

L30 Phil 321G Philosophy of Science
Pivotal concepts common to empirical sciences are examined and clarified. These include: explanation, confirmation, prediction, systematization, empirical significance and the relationship of all these concepts to the structure of scientific theory. Examples may be drawn from both contemporary and historical science, including the social, biological and physical sciences. Students with a background in science are particularly encouraged to consider this course. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.. Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L30 Phil 331F Classical Ethical Theories
Intensive readings of great works in the history of ethics, especially by Plato, Aristotle, Hume, Kant and Mill. Topics may include: the sources of moral knowledge; the nature of practical moral judgment; the moral role of emotion and desire; weakness of will; moral autonomy; and the universality of moral norms. Prerequisite: one course in philosophy at the 100 or 200 level, or permission of the instructor. Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP

L30 Phil 3321 Feminist Philosophy
This course focuses on vital normative issues of government, community, culture and interpersonal relationships that bear on women’s lives in distinctive ways. We consider diverse topics from varied feminist perspectives. Probable topics include: race/ethnicity and gender; care and justice; varieties of oppression; lesbianism; sexuality; radical democracy; violence against women; and whether philosophical modes of investigation are biased against women.
L30 Phil 339F Philosophy of the Arts
An examination both of general issues that apply to all types of art and of issues specific to particular art forms. For example, what is art? What are the central artistic values: beauty, truth, emotional expressiveness, representational power or something else? Does art have a moral or political function? How can we account for the history of art and for different artistic styles?
In regard to selected forms, there are important questions concerning how pictures represent, whether music and dance are forms of "language," and the nature of literary interpretation. Some consideration is given to the relation of psychology and theories of the mind to art. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.. Credit 3 units. A&S : TH A&S : IQ, HUM FA : AH, SSP

L30 Phil 340F Social and Political Philosophy
Study of certain fundamental issues concerning government, society and culture. For example: what are the nature and limits of legitimate political authority? Are ordinary human beings capable of governing themselves justly? Do citizens have a duty to obey the state? If so, to what extent, if at all, is that duty grounded in consent or contract? Should the state limit or regulate the personal relationships of citizens, such as marriage, family and sexuality? How should social institutions rectify a history of political or social injustice against oppressed groups? Readings from historical and contemporary sources. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.. Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH, HUM FA : AH, SSP

L30 Phil 345F Issues in Applied Ethics
Advanced study of a selected topic in applied ethics. Abstract ethical theories and methods are brought to bear on the moral problems that arise in an area of social and professional practice such as medicine, business, law, journalism, engineering or scientific and humanistic research. Possible topics include: reproductive health care and policy, the just distribution of medical resources, the social responsibilities of corporations, accountability in the media and public office, and the ethics of research on or affecting human subjects. Prerequisites: one course at the 100 or 200 level in applied ethics; or permission of the instructor. Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP

L30 Phil 346 Philosophy of Law
This course first focuses on the philosophical foundations of law, examining both the relationship between law and rules, as well as the types of legal reasoning. Second, the course focuses on philosophical issues that arise in the key substantive areas of law: contracts, torts, property, criminal law and constitutional law, as well in specialized areas such as family and employment law. The course ends with a brief discussion of several problems in legal ethics. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.. Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP

L30 Phil 347C Ancient Philosophy
An examination of the high-water marks of philosophy in ancient Greece and Rome, focusing primarily on Plato and Aristotle. A wide range of philosophical problems is discussed, including the nature of the good life, the justification of knowledge, and the ultimate nature of mind and world. Attention is paid to how these problems unfolded in their historical context and to how the ancient treatments of them compare to contemporary efforts. Prerequisite: one course in philosophy at the 100 or 200 level or permission of the instructor. Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP

L30 Phil 3481 Introduction to Metaphysics
This course is an introduction to central debates of contemporary analytic metaphysics. Metaphysics is concerned with the nature of the most general kinds of things and the relationship between these things. We discuss the nature of and relationship between properties, material objects, persons, time, space and modality. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.. Credit 3 units. A&S : TH A&S : IQ, HUM

L30 Phil 349C Descartes to Hume
An examination of major philosophical systems and problems in Modern Philosophy as presented in the original writings of the 17th and 18th centuries. Topics may include rationalism and empiricism, idealism, materialism and skepticism, with readings selected from the continental rationalists Descartes, Spinoza and Leibniz, and from the British empiricists Locke, Berkeley and Hume. Central problems include the mind-body problem, representationalism and transcendentalism. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.. Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L30 Phil 357C Kant and 19th-Century Philosophy
Examination of Kant and 19th-century philosophy. We discuss Kant’s "Copernican Turn" in metaphysics and epistemology, as well as his moral philosophy, and we study works of selected 19th-century philosophers such as Hegel, Marx, Mill and Nietzsche. Prerequisite: one 100- or 200-level course in
philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP

L30 Phil 358 Conceptual Foundations of Modern Science
The aim of this course is to present some of the basic concepts underlying modern science. Insofar as many of those concepts first appeared or became predominant in the 17th and early 18th centuries, the course concentrates on primary works from that period. Among the concepts studied are: (1) nature and natures: the ontology of matter and force; causal closure; (2) methods: observing and intervening, systematic and organized; (3) explanations: appeal to laws and mechanisms; teleology.
Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.
Credit 3 units. A&S : TH A&S : IQ, HUM

L30 Phil 366 Art and the Mind-Brain
In recent years, there has been a growing interest in the bearing of cognitive science on the perception and understanding of art. This interest has roots in tradition: historically, art, aesthetics and vision science have often been linked. But the growth of knowledge in cognitive science has opened up new opportunities for understanding art and addressing philosophical questions. The converse is also true. The production, perception and understanding of art are human capacities that can shed light on the workings of the mind and brain. This course considers questions such as: What is art? How do pictures represent? Does art express emotion? Why does art have a history?
Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in Philosophy and PNP.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : AH, SSP

L30 Phil 375 Existentialism
The philosophical systems of selected philosophers such as Kierkegaard, Nietzsche and Sartre are examined to determine their historical origins, their ontological and epistemological ramifications, and their relationships to contemporary philosophy.
Prerequisite: one course in philosophy at the 100 or 200 level or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L30 Phil 390 Philosophical Writing
This seminar has a different topic of central philosophical importance each semester. Significant attention also is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays. Limited to 15 students. Priority is given to philosophy majors and minors who have not yet completed their writing-intensive requirement.

L30 Phil 397 Undergraduate Independent Study
Credit variable, maximum 6 units.

L30 Phil 3991 Philosophy Capstone Course
This course focuses either on classic writings from the past century or on contemporary writings that address a major philosophical concern, such as “the meaning of life” or “the concept of self.” In either case, the course draws together a variety of philosophical specializations. Must be taken by all philosophy majors who are not writing an honors project. Work for the course typically consists of one written project, one oral presentation, and one commentary on another student’s oral presentation. Prerequisites: senior standing and major in philosophy; preference given to those majors not pursuing Honors.
Credit 3 units. A&S : TH A&S : IQ, HUM

L30 Phil 403 Mathematical Logic 1
A first course in mathematical logic, an introduction to both proof theory and model theory. The structure and properties of first-order logic are studied in detail, with attention to such notions as axiomatic theory, proof, model, completeness, compactness and decidability.
Prerequisite: Phil 301G or equivalent or a background in mathematics.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L30 Phil 404 Mathematical Logic II
Godel’s Incompleteness Theorem: its proof, its consequences, its reverberations. Prerequisite: Phil 403 or a strong background in mathematics.
Credit 3 units. A&S : TH A&S : IQ, HUM BU : HUM FA : SSP

L30 Phil 405 Philosophical Logic
What the philosophy student needs to know of logic, its techniques and its use as a tool in philosophical analysis. Some attention to the history of the subject and to its metatheory.
Prerequisite: previous exposure to formal logic, or permission of instructor.
Credit 3 units. A&S : LA FA : SSP

L30 Phil 4051 Philosophy of Logic
This course surveys some important issues in the philosophy of logic. We begin with basic foundational issues in classical logic, including the relation of logic to psychological reasoning and Tarski’s definition of logical consequence, and gradually go on to consider the motivations and status of well-known extensions (sometimes regarded as “neo-classical” logics) such as modal logics and second-order logic. In the last weeks of the course, we examine some outright challengers, including intuitionistic
and paraconsistent logics. After evaluating the arguments for and against these challenges, we examine one recent, controversial view—logical pluralism—which suggests that we might not need to choose among the rival systems. Many of the readings for this course are classics of contemporary philosophy, and the subject is likely to be of especial interest to students who have interests in logic, and in the philosophy and foundations of mathematics and language. Some of the important ideas in the course presuppose at least a basic acquaintance with formal logic, and hence either Phil 100 or Phil 301 (or permission of the instructor) are prerequisites.

Credit 3 units. A&S : TH A&S : IQ, HUM

L30 Phil 4065 Advanced Philosophy of Language
An advanced-level treatment of basic topics in the philosophy of language as this discipline is understood in the analytic tradition. The main positions and the problems they pose are surveyed; focal themes include meaning, reference and truth. The aim of the course is to help students develop effective expository techniques and to provide them with the necessary conceptual resources to analyze and criticize different theoretical views. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.

Credit 3 units. A&S : LA A&S : IQ, HUM FA : SSP

L30 Phil 4070 Global Justice
Same as Pol Sci 4070

Credit 3 units. A&S : SS A&S : IQ, SSC

L30 Phil 4141 Advanced Epistemology
Competing theories of knowledge and belief justification are considered. Careful attention is given to selected problems such as skepticism, certainty, foundations, coherence, perception, induction. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.

Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 4142 Advanced Metaphysics
Through readings from both classical and contemporary sources, a single traditional metaphysical concern is made the subject of careful and detailed analytic attention. Possible topics include such concepts as substance, category, cause, identity, reality and possibility, and such positions as metaphysical realism, idealism, materialism, relativism and idealism and realism. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.

Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 418 Current Controversies in Cognitive Science
An advanced survey of current debates in cognitive science with an emphasis on the philosophical issues raised by these debates. Topics may include: evolutionary psychology; innateness and neural plasticity; perception and action; consciousness; connectionism; robotics; embodied cognition; moral reason; emergence and artificial life; concepts and content; animal cognition. Prerequisite: one course in Philosophy at the 300 level, graduate standing or permission of the instructor.
Same as PNP 418

Credit 3 units. A&S : TH A&S : IQ, HUM

L30 Phil 419 Philosophy of Psychology
An investigation of the philosophical presuppositions and implications of various traditions in psychology, including behaviorism, Gestalt and cognitivism, with a special emphasis on the development of the information processing approach of contemporary cognitivism. The conception of psychological phenomena, data and explanation central to each of these traditions are examined, and typical topics include the debates between propositional and imagistic models of representation, different accounts of concepts and categorization, and the relation of psychology to ethics. Prerequisite: one previous course in philosophy at the 300 level, graduate standing or permission of the instructor.

Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 4202 Contemporary Feminisms
The purpose of this course is to provide a framework, a map, within which students can locate feminist ideas. The course, which may be presented historically, explores and compares different types of feminism selected from, for example, the following feminisms: liberal; Marxist; socialist; radical; lesbian; black; existentialist; postmodern. The class considers how such feminisms analyze the nature and sources of women’s oppressions, the worlds they envision, and the means they use to bring about change. NOTE: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: Completion of at least one Women, Gender, and Sexuality Studies course or permission of the instructor.
Same as WGSS 420

Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD FA : SSP

L30 Phil 4210 Advanced Philosophy of Science I
This course varies in topics related to philosophy of science from semester to semester. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.

Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 4212 Philosophy of Neuroscience
This course focuses on the historical roots of neuroscience as well as its contemporary developments. Topics include: (1) the nature of explanatory strategies in neuroscience; (2) the relation between neuroscience research and higher-level
disciplines such as psychology; and (3) the epistemology of the investigatory tools of neuroscience. Prerequisite: one previous course in Philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

<td>L30 Phil 4200 Advanced Philosophy of Science II</td>
<td>This course examines a number of theoretical, conceptual and methodological issues that arise in the attempts of biologists to explain living systems. One sort of problem concerns the relation between biology (and biological descriptions and explanations) and physics and chemistry. Biological phenomena have often seemed very different from ordinary physical phenomena in being teleological or goal oriented. Vitalists, accordingly, resisted the attempt to invoke physics and chemistry in the attempt to explain biological phenomena. But recently biology has come more and more to draw upon physics and chemistry; we examine the conceptual frameworks that underlie these efforts. Another sort of problem concerns the adaptiveness of living organisms. Charles Darwin offered one naturalistic explanation of this feature, an explanation that was further developed in this century as the synthetic theory of evolution. A number of controversial issues have arisen within this context of adaptation, and the range of levels at which selection can occur. The ubiquity of evolution, moreover, has been challenged in recent years, as a number of non-selectionist explanations have recently been put forward. We consider the arguments for the synthetic theory and these alternatives.</td>

<tr>
<td>L30 Phil 426 Theories of Concepts</td>
<td>Concepts are the building blocks of thought. They are implicated in just about every cognitive task. Beyond that, there is little consensus. What information do concepts encode? How are they acquired? How are they combined to form thoughts? How are they related to perception and imagery? Each of these questions has been answered in numerous ways. In this course, we explore competing theories of concepts that have been proposed by philosophers, psychologists and other cognitive scientists. No prior acquaintance with these issues is required.</td>

L30 Phil 4315 Normative Ethical Theory
An exploration of the three major normative ethical theories debated by philosophers in the past 100 years: Kantian ethics, utilitarianism and virtue theory. Authors covered in the course may include: Henry Sidgwick, R.M. Hare, R.B. Brandt, John Rawls, Bernard Williams, Philippa Foot, Thomas Nagel, Christine Korsgaard, Michael Slote and Barbara Herman. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 4320 British Moralists
An investigation of the work of the great British moral philosophers of the 17th to 19th centuries, especially Hobbes, Hume and Mill. Other figures may include Reid, Butler, Hutcheson, Bentham and Sidgwick. In considering these philosophers, we explore the relations between normative ethics, moral psychology and political philosophy, and may include a discussion of legal, social and economic philosophies as well. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 4332 Cognition and Computation
An investigation of the work of the great British moral philosophers of the 17th to 19th centuries, especially Hobbes, Hume and Mill. Other figures may include Reid, Butler, Hutcheson, Bentham and Sidgwick. In considering these philosophers, we explore the relations between normative ethics, moral psychology and political philosophy, and may include a discussion of legal, social and economic philosophies as well. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 4365 Political and Religious Power
The last century scattered many people's hopes for rational progress in politics. Outbreaks of horror pushed a number of European and American thinkers to reconsider the relation of religious and "secular" power. This seminar reflects on just four of them: Carl Schmitt, Michel Foucault, Giorgio Agamben and Judith Butler. We read major texts by each of these thinkers as they ask about divine and human violence, the limits of rational government, the transformations of power, and how societies decide which lives count as human. Same as Re St 4365
L30 Phil 438 Aesthetics
A careful consideration of selected issues regarding the experience of visual art, architecture, music or literature, as well as of the power or beauty of nature, people and artifacts. For example, is there a special form of aesthetic experience or aesthetic attitude? In what do aesthetic power and beauty consist? Are they different in art and nature? Do the artists’ intentions matter? Some central concerns are: how do visual art and literary texts have “meaning,” what role do the viewer’s or reader’s interpretations play, and how might recent work in cognitive science and social theory shed light on these issues? Prerequisites: one course in Philosophy at the 300-level, graduate standing or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : AH, SSP

L30 Phil 4400 Advanced Social and Political Philosophy
A selective investigation of one or two advanced topics in the philosophical understanding of society, government and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism, communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism and the rights of cultural minorities. Prerequisite: one course in philosophy at the 300-level, graduate standing or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 451 Plato
An examination of some of Plato’s most important dialogues, typically including the Gorgias, Phaedo and Republic, with the aim of grasping the development of Plato’s most influential thoughts in ethics and in metaphysics and epistemology. In order to provide both historical understanding and philosophical evaluation, attention is paid to the context and structure of the dialogues and to the best of recent secondary literature. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 452 Aristotle
This course offers a maximally full and detailed introduction to the works of Aristotle. His logic, natural philosophy, psychology, metaphysics, ethics and political philosophy are discussed, and stress is laid on the interpretive problems facing contemporary philosophers seeking to understand Aristotle’s achievement. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 4530 Hellenistic Philosophy
The Hellenistic Age, traditionally dated from the death of Alexander and his (Macedonian) Empire at 323 BCE to the birth of Augustus’ (Roman) Empire in 31 BCE, gave the West three of its most innovative and influential schools of philosophy: Epicureanism, Skepticism and Stoicism. This course investigates the central features of their thought. Special attention is paid to the still-relevant debates between the Stoics and Skeptics about the possibility of knowledge, to the disagreements among all three schools about the issues of freedom, responsibility and determinism, and to their ethical theories. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 4550 Continental Rationalism
A rationalist is a philosopher for whom at least one certain truth is inborn or comes from reason rather than from empirical or sensory experience. The major systemic writings of Descartes, Spinoza and Leibniz are examined with a focus on the question: does the epistemology determine the ontology of these philosophical systems or vice versa? The lines of development connecting these philosophers are traced, and such enduring problems as the relation of mind to body are examined. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 4563 Marxism After Marx: Philosophy and Radicalism in the 20th Century
As claims around the supposed “post-modernity” of our contemporary situation have ebbed, so scholars have returned once more to perhaps the defining philosophical and political voice of modernity, Karl Marx. This course prepares students to engage in current debates in the humanities over the nature of the political, the dynamics of class, the relative importance of the economy to culture, and the historical situatedness of philosophical knowledge, all through close readings of the Western Marxist philosophical tradition. That tradition, developing in Continental Europe and later the United States, sought to revitalize Marx’s account of historical development through attention to art, literature and the broader Western philosophical canon, often with the intention of accounting for the failures of Soviet Communism. The course begins with a condensed primer to Marx’s original ideas, before turning to the extension of Marxist philosophy in the ideas of Lenin, Lukács, the Frankfurt School, Louis Althusser, the British “New Left,” Lucio Colletti and Antonio Negri, before addressing more contemporary authors including Fredric Jameson and Alain Badiou.
Same as IPH 456
Credit 3 units. A&S : TH A&S : IQ, HUM
L30 Phil 4570 Kant’s “Critique of Pure Reason”
An in-depth investigation of Kant’s *Critique of Pure Reason*, one of the most important books in the history of Western philosophy. Some supplementary readings from other philosophers are used to situate Kant’s work in a systematic and historical context, to present some Kantian positions in current philosophy, and to bring in some important contrasting views and criticisms. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor. Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 4575 Kant and Kantian Practical Philosophy
An in-depth examination of Kant’s practical philosophy: his moral and political theory. Readings include the *Critique of Practical Reason*, parts of the *Metaphysics of Morals*, *Perpetual Peace* and other writings. Supplementary readings are used to situate Kant’s work in its systematic and historical context, to provide orientation in the world of Kant scholarship, and to introduce important contrasting views and criticisms. We also discuss recent reformulations of Kantian themes in the works of contemporary philosophers. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor. Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 464 Advanced Continental Philosophy
A study of selected texts by such major figures of 20th-century continental philosophy as Husserl, Heidegger, Merleau-Ponty, Sartre, de Beauvoir, Levinas, Habermas, Foucault, Derrida and Irigaray. Such topics as phenomenology, hermeneutics, existentialism, critical theory, structuralism and post-structuralism are investigated. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor. Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L30 Phil 465 Topics in the History of Philosophy
Study of individual philosophers or themes from the ancient, medieval, and/or modern periods. Examples: Spinoza, St. Thomas Aquinas, neo-Platonism, universals in ancient and medieval thought, ancient and modern theories of space and time. Prerequisite: 6 units in philosophy or permission of instructor. Credit 3 units. A&S : TH A&S : IQ, HUM

L30 Phil 4751 Intellectual History of Feminism
We focus on feminist thought in Western culture but also examine non-Western ideas about feminisms. We trace the relationship among emergent feminist ideas and such developments as the rise of scientific methodology, Enlightenment thought, revolutionary movements and the gendering of the political subject, colonialism, romanticism, socialism and global feminisms. Readings are drawn from both primary sources and recent feminist scholarship on the texts under consideration. NOTE: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: Completion of at least one Women, Gender and Sexuality Studies course or permission of the instructor. Same as WGSS 475 Credit 3 units. A&S : TH A&S : IQ, HUM FA : Lit

L30 Phil 497 Undergraduate Independent Study
Prerequisite: permission of the department. Credit variable, maximum 6 units. Credit variable, maximum 6 units.

L30 Phil 499 Study for Honors
Prerequisites: senior standing, a 3.5 minimum grade point average overall, a 3.5 minimum grade point average in philosophy courses, and the permission of the department. Applications and further information are available in the Department of Philosophy. See further: artsci.wustl.edu/~philos/undergrad/honors.html. Credit 3 units. A&S : TH FA : SSP

Philosophy–Neuroscience–Psychology
Philosophy–Neuroscience–Psychology (PNP) is an interdisciplinary program that provides an opportunity to examine the mind from multiple perspectives. Students who choose to major in PNP will learn to bring some of the newest findings in science to bear on some of the oldest questions in philosophy; equally important, they will see new questions emerge and learn to pursue those as well. Examples include: Is the mind–brain a single entity, or does having a mind involve something over and above the activity of a brain? What assumptions are made by cognitive psychologists when they divide mental activity into separate processes and use response times or other measures of task performance to describe those processes? What assumptions are made by neuroscientists when they use imaging techniques to determine where in the brain a cognitive process is carried out? What are we to make of Chomsky’s claim that language is an innate mental organ designed to generate an infinite number of sentences? PNP majors will seek answers to questions such as these in courses offered by PNP and PNP’s affiliated departments.

The Major in Philosophy–Neuroscience–Psychology

I. Core Undergraduate Requirements for PNP
(Required for all students, CN and LCC)

Entry Sequence
Choose one of the following:

PNP Sequence

PNP 200 Introduction Cognitive Science and
PNP 201 Inquiry in the Cognitive Sciences OR
Psych 301 Experimental Psychology

Mind, Brain, Behavior Sequence (MBB)

* MBB 120A Introduction to Study of the Mind-Brain:
Psychological, Biological and Philosophical Perspectives

* MBB 122 Introduction to the Study of the Mind Brain II
OR PNP 200 Introduction Cognitive Science

Core Philosophy Requirements

Prerequisites:

Phil 100 Logic and Critical Analysis
Phil 120 Problems in Philosophy or
Phil 125 Great Philosophers.

Upper division: Two courses at the 300 or 400 level.

*Majors must take either

PNP 315 Philosophy of Mind/Phil 315; or
PNP 306G/ Phil 306G Philosophy of Language/Ling 306G;
and another from the list below.

• PNP 301G/ Phil 301G Symbolic Logic
• PNP 306G/ Phil 306G Philosophy of Language
• PNP 307 Metaphysics and Epistemology/Phil 307
• PNP 315 Philosophy of Mind/Phil 315
• PNP 316 Mind and Morals/Phil 316
• PNP 321G/Phil 321G Philosophy of Science
• Phil 339F Philosophy of the Arts
• Phil 3481 Introduction to Metaphysics
• PNP 349C/Phil 349C Descartes to Hume
• PNP 3581 Conceptual Foundations of Modern Science/Phil 358
• PNP 366/Phil 366 Art and the Mind-Brain
• Phil 390 Philosophical Writing (WI) **(upon approval of subject matter, see PNP office for each semester)
• PNP 4023 Models of Social Science/AMCS 4023
• Phil 403 Mathematical Logic 1
• Phil 404 Mathematical Logic II
• PNP 405/Phil 405 Philosophical Logic
• PNP 4051/Phil 4051 Philosophy of Logic
• Phil 4061 Topics in the Philosophy of Language
• PNP 4065 Advanced Philosophy of Language/Phil 4065
• PNP 4101/Phil 410 Theories of Perception
• PNP 4114 Advanced Epistemology/Phil 4114
• PNP 4112 Advanced Metaphysics/Phil 4112
• PNP 418 Current Controversies in Cognitive Science/Phil 418
• PNP 419 Psychology of Philosophy/Phil 419
• PNP 4210 Advanced Philosophy of Science/Phil 4210
• PNP 4212 Philosophy of Neuroscience/Phil 4212
• Phil 423 Philosophy of Biological Science
• PNP 426 Theories of Concepts/Phil 426
• PNP 4332 Cognition and Computation
• PNP 495 PNP Seminar
• PNP 496 PNP Seminar

Core Psychology Requirements

Prerequisite: Psych 100B Introduction to Psychology

Upper division: Two courses at the 300 or 400 level.

Unless a student has completed MBB 120 with a grade of B– or higher, s/he must take

PNP 360 Cognitive Psychology/Psych 360, or
PNP 433/Ling 408/ Psych 433 Psychology of Language;

and another from the list below:

• Psych 300 Introduction to Psychological Statistics
• Psych 301 Experimental Psychology
• PNP 3151/ Psych 315 Introduction to Social Psychology
• PNP 3211/ Psych 321 Developmental Psychology
• PNP 323 Play and Development/Educ 337
• Psych 326 Introduction to the Psychology of Aging

II. Track-Specific Requirements

Courses required for the CN track

Prerequisites: Biol 2960 or Psych 3401*

and permission of instructor; Biol 3058 recommended.

Upper division: Two neuroscience courses at the 300 or 400 level. You MUST take:

• Biol 3411 Principles of the Nervous System and
• Psych 3604 Cognitive Neuroscience

[* Psych 3401 Biological Psychology CAN count toward the Depth Requirement in Neuroscience, if taken as a prerequisite]

Courses required for the LCC track

Prerequisites:

Ling/ Anthro 170D Introduction to Linguistics and
Anthro 150A Introduction to Human Evolution

Upper division: Two courses at the 300 or 400 level, chosen from those below:

• PNP 301 Symbolic Logic/Phil 301G
• PNP 306 Philosophy of Language/Phil 306G
• PNP 309 Syntactic Analysis/Ling 309
• PNP 3111 Introduction to Semantics/Ling 311
• Ling 312 Phonetics
• PNP 313 Phonological Analysis/Ling 313
• PNP 3171 Introduction to Computational Linguistics/Ling 317
• PNP 320 Historical and Comparative Linguistics/Ling 320
• PNP 3383 Cognition and Culture/Anthro 3383
• Anthro 3386 Language, Culture and Society
• Ling 339 Introduction to Sociolinguistics
• Psych 358 Language Acquisition
• PNP 362 The Biological Basis of Human Behavior/Anthro 362
• PNP 3662 Primate Biology/Anthro 3661
• PNP 3681 Language and Society in Africa/Anthro 3681/AFAS 368
• PNP 3701 Introduction to Hispanic Linguistics/Ling 3701/Span 370 (previously Ling 416)
• PNP 3881/Anthro 3881 Disability and Culture
• PNP 396 Linguistics Seminar/Ling 396
• Ling 4012/Sphr 401 Anatomy and Physiology of Speech and Hearing
• PNP 406 Primate Ecology and Social Structure/Anthro 406
• PNP 4065 Advanced Philosophy of Language/Phil 4065
• PNP 408 Psychology of Language/Psy 433
• PNP 4122 Language and Gender/Anthro 4122/Ling 4122
• Span 413 Linguistics and Language Learning
• Span 416 Introduction to Hispanic Linguistics/Ling 416 (prior to SP09)
• PNP 4192 Primate Cognition/Anthro 4191
• PNP 4315 Culture, Language and the Education of Black Students/Educ 4315
• Ling 433 Acoustical Phonetics & Speech Perception/Sphr 433
• Ling 4341/Sphr 434 Normal Language Development
• Psych 4351 Reading and Reading Development
• PNP 466 Second Language Acquisition/Ling 466/Span 466
• PNP 467 Grammar and Vocabulary Acquisition/Span 467
• PNP 469 Reading and Writing in a Second Language/Ling 469/Span 469

III. Depth requirement

Students on the CN track must complete at least 9 units, including at least 3 of those units credited from 400 or above, in one area of either philosophy, psychology or neuroscience.

Students on the LCC track must complete at least 9 units, including at least 3 units credited from 400 or above, in one area of either philosophy, psychology, anthropology or linguistics. Note that courses from another major may count toward satisfying the depth requirement, provided that you have at least 18 stand-alone units in PNP at level 300 or above.

Three units of MBB 300 MAY be counted toward the depth requirement, in an area appropriate to the research undertaken (e.g. a psychology research project would count toward the psychology depth requirement). All nine depth requirement units MUST be taken in a single area.

Philosophy
• PNP 301 Symbolic Logic/Phil 301G
• PNP 306 Philosophy of Language/Phil 306G
• PNP 307 Metaphysics and Epistemology/Phil 307
• PNP 315 Philosophy of Mind/Phil 315
• PNP 316 Mind and Morals/Phil 316
• PNP 321 Philosophy of Science/Phil 321G
• Phil 3481 Introduction to Metaphysics
• PNP 349 Descartes to Hume/Phil 349C
• PNP 3581 Conceptual Foundations of Modern Science/Phil 358
• PNP 366/Phil 366 Art and the Mind-Brain
• Phil 390 Philosophical Writing
• Phil 339F Philosophy of the Arts
• PNP 4023 Models of Social Science/Phil 4023
• Phil 403 Mathematical Logic 1
• Phil 404 Mathematical Logic II
• PNP 405 Philosophical Logic/Phil 405
• PNP 4051/Phil 4051 Philosophy of Logic
• PNP 4061/Phil 4061 Topics in Philosophy of Language
• PNP 4065 Advanced Philosophy of Language/Phil 4065
• PNP 4101/Phil 4101 Theories of Perception
• PNP 4141 Advanced Epistemology/Phil 4141
• PNP 4142 Advanced Metaphysics/Phil 4142
• PNP 418 Current Controversies in Cognitive Science/Phil 418
• PNP 419 Philosophy of Psychology/Phil 419
• PNP 4210 Advanced Philosophy of Science I/Phil 4210
• PNP 4212 Philosophy of Neuroscience/Phil 4212
• PNP 4220/Phil 4220 Advanced Philosophy of Science II
• PNP 423/Phil 423 Philosophy of Biological Science
• PNP 426 Theories of Concepts/Phil 426
• PNP 4332 Cognition and Computation/Phil 4332
• PNP 495 PNP Seminar
• PNP 496 PNP Seminar

Psychology
• Psych 300 Introduction to Psychological Statistics
• Psych 301 Experimental Psychology
• PNP 3151 Introduction to Social Psychology/Psych 315
• PNP 3211 Developmental Psychology/Psych 321
• PNP 323 Play and Development/Educ 337
• Psych 326 Introduction to the Psychology of Aging
• PNP 330 Sensation and Perception/Psych 330
• PNP 3401 Biological Psychology/Psych 3401
• PNP 3451 Genes, Environment and Human Behavior/Psych 345
• PNP 3531 Psychology of Personality/Psych 353
• PNP 3541 Abnormal Psychology/Psych 354
• Psych 357 Introduction to Clinical Psychology
• Psych 358 Language Acquisition
• PNP 360 Cognitive Psychology/Psych 360
• PNP 361 Psychology of Learning/Psych 361
• PNP 3661 Psychology of Creativity/Educ 366
• Psych 374 Drugs, Brain and Behavior
• PNP 380 Human Learning and Memory/Psych 380
• Psych 4046 Developmental Neuropsychology
• PNP 408 Psychology of Language/Psych 433
• Psych 4182 Perception, Thought and Action
• PNP 4302 Cognitive Psychology Applied to Education/Psych 4302
• Psych 4361 Psychological Perspectives on the Self
• Psych 4408 Trauma and Memory
• Psych 4413 Advanced Cognitive Neuroscience (WI)
• PNP 4450 Functional Neuroimaging Methods/Psych 4450
• Psych 4591 The Development of Social Cognition
• Psych 462: Psychology of Memory & Cognition
• PNP 4625/ Psych 4625 Autobiographical Memory
• PNP 4651/ Psych 4651 History and Modern Systems of Psychology
• Psych 4745 Genes, Brain and Behavior
• Psych 4765 Biological Basis of the Major Mental Disorders
• PNP 495 PNP Seminar
• PNP 496 PNP Seminar

Neuroscience
• Biol 3058 Physiological Control Systems *(only 2 units)
• Psych 3401 Biological Psychology
• Biol 3421 Introduction to Neuroethology
• Biol 3422 Genes, Brains and Behavior
• PNP 350 Physics of the Brain/Physics 350
• PNP 355 Physics of Vision/Physics 355
• Biol 360 Biophysics Laboratory/Physics 360
• Psych 374 Drugs, Brain and Behavior
• PNP 402 The Physiology and Biophysics of Consciousness *(only 2 units)
• PNP 4030/ Biol 4030 Biological Clocks
• Biol 4031 Biological Clocks (WI)
• PNP 404 Laboratory of Neurophysiology/Biol 404
• Psych 4046 Developmental Neuropsychology
• PNP 4212 Philosophy of Neuroscience/Phil 4212
• Psych 4413 Advanced Cognitive Neuroscience (WI)
• PNP 4450 Functional Neuroimaging Methods/Psych 4450
• PNP 4488 The Cognitive Neuroscience of Film/Psych 488
• Psych 4745 Genes, Brain and Behavior
• BME 4902 Special Topics: Cellular Neurophysiology **(upon approval of subject matter, see PNP office for each semester)
• PNP 495 PNP Seminar
• PNP 496 PNP Seminar

Anthropology
• PNP 3383 Cognition and Culture/Anthro 3383
• Anthro 3386 Language, Culture and Society
• PNP 362 The Biological Basis of Human Behavior/Anthro 362
• PNP 3662 Primate Biology/Anthro 3661
• PNP 406 Primate Ecology and Social Structure/Anthro 406
• PNP 4122/Anthro 4122/Ling 4122 Language and Gender
• PNP 4190 Primate Behavior/Anthro 419
• PNP 4192 Primate Cognition/Anthro 4191
• PNP 495 PNP Seminar
• PNP 496 PNP Seminar

Linguistics
• PNP 301G/ Phil 301G Symbolic Logic
• PNP 306G/ Phil 306G Philosophy of Language
• PNP 309 Syntactic Analysis/Ling 309
• PNP 3111 Introduction to Semantics/Ling 311
• Ling 312 Phonetics
• PNP 313 Phonological Analysis/Ling 313
• PNP 3171 Introduction to Computational Linguistics/Ling 317
• PNP 320 Historical and Comparative Linguistics/Ling 320
• Anthro 3386 Language, Culture and Society
• Ling 339 Introduction to Sociolinguistics
• PNP 358/Ling/Psych 358 Language Acquisition
• AFAS 368 Language and Society in Africa
• PNP 3701 Introduction to Hispanic Linguistics/Ling 3701/Span 370
• PNP 396 Linguistics Seminar/Ling 396
• PNP 4061 Topics in the Philosophy of Language/Phil 4061
• PNP 4065 Advanced Philosophy of Language/Phil 4065
• PNP 433/Ling 408/ Psych 433 Psychology of Language
• PNP 4122 Language and Gender/Anthro 4122/Ling 4122
• Span 413 Linguistics and Language Learning
• PNP 4161/ Span 416 Introduction to Hispanic Linguistics/Ling 4161
• Span 417 Spanish Phonetics, Phonology and Dialectology
• PNP 4315 Culture, Language and the Education of Black Students/Educ 4315/Ling 4315
• Ling 433 Acoustical Phonetics and Speech Perception/Sphr 433
IV. Capstone

The Capstone is required for honors students and first majors; it is recommended for second majors. It consists of one of the following:

- A PNP Honors project (PNP 499, 6 units; requires PNP Honors form to be filled out and approved by director).
- The 2-unit PNP Reading Class (formerly PNP Book Club) plus the PNP Seminar 495 (formerly PNP 395)
- The PNP Reading Class (formerly PNP Book Club) plus 3–6 advanced units of independent study in an affiliated discipline (Psych 500, Anthro 500, etc.). The independent study details are available on the PNP website.

Units from a capstone experience can count toward the depth requirement in either the CN or LCC tracks.

The Minor in Philosophy–Neuroscience–Psychology

Units required: 15

Required courses: Minors are required to complete at least 15 units, of which 9 must be at the 300 level or above.

The minor is composed of a 6-unit introductory sequence (PNP 200 and 201, or MBB 120 and 121), followed by:

- 3 units in Philosophy:
  - PNP 315 Philosophy of Mind/Phil 315
  - or
  - PNP 306GP/Phil 306G Philosophy of Language

- 3 units of Neuroscience:
  - PNP 3411 Principles of the Nervous System/Biol 3411
  - or
  - PNP 3604/ Psych 3604 Cognitive Neuroscience

- 3 units in Psychology:
  - PNP 360 Cognitive Psychology/Psych 360
  - or
  - PNP 408 Psychology of Language/Psych 408

Additional Information

Psych 100B is the prerequisite for all psychology courses at the 300 level and above. Note that no more than 6 units counted toward a minor in PNP may be transferred or earned abroad, and no more than 6 credits may be counted toward another major or minor.

L64 PNP 200 Introduction Cognitive Science

We seek to understand the mind-brain by integrating findings from several of the cognitive sciences, including philosophy, psychology, neuroscience, linguistics, anthropology and artificial intelligence. This course considers multiple perspectives on such topics as mental imagery, concepts, rationality, consciousness, emotion, language, thought, memory, attention and machine intelligence. Prerequisite: completion of at least one of the following courses: Psych 100B, Phil 120F, Phil 125C, Biol 296A, MBB 120A or Ling 170D.

Credit 3 units. A&S : SS A&S : IQ, SSC BU : HUM

L64 PNP 201 Inquiry in the Cognitive Sciences

Understanding the mind-brain involves orchestrating a variety of conceptual tools and modes of inquiry from the cognitive sciences. This course offers a hands-on introduction to a variety of research tactics used in the behavioral and biological sciences and emphasizes the advantages of combining them. For example, neuroimaging can enhance the interpretation of experiments by cognitive psychologists and modeling can be used to simulate and understand the effects of brain lesions. Prerequisite: completion of at least one of the following courses: Psych 100B, Phil 120F, Phil 125C, Biol 296A, MBB 120 or Ling 170D.

Credit 3 units. A&S : NS, QA A&S : IQ, NSM, AN

L64 PNP 3001 Research in the Mind-Brain

An introduction to research for students in the Mind, Brain and Behavior program (formerly known as Hewlett Program). Students work under the supervision of a mentor. Prerequisite: admission to the Mind, Brain and Behavior program, completion of MBB/PNP 122, and permission of the mentor. Credit variable, maximum 3 units.

Same as MBB 300

Credit variable, maximum 3 units. A&S : NS A&S : IQ, NSM

L64 PNP 301 Symbolic Logic

Same as Phil 301G

Credit 3 units. A&S : LA A&S : IQ, NSM, AN BU : HUM FA : SSP

L64 PNP 306 Philosophy of Language

A survey of major philosophical problems concerning meaning, reference and truth as they have been addressed within the
analytic tradition. Readings that represent diverse positions on these focal issues are selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor.

**L64 PNP 309 Syntactic Analysis**
The ability to produce and understand an infinite number of sentences is perhaps the most fascinating aspect of the human language faculty. Syntax is the study of how the brain organizes sentences from smaller phrases and words. This course explores syntactic analysis from several perspectives within generative linguistics, focusing primarily on the Government and Binding framework but also introducing Minimalist and Optimality Theoretic approaches. Topics include phrase structure, transformations, case theory, thematic roles and anaphora. Assignments help students learn to construct and compare analyses of syntactic problems in English and other languages. Prerequisite: Ling 170D or permission of instructor.

Credit 3 units.  A&S : LA  A&S : IQ, HUM  BU : HUM  FA : SSP

**L64 PNP 3111 Introduction to Semantics**
Same as Ling 311
Credit 3 units.  A&S : LA  A&S : IQ, SSC

**L64 PNP 313 Phonological Analysis**
Same as Ling 313
Credit 3 units.  A&S : LA  A&S : IQ, SSC  BU : BA

**L64 PNP 315 Philosophy of Mind**
Same as Phil 315
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : HUM  FA : SSP

**L64 PNP 3151 Introduction to Social Psychology**
Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory, and political psychology, among other issues. Prerequisite: Psych 100B.

Same as Psych 315
Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA  FA : SSP

**L64 PNP 316 Mind and Morals**
Same as Phil 316
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : ETH  FA : SSP

**L64 PNP 3171 Introduction to Computational Linguistics**
Same as Ling 317
Credit 3 units.  A&S : LA  A&S : IQ, SSC  EN : S

**L64 PNP 320 Historical and Comparative Linguistics**
Same as Ling 320
Credit 3 units.  A&S : LA  A&S : IQ, SSC  FA : Lit

**L64 PNP 321 Philosophy of Science**
Same as Phil 321G
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : HUM  FA : SSP

**L64 PNP 3211 Developmental Psychology**
This course concentrates on the cognitive and social development of the person from conception to adolescence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior. PREREQ: Psych 100B.

Same as Psych 321
Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA  FA : SSP

**L64 PNP 323 Play and Development**
Same as Educ 337
Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA

**L64 PNP 330 Sensation and Perception**
Same as Psych 330
Credit 3 units.  A&S : NS  A&S : IQ, NSM  BU : BA, SCI  FA : NSM

**L64 PNP 3383 Cognition and Culture**
Same as Anthro 3383
Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA  FA : SSP

**L64 PNP 3401 Biological Psychology**
Same as Psych 3401
Credit 3 units.  A&S : NS  A&S : IQ, NSM  BU : SCI  FA : NSM

**L64 PNP 3411 Principles of the Nervous System**
Same as Biol 3411

Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA  FA : SSP

<td>Primate Biology</td>
<td>This course takes a multifaceted introductory approach to the primates, the closest relatives of human beings, by investigating anatomy, growth and development, reproduction, behavioral adaptations, ecology, geographic distribution, taxonomy and evolution. Emphasis is placed not only on the apes and monkeys, but also on the lesser-known lemurs, lorises, bushbabies, tarsiers and many others. The importance of primate biology to the discipline of anthropology is discussed. Intended for students who have already taken Anthro 150A, and recommended for students who wish to take the more advanced 400-level courses on primates. Prerequisite: Anthro 150A or permission of instructor. Same as Anthro 3661</td>

<td>L64 PNP 3701</td>
<td>Introduction to Hispanic Linguistics</td>
<td>An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages.</td>

L64 PNP 402 The Physiology and Biophysics of Consciousness  
This course explores the questions surrounding the search to understand the biophysical substrate of consciousness. Some areas explored: (1) Can consciousness be addressed like any other biological property in the sense that it has evolved by natural selection and that some elements of it are present in simple model systems, such as the fruit fly? Can insight be gained studying simple model systems? (2) Where in the brain is consciousness? What is the pattern of neurological events that occurs during consciousness? Is brain activity generating consciousness localized or distributed? Does it involve interacting brain regions? Does brain activity generating consciousness migrate to different brain regions? (3) How does the dynamic core hypothesis of Edelman relate to these questions? What can functional brain imaging add to these questions? Are Gamma waves involved in higher mental activity, and do they promote synchronized firing of neurons from different brain areas? How does this relate to the binding problem? (4) How does the brain’s ability to function as a computer relate to consciousness? In many respects the brain functions as a computer using electrical signals called Action Potentials. Action potentials in neuronal networks function in an analogous was as DC electrical impulses function in computer circuits. What is the output of computation in an electrical device? What are the theoretical limitations regarding what computation can achieve and ask whether electrical activity in the brain also has a fundamentally different purpose in addition to computation. (5) Is our knowledge of the physical world too primitive and incomplete to understand consciousness? The brain is an electronic device and consciousness clearly depends on its electrical activity. Yet, electrical forces are poorly understood, both in the context of classical physics and quantum physics. Will understanding consciousness have to wait for a unified theory that more accurately describes electrical forces? Taught in the Medical School: McDonnell Science Building 983.  
Prerequisites: Biol 3411 or equivalent; college-level physics, some knowledge of computers.  
Credit 2 units. A&S : NS A&S : IQ, NSM

L64 PNP 408 Psychology of Language  
This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B.  
Same as Psych 433
### L64 PNP 4141 Advanced Epistemology

### L64 PNP 4142 Advanced Metaphysics
Same as Phil 4142
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

### L64 PNP 418 Current Controversies in Cognitive Science
An advanced survey of current debates in cognitive science with an emphasis on the philosophical issues raised by these debates. Topics may include: evolutionary psychology; innateness and neural plasticity; perception and action; consciousness; connectionism; robotics; embodied cognition; moral reason; emergence and artificial life; concepts and content; animal cognition. Prerequisites: one course in Philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S : TH A&S : IQ, HUM

### L64 PNP 419 Philosophy of Psychology
Same as Phil 419
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

### L64 PNP 426 Theories of Concepts
Same as Phil 426
Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

### L64 PNP 4302 Cognitive Psychology Applied to Education
This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning and comprehension with special focus on areas, theory and research that have potential application to education. Thus, the course provides selective coverage of theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes is explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. Prerequisites: junior/senior status, 9 units in Psychology and Psych 100B OR junior/senior status, 9 units in education and Psych 100B. Same as Psych 4302
Credit 3 units. A&S : SS A&S : IQ, SSC

### L64 PNP 4315 Culture, Language and the Education of Black Students
Same as Educ 4315
Credit 3 units. A&S : SS, CD A&S : IQ, SSC, LCD FA : SSP

### L64 PNP 4332 Cognition and Computation
This course introduces students to some of the key frameworks for thinking about the mind in computational terms. We look at some basic topics in the theory of computation, in addition to considering philosophical issues raised by computational models of cognitive processes. This course is required for graduate students in the PNP Ph.D. program. Prerequisites: at least two 400-level PNP courses cross-listed in Philosophy.
Credit 3 units. A&S : SS A&S : IQ, SSC

### L64 PNP 4450 Functional Neuroimaging Methods
Same as Psych 4450
Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

### L64 PNP 4488 The Cognitive Neuroscience of Film
To understand complex events in real life depends on perception, action and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar uses results from psychology and neuroscience to try to better understand the experience of a movie viewer, and uses theory and practice to explore psychological hypotheses about perception. Prerequisite: Psych 360 or 3604, or Psych 4604, or graduate standing in psychology. Same as Psych 488
Credit 3 units. A&S : NS A&S : IQ, NSM
L64 PNP 466 Second Language Acquisition
Same as Ling 466
Credit 3 units. A&S : LA A&S : IQ, HUM

L64 PNP 467 Grammar and Vocabulary Acquisition
Same as Span 467
Credit 3 units. A&S : LA A&S : IQ, LCD BU : BA

L64 PNP 4691 Second Language Reading and Writing: Theory, Research and Practice
Same as Span 4691
Credit 3 units. A&S : SS A&S : IQ, SSC EN : S

L64 PNP 495 PNP Seminar
Subject varies per semester. Not always offered as writing-intensive, refer to individual semester listing. Prerequisites: A 300-level Philosophy course (Phil/PNP 315 is recommended) and PNP major standing or approval of Instructor.
Credit 3 units. A&S : SS A&S : IQ, SSC

L64 PNP 495W PNP Seminar: Writing-Intensive
Subject varies per semester. Fulfills Writing-Intensive (WI) requirement. Prerequisites: A 300-level Philosophy course (Phil/ PNP 315 is recommended) and PNP major standing or approval of instructor.
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI

L64 PNP 496 PNP Seminar
Subject varies each semester. Prerequisites: A 300-level Philosophy course (Phil/PNP 315 is recommended) and PNP major standing or approval of instructor.
Credit 3 units. A&S : SS A&S : IQ, SSC

L64 PNP 499 Study for Honors
Prerequisites: senior standing, a grade point average of 3.50 overall and permission of the department.
Credit 3 units. A&S : SS

Physical Education
Undergraduate students may take both lecture-laboratory and performance courses through the Department of Athletics. A total of 12 performance units may be included in the 120 units required for graduation. All courses are offered only on a credit/no credit basis.

Contact Person: Paula Hardy-Mumm
Phone: 314/935-5185

E-mail: paulah@wustl.edu
Departmental website: http://bearsports.wustl.edu/AthleticsDept/

Director of Athletics and Coordinator of Physical Education
John Schael
MEd, Miami University

Students may take both lecture-laboratory and performance courses through the Department of Athletics; however there is no major in this area.

Students may take both lecture-laboratory and performance courses through the Department of Athletics; however there is no minor in this area.

L28 P.E. 115 Topics in Physical Education: Beginning Weight Training
Beginning Weight Training. Major emphasis is on strength development.
Credit 1 unit.

L28 P.E. 116 Topics in Physical Education: Beginning Racquetball
Beginning Racquetball.
Credit 1 unit.

L28 P.E. 120 Topics in Physical Education: Varsity Sports
Varsity Sports. Prerequisite: permission of instructor.
Credit 1 unit.

L28 P.E. 1201 Fundamentals of Rowing for Fitness
This course focuses on the effective use of Concept II Rowing as a tool to learn the rowing stroke as well as to maintain aerobic fitness and develop strength. Emphasis is placed on the correct use of technique to decrease risk of injury and on varying duration and intensity of work on the machine to develop different energy systems; and using these new skills in developing lifetime fitness. Instruction includes the use of video tape and video monitoring. Athletic shoes and clothes that are not baggy are needed to participate. There is a minimum amount of running of light low-impact aerobic activity required as a warm-up.
Credit 1 unit.

L28 P.E. 121 Topics in Physical Education: Varsity Sports
Varsity Sports. Prerequisite: permission of instructor.
Credit 1 unit.
L28 P.E. 132 Topics in Physical Education: High-Intensity Conditioning  
Credit 1 unit.

L28 P.E. 135 Step Aerobics  
Step Aerobics. A low-impact aerobic class in which choreography and equipment are combined to meet the needs of participants at all levels of fitness.  
Credit 1 unit.

L28 P.E. 136 Fitness and Conditioning  
Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time.  
Credit 1 unit.

L28 P.E. 137 Spinnin’  
Music, stationary bicycles and an instructor who cues you to ride through hills, valleys and other terrain, changing resistance and pace to simulate different types of riding. All levels welcome — you can tailor the ride to fit your personal fitness goals and needs. A water bottle and towel are required for this class.  
Credit 1 unit.

L28 P.E. 139 Topics in Physical Education: Advanced Tennis  
Advanced Tennis.  
Credit 1 unit.

L28 P.E. 140 Topics in Physical Education: Beginning Tennis  
Beginning Tennis.  
Credit 1 unit.

L28 P.E. 143 Intermediate Tennis  
Intermediate Tennis.  
Credit 1 unit.

L28 P.E. 148 Topics in Physical Education: Individual Physical Education  
Individual physical education. Prerequisite: medical referral.  
Credit 1 unit.

L28 P.E. 210 Topics in Physical Education: Beginning Racquetball  
Credit 1 unit.

L28 P.E. 212 Topics in Physical Education: Intermediate and Advanced Basketball  
Intermediate and advanced basketball. Designed to develop an appreciation for basketball through team competition and activity. Individual instruction and skill development also are available.  
Credit 1 unit.

L28 P.E. 214 Topics in Physical Education: Advanced Weight Training  
Major emphasis on muscular strength and flexibility through free weight-resistance exercise. Pre- and post-assessment of physical fitness levels may be established. Prerequisite: PE 215 Beginning Weight Training.  
Credit 1 unit.

L28 P.E. 215 Weight Training  
Beginning weight training. Major emphasis on strength development.  
Credit 1 unit.

L28 P.E. 216 Soccer  
Soccer. Designed to develop an appreciation for soccer through the development of soccer skills, concepts of group play and team competition. All students who register must check in with the departmental office during the first two weeks of the semester.  
Credit 1 unit.

L28 P.E. 220 Topics in Physical Education: Varsity Sports  
Varsity sports. Prerequisite: permission of the department.  
Credit 1 unit.

L28 P.E. 2201 Fundamentals of Rowing for Fitness  
This course focuses on the effective use of Concept II Rowing effective as a tool to learn the rowing stroke as well as to maintain aerobic fitness and develop strength. Emphasis is placed on the correct use of technique to decrease risk of injury; on varying duration and intensity of work on the machine to develop different energy systems; and on using these new skills in developing lifetime fitness. Instruction includes the use of video tape and video monitoring. Athletic shoes and clothes that are not baggy are needed to participate. There is a minimum amount of running or light low-impact aerobic activity required as a warm-up.  
Credit 1 unit.

L28 P.E. 221 Topics in Physical Education: Varsity Sports  
Varsity sports. Prerequisite: permission of the department.  
Credit 1 unit.
L28 P.E. 234 Topics in Physical Education: Lifeguard Training
Lifeguard training. The course provides skill instruction and knowledge needed to prevent and respond to aquatic emergencies in a pool setting. Successful completion of requirements results in certification in American Red Cross Lifeguard Training for swimming pools, CPR and First Aid. Prerequisite: swimming test given during the first week of class. Credit 1 unit.

L28 P.E. 235 Topics in Physical Education: Step Aerobics
Step Aerobics. Section 01: Step Plus: Primarily designed around step aerobics with occasional workouts using other fitness techniques such as box aerobics, interval training. Section 02: Combo Training: Combination of many fitness techniques, such as step aerobics, box aerobics, low-impact. Credit 1 unit.

L28 P.E. 236 Topics in Physical Education: Fitness and Conditioning
Fitness and conditioning. Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time. Students required to attend an orientation session. Step Plus: primarily designed around step aerobics with occasional workouts using other fitness techniques, such as box aerobics, interval training. Combo Training: combination of many fitness techniques, such as step aerobics, box aerobics, low-impact. Prerequisite: PE 208. Credit 1 unit.

L28 P.E. 237 Spinnin'
Credit 1 unit.

L28 P.E. 239 Topics in Physical Education
Credit 1 unit.

L28 P.E. 240 Topics in Physical Education: Intermediate Tennis
Intermediate Tennis. Note: Eight- or nine-week course. All students who register must check in with the departmental office during the first two weeks of the semester. Credit 1 unit.

L28 P.E. 248 Topics in Physical Education: Individual Physical Education
Individual physical education. Prerequisite: medical referral needed. Credit 1 unit.

L28 P.E. 255 Topics in Physical Education: Practicum in Sports Leadership
Practicum in sports leadership. Participation in formal leaderships tasks under the direction of the Washington University Athletic Department personnel. Selection of task and scope of work is determined before enrollment by conference with instructor. Prerequisite: permission of the department. Credit 1 unit.

L28 P.E. 258 Spinnin'
Music, stationary bicycles and an instructor who cues you to ride through hills, valleys and other terrain, changing resistance and pace to simulate different types of riding. All levels welcome — you can tailor the ride to fit your personal fitness goals and needs. A water bottle and towel are required. Credit 1 unit.

L28 P.E. 291 Fundamentals of Athletic Training
Study of the duties of the athletic trainer, in relation to physical education classes, competitive sports and recreation, including study and practice of first-aid care and prevention of injuries. Same as Educ 291. Credit variable, maximum 3 units. Credit variable, maximum 3 units.

Physics
Physics is the discipline that deals with the most fundamental aspects of our universe, such as the properties of atoms, nuclei and elementary particles; the nature of the forces between them; and the collective behavior of atoms in solids, liquids and gases. It deals with the entire universe, from its birth to its ultimate fate. At the same time, physics provides the tools that help us to understand extremely complex everyday things, like the behavior of sand piles, the strength of materials, or processes in the brain. Physics developed when people realized that nature operates according to simple mathematical rules; physics seeks to discover and understand those rules. Its early successes in comprehending motion, thermodynamics, electricity and magnetism provided a foundation upon which other physical sciences have grown.

For students planning a career in science and technology or planning to pursue graduate studies in physics, astronomy, earth sciences, environmental sciences, medical physics, meteorology or oceanography, a major in physics provides a solid foundation. The program is sufficiently flexible to allow students to combine a physics major with a second major in chemistry, mathematics or engineering, or with premedical studies, or with other disciplines in the humanities and social sciences. In addition to the fundamentals of physics, the program is designed to give students a broad range of skills in laboratory techniques, critical thinking, computer use and teamwork, which will serve them well in their chosen careers. In consultation with
a faculty adviser, students may design a program of study to meet individual goals and interests. Physics majors are strongly encouraged to participate in physics research projects directed by faculty members.

**Introductory Physics:** Physics 197–198 is a calculus-based introduction to physics intended for adequately prepared students interested in majoring in science or engineering or undertaking pre-medical studies. Physics 197 and 198 are more interactive, active-learning courses than traditional general physics courses. Calculus II is a co-requisite for Physics 197. An alternative and more traditional calculus-based sequence, Physics 117A–118A, also may be taken by students with these interests. For Physics 117A, Calculus I is a co-requisite. Physics 117A also fulfills the requirements of the College of Architecture.

The department offers several other courses of general interest to the nonscience student. In most cases, these have no prerequisite.

**Chair**

Mark Alford  
PhD, Harvard University

**Endowed Professors**

Carl M. Bender  
Wilfred R. and Ann Lee Konneker Professor of Physics  
PhD, Harvard University

John W. Clark  
Wayman Crow Professor of Physics in Arts & Sciences  
PhD, Washington University

Ramanath Cowsik  
James S. McDonnell Professor of Space Sciences  
PhD, University of Bombay

Kenneth F. Kelton  
Arthur Holly Compton Professor of Physics  
PhD, Harvard University

James G. Miller  
Albert Gordon Hill Professor of Physics  
PhD, Washington University

Stuart A. Solin  
Charles M. Hohenberg Professor of Experimental Physics  
PhD, Purdue University

**Professors**

Mark Alford  
PhD, Harvard University

Claude W. Bernard  
PhD, Harvard University

Thomas Bernatowicz  
PhD, Washington University

James H. Buckley  
PhD, University of Chicago

Anders E. Carlsson  
PhD, Harvard University

Mark S. Conradi  
PhD, Washington University

Willem H. Dickhoff  
PhD, Free University, Amsterdam

Charles M. Hohenberg  
PhD, University of California–Berkeley

Martin H. Israel  
PhD, California Institute of Technology

Jonathan I. Katz  
PhD, Cornell University

Henric Krawczynski  
PhD, University of Hamburg

Michael C. Ogilvie  
PhD, Brown University

James S. Schilling  
PhD, University of Wisconsin–Madison

Wai-Mo Suen  
PhD, California Institute of Technology

**Joint Professors**

Shankar M. L. Sastry  
PhD, University of Toronto  
(Mechanical Engineering)

Lee G. Sobotka  
PhD, University of California–Berkeley  
(Chemistry)

**Associate Professors**

Zohar Nussinov  
PhD

Alexander Seidel  
PhD, Massachusetts Institute of Technology

Ralf Wessel  
PhD, University of Cambridge

**Assistant Professors**

Francesc Ferrer  
PhD, Universitat Autonoma de Barcelona

Erik Henriksen  
PhD, Columbia University

Yan-Mei Wang
The Major in Physics

Total units required: 42-49

Prerequisites: As prerequisites for the major, students should complete Physics I and II (Physics 197–198) or General Physics I and II (Physics 117A–118A) during the first year. Majors should consider taking Physics 217, 316 or 321, 318, and 411 in the second year.

Required Physics courses: Students are required to complete a minimum program of 21 units of advanced courses (300 level or higher) in Physics. These 21 units must include:

- Physics 411 Mechanics 3
- Physics 421 Electricity and Magnetism 3
- Two upper-level laboratory courses. Choose from:
  - Physics 316 Optics and Wave Physics Laboratory 3
  - Physics 321 Electronics Laboratory 3
  - Physics 322 Physical Measurement Laboratory 3
  - Physics 360 Biophysics Laboratory 3
  - Physics 435 Nuclear and Radiochemistry Lab 3
  - Physics 451 Advanced Laboratory I 3
  - Physics 452 Advanced Laboratory II 3
- Students not taking Physics 217 must take either Physics 318 Introduction to Quantum Physics II or Physics 471 Quantum Mechanics.
- The remaining physics courses must be at the 300 level or above, excluding Physics 303, Physics 304, Physics 341, Physics 342, Physics 441, Physics 442, Physics 499 and Physics 500.

Recommended Physics courses: In addition to the above requirements, students who are preparing for graduate study in physics or astronomy should consider taking:

- Physics 422 Electricity and Magnetism II 3
- Physics 463 Statistical Mechanics and Thermodynamics 3
- Physics 471 Quantum Mechanics 3

as well as some of

- Physics 472 Solid State Physics 3
- Physics 474 Introduction to Particle Physics 3
- Physics 476 Astrophysics 3

and additional lab courses

Students also should consider taking Physics/Math 501–502 and additional mathematics courses.
Students who are preparing for employment after the A.B. degree should take additional laboratory courses from the following choices:

Physics 316  Optics and Wave Physics Laboratory  3
Physics 321  Electronics Laboratory  3
Physics 322  Physical Measurement Laboratory  3
Physics 360  Biophysics Laboratory  3
Physics 435  Nuclear and Radiochemistry Lab  3
Physics 451  Advanced Laboratory I  3
Physics 452  Advanced Laboratory II  3

Other relevant courses may include:

Physics 314  Physics of the Heart  3
Physics 350  Physics of the Brain  3
Physics 351  Introduction to Biomedical Physics  3
Physics 352  Physics of Biomolecules  3
Physics 355  Physics of Vision  3
Physics 422  Electricity and Magnetism II  3
Physics 463  Statistical Mechanics and Thermodynamics  3
Physics 471  Quantum Mechanics  3
Physics 472  Solid State Physics  3

Students also might consider:

Chem 435  Nuclear and Radiochemistry Lab  3
Chem 436  Radioactivity and Its Applications  3

Students who are preparing for medical school should give special consideration to:

Physics 314  Physics of the Heart  3
Physics 316  Optics and Wave Physics Laboratory  3
Physics 321  Electronics Laboratory  3
Physics 344  Energy and Environmental Physics  3
or Physics 444  Energy and Environmental Physics  3
Physics 350  Physics of the Brain  3
Physics 351  Introduction to Biomedical Physics  3
Physics 352  Physics of Biomolecules  3
Physics 355  Physics of Vision  3
Physics 360  Biophysics Laboratory  3

Math courses required for the Physics major:

Math 131  Calculus I  3
Math 132  Calculus II  3
Math 233  Calculus III  3
Math 217  Differential Equations (We recommend that Math 217 precede Physics 411)  3

Total units  12

Math courses recommended for the Physics major:

Math 308  Mathematics for the Physical Sciences (We recommend that this course precede Physics 421.)
Math 309  Matrix Algebra (We recommend that Math 309 precede Physics 471.)
Physics/Math 501 and 502 also are recommended.

Science-breadth requirement: Majors must select three of the following courses to satisfy the science-breadth requirement.
One of the three courses must be Chem 111A, Chem 112A, Chem 401 or Chem 402.

Chem 111A  General Chemistry I  3
Chem 112A  General Chemistry II  3
Chem 151  General Chemistry Laboratory I  2
Chem 152  General Chemistry Laboratory II  2
Chem 401  Physical Chemistry I  3
Chem 402  Physical Chemistry II  3
Chem 445  Instrumental Methods: Physical Chemistry  3
CSE 126  Introduction to Computer Programming  3
CSE 131  Computer Science I  3
CSE 132  Computer Science II  3
CSE 200  Engineering and Scientific Computing  3

Additional Information

Senior Honors: Students are encouraged to work toward honors in physics. To qualify, students must meet the academic requirements of the college and successfully complete a suitable project under the supervision of a faculty member in the department. The project, whether experimental or theoretical, should demonstrate the student's capacity for independent work. Honors candidates must apply to the Undergraduate Studies Committee no later than the beginning of the senior year. The application should include a description of the proposed project, co-signed by the supervising professor. A written report of the completed work must be submitted to the committee by a deadline in March. By enrolling in Physics 499, students may earn up to 6 units of credit for the honors project.

The Minor in Physics

Units required: 17

Required courses:

Physics 117A  General Physics I  4
or Physics 197  Physics I  3
Physics 118A  General Physics II  4
or Physics 198  Physics II  3
Physics 217  Introduction to Quantum Physics  3
Physics 318  Introduction to Quantum Physics II  3

Total units  14

Elective courses:
At least one course at the 300 level or above (with the exception of Physics 303, Physics 304, Physics 341, Physics 342, Physics 441, Physics Physics 442, Physics 499 and Physics 500) with a grade of C– or better.

Additional Information
Corequisite for taking Physics 117A General Physics I is enrollment in or placement out of Math 131 Calculus I. Math 132 Calculus II is a corequisite for Physics 197 Physics I. Calculus II also is necessary to provide adequate preparation for Physics 217/318 Quantum Physics I, II. Note that for some advanced courses, Math 233 Calculus III and Math 217 Differential Equations are prerequisites.

Additional Information
This is a minor for students interested in the discussion and application of methods and techniques from physics to topics in the area of biology and medicine. The program may be of interest to the premedicne student or the research-oriented science major. New courses are being developed that also will satisfy these requirements.

L31 Physics 107A How Things Work
Why is the sky blue? How can a baseball curve? Natural and manmade phenomena can be understood by simple and basic ideas of physics. This course illustrates these underlying principles by using examples from everyday life as well as from physics and other fields. Because the phenomena are many and the principles are few we find that apparently very different events sometimes have similar explanations; we come to understand how the stretching of a rubber band is related to ice skating, and how the blue of the sky is related to the red of the sunset and the white color of milk. No prerequisites.

Credit 3 units.  A&S : NS, QA  A&S : IQ, NSM, AN  BU : SCI  FA : NSM

L31 Physics 110A Awesome Ideas in Physics
The ideas of physics that have revolutionized our perception of the world and reality. Emphasis is on understanding a selected set of crucial concepts without losing track of the numbers. Using the writings of Hawking, Feynman and Lightman, a study is made of such topics as energy and conservation laws, the relativity of time, the wave-particle duality, the modern picture of matter at the smallest and the largest distance scales, and the history of the universe. Must be taken for a letter grade. No prerequisites.

Credit 3 units.  A&S : NS, QA  A&S : IQ, NSM, AN  BU : SCI  FA : NSM

L31 Physics 111 Variational Calculus — A Mathematical Blade for Cutting-Edge Science
Variational calculus, a fancy generalization of ordinary calculus, is the study of functionals. In variational calculus one tries to find the special function that extremizes a functional. The applications of variational calculus are ubiquitous in modern science. Variational calculus is the mathematical setting for describing the physical world. In all areas of classical and quantum physics, the physical world is expressed in terms of functions that extremize specific functionals. In this seminar variational calculus is explained at an elementary level and many of its applications in science are examined. A good understanding of elementary first-year calculus is required to take this seminar.

Credit 3 units.  A&S : NS, QA

L31 Physics 117A General Physics I
Calculus-based introduction to the concepts, laws and structure of physics. Topics include kinematics, Newton’s laws, energy, linear momentum, angular momentum, the conservation laws, gravitational force, harmonic motion, wave motion and interference, sound and special relativity. Prerequisite: previous
or concurrent enrollment in Math 131 Calculus I or permission of instructor. Concurrent registration in a Physics 117 lab section is required. Credit may not be obtained for both Physics 117A and Physics 197.
Credit 4 units. A&S : NS, QA A&S : IQ, NSM, AN BU : SCI FA : NSM

L31 Physics 118A General Physics II
Continuation of Physics 117. Calculus-based introduction to concepts, laws and structure of physics. Topics include electromagnetic forces and fields, direct current circuits, capacitance and inductance, electromagnetic radiation, light, geometrical and physical optics, interference and diffraction, early quantum theory, and nuclear physics. Prerequisite: Physics 117A, Physics 197 or permission of instructor. Concurrent registration in a Physics 118 lab section is required. Previous or concurrent enrollment in Calculus II Math 132 is recommended. Credit may not be obtained for both Physics 118 and Physics 198.
Credit 4 units. A&S : NS, QA A&S : IQ, NSM, AN BU : SCI FA : NSM

L31 Physics 125A Solar System Astronomy
Designed for the nonscience major, this course deals with the planets, their moons and rings, comets, meteorites and interplanetary dust particles. In order to understand both classical astronomy and the results obtained from modern telescopes and the space program, basic scientific ideas (including optics and the laws of motion) are reviewed first. There also is some discussion of astronomical history to show how we have arrived at our present ideas of the structure and evolution of the solar system. Prerequisites: high school algebra and trigonometry or concurrent enrollment in Math 131. Credit variable, maximum 3 units.
Credit 3 units. A&S : NS, QA A&S : IQ, NSM, AN BU : SCI FA : NSM

L31 Physics 126A Stars, Galaxies and Cosmology
Intended as a general survey for the nonscience major. Topics include the structure and evolution of stars, such as red giants, white dwarfs, neutron stars, pulsars and black holes; galaxies and quasars; cosmology and the Big Bang theory. Prerequisites: high school algebra and trigonometry, or concurrent enrollment in Math 131.
Credit 3 units. A&S : NS, QA A&S : IQ, NSM, AN BU : SCI FA : NSM

L31 Physics 141 Selected Topics in Physics I
Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair. Credit variable, maximum 3 units.
Credit variable, maximum 3 units. A&S : NS A&S : IQ, NSM BU : SCI FA : NSM

L31 Physics 142 Selected Topics in Physics I
Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor’s consent to undertake direction of the course from a faculty member and finally secure approval of the department chair. Credit variable, maximum 3 units.
Credit variable, maximum 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L31 Physics 171A Physics and Society
Credit 3 units. A&S : NS, QA A&S : IQ, NSM, AN BU : SCI FA : NSM

L31 Physics 197 Physics I
An advanced, calculus-based introduction to central concepts in classical and modern physics for students who desire to major in physics or another physical science or who have a special interest in physics. The course is structured around three themes that are treated in depth: conservation laws, Newtonian physics and special relativity. A daily regimen of homework and reading as well as active class participation are integral parts of the course. Corequisite: Math 132 Calculus II. Concurrent registration in a Physics 197 lab section is required. Credit may not be obtained for both Physics 117A and Physics 197.
Credit 4 units. A&S : NS, QA A&S : IQ, NSM, AN BU : SCI

L31 Physics 198 Physics II
Continuation of Physics 197. An advanced, calculus-based introduction to central concepts in physics for students who desire to major in physics or another physical science, or who have a special interest in physics. The course is structured around three themes that are treated in depth: electricity and magnetism, quantum physics, and statistical and thermal physics. A daily regimen of homework and reading as well as active class participation are integral parts of the course. Prerequisites: Physics 197 and Math 132 Calculus II. Students who have not taken Physics 197 may not register for Physics
L31 Physics 216 Introduction to Relativity: The Special Theory

L31 Physics 217 Introduction to Quantum Physics
Theoretical and experimental basis for quantum mechanics, following the historical development of 20th-century physics. Failure of classical physics; the Bohr theory of the atom; the Heisenberg uncertainty principle; the Schrödinger equation; atomic and molecular structure. Prerequisites: Physics 117A and 118A or Physics 197 and 198. Credit 3 units. A&S : NS A&S : IQ, NSM AN BU : SCI FA : NSM

L31 Physics 219 Energy and the Environment
Examination of the topic of energy from many human-relevant perspectives. Humans use an enormous amount of energy, at the rate of 18 terawatts. Where does this energy come from? How long will it last? What are the consequences? Examination of energy resources and consumption from scientific, social, economic and political viewpoints. Relationship of energy to concepts such as heat, work and power. Energy use by society. Energy sources, pros and cons of use, availability now and in the future. Types, abundance, advantages, challenges of renewable energy sources. Prerequisite: one year of high-school physics or chemistry. Same as EPSc 219 Credit 3 units. A&S : NS A&S : IQ, NSM AN BU : SCI FA : NSM

L31 Physics 241 Select Topics in Physics II
Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair. Credit variable, maximum 3 units.

L31 Physics 242 Selected Topics in Physics II
Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor’s consent to undertake direction of the course from a faculty member and finally secure approval of the department chair. Credit variable, maximum 3 units.

L31 Physics 312 Introduction to Astrophysics
Introduction to modern astronomy and astrophysics: stellar structure and evolution, nucleosynthesis, galactic structure, cosmology. Prerequisite: Physics 117A and 118A or Physics 197 and 198 or permission of instructor. Credit 3 units. A&S : NS A&S : IQ, NSM BU : SCI FA : NSM

L31 Physics 314 Physics of the Heart

L31 Physics 316 Optics and Wave Physics Laboratory
L31 Physics 318 Introduction to Quantum Physics II
Application of elementary quantum principles to atomic and molecular physics, solid-state physics, and nuclear and particle physics. Prerequisite: Physics 217.
Credit 3 units. A&S : NS A&S : IQ, NSM AN BU : SCI FA : NSM

L31 Physics 321 Electronics Laboratory
Elements of linear and nonlinear circuits, amplifiers, feedback, with applications in experimental physics. Prerequisite: Physics 118A, Physics 198 or permission of instructor. Two three-hour laboratories and two one-hour lectures a week.
Credit 3 units. A&S : NS A&S : IQ, NSM AN BU : SCI EN : DU, SU, TU FA : NSM

L31 Physics 322 Physical Measurement Laboratory
A variety of classical and modern experiments in physics, including five experiments in nuclear radiation. Use of computers in experiment control, data acquisition and data analysis. Development of skills in writing lab notebooks and formal reports and giving short oral presentations on experiments. Two laboratory periods each week. Prerequisites: Physics 217 or permission of instructor; junior or senior standing.
Credit 3 units. A&S : NS, WI A&S : IQ, NSM, AN, WI EN : TU FA : NSM

L31 Physics 331 Selected Topics in Physics II
Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair. Credit variable, maximum 3 units.
Credit variable, maximum 3 units. A&S : NS A&S : IQ, NSM BU : SCI FA : NSM

L31 Physics 341 Selected Topics in Physics III
Topics of special interest (e.g., holography, relativity, nuclear power, computer application in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor’s consent to undertake direction of the course from a faculty member and finally secure approval of the department chair. Credit variable, maximum 3 units.
Credit variable, maximum 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L31 Physics 342 Selected Topics in Physics III
Topics of special interest (e.g., holography, relativity, nuclear power, computer application in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor’s consent to undertake direction of the course from a faculty member and finally secure approval of the department chair. Credit variable, maximum 3 units.
Credit variable, maximum 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L31 Physics 344 Energy and Environmental Physics
This intermediate-level course applies basic physics principles to this increasingly important area. It is designed for all science and engineering majors with an interest in energy and environmental issues. Topics covered include population trends, fossil fuel use, renewable energy sources, energy storage strategies and climate change. Particular emphasis is given to the use of the fundamental laws of physics, such as energy conservation, as well as more general concepts such as local and global stability, chaotic behavior, probability and risk. The aim of the course is the development of analytical skills and familiarity with important concepts, in order to enable an independent and informed view of environmental problems and possible solutions. A one-year introductory physics class on the level of Physics 117–118 or 197–198 is required. This course also may be taken as Physics 444, which requires an additional independent project.
Credit 3 units. A&S : NS A&S : IQ, NSM, AN

L31 Physics 350 Physics of the Brain
Concepts and techniques of physics are applied to study the functioning of neurons and neuronal circuits in the brain. Neurons and neural systems are modeled at two levels: (1) at the physical level, in terms of the electrical and chemical signals that are generated and transmitted, and (2) at the information-processing level, in terms of the computational tasks performed. Specific topics include: neuronal electrophysiology, neural codes, neural plasticity, sensory processing, neural network architectures and learning algorithms, and neural networks as dynamical and statistical systems. Course grade is based primarily on an individualized term project. Prerequisites: Physics 117A–118A, Physics 197–198, or permission of the instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM BU : SCI EN : SU, TU FA : NSM

L31 Physics 351 Introduction to Biomedical Physics
Principles and application of key physical methods used in the diagnosis and treatment of diseases, and in biomedical research. Topics include interaction of radiation with living systems; fundamentals of optical and electron microscopy; imaging via X-rays, magnetic resonance and ultrasound; and electrical properties of organs and cells. Prerequisite: Physics 117A–118A or Physics 197–198.
Credit 3 units. A&S : NS BU : SCI EN : TU FA : NSM

L31 Physics 352 Physics of Biomolecules
This course emphasizes the application of physical laws and concepts in understanding biomolecules and their interactions, and in developing tools to investigate their biological properties and functionalities. Topics include (1) a general introduction to biomolecules and cells, (2) physics of biopolymers as modeled by stochastic analyses, (3) transport processes in biological systems including diffusion, reaction kinetics and “life at low Reynolds number;” and (4) the physics of fluorescence and its
contemporary applications to dynamics of biomolecules, such as optical tweezers. Prerequisite: Physics 117–118 or Physics 197–198. Some familiarity with thermodynamics; Chem 111A–112A recommended.

Credit 3 units. A&S : NS A&S : IQ, NSM, AN

L31 Physics 355 Physics of Vision
How do the eyes capture an image and convert it to neural messages that ultimately result in visual experience? This lecture and demonstration course covers the physics of how we see. The course is addressed to physics, premedical and life-sciences students with an interest in biophysics. Topics include physical properties of light, evolution of the eyes, image formation in the eye, image sampling with an array of photoreceptors, transducing light into electrical signals, color coding, retinal organization, computing with nerve cells, compressing the 3-D world into optic nerve signals, inferring the 3-D world from optic nerve signals, biomechanics of eye movement, engineered vision in machines. The functional impact of biophysical mechanisms for visual experience is illustrated with psychophysical demonstrations. Corequisite: Physics 117A, Physics 197 or permission of instructor.

Credit 3 units. A&S : NS A&S : IQ, NSM BU : SCI EN : SU, TU FA : NSM

L31 Physics 360 Biophysics Laboratory
This laboratory course consists of "table-top" experiments in biological physics that are designed to introduce the student to concepts, methods and biological model systems in biophysics. Most experiments combine experimentation with computer simulations. The list of available experiments includes electrophysiology, human bioelectricity, optical tweezers, ultrasonic imaging, mass spectrometer and viscosity measurements. Prerequisites: prior completion of Physics 117A–118A, Physics 197–198 or permission of instructor.

Credit 3 units. A&S : NS A&S : IQ, NSM

L31 Physics 400 Physical Science in 12 Problems
Same as Chem 400

Credit 1 unit. A&S : NS A&S : IQ, NSM FA : NSM

L31 Physics 411 Mechanics
Motion of a point particle, rotational motion, oscillation, gravitation and central forces, Lagrangian and Hamiltonian formulation. Prerequisites: Physics 117A–118A or Physics 197–198, Math 217 or permission of instructor.

Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L31 Physics 421 Electricity and Magnetism
Starting from Coulomb's law, the Biot-Savart law and Faraday's law, the electrical and magnetic fields are defined and applied. Maxwell's equations are derived and their consequences, such as electromagnetic waves and relativity, are explored. Prerequisites: Physics 117A–118A or Physics 197–198, Math 217 or permission of instructor.

Credit 3 units. A&S : NS A&S : IQ, NSM, AN BU : SCI EN : DU, SU, TU FA : NSM

L31 Physics 422 Electricity and Magnetism II
The second course in a two-part series covering the classical theory of electricity and magnetism leading to the derivation and application of Maxwell's equation. Topics in electrodynamics including Faraday's law, the displacement current and Maxwell's equations in vacuum and in matter are covered. Electromagnetic waves and radiation, special relativity and relativistic electrodynamics also are discussed. Prerequisite: Physics 421 or permission of instructor.

Credit 3 units. A&S : NS A&S : IQ, NSM, AN EN : DU, SU, TU FA : NSM

L31 Physics 427 Introduction to Computational Physics
Lectures and hands-on experience in computational physics combining topics in numerical analysis, algorithms, statistics, visualization and computer algebra with projects in contemporary areas of physics. Prerequisites: Physics 217 or equivalent and familiarity with a programming language.

Credit 3 units. A&S : NS A&S : IQ, NSM

L31 Physics 435 Nuclear and Radiochemistry Lab
Application of radiochemical techniques to problems in chemistry, physics and nuclear medicine. Prerequisites: 3 units of physical chemistry and permission of instructor. One lecture hour and five hours of laboratory a week. Same as Chem 435

Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L31 Physics 436 Introduction to the Atomic Nucleus
Introduction to the production and decay of radioactive nuclides, the structure and properties of nuclei, and the applications of nuclear and radiochemical techniques to current scientific problems. Prerequisites: one year each of chemistry, mathematics and physics. Same as Chem 436

Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L31 Physics 441 Selected Topics in Physics IV
Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a
Arts & Sciences

faculty member and finally secure approval of the department chair. Credit variable, maximum 3 units.
Credit variable, maximum 3 units. A&S : NS  A&S : IQ, NSM

L31 Physics 444 Energy and Environmental Physics
This intermediate-level course applies basic physics principles to this increasingly important area. It is designed for all science and engineering majors with an interest in energy and environmental issues. Topics covered include population trends, fossil fuel use, renewable energy sources, energy storage strategies and climate change. Particular emphasis is given to the use of the fundamental laws of physics, such as energy conservation, as well as more general concepts such as local and global stability, chaotic behavior, probability and risk. The aim of the course is the development of analytical skills and familiarity with important concepts, in order to enable an independent and informed view of environmental problems and possible solutions. A one-year introductory physics class on the level of Physics 117-118 or Physics 197-198 is required. This course also may be taken as Physics 444, which requires an additional independent project. Same as Physics 344
Credit 3 units. A&S : NS  A&S : IQ, NSM, AN

L31 Physics 450 Physics of the Brain
Contents are the same as Physics 350. Also intended for graduate students. Includes a more sophisticated term project than Physics 350. Prerequisites: Physics 117A–118A or Physics 197–198, or permission of instructor.
Credit 3 units. A&S : NS  A&S : IQ, NSM, AN  FA : NSM

L31 Physics 451 Advanced Laboratory I
Applications of analog and digital electronics. Contents are the same as Physics 321 plus a term project. Intended for graduate students. Prerequisite: Physics 118A, an equivalent course or permission of instructor.
Credit 3 units. A&S : NS  A&S : IQ, NSM  FA : NSM

L31 Physics 452 Advanced Laboratory II
Applications of analog and digital electronics and microprocessor techniques, followed by projects in modern physics with concurrent lectures on methods of experimental physics. Prerequisite: Physics 322 or permission of instructor. Two laboratories a week.
Credit 3 units. A&S : NS, WI  A&S : IQ, NSM, WI  FA : NSM

L31 Physics 455 Physics of Vision
Contents are the same as Physics 355. Also intended for graduate students. Includes a more sophisticated term project than Physics 355. Corequisite: Physics 117A, Physics 197 or permission of instructor.
Credit 3 units. A&S : NS  A&S : IQ, NSM  FA : NSM

L31 Physics 463 Statistical Mechanics and Thermodynamics
Basic methods of classical and quantum statistical mechanics, thermodynamics and transport theory. Prerequisite: Physics 217 or permission of instructor.
Credit 3 units. A&S : NS  A&S : IQ, ANM  EN : SU, TU  FA : NSM

L31 Physics 467 Solid State Physics
Crystal structures, binding energies, thermal properties, dielectrics, magnetism, free electron theory of metals, band theory, semiconductors, defects in solids. Prerequisite: Physics 471.
Credit 3 units. A&S : NS  A&S : IQ, NSM, EN : SU, TU  FA : NSM

L31 Physics 474 Introduction to Particle Physics
Introduction to the standard model of particle physics, including symmetries, conservation laws, the weak interaction, the strong interaction, quark confinement and some more exotic ideas such as grand unified theories. Prerequisite: Physics 471.
Credit 3 units. A&S : NS  A&S : IQ, NSM, AN  FA : NSM

L31 Physics 476 Astrophysics
This is the first of a four-semester sequence in astrophysics, with two semesters of classical astrophysics of stars and stellar systems, followed by two semesters of high-energy astrophysics of cosmic rays, radio, X-ray and gamma-ray astronomies. Each
of these is a self-contained course and may be attended by advanced undergraduates and graduate students. In the first semester we discuss observations of stars; stellar populations; physical processes in stars; birth, evolutions and death of stars; energy generation; nucleosynthesis; variable stars; supernovae; collapsed objects; solar neutrinos; helioseismology; and selected topics in galactic astrophysics, cosmology and exobiology. Additional reading assignments for students registered for Physics 576. Prerequisites: Physics 411, Physics 421 and Physics 463, or permission of the instructor. Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L31 Physics 477 Physics of Finite and Infinite Nuclear Systems

L31 Physics 478 From Black Holes to the Big Bang
An introduction to general relativity. The goal is to illustrate important features of general relativity without the full-blown mathematics of Einstein’s equations by restricting attention to spherically symmetric space times. Topics include: principle of equivalence; curved spacetime; spherical stars and black holes; the Big Bang model, observational cosmology. Prerequisite: Physics 411 or permission of instructor. Credit 3 units. A&S : NS A&S : IQ, NSM

L31 Physics 482 Research Seminar
Designed to introduce students to current developments in physics and to research carried out by faculty. Topics vary each year. Each member of the department addresses their particular specialty. Interested undergraduates may take this seminar in their junior or senior year. Must be taken pass/fail. Credit 1 unit. A&S : NS A&S : IQ, NSM FA : NSM

L31 Physics 499 Honors Program
Prerequisites: junior standing, an average grade of B or better, and permission of the chair of the department. Program and credit to be determined; maximum 6 units.

A&S : NS FA : NSM

Political Economy
The program in Political Economy offers students majoring in economics or political science an interdisciplinary second major that provides the opportunity to gain an understanding of the theoretical bases of both fields and to undertake research on current policy issues in political economy.

Students majoring in political science gain an appreciation of the deductive methods of economics and the role of economic forces in politics. Economics majors see the wider applicability of economic theory and learn how politics interact with economic behavior in the real world.

Central to the program is the senior seminar, taught by Professor Norman Schofield. Enrollment in the senior seminar is restricted to seniors who are second majors in political economy and to senior economics and political science students with strong backgrounds in both fields. New theoretical developments and recent empirical studies in political economy form the foundation of the seminar. Students prepare term papers that demonstrate their ability both to understand theory and to apply it to substantive issues.

Students choosing political economy as a second major will be especially well prepared for graduate study in economics, political science or business, and for both academic and nonacademic careers in policy analysis, business administration, law, governmental relations and other fields. A student majoring in economics or political science who selects a second major in political economy is assigned an adviser from the program who assists in organizing the student’s course of study.

**The Major in Political Economy**

*Not available as a standalone major*
Total units required: 21

Required course:
Pol Econ 498 Senior Seminar in Political Economy (3 units)

Elective courses:
At least 18 units of approved courses at the 300 level or above. None of the 18 units may be counted toward the first major, and no more than 3 of the 18 units may be earned in the department of the first major.

Economics majors must include among the 18 units of required credit at least 9 units of political science. Political science majors must include at least 9 units of economics. Published prerequisites for courses numbered 300 and above must be fulfilled to satisfy the requirements for enrollment (including Econ 1011, Econ 1021, Econ 4011 or Econ 4021). Econ 1011 and Econ 1021 may not be counted toward the 18-unit requirement. Students, in consultation with their adviser, will choose the remaining 6 units that will complete the major.

Note:
Pol Econ 413 (p. 667), Pol Econ 435 (p. 667), Pol Econ 451 (p. 667), Pol Econ 467 (p. 667) should not be taken by students whose prime major is Economics without prior consultation with the Economics Department Academic Coordinator (dottie@wustl.edu).

Additional Information

Honors Program: Students with a strong record of academic achievement may apply for the honors program at the end of the junior year. First majors in economics with the second major in political economy are asked to complete 12 units of political science, completing 21 rather than 18 hours in the second major. Three of the four political science courses required are to be completed at the 400 or 500 level. First majors in political science with the second major in political economy are asked to complete 12 units of economics, including either Econ 4011 Intermediate Microeconomic Theory or Econ 4021 Intermediate Macroeconomic Theory, also completing 21 rather than 18 hours in the second major. Two of the four economics courses must be taken at the 400 level.

Honors students also are required to enroll in Pol Econ 488 Honors Thesis Research and to complete a thesis (approximately 40 pages or 10,000 words) based on research undertaken under faculty supervision. Interested students should contact Professor Schofield.

The program in Political Economy does not offer a minor.

L50 Pol Econ 488 Honors Thesis Research
Adviser’s approval required.
Credit 3 units. A&S : SS

L50 Pol Econ 490 Independent Study
Prerequisite: permission of department. Credit variable, maximum 6 units.
Credit variable, maximum 6 units.

L50 Pol Econ 495 Readings in Political Economy
By arrangement with Political Economy faculty. Credit variable, maximum 3 units.
Credit variable, maximum 3 units.

L50 Pol Econ 498 Senior Seminar in Political Economy
Special topics in the theory and applications of political economy. Property rights theory and topics from the theory of games, with applications to economic history, development politics, American political institutions and other fields. Each student is responsible for class presentation of research in one of these theoretical or applied areas. Required for the second major in Political Economy.
Credit 3 units. A&S : SS A&S : IQ, SSC

L50 Pol Econ 499 Senior Honors Thesis
Independent research for Honors thesis. Students individually investigate a topic under the supervision of a Political Economy faculty sponsor.
Credit 3 units.

Political Science

The Department of Political Science offers undergraduates the opportunity to study all aspects of politics using cutting-edge technical and theoretical tools. Our courses are animated by longstanding problems related to the use of power, its rightful exercise by governments and individual actors, and the institutions that affect how that power is exercised. Reflecting the breadth of the discipline, we offer a range of classes, including courses on elections and electoral politics; international political economy; justice and the state; and comparative analyses of political institutions across states.

A major in political science thus exposes students to the primary themes of the discipline: American politics, comparative politics, international politics, judicial politics, political methodology and political theory. A major in political science can prepare you well for professional training and advanced study in law, business, education, journalism, policy analysis, political science, public administration, social work and urban planning. Political science graduates enter careers in business; federal, state and local government; the media; and nonprofit organizations.

Because political science is a broad discipline, students often choose to combine the major with such related fields as African and African-American studies; American culture
Arts & Sciences

studies; anthropology; economics; environmental policy; history; international studies; Jewish, Islamic and Near Eastern studies; Latin American studies; philosophy; psychology; and women, gender and sexuality studies.

The Major in Political Science

Total units: Students who major in political science are required to complete 30 graded units (10 classes) in political science with a C or better, distributed as follows:

Required courses:
- **Substantive Introductory Courses**: Six graded units must come from any two introductory classes. (Note: if you have Advanced Placement credit, you may be able to substitute an upper-level class for the related introductory course.)
- **Methodology Course**: Three graded units must come from Pol Sci 363 Quantitative Political Methodology. All majors are urged to take this course in the fall of their sophomore year. (Note: some statistics courses offered in other departments will allow you to opt out of this class, but those credits will not count toward your political science major.)

Elective courses:
- **Distribution Requirement**: 18 graded units must come from any six 300- or 400-level classes. Of these 18 units, you must complete at least one 3-unit course in three of the following five fields: American politics, comparative politics, international politics, political methodology or political theory. (Note: Pol Sci 363 does not count toward this upper-level distribution requirement.)
- **Other courses**: A student’s remaining graded units may be earned by any political science course or independent study. However, credits given for writing a senior thesis (see below) do not count toward the major.

Limitations
No more than 6 units from the following may count toward the major: service learning, study abroad, summer school, Pol Sci 419 Teaching Practicum in Political Science, transfer credit and University College.

No more than 6 units from the following may count toward the major: Pol Sci 413 Directed Research, Pol Sci 412 Directed Readings and independent study.

Additional Information
Concentrations: Political science majors may concentrate in a subfield of political science by taking (as part of their distribution requirement) three upper-level courses in any one of the five subfields (American politics, comparative politics, international politics, political methodology or political theory) and submitting a subfield concentration form. Students may earn concentrations in up to two subfields. The successful completion of a subfield concentration will be listed on a student’s transcript.

Senior Thesis/Capstone Option: The department encourages serious students to pursue independent research by working toward a senior thesis. Students admitted to this program work closely with a faculty advisor for a full calendar year, beginning at the end of their junior year. Students writing a senior thesis receive 6 units of college credit for two semesters of work by enrolling in Pol Sci 415 Senior Thesis Research; however, this credit does not count toward the completion of the political science major. Although there is no GPA requirement for writing a senior thesis, an application is required. For more information, contact the department office. All majors may apply.

To qualify to write a senior thesis, students must:
- Complete Pol Sci 363 Quantitative Political Methodology or its equivalent by the fall of their junior year (all majors are strongly urged to take this in the fall of their sophomore year);
- Complete Pol Sci 495 Research Design and Methods in the spring semester of their junior year;
- Complete a second methods course appropriate for their thesis by the start of their senior year (A complete list of courses can be found on http://polisci.wustl.edu; Pol Sci 495 does not count toward this requirement);
- Complete a subfield concentration (see above) by the end of their senior year in the subfield appropriate for their senior thesis. At least two-thirds of the concentration must be completed by the end of their junior year;
- Apply during their junior year for admission into the program;
- Students planning to study abroad and write a senior thesis should take Pol Sci 363 Quantitative Political Methodology in the fall of their sophomore year and should go abroad during the fall of their junior year. Students who wish to study abroad in the spring of their junior year and write a thesis senior year, must meet with the director of Undergraduate Study before the start of their junior year.

Senior Honors: To graduate with Latin Honors, students must successfully complete a senior thesis and have the minimum grade point average specified by the College of Arts & Sciences.

The Major in Environmental Policy

Required units: 40
Students who major in Environmental Policy will be required to complete 40 graded units (13 classes) distributed as follows:

- 16 units from required foundation courses.
- 9 units from research methods requirements.
- 12 units from the list of upper-division courses in the social sciences.
- 3 units from a substantive distribution requirement.

At least 24 of those total units must be at the 300-400 level.

We also strongly recommend that students do a capstone experience. Possible options include a senior Honors thesis, the environmental law clinic or an appropriate internship. We intend to develop more capstone possibilities in the future.

Required courses:

All students take the following five foundation courses (16 units):

- EPSc 201 Earth and the Environment 4
- Biol 2950 Introduction to Environmental Biology 3
- Pol Sci 2010 Introduction to Environmental Policy 3
- Pol Sci 331 Topics in Politics (Theories of Justice*) 3
- Anthro 361 Culture and Environment 3

Total units 16

*Note: Traditional Environmental Studies students may count En St 294 for the Introduction to Environmental Policy course and Environmental Ethics for the Theories of Justice requirement. Students also may substitute Pol Sci 331 Social Justice or Pol Sci 4070 Global Justice for the Ethics course.

Research Methods Requirements:

Students take three methods courses (9 units)

- Pol Sci 363 Quantitative Political Methodology (**) 3
- Econ 1011 Introduction to Microeconomics 3
- Pol Sci 4043 Public Policy Analysis, Assessment and Practical Wisdom 3

Total units 9

**Note: Students may place out of this requirement if they have completed QBA 120 Managerial Statistics I or QBA 121 Managerial Statistics II. Math 1011 Introduction to Statistics and University College Applied Statistics will not satisfy this requirement. Additionally, students who place out of this requirement and do not take Pol Sci 363 must take another upper-level class to complete the 40 credits.

Upper-Division Requirements:

Students need 12 additional units of upper-level course work (300-400 level) distributed in the following way:

(1) 9 units (three courses) must come from the following Political Science courses***:

- Pol Sci 332 Environmental and Energy Issues 3
- Pol Sci 3211 Public Opinion and American Democracy 3
- Pol Sci 340 Topics in Politics 3
- Pol Sci 340 Topics in Politics: Environmental Justice 3
- Pol Sci 345 Legislative Process 3
- Pol Sci 349 Politics in Bureaucracies 3
- Pol Sci 4001 American Democracy and the Policy-Making Process (DC Program only) 3
- Pol Sci 4731 Global Political Economy 3
- Pol Sci 4792 Globalization and National Politics 3
- Pol Sci 480 Topics in International Politics: Growth and Development 3
- Pol Sci 4013 Negotiating Major Legislation in Congress 3
- Pol Sci 489 Politics of Regulation 3
- Pol Sci 4050 Political Representation 3
- Pol Sci 3240 The Political Economy of Public Goods 3
- Pol Sci 3752 Topics in American Politics: Globalization, Urbanization and the Environment 3

***Note: Students who have not taken Pol Sci 363 will need to complete four courses.

(2) Social Science breadth requirement. Take at least one offering (3 units) from the following:

- Anthro 3053 Nomadic Strategies and Extreme Ecologies 3
- Anthro 3322 Brave New Crops 3
- Anthro 3391 Economies as Cultural Systems 3
- Anthro 3612 Population and Society 3
- Anthro 379 Meltdown: The Archaeology of Climate Change 3
- Anthro 399B Rich Nations, Poor Nations 3
- Anthro 406 Primate Ecology and Social Structure 3
- Anthro 4253 Researching Fertility, Mortality and Migration 3
- Anthro 4282 Political Ecology 3
- ARCH 336D Biomimicry: A Biokinetic Approach to Sustain(Able) Design 3
- ARCH 336E Biomimicry, Teleology and Organic Architecture 3
- ARCH 654D Metropolitan Landscapes 3
- Econ 1021 Introduction to Macroeconomics 3
- Econ 403 Economics of Law 3
- Econ 451 Environmental Policy 3
- CNISS 5825 Research Seminar I 3
- CNISS 5826 Research Seminar II 3
- U College IA International Environmental Issues 5421 3

(3) Substantive Distribution Requirement
The environmental policy major provides students with the social scientific tools to address policy problems related to the environment. To supplement this social scientific knowledge, it is also important that students have substantive knowledge of the natural science of the environment itself and/or practical experience in the policy area. All students are therefore required to complete one substantive area course (3 units) with a passing grade.

Biol 381 Introduction to Ecology 3
Biol 372 Behavioral Ecology 4
EPSc 323 Biogeochemistry 3
ChE 262 Introduction to Environmental Engineering 3
ChE 345 Pollution Abatement and Waste Minimization 3
ChE 438 Environmental Risk Assessment and Toxicology 3
ChE 449 Sustainable Air Quality 3
EECE 495 Special Topics: Energy and Buildings 3
EECE 590 Special Topics: Energy and Environmental Economics and Risk Management Decision-Making 3
EnSt 539 Interdisciplinary Environmental Law Clinic 3
MEC 400J Markets, Business and the Environment

For additional information about this major visit the website at http://enst.wustl.edu or send email to enstadmin@levee.wustl.edu.

The Minor in Political Science

Units required: 15

Required courses: Students must take a minimum of 15 graded units of course work with a C or better, including at least 9 advanced units.

Additional Information

No more than 3 units may be counted from among the following: Pol Sci 412 Directed Readings, Pol Sci 413 Directed Research, Pol Sci 419 Teaching Practicum in Political Science, summer school, University College courses or credits from another institution including study abroad.

L32 Pol Sci 101B American Politics

This course provides an overview of the politics of the American system of government. Among the topics covered are the historical developments of American politics, federalism, political participation (voting, interest groups, parties), institutions (congress, the courts, the president and public opinion). A theme underlying our examination of these and other topics is the fact that political actors are purposive in their strategic pursuit of various objectives. We explore the many ways in which this aspect of political behavior impacts institutions and the interactions between political actors throughout the American political system.

Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA  FA : SSP

L32 Pol Sci 102B Introduction to Comparative Politics

One of the primary goals of a course in comparative politics is to familiarize students with a broad array of political systems. The approach taken in this course can best be characterized as the active acquisition and use of a set of tools for looking at the political world. In other words, instead of putting emphasis on what textbook writers think political scientists know, in this course the emphasis is on "how we know what we know" and on building knowledge. This approach equips students with a set of tools to use long after the course is over. These comparative tools are focused on historical, recent and current events, and students are provided the opportunity to delve more deeply into a study of the parts of the world they find most interesting.

Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA, IS  FA : SSP

L32 Pol Sci 103B International Politics

Globalization, the accelerating rate of interaction between people of different countries, creates a qualitative shift in the relationship between nation-states and national economies. Conflict and war are forms of international interaction. Movements of capital, goods, services, production, information, disease, environmental degradation and people across national boundaries are other forms of international interactions. This course introduces the study of global political-economic relations. We focus upon building a toolkit that helps us understand the micro-foundations of the globalization of material and social relations.

Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA, IS  FA : SSP

L32 Pol Sci 1041 Freshman Seminar: Introduction to Political Theory I

Why is democracy a good form of government? What if a benevolent dictator arose who wrote and enforced laws that were just and equitable? What if she honored the sanctity of human life and its flourishing, guaranteed a full range of liberties to her citizens — including political ones, such as the right of free speech and organization (but not including the right to rule)? Given the problems of most living democracies, why wouldn’t this be a better regime than a democratic one? And are people really capable of governing themselves anyway? Why should we trust them so? In short, what’s so special about “democracy” and its corresponding idol, “public opinion,” that people bow to them as hallowed virtues of a good society? In this class we provide a framework in which these and other central questions of political theory have been and can be addressed. This course is designed to introduce students to the main theoretical issues of Western political theory, including but not limited to the following concepts: justice, legitimacy, equality, democracy,
L32 Pol Sci 106 Introduction to Political Theory
This course offers an undergraduate-level introduction to the field of political theory. We focus on three major themes — social justice, power and freedom, and democracy — reading some canonical texts, such as Bentham’s Introduction to the Principles of Morals and Legislation and Marx’s Capital, but emphasizing contemporary works, such as those of John Rawls, Michael Walzer, Michel Foucault and Robert Dahl.
Credit 3 units.  A&S : SS  FA : SSP

L32 Pol Sci 2001 The Great Economists
Examination of the great economic thinkers, the problems they sought to solve, the historically conditioned assumptions they bring to their work, and the moral issues they raise. The class reads from the works of Adam Smith, Ricardo, Malthus, Marx, Veblen, Keynes, Schumpeter, Galbraith and others as well as commentary from Heilbroner. These readings are paired with selected texts on the social and moral issues of their times. Same as iPH 201B
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : BA  FA : SSP

L32 Pol Sci 2010 Introduction to Environmental Policy
This course provides an introduction to and overview of environmental policy. Subjects covered include the policy process, the behavior of interest groups and political parties, and the actions of policymakers like Congress and the president. We also examine issues such as pollution control, climate change and biodiversity.
Credit 3 units.  A&S : SS  A&S : IQ, SSC

L32 Pol Sci 203C Early Political Thought: Text and Tradition
A selected survey of the political and moral thought of Europe from the rise of Athenian democracy to the Renaissance, with emphasis on analysis and discussion of writers such as Thucydides, Plato, Aristotle, St. Augustine, Castiglione and Machiavelli. The course aims to introduce students to basic texts in the intellectual history of Western Europe, understood both as products of a particular time and place and as self-contained arguments that strive to instruct and persuade. The texts are simultaneously used to chart the careers of such fundamental notions as liberty, virtue and justice. Preference given to Text and Tradition and iPH students.
Same as iPH 203C
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : HUM  FA : SSP

L32 Pol Sci 226 The Immigrant Experience
Same as AMCS 226.
Same as AMCS 202
Credit 3 units.  A&S : SS, CD  A&S : IQ, SSC, LCD  AR : SSP  BU : ETH, HUM  FA : SSP

L32 Pol Sci 227 Just Do It! Skills That Turn Passion Into Policy
The course focuses on skills related to the democratic expression of political rights and responsibilities. The course balances background knowledge of the issues with application. Students explore how to use coalition building and advocacy skills to relate to personal issues to public issues. Students research a current Missouri bill, create a strategic plan for its passage or failure, and prepare to give testimony on such bill in a mock House of Representatives committee hearing. Students also learn about ethical dilemmas in policy and politics and create a plan for turning their passions into policy.
Credit 1 unit.  A&S : SS  A&S : IQ, SSC

L32 Pol Sci 258 Law, Politics and Society
This course is an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system (in contrast to legal mythology), as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between
culture and law. Not open to students who have previously taken Pol Sci 358.
Credit 3 units. A&S : SS  A&S : IQ, SSC

L32 Pol Sci 260 Game Theory in Science and Culture
Introduces the major intellectual insights of game theory in a non-technical fashion, and examines the influence game theory has had on geopolitics, social philosophy, psychology, art and the humanities. In addition to covering the basic machinery of the theory, the class participates in numerous illustrative classroom games; examines game theory in film, literature and literary criticism; sees how game theory has contributed to social theory; and learns about the background of game theory and its history and perception as a hoped-for tool in the Cold War. Grades based on problems, short essays, two short essay exams and participation.
Credit 3 units. A&S : SS  A&S : IQ, SSC

L32 Pol Sci 3011 Computational Modeling in the Social Sciences
This course introduces students to the theory and practice of computational modeling in social science. Computational modeling allows us to explore topics — including complexity, emergence and dynamics — that are difficult to study using traditional analytic methods. This course covers the theoretical foundations behind computational modeling in addition to offering an introduction to the design and programming of such models.
Credit 3 units. A&S : SS  A&S : IQ, SSC

L32 Pol Sci 3012 Advanced Modeling in the Social Sciences
This course explores advanced topics and issues in the building and validation of models in the social sciences. The principal component of the course is the design and development of an individual research project by each student. The conclusion of the course involves a public research symposium with a poster session in which all students present their models and findings to the broader campus community. Prerequisite: Pol Sci 3011 Computational Modeling in Social Science.
Credit 3 units. A&S : SS  A&S : IQ, SSC

L32 Pol Sci 3024 International Institutions
This course surveys in historically and theoretically informed fashion the role of various international institutions in international relations. It addresses the fundamental question of the contribution of international institutions to world order. The course first traces the historical evolution of international organizations before turning to international institutions since World War II. It then focuses on the following: the most important regional international organization, the European Union; the most important international organizations dealing with the issues of peace and security, the United Nations and NATO; and the major international economic institutions, the WTO, the IMF and the World Bank. Prerequisite: Pol Sci 103B Introduction to International Politics.
Credit 3 units. A&S : SS  A&S : IQ, SSC  BU : IS

L32 Pol Sci 3031 Race and Ethnicity in American Politics
This seminar discusses the continuing importance of race and ethnicity in American politics and the politics of racial minority groups in America. It examines the disadvantage minorities have in the American political structure, including problems with political participation. It examines how the structure and functions of the branches of government and its bureaucracy affect the aspirations of minorities. The role of pressure groups on political structure is discussed. Additional discussion focuses on urban politics and tensions.
Credit 3 units. A&S : SS  A&S : IQ, SSC

L32 Pol Sci 3044 Foundations of American Democracy
Since its founding, the United States of America has been strongly identified with principles of democratic rule. This course provides an introduction to some philosophical and historical foundations of American democracy. Over the course of the semester, we ask what democracy means and what it requires. We examine thinking about political rights and liberty at the American founding. We ask what democratic inclusion and political equality entail. We ask what democracy means, and what it should mean, in the American context, and whether and to what extent American institutions embody democratic ideals.
Credit 3 units. A&S : SS  A&S : IQ, SSC

L32 Pol Sci 3070 Politics and Policymaking in the American States
The American federal system is often overlooked in discussions about politics in the United States; however, state governments unquestionably touch the lives of Americans every day. As such, an education in American politics is not complete without serious examination of state governments and their political institutions. This course illuminates the importance of the American states in U.S. politics and policymaking by critically examining topics such as intergovernmental relations; the historical evolution of American federalism; the organization and processes associated with state legislative, executive and judicial branches; state

<td>L32 Pol Sci 3093 Politics of the European Union</td>
<td>This class is designed to introduce undergraduates at the junior and senior level to the history and politics of the European Union (EU) and European integration. In the first part of the class, students learn about the interplay of theory and practice in the history of European integration. In the second part, we study the institutions and decision-making processes with reference to the theoretical concepts developed earlier in the course. From there, we examine some of the key EU policies and their implementation. In the final two sections of the course, we look at constitutional politics, and some of the more recent policies and developments.</td>

analysis (assuming no prior knowledge) so that students can use these tools as part of their own research projects. Prerequisite: previous course work in American politics or communications. Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L32 Pol Sci 3240 The Political Economy of Public Goods
This course explores the nature of public goods by investigating the economic and political rationales for providing them. We explore the endogenous creation of public goods, such as the formation of mutually agreed upon constitutions to protect property rights and the exogenous imposition of public goods, such as the regulatory framework that provides clean air. Through the use of efficiency analysis, we explore the costs and benefits to alternative institutional arrangements, such as private property or market exchanges, to the government or voluntary provision of public goods. Credit 3 units.

L32 Pol Sci 3255 Development of the American Constitution
The practical meaning of the Constitution has changed since 1787 — not only as a result of normal amendments and court interpretations, but also through normal politics and unconventional transformations. After initial discussion of the nature of the Constitution and of constitutional interpretation, the course examines important instances of such change processes. These have resulted in important reformulations, usually gradual but occasionally sudden, of executive branch powers, the judicial system, the electoral system, federalism, economic regulation and civil rights. The course then devotes special attention to several present-day issues of constitutional politics, such as presidential war powers, the use and misuse of secret agencies, the “unitary executive theory,” and the special constitutional significance of the Justice Department. Prerequisites: Pol Sci 101B American Politics. Formerly Pol Sci 3254 Constitutional Politics in the United States; students who have taken that class are not eligible. Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA

L32 Pol Sci 326B Latin-American Politics
This course is an introduction to the politics in Latin America, focusing on the trend toward the establishment of democracy. We examine the impact of political culture, economic development, and the legacy of authoritarian regimes on contemporary politics. The course also reviews many of the most pressing challenges confronting Latin-American governments: the role of the military in politics; the reform of political institutions; threats from radical guerrillas and drug traffickers; debt and economic restructuring; and relations with the United States. Country studies focus on Argentina, Brazil, Chile, Peru, Mexico and Nicaragua. Prerequisite: 100-level introductory course in Political Science or its equivalent in History or International and Area Studies. Credit 3 units. A&S : SS A&S : IQ, SSC BU : IS FA : SSP

L32 Pol Sci 327B African Politics
A survey of politics in the states of sub-Saharan Africa. Major themes include the givens of African politics; the colonial inheritance; ethnicity, race and politics; religion and politics; forms and styles of rule and governance; pathologies and nonformal politics; and the international relation of African states. Requirements include two short papers and a written briefing on an assigned country. Credit 3 units. A&S : SS A&S : IQ, SSC BU : IS FA : SSP

L32 Pol Sci 3280 Political Intolerance in World Politics
This course is an investigation into the meaning, causes and consequences of political intolerance. The goal is to expose students to contemporary research on (a) how political intolerance is conceptualized and understood, especially within the context of theories of democracy; (b) how political intolerance can be measured, both at the level of the individual and the institution/society; (c) where intolerance originates, both in terms of individual psychology and system-level politics; and (d) what consequences flow from intolerance, especially in terms of legal and extra-legai political repression, as well as cultural consequences (e.g., a “culture of conformity”). The course makes little distinction between American politics and politics in other parts of the world (although no knowledge of specific non-U.S. systems is required as a prerequisite). Credit 3 units. A&S : SS A&S : IQ, SSC BU : IS

L32 Pol Sci 3292 Topics in Politics: Modern South Asian Politics
This course focuses on the recent political history and development of South Asia. It begins with a review of the British colonial period and the Independence movement. The remainder of the course examines different political issues in India, Pakistan, Bangladesh and Sri Lanka. Topics include political mobilization; land reform; law and politics; social movements; religious and caste politics; the rise of religious nationalism; and political control of the economy. Course website: http://artsci.wustl.edu/~polisci/parikh/asian/
Credit 3 units. A&S : SS A&S : IQ, SSC BU : HUM, IS FA : SSP

Credit 3 units. A&S : SS AR : SSP BU : IS

L32 Pol Sci 3302 Politics and Policies of Immigration in the United States
This class examines the history and politics of American immigration from colonial times to the present. It begins with an overview of the colonial period, then discusses the immigration waves of the 19th and early 20th centuries, and concludes with
an examination of current topics and debates about immigration. Issues include racial, ethnic and class relations among groups; changes in immigration policies over time; comparative group experiences; transnational issues in immigration; and the impact of immigration on other American social and political processes and events. This class is a writing-intensive and modified version of Pol Sci 226/AMCS 202. Students who have taken that course should not take this course. Because this is a writing-intensive class, we also spend time studying research paper design and writing.

<td>Gender and American Politics</td>
</tr>
<tr>
<td>This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category and the relationship between gender, race, ethnicity and power. Second, we study gender-based social movements, including the suffrage and women’s rights movements, women’s participation in the Civil Rights Movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women’s peace movement. Third, we examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights. Credit 3 units. L32 Pol Sci 3431 Constitutional Law
Introduction to constitutional law and practice in the United States. Emphasis on the role of the U.S. Supreme Court as an interpreter of the Constitution.
Credit 3 units.  A&S : SS  BU : BA  FA : SSP

L32 Pol Sci 344 Courts and Civil Liberties
This course focuses on constitutional law principles in the Bill of Rights, and examines how Supreme Court decisions influence these principles in everyday life. We explore how the courts, and particularly the Supreme Court, have interpreted these rights in light of changing times and emerging issues. Topics include the First Amendment; free exercise of religion and the establishment clause; freedom of speech, assembly and association; freedom of the press; the Fourth Amendment and the rights of those accused and convicted of crimes; the right to privacy, including reproductive freedom and the right to die; equal protection and civil rights, including race, gender, sexual orientation; immigrants' rights and voting rights; and civil liberties after September 11. Recommended for the Liberal Arts and Business (LAB) Certificate.
Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA, ETH, HUM  FA : SSP

L32 Pol Sci 3441 Defendant's Rights
This course explores the operations of the American criminal justice system. Substantial emphasis on the constitutional rights accorded to the criminally accused. Readings consist primarily, but not exclusively, of Supreme Court cases.
Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA, ETH  FA : SSP

L32 Pol Sci 349 Politics in Bureaucracies
Focuses on politics and political conflicts involving bureaucratic organizations, primarily but not exclusively those of the federal government. Attention given to the characteristics of bureaucratic organizations and their members; their relations with one another as well as with other participants in policy making also considered. Major activities within bureaucracies — planning, program development, organizing, budgeting and service delivery — discussed with a view to clarifying their political implications and consequences; problems associated with controlling and changing bureaucracies.
Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA  FA : SSP

L32 Pol Sci 3510 Topics in American Politics: The Supreme Court
This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.
Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA  FA : SSP

L32 Pol Sci 3551 The Welfare State and Social Policy in America
How can we understand the recent debate about fundamental health care reform? Should social security be partially or wholly privatized? Was the 1996 welfare reform a success? Contemporary political questions frequently focus on the American welfare state and the social policies that compose it. The first half of this course describes the American welfare state broadly construed, places it in a comparative context, and elucidates major political science explanations for the size and scope of American social policy. We touch on several areas of social policy while constructing the generalized lenses through which particular political outcomes can be understood. The second part of the course then focuses on three major aspects of the American welfare state: health care, old age pensions and policies related to work, poverty and inequality.
Credit 3 units.  A&S : SS  A&S : IQ, SSC

L32 Pol Sci 3552 Political Economy of Democracy
In the past few years, a number of important books have appeared that combine elements of economics reasoning and political science, in an effort to understand the wide variation in economic development in the world. This course deals with the logic apparatus underpinning these books. In addition, the course introduces the student to the theoretical apparatus that can be used to examine democratic institutions in the developed world, and the success or otherwise of moves to democratization in the less-developed world.
Credit 3 units.  A&S : SS  A&S : IQ, SSC
L32 Pol Sci 3561 Topics in Politics:
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S : SS A&S : IQ, SSC BU : IS EN : S

L32 Pol Sci 358 Law, Politics and Society
This course is an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system (in contrast to legal mythology), as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce students to legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law.
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA, HUM FA : SSP

L32 Pol Sci 359 The Mathematics of Elections
Voting procedures provide the most common means of aggregating the preferences of individuals into societal outcomes. These procedures play an integral role in our daily lives, from having a show of hands to decide which type of pizza to order for a club meeting, to electing a president. This course examines the effects that different voting procedures have on how groups make decisions. We evaluate electoral systems mathematically, by considering the various properties that procedures may or may not satisfy. A classic example is Arrow’s Impossibility Theorem, which tells us that every electoral system must fail to satisfy one or more criteria of fairness or sensibility. In addition to Arrow’s claim, we examine other legislative paradoxes and learn why the choice of electoral procedure is critical to our understanding of how “good” and “bad” decisions can be made. We also discuss the comparative properties of electoral systems in operation, such as fairness, proportionality, representativeness and legitimacy.
Credit 3 units. A&S : SS A&S : IQ, SSC

This course presents an assessment of the Cold War from the perspective of its major participants. Topics include: the origins of the Cold War in Europe and Asia; the Korean War; the Stalin regime; McCarthyism and the Red Scare; the nuclear arms race; the conflict over Berlin; Cold War film and literature; superpower rivalry in Guatemala, Cuba, Vietnam, Africa, and the Middle East; the rise and fall of detente; the Reagan years and the impact of Gorbachev; the East European Revolutions; and the end of the Cold War. Same as History 3680
Credit 3 units. A&S : TH A&S : IQ, SSC, AN FA : SSP

L32 Pol Sci 361 Legislative Politics
This course is an introduction to the politics of the U.S. Congress and the federal lawmaking process. We focus on the behavior of individual legislators and the role they play in crafting federal legislation in policy areas such as health care, civil rights and the environment. In general we examine questions such as: Why do legislators behave as they do? Whose interests are being represented?
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA

L32 Pol Sci 362 Politics and the Theory of Games
This course is intended to cover through analytical discussion and illustrations the basic concepts and major achievements of Game Theory in different subfields of research in the social sciences today. We discuss examples of the usefulness of cooperative and noncooperative game theory to the study of human behavior in general and political science and political economy in particular.
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L32 Pol Sci 363 Quantitative Political Methodology
This is an introduction to research methodology and quantitative analysis for social scientists. Students are introduced to the logic of social scientific inquiry, and to the basic statistical tools used to study politics. Students learn and apply the following to answer substantive questions: measurement, descriptive analysis, correlation, graphical analysis, hypothesis testing, confidence intervals, analysis of variance and regression analysis. Major components of the course include learning how to collect, manage and analyze data using computer software, and how to effectively communicate to others results from statistical analyses. Students work collaboratively on research projects in which they pose their own questions, design a study, collect and analyze the data, and present their findings in a research paper.
Credit 3 units. A&S : SS, QA A&S : IQ, SSC, AN FA : SSP

This course presents an assessment of the Cold War from the perspective of its major participants. Topics include: the origins of the Cold War in Europe and Asia; the Korean War; the Stalin regime; McCarthyism and the Red Scare; the nuclear arms race; the conflict over Berlin; Cold War film and literature; superpower rivalry in Guatemala, Cuba, Vietnam, Africa, and the Middle East; the rise and fall of detente; the Reagan years and the impact of Gorbachev; the East European Revolutions; and the end of the Cold War. Credit 3 units. A&S : TH A&S : IQ, SSC, AN FA : SSP

L32 Pol Sci 3690 Politics of International Trade
In this course we study the relationship between international trade and domestic politics. We cover the basic models of international trade, the distributional consequences of international trade, the relationship between trade and economic development, an analysis of the trade protectionism (causes and consequences) and an analysis of international organizations related to international trade (special focus on the World Trade Organization). Prerequisite: Pol Sci 103B.
Credit 3 units. A&S : SS A&S : IQ, SSC BU : IS
L32 Pol Sci 373 International Political Economy
Analysis of the interplay of economics and politics in the world arena, focused primarily on the political basis of economic policies in both advanced and less-developed societies. Treating differing perspectives on the international economy, production, trade and finance, and international economic relations.
Prerequisite: junior standing or permission of instructor.
Credit 3 units. A&S : SS BU : IS FA : SSP

L32 Pol Sci 374 Contemporary American Foreign Policy
This course surveys post-war American foreign policy in historical perspective. It begins by evaluating the rise of the United States as a world power during the 20th century, its current position of primacy and its consequences in the post-Cold War period, and the distinctive traditions and institutions shaping the making of American foreign policy. It then examines the origins of the strategy of containment in the early Cold War period before considering how these debates animated the changing course of American foreign policy through the various phases of the Cold War conflict. The course concludes by analyzing American foreign policy since the end of the Cold War, up to and including debates about the consequences of September 11, 2001 for the United States' position of primacy, the Bush Doctrine and the American-led intervention in and subsequent occupation of Iraq.
Credit 3 units. A&S : SS & A&S : IQ, SSC BU : IS FA : SSP

L32 Pol Sci 376 Topics in Comparative Politics: Terrorism and Political Violence
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S : SS, CD A&S : IQ, SSC LCD BU : IS FA : SSP

L32 Pol Sci 377 The Politics of Electoral Systems
It is impossible to appreciate the variety of electoral systems used to select legislative bodies without taking a comparative perspective. We begin this course with a brief consideration of what goals political founders and reformers are pursuing when they design an electoral system. Then we define the conceptual dimensions along which electoral rules can vary. With these basic concepts in hand, we then study specific national cases to assess the impact of electoral laws on party systems, legislator behavior and interbranch relations. After completing a series of case studies, we return to a comparative perspective to discuss recent scholarly research in this field. This research conceives of electoral systems as incentive structures for voters, candidates, parties and politicians. To wrap up the course, we return to the question of what founders and reformers can hope to achieve when selecting electoral systems.
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI BU : BA

L32 Pol Sci 378 Power, Justice and the City
This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by “privatism” in cities and their suburbs. In addition, the course devotes considerable attention to honing students’ writing skills, through class assignments that stress rewriting and revising, and also through four in-class writing workshops devoted to formulating a thesis and making an argument; revising and rewriting; writing with style; and peer consultation.
Credit 3 units. A&S : SS, SD, WI A&S : IQ, SSC, SD, WI BU : BA

L32 Pol Sci 379 History of Political Thought I: Justice, Virtue and the Soul
This course offers a critical introduction to the main issues and debates in Western political theory, including but not limited to the topics of justice, legitimacy, equality, democracy, liberty, sovereignty and the role of history in the political and social world. This course is the first in a three-semester sequence on the history of political thought, and students are encouraged, but not required, to take the courses in chronological sequence. The first semester begins with ancient Greek political thought and follows its development up to the early 16th century.
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA

L32 Pol Sci 391A Democracy and Citizenship Seminar II
What does it mean to be a citizen in a democratic society? What are the rights of citizenship and what are its responsibilities?
How are the answers to these questions different for citizens of the United States of America, with its particular history, values and status in the world? Enrollment in this seminar is limited to freshmen who have been admitted to the Democracy and Citizenship Focus Program.

Credit 1 unit.

L32 Pol Sci 392 History of Political Thought II: Legitimacy, Equality and the Social Contract
Government is often justified as legitimate on the grounds that it is based on the consent of the governed. In this course, we examine the origins of this view, focusing our attention on canonical works in the social contract tradition, by Thomas Hobbes (1588–1679), John Locke (1632–1704), Jean-Jacques Rousseau (1712–1778), David Hume (1711–1776) and Immanuel Kant (1724–1804). This course is the second in a three-semester sequence on the history of political thought. Students are encouraged but not required to take all three courses. Prerequisite: one previous course in political theory or political philosophy.

Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA

L32 Pol Sci 3920 Feminist Research Methods
Same as WGSS 392
Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD BU : ETH FA : SSP

L32 Pol Sci 393 History of Political Thought III: Liberty, Democracy and Revolution
How, if at all, should the political institutions of the modern state express and secure the liberty and equality of citizens? What is the political significance of private property? Is world history to be understood as progress toward one best form of government — capitalist democracy, perhaps, or communism? What forces drive history? We address these and other timeless political questions through close reading and rigorous analysis of classic texts in the history of Western political thought. Authors studied include Hegel, Marx, Tocqueville, John Stuart Mill and Nietzsche. Prerequisite: one previous course in political theory or political philosophy. The course is the third in a three-semester sequence on the history of political thought, and students are encouraged but not required to take the courses in chronological sequence.

Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA

L32 Pol Sci 4001 American Democracy and the Policy-Making Process
This course is part of the Semester in DC Program.

Credit 3 units.

L32 Pol Sci 4010 Pluralism, Liberalism and Education
How should liberal democratic states respond to religious and cultural pluralism? In what ways is pluralism different from mere disagreement, and what normative implications does pluralism have for public policy? How can liberal states justify using their coercive power against a background of pluralism and in ways that systematically disadvantage certain religious and cultural groups in society? In particular, what is to be done when religious parents and the liberal state make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? Readings are taken from contemporary political philosophy. Prerequisites: Pol Sci 106, Pol Sci 107, Phil 340 or permission of instructor.

Credit 3 units. A&S : SS A&S : IQ, SSC

L32 Pol Sci 4013 Negotiating Major Legislation in Congress
This course examines the outcomes of the legislative process in the United States. The first third of the course examines key concepts and major determinants of the negotiation process: majority rule instability, agenda control, political parties, the amendment process and the uncovered set. The rest of the course examines the negotiations that led to some of the most significant legislation in the past 100 years, from the Federal Reserve Act of 1913 through the Voting Rights Act of 1965 to the immigration bill of 2006. Along with other assignments, each student writes several drafts of a major research project on a major piece of legislation. Each research project examines the amendments offered, the strategic intentions of the amendments’ sponsors, the agenda process and the role of party. Prerequisite: Pol Sci 101B.

Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI

L32 Pol Sci 402 Topics in Political Thought
Credit 3 units. A&S : SS A&S : IQ, SSC

L32 Pol Sci 4025 Experiments in Politics
This is a lab-style seminar in which we design, field and analyze an experimental study on political attitudes or political behavior. Our ultimate goal is to publish a scholarly article in a peer-reviewed journal in political science. Prerequisite: Pol Sci 363 Quantitative Political Methodology (can be taken concurrently).

Credit 3 units.

L32 Pol Sci 4030 Political Theory of Education
This course explores issues of authority, legitimacy, citizenship, freedom and equality through contemporary readings in the political theory of education. What is to be done when parents, citizens and educational experts make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? How should public schools aim to equip their students for the responsibilities of citizenship in a diverse liberal democratic state? What do the concepts of equality and equality of opportunity mean in the context of education, and (how) should governments pursue these
values through education policy? We explore these issues through contemporary works of political theory as well as through considering a number of important U.S. court cases, including those dealing with the schooling of children from minority religious and cultural groups, affirmative action in university admissions, and school desegregation plans. Prerequisite: one previous course in political theory or political philosophy. Credit 3 units. A&S : SS A&S : IQ, SSC BU : ETH

**L32 Pol Sci 4040 Capstone Seminar in International Politics: Public Policy Responses to Global Poverty**

This course is designed for senior political science majors with a background in international politics (see prerequisites). In this course we examine the theoretical and empirical literature on the causes of global poverty and evaluate public policy responses from the international community. Topics include: foreign aid (including micro finance), debt relief, trade reform, global health initiatives and private-public partnerships. Students are expected to have a strong theoretical background in the tools and concepts in political science and a strong interest in development topics. As a capstone class, the teaching style focuses on a student-centered classroom, where students run the class and help moderate discussions with outside speakers. Prerequisites: Pol Sci 103B, one advanced course in international politics, and a second advanced course in either international or comparative politics. Credit 3 units. A&S : SS A&S : IQ, SSC

**L32 Pol Sci 4043 Public Policy Analysis, Assessment and Practical Wisdom**

This course provides an introduction to the study, professional practice, ex-ante and ex-post assessment of public policy and the professional practice of public analysis. We rely heavily on David L. Weimer and Aidan R. Vining’s text, *Policy Analysis: Concepts and Practice*. This course covers a series of critical concepts in the understanding of practicing, analyzing and assessing public policy. Credit 3 units. A&S : SS A&S : IQ, SSC

**L32 Pol Sci 4050 Political Representation**

In this class we study the concept of representation. Historically, how has representation been conceived? Conceptually, what should count as political representation, and must it always be democratic? As a normative problem, what should representatives do? And how should institutions be designed to foster these normative ends? Readings provide a broad overview of the subject and address enduring questions, including problems of minority representation, voting rights and redistricting. Prerequisite: Pol Sci 106 or Pol Sci 107. Credit 3 units. A&S : SS A&S : IQ, SSC BU : ETH

**L32 Pol Sci 406 Topics in Political Thought**

Questions regarding the relationship between the state and civil society are among the most enduring in political science — and the most pressing in contemporary political practice. This course examines an array of texts in political theory and recent empirical studies of the relationship between state and civil society. Among the questions we address are the following: What kinds of groups “count” as being part of civil society? What is the relationship between the state and civil society in a democracy? Can we meaningfully distinguish between political associations and economic associations? What is the relationship between voluntary associations and the market? What is the purpose of civil society? This course focuses on close readings of the assigned texts and consideration of contemporary understandings of the topic. It is aimed at students interested in comparative politics, political philosophy and political economy. Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

**L32 Pol Sci 4070 Global Justice**

This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course is of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally. Credit 3 units. A&S : SS A&S : IQ, SSC

**L32 Pol Sci 412 Directed Readings**

This is a course of readings in political science taken under the direction of an instructor in the department. Credit variable, maximum 3 units. Credit variable, maximum 3 units. A&S : SS FA : SSP

**L32 Pol Sci 413 Directed Research**

Research activities or project in political science done under the direction of an instructor in the department. Credit variable, maximum 3 units. Credit variable, maximum 3 units. A&S : SS FA : SSP

**L32 Pol Sci 4131 Intolerance and Prejudice**

Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315. Same as Psych 413 Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

they ask about divine and human violence, the limits of rational
government, the transformations of power, and how societies
decide which lives count as human.
Same as Re St 4365
Credit 3 units. A&S : TH A&S : IQ, HUM

L32 Pol Sci 4373 Immigration, Identity and the Internet
This class examines a critical issue in contemporary societies: How do changes in technology affect the process of immigration and how immigrant identity is shaped?
Credit 3 units. A&S : SS, CD, WI A&S : IQ, SSC, LS

L32 Pol Sci 4400 Advanced Social and Political Philosophy
Same as Phil 4400
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L32 Pol Sci 4402 Topics in Political and Social Theory:
Constitutionalism
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S : SS

L32 Pol Sci 4451 Contemporary Politics in India
This seminar examines current topics and controversies in contemporary Indian politics. The course has three main foci: the links between politics and economic liberalization over the past two decades; the links between ascriptive identities such as religion, caste and gender and contemporary political processes, including ethnic and gender quotas; and the changes in party politics at the national and state levels that have accompanied the decline of Congress party dominance. Specific topics include the role of caste and religion in contemporary politics; the rise of state parties and its effects on federal relations; the effects of economic reform and globalization on economy and society; urbanization and migration flows; the rise of modern Hindu nationalism; and the links between collective violence and electoral politics.
Credit 3 units. A&S : SS, CD A&S : IQ, SSC, LCD BU : IS

L32 Pol Sci 4502 Topics in Political and Social Theory:
Comparative Political Economy
This research seminar introduces the student to recent work on the political economy of democracy. We start with a historical account of the development of democratic institutions in Britain and the United States, and then continue with recent work on modeling elections. We compare elections in countries that make use of proportional electoral systems, such as Israel, with those such as the United States and Britain that are highly majoritarian. Finally, we discuss the forces of democratization and globalization. The required work for the seminar is a research paper approximately 20 pages (double-spaced) in length.
Credit 3 units. A&S : SS A&S : IQ, SSC

L32 Pol Sci 4505 American Political Parties
This seminar introduced students to core literature on political parties with a strong bias toward recent research.
Credit 3 units. A&S : SS A&S : IQ, SSC

L32 Pol Sci 4510 Topics in American Politics: Supreme Court
This seminar has two purposes: to introduce students to the state of the art in studies of the Supreme Court and to cover a series of particular topics with emphasis on the major controversies within the field of law and the courts.
Credit 3 units. A&S : SS FA : SSP

L32 Pol Sci 4513 Topics in Politics: Criminal Law and
Criminal Justice: Homicide
Seminar investigates current controversies surrounding the homicide laws. Topics include the definitions of homicide and claims of self-defense, the controversies about admissions of evidence at various stages of prosecution, and the debates about the use of capital punishment (including the capital punishment of youths). Includes general academic readings, readings of recent court opinions, and guest discussants from the legal community.
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI BU : BA FA : SSP

L32 Pol Sci 4522 Topics in American Politics
This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S : SS FA : SSP

L32 Pol Sci 4551 Seminar in Political Economy
This research seminar introduces the student to recent work on the political economy of democracy. We start with a historical account of the development of democratic institutions in Britain and the United States, and then continue with recent work on modeling elections. We compare elections in countries that make use of proportional electoral systems, such as Israel, with those such as the United States and Britain that are highly majoritarian. Finally, we discuss the forces of democratization and globalization. The required work for the seminar is a research paper approximately 20 pages (double-spaced) in length.
Credit 3 units. A&S : SS A&S : IQ, SSC

L32 Pol Sci 4552 Comparative Political Economy
This seminar introduces the student to aspects of social choice theory, applied to themes to do with the economic origins of democracy, democratization and the stability of social orders. We read and discuss a number of recent books: Acemoglu and Robinson, Economic Origins of Dictatorship and Democracy;
North, Weingast and Wallis, Violence and Social Orders; Przeworski, Democracy and Development; Ferguson, The Ascent of Money; and Collier, Wars, Guns and Votes. If time permits, we may discuss recent work by Stern, The Economics of Climate Change. Students are expected to work on two short research papers, either empirically or theoretically based, and make a presentation of their work near the end of the semester. Credit 3 units. A&S : SS A&S : IQ, SSC

L32 Pol Sci 4562 Marxism After Marx: Philosophy and Radicalism in the 20th Century
As claims around the supposed ‘post-modernity’ of our contemporary situation have ebbled, so scholars have returned once more to perhaps the defining philosophical and political voice of modernity, Karl Marx. This course prepares students to engage in current debates in the humanities over the nature of the political, the dynamics of class, the relative importance of the economy to ‘culture,’’ and the historical situatedness of philosophical knowledge, all through close readings of the “Western Marxist” philosophical tradition. That tradition, developing in Continental Europe and later the United States, sought to revitalize Marx’s account of historical development through attention to art, literature and the broader Western philosophical canon, often with the intention of accounting for the failures of Soviet Communism. The course begins with a condensed primer to Marx’s original ideas, before turning to the extension of Marxist philosophy in the ideas of Lenin, Lukács, the Frankfurt School, Louis Althusser, the British “New Left,” Lucio Colletti and Antonio Negri, before addressing more contemporary authors including Fredric Jameson and Alain Badiou.
Same as IPH 456
Credit 3 units. A&S : TH A&S : IQ, HUM

L32 Pol Sci 4621 Politics and the Theory of Games
This course covers basic primitives and more sophisticated tools of game theory as they are used in contemporary political science. It covers some issues of the forefront of contemporary research in game theory as the central analytical tool in studying the science of politics. The main substantive issues are the emergence of law and order in society, markets vs. political mechanisms, and the distinctive characteristics of parliamentary vs. presidential democratic systems. The course also includes some real case studies, basic experiments and, in general, a lot of fun.
Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

Same as History 4894
Credit 4 units. A&S : TH A&S : IQ, HUM FA : SSP

L32 Pol Sci 4730 Political Economy of Multinational Enterprises
In this class we explore the literature in political science and economics on the relationship between multinational enterprises and domestic governments. The four main themes of the course are: (1) defining and understanding multinational enterprises; (2) governments attracting and competing for multinationals; (3) the impact of multinationals on economic development and groups within society; and (4) attempts to regulate multinationals both domestically and internationally. Prerequisite: Pol Sci 102 or 103B. Credit 3 units. A&S : SS A&S : IQ, SSC

L32 Pol Sci 4731 Global Political Economy
This course borrows on the insights of international relations scholarship and economic theory to develop a broad understanding of international economic relations. Specifically, this course attempts to address the following two sets of questions: (1) How do global economic relations fit into the broader category of international relations? How do the existing theories in international relations (liberalism, realism and Marxism) help us understand international economic relations between nation-states? (2) What are the effects of these international economic forces (trade, finance and multinational production) on domestic governments and societies? Credit 3 units. A&S : SS A&S : IQ, SSC BU : IS FA : SSP

L32 Pol Sci 475 Topics in International Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests. Credit 3 units. A&S : SS A&S : IQ, SSC BU : IS FA : SSP

L32 Pol Sci 4761 Politics of International Finance
In this course we examine the complex relationship between international finance, economic development and domestic politics by drawing on the recent scholarly literature in economics, political science and finance. The focus is on the theoretical literature on both the determinants of international financial flows and its effects on domestic societies. Specifically, we focus on five forms of international finance: (1) international equity markets (stocks), (2) flows of foreign direct investment (multinational corporations), (3) currency markets (with a special focus on currency crisis), (4) international debt and (5) international aid.
Credit 3 units. A&S : SS FA : SSP

L32 Pol Sci 4792 Globalization and National Politics
This seminar examines globalization and its interaction with national politics. The movements of ideas, capital, goods, services, production and people across national borders provide a skeletal framework for the global political economy. Politicians,
policy makers and societies discover new opportunities, but also dilemmas, as expanding interdependence challenges traditional notions of sovereignty and national policy autonomy. Prerequisite: Pol Sci 102 or Pol Sci 103.
Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

L32 Pol Sci 480 Topics in International Politics: Growth and Development
This course provides an introduction to qualitative and quantitative research methods in political science. Topics address issues related to theory building as well as theory testing. Technical issues related to these methods are not the focus of this course, as are theoretical issues regarding the advantages and disadvantages of the different approaches. Ultimately, the goal of this course is twofold: (1) to instruct students to critically analyze scholarly articles with particular attention to research design; and (2) to guide students in how to design an original research project. Both the reading assignments, including methodological and applied readings, and the written assignments are directed toward these goals.
Credit 3 units. A&S : SS A&S : IQ, SSC

L32 Pol Sci 489 Politics of Regulation
Events such as the Gulf oil spill and the economic meltdown have dramatized the importance of regulation in the United States, and at the same time called into question the most fundamental beliefs about the nature of the regulatory process. This course reviews the notion of market failure as basic to understanding the rationale for government regulation; it also examines theories of governmental failure as a source of skepticism and concern regarding impediments to effective regulation. Much of the course reviews the development of regulatory machinery in the 20th century. We examine the political forces that have resulted in expansion of the institutions of regulation — interest groups, partisan conflict, legislative negotiation and executive leadership. We examine these forces in detail in examining the political and legislative response to recent financial and environmental crises.
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI

L32 Pol Sci 490 Collection and Analysis of Qualitative Data
This course covers basic techniques for collecting, interpreting and analyzing qualitative data. Students select a research project, collect appropriate qualitative data and conduct a preliminary analysis. Students learn how to gather several types of qualitative data, including participant observation and open- and closed-ended interviews. In addition, they evaluate and analyze primary data collected by others including oral histories, archival records, interview transcripts. We consider the advantages and disadvantages of non-randomly collected data, such as those gathered though ethnographic and archival methods. We assess the utility of building statistical datasets from such data, and students learn the basic techniques of using computer programs such as Nvivo and Atlas.ti for qualitative data. Biweekly assignments that focus on different aspects of collection and analysis are designed to help students produce a research paper as a final project.
Credit 3 units. A&S : SS A&S : IQ, SSC

L32 Pol Sci 495 Research Design and Methods
This course provides an introduction to qualitative and quantitative research methods in political science. Topics address issues related to theory building as well as theory testing. Technical issues related to these methods are not the focus of this course, as are theoretical issues regarding the advantages and disadvantages of the different approaches. Ultimately, the goal of this course is twofold: (1) to instruct students to critically analyze scholarly articles with particular attention to research design; and (2) to guide students in how to design an original research project. Both the reading assignments, including methodological and applied readings, and the written assignments are directed toward these goals.
Credit 3 units. A&S : SS A&S : IQ, SSC

L32 Pol Sci 496 Game Theory and Collective Choice
An introduction to models of collective choice important in political science, including game theory, spatial voting model and axiomatic social choice theory. The course concentrates primarily on noncooperative game theory, whose main topics include: strategic and sequential forms, Nash equilibrium, solution by backward induction, imperfect information, repeated games; and applications to voting, campaigning, public goods, agenda design, bargaining and collective action. With noncooperative games as a foundation, the course then examines cooperative game theory (games in coalition form), voting as a social choice mechanism (including the median voter theorem and global cycling theorems), and social-choice possibility theorems (such as Arrow's Theorem). Prerequisite: Math 131 Calculus I or Pol Sci 5052 Mathematical Modeling, or equivalent.
Credit 3 units. A&S : SS A&S : IQ, SSC

Portuguese
Portuguese is the language spoken in nine countries spanning four continents. The giant looming in this group, of course, is Brazil, a powerful emerging economy of this century. A few years ago, students learning Portuguese were attracted by the vibrant Brazilian culture, its world-renowned music and Capoeira, an African influenced martial art, as well as its five soccer World Cup titles. Nowadays, even though these features still enchant people here and elsewhere, more and more business, economics and environment majors are taking Portuguese, aware of the importance of the country in the new world order.
Energy-independent since 2006 and a pioneer in the production of ethanol, “Brazil has an energy policy that has spawned the world’s most vibrant biofuels industry,” a Newsweek article of 2009 reports. With a population of more than 190 million people, it is one of the 10 largest markets in the world.
The reasons may vary. Students may be interested in Latin American issues or in global matters, willing to explore rich natural resources or participate in the country’s technological possibilities. Portuguese language can supplement students’ education and, for those already fluent in Spanish, it represents a chance to take fast-paced classes and be fluent in one more language in no time.
At Washington University, Portuguese classes are marked by a positive environment and the same joy that make Brazil the right place to host the Summer Olympics in 2016 and the World Cup in 2014. Outside the classroom, students can improve their fluency at Mesa Brasileira, a weekly conversation table, and choose from study abroad programs affiliated with the university, either for the summer or for an entire semester.

Finally, remember that Brazil offers more than 7,000 miles of coastline with beautiful beaches to reward all your hard work. Bem-vindos!

The Department of Romance Languages and Literatures offers course work in Portuguese; however there is no major in this area.

The Department of Romance Languages and Literatures offers course work in Portuguese; however there is no minor in this area.

L37 Portug 101 Portuguese I
Introduction to Portuguese language. The course emphasizes acquisition of communicative ability. It also covers basic grammar points through reading and writing activities. Classes are taught entirely in Portuguese. No prior experience in the language is required.
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L37 Portug 102A Portuguese II
Introduction to Portuguese language. This second course in the Portuguese program emphasizes acquisition of communicative ability. It also covers basic grammar structures through reading and writing activities. Classes are taught entirely in Portuguese.
Prerequisite: Portug 101 or permission of instructor.
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L37 Portug 103 Portuguese for Spanish Speakers I
Intensive and accelerated course especially designed to take advantage of students’ knowledge of Spanish and to promote a more rapid learning of Portuguese. Classes are entirely taught in Portuguese and stress oral communication, basic use of grammar, reading and writing skills. Intermediate online placement exam in Spanish is required.
Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : HUM

L37 Portug 104 Portuguese for Spanish Speakers II
This course intends to offer a sequence in the learning process initiated in Portug 103. It is a fast-paced class, designated for Spanish speakers with the objective of improving conversational, writing and reading skills. Prerequisite: Portug 103 or permission of instructor.
Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : HUM

L37 Portug 201 Intermediate Portuguese 1: Reading and Conversation
The goal of this accelerated-pace course is to review and to enhance the content learned at the basic level. Through reading (we read three short contemporary Brazilian novels) and related conversational activities, students are expected to enrich their vocabulary, gain fluency and improve reading comprehension ability. Prerequisites: two college semesters of Portuguese or permission of instructor.
Credit 3 units. BU : IS

L37 Portug 215 Reading and Conversation I
The goal of this course is to review and to enhance the content learned at the basic level. Through reading (we read three short contemporary Brazilian novels) and related conversational activities, students are expected to enrich their vocabulary, gain fluency and improve reading comprehension ability. Prerequisites: two college semesters of Portuguese or permission of instructor.
Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : IS

L37 Portug 220 Reading and Conversation II: Intermediate Portuguese
This course is a continuation of Portug 215, therefore an intermediate level in the Portuguese section. Its main goal is to improve students’ reading proficiency, as well as to provide a class environment in which conversational skills can be practiced and made into a solid foundation. In addition, the class provides tools to expand vocabulary and promote a cultural understanding of Brazil. Prerequisite: Portug 215 or permission of instructor.
Credit 3 units. A&S : LA A&S : IQ, LCD

L37 Portug 400 Independent Study

Praxis
The Praxis program provides an exciting opportunity to combine the analytical reading, writing and thinking skills of a liberal arts education with the marketable skills required in the 21st century to take students into career paths of their own design.
Eligibility Requirements: The program is designed for students entering their sophomore year. Students must fill out an application for the program (available online at college.artsci.wustl.edu/praxis) by the middle of the second semester of their freshman year. Students must have maintained at least a 3.0 grade point average in their first semester to be considered eligible.

Faculty: The Arts & Sciences faculty, from a wide variety of backgrounds, have helped to develop the program and are eager to teach, monitor and mentor the Praxis students. In addition, leaders in business, nonprofit organizations, government and the like, many of whom discovered the foundation for their success in liberal arts studies, will be lecturers in the signature Praxis courses.

Focused Workforce Curriculum: Not only does the Praxis program provide students with the foundation of a liberal arts education, the curriculum is designed specifically to provide students with many additional tools essential for their future in the world of work. Besides the specialized content of a particular field, the student will be acquiring the expertise essential for his or her first job as well as for careers that may not yet exist:

- Analysis of multiple perspectives essential in the increasing globalization of our world
- Critical thinking
- Familiarity with quantitative analysis and methods
- Outstanding writing and speaking skills
- Foreign language literacy and culture
- Team and group work expertise and psychology
- Essential skills in traditional and emerging technology.

Internships: The Praxis experience culminates in an internship taken normally at the end of the junior year that allows students to synthesize the tools and theories they have learned and use them in the workplace. Locations for internships may include national and international sites.

Community: The success of our students is central to our program. The academic advisers, as well as each Praxis faculty member, assists students in tailoring their education to their own interests and goals. In particular, each student’s faculty mentor closely monitors the student’s progress. The faculty and staff and all the Praxis students form a supportive community that stimulates and encourages the highest standards of excellence in the students’ studies and in their chosen careers.

The Program

1. Leadership and group experience (3 units) (fall of sophomore year)
   
   **Required:** Praxis 201 Leaders in Context

2. Information technology skills (2 units) (fall of sophomore year)
   
   **Required:** Praxis 207 Fluency in Sociotechnology

3. Communication skills, both written and oral (3 units) (spring of sophomore year)
   
   **Required:** Praxis 285 Communication That Works

4. Analytic and problem-solving requirement (6 units)
   
   **Required:** Econ 1011 Introduction to Microeconomics
   
   A second course in analytic skills (select one from below):
   
   Econ 1021 Introduction to Macroeconomics
   Phil 100G Logic and Critical Analysis

5. Quantitative Skills (3 units)
   
   **Required:** A course in statistics (select one from below):
   
   Math 1011 Introduction to Statistics
   Math 2200 Elementary Probability and Statistics
   Math 3200 Elementary to Intermediate Statistics and Data Analysis

6. International perspective or experience (3 units)
   
   **Required:**
   
   The study of any language through the 300 level
   or
   Study Abroad
   or
   One course in international economics or economic development, or by petition (must be 300 level or above), namely:
   
   Anthro 306B Africa: Peoples and Cultures
   Anthro 3322 Brave New Crops

7. Internship (3 units)

As the capstone experience of the Praxis program, the internship allows students to put into practice the skills and knowledge learned in the Praxis curriculum. The Praxis internship is conducted with the mentorship of a sponsoring Praxis faculty member and usually occurs by the end of the junior year. Students should contact the Praxis internship coordinator and have a faculty mentor in place before beginning the internship. It is not possible to fulfill the internship portion of the Praxis program with an internship that occurred before completing the majority of Praxis requirements, and the internship should consist of 135 hours.

Upon completion of the internship, there are two options available for students in order to fulfill the Praxis internship requirement. In conjunction with the approval of the faculty sponsor, the student submits a 10-page paper exploring the relevant issues and questions set by the sponsoring faculty. Depending on the topic, nature of the internship and discretion of the sponsoring faculty, a daily journal may be submitted in lieu of the 10-page paper. For full details as to the requirements for this...
internship, contact Dean Kiefer at jkiefer@wustl.edu. Required for completion of the Praxis program.

8. Praxis Seniors Master Class (1 unit)
As a capstone to the Praxis Program experience, this course revisits the major themes of the core Praxis courses in order to analyze their meanings in an interdisciplinary way. Students learn and explore the deeper applications of the topics introduced to them in their Praxis course work at a time in which they can reflect about what they have learned in the context of their internship experience.

Interdisciplinary lectures from the Praxis associated faculty in political science, anthropology and psychology will include the topics of organizational culture, leadership, followership, cooperation, communication, decision-making and presentation. This course is a requirement for the seniors enrolled in the Praxis program.

The Praxis program is not a major program. It is designed for students entering their sophomore year and is available by application only. Students must apply online at college.artsci.wustl.edu/praxis by the middle of the second semester of their freshman year.

The Praxis program is not a minor program. It is designed for students entering their sophomore year and is available by application only. Students must apply online at college.artsci.wustl.edu/praxis by the middle of the second semester of their freshman year.

L62 Praxis 201 Leaders in Context
In this course we explore leadership both theoretically and practically. Focus is on understanding the concept of culture and how the cultural context informs a leader’s style and effectiveness. This course also is designed to help students develop insights about leadership practice through readings, discussions, conversations with leaders, and group projects based on fieldwork. Students examine a wide variety of leaders and leadership styles in order to better understand how leaders mobilize followers within the constraints of their particular settings. Students also analyze the creation of institutional identity within organizations and corporate culture and explore effective leadership practices within these settings, as well as analyzing some cross-cultural examples of leadership. This course is limited only to students enrolled in the Praxis program. Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA

L62 Praxis 207 Fluency in Sociotechnology
This course studies the fundamentals of technology and how that technology is effectively implemented in organizations and affects human interactions and processes. We consider much of Microsoft Office: Excel, Access and PowerPoint and how the presentation of data in these forms affects our decision-making processes and how humans interact using these technologies. We also develop web skills with a close look at how presentation of information and data in general functions or does not function based simply on how it is presented. This course is limited only to students enrolled in the Praxis program. Credit 2 units. A&S : SS A&S : IQ, SSC

This course seeks to add in-depth sophistication to the functional skills acquired in one of the Praxis core courses, Fluency in Sociotechnology. Through interdisciplinary reading and exercises, the course illustrates to students that not all visual messages are created equal even when they contain the same information. For example, the most commonly used presentation tool, Microsoft PowerPoint, is routinely used in ways that misrepresents the data it is meant to explain. Organizations often create confusing and complicated spreadsheets that produce
numerous and costly errors, the very thing the software is meant to eliminate. Furthermore, websites are regularly so difficult to navigate and use they unknowingly hemorrhage profits and customers, the two things the technology is designed to attract. In this course, students learn the social, psychological and organizational implications of using these technologies so they may become more skillful and effective practitioners. This course is limited only to students in the Praxis program. Prerequisite: Praxis 207 Fluency in Sociotechnology.
Credit 3 units. A&S : SS  A&S : IQ, SSC

L62 Praxis 285 Communication That Works
This course focuses on the communication forms and skills essential to contemporary living and working. Various forms of writing for different audiences and purposes: business letters, memorandums, proposals, reports, press releases, speeches as well as public speaking are practiced and critiqued. The use of technology common in public speaking is practiced and critiqued. The use of technology common in public presentations is expected. Course reading is supplemented with viewing and listening. Final grade is based on combination of quizzes, writing assignments and demonstration of speaking skills. This course is limited only to students enrolled in the Praxis program.
Credit 3 units. A&S : LA  A&S : IQ, HUM

L62 Praxis 286 Entrepreneurship and the Liberal Arts
It is a little-known truth that more entrepreneurs come out of Arts & Sciences than any other college. This course begins by exploring why this is so, examining in particular the creative and innovative qualities developed in liberal arts that are crucial to the success of the entrepreneur. We then move on to examine entrepreneurs in action, hearing from those in the field and reading of others, learning how the liberal arts proved instrumental in various ways to their development and ultimate success as entrepreneurs.
Credit 3 units. A&S : TH  A&S : IQ, HUM

L62 Praxis 300 Praxis Seniors Master Class
As a capstone to the Praxis Program experience, this course revisits the major themes of the core Praxis courses in order to analyze their meanings in an interdisciplinary way. Students learn and explore the deeper applications of the topics introduced to them in their Praxis course work at a time in which they can reflect about what they have learned in the context of their internship experience. Interdisciplinary lectures from the Praxis associated faculty in political science, anthropology, psychology, topics include organizational culture, leadership, followership, cooperation, communication, decision making and presentation. This course is a requirement for seniors enrolled in the Praxis Program.
Credit 1 unit. A&S : SS  A&S : IQ, SSC

L62 Praxis 367 Seminar in Positive Psychology
Reviews the relatively recent development in the field known as: “Positive Psychology.” Topics may include: happiness and life satisfaction, positive self-esteem, creativity, caring relationships, love (passionate and otherwise), empathy, optimism, ambition, moral character development, attachment, compassion, forgiveness, helping, work ethics and successful aging. Designed to take a sampling of those aspects of psychology that emphasize the positive side of human nature. Prerequisite: Psych 100B and at least one 300-level course.
Same as Psych 367
Credit 3 units. A&S : SS  A&S : IQ, SSC  FA : SSP

Psychology
Psychology allows students to examine in depth the study of behavior in the areas of:
- Aging and development
- Biological bases of behavior
- Clinical and abnormal psychology
- Cognition
- Cognitive neuroscience
- Learning and memory
- Personality
- Sensation and perception
- Social interactions

The psychology department at Washington University has particular strengths in the areas of:
- Aging
- Behavioral economics
- Human development
- Cognitive neuroscience
- Judgment and decision making
- Learning and operant conditioning
- Neuropsychology
- Personality and individual differences
- Adult psychopathology
- Sensory processes in vision and audition
- Social theories of self and social processes
- Human emotion

Opportunities for undergraduates include:
- Research involvement with faculty members
- Supervised internships with community service agencies
- Practicum in Applied Behavior Analysis
- Study abroad
- Supplemental concentrations within the major
Arts & Sciences

• Senior Honors
• Membership in Psi Chi, the national honor society in psychology

The Major in Psychology

Total units required: 28 units, of which at least 22 must be at the 300 level or above.

Required courses:
• Psych 100B Introduction to Psychology is a prerequisite for all upper-level courses (numbered 300 and above). Exemption from Psych 100B is possible in the following circumstances:
• Completion of an equivalent course transferred from another institution, if approved by the Director of Undergraduate Studies.
• An AP Psychology test score of 5 or IB score of 6 or 7. (N.B. AP or IB earns exemption from Psych 100B, but no credit.)
• Psych 300 Introduction to Psychological Statistics
• Psych 301 Experimental Psychology or Psych 3011 Experimental Psychology

Elective courses: At least one course from each of the following three categories:

Social/Developmental:
- Psych 315 Introduction to Social Psychology 3
- Psych 321 Developmental Psychology 3
- Psych 325 Psychology of Adolescence 3
- Psych 326 Introduction to the Psychology of Aging 3

Personality/Abnormal:
- Psych 314 Behavior Modification and Self-Management 3
- Psych 353 Psychology of Personality 3
- Psych 354 Abnormal Psychology 3
- Psych 357 Introduction to Clinical Psychology 3

Behavior, Brain and Cognition:
- Psych 330 Sensation and Perception 3
- Psych 3401 Biological Psychology 3
- Psych 360 Cognitive Psychology 3
- Psych 3604 Cognitive Neuroscience 3
- Psych 361 Psychology of Learning 3
- Psych 380 Human Learning and Memory 3
- Psych 433 Psychology of Language 3

No more than 6 units from the following categories may be used to satisfy the minimum requirements for the psychology major:
- Psych 225 Internship in Psychology
- Psych 235 Practicum in Applied Behavior Analysis: Autism/PDD
- Psych 500 Independent Study
- Psych 500A Independent Study for a Supplemental Concentration
- Psych 498 Study for Honors and Psych 499 Study for Honors
- Approved Study Abroad
- University College-approved psychology classes
- Cross-listed, not psychology home-based classes
- 100/200-level classes (other than 100B)
- Transfer classes (students transferring from another college, see below.)

Additional Information

Transfer Credit: If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the psychology department for their applicability toward the major. At least 15 units of course work in psychology must be completed at Washington University to earn a major.

Senior Honors: The primary goal of the Honors Program in Psychology is to provide students who have achieved a superior academic record the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:
- Overall and psychology GPAs # 3.65
- Completion of both Psych 300 and 301 (or 3011)
- Have an approved honors research adviser.

Supplemental Concentration in Psychology

To augment the broadly based Psychology major, the department offers Supplemental Concentrations for students who wish to engage more intensively with a specific area within the discipline. The Supplemental Concentration is meant as an enrichment of the major, and the classes for a concentration may not be used to fulfill the requirements of the major, nor can they be counted toward any other major or minor. In addition, to complete the Supplemental Concentration, students will have to undertake an approved research assistantship (Psych 500A Independent Study for a Supplemental Concentration), or approved internship, or practicum.

A concentration entails 9 to 10 units of course work over and above the minimum major requirements and includes an advanced, 400-level class. The research assistantship, internship or practicum that is a requirement for the concentration may count toward the 28 units required for the Psychology major.

The Supplemental Concentration will be a valuable experience for students planning on graduate study in psychology or related fields, or for those who have a particular interest or want to gain expertise in one of the approved concentrations. Each concentration will have a member of the faculty as contact person to meet with and advise students in the concentration.

There are at present six Supplemental Concentrations, listed below.

Cognition in Children — This concentration allows students to acquire deeper knowledge of cognition and its development in the first few years of life. The courses for the concentration consider child development more generally and then explore in more depth the early development of cognitive, conceptual
and social-cognitive abilities. Adviser/coordinator: Professor Lori Markson.

Course work required: Psych 321 Developmental Psychology

Electives (must include two classes, at least one of which is at the 400 level):

- Psych 4046 Developmental Neuropsychology 3
- Psych 4591 The Development of Social Cognition 3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Pascal Boyer, Sandra Hale, Lori Markson, Desiree White.

Cognitive Neuroscience — This concentration allows students to acquire deeper knowledge of the relation between mind and brain. The courses for the concentration consider the neurobiological basis for psychological functions at a more general level, and then explore in greater depth specialized topics relating to how higher cognitive processes, such as memory, attention, perception and emotion, emerge from brain function. Adviser/coordinator: Professor Todd Braver.

Course work required:

- Psych 3401 Biological Psychology 3
  or Psych 344 Principles of the Nervous System

Electives (must include two classes, at least one of which is at the 400 level):

- Psych 3604 Cognitive Neuroscience 3
- Psych 374 Drugs, Brain and Behavior 3
- Psych 4413 Advanced Cognitive Neuroscience 3
- Psych 4450 Functional Neuroimaging Methods 3
- Psych 488 The Cognitive Neuroscience of Film 3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Deanna Barch, Todd Braver, Ian Dobbins, Denise Head, Kathleen McDermott, Jeff Zacks.

Reading, Language and Language Acquisition — This concentration provides students with a deep and broad knowledge of linguistic development. The courses look in-depth at the development of written and spoken language. Adviser/ coordinator: Professor Rebecca Treiman.

Course work required: Ling 170D Introduction to Linguistics

Electives (must include two classes, at least one of which is at the 400 level):

- Psych 358 Language Acquisition 3
- Psych 433 Psychology of Language 3
- Psych 4351 Reading and Reading Development 3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Rebecca Treiman, Brett Kessler, David Balota, Lori Markson, Mitchell Sommers.

Lifespan Development — Many introductory courses in Developmental Psychology focus on changes that occur from birth to adolescence. The supplemental concentration in Lifespan Development provides students with an understanding of the cognitive and physiological changes that occur over the lifespan, with a primary focus on older adulthood. A major goal of the concentration is to provide students with an understanding of the similarities and differences in development at different stages of the lifespan. Adviser/coordinator: Professor Mitchell Sommers.

Course work required:

- Psych 326 Introduction to the Psychology of Aging 3
- Psych 427 Social Gerontology 3

Electives (must include the following course):

- Psych 321 Developmental Psychology 3

Research mentorship or internship experience: Students can complete this aspect of the concentration with either a prior approved research mentorship or an approved internship related to older adults. Successful completion of a paper is required in either case. Relevant faculty for research mentorship: Mitchell Sommers, David Balota, Sandra Hale, Denise Head, Brian Carpenter. Possible internships: Work in an assisted-living facility or other community-based program designed to assist older adults. Other internships are available; see Dr. Brian Carpenter for opportunities.

Experimental Psychopathology — This concentration allows students to acquire more advanced knowledge of the ways in which psychologists study mental disorders. Current research has demonstrated the importance of integrating psychological and biological variables in understanding the classification, etiology and treatment of a wide variety of mental disorders, including schizophrenia, mood disorders, anxiety disorders, substance use disorders and eating disorders. Students who pursue this concentration will develop a broadly based appreciation for conceptual and methodological issues that are central to research in psychopathology. Adviser/coordinator: Professor Deanna Barch.

Course work required: Psych 354 Abnormal Psychology

Electives (must include two classes, at least one of which is at the 400 level):

- Psych 345 Genes, Environment and Human Behavior 3
- Psych 374 Drugs, Brain and Behavior 3
- Psych 4541 Personality and Psychopathology 3
- Psych 4557 Biopsychosocial Aspects of Eating Disorders and Obesity
Psych 4765 Biological Basis of the Major Mental Disorders 3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Deanna Barch, Tom Oltmanns, Denise Willifey, Tom Rodebaugh.

Personality and Individual Differences — This concentration allows students to acquire deeper knowledge of how and why individuals differ from one another and the ways in which individual (e.g., personality, self) and group differences (e.g., gender) influence behavior, emotion, experience, identity and psychopathology. The core course for the concentration (Psych 353) considers personality more generally. The seminars explore in depth specific aspects of personality and individual differences, including biological bases of individual differences (i.e., genetics), the interpersonal processes associated with personality and personality judgment, individual differences in self and identity, group differences and personality pathology. Adviser/coordinator: Professor Simine Vazire.

Course work required: Psych 353 Psychology of Personality

Electives (must include two classes, at least one of which is at the 400 level):

Psych 3091 Lesbian, Gay, Bisexual Identity Development 3
Psych 3290 Psychology of Women 3
Psych 4361 Psychological Perspectives on the Self 3
Psych 4535 Personality Judgment: How We Perceive Ourselves and Others 3
Psych 4541 Personality and Psychopathology 3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Simine Vazire, Randy Larsen, Michael Strube, Tom Oltmanns.

The Minor in Psychology

Units required: 15

Required course: Psych 100B Introduction to Psychology.

Elective courses:

Four additional courses (i.e., a minimum of 12 units of additional course work) in Psychology, all of which must be at the 300-level or above.

Additional Information

No more than 3 units of a previously approved cross-listed course originating outside the Department of Psychology, an approved psychology course taken in University College, an approved psychology course taken at another university, or an independent study-type course (e.g., Psych 500) may count toward the minor. (Transfer students must complete at least 9 advanced units of home-based Psychology courses at Washington University.)

For those who have a broad or general interest in psychology, we recommend taking several courses from the three core areas (i.e., Social/Developmental; Personality/Abnormal; and Behavior, Brain and Cognition).

For those students who want to concentrate in a more specialized area, courses can reflect such specialization. For example, a student interested in the helping professions or counseling may wish to select from such courses as Psych 353 Psychology of Personality, Psych 354 Abnormal Psychology, Psych 361 Psychology of Learning, Psych 321 Developmental Psychology and Psych 314 Behavior Modification and Self-Management. A student wishing to pursue a specialization in experimental psychology/neuroscientific bases of behavior might select from such classes as Psych 3401 Biological Psychology, Psych 361 Psychology of Learning, Psych 330 Sensation and Perception, Psych 360 Cognitive Psychology and Psych 3604 Cognitive Neuroscience and consider doing Independent Study (Psych 500).

L33 Psych 100B Introduction to Psychology

A survey and analysis of concepts, theory and research covering the areas of learning, memory, social, abnormal, clinical, physiological and sensory psychology. This is a general survey course designed to introduce students to the diversity of areas, approaches and theories that comprise the study of mind and behavior. Psych 100B is required of all majors and is prerequisite to all upper-level courses in Psychology. Open to freshmen. Note: For students enrolled in Psych 100B who are interested in exploring a few areas of Psychology within a seminar format, see the companion course, Psych 102 Seminar: Introduction to Psychology. Credit 3 units. A&S: SS A&S: IQ, SSC AR: SSP BU: BA FA: SSP

L33 Psych 102 Seminar: Introduction to Psychology

This seminar enables students enrolled in Psych 100B Introduction to Psychology to explore in greater depth several of the ideas and concepts in contemporary psychology. Open to freshmen who are concurrently enrolled in or have completed Psych 100B. Also open to sophomores who are concurrently enrolled in Psych 100B. Sections are limited to 15 students. Credit 1 unit. A&S: SS A&S: IQ, SSC AR: SSP FA: SSP

L33 Psych 105 Psychology of Young Adulthood: College Years

This course covers selected topics relevant to the developmental, social, personal and cognitive issues confronting young adults during their college years. Material is drawn mainly from the field of psychology, and the emphasis is on the scientific basis of concepts and on empirically supported
strategies for growth and development. The knowledge gained may contribute to academic success, personal development and a more rewarding social and academic experience over the course of college and beyond. Freshman standing, entering first-year undergraduates only. Credit 1 unit. AR : SSP

L33 Psych 106 The Science of Effective Study Strategies
You have now spent at least 12 years in school, studying for exams and/or tests (for most of you, that’s most of your lifetime). What can current research tell us about how well we study, whether we make efficient study decisions, and whether our study strategies are effective? This course offers an overview of current research from cognitive and educational psychology on effective study strategies. Throughout this course, students are encouraged to develop their understanding of scientific research and evaluate evidence supporting study strategies. Prerequisite: open only to freshmen and sophomores. Credit/no credit only. Credit 1 unit. A&S : SS A&S : IQ, SSC AR : SSP

L33 Psych 109 Research Seminar in Psychology
Weekly presentations by various members of the psychology faculty; introduces students to research areas and current issues. Attendance at all lectures required. Open to freshmen and sophomores only. Prerequisite: Psych 100B. Credit/no credit only. Credit 1 unit. A&S : SS A&S : IQ, SSC FA : SSP

L33 Psych 219 The Infant Mind
What goes on inside the mind of an infant? Descartes argued that the infant was entirely bound by sensation; thus, to think like a baby was to not think at all. Over the past few decades, however, research has revealed that the mind of the infant is abuzz with activity, capable of quickly learning astonishing amounts of information in a relatively short time. In this course we explore different topics concerning the inner workings of the infant mind. We cover topics such as imagination, language, memory, emotions and morality. This course is open to students from all majors, but Psych 100B is highly recommended. Enrollment is restricted to 24 sophomores or by permission of the instructor. Credit 3 units. A&S : SS A&S : IQ, SSC EN : S

L33 Psych 221 Freshman Seminar: Introduction to Memory Studies
This course focuses on memory not only as an individual phenomenon but also as the basis for the transmission of culture and the construction of collective identity. We survey such topics as experimental methods and findings in the study of individual memory; questions of accuracy and vividness of memory and witness reports; repressed memories; transmission of cultural norms and identity through narratives; shared historical memories; individual trauma and historical upheaval; revision of the past and political usage of collective memory. Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA

L33 Psych 225 Internship in Psychology
An opportunity to gain supervised, applied experience in a nonacademic, community service agency. For a description of prerequisites, goals, agency selection, registration policies and course requirements, obtain a copy of A Guide to Internships in Psychology from the Psychology department office. In addition to work at their internship site, students are required to meet regularly with the internship coordinator. This course can be taken only once. CBTL course. Credit/no credit only. Credit 3 units. FA : SSP

L33 Psych 234 Introduction to Speech and Hearing Sciences and Disorders
Same as Educ 234
Credit 3 units.

L33 Psych 235 Practicum in Applied Behavior Analysis: Autism/PDD
An opportunity to be trained in applied behavior analytic techniques and to work with a child with autism/pervasive developmental disorder. Training and supervision are arranged and coordinated by the family of the child and their consultant. To receive credit, students must undertake a year’s work with the child, complete the minimum number of hours of training and therapy, and attend regular therapy meetings. In addition, students must meet with the practicum coordinator for discussion of assigned readings and presentations on autism and therapy. Completion of a paper also is required. For further information and petition form, pick up the Practicum brochure from the department. This course can be taken only once for credit. Credit/no credit only. Enrollment through the practicum coordinator only. CBTL course. Credit 3 units. FA : SSP

L33 Psych 300 Introduction to Psychological Statistics
Descriptive statistics including correlation and regression. Inferential statistics including nonparametric and parametric tests of significance through two-way analysis of variance. Course emphasizes underlying logic and is not primarily mathematical, although knowledge of elementary algebra is essential. Prerequisite: Psych 100B.
Credit 3 units. A&S : NS, QA A&S : IQ, NSM, AN FA : NSM

L33 Psych 301 Experimental Psychology
This course provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and interpretation of results. Topics include experimental design and control, library
L33 Psych 3011 Experimental Psychology
Psych 3011 is limited to students who have not taken Psych 300 and want to enroll in Psych 300 and Experimental Psychology concurrently. Therefore, students who enroll in Psych 3011 also must register for Psych 300. Psych 3011 fulfills the Psych 301 requirement for the major. Topics in the two courses (Psych 300 and Psych 3011) are coordinated in order to integrate the concepts from Statistics course with those from Experimental Psychology course. Experimental Psychology provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation while the laboratory component provides an introduction to a range of psychological phenomena through hands-on experience in experimentation. Each student also completes an independent research project. Limited to 15 students per section. Prerequisites: Psych 100B and 300. Credit 4 units. A&S: NS A&S: IQ, NSM BU: BA FA: NSM

L33 Psych 304 Educational Psychology
A course in psychological concepts relevant to education. Organized around four basic issues: how humans think and learn; how children, adolescents and adults differ in their cognitive and moral development; the sense in which motivation and intention explain why people act as they do; how such key human characteristics as intelligence, motivation and academic achievement can be measured. Prerequisite: sophomore standing. Offered fall and spring semester. Same as Educ 304 Credit 3 units. A&S: SS A&S: IQ, SSC BU: BA FA: SSP

L33 Psych 3091 Lesbian, Gay, Bisexual Identity Development
Examination of sexual orientation and identity. Topics: historical perspectives, gender socialization, identity formation across the life span, cultural prejudices, the liberation movement, and recent legal changes affecting stigmatized minorities. Prerequisite: Psych 100B. Credit 3 units. A&S: SS, SD A&S: IQ, SSC, SD BU: BA FA: SSP

L33 Psych 314 Behavior Modification and Self-Management
Provides an overview of behavior modification and its applications for behavior change in various personal and social contexts. An important focus is on how behavioral tools can be used to enhance the personal change process leading to effective self-improvement. Prerequisite: Psych 100B. Enrollment limited to 15. Credit 3 units. A&S: SS A&S: IQ, SSC BU: BA FA: SSP

L33 Psych 315 Introduction to Social Psychology
Introduction to the scientific study of individual behavior in a social context. Topics: person perception; stereotyping and prejudice; attitudes; memory; and political psychology, among other issues. Prerequisite: Psych 100B. Credit 3 units. A&S: SS A&S: IQ, SSC BU: BA FA: SSP

L33 Psych 3195 Abnormal Child Psychology
This course familiarizes students with current perspectives on the nature, causes, assessment, treatment and prevention of child psychiatric disorders and related family dysfunction. Theoretical perspectives and research findings are discussed pertaining to anxiety, depression, conduct disorder, attention deficit/hyperactivity disorder, autism, learning impairments and parent-child conflict. Prerequisite: Psych 100B. Credit 3 units. A&S: SS A&S: IQ, SSC BU: BA FA: SSP

L33 Psych 321 Developmental Psychology
This course concentrates on the cognitive and social development of the person from conception to adolescence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior. Prerequisite: Psych 100B. Credit 3 units. A&S: SS A&S: IQ, SSC BU: BA FA: SSP

L33 Psych 323 Play and Development
An examination of current research and theory in play, in development and education, from infancy through the early school years. Topics include play and the development of language, social skills, creativity and cognitive abilities. We also examine the uses of play in educational contexts, focusing on preschool and the early primary grades. Prerequisite: Psych 321 or Educ 304. Same as Educ 337 Credit 3 units. A&S: SS A&S: IQ, SSC BU: BA
L33 Psych 3242 Introduction to African-American Psychology
This course provides an introduction to the experiences of African Americans from a psychological perspective. Throughout the course, we consider a range of theoretical and methodological approaches that scholars have developed to conceptualize the thoughts, styles and behaviors of African Americans. The course begins with an overview of these theories, methodologies and frameworks. The second part of the course is devoted to exploring psychological research around pertinent topics in the field such as racism and discrimination, gender, achievement and schooling, kinship and family, racial identity, religion and spirituality, and mental health. Finally, we conclude the course with discussions of current topics, controversies and recent advances in African-American psychology. Prerequisite: Psych 100B or permission of instructor.
Same as AFAS 3242
Credit 3 units.

L33 Psych 325 Psychology of Adolescence
A broad introduction to adolescence as a developmental period of transition and change. The major topics include the fundamental changes of adolescence; the context of adolescence; and processes of psychological development. Prerequisite: Psych 100B.
Credit 3 units.

L33 Psych 326 Introduction to the Psychology of Aging
Study of the processes of aging in the individual in terms of their behavioral effects. Age changes in biological functions, sensation, perception, intelligence, learning, memory and creativity are studied to understand the capacities and potentials of the mature and older person. Limited to 20 students. Prerequisite: Psych 301.
Credit 3 units.

L33 Psych 3290 Psychology of Women
Same as WGSS 329
Credit 3 units.

L33 Psych 330 Sensation and Perception
What's involved in seeing and hearing? This course covers perception from the physical stimuli (light and sound) that impinge upon the sensory receptors through the higher-level percepts that the stimuli generate. Demonstrations and illusions are used as we learn about the anatomy and physiology of the sensory systems and study the brain mechanisms that are involved in vision and audition. Prerequisite: Psych 100B.
Credit 3 units.

L33 Psych 3401 Biological Psychology
An introduction to biological mechanisms underlying behavior. Topics include the physiology of nerve cells; anatomy of the nervous system; control of sensory and motor activity, arousal and sleep; motivation; and higher mental processes. Prerequisite: Psych 100B.
Credit 3 units.

L33 Psych 344 Principles of the Nervous System
Prerequisite: Psych 100B.
Same as Biol 3411
Credit 3 units.

L33 Psych 345 Genes, Environment and Human Behavior
This class examines how genetic influences impact various dimensions of human behavior, ranging from personality to clinical disorders. Topics covered include methods used to study genetic influence, how genetic predispositions interact with the environment, and ethical implications of genetic research in psychology. Prerequisite: Psych 100B.
Credit 3 units.

L33 Psych 347 Environmental Psychology
Explores relations between people and their physical and social environments. Topics include interactions between human behavior and toxins, habitat destruction/species extinction, exhaustion of fossil fuels, and climate change as well as environmental contributors to psychopathology. The course examines the influence of space on human behavior and the design of homes, work areas, educational settings and urban environments. Prerequisite: Psych 100B.
Credit 3 units.

L33 Psych 3501 Psychotherapy: Introduction to Practice and Research
This is an introductory course in psychotherapy: The treatment of psychological problems through the application of interventions grounded in psychological theory and focusing on behavior or mental processes. Students become familiar with the more popular schools of psychotherapy, including their historical context, characteristic techniques, theoretical underpinnings and current research support. Students also gain an appreciation of the problems and solutions in researching psychotherapy, as well as emerging variations on psychotherapy procedures. Prerequisite: Psych 100B.
Credit 3 units.

L33 Psych 353 Psychology of Personality
Review of basic theoretical orientations to the understanding of personality and complex human behavior. Overview of related techniques, procedures and findings of personality.
assessments and measurements in personality research. Discussion of critical issues in evaluation of personality theories. Prerequisite: Psych 100B.
Credit 3 units. A&S : SS A&S : IQ SSC BU : BA FA : SSP

L33 Psych 354 Abnormal Psychology
This is an introductory course in psychopathology or the scientific study of mental health disorders. The course includes definitions, theories and classifications of abnormal behavior. Content focuses on symptoms, classification, prevalence, etiology and treatment of mental health disorders, including mood, anxiety, eating, schizophrenia spectrum, substance use and personality disorders. Prerequisite: Psych 100B.
Credit 3 units. A&S : SS A&S : IQ SSC BU : BA FA : SSP

L33 Psych 356 Introduction to Forensic Psychology
This course is an introduction to the interaction between psychology and the legal system. The contribution of psychology to such legal areas as family law, juvenile delinquency, criminal cases, law enforcement and correctional psychology is surveyed. Topics covered include domestic violence, child abuse, personal injury, eyewitness testimony, insanity, sex offenders and psychopaths. Legal standards regarding insanity, civil commitment and expert testimony are reviewed. We also focus on the emerging contributions of neuroscience to the field of forensic psychology. Prerequisite: Psych 100B.
Credit 3 units. A&S : SS A&S : IQ SSC BU : BA

L33 Psych 357 Introduction to Clinical Psychology
A survey of clinical psychology. Emphasis is placed on historical and recent developments in the field (e.g., managed care), as well as the consideration of the roles, functions and techniques of clinical psychologists including psychological testing and psychotherapy. Prerequisites: Psych 100B and either Psych 353 or Psych 354.
Credit 3 units. A&S : SS A&S : IQ SSC BU : BA EN : S FA : SSP

L33 Psych 358 Language Acquisition
This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include: biological bases of language development; development of phonology, syntax and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisite: Psych 100B and Ling 170D.
Credit 3 units. A&S : SS A&S : IQ SSC BU : BA FA : SSP

L33 Psych 358W Language Acquisition
This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include: biological bases of language development; development of phonology, syntax and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisites: Psych 100B and Ling 170D and junior or senior standing. Writing-intensive.
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI EN : S

L33 Psych 360 Cognitive Psychology
Introduction to the study of thought processing from an information-processing approach. Emphasis on theoretical models grounded in empirical support. Topics include pattern recognition, attention, memory, reasoning, language processes, decision making and problem solving. Prerequisite: Psych 100B.
Credit 3 units. A&S : NS A&S : IQ, NSM BU : SCI FA : NSM

L33 Psych 3604 Cognitive Neuroscience
A general introduction to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis is placed on how emerging methods and approaches from both neuroscience and cognitive psychology have been integrated to yield new insights into the organization and structure of higher mental processes. Topics include perception, attention, memory, language and executive control. Prerequisite: Psych 100B.
Credit 3 units. A&S : NS A&S : IQ, NSM BU : SCI FA : NSM

L33 Psych 361 Psychology of Learning
Basic learning processes in animals, such as conditioning, reinforcement, punishment and constraints on learning. Comparisons and interactions between classical and operant conditioning. Consideration given to learning theorists and theories, along with applications from the laboratory to the “real world.” Prerequisite: Psych 100B.
Credit 3 units. A&S : NS A&S : IQ, NSM BU : BA FA : NSM

L33 Psych 361A Psychology of Learning: Laboratory
This laboratory course is a supplement to the Psych 361 Psychology of Learning class. Students gain firsthand experience, via a virtual rat, of principles and procedures related to the acquisition and maintenance of behavior. Weekly lab meetings introduce Pavlovian and operant principles, which are then implemented as laboratory exercises with the virtual rat. Concurrent enrollment in Psych 361 required.
Credit 1 unit. A&S : NS A&S : IQ, NSM

L33 Psych 3645 Understanding Emotions
Emotions shape and are shaped by our subjective experiences, physiology, behaviors, cognitions, social interactions and health. Their complexity and significance make the study of emotions particularly exciting and challenging. This course offers an overview of theory and research on emotions with content stretching across psychological disciplines, including personality,
social, clinical, developmental and neuropsychology. Course content includes definitions of emotions, physiological changes associated with emotions, and individual differences in emotional experience. The course also examines how culture, cognitions and relationships shape and are shaped by emotions and how emotions are related to physical and mental health. Prerequisite: Psych 100B.
Credit 3 units. A&S : SS A&S : IQ, SSC EN : S

L33 Psych 366 Psychology of Creativity
Same as L12 Educ 366.
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L33 Psych 367 Seminar in Positive Psychology
Reviews the relatively recent development in the field known as “Positive Psychology.” Topics may include: happiness and life satisfaction, positive self-esteem, creativity, caring relationships, love (passionate and otherwise), empathy, optimism, ambition, moral character development, attachment, compassion, forgiveness, helping, work ethics and successful aging. Designed to take a sampling of those aspects of psychology that emphasize the positive side of human nature. Prerequisites: Psych 100B and at least one 300-level course.
Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

L33 Psych 374 Drugs, Brain and Behavior
This course reviews information pertaining both to medications used to treat psychiatric disorders and to psychoactive drugs of abuse. By learning principles of pharmacology and mechanisms of action of these agents, students develop an enhanced knowledge of the brain mechanisms underlying abnormal human behavior. Prerequisites: Psych 100B and one of the following: Psych 354 or 3401 or 344.
Credit 3 units. A&S : NS A&S : IQ, NSM BU : SCI

L33 Psych 380 Human Learning and Memory
A survey of issues related to the encoding, storage and retrieval of information in humans. Topics include memory improvement strategies, people with extraordinary memories, memory illusions and distortions, among other topics. Limited to 25 students. Prerequisite: Psych 100B.
Credit 3 units. A&S : NS A&S : IQ, NSM BU : BA FA : NSM, SSP

L33 Psych 399 Living, Dying and Death: A Biopsychosocial Approach to Understanding the End of Life
This survey course examines dying and death from biological, psychological and social perspectives. Topics include theoretical and research approaches to studying dying and death; historical and cross-cultural attitudes; psychological understanding and coping with death over the life span; the process of dying and definitions of death; health care professionals and treatment approaches for the dying; assisted death and other ethical/legal issues, grief and bereavement, mass tragedy and public death, and planning for death. Prerequisite: Psych 100B.
Credit 3 units. A&S : SS A&S : IQ, SSC

L33 Psych 4046 Developmental Neuropsychology
Development of the brain and associated changes in cognitive abilities are discussed, with an emphasis on recent research that integrates the theoretical perspectives of cognitive psychology and neuropsychology. Discussion focuses on early development and disorders affecting the brain such as cerebral palsy, sickle cell disease and autism. Prerequisite: Psych 321, Psych 360, Psych 3604 or Psych 3401.
Credit 3 units. A&S : NS, WI A&S : IQ, NSM, WI FA : NSM

L33 Psych 4082 Senior Seminar in Linguistics
This semester, the Senior Seminar in Linguistics surveys the writing systems of the world from both psychological and linguistic perspectives. Special attention is paid to how different writing systems represent the properties of words and to how different modes of representation affect the speed and accuracy with which writing systems are learned and used. This semester counts toward the senior capstone requirement in Linguistics or toward the Reading, Language and Language Acquisition supplemental concentration in Psychology. Prerequisites: Psych 100B or Ling 170D, and an upper-level course in linguistics or developmental or cognitive psychology; and junior, senior or graduate standing.
Same as Ling 495
Credit 3 units. A&S : SS A&S : IQ, SSC

L33 Psych 413 Contemporary Topics in Social Psychology
Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315.
Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

L33 Psych 4135 Human Behavior in Extreme Situations
This course familiarizes students with psychological theory and research that attempts to answer the question: What are the protective factors that help people who find themselves in an extreme situation respond constructively to the stress they must cope with? Extreme situations are characterized by conditions that force individuals and groups to adapt themselves involuntarily, entirely and with the greatest of speed. Readings are drawn from two sources (a) literature that describes extreme situations and human response to the trauma they cause (e.g., prisoner behavior in Nazi concentration camps, brainwashing of American soldiers during the Korean War, and response to a natural disaster and an airliner crash), and (b) research on potentially protective psychological variables such as coping and...
resilience. Prerequisites: junior or senior standing and 6 hours of advanced, home-based Psychology course work. Enrollment limited to 17.
Credit 3 units. A&S : SS A&S : IQ, SSC

L33 Psych 4182 Perception, Thought and Action
This course focuses on current topics in visual perception, visual attention, eye movements and sensory-motor behavior. Readings consist of recent journal articles. Class meetings emphasize presentation and discussion of the material in the readings. Prerequisite: previous course work in Cognitive Psychology, Experimental Psychology or Perception.
Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L33 Psych 4227 The Psychology of Close Relationships
This course examines close relationships from a scientific perspective. The course focuses on intimate relationships but also touch on friendships and family relationships. The objective of this course is to introduce you to the scientific perspective of close relationships. You learn how research psychologists apply the scientific method of data collection and analysis to investigate how people experience and think about relationships. We explore questions such as: Why are people attracted to some people but not others? How do relationships develop over time? How does each person’s personality influence the trajectory of a relationship? How do external factors (e.g., social norms, stress, life events) influence relationships? How do gender and sexual orientation influence people’s experiences in romantic relationships? Prerequisites: Psych 100B and Psych 301.
Credit 3 units. A&S : SS A&S : IQ, SSC

L33 Psych 427 Social Gerontology
This course provides an introduction to aging and growing old, from an interdisciplinary perspective. Specific attention is paid to demographics, physical health and illness, mental health, interpersonal relations, work issues, living arrangements, ethics, and death and dying. Prerequisites: junior or senior standing and completion of 6 advanced units in Psychology, CBTL course.
Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

L33 Psych 4302 Cognitive Psychology Applied to Education
This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning and comprehension with special focus on areas, theory and research that have potential application to education. Thus, the course provides selective coverage of theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes are explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. Prerequisites: junior/senior status; 9 units in Psychology and Psych 100B or junior/senior status; 9 units in Education and Psych 100B.
Credit 3 units. A&S : SS A&S : IQ, SSC

L33 Psych 4305 Psychological Science: Fact and Fiction
Skepticism analysis of psychological science as practiced and popularized in the media. Analysis of discrepancies between media and scientific claims regarding areas such as repressed memory, brain imaging, heritability and psychotherapy. Additional examination of scientific career demands such as peer review, journal publication and research funding. These topics are interwoven with a review of common errors in reasoning particularly with respect to probabilistic reasoning and the public misperception of the practice and principles of scientific psychology. Prerequisite: junior or senior standing and completion of 6 advanced units in psychology.
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI

L33 Psych 433 Psychology of Language
This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B.
Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

L33 Psych 4351 Reading and Reading Development
This seminar surveys current research on reading and spelling skills and their development. Students read and discuss journal articles that examine the cognitive and linguistic processes involved in reading, reading disorders and educational issues. Prerequisite: permission of instructor and previous course work in experimental psychology or psychology of language.
Credit 3 units. A&S : SS A&S : IQ, SSC

L33 Psych 4361 Psychological Perspectives on the Self
Historical and contemporary theories related to the self in social psychology. Emphasis on contemporary research and a focus on the self as a construct central to understanding important social phenomena. Topics include definitions and measurement of the self; motivational implications of the self for impression management, ability appraisal, self-regulation and social inference. Prerequisites: Psych 100B and Psych 315.
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI FA : SSP
L33 Psych 4408 Trauma and Memory
A thorough investigation of the effects of trauma on memory in both individuals and collective groups. Topics include flashbulb memories; forgetting and repression; post-traumatic stress and memory; and effects of trauma on individual and group identity. Prerequisites: Psych 100B and 6 units of advanced-level psychology or anthropology course work. Credit 3 units. A&S : SS A&S : IQ, SSC

L33 Psych 4413 Advanced Cognitive Neuroscience
An intensive, case-study based approach to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis is placed on understanding and evaluating cutting-edge neuroscience research that has yielded new insights into the organization and structure of higher mental processes. Students develop critical thinking and writing skills via a strong class participation component and a writing intensive format. Topics include perception, attention, memory, language, emotion and executive control. Writing-Intensive. Declared Psychology majors are given priority over others to enroll. Prerequisites: Psych 100B and either Psych 3401 or Psych 344/Biol 3411 or Psych 3604. Credit 3 units. A&S : NS, WI A&S : IQ, NSM, WI

L33 Psych 4450 Functional Neuroimaging Methods
This course is intended for students wishing to become sophisticated producers or consumers of functional neuroimaging data. Emphasis is on extracting the most information from neuroimaging techniques toward the goal of answering psychologically motivated questions. A number of issues relating to neuroimaging methodology are covered, including technical principles; acquisition options; potential sources of artifact; experimental design; software tools; and analytical techniques. Class approach is hands-on, with students gaining experience in actually acquiring and working with neuroimaging data. Prerequisite: graduate standing or permission of instructor. Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

L33 Psych 4535 Personality Judgment: How We Perceive Ourselves and Others
This course examines how we form judgments of people’s personalities. The central question is the accuracy of personality judgments. The readings examine theory and research concerning this topic, and class discussion focuses on critical evaluations of the readings and generation of new research questions. This course examines personality judgment from a scientific perspective and addresses such questions as: How should accuracy be measured? What do you have to know about a person to judge their personality accurately? Does accuracy increase with greater acquaintance? Who makes a good judge of personality? How well do relationship partners know each others’ personalities? How is judging our own personality similar to or different from judging others’ personalities? How accurate are our perceptions of our own personality? How can the accuracy of personality judgment be improved? Prerequisites: at least 6 units of home-based Psychology courses and Psych 353. Credit 3 units. A&S : SS A&S : IQ, SSC

L33 Psych 4541 Personality and Psychopathology
This course is an advanced seminar in the study of personality disorders. It covers a range of conceptual and methodological issues involved in scientific efforts to understand ways in which pathological personality features disrupt people’s lives. Students learn about the similarities and distinctions between normal and pathological features of personality as well as the role that personality may play with regard to the causes and treatment of other kinds of mental disorder. A laboratory component of the class focuses on the development of practical skills in conducting research interviews designed to elicit information about personality and social adjustment. Prerequisites: Psych 354, junior or senior standing, and permission of the instructor. Credit 3 units. A&S : SS A&S : IQ, SSC

L33 Psych 4557 Biopsychosocial Aspects of Eating Disorders and Obesity
The aim of this seminar course is to examine the epidemiology, etiology, prevention and treatment of body image, eating disorders and obesity. An emphasis is placed on understanding the characteristic symptoms of excessive dieting, body image disturbance and binge eating, not only as formal psychiatric syndromes but as a representation of dysregulatory processes reflecting social-cultural, psychological and biological disturbances. Students also learn about the clinical characteristics, medical sequelae and physical aspects of eating disorders and obesity. Prerequisites: Psych 100B and junior/senior standing plus 6 units of advanced home-based psychology. Credit 3 units. A&S : SS A&S : IQ, SSC

L33 Psych 4591 The Development of Social Cognition
This course explores what is known about the development of social cognition. Our starting point is infants’ capacity to navigate the social world, for instance, detecting agents, identifying social partners and learning from those around us. We consider what happens when the human ability to reason about others breaks down (as with autism), and what this can teach us about typical development. Each week we cover one topic and a related set of readings. Class meetings are devoted to active discussion and debate about the content of the readings. Students are required to write a weekly reaction paper to the readings to promote class discussion and give an in-class presentation on a novel research topic at the end of the semester. Graduate students may have additional course requirements. Prerequisites: Psych 100B and one of the following: Psych 315 or 321 or 360. Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA
L33 Psych 4625 Autobiographical Memory
This course investigates how people create and remember their personal life histories, with an emphasis on empirical studies within the cognitive tradition. Possible topics include childhood amnesia, false memories, emotional memories, the role of motivation in remembering, and how personal events are represented in memory. Prerequisite: Psych 360 or Psych 301 or Psych 380.
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI FA : SSP

L33 Psych 4651 History and Modern Systems of Psychology
An introduction to the history of psychology. This course begins with a brief consideration of forces leading to the development of psychology in the mid-1800s. It then examines the birth of modern psychology in Germany, and the schools of psychology that emerged early in the 20th century. Newer orientations and ideas are considered in the final segment of the course. We also consider the impact of psychology on American public life during the 20th century. Prerequisite: Psych 100B, junior or senior standing and 6 units of advanced home-based psychology courses or permission of the instructor.
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI FA : SSP

L33 Psych 4702 Current Debates in Psychology
In this seminar we debate issues of current controversy in psychology. Topics range from perception (Can subliminal messages affect behavior?) to development (Do children in daycare develop differently than children cared for at home?) to mental illness (Is road rage a real psychological illness?). Discussions are based on readings of primary research and review articles, and are augmented by written assignments. Prerequisite: completion of 6 units of advanced home-based Psychology courses.
Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L33 Psych 4745 Genes, Brain and Behavior: Pathways to Psychopathology
This seminar introduces students to emerging methods and recent empirical literature evaluating links between genes, brain and behavior, that is beginning to illuminate specific biological pathways shaping risk for and the emergence of psychopathology. In particular, the course focuses on the design, analysis and interpretation of multimodal research (e.g., fMRI, PET, EEG, pharmacology, molecular genetics, environmental assessment/manipulation) examining the biological underpinnings of behavioral traits relevant to psychopathology. Seminar readings are primary journal articles, reviews and book chapters. Prerequisite: Psych 3401 (or equivalent).
Credit 3 units. A&S : SS A&S : IQ, SSC

L33 Psych 4765 Inside the Disorderd Brain: Biological Basis of the Major Mental Disorders
How do subtle disturbances in brain circuits lead to abnormal behavior and psychopathology? This course provides students with a working knowledge of our rapidly evolving understanding of brain circuits that create order in our social, emotional and cognitive worlds, and how disorder within these circuits leads to a broad range of psychopathology including depression, anxiety, phobias, PTSD, OCD, addiction, schizophrenia, psychopathy and violence. Prerequisite: Psych 3401, graduate standing, or permission of instructor.
Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L33 Psych 488 The Cognitive Neuroscience of Film
To understand complex events in real life depends on perception, action and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar uses results from psychology and neuroscience to try to better understand the experience of a movie viewer, and uses theory and practice to explore psychological hypotheses about perception. Prerequisite: Psych 360 or 3604 or 4604, or graduate standing in Psychology.
Credit 3 units. A&S : NS A&S : IQ, NSM

L33 Psych 4891 The Science and Politics of Testing in the United States
Why do tests permeate American Society? Tests have been integral to the decision-making process in many venues of American culture—e.g., immigration opportunities, voting rights, college admissions, workforce considerations, special education placement, educational reform, and graduation requirements. The credibility of these decisions depends upon the claim that a particular test is a scientific instrument and relevant to the decision-making process. This claim is worthy of study. The purpose of this course is twofold. The first purpose is to examine how the nexus of science and politics influence testing practices in American society. The second purpose is to explore how testing practices influence the culture of schools, civil liberties, the work place, and public discourse about merit.
Same as Educ 4891
Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD

L33 Psych 494 Behavioral Psychology Readings Group
This weekly journal-style readings class provides the opportunity to read and discuss seminal as well as current papers on the conceptual aspects of behavioral psychology and relevant research. Points of contact among behaviorism, cognitivism and neuroscience, and the natural lines of fracture, are examined. Prerequisite: permission of instructor.
Credit 1 unit. A&S : SS A&S : IQ, SSC
L33 Psych 4971 Undergraduate Teaching
Limited opportunities for outstanding undergraduates to serve as teaching assistants for selected departmental courses.
Prerequisites: Psychology majors only, junior/senior standing and permission of Psychology adviser, course instructor and departmental approval. Credit cannot be counted toward fulfilling the requirements for the major or minor in Psychology. Credit/no credit only. Enrollment by department only.
Credit 2 units.  FA : SSP

L33 Psych 498 Study for Honors
Acceptance into the Honors Program is based on superior performance as evidenced by the student's record in undergraduate course work and the written agreement (Petition for Permission to Enroll) of a member of the faculty of the department (or other approved supervisor) to supervise an Honors project. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the department. Recommendation for an Honors degree is based on the evaluation of the written thesis and the student's overall performance as an undergraduate. Students in the Honors Program meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. Psych 498 is a writing-intensive course. All students must meet with Dr. Sommers prior to registering. Prerequisite: Psych 301 or equivalent and permission of instructor.
Credit 3 units.  A&S : SS, WI  A&S : IQ, SSC, WI  FA : SSP

L33 Psych 499 Study for Honors
Acceptance into the Honors Program is based on superior performance as evidenced by the student's record in undergraduate course work and the written agreement (Petition for Permission to Enroll) of a member of the faculty of the department (or other approved supervisor) to supervise an Honors project. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the Department. Recommendation for an Honors degree is based on the evaluation of the written thesis and the student's overall performance as an undergraduate. Students in the Honors Program meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. Permission of instructor is required for this course.
All students must meet with Dr. Sommers prior to registering. Prerequisite: Psych 301 or 3011.
Credit 3 units.  A&S : SS  A&S : IQ, SSC  FA : SSP

Public Health
Please note: The Public Health Minor will be discontinued for students enrolling in the fall of 2012 and beyond. Students interested in Public Health should explore the Global Health and Environment minor track in Anthropology (p. 197).
The Minor in Public Health permits students to focus the undergraduate course of study on health-related issues at the population and community level. Students in public health develop a greater understanding of the various factors affecting population health in local, regional and global perspective. Three foundational core courses provide a common language and methodology for understanding the key issues and controversies in public health, while elective courses permit exposure to a variety of disciplinary perspectives that contribute to public health practice and problem solving. Studying public health is important because it provides students with a population-level perspective on health and wellness, and provides an opportunity to address key societal concerns such as health equity and social justice. A multidisciplinary approach insures that the student who completes the Minor in Public Health will be well-prepared to proceed to the graduate level in public health or any number of related fields. All students are eligible to participate in the Minor in Public Health, regardless of their major discipline.

Additional Requirements

For non-Anthropology majors, at least one elective course must be home-based outside the Anthropology Department.

For Anthropology majors, both electives must be home-based outside Anthropology. Additional courses may be added as they become available in the curriculum. Students should register for elective courses under L58 (Public Health) in order for the courses to count toward the Public Health Minor. Courses taken for the Minor in Public Health may not be counted toward the requirements for any other major or minor in the College of Arts & Sciences. Study-abroad credits will be considered on a case-by-case basis, not to exceed 3 elective units toward the minor.

L58 PHealth 224 Infectious Diseases: Past, Present and Future
A variety of important infectious diseases are discussed. Attention is paid to the causative agent, natural source, disease symptoms, mode of transmission, treatment, prevention, evolution, eradication and historical impact of each. Lectures and assigned reading include discussions of small pox, yellow fever, Ebola and Marburg fevers, AIDS, influenza, rabies, SARS, bubonic plague, typhus, cholera, syphilis and malaria. The mechanisms underlying the emergence of “new” diseases are emphasized. Two one-hour lectures per week; three in-class exams and a final constitute the basis for grades. Not available to students who have credit for Biol 2960.
Same as Biol 224
Credit 2 units. A&S : NS A&S : IQ, NSM BU : SCI FA : NSM

L58 PHealth 233 Biomedical Ethics
A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.
Same as Phil 233F
Credit 3 units. A&S : TH A&S : IQ, HUM BU : ETH FA : SSP

L58 PHealth 303 Human Biology
How did Elvis, Socrates, and Babe Ruth die? How did David Letterman and Dick Cheney survive? In this course we work towards understanding the biology behind human health and disease. We examine cases from the news, literature and history. We work like detectives to understand how and why the characters were affected, and healed or died. This course is designed for students who do not plan to major in science and no prior science background is expected. Prerequisite: Sophomore standing or permission of instructor. A student may not receive credit for both Bio 303A and Bio 100A, 2960, 2970, or UCollege B320, B3201, B321, B3211.
Same as Biol 303A
Credit 3 units. A&S : NS A&S : IQ, NSM BU : SCI FA : NSM

L58 PHealth 307 Human Variation
A survey of human biological diversity, considering its adaptive and taxonomic significance from the perspective of origins and distribution of traits and adaptation. Prerequisite: Anthro 150A or introductory biology.
Same as Anthro 307A
Credit 3 units. A&S : NS, SD, QA A&S : IQ, NSM, AN, SD BU : SCI FA : NSM

L58 PHealth 310 History of Women’s Health Care in America
Same as WGSS 310
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI BU : BA FA : SSP

L58 PHealth 315 Introduction to Social Psychology
Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory, and political psychology, among other issues. Prerequisite: Psych 100B.
Same as Psych 315
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L58 PHealth 316 Contemporary Women’s Health
Same as WGSS 316
Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD BU : BA FA : SSP

L58 PHealth 318A A History of Genetics in the 20th Century
Same as Biol 3183
Credit 3 units. A&S : NS A&S : IQ, NSM FA : NSM

L58 PHealth 3195 Abnormal Child Psychology
Same as Psych 3195
L58 PHealth 322 Biostatistics
A second course in elementary statistics with applications to life sciences and medicine. Review of basic statistics using biological and medical examples. New topics include incidence and prevalence, medical diagnosis, sensitivity and specificity, Bayes’ rule, decision making, maximum likelihood, logistic regression, ROC curves and survival analysis. Prerequisite: Math 3200 or a strong performance in Math 2200 and permission of the instructor.
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA

L58 PHealth 326 Introduction to the Psychology of Aging
Same as Psych 326
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA

L58 PHealth 3262 Medicinal Botany
Same as Biol 3262

L58 PHealth 3283 Introduction to Global Health
Same as Anthro 3283
Credit 3 units. A&S : SS A&S : IQ, SSC BU : SCI FA : SSP

L58 PHealth 3284 Public Health Research and Practice
In-depth exploration of current theory and methods involved in public health research and practical applications. Emphasis on fundamentals of epidemiology, which forms the scientific rationale for public health assessment, assurance and policy development. Survey of current public health practice and research areas including biological foundations of public health, social and behavioral interventions, maternal-child health, and environmental health. Relationships among public health, medicine, nursing, social work and related disciplines. Same as Anthro 3284
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L58 PHealth 333 Culture and Health
Same as Anthro 333

L58 PHealth 343 Understanding the Evidence: Provocative Topics of Contemporary Women’s Health and Reproduction
Same as WGSS 343
Credit 3 units. A&S : SS A&S : IQ, SSC BU : ETH

L58 PHealth 347 Environmental Psychology
Explores relations between people and their physical and social environments. Topics include interactions between human behavior and toxins, habitat destruction/species extinction, exhaustion of fossil fuels, and climate change as well as environmental contributors to psychopathology. The course examines the influence of space on human behavior and the design of homes, work areas, educational settings and urban environments. Prerequisite: Psych 100B.
Same as Psych 347
Credit 3 units. A&S : SS A&S : IQ, SSC

L58 PHealth 348 Emerging Infectious Diseases
Same as Biol 348
Credit 2 units. A&S : NS A&S : IQ, NSM FA : NSM

L58 PHealth 352 Health Economics
Analysis of consumer demand for health care, medical technology and the role of health insurance. Emphasis placed on behavior of the physician (whether he acts as an agent for the consumer or on his own behalf); on the use of paramedics, preventive care, outpatient care and the general market organization of the health industry. The major concern is the rising cost of health care and appropriate public policy responses. Prerequisite: Econ 1011.
Same as Econ 352
Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

L58 PHealth 354 Abnormal Psychology: The Major Mental Disorders
This is an introductory course in psychopathology or the scientific study of mental health disorders. Prerequisite: Psych 100B.
Same as Psych 354
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L58 PHealth 3551 The Welfare State and Social Policy in America
How can we understand the recent debate about fundamental health care reform? Should social security be partially or wholly privatized? Was the 1996 welfare reform a success? Contemporary political questions frequently focus on the American welfare state and the social policies that comprise it. The first half of this course describes the American welfare state broadly construed, places it in a comparative context, and elucidates major political science explanations for the size and scope of American social policy. We touch on several areas of social policy while constructing the generalized lenses through which particular political outcomes can be understood. The second part of the course then focuses on three major aspects
of the American welfare state: health care, old age pensions and policies related to work, poverty and inequality.
Same as Pol Sci 3551
Credit 3 units. A&S : SS A&S : IQ, SSC

L58 PHealth 361 Culture and Environment
Same as Anthro 361
Credit 3 units. A&S : SS A&S : IQ, SSC BU : ETH FA : SSP

L58 PHealth 3612 Population and Society
Same as Anthro 3612
Credit 3 units. A&S : SS A&S : IQ, SSC BU : IS FA : SSP

L58 PHealth 3621 Anthropology of Human Birth
This course examines the interaction between human biology and culture in relation to childbirth. Emphasis is placed on understanding the cultural challenges posed by the physiology of human reproduction, the ways various cultures have attempted to meet those challenges, and the resultant consequences that this has had for women’s lives. The course draws on material from human anatomy and embryology, paleoanthropology, clinical obstetrics, public health, social anthropology, the history of medicine and contemporary bioethics.
Same as Anthro 3621
Credit 3 units. A&S : SS A&S : IQ, SSC BU : ETH FA : SSP

L58 PHealth 3625 The Female Life-Cycle in Cross-Cultural Perspective
This course examines the biology of the female reproductive cycle — menarche, menstruation and the menopause — and its cultural interpretation around the world. Topics covered include the embryology of human sexual differentiation, the biology of the menstrual cycle and how it influences or is influenced by various disease states, contraception, infertility, cultural taboos and beliefs about menstruation and menopause, etc. The course utilizes materials drawn from human biology, clinical gynecology, ethnography, social anthropology and the history of medicine and examines the interplay between female reproductive biology and culture around the world.
Same as Anthro 3625
Credit 3 units. A&S : NS A&S : IQ, NSM BU : SCI FA : NSM

L58 PHealth 3626 Adventures in Nosology: The Nature and Meaning of Disease
Same as Anthro 3626
Credit 3 units. A&S : SS A&S : IQ, SSC EN : S FA : SSP

L58 PHealth 3672 Medicine, Healing and Experimentation in the Contours of Black History

L58 PHealth 3876 Pharmaceutical Personhood
Same as Anthro 3875
Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

L58 PHealth 4003 Interrogating Health, Race and Inequalities: Public Health, Medical Anthropology and History
Interrogating Health, Race and Inequalities is intended for graduate students in the School of Social Work and in Arts & Sciences as well as advanced undergraduates in Arts & Sciences who have previous course work in medical anthropology, public health or urban policy. The fundamental goal of the course is to demonstrate that health is not merely a medical or biological phenomenon but more importantly the product of social, economic, political and environmental factors. To meet this goal the course is designed to examine the intersection of race/ethnicity and health from multiple analytic approaches and methodologies. Course readings draw from the fields of public health, anthropology, history and policy.
analysis. Teaching activities include lectures, group projects and presentations, videos, and discussions led by the course instructors. These in-class activities are supplemented with field trips and field-based projects. By the end of the course students have a strong understanding of race as a historically produced social construct as well as how race interacts with other axes of diversity and social determinants to produce particular health outcomes. Students gain an understanding of the health disparity literature and a solid understanding of multiple and intersecting causes of these disparities.

**L58 PHealth 4033 Culture, Illness and Healing in Asia**

This course examines the place of health, illness and healing in Asian societies. We explore how people experience, narrate and respond to illness and other forms of suffering — including political violence, extreme poverty and health inequalities. In lectures and discussions we discuss major changes that medicine and public health are undergoing and how those changes affect the training of practitioners, health care policy, clinical practice and ethics. The course familiarizes students with key concepts and approaches in medical anthropology by considering case studies from a number of social settings including China, India, Indonesia, Japan, Korea, Taiwan, Tibet, Thailand, Vietnam and Asian immigrants in the United States. We also investigate the sociocultural dimensions of illness and the medicalization of social problems in Asia, examining how gender, ethnicity, socioeconomic status, disability and other forms of social difference affect medical knowledge and disease outcomes. This course is intended for anthropology majors, students considering careers in medicine and public health, and others interested in learning how anthropology can help us understand human suffering and formulate more effective interventions.

**L58 PHealth 4135 Tobacco: History, Culture, Science and Policy**

This course examines tobacco’s important role in shaping the modern world over the course of the last five centuries, from indigenous uses of tobacco in the New World to the politics of smoking in the 20th century. Through in-depth historical and anthropological case studies, tobacco provides a window onto broad trends in government, law, economy, and society, including changing social meanings of gender, race, individualism, risk, responsibility, and health in the United States and worldwide. This course also introduces students to public health approaches to noncommunicable disease prevention and healthy lifestyle promotion. No background in anthropology or public health is required.

Religion and Politics
The John C. Danforth Center on Religion & Politics serves as an ideologically neutral venue for fostering rigorous scholarship and informing broad academic and public communities about the intersections of religion and U.S. politics.

The Center’s programs include:
- Public lectures, conferences and symposia relating to issues at the intersection of religion and U.S. politics.
- Research colloquium on American Religion, Politics and Culture, in which scholars and students discuss cutting-edge research.
- Religion & Politics, an online journal engaging a diverse array of scholars, journalists and public leaders.
- New courses on American religion and politics for Washington University students, conducted in both St. Louis and Washington, D.C. The courses contribute to an interdisciplinary undergraduate minor in religion and politics.

The Center offers a Religion and Politics Minor, an interdisciplinary program that brings together resources from the Danforth Center with relevant offerings from the Religious Studies, Political Science, Anthropology, History, American Cultural Studies, African-American Studies, English, and Women, Gender and Sexuality Studies programs. Designed to complement these major fields of study, the minor also aims to augment the undergraduate education of those considering postgraduate professional programs in public policy, education, law, medicine or social work. The Religion and Politics Minor provides the opportunity for exploring in sustained ways how religion and politics have intersected in American culture, both in historical and contemporary terms.

As part of the program, students may examine any number of issues such as church-state relations, religion’s role in shaping gender and sexuality debates, religion and electoral politics, public conflicts over the nexus of religion and science, or religion’s entwining with reform movements (from abolition to temperance to civil rights to environmentalism).

The Center does not offer a major. Interested students are encouraged to explore the Minor in Religion and Politics. See the Minors (p. 711) page.

The Minor in Religion and Politics
Required units: 15
12 units must be at the 300 level or above and at least 9 units must be offered through the Center.

Required courses:
L57 RelPol 201 Religion and American Society

Required activities:
Attendance at five auxiliary events, such as lectures, colloquia, panels, conferences and lunch discussions, sponsored by the Center on Religion and Politics.

L57 RelPol 201 Religion and American Society
This course explores religious life in the United States. We focus our study on groups and movements that highlight distinctive ways of being both “religious” and “American,” including the Americanization of global religions in the U.S. context. Major themes include religious encounter and conflict; secularization, resurgent traditionalism and new religious establishments; experimentalism, eclecticism and so-called “spiritual” countercultures; the relationship between religious change and broader social and political currents (including clashes over race, class, gender and sexuality); and the challenges of religious multiplicity in the United States. Students:
(1) acquire knowledge of the disparate religions practiced in North America during the 20th century and beyond; (2) examine some of the chief conflicts as well as alliances between religion and the American social order in a global context; and (3) develop interpretive tools for understanding religion’s present and enduring role in the U.S. and the world.

L57 RelPol 302 Religion and Politics in 20th Century U.S. History
This course provides both a chronological and thematic overview of the history of religion, political culture and society in 20th-century America. While moving sequentially through key transformations running from the beginning to end of the century, we also pause each week to examine particular episodes and themes that illuminate substantive and symbolic societal turns. Specifically, this course encourages us to think more deeply about the ways religious ideas, institutions and individuals intersect with and weave through broad political developments like populism and progressivism; corporate and labor activism; the rise and decline of New Deal liberalism; war and American empire building; the power shift to the Sunbelt; urban and suburban power struggles, social movements of the Left and the Right; the politics of family, education and community; civil rights and ethnic identity; conservatism and globalization. The overarching goal of this course is to place religion at the center of political development in the 20th century, and at the center of our understanding of this recent past. Here religion is not (as is often done by political historians) cordoned off as an agent of change worthy of consideration only under exceptional circumstances and in rare moments, but rather be considered as a consistent, powerful player that always brings competing passions and interests, drama and controversy to the political realm. This primary agenda is accompanied by a couple of others. In addition to absorbing the historical “facts and figures” of religion and politics in the 20th century (on which students are tested), students also are encouraged to encounter and critique different styles of historical writing, from biographies and autobiographies to traditional monographs, articles and essays to editorials. What makes “good writing” and “good history writing”? What are the challenges inherent to writing effective religious and political history? This set of issues is important for us to consider, because they lead to yet a final set of questions: how does one actually go about researching history? Writing it? In addition to taking time for extensive reading in this subject area, students also are expected to complete a major term paper based on both primary and secondary sources. Students begin this project early in the semester and, while in consultation with members of their peer group and professor, see it through to its conclusion by the last week of class.

L57 RelPol 310 Religion and Violence
Is religion intrinsically connected with violence or merely manipulated to justify political positions and incite supporters? How has religion been the motivation and justification behind violent conflict, aggression and persecution? Does religion have a greater power to make war or peace? People have debated these questions for centuries as believers waged war in the name of their god(s). We study several critical theories about religion and violence and test them on historical and recent “religious” conflicts. Our investigation is organized around five types of violence: (1) martyrdom and redemptive suffering, (2) claims on sacred space, (3) the violence of social stratification and “othering,” (4) war, and (5) apocalyptic and spiritual warfare. Case studies ranging from early Christian martyrs and crusades to attacks on abortion clinics and Tokyo subways help clarify patterns and types of religious violence.

L57 RelPol 406 Natural Law
In Christian theology and philosophy, a claim that there is a “natural law” has typically meant that all human beings share certain moral impulses, principles or judgments because they were all created by God. The claim has many sources versions, but it was formulated most influentially by Thomas Aquinas. Through Thomas, natural law became a fundamental notion in Catholic moral theology, but also in philosophical ethics and international law. It entered Protestant traditions at many points, notably in Anglicanism with Thomas Hooker. In the past decades, it has been retrieved for application to public debates on any number of controversial issues, from artificial contraception to torture and nuclear war. This seminar takes up representative parts of this long tradition — first in Thomas Aquinas, then in some of his early modern interpreters, and finally in contemporary controversies.

Religious Studies

The study of religion, in all of its many cultural and historical manifestations, entails a study of the most fundamental values, as well as some of the most deep-seated conflicts found in individuals and in larger communities, societies and cultures. The study of religion and religions offers students an opportunity to explore, in an informed, critical and empathetic manner, many of the most pressing questions about the human condition. Given the multicultural and interdisciplinary nature of religious studies as a field, it also offers students a means to greatly expand their cultural and intellectual horizons and to acquire a deeper understanding of the reality of global human diversity.

Religious Studies at Washington University is a program that brings together faculty and courses from various disciplines in the humanities and social sciences to engage in the academic study of major religious traditions of the world. The religious studies program offers a wide range of courses from introductory surveys to advanced seminars. Some of these courses are devoted to the historical development of one or more of the major religious traditions of the world, including Judaism, Christianity, Islam, Hinduism, Buddhism and East Asian religions. Others focus on particular texts such as the Hebrew Bible, the New Testament, the Qur’an or Buddhist scriptures. Still others are more comparative in nature, tackling broader issues such as religion and science; religion and literature; or religion, sexuality and gender. Students are encouraged and indeed required to gain an exposure to more than one religious tradition.

<tr>
<td>Re St 368</td>
<td>Theories and Methods in the Study of Religion</td>
<td>3</td>
</tr>
</tbody>
</table>

Total units: 6

Senior Capstone Experience (3 units): In their senior year, all Religious Studies majors (with the exception of those students who have qualified for and elected to write an honors thesis) are required to take Re St 479 Senior Seminar in Religious Studies. The topic of this seminar varies from year to year.

Elective courses: (21 units; 18 must be 300 level or above): All majors must take at least seven courses chosen from among the offerings in Religious Studies. Those courses will be selected to achieve both breadth and depth of knowledge in the field.

To foster BREADTH OF KNOWLEDGE, the electives must include one course in four of the areas that the program supports. Those areas are: Judaism, Christianity, Islam, Buddhism, East Asian religions, South Asian religions, indigenous religious traditions, and religions of the ancient Mediterranean world.

To foster DEPTH OF KNOWLEDGE, the electives must include a concentration of three courses in one religious tradition or a set of closely related traditions (see list above) and a secondary concentration of two courses in another tradition or set of traditions. As an alternative, students may petition to create a thematic concentration, which must be approved by their adviser and the program director. Examples of such thematic concentrations include (but are not limited to) “Magic and Mysticism,” “Religion and Politics,” and “Gender and Religion.”

Note: Any one course can count toward both the depth and breadth requirements.

For models illustrating some possible combinations of depth and breadth see the Religious Studies website.

Additional Information

Senior Honors: Qualified majors are encouraged to apply for Senior Honors before the end of the junior year. Students
wishing to pursue this option need to meet the minimum honors requirements stated in this Bulletin and satisfactorily complete, during the senior year, Re St 498 Independent Work for Senior Honors I (fall) and Re St 499 Independent Work for Senior Honors II (spring), to be taken in addition to all other departmental requirements.

Transfer Credit: A maximum of 6 units of course work completed at another university, whether in the United States or abroad, may be applied toward the major. Credit will be awarded only to those courses that have been approved by the Religious Studies program.

The Minor in Religious Studies

Units required: 18 units, 12 of which must be at the 300 level or above.

Required courses: (6 units)

L23 Re St 204 Thinking About Religion
Everyone agrees that religion is vitally important, but people rarely agree about what religion is. This course introduces students to the questions posed about religion, and the methods by which they are answered. Beginning with the central question — What is religion? — we ask: How has religion served political power? How does the experience of religion create or change perceptions of reality? How does religious practice maintain or subvert gender roles? How does commemoration of the past shape communities in the present? How are religious identities formed, and how do they change? What is religious art? How does something become sacred? We explore these and other questions using case studies drawn from a range of sources that represent different regions, traditions and scholarly approaches. This course is required for Religious Studies majors and minors.

L23 Re St 303 The Taoist Tradition
This course offers an introduction to the ethical aspects of the Taoist tradition through the study of a select number of literary and philosophical texts ranging from ca. 300 BCE through the present day. We explore questions regarding the relationship between nature and culture, conceptions of the self, and ideas about the good life.
Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD  BU : ETH

L23 Re St 3031 Christianity in the Modern World
Survey of Christianity since the Reformation. Focus on the divisions in Christianity, its responses to modern science, the rise of capitalism, and European expansion into Africa, Asia and the Americas. Attention to ecumenism and the contemporary status of Christianity in the world. Use of original documents.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  EN : H

L23 Re St 3062 Islam, Culture and Society in West Africa
This course explores the introduction of Islam into West Africa beginning in the 10th Century and explores its expansion and development in the region, placing emphasis on the 19th century to present day. It focuses on the development of West African Muslim cultural, social, religious and political life, to understand not only how the religion affected societies, but also how West African local societies shaped Islam. The course also aims to introduce students to a critical understanding of Islamic writing in West Africa. It also examines the organization of Muslim Sufi orders in West Africa through time and space. The course is organized around a series of lectures, readings, as well as print and visual media.
Same as AFAS 3062
Credit 3 units.  A&S : SS, CD  A&S : IQ, SSC, LCD  AR : SSP

L23 Re St 307F Introduction to the New Testament
What can be known — from a historical perspective — about the life and teachings of Jesus and his earliest followers? How did Jesus see himself and how did his followers see him? How did the lives, teachings and deaths of Jesus and his followers come to form the heart of a new movement? If Jesus and the apostles were all Jews, how did Christianity emerge as a distinct “religion”? This course investigates these questions through a focus on the earliest sources for Jesus and his first followers, including and extending beyond the canonical books of the Christian New Testament. Our approach in this course is historical and literary, rather than theological or confessional: we ask what Jesus, his first followers, and their Jewish and “pagan” contemporaries did and believed, and we try to catch glimpses of the worlds in which they lived and the cultures that they took for granted.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : HUM  FA : SSP

L23 Re St 3082 From the Temple to the Talmud: The Emergence of Rabbinic Judaism
This course offers a survey of the historical, literary, social and conceptual development of Rabbinic Judaism from its emergence in late antiquity to the early Middle Ages. The goal of the course is to study Rabbinic Judaism as a dynamic phenomenon — as a constantly developing religious system. Among the topics explored are: How did Judaism evolve from a sacrificial cult to a text-based religion? How did the “Rabbis” emerge as a movement after the destruction of the Second Temple and how could they replace the old priestly elite? How did Rabbinic Judaism develop in its two centers of origin, Palestine (the Land of Israel) and Babylonia (Iraq), to become the dominant form of Judaism under the rule of Islam? How did Jewish ritual and liturgy develop under Rabbinic influence? How were the Rabbis organized and was there diversity within the group? What was the Rabbis’ view of women? How did they perceive non-Rabbinic Jews and non-Jews? As Rabbinic Literature is used as the main source to answer these questions, the course provides an introduction to the Mishnah, the Palestinian and Babylonian Talmuds, and the Midrash collections — a literature that defines the character of Judaism down to our own times. All texts are read in translation.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : HUM  FA : SSP

L23 Re St 3090 Chinese Thought
This course offers an introduction to Chinese thought through a study of thinkers from arguably one of the most vibrant periods of religious-philosophical discourse in China. We examine early classical texts from the Daoist, Confucian, Mohist and Legalist traditions, and follow arguments where the thinkers expand upon, dispute and respond to each other in regard to questions that are still important to us today. We explore issues such as notions of the self, conceptions of the greater cosmos, the role of rituals, ideas about human nature, and the subjects of freedom and duty. Motivating the course is the underlying question: What is the good life?
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD

716
L23 Re St 3092 Confucian Thought: The Sage and Society: Writing-Intensive Seminar
This course offers an introduction to the ethical dimensions of Confucianism through a study of a select number of religio-philosophical texts ranging from ca. 500 BCE through the present day. We begin with a study of Confucianism as a commentarial tradition on the classical text of the Analects. We then turn to the theme of self-cultivation and examine three contrasting ideas put forth on the subject: self-cultivation through learning the classics, through mystical intuition, and through a study of history. In the third part, we explore the role of Confucianism in addressing contemporary ethical issues such as ones regarding government, abortion, the environment, human rights, feminism and intellectual property.

L23 Re St 3101 The Problem of Evil
The question of how God can allow evil to occur to the righteous or innocent people has been a perennial dilemma in religion and philosophy. We study the classic statement of the problem in the biblical book of Job, the ancient Near Eastern literature on which Job is based, and traditional Jewish and Christian interpretation of Job. We study the major approaches to the problem of evil in Western philosophical and religious thought.

L23 Re St 3105 American Holidays, Rituals and Celebrations
Same as AMCS 3105

L23 Re St 311 Buddhist Traditions
This course examines the historical development of Buddhism from its origins in South Asia in the 6th to 5th century BCE, through the transmission of the teachings and practices to East Asia, Southeast Asia and Tibet, to contemporary transformations of the tradition in the modern West. In the first third of the course, we focus on the biographical and ritual expressions of the historical Buddha’s life story, the foundational teachings attributed to the Buddha, and the formation and development of the Buddhist community. In the second third, we examine the rise of the Mahayana, the development of the Mahayana pantheon and rituals, and the spread of Mahayana in East Asia. In the final third, we explore the Theravada tradition in Sri Lanka and Thailand, then Tantric Buddhism in India, Tibet and East Asia. We close the course with an overview of Buddhism in the modern West.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : ETH

L23 Re St 312 South Asian Religious Traditions
In this course, we take a considered look at the diverse religious traditions that have shaped and enriched life on the Indian subcontinent and beyond. India, Pakistan, Nepal, Bangladesh and Sri Lanka are home to Hindu, Islamic, Buddhist, Jain, Christian and Sikh traditions of learning and practice, among others. This course provides an in-depth survey of the traditions of South Asia, while attending to the borrowings and contestations that have blurred and defined the boundaries between traditions over time. We explore the central teachings, practices and debates of these traditions as we explore mythology, poetry and narrative; ritual and performance; social relations and political life at selected moments in the history of South Asia.

L23 Re St 3422 Art of the Islamic World
This course surveys the art and architecture of societies where Muslims were dominant or where they formed significant minorities from the 7th through the 20th centuries. It examines the form and function of architecture and works of art as well as the social, historical and cultural contexts, patterns of use, and evolving meanings attributed to art by the users. The course follows a chronological order, where selected visual materials are treated along chosen themes. Themes include the creation of a distinctive visual culture in the emerging Islamic polity; the development of urban institutions; key architectural types such as the mosque, madrasa, caravanserai, palace and mausoleum; art objects and the arts of the illustrated book; cultural interconnections along trade and pilgrimage routes; Westernization and modernization in art and architecture. Same as Art-Arch 3422

L23 Re St 346 Topics in East Asian Religions
This course explores one of the various topics in East Asian Religion.
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L23 Re St 348 Hindu Traditions
What exactly is Hinduism? Many have remarked on the overwhelming variety of Hindu traditions: the plethora of gods, the richness and range of mythological traditions, the great variety of festivals. In this course, we examine the diversity of Hindu traditions from a number of perspectives. We reflect on what this diversity means — How can we define Hinduism? Who is a Hindu? What have people understood Hinduism to be? We familiarize ourselves with key concepts, ceremonies and narratives (from the Vedas to the Ramayana, from sacrifice to marriage) through the eyes of men and women, upper and lower castes, on the Indian subcontinent and around the world. We also learn how issues of social and gender equality have been debated in the language of Hindu traditions, thereby building a foundation for understanding the gender struggles, class conflict and sectarian strife in modern India.
Credit 3 units.  A&S : TH, CD, SD  A&S : IQ, HUM, LCD  BU : ETH

L23 Re St 3480 Medieval Jewish Travelogues, Chronicles and Biographies
Medieval Hebrew literature includes a wide range of narratives, many of which are commonly classified as chronicles,
travelogues, biographies or diaries. In this course, we explore a variety of authors and narratives from the 9th to the 17th centuries, originating from Muslim and Christian lands, the Middle East and Europe. We ask to what extent these texts mirror the personal experiences of their authors and to what extent they must be regarded as literary fictions. In addition, we discuss the question of how pre-modern Jewish writers reflected on history. All texts are read in English translation. Prerequisite: JNE 208F, or instructor's permission. 

Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD

L23 Re St 3510 Cultures of the Middle Ages: Death and Dying in Medieval Europe
Same as Med-Ren 351

Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD  FA : AH

L23 Re St 3622 Topics in Islam
Selected themes in the study of Islam and Islamic culture in social, historical and political context. The specific area of emphasis are determined by the instructor. Same as JINE 3622
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L23 Re St 365F The Bible as Literature
Same as E Lit 365F
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : ETH  FA : Lit

L23 Re St 366 Approaches to the Qur’an
The place of the Qur’an in Islamic religion and society. Equal emphasis on text — the Qur’an’s history, contents and literary features — and context — the place of the Qur’an in everyday life, its oral recitation, artistic uses and scholarly interpretation. Knowledge of Arabic not required.
Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD  BU : ETH

L23 Re St 3670 Gurus, Saints and Scientists: Religion in Modern South Asia
Many longstanding South Asian traditions have been subject to radical reinterpretation, and many new religious movements have arisen as South Asians have grappled with how to accommodate their traditions of learning and practice to what they have perceived to be the conditions of modern life. In this course we consider some of the factors that have contributed to religious change in South Asia, including British colonialism, sedentarization and globalization, and new discourses of democracy and equality. We consider how new religious organizations were part and parcel with movements for social equality and political recognition; examine the intellectual contributions of major thinkers such as Swami Vivekananda, Sayyid Ahmad Khan and Mohandas Gandhi; and explore how Hindu, Islamic and other South Asian traditions were recast in the molds of natural science, social science and world religion.
Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD  BU : ETH

L23 Re St 368 Theories and Methods in the Study of Religion
What is religion? In this course, we explore how religious ritual may help to clarify the nature and function of religion. We first consider some “classic” theories of religion and ritual, such as those of James Frazer, Sigmund Freud, Emile Durkheim, Mircea Eliade, Max Weber, E. E. Evans-Pritchard and Clifford Geertz. We also consider some more recent theories of ritual and its relationship to religion (such as those of Victor Turner and Maurice Bloch). Alongside and in light of these theoretical writings, we look at specific instances of ritual practice from various cultures and periods. Note: This course is required for Religious Studies majors and minors. It is recommended that this course be taken after completion of Re St 204 Thinking About Religion.
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : ETH

L23 Re St 370C Islamic Movements: Reform, Revival, Revolt
As a religion and a social/intellectual and political movement, Islam has undergone constant reassessment since its inception 14 centuries ago; thus modern fundamentalist movements are the latest manifestation of long-term trends. An overview of this historical process, concentrating on contemporary Islamic movements and works by seminal thinkers.

Credit 3 units.  A&S : TH, CD  A&S : IQ, HUM, LCD  BU : BA, HUM  FA : SSP

L23 Re St 3750 In the Beginning: Creation Myths of the Biblical World
This course studies myths and epic literature from the Bible, ancient Egypt, the ancient Near East and ancient Greece about the birth of the gods, the creation of the world and of humanity, and the establishment of societies. These masterpieces of ancient literature recount the deeds of gods and heroes and humanity’s eternal struggle to come to terms with the world,
supernatural powers, love, lust and death. This course examines how each culture borrows traditions and recasts them in a distinct idiom. The course further examines different approaches to mythology and to the study of ancient cultures and the Bible. Same as JINE 3751
Credit 3 units. A&S : TH, CD, WI A&S : IQ, HUM, LCD

L23 Re St 392 South Asian Traditions in Practice: Ritual, Spectacle, Self
What is ritual, what do rituals mean, how do rituals work? In this course we explore different perspectives on how ritual practice can be effective: How do ritual performances express or reconcile core cultural values? How do forms of worship produce, reinforce or alter relationships of kinship, hierarchy or power? How are regimens of practice employed for making the self? We explore these questions through detailed study of forms of practice in Hindu, Islamic, Jain and other South Asian traditions: public processions; dramatic performance; domestic rites; meditation and worship; diet and bodily discipline. Course aims: to deepen our understandings of religion, society and politics in general, and of South Asian culture and history in particular. No prerequisites; prior course work in Re St 203 or Re St 3670 recommended.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : ETH

L23 Re St 393 Medieval Christianity
This course surveys the historical development of Christian doctrine, ecclesiastical organization and religious practice between the 5th century and the 15th, with an emphasis on the interaction of religion, culture, politics and society. Topics covered include the Christianization of Europe, monasticism, the liturgy, sacramental theology and practice, the Gregorian reform, religious architecture, the mendicant orders and the attack on heresy, lay devotions, the papal monarchy, schism and conciliarism, and the reform movements of the 15th century.

L23 Re St 4065 Natural Law
Same as RelPol 406
Credit 3 units. A&S : TH A&S : IQ, HUM EN : H
L23 Re St 408 Nuns
Nuns — women vowed to a shared life of poverty, chastity and obedience in a cloistered community — were central figures in medieval and early modern religion and society. This course explores life in the convent, with the distinctive culture that developed among communities of women, and the complex relations between the world of the cloister and the world outside the cloister. We look at how female celibacy served social and political as well as religious interests. We read works by nuns, both willing and unwilling, and works about nuns: nuns behaving well, and nuns behaving scandalously badly; nuns embracing their heavenly spouse, and nuns putting on plays; nuns possessed by the devil, and nuns managing their possessions; nuns as enraptured visionaries, and nuns grappling with the mundane realities of life in a cloistered community. Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD

L23 Re St 411 Topics in Christianity: Women and Religion in Medieval Europe
This course explores the religious experience of women in medieval Europe and attempts a gendered analysis of the Christian Middle Ages. It examines the religious experience of women in a variety of settings, from household to convent. Readings include modern studies of women and religion in medieval Europe, as well as medieval texts produced by, for and about women. Credit 3 units. A&S : TH A&S : IQ, HUM

L23 Re St 412 Islamic Theology
This course explores major themes of early Islamic theology as developed by the Mutazilite, Ash'arite and Maturidi schools. Some attention also is paid to defunct theological systems, the traces of which have remained in the heresiographical literature. Most readings are in primary sources in English translation, though the students also are introduced to some secondary literature on various themes. Some comparative theology with reference to the Judeo-Christian tradition is a regular feature of class discussion. Topics include (but are not limited to) debates over the createdness of the Qur'an; predestination and foreknowledge; God's attributes; the nature of language; the nature of the human soul; and creation and afterlife. Credit 3 units. A&S : TH A&S : IQ, HUM FA : SSP

L23 Re St 4122 American Religion, Politics and Culture: Commentary from Alexis de Tocqueville to Contemporary Pundits
This research-oriented seminar involves in-depth historiographical investigation of leading scholarship at the busy intersections of American religion, politics and culture. The second semester focuses on classic and contemporary commentaries on the American religious and political scene from Alexis de Tocqueville through today's leading pundits. Some sessions include a visiting scholar engaged in cutting-edge research — a feature that allows seminar members to work with important scholars from beyond the university. Possible topics include: church-state relations, religion and foreign policy, religion and civil rights, religion and the science wars, the rise of the Religious Right, and the role of religion in national elections. The seminar is taught under the auspices of the John C. Danforth Center on Religion and Politics and is offered in two complementary parts (though enrollment in either one of the two is certainly possible). Its ambition is to build up a community of inquirers engaged in the core questions that animate the Danforth Center. Prerequisite: advanced undergraduate or graduate standing in AMCS, History or Religious Studies or permission of instructor. Credit 3 units. A&S : TH A&S : IQ, HUM

L23 Re St 413 Topics in Islam
Critical examination of special topics or figures in the history of Islam. May be repeated for credit. Prerequisite: junior standing. Same as JINE 445 Credit 3 units. A&S : TH BU : IS FA : SSP

L23 Re St 414 Readings in Classical Chinese Philosophy
Same as Chinese 414 Credit 3 units. A&S : TH, CD

L23 Re St 415 Topics in Judaism
Same as JINE 415 Credit 3 units. A&S : TH
L23 Re St 418 Gender and Sexuality in East Asian Religions
In this course we explore some of the primary gender ideals and realities, images and self-representations in the religions of China, Japan and Korea, with a discussion of Confucianism but primary emphasis on East Asian Buddhism (esp. Zen and Pure Land), Daoism, Shinto and popular religious traditions such as Shamanism. Selected reading and discussion materials include scriptural texts; poetry, fiction and drama (in English translation); painting and archeological evidence; films and videos; and secondary scholarly and ethnographic studies. Prerequisite: at least one introductory course in East Asian religions or civilizations (Chinese, Japanese or Korean) is recommended. Credit 3 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD EN : H

L23 Re St 4213 Sufism and Islamic Brotherhoods in Africa
Same as AFAS 4213
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD EN : H

L23 Re St 425 Zen Buddhism
This course is designed as an exploration of the history, teachings, practices and literature of Zen Buddhism in China (Chán), Korea (Sŏn), Japan (Zen) and the United States. We discuss how Zen's conception of its history is related to its identity as a special tradition within Mahayana Buddhism, as well as its basic teachings on the primacy of enlightenment, the role of practice, the nature of the mind, and the limitations of language. We also look at Zen Buddhism and its relation to the arts, including poetry and painting, especially in East Asia. Finally, we briefly explore the response of Zen teachers and practitioners to questions of war, the environment and other contemporary issues. Open to seniors and graduate students. Prerequisite: Re St 311 Buddhist Traditions or instructor's permission. Credit 3 units. A&S : TH A&S : IQ, HUM EN : H

L23 Re St 432 Early Christianity and Classical Culture
This course explores the tangled, sometimes conflictual, but always fascinating relations between early Christianity and the classical world through which it spread. Topics discussed include: the Pauline epistles in relation to Greco-Roman letter writing; the gospels and pagan biographical traditions; the apocryphal Acts of the Apostles and the ancient novel; and the relationship between miracle and magic in regard to Jesus and pagan holy men. Our aim is to understand the multicultural, cosmopolitan world that gave rise to Christianity and its earliest literature. Credit 3 units. A&S : TH A&S : IQ, HUM

L23 Re St 4365 Political and Religious Power
The last century scattered many people's hopes for rational progress in politics. Outbreaks of horror pushed a number of European and American thinkers to reconsider the relation of religious and "secular" power. This seminar reflects on just four of them: Carl Schmitt, Michel Foucault, Giorgio Agamben and Judith Butler. We read major texts by each of these thinkers as they ask about divine and human violence, the limits of rational government, the transformations of power, and how societies decide which lives count as human. Credit 3 units. A&S : TH A&S : IQ, HUM

L23 Re St 4401 Topics in Rabbinic Texts
Same as HBRW 440
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD EN : H

L23 Re St 444 The Mystical Tradition in Judaism
What is Jewish “mysticism”? What is its relationship to the category of “religion”? Is Jewish mysticism just one form of a general phenomenon common to a variety of religious traditions or is it a specific interpretation of biblical, rabbinic and other Jewish traditions? Taking the above questions as a starting point, this course aims at a systematic and historically contextualized analysis of a broad range of Jewish texts that are commonly classified as “mystical.” (All primary texts are read in translation.) At the same time, we explore such overarching themes as: the interplay of esoteric exegesis of the Bible and visionary experiences; the place of traditional Jewish law (halakhah) within mystical thought and practice; the role of gender, sexuality and the body in Jewish mystical speculation and prayer; the relationship between mysticism and messianism; Ashkenazic and Sephardic traditions and their mutual impact on Jewish mysticism; the absence of women from Jewish mystical movements; esoteric traditions of an elite vs. mysticism as a communal endeavor; and the tension between innovation and (the claim to) tradition in the history of Jewish mysticism. Prerequisite: Re St 208F Introduction to Jewish Civilization or permission of the instructor. Credit 3 units. A&S : TH, CD A&S : IQ, HUM BU : ETH, IS

L23 Re St 4491 American Unbelief from the Enlightenment to the New Atheism
This seminar examines American freethinkers, secularists, humanists and atheists from Tom Paine and Ernestine Rose through Madalyn Murray O'Hair and Sam Harris. Topics emphasized include: church-state relations, social radicalism and women’s rights, secular versus Christian imaginings of the nation, and the recent flourishing of the new atheists and religious “Nones.”. Credit 3 units. A&S : TH A&S : IQ, HUM

L23 Re St 471 Topics in Religious Studies
The topic for this course varies. Credit 3 units. A&S : TH

Romance Languages and Literatures

Romance Languages and Literatures offers vibrant programs in French, Italian, Portuguese and Spanish. Our language classes have long been popular with undergraduates, including those interested in international travel and those who anticipate a global dimension to their future careers. All of our classes focus on culture writ large: we study great texts and we do so with an eye to gender roles, traditions, communities, individual freedom, social obligations and many other topics of critical importance today. We offer concentrations in French, Italian and Spanish, as well as Applied Linguistics and introductory Portuguese.

Our undergraduate programs in French, Italian and Spanish include a compelling series of language, literature, culture and civilization courses that introduce students to the global Hispanic, Francophone and Italophone communities. The curriculum affords students the opportunity to become fluent in a foreign language, enrich their historical and cultural understanding, and acquaint themselves with influential intellectual, literary and artistic traditions. Students also benefit from linguistic and cultural immersion opportunities through our many summer, semester and year-long study abroad programs. These programs offer unique possibilities to combine foreign language training with other interests, including participating in business internships in Paris; pursuing fieldwork in Camaroon; studying art history in Italy, literature in Madrid, or Andean culture in Ecuador. These experiences lead to a variety of career paths, including international law, international business, medicine, journalism and graduate studies in political science, international relations, history, anthropology, art history, comparative literature, French and film studies. In order to prepare our students to take full advantage of such opportunities, our faculty provide an innovative range of courses that combine the study of literature with contemporaneous developments in philosophy, science, music, art and theory.

For undergraduates interested in cross-language study, we offer two programs. First, students may elect to major in Romance Languages and Literatures. This major requires advanced course work in French, Italian and Spanish, with one of the three languages as the focus of primary emphasis. Second, they may minor in Applied Linguistics, studying the theoretical, empirical and practical foundations of teaching and learning languages. The minor is available to all majors on campus but is particularly suited to language majors.

For the Italian major, please see the Italian (p. 546) page.
For the Spanish major, please see the Spanish (p. 733) page.

The Major in Romance Languages and Literatures

Like our other majors, the Romance languages major requires a writing-intensive course and a capstone. Further details are available on the department’s website at http://rll.wustl.edu.

Total units required: A minimum of 42 units at the 300- and 400-level, distributed among French, Italian and Spanish.

Required courses:

• Language I: courses through the 400 level, including 307, 308, two literature surveys (French 325 and 326, or Italian 323 and 324, or two among Spanish 330, 335 or 336), and two 400-level courses (in Italian, two literature courses; in French, two literature courses or one literature course and French 411; in Spanish, either two literature courses or one literature and one linguistics course).

• Language II: courses through the 400 level, including 307, 308, at least two literature surveys (French 325 and 326, or Italian 323 and 324, or two among Spanish 330, 335 or 336), and one 400-level course (in Italian and French, a literature course; in Spanish, either literature or linguistics).

• Language III: courses through and including one literature survey (307, 308, plus, depending on the language, French 325 or 326; Italian 323 or 324; Spanish 330, 335 or 336).

• One WI (writing-intensive) course either in Spanish or Italian, or via French 411 (fall only).

• A capstone experience, either by completing Latin honors or by completing a senior undergraduate seminar in the junior or senior year with a grade of B+ or better. We encourage students to think about doing an honors thesis, perhaps
combining French and Spanish. The 6 units of 495 (honors) would be above and beyond the requirements listed above for each language.

Students will need to take these classes for a grade (not pass/ fail) and earn a B– or better, with a B average overall, per departmental requirements of all majors.

Students will need approval from directors of Undergraduate Studies for Italian, French and Spanish for this major.

Additional Information

Students who plan to teach or pursue graduate study should consider taking a second foreign language, as well as linguistics courses. In all departmental courses for the major the student must receive a grade of B– or above. Each student’s progress toward achieving the objectives of the major will be assessed on a regular basis and by a variety of means. More information is available in the departmental mission statement.

Spanish Honors in Linguistics: To qualify for Spanish Honors in linguistics in the major by thesis, a student must complete linguistic research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. The honors thesis in linguistics may include scientific experiments conducted in Spanish. The written thesis will include several drafts, all of which will be written in Spanish.

Study Abroad: Students are encouraged to participate in a study abroad program. Programs are available in France, Italy, Spain, Ecuador, Mexico and Chile.

Senior Honors: Students are encouraged to work toward Latin Honors (cum laude, magna, summa). To qualify for Latin Honors in the major by thesis, a student must complete special literary research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. To qualify for Latin Honors by course work, the student must complete four literature courses at the 400 level, including two in literature before 1800, and present two critical essays written for those courses to be judged by an honors faculty committee. Recommendations for honors are based on performance and the quality of the thesis or critical essays, plus the cumulative grade point average.

For the Minor in French, see the French (p. 424) page.

For the Minor in Italian, see the Italian (p. 546) page.

For the Minor in Spanish, see the Spanish (p. 735) page.

Additional Information

This minor is composed of 18 credits that focus on the theoretical, empirical and practical foundations of teaching and learning second or foreign languages. All participating students must have a declared primary major.

L78 RoLit 495 Honors

To be eligible for Latin Honors, a student must have maintained a 3.5 average through the sixth semester and must be accepted for candidacy by the department or area committee concerned. The student must register in such courses as the department or area committee may recommend; complete satisfactorily a significant project appropriate to the nature of the discipline; and pass such written or oral examinations as the department or area committee may set. Upon completion of the Honors Program, students may be awarded the A.B. degree cum laude, magna cum laude or summa cum laude through achievement of cumulative averages through the eighth semester of 3.5, 3.65 and 3.8, respectively, and recommendation of the department or area committee to the College Committee on Honors, based in part on the evaluation of the senior project. Recommendation for Latin Honors ultimately depends upon the student’s attitude toward learning as demonstrated by genuine understanding and high scholarly attainment. Upon acceptance to do a Senior Honors thesis, the student should enroll for three credits of French/Ital/Span 495 (Honors Tutorial) for fall semester of the senior year, to be followed by another 3 credits of RoLit 495 in the major language for spring. The grade for the fall semester (3 credits) is based on the thesis director’s evaluation of the
first significant piece of the thesis (chapter or introduction) and also on the student’s diligence in organizing and mastering the materials to date, including regular discussions with the professor. The grade for the spring term reflects the quality of the student’s completed thesis and the oral examination, as well as the student’s discussions about the thesis with his/her director throughout the spring term. If the GPA of a student enrolled in the Honors thesis program drops below 3.5 during the senior year, the student may, with the concurrence of her/his thesis director, elect to have the 3 or 6 credits of RoLit 495 changed to an equivalent number of Independent Study credits, and may complete the project as an independent study project. However, students may only do a total of 6 credits of Independent Study toward the B.A. Students unable either to finish the thesis project or an independent study project do not receive degree credit for their work. With regard to the planning of honors topics, students should bear in mind that most theses are written on literary problems and require methods of research appropriate to literary studies. Some faculty may also be willing to direct theses that focus on cultural studies and other areas of investigation related to literary studies. However, the department does not sponsor Honors theses in other disciplines (for example, economics or business, which have different methods of research).

Credit 3 units.

A minor in Russian Language and Literature is administered through the International and Area Studies Program. Students also are encouraged to consider majors in International Studies, European Studies, Comparative Literature and History, all of which can be pursued with a focus on Russia and the former Soviet Union.

Students interested in Russian Studies are encouraged to consider majors in European Studies (p. 394), Comparative Literature (p. 297) and History (p. 454), all of which can be pursued with a focus on Russia and the former Soviet Union. Additionally, a minor in Russian Language and Literature is administered through the International and Area Studies Program, which also offers a minor in Russian Studies/International and Area Studies. There is no major in Russian Studies.

The Minor in Russian Language and Literature

Total units required: 20 graded credits

Prerequisites:
Russ 101D Elementary Russian and Russ 102D Elementary Russian or the equivalent.

Regulations:

- Students who place into Third-Year Russian must complete a minimum of 21 units of 300 or 400-level language or literature courses.
- At least 3 credits must be from one of these advanced language and culture courses: Russian 404, Russian 405, Russian 431 or Russia 432.
- No more than 9 credits may be from study abroad, to be determined in consultation with the student’s adviser.
- All advanced units must be unique to the Russian Language and Literature minor (i.e. not counted toward any other major or minor).

Additional Information

Study Abroad: Students are strongly encouraged to participate in one of the Washington University study abroad programs in St. Petersburg, Russia. Semester options include both language and area studies programs. While the summer program is language-focused only, there are programs available for students at any language level, including beginning. The university’s programs in St. Petersburg are conducted under the auspices of Council for International Educational Exchange (CIEE), the longest running such program in Russia.

Financial aid may be available for these programs through both Washington University and CIEE.

Russian

L39 Russ 101D Elementary Russian
Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary post-Soviet Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review and testing. Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L39 Russ 102D Elementary Russian
Continuation of 101D. Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review and testing. Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L39 Russ 211D Intermediate Russian
Designed to solidify students’ command of Russian grammar and advance conversational, reading and writing skills. Includes video materials produced in Russia and conveying an up-to-the-minute picture of contemporary Russian life. Credit 4 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L39 Russ 212D Intermediate Russian
Continuation of 211D, completes comprehensive review of Russian grammar and further advances conversational, reading, writing and listening skills. Revised textbook with new audio and video materials that convey an up-to-the-minute picture of contemporary Russian life. Credit 4 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L39 Russ 215C Introduction to Russian Civilization
This course provides an overview of the main currents and developments in Russian culture and the arts from the earliest records to the present day. Exploring literary texts, film, music, architecture, the visual arts and popular culture, we discuss the self-identity of a people neither European nor Asian. Topics include the introduction of Orthodox Christianity, the “Tatar yoke,” reactions to the “Europeanization” of Russia, Soviet propaganda and post-Soviet everyday life. Does the Russian Federation of today represent a complete break with the past or a reemergence of certain cultural constants? Knowledge of Russian language not required. Freshmen welcome.
**L39 Russ 315 Russian Music**  
Same as Music 315  
Credit 3 units.  
A&S : TH, CD  A&S : IQ, HUM, LCD  BU : HUM, IS  FA : SSP

**L39 Russ 322D Third-Year Russian**  
Designed to develop students’ abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts and write compositions.  
Prerequisite: Russ 212D or equivalent.  
Credit 3 units.  
A&S : LA  A&S : IQ, LCD, LS  BU : HUM, IS

**L39 Russ 324D Third-Year Russian**  
Designed to develop students’ abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts and write compositions.  
Prerequisite: Russ 322D or equivalent.  
Credit 3 units.  
A&S : LA  A&S : IQ, LCD, LS  BU : HUM, IS

**L39 Russ 350C The 19th-Century Russian Novel (WI)**  
The 19th-century “realistic” novel elevated Russian literature to world literary significance. In this course we do close readings of three major Russian novels: Alexander Pushkin’s *Eugene Onegin*, Fyodor Dostoevsky’s *Crime and Punishment* and Lev Tolstoy’s *Anna Karenina*. While we consider a variety of formal and thematic concerns, special emphasis is placed on the social context and on questions of Russian cultural identity. Readings and discussions are supplemented by critical articles and film.  
This is a Writing-Intensive course: workshops are required. All readings are in English translation. No prerequisites.  
Credit 3 units.  
A&S : TH, SD, WI  A&S : IQ, HUM, LCD, SD, WI  BU : HUM  FA : Lit

**L39 Russ 3559 Socialist and Secular? A Social History of the Soviet Union**  
Same as History 3559  
Credit 3 units.  
A&S : TH, CD, SD  A&S : IQ, HUM, LCD, SD

**L39 Russ 356 The Russian Revolution**  
The “Ten Days that Shook the World” divided Russian, European and American society from 1917 until the dissolution of the U.S.S.R. in 1991. This seminar examines major interpretations of the Russian Revolution through readings and a series of written exercises including a formal book review, a comparative essay and an analytical research paper.  
Same as History 38R8

**L39 Russ 3560 Russia and the West**  
Same as IPH 3560

**L39 Russ 379 Nabokov and Others: Emigration, Literature, Identity**  
In this course we read and discuss literary works from Russian emigrations of the 20th century: the so-called “White Russian” emigration in the wake of the 1917 Revolution; the exile of dissidents and defectors from behind the Iron Curtain; Jewish emigration in the 1970s and ’80s; and migrations and displacements after the disintegration of the Soviet Union. Through our exploration of novels, short stories, poetry, memoirs, literary essays and film, we “travel” to Europe (Paris, Berlin, Prague), the U.S.A. and Israel. The works of Vladimir Nabokov are the centerpiece of the course; we also read shorter pieces by Marina Tsvetaeva, Ivan Bunin, Joseph Brodsky, Dina Rubina, Gary Shteyngart and others. Main topics discussed include memory, place, nostalgia, alienation, assimilation, citizenship and various constructs of personal and cultural identity. All assignments are in English or English translation. There are no prerequisites, although an interest in the IAS topic “Migration and Identity” is helpful.  
Same as IAS 379  
Credit 3 units.

L39 Russ 488 Europe on the Move
The long 19th century was a time of radical changes in all spheres of society. Numerous innovations ushered in an irrevocable acceleration of globalization. The revolution in transport and communication - which started with improved mail services, the construction of a modern road network, the steam ship and the telegraph - would eventually cumulate in the development of a European railroad system. Railroads proved to be important carriers of globalization, contributing to a dramatic boost of worldwide economic exchange. The rising mobility of ever larger population groups was followed by an international exchange of ideas, technical and cultural innovation, workforce and tourists as part of a "fundamental experience of modernity" (W. Kaschuba). This course deals with the impact of the mobility revolution on social and cultural changes in East Central Europe before the First World War - focusing on Prussia/the German Reich and the Russian Empire. After a brief introduction into the concept of mobility history and the Prussian and Russian societies of the long 19th century we will discuss mobility opportunities before the railroad revolution. Thereafter we will focus on the emergence of railroad nets in Prussia and Russia. A focus will be on the role of mobility in literature/arts and for changing urban and rural landscapes. In a last step the students will work on the international aspects of railroad travel, especially tourism.

L83 Russ St 402 The Meaning of National Security in the 21st Century
The 21st century has brought with it new challenges to national security. Standard assumptions about nations and the borders that separate them have been brought into question, and one of the results of this is that the very meaning of national security is undergoing change. Instead of threats to security coming from outside national boundaries, they now often exist within and across borders. This course focuses on contemporary ideas about these issues. It includes a brief overview of current discussions of national security, but it is primarily devoted to examining the conceptual resources we have for making sense of national security in a new world.
Same as IAS 402
Credit 3 units.

L83 Russ St 488 Europe on the Move
The long 19th century was a time of radical changes in all spheres of society. Numerous innovations ushered in an irrevocable acceleration of globalization. The revolution in transport and communication — which started with improved mail services, the construction of a modern road network, the steam ship and the telegraph — would eventually cumulate in the development of a European railroad system. Railroads proved to be important carriers of globalization, contributing to a dramatic boost of worldwide economic exchange. The rising mobility of ever-larger population groups was followed by an international exchange of ideas, technical and cultural innovation, workforce and tourists as part of a “fundamental experience of modernity” (W. Kaschuba). This course deals with the impact of the mobility revolution on social and cultural changes in East Central Europe before World War I — focusing on Prussia/the German Reich and the Russian Empire. After a brief introduction into the concept of mobility history and the Prussian and Russian societies of the long 19th century we discuss mobility opportunities before the railroad revolution.

The Major in Spanish
Required units: 27–30
A minimum of 30 units (double majors: 27 units) at the 300 level or above, of which 21 units must be taken in residence.

Required courses:
The following courses must be included in the 30 units:

Advanced Grammar and Composition (6 units)
Span 307D Spanish Level 4: Grammar and Composition 1 (or elective if placed in Span 308D/308E)
Either Span 308D Spanish Level 4: Grammar and Composition 2 or Span 308E Advanced Reading and Writing (Span 308E is now offered instead of Span 308D).

• Students who place out of Span 307D through Washington University’s placement exam and consultation with the Director of Undergraduate Studies receive back credits toward graduation but not toward the major. These students need to take another advanced (300- or 400-level) Spanish course to obtain the credits typically obtained through Span 307D.

• Span 307D is a prerequisite for the 300-level literature surveys.

• Students are strongly encouraged also to take Span 308D/308E before registering for the survey classes (see below).

Three Literature Survey courses (9 credits)
Three of the following courses, including one Peninsular and one Spanish-American course:
### Arts & Sciences

<table>

### Notes for students considering 400-level courses and study abroad:

- A minimum of two survey courses are prerequisites for all 400-level courses.
- One literature course taken in the Chile or Spain Romance Languages and Literatures semester programs, designated as an acceptable substitute, may be used as one of the three required 300-level survey courses. Students who still must fulfill a survey on campus after returning from study abroad may, with permission of the Director of Undergraduate Studies in Spanish, petition to take an appropriate 400-level seminar in place of the remaining 300-level survey course. Otherwise, students may not take a 400-level course to replace a required 300-level survey course.

Other approved 400-level linguistics course

- Span 370 is prerequisite for the Linguistics courses taught in Spanish.

#### Study Abroad

- One 400-level seminar must be taken on campus.
- Approved 400-level course from the Madrid or Chile Program. (See Study Abroad guidelines)

### Elective courses (two for Single Majors; one for Double Majors):

- Span 324/U27 324 Conversation in Cinema (the only University College course that can count as elective credit for the major and minor).
- Span 331 Hispanic Art/Arte Hispano
- Span 351 Business Spanish
- Span 353 Medical Spanish

Any other advanced 300- or 400-level Spanish (L38) class taught by a Romance Languages and Literatures faculty member.

- Only one elective course taught in English may be taken, when available, for the major.

#### Study Abroad

- Elective credit from Semester programs in Ecuador or Madrid
- Elective credit from Summer program in Ecuador
- Elective credit from Petitioned, Organization for Tropical Studies, School for International Training or Comparative Literature Programs (see Study Abroad guidelines)

- Spanish courses completed (and approved) from Study Abroad programs other than those at Washington University may be used for Spanish elective credit only.
• All Study Abroad credit requires authorization from the Director of Undergraduate Studies.

Other Requirements
Prior to declaring a major, students are required to fill out a questionnaire about their previous preparation and objectives in studying Spanish. As seniors they may fill out an optional survey about the major. Double-major seniors may elect to do their capstone experience in a 400-level course; single majors must do so. The capstone may be fulfilled through the completion of a 400-level class with a B+ or better, or via Honors (see guidelines). All qualified majors in the school of Arts and Sciences may elect to meet the requirements for honors. To be eligible to earn honors in Spanish, Spanish must be the student's prime major.

Recommended for prospective teachers:
1. A second language.
2. Span 466, Span 467, Span 469, Span 413, Span 4013 and Span 417
3. Semester or year in Spain or Chile.

Recommended for prospective graduate students:
1. A second language related to student’s area of interests.
2. Advanced work in other literatures, literary criticism and theory, and related course work in other literature or film programs.
3. Year in Spain or Chile.
4. Senior Honors by thesis or course work (see Honors guidelines).

Any other advanced-level Spanish course offerings either at the 300- or 400-level or approved study abroad course.

L38 Span 101D Spanish Level 1
Beginning language program stressing rapid acquisition of communicative ability. In addition to four hours of master class, students must enroll for two hours of additional practice and do one hour of assessed independent learning activities with multimedia resources.
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L38 Span 102D Spanish Level 2
Beginning language program stressing rapid acquisition of communicative ability. In addition to four hours of master class, students must enroll for two hours of additional practice and do one hour of assessed independent learning activities with multimedia resources. Prerequisite: Span 101D or placement by examination.
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L38 Span 201D Intermediate Spanish
An accelerated intermediate-level grammar review taught by a team of instructors in a MWF grammar class and a T/TH literature/composition class. Reviews basic and some advanced skills intensively with increased emphasis upon reading, writing, culture and vocabulary learning. Prerequisite: Span 102D or placement by examination. Students must register for both a T/TH and a MWF class.
Credit 5 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L38 Span 223 Intermediate Spanish Conversation and Culture
Practice of spoken Spanish and expansion of vocabulary in a wide range of topics. Discussion and role play based on short readings, music and film. Use of the World Wide Web for up-to-date news and culture. Oral presentations and limited writing. Prerequisite: 201D or equivalent. Concurrent enrollment in Span 307D recommended.
Credit 3 units. A&S : LA A&S : IQ, LCD EN : H
L38 Span 245 Women's Fiction in Contemporary Spain
This course focuses on selected novels and short stories by 20th-century women writers in Spain, beginning with those writing during the post-Civil War years (1939–1975) and ending with the new generation of women writers who emerged after the end of the Franco dictatorship (post-1975). Discussions center on both political and aesthetic issues in the contexts of post-war and post-Franco Spain, including the effects of political repression and censorship; representations of gender and sexuality; and literature’s relationship to feminist and nationalist movements in Spain. When relevant, other cultural media, such as film and music, are used in conjunction with our reading and analysis of literary texts. The course is taught in English. Credit 3 units. A&S : TH BU : IS FA : Lit

L38 Span 246 Freshman Seminar: Latin-American Women in History and Culture: Icons and Idols
In English. This class takes an in-depth look at various iconic female figures in the history of Latin America, examining their (self-) representation in history, literature, art and other cultural manifestations. We examine their lives, writings and art to learn more about the historical and cultural moment they lived in; how this moment shaped their lives and how they, in turn, shaped their historical moment. We aim to draw the larger conclusions of how women in history, despite hostile circumstances, have managed to forge political, cultural and artistic identities and make an impact on the world around them. We study these women in a chronological fashion, showing how society’s attitudes changed toward women and how, in some ways, paradoxically, stayed the same. The women we study are all very different in terms of identity, historical period and sociocultural background but all are similar in terms of their desire to overcome convention and resist repression — sometimes with very tragic results. Figures we study include La Malinche, Sor Juana Inés de la Cruz, Delmira Agustini, Frida Kahlo, Eva Perón, the Mothers of the Plaza de Malinche, Sor Juana Inés de la Cruz, Manuela Saenz, Delmira Agustini, Frida Kahlo, Eva Perón, the Mothers of the Plaza de Mayo, Rigoberta Menchú and Ingrid Betancourt. Prerequisite: concurrent registration in individually appropriate level of Spanish language course is required. Credit 3 units. A&S : TH, SD A&S : IQ, HUM, LCD, SD BU : IS

L38 Span 247 Freshman Seminar
Same as WGSS 247. Taught in English. Small group seminar devoted to readings and study of other texts such as films, paintings, etc., active discussion, writing. Topics vary; interdisciplinary focus. Credit 3 units. A&S : TH A&S : IQ, HUM, LCD BU : ETH

L38 Span 251 Latin-American Nomads and Travelers
Rites of passage and trespassing representing Latin-American immigrants, nomads and travelers in narrative and film. This course is designed to map the multicultural context of travel, nomadism, displacement and immigration while studying narrative texts (Before Night Falls; Heading South, Looking North; Life on the Hyphen; Translated Woman: Crossing the Border With Esperanza’s Story) and films (El Norte, Gringo, Old Gringo, Stand and Deliver) by Latin-American and Latino authors. We look at the images, metaphors and myths that pervade current conceptualizations of the borderlands and explore the variety of ways in which postcolonial rites of passage and trespassing inform the aesthetics of contemporary Latin-American cultural expression. In English. Credit 3 units. A&S : TH BU : IS FA : SSP

L38 Span 299 Undergraduate Independent Study
Prerequisites: Span 201D and permission of the department. Credit variable, maximum 3 units.
Credit variable, maximum 3 units.

L38 Span 307D Spanish Level 4: Grammar and Composition 1
In-depth study of the process of writing, designed to prepare the Spanish major to write literary analysis. Literary texts studied as examples of writing styles. Regular compositions. Prerequisite: Span 307D or placement by examination. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L38 Span 308D Spanish Level 4: Grammar and Composition 2
In-depth study of the process of writing, designed to prepare the Spanish major to write literary analysis. Literary texts studied as examples of writing styles. Regular compositions. Prerequisite: Span 307D or placement by examination. Credit 3 units. A&S : LA A&S : IQ, LCD, LS BU : HUM, IS

L38 Span 308E Advanced Reading and Writing
In depth study of the process of advanced reading and writing designed to prepare the Spanish major for upper-level courses. Literary texts studied as examples of writing styles. Regular compositions. Prerequisite: Span 307D or placement by examination. Conducted in Spanish. Credit 3 units. A&S : LA A&S : IQ, LCD, LS

L38 Span 310 Advanced Intermediate Spanish in Spain
Continued study of Spanish grammar and syntax at Washington University’s Madrid Carlos III University Program. A course designed for non-native speakers of Spanish, to refine communicative abilities in all four skills. Prerequisite: placement by exam at Carlos III. Credit variable, maximum 4 units. Credit variable, maximum 4 units.
L38 Span 311 Hispanic Culture and Civilization I
Study of aspects of the political, social and cultural life of contemporary Spain and Portugal and their historical development. Class discussion; readings with compositions. Conducted in Spanish. May be repeated for credit. Prerequisite: Span 201D.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : BA FA : SSP

L38 Span 312 Topics in Hispanic Culture and Civilization II
Study of aspects of the political, social and cultural life of contemporary Latin America and their historical development. Class discussion; readings with compositions. Conducted in Spanish. Prerequisite: Span 201D or placement by examination.
Credit 3 units. A&S : TH, CD BU : BA FA : SSP

L38 Span 313 Chilean Contemporary Culture
This two-week course provides a panoramic view of Chilean contemporary culture, focusing on the years from 1988 to the present. We examine the representation of current issues in literature, the arts and the media, and study topics such as governmental institutions, the constitution of 1980, the economy, the role of the Catholic Church, public policy concerning culture, etc. The course meets three hours a day, and there are several guest lecturers. Conducted in Spanish. Requirements: two short papers, short reports in class of the news or a cultural activity students have attended, and participation in class discussions. Course includes an all-day cultural excursion on Saturday, which features a visit to one of Neruda’s houses, a history museum, etc.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD BU : ETH FA : SSP

L38 Span 317 Advanced Spanish Language in Chile/Spain
Continued study of Spanish grammar and syntax at Washington University’s program in Chile or Spain. A course designed for non-native speakers of Spanish to refine mastery of difficult uses and structures in all four skills. Prerequisite: placement by exam or program director. Credit variable, maximum 4 units.
Credit variable, maximum 4 units.

L38 Span 3181 Spanish Culture and Civilization
This course is intended to acquaint students with important aspects of Spanish culture, including history, civilization, society, politics and the arts, dating from the first invasions of the Peninsula to the present. Students gain an awareness of the ethnic, cultural and aesthetic diversity of Spain as a country of multiple autonomous regions, by working with written texts and other media and by visits to various locations. The broader aim of the course is to enable students to engage with and to analyze Spanish culture from an intellectually critical perspective and knowledge of its sociohistorical distinctiveness. Requirements include active participation within all classes and excursions, presentations and various written assignments. This course is taught in Madrid, as part of the Washington University Carlos III Program. Conducted in Spanish.
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : IS FA : SSP

L38 Span 322 Advanced Conversation in Spain
Designed to offer students with advanced skills in Spanish an opportunity to refine their ability to discuss a variety of topics. Various media such as films, television, newspapers and other modes of communication are used for oral presentations and some writing. Prerequisite: Span 301, 307D or 308E, or multiple 300-level courses.
Credit 3 units. A&S : LA A&S : IQ, LCD

L38 Span 325 Exploration, Traveling and the Double Gaze: Mapping Geography and Identity in Colonial Spanish America
In this course we examine the geographical, cultural and ideological mapping as described in the travel/exploration chronicles of the 16th, 17th and 18th centuries. We focus on the Southern hemisphere (Peru) as well as the Northern Frontier (Mexico, New Mexico, La Florida, Colorado) while reading narrative texts such as Columbus’ Diario, Cabeza de Vaca’s Naufragios, Inca Garcilaso de la Vega’s The Florida of the Inca, Francisco Vázquez de Coronado’s Narratives of the Coronado Expedition, and Alonso Carrió de la Vandera’s El Lazarillo de Ciegos Caminantes (Guide for Travelers in 18th-Century Spanish America). We use art work and historical maps for our study of the cultural and ideological representations of alterity and of the geography of the colonial empire. In English.
Credit 3 units. A&S : TH FA : SSP

L38 Span 331 Hispanic Art/Arte Hispano
This course focuses on the most important movements, artistic expressions and its representatives of the art history of Latin America and Spain. From the pre-Columbian art of the Mayas, Aztecs and Incas, to the syncretism of Postcolonial Latin American art, the Mexican Muralism and the self-reconstruction portraits of Mexican artist Frida Kahlo to the Chicano Art in the U.S.A. From the Medieval paintings of religious Spain, to the criticism of the Spanish nobility by Diego Velazquez, the Spanish Civil War of “Guernica” by Pablo Picasso, to the Surrealism of Salvador Dalí and Antonio Gaudi. The students visit the St. Louis and the Kemper Art Museums. Prerequisite: Span 308E. May be used for elective credit in the Spanish major or minor. In Spanish.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD BU : IS FA : AH
L38 Span 3321 Spanish Film Studies in Spain
An introduction to contemporary Spanish film taught at Washington University's program in Spain. Prerequisite: approval of Washington University's program director. Credit 3 units. BU : IS FA : AH

L38 Span 3331 Spanish Literature I in Chile/Spain
Introductory survey of Spanish literature from its beginnings in the Middle Ages to the baroque period at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. FA : Lit

L38 Span 3332 Early Modern Spanish Texts: Whose Golden Age Do They Represent?
This course studies a series of work from 16th- and 17th-century Spain canonized by later readers as classics of national Spanish literature, that daringly experiment with the literary genres of their period to incorporate discourses from daily life, thereby revealing the decadence of imperial Spain and questioning the representation of this period as a "Golden Age." Includes the Lazarillo de Tormes, El Abencerraje, Fuenteovejuna, La Vida es Sueño, La Dama Boba and short narratives by Cervantes and María de Zayas. Prerequisites: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. In Spanish. Credit 3 units. A&S : TH, SD A&S : IQ, HUM, LCD, SD, LS BU : IS

L38 Span 3333 Medieval Iberia: A World with Many Faces, Through its Texts and Other Cultural Artifacts
This course offers a panoramic vision of the medieval literature of the Iberian Peninsula, from its beginnings until the end of the Middle Ages (11th to 15th Centuries). We read student modernized and annotated versions of some of the most famous works of this period, originally written in Castilian: lyric and epic poetry, ballads, miracles and exemplary stories, and the first act of Celestina. This selection includes works written by Christian, hispano-arabic and hispano-hebrew authors, and also some works originally written in other languages of the Peninsula (Arabic, Hebrew, Portuguese and Latin), that were translated into Castilian during the Middle Ages and are now considered part of the corpus of Castilian literature, because they significantly influenced Castilian authors of this and later periods. We also use music, art, images of old manuscripts and books, and secondary readings that help us better understand the cultural context of this period. Our discussion of the texts include topics such as the relations among the three main Cultures of the Peninsula: Arabic, Jewish and Christian, the role of the Christian Church in medieval society, the situation of minority and women, the presence of oral tradition in written texts, and the creation and spread of manuscripts and early printed books. Prerequisite: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD, SD, LS BU : HUM

L38 Span 3334 Spanish Literature II
An introduction to key texts from Spanish literature in the 19th and 20th centuries at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. FA : Lit

L38 Span 3341 Spanish Literature II in Chile/Spain
An introduction to key texts from Spanish literature in the 19th and 20th centuries at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. FA : Lit

L38 Span 3344 Spanish Literature II
An introduction to key texts from Spanish literature and culture in the 19th, 20th and 21st centuries in their specific historical contexts. Topics may include encounters between Arabs, Christians and Jews in the Iberian peninsula; issues of gender and sexuality; the modern city; discourses of nationalism; the Spanish Civil War; the Francoist dictatorship; transition to democracy; and contemporary challenges in an increasingly multicultural and multi racial society. Prerequisites: Span 307D; concurrent registration in Span 308E is allowed; completion of Span 308E is recommended. In Spanish. Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD, LS BU : IS FA : Lit

L38 Span 3351 Spanish-American Literature I in Chile/Spain
A survey of major figures and literary trends in Spanish America from 1492 to Modernismo (1880); at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. FA : Lit

L38 Span 3352 Spanish-American Literature of the Long 19th Century: From Empire to Nation
This survey examines the changing roles of literature and its creators during the period that saw the end of the powerful Spanish empire and the emergence of the political framework of independent nations we are familiar with today. Students are introduced to prominent themes such as independence writing, the experience of race in literature, romanticism, civilization vs. barbarism, the appeal of literature to popular classes, modernism, the place of literature in nation building and in shaping national identity, and the idea of the past as present. Prerequisites: Span 307D or permission of instructor; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. In Spanish. Credit 3 units. A&S : TH A&S : IQ, HUM, LCD, LS

L38 Span 3353 Spanish-American Literature I
A survey of major figures and literary trends in Spanish America from 1492 to Modernismo (1880). Emphasis on the writings of either Colón or Columbus, Cortés, Bernal Díaz, Las Casas,
Inca Garcilaso de la Vega; and Aztec reactions to the Conquest in the early period and on Sor Juana in colonial times. After the period of independence from Spain (1810–1824), the focus is on the literary representation of the making of the new nations and cultural autonomy. Readings include chapters of a picaresque novel, the representation of dictatorship, civilization vs. barbarism, the gaucho epic, and 19th-century fiction. Lectures and class discussions of the readings; exams, papers and short reports. Prerequisites: Span 307D; concurrent registration in Span 308E is allowed; completion of Span 308E is recommended. In Spanish.

Credit 3 units. A&S : TH , CD A&S : IQ , HUM , LCD LS BU : IS FA : Lit

L38 Span 3361 Spanish-American Literature II in Chile/Spain
A survey of major Spanish-American literary works from the end of the 19th century to the contemporary period at Washington University’s program in Chile or Spain. Prerequisite: Span 308E or the equivalent.
Credit 3 units. FA : Lit

L38 Span 336C Spanish-American Literature II
A survey of major Latin-American literary works focusing on canonical works of the 20th and 21st centuries in their cultural and historical contexts. The course includes discussions of major literary movements such as the avant-garde, the Boom and the post-Boom. Other topics may include the literary and cultural responses to revolution, dictatorship and the evolving definitions of Latin America. Authors may include Quiroga, Neruda, Guillén, Vallejo, Borges, Cortázar, Rulfo, Carpentier, García Márquez, Poniatowska, Fuentes, Ferré and others. Prerequisites: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended.
Credit 3 units. A&S : TH , CD A&S : IQ , HUM , LCD , LS BU : IS FA : Lit

L38 Span 337C The Chilean Short Story
In this course we trace the trajectory of the short story in Chile in the 20th century with special attention to such literary movements as realism, naturalism, vanguardism, surrealism and the new narrative, including the literature written during the dictatorship. The course tries to determine what specifically can be expressed about national identity through narrative, and is informed by historical, political and sociological analyses. The course includes several field trips to related sites and guest lectures by major Chilean writers and critics. Class requirements include a short essay, a long final essay and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. Conducted in Spanish.
Credit 3 units. A&S : TH FA : Lit

L38 Span 3340 Nationalism in Action: The Spanish-American War
We study nationalism as it was in evidence in the Spanish-American War in the United States and in Spain as an outgrowth of each country’s history. We read periodicals of the period and study caricatures and other artistic expressions, as well as writings by authors such as Stephen Crane, Galdós, Mark Twain, Fernando Ortíz, Ivan Musicant and others. Cuba, Puerto Rico and the Philippines are included in the scope of the course. Students are expected to present a book report orally and to write it formally; in addition, a term paper of about 15 pages on a topic chosen in consultation with the instructor serves as a final project. The course is conducted in English although students able to read other languages may do some of the readings in the original. May count as elective credit for the major if work is done in Spanish. Enrollment limited to 15 students.
Credit 3 units. A&S : TH FA : SSP

L38 Span 3349 “Don Quixote” in Translation
Because Cervantes' masterpiece is considered to be the first modern novel, it is absolutely essential to any understanding of literature as a whole. By way of a close textual reading, this course focuses on all the ways Don Quixote recapitulates almost the entire Western tradition and how it anticipates so many of the later developments of the novel. Course conducted in English.
Credit 3 units. A&S : TH FA : Lit

L38 Span 350 Undergraduate Seminar in Spanish Literature and Culture
Taught in Spanish. Topics vary. Can be repeated for credit. This course can be counted as one of the three surveys required to obtain a Spanish major. Prerequisites: Span 307D; concurrent registration in Span 308E is recommended. Satisfies the 300-level literature survey requirement for the Spanish major and minor.
Credit 3 units. A&S : TH A&S : IQ , HUM , LCD FA : Lit

L38 Span 3501 Latin-American Women Writers in Translation
Study of major 20th-century women writers in English translation. We read poems, plays, essays and short fiction by authors such as Agustini, Ocampo, Mistral, Bombal, Gambaro, Ferré, Valenzuela and others. Class conducted in English. Spanish majors do the readings and papers in Spanish. Enrollment limit 25.
Credit 3 units. A&S : TH FA : Lit

L38 Span 3502 Spanish-American Short Novel
Credit 3 units. A&S : TH BU : HUM FA : Lit
Arts & Sciences

L38 Span 3503 Fiction, Crime and Enigma: Clues to Detective Narrative from the Americas
Ever since the detective story took readers by storm during the last decades of the 19th century, the genre of detective fiction has continued to flourish while undergoing numerous transformations. Latin-American literature is well known for the alternative re-readings of the crime fiction canon by well-established writers who broke canonical rules of classical and hard-boiled detective narrative and both parodied and politicized the genre through endless experimentation. In this course, we focus on the intersection of action and enigma, clues and patterns of a crime, the unraveling of a puzzle and the solution of a mystery in narratives by Poe, Borges, Chandler, Hammett, Valenzuela, Piglia, García Márquez and others, as well as in selected films based on their works. In English.
Credit 3 units.  A&S : TH  FA : Lit

L38 Span 3504 The Spanish Short Story During the Past 50 Years
An explosion of storytellers: the rise and fall and rebirth of a genre. This course reviews a half century of short fiction in Spain, emphasizing the works written since 1970. We focus on the most significant, representative movements in relation to their historical and social contexts. Writers studied include Camilo José Cela, Miguel Delibes, Ignacio Aldecoa, Ana María Matute, Carmen Martín Gaite, Juan Benet, José María Merino, Luis Mateo Díez, Esther Tusquets, Cristina Fernández Cubas, Soledad Puértolas, Javier Marías, Antonio Muñoz Molina and Marina Mayoral. Prerequisites: Span 307E; concurrent registration in Span 308D is recommended. Paper, mid-term and final exams. In Spanish.
Credit 3 units.  A&S : TH  FA : Lit

L38 Span 3505 Borges in Translation
Comprehensive study of Borges’ major works. Analysis of basic themes, philosophical implications and structural elements present in Borges’ poetry, essays and short stories. We also study a number of film adaptations of Borges’ work, as well as a number of texts by writers he has influenced.
Credit 3 units.  A&S : TH  FA : Lit

L38 Span 3506 Women Writers of Early Modern Spain
This course analyzes early modern women’s writings (both secular and religious) by considering sociohistoric context, genre studies (autobiography, convent narratives, short prose fiction, poetry and theater) and feminist criticism. Critical approaches included consider issues of self-representation and subjectivity; performance; mysticism; life writing; feminist and lesbian utopias; cross-dressing; the body and spirituality; and the role of the inquisition and confessors in the collaborative process of confessional writing. Class conducted in English. Spanish majors do the readings and papers in Spanish.

Credit 3 units.  A&S : TH

L38 Span 351 Business Spanish
Study of language and structures used in conducting business in the Hispanic world. We use actual materials from various businesses — advertising, marketing, real estate, accounting. Particular stress on speaking and writing. Prerequisite: Span 308E or permission of instructor.
Credit 3 units.  A&S : LA  A&S : IQ, LCD  BU : IS

L38 Span 353 Medical Spanish
Designed for future medical professionals, this course provides students with a complete vocabulary and cultural sensitivity necessary for treating Spanish-speaking patients. While the main focus is oral/aural, written exams, varied reading and some research are required. Volunteer work recommended for enrolled students. Advanced students are given priority. Prerequisite: Span 307D.
Credit 3 units.  A&S : LA  A&S : IQ, LCD  BU : IS

L38 Span 354 A View from the Southern Cone: Perspectives on Art, Literature and Culture
This course deals with current issues of cultural, social, political and literary importance related to the Southern Cone. We study selected texts from Argentina, Chile and Uruguay as well as contemporary films and drama productions. This course seeks to determine what specifically can be expressed about national identity, globalization and the environment as these countries face the 21st century. Course requirements include four short essays and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. May be repeated for credit. Conducted in Spanish.
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD  BU : ETH

L38 Span 360 Literature Topics Course in Spain
Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prerequisite: approval of Washington University’s Madrid Program director and Carlos III. Credit variable, maximum 3 units.
Credit variable, maximum 3 units.  FA : Lit

L38 Span 3601 Cultural Studies Topics Course in Spain
Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prerequisite: approval of Washington University’s Madrid Program director and Carlos III. Credit variable, maximum 3 units.
Credit variable, maximum 3 units.  FA : SSP
L38 Span 370 Introduction to Hispanic Linguistics
An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax) and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and within Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages. Credit 3 units. A&S : LA A&S : IQ, LCD

L38 Span 380 Surveys of Hispanic Cultures
This course surveys cultures in specific contexts (Latin America and Spain) and in different historical periods, from the Middle Ages to the present. The course provides students with critical and methodological tools in order to carry out an articulate and informed cultural analysis. Prerequisites: Span 307D; concurrent registration in Span 308E is recommended. In Spanish. Topics vary from semester to semester. See section description for current offering. Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD BU : ETH

L38 Span 400 Intensive Translation for Graduate Students I
The first part of a two-semester course sequence in reading and translating Spanish. For graduate students in the humanities and social and natural sciences. Nongraduate students may enroll with permission of the department. Must be followed by Span 401. Credit 3 units. A&S : LA A&S : IQ, LCD

L38 Span 401 Intensive Translation for Graduate Students II
Continuation of Span 400. For graduate students in the humanities and social and natural sciences. Prerequisite: Span 400. Credit for Span 400 is contingent on completion of Span 401. Credit 3 units. A&S : LA A&S : IQ, LCD

L38 Span 406 The Spanish Symbiosis: Christians, Moors and Jews
This course explores the contributions of Christians, Muslims and Jews in the Spanish peninsula, which led to what historians have called a convivencia (the peaceful and productive coexistence of these groups in medieval Spain), albeit an arrangement that was often troubled and tested. Among the topics studied are the Visigothic kingdom, the “Golden Age” of Muslim and Jewish Spain, the reconquista (reconquest; a series of campaigns by Christian states to recapture territory from the Moors), the age of Alfonso X, the Inquisition, the conquest of the New World, the expulsion of the Jews and the Moriscos (Moors), and the formation of modern Spain. We read historical accounts by Vives, Américo Castro, Benassar. Literary texts in translation include some of the greatest works of the Spanish tradition: The Cid, The Celestina, Galdós’ Compassion, Goytisolo’s Count Julian, Aridjis’s 1492 and excerpts from Fuentes’ Terra Nostra, among others. Pertinent films are discussed in class. Prerequisite: reading knowledge of Spanish, Hebrew or Arabic, or permission of instructor. Credit 3 units. A&S : TH, CD FA : Lit, SSP

L38 Span 407 Seminar in Spain: Cultural Encounters
The Spanish, Latinos and non-Hispanic North American vis-a-vis “the Other.” Designed to study the historical and ideological bases of attitudes and mutual perceptions that inform these three cultures’ understanding of each other. Analysis of literary and extra-literary representations of the three identities in question teach students to think critically about the cultural, religious and political foundations of intercultural perceptions. Washington University students’ experiences living in Spain provide a context for them to examine their own attitudes about “Hispanidad,” as well as to learn about their own cultures (American, “Latino”) as they are understood from abroad. Study of theoretical concepts of identity, ethnicity, minority, gender, culture and intercultural communication enables students to participate in practical discussions based on observation and experience with an objective, critical understanding of how they perceive and are perceived by others. Fulfills 400-level literature courses taught in Spanish. In Spanish. Credit 3 units. A&S : SS A&S : IQ, SSC
course requirement for the Spanish major. Prerequisites: Span 307D, Span 308E and two 300-level literature surveys or the equivalent in Spanish. Course taught in Madrid, Spain, through the Washington University Madrid Program. Credit 3 units. A&S : TH

L38 Span 408 Topics in Medieval Literature and Culture
This is a writing-intensive course that requires a minimum of three papers of approximately four to five pages in length, with rewrites; 50 percent of the grade must come from written work. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. In Spanish. Credit 3 units. A&S : TH

L38 Span 411 Advanced Grammar and Syntax
This course presents a detailed study of Spanish syntax. Special attention is given to synchronic and diachronic variation as well as Spanish/English contrasts of particular interest to language learners and teachers. Prerequisites: 6 units of 300-level Spanish, or permission of instructor. Credit 3 units. A&S : LA A&S : IQ, LCD

L38 Span 4111 Advanced Grammar and Syntax in Spain
Detailed study of contemporary Spanish syntax. Special attention to fine points of grammar and syntax necessary for communication at the advanced level, taught at Washington University's Carlos III Program in Madrid. Prerequisite: placement by exam. Credit variable, maximum 4 units.

L38 Span 4112 Bilingual Advanced Grammar and Syntax in Spain
Detailed study of contemporary Spanish syntax for bilingual students, taught at Washington University's Carlos III Program in Madrid. Prerequisite: placement by exam or program director. Credit 3 units.

L38 Span 413 Linguistics and Language Learning
The course, taught in English, provides a critical survey of various components involved in the relationship between linguistics and language learning. The course emphasizes the language learner and explores dimensions of second-language acquisition. The course begins with an examination of linguistic theories and then highlights the influence of linguistic theories on L2 acquisition research. The course then moves to an exploration of research on language and the brain. With this foundation, the course covers both internal and external factors related to language acquisition, such as language aptitude, age, gender, memory, prior knowledge, etc. In summary, theoretical and research dimensions of both linguistics and language learning are treated. This course counts as a requirement for the Graduate Certificate in Language Instruction and for the undergraduate Minor in Applied Linguistics. This course carries the Social and Behavioral Sciences attribute. Prerequisite: Ling 170 is recommended but not required. Credit 3 units. A&S : LA A&S : IQ, SSC FA : SSP

L38 Span 416 Introduction to Hispanic Linguistics
An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages. Preceptorial for undergraduates only. Credit 3 units. A&S : LA A&S : IQ, LCD

L38 Span 417 Spanish Phonetics, Phonology and Dialectology
This course, conducted in Spanish, explores the linguistic varieties of the 21 Spanish-speaking countries from both a historical and a synchronic perspective. The course begins with a traditional look at Spanish phonetics and phonology, with all students memorizing and using the International Phonetic Alphabet. Course readings and discussions extend beyond the descriptive and include a search for the sources of language variation within the Spanish-speaking world. Particular attention is devoted to language contact and bilingualism. Students read in areas such as history, sociolinguistics, dialectology and sociology, as well as traditional linguistic studies, in designing their projects concerning phonetics, phonology and dialect diversification. Credit 3 units. A&S : LA A&S : IQ, LCD BU : IS

L38 Span 419 Feminist Literary and Cultural Theory
This course intends to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. NOTE: This course is in the core curriculum for the Women, Gender and Sexuality Studies graduate certificate. Prerequisites: advanced course work in WGSS or in literary theory (300 level and above) or permission of the instructor required. Same as WGSS 419

742
L38 Span 420 Captivity and Its Consequences: Horror, Desire and Nostalgia in Colonial Narratives
The objective of this course is to examine the formation and evolution of narratives of captivity in Latin American texts and their visual representations from the first indigenous and European contacts to the end of the colonial period. Prerequisite: Span 307D, Span 308E and at least two 300-level courses taught in Spanish; in Spanish.
Credit 3 units.  A&S : TH

L38 Span 421 Argentinean Literature
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD

L38 Span 4211 Spanish-American Literature of the Colonial Period
A selective survey of the literature of the three centuries between the first encounters of the European and American Indian cultures and independence from Spain. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units.  A&S : TH, CD  FA : Lit

L38 Span 423 Trotaconventos, Celestina & Co.: Go-Betweens, Love, Witchcraft and Other Related Subjects
In this course we study how the literary figure known as the "go-between" evolved in Spanish literature, from its origins in Roman literature, the Cantigas and the Exempla, to its culmination in the Libro de Buen Amor and the T ragicomedia de Calisto y Melibea, also called Celestina. We also read a selection of texts that were influenced by Celestina and examine how their authors recreated Celestina's characters and theme. Our analysis of the go-between leads us to a series of reflections about various related subjects, including the literary representation of love, the uses of language and magic as instruments of manipulation and power, and the ethical problems associated with such uses. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Preceptorial for undergraduates only; in Spanish.
Credit 3 units.  A&S : TH

L38 Span 424 Latin-American Literature and Theory: Reading the State, Culture and Desire
In this course, we pair literary and theoretical texts in order to hone a way of reading in which theory and literature are mutually informative, provocative and inspiring. The idea of these loose groupings is not to prescribe a particular relationship between given literary and theoretical texts but rather is a way to begin negotiating the necessarily multiple relationships of theory and literature. These pairings come to seem more artificial over the course of the semester as we trace a network of relations that begins to look more and more like the Borgesian map that covered up the entire territory it described. The object of the course is, thus, not to define or prioritize a particular set of relations but rather to practice a way of reading literature theoretically and theory literarily, by which the strengths of both are allowed to come to the forefront in their complexity. Thematically, the course has several nuclei: the triangulation of State, culture and art (Piglia/Foucault, Burman/Agamben); a psychoanalytic approach to art as desire (Lispector/Lacan/Cixous); and finally, a third nucleus about which the first two commingle completely: “post-State,” proliferating desire, libidinal economies wherein the State is anachronism and failure (Art/Deleuze; Sorín/Virilio/Sitrín, Sassen; Bolaño/Zizek). Readings may include: Piglia, Foucault, Agamben, Artt, Deleuze, Virilio, Sassen, Borges, Benjamin, Bolaño, Zizek, Lispector, Lacan, Cixous, as well as the films Garaje Olimpo and Historias Míminas. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD

L38 Span 425 Humanism, Magic and Rhetoric in 15th-Century Castilian Literature
This course offers a panoramic view of 15th-century Castilian literature. We study a selection of texts produced both in the Castilian court and in some centers of higher learning, especially the University of Salamanca. The secondary readings help us to better understand the cultural context of the time and deepen our knowledge of four subjects that were highly present in the minds of 15th-century authors: humanism, rhetoric, love and magic. Because some of the texts selected for this course were written by (or have been attributed to) “converso” authors, we also examine the phenomenon of “converso” literature. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One hour preceptorial for undergraduates only. Conducted in Spanish.
Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD

L38 Span 426 Latin-American Theater
Survey of dramatic and theatrical currents from the late 19th century to the present. The course focuses on tracing the themes of nationalism, cultural identity, immigration, class displacement and the effects of consumerism in representative plays from the Rio de la Plata, Chile, Colombia and Mexico. The course studies manifestations of the sainete, the grotesco criollo, theater of the absurd, as well as the popular independent theater movements of the 1960s and '70s. Theoretical works studied include those of Brecht, Piscator, Esslin. Authors studied: Dragún, Payró, Cossa, Wolff, Sánchez, Díaz, Carballido, Gambaro, Buenaventura. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
L38 Span 4261 The Erotics of Violence in Latin America
The course is based on a combined analysis of theories on violence, nation and urban spaces, and the study of literary texts pertaining to the Latin-American post-Boom. Some of the authors be studied are Ricardo Piglia, Fernando Vallejo, Jorge Franco, Roberto Bolaño, Mario Mendoza, Laura Restrepo, Evelio Rosero, Santiago Roncaglione, Alonso Cueto, Martin Kohan, Guillermo Arriaga, Daniel Alarcón, Paulo Lins, etc. The course is conducted in Spanish and focuses on the interconnections between sexuality, violence and political issues, and on the discursive strategies used for the representation of collective subjectivities and social conflict in Latin-American societies.
Credit 3 units. A&S : TH

L38 Span 4261 The Erotics of Violence in Latin America
Credit 3 units. A&S : TH

L38 Span 4281 Creative Difference: Reclaiming Spanish-American “Traditional” Novel
This class focuses on a selection of aesthetically and socially representative 19th- and early 20th-century Spanish-American novels. Integrating a wide range of sources (critical essays, paintings, film), we explore abolitionist issues in Sab (Cuba), the reinvention of Amerindian legacies in Aves Sin Nido (Peru), and the different facets of modernization and nation-building in Los de Abajo (Mexico) and La Voragine (Colombia). You should finish the course with a broader knowledge of Spanish-American literary history, a deeper understanding of textual representations of gender, class and multiethnic identities, and a sharper awareness of your potential as a reader and critic. Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units. A&S : TH

L38 Span 4281 Creative Difference: Reclaiming Spanish-American “Traditional” Novel
Credit 3 units. A&S : TH

L38 Span 4282 Voice into Print: The Art of Storytelling in Spanish-American Short Story
The short story has been a central part of the extraordinary originality and vitality of Spanish-American writing and it enjoys great popularity among scholars and the general public alike. Integrating a wide range of sources (critical essays, paintings, film), this course brings together the best examples of the genre that span over a hundred years of the history of Spanish-American literature and exemplify a variety of themes and forms: from the ordinary to the fantastic, from the realist to the imaginative. Special emphasis is placed on the questioning of such binary oppositions in the most recent writings, particularly from the Caribbean, promoting the syncretic or “transculturated” forms of expression. Students familiar with the works of Quiroga, Borges, Ruflo, Cortázar, Ferré and Valenzuela are delighted to discover many vibrant new voices, including Peri Rossi, Sommers and Moyano, or to explore the lesser-known terrain of minority writings. Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units. A&S : CD

L38 Span 4282 Voice into Print: The Art of Storytelling in Spanish-American Short Story
Credit 3 units. A&S : CD

L38 Span 4291 The Politics and Poetics of Spanish-American New Novel
When Spanish-American writers gained acclaim in the world literary scene in the so-called “Boom” of the 1960s, their spectacular success was often linked with the so-called magical realism that draws upon the oral and written tradition of both European and regional heritage (African, Amerindian) and shapes them to forge a uniquely Latin-American poetics. Through theoretically informed approach, this course offers an overview of the most acclaimed Spanish-American novels published between 1950 and 1970, with special attention given to the divergent cultural legacies and political uses of “magical realism.” Specific notions of New World/Old World, modernization/tradition, nation building/otherness are explored in novels such as: Los Pasos Perdidos by Carpentier (Cuba), Pedro Paramo by Ruflo (Mexico), La Ciudad y Los Perros by Vargas Llosa (Peru), Los Recuerdos del Porvenir by Garro (Mexico), La Traicion de Rita Hayworth by Puig (Argentina), and Cien Años de Soledad by Garcia Márquez (Colombia). Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units. A&S : CD

Credit 3 units. A&S : CD

L38 Span 4301 Print and Power in 19th-Century Latin America
Open to advanced undergraduate and graduate students, this seminar covers one of the most fascinating periods in Latin America history and cultural production, spanning from the eve of the wars for independence to eve of the Mexican Revolution (1800–1910). Several reasons make this period and the connections between print media or print culture and power worthwhile. This long century was the most war-torn in the region’s history. Not only did writers engage issues of war on what was almost a daily basis, but war generated a wealth of new modes of literature. Debates on the slave trade

Credit 3 units. A&S : CD

L38 Span 4303 Latin-American Essay
Credit 3 units. A&S : CD
and abolition also occurred during the 1800s, and largely in
writing. And while places such as Lima, Peru and Mexico
City were established printing centers during the Iberian
occupation of the Americas, true printing revolutions were not
widespread until during and after the wars for independence.
One of the results to emerge during the first third of the century
was that writing and print media gave legitimacy to incipient
republican states, wedding print to power in new ways. And
by the end of the century, educators and state bureaucrats
 teamed up to push for public primary education and literacy
as components of progressive, “civilized” nations. Add to this
the visual technologies and an overall surge in new forms of
symbolic communication through print, and it is easy to see
why this period offers such a rich backdrop for observing how
print and power fit into the landscape we now know as Latin
America. We pay special attention to themes including writing
as a legitimizing force, writing and nation building, and the
intersection of print with war, race, identity formation, modernity
and ideologies. Readings include archival materials, wartime
and popular poetry, novels by authors such as Jorge Isaacs
and Ignacio Altamirano, writings by Simon Bolívar and Domingo
Sarmiento, and modernista poetry and prose. Historical and
theoretical selections guide our analysis of primary sources.
Prerequisites: Span 307D, Span 308E and at least two 300-level
literature courses taught in Spanish. One-hour preceptorial for
undergraduates only. In Spanish.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD FA : Lit

L38 Span 431 Latin-American Poetry I
Survey of the major figures of Latin-American poetry from
the colonial period to modernism. Poets studied include Sor
Juana, Caviedes, Avellaneda, Marti, Dario, Silva, Najera.
Prerequisites: Span 307D, Span 308E and at least two 300-level
literature courses taught in Spanish. One-hour preceptorial for
undergraduates only. In Spanish.
Credit 3 units. A&S : TH FA : Lit

L38 Span 432 Latin-American Poetry II
Survey of contemporary Latin-American poetry,
“postmodernismo” to the present. Poets studied include
González Martinez, Vallejo, Neruda, Huidobro, Paz, Parra,
Orozco, Pizarnik, Cardenal, Belli. Prerequisites: Span 307D,
Span 308E and at least two 300-level literature courses taught
in Spanish. One-hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD FA : Lit

L38 Span 433 Spanish-American New Novel
This course offers a critical overview of the most acclaimed
The following texts are read critically with special attention given
to the problems of canonicity and formal experimentation:
Los Pasos Perdidos b y Carpentier, Pedro Paramo by Rulfo,
Spanish. One-hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD

L38 Span 4361 Latin-American Prose Fiction: 1975 to Present
Study of Latin-American narrative from the late 1970s to the present includes both recent novels of writers established before the 1970s (Vargas Llosa, García Márquez, Fuentes) and younger writers associated with the post-"Boom" phenomenon.
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. A&S : TH FA : Lit

L38 Span 442 Literature and Revolution
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD

L38 Span 443 The Inconvenient Indio: Imagining Indigenous Cultures in Peru and Bolivia
In the cultural history of the Andean nations, the Indio has always been a powerful yet perpetually unstable signifier, whose meaning is constantly redefined by non-Indians. An archaic residue for some, the bedrock of a new society for others, the Indio conjures contradictory imaginaries of articulation, combination, disjunction and metamorphosis that have shaped a wide range of debates: from assimilation and mestizaje in the context of nation-building and modernity, to the politicizing of ethnic identities in the context of immigration and globalization. Focusing on Peru and Bolivia, this course examines these cultural imaginaries and the debates in which they appear, as well as the models of community and identity they suggest. In doing so, we discuss topics such as the discourse of illness, indigenismo, transculturation, heterogeneity, violence and memory. Materials analyzed include poetry by César Vallejo and Carlos Oquendo de Amat; essays by José Carlos Mariátegui and Ángel Rama; José María Arguedas’s novel Los Ríos Profundos; Jorge Sanjínés’s film El Coraje del Pueblo; and theatrical performances by Grupo Yuyachkani. Prerequisites: Span 307D, Span 308E and at least two 300-level literature course taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S : TH A&S : IQ, HUM

L38 Span 4471 Spanish-American Women Writers I
A study of women’s writing from the turn of the century to 1970. Readings include novels, short stories, poetry, essays and autobiographical texts. Prerequisites: Span 307D, Span 308E and at least two 300-level literature course taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. A&S : TH, SD FA : Lit

L38 Span 4472 Spanish-American Women Writers II
A study of contemporary women’s writing from 1970 to the present within a feminist theoretical framework. Topics include the construction of gender, female subjectivity, love and power, women and politics, literary strategies, etc. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. A&S : TH, SD FA : Lit

L38 Span 449 Topics: Defining a Lit of the Americas
Topics in Comparative Literature. Subject matter varies from semester to semester.
Same as Comp Lit 449
Credit 3 units. A&S : TH A&S : IQ, HUM FA : Lit

L38 Span 450 Special Topics in Hispanic Literature and Culture
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. May be repeated for credit.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD FA : Lit

L38 Span 4502 Latin-American Narrative in Film
Analysis and discussion of a select group of films, focusing on their literary origins or their peculiar elaboration of critical conflicts in contemporary Latin-American society. Films by Littin, Puenzo, Lombardi, Skarmeta, Solanas, Gutiérrez Alea, Lilienthal and others. Novels by Vargas Llosa, Carpentier, Amado, Puig, Skarmeta and Soriano. Course conducted in English. Does not fulfill 400-level literature requirement.
Credit 3 units. A&S : TH FA : AH

L38 Span 4503 Latin-American Film: Argentine Cinema
This course examines the development of cinema in Argentina, from the earliest attempts to codify a particularly Argentine perspective in Tango musicals to the present day. We explore the relationships between both film and nation building and film and revolution. We also study the role of cinema in national memory, using the cinema of the post-dictatorship as a case study. We read widely in film, cultural and political theory to enrich our study of the various films under consideration.
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Conducted in Spanish.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD BU : IS FA : AH

L38 Span 450C Advanced Seminar Abroad in Spanish and Latin-American Literature
Credit 3 units.
L38 Span 451 Medieval Spanish Literature
Study of the development of the principal literary traditions of medieval Spain, emphasizing major genres, themes and styles. Consideration of various critical approaches and responses to medieval texts. Lectures, papers and class reports. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD FA : Lit

L38 Span 453 Survey of 18th-Century Latin-American Narrative
Exploring new ways of thinking; scientific observation and traveling; historiography; and the organization of knowledge. Analysis and discussion of a variety of 18th-century Latin-American narratives such as conventual writing by women, memoirs, travel, scientific writing and newspaper articles, to understand how that century's attempts to compile, question, seek, build and reform came about. The narratives are regarded in their historical context and in a dialogue with some of the most recent literary studies about 18th-century Latin America. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates.
Credit 3 units. A&S : TH FA : Lit

L38 Span 4533 Narratives of Fear: Violence in Latin-American Literature
This course analyzes different representations of violence in Latin-American literature. Based on a critical analysis of 19th- and early 20th-century texts, we study how the recognition and legitimation of violence occurs in the context of hierarchical relationships in the society. Also we study how the literary images of bandits, pirates, thieves and assassins become the counter-discourse of the views of progress sustained by the hegemonic powers. The role of power and ideology is discussed in texts that define different levels of violence as a cultural manifestation.
Credit 3 units. A&S : TH

L38 Span 455 History of the Language
A study of the evolution of Spanish and its dialects from Latin to contemporary usage. Knowledge of Latin helpful but not required. Prerequisites: Span 307D and Span 308E.
Credit 3 units. A&S : LA

L38 Span 456 Romance Philology
Same as French 456
Credit 3 units. A&S : LA

L38 Span 4571 Exemplarity, the Writing of History and the Beginnings of Chivalry in Medieval Spain
This course is devoted to the study of exemplarity, historical discourse and chivalric fiction in medieval Iberia. It begins with an introductory selection of 13th-century texts that prepares the students to better understand the development of Castillian identity, as shown in a selection of historical chronicles, and in some of the most canonical texts of the 15th century, such as El Libro del Conde Lucanor, El Libro de Buen Amor and El Libro del Caballero Zifar.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD

L38 Span 458 Gender, Politics and Writing in Women’s Fiction of the Post-Franco Era
This course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco’s death and continue to write into the new century (Esther Tusquets, Cristina Fernández Cubas, Rosa Montero, Carmen Riera and Adelaida García Morales), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucía Etxebarria and Espido Freire). We consider the works of these women within their cultural, historical and political contexts, addressing issues such as the representation of gender and sexuality; the cultural impact of feminism, nationalism and globalization; and the influence of the publishing industry and the market on literary production. Whenever available, film adaptations of these literary works are used in conjunction with the readings. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. A&S : TH

L38 Span 459 16th- and 17th-Century Drama
Study of early modern Spain’s highly influential and innovative Comedias, from Lope de Vega’s creation of new popular forms for public Corrales to the spectacles of court theater for elite audiences in the generation that followed. Includes study of selected plays, as both texts and performances. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD BU : HUM FA : Lit

L38 Span 461 Cervantes: “Don Quixote”
Study of the famous work that launched the novel, giving voice to surprisingly different forms of experience and identity as it narrates the life of a crazed reader who attempts to rewrite his own history by becoming a knight errant. Includes Parts 1 and 2 of Cervantes’ Don Quixote, a range of critical readings, and the use of visual media that reflect how this work has in subsequent centuries entered popular culture. Prerequisites: Span 307D,
Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S : TH A&S : IQ, HUM, LCD FA : Lit

L38 Span 4611 The Golden Age Novelas
A detailed study of the novela, or novella, genre in 17th-century Spain, including selected novelas ejemplares by Cervantes and selected novelas amorosas and Desenganos Amorosos by María de Zayas. The course considers the problem of exemplarity, the representation of transgression or deviancy, literary tradition and sociohistorical context in these works. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S : TH FA : Lit

L38 Span 46216th- and 17th-Century Prose
Reading of works that are groundbreaking in the formal development of Golden Age Spanish literature and in the representation of ideas concerning national and individual identity during the imperial period. To include Dialogo de la lengua, Lazarillo de Tormes, Diana and selected works by Guevara, Cervantes, Quevedo and Zayas. Seminar discussions and research paper. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S : TH A&S : IQ, HUM, LCD FA : Lit

L38 Span 46316th- and 17th-Century Poetry
Classical Spanish poetry during the Renaissance and the baroque periods. Poets range from the Marques de Santillana and Garci Icaso de la Vega to Luis de Gongora, San Juan de la Cruz and Francisco de Quevedo. Movements and trends explored include the tradition of courtly love, culteranism, Spanish mysticism and conceptismo. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S : TH A&S : IQ, HUM, LCD FA : Lit

L38 Span 464 Self-Representation and Picaresque Fiction in Early Modern Spain
This course investigates self-representation through the figure of the picaro and fictional autobiography in the representative works of the Spanish picaresque genre (Lazarillo, Guzman de Alfarache and El Buscon). We also examine the figure of the Picara in novels with female protagonists such as La Lozana Andaluza and La Picara Justina (as well as a short story by María de Zayas) and consider the relation of the picara to women's roles in Spanish fiction and culture. This course considers aspects of gender, ethnicity, class and desire in the sociohistorical context of picaresque fiction as well as narratological approaches to these texts. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S : TH

L38 Span 465 The Spanish Trickster
A study of Spain's major picaresque novels in the Golden Age in the context of early modern Europe. Translations of works such as the Lazarillo and El Buscon, as well as selected foreign imitations and parodies of the Spanish picaresque from the 17th and 18th centuries. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Does not fulfill the 400-level literature requirement for the Spanish major but is applicable to other credit required for the major. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S : TH FA : Lit

L38 Span 466 Second-Language Acquisition
Same as Ling 466
Credit 3 units. A&S : LA A&S : IQ, HUM

L38 Span 467 Grammar and Vocabulary Acquisition
This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing; explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such as a learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices. Credit 3 units. A&S : LA A&S : IQ, LCD BU : BA

L38 Span 468 Don Quixote
A close reading of the English translation of Cervantes' masterpiece, with special attention given to the European literary context. Conducted in English. Credit 3 units. A&S : TH FA : Lit

L38 Span 469 Reading and Writing in a Second Language
This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second-language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required
course for the undergraduate minor in Applied Linguistics and an elective for the Graduate Certificate in Language Instruction. Credit 3 units. A&S : TH  A&S : IQ, HUM, LCD

L38 Span 4691 Second Language Reading and Writing: Theory, Research and Practice
This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second-language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in Applied Linguistics and an elective for the Graduate Certificate in Language Instruction. This course carries the Social and Behavioral Sciences attribute. Credit 3 units. A&S : SS  A&S : IQ, SSC  EN : S

L38 Span 471 Borges
Comprehensive study of Borges’ major works. Analysis of basic themes, philosophical implications and structural elements present in Borges’ poetry, essays and short stories. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S : TH  A&S : IQ, HUM, LCD  FA : Lit

L38 Span 472 19th-Century Novel
Departing from writings on realism by both 19th-century European writers and more contemporary literary theorists, the course carries out a critical reappraisal of the notion of “realism” in the 19th-century Spanish novel. Texts covered include selected works of Benito Pérez Galdós, Leopoldo Alas (Clarín), and Emilia Pardo Bazán that represent different periods of their literary trajectory. Daily readings and discussions focus on issues such as: the “reality effect”; the poetics of detail; naturalism in the Spanish context; the aesthetics of beginnings and endings; gender and consumption; fin-de-siècle crisis of gender (“New Women” and emasculated men); the problem of modernity; and the intersections of gender, class and national identity. These critical issues are situated in the context of theoretical discussions on the complex, and often ambivalent, function of realist discourse in Spanish fin-de-siècle culture and society. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S : TH  A&S : IQ, HUM, LCD  FA : Lit

L38 Span 473 Romanticism
The origins of romanticism as a movement explored before reading and analyzing key works by the main Spanish romantic writers: Cadalso, El Duque de Rivas, Espronceda, Larra, Mesonero Romanos, Becquer, Campoamor and Zorrilla. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S : TH  FA : Lit

L38, Span 474 Mexican Film in the Age of NAFTA (1990-2010),
Starting in the 1990s, as NAFTA came into effect, Mexico revitalized its film industry and managed to produce not only a somewhat sustainable market within the country, but also a set of recognized figures in acting (Salma Hayek, Gael Garcia, Diego Luna), directing (Guillermo del Toro, Alfonso Cuándn, Alejandro González Iñarritu), and moviemaking in general (Emmanuel Lubezki, Rodrigo Prieto, and others). This course explores the underlying processes that allowed for such a rebirth. The main focus of the course is to understand the contradictory impact of neoliberalism in film, understanding neoliberalism as the economic doctrine of unbridled free markets, and its social and cultural consequences. Paradoxically, neoliberalism allowed the industry to become financially and aesthetically viable, while becoming inaccessible to the lower classes in Mexico. The course will mostly develop four of these processes: the undermining of nationalism as the main topic, the displacement of the target audience from the working classes, both rural and urban, to the urban middle class; the transformation of political cinema from the leftist films of the 70s to the conservative ideologies of neoliberal politics and the intersection of Mexican film to the global market of so-called “art house cinema” Students will compare films that have reached an international market with those viewed only within Mexico. In addition, students will be introduced to critical approaches that will allow them to appreciate these movies in the context of film aesthetics, social identities, and the relationship between film and economic development. Movies will be shown outside of class in Spanish with English subtitles. The class will be conducted in English. Written coursework may be pursued in English or Spanish. No Prereq...
Credit variable, maximum NaN units. A&S : TH  A&S : IQ, HUM, LCD

L38 Span 475 The Other in Contemporary Spanish Fiction
An examination of the various manifestations of “the other” in works of Delibes, Perez Reverte, Matute, Goytisolo, Riera, Atxaga. Aspects studied include history, culture, religion, language and gender. Ancillary readings treat theoretical as well as critical issues. Two or three short papers (two to three pages) and a longer paper with specific installments and revisions due during the semester (undergraduates, 15 pages; graduates, 20 pages.) Prerequisites: Span 307D, Span 308E and at least
two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. 
Credit 3 units. A&S : TH

L38 Span 479 Generation of 1898: Theater and Poetry
Analysis of works by Azorin, Unamuno, Baroja, Maeztu and Valle-Inclán. Various approaches to each work encouraged, and the theory of “generations” questioned. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. 
Credit 3 units. A&S : TH, FA : Lit

L38 Span 480 The Generation of ’98
An analysis of the Spanish-American War, the warring parties, and particularly of the literature it created in Spain by authors such as Unamuno, Machado, Valle-Inclán, Azorin and Baroja. The “desastre” led to introspective analyses of philosophy, education, and history. It attempted to rediscover the Hispanic ethos, to re-create its landscape poetically, and to become European without losing its Spanish roots. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. 
Credit 3 units. A&S : TH, FA : Lit

L38 Span 481 Modern Drama
Readings from 19th- and 20th-century playwrights such as Zorrilla, Benavente, Valle-Inclán, Lorca, Buero-Vallejo. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. 
Credit 3 units. A&S : TH, FA : Lit

L38 Span 482 Topics in 19th-Century Spanish Cultural Studies
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. 
Credit 3 units. A&S : TH, A&S : IQ, HUM, LCD

L38 Span 486 20th-Century Novel
A study of the novel in 20th-century Spain, focusing on the contemporary period. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. 
Credit 3 units. A&S : TH, A&S : IQ, HUM, LCD, FA : Lit

L38 Span 487 Discourses on Gender in 19th- and 20th-Century Spain
This course focuses on discourses on gender, from the late 19th century to the present in the context of feminism in Spain. We explore the social, political and cultural role of Spanish women (writers) within their specific historical contexts, with a special attention to their struggle to construct a new female subjectivity through their writings. To this end, their narrative fiction (novels, short stories) are read in conjunction with nonfiction writings (essays, journalism, etc.). Authors studied include 19th-century proto-feminists such as Emilia Pardo Bazán and Concepción Arenal; early 20th-century writers such as Carmen de Burgos, Margarita Nelken, and other female activists of the Republican period; and women writers of the post-War and post-Franco eras. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. 
Credit 3 units. A&S : TH, SD, A&S : IQ, HUM, LCD, SD

L38 Span 489 Cities of the Past Future: Literary Institutions & Peripheral Modernity in the Latin-Am. Avant-Garde
This class proposes a study of the Latin-American avant garde as a phenomenon of “peripheral modernity” and as a critique of the “institution literature” developed by 19th century and modernista liberalisms. This reading, rather than merely proposing a one-by-one reading of canonic texts, seeks to engage the avant-garde as a global cultural phenomenon with impact in literature, art, society and ideology. To achieve this, the class focuses on four regional contexts of the avant garde. First, we visit post-Revolutionary Mexico, to understand the way in which the avant-garde redefined notions of literature in Latin America by carefully analyzing the stakes of groups such as the estridentistas or the contemporaneos. Second, we analyze the reinvention of Buenos Aires as a literary city in the 1920s and 1930s to understand the impact of “peripheral modernity” in the constitution of the avant-garde as a specifically Latin-American phenomenon. Third, we discuss the impact of the semana de arte moderno of Sao Paulo, to understand how the idea of
“antropophagia” created an articulation of the avant-garde with debates of cultural identity and transculturation. Finally, we go to the Andes to understand how avant-garde phenomena dealt with the questions of “divergent modernities.” Authors discussed include Arqueles Vela, Manuel Maples Arce, Jorge Cuesta, Xavier Villaurrutia, Jorge Luis Borges, Oliverio Girondo, Roberto Arlt, Mario de Andrade, Oswald de Andrade, Manuel Bandeira, César Vallejo, Pablo Palacio, César Moro and José Carlos Mariátegui. Scholarship includes Peter Bürger, Matei Calinescu, Renato Poggioli, Rubén Gallo, Pedro Angel Palou, Beatriz Sarlo, Fernando Rosenberg, Haroldo de Campos, William Rowe and Roland Forgues. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates in Spanish. Credit 3 units.  A&S : TH  A&S : IQ, HUM, LCD

L38 Span 490 Spanish Women’s Fiction on the Edge of the Millennium
The course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco’s death and continue to write into the new century (Cristina Fernandez Cubas, Rosa Montero, Soledad Puertolas and Carme Riera), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucia Etxebarria, Belen Gopegui). We consider not only the aesthetic innovations of these writers, but also their preoccupation with the following sociopolitical and cultural issues: connections between gender, sexuality and writing; their response to feminist literary criticism and politics; and their relationship to the market and consumer society in the context of globalization. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates in Spanish. Credit 3 units.  A&S : TH, SD  FA : Lit

L38 Span 491 18th- to 19th-Century Literature
Readings in various genres covering significant figures and works in neoclassicism, romanticism and realism. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates in Spanish. Credit 3 units.  A&S : TH  FA : Lit

L38 Span 4921 The Avant-Garde in Spain: Poetry/Visual Art/Cinema
This course examines the development of the avant-garde in Spain during the two decades prior to the Spanish Civil War (1936–1939) from an interdisciplinary perspective, including poetry, the visual arts and cinema. We first study the development of the historical avant-garde through a study of four key avant-garde movements either developed by Spanish artists or taking place in Spain: Cubismo (Pablo Picasso, Juan Gris), Creacionismo (Vicente Huidobro, Gerardo Diego), Ultralismo (Gomez de la Serna, Cansinos-Assens, Pedro Salinas), and Surrealismo (Luis Bunuel, Salvador Dali, Rafael Alberti, Luis Cernuda, Federico Garcia Lorca and Joan Miro). We then analyze different connections with the historical avant-garde traceable in the work of a later generation of experimental Spanish poets and artists working under the strict censorship existing during Franco’s fascist dictatorship, such as Jose Val del Omar, Joan Brossa, Antoni Tapiés, Jose Angel Valente, Pere Gimferrer, Jose Miguel Ullan and Jose Luis Guerin. We also incorporate in our discussion theoretical writings by various critics including Ortega y Gasset, Peter Burger, C. Brian Morris and Roman Gubern. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates in Spanish. Credit 3 units.  A&S : LA  A&S : IQ, LCD

L38 Span 494 20th-Century Poetry
Examination of 20th-century Spanish poetry from Machado and Juan Ramon Jimenez to the Generation of ’27 and younger poets. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates in Spanish. Credit 3 units.  A&S : TH  FA : Lit

L38 Span 495 Honors
Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prerequisite: permission of Director of Undergraduate Studies. Preregistration not permitted. Credit variable, maximum 3 units. Credit variable, maximum 3 units.  A&S : TH

L38 Span 4951 Honors
Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prerequisite: permission of Director of Undergraduate Studies. Preregistration not permitted. Pass/fail. Credit 3 units.  A&S : TH

L38 Span 498 Contemporary Spanish Novel
A study of modern novels by established authors, such as Benet, Goytisolo and Martin Gaite, and new figures such as Landero, Millas and Puertolas. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates in Spanish. Credit 3 units.  A&S : TH  FA : Comp

L38 Span 499 Contemporary Spanish Novel II: 1965 to Present
A study of modern novels by established authors, such as Benet, Goytisolo and Martin Gaite, and new figures such as Landero,
Speech and Hearing

The minor in Speech and Hearing Sciences is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine and is designed for students interested in exploring topics related to human communication. Course work provides an overview of the fields of hearing, deafness, language and speech, with opportunities to explore related topics in more depth. This minor is especially valuable for students in fields such as psychology, education, philosophy–neuroscience–psychology (PNP) and linguistics, but has broad applicability for many fields of study. Course work completed as part of this minor can also be used to fulfill prerequisites for graduate studies in audiology, deaf education and speech-language pathology.

Contact Person: William W. Clark

E-mail: clarkw@wustl.edu
Departmental website: http://pacs.wustl.edu

Program Director
William W. Clark
Professor of Audiology and Communication Sciences, Professor of Otolaryngology, Professor of Education
PhD, University of Michigan

Director of Audiology Studies
L. Maureen Valente
Associate Professor of Audiology and Communication Sciences, Associate Professor of Otolaryngology
PhD, Washington University

Director of Deaf Education Studies
Heather Hayes
Assistant Professor of Audiology and Communication Sciences, Assistant Professor of Otolaryngology
PhD, Washington University

Assistant Professors
Brian T. Faddis
Assistant Professor of Audiology and Communication Sciences, Research Assistant Professor of Otolaryngology
PhD, University of California–Davis

Rosalie M. Uchanski
Assistant Professor of Audiology and Communication Sciences, Research Assistant Professor of Otolaryngology
PhD, Massachusetts Institute of Technology

There is no major in this area. The minor in Speech and Hearing Sciences is offered by the Program in Audiology and Communication Sciences at Washington University School of Medicine. The program also offers graduate programs in the fields of audiology, deaf education, and speech and hearing sciences, leading to the following degrees: Doctor of Audiology (AuD), Master of Science in Deaf Education (MSDE), Doctor of Philosophy (PhD)—Speech and Hearing Sciences.

The Minor in Speech and Hearing

Total units required: 15

Required courses:
- Educ 234 Introduction to Speech and Hearing Disorders

Elective courses:
At least four of the following, totaling at least 12 units:
- PACS 401 Anatomy and Physiology of Speech and Hearing
- PACS 421 Introduction to Electroacoustics
  or
- PACS 422 Basic Acoustic Measures
- PACS 433 Acoustical Phonetics and Speech Perception
- PACS 434 Normal Language Development
- Educ 408 Education and Psychology of Exceptional Children
- Psych 433 Psychology of Language
- Ling 170D Introduction to Linguistics
- Ling 312 Phonetics

Additional Information
This minor is composed of a minimum of 15 hours that focus on the study of speech, language and hearing. Of these, at least 9 units must be at the 300 level or above. Courses to count toward the minor must be approved in advance by the minor adviser, and one or more elective courses must come from M89 PACS. Additional courses not listed may be allowed, with advance approval of the minor adviser, based on the student’s individual area(s) of interest.

Speech and Hearing Sciences course work is offered by the Program in Audiology and Communication Sciences at Washington University School of Medicine. Please visit the website at http://pacs.wustl.edu or contact via email at pacs@wusm.wustl.edu or call 314/747-0104 with questions about courses and programs.
Urban Studies

The interdisciplinary major in Urban Studies is ideal for students drawn to serious examination of the profound issues confronting urban/metropolitan America. Urban Studies seeks to prepare students, indeed our nation's future leaders, for the challenge of solving these issues. We seek to prepare students to research and investigate issues concerned with evolving patterns of metropolitanism and the necessity for central city reconstruction; problems associated with gentrification, urban sprawl and affordable housing; crises confronting newly emerging immigrant communities and the social cleavages of urban marginalized communities; unemployment and underemployment; law and justice; HIV/AIDS and issues of public health; the economic underdevelopment of poor communities; race and inequality; the paradox of declining welfare rolls amidst escalating poverty rates; underperforming urban schools; and the in-migration and out-migration of the city and its schools, among others. All available social indices suggest that such domestic issues in our central cities will only increase in significance in the years ahead. The fact that many of the aforementioned issues are deeply embedded in cities of the world makes Urban Studies not just focused on domestic cities, but global cities as well.

Urban Studies is a standalone major. The students presently in the program are jointly pursuing study in Urban Studies and in prelaw, premedicine, political science, educational studies, environmental studies, economics, international and area studies, philosophy–neuroscience–psychology, architecture and comparative arts, among others. Our purpose is to prepare students to critically engage the social, political and economic dilemmas facing our cities, both domestically and internationally, with intellectual rigor, integrity, sensitivity and compassion. The program draws faculty and course work from the various academic units including, but not limited to, Arts & Sciences, the George Warren Brown School of Social Work, the School of Law, the College of Architecture and the Graduate School of Architecture & Urban Design, among others. To complement our course work, Urban Studies offers local internships in the St. Louis area or internships through the Capital Semester in Urban Studies in Washington, D.C.

The Major in Urban Studies

Total required units: 33 units, 21 of which must be 300 level or above. Of these 21 advanced units, no more than 6 units may be from independent study courses.

Required courses: URST 299 The Study of Cities and Metropolitan America; one introductory course in math or applied statistics; one 400-level independent study or an internship located locally, nationally or internationally; and a capstone seminar with required writing assignments or senior thesis.

Elective courses: There are five subject area concentrations in Urban Studies: neighborhoods and community development, urban education, cities of the world, public policy/social policy, and public health. Once a student declares a major in urban studies, he or she will be assigned a major adviser who will help the student formulate the area concentration.

Because of the nature of the major and requirements of the nonresidential components, majors are strongly encouraged to declare by their third semester in residency.

Additional Information

Study Abroad: The program offers the International Urban Scholars Study Abroad Program through Oxford University, the London School of Economics and Political Science, University of Cape Town in South Africa, and Fudan University in Shanghai, China.

The Capital Semester in Urban Studies, in Washington, D.C.: The Capital Semester in Urban Studies, in Washington, D.C., is an intensive program that combines internships and academics in one semester. The Capital Semester combines professional experience, course credit in Social and Public Policy, exclusive briefings and unparalleled internship placement in the nation’s capital. Requirements include a 3.4 grade point average and two letters of recommendation from Washington University faculty. In addition to classes, students will attend exclusive site briefings for dialogue with politicians and policy makers. The program is coordinated by the Office of Overseas Programs in the Office of International and Area Studies. Previous internships have been in the office of congressional leaders as well as policy making and policy informing research agencies.

Senior Honors: Urban Studies majors are encouraged to work for Senior Honors, for which they may apply in the junior year. Acceptance into the program is based on the student’s previous academic performance and a proposal to a core faculty member in Urban Studies who agrees to supervise the honors research. The honors candidate must complete Honors thesis research and an Honors thesis, which is evaluated by a three-member faculty committee.

The Minor in Urban Studies

Total required units: 15

Required courses:

URST 299 The Study of Cities and Metropolitan America 3

Elective courses:

12 units at the 300 level or above. All courses for the minor must be taken for a letter grade, with a passing grade of C or better. These courses must be home-based in three different departments or programs, and may not include courses in the student’s major field. A complete list of general courses that count toward the Urban Studies minor is published each semester in WUCRSL. No more than 3 units may be counted from among the following: Directed Readings, Independent Study, Internships, University College or credits from another institution including study abroad.

Additional Information

The Minor in Urban Studies facilitates the study of urbanization across the globe, from multiple disciplinary perspectives, and is designed to complement any major field of study. Students
are encouraged to pursue course work, in companion with their major field of interest, that is distinctive yet complementary to the study of urbanization, which impacts all fields of inquiry. Courses must be selected in consultation with the program director/adviser in Urban Studies.

L18 URST 101 Introduction to Urban Studies
This course provides a survey of the field of Urban Studies, utilizing the City of St. Louis as a field site. The major purpose of the course is to gradually reveal how a city operates internally, and how it operates externally with its sister cities, surrounding metropolitan areas and neighboring states, amidst competing and often contradictory interests. Utilizing historical analysis as a guide, the course briefly revisits the experiences of previous waves of ethnic groups to the St. Louis metropolitan area, as a lens for understanding the current social, political and economic dilemmas that many urban dwellers in St. Louis now face. The course reveals to students the intricacies of social welfare issues and policies among high density populations, in St. Louis, that are homogeneous and heterogeneous, at the same time. Visits and discussions with various governmental and nongovernmental agencies, and how such agencies function or dysfunction for various constituencies allow students to ask crucial questions regarding equality of opportunity in a democratic society. Students also encounter diverse communities and neighborhoods and the intended and unintended consequences of social welfare policies designed to ameliorate urban dilemmas such as poverty and inequality, homelessness, educational underachievement, gentrification, migration and immigration, development, health care, fiscal issues, the informal economy, and issues concerned with crime and social justice, among others. Readings are reinforced and challenged through visits, interactions and observations with broad constituencies and institutions, ranging from city officials to community residents. As such, this course offers a survey discussion of the rich interdisciplinary field of Urban Studies for those who may be interested in pursuing a standalone major in the field of Urban Studies.
Credit 3 units.  A&S : TH, CD, SD  A&S : IQ, HUM, LCD  BU : HUM  FA : SSP

L18 URST 2020 The Immigrant Experience
Same as AMCS 202
Credit 3 units.  A&S : SS, CD  A&S : IQ, SSC, LCD  AR : SSP  BU : ETH, HUM  FA : SSP

L18 URST 2152 The Theory and Practice of Justice: The American Historical Experience
Same as History 2152

L18 URST 2188 African Urban History
Same as History 2188
Credit 3 units.  A&S : TH  A&S : IQ, HUM  EN : H

L18 URST 233 Biomedical Ethics
A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.
Same as Phil 233F
Credit 3 units.  A&S : TH  A&S : IQ, HUM  BU : ETH  FA : SSP

L18 URST 258 Law, Politics and Society
Same as Pol Sci 258
Credit 3 units.  A&S : SS  A&S : IQ, SSC

L18 URST 298 Practicum in Urban Studies
Practicum with an Urban Studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the Urban Studies adviser. Enrollment by permission of the instructor. Credit variable, maximum 3 units. Credit variable, maximum 3 units.

L18 URST 299 The Study of Cities and Metropolitan America
This course serves as the introductory course analyzing the forces shaping America’s cities and surrounding metropolitan areas. It examines strategies for dealing with many of the profound social issues affecting urban/metropolitan America. Emanating from a historical perspective, it examines the ways in which industrialization and deindustrialization shaped Northern American cities and the consequences of deindustrialization on urban citizenry. It further surveys the demographic and spatial
transformation of American cities, examining the consequences of urban transformation on federal, state and local politics on society and on her institutions. Similarly, the course focuses on the origin and societal changes and emerging goals of urban development, gentrification and evolving patterns of metropolitanism and the necessity for central city as well as neighborhood reconstruction. The dynamics of racial residential segregation; crime and punishment; issues of academic achievement and under-achievement; and the social cleavages of urban marginalized communities, family structure, urban homelessness, urban sprawl and health care among others, are viewed from the perspective of social justice by exploring social, political, economic, racial and ethnic factors that impact on access, equity and care. Various theoretical perspectives and philosophies are introduced that have dominated the discourse on race and urban poverty. A field-based component complements the course work, and is designed to build interest, awareness and skills in preparation for outreach to urban communities. Prerequisite: sophomore standing. Credit 3 units.

L18 URST 3025 Sports and Culture: Fair Play (?): Race, Gender and Nation in American Sports
Same as AMCS 3025
Credit 3 units. A&S : TH A&S : IQ, HUM, LCD

L18 URST 303 Independent Study in Urban Studies
Independent study with an Urban Studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the Urban Studies adviser. Enrollment by permission of the instructor. Credit variable, maximum 3 units. Credit variable, maximum 3 units.

L18 URST 3036 Migration and Modernity: Human Mobility, Identity and State Formation — Russian/Soviet/Post-Soviet Context
Same as IAS 384
Credit 3 units. A&S : TH, CD, SD A&S : IQ, HUM, LCD, SD EN : H

L18 URST 304 Educational Psychology
A course in psychological concepts relevant to education. Organized around four basic issues: how humans think and learn; how children, adolescents and adults differ in their cognitive and moral development; the sense in which motivation and intention explain why people act as they do; how such key human characteristics as intelligence, motivation and academic achievement can be measured. Prerequisite: sophomore standing. Offered fall and spring semesters. Same as Educ 304
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L18 URST 3066 The American City in the 19th and 20th Centuries
Same as History 3066
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : HUM FA : SSP

L18 URST 308 Human Variation
A survey of human biological diversity, considering its adaptive and taxonomic significance from the perspective of origins and distribution of traits and adaptation. Prerequisite: Anthro 150A or introductory biology. Same as Anthro 307A
Credit 3 units. A&S : NS, SD, QA A&S : IQ, NSM, AN, SD BU : SCI FA : NSM

L18 URST 3091 Poverty and Social Reform in American History
Same as History 3091
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : BA EN : H FA : SSP

L18 URST 310 History of Women’s Health Care in America
Same as WGSS 310
Credit 3 units. A&S : SS, WI A&S : IQ, SSC, WI BU : BA FA : SSP

L18 URST 313B Education, Childhood and Society
An examination of childhood, child development and education from different perspectives. Observation of children in a variety of settings, including classrooms. Through historical, sociological, psychological and political readings, students clarify current ideas about children, investigate the nature of childhood, and begin to understand how and why childhood is constructed as it is. Prerequisite: sophomore standing. Limited to 45 students. Same as Educ 313B
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L18 URST 314 Literacies, Schools and Communities
Same as Educ 314
Credit 3 units. A&S : LA A&S : IQ, HUM BU : BA

L18 URST 315 Introduction to Social Psychology
Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory and political psychology, among other issues. Prerequisite: Psych 100B. Same as Psych 315
L18 URST 316 Contemporary Women's Health  
Same as WGSS 316  
Credit 3 units. A&S : SS , SD A&S : IQ , SSC , SD BU : BA FA : SSP

L18 URST 316F Rediscovering the Child: Interdisciplinary Workshops in an Urban Middle School  
It is said that at this time in history the entire country must make a commitment to improve the positive possibilities of education. We must work to lift people who are underserved; we must expand the range of abilities for those who are caught in only one kind of training; and we must each learn to be creative thinkers contributing our abilities to many sectors of our society. In this course, we expand our views about learning by experimenting with the creative process of lateral thinking. In the first six weeks of the semester, we learn about learning by meeting with exceptional people with many scholarly, professional and civic engagement accomplishments. We also learn by working in teams to develop an exciting set of 2D/3D, hands-on, problem-solving workshops for middle-schoolers from economically disadvantaged urban families; the workshop curriculum is based upon your knowledge and passion as well as your interests. During the last eight weeks, we deliver these workshops once a week to students at Compton-Drew Middle School (adjacent to the Science Center in the city of St. Louis). In this course we celebrate the choices of studies we each pursue, and expand our experience by learning from each other’s knowledge bases and creativity. The course is open to students from all disciplines and schools, freshmen through seniors, and meets the Multidisciplinary Fieldwork requirement for AMCS majors.  
Same as AMCS 316F  
Credit 3 units. A&S : SS A&S : IQ, SSC FA : SSP

L18 URST 3206 Global Gender Issues  
This course compares the life experiences of women and men in societies throughout the world. We discuss the evidence regarding the universal subordination of women, and examine explanations that propose to situate women’s and men’s personality attributes, roles and responsibilities in the biological or cultural domains. In general, through readings, films and lectures, the class provides a cross-cultural perspective on ideas regarding gender and how gendered meanings, practices, performances serve as structuring principles in society.  
Same as Anthro 3206  
Credit 3 units. A&S : SS, CD A&S : IQ, SSC, LCD FA : SSP

L18 URST 3211 Introduction to Colonial Latin America  
Same as History 321C

L18 URST 322C African Civilization 1800 to Present  
Beginning with social and economic changes in 19th Century Africa, this course is an in-depth investigation of the intellectual and material culture of colonialism. It is also concerned with the survival of pre-colonial values and institutions, and examines the process of African resistance and adaptation to social change. The survey concludes with the consequences of decolonization and an exploration of the roots of the major problems facing modern Africa.  
Same as AFAS 322C  
Credit 3 units. A&S : TH, CD A&S : IQ, HUM, LCD AR : SSP BU : IS FA : SSP

L18 URST 3254 Vote for Pedro: A Critical Look at Youth and Popular Culture  
Over the past decade, anthropologists have become increasingly wary of the importance of youth and popular cultures as a powerful field where people not only express themselves but also influence some of the basic tenets of society. While “pop life” is not exclusive to youth groups in terms of production and distribution, young people are the majority of consumers. In this course, we examine popular Christianity in Brazil, Mexican street art, Japanese manga comics, American teenage fascination with the extraterrestrial, U.S. college sports fandom, various “white” hip-hop movements, alternative “girl” rock and drug “cultures.” These vibrant forms and practices are not homogenous, they vary across time and space. This course considers “the popular” in its broadest sense, giving us an opportunity to turn an anthropological lens onto the everyday life of teenagers and the seemingly flavor-of-the-month styles of the popular, while simultaneously opening up the discipline of cultural anthropology to appreciate the fast-paced montages and purposefully distorted sounds of consumerism and youth energy.  
Same as Anthro 3254  
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L18 URST 326 American Economic History  
Basic theoretical concepts applied to analyze the changing structure and performance of the American economy from colonial times to the present. Prerequisites: Econ 1011 and 1021.  
Same as Econ 326  
Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L18 URST 3260 Race, Class and Gender: Cultural Readings of Brazil and Its Cities  
Cities are spectacles of humanity. In Brazil, the construction and management of its metropolitan areas have been intended
as a showcase of modernity and cultural development for the outside world (especially Europe and later the United States) to see. Brazilian cities are also the settings and results of intense social relationships. In this course we try to understand the relationship between spatial design and sociocultural identity through particular discussions of (im)migration, globalization, architecture, history and ideology. In our conversations about Sao Paulo, Rio de Janeiro, Brasilia, Salvador and Porto Alegre, we come to understand that places are always social and thus necessitate an analysis of race, class, gender and sexuality.

Same as IAS 3260

Credit 3 units.  A&S : SS, SD  A&S : IQ, SSC, SD  BU : IS

L18 URST 3280 Political Intolerance in World Politics
Same as Pol Sci 3280

L18 URST 348 Economic Realities of the American Dream
Exploration of the realities of economic life in the U.S. and how they correspond to the American Dream. Interdisciplinary perspectives from economics, sociology and other areas of social inquiry. Emphasis on the consistency between empirical data and different concepts of the American Dream. Specific topics to include sources of economic growth and changing living standards, unemployment, impact of globalization on U.S. citizens, economic mobility, poverty and inequality, and social justice. Prerequisites: Econ 1011 and Econ 1021, or consent of the instructors.

Same as Econ 348

Credit 3 units.  A&S : SS  A&S : IQ, SSC

L18 URST 352 Health Economics
Analysis of consumer demand for health care, medical technology and the role of health insurance. Emphasis placed on behavior of the physician (whether he acts as an agent for the consumer or on his own behalf); on the use of paramedics, preventive care, outpatient care and the general market organization of the health industry. The major concern is the rising cost of health care and appropriate public policy responses. Prerequisite: Econ 1011.

Same as Econ 352

Credit 3 units.  A&S : SS  A&S : IQ, SSC  FA : SSP

Same as History 3632
Credit 3 units.  A&S : TH, CD, SD   A&S : IQ, HUM, LCD   BU : HUM   FA : SSP

L18 URST 372C Law in American Life: 1776 to the Present
Among the many contradictions of American history, none has been more recurrent than the tension of justice and law — of aspiration and reality — as Americans have sought to make good on the promises of the Revolution. Although we pride ourselves as a nation devoted to the principle of "equal justice under the law," the terms "equal" and "justice" have prompted bitter debate, and the way we place them "under law" has divided Americans as often as it has united them. It is the purpose of this course to examine the many and conflicting ways in which Americans have sought to use "law" to achieve the goals of the republic established in 1776. Viewing "law" as the contested terrain of justice, cultural construction, social necessity and self-interest, this course pays close attention to the way Americans have used, abused or evaded "law" throughout their national history.
Same as History 372C
Credit 3 units.  A&S : TH, SD   A&S : IQ, HUM, SD   BU : ETH, IS   FA : SSP

L18 URST 375 Topics in Urban Studies
Prerequisites: URST 299 and junior standing.
Credit 3 units.  A&S : SS

L18 URST 379 Meltdown: Archaeology and Climate Change
This course examines the temporal, geographical and environmental aspects of past climate changes, and by using specific examples, explores how climate changes may have affected the evolution of human culture and the course of human history. Archaeological and documentary examples from the Americas, Africa, Asia, Europe and the Near East are used to explore if or how significant events in human history have been influenced by changes in climate.
Same as Anthro 379

L18 URST 3874 International Public Health
This course explores current topics in international public health using a case-study–based approach, emphasizing public health issues affecting low-and middle-income countries; introduction to the tools and methods of international public health research and programs; in-depth examination and critique of the roles of local and national governments, international agencies, and third-party donors in international public health work; and the contributions of anthropology to the international public health agenda.
Same as Anthro 3874
Credit 3 units.  A&S : SS   A&S : IQ, SSC   FA : SSP

L18 URST 389A Power, Justice and the City
Same as Pol Sci 389A
Credit 3 units.  A&S : SS, SD   A&S : IQ, SSC, SD   EN : S

L18 URST 394 Urban Development and the Global Economy
This course is designed to familiarize students with the urban effects of economic globalization and to provide students with
tools that enable them to engage in scholarly and practical debates on economic growth and the city. Students are exposed to a variety of theoretical statements comparative studies, and case-specific research focusing on cities and the global economy. Topics include: industrial reorganization and its connection to the urban form; the ability of “dead” cities to adapt to economic change; how economic innovation is encouraged or suppressed within cities; growth coalitions and urban politics; networks and culture in relation to capitalist commitment to urban space; and the role of the arts and entertainment in new development versus production-based paradigms.

Same as AMCS 394
Credit 3 units.

L18 URST 396 Women and Social Class
This course examines the intersection of class and gender from the late 19th century to the present. It begins by asking how a focus on women challenges conventional notions of class. Some of the topics covered include women, race, and class; class and family formation; women, class, and globalization; class and feminist politics; women and work; class and domestic labor; women and unionization; and class and sexual identity. The emphasis is on women and class in the U.S., but includes analysis of women and class in a broader, global context. This course examines these topics using non-fictional and fictional texts. Prerequisites: one 100 or 200 level Women, Gender, and Sexuality Studies Course or permission of instructor.
Same as WGSS 396
Credit 3 units.

L18 URST 404 Directed Readings in Urban Studies
This course consists of readings in Urban Studies that deal with a range of contemporary issues, focusing on cities and the surrounding metropolitan regions. It can be taken only under the direction of the director of the Urban Studies program. Prerequisite: permission of instructor. The student must be a declared major in Urban Studies. See program approval form.
Credit 3 units.

L18 URST 4041 Islam and Politics
Same as Anthro 4041
Credit 3 units.

L18 URST 406 Sexual Health and the City: A Community-Based Learning Course
Same as AFAS 406
Credit 3 units.

L18 URST 4070 Global Justice
Same as Pol Sci 4070
Credit 3 units.

L18 URST 4101 Metropolitan Finance
This course is an interdisciplinary examination of fiscal policies in metropolitan regions and the related public policies that can make them better or worse places for living and working. A particular focus is on the financial structures and arrangements — both public and private — that support or hinder quality of
life in urban spaces. Core topics of study include the potential impact of decentralized governments on metropolitan economic development, determination of optimal arrangements for sharing fiscal responsibilities among levels of government, evaluation of local revenue and expenditure decisions, and assessment of prospects and options for intergovernmental fiscal reform. The course is consistent in its approach to policy. Drawing on literature in sociology, education, public finance, community development, political economy and other related fields, the course readings and experiences explore how fiscal policies can and do affect urban dwellers and their well-being. This is a departure from many public finance courses. Such an approach leads to very different questions: How do liquor zoning regulations influence minority and nonminority children in schools? Should whites be paid to move into minority neighborhoods or vice versa? This approach to the study of metropolitan finance puts an emphasis on topics such as child care, public transportation, minimum wage, housing codes, street behavior, homelessness, incarceration, alcohol, sports stadiums, illicit drugs, tax abatements, water service, garbage collection, schools, higher education, sprawl and technological change, with consideration given to political, institutional and cultural factors. Students are required to attend hearings, meetings and other relevant functions associated with the development of public financial policy. Prerequisites: URST 299 and either junior standing or permission of the instructor. Credit 3 units.

L18 URST 4102 Latin America and the Rise of the Global South
Same as Anthro 4102
Credit 3 units. A&S: SS, A&S: IQ, SSC, LCD, EN: S

L18 URST 4181 Studying the City: Approaches to Social Research
In this course we explore social science/social scientific research methods. The course is designed primarily for students majoring in urban studies. However, the research skills that students acquire can be applied to any substantive topic in the social sciences. The main goal of this course is that students develop the skills to independently design and execute high-quality social research, regardless of their substantive interests. To develop these skills we read about methods, assess published research from a methodological perspective, and complete original research projects. Credit 3 units. A&S: SS, A&S: IQ, SSC

L18 URST 4211 New Media Literacy and Popular Culture in Education
Same as Educ 4211

Credit 3 units. A&S: SS, A&S: IQ, SSC

L18 URST 4301 Understanding the Financial Crisis
The global financial crisis of 2007–09 was the most severe since the Great Depression. The goal of the course is to provide tools to analyze key elements of this crisis. We move from a corporate finance perspective — to understand the behavior of firms and financial institutions — to a macroeconomic perspective, to make this behavior in aggregate outcomes and policy responses. Topics covered include: The U.S. crisis in historical and international perspective; corporate finance of firms and banks in closed and open economy; monetary and fiscal policy intervention; the open economy dimension of the financial crisis; the European Sovereign Debt crisis. Same as Econ 4301
Credit 3 units. A&S: SS, A&S: IQ, SSC

L18 URST 4315 Culture, Language and the Education of Black Students
Same as Educ 4315
Credit 3 units. A&S: SS, CD, A&S: IQ, SSC, LCD, FA: SSP

L18 URST 4411 In the Field: Ethnographic and Qualitative Methods
This course provides an introduction to ethnographic and qualitative research. Ethnography is the study of culture
and social organization through participant observation and interviewing. Ethnographers carry out their research by becoming a participant/observer, to varying degrees, in the social setting they wish to study. Ethnographic research provides interpretative and descriptive analyses of the routine practices of everyday life. Conducting ethnographic research in familiar settings requires that we “make the familiar strange” or make visible what otherwise are implicit and taken for granted aspects of social life. Ethnographic accounts represent different ways people live and make sense of their experiences and describe the types of social organization (for example, gender relations, class systems, racial divisions or national contexts) that, in part, serve to structure or pattern social behavior.

Same as AMCS 441

Credit 3 units.  A&S : SS  A&S : IQ, SSC  FA : SSP

L18 URST 4511 Race, Ethnicity and Culture
Drawing on traditional and recent advances in the field of qualitative studies, this course is the first in a series to examine ethnographic research at the interlocking domains of race, ethnicity, class, gender and culture. The emphasis in this course is on how these concepts are constructed in urban educational institutions. The course includes a field component that involves local elementary and/or middle schools.

Same as AFAS 4511

Credit 3 units.  A&S : SS, SD  A&S : IQ, SSC, SD  AR : SSP  BU : BA  EN : S  FA : SSP

Same as Econ 451

Credit 3 units.  A&S : SS  A&S : IQ, SSC  BU : BA, ETH  FA : SSP

L18 URST 453 Sociology of Education
How does society shape schools and schools shape society? An examination of cultural, political, and economic factors and their relationship to the structure of our educational institutions; how control is exercised in classrooms; how knowledge and learning are defined, and basic values about equally, gender, and social justice are shaped by teachers’ educational decisions. Students analyze their own schooling experience, visit at least two schools, interview teachers and students, and consider what changes are needed to make schools more responsive to students and communities. Prerequisite: Sophomore standing.

Same as Educ 453B

Credit 3 units.  A&S : SS, SD  A&S : IQ, SSC, SD  BU : BA, ETH, HUM, IS  FA : SSP

L18 URST 455 Topics in Urban Studies
Prerequisites: URST 299 and senior standing.

L18 URST 4631 Seminar on Urban Cultures in Latin America
The course focuses on the key role urban development and urban cultures have had in Latin America with particular emphasis on contemporary times. The goal of the course is to discuss the connections between the formation and expansion of cities, the definitions of citizenship, and the role of modernity in the development of “high” and “popular” cultures within different historical and geocultural contexts. Particular attention is paid to the issues of race, class and gender. The course, which utilizes an interdisciplinary and comparative approach, also focuses on the phenomena of marginality, cultural resistance, nationalism and consumerism as well as on the role played by the media in contemporary Latin American societies. Some of the cultural expressions analyzed in the course are music (rock, pop, rap), sports, film and video. Prerequisite: IAS 165C Survey of Latin American Culture.

L18 URST 472 Topics in Growth and Development
This course highlights important empirical facts concerning growth and development in various countries at different development stages. Fundamental growth theory is then provided for explaining these facts systematically and for evaluating the consequences of commonly adopted development policies. Topics vary, but may include population, human capital and labor market development, R&D and innovation, finance and growth, modernization and industrial transformation, world income disparities and poverty problems, institutions and political economy issues, environmental and social factors, and international trade and economic integration. Prerequisites: Econ 4011 and Econ 4021. Credit: 3 units.

L18 URST 4892 The Science and Politics of Testing in the United States
Why do tests permeate American Society? Tests have been integral to the decision-making process in many venues of American culture—e.g., immigration opportunities, voting rights, college admissions, workforce considerations, special education placement, educational reform, and graduation requirements. The credibility of these decisions depends upon the claim that a particular test is a scientific instrument and relevant to the decision-making process. This claim is worthy of study. The purpose of this course is twofold. The first purpose is to examine how the nexus of science and politics influence testing practices in American society. The second purpose is explore how testing practices influence the culture of schools, civil liberties, the workplace, and public discourse about merit.

L18 URST 4991 Senior Honors Thesis in Urban Studies
This course is required for students seeking college honors through Urban Studies. Students discuss research methods and make regular research reports, both to the instructor and for other students. Prerequisites: satisfactory standing as a candidate for senior honors (3.5 cumulative GPA) and permission of thesis director.
Credit 3 units. A&S : SS
Women, Gender and Sexuality Studies

Courses in the Women, Gender and Sexuality Studies program examine how gender affects many aspects of the world in which we live, such as literature, art, history, political structures, social relations and economic institutions. The curriculum provides opportunities to explore the specificity of women's and men's experiences, concerns and perspectives and to see how these vary among different social groups and at different points in time. The Women, Gender and Sexuality Studies program has three areas of focus around which courses are organized: literature/theory/history; sexuality/the body/health; and global and transnational feminist and gender studies. Students may choose to concentrate in one of these areas or to investigate all three.

The Women, Gender and Sexuality Studies program offers both interdisciplinary courses based in the program and more disciplinary-based courses coming from departments and programs throughout the university. Examples of interdisciplinary courses located within the program include: Introduction to Women, Gender and Sexuality Studies; Masculinities; Women’s Healthcare in America; and Race, Sex and Sexuality: Concepts of Identity.

Among the first in the nation (est. 1972), the Women, Gender and Sexuality Studies program at Washington University has emphasized the importance of gender to such disciplines and interdisciplinary programs as philosophy, psychology, history, education, law, architecture, art history and archaeology, anthropology, political science, international studies, American culture studies, and studies in culture and languages.

Women, Gender and Sexuality Studies students are often leaders in campus organizations that deal with issues concerning women, gender relations, sexuality and health. They also participate in a wide spectrum of extracurricular organizations available to undergraduates, including Students for Choice, Uncle Joe’s Peer Counseling, MORE, Student Forum on Sexuality, X Magazine and SARAH.

Women, Gender and Sexuality Studies encourages students to think critically and to participate actively in their education. Most classes are small, rely heavily on classroom discussion, and emphasize interaction between faculty and students. Courses in the Women, Gender and Sexuality Studies program can be taken as electives, toward a primary or secondary major, or toward a minor. Graduate students can pursue a certificate in Women, Gender and Sexuality Studies.

Women, Gender and Sexuality Studies can help students prepare for a career that involves women’s and men’s concerns or issues of gender or sexuality. Many graduates who continue their schooling choose to focus on such issues in medical school, law school, public health programs or social work. Some students envisage a career in college or university teaching, where they can apply a gender studies focus. Other students find jobs in social agencies focused on women’s or gender issues. Others currently are employed in such areas as health care, business, education, the arts, media, politics and law.

The Major in Women, Gender and Sexuality Studies

Total required units: 27 units

3 credits of an introductory-level class, either:
- WGSS 100B Introduction to Women and Gender Studies 3
- or WGSS 105 Introduction to Sexuality Studies

3 credits of theory:
The following courses may fulfill this requirement:
- WGSS 335 Feminist Theory 3
- WGSS 3031 Queer Theory 3
- WGSS 475 Intellectual History of Feminisms 3
- WGSS 420 Contemporary Feminisms 3
- WGSS 419 Feminist Literary and Cultural Theory 3
- WGSS 383 Topics in Women and Gender Studies 3
- WGSS 406 Queering Theory: A Multidisciplinary Approach 3

Note: The 400-level theory classes also will satisfy the requirement for a 400-level class.

3 credits of a Research Methods OR Service Learning course:
The following courses may fulfill this requirement:
- WGSS 392 Feminist Research Methods 3
- WGSS 3942 Service Learning: Projects in Domestic Violence 4
- WGSS 3131 Service Learning: Contemporary Female Sexualities: Designing Sex Education 4
- WGSS 370 Service-Learning: Sex, Lies and Myths of the Mother 4
- WGSS 3171 Service Learning: Women and Prison 4

Any other service learning course approved by WGSS

3 credits at the 400 level or an Honors Thesis:
Any home-based or cross-listed WGSS class at the 400 level or a WGSS Honors thesis will satisfy this requirement.

3 credits of a Historical Context course:
A course home-based or cross-listed in WGSS that explores gender, sex, or sexuality in a historical context or studies the history of these categories.

3 credits of an ethnic/global/racial context course:

A course home-based or cross-listed in WGSS that considers gender and ethnicity or gender and race or gender in a global context.

9 credits of WGSS courses in addition to the credits required in the categories above

Courses home-based or cross-listed in WGSS.

**Note:** Only two home-based or cross-listed WGSS courses below the 300 level may be counted toward the 27 required units for the major.

### Additional Information

**Study Abroad:** We strongly encourage and support students who wish to study abroad and will accept up to 9 credits from approved programs. Please see Barbara Baumgartner, WGSS Study Abroad supervisor, about this option.

**Honors:** The honors program in Women, Gender and Sexuality Studies is open to majors who have strong academic records. Students who have maintained a cumulative 3.65 grade point average through five semesters and have at least a 3.65 in the major may be considered for honors. Application to the program must be made by April 1 of junior year. (No late applications will be accepted.)

### The Minor in Women, Gender, and Sexuality Studies

**Units required:** 18 units, 12 of which are at or above the 300 level. All 18 units must be separate courses not double-counted toward a major. All minor courses must be home-based or cross-listed in Women, Gender and Sexuality Studies. All courses taken for the minor must be taken for a grade.

**Required courses:**

Individual programs are designed in consultation with an adviser in light of the student’s interests and abilities, major course of study, and plans for the future. All courses must be home-based or cross-listed in Women, Gender and Sexuality Studies.

**L77 WGSS 100B Introduction to Women and Gender Studies**

Interdisciplinary examination of major topics in women’s lives, in gender, and in the development of feminist theories. For students without previous academic experience in WGSS. Five seats are reserved for seniors, juniors, sophomores and freshmen in each section.

Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : BA, HUM FA : SSP

**L77 WGSS 102 Women in Science: An Introduction**

Throughout the centuries, women were interested and involved in the sciences. Their scientific contributions, however, have often been overlooked and their abilities questioned. The 2005 proposition by Harvard’s President Larry Summers that women’s innate differences explain why fewer women succeed in math and science suggests that women continue to face assumptions about their scientific competence. In addition to examining the history of women’s participation in science, this class explores the continuing cultural and economic barriers to women interested in science. Starting with a historical overview of women in science, we look at the contributions of women scientists. We review the numbers of women in various fields with good representation, such as biology, and those with few women, such as physics and computer science. Like the prestigious journal Science, we also explore whether women do science differently. This course is restricted to Women in Science Focus program participants.

Credit 1 unit. A&S : TH

**L77 WGSS 105 Introduction to Sexuality Studies**

An introduction to the history of the study of sexuality in the 19th, 20th and 21st centuries. An examination of the ways that human groups attach meaning to emotions, desires and relationships reveals that human sexuality is the product of cultural history. Taking a social constructionist perspective, this course investigates how the deployment of sexuality socializes, organizes and provides identities to individuals and groups. We also consider why the topic of sexuality provokes such volatile reactions in contemporary American culture, how the discussion of sex is discouraged, and what is at stake in developing skills, knowledge and attitudes to engage in public discussion of sex.

Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD BU : BA

**L77 WGSS 200 Women Writers of the Near and Far East**

Same as ANELL 200

Credit 3 units. A&S : TH, CD AR : Lit BU : BA, HUM, IS

**L77 WGSS 205 Introduction to LGBTQ Studies**

This course offers an introduction to the topics, questions and approaches that characterize the rapidly growing field of lesbian/gay/bisexual/transsexual/queer studies. Using an interdisciplinary approach, we explore such topics as the relation between gender and sexual identity, the history of same-sex relations, homophobia and heterosexism, queer cultures and LGBTQ politics, particularly in the United States. Our focus is on asking whether and how “LGBTQ” functions as a coherent category of analysis or identity, and we pay particular attention to differences (of race, age, gender, sexual practice, class, national origin, temperament, etc.) that are contained within, and often disrupt, that category. This course is not open to students who have taken WGSS 203 or 3031.
L77 WGSS 209 Sex, Cyborgs and Society
This course asks how contemporary relations between women and men are changing under the transformations of technology, science and medicine. Sex is explored as an integral and complex element of gender. Does sex, as a biological construct, determine gender? Or is gender in fact fixed at all? Sexuality also is considered as a practice, in which intimate relations are being mediated by new technological developments on the internet. Society is addressed as a lens or framework for our discussion of gender. What is “social” about these dynamics? Cyborgs are the substantive focus of our discussion. We pay special attention to developments in technology, science and medicine, and ask if it is improving or degrading gender relations.
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : BA

L77 WGSS 210 Freshman Seminar: Gender and Citizenship
Who is a citizen, and what exactly does this term mean? This freshman seminar investigates how ideologies relating to gender have shaped the rights and duties attached to citizenship in the United States, and how women and men have drawn on those ideologies to make claims to citizenship. We focus on distinct movements in the past and present to identify models of citizenship that have been available to Americans. These movements include the creation of an ideology of “republican motherhood” in the early Republic; the Reconstruction-era debate over the enfranchisement of African-American men; the male culture of 19th-century political parties; the woman suffrage campaign; 20th-century debates over military service for women and for gay men and lesbians; welfare rights and welfare reform; and abortion conflicts since Roe vs. Wade. We take an interdisciplinary approach that encompasses scholarly writings and a wide variety of historical and contemporary documents.
Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD BU : BA

L77 WGSS 214C Introduction to Women’s Texts
Discussion of canonical and nontraditional texts, most by women. Emphasis on how these texts represent gender, how literature contributes to identity formation, and how women have used the written word to change their social and imaginative conditions.

Same as Educ 303
Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD BU : BA FA : SSP
L77 WGSS 3031 Queer Theory
This course provides students with an interdisciplinary examination of the history, politics and cultural expressions of gay and lesbian communities in American culture. It explores the ways lesbians, gay men, bisexual and transgendered people construct, participate in and resist various constructions of gender and sexuality. We question desire and social/ cultural power, the nature and power of social change, etc. Particular attention is paid to examining the roots and effects of heterosexism and homophobia, the call for hate crime legislation, the ethics of “outing” and “passing,” the impact of AIDS, partnership recognition and domestic violence on GLBT communities. Throughout the course students are encouraged to examine the intersections of gender, race, ethnicity and social class with sexual orientation.
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : BA

L77 WGSS 3033 Global Masculinities
An interdisciplinary survey of expressions of masculinity and male gender in global perspective with a strong emphasis on non-Western cultures. Themes and topics include the increasingly global culture and economy, terrorism, international relations, development policy, colonization/imperialism and war/militarism, as well as specific cultural, social and national expressions of masculinity across a wide geographical range. Credit 3 units. A&S : SS, CD A&S : IQ, SSC, LCD BU : BA

L77 WGSS 304 Sex, Gender and Popular Culture
A critical survey of sex and gender in the production, reception and content of contemporary popular culture. Possible topics include: television, film, advertising, popular fiction, music, comics, Internet, foodways and fashion. Themes include: the representation and stylization of sexed and gendered bodies; popular models of sexual and gendered social relations; production of normative and alternative sex and gender identities through media consumption; sex and gender in systems of popular cultural production.
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD BU : BA

L77 WGSS 3041 Making Sex and Gender: Understanding the History of the Body
This course provides an overview of the history of the body from antiquity to modern times using an interdisciplinary approach. By exploring selections from medical texts, literature, fashion, art, accounts of “new world” exploration, legal records, self-help books and contemporary media representations of human bodies, we consider the changing historical perception of the body. The intersection of gender, race and class factor significantly in our discussions of how the body has been construed historically and how it is currently being constructed in contemporary American culture. This course also provides an introduction to feminist/gender methodologies that apply to understanding the history of the body. This course is not open to students who have taken WGSS 204. Prerequisite: any 100- or 200-level WGSS course or permission of instructor.
Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD

L77 WGSS 306 Between Submission and Power: Women and Family in Islam
As a result of recent political upheavals in the Middle East, the Muslim woman, her rights and her role in the society have been the focus of much attention. Who dictates her dress regulation? Who defines her legal rights? Is she entitled to work? Can she be politically active outside her family? Can she be economically independent? What is her reaction to polygamy? An attempt to look at these and similar questions as addressed by traditional Islam and interpreted in major Muslim countries today.
Credit 3 units. A&S : SS, CD BU : ETH FA : SSP

L77 WGSS 308 Masculinities
This course critically examines the subject of masculinity through a number of themes including history, society, politics, race, gender, sexuality, art and popular culture. Interdisciplinary readings are drawn from the fields of sociology, anthropology, literature, history, art history and cultural studies. We examine the challenges presented to “masculinity” (and a variety of responses) by the late-20th century emergence of gender studies. Our goal is to come to a working definition of masculinity/ies and gain an understanding of some past, current and possible future masculine behaviors, mythologies, ideologies, experiences and identities. Previous course work in Women, Gender, and Sexuality Studies strongly recommended but not required. Attendance mandatory first day in order to reserve your class enrollment.
Credit 3 units. A&S : SS, CD A&S : IQ, SSC, CD BU : BA

L77 WGSS 3091 Lesbian, Gay, Bisexual Identity Development
Examination of sexual orientation and identity. Topics: historical perspectives, gender socialization, identity formation across the life span, cultural prejudices, the liberation movement, and recent legal changes affecting stigmatized minorities. Prerequisite: Psych 100B.
Same as Psych 3091
Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD BU : BA FA : SSP

L77 WGSS 310 History of Women’s Health Care in America
This course examines issues surrounding women’s health care in America. While the scope is broad, the major emphasis is on the 19th and 20th centuries. Through an examination of popular writing, scientific/medical writing, letters, diaries and fiction, we look at the changing perceptions and conceptions of women’s bodies and health in America.
Credit 3 units.  A&S : SS, WI  A&S : IQ, SSC, WI  BU : BA  FA : SSP

L77 WGSS 3101 An Intellectual History of Sex and Gender
When did sexuality begin? Is it safe to assume that gender constructions are universal and timeless? In this course, we engage with a broad range of readings that serve as primary texts in the history of sexuality and gender. Our aims are threefold: to analyze the literary evidence we have for sexuality and gender identity in Western culture, to survey modern scholarly approaches to those same texts and to consider the ways in which these modern theoretical frameworks have become the most recent set of “primary” texts on sexuality and gender.
Same as IPH 310
Credit 3 units.  A&S : TH, SD  A&S : IQ, HUM, SD  BU : BA  FA : SSP

L77 WGSS 311 Globalization and Gender
How is gender embedded in the contemporary global economy? In this course, we look at major institutions and circuits of globalization, for the purpose of uncovering masculine principles and privileges, and illuminating women’s participation, agency and resistance. This is slightly different than a traditional “comparative” approach to women’s studies. Rather than contrasting women’s positions in different societies, we look at the dynamic interrelations of nations with one another. These relations — especially hierarchical ones — are fundamental to and infused with gender, and have impacts upon gender.
Credit 3 units.  A&S : SS, SD  A&S : IQ, SSC, SD  BU : BA

L77 WGSS 312 Globalization and Gender
How is gender embedded in the contemporary global economy? In this course, we look at major institutions and circuits of globalization, for the purpose of uncovering masculine principles and privileges, and illuminating women’s participation, agency and resistance. This is slightly different than a traditional “comparative” approach to women’s studies. Rather than contrasting women’s positions in different societies, we look at the dynamic interrelations of nations with one another. These relations — especially hierarchical ones — are fundamental to and infused with gender, and have impacts upon gender.

Same as E Lit 316W
Credit 3 units.  A&S : TH, WI  A&S : IQ, HUM, WI

L77 WGSS 3131 Service Learning: Contemporary Female Sexualities: Designing Sex Education
This interdisciplinary service-learning course explores representations of and theories about female sexualities in postmodern America. We study how our culture constructs women’s sexual desires, fantasies, behaviors, relationships and communities. Integrating biological with social constructionist and symbolic interactionist approaches, we study how female sexualities vary over life spans and among socioeconomic groups. We read both fictional and nonfictional texts, examining them for theories of how female sexualities organize personal lives and politics today and how individuals and groups use sex to shape their environments and destinies. We coordinate what we attend to in the classroom with the needs of agency partners who are our field educators for our help with their work in the community. Projects and activities students take on depend on the current needs of our community partners and the skills and interests of particular students. Prerequisite: any 100-level WGSS course.
Credit 4 units.  A&S : SS, SD  A&S : IQ, SSC, SD

L77 WGSS 3132 Service Learning: Girls’ Studies
2012 marks the 100th anniversary of Girl Scouts of America, an organization that has played a significant role in defining what it means to be a girl in American culture. This class looks back at girlhood over the past 100 years to today by exploring topics that include literature for girls, the education of girls, sports and girlhood, marketing to girls, girl’s health and sexuality, and, of course, the history of organizations for girls in the United States and abroad. This course introduces students to the emerging field of Girl Studies within the field of Feminist/ Gender Studies research. Because the course builds upon basic knowledge of women’s movements in the U.S. and builds upon an understanding of core women and gender studies readings, students must take Introduction to Women and Gender Studies or Introduction to Sexuality Studies before enrolling in this course. This course includes a fieldwork component in addition to regular course meetings. Prerequisite: any 100-level WGSS course.
Credit 4 units.  A&S : TH  A&S : IQ, HUM

L77 WGSS 3151 Indian Barbie, Asian Tigers and IT Dreams: Politics of Globalization and Development in South Asia
Same as IAS 315
Credit 3 units.  A&S : SS, CD, SD  A&S : IQ, SSC, LCD  BU : IS

L77 WGSS 3156 Contemporary Women’s Health
We identify and study a broad range of health issues that are either unique to women or of special importance to women. The roles that women play as both providers and consumers of health care in the United States are examined. The interface of gender, race and class and their impact on an individual’s access to and experience in the health care system are central concerns. Topics are wide-ranging and include discussions of breast cancer, mental health, cardiovascular disease in women, women and eating (from anorexia to obesity), reproductive issues (from menstruation to fertility to menopause), as well as the politics of women’s health, gender differences in health status, the effect of employment on health, the history of women’s health research.

L77 WGSS 3171 Service Learning: Women and Prison
Since President Reagan declared a war on drugs in the 1980s, the numbers of women in prison has increased dramatically. Due to mandatory minimum sentencing requirements and increasingly punitive prisoners for non-violent offences, there are
no more than 200,000 women incarcerated in the United States with more than 1 million on probation and parole. While women are the fastest growing population in prison, men still make up the vast majority of prisoners, and the system is largely geared toward men and their needs. In this course, we explore the historical and contemporary issues of girls and women who are convicted of a crime. Through readings, films, reflective writings and facility tours, we explore the impact of incarceration on women and their families. While our scope is national, we focus on the corrections system in Missouri. Prerequisite: Introduction to Women and Gender Studies or Introduction to Sexuality Studies.

Credit 4 units. A&S : SS, SD A&S : IQ, SSC, SD

L77 WGSS 3172 Queer Histories
Queer history is a profoundly political project. Scholars and activists use queer histories to assert theories of identity formation, build communities and advance a vision of the meanings of sexuality in modern life and the place of queer people in national communities. This history of alternative sexual identities is narrated in a variety of settings — the internet as well as the academy, art and film as well as the streets — and draws upon numerous disciplines, including anthropology, geography, sociology, oral history, fiction and memoir, as well as history. This discussion-based course examines the sites and genres of queer history, with particular attention to moments of contestation and debate about its contours and meanings.

L77 WGSS 3201 Gender, Culture and Madness
This course explores the relationships among gender constructs, cultural values and definitions of mental health and illness. Understandings of the proper roles, sensibilities, emotions and dispositions of women and men are often culturally and morally loaded as indicators of the “proper” selves permitted in a given context. Across cultures, then, gender often becomes an expressive idiom for the relative health of the self. Gender identities or presentations that run counter to these conventions are frequently identified as disordered and in need of fixing. In this course, we take up these issues through three fundamental themes: the social and cultural (re)production of gendered bodies and dispositions; the normalization of these productions and the subsequent location of “madness” in divergent or dissonant experiences of embodiment; and the situation of discourses of “madness” within debates of resistance and conformity, selfhood and agency.

L77 WGSS 3206 Global Gender Issues
This course compares the life experiences of women and men in societies throughout the world. We discuss the evidence regarding the universal subordination of women, and examine explanations that propose to situate women’s and men’s personality attributes, roles and responsibilities in the biological or cultural domains. In general, through readings, films and lectures, the class provides a cross-cultural perspective on ideas regarding gender and how gendered meanings, practices, performances serve as structuring principles in society.

L77 WGSS 3255 Deconstructing Black Manhood
This course investigates and explores how manhood, or masculinity, interacts with ideas of sexuality in public and private life. Together, we look closely at writers who offer cultural and theoretical frameworks to challenge our ideas of what black manhood is and should be, particularly those writers who are bold enough to represent same-sex desire among black men and women. Authors include James Baldwin, Essex Hemphill, Mark Anthony Neal, Mignon Moore and E. Patrick Johnson.

L77 WGSS 3323 Topics in Gender and Religion: Women and Islam
An anthropological study of the position of women in the contemporary Muslim world, with examples drawn primarily from the Middle East but also from Asia, Africa, Europe and the United States. Students examine ethnographic, historical and literary works, including those written by Muslim women. Topics having a major impact on the construction of gender include Islamic belief and ritual, modest dress (veiling), notions of marriage and the family, modernization, nationalism and the nation-state, politics and protest, legal reform, formal education, work and Westernization. The course includes a visit to a St. Louis mosque, discussions with Muslim women, and films. Same as Anthro 3313

L77 WGSS 335 Feminist Theory
This course begins by examining the 19th and early 20th century historical context out of which contemporary feminist theory emerged. We then turn to the 1960s and the emergence of the “Second Wave” of Feminism. We focus on the major theories that developed during the 1960s, 1970s and 1980s and the conflicts and internal problems these theories generated. We then examine some of the ways these problems were resolved in feminist theory of the 1990s. The last part of the course focuses on topics of concern to contemporary feminists — such as the family, sexuality and globalism — and the contributions feminist theory brings to these topics. Open to graduate students by enrolling in WGSS 500; contact the Women, Gender, and Sexuality Studies office for details.

L77 WGSS 337 Women’s Literature: Before Thelma and Louise: American Women’s Adventure Stories
American literature is filled with adventurers and adventure stories. Some of the most exciting tales were written by women. Their adventures include Mary Rowlandson's autobiography of her capture by and life with the Indians, E.D.E.N. Southworth's story of a 19th-century heroine who rescues imprisoned maidens and fights duels, and Octavia Butler's science fiction account of a 20th-century black woman who is transported back through time to an antebellum plantation. Until recently, American women authors and their stories were largely dismissed because they were perceived to focus on domestic concerns, which were seen as narrow and trivial. But the works of many women authors are far different from sentimental domestic fiction. In addition to looking closely at the historical and cultural conditions in which the narratives were written, we examine the ways in which these writers conform to and rebel against cultural prescriptions about femininity. Finally, we read some contemporary and current criticism about these works and American women’s writing and discuss the politics of canon formation. Tentative Reading List: Mary Rowlandson, The Captivity and Restoration of Mrs. Mary Rowlandson (1682); The Journal of Madam Knight (1704); Catharine Maria Sedgwick, Hope Leslie (1827); E.D.E.N. Southworth, The Hidden Hand (1858); Zora Neale Hurston, Their Eyes Were Watching God (1937); Octavia Butler, Kindred (1979); Paule Marshall, Praisesong for the Widow (1983). Writing-intensive.

L77 WGSS 3401 Performing Gender
This course investigates an array of contemporary performances to explore manifestations of and challenges to gender norms in American culture. An initial reading of crucial performance theories by Judith Butler, Jill Dolan and others help set the stage for our examination of a diverse collection of contemporary texts, including plays, solo performances, stand-up comedy and pop culture phenomenon. We raise questions about feminist performance strategies, butch/femme performance, camp, cross-dressing, feminist spectatorship, multimedia performances and the representation of lesbian desire. Prerequisite: any 100-level WGSS course.
This course looks at the contemporary cultural phenomenon of hooking up, from feminist, social and symbolic interactionist, and critical theoretical points of view. We consider the historical contexts, political implications and personal consequences of hooking up. We read both literary and social science texts.

Prerequisite: any 100- or 200- level WGSS course or permission of instructor.

Female writers and the law

We explore the development of women's legal rights by examining the ways in which social constructions of gender, race, and sexuality have shaped American legal concepts within the limited bounds of traditional legal reasoning. We begin by placing our current legal framework, and its gender, race, and other societal assumptions, in an historical and Constitutional context. We then examine many of the critical questions raised by feminist theory, feminist legal thought and other critical perspectives. For example, is the legal subject gendered as male, and, if so, how effectively can women use the law to gain greater social equity? What paradoxes have emerged in areas, such as employment discrimination, family law or reproductive rights, as women have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? The course is thematic, but we spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women.

Scribbling Women: 19th-Century American Women Writers

In 1855, Nathaniel Hawthorne wrote to his publisher, William Tichnor, that “America is now wholly given over to a damned mob of scribbling women, and I should have no chance of success while the public taste is occupied with their trash.” In this class, we examine works of those scribbling women of the 19th century. We read one of the best-selling novels of the century, one that created a scandal and ruined the author’s literary reputation, along with others that have garnered more attention in our time than their own. In addition to focusing on these women writers, we also explore questions about the canon of American literature: What makes literature “good”? What constitutes American literature? How does an author get in the canon and stay there? Finally, in this writing-intensive course, there are frequent writing assignments and a strong emphasis on the essential writing process of drafting and revising.

Transgender Studies

This course explores the recent emergence of transgender studies from feminist scholarship while at the same time questioning how feminist assumptions about sex and gender have necessitated a reevaluation of identity. We consider why intersexed births still elicit curiosity and fear, historical perspectives on intersex, the difference between intersex and transsexual, and how transgender theorists work with feminist categories of sex, gender and embodiment. Once we have established a working understanding of transgender theory, we apply these theoretical perspectives to an analysis of recent fictional accounts of transgender and then consider how these popular media representations influence or interact with our current legal definitions of sex and gender as they apply to transgender. Prerequisites: WGSS 100B Introduction to Women and Gender Studies or WGSS 105 Introduction to Sexuality Studies or permission of the instructor.

Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD

The Traffic in Women and Contemporary European Cinema

What binds society together? One of the most influential answers to this question was offered by French anthropologist Claude Lévi-Strauss. He argued that the fabric of a society is formed by a network of exchanges among kinship groups, which circulate three kinds of objects: economic goods, linguistic signs and women. In this course, we inquire into the place of women in this argument. We trace rudiments of the traditional marriage system (a father figure still “gives away” the bride in the marriage ceremony), its range of displacements in a global economy (transnational wives, nannies and domestic servants), the role of new media in the formation of new systems of trafficking (internet brides), and the place of the debate on gay marriage within the larger conversation. We read texts by Friedrich Engels, Sigmund Freud, Marcel Mauss, Claude Lévi-Strauss, Gayle Rubin, Luce Irigaray, Judith Butler, Barbara Ehrenreich and Arlie Russell Hochschild, and we watch a number of films that dramatize the traffic in women in the context of contemporary Europe: Coline Serreau’s Chaos, Lukas Moodysson’s Lilja 4-
ever, Cristian Mungiu’s *Occident*, Nilita Vachani’s *When Mother Comes Home for Christmas*, Fatih Akin’s *Head-on*, Jean-Pierre and Luc Dardenne’s *The Silence of Lorna*.

**L77 WGSS 370 Service-Learning: Sex, Lies and Myths of the Mother**

This interdisciplinary service-learning course begins with a fundamental question: What makes a good mother? Students have opportunities to deepen their understanding of motherhood — both as an institution and as a practice — through interviews with mothers, through reflections on their service-learning experiences, and through the course readings. Students learn to identify interconnections between motherhood, the social construction of gender, and systems of oppression in women’s lives. Readings include cross-cultural myths and mythologies; transnational, historical and contemporary personal narratives; feminist analyses; a novel or play; and journal articles from the social sciences. Grades based on attendance, service-learning participation, web-based journal entries, an art project, short papers and a final project for Kids’ Place, our community partner. Prerequisite: any 100- or 200-level WGSS course.

**L77 WGSS 3776 Sexuality, Courtship and Marriage in U.S. History**

This course surveys the history of practices, identities, legal constructs and social norms relating to sexuality, courtship and marriage. Students particularly focus on locating the history of sexuality in its larger social, economic and cultural contexts. Students also discuss the experience of individuals or social groups who deviated from the socially and legally constructed norms of the day in order to gain insight into how the sexual order has developed as a whole in this country.

Credit 3 units.  A&S : TH, SD  A&S : IQ, HUM, SD
L77 WGSS 380 Biomedicalization: Life Under Medical Authority

Medicalization is a cultural process by which conditions that were not thought to be medical come to be defined and treated as illnesses. Medicalization investigates the ways in which medical authority is able to legitimate or de-legitimate physical, mental and social states as medical issues. For instance, how does a handicap placard in the contemporary United States distinguish the bearer as having a real physical impairment? As such, medicalization is both an examination and a critique of biomedicine. This class asks how certain social states come to be medicalized or demedicalized, and question some of the social implications for the individuals impacted by these changes. What are some of the goals of medicalization? How can medicalization be seen as helpful for individuals? How can medicalization be seen as detrimental to individuals? What are some ways individuals find meaning in medicalized identities? How is the body now a social problem necessitating an individual fix? Prerequisite: any 100- or 200-level WGSS course or WGSS 3283 or permission of instructor. Credit 3 units. A&S : SS A&S : IQ, SSC

L77 WGSS 384 Gender and Consumer Culture in U.S. Fiction of the Late 19th and Early 20th Century

The decades between the end of the Civil War and the 1930s saw the rise of a mass consumer culture that would dramatically reshape America. The fiction writers of this period, keen to capture the spirit of the age, helped to create the enduring idea that consumerism and an orientation toward material acquisition are at the heart of gendered concepts of American identity. Their stories documented, and sometimes celebrated, the emergence of recognizable "types" of American womanhood and manhood — such as self-made millionaires, ambitious "working girls," bargain-hunting middle-class housewives, and the commercially minded women and men of the social and intellectual elite. At the same time, their stories articulated anxieties about U.S. consumer culture and its impact on the world. Students in this course read, discuss and write about novels and short stories by writers such as Henry James, Mary Wilkins Freeman, Kate Chopin, Theodore Dreiser, Edith Wharton, Nella Larsen, Langston Hughes and F. Scott Fitzgerald. Students in the course also examine primary materials such as magazine advertisements, and read and respond to relevant scholarship on the period. Writing-Intensive course.

L77 WGSS 391 Social Construction of Female Sexuality

This course examines the relationship between female sexuality and its social, historical and ideological contexts. Course materials provide feminist analyses of the changing social organization and cultural meaning of women’s bodies, sexual desires and sexual practices. Prerequisite: WGSS 100B, WGSS 105 or permission from the instructor. Preference to those who have taken WGSS 395. WGSS majors and minors, seniors, juniors. Credit 3 units. A&S : SS A&S : IQ, SSC BU : BA FA : SSP

L77 WGSS 392 Feminist Research Methods

This course examines feminist epistemologies and research methods. We ask how gender theory and feminist politics shape the kinds of research questions we ask, the types of materials we use, and how we define our relationships with our subjects. We study how feminist scholars have challenged dominant theories of knowledge and the major methodologies employed in their disciplines. Students explore research methods from the social sciences and humanities (interviews, life histories, participation observation, textual analysis) and engage feminist critiques and evaluation of such methods. The course requires commitment to a research project completed in stages over the course of the semester. Prerequisite: at least one WGSS course at the 100 or 200 level. Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD BU : ETH FA : SSP

L77 WGSS 393 Violence Against Women: Current Issues and Responses

This course explores the issue of violence against women within families, by strangers in the workplace, and within the context of international and domestic political activity. In each area, issues of race, class, culture and sexuality are examined as well as legal, medical and sociological responses. Readings cover current statistical data, research and theory as well as information on the history of the battered women’s movement, the rape crisis center movement, violent repression of women’s political expressions internationally, and the effect of violence on immigrant and indigenous women in the United States and abroad. Not open to students who have taken U92 (UCollege) WGSS 363. Credit 3 units. A&S : SS, SD A&S : IQ, SSC, SD BU : BA FA : SSP
L77 WGSS 394 Communities of Women: Service-Learning Seminar
This course explores the sometimes vexed relationship between the theory and the practice of women’s studies. Students in the course, who must also enroll in the service companion course (WGSS 3941), participate in service work while taking the course. In class, we discuss and write about the history of women and voluntarism, the ethical challenges of service work, the ongoing affinity between community service and female citizenship, as well as how students’ particular experiences challenge or confirm theoretical discussions in women’s studies. Because this is a writing-intensive course, students are expected to submit and revise three medium-sized papers as well as to write other, unrevised writing assignments including directed journals and a writing assignment determined by each agency partner. The three essay assignments are each part of a larger paper submitted (with further revision) at the end of the course. Enrollment limited to Women, Gender and Sexuality Studies students with junior or senior standing or with permission of the instructor. Credit 3 units. A&S: SS, WI

L77 WGSS 3941 Communities of Women: Service-Learning Seminar Internship Component
This course is the service companion course for WGSS 394 Communities of Women: Service-Learning Seminar. Students must be enrolled in WGSS 394. For the internship component, students choose from a number of pre-approved service projects at local agencies whose mission it is to serve women from St. Louis. This course has variable credits. For 2 units of credit, students are expected to work at their partner agency for six to eight hours per week; for 3 units of credit, students are expected to work between eight and 10 hours per week. Students cannot receive credit for any paid work. Credit to be determined in each case. A&S: SS

L77 WGSS 3942 Service Learning: Projects in Domestic Violence
In this course, we explore the links between the theories and practices of Women, Gender and Sexuality Studies through a combination of readings and direct community engagement. Course readings focus on the ways that poverty and violence, along with race and gender expectations, shape the lives of women. A required community service project for this course asks students to examine the relationship between the course readings and the lives of actual women in St. Louis. Over the course of the semester, students design and execute programming for women at a local community agency. This is a writing-intensive course. Students must contact instructor for permission to enroll. CBTL course. Credit 4 units. A&S: SS, SD, WI A&S: IQ, SSC, SD, WI

L77 WGSS 3943 Violence Against Women Court Project
The seminar explores the links between the theories and practices of Women, Gender and Sexuality Studies through a combination of readings, discussion and direct community engagement. Readings focus on the legal system and the ways domestic violence is confronted and how criminal justice interventions have responded to new theories and research about the nature of intimate partner violence. Particular attention is directed to the ways that issues of race, poverty, parenthood and sexual orientation influence the criminal justice response and shape the lives of abused women. Students participate in a court advocacy program to investigate the important discrepancies between theory and practice in the field. Prerequisites: students are required to take WGSS 393 or have taken WGSS 393 to enroll in the seminar. Credit 1 unit. A&S: SS A&S: IQ, SSC

L77 WGSS 395 Contemporary Female Sexualities
The course explores representations of and theories about contemporary women’s sexual fantasies, attitudes, behaviors, relationships and communities. Topics include sexual desire and gender; sexuality and the female life cycle; sexual behavior and gender; sexual variations linked with particular socioeconomic, ethnic, psychological and physical variables; models of female sexual response; committed and uncommitted relationships; sex and marriage; fertility and its control; and teaching children about sex. We read both literary and theoretical texts with an eye to understanding what roles various sexualities play in personal lives, in relationships and in communities. Prerequisites: WGSS 100B Introduction to Women and Gender Studies or WBSS 105 Introduction to Sexuality Studies, or permission from the instructor. Preference to those who have taken WGSS 391 The Social Construction of Female Sexuality, WGSS majors, WGSS minors, seniors, juniors. Credit 3 units. A&S: TH A&S: IQ, HUM BU: BA

L77 WGSS 396 Women and Social Class
This course examines the intersection of class and gender from the late 19th century to the present. It begins by asking how a focus on women challenges conventional notions of class. Some of the topics covered include women, race and class; class and marriage; fertility and its control; and teaching children about sex. The emphasis is on women and class in the United States, but includes analysis of women and class in a broader, global context. This course examines these topics using nonfiction and fiction texts. Prerequisite: one 100- or 200-level WGSS course or permission of instructor. Credit 3 units. A&S: TH, SD A&S: IQ, HUM, SD BU: BA

L77WGSS 399 Undergraduate Work in Women’s Studies

L77 WGSS 402 Transnational Reproductive Health Issues: Meanings, Technologies, Practices
This course covers recent scholarship on gender and reproductive health, including such issues as reproduction and the disciplinary power of the state, contested reproductive relations within families and communities, and the implications of global flows of biotechnology, population and information for reproductive strategies at the local level. We also explore how transnational migration and globalization have shaped reproductive health, the diverse meanings associated with reproductive processes, and decisions concerning reproduction. Reproduction serves as a focus to illuminate the cultural politics of gender, power and sexuality.
Same as Anthro 4022
Credit 3 units. A&S : SS, CD, SD A&S : IQ, SSC, LCD, SD BU : BA FA : SSP

L77 WGSS 403 Race, Sex and Sexuality: Concepts of Identity
This course examines changes in the meanings of three concepts of identity — race, sex and sexuality — from the early modern period to the present. The course begins by looking at early modern constructions of these concepts in Western Europe. We then focus on changes occurring during the course of the 18th and 19th centuries in Europe and the United States and at how such changes were similar and different among these three concepts. We then examine 20th-century challenges to 19th-century constructions. The course concludes by studying the relationship between these challenges and 20th-century identity political movements organized around these concepts. Prerequisite: completion of at least one WGSS course or permission of the instructor.

L77 WGSS 404 Regulating Sex: Historical and Cultural Encounters
This seminar examines various ways in which the law regulates sex, emphasizing the place of sexual pleasure in conventional legal analysis and through feminist frameworks. The class considers the history of the regulation of sex in this country, with emphasis on key historical moments, such as the European/Native American encounter; the “sexual economy” of slavery; suffragists’ 19th-century writings on sexuality; the post-WW II emergence of lesbianism; policies of the 1950s on illegitimacy, adoption and divorce; the “sexual revolution” of the 1960s and 1970s; the AIDS crisis and recognition of marital rape of the 1970s and 1980s; as well as moments when pornography, prostitution, abstinence-only education and changing understandings of marriage have each enjoyed attention. This historical approach emphasizes sites where sex-positive feminist theory and traditional legal rules converge or clash.
Credit 3 units. A&S : TH, SD, WI A&S : IQ, HUM, SD, WI

L77 WGSS 406 Queering Theory: A Multidisciplinary Approach
This class aims to use theory to destabilize the concepts of race, sexuality, gender, disability and academic methodology. This class submerges you in some of the most influential texts in queer theory. The selected readings range across many disciplines, including biology, philosophy, anthropology, sociology, history and cultural studies. The core premise of this class is that to queer something is to destabilize it. Therefore, not all of the readings specifically are about gay, lesbian, bisexual or transgender people. However, these readings help any scholar in their future work in queer theory. Prerequisite: any 300-level WGSS class or equivalent or permission from instructor.
Credit 3 units. A&S : SS A&S : IQ, SSC

L77 WGSS 4071 Topics in Women, Gender and Sexuality Studies: Identity, Intimacy and the Law
This course explores the array of historic and contemporary forces that have regulated identity and intimacy in the U.S., most notably law, culture and markets. We pay particular attention to the role of gender, race and sexuality. Topics include misconception law, surrogacy, friendship, sex work, polygamy and queer space. This course is cross-listed between the School of Law and Women, Gender, and Sexuality Studies in Arts & Sciences. Ten seats are reserved for law students and 10 for Arts & Sciences students.

L77 WGSS 414 Gender, Religion, Medicine and Science
Until recently the histories of science, medicine and religion were written by men and for men. These fields did not critically analyze gender or sexuality. Neither masculinity nor femininity were topics of interest in the studies of great scientists or famous theologians. Sexuality in scientific writing and religious thought barely received more than a sentence or two in the writings of historians. What changed? Feminist/Queer theory made us rethink the way we learn about the history of medicine, science and religion. Despite these great strides, we are only beginning to explore the interplay between these fields from a feminist/queer perspective. In other words, while feminist/queer scholars have deepened our understandings of both science and religion, they have only recently begun to examine the relationship between these two fields. This course explores how feminist research has broadened our understanding of the interplay between the authority of religion, science and medicine in historical and contemporary studies. Some of the topics we explore include: conception and gestation, birth control, birthing, sexuality and aging. Prerequisites: WGSS 100B Introduction to Women and Gender Studies and at least one 300-level WGSS course that addresses feminist and/or queer theory such as: WGSS 308 Masculinities, WGSS 3041 Making Sex and Gender, WGSS 360 Transgender Studies.
Credit 3 units.  A&S : TH, SD  A&S : IQ, HUM, SD

L77 WGSS 418C Gender and Sexuality in East Asian Religions
In this course we explore some of the primary gender ideals and realities, images and self-representations in the religions of China, Japan and Korea, with a discussion of Confucianism but primary emphasis on East Asian Buddhism (esp. Zen and Pure Land), Daoism, Shinto and popular religious traditions such as Shamanism. Selected reading and discussion materials include scriptural texts, poetry, fiction, drama (in English translation), painting and archeological evidence, films and videos, and secondary scholarly and ethnographic studies. Prerequisite: at least one introductory course in East Asian religions or civilizations (Chinese, Japanese or Korean) is recommended. Same as Re St 418

L77 WGSS 419 Feminist Literary and Cultural Theory
This course is intended to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. Note: this course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisite: advanced course work in WGSS or in literary theory (300 level and above), or permission of the instructor required.
Credit 3 units.  A&S : TH  A&S : IQ, HUM

L77 WGSS 420 Contemporary Feminisms
The purpose of this course is to provide a framework, a map, within which students can locate feminist ideas. The course, which may be presented historically, explores and compares different types of feminism selected from, for example, the following feminisms: liberal, Marxist, socialist, radical, lesbian, black, existentialist, postmodern. The class considers how such feminisms analyze the nature and sources of women's oppressions, the worlds they envision, and the means they use
to bring about change. Note: this course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: completion of at least one WGSS course or permission of the instructor. Credit 3 units. A&S : TH, SD A&S : IQ, HUM, SD FA : SSP

L77 WGSS 457 Gender and Modernity in Latin America
The purpose of this course is to introduce students to the particular forms modernity assumes in Latin American countries and to the ways in which national cultures, identity politics, and gender issues interweave during the 20th-century. The course discusses three particular articulation of this topic: 1) gender and the national question in Argentina: Eva Peron; 2) gender and visual arts: Frida Kahlo; and 3) gender and ethnicity: Rigoberta Menchu. Through these iconic figures students are introduced to the specific features that characterized three very different but representative cultural scenarios in Latin America. In each case, the context for the emergence of these highly influential public figures are studied from historical, social and cultural perspectives. In order to explore the cultural and political significance of Eva Peron, Frida Kahlo and Rigoberta Menchu, the course utilizes literary texts (speeches, letters, diaries, etc.), visual materials (photography, films and paintings) and critical bibliography.

L77 WGSS 4601 Taboo: Contesting Race, Sexuality and Violence in American Cinema
Pushing the envelope or going too far? What is the boundary between films that challenge us and films that offend us? This is a course about films that crossed that boundary, most often by presenting images of race, sexuality and violence, images that could attract audiences as much as they offended moral guardians and counted legal sanctions. Because they were denied the First Amendment protection of free speech by a 1915 Supreme Court decision, movies more than any prior art form were repeatedly subject to various attempts at regulating content by government at federal, state and even municipal levels. Trying to stave off government control, Hollywood instituted forms of self-regulation, first in a rigid regime of censorship and subsequently in the Ratings system still in use. Because taboo content often means commercial success, Hollywood could nonetheless produce films that pushed the envelope and occasionally crossed over into more transgressive territory. While control of content is a top-down attempt to impose moral norms and standards of behavior on a diverse audience, it also reflects changing standards of acceptable public discourse.
That topics once barred from dramatic representation by the Production Code — miscegenation, homosexuality and “lower forms of sexuality,” abortion, drug addiction — could eventually find a place in American movies speaks to changes in the culture at large. In trying to understand these cultural changes, this course explores films that challenged taboos, defied censorship and caused outrage, ranging from films in the early 20th century that brought on the first attempts to control film content through to films released under the ratings system, which has exerted subtler forms of control. Required screening.

L77 WGSS 475 Intellectual History of Feminisms
We focus on feminist thought in Western culture but also examine non-Western ideas about feminisms. We trace the relationship among emergent feminist ideas and such developments as the rise of scientific methodology; Enlightenment thought; revolutionary movements and the gendering of the political subject; colonialism; romanticism; socialism; and global feminisms. Readings are drawn from both primary sources and recent feminist scholarship on the texts under consideration. Note: this course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: completion of at least one WGSS course or permission of the instructor.

Writing

Although the English Department does not offer a Writing Major, it provides a full range of courses in the writing of poetry, fiction, drama and various forms of nonfiction, as well as advanced courses in expository writing. An English major with a special interest in writing may count toward the major up to 9 upper-division units from a selection of these courses (designated Writing). Students who wish to take a Writing Minor in addition to an English Major are advised to take English and American literature courses (designated L14 E Lit) exclusively for the major, and Writing courses (designated L13 Writing) exclusively for the minor. Except where noted, students are expected to receive a grade of C or better in each course.

Departmental website: http://artsci.wustl.edu/~english/

For a list of affiliated faculty, please see the Department of English faculty (p. 368) page.

The English Department does not offer a Writing Major. An English major with a special interest in writing may count toward the major in English literature up to 9 upper-division units from a selection of these courses (designated Writing). Students interested in majoring in English Literature should see the English (p. 369) page.

The Minor in Writing

Units required: 15

The Writing Minor consists of 15 units comprising any five courses in the Writing department, one of which must be Writing 311 Exposition or Writing 312 Argumentation, but no more than two courses (6 units) at the 200-level. With department approval,
up to 6 units of journalism courses in writing or editing offered in University College or an off-campus internship (Writing 298 Journalism: Communications Internship) oriented to writing may be counted toward the minor.

**Additional Information**

Students who wish to take a Writing Minor in addition to an English Major are advised to take English and American literature courses (designated L14 E Lit) exclusively for the major, and Writing courses (designated L13 Writing) exclusively for the minor.

**Transfer Units:** Students must provide transcript of previous work to receive approval from the Director of Undergraduate Studies.

**Study Abroad:** Four affiliate programs in England are open for well-prepared students: University College, London (UCL), University of Sussex, Oxford Program for Undergraduate Studies (OPUS), and Keble College at Oxford. Students interested in study abroad must apply and participate before senior year.

**Writing**

**L13 Writing 211 Writing 2**

This course invites students to pursue a writing project that centers on their own intellectual interests and that complicates their approaches to researched, creative and analytical work. See section description for details about specific class emphases. Limit: 12 students. Prerequisite: L13 Writing 100 Writing 1.

Credit 3 units. **A&S: LA**  
**A&S IQ:**  
**HUM**

---

**L13 Writing 212 Principles of Rhetoric**

The study of rhetoric, one of the original seven Liberal Arts, is perhaps more relevant today, in a world where diverse opinions reverberate 24/7 from television and the internet, than in ancient times when rhetors invented arguments to help people choose the best course of action when they disagreed about important political, religious or social issues. How do we make our voices heard? How can we invent and present compelling written discourse. This course introduces students to common rhetorical principles and to the disciplinary history of rhetoric and compositional studies. Assignments in this class include rhetorical exercise in invention and craft, imitations, and varied compositions, ranging from the personal to critical, from the biographical to argumentative. We examine rhetorical principles (audience, context, kairos, exigency, ethos, pathos, logos and so forth) that are employed, for example, not only in literary analysis but in law, politics, education and science. We aim for a mastery of craft and a refinement of thought.

**L13 Writing 298 Journalism: Communications Internship**

For students undertaking projects in newspaper or magazine journalism, in radio or television, or in business, government, foundations and the arts. The student must secure permission of the chair of the Undergraduate Committee, file a description of his or her project with the department and, at the end of the semester, submit a significant portfolio of writing together with an evaluation by the internship supervisor. Up to 3 units acceptable.
toward the Writing Minor, but cannot be counted toward the English Major or Literature Minor. Prerequisite: L13 Writing 100 Writing 1. Must be taken credit/no credit.
Credit 3 units.

L13 Writing 309 Writing the Natural World
For students interested in the environment and natural sciences. This course brings together essays from a wide range of communities including biology, physics, medicine, environmental studies, creative writing and more. Readings and assignments are intended to enhance students' understanding of the relationship between writing and their experience/knowledge of the natural world. Major assignments allow students to follow, explore and write about their own unique interest in a related subject, and include a personal essay, an expository essay, and a researched argumentative essay, as well as peer review workshops, oral presentations, and revision. Students record and explore their own experiences of nature in short creative assignments that prepare them for the major papers. Prerequisites: L13 Writing 100 Writing 1 and junior standing.
Credit 3 units. A&S: LA A&S IQ: HUM, WI

L13 Writing 310 Guided Research in Composition: Theory and Pedagogy of One-to-One Writing Instruction
This course teaches theoretical and practical approaches to the tutoring of writing, specifically focusing on tutoring writing within the context of undergraduate courses. Students learn collaborative methods of tutoring writing, explore different approaches to writing comments on student work in various content areas, and examine the connections between writing and thinking. Students analyze their own writing processes and learn how to help others through the writing and revision process. Readings and discussions focus on writing theory and pedagogy, and students practice one-to-one methods in mock conferences and with sample essays. Assignments: two short essays, a longer research paper and presentation, and a journal.
Credit variable, maximum 3 units. A&S: LA A&S IQ: HUM

L13 Writing 311 Exposition
This advanced writing course considers style in relationship to audience and purpose, asking the writer to engage more consciously with writing conventions, and to explore strategies appropriate to various writing situations. Prerequisites: L13 Writing 100 Writing 1 and junior standing. A note for students and advisers: when registering refer to WebStac for updated information on section times and available seats.
Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI

L13 Writing 3111 Exposition (Visual)
This advanced writing course emphasizes writing and visual analysis, asking students to examine important forms of visual media to develop a sophisticated sense of the strategies, techniques and the rhetoric of visual representation. Prerequisites: L13 Writing 100 Writing 1 and junior standing.
Credit 3 units. A&S: LA

L13 Writing 3112 Exposition: Writing and Medicine
For students who have a particular interest in health, illness and medical care. Exposition is a course that considers style in relationship to audience and purpose, asking the writer to engage more consciously with writing conventions, and to explore strategies appropriate to various writing situations, from the more experimental and performative to the more formal and scholarly. The course involves frequent practice in analyzing and critiquing, with special attention to techniques of organization, argument and emphasis. Students in this special section of Exposition read essays, journalism and personal narratives about the experience of physicians and patients in the modern health care system. Students use expository writing to think critically and personally about their own experiences with illness and disease. Premedical students might use this opportunity to write and think about the anticipated rewards and challenges of the profession they hope to join.
Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI

L13 Writing 312 Argumentation
This advanced writing course examines the strategies of argumentation, exploring such elements of argument as the enthymeme, the three appeals, claim types and fallacies. Prerequisites: Writing 100 Writing 1 and junior standing. A note for students and advisers: when registering refer to WebStac for updated information on section times and available seats.
Same as L84 Lw St 312
Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI

L13 Writing 314 Topics in Composition
An advanced writing course focusing on selected topics related to writing. Topics chosen by department/instructor. See section description for details about specific class emphases. (Note: In some cases, this course may be cross-listed with other programs/departments and may satisfy the writing-intensive requirement.) Prerequisites: Writing 100 Writing 1 and junior standing.
Same as L98 AMCS 3132
Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI

L13 Writing 320 Creative Nonfiction Writing 2
This course is aimed at undergraduates who have taken Non-Fiction Writing 1 and wish to pursue both their development as writers and the study of craft in the context of a more rigorous workshop. Prerequisites: Writing 100 Writing 1, Writing 220 Creative Non-Fiction Writing 1.
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 321 Fiction Writing 2
This course is aimed at undergraduates who have taken Fiction Writing 1 and wish to pursue both their development as writers and the study of craft in the context of a more rigorous workshop. Prerequisites: Writing 220, Writing 221 Fiction Writing 1.
Credit 3 units. A&S: LA A&S IQ: HUM SB: HUM

L13 Writing 321W Mellon Undergraduate Fellows Seminar
Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI

L13 Writing 322 Poetry Writing 2
This course is aimed at undergraduates who have taken Poetry Writing 1 and wish to pursue both their development as poets and the study of craft in the context of a more rigorous workshop. Prerequisites: Writing 221, Writing 222 Poetry Writing 1.
Credit 3 units. A&S: LA A&S IQ: HUM SB: HUM

L13 Writing 322W Kling Undergraduate Honors Fellowship Seminar
Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI

L13 Writing 323 Fiction Writing: The Short-Short, Sudden Fiction and Microfiction
This course is aimed at undergraduates who have taken Fiction Writing 1 or Poetry Writing 1 and wish to further explore the craft of fiction through the medium of the short-short story. The course focuses on reading, writing and thinking critically about short-shorts.
Credit 3 units. A&S: LA A&S IQ: HUM SB: HUM

L13 Writing 324 Fiction Writing: Coming of Age in the Short Story
A fiction writing course that explores coming of age themes.
Credit 3 units. A&S: LA A&S IQ: HUM SB: HUM

L13 Writing 325 Poetry Writing: The Poetry of Travel
This course is offered for students who have taken Poetry 1 and are interested in further developing their craft.

L13 Writing 326 Fiction Writing: Stories in the Suburbs
In the 1950s, the suburbs were still somewhat of a novelty in American culture — most people still lived in cities and small towns, or on the farm. Back then, Levitowns and the like were embraced with either gee-whiz optimism, or seen as sinister dystopias where youth, ideals and romance went to fester and die. But now that the American mainstream is stucco McMansions, strip malls and big box stores; now that the suburbs have become more ethnically diverse; now that literature is being generated from these places instead of just about them, how have stories set in the ‘burbs changed? We read short stories written from the 1950s until the present day exploring this particular setting, and, through a series of exercises, workshops and our own short fiction, we explore the milieu as writers (whether we happen to be from the suburbs or not), always on the lookout for the unexpected in these familiar places.
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 327 Creative Nonfiction: Personal Essay and Memoir
This is an intermediate course in writing creative nonfiction, with a concentration on personal essay and memoir. Prerequisite: Writing 220 Creative Nonfiction Writing 1.
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 330 Fiction Writing: Fiction and Obsession
Desire is at the heart of fiction, from the forces that drive the decisions characters make to the ways stories work on us as readers.
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 331 Fiction Writing: Historical Fiction
A literature/creative writing hybrid course, students read a number of contemporary historical fictions and then write one of their own. We consider the ways in which these fictions inhabit, depart from and reflect upon the historiography and history they’re built from — upon the indeterminacy of the historical record, and the limits of its reach — but we also discuss fiction’s reponsibility to historical “facts” and documents, and the relevance of fictions among non-fictions in approaching an event or figure. Prerequisites: Writing 100 Writing 1, Writing 221 Fiction 1.
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 332 Fiction Writing: Historical Fiction
A literature/creative writing hybrid course, students read a number of contemporary historical fictions and then write one of their own. We consider the ways in which these fictions inhabit, depart from and reflect upon the historiography and history they’re built from — upon the indeterminacy of the historical record, and the limits of its reach — but we also discuss fiction’s reponsibility to historical “facts” and documents, and the relevance of fictions among non-fictions in approaching an event or figure. Prerequisites: Writing 100 Writing 1, Writing 221 Fiction 1.
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 352 Introduction to Screenwriting
Same as L53 Film 352.
Credit 3 units. A&S: LA A&S IQ: HUM SB: HUM

L13 Writing 401 Writing for Children and Young Adults
In this course we examine various genres of writing for young people: poetry, fiction and non-fiction.
Same as L56 CFH 401
Credit 3 units. A&S: LA

L13 Writing 403 Dramaturgy Workshop
Same as L15 Drama 403
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 4131 Topics in Composition
Composition topics course — offerings vary from semester to semester.
Credit 3 units. A&S: TH A&S IQ: HUM

L13 Writing 421 Advanced Fiction Writing
For qualified students who wish to continue their creative writing and reading through immersion in an intensive fiction workshop. Students wishing to enroll must not only register but also submit a 15-page (double-spaced) fiction sample. The sample must include a cover page with: student’s name, the semester he/she took Fiction Writing 2, and the name of the Fiction Writing 2 instructor. Submit samples to the English Department mailbox of the L13 421 instructor no later than April 20. No one is officially enrolled in this class until contacted by the instructor. Prerequisites: Writing 100 Writing 1, Writing 221 Fiction Writing 1, Writing 321 Fiction Writing 2.
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 422 Advanced Poetry Writing
For qualified students who wish to continue their creative writing and reading through immersion in an intensive poetry workshop. Students wishing to enroll must not only register but also submit eight poems. The sample must include a cover page with: student’s name, the semester he/she took Poetry Writing 2, and the name of the Poetry Writing 2 instructor. Submit samples to the English Department mailbox of the L13 421 instructor no later than April 20. No one is officially enrolled in this class until contacted by the instructor. Prerequisites: Writing 100 Writing 1, Writing 221 Fiction Writing 1, Writing 321 Fiction Writing 2.
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 423 Proseminar in Writing: Nonfiction Prose
For students qualified to pursue their own projects in nonfiction prose; criticism by other members of the class and by the instructor. Limit: 12 students. Prerequisite: permission of instructor upon submission of writing samples.
Credit 3 units. A&S: LA

L13 Writing 424 Poetry Tutorial
These credits are available to students who have completed Writing 222 Poetry I and Writing 322 Poetry II. This is an opportunity for students who have already completed Writing 422 Advanced Poetry, or who are not able to take Advanced Poetry because of scheduling conflicts, to meet individually with the instructor to develop a portfolio of poems. During weekly meetings students explore various writing processes and revision techniques. There are directed readings and discussions of selected topics related to contemporary poetry and poetics. Credits may be taken concurrently with Advanced Poetry. Permission of the instructor is required.
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 431 Craft of Fiction
A literature/creative writing hybrid course; students read a number of contemporary historical fictions — an increasingly important and innovative genre — and then write one of their own.
Same as L56 CFH 431
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 432 The Craft of Poetry
An investigation into the art and craft of poetry, in order to consider the choices a poet makes in the process of composing and revising. The students are asked to complete many poetry writing exercises, as well as the writing of critical papers, in their investigation of poetic forms and modes from many historical periods. (This course is highly recommended for those who have completed or are taking the 300-level creative writing courses and to students in The Writing Program.)
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 4521 Advanced Screenwriting
Same as L53 Film 452
Credit 3 units. A&S: LA A&S IQ: HUM FA: Lit

L13 Writing 4731 Advanced Playwriting
Same as L15 Drama 473
Credit 3 units. A&S: LA A&S IQ: HUM
Writing Center Courses

L59 CWP 100 College Writing 1
This course teaches writing as a way of thinking and learning. Throughout the semester, students explore writing as a creative and intellectual process. They learn how to brainstorm, explore and structure ideas on a page; share their writing and learn how to give and take constructive criticism; and learn how to revise their work, both for issues related to the paper’s larger idea and for issues related to grammar and style. By regularly working their way through the writing process, students develop the habits and skills that make advanced study possible: paying close attention to the words and ideas of others; forming and responding to arguments of others; and refining a lucid style of prose that meets the expectations of the audience and occasion. This course is taught in small sections of 12 students or fewer.
Credit 3 units. FA: Comp

L59 CWP 1001. Fundamentals of Academic Writing
A preparatory course required of some students before they take Writing 100 Writing 1 (placement to be determined by the department). Particular attention is paid to reading comprehension, critical thinking, organization of ideas and grammar. In some cases, students may be required to enroll in a 1-credit tutorial along with this course.
Credit 3 units. A&S: LA A&S IQ: HUM

L59 CWP 200 Writing Tutorial
A tutorial in writing; may be taken for credit in one of two cases: (1) Students may be required to enroll in the tutorial for concentrated practice in writing fundamentals under the guidance of a tutor in addition to taking Writing 1. In these cases, satisfying the first-year writing requirement mean receiving a satisfactory grade in Writing 100 and receiving a passing grade in the tutorial. Students enroll in CWP 200 for 1 credit hour. Tutorials taken concurrently with Writing 1 must be taken pass/fail. (2) Students may be required to take the tutorial for 3 credit hours after taking Writing 1 in order to satisfy the first-year writing requirement. In this case, the tutorial is taken for credit. Direct all questions to Writing 1 office: 314/935-4899.
Credit variable, maximum 3 units.

L59 CWP 201 Writing Workshop
An intensive workshop focusing on selected topics related to writing. Topics chosen by the department/instructor. Must be taken for credit. See course and section descriptions in online course listings for details about workshop emphases.
Credit 1 unit. A&S: LA A&S IQ: HUM
Business

About the Olin Business School

Any top business school should give students an exceptional grounding in the basics — accounting, finance, economics, marketing and operations. At Olin Business School, mastering those functional skills is not the end, but the beginning. Here, it’s not only about what you know, but, more importantly, how you think.

Our faculty is widely regarded as among the very best in the nation in terms of scholarly research productivity. In the classroom, you’ll learn rigorous critical thinking skills — the same kind of analytical, open-minded inquiry that powers top-tier research.

Business-involved, applied-learning opportunities help you integrate your newfound knowledge, critical thinking and collaboration skills to solve real, complex, unstructured business problems. Study abroad, entrepreneurship and consulting projects further transform your perspectives, skills and competencies.

Research-driven thinking, applied — that organizing principle at Olin transforms individuals who transform business. You learn from the best and with the best, in an energizing and exhilarating environment that fosters teamwork, interdisciplinary learning and the practical experience essential to your future success.

Bachelor of Science in Business Administration (B.S.B.A.)

The Olin Business School offers a full-time Bachelor of Science in Business Administration (B.S.B.A.) degree program of instruction. As an undergraduate student at Olin, you may choose to major in one or two professional fields in business as part of your degree. Our B.S.B.A. students enroll in business courses in their freshman year. The curriculum covers the core functional areas of business, at least one major course of study in a field of business and at least 40 percent of the course work must be in nonbusiness fields — from fine arts to science — allowing you to pursue individual careers and ensuring a well-rounded educational experience.

Majors

B.S.B.A.s are offered the option to focus their studies in a specific field of business. While a business student is not required to declare a business major, almost all our business students earn at least one professional major. You may pursue one or two majors from the list below:

- Accounting
- Economics and Strategy
- Entrepreneurship
- Finance
- Healthcare Management
- International Business
- Marketing
- Operations and Supply Chain Management
- Organization and Human Resources

Specific requirements for each major can be found on the Majors (p. 797) page.

Combined Majors

As a business student, you have the option to major in more than one field of study. B.S.B.A. students can earn a total of two majors either both in business or one in business and one outside of Olin. For example, you could earn a B.S.B.A. degree with a major in finance and a major in English literature from the College of Arts & Sciences. You must complete the specific courses required for the second major, but you are not required to complete the general requirements for the second degree. You should consult with your academic adviser for additional information. Upon completion, the student’s transcript would show a B.S.B.A. degree along with the earned second major. A diploma is awarded for the degree, with reference to any major(s) on the official transcript.

Minors

Many departments and schools in the university offer minors. Business students also can pursue a minor outside of Olin in any recognized academic discipline offered within the university by satisfactorily completing all the requirements for both the B.S.B.A. degree and the minor. Required courses for a minor outside of business may range from 15 to 27 units, depending on the specific regulations of the academic department. A business student who applies for a minor and completes all of the requirements will have the award of the minor noted on the official transcript. A student must be approved for admission to a minor program by the department offering the minor.

Students from other schools of Washington University can read about business minors on the Minors (p. 800) page.

Combined Degrees

You also can earn two undergraduate degrees simultaneously — your B.S.B.A. degree and another undergraduate degree offered at the university. You must be admitted to the other degree-granting program, and you must meet specific degree requirements for both schools. Typically, this option requires additional time to complete all requirements. For example, if you combine your business degree with a degree from the College of Arts & Sciences, you must complete a minimum of 150 units between the two disciplines. Of the 150 units, at least 90 units must be from the College of Arts & Sciences and at least 55.5 units from the Olin Business School. Some courses may be used to satisfy both degree requirements simultaneously.
Because requirements for a second degree vary from discipline to discipline, you should talk with your primary adviser to plan your program.

**Joint Undergraduate and Business Master’s Degrees**

**Master of Business Administration (M.B.A.)**

A special five-year program combining an undergraduate degree with the Master of Business Administration degree is available to a select number of undergraduates. Often referred to as the 3+2 program, it combines three years of undergraduate study and two years of M.B.A. study for completion of both degrees in five years. Joint programs include: the A.B./M.B.A. degrees offered with the College of Arts & Sciences, the B.S./M.B.A. degrees offered with the School of Engineering & Applied Science, and the B.S.B.A./M.B.A. degrees offered through Olin Business School.

Admission to the 3/2 program is extremely competitive. You must have a superior academic record, an outstanding performance on your Graduate Management Admission Test (GMAT) or Graduate Record Exam (GRE) and substantive summer internship experience in a related field.

You apply during the winter of your junior year and begin the full-time M.B.A. program in the fall semester. You must complete at least 90 units of undergraduate course work before entering Olin Business School and then complete an additional 66 units of graduate-level courses. Consult your academic adviser during your sophomore year regarding specific degree requirements. If your undergraduate major is in the School of Engineering & Applied Science or the College of Arts & Sciences, up to 15 units of remaining undergraduate courses will apply toward the 66 units required in the M.B.A. program. If your undergraduate major is in the Olin Business School, up to 6 units of remaining undergraduate course work will apply toward the 66 units required in the M.B.A. program. See http://www.olin.wustl.edu/academicprograms/MSF/Pages/default.aspx for more information, including additional requirements for Arts & Sciences candidates.

In addition, as an M.B.A. student, you can earn a second graduate degree concurrently in one of the following disciplines:

- Master of Science in Biomedical Engineering (M.B.A./M.S.-B.M.E.)
- Master of Arts in East Asian Studies (M.B.A./M.A.)
- Juris Doctorate (M.B.A./J.D.)
- Master of Social Work (M.B.A./M.S.W.)
- Master of Public Health (M.B.A./M.P.H.)

To apply contact the M.B.A. Admissions Office in Simon Hall, Room 114, or send email to mba@olin.wustl.edu.

**Master of Accounting (M.A.C.C.)**

Whether your career interests lie in public or corporate accounting, consulting or financial services, Olin’s Master of Accounting (M.A.C.C.) program will prepare you for an exciting and challenging future. This program requires 33 graduate-level credit units in addition to the course work requirements for your undergraduate degree. Course work is included to help meet eligibility requirements to sit for the CPA exam in states with the “150-hour rule.” You can apply for admission once you have completed ACCT 2610 and ACCT 3610. It is expected that you also will have completed ACCT 3620 during the undergraduate program. If you are interested in pursuing a MACC degree, it is recommended that you contact the Specialized Masters Programs office prior to entering your junior year. For students at Washington University, the GMAT/GRE requirement and $100 application fee are waived.

See www.olin.wustl.edu/academicprograms/MACC/Pages/default.aspx. Further information is available in the Specialized Masters Programs Office in Simon 118, or by sending email to maccinfo@wustl.edu.

**Master of Science in Finance (M.S.Fin.)**

Graduates of Olin’s Master of Science in Finance (M.S./Finance) develop highly targeted skills by selecting the curriculum track best suited to their career aspirations — Corporate Finance and Investments or Quantitative Finance. This rigorous and comprehensive graduate program offers in-depth training in securities research, asset management, derivative pricing, fixed income and corporate finance for students pursuing specialized finance careers in either of two tracks:

- Corporate Finance and Investments requires 30 graduate-level credit units in addition to the course requirements for your undergraduate degree and prepares you for careers in investment banking, asset management, sales and trading, industry finance and consulting.
- Quantitative Finance requires 42 graduate-level credit units in addition to the course requirements for your undergraduate degree and prepares you for careers in credit risk analysis, derivative pricing, risk management modeling and financial software development.

If you are interested in pursuing an M.S./Finance degree, it is recommended that you contact the Specialized Masters Program Office prior to entering your junior year. For students at Washington University, the GMAT/GRE requirement and $100 application fee are waived.

See www.olin.wustl.edu/academicprograms/MSF/Pages/default.aspx. Further information available in the Specialized
Masters Programs Office in Simon 118 or by sending email to MSFinanceInfo@wustl.edu.

Master of Science in Supply Chain Management (M.S.SCM.)

Exceptional management of the production and delivery of a firm’s products and services — its supply chain — is essential. The Master of Science in Supply Chain Management (MS/SCM) degree at Washington University’s Olin Business School equips graduates to stand out in this challenging and critically important career field. This program provides students with comprehensive preparation in all areas relevant to sophisticated management of a company’s supply chain, whether the company is engaged in manufacturing or in the delivery of complex services.

Completion of the degree requires a minimum of 36 graduate-level credit hours in addition to the course requirements for your undergraduate degree. If you are interested in pursuing an M.S./S.C.M. degree, it is recommended that you contact the Specialized Masters Programs office prior to entering your junior year. For students at Washington University, the GMAT/GRE requirement and $100 application fee are waived.

See www.olin.wustl.edu/academicprograms/MSSCM/Pages/default.aspx. Further information is available in the Specialized Masters Programs Office in Simon 118, or by sending email to MSSCMInfo@wustl.edu.

Special Opportunities

Center for Experiential Learning

Olin’s Center for Experiential Learning (see www.olin.wustl.edu/cel/Pages/default.aspx) is the focal point for a wide range of activities that take learning beyond the classroom to integrate what you’re learning in hands-on projects and real-world situations. Courses include:

- Investment Praxis — students manage more than $1.5 million of the university’s endowment funds.
- Taylor Community Consulting Program — students serve as management consultants in six-week projects for area nonprofit organizations.
- The Practicum — student teams consult for local, national and international companies on a wide array of business and management problems. An Olin faculty member serves as a mentor for each team. At the end of the semester-long project, your team makes a formal presentation that includes analyses, strategies and recommendations for change.

Skandalaris Center for Entrepreneurial Studies

With its collaborative, interdisciplinary focus, the Skandalaris Center connects Washington University and the St. Louis startup community. Student interest areas include commercial, social, creative, environmental and technology entrepreneurship. The Center coordinates entrepreneurship curriculum across campus and also co-curricular programs including pre-orientation IDEA, Coffee with the Experts, the Olin Cup and YouthBridge Social Enterprise and Innovation Competitions, and its flagship, IdeaBounce®. The Center offers a set of curricular and co-curricular options for student and community entrepreneurs to help move their ideas forward. See www.ideabounce.com for more information.

Independent Study

Independent study under the direction of a faculty member is available on a selective basis. The purpose of independent study is to provide an opportunity for you to pursue subject matter beyond the specific course offerings found in the Olin School. Projects may be done for 1 to 6 units, but normally no more than 3 units will be granted in any one semester. For more information, please refer to the Olin School’s Undergraduate Student Handbook.

Students may apply a maximum of 6 units of independent study in business and 6 units outside of the Olin School toward the 120-unit degree requirement.

Internship for Credit Opportunities

Olin freshmen and sophomores who have a summer internship can enroll in MGT 450A for academic credit. This online course is designed to deepen your overall learning gained from an internship. Students enroll in this 1.5-credit course as a Pass/Fail basis. While this course will be listed on your academic transcript, it will not count toward the 120 units needed for graduation.

Olin juniors or seniors who have completed the core requirement and one advanced elective in the appropriate major field may apply to receive credit for internship experience. Students must work under the direction of a faculty member to complete an academic paper/project. The Internship Petition Form must be submitted to the student’s academic adviser by the end of the second week of the academic semester. A maximum of 6 units of internship course work may be applied toward the B.S.B.A. degree.

Undergraduate Teaching Assistantships

In this challenging program, outstanding students are chosen to assist various professors with their course development work or research efforts. Students may conduct library research, perform computer programming, develop new learning materials for class, assist other students with their writing skills, or tutor in various areas of the curriculum.

Participation in the Undergraduate Teaching Assistantship (UTA) program is voluntary and may begin as early as the first year. As a participant, you are paid the going rate for student assistants. UTA experience also impresses company recruiters.
Study Abroad

As a business student, you have the opportunity to participate in various study abroad programs. You may choose to (1) apply to one of Olin’s International Internship Programs, (2) apply to participate in a semester academic exchange program, or (3) apply to participate in one of the study abroad programs sponsored by the Office of International and Area Studies in the College of Arts & Sciences. Detailed information is available at http://sa.wustl.edu or in the B.S.B.A. Programs office.

International Internship Programs

Our International Internship Programs offer you the opportunity to combine classroom learning with an internship in Herzliya/Tel Aviv, Germany, London, Sydney or Paris. You earn 15 units of academic credit in any of these programs by completing:

• 6 units of academic credit in appropriate areas (e.g., language study in non-English-speaking locations)
• Full-time internship placement of approximately 10 - 12 weeks (in Herzliya/Tel Aviv, London, Paris, Sydney or Germany) for credit.
• Significant research project in conjunction with the internship experience.
• European Study Tour for programs in Europe and Colloquium/Study Tour Series for programs outside of Europe for credit.

The International Internship Programs are open to all Olin juniors and seniors who have completed the equivalent of five semesters of course work (75 units) and the specific prerequisites for the particular program of study. Second majors in business also may be eligible to apply. There is a minimum GPA requirement of 3.0 in your overall course work and 3.0 in your professional course work. Eligibility requirements are subject to change.

Other Study Abroad Opportunities through Olin

Olin students may participate in academic exchange programs at Chinese University of Hong Kong or Hong Kong University of Science and Technology in Hong Kong; Bocconi University in Milan, Italy; the University of Melbourne in Australia; ESCP Business School in Paris, France; Carlos III University of Madrid, Spain; Singapore Management University in Singapore; WHU in Vallendar, Germany; FGV in Sao Paulo, Brazil, or Fudan University in Shanghai, China. You may participate in any of these exchange programs and take course work that allows you to continue your studies toward your Olin School degree without interruption.

Olin also offers several summer programs lasting from two to eight weeks for 3 to 6 credits. Visit http://sa.wustl.edu for more information.

Washington D.C. Opportunity

Olin students may participate in Washington University’s Semester in D.C. program. This experience introduces students to the workings of our nation’s capital through a course on American Democracy and the Policy Making Process, an internship experience, a speaker series, an applied independent research project as well as group activities during the fall, spring and summer semesters. Additional information is available at www.olin.wustl.edu/academicprograms/BSBA/Pages/SemesterinDCProgram.aspx.

Semester in New York City

Olin students may participate in a semester in New York program. Students enrolled in the program take a course in a corporate ethics, attend a speaker series, intern and create applied research while spending their semester in New York. This program is available for both the fall and spring semesters. Additional information on this program can be obtained via the B.S.B.A. Programs Office.

Academic Support Services

Academic Advising

Olin Business School provides you with expert academic advising and support. B.S.B.A. Student Services has six academic advisers who serve as professional advisers to all undergraduate students on procedural matters, course planning, registration and other academic matters.

Olin Peer Ambassadors

In this program, undergraduate business students who are familiar with the university and with Olin’s programs and policies help incoming students make a smooth transition to the university by providing informal peer advising services throughout their first year here.

Weston Career Center

To provide you with personalized career planning and job search services, Olin operates its own career center. The Weston Career Center (WCC) delivers a variety of career management programs and services to Olin students pursuing their B.S.B.A., M.B.A, Master of Accounting, M.S. Supply Chain Management and M.S. Finance degrees. Services include: one-on-one advising and consultation with a functional career specialist, workshops and professional development seminars, company information sessions, mock interviews, self-assessments, resume and cover writing, and networking — all the tools you will need for an effective job search. On-campus interviews take place in the Simon Hall Interview Suite or Danforth Center throughout the academic year. Business students are encouraged to meet with the center’s staff early in the school year to discuss career and professional goals. For more information, see OlinCareers.wustl.edu, or contact the Weston Career Center by phone at 314/935-5950 or e-mail at wcc@olin.wustl.edu.

The Major in Economics and Strategy

Total units required: 21

- Economics & Strategy Core: 21 units
  - FIN 340 Capital Markets and Financial Management 3
  - MEC 370 Game Theory for Business 3
  - MEC 380 Competitive Industry Analysis 3
  - MEC 470 Market Competition and Value Appropriation 3
  - MEC 471 Empirical Techniques for Industry Analysis 3
  - MGT 380 Business Strategy 3
  - MEC 391 The Economics of Human Resource Management 3

The Major in Entrepreneurship

Total units required: 21

- Entrepreneurship Core: 12 units
  - FIN 340 Capital Markets and Financial Management 3
  - MGT 421 Introduction to Entrepreneurship 3
  - MGT 424 Business Planning for New Enterprises [The Hatchery] 3
  - MKT 370 Principles of Marketing 3

- Entrepreneurship Elective Choices: 9 units
  - ACCT 466 Financial Statement Analysis 3
  - MEC 370 Game Theory for Business 3
  - MEC 380 Competitive Industry Analysis 3
  - MEC 470 Market Competition and Value Appropriation 3
  - MGT 301 Legal Environment of Business Management 3
  - MGT 380 Business Strategy 3
  - MGT 450C Venture Consulting 3
  - MKT 373 Retail Management 3
  - MKT 473 Marketing Research 3
  - OB 461 Negotiation 3

Students also may select several courses outside of Olin to complete their Entrepreneurship major. For more information about these choices, please review the Class of 2017 Degree Requirements in PDF form.

The Major in Finance

Total units required: 15

- Finance Core: 12 units
  - FIN 340 Capital Markets and Financial Management 3
  - FIN 441 Investments 3
  - FIN 448 Advanced Financial Management 3
  - FIN 451 Options, Futures and Derivative Securities 3
Finance Elective Choices: 3 units

FIN 400G Financial Markets and Instruments 3
FIN 400I Mergers and Acquisitions 1.5
FIN 400J Advanced Valuation 1.5
FIN 428 Investments Praxis 3
FIN 443 International Finance 3
FIN 447 Information, Intermediation and Financial Markets 3
FIN 452 Advanced Derivative Securities 3

The Major in Healthcare Management

Total units required: 15

• Health Care Core: 12 units

MGT 320 Olin Grand Rounds: The Business and Practice of Medicine 3
MGT 321 Health Economics and Policy 3
MGT 322 Health Care Management 3
MGT 420 Research in Health Care Management 3

• Health Care Elective Choices: 3 units

Students select at least one course outside of Olin to complete their Healthcare major. For more information about these choices, please review the Class of 2017 Degree Requirements in PDF form.

The Major in International Business*

Total units required: 24

• International Business Core Requirements: 15 units

INTL 300A Planning for International Learning 1.5
INTL 300B Applying International Experiences 1.5
MGT 308 Introduction to International Business 3

Total units 6

Plus:

Two Foundation courses chosen from the WU Global Certification Foundation offerings

Off-Danforth Campus immersive learning experience for a minimum of four weeks (All Olin semester programs are automatically approved.)

Capstone course (Honors in Management with an international topic or the Global Certificate Capstone course)

• International Business Elective Choices: at least three courses from below:

FIN 400G Financial Markets and Instruments 3
INTL 320 Business, Innovation and Entrepreneurship in Israel 3
MGT 400S International Business Environment 3
MGT 418 International Business: A Euro Perspective 3
MKT 477 International Marketing 3

Upper-level foreign language or international business courses taken abroad with the approval of the Director of International Programs may count as an International Business elective.

*Effective with the Class of 2015, the International Business major will be considered as a secondary major option only. Any student majoring in International Business must declare another major field as the International Business major will no longer serve as a prime major.

The Major in Marketing

Total units required: 15

• Marketing Core: 9 units

MKT 370 Principles of Marketing 3
MKT 473 Marketing Research 3
MKT 480 Marketing Strategy 3

• Marketing Electives: 6 units

Group A Elective Choices: (at least one course from Group A required)

MKT 377 Consumer Behavior 3
MKT 470E Pricing Strategies 3
MKT 478 New Product Management 3

Group B Elective Choices:

MKT 373 Retail Management 3
MKT 476 Advanced Retail Topics 3
MKT 477 International Marketing 3
MKT 481 Integrated Marketing Communication 3

The Major in Operations and Supply Chain Management

Total units required: 18

• Operations and Supply Chain Management Core: 6 units

OSCM 230 Management Science 3
OSCM 356 Operations Management 3

• OSCM Elective Choices: 12 units

Group A Elective Choices: (at least two courses from Group A required)
OSCM 458  Operations Planning and Control  3  
OSCM 558  Advanced Operations Strategy  3  

**Group B Elective Choices:**
MEC 380  Competitive Industry Analysis  3  
MGT 380  Business Strategy  3  
MKT 373  Retail Management  3  
MKT 473  Marketing Research  3  
OB 461  Negotiation  3  

**The Major in Organization and Human Resources Management**

Total units required: 15  
- OHR Core Requirements: 6 units  
  - MEC 391  The Economics of Human Resource Management  3  
  - OB 360  Organization Behavior Within the Firm  3  
- OHR Electives: 9 units  
  - Group A Elective Choices: (choose at least 6 units from Group A)
    - HRM 320A  Managing People in Organizations  3  
    - HRM 325A  Personel/Human Resources Management  3  
    - MEC 380  Competitive Industry Analysis  3  
    - MGT 380  Business Strategy  3  
    - MGT 402  Ethical Issues in Managerial Decision Making  1.5  
    - MGT 450V  Defining Moments: Lessons in Leadership and Character From the Top  1.5  
    - MGT 526  Topics and Case Studies in Ethical Decision Making  1.5  
    - OB 461  Negotiation  3  
    - OB 462  Leadership in Organizations  3  
  - OHR Group B Elective Choices:  
    - Econ 380  Labor and the Economy  3  
    - Psych 315  Introduction to Social Psychology  3  
    - Psych 353  Psychology of Personality  3  
    - Psych 361  Psychology of Learning  3  

**Class of 2017 Degree Requirements:**  
For a comprehensive view of our degree program, please review the PDF of these requirements on our website or click here to download it.

**Academic Options for Non-B.S.B.A. Degree Students**
If you are a student in another undergraduate division of the university, you may choose to complete a second major or a minor in a business discipline.

**Second Majors**
Any non-B.S.B.A. degree student may earn a second major in a specific major discipline offered through the Olin Business School. This opportunity allows you to combine your academic interests between two schools. If you wish to pursue a second major in business, you are required to follow the degree requirements for your primary school/major along with a set of core business requirements and 12–21 units of business major course work.

**Core Business Requirements:**
- ACCT 2610  Principles of Financial Accounting  3  
- ACCT 2620  Principles of Managerial Accounting  3  
- Math 131 & Math 132  Calculus I & II  6  
- MGT 100  Individual in a Managerial Environment  3  
- or MGT 380  Business Strategy  
- or MEC 380  Competitive Industry Analysis  
- MEC 290  Microeconomics  3  
- MEC 292  Global Economy  3  
- or Econ 1021  Introduction to Macroeconomics  
- or QBA 120 & QBA 121  Managerial Statistics I & II  6  

Total units: 27  

You may select a major from the following disciplines:  
- Accounting  
- Economics and Strategy  
- Entrepreneurship  
- Finance  
- Healthcare Management  
- International Business  
- Marketing  
- Operations and Supply Chain Management  
- Organization and Human Resources  

Requirements for all majors, with the exception of the Entrepreneurship major, follow the same protocol as a B.S.B.A. degree student earning a specific business major. Therefore, specific course requirements for each major are shown above under the Majors for B.S.B.A. Degree Candidates. Students taking the Second Major in Entrepreneurship are not required to complete MEC 292/Econ 1021. For a comprehensive view of our
second majors, please review the PDF of these requirements on our website or click here to download it.

Regulations:
1. Second majors are required to complete a minimum of 24 business units through the Olin School. Transfer students from another institution must take a minimum of 18 credits through Olin Business School.
2. All courses for any business major must be taken for a grade.
3. An overall 2.0 average must be achieved in course work taken as part of the business major.
4. Students must declare their second major by the end of their junior year. A second major will not be awarded to a student unless proper declaration is made.
5. University College courses will not count toward any business major.
6. You may not count one course toward two majors.
7. AP credit for Math 2200 will not serve as a substitute for our QBA 120 requirement. All second majors must complete QBA 120.

Minors for Non-B.S.B.A. Degree Candidates
Non-B.S.B.A. degree students are eligible to pursue a minor in one of the specific fields of business listed below:
• Accounting
• Entrepreneurship
• Finance
• General Business
• Healthcare Management
• Leadership
• Managerial Economics
• Marketing
• Operations and Supply Chain Management
• Strategy

Prerequisites for the Business Minor:
The following prerequisites are required for all minors except Entrepreneurship. For Entrepreneurship, the prerequisites are recommended.

Math 132 Calculus II or Math 128 Calculus II for the Life, Managerial and Social Sciences or the equivalent.
Math 2200 Elementary Probability and Statistics or Math 3200 Elementary to Intermediate Statistics and Data Analysis or ESE 326 Probability and Statistics for Engineering or Pol Sci 363 Quantitative Political Methodology or QBA 120 Managerial Statistics I.*

Econ 1011 Introduction to Microeconomics or MEC 290 Microeconomics
QBA 121 is also a prerequisite for minors in Marketing, Finance and General Business.

* AP Credit for Math 2200 will satisfy this prerequisite. This exemption applies only to Business minors.

The Minor in Accounting
Total units required: 15
Required courses: Five courses including:
ACCT 2610 Principles of Financial Accounting 3
ACCT 2620 Principles of Managerial Accounting 3
ACCT 3610 Intermediate Financial Accounting Theory I 3
Plus two chosen from the following:
ACCT 3620 Intermediate Financial Accounting II 3
ACCT 464 Auditing 3
ACCT 466 Financial Statement Analysis 3
ACCT 4680 Advanced Financial Accounting Problems 3

The Minor in Entrepreneurship
Total units required: 15
Required courses Five courses including:
ACCT 2610 Principles of Financial Accounting 3
MGT 100 Individual in a Managerial Environment 3
MGT 301 Legal Environment of Business Management 3
MGT 421 Introduction to Entrepreneurship 3
MGT 424 Business Planning for New Enterprises [The Hatchery] 3

The Minor in Finance
Total units required: 15
Required courses: Five courses including:
ACCT 2610 Principles of Financial Accounting 3
FIN 441 Investments 3
FIN 448 Advanced Financial Management 3
FIN 451 Options, Futures and Derivative Securities 3

Plus a 3-credit Finance elective.

The Minor in General Business
Total units required: 15
Required courses: Five courses including:
ACCT 2610 Principles of Financial Accounting 3
Choose one course from the following:
The Minor in Marketing
Total units required: 15
Required courses: Five courses including:
- MKT 370 Principles of Marketing 3
- MKT 473 Marketing Research 3
- MKT 480 Marketing Strategy (*) 3
  * Marketing 480 is taken spring semester of the senior year.

The Minor in Health Care Management
Total units required: 15
Required courses: Five courses including:
- MGT 100 Individual in a Managerial Environment 3
- MGT 320 Olin Grand Rounds: The Business and Practice of Medicine 3
- MGT 321 Health Economics and Policy 3
- MGT 322 Health Care Management 3
- MGT 420 Research in Health Care Management 3

The Minor in Leadership
Total units required: 15
Required courses: Five courses including:
- MGT 100 Individual in a Managerial Environment 3
- OB 460 Organization Behavior Within the Firm 3
- OB 461 Negotiation 3
- OB 462 Leadership in Organizations 3
  * Plus one course chosen from the following:
    - MGT 201 Management Communication 3
    - HRM 320A Managing People in Organizations 3

The Minor in Managerial Economics
Total units required: 15
Required courses: Five courses including:
- MEC 370 Game Theory for Business 3
- MEC 380 Competitive Industry Analysis 3
- MEC 470 Market Competition and Value Appropriation 3
- MEC 471 Empirical Techniques for Industry Analysis 3
- MEC 391 The Economics of Human Resource Management 3
  * Plus one course chosen from the following:
    - MEC 370 Game Theory for Business 3
    - MEC 471 Empirical Techniques for Industry Analysis 3
    - OB 461 Negotiation 3
    - OB 462 Leadership in Organizations 3

The Minor in Operations and Supply Chain Management
Total units required: 15
Required courses: Five courses including:
- QBA 120 Managerial Statistics I 3
- OSCM 230 Management Science 3
- OSCM 356 Operations Management 3
- OSCM 458 Operations Planning and Control 3
- OMM 558 Advanced Operations Strategy 3

The Minor in Strategy
Total required units: 21
Required courses: Seven courses including:
- MGT 100 Individual in a Managerial Environment 3
- MGT 380 Business Strategy 3
- MEC 290 Microeconomics 3
  or Econ 1011 Introduction to Microeconomics
- MEC 380 Competitive Industry Analysis 3
- MEC 470 Market Competition and Value Appropriation 3
- QBA 120 Managerial Statistics I 3
  * Plus one course chosen from the following:
    - MEC 370 Game Theory for Business 3
    - MEC 471 Empirical Techniques for Industry Analysis 3
    - OB 461 Negotiation 3
    - OB 462 Leadership in Organizations 3
Fulfilling the Business Minor

All students pursuing any Business Minor must:

- file a declaration no later than the end of their sixth semester;
- satisfy all prerequisites;
- take all five required courses at Olin Business School. It is preferred that prerequisites be completed at Washington University. Courses taken in University College or at another university do not satisfy any of the five required courses;
- take all five required courses for grades, i.e., no pass/fail;
- achieve no less than a 2.0 GPA average in all Business Minor course work;
- receive permission from their academic adviser and the Olin Business School to declare a second Business Minor.

Accounting

**B50 ACCT 2610 Principles of Financial Accounting**
Provides an overview of the financial accounting reporting process, with a primary focus on the analysis of economic events and their effect on the major financial statements (balance sheet, income statement and statement of cash flows). Prerequisite: second semester freshman standing.
Credit 3 units.

**B50 ACCT 2620 Principles of Managerial Accounting**
Emphasis on the accumulation and analysis of data for internal decision makers. Introduces the vocabulary and mechanics of managerial accounting and accounting techniques used by internal managers in planning, directing, controlling and decision-making activities within their organizations. Prerequisite: ACCT 2610.
Credit 3 units.

**B50 ACCT 3610 Intermediate Financial Accounting Theory I**
The first of a two-course sequence in corporate financial reporting. Examines the environment of financial accounting, the standards-setting process and the conceptual framework that underlies financial accounting in the United States. Topics: review accounting basics, events and transactions that impact financial statements, comprehension of corporate financial reports, and examination of political and economic factors influencing accounting policy. Prerequisite: ACCT 3610.
Credit 3 units.

**B50 ACCT 3620 Intermediate Financial Accounting II**
Continuation of ACCT 3610. Focus on the accounting and reporting of various stakeholders' claims against the corporate entity. Claims of shareholders, long-term creditors, employees and governmental bodies are examined. An in-depth understanding of applicable generally accepted accounting principles is developed by examining the strengths and weaknesses of these principles and alternative accounting practices. Prerequisite: ACCT 3610.
Credit 3 units.

**B50 ACCT 400A Analysis of Financial Institutions and Financial Instruments**
Provides an in-depth understanding of how financial reports of financial institutions provide unusually accurate and detailed (but not perfect) information about the risks and performance of firms in the financial services industries. These firms' financial statements increasingly are based on fair value accounting and their financial reports typically include extensive risk and estimation sensitivity disclosures. While financial services firms often apply fair value accounting and risk and estimation sensitivity disclosures imperfectly (or worse), careful joint analysis of the information they do provide invariably yields important clues about their risks and performance. The emphasis of the course is on the use of financial reports for financial analysis purposes rather than focusing on the technical accounting issues. Prerequisite: ACCT 3620.
Same as B60 500G
Credit 1.5 units.

**B50 ACCT 466 Financial Statement Analysis**
Designed to enhance your understanding of the process of evaluating financial statement information. Requires a basic familiarity with financial accounting and the assumptions underlying measurements reported in financial statements, an understanding of the economic and regulatory forces underlying corporate disclosure of financial statement information and their effects on financial statement information, and familiarity with data sources and analytical tools to extract and evaluate this data. Objectives are to develop familiarity with this type of analysis and to gain an appreciation for its limitations. Topics: profitability and risk analysis, credit risk models, forecasting and valuation. Prerequisite: ACCT 3610.
Credit 3 units.

**B50 ACCT 4680 Advanced Financial Accounting Problems**
Examination of the nature and financial reporting aspects of various business transactions: corporate acquisitions, mergers and the formation of other strategic alliances. Topics: accounting for business combinations and consolidations, joint ventures and foreign currency translation, accounting and financial reporting issues facing government entities. Prerequisite: ACCT 3620.
Credit 3 units.

Finance

**B52 FIN 340 Capital Markets and Financial Management**
Examines finances of business at the aggregate level through the flow of funds framework. Financial decision making in
areas of liquidity management, investment management and the selection of capital sources. Prerequisites: Math 128 or Math 132, ACCT 2610, MEC 290 or Econ 1011, and completion or concurrent enrollment in QBA 121.
Credit 3 units. EN : S

**B52 FIN 343 Personal Finance**
Examines issues underlying decision making regarding personal investments. Topics: present value concepts, financial markets and instruments, portfolio theory, bond and equity valuations, mutual funds, mortgages, taxes and personal financial planning. Intended for nonbusiness students who are not second majors in Finance. Students may not receive credit for both this course and FIN 340. B.S.B.A. students may take this course but it will not count toward their degree requirements. Prerequisite: junior standing.
Credit 3 units.

**B52 FIN 400I Mergers and Acquisitions**
This course focuses on identifying ways to increase firm value through mergers and acquisitions (M&A) and corporate restructurings. We survey the drivers of success (and failure) in M&A transactions and develop skills in the design and evaluation of such transactions. Specific topics we address in the course are the valuation of companies, the motivations underlying mergers, structuring of transactions, deal tactics and strategy, leveraged buyouts, corporate restructuring though divestitures, spin-offs, carve-outs and acquisitions of private firms. We also delve into issues of law, accounting and tax and how they affect the outcome of M&A transactions. Why is M&A an important component of any corporate finance professional toolset? It lays the foundation for effective work in a wide range of fields including corporate development, investment banking, consulting and strategy advising senior management. The presentations, class discussions, case analyses and readings are designed to help students master these important career skills. Prerequisites: FIN 340 and FIN 448. Credit 1.5 units.

**B52 FIN 400J Advanced Valuation**
This course covers advanced topics in valuation. Main topics covered are the valuation of private firms and young businesses, and the valuation of financial services firms such as banks and insurance companies. The course applies both theory and practical valuation methods through the analysis of cases and real world examples. Prerequisite: FIN 448. Credit 1.5 units.

**B52 FIN 428 Investments Praxis**
Students serve as managers of a portfolio, the Investment Praxis Fund, which is owned by the university. Students analyze investment opportunities in various industries and present recommendations to the class for possible purchases or sales of stocks, consistent with the style and objectives of the fund. Valuation tools, financial statement analysis and investment techniques are emphasized as part of a thorough analysis. The course focus is on developing and implementing investment ideas. Prerequisites: FIN 441, and FIN 448 or FIN 451. Credit 3 units.

**B52 FIN 441 Investments**
Introduces the theory and practice of investments from the point of view of an investment/portfolio manager. We begin with a review of asset classes, financial history and preferences for risk. Next, we have a brief review of statistics and finance and we review matrix algebra. We then apply these tools to examine the trade-off between risk and return and to develop and implement Modern Portfolio Theory. The major topics covered include the Capital Asset Pricing Model (CAPM), Markowitz optimization, performance evaluation, market efficiency and Arbitrage Pricing Theory (APT). The last portion of the course is devoted to fixed income securities including interest rates, bond valuation and bond immunization. Prerequisites: FIN 340, QBA 120, QBA 121, Math 128 or Math 132, and either MEC 290 or Econ 1011. Credit 3 units.

**B52 FIN 443 International Finance**
Provides a framework for making financial decisions in an international context. Topics include: relevant features of financial markets and instruments (such as foreign exchange, currency futures and options, swaps); exchange rates; corporate risk management; international investing and capital budgeting issues. Prerequisites: FIN 340 and FIN 448. Credit 3 units. BU : IS

**B52 FIN 447 Information, Intermediation and Financial Markets**
Examines the organization and function of financial markets from the corporate perspective with an emphasis on investment banking activities. Topics: design, issuance and trading of corporate securities, risk management and corporate control transactions. Develop familiarization with current practices while building a conceptual framework for understanding and anticipating change in the institutions that make up the financial markets. Prerequisites: FIN 340 and FIN 451 are required. FIN 441 and FIN 448 recommended. Credit 3 units.

**B52 FIN 448 Advanced Financial Management**
Advanced study of corporate financial management. The course focuses on the relationships between the internal decisions of the corporation and valuation. Topics: capital budgeting, valuation models, capital structure, debt policy, payout policy, raising capital, risk management, security design, international valuation, mergers and acquisitions. Prerequisite: FIN 340.
**Business**

Credit 3 units.

**B52 FIN 451 Options, Futures and Derivative Securities**
Examines the theory and practical application of derivative securities such as futures, options and swaps. Central to the theory of derivative security pricing is arbitrage and payoff replication. In practice, derivative securities provide a principal route to manage and, in particular, hedge financial risk. Futures, options and swaps on different types of underlying assets are examined with emphasis on pricing and application. Prerequisite: FIN 340.
Credit 3 units.

**B52 FIN 452 Advanced Derivative Securities**
Focuses on implementation of models for pricing and hedging derivative securities in the equity, currency and futures markets. Students learn to write programs in VBA to implement the Black-Scholes model, binomial models and Monte-Carlo methods. The goals of the course are to learn more about the various instruments that are traded, the various assumptions and methods that may be chosen in modeling them, and the importance of the assumptions in determining the prices and hedges that are chosen. The course is especially useful to students pursuing careers in sales and trading who will interact with research departments and students pursuing careers in asset management. Prerequisites: FIN 451 and permission of instructor.
Same as B62 537
Credit 3 units.

**B52 FIN 470A Research Methods in Finance**
Prepares students for independent research in finance by exploring methods and techniques in a manner that allows the students to implement them correctly and efficiently. The curriculum emphasizes practical applications of empirical methods used in financial research and how to implement them. Students in the course empirical methods in corporate finance and asset pricing; obtain basic knowledge and familiarity of the databases used in common finance research; get exposure to recent research in finance that applies the methods covered; and learn how to implement the methods covered using relevant programming languages. Prerequisites: QBA 120, QBA 121 and FIN 340.
Same as B62 560A
Credit 3 units.

**Human Resources Management**

**B56 HRM 320A Managing People in Organizations**
Critically examines the interpersonal functions of management. Organized in three sections: (1) Introduces the principles of management with concepts of management including the traditional functions of planning, organizing, controlling and problem solving as well the history of management and how such historical principles continue to influence the management of today’s organizations; (2) Principles of Leadership concentrates on competencies for leading people. Topics: aligning and motivating people, conflict resolution, negotiating, decision making, communication skills, teambuilding and selecting effective leadership styles; and (3) Leadership and Management: Applied Practice focuses on the nature of the workforce both now and in the volatile years ahead through case studies and group activities that comprehensively incorporate the material from throughout the course. Prerequisite: sophomore standing.
Credit 3 units.

**International Business**

**B99 INTL 300A Planning for International Learning**
A mini-B course required of all students participating in Olin semester abroad programs that focus on planning, assessment, the theory of global competency, cross-cultural communication skills, the structure of a research paper, and other predeparture information that enhances the student learning experience while abroad. Prerequisite: permission of instructor.
Credit 1.5 units.

**B99 INTL 300B Applying International Experiences**
A mini-B course required of all students who participated in an Olin semester abroad program that includes a research symposium to showcase work from abroad, and which focuses on reentry issues, post-program assessment, how to articulate transferable skills, and other post-departure information that allows returnees to translate their abroad experiences into the working world. Prerequisite: permission of instructor.
Credit 1.5 units.

**B99 INTL 320 Business, Innovation and Entrepreneurship in Israel**
Israel is an innovation and entrepreneurial hub with more listings on the NASDAQ than any country other than the United States,
more patents per capita and more entrepreneurial events occurring in Israel in both the commercial and social arena than anywhere else in the world. Students learn about the Israel economy, different industries, Israeli culture and politics along with the critical business challenges and opportunities that face Israel. This course includes a required immersion to Israel during spring break and contains an additional lab fee for the immersion. Credit 3 units.

Management

B53 MGT 100 Individual in a Managerial Environment
An introduction to the foundations of business. The course covers four major themes: (1) how markets work; (2) motivating and managing people; (3) business strategy and firm performance; (4) ethics and corporate social responsibility. In the Fall semester, MGT 100 is only open to incoming freshmen and students must be concurrently enrolled in MGT 150A. Spring semester enrollments are open to any freshman and sophomore. Credit 3 units. EN: S

B53 MGT 150A Foundations of Business
Provides first-semester business students with an introduction to each of the functional areas of business as well as the entrepreneurial function. As they work to design their own enterprise, students build skills in teamwork, communication, critical thinking and an understanding of the complex interplay of business functions. Prerequisites: must be 2017 B.S.B.A. degree candidate and concurrently enrolled in MGT 100. Credit 1.5 units.

B53 MGT 150B Olin Experience Program
MGT 150B is designed to teach students data analysis and spreadsheet modeling using Microsoft Excel. Additionally, students continue to develop critical thinking skills, which in this course, includes understanding data needed to solve unstructured problems. The course culminates in a team-based case analysis and presentation refereed by one of Olin’s corporate partners. Credit 1.5 units.

B53 MGT 201 Management Communication
Managers who write and speak effectively excel in business leadership. Persuasive and authentic communication is not only useful in advancing your business career; business employers also consider communication skills to be the most important attribute in people they hire. Effective communication involves more than mastering technical writing and presentation skills. Successful communicators use critical thinking to assess business scenarios and the audience who will hear or read a message; they craft communication in order to attain targeted results. This course gives you the opportunity to become a more polished communicator as you work toward the following goals: applying rhetorical principles to management communication; using critical thinking to analyze the audience, the organizational environment and problems before choosing communication strategies; implementing principles of plain language and effective design; collaborating with colleagues to create effective group projects; representing a company or product in a "crisis communication" press conference. Priority for enrollment is given to B.S.B.A. students. Credit 3 units.

B53 MGT 250A Building Your Career Foundation — Techniques and Strategies
MGT 250A is designed to introduce you to topics integral to your career development. The course takes an integrated approach with each session building on the previous class material. Lectures and class activities look at the career-planning process through discussions on self exploration and assessment, industry/company/job research, writing strong resumes and other business communication, networking, interviewing skills and techniques for getting internships and jobs. Expected enrollment is fall of the sophomore year. This is a requirement for all B.S.B.A. degree students. Credit 1.5 units.

Students work in teams to apply their business skills to address real-life business challenges of community-based and nonprofit organizations. Through these projects, students have the opportunity to strengthen their business project management skills, gain experience in solving real-world unstructured problems and connect with community and agency leaders. Community-based organizations benefit from the skills and knowledge of Olin students through their final recommendations addressing the identified business challenge. Participating agencies are located in the metro St. Louis area, throughout the United States and even internationally. CBTL course. Credit 1.5 units.

B53 MGT 301 Legal Environment of Business Management
Surveys the various areas of law that make up the legal environment of business. Develops a basic understanding of law as it relates to business, with traditional emphasis on private law and business transactions. This study of the micro law of business reviews the detailed substantive rules in the areas of contracts, sales, product liability, agency, corporations and partnership. In addition, a summary review of contemporary legal problems such as insider trading, discrimination in employment, sexual harassment and ethics may be discussed, if time permits. Case studies are analyzed in order to give the student an understanding of how various laws apply to actual situations. Prerequisite: sophomore standing.
**B53 MGT 308 Introduction to International Business**
Focus on the aspects of management of a business enterprise that are necessary to compete in the global marketplace. The course begins with a survey of the environmental context in which international companies operate (economic systems and cultural factors). This is followed by a review of International Trade Theory and Economics. This forms a basis for concentration in the second half of the course on strategies and structure for global operations. The course deals with the situations in Europe, Japan, Latin America and China through case studies and discussion of current topics and their relation to the fundamental aspects of global business management. Prerequisite: junior standing or permission of instructor. Credit 3 units. EN: S

**B53 MGT 320 Olin Grand Rounds: The Business and Practice of Medicine**
Grand rounds in medical schools are a forum for presenting new and challenging clinical problems and cases. The goal of Olin Grand Rounds is to focus on the challenges and solutions facing the business of medicine. The course therefore provides an introduction to the current issues facing the health care sector that integrates management tools and clinical knowledge. The objective is to provide students new insights into how modern management tools can be combined with scientific and clinical knowledge to manage health care organizations more efficiently and practice medicine more effectively. Credit 3 units. EN: S

**B53 MGT 321 Health Economics and Policy**
The basic tenets of health economics are covered. This course places a unique emphasis on incorporating materials from three broad source categories: textbook elements, “lay” press and media, and academic journal publications with the aim to foster application of rigorous, critical thought to media presentations of health care economics and policy issues. Credit 3 units. EN: S

**B53 MGT 322 Health Care Management**
The goal of the course is to develop facility in applying basic tenets of general management to actual situations and dilemmas that might be faced by health care managers, consultants, financiers, investors, innovators or providers in the course of their work. Issues addressed include but are not limited to financial issues, management challenges and conduct of operations. The first phase covers the basic background on the structure and financing of the health care industry to include very brief reviews of critical topics such as insurance and government-provided health care. A few basic frameworks are then developed for students to apply to course topics moving forward, such as cost/benefit analysis and evaluation of risk. The remainder of the course involves critical analyses of health care cases involving varied subjects and management challenges. Sessions emphasize student-led discussions. Credit 3 units. EN: S

**B53 MGT 340 Seminar on American Democracy and the Policy Making Process**
This is a course on the policy-making processes in the United States government. It serves as a window through which to view basic issues in American democracy from macro-explanatory questions (such as: What are the factors that cause issues to arise on the institutional agendas of Congress, executive agencies and the Supreme Court?) to micro-normative questions (such as: What ought to be the limits on the behavior and obligations for action of legislators, regulators, lobbyists and other participants in the policy-making process?). Policy making proceeds through predictable stages starting with agenda-setting, proceeding through legitimation, moving to implementation, entering into evaluation, and culminating in a possible return to agenda setting. Prerequisite: admission to the Semester in D.C. Program. Credit 3 units.

**B53 MGT 341 Washington University Colloquium**
The Colloquium series hosts members of the branches of government, leaders in industry and policy making to share their perspectives on the process of policy making, enforcement and governance. This series is connected to the content of MGT 340. Prerequisite: admission to the Semester in D.C. Program. Credit 1 unit.

**B53 MGT 342 Applied Research in Business and Public Policy**
Students conduct an original piece of applied research relating to the intersection of business and government. Students receive assistance and supervision from Washington University faculty in the development and execution of their research. Prerequisite: admission to the Semester in D.C. Program. Credit 6 units.

**B53 MGT 343 Washington D.C. Internship**
This online course deepens the overall learning a student gains from an international internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin business curriculum, the value of the internship increases markedly — for student and employers. Prerequisite: admission to the Semester in D.C. Program. Credit 1.5 units.
B53 MGT 380 Business Strategy
This capstone course adopts the perspective of the general manager — an individual charged with developing and implementing the long-term strategy of a business. The course develops basic tools and concepts in strategy formulation, including competitive advantage, value creation and capture, industry analysis, capability assessment, and competitive positioning. The course is designed to develop students’ skills in both analyzing observed strategies and in formulating and implementing new ones. A key feature of the course is a business simulation in which student teams interactively formulate and execute strategy for a simulated firm. Prerequisites: ACCT 2610 and MEC 290.
Credit 3 units.

B53 MGT 390 The Economics of Human Resource Management
Key to a firm’s success is whether it can develop a firm organization and a human resource management system that reinforce the firm’s strategic position. This course covers topics in managing work forces and organizations that are of fundamental importance to all managers, and teaches how organizational design and human resource policies interact with the firm’s market strategy and production environment. We look at how management can motivate executive and employee performance, screen and attract appropriate workers, and improve the way information is processed and decisions are made within organizations. This course combines economic analysis with case discussions to address topics including hiring policy, turnover, training, variable pay, promotions, evaluation, job design, teams, worker empowerment, hierarchy and organizational structure such as centralization and decentralization. Prerequisite: MEC 290.
Credit 3 units.

B53 MGT 400X Sports Management
Examines business and management issues involved in the sports industry. This industry is very diverse, ranging from global sports events (such as the Olympic Games, World Cup Soccer, etc.) to major national competitions (such as the National Football League, Major League Baseball, etc.). Engaged in this industry are many different players, including franchises, governing leagues, sponsors, media, stadium owners, government, fans and so forth. This course takes a practical look at the world of sports management and administration, with an eye on extracting key lessons for corporate management and administration.
Credit 1.5 units.

B53 MGT 402 Ethical Issues in Managerial Decision Making
Focuses on ethical issues in management and surveys a number of ethical standards or levels by which managers make decisions involving most functional areas of business. Course emphasis on class discussion of cases and problem situations which confront managers and for which ethical dimensions are a significant part of the business choices. Prerequisite: senior standing.
Same as B63 502
Credit 1.5 units.

B53 MGT 405S International Business Environment — Sydney
The aim of this course is to internalize and develop multicultural competency applied within personal, organizational and business contexts. Reaching this goal includes developing personal awareness, understanding of important concepts and developing multicultural skills. The ability to recognize and overcome common pitfalls that prevent people from operating effectively within, and actually benefiting from, multicultural contexts are explored. Prerequisite: admission to the Sydney Internship Program.
Credit 3 units.

B53 MGT 405T Australian Study Tour
Individual and team research, writing, presentation and participation in Olin’s Australian Study Tour. Includes required attendance and expected professional contributions to all corporate and government visits and briefings and other required individual and group activities. Prerequisite: admission to the Sydney Internship Program.
Credit 1.5 units.

B53 MGT 418 International Business: A Euro Perspective
Examines the economic and institutional setting of Europe from a general business perspective. The economic and political structures of major countries are studied. The role of the European Economic Community examined as well as that of some major international organizations such as GATT and OECD. The primary emphasis is with countries of western Europe. Other topics: theory of customs, unions, monetary and economic integration, and multicountry policy integration. Opportunities for and problems of doing business in Europe examined from both an overall strategic perspective and from the perspective of the different functional areas.
Credit 3 units.

B53 MGT 420 Research in Health Care Management
In this capstone course for the Health Management major, students learn to apply rigorous statistical and analytical approaches to research questions in health services, but not limited to questions relating to management, finance and economics, operations and policy. Faculty identify several available research project options and present these options in class. The goal is to capitalize on the strength of the university medical school and affiliated medical centers, in addition to capitalizing on existing relationships between Olin and health
Business

Credit 3 units.

**B53 MGT 421 Introduction to Entrepreneurship**
Through case studies, frequent guest speakers and the professor's own experience, the real world of entrepreneurship is brought into the classroom to provide a context for students to learn the fundamentals of founding, operating and exiting a start-up business. Students learn new perspectives that teach them to think like an entrepreneur. Those who are interested in the general study of entrepreneurship, those who want to be entrepreneurs, and those who would like to leverage entrepreneurial principles in other career paths are all good candidates for the course. Prerequisites: junior or senior standing in any school or college.
Credit 3 units. EN : S

**B53 MGT 424 Business Planning for New Enterprises [The Hatchery]**
In this course, student teams pursue their own business idea or support outside entrepreneurs by researching, writing and pitching business plans for new commercial or social ventures. Enrolled students can recruit a team to work on their own business idea, or can join a team working on another's idea. Outside entrepreneurs and scientific researchers wishing to recruit student teams must apply in advance to be considered for student selection. Most of the work is done outside the classroom with the support of mentors, advisers and the instructor. Classes are held once per week for the first half of the semester. Workshops and rehearsals are required in the second part of the term. Students make final presentations to a panel of outside judges including venture capitalists, angel investors, entrepreneurs and people involved with early stage ventures. Prerequisite: MGT 421 or MGT 500T or permission of the instructor.
Same as B63 524
Credit 3 units.

**B53 MGT 450A Internship in Business**
MGT 250A is designed to introduce students to topics integral to their career development. The course takes an integrated approach with each session building on the previous class material. Lectures and class activities look at the career-planning process through discussions on self exploration and assessment, industry/company/job research, writing strong résumés and other business communication, networking, interviewing skills and techniques for getting internships and jobs. This is a requirement for all B.S.B.A. degree students with expected enrollment in the fall of the sophomore year.
Credit 1.5 units.

**B53 MGT 450C Venture Consulting**
Students who complete the course gain a deep understanding of the issues of both operational management and investment management of start-up firms. Students learn of the fundamental strategies and tactics employed by private equity and venture capital firms as well as aid in the development of business strategies for the companies in which they invest. Additionally, students learn how to take into account the macroeconomic, political and cultural issues that affect start-up businesses that are both operating internationally and raising capital internationally. Furthermore, students learn of the subtleties in the complex relationship between the investment firm and the entrepreneur and understand both their shared and disparate motivations and objectives. Students who complete the course develop competency in the research and writing of professional consulting reports and gain a more sophisticated understanding of both venture capital and entrepreneurship management and strategy. Students better understand the interpersonal dynamics between the relevant stakeholders, become proficient in the terminology of private equity investing, and learn how to create structure to unstructured problems thus improving their ability for critical thinking. Participants are given the opportunity to apply their efforts beyond their basic functional business skills and toward issues of relationship management and strategy. Prerequisite: MGT 421.
Same as B63 550T
Credit 3 units.

**B53 MGT 450D Honors Thesis I: Research and Analysis**
The Olin B.S.B.A. Honors Thesis challenges motivated students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. Senior B.S.B.A. degree students in good standing with a cumulative grade point average of 3.70 or higher have the opportunity to develop an intensive research project, which extends far beyond the limits of the material in a single course during a single semester. In the two-semester honors thesis sequence, research and analysis are the foci of the first semester and, upon successful progress, the student writes, presents and defends the research in the subsequent semester. Prerequisites: senior standing and faculty permission.
Credit 3 units.

**B53 MGT 450E Honors Thesis II: Writing and Presentation**
The Olin B.S.B.A. Honors Thesis challenges motivated students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. Senior B.S.B.A. degree students in good standing with a cumulative grade point average of 3.70 or higher have the opportunity to develop an
intensive research project, which extends far beyond the limits of the material in a single course during a single semester. In the two-semester honors thesis sequence, research and analysis are the foci of the first semester and, upon successful progress, the student writes, presents and defends the research in the subsequent semester. Prerequisite: MGT 450D. Credit 3 units.

B53 MGT 450I International Internship in Business
The online course deepens the overall learning a student gains from an international internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin business curriculum, the value of the internship increases markedly — for student and employers. Prerequisite: admission to one of Olin's International Internship Programs. Credit 1.5 units.

B53 MGT 450L Ethics and Integrity in Law and Business
This course examines complex ethical issues in contemporary business operations and decisions. Students learn to recognize ethical implications of business issues and develop models and decision techniques useful to analyzing and resolving problems. Credit 3 units.

B53 MGT 450R Business and Government: Understanding and Influencing the Regulatory Environment
The United States as well as many of the world's governments has entered a new episode with respect to the interaction of business and government. Now, more than ever, government regulations are attempting to spur job growth and the economy on one hand, but also is intruding into many aspects of business and the markets on the other hand. Business students must not only understand the shifting business government landscape, but also how to engage government officials and legislators to help shape policies that affect their firms and industries. In this introductory course, student learn from business and government leaders how to interact with and affect the processes of regulation. Credit 1.5 units.

B53 MGT 450T Strategy and Social Responsibility
In the modern world, large corporations have come to dominate many parts of economic life. Managers in large corporations face a challenging set of trade-offs about (1) how to balance value creation for present and future generations and (2) how to coordinate the distribution of this value among shareholders, customers, suppliers, employees and the communities in which they operate. The supremacy of shareholders among these constituencies has led some groups to fear that they will be exploited when shareholders’ interest conflict with their own. In this course, we examine different perspectives on the role of corporate self-interest, changing social values, NGOs and government regulation in addressing this apparent conflict. In particular, the course examines how pro-social business practices affect the relationships between for-profit corporations and customers, employees, suppliers, investors, regulators and non-governmental organizations. We explore how these practices can be integrated into a firm’s operating strategy, and how they can be employed to enhance a firm’s competitive position. Prerequisites: MGT 100 and MEC 290 or permission of instructor. Credit 3 units.

B53 MGT 450V Defining Moments: Lessons in Leadership and Character From the Top
Most successful leaders can point to a handful of “defining moments” in their careers — key choice points that defined the trajectory of their character, career, and/or their company. How can aspiring business leaders prepare themselves to face these defining moments with insight and integrity? How do leaders achieve business performance without sacrificing character or integrity? This course examines these questions by learning from notable leaders who exemplify both business excellence and personal character. Top executives from leading companies sit down with us to talk about their defining moments and to engage with us in considering these questions. These conversations are supplemented with contemporary cases and readings on leadership and character. Prerequisite: senior standing or juniors with permission of instructor. Credit 1.5 units.

B53 MGT 450Z European Study Tour
Individual and team research, writing, presentation and participation in Olin's European Study Tour (EST), including Mock Parliament. Includes required attendance and expected professional contributions to all EST corporate and government visits and briefings and other EST individual and group activities. Credit 1.5 units.

B53 MGT 460A Asian Networks
We examine the business networks of individuals and firms in finance, trade and a wide range of corporate sectors. Business actors are placed in social organizational, economic and political contexts. Networks covered include Japanese, Korean, Overseas and mainland Chinese, and Indian, as well as the interface of these networks with foreign networks. The role of the major business network hubs of Asia, including Hong Kong, Singapore, Tokyo, Shanghai and Mumbai, as anchors of Asian networks are explored. Social network theory and the theory of business networks provide the conceptual grounding for this examination of Asian networks. Case studies of individuals and firms constitute the empirical evidence. Prerequisites: MEC 292 or Econ 1021 and sophomore standing. MGT 308 is recommended. Credit 3 units.
Managerial Economics

B54 MEC 290 Microeconomics
Provides a rigorous analysis of the behavior of consumers and firms in competitive and monopoly markets; oligopoly markets are introduced. Consumer topics include preferences and utility, budget constraints, consumer optimal choice and demand curves. Firm topics include technology, cost minimization and profit maximization. The course concludes with price determination in monopoly and competitive markets, and an introduction to oligopoly and game theory. The focus of the course is on microeconomics as a decision making tool for consumers and managers. Prerequisite: Math 127 or Math 131. Credit 3 units.

B54 MEC 292 Global Economy
Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include: introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; global economic competition and business strategy. Prerequisites: MEC 290 or Econ 1011 and QBA 120. Credit 3 units.

B54 MEC 370 Game Theory for Business
Provides students with a methodological framework to analyze strategic business situations. Building on a background in microeconomics and statistics, this course includes such topics as the following: modeling strategic problems, games with sequential moves, games with simultaneous moves, strategies and the derivation of strategic forms, general classes of games, uncertainty and information, strategy and voting, auctions, bargaining. Prerequisite: MEC 290. Credit 3 units.

B54 MEC 380 Competitive Industry Analysis
Uses economics and game theory to analyze strategy and industry dynamics. Focus is split between evaluating the competitive environment within industries and developing competitive strategies that are responsive to specific competitive forces facing individual firms. Topics typically covered include models of price and quantity competition, barriers to entry, commitment strategies and credible threats, product differentiation, vertical integration, research and development, and patenting strategies. Prerequisite: MEC 470. Credit 3 units.

B54 MEC 400H Economics of Entertainment
This course focuses on the unusual economics of the entertainment industry and the associated management challenges. The sessions cover the basic economics of entertainment, then focus specifically on the music and movie industries, plus one other that varies from year to year. Classes consist of lecture and discussion, as well as speakers from the relevant industries. The primary student deliverable is a 20-minute documentary-style production in which student teams present findings of their research into specific industries within the broader industries studied in class, e.g., rock, classical or rap within music, blockbusters within music, etc. Prerequisite: MEC 290 or Econ 4011. Credit 3 units.

B54 MEC 470 Market Competition and Value Appropriation
Provides students with frameworks and capabilities for making intelligent decisions in evolving markets. Course begins with general game theory concepts, which form the basis for two main topics: models of competition in markets and value appropriation. Students learn the basic framework and apply it in the context of a detailed industry study. Specific topics may include firm interactions in stable and evolving market environments, industry life cycles, the evolution of new product markets, and strategic decision-making in developing markets. Prerequisite: MEC 370. Credit 3 units.

B54 MEC 471 Empirical Techniques for Industry Analysis
Students learn how to use data to answer a wide variety of questions regarding the incentives and behavior that generate market activity. We emphasize inference about the strategic decisions of firms and consumers. Students are introduced to new statistical and econometric tools by examining the application of these tools to current research in economics. Among the topics considered are the empirical implications of:
strategic bidding in auctions, price discrimination and dispersion, differences across products, and the internal organization of firms. Prerequisite: MEC 470.
Credit 3 units.

B54 MEC 494 Business and the Environment
To sensitize business students to a broad range of environmental issues they may address as future managers; to widen the scope of the students analytical and problem-solving portfolio through the introduction of environmental considerations to the decision-making process; and to develop an economic framework that serves as a foundation for additional management research on the relationship between environmental issues and their impact on the functional areas of business, including production, accounting, auditing, finance, real estate, marketing, business and public policy, and organizational behavior. Prerequisite: junior standing or permission of instructor.
Credit 3 units.

Marketing

B55 MKT 370 Principles of Marketing
Introduces the fundamental principles of marketing management: analyzing market opportunities; segmenting markets, selecting target markets and positioning. Developing and managing the marketing mix (product, price, distribution and promotion) within the context of the marketing environment (customers, competitors and the external environment). Prerequisites: MEC 290 or Econ 1011 and Math 127 or 131.
Credit 3 units. EN : S

B55 MKT 373 Retail Management
Explores the fundamental factors that are critical to the success of most retailers: merchandising; store design and display; personal selling; advertising and promotion; pricing; and location. The class studies a wide variety of retailers — department stores, specialty stores, wholesale clubs, direct marketers, franchisers, food retailers, discounters and others. Through case methodology, the class studies the role that managers play in problem solving and development of strategies. Topics include: positioning for success; retailing organizations; retail economics; pricing strategy; and entrepreneurial retailing. Prerequisite: MKT 370.
Credit 3 units.

B55 MKT 377 Consumer Behavior
Psychological, sociological and social psychological principles as they apply to consumer response to product offerings, media communications, personal influence and other environmental factors. Consumer buying behavior is analyzed from theoretical, empirical and applied perspectives. Current applications of concepts employed by marketers are discussed in the context of both consumer and industrial marketing situations. Prerequisite: MKT 370.
Credit 3 units. EN : S

B55 MKT 470E Pricing Strategies
The environment of pricing decisions and common analytical techniques used by firms in making pricing decisions are studied. Critical-thinking skills and problem-solving skills emphasized.
Topics: market structure analysis, contribution analysis, product life cycles, product line decisions, pricing in marketing channels, and transfer pricing. Prerequisites: MKT 370, QBA 120 and QBA 121 or concurrent enrollment in QBA 121.
Credit 3 units.

B55 MKT 473 Marketing Research
The four P’s of marketing are product, place, price and promotion. Using these decision variables, firms seek to maximize profits. Making these decisions requires market information. Marketing research is the process of actively collecting, assimilating and analyzing market information to support management decision making. Teaches the nuts and bolts of market research. Prerequisites: MKT 370, QBA 120 and QBA 121 or concurrent enrollment in QBA 121.
Credit 3 units.

B55 MKT 476 Advanced Retail Topics
Focuses on current important issues facing retailers. Students form four- to six-person teams to identify a relevant topic, to outline a project proposal identifying its scope and methodology, and to present both a written and oral presentation of their findings and recommendations. Course relies on cases, company and industry data, and field trips. Prerequisite: MKT 373.
Credit 3 units.

B55 MKT 477 International Marketing
Addresses three fundamental decisions confronting a company whose operations extend beyond the domestic market: (1) choosing which foreign markets to penetrate; (2) determining the mode of market entry; and (3) devising the international marketing plan. Topics include: global marketing planning; environmental and cultural influences on international marketing decisions; organizational and control issues in international marketing decisions; global marketing intelligence; foreign risk and feasibility studies; and issues of ethics in other countries. Prerequisite: MKT 370.
Credit 3 units.

B55 MKT 477S International Marketing Sydney
Many companies, large and small, prepare a business environmental analysis for each country in which they do
Business

Operations and Supply Chain Management

B58 OSCM 230 Management Science
Introduces concepts, methods and applications of management science. Develops a more disciplined thinking process for approaching management situations by constructing, understanding and using models both in other courses and on the job. Prerequisites: QBA 120 and MEC 290 or Econ 1011. Credit 3 units.

B58 OSCM 356 Operations Management
Introduces a variety of common operations issues that are frequently dealt with in both manufacturing and service industries and that affect other functions of the business. Specific topics include: process design and control; quality; waiting line models; inventory systems; and supply chain management. Prerequisites: ACCT 2610, MEC 290 and completion or concurrent enrollment in OSCM 230. Credit 3 units.

B58 OSCM 458 Operations Planning and Control
Examines the concepts and techniques essential for effective operations planning and control in various manufacturing and service organizations. The course builds on the knowledge and skills acquired in core operations management and quantitative method courses, and covers key topics including inventory management, linear and nonlinear programming, aggregate planning, Markov chain models. The course introduces students to the major trade-offs and issues in operations planning and control, as well as important tools and techniques available for helping operations managers to make analysis and decisions. Prerequisite: OSCM 356. Credit 3 units.

Organization Behavior

B66 OB 360 Organization Behavior Within the Firm
Provides a toolbox of analytical and interpersonal skills that are necessary to be an effective manager. Learn how these skills can have a significant impact on profitability. Objectives: (1) understanding research conclusions through explaining the dimensions of individual differences and how they impact motivation, job satisfaction and ultimately organizational effectiveness; explaining group dynamics and how they determine effectiveness; identifying organizational implications of research; evaluating organizational structure and job design; evaluating organizational culture and identify methods of culture management; and identifying the steps and roadblocks in the process of organizational change;(2) developing management skills by writing effective reports to senior management that analyze individual, group and organizational effectiveness in actual organizations; and applying your understanding of...
individual, group and organizational dynamics to improve your team’s effectiveness on group projects. Prerequisite: MGT 100 or sophomore standing.
Credit 3 units.

B66 OB 461 Negotiation
Skillful negotiation is an important aspect of management. Designed to improve a student’s skills in analyzing and conducting negotiations in a variety of settings. Topics include two-party bargaining, multiparty bargaining, arbitration and coalition formation. Prerequisite: OB 360.
Credit 3 units.

B66 OB 462 Leadership in Organizations
This course is designed to fulfill three broad objectives for students. The first is to provide a useful overview of the primary leadership perspectives, focusing on how each framework links individual leadership to organizational outcomes. The second objective involves students in self-assessment of strengths and weaknesses in relation to the abilities and skills that are predictive of leadership effectiveness. Third, the course is designed to enable participants to articulate an effective strategic plan for individual leadership development. Course topics include perspectives on individual leadership effectiveness, leadership and motivation, developing subordinates, leading groups and teams, leading the resolution of conflict, and leading organizational change. Prerequisite: sophomore standing.
Credit 3 units.

Quantitative Business Analysis
B59 QBA 120 Managerial Statistics I
The first of a two-course sequence in business applications of statistics, focused on descriptive statistics, probability and distributions, inferential statistics, and linear regression. Approximately, the first quarter of the course is about descriptive statistics and applications of covariance. The second quarter is devoted to probability: basic rules, conditional probabilities, Bayes’ theorem, expected values, and probability distributions. This work is followed by an introduction to sampling distributions and inferential statistics. Confidence intervals and hypothesis testing are introduced to make inferences about parameters. The last one-fourth of the course focuses on simple linear regression. Throughout the course, functions, data analysis, VBA and solver features of Excel are introduced. Prerequisite: completion or concurrent enrollment in Math 128 or Math 132.
Credit 3 units.

B59 QBA 121 Managerial Statistics II
The second of a two-course sequence in business applications of statistics, focused on forecasting. The course is devoted to the use of linear regression models in business, and ways to deal with problems of collinearity, outliers, non-linear relationships and heteroscedasticity. Advanced topics including time series regression and logistic models are covered as time permits. There are quizzes and group projects in addition to a midterm and final. Prerequisites: QBA 120 or approved equivalent; Math 128 or Math 132; and MEC 290 or Econ 1011.
Credit 3 units.

Degree Requirements
B.S.B.A. Degree Requirements
The Bachelor of Science in Business Administration degree is awarded to you by recommendation of the faculty. Standards established by the faculty for recommendation are:

1. Satisfactory completion of requirements regarding required and elective courses, accumulation of a minimum of 120 units of course work and satisfactory fulfillment of other requirements established in accordance with the rules and regulations of the Olin Business School.

2. Completion of the last 30 units in residence at Washington University for entering freshmen. Transfer students must complete a minimum of 60 units in residence at Washington University.

General Requirements (a minimum of 48 units)
Each student must complete a minimum of 48 units from the College of Arts & Sciences to include the following specific requirements:

A. Writing I (3 units): You must demonstrate proficiency in reading and writing the English language by satisfactorily completing CWP 100 with a grade of C– or better.

B. Calculus (3–6 units): You must complete Math 131–132 or other calculus courses approved by the Olin Business School.

C. Distribution Requirements (18 units): You must complete 3 units of physical and life sciences, 3 units of humanities, 6 units of international studies, 3 units of behavioral analysis and 3 units of ethics and values. Approved course selections are available in the University’s Course Listings.

D. Advanced Electives (18 units): You must complete at least 18 graded units of advanced Liberal Arts course work. Advanced electives are defined as any course numbered 300 or above that is offered as a day division course through the College of Arts & Sciences. Advanced electives also may satisfy a distribution requirement.

Professional Requirements (a minimum of 55.5 units)
A. Core Requirements (43.5 units):
ACCT 2610 Principles of Financial Accounting
ACCT 2620 Principles of Managerial Accounting
MEC 290 Microeconomics
MEC 292 Global Economy or Econ 1021 Introduction to Macroeconomics
MGT 100 Individual in a Managerial Environment*
MGT 150A Foundations of Business
MGT 201 Management Communication
MGT 250A Building Your Career Foundation: Techniques and Strategies
FIN 340 Capital Markets and Financial Management
MKT 370 Principles of Marketing
OB 360 Organization Behavior Within the Firm
OSCM 230 Management Science
OSCM 356 Operations Management
QBA 120 Managerial Statistics I
QBA 121 Managerial Statistics II

*Transfer students entering Olin must take one of the following: MGT 100, MGT 380 or MEC 380 to satisfy this requirement.

Professional Electives (a minimum of 12 units)
Professional electives are nonrequired business courses offered by the Olin Business School that may or may not lead toward a specific business major. Additional information about the specific requirements for each business major is available on our Majors (p. 797) page.

Electives (16.5 units)
You must earn at least 16.5 more units for your B.S.B.A. degree.

Typical Four-Year Curriculum for a B.S.B.A. Student
Typically, students must earn 30 units a year to stay on target with a four-year graduation plan.

* Students may enroll in a higher level of calculus providing their academic preparation suggests a different level of calculus.

** B.S.B.A. students are assigned to enroll in their Writing course in either fall or spring semester of their freshman year. Some students may start at a different level of English preparation and may take their Writing course as late as sophomore year.

*** Students who completed Math 132 in the fall semester have the option to take either QBA 120 or a general elective.

**** B.S.B.A. students are assigned to enroll in Mgt 201 in either fall or spring semester of their sophomore year.

***** Students may take either one more business course or complete general requirements.

Additional Requirements
A. You must complete a minimum of 120 units including 48 units from the College of Arts & Sciences and 55.5 units from the Olin Business School. Forty-two of your 48 Arts & Sciences units must be taken in residence. Students who substitute a nonbusiness course for a business requirement will still be required to enroll in another business course as a minimum of 55.5 credits must be earned in Olin.

B. You must earn a minimum of 2.0 overall grade point average (GPA) and 2.0 GPA in all professional course work taken at Olin.

C. You must earn the final 30 units (60 units for an external transfer) toward the degree at Washington University.
D. You must be recommended by the Olin Business faculty for degree confirmation by the Board of Trustees.

Regulations

A. A maximum of 15 units of pre-matriculation credit may be counted toward graduation. Pre-matriculation sources include Advanced Placement (AP), International Baccalaureate (IB), British Advanced (A) Levels and college courses taken after the junior year in high school. These units will count toward the 120 credits but will not satisfy any distribution, statistics or advanced education requirements. If a student takes a course in residence in which AP credit has already been awarded, the AP credit will be removed from the student’s record.

B. B.S.B.A. students may earn a maximum of two majors to include two professional majors or one professional major and one major outside of Olin.

C. B.S.B.A. students may earn one or two minors outside of Olin, depending on the number of majors you pursue. The options are two majors and one minor or one major and two minors.

D. Distribution requirements and advanced general electives (18 credits) must be taken for a grade. However, if a student completed a distribution/advanced course on a pass/fail basis prior to transferring to Olin, then this course would count toward that requirement.

F. All business courses must be taken for a grade with the exception of Mgt 450A.

G. B.S.B.A. students may enroll in one physical education course per semester.

H. B.S.B.A. students may enroll in one pass/fail course each semester. These credits will count only as general education electives.

I. B.S.B.A. students may enroll in one University College course per semester. However, these credits will not count toward the 120 units needed for their B.S.B.A. degree. The grade from this course will not be factored into the GPA.

J. Students are obligated to requirements and policies at the time of matriculation into the B.S.B.A. Program. However, faculty has and reserves the right to make changes to degree requirements, policies and procedures, including modifying or adding new requirements, policies and procedures at any time.

Academic Honors & Awards

Scholars in Business Program: The Scholars in Business program allows alumni, corporations and friends of Olin to provide scholarship funds to students of high academic promise who require financial support to attend the university. Students are considered for this award when they apply for financial aid in the fall of each year. Donors and students meet each other at the annual Scholars in Business dinner.

Dean’s List: Dean’s List honors are awarded to undergraduates who have completed a minimum of 14 graded units and achieved a semester grade point average of 3.6 or above. No incomplete or “N” grades may be outstanding as part of your semester record.

Beta Gamma Sigma Honor Society: The top 7 percent of the junior class and the top 10 percent of the senior class are eligible for invitation to Beta Gamma Sigma, the national business society. You must have completed a minimum of 30 units at Washington University to be eligible.

Latin Honors: Graduating seniors in the top 5 percent of the class, based on overall university academic records, graduate summa cum laude. Seniors in the top 6 to 15 percent of the class graduate magna cum laude. These designations are recorded on the official university transcripts. All candidates for the B.S.B.A. degree in August, December or May will be considered as one group for purposes of final honors. Honors are determined in May for all graduates.

Honors in Management: The Honors in Management (HIM) Seminar is a two-semester sequence course that gives students the opportunity to work with senior-level faculty in a specialized format. In the fall semester, the HIM course will be team taught with various faculty members. For the spring semester, students will form teams to develop substantial research projects under the direction of one of the participating faculty for the remainder of the academic year. HIM students also must have a total of 126 credits of academic work (including Mgt 490 and 491) in order to receive the Honors in Management designation at graduation.

Honors Thesis: The Olin B.S.B.A. Honors Thesis challenges students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. The Honors Thesis is a two-semester sequence in which the student engages in research and analysis in the first semester and upon successful progress, the student writes, presents and defends his or her research in the subsequent semester. Students must apply and be approved to participate in this experience. All applicants must be senior B.S.B.A. degree students in good standing with a cumulative GPA of 3.7.

Academic Regulations

Attendance

Olin Business School allows each instructor of a course to decide how many absences you may have and still pass the course. The Olin Business School expects faculty to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. You are expected to explain to your instructors the reasons for any absences and to discuss with them the possibility of making up missed assignments.
Enrollment

B.S.B.A. students must be enrolled in a minimum of 12 units to a maximum number of 21 units each semester. Olin undergraduates will be assessed a full-time tuition charge for their course of study through eight semesters of enrollment.

Units and Grades

A unit is a measure of quantity given for one hour of lecture or recitation course a week for one semester. A grade point is a measure of the quality of work done in the course. The Olin Business School employs the following grading system in evaluating student performance:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Points Per Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A−</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>

<tr>
<td>L</td>
<td>Successful audit</td>
</tr>
<tr>
<td>Z</td>
<td>Unsuccessful audit</td>
</tr>
<tr>
<td>N</td>
<td>No grade submitted</td>
</tr>
</tbody>
</table>

Grade points per course are calculated by multiplying the number of units of a course by the grade points earned. You may retake a course if a higher grade is required or desired. The initial grade received in the course remains on your record, along with an R to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing your grade point average.

Incomplete Grades

You may be given an I (incomplete) when extenuating circumstances preclude the satisfactory completion of course work during the semester in which a particular course is taken. While an incomplete grade is sometimes appropriate, you should make every effort to avoid the accumulation of incomplete grades. Incomplete grades are expected to be finished. Failure to finish an incomplete grade by the following semester will result in a failing grade.

Pass/Fail Option

You may take a maximum of one course per semester on a pass/fail basis. A grade of P# (pass) indicates that credit has been awarded, but the work was not subject to finer evaluation. No required or business course work may be taken on a pass/fail option. This option is provided so that you may take nonbusiness courses in subject areas with which you may have little familiarity.

Minimum and Maximum Course Loads

In Olin, business students are required to enroll in a minimum of 12 units to a maximum of 21 units each semester here at Washington University. A minimum 2.0 grade point average in all course work taken at the university and a 2.0 in all professional course work taken at Olin must be achieved to satisfy B.S.B.A. graduation requirements.

Repeating a Course

You may retake a course if a higher grade is required or desired. The initial grade received in the course remains on your record, along with an R to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing your grade point average.

Auditing a Course

You may not audit a business course. However, you may take nonbusiness courses for audit with the approval of the professor. An audited course does not count toward your degree requirements. A grade of L indicates satisfactory completion of an audit; unsatisfactory completion results in a grade of Z. Fees for auditing a course are assessed at the same rate as for all other courses.

Academic Probation and Suspension

Approximately three weeks following the end of a semester, the Academic Review Committee reviews the record of each enrolled student. Students must attain and maintain a minimum 2.0 grade point average in professional (business) and general courses to be in “good academic standing.” Failure to achieve minimum standards may result in the student being placed on academic probation or becoming ineligible for future registration in the Olin Business School. Failure on the part of a student to meet the conditions of probation in the following semester may result in dismissal from the school. Another cause for probationary action or dismissal is failure on the part of a student to complete professional requirements.
within a reasonable time period. Students who fall behind in completing requirements should make an appointment to see their primary advisor to work out a plan for making up the work at the earliest possible time. Registration is restricted to a maximum of 15 credits for students on academic probation.

**Leave of Absence Process**

If you are an undergraduate in good standing at the completion of a term, you are eligible to apply to take a leave of absence from the Olin Business School. You should first contact your academic adviser to discuss your situation. You must submit your request for a Leave of Absence to your four-year academic adviser. Students on an approved leave of absence should submit their Reinstatement Form by March 1 for a fall semester return or October 1 for a spring semester return.

A student wishing to take a medical leave of absence (MLOA) should first talk with a representative from Student Health Services. Then, you should submit your MLOA petition to your business school adviser. A student’s request for the MLOA or re-enrollment from an approved MOLA will be reviewed by the B.S.B.A. officer once the recommendations from Student Health Services are received. The decision on whether or not to grant the request for a medical leave of absence or re-enrollment will be communicated to the student by the B.S.B.A. Programs Office. If you are considering a medical leave of absence, you should first contact Student Health Services to initiate this leave.

In either case, you must complete the Leave of Absence or the Medical Leave of Absence form and submit it to your four-year academic adviser.

Students who leave the university without filing either a Leave of Absence or a Medical Leave of Absence will be considered officially withdrawn from the university. In this instance, a student must re-apply for admission if he/she wishes to return the university.

**Transfer Credit**

Students who are enrolled at Olin and wish to receive transfer credit for course work subsequently taken at another institution must receive approval from their adviser prior to the time the course is to be taken. General guidelines are as follows:

- The institution must meet accreditation requirements.
- No course work may be taken at a two-year institution after a student has accumulated 60 credit hours of work.
- Credit will not be given for course work taken at another institution during a student’s last 30 credit hours.
- A catalog description for each course must be submitted with the petition for review.

As a general rule, Olin encourages that all required business courses and professional electives be taken at Washington University. Under certain circumstances, permission may be granted for a student to take a business course from another university with accreditation by AACSB–International (Association to Advance Collegiate Schools of Business). In order for consideration to be given, a syllabus showing text used must be submitted.

No transfer credit will be accepted with less than a “C” grade.

**University College Courses**

Effective with the Class of 2017, a student may enroll in one University College course per semester. However, these units will not count toward the 120 units needed for the B.S.B.A. degree.

**Pre-matriculation Units**

Pre-matriculation units are earned before your enrollment at Washington University as a first-year student. These units would include Advanced Placement (AP) examinations, International Baccalaureate (IB), British Advanced (A) Levels and college credit earned after your junior year in high school. These units will be noted on your transcript. Effective with the B.S.B.A. Class of 2015, the maximum number of pre-matriculation units awarded is 15. These pre-matriculation credits will transfer as general elective course work and will not satisfy any distribution requirement. All B.S.B.A. students and second majors will be required to take QBA 120 even when AP credit is earned for Math 2200.

**Administration**

**Mahendra R. Gupta, PhD**  Dean

**Nicholas S. Argyres, PhD**  Senior Associate Dean — Faculty

**Mark J. Brostoff, MHA**  Associate Dean and Director, Weston Career Center

**Paula A. Crews, MBA**  Associate Dean and Director, Marketing and Communications

**Gary M. Hochberg, PhD**  Assistant Dean Academic Affairs

**Greg Hutchings, JD**  Assistant Dean and Director of S.M.P. Programs

**Ronald R. King, PhD**  Senior Associate Dean — Special Projects

**Panos Kouvelis, PhD**
Minor (directory)

Non-B.S.B.A. students are eligible to pursue a minor in one of the specific fields of business listed below. Click the link to view more information about a specific minor. Engineering

Mission Statement
The mission of the School of Engineering & Applied Science at Washington University is to serve society as a center for learning in engineering, science and technology. It is our duty to disseminate and create knowledge through teaching, research, publications and the transfer of important ideas and research into the development of new products and technologies. We strive to provide an environment that nurtures critical thinking and the education of innovators and leaders for the future.

Undergraduate Degree Programs
The School of Engineering & Applied Science offers four-year, full-time programs of instruction leading to various professional Bachelor of Science degrees. Bachelor of Science degrees are available in the fields of biomedical engineering, chemical engineering, computer engineering, computer science, electrical engineering, mechanical engineering, and systems science and engineering.

If you are not preparing for a professional engineering career (i.e., one that might one day lead to licensure as a professional engineer [P.E.]), but are interested in an academic program broadly based on the engineering sciences, the School of Engineering & Applied Science offers the Bachelor of Science (B.S.) Major in Applied Science with several options including Chemical Engineering, Computer Engineering, Computer Science, Electrical Engineering, Mechanical Engineering, and Systems Science & Engineering. These degree options provide more flexibility for students who do not intend to become licensed engineers and want to select their course work according to their personal educational objectives. For example, some students use this flexibility to gain technical background and training while pursuing or preparing for professional training in medicine, business or law. However, although the flexibility exists to do so, it is not necessary to combine an Applied Science degree program with another major or degree. Students also can use this added flexibility to achieve a well-rounded undergraduate education by selecting courses from across the university while pursuing a major in the School of Engineering & Applied Science or to deepen their understanding in their chosen major.

B.S. in Engineering (Individually Designed Major)
Many of the most interesting and developing areas of engineering and applied science do not fit within a single undergraduate major. Students can create an Individually Designed Major (IDM) under the direction of a faculty adviser. Sample IDMs include biomedical informatics, imaging, energy engineering, robotics, computer graphics and more.

The requirements to be admitted to an IDM are more stringent than those for our other engineering degree programs, and the IDM will not be available to students when they first enter WU (so it will not be listed on the admissions application as an option).

Students applying for an IDM should:
• have already completed at least one semester at WU.
• apply before the beginning of their junior year.
• have at least a 3.5 GPA at WU and maintain good standing in the School of Engineering.
• find an Engineering faculty member who will agree to serve as that student’s IDM adviser. The student and adviser will design a plan of study, which lists the courses that must be successfully completed to earn the IDM. That plan must include at least 42 engineering units of credit.
• satisfy all other general engineering degree requirements (p. 823).
• the students and adviser will present the plan to a standing engineering committee (normally, the Engineering Curriculum Committee), which will then assess the proposed plan and will approve or deny the request.

Combined Majors and/or Multiple Degrees

Multiple Majors in Engineering
All undergraduate divisions at Washington University allow students to pursue majors and degrees in more than one division. The following options are available:

Second degrees. A student in any undergraduate division of the university may be allowed by another division to pursue a second bachelor’s degree. For this, the student must satisfactorily complete all of the degree requirements for BOTH degrees in order to earn two diplomas. These requirements may include a “residency” requirement. For engineering majors, this residency requirement is stated on the Engineering Degree Requirements (p. 823) page. In addition, the College of Arts & Sciences requires any student earning an A.B. degree and a bachelor’s degree from another division to earn a minimum of 150 total units. If the additional residency and units requirement for a second degree are incompatible with a student’s plan, then the student should consider a second major as a more convenient and equally viable alternative.

Second majors. A student pursuing a bachelor’s degree in engineering may also pursue second majors offered by all undergraduate divisions. There are three second majors offered by the School of Engineering & Applied Science: Computer Science, Electrical Engineering Science, and Systems Science. In addition, there are second majors offered by the College of Arts & Sciences, School of Business and College of Architecture. Students may declare a second major online via WebSTAC
up until the time they have filed an Intent to Graduate. Upon completion of the requirements, the student’s transcript will show an engineering degree and all earned second majors. Only one diploma is granted, and no reference to the second major is noted on the diploma.

Minors. Undergraduate students are allowed to pursue minors offered by any undergraduate division of the university. A minor usually requires five to six courses. The minor program’s home division sets the requirements for admission and completion of the minor program. Students may declare a minor online via WebSTAC up until the time they have filed an Intent to Graduate. An engineering student who completes all of the requirements will have the award of the minor noted on the official transcript, but no reference of the minor is noted on the diploma.

Residency Rule for Engineering Minors: No more than 6 units of credit transferred from another institution (outside Washington University) can be used to meet the requirements of any minor offered by the School of Engineering & Applied Science. The remaining units (up to the amount required for the minor) must be applicable units from Washington University. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

Special Combined Programs

Process Control Systems

The Department of Energy, Environmental and Chemical Engineering and the Department of Electrical and Systems Engineering jointly sponsor a double-degree program in process control systems. Undergraduate degrees are earned in both Chemical Engineering and in Systems Science and Engineering.

The emphasis in this course of study is on the science and technology of process automation with a solid traditional foundation in the two major disciplines. Graduates of the program can contribute, through automation, to improved product quality, reduced manufacturing costs, greater capital productivity and improved safety and environmental quality.

B.S./Master’s Program in Engineering

This program provides undergraduate engineering students with the opportunity to plan a coordinated five-year program of studies in the School of Engineering & Applied Science leading to both the bachelor’s and master’s degrees. The program requires at least 150 units and normally takes five years to complete. With departmental approval, up to 6 units completed at the School of Engineering & Applied Science for the master’s degree may be used to count toward the engineering undergraduate degree; however, at least 150 applicable degree units must still be completed. The degrees available to students are the traditional engineering master’s degrees offered by the School of Engineering & Applied Science and do not include interdisciplinary graduate degrees with other schools on campus.

The program is open to students who have at least 3.0 cumulative GPAs; some departments may require higher minimum cumulative GPAs. Students must apply no later than September 1 of their senior year. Approval by the department and the dean’s office is required.

Undergraduate financial support is not extended for the additional semesters to complete the master’s degree requirements. Students are classified as graduate students in their final year of study. Their tuition charges are at the graduate student rate.

When to earn the B.S. degree

Students can choose to earn their B.S. degrees at the end of their senior year or they may instead choose to defer earning their B.S. until they also complete their master’s degree. The latter option may have financial advantages for students who do not want to earn their B.S. degrees early due to financial aid issues. For example, loan interest may accrue once an undergraduate degree has been earned, depending on the type and terms of the undergraduate student loan. Students should check with Student Financial Services if they have questions or concerns. NOTE: If a student does opt to earn the B.S. degree prior to completing the master’s degree, it will not restrict the student from receiving the merit-based scholarship support described below.

Scholarship support

Scholarship support for the final year of study (the master’s year of study) is automatically awarded to students who are admitted into the program. For a student who began as a freshman at Washington University, this typically would be in the student’s fifth year of study. Any scholarship support given is based upon a student’s Major GPA that is computed at the end of the student’s junior year. The major GPA is found on DARS.

Students may apply during their junior year. Admission offers will begin on September 1 of the senior year, and the major GPA at the end of the junior year will be used to determine the amount of scholarship support awarded. Award amounts vary and are granted on a graduated scale as shown below:

<table>

A.B./Master’s Program

The combined A.B./Master’s Program is designed to enable students in the College of Arts & Sciences to pursue a coordinated five-year study leading to an A.B. degree in the College of Arts & Sciences and a master’s degree in the School of Engineering & Applied Science. The admission process and the graduation requirements for this program are identical to those of the B.S.–Master’s Program in Engineering.

B.S.–M.B.A. Program

The School of Engineering & Applied Science and the Olin Business School offer a five-year program leading to the professional Bachelor of Science engineering degree and the Master of Business Administration degree. The purpose of the program is to provide you with the opportunity to develop an educational background particularly in demand by industry.

You should apply to this joint program by February 1 of your junior year. You must complete the application for admission to the Olin Business School, available through the business school. You should have a cumulative grade point average of B+ or better, and you must take the Graduate Management Admission Test (GMAT) administered by the Educational Testing Service. Registration materials for the test may be obtained through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and personal interviews.

The B.S.–M.B.A. student’s fourth-year curriculum is composed largely of business courses. The fifth-year curriculum is divided almost evenly between business and engineering courses. Because merging of the two curricula results in very tight scheduling, it is possible that course overloads may be necessary to complete both programs in 10 semesters. You are strongly urged to meet with your advisers to plan the remaining years of the program.

Dual-Degree Program

The School of Engineering & Applied Science offers a Dual-Degree Program with numerous other colleges and universities. Qualified students earn both a non-engineering baccalaureate from the first school and a Washington University bachelor’s degree in engineering by attending the affiliated institution for three or four years, then completing the program with two years of concentrated engineering study at Washington University. Please note that all students earning an undergraduate engineering degree are required to complete a minimum of 60 course units taken at Washington University.

If you are enrolled at an affiliated institution, you may apply for admission to dual-degree study under this program, provided you are recommended by an official representative of your college or university and will receive or have received the non-engineering baccalaureate. For more information, please see the Dual-Degree Program website.

Co-operative Education

The Engineering Co-op Program offers students a unique opportunity to gain in-depth engineering experience prior to graduation. Co-op students learn about a field of engineering by working alongside practicing engineers on extensive projects, which are typically held by entry-level engineers. This type of experience gives students a chance to preview a career path and employment options, gain career clarification, improve communication and team project skills, and enhance marketability with future employers. The Co-op experience is typically completed over the course of a semester and a summer term.

The Engineering Co-op Program is coordinated through the Career Center.

For more information on Co-ops, please visit the Career Center’s website at careers.wustl.edu or call 314/935-5930.

Pre-medical Education

The School of Engineering & Applied Science makes available, as options within its undergraduate degree programs, curricula that prepare you for entry into medical, dental or veterinary school while you pursue the undergraduate degree.

These curricula were formulated in recognition of the increasing importance in medicine of the methods and subject matter of the basic engineering sciences. The student who successfully completes one of the curricula will be well prepared for the study of medicine and will have, in addition, a solid background in engineering. Moreover, the student who decides not to go on to medical school will have an exceptionally wide selection of options, including not only those commonly open to the graduate in engineering, but also those of graduate study in biomedical engineering. In accordance with the recommendations of the school’s Pre-medicine Committee, all curricula include, in addition to the normal degree requirements, the following courses:

- **Biology**: Biol 2960, 2970, 4810
- **General Chemistry**: two semesters with lab
- **Organic Chemistry**: two semesters with lab
- **Psychology**: Psych 100B

Many medical schools have other assorted prerequisites, which you can find in the Medical Schools Admissions Book. You may purchase this by going to the Association of American Medical Colleges (AAMC) website at www.aamc.org on the publications page, where you can order online.

If you are interested in attending medical or dental school, you must consult and register with the Pre-medicine Committee before the end of your sophomore year. Engineering students should contact the premedical adviser in Engineering Student Services, Lopata 303.
There is extensive detailed information concerning the Medical College Admission Test, the choice of advanced biology or chemistry courses, and the choice of medical school that should be discussed prior to the beginning of the junior year. Students requesting letters of recommendation from the Pre-medicine Committee must do so in writing by the end of the fall semester of the senior year. The Pre-medicine Committee reserves the right not to write letters for students deemed not qualified.

Engineering Summer School

The School of Engineering & Applied Science offers a variety of engineering courses each summer. Class times are varied to accommodate both traditional daytime students and those with full- or part-time employment. The Engineering Summer School calendar comprises one full eight-week evening session as well as several accelerated sessions of shorter duration.

If you are interested in enrolling in an engineering summer course, you can obtain further information, advice and registration materials in 204 Lopata Hall, 314/935-5484.

University College Courses

Engineering students may enroll in courses offered by Washington University’s University College. The school evaluates these courses as if they were taken at another institution. Although a student’s official record will show each course with its title, units and grade, the units and grade are not counted. Each course must be pre-approved and evaluated for its applicability toward an engineering bachelor’s degree.

If the course is transferable, a separate entry is inserted into the student’s record, with the transfer units and the day-school equivalent course. Students must earn a minimum grade of C (2.0) for the units to transfer; if approved to transfer in, the grade will not impact the GPA. Pass/fail grades are not accepted for transfer credit.

Student Services

Engineering Student Services

Engineering Student Services, located in Lopata 303, has three main areas: Admissions, Advising Support and Registrar. Our admissions officers work closely with the university Admissions Office to provide current and useful information to students and parents who are learning about our university, our community and the opportunities available in the School of Engineering & Applied Science. The advising staff has a comprehensive knowledge of all campus resources and can help with such items as tutoring, international studies, assistance with the registration process and general advising. The registrar handles class scheduling, transfer and AP credit, course registration, graduation eligibility and other student records-related processes. Engineering Student Services serves all students, faculty and staff. For an appointment, call 314/935-6100.

Engineering Communications Center

The Engineering Communications Center offers all engineering students free help with their engineering communication needs. The faculty who staff the center work with students to define communication audiences and purposes, develop and organize ideas, create effective graphics and page design, and sharpen self-editing skills. Help is offered for résumés and employment correspondence, proposals, formal reports, lab reports, graduate program application statements, and both traditional and computer-based presentations. The center also houses videotape facilities for analyzing presentation rehearsals.

The Career Center

The Career Center helps engineering students prepare for a lifetime of career management by offering innovative approaches to help prepare them for a successful Co-op, internship and job search. The Career Center offers a variety of services and resources for Engineering undergraduate and graduate students.

Whether you are looking for a summer internship, a Co-op or a full-time job, the center is here to help. The Career Center offers a breadth of resources, including Career Options; an online job, Co-op and internship database; the Engineering Mentoring Program; Job and Internship Search Teams; special events; skill-building workshops; career fairs and on-campus interviews; and résumé referrals for job opportunities.

The Career Center offers one-on-one career guidance to students at any stage of their career-planning process. Students are encouraged to meet with a career adviser early in their academic career and at least once each year to establish a relationship. To schedule an advising appointment, please contact 314/935-5930 or careers@wustl.edu, or visit the website at www.careers.wustl.edu.

Course Descriptions

For administrative purposes, the School of Engineering & Applied Science is subdivided into five academic departments: Biomedical Engineering (E62); Computer Science & Engineering (E81); Electrical & Systems Engineering (E35); Energy, Environmental and Chemical Engineering (E33, E63); and Mechanical Engineering & Materials Science (E37). Each department may offer courses leading to one or more bachelor’s, master’s or doctoral degrees.

The courses of instruction are numbered according to the following system:

- 100 to 199 are primarily for first-year students.
- 200 to 299 are primarily for sophomores.
- 300 to 399 are primarily for juniors.
- 400 to 499 are primarily for juniors and seniors, although certain courses may carry graduate credit.
• 500 or above are offered to graduate students and to juniors and seniors who have met all stated requirements. If there are no stated requirements, juniors and seniors should obtain permission of the instructor.

One unit of credit is given for each hour of lecture, and one unit for each two and one-half hours of laboratory. Each course description shows the course's credit. A table of all engineering courses and, for each course, the division of its topics units is available and frequently updated on the school's website.

First-Year Program

This First-Year Program is offered as a starting point for beginning students and their advisers when planning each student’s individual course schedule.

A typical first-year course load totals 14 to 16 units for each semester, and it is not wise to enroll for more than 16 units during the first semester. It may be that a load of less than 14 units is desirable. You should enroll in the following courses:

Calculus: Beginning engineering students with previous calculus course work usually begin with Math 132 Calculus II. Students with a strong mathematics background may be ready for Math 233 Calculus III or even Math 217 Differential Equations.

Physics and/or Chemistry: If biomedical engineering or chemical engineering is a likely major, chemistry and physics should be completed during the first year; for other majors, physics is the recommended choice.

Other courses: Most first-year engineering students also enroll in one or more humanities/social sciences courses, engineering courses at the 100 level, and perhaps a computer science course. If you have a major or are strongly leaning toward a major, you should follow the recommendations for that major.

English proficiency: The English proficiency requirement must be completed as soon as possible. See Engineering Degree Requirements (p. 823) for further details on this requirement.

Recommended Courses

The following list recommends course sequences for each engineering major.

Biomedical Engineering: BME 140, first semester; Biol 2960, second semester.

Chemical Engineering: EECE 146A, first semester.

Computer Engineering: CSE 131, first semester; CSE 132, second semester.

Computer Science: CSE 131-132, first and second semester; CSE 240, second semester.

Electrical Engineering: CSE 131 and ESE 103, first semester; ESE 260, second semester.

Mechanical Engineering: MEMS 202, first semester.

Systems Science and Engineering: CSE 131, first semester; Math 309, first or second semester; ESE 151 or 251, second semester.

Contact Person: Engineering Student Services

Phone: 314/935-6100

Departmental website: http://www.engineering.wustl.edu

Degree Requirements

Professional Bachelor of Science Degrees

To earn any of the professional degrees (e.g., B.S. in …), a student must satisfy all of the following general distribution requirements:

1. Complete the Common Studies program (see chart (p. 826)).
2. Satisfy the specific degree requirements of one of the professional degree programs, as outlined in other sections of this Bulletin.
3. Satisfy the requirements listed under All Undergraduate Degrees (below).

**Majors in Applied Science**

To earn one of the B.S. Major in Applied Science degrees, a student must satisfy all of the following general distribution requirements:

1. Complete at least 120 applicable units.
2. Complete at least 48 units of the 120 in mathematics, natural sciences and engineering.
4. Complete at least 42 of the total 120 units at the 300 level or higher.
5. Complete the specific requirements of the major.
6. Satisfy the requirements outlined under All Undergraduate Degrees.

**All Undergraduate Degrees**

To earn any undergraduate degree in the School of Engineering & Applied Science, you must accomplish all the following:

1. Earn at least a C (2.0) cumulative grade point average in all applicable courses taken at Washington University.
2. Earn at least the minimum total number of units specified for the particular degree. All degrees require students to complete at least 120 applicable units.
3. Earn at least a C (2.0) grade point average in your major area of study.
4. Satisfy all of the following residency requirements:
   
   **A.** Complete a minimum of 30 units of 300-level or higher courses from the school, while matriculated at Washington University in a degree program. An engineering course transferring from an exchange program sanctioned by the School of Engineering & Applied Science may be counted as a school equivalent course for the purpose of satisfying this requirement.
   
   **B.** Complete a minimum of 60 units at Washington University, while matriculated at Washington University in a degree program. Exchange program courses sanctioned by the school may be counted toward this requirement.
   
   **C.** For students who pursue multiple engineering B.S. degrees, for each additional B.S. degree from the school, students must complete an additional 15 resident units of 300-level or higher courses from the school, which are in addition to the 30 units of 300-level or higher engineering courses that are listed in 4A above.
5. Complete the English proficiency requirement.

**English Proficiency Requirement**

Every student must demonstrate proficiency in reading and writing the English language. Students are considered proficient if they have earned one of the following scores: a 5 on the Advanced Placement English Examination of the College Board, or a score of 750 or higher on the SAT W examination, or a score of 36 on the ACT English exam, or a score of 7 on the International Baccalaureate examination. Proficiency is most commonly demonstrated by satisfactory performance on the Freshman English Composition proficiency test administered by the School of Engineering & Applied Science.

Students who do not demonstrate satisfactory proficiency on the test are required to enroll the following semester in the course or sequence of courses specified by the test’s administrator. The school’s English proficiency requirement is then satisfied only by a grade of C− or better in the university’s College Writing 1 course (CWP 100). Courses taken at other institutions to satisfy the school’s English proficiency requirement must be pre-approved by the school’s English proficiency coordinator. If the course is so approved, the student must pass with a grade of B or better. Writing 1 does not count toward the Humanities and Social Sciences requirement of the School of Engineering & Applied Science. Waivers of the Writing 1 requirement via the AP, SAT, ACT, IB or other proficiency exam do not carry degree credit.

The English proficiency requirement must be completed as soon as possible. Undergraduate students who have not yet satisfied this requirement must enroll in Writing 1 (or an approved alternative course) at the first possible opportunity, commonly their first spring semester. Enrollment in English composition courses for subsequent semesters may be required until the proficiency requirement is satisfied.

Before enrolling in Writing 1, some students may be required to complete CWP 1001 Fundamentals of Academic Writing or CWP 200 Writing Tutorial or ELP 1511 Academic Writing for Second Language Writers; these courses will not be counted toward the student’s degree requirements.

**Humanities and Social Sciences Requirement**

To earn any bachelor’s degree from the School of Engineering & Applied Science, you must complete the school’s humanities and social sciences requirement:

1. Minimum units: At least 18 units of humanities and social sciences courses must be completed with passing grades. Humanities and social sciences courses, other than transfer courses, may be taken for pass/fail credit.
2. Breadth: At least 6 units of the 18 must be in the humanities and at least 6 units must be in the social sciences.
Engineering Science

The engineering sciences have their roots in mathematics and basic sciences but carry knowledge further toward creative application. These studies provide a bridge between mathematics and basic sciences on the one hand and engineering practice on the other. Such subjects include mechanics, thermodynamics, electrical and electronic circuits, materials science, transport phenomena and computer science (other than computer programming skills), along with other subjects, depending upon the discipline. While it is recognized that some subject areas may be taught from the standpoint of either the basic sciences or engineering sciences, the ultimate determination of the engineering science content is based upon the extent to which there is extension of knowledge toward creative application. In order to promote breadth, the curriculum must include at least one engineering course outside the major disciplinary area.

Applicable Undergraduate Engineering Degree Requirements

Undergraduate engineering students are required to satisfy the engineering degree requirements that are published in the online Undergraduate Catalog (http://bulletin.wustl.edu) in effect at the time they first enroll at the university as degree-seeking undergraduate students.

Undergraduate engineering students must complete all undergraduate degree requirements and graduate within 10 consecutive years of enrolling as degree-seeking undergraduate students.

A student who does not graduate within 10 consecutive years will be required to satisfy the degree requirements that are in the most recently published online Undergraduate Catalog at http://bulletin.wustl.edu and to retake courses identified by the chair of the department in which the student is seeking the degree.

• When a student wishes to return to complete course work and earn a degree after the 10-year time period has passed, the most recent online Undergraduate Catalog (http://bulletin.wustl.edu) is defined as the catalog in effect when the student re-enrolls in the School of Engineering & Applied Science as an undergraduate student seeking a degree.

• When a student has left the university and wishes to complete course work at another university to transfer back and graduate from the School of Engineering & Applied Science, and more than 10 years have elapsed since the student was first enrolled as an undergraduate engineering degree-seeking student, the most recent online Undergraduate Catalog (http://bulletin.wustl.edu) is defined as the catalog in effect when the student files an intent to graduate for an engineering undergraduate degree. The course work the student intends to complete and transfer back to the School...
Definition of Class Levels
For classification purposes, your undergraduate class level is defined according to the year in which you intend to graduate.

Common Studies Program
All students who wish to earn a professional degree (e.g., B.S. in Chemical Engineering) must complete the Common Studies program. Courses required by the Common Studies program:

<table>
<thead>
<tr>
<th>Course Description</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>English Composition (by examination or at least a C– in CWP 100)</td>
<td>0</td>
</tr>
<tr>

</table>

* Some programs also require Chem 152.

Academic Honors & Awards

Dean’s List: The Dean’s List is composed of freshman, sophomore, junior and senior engineering students who, for the preceding semester, have achieved a 3.6 or higher grade point average based on a minimum of 12 units of courses taken for grades (not pass/fail). An appropriate entry is added to their official transcripts.

Latin Honors: The Engineering Curriculum Committee has the responsibility for determining which students will receive the designations cum laude, magna cum laude and summa cum laude. The criterion for making the decision is academic achievement based on cumulative grade point average. Grade point averages are reviewed the week of Commencement, after final grades are submitted, to determine which students are awarded final honors for each graduation year.

Valedictorians: Valedictorians are selected from graduating seniors who entered as freshmen. Candidates must have earned a 4.0 cumulative grade point average at Washington University with no repeated courses.

Washington University Engineering Scholarship Program:
The Engineering Scholarship Program enables a sponsor — an individual, a group of individuals or a company — to provide a named scholarship. The selection of students is made by the dean’s office and is based on academic achievement and potential for professional attainment. There is no application process. The awards are need-based. The total amount of the financial aid package does not change, but the source of the scholarship funds is shifted to funds that have been specifically contributed to the university for that purpose.

Academic Regulations

Attendance
Each professor in the School of Engineering & Applied Science decides how many absences a student may have and still pass the course. Professors are expected to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their professors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

Units and Grades
A credit unit is the equivalent of one recitation or lecture hour a week for one semester, or one laboratory of two and one-half hours a week for one semester. A student’s work is rated in terms of the following system of grades and grade points:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Points per Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>4.0</td>
</tr>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A–</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B–</td>
<td>2.7</td>

<td>R</td>
<td>Repeat</td>
</tr>
<tr>
<td>L</td>
<td>Successful audit</td>
</tr>
</tbody>
</table>
Engineering

Z  Unsuccessful audit
N  No grade submitted

For students who entered prior to Fall 2010, plus and minus marks to the grades of A, B, C, D and F do not affect the value of the grade points earned by each letter grade.

To graduate, a student must meet the following criteria:

1. at least a C (2.0) cumulative average and
2. at least a C (2.0) cumulative average in your major area of study

Auditing a Course

You may register for a specific course as an auditor. When a student uses the Audit grading option, the student is expected to attend all of the course’s classes. Completion of homework and the taking of exams are not required. The grade L signifies a successful audit (class attendance) and the grade Z signifies an unsuccessful audit. Neither grade affects a student’s grade point average, nor do the course’s units contribute to the student’s total cumulative units. Audit courses do not count toward any degree. Class attendance is required to earn the grade L; unsatisfactory attendance will result in a grade of Z. Certain computer science courses do not allow students with auditor status.

Incomplete Grades

The grade I (incomplete) indicates that the work of a student has been generally acceptable but that extenuating circumstances led to certain requirements not having been met. The grade of X is recorded when a student is absent from a midterm or final examination because of illness or other unavoidable reason, provided the work has been otherwise satisfactory.

Grades of X and I must be removed no later than the close of the next full semester a student is in residence. On failure to make up an X or I, the student will not receive credit for the course, and the grade will be changed to F unless the student has been explicitly excused by the associate dean.

Pass/Fail Option

All undergraduate engineering students are eligible to register each semester for up to 6 units on the pass/fail option, up to a maximum of 18 units attempted. Some departments require students to take certain courses pass/fail; credits in these courses do not count toward either the semester limit of 6 units or the cumulative limit of 18 units. Other than these courses, only elective courses may be taken on this option, including courses in other divisions of the university, but still contingent upon and subject to departmental requirements. Humanities, social sciences and some technical electives specifically allowed by individual engineering programs, as well as some engineering courses, both undergraduate and graduate that are not specifically required for your major program may be taken with the pass/fail option. Some programs do not allow courses, required or elective, to be taken with the pass/fail option. Graduate courses taken on the pass/fail basis cannot be transferred later for credit toward a graduate degree.

Changes from the regular grade basis to pass/fail or vice versa may not be made after the last dates specified in the current Course Listings. The normal regulations for withdrawal or change to auditor status also apply to pass/fail courses.

A final grade of P# (pass) will earn degree credit. A final grade of F# (fail) will not earn degree credit. Neither P# nor F# will affect the grade point average.

Minimum and Maximum Course Loads

Undergraduate engineering students must take a minimum of 12 units of credit to be considered full-time. Students may not enroll in more than 21 units without special permission and additional per-unit tuition charge.

Repeating a Course

If an Engineering student repeats a course at Washington University, only the second grade is included in the calculation of the grade point average. Both enrollments and grades are shown on the student’s official transcript. The symbol R next to the first enrollment’s grade indicates that the course was later retaken. Credit toward the degree is allowed for the latest enrollment only.

Academic Probation and Suspension

A student whose work is of unsatisfactory quality is placed on academic probation. If a student on probation doesn’t improve his or her academic record after a reasonable time, probation is followed by dismissal. The regulations governing probation and dismissal are as follows:

1. At the close of each semester, each student’s semester grade point average is computed as the total grade points earned during the semester divided by the total credit units attempted. At the same time, the cumulative grade point average is computed as the quotient of the cumulative total of grade points over the cumulative total of credit units attempted. The computations are made on the basis of the grade point scale indicated in the section on grades. Courses taken on a pass/fail basis are not included in these calculations.

   2. At the close of each semester, each student’s semester and cumulative grade point averages are reviewed. If either is below 2.0, the probation rules stated below apply and the student is notified of any academic probation or dismissal action.
Probation and Dismissal Rules

1. Probation follows any semester during which either the semester or cumulative grade point average is less than 2.0, or a student has three I (incomplete) grades at the end of a semester, or a student was enrolled in credit courses and earns no degree credit at the end of a semester, or a student drops below full-time student status without the approval from his/her academic adviser or the associate dean for students.

2. If a student has been on academic probation twice previously, dismissal may follow the next time the student is eligible for probation.

3. Dismissal may result if a student becomes eligible for probation in two sequential semesters.

4. Dismissal may result if any course is failed twice.

First Academic Probation

The first time a student qualifies for probation, he/she is placed on “First Academic Probation.” Students placed on First Academic Probation status are sent a letter informing them of this action.

Second Academic Probation

The second time a student qualifies for probation, he/she is placed on “Second Academic Probation.” Students placed on Second Academic Probation status are sent a letter informing them of this action.

Special Academic Probation

Special Academic Probation means that a student was eligible for suspension but was not suspended.

Stop Procedure

Any student who in the judgment of the Engineering Registrar is not making adequate academic progress is required to meet with his/her academic adviser before enrollment is allowed for the following semester.

When the Engineering Registrar reviews the academic records of students eligible for probation, students having serious academic difficulties are identified and notified of the “stop” process. The letter instructs them to write a brief (one or two pages) statement, and meet with their academic advisers to discuss their situations. After this discussion takes place, the academic adviser notifies the Registrar that the discussion has occurred. If the Registrar is not notified by the deadline stated in the letter, the Registrar may withdraw the student from all current courses.

Students who have been doing satisfactory course work, and suddenly complete a semester with unacceptable grades, typically have personal problems that have seriously interfered with their academic work. It is also typical that such students are embarrassed by their academic performance and are reluctant to talk with parents, advisers, counselors and deans about their problems. The “stop” procedure is specifically designed to answer the question: “Are you getting appropriate help?”

Academic Suspension

The third time a student qualifies for probation, or becomes eligible for probation the second semester in a row, or fails the same course twice, he/she is dismissed from the university.

Students placed on academic suspension status are sent a letter informing them of the suspension action. Students who wish to appeal are instructed to prepare a written statement that informs the Academic Standards Committee of the decision to appeal, and respond to two questions: explain why the unsatisfactory academic performance occurred; and, if allowed to return, what would be done differently by the student. The student must then attend an appeal hearing. The student’s academic record, his/her written appeal and any other factors the student may wish to discuss are considered by the Committee. When the discussion ends, the student leaves the hearing room and the Committee immediately makes a decision regarding the student’s appeal. The Engineering Registrar then informs the student of the Committee’s decision. The Committee’s decision is final (no other appeals are possible). If the appeal is successful, the student is placed on Special Academic Probation and the student is allowed to enroll in classes.

If a student is placed on academic suspension status and chooses not to appeal, or appeals and his/her appeal is denied, the student is not allowed to enroll in any classes in any division at Washington University. If a suspended student would like to return to the university at a future time, the student must apply for reinstatement to the School of Engineering & Applied Science.

Full-Time and Part-Time Enrollment

Undergraduate degree programs are full-time programs. Part-time enrollment is not allowed unless serious health problems prevent a student from being enrolled full-time.

Part-time enrollment and partial tuition charges are allowed for seniors who must enroll for an extra semester. For students who enroll as freshmen, this status is allowed after their eighth semester. For dual degree students, part-time status is allowed after their fourth semester. (NOTE: Summer semesters are not counted as an academic semester.) Part-time students take
1 to 11 units and are charged for part-time tuition, along with the standard undergraduate fees. Scholarship support is not normally available for part-time students.

**Special Note to senior-level undergraduate students:** Senior-level students (those in their seventh or eighth semester) will automatically be designated as having full-time enrollment status if taking 6 or more units. All students designated with full-time status will automatically be charged the full-time tuition.

**Leaves of Absence**
Engineering students may petition to take a leave of absence. On a leave of absence, you are assured re-enrollment within the next two years. Before returning you are to notify the School of Engineering & Applied Science and submit a Reinstatement Form at least six weeks prior to the beginning of the appropriate term. A student wishing to take a medical leave of absence must have a recommendation for the medical leave of absence from Student Health Services submitted to the appropriate dean in the School of Engineering & Applied Science prior to leaving and prior to re-enrollment. The dean will decide whether or not to grant the request for the medical leave of absence and re-enrollment upon reviewing the recommendations from the Student Health Services and the student’s file.

**Transfer Credit**
You must get prior approval before taking a course at another university. After completing the course, have an official copy of the transcript sent to the School of Engineering & Applied Science for evaluation. If the credit is accepted, the course will show on the transcript with the units, but not the grade. Only units of credit for courses with a grade of C or better will transfer.

**Military Training**
Army and Air Force ROTC programs are available at Washington University.

A student in the School of Engineering & Applied Science who takes an ROTC course will have the course name, number, credit units* and grade entered on the official transcript. If the course is numbered 100–299, the course’s units and grade will not apply toward the student’s degree requirements; if the course is numbered 300–499 and the grade is D– or better, the course’s units will apply toward the student’s degree requirements (as a free elective) but the grade will not affect the student’s cumulative or semester grade point average.

*All ROTC courses are initially set up with 0 units. Engineering students may petition Engineering Student Services (Lopata 303) to have units of credit posted for the ROTC course(s) in which they are enrolled.

See course descriptions for Air Force ROTC (p. 38) and Army ROTC (p. 38).

---

**Physical Education**
Students in the School of Engineering & Applied Science are not required to enroll in physical education courses. These courses may be taken for recreation but not for academic credit.

**University College**
Engineering students may enroll in courses offered by Washington University’s University College. The school evaluates these courses as if they were taken at another institution. Although a student’s official record will show each course with its title, units and grade, the units and the grade are not counted. Each course must be pre-approved and evaluated for its applicability toward an engineering bachelor’s degree. If the course is transferable, a separate entry is inserted into the student’s record with the transfer units and the day-school equivalent course. Students must earn a minimum grade of C for the units to transfer.

**Majors (directory)**

Below is a list of majors offered by the School of Engineering & Applied Science. Click the link to view more information about a specific major. Log into WebSTAC and select Major Programs to switch your major program within Engineering or to declare a second major or minor online.

- Applied Science (Chemical Engineering) (p. 895)
- Applied Science (Computer Science) (p. 848)
- Applied Science (Electrical Engineering) (p. 870)
- Applied Science (Mechanical Engineering) (p. 912)
- Applied Science (Systems Science and Engineering) (p. 870)
Minors (directory)

Residency Rule for Engineering Minors:
No more than 6 units of credit transferred from another institution (outside Washington University) can be used to meet the requirements of any minor offered by the School of Engineering & Applied Science. The remaining units (up to the amount required for the minor) must be applicable units from Washington University. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

Below is a list of minors offered by the School of Engineering & Applied Science. Click the link to view more information about a specific minor. Log into WebSTAC and select the Major Programs link under Academic Records to declare a minor online.

- Aerospace Engineering (p. 913)
- Bioinformatics (p. 850)
- Computer Science (p. 850)
- Electrical Engineering (p. 875)
- Energy Engineering (p. 896)
- Environmental Engineering Science (p. 896)
- Mechanical Engineering (p. 913)
- Mechatronics (p. 913)
- Nanoscale Science and Engineering (p. 896)
- Robotics (p. 875)
- Systems Science and Engineering (p. 875)

Biomedical Engineering

About Biomedical Engineering

Biomedical engineering is an interdisciplinary field in which the concepts, methods and techniques of engineering are applied to solving problems in biology and medicine. It applies quantitative, analytical and integrative methods from the molecular level to that of the whole organism to further our understanding of basic biological processes and to develop innovative approaches for the prevention, diagnosis and treatment of disease.

As a student majoring in biomedical engineering, you will have the opportunity to participate in the world-class research activities of engineering and medical faculty in biomaterials and imaging, cardiovascular engineering, cell and tissue engineering, molecular cellular and systems engineering, and neural engineering. All students in biomedical engineering are encouraged to join and be active in the Biomedical Engineering Society.

Mission Statement

Our departmental mission is to serve society as a center for learning and knowledge-creation in engineering and science for the purpose of advancing biology and medicine.

Our overall educational objective is to prepare those receiving a bachelor’s degree in biomedical engineering for a variety of career paths. To that end, our undergraduate curriculum is designed to provide technical proficiency as well as communication and other professional skills so that our graduates will be able to:

- Pursue careers in the biomedical engineering industry or related fields.
- Undertake advanced study (e.g., M.S., Ph.D.) in biomedical engineering or a related field, in preparation for careers utilizing this further training.
- Complete professional degrees (e.g., in medicine, dentistry, law, business) in preparation for careers utilizing those degrees.

Academic Programs

The Bachelor of Science in Biomedical Engineering (B.S.–BME) is designed to prepare graduates for the practice of engineering at a professional level and is accredited by Engineering Accreditation Commission of ABET (http://www.abet.org).

The curriculum is structured around a basic core of 102 units. In addition, a complementary set of courses totaling at least 18 units completes the degree requirements. The latter courses will be elected from the sciences (biology, chemistry, physics), mathematics or engineering.

In order to satisfy ABET requirements, all professional engineering curricula at the baccalaureate level must include the equivalent of one and one-half years of engineering topics, to include engineering sciences and engineering design appropriate to biomedical engineering. The B.S.–BME degree at Washington University requires 48 credits of engineering topics. The basic core curriculum includes 33 to 34 engineering topics credits. Therefore, students pursuing a B.S.–BME degree will need 14 to 15 additional engineering topics credits beyond the basic core curriculum. They also may receive up to 6 units of academic credit for a research or design project, by registering for BME 400, 400A, 400B or 400C Independent Study. In addition, their course program must include sufficient laboratory experience to ensure competence in experimental design, data...
collection and data analysis. For more information regarding engineering topics unit requirements, please refer to the BME Undergraduate Studies Manual, available in the Biomedical Engineering Department in Whitaker 190.

Double Majors

An option available to students majoring in Biomedical Engineering is the double major, leading to a second professional Bachelor of Science degree in one of the other engineering disciplines in four years. A degree in Biomedical Engineering combined with a professional degree in one of the traditional engineering disciplines can be expected to enhance employment options in industry. Depending upon the second major chosen, total unit requirements may range from 140 to 148 (or less if the student enters with AP credits). Hence, some summer work may be necessary in order to complete a double major within four academic years. To determine the specific requirements to be satisfied for both degrees, students are urged to consult with an adviser in the second department as early as possible.

Phone: 314/935-7208

Departmental website: http://bme.wustl.edu/Pages/default.aspx

Interim Chair and Professor of Biomedical Engineering

Mark Anastasio
PhD, University of Chicago
Imaging sciences, phase-contrast, X-ray imaging

Endowed Professors

Igor R. Efimov
Lucy & Stanley Lopata Distinguished Professor of Biomedical Engineering
PhD, Moscow Institute of Physics and Technology
Cardiac imaging, mechanisms of arrhythmias, implantable stimulators

Yoram Rudy
Fred Saigh Distinguished Professor
PhD, Case Western Reserve University
Cardiac electrophysiology, modeling of the cardiac system

Larry A. Taber
Dennis and Barbara Kessler Professor
PhD, Stanford University
Mechanics of growth and development, cardiac mechanics

Lihong Wang
Gene K. Beare Distinguished Professor
PhD, Rice University
Biophotonics and multimodality optical imaging

Frank C-P Yin

Stephen F. and Camilla T. Brauer Distinguished Professor of Biomedical Engineering
MD, University of California–San Diego
PhD, University of California–San Diego
Tissue and cell biomechanics, hemodynamics

Professors

Mark Anastasio
PhD, The University of Chicago
Imaging sciences, phase-contrast, X-ray imaging

Jianmin Cui
PhD, State University of New York–Stony Brook
Ion channels, channel structure-function relationship, biophysics

Rohit V. Pappu
PhD, Tufts University
Macromolecular self assembly and function, computational biophysics

Shelly E. Sakiyama-Elbert
PhD, California Institute of Technology
Cell adhesion, nerve regeneration, protein engineering

Associate Professors

Dennis L. Barbour
MD, PhD, Johns Hopkins University
Auditory physiology, sensory cortex neurocircuitry, functional neuronal imaging

Donald L. Elbert
PhD, University of Texas–Austin
Biomaterials, polymer chemistry, proteomics

Daniel W. Moran
PhD, Arizona State University
Motor control, neural engineering, neuroprosthetics, movement biomechanics

Jin-Yu Shao
PhD, Duke University
Cell mechanics, receptor and ligand interactions, molecular biomechanics

Kurt A. Thoroughman
Director of Undergraduate Studies
PhD, Johns Hopkins University
Human motor control and motor learning, neural computation

Assistant Professors

Jan Bieschke
PhD, Max Planck Institute for Biophysical Chemistry/University of Braunschweig
Single molecule fluorescence and other biophysical methods to probe the mechanistic underpinnings of protein misfolding

Vitaly Klyachko
PhD, University of Wisconsin–Madison
Synaptic function and plasticity, neural circuits, information analysis, neurological disorders

Kristen Naegle  
PhD, Massachusetts Institute of Technology  
Computational systems biology with emphasis on cellular networks involved in cancer and diabetes

Baranidharan Raman  
PhD, Texas A & M University  
Computational and systems neuroscience, neuromorphic engineering, pattern recognition, sensor-based machine olfaction

Jon Silva  
PhD, Washington University  
Ion channel biophysics

Lecturers
Alyssa Vikesland  
Lecturer
Patricia Widder  
Lecturer

The Major in Biomedical Engineering

The Basic Core

The B.S. in Biomedical Engineering curriculum that meets accreditation criteria is structured around a basic core of 103 units, outlined below. In addition, a complementary set of courses totaling at least 17 units (making the total to 120 units) completes the degree requirements. The latter courses will be selected from the sciences (biology, chemistry, physics), mathematics or engineering. Students in BME also may receive up to 6 units of academic credit for a research or design project, by registering for BME 400, 400A, 400B or 400C Independent Study (please see the department for the policy on Independent Study). Finally, all students in BME must complete the English Composition requirement (please see the Engineering Degree Requirements page), which may be satisfied by examination or a minimum grade of C+ in E Comp 100.

Click here to view a sample curriculum.

In order to satisfy ABET accreditation requirements, all professional engineering curricula at the baccalaureate level must include the equivalent of one and one-half years of engineering topics, to include engineering sciences and engineering design appropriate to biomedical engineering. Please note that the number of engineering topics credits for a course does not necessarily equal its total number of credits. Engineering topics credits and the total number of credits for any course taught in the school of engineering are provided on the Engineering Student Services website.

The B.S.–BME degree at Washington University requires 48 credits of engineering topics. The basic core curriculum includes 34 (if CSE 131 is taken) or 33 (if CSE 200 is taken) engineering topics credits. Therefore, students pursuing a B.S.–BME degree will need 14 or 15 additional engineering topics credits beyond the basic core curriculum. Out of these 14 or 15 engineering topics credits, at least 6 must be earned from the BME Tier I electives listed below (all of them carry three engineering topics credits and the ones marked with # are offered every other year or less):

The remaining eight or nine engineering topics credits may be earned from the BME Tier I electives listed above, other upper-level BME courses (see BME in WUCRSL) or other engineering electives listed below in the order of mechanical engineering, electrical and systems engineering, and chemical engineering (all of them carry three engineering topics credits unless noted otherwise and the ones marked with # are offered every other year or less):

MEMS 3410 Fluid Mechanics
MEMS 350 Engineering Mechanics III
MEMS 431 Structural Dynamics and Vibrations
MEMS 5301 Nonlinear Vibrations (#)
MEMS 5500 Elasticity (#)
MEMS 5510 Finite Element Analysis (#)
ESE 351 Signals and Systems
ESE 441 Control Systems
ChE 351 Engineering Analysis of Chemical Systems
ChE 368 Transport Phenomena II

Once the engineering topics requirement is satisfied, students pursuing the B.S.–BME degree may take almost any course in science or engineering to reach 120 units in total, as required by the university for a bachelor’s degree.

Another option available to students majoring in Biomedical Engineering is the double major, leading to a second professional Bachelor of Science degree in one of the other engineering disciplines in four years. A degree in Biomedical Engineering combined with a professional degree in one of the traditional engineering disciplines can be expected to enhance employment options in industry. Depending upon the second major chosen, total unit requirements may range from 140 to 148 (or fewer if the student enters with AP credits). Hence, some summer work may be necessary in order to complete a double major within four academic years. To determine the specific requirements to be satisfied for both degrees, students are urged to consult with an adviser in the second department as early as possible.
There are no Biomedical Engineering minors. Please see the complete list of minors (p. 830) offered in the School of Engineering & Applied Science.

**E62 BME 140 Introduction to Biomedical Engineering**
An introduction to the vast and diverse field of biomedical engineering (BME), this very challenging course has two main purposes. One is to teach students — via lectures, reading assignments, homework and exams — to think on their own, to solve problems and know how engineering principles are applied to the areas of bioelectricity, biomechanics, biomolecules, biotechnology and bioimaging. The second is to introduce students — via guest lectures by school of medicine and engineering faculty — to some of the fascinating and challenging ongoing research in these areas. The course is challenging because students at this early stage, by and large, lack the knowledge base to understand either the engineering/biological aspects of the topical areas or the research being presented. Nevertheless, because future success depends on such, emphasis throughout is placed on developing self-learning as well as quantitative and analytical problem-solving skills, but at an appropriate level. By the end of the course it is hoped that students have begun to acquire the skills and approaches necessary to succeed in the engineering curriculum as well as a much more in-depth and informed perspective of BME. Corequisites: Physics 117A, Chem 111A and college-level calculus. Credit 3 units.  EN : DU, SU, TU

**E62 BME 201 From Concept to Market — The Business of Biomedical Engineering**
This seminar course is offered as E60 Engr 324 From Concept to Market — The Business of Engineering beginning in fall 2012. Credit 3 units.  EN : DU, SU, TU

**E62 BME 240 Biomechanics**
Principles of static equilibrium and solid mechanics applied to the human anatomy and a variety of biological problems. Statics of rigid bodies with applications to the musculoskeletal system. Mechanics of deformable media (stress, strain; stretching, torsion and bending) with introduction to nonlinear behavior, viscoelasticity and growth in living tissue. Applications to cells, bone, muscle, arteries, the heart and the cochlea. Prerequisites: Physics 117A or 197. Credit 3 units.  EN : DU, SU, TU

**E62 BME 301A Quantitative Physiology I**
A course (lectures, recitation and supervised laboratory sections) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include bioinstrumentation, eye movement, muscle mechanics, action potentials, sensory systems, neuroprosthetics. Prerequisites: BME 140, CSE 131 or 200, ESE 230, Biol 3058 (previously Biol 3050 or 3059), ESE 318, ESE 319 or permission of instructor. Corequisites: Engr 310 or permission of instructor. Credit 4 units.  EN : DU, SU, TU

**E62 BME 301B Quantitative Physiology II**
A course (lecture and supervised laboratory sessions) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include electrocardiography; heart contractility; pulse wave propagation in arteries; pulmonary function; renal function; immune system; drug delivery. Prerequisites: BME 140, CSE 131 or 200, ESE 230, ESE 318 or ESE 319 or permission of instructor. Corequisites: Engr 310 or permission of the instructor. Credit 4 units.  EN : DU, SU, TU

**E62 BME 314 Physics of the Heart**
A lecture and demonstration course that may be of particular interest to premedical and life science students. Basic physics of the human cardiovascular system. Elasticity of vessels: properties of elastin and collagen. Energetics of the circulation: arterial and venous blood pressure, total fluid energy, gravitational potential energy, kinetic energy. Streamline flow and turbulence: effects of stenosis. Static and dynamic energy consumption of the heart: cardiac efficiency, the tension-time integral, Laplace’s law, Starling’s law. Metabolism of cardiac muscle. Electrophysiology: the heartbeat and cardiac arrhythmias. The physics of phonocardiograms, echocardiograms and other non-invasive techniques for physical assessment of cardiac abnormalities, including ischemia and myocardial infarction. Models of mechanical properties: contractile element, series elastic and parallel elastic elements. Corequisite: Physics 118A, Physics 198 or permission of instructor. Same as Physics 314 Credit 3 units.  A&S : NS  A&S : IQ, NSM, AN  BU : SCI  EN : SU, TU  FA : NSM

**E62 BME 320B Bioengineering Thermodynamics**
This course teaches the foundations of thermodynamics with strong emphasis on concepts, translation of concepts, and applications of concepts in bioengineering and biophysics. The target audience for this course is juniors majoring in Biomedical Engineering. The course content draws, loosely, from the book *Molecular Driving Forces: Statistical Thermodynamics in Chemistry and Biology* by Ken A. Dill and Sarina Bromberg, published by Garland Science. Students have to enroll in the problem solving session. Prerequisite: a strong background in multivariate calculus. Probability and Statistics is useful as a corequisite.
Engineering

Credit 3 units. EN: SU, TU

E62 BME 320L Bioengineering Thermodynamics Laboratory
This course includes hands-on laboratory experiments in topics relevant to bioengineering thermodynamics, such as heat transfer, relationships involving temperature and pressure, equilibria, mixing and solution chemistry. A focus of the course is extending fundamental scientific principles to biological applications. Students have the opportunity to design their own experiments, explore topics of special interest, and present their findings. Prerequisites: Chem 111A and Chem 151; Physics 117A, Physics 118A.
Credit 2 units.

E62 BME 366 Transport Phenomena in Biomedical Engineering
Many processes of importance in biology and medicine involve the transfer of mass, heat or momentum. Through the use of the differential control volume approach, the fundamental transport equations are derived. Systematic derivation of differential equations appropriate for different types of transport problems are explored. Solutions of the resulting differential equations for simple chemical/biological systems are then sought. Macroscopic descriptions of fluid flow are applied to the design of blood pumps for the heart. Unsteady mass transfer with diffusion, advection and chemical reactions also are applied to the transport of proteins, metabolites and therapeutics throughout the body. Prerequisites: BME 240, Math 217, BME 320B, ESE 317 or ESE 318 and 319.
Credit 3 units. EN: SU, TU

E62 BME 400C Independent Study
Independent investigation on a topic of special interest. This course has 3 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME department’s accreditation committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and permission of program director. Variable credit, maximum 6 units.
Credit variable, maximum 6 units. EN: DU, SU, TU

E62 BME 400C Independent Study
Independent investigation on a topic of special interest. This course has 3 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME department’s accreditation committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and permission of program director. Variable credit, maximum 6 units.
Credit variable, maximum 6 units. EN: DU, SU, TU

E62 BME 400B Independent Study
Independent investigation on a topic of special interest. This course has 2 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME department’s accreditation committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and permission of program director. Variable credit, maximum 6 units.
Credit variable, maximum 6 units. EN: DU, SU, TU

E62 BME 400A Independent Study
Independent investigation on a topic of special interest. This course has 1 unit of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME department’s accreditation committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and permission of program director. Variable credit, maximum 6 units.
Credit variable, maximum 6 units. EN: DU, SU, TU

E62 BME 400B Independent Study
Independent investigation on a topic of special interest. This course has 2 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME department’s accreditation committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and permission of program director. Variable credit, maximum 6 units.
Credit variable, maximum 6 units. EN: DU, SU, TU

E62 BME 400A Independent Study
Independent investigation on a topic of special interest. This course has 1 unit of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME department’s accreditation committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and permission of program director. Variable credit, maximum 6 units.
Credit variable, maximum 6 units. EN: DU, SU, TU

E62 BME 400B Independent Study
Independent investigation on a topic of special interest. This course has 2 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME department’s accreditation committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and permission of program director. Variable credit, maximum 6 units.
Credit variable, maximum 6 units. EN: DU, SU, TU

E62 BME 402 Senior Design II
BME 402 is a continuation of the BME 401 class. Working in small groups, students take a paper design completed in BME 401, and build a prototype. The students evaluate, optimize and undertake the building of the design. The design experience requires application of knowledge and skills acquired in earlier course work; it incorporates engineering standards and realistic constraints that include most of the following considerations: economic, environmental, ethical, manufacturability, sustainability, health and safety, social and political. Students prepare written reports and present their designs orally to their classmates and panels of faculty members and industrial representatives. Prototype construction is not generally required but may be encouraged subject to available time and financial and material resources. Prerequisite: BME 301A, BME 301B and senior standing.
Credit 3 units. EN: DU, SU, TU

E62 BME 402 Senior Design II
BME 402 is a continuation of the BME 401 class. Working in small groups, students take a paper design completed in BME 401, and build a prototype. The students evaluate, optimize and undertake the building of the design. The design experience requires application of knowledge and skills acquired in earlier course work; it incorporates engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, social, and political. Students prepare written reports and participate in oral design reviews to a panel of faculty members and industrial representatives. Prototype construction is the final goal of the class. Prerequisites: BME 401, senior standing and approval of the instructor.
Credit 3 units. EN: DU, SU, TU

E62 BME 422 Kinetics In Cell Signaling and Metabolism
This course focuses on the development of mathematical descriptions for cell signaling and catalysis in cells. We build
a foundation to understand time-dependent reactions in biological systems and then explore models for the flow of information through metabolic pathways. Additionally, we examine experimental methods for understanding receptors, transmitters and catalysis. Prerequisites: BME 301B, BME 320B, ESE 317 or ESE 318 and 319. Credit 3 units.

E62 BME 423 Biomaterials Science
An understanding of the interactions between biological systems and artificial materials is of vital importance in the design of medical devices. This course introduces the principles of biomaterials science, unifying knowledge from the fields of biology, materials science, surface science and colloid science. The course is taught from the primary scientific literature, focusing on the study of protein/surface interactions and hydrogel materials. Same as BME 523 Credit 3 units.

E62 BME 433 Biomedical Signal Processing
An advanced undergraduate/graduate level course. Continuous-time and discrete-time application of signal processing tools to a variety of biomedical problems. Course topics include linear systems theory, frequency transforms, sampling theorem, basis functions, linear filtering, feature extraction, noise analysis, system identification. Concepts learned in class are applied using software tools to real biomedical signals such as speech, ECG, EEG, medical images. Prerequisites: ESE 317 (or ESE 318 or 319), ESE 351. Same as BME 533 Credit 3 units.

E62 BME 458A Biological Transport
The principles of mass, momentum and energy transport are applied to the analysis of selected processes of biomedical and biotechnological interest. Topics include dynamics of blood flow, oxygen and solute transport, steady and transient diffusion in reacting systems, pharmacokinetic analysis and heat transfer. Prerequisite: ChE 366 or ChE 367 or MEMS 370 or graduate standing. Same as BME 558 Credit 3 units.

E62 BME 459 Intermediate Biomechanics
This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing. Prerequisites: BME 240 and ESE 317 or ESE 318 and ESE 319 or equivalent, or permission of instructor. Same as BME 559 Credit 3 units.

E62 BME 461 Protein Structure and Dynamics
This course covers the concepts and methods involved in the analysis of protein structure, stability, folding and misfolding. Topics include, protein structural elements, amyloid structure, intra- and intermolecular forces, folding pathways and intermediates, phi-value analysis, kinetics of protein folding and of amyloid formation, introduction to X-ray crystallography and NMR and their application to problems of bioengineering and biophysics. One half of the course consists of lectures, the other half is a student seminar, in which each student presents a paper from primary literature and its concept and methodology that is discussed in detail. Prerequisites: senior or graduate level, prior course work in physical chemistry/thermodynamics. Credit 3 units.

E62 BME 462 Protein Function and Interactions
This course focuses on the interactions between proteins, nucleic acids, small molecules and drugs. We begin with the elements of molecular recognition, binding and prediction of interactions. We next move on to molecular kinetics, inhibition and allosteric regulation. Finally we look at modeling regulatory networks and signaling pathways using systems biology approaches. Credit 3 units.

E62 BME 463 Orthopaedic Biomechanics — Bones and Joints
Basic and advanced solid mechanics applied to the musculoskeletal system, with a primary focus on bone and joint mechanics. Topics include: forces in joints; gait analysis; axial, torsional and bending loading of bones; mechanical properties (elastic, fracture, creep, fatigue) and composition of bone; bone adaptation and basic concepts of bone biology; joint kinematics; total hip and knee replacement; mechanical consequences of injury (fracture) and disease (osteoporosis). This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Same as BME 563 Credit 3 units.

E62 BME 464 Special Topics: Orthopaedic Biomechanics — Cartilage/Tendon
Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on...
E62 BME 468 Cardiovascular Dynamics
Same as BME 568
Credit 3 units.  EN : DU, SU, TU

E62 BME 471 Bioelectric Phenomena
This course is a quantitative introduction to the origins of bioelectricity with an emphasis on neural and cardiac electrophysiology. Topics include electric fields and current flow in volume conductors; cell membrane channels and their role in generating membrane potentials; action potentials and their propagation in myelinated and unmyelinated axons as well as cardiac tissue. Minor topics of discussion include both skeletal muscle and nonhuman (e.g., electric fish) sources of bioelectricity. Prerequisite: ESE 330.
Credit 3 units.  EN : DU, SU, TU

E62 BME 472 Biological Neural Computation
This course considers the computations performed by the biological nervous system with a particular focus on neural circuits and population-level encoding/decoding. Topics include Hodgkin-Huxley equations, phase-plane analysis, reduction of Hodgkin-Huxley equations, models of neural circuits, plasticity and learning, and pattern recognition and machine learning algorithms for analyzing neural data. Note: Graduate students in psychology or neuroscience who are in the cognitive, computational and systems neuroscience curriculum pathway may register in Biol 5657 for three credits. For non-BME majors, conceptual understanding and selection/application of right neural data analysis technique are stressed. Hence homework assignments/examinations for the two sections are different, however all students are required to participate in a semester-long independent project as part of the course. Calculus, differential equations, basic probability and linear algebra undergraduates need permission of the instructor. Biol 5657 prerequisites: Permission from the instructor.
Same as BME 572
Credit 3 units.  EN : DU, SU, TU

E62 BME 4902 Special Topics: Cellular Neurophysiology
This course examines the biophysical concepts of synaptic function with the focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information coding, mechanisms of learning and memory, function of synapses in sensory systems, models of synaptic disease states such as Parkinson and Alzheimer’s diseases. Additionally, a set of lectures is devoted to modern electrophysiological and imaging techniques, and modeling approaches to study synapses and neural circuits. Prerequisites: senior or graduate standing.
Same as BME 5902
Credit 3 units.  EN : DU, SU, TU

E62 BME 4903 Physical Methods for Biomedical Scientists
This course provides an introduction to various techniques and methods that are widely used in biomedical research, including spectroscopy (electronic, vibrational, Raman and magnetic resonance) and surface analysis tools. The course materials are designed for graduate students and seniors majoring in biomedical engineering and biology. Prerequisites: senior or graduate standing.
Same as BME 5903
Credit 3 units.

E62 BME 4904 Interfaces and Attachments in Natural and Engineered Structures
Attachment of dissimilar materials in engineering and surgical practice is a perennial challenge. Bimaterial attachment sites are common locations for injury, repeated injury and mechanical failure. Nature presents several highly effective solutions to the challenge of bimaterial attachment that differ from those found in engineering practice. This course bridges the physiologic, surgical and engineering approaches to connecting dissimilar materials and aims to advance the field by providing the first ever cross-disciplinary treatment of the subject. The course elucidates natural bimaterial attachments and outline engineering principles underlying successful attachments to the communities of tissue engineers and surgeons. The course includes an in-depth analysis of the biology of attachments in the body and mechanisms by which robust attachments are formed. The course also reviews current concepts of attaching dissimilar materials in surgical practice (e.g., for rotator cuff tendon-to-bone repair) and engineering (e.g. attachment of composite wings to the aluminum fuselage of an aircraft). The course concludes with a discussion of bioengineering approaches that are currently being developed to more effectively combine dissimilar materials.
E62 BME 502 Cardiovascular MRI — Physics to Clinical Application
This graduate course (seniors welcome) covers the basic physics involved in creating an image by magnetic resonance technology. The use of this technology, specifically as it applies to the unique challenges of cardiovascular applications, is examined. This includes topics such as motion compensation techniques, real-time imaging, exogenous contrast enhancement and quantitative flow measurements, for example. As much as one-third of the class involves actual case studies and the discussion of clinical use for cardiovascular MRI. Students demonstrate competence in the subject through a combination of homework, a final examination and a small semester project. Prerequisites: Calculus, introductory human physiology/anatomy/biology course. Credit 3 units.

E62 BME 502L MRI Practicum
This hands-on lab course, taught at the Medical School campus using research-dedicated clinical MRI scanners, extends the concepts and theory of MRI learned in BME 502. Emphasis is placed on learning to operate a clinical MRI scanner to obtain data useful to biomedical experimentation. The level of understanding goes beyond the basic clinical user interface, deeper into hardware and software. The lab includes topics such as image acquisition and manipulation, k-space (i.e., Fourier domain), RF coil design, proton and non-proton spectroscopy and imaging, and general pulse sequence design. In addition to assisted lab time, participants are expected to spend some additional time using the MRI scanners and/or simulators, performing image analysis in, e.g. MATLAB or ImageJ, and designing pulse sequences. Students demonstrate competence through a combination of hands-on experimentation, practical exams and written lab reports. The lab is taught at the Research Clinical Scanners in the CORTEX building, Dept. of Medicine. Prerequisite: BME 502. Credit 2 units.

E62 BME 503A Cell and Organ Systems Biology
This 1.5-semester course integrates and extends the basic principles of cell biology and physiology to the functions of the major organ systems of the body i.e. muscle, cardiovascular, renal, respiratory, gastrointestinal and endocrine. Same as M75 503, offered through the medical school. This course is open to biomedical engineering students only. Permission must be obtained by the chairman in Biomedical Engineering. Starts at same time as Medical School classes and ends the middle of spring semester. Credit 6 units.

E62 BME 504 Light Microscopy and Optical Imaging
Recent advances in optics, microscopy and probe design have led to a dramatic expansion of options for measuring structural and functional features of biological tissue with light. Course topics include the basic physics underlying vital light microscopy, use of voltage-sensitive and calcium-sensitive fluorescent probes, multiphoton and confocal imaging, and image acquisition/processing. Special emphasis is placed on imaging neural tissue and live preparations. Students read current literature and devise a research project based upon an imaging technology. Credit 3 units.

E62 BME 506 Seminar in Imaging Science and Engineering
Same as ESE 596
Credit 1 unit.

E62 BME 5068 Fundamentals of Molecular Cell Biology
Same as Biol 5068
Credit 4 units.

E62 BME 511 Biotechnology Techniques for Engineers
This course is a survey of techniques that biomedical engineers working in biotechnology and biomedical engineering will encounter in research or industry. It serves to introduce the important advances in the state of the art in molecular and cell biology. Students learn the basis of standard biological techniques and when these techniques should be applied, as well as their shortcomings. This course provides students with a toolbox of techniques to approach the analysis of cellular and molecular interactions. Techniques include recombinant DNA methods, PCR, protein expression and purification, protein analysis, mammalian cell culture, light microscopy, and immunohistochemistry. Prerequisites: graduate standing in biomedical engineering and BME 530A or equivalent. Credit 3 units.

E62 BME 523 Biomaterials Science
An understanding of the interactions between biological systems and artificial materials is of vital importance in the design of medical devices. This course introduces the principles of biomaterials science, unifying knowledge from the fields of biology, materials science, surface science and colloid science. The course is taught from the primary scientific literature, focusing on the development of mathematical models of protein/surface interactions. Credit 3 units.
E62 BME 5231 Biomaterials Science: Polymer Physics
The properties of polymeric biomaterials are largely predictable from basic polymer physics principles. Topics discussed include: single chain conformations, thermodynamics of mixing and polymer solutions, networks and gelation, rubber elasticity and swelling, and polymer dynamics. Credit 2 units.

E62 BME 524 Tissue Engineering
This course integrates the principles and methods of engineering and life sciences toward the fundamental understanding of normal and pathological mammalian tissues especially as they relate to the development of biological substitutes to restore, or improve tissue function. Current concepts and strategies including drug delivery, tissue and cell transplantation, and in vivo tissue regeneration are introduced as well as their respective clinical applications. Topics discussed include: swelling, and polymer dynamics.

E62 BME 525 Engineering Aspects of Biotechnology
An understanding of engineering principles such as kinetics and transport is essential to the successful scale up of processes for the production of biological therapeutics. This course discusses the use of protein-based therapeutics and their production in bacterial and mammalian cells. The course unifies concepts learned in biology, thermodynamics and transport to understand the need for engineering in the field of biotechnology. The impact of emerging technologies such as genomics, proteomics, micro arrays, tissue engineering and gene therapy on the biotechnology industry also is described. Prerequisites: ChE 366-367 or MEMS 370, Biol 2960 and 2970. Credit 3 units. EN : DU, SU, TU

E62 BME 527 Design of Artificial Organs
Medical devices that replace the function of one of the major organs in the body must usually interface with flowing blood. Examples include total artificial hearts, left ventricular assist devices, membrane oxygenators, hemodialysis systems and encapsulated endocrine cells. The design of these devices relies on integration of knowledge from a variety of fields, in particular computational fluid dynamics and blood rheology. We study the process by which a concept for a medical device eventually leads to a functioning, blood-contacting medical device. An introduction to computational fluid dynamics (the finite difference and finite volume methods) are integrated with computer-aided design and testing of devices using the software package GAMBIT/Fluent. Prerequisite: BME 366 or equivalent course in Transport Phenomena (including momentum and mass transfer).

E62 BME 530A Molecular Cell Biology for Engineers
This course is designed for upper-level undergraduates and first-year graduate students with a background in engineering. This course covers the biology of cells of higher organisms: protein structure and function; cellular membranes and organelles; cell growth and oncogenic transformation; cellular transport, receptors and cell signaling; the cytoskeleton, the extracellular matrix and cell movement. Emphasis is placed on examples relevant to biomedical engineering. The course includes two lectures per week and one discussion section. In the discussion section, the emphasis is on experimental techniques used in cell biology and the critical analysis for primary literature. Note this course does not count for engineering topics credits and is meant to fulfill a life science requirement for engineering or physical sciences graduate students. Prerequisites: Biol 2960 and 2970 or graduate standing. Credit 4 units.

E62 BME 533 Biomedical Signal Processing
Course designed for graduate students with little or no background in signal processing. Continuous-time and discrete-time application of signal processing tools to a variety of biomedical problems. Course topics include review of linear signals and systems theory, frequency transforms, sampling theorem, basis functions, linear filtering, feature extraction, parameter estimation and biological system modeling. Special emphasis is placed on signal transduction and data acquisition. Additional topics include noise analysis of real-world biosignals, biological system identification, stochastic/chaotic/fractal/nonlinear processes in biological systems. Concepts learned in class are applied using software tools to identify biomedical signals such as biological rhythms, chemical concentrations, blood pressure, speech, EMG, ECG and EEG. Prerequisite: graduate standing or consent of instructor. Credit 3 units. EN : DU, SU, TU

E62 BME 537 Computational Molecular Biology
This course focuses on mathematical and algorithmic issues in systems biology and biological sequence analysis. The essential mathematics is introduced first. Systems biology topics include synthetic biology, dynamical systems modeling, mapping and modeling gene regulatory networks, constraint based approaches to predictive modeling of metabolic networks, and the integration of regulatory and metabolic models. Sequence analysis topics include, Hidden Markov Models, parameter inference, sequence alignment and modeling transcription factor binding sites. This course includes a combination of paper and pencil homework assignments and programming labs.
Engineering

E62 BME 540 Modeling Biomolecular Systems II
This course is a continuation of BME 530/Biol 5476, covering additional topics in computer modeling and simulation. The lectures cover the theory and underlying algorithms, while the laboratories and term project provide the students with hands-on experience in using various software packages. Topics include: statistical mechanics concepts in molecular simulations; algorithms for molecular dynamics, stochastic dynamics and Monte Carlo simulations; free energy calculations; electrostatics and continuum solvation methods; hybrid QM/MM calculations; multiscale modeling. Prerequisites: a background in biochemistry and physical chemistry.
Credit 3 units. EN : DU, SU, TU

E62 BME 5494 Quantitative Cardiovascular Physiology
Same as Biol 5494
Credit 3 units. EN : SU

E62 BME 557 Cellular and Subcellular Biomechanics
This is an advanced biomechanics course intended to cover the applications of mechanics to biological problems at cellular and subcellular levels. Discussion topics include mechanical equilibrium of biomembranes, constitutive equations of biomembranes, viscoelasticity of biomembranes, mechanics of the cytoskeleton, experimental tools (the micropipette aspiration technique, the atomic force microscope, the optical tweezers, etc.) and their applications. Prerequisite: instructor’s permission.
Credit 3 units. EN : DU, SU, TU

E62 BME 558 Biological Transport
The principles of mass, momentum and energy transport are applied to the analysis of selected processes of biomedical and biotechnological interest. Topics include dynamics of blood flow, oxygen and solute transport, steady and transient diffusion in reacting systems, pharmacokinetic analysis and heat transfer.
Prerequisites: Chem 366 or Chem 367 or MEMS 370 or graduate standing.
Credit 3 units. EN : DU, SU, TU

E62 BME 559 Intermediate Biomechanics
This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing.
Prerequisites: BME 240 and ESE 317 (or ESE 318 or 319) or equivalent, or permission of instructor.
Credit 3 units. EN : DU, SU, TU

E62 BME 560A Biomechanics
Advanced topics in the application of mechanics to biological problems. The specific topics selected for discussion reflect current faculty research interests and may include: mechanics and energetics of contractility, membrane mechanics, material properties of cells and tissues, and micromechanical measurement systems.
Credit 3 units. EN : DU, SU, TU

E62 BME 5610 Protein Structures and Dynamics
This course covers the concepts and methods involved in the analysis of protein structure, stability, folding and misfolding. Topics include protein structural elements, amyloid structure, intra- and intermolecular forces, folding pathways and intermediates, phi-value analysis, kinetics of protein folding and of amyloid formation, spectroscopic methods, fluorescence-based methods, hydrodynamic methods, relaxation techniques and force spectroscopy in measuring dynamics of protein structure and protein interaction, introduction to X-ray crystallography and NMR and their application to problems of bioengineering and biophysics.
One half of the course consists of lectures, the other half is a student seminar, in which each student presents a paper from primary literature and its concept and methodology that is discussed in detail.
Prerequisites: senior or graduate level, prior course work in physical chemistry/thermodynamics.
Same as BME 461
Credit 3 units. EN : DU, SU, TU

E62 BME 562 Mechanics of Growth and Development
This course applies the fundamental principles of solid mechanics to problems involving growth, remodeling and morphogenesis of cells, tissues and organs. Introduction to developmental biology, nonlinear elasticity, viscoelasticity and active contraction. Particular topics include cellular morphogenetic mechanisms, growth and development of the cardiovascular system, and adaptive remodeling of bone.
Prerequisites: BME 240 or MEMS 241 or equivalent.
Credit 3 units. EN : DU, SU, TU

E62 BME 5620 Protein Function and Interactions
This course focuses on the interactions between proteins, nucleic acids, small molecules and drugs. We begin with the elements of molecular recognition, binding and prediction of interactions. We next move on to molecular kinetics, inhibition and allosteric regulation. Finally we look at modeling regulatory networks and signaling pathways using systems biology approaches.
E62 BME 563 Orthopaedic Biomechanics — Bones and Joints
Basic and advanced solid mechanics applied to the musculoskeletal system, with a primary focus on bone and joint mechanics. Topics include: forces in joints; gait analysis; axial, torsional and bending loading of bones; mechanical properties (elastic, fracture, creep, fatigue) and composition of bone; bone adaptation and basic concepts of bone biology; joint kinematics; total hip and knee replacement; mechanical consequences of injury (fracture) and disease (osteoporosis). This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Credit 3 units. EN: DU, SU, TU

E62 BME 564 Special Topics: Orthopaedic Biomechanics — Cartilage/Tendon
Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisite: BME 240 or equivalent. Note: BME 590Z (BME 463/563) Orthopaedic Biomechanics — Bones and Joints is NOT a prerequisite. Credit 3 units. EN: SU, TU

E62 BME 566 Cardiac Electrophysiology
A mathematical introduction to basic electrophysiology and its application to the heart. Topics include: gross cardiac anatomy and physiology; the cardiac cycle; cable theory and propagation of activity in one, two and three dimensions; the forward and inverse problems of electrocardiology; and applications to clinical medical practice. Engineering examples include cardiac mapping systems, pacemakers and implantable defibrillators. Prerequisite: SSM 317. Credit 3 units. EN: DU, SU, TU

E62 BME 568 Cardiovascular Dynamics
This course focuses on the analysis of blood flow through the heart and blood vessels. Basic cardiovascular anatomy and physiology; principles of continuum mechanics. Flow through heart chambers, valves and coronary arteries; peristaltic flow in the embryonic heart. Steady and unsteady flow in tubes; wave propagation in blood vessels; flow in collapsible tubes; microcirculation. Prerequisites: BME 240 or equivalent and ChE 367 or MEMS 341 or equivalent, or permission of instructor. Credit 3 units. EN: DU, SU, TU

E62 BME 574 Quantitative Bioelectricity and Cardiac Excitation
Action potential generation, action potential propagation, source-field relationships in homogeneous and inhomogeneous media, models of cardiac excitation and arrhythmia, quantitative electrocardiography. Prerequisites: differential equations, Laplace transform, electromagnetic field theory (undergraduate level). Credit 3 units. EN: SU, TU

E62 BME 575 Molecular Basis of Bioelectrical Excitation
Ion channels are the molecular basis of membrane excitability in all cell types, including neuronal, heart and muscle cells. This course presents the structure and the mechanism of function of ion channels at the molecular level. It introduces the basic principles and methods in the ion channel study as well as the structure-function relation of various types of channels.
Exemplary channels that have been best studied are discussed to illustrate the current understanding. Prerequisites: knowledge of differential equations, electrical circuits and chemical kinetics. Credit 3 units.

**E62 BME 589 Biological Imaging Technology**
This class develops a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section examines how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure and function, image formation methods and diffraction limited imaging. The math section examines image decomposition using basis functions (e.g. Fourier transforms), synthesis of measurement data, image analysis for feature extraction, reduction of multidimensional imaging datasets, multivariate regression and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology are critiqued.
Same as ESE 589  
Credit 3 units. EN : DU, SU, TU

**E62 BME 5902 Special Topics: Cellular Neurophysiology**
This course examines the biophysical concepts of synaptic function with the focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information coding, mechanisms of learning and memory, function of synapses in sensory systems, models of synaptic disease states such as Parkinson and Alzheimer’s diseases. Additionally, a set of lectures is devoted to modern electrophysiological and imaging techniques, and modeling approaches to study synapses and neural circuits. Prerequisite: senior or graduate standing.  
Credit 3 units. EN : DU, SU, TU

**E62 BME 5903 Physical Methods for Biomedical Scientists**
This course provides an introduction to various techniques and methods that are widely used in biomedical research, including spectroscopy (electronic, vibrational, Raman and magnetic resonance) and surface analysis tools. The course materials are designed for graduate students and seniors majoring in biomedical engineering and biology. Prerequisite: senior or graduate standing.  
Credit 3 units.

**E62 BME 5904 Special Topics: Nanostructured Surfaces and Materials and Their Applications in Biomedical Research**
Although this course is primarily designed for graduate students and seniors in biomedical engineering, the selected topics are also appropriate for students in other departments such as chemistry, physics, chemical engineering, mechanical engineering and materials science. This course presents an overview of the basic principles and recent activities in representative areas of nanoscience and nanotechnology. We deal with the chemistry and physics of materials, structures and surfaces with feature sizes less than 100 nm: For example, when does size matter? How do we engineer the properties of materials/structures/surfaces through size control? Is there the lowest limit for the size? How do we synthesize nanomaterials, fabricate nanostructures and generate nanoscale patterns? What are the challenges in these newly developed areas? What are the unique applications of nanostructured materials in biomedical research? Prerequisites: general chemistry and general physics.  
Credit 3 units.

**E62 BME 5905 Neural Computation and Motor Behavior**
This course considers current problems in motor neuroscience. Emphasis is placed on experimental paradigms and computational models that most directly address how the brain represents, transforms and estimates information during movement, and how these computations adapt with experience. Graduate students from all engineering and science disciplines who aspire to deeply consider and address these issues should attend. Prerequisites: recommended background in neuroscience and/or numerical implementation of differential equations.  
Credit 3 units.

**E62 BME 5906 Brain Networks**
Large networks of interconnecting elements are now accessible for study with increasingly sophisticated simulation methods. Brain networks represent an exceptionally attractive target for such study. This course includes a survey of modern analytic methodology used to evaluate a range of biological neural networks from relatively simple cellular networks in model animals and in vitro to abstracted networks of functional areas in the human cerebral cortex. Course work involves lectures on
methodology and recent findings as well as readings from the primary literature. Prerequisites: Math 217 Differential Equations, graduate standing or consent of instructor. Credit 3 units.

E62 BME 5907 Advanced Concepts in Image Science
The course exposes students to a unified treatment of the mathematical and statistical principles of imaging. This includes the deterministic analysis of imaging systems that includes continuous-to-continuous, continuous-to-discrete and discrete-to-discrete mappings from objects to images. In addition, imaging systems are analyzed in a statistical framework where stochastic models for objects and images are introduced. Methodologies for task-based image quality assessment are reviewed, which includes classification tasks and receiver operator characteristic (ROC) analysis. Basic concepts of inverse problems and tomography also are covered. Prerequisite: graduate standing or consent of instructor. Credit 3 units.

E62 BME 5908 The Cell as a Machine
The goals of this course are to provide a working understanding of the basic cell functions and the physical and chemical principles underlying them. In practical terms, we attempt to solve a number of important problems relevant to replication, transcription, translation, translation, motility and other important functions. Classes consist of online videotaped lectures (three hours per week) and live weekly Q&A sessions (Th 6-7 p.m.). Prerequisites: basic physical chemistry, calculus, biology, graduate standing or approval by adviser or department. Credit 3 units.

E62 BME 5909 Physiology of the Heart
This is a comprehensive cardiac physiology course for biomedical engineers, which includes (1) history, philosophy and methodology of cardiac physiology and cardiac engineering, (2) structure, biochemistry and biophysics of the heart, (3) signal transduction and regulation, (4) normal physiology and pathophysiology, and (5) current approaches to therapy of heart disease. Textbook: Arnold M. Katz, Physiology of the Heart, 5th edition. Credit 3 units.

E62 BME 5910 Reverse Engineering the Human Brain
This course investigates classic and current research that identifies the processes by which the human brain transforms, estimates and adapts to underlie mental and physical behavior. We consider how these studies succeed or fail to identify the systemic properties that make us human. The focus is on behavioral approaches, but we also integrate into our study physiological, neurological and imaging approaches. Credit 3 units. EN: DU, SU, TU

E62 BME 5911 Cardiovascular Biophysics Journal Club
This journal club is intended for beginning graduate students, advanced undergraduates and MSTP students with a background in quantitative sciences (engineering, physics, math, chemistry, etc). The subjects covered are inherently multidisciplinary. We review landmark and recent publications in quantitative cardiovascular physiology, mathematical modeling of physiologic systems and related topics such as chaos theory and nonlinear dynamics of biological systems. Familiarity with calculus, differential equations and basic engineering/thermodynamic principles is assumed. Knowledge of anatomy/physiology is optional. Credit 1 unit. EN: DU, SU, TU

E62 BME 5912 Applied Mathematics for Biomedical Sciences
This course focuses on mathematical methods and concepts required for research in BME and related biomedical sciences. The course is organized around five modules: Linear Algebra, Differential Equations, Functionals, Variational Calculus and Statistical Analysis. The lectures introduce mathematical concepts and the application of these concepts to problems in biomedical sciences such as imaging, biotechnology, systems biology, network science and biophysics. Students are expected to have a background in advanced calculus, vector calculus, introductory linear algebra, differential equations and related topics in engineering mathematics. This course is open to graduate students and upperclass students majoring in engineering, particularly BME. Credit 3 units.

E62 BME 5913 Biological Systems Engineering
This project-based (MATLAB) class introduces several current techniques for systems-level measurement of molecules and a set of computational techniques for inferring biological meaning from such experiments. Several molecular types and measurement techniques are covered. How to determine the quality of measurements lays the ground work for understanding a new measurement technique. From there, computational topics includes dimensionality reduction techniques, correlations between measurements and outcomes, and network modeling.
and inference. A working knowledge of molecular biology, differential equations, linear algebra and statistics is required. Credit 3 units.

E62 BME 592 Special Topics: Biomedical Optics II: Imaging
This course covers optical imaging technologies. Topics include ballistic imaging, optical coherence tomography, Mueller optical coherence tomography, diffuse optical tomography, photoacoustic tomography and ultrasound-modulated optical tomography. Prerequisites: Math 217, BME 591. Credit 3 units. EN : DU, SU, TU

E62 BME 599 Masters Research
Credit variable, maximum 6 units.

Computer Science and Engineering

About Computer Science and Engineering

The field of Computer Science and Engineering studies the design, analysis, implementation and application of computation and computer technology. Computing plays an important role in virtually all fields, including science and medicine, music and art, business, law, and human communication; hence the study of Computer Science and Engineering can be interdisciplinary in nature. Whether your goal is to become a computing professional or to take a few courses to develop a basic understanding of computing for application to another field, the Department of Computer Science and Engineering at Washington University is committed to helping you gain the background you need.

People are attracted to the study of computing for a variety of reasons. Consequently, the department offers a wide variety of academic programs, including a five-course minor, a second major, several undergraduate degrees, combined undergraduate and graduate programs, as well as undergraduate research opportunities and an undergraduate honors program. Each academic program can be tailored to your individual needs.

The breadth of Computer Science and Engineering may be best understood in terms of the general areas of software systems, hardware, theory and applications.

Software Systems are collections of interacting software components that work together to support the needs of computer applications. Courses in this area help you gain a solid understanding of how software systems are designed and implemented. Examples include operating systems, which manage computational resources; network protocols, which are responsible for the delivery of information; programming languages, which support the construction of software systems and applications; and compilers, which translate computer programs into executable form.

Hardware is the term used to describe the physical and mechanical components of a computer system. Courses in this area provide background in logic circuits, which carry out basic computations; computer architecture, which defines the organization of functional components in a computer system, and peripheral devices such as disks and robot arms that are controlled by the computer system.

Theory is the study of the fundamental capabilities and limitations of computer systems. A background in theory will help you choose among competing design alternatives on the basis of their relative efficiency and will help you to verify that your implementations are correct. Theory courses provide background in algorithms, which describe how a computation is to be carried out; data structures, which specify how information is to be organized within the computer; analytical techniques to characterize the time or space requirements of an algorithm or data structure; and verification techniques to prove that solutions are correct.

Applications are the ways in which computer technology is applied to solve problems, often in other disciplines. Most applications courses provide background not only in the applications themselves but also in how the applications are designed and implemented. Examples of application areas include artificial intelligence, computer graphics and robotics.

A well-rounded study of computing will include training in each of these areas. However, depending on your educational goals, you may prefer to concentrate on certain areas for greater depth of knowledge. To help you balance your elective courses, most upper-level departmental courses are numbered with a designation in one of these categories: S for software systems, M for machines (hardware), T for theory and A for applications. If your interests are concentrated in the first two areas, a Computer Engineering degree might be best for you. If your interests are concentrated in the second two, a Computer Science degree might be best for you. You are encouraged to meet with a faculty adviser in the Department of Computer Science and Engineering to discuss your options and develop a plan consistent with your goals.

Undergraduate Programs

These pages introduce the wide variety of undergraduate programs offered by the Department of Computer Science and Engineering and will help as a starting point for students interested in studying computer science or computer engineering. We describe the Minor in Computer Science, the second major, the premedical option, the B.S. degree, the B.S.C.S. degree, the B.S. in Computer Engineering (see Majors (p. 848) and Minors (p. 850) tabs), combined undergraduate and graduate programs, the Undergraduate Research
Opportunities Program, and the Cooperative Education Program. Additional information can be found at cse.wustl.edu, and our department’s faculty can offer further guidance and information about our programs.

The Majors page contains some sample schedules for several of the Computer Science and Engineering degree options. These schedules demonstrate some of the many course schedules that can be selected in completing a computer science or computer engineering degree. All students in our programs are assigned an adviser, who can help design an individualized program, monitor a student’s progress, and consult about curriculum and career options.

Many nonmajors take a CSE course to broaden their education. CSE 104 Web Development, CSE 131 Computer Science I, and CSE 200 Engineering and Scientific Computing do not require any computer science background.

**Dual Degree**

An alternative to the second major is the dual-degree program that leads to two undergraduate degrees, one in the School of Engineering & Applied Science and one from another school. For this option you must complete all requirements (including distribution requirements) for both degrees. If Arts & Sciences is the other school, 150 credits are required for two degrees. (Only 120 credits are required for the second major because a single degree is earned.) See the Dual Degree Office (Lopata 303, 314/935-6100) for details.

**Premedical Option within Computer Science**

Students may pursue a premedicine curriculum in conjunction with either the B.S. degree or second major in computer science programs. Students interested in the premedical option should refer to the School of Engineering Bulletin (p. 819) section for details.

**Combined Undergraduate and Graduate Study**

The Department of Computer Science and Engineering offers in-depth graduate study in many areas. Students entering the graduate programs require a background in computer science fundamentals equivalent to at least the minor in computer science. Washington University undergraduates seeking admission to the graduate degree program to obtain a master’s degree in computer science or computer engineering do not need to take the Graduate Record Examination (GRE). For more information, contact the department office at 314/935-6160 or the associate chair at associatechair@cse.wustl.edu.

**The Joint B.S.–M.S.**

This five-year program that leads to both the bachelor’s and master’s degrees offers the student an excellent opportunity to combine undergraduate and graduate studies in an integrated curriculum. The combination of the two programs extends the flexibility of the undergraduate curriculum to more advanced studies, thereby enabling students to plan their entire spectrum of computing studies in a more comprehensive educational framework. Consistent with the general requirements (p. 823) defined by the School of Engineering, a minimum of 150 units is required for completion of the B.S.–M.S. program. Provided that the 150-unit requirement is satisfied, up to 6 units of course work acceptable for the M.S. can be counted toward both the B.S. and M.S. requirement. Students in the B.S.–M.S. program can take advantage of the program’s flexibility by taking graduate courses toward the graduate degree while still completing the undergraduate degree requirements.

The B.S.–M.S. program offers early admission to the graduate programs in computer science and computer engineering in the junior year and allows you to complete the master’s degree typically in only one additional year of study (instead of the usual three semesters). Undergraduate financial support is not extended for the additional semesters to complete the master’s degree requirements; however, scholarship support based upon a student’s major GPA calculated at the end of the junior year will be awarded automatically in the student’s final year of study. Students are classified as graduate students in their final year of study, and their tuition charges are at the graduate student rate. For information regarding scholarship amounts, please click here.

If you plan to apply to this program, it is recommended that you complete at least an undergraduate minor in computer science, three additional computer science courses at the 400 level, and one at the 500 level during your first four years. You must apply to this program by September 1 of your senior year, and a minimum GPA of 3.0 is required of all applicants.

**B.S.–M.B.A. Program**

The growing importance of computer-based information systems in the business environment has produced a sustained high demand for graduates with master’s degrees in business administration and undergraduate majors in computer science and engineering.

Students should apply to this joint program by February 1 of their junior year. The application for admission to the Olin Business School is available through the business school (p. 789). Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and a personal interview.

**Research and Industry Experience**

If you want to become involved in computer science or computer engineering research or gain experience in industry while you are an undergraduate, there are many opportunities to do so. A few of these are listed below.
Co-op: The Cooperative Education Program allows you to get valuable experience working in industry while an undergraduate. Doing a Co-op can help you gain another perspective on your education and may lead to full-time employment. Numerous companies participate in this program. More information is available from the Engineering Co-op and Internship Program that is part of the Career Center in the Danforth University Center, Suite 110.

Research: Participating in an undergraduate research project is a great way to learn a lot about a specific area and find out what research is all about. Research projects are available either for pay or for credit through CSE 400E Independent Study. See cse.wustl.edu for details.

Honors Program: If you maintain a 3.5 GPA and complete a thesis describing research that you have performed while an undergraduate, then you will graduate “with distinction” and your thesis title will appear on your transcript. Besides being a valuable experience, completing a thesis can be advantageous if you apply to graduate school. When selecting this option, you should register for CSE 499 Undergraduate Honors Thesis. Students in the Honors Program are encouraged to take several graduate-level courses and to serve as undergraduate teaching assistants for upper-level undergraduate courses.

Computing Facilities

The School of Engineering & Applied Science has numerous undergraduate laboratories that are accessible to all students regardless of their majors. In addition, the Department of Computer Science and Engineering maintains specialized instructional laboratories such as those in support of computer engineering classes. The department actively promotes a culture of strong undergraduate participation in research. Many undergraduates work in research labs with state-of-the-art equipment that provides them the opportunity to take part in computer science and computer engineering research. Sensor networks, high-speed routers, specialized FPGA hardware, wireless devices, RF tags, digital cameras, robots, large displays and multiprocessors are just a few of the hardware devices undergraduates often use in their projects. Opportunities for exploring modern software development techniques and specialized software systems further enrich the range of research options and help undergraduates sharpen their design and programming skills.

Advanced Placement/Proficiency

Students receiving a 4 or 5 on the AP Computer Science AB exam are awarded credit for CSE 131 Computer Science I. Students who receive a 4 or 5 on the AP Computer Science A exam can receive the same credit only if they pass the CSE 131 proficiency exam. Any student can take the CSE 131 proficiency exam, and a suitable score will waive CSE 131 as a requirement.

Upon request, the computer science department will evaluate a student for proficiency for any of our introductory courses. If a student is determined to be proficient in a given course, that course will be waived (without awarding credit) in the student’s degree requirements, and the student will be offered guidance in selecting a more advanced course. Questions should be directed to the associate chair at associatechair@cse.wustl.edu.

Undergraduate Courses

Course requirements for the minor and majors may be fulfilled by CSE 131 Computer Science I, CSE 132 Computer Science II, CSE 240 Logic and Discrete Mathematics, CSE 241 Algorithms and Data Structures and CSE courses with a letter suffix in any of the categories: software systems (S), hardware (M), theory (T) and applications (A). In addition, with approval of the instructor, up to 6 units of CSE 400E Independent Study can be used toward the CSE electives of any CSE degree. Other CSE courses provide credit toward graduation but not toward the CSE elective requirements for the second major, B.S.C.S., B.S.Co.E., or B.S. with a major in Computer Science. undergraduates are encouraged to consider 500-level courses. If you are interested in taking a course but are not sure if you have the needed prerequisites, please contact the instructor.

Departmental website: http://cse.wustl.edu/undergraduateprograms/Pages/default.aspx

Chair
Roch Guérin
Harold B. and Adelaide G. Welge Professor of Computer Science
PhD, California Institute of Technology
Computer networks and communication systems

Endowed Professors
Michael R. Brent
Henry Edwin Sever Professor of Engineering
PhD, Massachusetts Institute of Technology
Systems biology, computational and experimental genomics, mathematical modeling, algorithms for computational biology, bioinformatics

Jonathan S. Turner
Barbara J. and Jerome R. Cox Jr. Professor of Computer Science
PhD, Northwestern University
Design and analysis of internet routers and switching systems, networking and communications, algorithms

Professors
Jeremy Buhler
PhD, Washington University
Computational biology, genomics, algorithms for comparing and annotating large biosequences

Ron K. Cytron
PhD, University of Illinois at Urbana–Champaign
Programming languages, middleware, real-time systems

Christopher D. Gill
DSc, Washington University
Distributed real-time embedded systems, middleware, formal models and analysis of concurrency and timing

Raj Jain
PhD, Harvard University
Wireless networks, network security, next generation Internet, sensor networks, telecommunications networks, performance analysis, traffic management, quality of service

Chenyang Lu
PhD, University of Virginia
Real-time and embedded systems, wireless sensor networks, mobile computing

Robert Pless
PhD, University of Maryland
Computer vision, medical imaging, sensor network algorithms, citizen science

Weixiong Zhang
PhD, University of California–Los Angeles
Computational biology, genomics, machine learning and data mining, and combinatorial optimization

Associate Professors

Roger D. Chamberlain
DSc, Washington University
Computer engineering, parallel computation, computer architecture, multiprocessor systems

Yixin Chen
PhD, University of Illinois at Urbana–Champaign
Mathematical optimization, artificial intelligence, planning and scheduling, data mining, learning data warehousing, operations research, data security

Patrick Crowley
PhD, University of Washington
Computer and network systems, network security

Sanmay Das
PhD, Massachusetts Institute of Technology
Design of algorithms for complex environments, computational social science, machine learning

Tao Ju
PhD, Rice University
Computer graphics, visualization, mesh processing, medical imaging and modeling

William D. Richard
PhD, University of Missouri–Rolla
Ultrasonic imaging, medical instrumentation, computer engineering

Assistant Professors

Kunal Agrawal
PhD, Massachusetts Institute of Technology
Scheduling, resource allocation, transactional memory, cache-aware and cache-oblivious streaming

Yasutaka Furukawa
PhD, University of Illinois at Urbana–Champaign
Computer vision and computer graphics

Viktor Gruev
PhD, Johns Hopkins University
Low power integrated sensory systems, integrated polarization imaging, focal plane spatiotemporal image sensors, current mode image sensors, sensory systems in 3-D fabrication technology, micro/nano fabrication, micro fluidics, and low power analog/digital integrated circuits

Caitlin Kelleher
PhD, Carnegie Mellon University
Human-computer interaction, programming environments, and learning environments

Kilian Weinberger
PhD, University of Pennsylvania
Multi-task learning, convex optimization, metric learning, dimensionality reduction, manifold learning and machine learned ranking

Research Faculty

Sharlee Climer
PhD, Washington University
Computational biology, artificial intelligence, mathematical modeling, combinatorial optimization, pattern recognition

Lecturers

Anne Bracy
PhD, University of Pennsylvania
Computer architecture, microarchitecture, performance modeling, instruction fusion

Douglas Shook
BS, Ball State University
Imaging sensor design, compiler design and optimization

Todd Sproull
PhD, Washington University
Computer networking and mobile application development

Senior Professors

Jerome R. Cox Jr.
ScD, Massachusetts Institute of Technology
Computer system design, computer networking, biomedical computing

Mark A. Franklin
Hugo F. and Ina Champ Urbauer Professor of Engineering
PhD, Carnegie Mellon University
Computer architecture, systems analysis and parallel processing, storage systems design

Professors Emeriti

Richard A. Dammkoehler
MS, Washington University
Computer programming theory, information retrieval, computer systems architecture

Takayuki D. Kimura
PhD, University of Pennsylvania
Communication and computation, visual programming

Seymour V. Pollack
MS, Brooklyn Polytechnic Institute
Intellectual property, information systems

Bachelor of Science in Computer Science

The Bachelor of Science in Computer Science (B.S.C.S.) is designed for students planning a career in computer science and desiring a degree with an engineering flavor. Students working toward a B.S.C.S. degree must meet all requirements for a professional degree (p. 823). In addition, there are the following departmental course requirements:

• Common Studies Program Requirements:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>

<td></td>
</tr>
<tr>
<td>or CSE 431S</td>
<td>Translation of Computer Languages</td>
<td></td>
</tr>
</tbody>
</table>

Each of these core courses must be passed with a grade of C– or better.

• Computer Science Elective Requirements:

At least 18 additional units in computer science or computer science-related courses with an S, M, T or A suffix of which at least one must be a theory (T) course, at least one must be a systems (S) course, and at least one must be a machine (M) or application (A) course. Students may use up to 6 units of approved independent work (CSE 400E, CSE 497–CSE 499) as part of their computer science electives. Such independent work is not classified as S, M, T or A.

• Additional Departmental Requirements:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 309</td>
<td>Matrix Algebra</td>

<tr>
<td>ESE 326</td>
<td>Probability and Statistics for Engineering</td>
<td>3</td>
</tr>
</tbody>
</table>

All courses taken to meet the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/fail basis.

Click here for a sample schedule for Computer Science Degree Options. (p. 865)

The Major in Computer Science

The most flexible degree option in computer science is the Bachelor of Science in Applied Science (Computer Science), known informally as the Major in Computer Science. The B.S. degree is designed for students who want a solid background for a career in computer science, with additional flexibility to choose a well-rounded variety of courses. Because it has fewer specific course requirements than the B.S.C.S. and does not require the School of Engineering & Applied Science common studies (such as advanced mathematics, physics, chemistry, etc.), the B.S. degree program leaves room for you to select courses according to your particular needs and interests. Also, the B.S. works well if you want to complete another major along
Engineering

with computer science. This program is therefore well-suited for students planning to enter medical school or law school.

Students working toward a B.S. degree must meet all requirements for a Bachelor of Science Degree (see School of Engineering requirements) (p. 823) and the following course requirements:

• **Computer Science Core Requirements**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CSE 131</td>
<td>Computer Science I</td>
<td>3</td>
</tr>
<tr>

</tr>
<tr>
<td>or CSE 425S</td>
<td>Programming Systems and Languages</td>
<td></td>
</tr>
</tbody>
</table>

Each of these core courses must be passed with a grade of C– or better.

• **Computer Science Electives:**

At least 24 units of computer science electives, selected from any computer science course with an S, M, T or A suffix. Students may use up to 6 units of approved independent work (CSE 400E, CSE 497–CSE 499) as part of their computer science electives.

• **Math Requirement:**

Calculus (Math 131–Math 132–Math 233), Probability (ESE 326, Math 3200, or the sequence QBA 120 Managerial Statistics I–QBA 121 Managerial Statistics II). Upon completing a course in the calculus sequence (Math 131–Math 132–Math 233) with a grade of C– or better, you may apply to receive credit for the preceding courses in the calculus sequence.

• **Additional Requirements:**

8 units in natural sciences or psychology (courses taken in the following departments will be counted: Chemistry, Earth and Planetary Sciences, Physics, Psychology, Biology, Philosophy–Neuroscience–Psychology), C+ or better in E Comp 100 (unless waived), Engr 310 Technical Writing (or comparable demonstration of technical writing ability), and the humanities and social sciences electives required of all engineering students.

Computer science and math courses taken for the above requirements as well as E Comp 100 and Engr 310 cannot be taken on a pass/fail basis.

Click here for a sample schedule for Computer Science Degree Options. (p. 865)

---

**Bachelor of Science in Computer Engineering**

Computer Engineering encompasses studies of hardware, software and systems issues that arise in the design, development and application of computer systems. Computer Engineering students must choose between a more hardware-focused or a more software-focused degree program, each with slightly different requirements.

Students working toward a B.S.Co.E. degree must meet all requirements for a professional degree (p. 823). Required courses and technical electives cannot be taken on a pass/fail basis. In addition, there are the following departmental course requirements:

**Common Studies Program Requirements:**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>

</tbody>
</table>

Each of these core courses must be passed with a grade of C– or better.
• **Computer Engineering Focus Area:**
  Each student must satisfy the requirements of at least one focus area.
  **Hardware Focus:**
  - CSE 462M Computer Systems Design 3
  - one of the following
  - CSE 463M Digital Integrated Circuit Design and Architecture 3
  - CSE 464M Digital Systems Engineering 3
  - CSE 465M Digital Systems Laboratory 3
  **Software Focus:**
  - CSE 422S Operating Systems Organization 3
  - one of the following
  - CSE 431S Translation of Computer Languages 3
  - CSE 467S Embedded Computing Systems 3
  - CSE 473S Introduction to Computer Networks 3

• **Computer Engineering Technical Electives:**
  At least 21 units of technical electives, drawn from 400- or 500-level CSE (with suffix S, M, T, or A) or ESE courses. These units are in addition to the 6 units needed to meet the focus area requirement described above.

• **Computer Engineering Senior Project:**
  Each student must complete a senior project (CSE 497, 3 credits), either individually or as part of a group under the direction of a CSE or ESE professor.

Click here for a sample schedule for Computer Engineering Degree Options. (p. 863)

**The Second Major in Computer Science**

The second major provides an opportunity to combine computer science with another degree program. A second major in computer science can expand your career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major also is well suited for students planning careers in medicine, law, business, architecture and fine arts. The requirements are as follows. There are no additional distribution or unit requirements for the second major.

• **Computer Science Core Requirements:**
  - CSE 131 Computer Science I 3
  - CSE 132 Computer Science II 3
  - CSE 241 Algorithms and Data Structures 3

**Additional Information**

All courses used for the Computer Science minor must be taken for a grade, and you must earn a C– or better. Should you decide to go further in the field, all courses in the Computer Science minor, except CSE 200, can be used toward a second
Engineering

major in computer science or a degree in computer science or computer engineering.

The Minor in Bioinformatics

Mindful of the emerging opportunities at the interface of biology and computer science, the Department of Biology and Department of Computer Science and Engineering have fashioned a Bioinformatics Minor that serves students from both departments as well as other students from the natural sciences and engineering with an interest in this field.

Units required: 23–24 units as described below

Core courses:

- Biol 2960 Principles of Biology I 4
- Biol 2970 Principles of Biology II 4
- CSE 131 Computer Science I 3
- CSE 241 Algorithms and Data Structures 3
- Math 2200 Elementary Probability and Statistics 3
- or Math 3200 Elementary to Intermediate Statistics and Data Analysis
- or ESE 326 Probability and Statistics for Engineering

Advanced biology elective:

Choose one of:

- Biol 3492 Laboratory Experiments with Eukaryotic Microbes 3
- Biol 4181 Population Genetics 3
- Biol 4342 Research Explorations in Genomics 4
- Biol 437 Laboratory on DNA Manipulation 4

CSE elective:

Choose one of:

- CSE 514A Data Mining 3
- CSE 584A Algorithms for Biosequence Comparison 3
- CSE 587A Algorithms for Computational Biology 3

Additional Information

It is anticipated that for those students majoring in Biology or CSE, some portion of the introductory sequence will overlap with courses required for the major, and these courses will be applicable to both the major and the minor. Upper-level courses in Biology and CSE used to fulfill the minor may not be used to fulfill another major or minor in Arts & Sciences. A minimum grade of C– is required for all courses to count toward the minor.

Note: Biol 280 DNA Workshop will provide students with the grounding in molecular biology (DNA, RNA, proteins) and Mendelian genetics that will enable them to participate in the upper-level courses in the bioinformatics minor. Biol 280 is not appropriate for biology majors or premedicine students, but is designed to serve the needs of students in the physical sciences, math or engineering who wish to pursue this minor. Students from the humanities, social sciences and business also are welcome in this course. Students will be expected to earn a minimum grade of B in Biol 280 (or the Biol 2960–2970 sequence) to advance in the minor. Permission of the instructor will be required to use this course to satisfy the prerequisites for upper-level biology courses to insure that this standard has been met satisfactorily.

E81 CSE 104 Web Development

This comprehensive course does not assume prior programming background or web design experience. Explores elementary principles that go into designing, creating and publishing an effective website. Topics include the production process, design metaphors, interface/information design, page layout concepts, graphics preparation, color theory, development tools, HTML, style sheets, basic scripting techniques, search engine optimization and site maintenance/marketing strategies.

Credit 3 units. EN : DU, SU, TU

E81 CSE 131 Computer Science I

An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation and object-oriented programming. Recursion, iteration and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: comfort with algebra and geometry at the high school level is assumed. Patience, good planning and organization promote success. This course assumes no prior experience with programming.

Credit 3 units. EN : DU, SU, TU

E81 CSE 131R Seminar: Computer Science I

A seminar and discussion session that complements the material studied in CSE 131. Provides background and breadth for the disciplines of computer science and computer engineering. Features guest lectures and highly interactive discussions of diverse computer science topics. Highly recommended for majors and for any student seeking a broader view of computer science or computer engineering. Pass/fail only.

Credit 1 unit.

E81 CSE 132 Computer Science II

CSE 132 builds on CSE 131’s introduction to software systems as collections of communicating components. CSE 132 emphasizes more sophisticated uses of object-oriented concepts (inheritance, polymorphism, method overloading and
multiple inheritance of interfaces) and techniques for managing communication among software components. An introduction to packages, file I/O, parsing, graphical user interfaces, exception handling, threads, concurrence, synchronization and network programming is provided. Algorithms and data structures are presented as needed to support discussion of these topics. Concepts and skills are mastered through software projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Prerequisite: CSE 131 or equivalent. Credit 3 units. EN: DU, SU, TU

E81 CSE 200 Engineering and Scientific Computing
This course provides an introduction to numerical methods for scientific computation that are relevant to engineering problems. Topics addressed include interpolation, integration, linear systems, least-squares fitting, nonlinear equations and optimization and initial value problems. Basic procedural programming concepts (procedural and data abstraction, iteration, recursion) are covered generally using MATLAB. C is briefly covered so the students understand that the algorithms and programming concepts apply in both. Prerequisite: Math 132. Credit 3 units. EN: DU, SU, TU

E81 CSE 220S Software Design and Development Studio
This is a lab course that provides practical experience in designing, implementing, testing, documenting and supporting a medium-sized software application. Topics covered include application and user interface specification, module and API design, code re-use, code review, software maintenance and support, unit and integration testing, and debugging procedures. Students gain experience in the application of common algorithms, design patterns and data structures to novel problems. Students have a choice of working in Java or C++, and work both individually and in groups. Specific application areas vary by semester. Prerequisites: sophomore standing and CSE 132. CSE 241 is recommended. Credit 3 units. EN: DU, SU, TU

E81 CSE 232 Programming Skills Workshop
This course provides an overview of practical implementation skills. Topics include compilation and linking, memory management, pointers and references, using code libraries, testing and debugging. Prerequisites: CSE 132. Credit 1 unit.

E81 CSE 240 Logic and Discrete Mathematics
Introduces elements of logic and discrete mathematics that allow reasoning about computational structures and processes. Generally, the areas of discrete structures, proof techniques and computational models are covered. Topics typically include propositional and predicate logic; sets, relations, functions and graphs; proof by contradiction, induction and reduction; and finite state machines and regular languages. Prerequisite: CSE 131 or other introductory programming background. Credit 3 units. EN: DU, SU, TU

E81 CSE 241 Algorithms and Data Structures
Study of fundamental algorithms, data structures and their effective use in a variety of applications. Emphasizes importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Other topics covered generally include: divide-and-conquer algorithms, sorting algorithms, decision tree lower-bound technique, hashing, binary heaps, skip lists, B-trees, basic graph algorithms. Prerequisites: CSE 131, CSE 240 (or some basic discrete mathematics background) is strongly recommended. Credit 3 units. EN: DU, SU, TU

E81 CSE 260M Introduction to Digital Logic and Computer Design
Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisites: CSE 131 or comparable programming experience. Credit 3 units. EN: DU, SU, TU

E81 CSE 320S Software Design and Development Studio
This is a lab course that provides practical experience in designing, implementing, testing, documenting and supporting a medium-sized software application. Topics covered include application and user interface specification, module and API design, code re-use, code review, software maintenance and support, unit and integration testing, and debugging procedures. Students gain experience in the application of common algorithms, design patterns and data structures to novel problems. Students have a choice of working in Java or C++, and work both individually and in groups. Specific application areas vary by semester. Prerequisites: junior standing and CSE 132. CSE 241 is recommended. Same as CSE 220S. Credit 3 units. EN: DU, SU, TU
E81 CSE 330S Rapid Prototype Development and Creative Programming

This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a web site from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ the Django web framework and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: after a formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131 or an equivalent programming background. Credit 3 units. EN : DU, SU, TU

E81 CSE 332S Object-Oriented Software Development Laboratory

Intensive focus on practical aspects of designing, implementing and debugging object-oriented software. Topics covered include developing, documenting and testing representative applications using object-oriented and generic frameworks and C++. Design and implementation based on frameworks are central themes to enable the construction of reusable, extensible, efficient and maintainable software. Prerequisites: CSE 132 and 241. Credit 3 units. EN : DU, SU, TU

E81 CSE 341T Parallel and Sequential Algorithms

The course aims to teach how to design, analyze and implement parallel and sequential algorithms. The emphasis is on teaching fundamental principles and design techniques that easily transfer over to parallel programming. These techniques include divide and conquer, contraction, the greedy method, etc. The course does have a significant programming component using Cilk Plus, a parallel programming language. This is the first offering of this experimental course with limited class size. Prerequisite: CSE 240. CSE 241 is recommended, but the course can be taken without it with instructor permission. Credit 3 units. EN : DU, SU, TU

E81 CSE 361S Introduction to Systems Software

Introduction to the hardware and software foundations of computer processing systems. Examines the process whereby computer systems manage, interpret and execute applications. Covers fundamental algorithms for numerical computation, memory organization and access, storage allocation, and the sequencing and control of peripheral devices. Weekly laboratories, exercises and a final laboratory project. Prerequisite: CSE 131. Credit 3 units. EN : DU, SU, TU

E81 CSE 362M Computer Architecture

Study of interaction and design philosophy of hardware and software for digital computer systems. Processor architecture, instruction set architecture, assembly language, memory hierarchy design, I/O considerations. Comparison of computer architectures. Prerequisite: CSE 260M. Credit 3 units. EN : DU, SU, TU

E81 CSE 400 Independent Study

Investigation of a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. This course carries university credit, but does not count toward a CSE major or minor. To arrange for CSE major or minor credit for independent study, a student must enroll in CSE 400E instead of CSE 400. See also: CSE 400E. Credit variable, maximum 6 units. Credit variable, maximum 6 units.

E81 CSE 400E Independent Study

Investigation of a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Credit earned for CSE 400E can be counted toward a student’s major or minor program, with the consent of the student’s adviser. See also: CSE 400. Variable credit, maximum 6 units. Credit variable, maximum 6 units.

E81 CSE 422S Operating Systems Organization

Exploration of operating systems as managers of shared resources. Using UNIX and Windows XP as experimental frameworks, students study algorithms and data structures that support essential operating systems services. Concepts are reinforced through programming exercises and comparative studies. Topics include: proportional sharing and real-time scheduling of processes and threads, I/O facilities, memory management, virtual memory, device management, concurrent programming, file system organization and distributed object computing. Prerequisite: CSE 332S and CSE 361S. Credit 3 units. EN : DU, SU, TU

E81 CSE 425S Programming Systems and Languages

A systematic study of the principles, concepts and mechanisms of computer programming languages: their syntax, semantics and pragmatics; the processing and interpretation of computer programs; programming paradigms; and language design. Illustrative examples are selected from a variety of programming language paradigms. Prerequisites: CSE 132, CSE 240 and CSE 241.
E81 CSE 431S Translation of Computer Languages
The theory of language recognition and translation is introduced in support of compiler construction for modern programming languages. Topics include syntactic and semantic analysis, symbol table management, code generation and runtime libraries. A variety of parsing methods is covered, including top-down and bottom-up. Machine problems culminate in the course project, for which students construct a working compiler. Prerequisites: CSE 132, CSE 240 and CSE 241.
Credit 3 units. EN : DU, SU, TU

E81 CSE 432S Pattern-Oriented Software Design and Development
Intensive focus on design and implementation of software using design patterns. Particular emphasis on successive refinement based on identification of unresolved design forces at each step of the design process, and on application of patterns to guide design refinement. Design implementations are conducted in Java and C++ in a team setting, with weekly presentations and critiques of design and implementation decisions and outcomes throughout the course. Prerequisites: CSE 332S or graduate standing, and proficiency in Java and C++ software development.
Credit 3 units. EN : DU, TU

E81 CSE 436S Software Engineering Workshop
An introduction and exploration of concepts and issues related to large-scale software systems development. Areas of exploration include technical complexities, organization issues and communication techniques for large-scale development. Students participate through teams emulating industrial development. The projects cover the principal system development lifecycle phases from requirements analysis, to software design and to final implementation. Issues relating to real-time control systems, human factors, reliability, performance, operating costs, maintainability and others are addressed and resolved in a reasonable manner. Prerequisite: CSE 332S.
Credit 3 units. EN : DU, SU, TU

E81 CSE 441T Advanced Algorithms
Provides a broad coverage of fundamental algorithm design techniques with the focus on developing efficient algorithms for solving combinatorial and optimization problems. The topics covered include: greedy algorithms, dynamic programming, linear programming, NP-completeness, approximation algorithms, lower-bound techniques and online algorithms. Throughout this course there is an emphasis on correctness proofs and the ability to apply the techniques taught to design efficient algorithms for problems from a wide variety of application areas. Prerequisite: CSE CSE 241.

E81 CSE 450A Video Game Programming
This course teaches the core aspects of a video game developer’s toolkit. Students work in groups and with a large game software engine to make a full-featured video game. Students have the opportunity to work on topics in graphics, artificial intelligence, networking, physics, user interface design and other topics. Prerequisite: CSE 332S.
Credit 3 units. EN : DU, SU, TU

E81 CSE 452A Computer Graphics
Introduction to computer graphics. Input, representation, manipulation and display of geometric information. Two-dimensional display of three-dimensional objects: perspective, hidden surface, shading, animation. Display and input devices. Issues in designing interactive graphics systems. Issues in building 3-dimensional renderers. Students develop interactive graphics programs with a standard graphics package and using various graphics input and output devices. Prerequisites: CSE 332S and basic knowledge in linear algebra.
Credit 3 units. EN : DU, SU, TU

E81 CSE 460T Switching Theory
Advanced topics in switching theory as employed in the synthesis, analysis and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits and built-in self-test techniques. Prerequisite: CSE 260M or equivalent.
Credit 3 units. EN : DU, SU, TU

E81 CSE 462M Computer Systems Design
Introduction to modern design practices, including the use of FPGA design methodologies. Students use a commercial CAE/CAD system for VHDL-based design and simulation while designing a selected computation system. Prerequisites: CSE 361S and CSE 362M.
Credit 3 units. EN : DU, SU, TU

E81 CSE 463M Digital Integrated Circuit Design and Architecture
This is a project-oriented course on digital VLSI design. The course material focuses on bottom-up design of digital integrated circuits, starting from CMOS transistors, CMOS inverters, combinational circuits and sequential logic designs. Important design aspect of digital integrated circuits such as propagation delay, noise margins and power dissipation are covered in the class, as well as design challenges in submicron technology are addressed. The students design combinational and sequential
circuit at various levels of abstraction using state-of-the-art CAD environment provided by Cadence Design Systems. The goal of the class is to design a microprocessor in 0.5-micron technology that can be fabricated by a semiconductor foundry. Prerequisites: CSE 260 and ESE 232. Credit 3 units. EN: DU, SU, TU

E81 CSE 460M Digital Systems Engineering
Design and characterization of digital circuits, reliable and predictable interconnection of digital devices, and information transfer over busses and other connections. Topics include: review of MOSFET operation; CMOS logic gate electrical characteristics; system and single-point noise margin and noise budgets; figures of merit for noise-margin and power-delay product, and trade-off between noise margin and propagation delay; transmission-line driving including reflection, termination, nonzero transition time, lumped and distributed capacitance loads, nonlinear terminations, and applicable conditions for lumped approximations; coupled transmission lines, forward and backward crosstalk, short line approximations, ground bounce, and simultaneous switching noise; timing, clocking and clock distribution for digital circuits; prediction of metastability error rates and design for acceptable probability of failure. Examples and design exercises using systems and interconnections selected from current Computer Engineering practice such as RAMBUS, PCI bus, GTL, LVDS and others. Prerequisites: ESE 232 and CSE 362M. Credit 3 units. EN: DU, SU, TU

E81 CSE 465M Digital Systems Laboratory
Procedures for reliable digital design, both combinational and sequential; understanding manufacturers specifications; use of special test equipment; characteristics of common SSI, MSI and LSI devices; assembling, testing and simulating design; construction procedures; maintaining signal integrity. Several single-period laboratory exercises, several design projects and application of a microprocessor in digital design. One lecture and one laboratory period a week. Prerequisites: CSE 260M and CSE 361S. Credit 3 units. EN: DU, SU, TU

E81 CSE 467S Embedded Computing Systems
Introduces the issues, challenges and methods for designing embedded computing systems — systems designed to serve a particular application, which incorporate the use of digital processing devices. Examples of embedded systems include PDAs, cellular phones, appliances, game consoles, automobiles and iPod. Emphasis is given to aspects of design that are distinct to embedded systems. The course examines hardware, software and system-level design. Hardware topics include microcontrollers, digital signal processors, memory hierarchy and I/O. Software issues include languages, run-time environments and program analysis. System-level topics include real-time operating systems, scheduling, power management and wireless sensor networks. Students perform a course project on a real wireless sensor network testbed. Prerequisite: CSE 361S. Credit 3 units. EN: DU, SU, TU

E81 CSE 473S Introduction to Computer Networks
A broad overview of computer networking. Topics include layered models of networking protocols, basics of physical layer, data link layer, flow control, error control; local area networks, e.g., Ethernet; wireless networks, IEEE 802.11 (WiFi), cellular wireless networks; Internet protocols, transport protocols, routing algorithms; network security, network management, ATM networks and protocols for networking applications, such as World Wide Web, email and file transfer. Prerequisite: CSE 241. Credit 3 units. EN: DU, SU, TU

E81 CSE 497 Senior Project I
Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving exploration and extension of theoretical structures, or may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or community. In either case, the project serves as a focal point for crystallizing the concepts, techniques and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal for approval by the department during the spring semester of the junior year. Prerequisite: senior standing. Credit 3 units.

E81 CSE 498 Senior Project II
Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving exploration and extension of theoretical structures, or may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or community. In either case, the project serves as a focal point for crystallizing the concepts, techniques and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal for approval by the department during the spring semester of the junior year. Prerequisite: senior standing. Credit 3 units.

E81 CSE 499 Undergraduate Honors Thesis
Working closely with a faculty member, the student investigates an original idea (algorithm, model technique, etc.), including a study of its possible implications, its potential application and its relationship to previous related work reported in the literature. Contributions and results from this investigation are synthesized and compiled into a publication-quality research
paper presenting the new idea. Prerequisites: a strong academic record and permission of instructor. Credit 3 units.

E81 CSE 500 Independent Study
Credit variable, maximum 3 units.

E81 CSE 501N Programming Concepts and Practice
An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation and object-oriented programming. Recursion, iteration and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: comfort with algebra and geometry at the high school level is assumed. Patience, good planning and organization promotes success. This course assumes no prior experience with programming. Credit 3 units. EN: DU, SU, TU

E81 CSE 502N Fundamentals of Computer Science
Study of fundamental algorithms, data structures and their effective use in a variety of applications. Emphasizes importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Other topics covered generally include: divide-and-conquer algorithms, sorting algorithms, decision tree lower bound technique, hashing, binary heaps, skip lists, B-trees, basic graph algorithms. Prerequisites: CSE 131, CSE 240 (or some basic discrete mathematics background) strongly recommended. Credit 3 units. EN: DU, SU, TU

E81 CSE 503N Rapid Prototype Development and Creative Programming
This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a web site from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ the Django web framework and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: after a formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 132 or an equivalent programming background. Credit 3 units.

E81 CSE 504N Object-Oriented Software Development Laboratory
Intensive focus on practical aspects of designing, implementing and debugging object-oriented software. Topics covered include developing, documenting, and testing representative applications using object-oriented and generic frameworks and C++. Design and implementation based on frameworks are central themes to enable the construction of reusable, extensible, efficient, and maintainable software. Prerequisites: CSE 132 and 241. Same as CSE 332S

E81 CSE 506M Principle and Methods of Micro- and Nano-fabrication
An introduction to the fundamentals of micro- and nano-fabrication processes with emphasis on cleanroom practices. The physical principles of optical lithography, electron-beam lithography, alternative nanolithography techniques, and thin film deposition and metrology methods. The physical and chemical processes of wet and dry etching. Cleanroom concepts and safety protocols. Sequential micro-fabrication processes involved in the manufacture of microelectronic and photonic devices. Imaging and characterization of micro- and nano-structures. Examples of practical existing and emerging micro- and nano-devices. Prerequisite: Chem 111A or consent from instructor. Credit 3 units. EN: DU, SU, TU

E81 CSE 507A Technology Entrepreneurship
This is a course for students who plan to be, or work with, entrepreneurs. An entrepreneurial mindset is needed to create or grow economically viable enterprises, be they new companies, new groups within companies, or new university laboratories. This course aims to cultivate an entrepreneurial perspective with particular emphasis on information technology-related activities. The course is jointly offered for business and CSE students, allowing for acculturation between these disciplines. In addition to an introductory treatment of business and technology fundamentals, course topics include: business ethics, opportunity assessment, team formation, financing, intellectual property and university technology transfer. The course features significant participant and guest instruction from experienced practitioners. Prerequisites: none. Credit 3 units.
E81 CSE 511A Introduction to Artificial Intelligence
The discipline of artificial intelligence (AI) is concerned with building systems that think and act like humans or rationally on some absolute scale. This course is an introduction to the field, with special emphasis on sound modern methods. The topics include knowledge representation, problem solving via search, game playing, logical and probabilistic reasoning, planning, machine learning (decision trees, neural nets, reinforcement learning, and genetic algorithms) and machine vision. Programming exercises concretize the key methods. The course targets graduate students and advanced undergraduates. Evaluation is based on written and programming assignments, a midterm exam and a final exam. Prerequisite: CSE 132, CSE 240 and CSE 241, or permission of the instructor. Credit 3 units.

E81 CSE 512A Statistical Computing for Scientific Research
Provides students a solid understanding of statistical computing issues that concern empirical researchers in different sciences. Topics covered include: computer architecture, Monte Carlo simulation, bootstrapping and jackknife, nonparametric smoothing, and Markov chain Monte Carlo methods. Prerequisite: basic statistics or permission of the instructor. Students are assumed to be familiar with: basic calculus, probability, regression, MLE theory and simple programming. Credit 3 units.

E81 CSE 514A Data Mining
Many scientific computing problems are, by nature, statistical. Such problems appear in many domains, such as text analysis, data mining on the web, computational biology and various medical applications. Another source of the statistical nature of such problems is the lack of sufficient information of the problem domains as well as the specific problems at hand. What is available for a typical application is usually a set of data from observation or experiments. The main objective of this course is to gain experience of dealing with statistical data analysis problems by studying various statistical methods that can be used to make sense out of data, by reading and reviewing literature as well as by working on a specific statistical problem in a selected application domain. Prerequisites: CSE 241 and ESE 326 (or Math 3200) or their equivalent, or permission of the instructor. Credit 3 units.

E81 CSE 517A Machine Learning
The field of machine learning is concerned with the question of how to construct computer programs that automatically improve with experience. Recently, many successful machine learning applications have been developed, ranging from data-mining programs that learn to detect fraudulent credit card transactions, to information-filtering systems that learn users’ reading preferences, to autonomous vehicles that learn to drive. There also have been important advances in the theory and algorithms that form the foundation of this field. This course provides a broad introduction to the field of machine learning. Prerequisite: CSE 241. Credit 3 units. EN : DU, SU, TU

E81 CSE 519T Advanced Machine Learning
This course provides a close look at advanced machine learning algorithms —their theoretical guarantees (computational learning theory) and tricks to make them work in practice. In addition, this course focuses on more specialized learning settings, including unsupervised learning, semi-supervised learning, domain adaptation, multitask learning, structured prediction, metric learning and learning of data representations. Learning approaches may include graphical models, nonparametric Bayesian statistics, and technical topics such as sampling, approximate inference and nonlinear function optimization. Mathematical maturity and general familiarity of machine learning is required. Prerequisites: CSE 517A or 511A or 7100 and approval by instructor. Credit 3 units.

E81 CSE 520S Real-Time Systems
This course covers software technologies for real-time systems and networking such as distributed multimedia, telecommunication management, automobiles, avionics and smart manufacturing. Topics include real-time scheduling, distributed embedded middleware, adaptive performance management and real-time wireless sensor networks. Prior knowledge on embedded and real-time systems is not required. Prerequisite: CSE 422S or equivalent. Credit 3 units. EN : DU, SU, TU

E81 CSE 521S Wireless Sensor Networks
Dense collections of smart sensors networked to form self-configuring pervasive computing systems provide a basis for a new computing paradigm that challenges many classical approaches to distributed computing. Naming, wireless networking protocols, data management and approaches to dependability, real-time, security and middleware services all fundamentally change when confronted with this new environment. Embedded sensor networks and pervasive computing are among the most exciting research areas with many open research questions. This class studies a large number of research papers that deal with various aspects of wireless sensor networks. Students perform a project on a real wireless sensor network comprised of tiny devices each consisted of sensors, a radio transceiver and a microcontroller. Prerequisite: CSE 422S. Credit 3 units. EN : DU, SU, TU
E81 CSE 522S Advanced Operating Systems
This course explores the core OS abstractions, mechanisms and policies and how they impact support for general purpose, embedded and real-time operating environments. Resource management is covered in detail including CPU scheduling, I/O scheduling, interprocess communication models (message passing, remote procedure call and shared memory); virtualization models and techniques; synchronization models and techniques; and resource allocation strategies. Prerequisites: CSE 422S and significant C/C++ programming experience.
Credit 3 units. EN : DU, SU, TU

E81 CSE 528S Software Project Management
An introduction to the issues and basic methods used in managing software development projects. The course includes factors affecting software projects, lifecycle models, project scheduling, size and staffing, progress tracking, software metrics, managing people, and crisis management. The course includes lectures, hands-on training in selected project management tools, and case studies. In addition, each student plans and manages a simulated software project. The course is designed to familiarize software engineers and computer scientists to the issues and problems involved in managing software projects. Prerequisite: CSE 436S, significant industrial software development, or permission of instructor.
Credit 3 units.

E81 CSE 530A Database Management Systems
A study of data models and the database management systems that support these data models. The design theory for databases is developed and various tools are utilized to apply the theory. General query languages are studied and techniques for query optimization are investigated. Integrity and security requirements are studied in the context of concurrent operations on a database, where the database may be distributed over one or more locations. The unique requirements for engineering design databases, image databases and long transaction systems are analyzed. Prerequisite: CSE 241.
Credit 3 units.

E81 CSE 531S Theory of Compiling and Language Translation
Algorithms and intermediate representations for automatic program analysis are examined, with an emphasis on practical methods and efficient engineering of program optimization and transformations. The course includes a thorough treatment of monotone data flow frameworks: a mathematical model in which most optimization problems can be specified and solved. The course primarily covers optimizations that are applicable to any target architecture; however, optimizations specific to parallel, distributed and storage-hierarchical systems also are discussed. Prerequisite: CSE 431S or CSE 425S.

E81 CSE 532S Advanced Multiparadigm Software Development
Intensive focus on advanced design and implementation of distributed object computing (DOC) software. Topics covered include reuse of design patterns and software architectures, and developing representative applications using object-oriented and generic frameworks in C++. Design and implementation based on design patterns and frameworks are central themes to enable the construction of reusable, extensible, efficient and maintainable DOC software. Prerequisites: CSE 332S or graduate standing; familiarity with C++, CSE 432S, and CSE 422S or CSE 522S.
Credit 3 units. EN : DU, SU, TU

E81 CSE 533T Programming Language Theory
This course presents the theoretical foundations of programming languages, using formal techniques. We study how to define programming languages in a formal way, and how to prove meta-theoretic properties about them. Type theory, including powerful typing constructs such as polymorphic and recursive types, receives particular attention. The work for the course includes theoretical exercises as well as a project in which students implement selected aspects of advanced programming languages. Prerequisites: CSE 240 and CSE 241.
Credit 3 units.

E81 CSE 536S Distributed System Design: Models and Languages
Modern computing environments are highly distributed. This has been the result of major advances in networking technology and their rapid assimilation by a society that functions in a highly distributed and decentralized manner. The goal of this course is to familiarize students with basic concepts, models and languages that shaped recent developments in distributed computing. The focus is on exploring new ways of thinking about computing and communication that made the development of distributed software systems possible. Competing concepts and design strategies are examined both from a theoretical and a practical perspective. Prerequisite: CSE 240 and CSE 241.
Credit 3 units.

E81 CSE 541T Advanced Algorithms
Formerly CS 539T. Provides a broad coverage of fundamental algorithm design techniques with the focus on developing efficient algorithms for solving combinatorial and optimization problems. The topics covered include: greedy algorithms, dynamic programming, linear programming, NP-completeness, approximation algorithms, lower-bound techniques and online algorithms. Throughout this course there is an emphasis on correctness proofs and the ability to apply the techniques taught to design efficient algorithms for problems from a wide
variety of application areas. CSE 541T students are given more challenging problems to work than those given to CSE 441T students. Prerequisites: CSE 240/CS 201 and CSE 241.
Same as CSE 441T
Credit 3 units.  EN : DU, SU, TU

E81 CSE 542T Advanced Data Structures and Algorithms
This course is concerned with the design and analysis of efficient algorithms, focusing principally on algorithms for combinatorial optimization problems. A key element in the course is the role of data structures in algorithm design and the use of amortized complexity analysis to determine how data structures affect performance. The course is organized around a set of core problems and algorithms, including the classical network optimization algorithms, as well as newer and more efficient algorithms. This core is supplemented by algorithms selected from the recent technical literature. Prerequisite: CSE 241. Credit 3 units.

E81 CSE 543T Algorithms for Nonlinear Optimization
The course provides an in-depth coverage of modern algorithms for the numerical solution of multidimensional optimization problems. Unconstrained optimization techniques including gradient methods, Newton's methods, Quasi-Newton methods and conjugate methods are introduced. The emphasis is on constrained optimization techniques: Lagrange theory, Lagrangian methods, penalty methods, sequential quadratic programming, primal-dual methods, duality theory, nondifferentiable dual methods and decomposition methods. The course also discusses applications in engineering systems and use of state-of-the-art computer codes. Special topics may include large-scale systems, parallel optimization and convex optimization. Credit 3 units.

E81 CSE 544T Special Topics in Computer Science Theory
Cake-cutting algorithms consider the division of resources among a set of participants such that the recipients believe they have been treated fairly. In some cases, a given resource can be divided without loss of value, while in other cases, dividing a resource may lessen its value, perhaps significantly. Notions of fairness include proportionality, envy-freeness and equitability. This course is organized around a rich set of fair-division problems, studying the correctness, complexity, and applicability of algorithms for solving such problems. The problems and algorithms studied span millennia and include recent technical literature. Credit 3 units.

E81 CSE 545T Computational Geometry
Computational geometry is the algorithmic study of problems that involve geometric shapes such as points, lines and polygons. Such problems appear in computer graphics, vision, robotics, animation, visualization, molecular biology and geographic information systems. This course covers data structures that are unique to geometric computing, such as convex hull, Delaunay triangulation, arrangement, range searching, KD-trees and segment trees. Also covered are algorithms for polygon triangulation, shortest paths, the post office problem and the art gallery problem. Prerequisite: CSE 241. Credit 3 units.

E81 CSE 547T Introduction to Formal Languages and Automata
An introduction to the mathematical theory of languages and grammars. Topics include deterministic and non-deterministic finite state machines, push-down automata, and Turing machines; regular, context-free and recursive languages; closure properties of languages; the concepts of computability and undecidability. Prerequisite: CSE 240. Credit 3 units.

E81 CSE 548T Concurrent Systems: Design and Verification
Formerly CS 563T, Concurrency presents programmers with unprecedented complexity further exacerbated by our limited ability to reason about concurrent computations. Yet, concurrent algorithms are central to the development of software executing on modern multiprocessors or across computer networks. This course reviews several important classes of concurrent algorithms and presents a formal method for specifying, reasoning about, verifying and deriving concurrent algorithms. The selected algorithms are judged to have made significant contributions to our understanding of concurrency. Rigorous treatment of the design and programming process is emphasized. Students entering this course must be familiar with predicate calculus and sequential algorithms. Upon completion of this course students are able to reason completely formally about small concurrent programs and to apply systematically and correctly their formal skills to larger problems. Prerequisites: CSE 240 and CSE 241. Credit 3 units.

E81 CSE 549T Theory of Parallel Systems
The course covers parallel programming models, languages and algorithms. We cover both classic and recent results in parallel computing. The list of topics includes scheduling theory, parallel algorithms (in various models such as PRAM, log P, etc.), cache-coherence protocols and external memory algorithms. The focus is on design and performance analysis of algorithms. Credit 3 units.

E81 CSE 550A Mobile Robotics
An introduction to the design and implementation of intelligent mobile robot systems. This course covers the fundamental elements of mobile robot systems from a computational
E81 CSE 550S Mobile Robotics
An introduction to the design and implementation of intelligent mobile robot systems. This course covers the fundamental elements of mobile robot systems from a computational standpoint. Issues such as software control architectures, sensor interpretation, map building and navigation are covered, drawing from current research in the field. Students also design and build a small mobile robot and program it to perform simple tasks in real-world environments. Prerequisites: CSE 241 and either ESE 326 or Math 3200. Credit 3 units. EN: DU, SU, TU

E81 CSE 552A Advanced Computer Graphics
This course covers advanced topics in graphics in the areas of modeling, rendering, volume rendering, image-based rendering and image processing. Topics include, but are not limited to, subdivision surfaces, splines, mesh simplification, implicit or blobby modeling, radiosity, procedural textures, filtering, BRDFs and procedural modeling. The class has several structured programming assignments and an optional final group project. Students are exposed to the wide variety of techniques available in graphics and also pick one area to study in depth. Prerequisite: CSE 332S and CSE 452A. Credit 3 units. EN: DU, SU, TU

E81 CSE 553S Advanced Mobile Robotics
This course covers advanced topics from the theory and practice of mobile robotics. Students read, present and discuss papers from the current research literature. There is a substantial programming project, in which students implement and test ideas from the current research literature on one of the department's research robot platforms. Prerequisites: CSE 550A and strong programming skills (preferably in C++). Credit 3 units. EN: DU, SU, TU

E81 CSE 554A Geometric Computing for Biomedicine
With the advance of imaging technologies deployed in medicine, engineering and science, there is a rapidly increasing amount of spatial data sets (images, volumes, point clouds, etc.) that need to be processed, visualized and analyzed. This course focuses on a number of geometry-related computing problems that are essential in the knowledge discovery process in various spatial-data-driven biomedical applications. These problems include visualization, segmentation, mesh construction and processing, shape representation and analysis. The course consists of lectures that cover theories and algorithms, and a series of hands-on programming projects using real-world data collected by various imaging techniques (CT, MRI, electron cryo-microscopy, etc.). Prerequisite: CSE 332 and CSE 452, or approval by instructor. Credit 3 units. EN: SU, TU

E81 CSE 555A Human-Computer Interaction Methods
This course is designed to introduce tools and methods from Human-Computer Interaction that enable you to create effective user interfaces. We cover techniques that can be used at different stages in the software development cycle and techniques that can be used both with and without involving users. We study how to maximize interface usability and efficiency as well as how to design for, and measure, things like fun and persuasiveness. You gain experience applying HCI techniques through a group design, development and evaluation project. Prerequisites: CSE 132 and at least one additional systems course. Students who enroll in this course are expected to be comfortable with the process of building user interfaces using Java JFC/Swing. Credit 3 units. EN: DU, SU, TU

E81 CSE 558A Motion Planning
This course studies the general motion planning problem: computing a sequence of motions that transforms a given (initial) arrangement of physical objects to another (goal) arrangement of those objects. Many motion planning methods were developed in the realm of robotics research. For example, a typical problem might be to find a sequence of motions (called a path) to move a robot from one position to another without colliding with any objects in its workspace. However, the general motion planning problem studied arises in many other application domains as well. For example, assembly planning (e.g., finding a valid order for adding the parts when building an engine), mechanical CAD studies (e.g., can you remove a certain part from an engine without taking the engine apart), artificial life simulations (e.g., moving a herd of animals from one location to another), and medicine (e.g., can a drug molecule reach a protein molecule). Prerequisite: CSE 241. Credit 3 units. EN: DU, SU, TU

E81 CSE 559A Computer Vision
Computer vision is the process of automatically extracting information from images and video. This course covers imaging geometry (camera calibration, stereo and panoramic image stitching) and algorithms for video surveillance (motion detection and tracking), segmentation and object recognition. Final projects for the course explore challenges in analysis of real-world data. Students with nonstandard backgrounds (such as video art, or the use of imaging in physics and biology) are encouraged to contact the instructor. Prerequisites: CSE 241 and linear algebra.
E81 CSE 560M Computer Systems Architecture I
An exploration of the central issues in computer architecture: instruction set design, addressing and register set design, control unit design, microprogramming, memory hierarchies (cache and main memories, mass storage, virtual memory), pipelining, bus organization, Reduced Instruction Set Computers (RISC), and Complex Instruction Set Computers (CISC). Architecture modeling and evaluation using VHDL and/or instruction set simulation. Prerequisites: CSE 361S and CSE 260M.
Credit 3 units. EN : DU, SU, TU

E81 CSE 561M Computer Systems Architecture II
Advanced techniques in computer system design. Selected topics from: processor and system-on-chip design (multicore organization, system-level integration), run-time systems, memory systems (topics in locality and special-purpose memories), I/O subsystems and devices, systems security, and power considerations. Prerequisite: CSE 560M or permission of instructor.
Credit 3 units. EN : DU, SU, TU

E81 CSE 563M Digital Integrated Circuit Design and Architecture
This is a project-oriented course on digital VLSI design. The course material focuses on bottom-up design of digital integrated circuits, starting from CMOS transistors, CMOS inverters, combinational circuits and sequential logic designs. Important design aspect of digital integrated circuits such as propagation delay, noise margins and power dissipation are covered in the class, and design challenges in submicron technology are addressed. The students design combinational and sequential circuits at various levels of abstraction using state-of-the-art CAD environment provided by Cadence Design Systems. The goal of the class is to design a microprocessor in 0.5 micron technology that can be fabricated by a semiconductor foundry. Prerequisites: CSE 260 and ESE 232.
Same as CSE 463M
Credit 3 units. EN : DU, SU, TU

E81 CSE 564M Advanced Digital Systems Engineering
This course focuses on advance sensor design. The class covers various basic analog and digital building blocks that are common in most sensor integrated circuits. The class extensively uses state-of-the-art CAD program Cadence to simulate and analyze various circuit blocks. The first half of the course focuses on analyzing various operational amplifiers, analog filters, analog memory and analog to digital converters. The second half of the course focuses on understanding the basic building blocks of imaging sensors. The class has a final project consisting of designing a smart sensor using Cadence tools. Prerequisites: ESE 232 and CSE 362M.
Credit 3 units. EN : DU, SU, TU

E81 CSE 565M Acceleration of Algorithms in Reconfigurable Logic
Reconfigurable logic, in the form of Field-Programmable Gate Arrays (FPGAs), enables the deployment of custom hardware for individual applications. To exploit this capability, the application developer is required to specify the design at the register-transfer level. This course explores techniques for designing algorithms that are amenable to hardware acceleration as well as provides experience in actual implementation. Example applications are drawn from a variety of fields, such as networking, computational biology, etc. Prerequisites: Basic digital logic (CSE 260M) and some experience with a hardware description language (e.g., VHDL or Verilog).
Credit 3 units. EN : DU, SU, TU

E81 CSE 566S High-Performance Computer Systems
Many applications make substantial performance demands upon the computer systems upon which those applications are deployed. In this context, performance is frequently multidimensional, including resource efficiency, power, execution speed (which can be quantified via elapsed run time, data throughput or latency), etc. Modern computing platforms exploit parallelism and architectural diversity (e.g., co-processors such as graphics engines and/or reconfigurable logic) to achieve the desired performance goals. This course addresses the practical aspects of achieving high performance on modern computing platforms. This includes questions ranging from how the computing platform is designed to how applications and algorithms expressed to exploit the platform’s properties. Particular attention is given to the role of application development tools. Prerequisite: graduate standing or permission of instructor.
Credit 3 units.

E81 CSE 567M Computer Systems Analysis
Comparing systems using measurement, simulation and queueing models. Common mistakes and how to avoid them, selection of techniques and metrics, art of data presentation, summarizing measured data, comparing systems using sample data, introduction to experimental design, fractional factorial designs, introduction to simulation, common mistakes in simulations, analysis of simulation results, random number generation, random variate generation, commonly used distributions, introduction to queueing theory, single queues and queueing networks. The techniques of the course can be used to analyze and compare any type of systems including algorithms, protocols, network or database systems. Students do a project involving application of these techniques to a problem of their interest. Prerequisites: CSE 131 and CSE 260M.
E81 CSE 568M Imaging Sensors
This course covers topics on digital imaging sensors including basic operations of silicon photodetectors; CCD and CMOS passive and active sensor operation; temporal and spatial noise in CMOS sensors; spatial resolution and MTF; SNR and dynamic range; high dynamic range architectures and application specific imaging sensors such as polarization imaging and fluorescent imaging sensors.
Credit 3 units.

E81 CSE 569M Parallel Architectures and Algorithms
A number of contemporary parallel computer architectures are reviewed and compared. The problems of process synchronization and load balancing in parallel systems are studied. Several selected applications problems are investigated and parallel algorithms for their solution are considered. Selected parallel algorithms are implemented in both a shared memory and distributed memory parallel programming environment.
Prerequisites: graduate standing and knowledge of the C programming language.
Credit 3 units.

E81 CSE 570S Recent Advances in Networking
This course covers the latest advances in networking. The topics include data center networking, 40GB and 100GB ethernet, sustainability and energy issues in networking, energy-efficient ethernet, network virtualization, networking for cloud computing, networking for big data. Recent advances in wireless and mobile networking including white spaces, 4G and 5G are covered.
Prerequisite: CSE 473 or equivalent.
Credit 3 units.

E81 CSE 571S Network Security
A comprehensive treatment of network security. Topics include virus, root kits, malware, TCP/IP security attacks, operating systems security, secret key cryptography, modes of operation, hashes and message digests, public key algorithms, authentication systems, Kerberos, Public Key Infrastructures (PKI), IPsec, Internet Key Exchange (IKE), Secure Socket Layer (SSL), Transport Layer Security (TLS), e-mail security, virtual private networks, authentication, authorization, accounting (AAA), WiFi security, Domain Name System security (DNSSEC), intrusion detection systems. Prerequisite: CSE 473S.
Credit 3 units.

E81 CSE 573S Protocols for Computer Networks
An introduction to the design, performance analysis and implementation of existing and emerging computer network protocols. Protocols include multiple access protocols (e.g., CSMA/CD, token ring), internet, working with the internet protocol (IP), transport protocols (e.g., UDP, TCP), high-speed bulk transfer protocols, and routing protocols (e.g., BGP, OSPF). General topics include error control, flow control, packet switching, mechanisms for reliable, ordered and bounded-time packet delivery, host-network interfacing and protocol implementation models. Substantial programming exercises supplement lecture topics. Prerequisite: CSE 473S or permission of the instructor.
Credit 3 units.

E81 CSE 574S Wireless and Mobile Networking
Prerequisites: CSE 473S or permission of the instructor.
Credit 3 units.

E81 CSE 577M Design and Analysis of Switching Systems
Switching is a core technology in a wide variety of communication networks, including the Internet, circuit-switched telephone networks and optical fiber transmission networks. The past decade has been a time of rapid development for switching technology in the Internet. Backbone routers with 10 Gb/s links and aggregate capacities of hundreds of gigabits per second are becoming common, and advances in technology are now making multi-terabit routers practical. This course is concerned with the design of practical switching systems and evaluation of their performance and complexity. Prerequisites: CSE 241, 260M and ESE 326.
Credit 3 units.

E81 CSE 583A Topics in Computational Molecular Biology
Formerly CS 543T. In-depth discussion of problems and methods in Computational Molecular biology. Each year three topics are covered and those change yearly. Prerequisite: Biol 5495 or instructor’s consent.
Same as Biol 5497
Credit 2 units.

E81 CSE 584A Algorithms for Biosequence Comparison
This course surveys fundamental algorithms for comparing and organizing biological sequences. Emphasis is placed on techniques that are useful for implementing biosequence databases and comparing long sequences, such as entire
E81 CSE 587A Algorithms for Computational Biology
This course focuses on how to sequence and analyze a genome, emphasizing computational and algorithmic issues. After taking this course, you should be able to parachute into a genome informatics group, understand what’s going on, and do something useful on your first day. Topics covered include: the essential biology, the essential probability theory, base calling and quality clipping, genome assembly (including aspects of sequence alignment), predicting protein-coding genes (including Hidden Markov Models and comparative genomics approaches), predicting gene function by comparing to proteins of known function, and advanced topics in sequence alignment. This course includes a combination of paper-and-pencil homework assignments and programming labs in C. Prerequisites: CSE 241 or CSE 502N or Biol 5495. Credit 3 units.

Electrical and Systems Engineering

About Electrical and Systems Engineering

The mission of our undergraduate programs is to instill in students the knowledge and perspective, appropriate both for a professional career and for the pursuit of advanced degrees, in fields that rely on key electrical engineering and systems principles and practices. Such principles and practices include rigorous quantitative reasoning and robust engineering design. This mission is accomplished by ensuring that students achieve both depth and breadth of knowledge in their studies and by maintaining a high degree of flexibility in the curriculum. Our programs also seek to provide good preparation for life, including the ability to communicate in written and oral forms and a desire to continue learning throughout life. In addition, they aim to provide the opportunity and training for students to acquire the skills and attitudes to become leaders.

The department offers courses of study leading to degrees in both electrical engineering and systems science and engineering. Opportunities for study and research currently available in the department include solid-state engineering (semiconductor theory and devices, plasma processing and nonlinear plasma theory, optoelectronics, microwave and magnetic information devices and systems), communication theory and systems, information theory, signal and image processing, linear and nonlinear dynamics and control, scheduling and transportation systems, robotics, automation, identification and estimation, multisensor fusion and navigation, machine vision and control, computational mathematics, finite elements, optimal control, mathematics of large-scale power systems, and intelligent systems. Students are encouraged to participate in research activities as soon as they have received training in the fundamentals appropriate for a given research area.

Electrical engineering is the profession for those intrigued with electrical phenomena and eager to contribute their skills to a society increasingly dependent on electricity and sophisticated electronic devices. It is a profession of broad scope with many specialty careers designed for engineers who seek an endless diversity of career paths on the cutting edge of technology. The Institute of Electrical and Electronics Engineers publishes transactions on about 60 different topics, from aerospace and electronic systems to visualization and computer graphics. This is a breadth so great that no single electrical engineering department can hope to span it. Moreover, those fields themselves encompass still more fascinating specialties. We give the basics; the future is yours to shape.

Systems science and engineering is based on an approach that views an entire system of components as an entity rather than simply as an assembly of individual parts; each component is designed to fit properly with the other components rather than to function by itself. The engineering and mathematics of systems is a rapidly developing field. It is one of the most modern segments of applied mathematics, as well as an engineering discipline. It is concerned with the identification, modeling, analysis, design and control of systems that are potentially as large and complex as the U.S. economy or as precise and vital as a space voyage. Its interests run from fundamental theoretical questions to the implementation of operational systems. It draws on the most modern and advanced areas of mathematics. A very important characteristic of the systems field is that its practitioners must, of necessity, interact within a wide interdisciplinary environment, not only with various engineers and scientists but also with economists, biologists or sociologists. Such interaction is both emphasized and practiced in the programs.

Our Department of Electrical and Systems Engineering offers a challenging basic curriculum, a broadly qualified faculty and modern facilities so that you can receive a contemporary preparation for a career in electrical or systems engineering.

Undergraduate Degree Programs

The Department of Electrical and Systems Engineering (ESE) offers four undergraduate degree programs: two professional degrees and two nonprofessional degrees. The two professional degrees are the Bachelor of Science in Electrical Engineering (B.S.E.E.) and the Bachelor of Science in Systems Science and Engineering (B.S.S.S.E.). These two programs are accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). The two nonprofessional degrees are the Bachelor of Science in Applied Science (Electrical Engineering) and the Bachelor of Science in Applied Science (Systems Science and Engineering). All programs have flexible curricula as well as specific requirements, and students may elect programs of study tailored to individual interests and professional goals.

In the professional B.S.E.E. curriculum, there are required courses in electrical circuits, signals and systems, digital systems and electromagnetic fields, along with laboratory and design courses, which provide students with a common core of experience. Subsequently, one may orient the program toward breadth, so that many disciplines within the profession are spanned or toward a specialty with more emphasis on depth in one or more disciplines. Areas of specialization include modern electronics, applied physics, telecommunications, control systems, and signal and image processing.

Students in the professional B.S.S.S.E. degree program take required courses in engineering mathematics, signals and systems, operations research, and automatic control systems, along with laboratory and design courses. This program emphasizes the importance of real-world applications of systems theory, and accordingly students are required to...
take a concentration of courses in one of the traditional areas of engineering or science. There are numerous elective courses in control theory and systems, signal processing, optimization, robotics, probability and stochastic processes, and applied mathematics.

Students enrolled in any of the ESE undergraduate degree programs have a variety of opportunities to augment their educational experience at Washington University. Students may participate in the Premedical Engineering program or in the Cooperative Education program. Some students pursue double majors, in which two sets of degree requirements, either within or outside the ESE department, are satisfied concurrently. The Process Control Systems program is one such double-degree program, involving the degrees Bachelor of Science in Systems Science and Engineering (B.S.S.S.E.) and Bachelor of Science in Chemical Engineering (B.S.Ch.E). Finally, students may earn both an undergraduate and a graduate degree through the school’s five-year B.S.–M.S. program.

Students who seek a broad undergraduate education in electrical engineering or systems science and engineering but plan on careers outside of engineering, may pursue the nonprofessional degrees: Bachelor of Science in Applied Science (Electrical Engineering) and Bachelor of Science in Applied Science (Systems Science and Engineering). These programs of study are appropriate for students planning to enter a medical, law or business school, and desire a more technical undergraduate experience than what otherwise may be available to them.

The ESE department also offers a variety of educational opportunities for students enrolled in other departments. These include the Second Major in Systems Science and the Second Major in Electrical Science, which are open to students inside as well as outside of the School of Engineering & Applied Science, such as the College of Arts & Sciences and the School of Business. They also include the Minor in Electrical Engineering, the Minor in Energy Engineering, the Minor in Mechatronics, the Minor in Robotics and the Minor in Systems Science and Engineering.

**B.S.–Masters’ Programs in Electrical and Systems Engineering**

Students enrolled in any of the undergraduate degree programs in the School of Engineering & Applied Science may choose to extend their educational experience by enrolling in a five-year B.S.–Masters’ program. The Master of Science in Electrical Engineering (M.S.E.E.), Master of Science in Systems Science and Mathematics (M.S.S.S.M.), Master of Control Engineering (MCE), and Master of Engineering in Robotics (MER) degrees are participating graduate degrees, and these may be combined with any undergraduate degree that provides the appropriate background.

**B.S. and Master of Control Engineering (M.C.E.)**

The requirements for the M.C.E. degree are given on the department website at http://ese.wustl.edu/graduateprograms/Pages/MSinControlEngineering.aspx.

**B.S. and Master of Engineering in Robotics (M.E.R.)**

The requirements for the M.E.R. degree are given on the department website at http://ese.wustl.edu/graduateprograms/Pages/MEinRobotics.aspx.

**Common Requirements for the B.S.–Masters’ Programs**

General requirements for the B.S.–Masters’ programs include the residency and other applicable requirements of the university and the School of Engineering & Applied Science, which are found elsewhere in this catalog. In summary, students must complete all the degree requirements for both the undergraduate and graduate degrees (at least 120 units plus 30 units, 150 units) but are not required to complete all the undergraduate degree requirements first.

**Requirements for the B.S.–M.S.E.E. Degree**

The requirements for the M.S.E.E. degree include a total of 30 units, with 15 units being in graduate-level electrical engineering courses (ESE 513, ESE 516, ESE 520–589), and the other 15 units being in technical electives (not necessarily from the ESE department but approved by the ESE department) at the senior level or above. A maximum of one 500-level cross-listed ESE course whose home department is outside of ESE may be applied toward the 15-credit graduate-level course requirement. At least 15 units of the 30 total units applied toward the M.S.E.E. degree must be in ESE courses which, if cross-listed, have as the home department the Department of Electrical and Systems Engineering. Both a thesis option and a course option are available.

**Requirements for the B.S.–M.S.S.S.M. Program**

Students in the joint B.S.–M.S. program seeking the degree of the M.S. in Systems Science and Mathematics are required to fulfill the following additional requirements: a total of 30 units, with at least 15 units at the graduate level, and the remaining units at the senior level or above. Required courses (15 units) for the M.S. degree include: ESE 520, ESE 551, ESE 552, ESE 553 and either ESE 415, ESE 516 or ESE 556. The remaining courses in the program may be selected from senior- or graduate-level courses in Electrical and Systems Engineering or elsewhere in the university. Courses outside of Electrical and Systems Engineering must be in technical subjects relevant to
Engineering

systems science and mathematics and require the department’s approval.

undergraduateprograms/Pages/default.aspx

Chair and Eugene and Martha Lohman Professor of Electrical Engineering

Arye Nehorai
PhD, Stanford University
Signal processing, imaging, biomedicine, communications

Associate Chair and Professor

Hiroaki Mukai
PhD, University of California–Berkeley
Theory and computational methods for optimization, optimal control, systems theory, electric power system operations, differential games

Endowed Professors

R. Martin Arthur
Newton R. and Sarah Louisa Glasgow Wilson
PhD, University of Pennsylvania
Ultrasonic imaging, electrocardiography

Joseph A. O’Sullivan
Samuel C. Sachs Professor of Electrical Engineering and Dean, UMSL/WUSTL Joint Undergraduate Engineering Program
PhD, Notre Dame University
Information theory, statistical signal processing, imaging science with applications in medicine and security, and recognition theory and systems

Professors

I. Norman Katz
PhD, Massachusetts Institute of Technology
Numerical analysis, differential equations, finite element methods, locational equilibrium problems, algorithms for parallel computations

Daniel L. Rode
PhD, Case Western Reserve University
Optoelectronics and fiber optics, semiconductor materials, light-emitting diodes (LEDs) and lasers, semiconductor processing, electronics

Barry E. Spielman
PhD, Syracuse University
High-frequency/high-speed devices, RF & MW integrated circuits, computational electromagnetics

Assistant Professors

ShiNung Ching
PhD, Harvard University
Mathematical control theory, optimization, quantum control, biomedical applications

Paul S. Min
PhD, University of Michigan
Routing and control of telecommunication networks, fault tolerance and reliability, software systems, network management

Robert E. Morley Jr.
DSc, Washington University
Computer and communication systems, VLSI design, digital signal processing

Heinz M. Schättler
PhD, Rutgers University
Optimal control, nonlinear systems, mathematical models in biomedicine

Lan Yang
PhD, California Institute of Technology
Nanophotonics, optical sensing, single nanoparticle detection, photonic materials

Senior Professors

William F. Pickard
PhD, Harvard University
Biological transport, electrobiochemistry, energy engineering

Ervin Y. Rodin
PhD, University of Texas–Austin
Optimization, differential games, artificial intelligence, mathematical modeling

Barbara A. Shrauner
PhD, Harvard University (Radcliffe)
Plasma processing, semiconductor transport, symmetries of nonlinear differential equations

Donald L. Snyder
PhD, Massachusetts Institute of Technology
Bachelor of Science in Electrical Engineering

Educational Objectives of the B.S.E.E. Degree Program

A. Our graduates will establish themselves as practicing professionals or engaged in advanced study in engineering or a related area.

B. Our graduates will demonstrate their ability to work successfully as a member of a professional team and function effectively as responsible professionals.

B.S.E.E. Degree Requirements

to obtain the degree Bachelor of Science in Electrical Engineering, students must complete a minimum of 120 units consistent with the residency and other applicable requirements of Washington University and the School of Engineering, and subject to the following program requirements.

1. Common Studies program of the School of Engineering: This includes courses in engineering, mathematics, chemistry, humanities, social sciences and technical writing. The required chemistry sequence is Chem 111A-151, although Chem 111A-112A–151–152 is recommended.

2. Engr 4501 Engineering Ethics and Sustainability (1 unit).

4. Engineering and science breadth requirements: 9 units in engineering or science outside of electrical engineering. These units must be taken in the following areas: biomedical engineering, chemical engineering, computer science and engineering, mechanical engineering, economics, mathematics, physics, biology, chemistry, earth and planetary sciences, and premedicine. These units must be at the level 200 or higher and shall not be used to satisfy the Common Studies requirements (item 1 above) or the CS requirement (item 3). Courses in other fields can be arranged with special departmental approval. Examples of engineering and science courses are MEMS 255 Engineering Mechanics II, MEMS 342 Heat Transfer, ChE 262 Introduction to Environmental Engineering, ChE 320 Thermodynamics, ChE 351 Engineering Analysis of Chemical Systems, CSE 200 Engineering and Scientific Computing, CSE 241 Algorithms and Data Structures, Engr 324 From Concept to Market: The Business of Engineering, BME 240 Biomechanics, Physics 217 Introduction to Quantum Physics, Physics 318 Introduction to Quantum Physics II, MEMS 253 Engineering Mechanics I, Biol 2960 Principles of Biology I, Biol 2970 Principles of Biology II, Chem 251 Organic Chemistry I and Chem 252 Organic Chemistry II.

5. 28 units of required ESE courses:
ESE 230  Introduction to Electrical and Electronic Circuits  4
ESE 232  Introduction to Electronic Circuits  3
ESE 260  Introduction to Digital Logic and Computer Design  3
ESE 318  Engineering Mathematics A  3
ESE 319  Engineering Mathematics B  3
ESE 326  Probability and Statistics for Engineering  3
ESE 330  Engineering Electromagnetics Principles  3
ESE 351  Signals and Systems  3
ESE 498  Electrical Engineering Design Projects  3
Total units  28

6. Two upper-level laboratory courses (6 units) from the following list: ESE 331, ESE 435, ESE 447, ESE 448, ESE 465, ESE 488.

7. 15 units of elective ESE courses in electrical engineering subjects, from the following list: ESE 330–399, ESE 400, ESE 402, ESE 405, ESE 407, ESE 425, ESE 430–499, ESE 503–589.

8. The entire course sequence for the B.S.E.E. containing engineering topics of at least 45 units. The numbers of engineering topic units assigned to undergraduate courses in the School of Engineering & Applied Science vary from none (0) to the number of credits given to the course. For the precise number for each course, please look at the table of Topics Units — Engineering Courses provided by Engineering Student Services.

9. Limitations. No more than 6 credits of ESE 400 Independent Study and no more than 3 credits of 500-level courses may be applied toward the B.S.E.E. degree.

10. Limitations. No more than 6 units of the combined units of ESE 400 Independent Study and ESE 497 (including ESE 497A and ESE 497B) Undergraduate Research may be applied toward the EE elective requirement (Item 7) of the B.S.E.E. degree. The balance of combined units, if there are any left, are allowed as free electives to satisfy the requirement on the total number of units.

11. The courses taken to satisfy the following B.S.E.E. degree requirements must be taken for a letter grade and not on a pass/fail basis: Item 5 (required ESE courses), Item 6 (upper-level laboratory courses) and Item 7 (elective ESE courses).

Most students acquire more than the number of 120 credit units. See a typical sequence of subjects for the Bachelor of Science in Electrical Engineering degree.

This professional degree is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

Click here for a sample Pre-Med Electrical Engineering curriculum (p. 890).

For more information on B.S. in Electrical Engineering curriculums, please visit: http://ese.wustl.edu/undergraduaterprograms/Pages/bs-in-ee.aspx.

Bachelor of Science in Systems Science and Engineering

Objectives and requirements

Key points:

• Systems Engineering: how to integrate different components in engineering systems.
• Operations Research: mathematical solutions to business problems.
• Pre-financial Engineering: the best preparation for the M.S. in Financial Engineering.
• Applied Mathematics
• Control Engineering: how to control jet airplanes, electric power grids, and the nation’s economy.
• Ideal for students strong in math and physics.
• Ideal for students interested in engineering and business.
• Ideal for students interested in a second major.
• The most mathematical program in the School of Engineering & Applied Science.
• The most flexible professional program in the School of Engineering & Applied Science.

This program educates students in the engineering and science of systems. Graduates are expected to have mathematical competence and knowledge of systems analysis, control, design methods, numerical methods, differential equations, dynamic systems theory, automatic control theory, system stability, estimation, optimization, modeling, identification, simulation and basic computer programming. You will have an engineering outlook and engineer’s competence of your own and be able to interact fully with other engineers. You also will possess sufficient proficiency in computer use to design algorithms for simulation, estimation, control and optimization.

The engineering departments of high-technology industries are staffed by large numbers of engineers with this type of expertise. However, graduates are by no means restricted to careers in traditional industry or in high-technology industries. Within the outlined framework, a salient feature of the program is its flexibility and interdisciplinary nature. It is possible for you to orient study toward preparation for systems science and engineering work in large complex systems such as transportation or power or communications networks or in societal systems such as the economy, ecology, the cities or biological systems. You may wish to prepare for work along theoretical or professional lines. There is ample room in the program structure to accommodate all these interests and to
make your preparation at the B.S. level ideally suited for your future plans and interests.

This professional degree is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

Educational Objectives of the B.S.S.S.E. Degree Program
A. Our graduates will establish themselves as practicing professionals or engaged in advanced study in engineering or a related area.
B. Our graduates will demonstrate their ability to work successfully as a member of a professional team and function effectively as responsible professionals.

B.S.S.S.E. Degree Requirements
The course sequence designed to achieve the type of education outlined above requires at least 120 units, satisfies the residency and other applicable requirements of Washington University and the School of Engineering & Applied Science, and meets the following program requirements:

1. Common Studies program of the School of Engineering & Applied Science. This includes courses in engineering, mathematics, physics, chemistry, humanities, social sciences and technical writing. The required chemistry sequence is Chem 111A–151.
2. Engr 4501 Engineering Ethics and Sustainability (1 unit).
3. Required courses in systems science and engineering: ESE 151/251 Introduction to Systems Science and Engineering (3 units); Math 309 Matrix Algebra (3 units); ESE 318 Engineering Mathematics A (3 units); ESE 319 Engineering Mathematics B (3 units); ESE 326 Probability and Statistics for Engineering (3 units); ESE 351 Signals and Systems (3 units); ESE 403 Operations Research (3 units); ESE 441 Control Systems (3 units); ESE 448 Systems Engineering Laboratory (3 units); and ESE 499 Systems Design Project (3 units).
4. Two of the following four computer science courses: CSE 131 Computer Science I (3 units); CSE 241 Algorithms and Data Structures (3 units); CSE 132 Computer Science II (3 units); or CSE 200 Engineering and Scientific Computing (3 units). Students are encouraged to take CSE 131 Computer Science I and CSE 241 Algorithms and Data Structures. The other possible sequences are CSE 131 and CSE 132 or CSE 200 and CSE 131.
   Students interested in improving their job prospects by learning C++ may take CSE 131, 132, 241 and CSE 332S. Students interested in a Minor in Computer Science are recommended to take CSE 131 Computer Science I, CSE 132 Computer Science II, CSE 241 Algorithms and Data Structures (3 units), CSE 332S Object-oriented Software Development Laboratory (3 units) and CSE 436S Software Engineering Workshop (3 units).
5. One of the following three laboratory courses: ESE 447 Robotics Laboratory (3 units), ESE 449 Digital Process Control Laboratory (3 units), ESE 488 Signals and Systems Laboratory (3 units). ESE 449 is only recommended to students with a chemical engineering background.
6. 12 units in elective courses in systems science and engineering: ESE 400 through 429; ESE 437; ESE 440 through 459; ESE 470 through 489; ESE 497; ESE 500 through 529; ESE 540 through 559. Up to 3 units of the following business courses may be part of the 12 units of SSE electives: OSCM 356 Operations Management, OSCM 458 Operations Planning and Control, OMM 576 Foundations of Supply Chain Management, OMM 577 Information Technology and Supply Chain Management.
7. 12 units in engineering concentration outside of systems science and engineering. These must all be taken in one of the following engineering areas: Biomedical Engineering, Chemical Engineering, Computer Science and Engineering, Electrical Engineering (ESE 102; ESE 230 through 239; ESE 260 through 290; ESE 330 through 339; ESE 360 through 390; ESE 430 through 439; ESE 460 through 469; ESE 490 through 496; ESE 498; ESE 530 through 539; ESE 560 through 589), or Mechanical Engineering and Materials Science. Of the 12 units, 9 units must be at the level 200 or higher. Sequences for concentrations in economics, mathematics, physics, premedicine and other fields can be arranged with special departmental approval to meet your specific needs. When a non-engineering discipline is chosen as the outside concentration, the student needs to pay special attention to the next requirement, which is required of all students, and make sure that enough engineering contents are obtained from the other courses. The use of basic required courses to fulfill the requirement for an outside concentration requires special approval from the department.
8. The entire course sequence for the B.S.S.S.E. containing engineering topics of at least 45 units. The numbers of engineering topic units assigned to undergraduate courses in the School of Engineering & Applied Science vary from none (0) to the number of credits given to the course. For the precise number for each course, please look at the table of Topics Units — Engineering Courses provided by Engineering Student Services.
9. Limitations. No more than 6 units of the combined units of ESE 400 Independent Study and ESE 497 (including 497A and 497B) Undergraduate Research may be applied toward the SSE elective requirement (item 6) of the B.S.S.S.E. degree. Any remaining combined units are allowed as free electives to satisfy the requirement on the total number of units.
10. The courses taken to satisfy the following B.S.S.S.E. degree requirements must be taken for a letter grade and not on a pass/fail basis: item 3 (required ESE courses), item 5 (elective laboratory course) and item 6 (elective ESE courses).

The program requirements for the B.S. in Systems Science and Engineering allow a double major with another department. Changes in the program to accommodate such double majors may be made with departmental approval. See a sample program for the B.S. in Systems Science and Engineering.

Click here for a sample Systems Science and Engineering curriculum (p. 891).

Click here for a sample Pre-Med Systems Science and Engineering curriculum (p. 892).

**Bachelor of Science in Applied Science (Electrical Engineering)**

Students who do not plan to pursue a career in electrical engineering but seek a strong foundation in the principles of electrical engineering may choose the Bachelor of Science in Applied Science (Electrical Engineering). The program ensures that the student learns the foundations of electrical engineering through breadth requirements. In addition, there is flexibility in selecting upper-level courses to meet the student’s individual objectives. This program also may be attractive for students interested in obtaining multiple degrees because the requirements are less strict than for the B.S.E.E. degree. Historically students have matched a degree in electrical engineering with degrees in other engineering disciplines, in the natural sciences, in music, in history and in business; other combinations are possible. This also may be an attractive option for students planning graduate studies in a variety of disciplines including medicine, law or business. This nonprofessional degree is not accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

The degree requirements include the residency and general requirements of the university and the School of Engineering and:

<table>
<thead>
<tr>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Humanities and social sciences electives</td>
</tr>
<tr>
<td>Mathematics, science and engineering electives</td>
</tr>
<tr>
<td>Required courses in electrical engineering (ESE 230, ESE 232 and ESE 330 or ESE 351)</td>
</tr>
</tbody>
</table>

The program must include at least 48 units at the 300 level or higher.

**Bachelor of Science in Applied Science (Systems Science and Engineering)**

This program provides you with the opportunity to prepare your academic career with maximum flexibility, but with enough organization to assure substantive, consistent training in systems science methodology and outlook. This program is recommended if you wish to pursue a program that does not follow conventional lines. It is an especially advantageous component for a double major in association with mathematics, physics, economics or another engineering discipline. The program can be planned to provide a desirable background for graduate work in biological, medical or management fields. This nonprofessional degree is not accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

The degree requirements include the residency and general requirements of the University and the School of Engineering and:

<table>
<thead>

</tbody>
</table>

The program must include at least 48 units at the 300 level or higher.
The Second Major in Electrical Engineering Science

A second major in Electrical Engineering Science is ideal for students majoring in many areas, such as mathematics, physics, chemistry and biology. Students in the School of Engineering & Applied Science as well as the other undergraduate divisions at Washington University now have the opportunity to pursue a second major in Electrical Engineering Science. Students are not allowed to add this second major to either the B.S. in Electrical Engineering or the B.S. in Applied Science (Electrical Engineering).

The requirements for a second major in Electrical Engineering Science are:

- ESE 230 Introduction to Electrical and Electronic Circuits 4
- ESE 260 Introduction to Digital Logic and Computer Design 3
- ESE 351 Signals and Systems 3
- And one of the following:
  - ESE 232 Introduction to Electronic Circuits 3
  - ESE 318 Engineering Mathematics A 3
  - ESE 319 Engineering Mathematics B 3
  - ESE 330 Engineering Electromagnetics Principles 3
  - ESE 326 Probability and Statistics for Engineering 3

And seven 3-unit ESE courses in the Electrical Engineering area chosen from:

- ESE 330–339
- ESE 400 Independent Study 1-3
- ESE 405 Reliability and Quality Control 3
- ESE 407 Analysis and Simulation of Discrete Event Systems 3
- ESE 409
- ESE 425
- ESE 430–439
- ESE 503–589

The above program assumes the completion of the following courses:

- Math 132 Calculus II and Calculus III 6
- Math 233 Differential Equations 3
- CSE 131 Computer Science I 3

Students may petition to substitute electrical science-oriented courses from other disciplines for up to two of the above 11 courses (for example, certain courses in physics or applied mathematics). When such substitutions are employed, the total number of units for non-Arts & Sciences courses is 31 or 32 units. Within this second major in Electrical Engineering Science, areas of concentration are possible in: applied physics, signal processing and control systems. The second major in the Electrical Engineering Science program comprises a total of 34 or 35 units. To design a customized program, contact the department chair or the director of the program Professor R. Martin Arthur at rma@wustl.edu.

The Second Major in Systems Science

A second major is ideal for study in many areas such as physics, chemistry, economics and computational biology. Students in the School of Engineering as well as the other undergraduate divisions at Washington University have the opportunity to pursue a second major in the Preston M. Green Department of Electrical and Systems Engineering in the School of Engineering & Applied Science. Students are not allowed to add this second major to either the B.S. in SSE or the B.S. in Applied Science (SSE).

The requirements for a second major in systems science are:

- ESE 251 Introduction to Systems Science and Engineering 3
- Math 309 Matrix Algebra 3
- ESE 351 Signals and Systems 3
- ESE 403 Operations Research 3

One of the following:

- ESE 318 Engineering Mathematics A 3
- ESE 319 Engineering Mathematics B 3
- ESE 326 Probability and Statistics for Engineering 3
- ESE 441 Control Systems 3

Eight 3-unit ESE courses in the Systems area chosen from

- ESE 318 through 326
- ESE 400 through 429
- ESE 437
- ESE 440 through 459
- ESE 470 through 489
- ESE 500 through 529
- ESE 540 through 559.

Students may petition to substitute systems-oriented courses from other disciplines for two of these eight courses (for example, courses in computational physics, mathematical economics or computational mathematics). When such substitutions are employed, the total number of units for non-Arts & Science courses will be 30 units.
Within this second major in systems science, areas of concentration are possible in: robotics, control systems and operations research.

This totals 34 to 40 units of systems science, depending on students' use of the substitution option for upper-level electives. To design a customized program, contact the departmental associate chair or the director of the program (Professor I. Norman Katz).

**The Minor in Electrical Engineering**

_Units required: 16_

**Required courses:**

<table>

For more information, contact the director for the minor or visit the minor web page.

**The Minor in Energy Engineering (ESE)**

This minor will provide students with course work that will enhance their background, knowledge and skills in the topical area of Energy Engineering. The minor covers classes in several fields of science and engineering, encompassing the Department of Energy, Environmental and Chemical Engineering, the Department of Electrical & Systems Engineering and the Department of Mechanical Engineering & Materials Science. A minor in Energy Engineering requires the completion of 18 units. It is open to undergraduate students pursuing an engineering major, students from the sciences (Biology, Chemistry, Physics) in Arts & Sciences, and students pursuing the Environmental Studies major. The detailed requirements for the minor can be found on the Energy, Environmental and Chemical Engineering Minors page (p. 896). Questions regarding the minor should be directed to a member of the committee for the Energy Engineering Minor: Professor Pratim Biswas (EECE), Professor Hiro Mukai (ESE) or Professor David Peters (MEMS).

---

**Committee to Oversee Energy Engineering Minor**

Pratim Biswas (EECE, Coordinator)

Hiro Mukai (ESE)

David Peters (MEMS)

The committee ensures that any course added to the above lists contain a significant amount of energy topics and that the entire program be cohesive.

Visit the minor web page for more information.

**The Minor in Mechatronics (ESE)**

(Program Director: Heinz Schättler)

Advancements in power electronics, electronic sensors and computer hardware and software have led to an expanding role for “smart” systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The Minor in Mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

**Four required courses:**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MEMS 255</td>
<td>Engineering Mechanics II (Dynamics)</td>
<td>3</td>
</tr>
<tr>
<td>MEMS 411</td>
<td>Mechanical Engineering Design Project (Mechatronics project)</td>
<td>3</td>
</tr>
<tr>
<td>ESE 446</td>
<td>Robotics: Dynamics and Control</td>
<td>3</td>
</tr>
<tr>
<td>ESE 444</td>
<td>Sensors and Actuators</td>
<td>3</td>
</tr>
</tbody>
</table>

**Two electives from the following:**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MEMS 431</td>
<td>Structural Dynamics and Vibrations</td>
<td>4</td>
</tr>
<tr>
<td>MEMS 5101</td>
<td>Analysis and Design of Fluid-Power Systems</td>
<td>3</td>
</tr>
</tbody>
</table>
**The Minor in Robotics**

Robotic systems have wide applications in modern technology and manufacturing. Robots can vary in complexity and use, from microrobots for surgical procedures to moderate-size robots common in manufacturing and underwater exploration to macro robots used for disposal of nuclear wastes and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in design and use of robots.

**Prerequisites:**

- Math 217: Differential Equations
- Physics 117A: General Physics I
- Physics 118A: General Physics II
- CSE 131: Computer Science I
- or CSE 200: Engineering and Scientific Computing
- or MEMS 201: Numerical Methods and Matrix Algebra or equivalent

**Required courses:**

- MEMS 255: Engineering Mechanics II
- ESE 351: Signals and Systems
- or MEMS 431: Structural Dynamics and Vibrations
- ESE 446: Robotics: Dynamics and Control
- ESE 447: Robotics Laboratory

Plus two courses chosen with the approval of the director of the program for a minor in robotics. Suggested courses are:

- CSE 313A: Artificial Intelligence Laboratory
- CSE 452A: Computer Graphics
- CSE 546T: Computational Geometry
- MEMS 311: Machine Elements
- ESE 441: Control Systems
- or MEMS 4301: Modeling, Simulation and Control
- or MEMS 4302: Aircraft Flight Dynamics and Control

**The Minor in Systems Science & Engineering**

This minor consists of fundamental courses in control systems and operations research. In the area of control systems, students will be introduced to design techniques for controlling engineering and socioeconomic systems such as airplanes, automobiles, nuclear reactors, ecological systems, communication networks, the nation's economy and biological systems. In the area of operations research, students are introduced to techniques for optimally managing business resources and controlling business networks such as supply chains.

**Requirements:**

Students who complete 15 units of course work in systems science and engineering subjects at Washington University as specified below may be awarded a minor in Systems Science & Engineering.

**The required courses for the minor are:**

- ESE 251: Introduction to Systems Science and Engineering
- ESE 351: Signals and Systems
- ESE 403: Operations Research
- or ESE 404: Applied Operations Research
- ESE 441: Control Systems

Students must select one systems science and engineering elective course from the following list: ESE 400 through 425 except 409; ESE 437; ESE 440 through 459 except 449; ESE 470 through 489.

**Prerequisites:**

A student who has finished engineering common studies courses needs to take only ESE 317 or ESE 318 and ESE 319 in addition to the above five courses. The student may start taking ESE 251 while taking Math 217 or Math 233.

For more information, contact the director (Norman Katz) for the minor.

---

**E35 ESE 100 Independent Study**

MATLAB and Simulink are important tools in quickly analyzing different designs in many engineering disciplines and are also
perhaps the most used software in many engineering schools. Gain skills in the basics of the array-based language MATLAB to write programs, including scripts and functions, to calculate and display variables and images. Learn the basics of Simulink to build and simulate models from standard blocks. Discover both MATLAB and Simulink in an environment with supervised practice and hands-on experience. Practice problems are chosen from different engineering fields as well as from a few socio-economic fields so that students can see the software being exploited in real life applications. This is a pass/fail course. Prerequisite: freshman standing. Credit 1 unit.

E35 ESE 103 Introduction to Electrical Engineering
A hands-on introduction to electrical engineering to put the FUN into the electrical engineering FUNdamentals. Experiments are designed to be easy to conduct and understand. Some of the technologies explored are used in a variety of applications including the iPod, ultrasound imaging, computed tomography, radar, DC motors and credit card readers. Students work in groups of two in the newly renovated Bryan 316 laboratory. Each station is equipped with a Quad-Core computer and an integrated data acquisition system. Using this lab equipment, students design and build solutions to the exercises. The students also learn to program the computer in LabVIEW to control the Data Acquisition system. Also, throughout the semester, presentations are given by the Electrical and Systems Engineering faculty about their research. Credit 1 unit.

E35 ESE 141 Introductory Robotics
A hands-on introduction to robotics. Project-oriented course in which students build and program a robot guided by upper-division students. Friendly competition at the end of the semester. Students gain electrical lab experience, programming experience and a guided introduction into the field of robotics. Recommended to freshmen and sophomores. This is a pass/fail course. Credit 1 unit.

E35 ESE 151 Introduction to Systems Science and Engineering
Introduction to the methodology of systems engineering: mathematical modeling, deterministic and stochastic systems, optimization, utilization of scientific literature. Applications in engineering, environmental studies, sports, medicine, business, etc. Guest lecturers from various disciplines. Students are required to do mini research projects (in groups) and present their results. Grading is based on presentations and reports. (Not open to seniors or graduate students.) Prerequisites: Math 132, Physics 117A. Same as ESE 251. Credit 3 units.

E35 ESE 230 Introduction to Electrical and Electronic Circuits

E35 ESE 231 Electrical and Electronic Circuits Laboratory
This course is limited to students who have taken ESE 230. Introduction to electronic meters, instruments and power supplies to create and measure electrical current and voltage. Use of PSPICE and Multisim circuit simulation software to design and analyze electrical circuits. Construction, operation and measurement of electronic circuits comprising resistors, inductors, capacitors, transformers, audio speakers, DC motors, and basic inverting and non-inverting operational amplifier circuits. Weekly attendance at laboratory exercises is required. Prerequisites: ESE 230 and Math 217 or equivalent. Credit 1 unit.

E35 ESE 232 Introduction to Electronic Circuits
Analysis and design of linear electronic circuits. Terminal characteristics of active semiconductor devices. Incremental and DC models for diodes, metal-oxide-semiconductor field effect transistors (MOSFETs) and bipolar junction transistors (BJTs). Design and analysis of single- and multistage amplifiers. Volatile and nonvolatile memories. Understanding of common application circuits (e.g., operational amplifier, memories) in integrated circuit chips. Semester-long design project. Prerequisite: ESE 230. Credit 3 units.

E35 ESE 233 Electrical and Electronics Laboratory
Lectures and laboratory exercises related to sophomore topics in introductory networks and basic electronics. Prerequisite: ESE 230.
E35 ESE 251 Introduction to Systems Science and Engineering
Introduction to the methodology of systems engineering: mathematical modeling, deterministic and stochastic systems, optimization, utilization of scientific literature. Applications in engineering, environmental studies, sports, medicine, business, etc. Guest lecturers from various disciplines. Students are required to do mini research projects (in groups) and present their results. Grading is based on presentations and reports. (Not open to seniors or graduate students.) Prerequisites: Math 132, Physics 117A.
Credit 3 units. EN : DU, SU, TU

E35 ESE 250 Introduction to Digital Logic and Computer Design
Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisite: CSE 131 or comparable programming experience.
Same as CSE 260M
Credit 3 units. EN : DU, SU, TU

E35 ESE 297 Introduction to ESE Undergraduate Research Projects
This course is offered to students at all levels from all departments. The course is designed to give students some hands-on experience by implementing projects that use the lab PCs, the sbRIO robots from National Instruments, acoustic sensors, bio-medical sensors and 3D cameras. These projects are implemented in LabVIEW and Matlab and should prepare the students to work on topics that include the Robotic Sensing Undergraduate Research Projects in subsequent semesters. Note that under ESE 497 Undergraduate Research, students may select the Robotic Sensing Projects as well as other projects. Working in groups, students implement algorithms that run on PCs and our wireless robotic platforms to track a moving audio source. Also, they use an EEG system to implement a Brain Computer Interface (BCI) project and work with the new Kinect camera from Microsoft. Corequisite: CSE 131 or equivalent.
Credit 2 units.

E35 ESE 318 Engineering Mathematics A
Laplace transforms; matrix algebra; vector spaces; eigenvalues and eigenvectors; vector differential calculus and vector integral calculus in three dimensions. Prerequisites: Math 233 and Math 217 or their equivalents.
Credit 3 units.

E35 ESE 319 Engineering Mathematics B
Power series and Frobenius series solutions of differential equations; Legendre’s equation; Bessel’s equation; Fourier series and Fourier transforms; Sturm-Liouville theory; solutions of partial differential equations; wave and heat equations. Prerequisites: Math 233 and Math 217 or their equivalents.
Credit 3 units.

E35 ESE 326 Probability and Statistics for Engineering
Study of probability and statistics together with engineering applications. Probability and statistics: random variables, distribution functions, density functions, expectations, means, variances, combinatorial probability, geometric probability, normal random variables, joint distribution, independence, correlation, conditional probability, Bayes theorem, the law of large numbers, the central limit theorem. Applications: reliability, quality control, acceptance sampling, linear regression, design and analysis of experiments, estimation, hypothesis testing. Examples are taken from engineering applications. Prerequisites: Math 233 or equivalent.
Credit 3 units. EN : DU, SU, TU

E35 ESE 330 Engineering Electromagnetics Principles
Electromagnetic theory as applied to electrical engineering: vector calculus; electrostatics and magnetostatics; Maxwell’s equations, including Poynting’s theorem and boundary conditions; uniform plane-wave propagation; transmission lines, TEM modes, including treatment of general lossless lines, and pulse propagation; introduction to guided waves; introduction to radiation and scattering concepts. Prerequisites: ESE 318 and 319 or 317 or equivalent.
Credit 3 units. EN : DU, SU, TU

E35 ESE 331 Electronics Laboratory
Laboratory exercises provide students with a combination of hands-on experience in working with a variety of real instruments and in working in a simulated “virtual” laboratory setting. A sequence of lab experiments provide hands-on experience with grounding and shielding techniques, signal analysis, realistic operation amplifier (op amp) characterization, op amp-based active filters characterization, MOSFET chopper/amplifier behavior, measurement of pulses propagating on a transmission line with various terminations, experience with both AM and FM modulation. Students gain experience in working with: sampling oscilloscopes, various signal generators, frequency counters, digital multimeters, spectrum analyzers and contemporary
connection boards. The course concludes with a hands-on project to design and demonstrate an electronic component. Prerequisite: ESE 230. Credit 3 units. EN : DU, SU, TU

E35 ESE 332 Power, Energy and Polyphase Circuits
Fundamental concepts of power and energy; electrical measurements; physical and electrical arrangement of electrical power systems; polyphase circuit theory and calculations; principal elements of electrical systems such as transformers, rotating machines, control and protective devices, their description and characteristics; elements of industrial power system design. Prerequisite: ESE 230. Credit 3 units. EN : DU, SU, TU

E35 ESE 336 Principles of Electronic Devices
Introduction to the solid-state physics of electronic materials and devices, including semiconductors, metals, insulators, diodes and transistors. Crystal growth technology and fundamental properties of crystals. Electronic properties and band structure of electronic materials, and electron transport in semiconductor materials. Fabrication of PN junction diodes, metal-semiconductor junctions, and transistors and integrated-circuit chips. Fundamental electrical properties of rectifying diodes and light-emitting diodes, bipolar transistors and field-effect transistors. Device physics of diodes and transistors, large-signal electrical behavior and high-frequency properties. Prerequisite: Physics 118A. Credit 3 units. EN : DU, SU, TU

E35 ESE 337 Electronic Devices and Circuits

E35 ESE 351 Signals and Systems

E35 ESE 352 Introduction to Signals and Systems Lab
Introduction to physical and computational aspects of signals and systems. Weekly laboratory experiments complement the theoretical treatment in ESE 351 Signals and Systems. Experiments illustrate fundamental concepts of linear systems, including state-space and input-output models, impulse response and convolution, transient and steady-state responses, time- and frequency-domain representations, system frequency response, and sampling, filtering and modulation. MATLAB and/ or LabView are used for experiments and analysis of mechanical systems, electrical circuits, signals and communication systems. Corequisite: ESE 351. Credit 1 unit.

E35 ESE 362 Computer Architecture
Same as CSE 362M
Credit 3 units. EN : DU, SU, TU

E35 ESE 400 Independent Study
Opportunities to acquire experience outside the classroom setting and to work closely with individual members of the faculty. A final report must be submitted to the department. Not open to first-year or graduate students. Consult adviser. Hours and credit to be arranged; credit variable, maximum 3 units. Credit variable, maximum 3 units.

E35 ESE 403 Operations Research
Introduction to the mathematical aspects of various areas of operations research, with additional emphasis on problem formulation. This is a course of broad scope, emphasizing both the fundamental mathematical concepts involved, and also aspects of the translation of real-world problems to an appropriate mathematical model. Subjects covered include linear and integer programming, network problems and dynamic programming. Prerequisites: Math 217 and familiarity with matrix or linear algebra, or permission of instructor. Credit 3 units. EN : DU, SU, TU

E35 ESE 404 Applied Operations Research
Application of deterministic and stochastic operations research techniques to real-world problems. Emphasis is given to linear programming and simulation. The nature of the problems ranges from logistics and planning to operations management. The
systems examined are transportation systems, supply chain systems, medical care delivery systems, urban service systems, management systems, manufacturing systems. Emphasis is placed on the problem formulation of real-world problems, the use of computer software and the analysis of the solutions. Prerequisites: ESE 326 and ESE 318 or equivalent. ESE 403 is not a prerequisite for this course, so it is possible to take this course without ESE 403. Credit 3 units. EN: DU, SU, TU

**E35 ESE 405 Reliability and Quality Control**
An integrated analysis of reliability and quality control function in manufacturing. Statistical process control, acceptance sampling, process capability analysis, reliability prediction, design, testing, failure analysis and prevention, maintainability, availability, and safety are discussed and related. Qualitative and quantitative aspects of statistical quality control and reliability are introduced in the context of manufacturing. Prerequisite: ESE 326 or equivalent. Credit 3 units. EN: DU, SU, TU

**E35 ESE 407 Analysis and Simulation of Discrete Event Systems**
Study of the dynamic behavior of discrete event systems and techniques for analyzing and optimizing the performance of such systems. Covers both classical and recent approaches. Classical topics include Markov chains, queueing theory, networks of queues, related algorithms and simulation methods. Recent approaches include decomposition and aggregation, approximation, and perturbation analysis of nonclassical systems. Applications are drawn from various areas, including production systems. Prerequisites: Math 217, ESE 326 or equivalent, programming experience such as CSE 131 or CSE 200. Credit 3 units. EN: DU, SU, TU

**E35 ESE 408 A System Dynamics Approach to Designing Sustainable Policies and Programs**
Principles and practice of modeling dynamic systems in the sciences, engineering, social sciences and business. Model structure and its relationships to prior knowledge and assumptions, measurable quantities and ultimate use in solving problems in application areas. Problems considered are in the areas of intervention, policy making, business and engineering systems. Model verification. The basic theory and practice of system dynamics. Quantitative methods are emphasized. Senior or graduate standing. Credit 3 units. EN: DU, SU, TU

**E35 ESE 415 Optimization**
Optimization problems with and without constraints. The projection theorem, Convexity, separating hyperplane theorems; Lagrange multipliers, Kuhn-Tucker-type conditions, duality; computational procedures. Optimal control of linear dynamic systems; maximum principles. Use of optimization techniques in engineering design. Prerequisites: Math 309 and ESE 317 or ESE 318 or permission of instructor. Credit 3 units. EN: DU, SU, TU

**E35 ESE 425 Random Processes and Kalman Filtering**
Probability and random variables; random processes; linear dynamic systems and random inputs; autocorrelation; spectral density; the discrete Kalman filter; applications; the extended Kalman filter for nonlinear dynamic systems. Kalman filter design using a computer package, mean square estimation; maximum likelihood; Wiener filtering and special factorization, LQG/LTR control. Prerequisite: ESE 326 and ESE 351 or equivalent. Credit 3 units. EN: DU, SU, TU

**E35 ESE 427 Financial Mathematics**
This course is a self-contained introduction to financial mathematics at the undergraduate level. Topics to be covered include pricing of the financial instruments such as options, forwards, futures and their derivatives along with basic hedging techniques and portfolio optimization strategies. The emphasis is put on using of discrete, mostly binary models. The general, continuous case including the concepts of Brownian motion, stochastic integral, and stochastic differential equations, is explained from intuitive and practical point of view. Among major results discussed are the Arbitrage Theorem and Black-Scholes differential equations and their solutions. Prerequisites: ESE 318 and ESE 319 or ESE 317 and ESE 326 or the consent of the instructor. Credit 3 units. EN: SU, TU

**E35 ESE 428 Probability**
Same as Math 493. Credit 3 units. A&S: NS A&S: IQ, NSM FA: NSM

**E35 ESE 433 Radio Frequency and Microwave Technology for Wireless Systems**
Focus is on the components and associated techniques employed to implement analog and digital radio frequency (RF) and microwave (MW) transceivers for wireless applications, including: cell phones; pagers; wireless local area networks; global positioning satellite-based devices; and RF identification systems. A brief overview of system-level considerations is provided, including modulation and detection approaches for analog and digital systems; multiple-access techniques and wireless standards; and transceiver architectures. Focus is on RF and MW: transmission lines; filter design; active component modeling; matching and biasing networks; amplifier design; and mixer design. Prerequisite: ESE 330. Credit 3 units. EN: DU, SU, TU
Engineering

E35 ESE 434 Solid-State Power Circuits and Applications
Study of the strategies and applications power control using solid-state semiconductor devices. Survey of generic power electronic converters. Applications to power supplies, motor drives and consumer electronics. Introduction to power diodes, thyristors and MOSFETs. Prerequisites: ESE 232, ESE 351. Credit 3 units. EN: DU, SU, TU

E35 ESE 435 Electrical Energy Laboratory
Experimental studies of principles important in modern electrical energy systems. Topics include: AC power measurements, electric lighting, photovoltaic cells and arrays, batteries, DC-DC and DC-AC converters, and three-phase circuits. Each experiment requires analysis, simulation with MultiSim, and measurement via LabView and the Elvis II platform. Prerequisites: ESE 230 and ESE 351. Credit 3 units. EN: DU, SU, TU

E35 ESE 436 Advanced Electronic Devices
The physics of state-of-the-art electronic devices. Devices studied include novel diode structures (light-emitting diodes, semiconductor laser diodes), high-power devices (SCRs, TRIACs and power transistors), and high-speed devices. High-speed devices include heterojunction bipolar (HBT), heterojunction field-effect (HFET) and high electron mobility (HEMT) transistors used in very high-speed systems (up to 100 GHz). Advanced bipolar transistors (poly-Si), used in high-speed microprocessors, examined; also materials properties, transport mechanisms, band structure and physics of these devices. Prerequisite: ESE 336. Credit 3 units. EN: DU, SU, TU

E35 ESE 437 Sustainable Energy Systems
We survey the field of sustainable energy and explore contributions within electrical and systems engineering. Topics include introductory electric power systems, smart grids and the roles of heat engines, photovoltaics, wind power and energy storage, as well as analysis and optimization of energy systems. The course consists of lectures, review and discussion of literature, and student projects. Prerequisites: ESE 317 or ESE 318 or ESE 319 and ESE 230 or ESE 351 or permission of instructor. Credit 3 units. EN: DU, SU, TU

E35 ESE 438 Applied Optics
Topics relevant to the engineering and physics of conventional as well as experimental optical systems and applications explored. Items addressed include geometrical optics, Fourier optics such as diffraction and holography, polarization and optical birefringence such as liquid crystals, and nonlinear optical phenomena and devices. Prerequisite: ESE 330 or equivalent. Credit 3 units. EN: DU, SU, TU

E35 ESE 441 Control Systems

E35 ESE 442 Digital Control Systems
The control of physical systems with digital computer, microprocessor or special-purpose digital hardware is becoming very common. Course continues ESE 441 to develop models and mathematical tools needed to analyze and design these digital feedback-control systems. Linear, discrete dynamic systems. The Z-transform. Discrete equivalents to continuous transfer functions. Sampled-data control systems. Digital control systems design using transfer and state-space methods. Systems composed of digital and continuous subsystems. Quantization effects. System identification. Multivariable and optimum control. Prerequisites: ESE 351 and ESE 441 (or MEMS 431) or permission of instructor. Credit 3 units. EN: DU, SU, TU

E35 ESE 444 Sensors and Actuators
The course provides engineering students with basic understanding of two of the main components of any modern electrical or electromechanical system; sensors as inputs and actuators as outputs. The covered topics include transfer functions, frequency responses and feedback control. Component matching and bandwidth issues. Performance specification and analysis. Sensors: analog and digital motion sensors, optical sensors, temperature sensors, magnetic and electromagnetic sensors, acoustic sensors, chemical sensors, radiation sensors, torque, force and tactile sensors. Actuators: stepper motors, DC and AC motors, hydraulic actuators, magnet and electromagnetic actuators, acoustic actuators. Introduction to interfacing methods: bridge circuits, A/D and D/A converters, microcontrollers. This course is useful for those students interested in control engineering, robotics and systems engineering. Prerequisites: one of the following 5 conditions: (1) prerequisite of ESE 230 and corequisite of ESE 351; (2) prerequisites of ESE 230, ESE 317 and MEMS 255 (Mechanics II); (3) prerequisites of ESE 230, ESE 318 and MEMS 255 (Mechanics II); (4) prerequisites of ESE 151 and ESE 351; (5) permission of instructor.
E35 ESE 446 Robotics: Dynamics and Control
Homogeneous coordinates and transformation matrices. Kinematic equations and the inverse kinematic solutions for manipulators, the manipulator Jacobian and the inverse Jacobian. General model for robot arm dynamics, complete dynamic coefficients for six-link manipulator. Synthesis of manipulation control, motion trajectories, control of single- and multiple-link manipulators, linear optimal regulator. Model reference adaptive control, feedback control law for the perturbation equations along a desired motion trajectory. Design of the control system for robotics. Prerequisites: ESE 351 or ESE 441, and knowledge of a programming language. Credit 3 units. EN : DU, SU, TU

E35 ESE 447 Robotics Laboratory
Introduces the students to various concepts such as modeling, identification, model validation and control of robotic systems. The course focuses on the implementation of identification and control algorithms on a two-link robotic manipulator (the so-called pendubot) that is used as an experimental testbed. Topics include: introduction to the mathematical modeling of robotic systems; nonlinear model, linearized model; identification of the linearized model: input-output and state-space techniques; introduction to the identification of the nonlinear model: energy-based techniques; model validation and simulation; stabilization using linear control techniques; a closer look at the dynamics; stabilization using nonlinear control techniques. Prerequisite: ESE 351 or MEMS 431. Credit 3 units. EN : DU, SU, TU

E35 ESE 448 Systems Engineering Laboratory
Experimental study of real and simulated systems and their control. Identification, input-output analysis, design and implementation of control systems. Noise effects. Design and implementation of control laws for specific engineering problems. Corequisite: ESE 441 and knowledge of a programming language. Credit 3 units. EN : DU, SU, TU

E35 ESE 449 Digital Process Control Laboratory
Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics and process control. Exercises in data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature and pressure control. Term project. Prerequisite: ESE/MEMS 441 or ChE 462 or equivalent. Same as ChE 433 Credit 3 units. EN : DU, SU, TU

E35 ESE 455 Quantitative Methods for Systems Biology
Application of computational mathematical techniques to problems in contemporary biology. Systems of linear ordinary differential equations in reaction-diffusion systems, hidden Markov models applied to gene discovery in DNA sequence, ordinary differential equation and stochastic models applied to gene regulation networks, negative feedback in transcription and metabolic pathway regulation. Prerequisites: (1) Math 217 Differential Equations and (2) a programming course and familiarity with MATLAB. Credit 3 units. EN : DU, SU, TU

E35 ESE 460 Switching Theory
Advanced topics in switching theory as employed in the synthesis, analysis and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits and built-in self-test techniques. Prerequisite: CSE 260M or equivalent. Same as CSE 460T Credit 3 units. EN : DU, SU, TU

E35 ESE 462 Computer Systems Design
Introduction to modern design practices, including the use of FPGA design methodologies. Students use a commercial CAE/CAD system for VHDL-based design and simulation while designing a selected computation system. Prerequisites: CSE 361S and 362M. Same as CSE 462M Credit 3 units. EN : DU, SU, TU

E35 ESE 463 Digital Integrated Circuit Design and Architecture
This is a project oriented course on digital VLSI design. The course material focuses on bottom up design of digital integrated circuits, starting from CMOS transistors, CMOS inverters, combinational circuits and sequential logic designs. Important design aspects of digital integrated circuits such as propagation delay, noise margins and power dissipation are covered in the class, as well as design challenges in submicron technology are addressed. The students design combinational and sequential circuits at various levels of abstraction using state-of-the-art CAD environment provided by Cadence Design Systems. The goal of the class is to design a microprocessor in 0.5 micron technology that can be fabricated by a semiconductor foundry. Prerequisites: CSE 260 and ESE 232. Same as CSE 463M Credit 3 units. EN : DU, SU, TU

882
E35 ESE 464 Digital Systems Engineering
Same as CSE 464M
Credit 3 units. EN : DU, SU, TU

E35 ESE 465 Digital Systems Laboratory
Same as CSE 465M
Credit 3 units. EN : DU, SU, TU

E35 ESE 467 Embedded Computing Systems
Introduces the issues, challenges and methods for designing embedded computing systems — systems designed to serve a particular application, which incorporate the use of digital processing devices. Examples of embedded systems include PDAs, cellular phones, appliances, game consoles, automobiles and iPod. Emphasis is given to aspects of design that are distinct to embedded systems. The course examines hardware, software and system-level design. Hardware topics include microcontrollers, digital signal processors, memory hierarchy and I/O. Software issues include languages, run-time environments and program analysis. System-level topics include real-time operating systems, scheduling, power management and wireless sensor networks. Students perform a course project on a real wireless sensor network testbed. Prerequisite: CSE 361S. Same as CSE 467S
Credit 3 units. EN : DU, SU, TU

E35 ESE 471 Communications Theory and Systems
Introduction to the concepts of transmission of information via communication channels. Amplitude and angle modulation for the transmission of continuous-time signals. Analog-to-digital conversion and pulse code modulation. Transmission of digital data. Introduction to random signals and noise and their effects on communication. Optimum detection systems in the presence of noise. Elementary information theory. Overview of various communication technologies such as radio, television, telephone networks, data communication, satellites, optical fiber and cellular radio. Prerequisites: ESE 351 and ESE 326.
Credit 3 units. EN : DU, SU, TU

E35 ESE 482 Digital Signal Processing
Credit 3 units. EN : DU, SU, TU

E35 ESE 483 Medical Imaging
Introduction to the mathematical, physical and engineering principles underlying modern medical imaging systems including x-ray computed tomography, ultrasonic imaging and magnetic resonance imaging. Mathematical tools including Fourier analysis and the sampling theorem; the Radon transform and related transforms; reconstruction algorithms for computed tomography; tomographic imaging with diffracting sources; Bloch equations; free induction decay, spin echoes and gradient echoes; one-dimensional Fourier magnetic resonance imaging; 3-dimensional magnetic resonance imaging and slice excitation. Prerequisite: ESE 351.
Credit 3 units. EN : DU, SU, TU

E35 ESE 488 Signals and Systems Laboratory
A laboratory course designed to complement the traditional EE course offerings in signal processing, communication theory and automatic control. Signals and systems fundamentals: continuous-time and discrete-time linear time-invariant systems, impulse and step response, frequency response, A/D and D/A conversion. Digital signal processing: FIR and IIR digital filter design, implementation and application of the Fast Fourier Transform. Communication theory: baseband, digital communication, amplitude modulation, frequency modulation, bandpass digital communication. Automatic control: system modeling, feedback control systems, closed-loop transient and frequency response. Laboratory experiments involve analog and digital electronics, and mechanical systems. Computer workstations and modern computational software used extensively for system simulation, real-time signal processing and discrete-time automatic control. Prerequisite: ESE 351.
Credit 3 units. EN : DU, SU, TU

E35 ESE 497 Undergraduate Research
Undergraduate research under the supervision of a faculty member. The scope and depth of the research must be approved by the faculty member prior to enrollment. A written final report and a web page describing the research are required. Credit variable, maximum 3 units.

E35 ESE 497B Undergraduate Research
Undergraduate research in the summer under the supervision of Dr. Arye Nehorai. Prerequisite: undergraduate standing. Credit variable, maximum 3 units.

E35 ESE 498 Electrical Engineering Design Projects
Working in teams, students address design tasks assigned by faculty. Each student participates in one or more design projects
Credit variable, maximum 3 units.
in a semester. Projects are chosen to emphasize the design process, with the designers choosing one of several paths to a possible result. Collaboration with industry and all divisions of the University is encouraged. A written report, a web page and an oral presentation are required. In order to gain teamwork experience, students are required to form a team of at least two members. Prerequisite: senior standing. Credit 3 units. EN: DU, SU, TU

**E35 ESE 499 Systems Design Project**
Term design project, directed by a faculty adviser, requiring use of systems theory, techniques, engineering and concepts. This project is carried out in cooperation with either local industry or university laboratories. The solution of a real technological or societal problem is carried through completely, starting from the stage of initial specification, proceeding with the application of systems engineering methods and terminating with an actual solution. Required documents are a written proposal and a final report on the project. An oral presentation of the project and a web page are required. Prerequisite: SSE senior standing. Credit 3 units. EN: DU, SU, TU

**E35 ESE 500 Independent Study**
Opportunities for graduate students to explore possible areas of interest with individual faculty members. Coordinated study programs dealing with areas not covered by formal course work are possible. Independent study credit can be changed to research credit (ESE 599) any time during the semester if enrollment is appropriate. A final report must be submitted to the department. Credit variable, maximum 3 units. Credit variable, maximum 3 units.

**E35 ESE 501 Mathematics of Modern Engineering I**
Vectors and vector spaces, Matrix operations, system of linear equations, eigenvalues and eigenvectors, vector fields, line and surface integrals, solutions to ordinary and partial differential equations, series expansions, Fourier series. Prerequisite: ESE 318 and 319 or ESE 317 or equivalent or consent of instructor. Credit 3 units. EN: DU, SU, TU

**E35 ESE 502 Mathematics of Modern Engineering II**
Techniques of solving ordinary differential equations with constant coefficients, Laplace’s Transform, solutions for the heat and wave equations, Laplace’s Equation, Legendre and Bessel Function. Introduction to function of a complex variable, conformal mapping, contour integrals. Prerequisite: ESE 318 and ESE 319 or ESE 317 or equivalent, or consent of instructor. Credit 3 units. EN: DU, SU, TU

**E35 ESE 503 Operations Research**
Introduction to the mathematical aspects of various areas of operations research, with additional emphasis on problem formulation. This is a course of broad scope, emphasizing both the fundamental mathematical concepts involved and also aspects of the translation of real-world problems to an appropriate mathematical model. Subjects covered include linear and integer programming, network problems and dynamic programming. Prerequisites: Math 217 and familiarity with matrix or linear algebra, or permission of instructor. Credit 3 units.

**E35 ESE 512 Advanced Numerical Analysis**
Special topics chosen from numerical solution of partial differential equations, uniform and least-squares approximation spline approximation, Galerkin methods and finite element approximation, functional analysis applied to numerical mathematics, and other topics of interest. Prerequisite: ESE 511 or consent of instructor. Credit 3 units. EN: DU, SU, TU

**E35 ESE 514 Calculus of Variations**
Introduction to the theory and applications of the calculus of variations. Theory of functionals; variational problems for an unknown function; Euler’s equation; variable end-point problems; variational problems with subsidiary conditions; sufficient conditions for extrema: applications to optimum control and/or to other fields. A term project is required. Prerequisite: ESE 318 and 319 or ESE 317 or equivalent. Credit 3 units.

**E35 ESE 516 Optimization in Function Space**
Introduction to the mathematical aspects of various areas of optimization. The emphasis is on both the fundamental mathematical concepts involved and also aspects of the translation of real-world problems to an appropriate mathematical model. Subjects covered include linear and integer programming, network problems and dynamic programming. Prerequisites: Math 217 and familiarity with matrix or linear algebra, or permission of instructor. Credit 3 units.

**E35 ESE 517 Partial Differential Equations**
Linear and nonlinear first order equations. Characteristics. Classification of equations. Theory of the potential linear and nonlinear diffusion theory. Linear and nonlinear wave equations. Initial and boundary value problems. Transform methods. Integral equations in boundary value problems. Prerequisite: ESE 317, ESE 318 or 319 or equivalent or consent of instructor.
E35 ESE 520 Probability and Stochastic Processes
Review of probability theory; models for random signals and noise; calculus of random processes; noise in linear and nonlinear systems; representation of random signals by sampling and orthonormal expansions. Poisson, Gaussian and Markov processes as models for engineering problems. Prerequisite: ESE 326.
Credit 3 units. EN : DU, SU, TU

E35 ESE 521 Random Variables and Stochastic Processes I
Mathematical foundations of probability theory, including constructions of measures, Lebesgue-measure, Lebesgue-integral, Banach space property of Lp, basic Hilbert-space theory, conditional expectation. Kolmogorov’s theorems on existence and sample-path continuity of stochastic processes. An in-depth look at the Wiener process. Filtrations and stopping times. Markov processes and diffusions, including semigroup properties and the Kolmogorov forward and backward equations. Prerequisites: ESE 520 or equivalent, Math 411.
Credit 3 units.

E35 ESE 522 Information Theory
Discrete source and channel model, definition of information rate and channel capacity, coding theorems for sources and channels, encoding and decoding of data for transmission over noisy channels. Corequisite: ESE 520.
Credit 3 units. EN : DU, SU, TU

E35 ESE 523 Detection and Estimation Theory
Study of detection, estimation and modulation theory; detection of signals in noise; estimation of signal parameters; linear estimation theory. Kalman-Bucy and Wiener filters, nonlinear modulation theory, optimum angle modulation. Prerequisite: ESE 520.
Credit 3 units. EN : DU, SU, TU

E35 ESE 524 Random Processes and Kalman Filtering
Review of probability and random variables; random processes; linear dynamic system response to stochastic inputs; mean square estimation; discrete and continuous Kalman filters; extended Kalman filter for nonlinear systems; maximum likelihood; Wiener filtering and special factorization, LOG/LTR control; topics in system identification; particle filters. Control, estimation (Kalman filter) and system identification problems using MATLAB. Prerequisite: ESE 326 or equivalent.
Credit 3 units.

E35 ESE 529 Special Topics in Information Theory and Applied Probability
Credit 3 units.

E35 ESE 531 Nano and Micro Photonics
This course focuses on theory, design, fabrication and application of photonic materials and micro/nano photonic devices. Interaction of light and matter, propagation of light in waveguide, nonlinear optical effect and optical properties of nano/micro structure, the device principles of silicon-based waveguide, filter, photodetector, modulator and laser devices. Prerequisite: ESE 330.
Credit 3 units. EN : DU, SU, TU

E35 ESE 532 Introduction to Nano-Photonic Devices
Introduction to photon transport in nano-photonic devices. This course focuses on the following topics: light and photons, statistical properties of photon sources, temporal and spatial correlations, light-matter interactions, optical nonlinearity, atoms and quantum dots, single- and two-photon devices, optical devices, and applications of nano-photonic devices in quantum and classical computing and communication. Prerequisites: ESE 330 and Physics 217, or permission of instructor.
Credit 3 units. EN : DU, SU, TU

E35 ESE 534 Special Topics in Advanced Electrodynamics
This course covers advanced topics in electrodynamics. Topics include electromagnetic wave propagation (in free space, confined waveguides, or along engineered surfaces); electromagnetic wave scattering (off nano-particles or molecules); electromagnetic wave generation and detection (antenna and nano-antenna); inverse scattering problems; and numerical and approximate methods. Prerequisites: ESE 330, or Physics 421 and Physics 422.
Credit 3 units. EN : DU, SU, TU

E35 ESE 537 Advanced Electromagnetic Theory
Solution of electromagnetic boundary value problems, applications to engineering analysis and design. First semester: mathematical methods for electrostatics, magnetostatics and electrodynamics, emphasizing Green’s function techniques. Second semester: radiation and diffraction; waveguides, antennas and optics. Vector boundary conditions, Green’s dyadics, variational techniques. Prerequisite: advanced calculus, ESE 430 or equivalent.
Credit 3 units. EN : DU, SU, TU

E35 ESE 538 Advanced Electromagnetic Engineering
This course begins with a brief review of prerequisite topics. The following topics are treated for guided-wave systems: solution for and use of mode sets in planar and cylindrical guided-wave systems; use of alternative mode sets for inhomogeneous
guided-wave systems; dielectric-based and surface-guided wave systems. Methods for launching waves in systems are studied, including: modal expansions, current-based launchers using electric or magnetic coupling techniques, and aperture excitation. Perturbational and variational methods are studied for representing important characteristics of guided-wave and resonator systems. Modal expansions are related to a one- and two-port microwave network treatment of obstacles and circuit elements and junctions in guide-wave systems. The course then shifts to the study of modern numerical methods for developing frequency- and time-domain solutions for guided-wave and two-dimensional radiation and scattering problems encountered in electromagnetic engineering applications. The methods learned are applied to a project selected and carried out by each student. Prerequisites: equivalent of ESE 330, ESE 430 and ESE 537, or instructor permission. Credit 3 units.

E35 ESE 539 Advanced Electromagnetics: Radiation and Scattering
This course begins with a brief review of fundamental concepts including: wave behavior, the generalized source concept, basics of radiation, duality, uniqueness, image theory, the equivalence principle and reciprocity. The focus then turns to important definitions of antenna parameters and qualities. Important antenna types are addressed, including resonant and traveling-wave types. Linear and two-dimensional arrays are treated. Phased-array and active-aperture systems are described. Finally, smart antenna concepts are presented. Prerequisites: ESE 330 or equivalent. Credit 3 units.

E35 ESE 543 Control Systems Design by State Space Methods
Advanced design and analysis of control systems by state-space methods: review of linear algebra (vector space, change of basis, diagonal and Jordan forms), linear dynamic systems (modes, stability, controllability, observability, canonical forms), nonlinear dynamic systems and their linearization (stability, Lyapunov methods), servomechanism design, state feedback and output feedback control design, observers and state estimation, introduction to optimal control, state feedback optimal control design and analysis, multivariable frequency response methods, robustness theory. Design exercises with CAD (computer-aided design) packages for engineering problems. Prerequisite: ESE 441 or equivalent, or permission of instructor. Credit 3 units. EN : DU, SU, TU

E35 ESE 544 Optimization and Optimal Control
Constrained and unconstrained optimization theory. Continuous time as well as discrete-time optimal control theory. Time-optimal control, bang-bang controls and the structure of the reachable set for linear problems. Dynamic programming, the Pontryagin maximum principle, the Hamilton-Jacobi-Bellman equation and the Riccati partial differential equation. Existence of classical and viscosity solutions. Application to time optimal control, regulator problems, calculus of variations, optimal filtering and specific problems of engineering interest. Prerequisites: ESE 551, ESE 552. Credit 3 units. EN : DU, SU, TU

E35 ESE 545 Stochastic Control

E35 ESE 547 Robust and Adaptive Control
Graduate-level control system design methods for multi-input multi-output systems. Linear optimal-based methods in robust control, nonlinear model reference adaptive control. These design methods are currently used in most industry control system design problems. These methods are designed, analyzed and simulated using MATLAB. Linear control theory (review), robustness theory (Mu Analysis), optimal control and the robust servomechanism, H-infinity optimal control, robust output feedback controls, Kalman filter theory and design, linear quadratic gaussian with loop transfer recovery, the Loop Transfer Recovery method of Lavretsky, Mu synthesis, Lyapunov theory (review), LaSalle extensions, Barbalat’s Lemma, model reference adaptive control, artificial neural networks, online parameter estimation, convergence and persistence of excitation. Prerequisite: ESE 543 or ESE 551 or equivalent. Credit 3 units. EN : DU, SU, TU

E35 ESE 549 Special Topics in Control
Credit 3 units.

E35 ESE 551 Linear Dynamic Systems I
Input-output and state-space description of linear dynamic systems. Solution of the state equations and the transition matrix. Controllability, observability, realizations, pole-assignment, observers and decoupling of linear dynamic systems. Prerequisite: ESE 351. Credit 3 units. EN : DU, SU, TU

E35 ESE 552 Linear Dynamic Systems II
Least squares optimization problems, Riccati equation, terminal regulator and steady-state regulator. Introduction to filtering and stochastic control. Advanced theory of linear dynamic systems. Geometric approach to the structural synthesis of linear multivariable control systems. Disturbance decoupling, system
invertibility and decoupling, extended decoupling and the internal model principle. Prerequisite: ESE 551.
Credit 3 units. EN : DU, SU, TU

E35 ESE 553 Nonlinear Dynamic Systems
State space and functional analysis approaches to nonlinear systems. Questions of existence, uniqueness and stability; Lyapunov and frequency-domain criteria; w-limits and invariance, center manifold theory and applications to stability, steady-state response and singular perturbations. Poincare-Bendixson theory, the van der Pol oscillator, and the Hopf Bifurcation theorem. Prerequisite: ESE 551.
Credit 3 units. EN : DU, SU, TU

E35 ESE 554 Advanced Nonlinear Dynamic Systems
Credit 3 units.

E35 ESE 557 Hybrid Dynamic Systems
Theory and analysis of hybrid dynamic systems, which is the class of systems whose state is composed by continuous-valued and discrete-valued variables. Discrete-event systems models and language descriptions. Models for hybrid systems. Conditions for existence and uniqueness. Stability and verification of hybrid systems. Optimal control of hybrid systems. Applications to cyber-physical systems and robotics. Prerequisite: ESE 551.
Credit 3 units. EN : DU, SU, TU

E35 ESE 559 Special Topics in Systems
Credit 3 units.

E35 ESE 560 Computer Systems Architecture I
Same as CSE 560M
Credit 3 units. EN : DU, SU, TU

E35 ESE 561 Computer Systems Architecture II
Advanced techniques in computer system design. Selected topics from: processor design (multithreading, VLIW, data flow, chip-multiprocessors, application specific processors, vector units, large MIMD machines), memory systems (topics in locality, prefetching, reconfigurable and special-purpose memories), system specification and validation, and interconnection networks. Prerequisites: CSE 560M or permission of instructor. Same as CSE 561M
Credit 3 units. EN : DU, SU, TU

E35 ESE 565 Acceleration of Algorithms in Reconfigurable Logic
Same as CSE 565M
Credit 3 units. EN : DU, SU, TU

E35 ESE 567 Computer Systems Analysis
Comparing systems using measurement, simulation and queueing models. Common mistakes and how to avoid them, selection of techniques and metrics, art of data presentation, summarizing measured data, comparing systems using sample data, introduction to experimental design, fractional factorial designs, introduction to simulation, common mistakes in simulations, analysis of simulation results, random number generation, random variate generation, commonly used distributions, introduction to queueing theory, single queues, and queueing networks. The techniques of the course can be used to analyze and compare any type of systems including algorithms, protocols, network or database systems. Students do a project involving application of these techniques to a problem of their interest. Prerequisites: CSE 131 and CSE 260M. Same as CSE 567M
Credit 3 units. EN : DU, SU, TU

E35 ESE 569 Parallel Architectures and Algorithms
Several contemporary parallel computer architectures are reviewed and compared. The problems of process synchronization and load balancing in parallel systems are studied. Several selected applications problems are investigated and parallel algorithms for their solution are considered. Selected parallel algorithms are implemented in both a shared memory and distributed memory parallel programming environment. Prerequisites: graduate standing and knowledge of the C programming language. Same as CSE 569M
Credit 3 units. EN : DU, SU, TU

E35 ESE 570 Coding Theory
Credit 3 units. EN : DU, SU, TU
E35 ESE 571 Transmission Systems and Multiplexing
Transmission and multiplexing systems are essential to providing efficient point-to-point communication over distance. This course introduces the principles underlying modern analog and digital transmission and multiplexing systems and covers a variety of system examples.
Credit 3 units. EN : DU, SU, TU

E35 ESE 572 Signaling and Control in Communication Networks
The operation of modern communications networks is highly dependent on sophisticated control mechanisms that direct the flow of information through the network and oversee the allocation of resources to meet the communication demands of end users. This course covers the structure and operation of modern signaling systems and addresses the major design trade-offs that center on the competing demands of performance and service flexibility. Specific topics covered include protocols and algorithms for connection establishment and transformation, routing algorithms, overload and failure recovery and networking dimensioning. Case studies provide concrete examples and reveal the key design issues. Prerequisites: graduate standing and permission of instructor.
Credit 3 units. EN : DU, SU, TU

E35 ESE 574 Digital Communications
Representation of signals by orthonormal expansion, spectral characteristic of digitally modulated signals, channel models, source models, results from information theory, efficient signaling with coded waveforms, intersymbol interference, equalization, optimum demodulation, decoding (including Viterbi decoder), probability of error, carrier and symbol synchronization, spread-spectrum methods. Corequisite: ESE 520.
Credit 3 units. EN : DU, SU, TU

E35 ESE 575 Fiber-Optic Communications
Introduction to optical communications via glass-fiber media. Pulse-code modulation and digital transmission methods, coding laws, receivers, bit-error rates. Types and properties of optical fibers; attenuation, dispersion, modes, numerical aperture. Light-emitting diodes and semiconductor laser sources; device structure, speed, brightness, modes, electrical properties, optical and spectral characteristics. Prerequisites: ESE 330, ESE 336.
Credit 3 units. EN : DU, SU, TU

E35 ESE 577 Design and Analysis of Switching Systems
Same as CSE 577M
Credit 3 units. EN : DU, SU, TU

E35 ESE 581 Radar Systems
Credit 3 units. EN : DU, SU, TU

E35 ESE 584 Statistical Signal Processing for Sensor Arrays
Methods for signal processing and statistical inference for data acquired by an array of sensors, such as those found in radar, sonar and wireless communications systems. Multivariate statistical theory with emphasis on the complex multivariate normal distribution. Signal estimation and detection in noise with known statistics, signal estimation and detection in noise with unknown statistics, direction finding, spatial spectrum estimation, beam forming, parametric maximum-likelihood techniques. Subspace techniques, including MUSIC and ESPRIT. Performance analysis of various algorithms. Advanced topics may include structured covariance estimation, wide-band array processing, array calibration, array processing with polarization diversity, and space-time adaptive processing (STAP). Prerequisites: ESE 520, ESE 524, linear algebra, computer programming.
Credit 3 units. EN : DU, SU, TU

E35 ESE 585 Optical Imaging
A modern introduction to optical imaging. Topics include: propagation of waves, diffraction, scattering theory, multiple scattering and radiative transport, diffuse light, inverse scattering and other inverse problems, near-field optics. Applications to biomedical problems are discussed. Prerequisites: ESE 330 and ESE 351.
Credit 3 units. EN : DU, SU, TU

E35 ESE 586 Tomographic Systems
The study of systems for imaging the interior of an object from external measurements. Mathematical preliminaries: multidimensional linear systems, the Poisson process, maximum-likelihood estimation. Transmission, emission, reflection and magnetic resonance tomography. Line integral, strip integral, weighted integral, and divergent ray descriptions of tomographic data. The Radon transform. Reconstruction from ideal data: filtered back project, back-project filter, Fourier and inverse Radon-transform methods. Reconstruction from blurred and noisy data: confidence-weighting, minimum-divergence deblurring, and estimation-based methods. Techniques for treatment of mission data, attenuation and accidents. Application to positron-emission, single-photon emission, X-ray and magnetic-resonance tomography and to high-
resolution radar-imaging. Computer architectures for producing tomographic imagery. Prerequisite: ESE 520.
Credit 3 units. EN: DU, SU, TU

E35 ESE 587 Ultrasonic Imaging
Credit 3 units. EN: DU, SU, TU

E35 ESE 588 Quantitative Image Processing
Introduction to the modeling processing and display of images. Two-dimensional linear systems and linear processing of images. Two-dimensional transform methods. Image acquisition and display technology. Psychophysical aspects of vision. Case studies in image processing (examples: tomography, radiology, ultrasonic imaging). Special algorithms for image processing (examples: boundary detection, segmentation, compression, interactive processing and display). Prerequisites: ESE 326, ESE 482.
Credit 3 units. EN: DU, SU, TU

E35 ESE 589 Biological Imaging Technology
This class develops a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section examines how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure and function, image formation methods, and diffraction limited imaging. The math section examines image decomposition using basis functions (e.g. Fourier transforms); synthesis of measurement data, image analysis for feature extraction, reduction of multidimensional imaging datasets, multivariate regression, and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology are critiqued.
Credit 3 units. EN: DU, SU, TU

E35 ESE 590 Electrical and Systems Engineering Graduate Seminar
This course is required for the M.Sc., D.Sc. and Ph.D. degrees in Electrical and Systems Engineering and is graded on a satisfactory/unsatisfactory basis. A passing grade is required for each semester of enrollment and is received by attendance at regularly scheduled ESE seminars. M.Sc. students must attend at least four seminars per semester. D.Sc. and Ph.D. students must attend at least seven seminars per semester. Part-time students are exempt except during their year of residency. Any student under continuing status also is exempt. Seminars missed in a given semester may be made up during the subsequent semester.

E35 ESE 591 Special Topics: Biomedical Optics I: Principles
This course covers the principles of optical photon transport in biological tissue. Topics include a brief introduction to biomedical optics, single-scatterer theories, Monte Carlo modeling of photon transport, convolution for broad-beam responses, radiative transfer equation and diffusion theory, hybrid Monte Carlo method and diffusion theory, and sensing of optical properties and spectroscopy. Prerequisite: Math 217 Differential Equations. Same as BME 591
Credit 3 units. EN: SU, TU

E35 ESE 592 Special Topics: Biomedical Optics II: Imaging
This course covers optical imaging technologies. Topics include ballistic imaging, optical coherence tomography, Mueller optical coherence tomography, diffuse optical tomography, photoacoustic tomography and ultrasound-modulated optical tomography. Prerequisites: Differential equations, Biomedical Optics I: Principles. Same as BME 592
Credit 3 units. EN: DU, SU, TU

E35 ESE 596 Seminar in Imaging Science and Engineering
This seminar course consists of a series of tutorial lectures on Imaging Science and Engineering with emphasis on applications of imaging technology. Students are exposed to a variety of imaging applications that vary depending on the semester, but may include multispectral remote sensing, astronomical imaging, microscopic imaging, ultrasound imaging and tomographic imaging. Guest lecturers come from several parts of the university. This course is required of all students in the Imaging Science and Engineering program; the only requirement is attendance. This course is graded pass/fail. Prerequisite: admission to Imaging Science and Engineering Program. Same as CSE 596 (when offered) and BME 506.
Credit 1 unit.
### E35 ESE 597 Practicum in Imaging Science and Engineering
This course provides students in the Imaging Science and Engineering program with opportunities to participate, early in their graduate studies, in projects involving image data. A list of IS&E faculty having potential projects of interest is provided. It is the student’s responsibility to interview with such faculty in order to identify a project for themselves to be completed in one semester. A written report documenting the project goals, relevant literature and results obtained is required at the end of the project. To receive credit for completing the practicum, the report must be accepted by the supervisor of the project and a committee of IS&E faculty. This course is graded pass/fail.

Prerequisite: admission to Imaging Science and Engineering Program.
Credit 1 unit. EN : DU, SU, TU

### E35 ESE 599 Masters Research
Credit variable, maximum 3 units.

Energy, Environmental and Chemical Engineering

About Energy, Environmental and Chemical Engineering

Our department focuses on environmental engineering, energy systems engineering and chemical engineering. We provide integrated and multidisciplinary programs of scientific education. Our mission is accomplished by: instilling a tradition of "lifelong learning"; a curriculum of fundamental education coupled with applications in advanced focal areas and strengthened by our breadth in other disciplinary areas; participation in cutting-edge research with faculty and industrial partners; and access to state-of-the-art facilities and instrumentation. Most undergraduate students in the department pursue the B.S. in Chemical Engineering degree, accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). Other students pursue the B.S. in Applied Science degree with a major in Chemical Engineering. The department offers a minor in Environmental Engineering Science and, in collaboration with other engineering departments, we co-sponsor a minor in Energy Engineering. Graduate degrees (Master of Engineering and Doctor of Philosophy) in Energy, Environmental and Chemical Engineering are offered by the department.

Chemical engineers are involved in the transfer of scientific discoveries to modern technologies and novel products that benefit society and minimize the impact on the environment. They deal with multiscale aspects of generating clean energy, producing novel and superior materials, and utilizing the biological revolution to manufacture new products. They are involved in the development and manufacture of consumer products, as well as in design, operation and control of processes in a variety of industries (e.g., petroleum, petrochemical, chemical, consumer products, food, feed and pharmaceuticals). Their broad training in basic sciences (e.g., chemistry, physics, biology, mathematics) coupled with a strong foundation in chemical engineering principles (e.g., thermodynamics, mass and energy balances, transport phenomena, kinetics, separations, reaction engineering, control, product development and process design) makes them invaluable team members and leaders in any engineering enterprise. It also prepares them well for graduate studies in biochemical, biomedical, chemical, environmental and materials engineering. In addition, the B.S. degree in chemical engineering is a great starting point for pursuing a degree in business, law or medicine.

The curriculum is planned so as to provide students with a strong background in basic chemical engineering concepts, while allowing individual latitude to emphasize study in a specialized area or obtain added breadth both within and outside chemical engineering. The faculty devotes a considerable amount of time to individual advising. A contemporary approach to chemical engineering is focused on the multiscale aspects of the discipline, consistent with modern developments in computer-supported problem solving. Molecular-level understanding is utilized in product development and process design, which in turn are evaluated in terms of their impact on the environment and society according to the principles of green engineering.

Mission Statement

The mission of the department is to teach chemical engineering principles and their application in an inspiring learning environment and to prepare students for engineering careers by developing the skills of critical thinking, analytical abilities and communication proficiency and by instilling a sense of professional ethics and societal responsibility.

Program Objectives

The Chemical Engineering Program Educational Objectives are as follows.

(a) Graduates who are employed in chemical process and related industries will perform tasks related to plant operation, control, engineering decision making, and process and product design. Other graduates who are not employed in chemical process and related industries will be employed in diverse professions including other engineering fields, management, consulting, etc., using their engineering and analytical backgrounds. All will engage in activities that promote professional growth and fulfillment.

(b) Graduates pursuing doctoral studies or other professional degrees will make reasonable progress toward completing the degree requirements and will engage in activities that promote professional development and fulfillment.

Advising

The department takes pride in the mentoring of undergraduate students. Each student who declares chemical engineering as a (potential) major is assigned an academic adviser from the tenure-track department faculty. Typically, the same adviser follows the student’s academic progress and serves as a mentor from the freshman year through graduation.

Phone: 314/935-5545
Departmental website: http://eece.wustl.edu/undergraduateprograms/Pages/default.aspx

Chair and Endowed Professor

Pratim Biswas
Lucy and Stanley Lopata Professor
PhD, California Instute of Technology
Aerosol science and engineering, air quality and pollution control, nanotechnology, environmentally benign energy production

**Endowed Professor**

Richard L. Axelbaum  
Stifel and Quinette Jens Professor  
PhD, University of California–Davis  
Combustion, advanced energy systems, clean coal, aerosols, nanoparticle synthesis, rechargeable battery materials, thermal science

Milorad P. Dudukovic  
Laura and William Jens Professor  
PhD, Illinois Institute of Technology  
Chemical reaction engineering, multiphase reactors, visualization of multiphase flows, tracer methods, environmentally benign processing

**Professors**

William P. Darby  
PhD, Carnegie Mellon  
Environmental planning and management

Rudolf B. Husar  
PhD, University of Minnesota  
Environmental informatics, aerosol science and engineering

Himadri Pakrasi  
PhD, University of Missouri–Columbia  
Systems biology, photosynthesis, metal homeostasis

P. A. Ramachandran  
PhD, University of Bombay  
Chemical reaction engineering, applied mathematics, process modeling, waste minimization, environmentally benign processing

**Associate Professors**

Daniel Giammar  
PhD, California Institute of Technology  
Aquatic chemistry, environmental engineering, water quality, water treatment

John T. Gleaves  
PhD, University of Illinois  
Heterogeneous catalysis, particle chemistry

Young-Shin Jun  
PhD, Harvard University  
Aquatic processes, molecular issues in chemical kinetics, environmental chemistry, surface/physical chemistry, environmental engineering, biogeochemistry, nanotechnology

Venkat Subramanian  
PhD, University of South Carolina  
Electrochemical energy storage, energy systems engineering, multiscale modeling and simulation

Jay R. Turner  
DSc, Washington University  
Air quality planning and management; aerosol science and engineering, life cycle assessments

**Assistant Professors**

John Fortner  
PhD, Rice University  
Environmental engineering, aquatic processes, water treatment, remediation, and environmental implications and applications of nanomaterials

Marcus Foston  
PhD, Georgia Institute of Technology  
Utilization of biomass resources for fuel and chemical production, renewable synthetic polymers

Cynthia Lo  
PhD, Massachusetts Institute of Technology  
Solar energy conversion, materials, environmental interfaces, catalysis, computational chemistry and molecular modeling

Tae Seok Moon  
PhD, Massachusetts Institute of Technology  
Metabolic engineering and synthetic biology

Yinjie Tang  
PhD, University of Washington  
Metabolic engineering, bioremediation

Brent Williams  
PhD, University of California  
Aerosols, global climate issues, atmospheric sciences

Fuzhong Zhang  
PhD, University of Toronto  
Metabolic engineering, protein engineering, synthetic and chemical biology

**Research Assistant Professor**

Weining Wang  
PhD, Hiroshima University  
Aerosol science and technology, nanoparticle synthesis

**Joint Faculty**

Nathan Ravi  
PhD, Virginia Polytechnic Institute  
Cataract, ocular biomaterials

Shelly Sakiyama-Elbert  
PhD, California Institute of Technology  
Bioactive materials

**Professor of the Practice**

Ruth Chen  
PhD, University of Michigan
Environmental toxicology, risk assessment, risk management, public health

**Jan Lerou**
PhD, University of Gent
Chemical reaction engineering

### Adjunct Professors

**Charles N. Carpenter**
PhD, Ohio State University
Process design

**Robert Heider**
MME, Washington University
Process control and process design

**Timothy Michels**
MA, Washington University
Energy economics, building construction and equipment sciences

**Nicholas J. Nissing**
BS, Washington University
Product development and process design

**Robin L. Shepard**
DSc, Washington University
Process safety, sustainable engineering in developing countries

### Research Associates

**Raymond Ehrhard**
BS, University of Missouri–Rolla
Water and wastewater treatment technologies, process energy management

**John Murphy**
Certified Energy Manager, P.E., Missouri
MS Chemical Engineering, University of Missouri–Columbia
Drinking water treatment process, hydrology and hydraulics, energy management

### Bachelor of Science in Chemical Engineering

The B.S. Ch.E. degree program is designed to provide students with comprehensive training in chemical engineering fundamentals. This degree program is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). Program objectives are stated in overview (p. 893). The B.S. Ch.E. degree requires satisfactory completion of a minimum of 126 units as indicated in Table 1. From the courses listed in Table 1, the humanities and social sciences courses (except ENGR 450X courses) may be taken pass/fail. A sample year-by-year B.S. Ch.E. curriculum is shown in Table 2.

The program of study consists of 26 units of physical and biological sciences (i.e., biology, chemistry and physics); 21 units of mathematics and engineering computing; 40 units of core chemical engineering courses; 21 units of humanities, social sciences and technical writing; and 18 units of chemical engineering electives. The chemical engineering electives permit students to tailor their studies toward specific goals such as obtaining more depth in a chemical engineering subdiscipline (e.g., materials) or increasing breadth by choosing courses from different subdisciplines. Some of these 18 units may be taken in other engineering departments or in the natural sciences or physical sciences. Students in collaboration with their advisers design a course of study (subject to certain requirements) for the chemical engineering electives. A draft plan is developed as early as possible and formally reviewed each semester by the student and adviser. Consult the EECE department website for more details, including the requirements that must be satisfied by these chemical engineering electives.

Click here for Table 1, describing the B.S. Ch.E. Requirements. (p. 907)

Click here for Table 2, a sample B.S. Ch.E. Curriculum (p. 908).

The curriculum is designed to provide opportunities for students to explore areas of interest within chemical engineering. In addition to the accredited B.S. degree in Chemical Engineering, another choice is to pursue the course of study leading to the B.S. degree in Applied Science with major in Chemical Engineering.

### Double Majors and Premedical Program

Some students may be able to take more than the 126-unit minimum during a four-year program, especially if they have Advanced Placement units. This permits the choice of additional free electives from such areas as biology, computer science, humanities, social sciences or other engineering courses. It also provides an opportunity to pursue a double major. The rules for combining majors in engineering and multiple majors involving other university divisions are described in the general section (p. 819) on the School of Engineering & Applied Science. Particularly popular with chemical engineering students is the combined degree program in Process Control Systems.

Traditionally, the undergraduate chemical engineering degrees (both the accredited degree and the applied science option) have been popular with students interested in medicine because the curriculum automatically satisfies many of the premedical requirements. The additional needed courses are taken as electives.

### Bachelor of Science in Applied Science (Chemical Engineering)

This degree serves students who wish to be exposed to key chemical engineering principles yet seek a more flexible
The Minor in Environmental Engineering Science

The EECE Department sponsors an undergraduate Minor in Environmental Engineering Science. This 20-21 unit program prepares the student to seek an entry-level position as an environmental engineer, scientist or analyst. The minor also provides a solid foundation for undertaking graduate study in environmental engineering. Consult the EECE department website for more information.

**Units required:** 21

**Required courses:**

Select from the following menus:

- **Introduction**¹ (3 units):
  - ChE 262 Introduction to Environmental Engineering 3

- **Environmental Chemistry**² (3 units):
  - EECE 448 Environmental Organic Chemistry 3
  - EECE 543 Aquatic Chemistry 3
  - EECE 547 Atmospheric Science and Climate 3

- **Green Engineering, Environmental Management and Risk Assessment** (3 units):
  - ChE 345 Pollution Abatement and Waste Minimization 3
  - EECE 380A Sustainable Technologies for the Global Community 3
  - ChE 438 Environmental Risk Assessment and Toxicology 3

- **Environmental Engineering electives**² (6 units):
  - ChE 408A Environmental Engineering Lab 3
  - ChE 449 Sustainable Air Quality 3
  - ChE 518 Aerosol Science and Technology 3
  - EECE 5404 Combustion Phenomena 3
  - EECE 588 Physical and Chemical Processes for Water Treatment 3

- Additional eligible courses (new courses, special offerings) will be posted on the EECE website as they become available.

- **Natural Science** (3 units):
  - EPSc 323 Biogeochemistry 3
  - EPSc 413 Introduction to Soil Science 3
  - EPSc 444 Environmental Geochemistry 3

Environmental Policy and Social Science (3 units):
- Econ 451 Environmental Policy 3
- EnSt 539 Interdisciplinary Environmental Clinic 3
- Pol Sci 332B Environmental and Energy Issues 3

¹Freshmen potentially interested in majoring in Chemical Engineering should take ChE 146A; all other students working toward the Minor in Environmental Engineering Science should take ChE 262.

²Students taking both environmental chemistry courses can count one of them toward the Environmental Engineering Sciences.

The Minor in Energy Engineering

This minor will provide students with course work that will enhance their background, knowledge and skills in the topical area of Energy Engineering. The minor covers classes in several fields of science and engineering, encompassing the Department of Energy, Environmental and Chemical Engineering; the Department of Electrical and Systems Engineering; and the Department of Mechanical Engineering and Materials Science.

The Minor in Energy Engineering is open to undergraduate students pursuing an engineering major, students from the sciences (Biology, Chemistry, Physics) in Arts & Sciences, and the Environmental Studies major.

**Units required:** 18

**Required courses:**

Select from the following menus:

- **Basic and Applied Sciences** (fundamental content) (two courses):
  - ChE 320 Thermodynamics 3
  - MEMS 3410 Fluid Mechanics 3
  - or ChE 367 Transport Phenomena I
  - ChE 369 Energy Transfer Processes (spring) 3
  - or MEMS 342 Heat Transfer
  - ESE 332 Power, Energy and Polyphase Circuits (spring) 3

- **Social Science/Policy/Economics Elective** (one course):
  - EnSt 451 Environmental Policy (fall) 3
  - EECE 590 Special Topics: Energy and Environmental Economics and Risk Management Decision-Making (spring) 3
  - ESE 408 A System Dynamics Approach to Designing Sustainable Policies and Programs (fall) 3

- **Electives** (Choose three courses. One of the courses is required to be chosen from outside your major degree department. A
partner department may approve the use of a course listed under Basic and Applied Sciences as elective):

EECE 401 International Experience in Energy, Environmental and Chemical Engineering (summer/fall) 3
EECE 495 Special Topics: Energy and Buildings (fall) 3
EECE 5404 Combustion Phenomena (fall) 3
or MEMS 5404 Combustion Phenomena
ChE 4830 Bioenergy (spring) 2
ChE 345 Pollution Abatement and Waste Minimization (fall) 3
MEMS 5422 Solar Energy Thermal Processes (summer/fall) 3
MEMS 5420 HVAC Analysis and Design I (fall) 3
MEMS 5421 HVAC Analysis and Design II (spring) 3
MEMS 5705 Wind Energy Systems (spring) 3
MEMS 412 Design of Thermal Systems (spring) 3
ESE 434 Solid-State Power Circuits and Applications (fall) 3
ESE 435 Electrical Energy Laboratory (spring) 3
ESE 437 Sustainable Energy Systems (spring) 3

Committee to Oversee Energy Engineering Minor

Pratim Biswas (EECE, Coordinator)
Hiro Mukai (ESE)
David Peters (MEMS)

The committee ensures that any course added to the above lists contain a significant amount of energy topics and that the entire program be cohesive.

The Minor in Nanoscale Science and Engineering

This minor will enhance student’s knowledge and skills in the area of nanotechnology. The minor consists of courses, labs and a project with a participating faculty in the Nanotechnology minor program.

Units required: 18

Required courses:
Select from the following menus:

Fundamentals (choose one course):
Physics 217 Introduction to Quantum Physics 3
MEMS 3601 Materials Engineering 3
MEMS 361 Materials Science 4
ChE 325 Materials Science 3
Physics 352 Physics of Biomolecules 3

Chem 401 Physical Chemistry I 3
Chem 465 Solid-State and Materials Chemistry 3
Physics 472 Solid State Physics 3
Biol 4810 General Biochemistry I 3

Synthesis (choose one course):
BME 525 Engineering Aspects of Biotechnology 3
EECE 518 Aerosol Science and Technology 3
MEMS 5610 Quantitative Materials Science and Engineering

Characterization, Structure and Modeling (choose one course):
BME 461 Protein Structure and Dynamics 3
EECE 476 Properties of Materials 3
Chem 453 Bioorganic Chemistry 3
MEMS 5602 Non-metals 3
MEMS 5603 Materials Characterization Techniques I 3
MEMS 5604 Materials Characterization Techniques II 3
EECE 591 Computational Chemistry of Molecular and Nanoscale Systems

Applications (choose one course):
ESE 336 Principles of Electronic Devices 3
ESE 438 Applied Optics 3
MEMS 463 Nanotechnology Concepts and Applications 3
MEMS 5606 Soft Nanomaterials 3
ESE 532 Introduction to Nano-Photonic Devices 3
EECE 534 Environmental Nanochemistry 3
MEMS 5801 Micro-Electro-Mechanical Systems I 3
MEMS 5802 Micro-Electro-Mechanical Systems II 3

Nanotechnology Laboratory Class (required):
MEMS 5611 Principles and Methods of Micro and Nanofabrication 3
or CSE 506M, ECE 494L/494L

Independent Study Project (required):
Students should sign up for at least 3 credits of Independent Study and work on a project related to Nanotechnology under the supervision of a faculty member. A list of projects with potential faculty mentors will be circulated in the spring semester every year. Students will have to be signed up for the Nanotechnology minor and have completed at least two of the classes from the above categories before doing the Independent Study Project. Students can also come up with their own ideas for projects, but would need to get approval from the Nanotechnology Minor Committee and a faculty mentor.

The classes listed above will count for elective credit for their major in all the Engineering Departments. However,
students should check with their major advisers to confirm this.

Committee to Oversee Nanoscale Science and Engineering Minor
Parag Banerjee (MEMS, Coordinator)
Pratim Biswas (EECE)
Victor Gruev (CSE)

Visit the Energy Engineering Minor web page for more information.

E33 EECE 380A Sustainable Technologies for the Global Community
This course provides the engineering tools needed to solve problems in the developing world and within the global community. Emphasis is on learning and applying technology that are appropriate for varying communities and the challenges that must be overcome when implementing improvements. Course work consists of lectures, case studies of intermediate and sustainable improvements throughout the world and hands-on learning.
Credit 3 units. EN : DU, SU, TU

E33 EECE 401 International Experience in Energy, Environmental and Chemical Engineering
This course provides undergraduate students with an international experience related to energy, environmental and/or chemical engineering. The country visited varies from year to year with one or more EECE faculty members developing the program in collaboration with McDonnell Global Energy and Environment Partnership (MAGEEP) universities. Example activities include conducting field or laboratory research, attending short courses taught by MAGEEP university faculty members, and visiting attractions relevant to the course focus (e.g., industrial facilities). Students also gain an understanding of the local culture and history of the country visited. Course content includes a seminar series in the spring semester prior to the international experience, a two-to-three week visit to the location of study, and a follow-up student project and presentations during the fall semester that draws upon the experience. Students enroll in EECE 401 for the fall semester following the trip.
Credit 3 units. EN : DU, SU, TU

E33 EECE 439 Advanced Energy Lab
Laboratory experiments to illustrate the application of engineering fundamentals to the study of advanced energy generation, storage, distribution and delivery systems. Modules include both lecture and laboratory components and explore topics such as fossil fuel combustion, solar PV and solar thermal systems, wind-derived energy, biofuels production, electrochemical energy storage. Extensive metering of energy use in Brauer Hall are used to study systems performance including energy efficiency. Prerequisites: ChE 320 or MEMS 301, and ChE 367 or MEMS 3410; or permission of instructor.
Credit 3 units. EN : DU, SU, TU

E33 EECE 443 Aquatic Chemistry
Aquatic chemistry governs aspects of the biogeochemical cycling of trace metals and nutrients, contaminant fate and transport, and the performance of water and wastewater treatment processes. This course examines chemical reactions relevant to natural and engineered aquatic systems. A quantitative approach emphasizes the solution of chemical equilibrium and kinetics problems. Topics covered include chemical equilibrium and kinetics, acid-base equilibria and alkalinity, dissolution and precipitation of solids, complexation of metals, oxidation-reduction processes, and reactions on solid surfaces. A primary objective of the course is to be able to formulate and solve chemical equilibrium problems for complex environmental systems. In addition to solving problems manually to develop chemical intuition regarding aquatic systems, software applications for solving chemical equilibrium problems are also introduced. Course lectures on aquatic chemistry principles are supplemented by laboratory demonstrations and detailed examinations of case studies. Prerequisite: Chem 112A.
Same as EECE 543
Credit 3 units. EN : DU, SU, TU

E33 EECE 448 Environmental Organic Chemistry
Fundamental, physical-chemical examination of organic molecules (focused on anthropogenic pollutants) in aquatic (environmental) systems. Students learn to calculate and predict chemical properties that are influencing the partitioning of organic chemicals within air, water, sediments and biological systems. This knowledge is based on understanding intermolecular interactions and thermodynamic principles. Mechanisms of important thermochemical, hydrolytic, redox and biochemical transformation reactions are also investigated, leading to the development of techniques (such as structure-reactivity relationships) for assessing environmental fate or human exposure potential. Prerequisite: Chem 112A.
E33 EECE 495 Special Topics: Energy and Buildings
There is a $2 trillion U.S. market in energy efficiency with paybacks of four to five years. This course is an introduction to energy use in the built environment and means and methods for evaluating and harvesting these financial benefits. It is based on fundamentals of energy usage in building systems. Building sciences for architectural envelope, heating and cooling systems, lighting, and controls. Building/weather interaction and utility weather regression analyses. Building dynamics and rates of change in energy usage. Students work in groups to perform an energy audit for a building on campus. Prerequisite: senior or graduate student standing, or permission of instructor. Same as EECE 595
Credit 3 units.

E33 EECE 495D Biomass Energy Systems and Engineering
This course offers background in the organic chemistry, biology and thermodynamics related to understanding the conversion of biomass. In addition includes relevant topics relating to biomass feedstock origin, harvest, transportation, storage, processing and pretreatment along with matters concerning thermo- and bio-chemical conversion technologies required to produce fuels, energy, chemicals and materials. Also, various issues with respect to biomass characterization, economics and environmental impact are discussed. The main objective of the course is to introduce concepts central to a large-scale integrated biomass bioconversion system. Same as EECE 595D
Credit 3 units.

E33 EECE 501 Transport Phenomena in Energy, Environmental and Chemical Engineering
The aim of the course is for students to develop skills in applying principles of momentum, heat and mass transport in an unified manner to problems encountered in the areas of energy, environmental and chemical processes. A systems approach is followed so that the general principles can be grasped and the skills to develop mathematical models of seemingly different processes is emphasized. This provides the students with a general tool that they can apply later in their chosen field of research.
Credit 3 units.

E33 EECE 502 Mathematical Methods in Engineering
The course introduces students to mathematical principles essential for graduate study in any engineering discipline. Applied mathematical concepts are demonstrated by applications to various areas in energy, environmental, biomedical, chemical, mechanical, aerospace, electrical and civil engineering.
Credit 3 units.

E33 EECE 503 Kinetics and Reaction Engineering Principles
The course is aimed at a modern multiscale treatment of kinetics of chemical and biochemical reactions and application of these fundamentals to analyze and design reactors. Application of reaction engineering principles in the areas related to energy generation, pollution prevention, chemical and biochemical processes are studied and illustrated with case studies and computer models. Description of the role of mass and heat transport in reacting systems also is provided with numerous examples.
Credit 3 units.

E33 EECE 508 Research Rotation
First-year doctoral students in EECE should undertake research rotation as a requirement prior to choosing a permanent research adviser. The rotation requires the student to work under the guidance of a faculty member.

E33 EECE 509 Seminar in Energy, Environmental and Chemical Engineering
All graduate students in EECE should attend the Departmental Seminar Series to gain exposure in various diverse fields of research. Students also are expected to participate in journal clubs and other discussion formats to discuss topical research areas. The course is required of all graduate students every semester of residency in the program.
Credit 1 unit.

E33 EECE 534 Environmental Nanochemistry
This course involves the study of nanochemistry at various environmental interfaces, focusing on colloid, nanoparticle and surface reactions. The course also (1) examines the thermodynamics and kinetics of nanoscale reactions at solid-water interfaces in the presence of inorganic or organic compounds and microorganisms; (2) investigates how nanoscale interfacial reactions affect the fate and transport of contaminants; (3) introduces multidisciplinary techniques for obtaining fundamental information about the structure and reactivity of nanoparticles and thin films, and the speciation or chemical form of environmental pollutants at the molecular scale; (4) explores connections between environmental nanochemistry and environmental kinetic analysis at larger scales. This course helps students attain a better understanding of the relationship between nanoscience/technology and the environment — specifically how nanoscience could lead potentially to better water treatments, more effective contaminated-site remediation, or new energy alternatives.
Credit 3 units.

EN : SU , TU
E33 EECE 5404 Combustion Phenomena
Introduction to fundamental aspects of combustion phenomena including relevant thermochemistry, fluid mechanics and transport processes. Emphasis on elucidation of the physicochemical processes, problem formulation and analytical techniques. Topics covered include ignition, extinction, diffusion flames, particle combustion, deflagrations and detonations. Prerequisites: graduate standing or permission of instructor. Credit 3 units. EN: DU, SU, TU

E33 EECE 543 Aquatic Chemistry
Aquatic chemistry governs aspects of the biogeochemical cycling of trace metals and nutrients, contaminant fate and transport, and the performance of water and wastewater treatment processes. This course examines chemical reactions relevant to natural and engineered aquatic systems. A quantitative approach emphasizes the solution of chemical equilibrium and kinetics problems. Topics covered include chemical equilibrium and kinetics, acid-base equilibria and alkalinity, dissolution and precipitation of solids, complexation of metals, oxidation-reduction processes, and reactions on solid surfaces. A primary objective of the course is to be able to formulate and solve chemical equilibrium problems for complex environmental systems. In addition to solving problems manually to develop chemical intuition regarding aquatic systems, software applications for solving chemical equilibrium problems also are introduced. Prerequisites: Chem 112A. Credit 3 units. EN: SU, TU

E33 EECE 544 Multiphase Flow
Multiphase flows are encountered in a broad range of engineering disciplines, a host of different technological contexts, and a wide spectrum of different scales. A fundamental understanding of multiphase flows plays an important role in the successful design and operation of processes and systems involving multiphase flows. Due to the vast field it is often difficult for students to determine the appropriate experimental or analytical methodologies for their studies in the field of multiphase flows. The aim of this course is to bring much of this fundamental understanding together and to present a unified approach to the fundamental ideas of multiphase flows. Prerequisite: ChE 367. Credit 3 units. EN: DU, SU, TU

E33 EECE 547 Atmospheric Science and Climate
This course covers current research topics in atmospheric chemistry and climate change. Topics include atmospheric composition, chemistry, transport, dynamics, radiation, greenhouse gases, natural and anthropogenic primary pollution sources and secondary aerosol production, and measurement techniques. Focus is placed on how our atmosphere and climate are altered in a world of changing energy production and land use. Prerequisites: Chem 112A, Physics 118 or 198, and junior or higher standing. Credit 3 units. EN: DU, SU, TU

E33 EECE 548 Environmental Organic Chemistry
Same as EECE 448
Credit 3 units. EN: SU, TU

E33 EECE 548 Environmental Organic Chemistry
Credit 3 units. EN: SU, TU

E33 EECE 548 Physical and Chemical Processes for Water Treatment
Theory and design of water treatment processes and systems. Emphasis on potable and industrial water supply. Coagulation, flocculation, sedimentation, filtration, disinfection, softening, ion exchange, adsorption, membrane separation and oxidation review of EPA regulations. Credit 3 units.

E33 EECE 549 Electrochemical Engineering
This course teaches the fundamentals of electrochemistry and thermodynamics of the application of the same for analyzing various electrochemical energy sources/devices. The theoretical frameworks of current-potential distributions, electrode kinetics, porous electrode and concentration solution theory are presented in the context of modeling, simulation and analysis of electrochemical systems. Applications to batteries, fuel cells, capacitors, copper deposition are explored. Prerequisite/corequisite: EECE 501-502 (or equivalent), or permission of instructor. Credit 3 units.

E33 EECE 550 Special Topics: Energy and Environmental Economics and Risk Management Decision-Making
This course teaches economic principles in energy and environmental management decision-making. After evaluating public and private projects for selection based on economic considerations in resource allocation, students use principles of decision-making and risk assessment in case studies. Other tools are essentials of conditional probability, value of information and testing, and utility. Credit 3 units.

E33 EECE 551 Computational Chemistry of Molecular and Nanoscale Systems
This course explores the structure, properties and reactivity of molecular and nanoscale systems in engineering using computational chemistry tools. The science behind density functional theory (DFT) calculations and molecular dynamics (MD) simulations are explained, and applied in the context of multiscale modeling. Special emphasis is placed on solid-state materials and aqueous/biological systems found in engineering. Students are encouraged to apply the methods discussed in class to their own research topics. Prerequisites: ChE 320 and ChE 359, or permission of the instructor.
E33 EECE 592A Advanced Topics in Aerosol Engineering
This course is focused on discussion of advanced topics in aerosol science and engineering and its applications in a variety of fields — materials science, chemical engineering, mechanical engineering and environmental engineering. Prerequisite: ChE 518.
Credit 3 units.

E33 EECE 594 Special Topics: Advanced Renewable Energy
A study of renewable energy technologies, including biomass, solar, thermal and wind energy collection and conversion. Introduction to hydrogen technologies and fuel cells. Course discusses analysis and technical design of renewable energy processes. Prerequisite: ChE 320 or equivalent or graduate standing.
Credit 3 units.

E33 EECE 595 Special Topics: Energy and Buildings
There is a $2 trillion U.S. market in energy efficiency with paybacks of four to five years. This course is an introduction to energy use in the built environment and means and methods for evaluating and harvesting these financial benefits. It is based on fundamentals of energy usage in building systems. Building sciences for architectural envelope, heating and cooling systems, lighting and controls. Building/weather interaction and utility weather regression analyses. Building dynamics and rates of change in energy usage. Students work in groups to perform an energy audit for a building on campus. Prerequisite: senior or graduate student standing or permission of instructor.
Credit 3 units.

E33 EECE 595B Principles and Methods of Micro and Nanofabrication
An introduction to the fundamentals of micro- and nano-fabrication processes with emphasis on cleanroom practices. The physical principles of optical lithography, electron-beam lithography, alternative nanolithography techniques and thin film deposition and metrology methods. The physical and chemical processes of wet and dry etching. Cleanroom concepts and safety protocols. Sequential micro-fabrication processes involved in the manufacture of microelectronic and photonic devices. Imaging and characterization of micro- and nano-structures. Examples of practical existing and emerging micro- and nano-devices. Prerequisite: Chem 111A or consent from instructor. Same as CSE 506M
Credit 3 units.

E33 EECE 595C Molecular Biochemical Engineering
This course is set for junior-level graduate students to bridge the gap between biochemical engineering theory and academic research in bioengineering. It covers common molecular biotechnologies (molecular biology, microbiology, recombinant DNA technology, protein expression, etc.), biochemical models (enzyme catalysis, microbial growth, bioreactor, etc.) and bioengineering methodologies (protein engineering, expression control systems, etc.). These theories and technologies are introduced in a manner closely related to daily academic research or biochemical industry. Areas of application include biofuel and chemical production, drug discovery and biosynthesis, bioremediation, and environmental applications. This course also contains a lab section (20 to 30 percent) that requires students to apply the knowledge learned to design experiments, learn basic experimental skills and solve current research problems. Prerequisites: ChE 146, Biol 2960, Biol 4810.
Credit 3 units.

E33 EECE 595D Biomass Energy Systems and Engineering
This course offers background in the organic chemistry, biology and thermodynamics related to understanding the conversion of biomass. In addition includes relevant topics relating to biomass feedstock origin, harvest, transportation, storage, processing and pretreatment along with matters concerning thermo- and bio-chemical conversion technologies required to produce fuels, energy, chemicals and materials. Also, various issues with respect to biomass characterization, economics and environmental impact are discussed. The main objective of the course is to introduce concepts central to a large-scale integrated biomass bioconversion system.
Credit 3 units.

E33 EECE 596 Special Topics: Metabolic Engineering
Metabolic engineering is the systematical practice of optimizing genetic and regulatory processes within cells to improve cellular performance. Metabolic engineering course gives an overview of the different concepts of metabolic engineering with a number of examples on how systems biology (i.e., omics tools) and molecular biology methods (i.e., genetic modification using recombinant DNA technology) have been applied to understand unique cellular metabolisms and to induce cellular production of useful compounds. The course can be divided by three parts: (1) systematic analysis of complex metabolic pathways; (2) ways of employing recombinant DNA techniques to alter cell behavior, metabolic patterns and product formation; and (3) practical applications of metabolic engineering (i.e., “cell factory”) in chemical, energy, medical and environmental fields.
Credit 3 units.

E33 EECE 596A Metabolic Engineering and Synthetic Biology
Synthetic Biology is a transformative view of biology from "observation approach" to "synthesis approach." It is new "engineering" discipline and aims to make the engineering of
new biological function predictable, safe and quick. It paves a wide range of applications to transform our views on production of sustainable energy and renewable chemicals, environmental problems and human disease treatments. The field intersects with metabolic engineering in areas such as the design of novel pathways and genetic circuits for product generation and toxic chemical degradation. In this course, the field and its basis are introduced. First, relevant topics in biology, chemistry, physics and engineering are covered. Second, students participate in brainstorming and discussion on new biology-based systems. Last, they design and present new synthetic biology systems to solve real-world problems. Credit 3 units.

E33 EECE 597 Special Topics: EECE Project Management
An introduction to the theory and practice of engineering project management, with an emphasis on projects related to environmental protection and occupational health and safety. Topics include: project definition and justification; project evaluation and selection; financial analysis and cost estimation; project planning, including scheduling, resourcing and budgeting; project oversight, auditing and reporting; and effective project closure. Students are introduced to commonly used project management tools and systems, such as work breakdown structures, network diagrams, Gantt charts and project management software. Topics include: project management in different organizational structures and philosophies; creating effective project teams; and managing projects in international settings. Prerequisites: enrollment in masters of engineering program; senior or higher standing. Credit 3 units.

E33 EECE 598 Special Topics: Chemical Kinetics and Catalysis
This course reflects the fast, contemporary progress being made in decoding kinetic complexity of chemical reactions, in particular heterogeneous catalytic reactions. New approaches to understanding relationships between observed kinetic behavior and reaction mechanism are explained. Present theoretical and methodological knowledge is illustrated by many examples taken from heterogeneous catalysis (complete and partial oxidation), combustion and enzyme processes. Prerequisite: senior or graduate student standing. Credit 3 units. EN : DU, SU, TU

Chemical Engineering

E63 ChE 146A Introduction to Energy, Environmental and Chemical Engineering
Key technical issues that face our society and some of the emerging technologies that hold promise for the future are examined and discussed. Relationship to chemical engineering principles is emphasized. Credit 3 units. EN : DU, SU, TU

E63 ChE 240 Independent Work
Prerequisite: sophomore standing. Credit variable, maximum 9 units. Credit variable, maximum 9 units.

E63 ChE 262 Introduction to Environmental Engineering
The objective of this course is to introduce students to the field of environmental engineering. The course emphasizes basic principles of mass and energy conservation that govern physical, chemical and biological processes. Applications include the estimation of contaminant concentrations and the design of environmental controls. Credit 3 units. EN : DU, SU, TU

E63 ChE 275 Modeling and Computing in Chemical Engineering

E63 ChE 320 Thermodynamics
Classical thermodynamics. First and second laws, properties of pure substances, mixtures, and solutions. Phase equilibria, chemical reaction equilibria. Prerequisites: Chem 111A, Math 132 and Physics 117A. Credit 3 units. EN : DU, SU, TU

E63 ChE 325 Materials Science
Chemistry and physics of engineering materials. Emphasis on atomic and molecular interpretation of physical and chemical properties, the relationships between physical and chemical properties, and performance of an engineering material. Prerequisite: Math 217, Chem 111A. Credit 3 units. EN : DU, SU, TU

E63 ChE 344 Air Pollution
Generation, transport and fate of gaseous and particulate air pollutants. Meteorology and its coupling to air quality. Photochemical smog formation, visibility impairment, pollutant
dispersion modeling, and source apportionment. Prerequisite: ChE 443 or permission of instructor. Credit 3 units.

E63 ChE 345 Pollution Abatement and Waste Minimization

E63 ChE 351 Engineering Analysis of Chemical Systems
Introduction to the use of mathematics and methods of engineering in analysis of chemical and physical processes. Use of conservation balances and basic rate laws to describe processes with and without chemical reaction in both transient and steady state conditions. Prerequisites: Chem 112A, Math 233. Corequisites: ChE 320, Math 217. Credit 3 units.

E63 ChE 357 Mass Transfer Operations
Stagewise and continuous mass transfer operations, including distillation, gas absorption, humidification, leaching, liquid extraction and membrane separations. Prerequisites: Math 217, ChE 351 and ChE 320. Credit 3 units.

E63 ChE 359 Molecular Transport Processes and Chemical Kinetics
Molecular motions, kinetic theory of gases, kinetic theory of dense phases, chemical kinetics. Prerequisite: ChE 320. Credit 3 units.

E63 ChE 360 Transport Phenomena I
Development of pointwise conservation equations for mass, momentum and energy. Application in analysis of physical processes where molecular transport mechanisms are dominant. Prerequisites: ChE 320, ChE 275, Math 217, ESE 317 or ESE 318 and ESE 319 or permission of instructor. Credit 3 units.

E63 ChE 368 Transport Phenomena II
Introduction to the concept of boundary layers and transition to turbulence. Application of pointwise mass, momentum and energy conservation equations in physical processes where convective transport mechanisms play a dominant role. Prerequisite: ChE 366 or ChE 367. Credit 3 units.

E63 ChE 369 Energy Transfer Processes
Introductory treatment of the principles of heat transfer by conduction, convection or radiation. Mathematical analysis of steady and unsteady conduction along with numerical methods. Analytical and semi-empirical methods of forced and natural convection systems. Boiling and condensation heat transfer. Radiation between black-body and real surfaces. Radiation network analysis. Corequisite: ChE 368 or equivalent. Credit 3 units.

E63 ChE 400 Independent Study
Prerequisite: junior or senior standing. Credit variable, maximum 9 units.

E63 ChE 408A Environmental Engineering Lab
Laboratory experiments to illustrate the application of engineering fundamentals to environmental systems. Applications of experimental design and data analysis principles. Introduction to relevant analytical instrumentation and laboratory techniques. Laboratory work supported by theoretical analysis and modeling as appropriate. Prerequisites: ChE 443 or equivalent and consent of instructor. Credit 3 units.

E63 ChE 431 Control Systems I

E63 ChE 433 Digital Process Control Laboratory
Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics and process control. Exercises in data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature and pressure control. Term project. Prerequisite: ESE 441/MEMS 441 or ChE 462, or equivalent. Credit 3 units.
E63 ChE 438 Environmental Risk Assessment and Toxicology
Essentials of human and ecological toxicology. Relationship between toxicology and risk assessment. Concepts of environmental exposures and their practical applications. Qualitative and quantitative evaluation of human and animal studies. Estimations of individual risk and aggregate risk. Risk assessment methodology in regulatory decision making. Application of risk assessment in environmental exposures and evaluation of hazardous waste site. Risk communication and remediation. Prerequisites: senior or graduate standing, or permission of the instructor. Credit 3 units. EN : DU, SU, TU

E63 ChE 440 Environmental Chemistry
Introduction to the chemistry of air, water and soil systems. Emphasis on the application of chemical equilibrium principles to quantitatively describe environmental systems. Chemical basis for processes occurring in the natural environment and industrial pollution control systems. Prerequisite: Chem 112A. Credit 3 units. EN : DU, SU, TU

E63 ChE 441 Sustainable Air Quality
Introduction to sustainability and sustainable air quality. Systems science as an organizing principle for air quality management. Setting of air quality goals. Observing the status and trends. Establishing causal factors: energy use and chemical processing. Natural sources and variability. Corrective actions to reach air quality goals. Process design for emission reductions. Adoptive response to air pollution episodes. A web-based class project is conducted through the semester. Credit 3 units. EN : DU, SU, TU

E63 ChE 442 New Product and Process Development
An overview of product development, innovative solutions to technical problems, designed experimentation, evaluation of abstract data, product design and the basics of intellectual property. Prerequisites: junior standing and Chem 251, ChE 320, or by permission of the instructor. Credit 3 units. EN : DU, SU, TU

E63 ChE 443 Bioprocess Engineering I: Fundamentals and Applications
The course covers the fundamentals and provides the basic knowledge needed to understand and analyze processes in biotechnology in order to design, develop and operate them efficiently and economically. This knowledge is applied to understand various applications and bioprocesses, such as formation of desirable biological and chemical materials and products, production of bioenergy, food processing and waste treatment. The main objective of the course is to introduce the essential concepts and applications of bioprocessing to students of diverse backgrounds. An additional project is required to obtain graduate credit. Prerequisite: Biol 2960 or equivalent or permission of instructor. Credit 3 units. EN : DU, SU, TU

E63 ChE 444 Environmental Risk Assessment and Toxicology
Essentials of human and ecological toxicology. Relationship between toxicology and risk assessment. Concepts of environmental exposures and their practical applications. Qualitative and quantitative evaluation of human and animal studies. Estimations of individual risk and aggregate risk. Risk assessment methodology in regulatory decision making. Application of risk assessment in environmental exposures and evaluation of hazardous waste site. Risk communication and remediation. Prerequisites: senior or graduate standing, or permission of the instructor. Credit 3 units. EN : DU, SU, TU

E63 ChE 446 Chemical Process Dynamics and Control
A state-of-the-art industrial virtual plant is used for the development of dynamic simulations, selection of instrumentation, statistical analysis of variability, and implementation of process control to improve process operation and efficiency. Prerequisites: Math 217 and ChE 351. Credit 3 units. EN : DU, SU, TU

E63 ChE 447 Chemical Reaction Engineering
Introduction to chemical reaction engineering principles and applications in process and product development. Evaluation of reaction rates from mechanisms and experimental data, quantification of pertinent transport effects and application to reactor and product design. Prerequisites: ChE 320, ChE 351, ChE 359, ChE 367. Credit 3 units. EN : DU, SU, TU

E63 ChE 448 Sustainable Air Quality
Introduction to sustainability and sustainable air quality. Systems science as an organizing principle for air quality management. Setting of air quality goals. Observing the status and trends. Establishing causal factors: energy use and chemical processing. Natural sources and variability. Corrective actions to reach air quality goals. Process design for emission reductions. Adoptive response to air pollution episodes. A web-based class project is conducted through the semester. Credit 3 units. EN : DU, SU, TU

E63 ChE 449 New Product and Process Development
An overview of product development, innovative solutions to technical problems, designed experimentation, evaluation of abstract data, product design and the basics of intellectual property. Prerequisites: junior standing and Chem 251, ChE 320, or by permission of the instructor. Credit 3 units. EN : DU, SU, TU

E63 ChE 450 Bioprocess Engineering II: Process and Product Development
An overview of product development, innovative solutions to technical problems, designed experimentation, evaluation of abstract data, product design and the basics of intellectual property. Prerequisites: junior standing and Chem 251, ChE 320, or by permission of the instructor. Credit 3 units. EN : DU, SU, TU

E63 ChE 451 Bioprocess Engineering III: Process and Product Development
The course covers the fundamentals and provides the basic knowledge needed to understand and analyze processes in biotechnology in order to design, develop and operate them efficiently and economically. This knowledge is applied to understand various applications and bioprocesses, such as formation of desirable biological and chemical materials and products, production of bioenergy, food processing and waste treatment. The main objective of the course is to introduce the essential concepts and applications of bioprocessing to students of diverse backgrounds. An additional project is required to obtain graduate credit. Prerequisite: Biol 2960 or equivalent or permission of instructor. Credit 3 units. EN : DU, SU, TU
E63 ChE 478B Honors Design Project for AIChE Student Contest Problem
Application of engineering science and design, fundamentals of process and product development, computational techniques and economic principles to design of chemical and biological processes and procedures in solving the AIChE national student contest problem. Up to two single and up to two group (two to three per group) solutions may be chosen for national competition. Concurrent with ChE 478A. Prerequisites: ChE 320, ChE 357, ChE 367, ChE 471, ChE 473A.
Credit 1 unit. EN : DU, SU, TU

E63 ChE 479 Chemical Process Safety
Credit 3 units. EN : DU, SU, TU

E63 ChE 480 Principles of Surface and Colloid Science
Interfacial phenomena play key roles in such industrial operations as emulsification, catalysis and detergency. Introduction to principles of surface science. Particular attention to describing the nature of the liquid/gas, liquid/liquid, solid/liquid and solid/gas interfaces. Specific topics include methods of measuring surface tension, interfacial adsorption, surface area and particle size determinations, dispersion stabilization/flocculation, emulsification and wetting. Prerequisite: ChE 320 or permission of instructor.
Credit 3 units. EN : DU, SU, TU

E63 ChE 4830 Bioenergy
A broad overview of the flow of energy, captured from sunlight during photosynthesis biological systems, and current approaches to utilize the metabolic potentials of microbes and plants to produce biofuels and other valuable chemical products. An overall emphasis is placed on the use of large-scale genomic, transcriptomic and metabolomic datasets in biochemistry. The topics covered include photosynthesis, central metabolism, structure and degradation of plant lignocellulose, and microbial production of liquid alcohol, biodiesel, hydrogen and other advanced fuels. Course meets during the second half of the spring semester. Prerequisite: Biol 4810 or permission of instructor.
Same as Biol 4830
Credit 2 units. A&S : NS A&S : IQ, NSM FA : NSM

E63 ChE 499 Senior Thesis
Research project selected by the student with the permission and recommendation of a faculty supervisor and the approval of the department chair. At conclusion of project, student prepares a report in the form of a senior thesis.
Credit variable, maximum 6 units.

E63 ChE 500 Independent Study
Credit variable, maximum 9 units.

E63 ChE 508A Environmental Engineering Lab
Laboratory experiments to illustrate the application of engineering fundamentals to environmental systems. Applications of experimental design and data analysis principles. Introduction to relevant analytical instrumentation and laboratory techniques. Laboratory work supported by theoretical analysis and modeling as appropriate. Prerequisite: ChE 443 or equivalent and consent of instructor.
Same as ChE 408A
Credit 3 units.

E63 ChE 510A Dynamics of Air Pollution
Physicochemical processes governing the dynamics of pollutants from point and nonpoint sources: generation, transport and decay. Application of fundamental thermodynamics, mass/heat transfer and fluid mechanics principles to environmental systems. Prerequisites: ChE 320, ESE 317 or ESE 318 or 319 and ChE 443 or equivalent, or permission of instructor.
Credit 3 units.

E63 ChE 512 Transport Effects in Chemical Reactors
Mixing effects and nonideal flows in reactors and their characterization. Description and quantification of mass and heat transfer interactions with chemical reactions in gas-liquid, gas-solid catalyzed reactions and gas-solid noncatalytic reactions. Introduction to transport effects on reactor stability and outline of basic approaches to reactor design for heterogeneous systems. Prerequisites: ChE 471, ChE 368 or equivalent.
Credit 3 units.

E63 ChE 518 Aerosol Science and Technology
Credit 3 units.

E63 ChE 500A Environmental Engineering Lab
Laboratory experiments to illustrate the application of engineering fundamentals to environmental systems. Applications of experimental design and data analysis principles. Introduction to relevant analytical instrumentation and laboratory techniques. Laboratory work supported by theoretical analysis and modeling as appropriate. Prerequisite: ChE 443 or equivalent and consent of instructor.
Same as ChE 408A
Credit 3 units.

E63 ChE 510A Dynamics of Air Pollution
Physicochemical processes governing the dynamics of pollutants from point and nonpoint sources: generation, transport and decay. Application of fundamental thermodynamics, mass/heat transfer and fluid mechanics principles to environmental systems. Prerequisites: ChE 320, ESE 317 or ESE 318 or 319 and ChE 443 or equivalent, or permission of instructor.
Credit 3 units.

E63 ChE 512 Transport Effects in Chemical Reactors
Mixing effects and nonideal flows in reactors and their characterization. Description and quantification of mass and heat transfer interactions with chemical reactions in gas-liquid, gas-solid catalyzed reactions and gas-solid noncatalytic reactions. Introduction to transport effects on reactor stability and outline of basic approaches to reactor design for heterogeneous systems. Prerequisites: ChE 471, ChE 368 or equivalent.
Credit 3 units.

E63 ChE 518 Aerosol Science and Technology
Credit 3 units.

E63 ChE 500 Independent Study
Credit variable, maximum 9 units.

E63 ChE 508A Environmental Engineering Lab
Laboratory experiments to illustrate the application of engineering fundamentals to environmental systems. Applications of experimental design and data analysis principles. Introduction to relevant analytical instrumentation and laboratory techniques. Laboratory work supported by theoretical analysis and modeling as appropriate. Prerequisite: ChE 443 or equivalent and consent of instructor.
Same as ChE 408A
Credit 3 units.

E63 ChE 510A Dynamics of Air Pollution
Physicochemical processes governing the dynamics of pollutants from point and nonpoint sources: generation, transport and decay. Application of fundamental thermodynamics, mass/heat transfer and fluid mechanics principles to environmental systems. Prerequisites: ChE 320, ESE 317 or ESE 318 or 319 and ChE 443 or equivalent, or permission of instructor.
Credit 3 units.

E63 ChE 512 Transport Effects in Chemical Reactors
Mixing effects and nonideal flows in reactors and their characterization. Description and quantification of mass and heat transfer interactions with chemical reactions in gas-liquid, gas-solid catalyzed reactions and gas-solid noncatalytic reactions. Introduction to transport effects on reactor stability and outline of basic approaches to reactor design for heterogeneous systems. Prerequisites: ChE 471, ChE 368 or equivalent.
Credit 3 units.

E63 ChE 518 Aerosol Science and Technology
Credit 3 units.

E63 ChE 500 Independent Study
Credit variable, maximum 9 units.
E63 ChE 523 Biological Treatment Processes
Fundamental concepts of biological processes that are relevant for wastewater treatment engineering applications. The course tackles the stoichiometry and kinetics of biochemical reactions and then use the obtained knowledge to evaluate and model wastewater treatment systems. Prerequisite: permission of instructor.
Credit 3 units. EN : DU, SU, TU

E63 ChE 525 Industrial and Environmental Catalysis
Major industrial and environmental catalytic processes. Principal theories of heterogeneous catalysis. Experimental methods and techniques used to develop modern catalytic systems. Examples from the petrochemical industry, automotive exhaust systems and industrial emissions abatement. Prerequisites: Chem 112A, 262.
Credit 3 units. EN : DU, SU, TU

E63 ChE 526 Topics in Nanotechnology
This course is focused on discussion of topics in Nanotechnology — with a focus on nanoparticles and their applications in a variety of fields — Materials Science, Chemical Engineering, Mechanical Engineering, Environmental Engineering, Medicine.
Credit 3 units. EN : DU, SU, TU

E63 ChE 542 Interdisciplinary Environmental Clinic
This course constitutes the technical component of an interdisciplinary environmental clinic based at the Law School. Engineering and Arts & Sciences students participate in interdisciplinary teams with law students, handling environmental projects for public interest, environmental or community organizations or individuals. Students from other schools also may participate with permission of instructor. Projects may involve the following activities: representing clients in federal and state court litigation and administrative proceedings; drafting proposed legislation; commenting on proposed regulations, permits, environmental impact statements or environmental assessments, and similar documents; and evaluating matters for potential future action. The goal is that for each project, students have primary responsibility for handling the matter, and faculty play a secondary, supervisory role. Non-law students may provide such technical support as investigating unknown facts, evaluating facts presented by other parties (such as in government reports), and working with law students to develop and present facts relevant to an understanding of and resolution of the matter. Non-law students must work at least an average of 12 hours per week on clinic matters, including attendance at and participation each week in: at least one individual meeting with the professor; one group meeting involving the student team assigned to each project and the professor(s); and a two-hour seminar for all students in the clinic. Prerequisites: The clinic is open to graduate students and upper level undergraduates with course work and/or experience in environmental engineering, environmental science or related fields. Enrollment is a two-step process including the submission of a Request for Permission to Enroll form (found at: http://law.wustl.edu/intenv/index.asp?id=429) and online registration. Same as EnSt 539
Credit variable, maximum 6 units.

E63 ChE 549 Sustainable Air Quality
Introduction to sustainability and sustainable air quality. Systems science as an organizing principle for air quality management. Setting of air quality goals. Observing the status and trends. Establishing causal factors: energy use and chemical processing. Natural sources and variability. Corrective actions to reach air quality goals. Process design for emission reductions. Adoptive response to air pollution episodes. A web-based class project is conducted through the semester. Same as ChE 449
Credit 3 units. EN : DU, SU, TU

E63 ChE 553 Bioprocess Engineering I: Fundamentals and Applications
The course covers the fundamentals and provides the basic knowledge needed to understand and analyze processes in biotechnology in order to design, develop and operate them efficiently and economically. This knowledge is applied to understand various applications and bioprocesses, such as formation of desirable bio and chemical materials and products, production of bioenergy, food processing and waste treatment. The main objective of the course is to introduce the essential concepts and applications of bioprocessing to students of diverse backgrounds. An additional project is required to obtain graduate credit. Prerequisite: Biol 2960 or equivalent or permission of instructor.
Same as ChE 453
Credit 3 units. EN : DU, SU, TU

E63 ChE 558 Biological Transport
The principles of mass, momentum and energy transport are applied to the analysis of selected processes of biomedical and biotechnological interest. Topics include dynamics of blood flow, oxygen and solute transport, steady and transient diffusion in reacting systems, pharmacokinetic analysis, and heat transfer. Prerequisites: ChE 366 or ChE 367 or MEMS 370.
Same as BME 558
Credit 3 units. EN : DU, SU, TU

E63 ChE 563 Measurement Techniques for Particle Characterization
The purpose of this course is to introduce students to the principles and techniques of particle measurement and
characterization. Practical applications of particle technology include air pollution measurement, clean manufacturing of semiconductors, air filtration, indoor air quality, particulate emission from combustion sources and so on. The course focuses on (1) integral moment measurement techniques, (2) particle sizing and size distribution measuring techniques, and (3) particle composition measurement techniques. The related issues such as particle sampling and transportation, the instrument calibration, and particle standards also are covered. Credit 3 units. EN : DU, SU, TU

E63 ChE 569 Chemical Process Safety
Analysis and management of fire and explosion hazards. Control of human exposure to toxic materials. Codes, standards and regulations. Transportation and disposal of noxious substances. Analysis of drift from clouds, flares and stacks. Venting of pressure vessels. Hazard evaluation and safety review of processes. Emergency plans for accidents and disasters. Prerequisite: ChE 320 or Chem 421, or permission of instructor. Same as ChE 479
Credit 3 units. EN : DU, SU, TU

E63 ChE 5830 Bioenergy
A broad overview of the flow of energy, captured from sunlight during photosynthesis, in biological systems, and current approaches to utilize the metabolic potentials of microbes and plants to produce biofuels and other valuable chemical products. An overall emphasis is placed on the use of large-scale genomic, transcriptomic and metabolomic datasets in biochemistry. The topics covered include photosynthesis, central metabolism, structure and degradation of plant lignocellulose, and microbial production of liquid alcohol, biodiesel, hydrogen and other advanced fuels. Course meets during the second half of the spring semester. Prerequisite: Biol 4810 or permission of instructor. Same as Biol 4830
Credit 2 units. A&S : NS A&S : IQ, NSM FA : NSM

E63 ChE 592A Advanced Topics in Aerosol Science and Engineering
This course focuses on discussion of advanced topics in aerosol science and engineering and its applications in a variety of fields — Materials Science, Chemical Engineering, Mechanical Engineering and Environmental Engineering. Prerequisite: ChE 518.
Credit 3 units. EN : DU, SU, TU

E63 ChE 599 Masters Research
Credit variable, maximum 9 units.

Mechanical Engineering & Materials Science

The Department of Mechanical Engineering and Materials Science (MEMS) offers the Bachelor of Science degree in Mechanical Engineering (B.S.M.E.). In addition, minors in aerospace, robotics, mechatronics and energy engineering, and in related scientific and engineering fields, are available to students. The MEMS curriculum emphasizes the core principles of mechanics (the study of forces, materials and motion) that underlie mechanical engineering. The common curriculum during the student’s early academic development encourages breadth of understanding, interdisciplinary thinking and creativity. Undergraduates in MEMS learn to analyze, model, design and build a variety of mechanical systems such as automobile components, wind turbines and medical devices. Freshman, sophomore and early junior years are focused on learning fundamental concepts in statics, dynamics, fluid mechanics and thermodynamics. In the junior and senior years, students choose electives that emphasize their specific interests and prepare them for a particular professional or academic career. The undergraduate curriculum for the B.S.M.E. degree provides Mechanical Engineering and Materials Science students with a strong base in fundamental mathematics, science and engineering; exposes the students to diverse applications of mechanics and materials; and provides the flexibility to explore creative ideas through undergraduate research and project-based courses.

Mechanical engineering is critical in a variety of important emerging technologies. Mechanical engineers design and develop artificial organs, prosthetic limbs, robotic devices, adaptive materials, efficient propulsion mechanisms, high-performance aerospace structures and advanced renewable energy systems. The core concepts of mechanics, thermal systems and materials science are at the heart of these technologies.

Mission Statement

The Mechanical Engineering and Materials Science faculty is committed to providing the best possible undergraduate mechanical engineering education. The faculty strives to nurture the intellectual, professional and personal development of the students, to continually improve the curriculum, to remain current in their professional field and to maintain state-of-the-art facilities. The overarching goal is to prepare students for professional practice with a solid, scientifically grounded foundation in the major stems of mechanical engineering: mechanics, design, dynamics, control, fluid mechanics, thermal science and materials science.

Bachelor of Science Degree in Mechanical Engineering

The mission of the undergraduate program in mechanical engineering is to prepare students within the broad and evolving field of mechanical engineering. The program instills in students a capacity for creative design through critical and analytical thought. The B.S.M.E. is the first step toward a career in industry, academia or government; it encourages a commitment to independent, lifelong learning and professional development. In addition to their technical studies, students learn to communicate their ideas clearly and to conduct themselves in an ethical and socially responsible manner.

The curriculum is a four-year program leading to the first professional degree, Bachelor of Science in Mechanical Engineering, which is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). The curriculum prepares the student for professional practice or postgraduate education in a broad spectrum of mechanical and other engineering or professional fields. The curriculum provides critical knowledge in solid mechanics, fluid mechanics, thermodynamics and heat transfer, materials science, dynamics and control, and design. The curriculum is structured around a technical core of 102 units and 18 units of social science and humanities for a total degree requirement of 120 units. Core courses must be taken for credit (grade). The social science and humanities courses may be taken Pass/Fail. The undergraduate program provides the necessary foundations in these areas, and the opportunity to specialize in topics of particular interest. Specialization is accomplished by judicious choice of engineering electives taken in 300-, 400- or 500-level courses approved by your adviser. At the end of the four-year program, the student is ready to go on to graduate education, research or professional practice.

Program Objectives

The faculty of our department aspire to make positive, substantive and lasting contributions to the lives of our students. This intent is embodied in the following program educational objectives:

- Graduates will exhibit leadership in their fields, either as designers, managers, educators or researchers.
- Graduates will attain positions of responsibility in professional practice or be engaged in advanced study.
- Graduates will behave professionally, act ethically and be responsive to global, societal and environmental needs. They will constantly seek to keep their knowledge current and will effectively communicate their knowledge and experience. They will be active in their professional communities and will collaborate with others.
Bachelor of Science in Applied Science (Mechanical Engineering)

The Bachelor of Science in Applied Science (Mechanical Engineering) degree program will offer a degree path for students to gain technical knowledge in mechanical engineering with more course selection flexibility. Students who do not desire to become licensed engineers but seek to acquire analytical engineering thinking skills may choose to pursue this program. The added degree flexibility will allow these students to pursue additional second majors and/or minors and increase their ability to participate in programs such as study abroad.

Premedical Option

Research and practice in the biological and medical sciences increasingly involves advanced technology, including mechanical engineering. For those interested in a career in medicine, the premedical option in Mechanical Engineering and Materials Science makes it possible to obtain an accredited Bachelor of Science and simultaneously meet the admission requirements of most medical and dental schools. The program also provides a foundation for graduate study and research in biomedical engineering. The essential requirements of the premedical option are three semesters of general biology (Biol 2960, 2970 and 3050), two semesters of general chemistry with a laboratory and two semesters of organic chemistry with a laboratory (Chem 261, 262). One semester of organic chemistry may be counted as an upper-level MEMS elective; the student must take 6 units of other upper-level mechanical engineering electives to complete the 9-unit requirement. The premedical option is easier for those who have a high school background in biology or, by reason of advanced placement, have reduced requirements in the Common Studies portion of the curriculum. For additional information on the premedical option, please refer to the premedical education section located in the introduction to the School of Engineering & Applied Science’s Undergraduate Programs (p. 819).

Graduate Programs

The department offers programs for graduate study at both the master’s and doctoral levels. All programs are designed to direct advanced study into an area of specialization and original research that includes recent scientific and technological advances.

A graduate degree can provide significant advantages and rewards to a mechanical engineer, including increased income and a wider range of career options. Graduate programs include professional, course-option master’s degrees (M.S. and M.Eng.) and research-based master’s (M.S.) or doctoral (Ph.D.) degrees. The undergraduate curriculum provides an excellent foundation for graduate study, and a careful selection of electives in the third and fourth years can facilitate the transition to graduate work. The master’s degrees can be pursued on a part-time or full-time basis, while Ph.D. degrees are typically pursued by full-time students.

Chair

Philip V. Bayly
Lilian and E. Lisle Hughes Professor of Mechanical Engineering
PhD, Duke University
Nonlinear dynamics, vibrations, biomechanics

Associate Chairs

Katherine M. Flores (Materials Science)
PhD, Stanford University
Mechanical behavior of structural materials

Kenneth L. Jerina (Mechanical Engineering)
Earl E. and Myrtle E. Walker Professor of Engineering
DSc, Washington University
Materials, design, solid mechanics, fatigue and fracture

Endowed Professors

Ramesh K. Agarwal
William Palm Professor of Engineering
PhD, Stanford University
Computational fluid dynamics and computational physics

Thomas G. Harmon
Clifford W. Murphy Professor
PhD, Massachusetts Institute of Technology
Reinforced and prestressed concrete, structural design, fiber reinforced polymers

Mark J. Jakiela
Lee Hunter Professor of Mechanical Design
PhD, University of Michigan
Mechanical design, design for manufacturing, optimization, evolutionary computation

David A. Peters
McDonnell Douglas Professor of Engineering
PhD, Stanford University
Aeroelasticity, vibrations, helicopter dynamics

Shankar M. L. Sastry
Catherine M. and Christopher I. Byrnes Professor of Engineering
PhD, University of Toronto
Materials science, physical metallurgy

Professor

Guy M. Genin
PhD, Harvard University
Solid mechanics, fracture mechanics
Associate Professor
Jessica E. Wagenseil
DSc, Washington University
Biomechanics

Assistant Professors
Parag Banerjee
PhD, University of Maryland
Materials sciences and engineering, nanostructured materials, materials synthesis, and novel devices for storing and harvesting energy

Spencer Lake
PhD, University of Pennsylvania
Soft tissue biomechanics

Amit Pathak
PhD, University of California–Santa Barbara
Biomechanics

Srikanth Singamaneni
PhD, Georgia Institute of Technology
Microstructures of cross-linked polymers

Professors of the Practice
Harold J. Brandon
DSc, Washington University
Energetics, thermal systems

Frederick Roos
PhD, University of Michigan
Aerodynamics, fluid dynamics

Joint Faculty
Richard Axelbaum (EECE)
PhD, University of California–Davis
Combustion, nanomaterials

Elliot Elson (Biochemistry and Molecular Biophysics)
The Alumni Endowed Professor in Biochemistry and Molecular Biophysics
PhD, Stanford University
Biochemistry and molecular biophysics

Kenneth Kelton (Physics)
Arthur Holly Compton Professor of Arts & Sciences
PhD, Harvard University
Study and production of titanium-based quasicrystals and related phases

Eric Leuthardt (Neurological Surgery and BME)
MD, University of Pennsylvania School of Medicine
Neurological surgery

Matthew Silva (Orthopedic Surgery)
PhD, Massachusetts Institute of Technology
Biomechanics of age-related fractures and osteoporosis

Larry Taber (BME)
Dennis and Barbara Kessler Professor of Biomedical Engineering
PhD, Stanford University
Biomechanics, mechanics of development

Simon Tang (Orthopedic Surgery, BME)
PhD, Rensselaer Polytechnic Institute
Biological mechanisms

Stavros Thomopoulos (Orthopedic Surgery)
PhD, University of Michigan
Development, healing and tissue engineering of the tendon-to-bone insertion

Senior Research Associate
Ruth Okamato
DSc, Washington University
Biomechanics, solid mechanics

Adjunct Professors
Ricardo Actis
DSc, Washington University
Finite element analysis, numerical simulation, aircraft structures

Xavier Avula
PhD, Iowa State University
Design, micro-electrical-mechanical systems

Carl Baggett
BS, University of Missouri–Columbia
Design

Thomas L. Bever
BS, Washington University
Design, mechanical systems

John Biggs
MEng, Washington University
Thermal science

Andrew Cary
PhD, University of Michigan
Computational fluid dynamics

Jerry Craig
MS, Kansas State University
Engineering graphics

Richard Dyer
PhD, Washington University
Propulsion, thermodynamics, fluids

John Griffith
BS, Washington University
Manufacturing

Hanford Gross
BS, Washington University
Engineering project management
Engineering

Raimo J. Hakkinen
PhD, California Institute of Technology
Aerodynamics, experimental methods in fluid dynamics

Dale M. Pitt
DSc, Washington University
Aeroelasticity

Gary D. Renieri
PhD, Virginia Polytechnic Institute and State University
Structural applications, composite materials

Hiroshi Tada
PhD, Lehigh University
Solid mechanics

Michael Wendl
DSc, Washington University
Mathematical theory and computational methods in biology, and engineering

Senior Professors

Phillip L. Gould
PhD, Northwestern University
Structural analysis and design, shell analysis and design, biomechanical engineering

Salvatore P. Sutera
PhD, California Institute of Technology
Viscous flow, biorheology

Barna A. Szabo
PhD, State University of New York–Buffalo
Numerical simulation of mechanical systems, finite-element methods

Lecturer

Shaun Sellers
PhD, Johns Hopkins University
Mechanics and materials

Professors Emeriti

Wallace B. Diboll Jr.
MSME, Rensselaer Institute of Technology
Dynamics, vibrations, engineering design

Paul C. Paris
PhD, Lehigh University
Classical mechanics, solid mechanics, dynamics, fracture mechanics, stochastic processes

Bachelor of Science in Mechanical Engineering

The Department of Mechanical Engineering and Materials Science offers a four-year curriculum leading to a professional baccalaureate degree, a Bachelor of Science in Mechanical Engineering (B.S.-M.E.). This degree is designed to prepare students for graduate school, a professional graduate program or industry; the program is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). The B.S.-M.E. curriculum is structured around a basic core of 58 units and a complementary mechanical engineering program of at least 62 units to complete the degree requirement of a total of 120 units.

## Bachelor of Science in Applied Science (Mechanical Engineering)

The Bachelor of Science in Applied Science (Mechanical Engineering) program provides substantive and consistent training in mechanical engineering with maximum flexibility. This program is advantageous if you wish to pursue a more flexible program than the accredited B.S.-M.E. degree program. It is especially suitable for a double major in combination with mathematics, physics, chemistry, biology, economics or another engineering discipline. The program can be planned to provide a background for graduate work in biological, medical or management fields. The B.S. in Applied Science is a non-professional degree and is not accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

The degree requirements include the residency and general requirements of the University and the School. The Bachelor of Science in Applied Science (Mechanical Engineering) degree requirements are:

- Complete at least a total of 120 applicable units
- Complete a minimum of 60 units at Washington University
- Complete at least 42 units at the 300 level or higher
- Complete at least 48 units in mathematics, natural science and engineering
- Complete at least 30 units of mechanical engineering (MEMS) courses
- Satisfy the SEAS English composition requirement
- Satisfy the SEAS humanities and social science requirement
- Satisfy the residency requirement of 30 units of 300 level or higher engineering courses
- Earn at least a 2.0 cumulative GPA in all applicable courses taken at Washington University
- Earn at least a 2.0 cumulative GPA in mechanical engineering (MEMS) courses.

## The Minor in Aerospace Engineering

Whether you are intent on a career in aviation, or simply enthusiastic about space and flight, a minor in aerospace engineering can satisfy your scientific curiosity, prepare you for a job or uncover opportunities for technical contributions.

The Minor in Aerospace Engineering is available to all undergraduates but is most attractive to those pursuing a degree in mechanical engineering. The Minor in Aerospace Engineering requires a minimum of 15 units of courses selected from the list below; it is possible to earn the minor without increasing the number of units (120) required for the B.S.M.E.

Aerospace engineering deals with the analysis, design and performance of flight vehicles such as transport and military aircraft, helicopters, missiles and launch vehicles, and spacecraft.

such as NASA’s Space Shuttle. Students learn about aerospace engineering by taking courses in aerodynamics, aircraft flight dynamics and control, aerospace propulsion, aerospace structures and aerospace vehicle design. Students also may have the opportunity to gain experience in aerospace engineering design through collaborative programs with local companies such as Boeing. Aerospace engineers from industry teach courses as adjunct instructors at Washington University, and many Washington University regular faculty members have extensive aerospace industry experience.

The Minor in Energy Engineering

This minor will provide students with course work that will enhance their background, knowledge and skills in the topical area of Energy Engineering. The minor covers classes in several fields of science and engineering, encompassing the Department of Energy, Environmental and Chemical Engineering, the Department of Electrical & Systems Engineering and the Department of Mechanical Engineering & Materials Science. A minor in Energy Engineering requires the completion of 18 units. It is open to undergraduate students pursuing an engineering major, students from the sciences (Biology, Chemistry, Physics) in Arts & Sciences, and students pursuing the Environmental Studies major. The detailed requirements for the minor can be found on the Energy, Environmental and Chemical Engineering Minors page (p. 896). Questions regarding the minor should be directed to a member of the committee for the Energy Engineering Minor: Professor Pratim Biswas (EECE) or Professor Hiro Mukai (ESE) or Professor David Peters (MEMS).

The Minor in Environmental Engineering Science

The Minor in Environmental Engineering Science may be earned by students receiving any of the Bachelor of Science degrees offered by the School of Engineering & Applied Science or the Environmental Studies degree or the Earth and Planetary Sciences degree offered by the College of Arts & Sciences. The 21–22 unit program prepares you to seek an entry-level position as an environmental engineer, scientist or analyst. The minor also provides a solid foundation for undertaking graduate study in environmental engineering. The detailed requirements for the minor can be found on the Energy, Environmental and Chemical Engineering Minors page (p. 896). Questions regarding the minor should be directed to a member of the committee for the Energy Engineering Minor: Professor Pratim Biswas (EECE) or Professor Jay Turner (EECE).

The Minor in Robotics

Robotic systems have wide application in modern technology and manufacturing. Robots can vary in complexity and use, from microrobots for surgical procedures to moderate-size robots common in manufacturing and undersea exploration to macrorobots used for disposal of nuclear wastes or deployed as arms on space-station modules. The program designed for a Minor in Robotics provides a fundamental understanding of robotic operation and preliminary training in design and use of robots.

The Minor in Mechatronics

Advancements in power electronics, electronic sensors and computer hardware and software have led to an expanding role for “smart” systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The Minor in Mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

The proposed minor program consists of four required courses, two electives and one prerequisite:

Four required courses:
MEMS 255  Engineering Mechanics II 3
MEMS 411  Mechanical Engineering Design Project 3
ESE 444  Sensors and Actuators 3
ESE 446  Robotics: Dynamics and Control 3

Total units 12

Two electives from the following:
MEMS 431  Structural Dynamics and Vibrations 4
MEMS 4301  Modeling, Simulation and Control 3
or MEMS 4302  Aircraft Flight Dynamics and Control
or MEMS 411  Mechanical Engineering Design Project
MEMS 5101  Analysis and Design of Fluid-Power Systems 3
ESE 336  Principles of Electronic Devices 3
ESE 442  Digital Control Systems 3
ESE 482  Digital Signal Processing 3

CSE 467S  Embedded Computing Systems 3
CSE 550A  Mobile Robotics 3

Prerequisite:
Basic programming course: CSE 131 Computer Science I or CSE 200 Engineering and Scientific Computing.

To find out more about this minor, contact the department chair or the adviser for the Minor in Mechatronics or visit the minor web page.

The Minor in Mechanical Engineering

The Minor in Mechanical Engineering complements studies in a field related to mechanical engineering, such as biomedical engineering, electrical engineering, physics, chemistry or architecture. The minor is intended to provide students with a credential that could enhance their opportunities for employment or graduate study. Completion of the minor demonstrates that the student has pursued a structured program approved by the faculty of the Department of Mechanical Engineering and Materials Science.

Students pursuing the Minor in Mechanical Engineering must complete a total of 18 units of course work as described below. Courses selected for the minor program may count toward program requirements of the student’s major. The subjects selected for a Minor in Mechanical Engineering are expected to constitute a coherent program within the field of mechanical engineering. Courses taken under the pass/fail grading option cannot be used for a minor program.

Required courses:
MEMS 253  Engineering Mechanics I 3
or BME 240  Biomechanics
or MEMS 255  Engineering Mechanics II
or Physics 411  Mechanics
MEMS 350  Engineering Mechanics III 3

Total units 6

Three electives from the following:
MEMS 301  Thermodynamics 3
or ChE 320  Thermodynamics
or BME 320B  Bioengineering Thermodynamics
MEMS 311  Machine Elements 4
MEMS 3410  Fluid Mechanics 3
MEMS 361  Materials Science 4
MEMS 431  Structural Dynamics and Vibrations 4

To find out more about this minor, contact the department chair or the adviser for the Minor in Mechanical Engineering or visit the minor web page.
E37 MEMS 1001 Machine Shop Practicum
Operation of basic machine tools including: lathe, drill press, grinder and mill. Student shop privilege requires completion of this practicum.
Credit 1 unit. EN: DU, TU

E37 MEMS 1003 Mechanical Engineering Design and Build
The course provides an introduction to design and fabrication. Students formulate designs, build prototypes and compete in engineering exploration-based creative design projects. Emphasis is placed on producing working hardware and prototypes in response to design needs. Specialized learning modules focus on the knowledge required to complete projects, such as introductory topics in shop skills, machine elements, electronics, design, visualization and communication. Enrollment limited to engineering freshmen.
Credit 1 unit.

E37 MEMS 101 Introduction to Mechanical Engineering and Mechanical Design
Mechanical engineers face new challenges in the areas of energy, materials and systems. This course introduces students to these areas through team-based, hands-on projects that emphasize engineering design, analysis and measurement skills. The course is strongly recommended for mechanical engineering majors. Students from other disciplines are welcome and encouraged to enroll.
Credit 2 units. EN: DU, SU, TU

E37 MEMS 102 Computer-Aided Design — SketchUp
SketchUp 3D modeling software is widely used in diverse fields such as architecture, engineering, product design, theatre production and accident and crime reconstruction. SketchUp allows fast 3-dimensional modeling of design concepts, ground contours and animations, with lighting, shades and shadows, colors and textures. The course includes introduction, modeling shapes, modeling complex shapes, adding colors and textures, using library parts, animation, 2-dimensional drawings and rendering 3D models. A SketchUp project allows students to work on designs in their field of interest.
Credit 1 unit. EN: SU, TU

E37 MEMS 103 Computer-Aided Design — AutoCAD
AutoCAD is the most used 2-dimensional drawing software for architectural and engineering production drawings. Introduction to AutoCAD, title blocks, drawing setup, absolute and relative coordinates, drawing entities, layouts, drafting geometry, dimensioning, plotting drawings to scale, sectional and other special views, isometric pictorial views. Class work involves typical drawings from industry.
Credit 1 unit. EN: SU, TU

E37 MEMS 202 Computer-Aided Design
An introduction to computer-aided engineering design in the context of mechanical and structural engineering. Students learn the fundamentals of spatial reasoning and graphical representation. Freehand sketching skills, including pictorial and orthographic views, are applied to the design process. Computer modeling techniques provide accuracy, analysis and visualization tools necessary for the design of structures, devices and machines. Topics include: detailing design for production; fasteners; dimensioning; tolerancing; creation of part and assembly drawings; computer-aided design, analysis and optimization of parts and assemblies; solid modeling of complex surfaces; assembly modeling; assembly constraints; and interference checking.
Credit 3 units. EN: DU, SU, TU

E37 MEMS 203 Advanced CAD
Computer-aided design, analysis and optimization of parts and assemblies; solid modeling of complex surfaces, creation of detail drawings, dimensioning and tolerancing; assembly modeling, assembly constraints, interference checking; motion constraints, force and acceleration analysis, thermal analysis; part optimization for weight, strength and thermal characteristics using Unigraphics software. MEMS 203 is an extension of the basic course, MEMS 202.
Credit 3 units. EN: DU, SU, TU

E37 MEMS 253 Engineering Mechanics I
Credit 3 units. EN: DU, SU, TU

E37 MEMS 255 Engineering Mechanics II
Credit 3 units. EN: DU, SU, TU

E37 MEMS 301 Thermodynamics
Topics include: classical thermodynamics, thermodynamic properties, work and heat, first and second laws, entropy, irreversibility, availability, thermodynamic cycle analysis, mixtures of ideal gases, combustion processes and chemical
equilibrium. Applications to engineering systems are discussed. Prerequisites: Chem 111A, Math 132, Physics 117A. Credit 3 units. EN: DU, SU, TU

E37 MEMS 311 Machine Elements
Overview of the steps in the engineering design process and an introduction to several classes of machine elements such as bearings, gears, belts, brakes and springs. Underlying analytical models of the machine elements are presented along with guidelines about designing and choosing such elements for practical applications. A case study of the steps of the design process as well as the rationale for choosing particular machine elements. Prerequisites: MEMS 251 or MEMS 253, MEMS 361. Credit 3 units. EN: DU, SU, TU

E37 MEMS 3410 Fluid Mechanics
Fundamental concepts of fluids as continua. Topics include: viscosity, flow fields, velocity, vorticity, streamlines, fluid statics, hydrostatic forces, manometers, conservation of mass and momentum, incompressible inviscid flow, dimensional analysis and similitude, flow in pipes and ducts, flow measurement, boundary-layer concepts, flow in open channels. Prerequisites: MEMS 255, ESE 317 or corequisites ESE 318 and 319. Credit 3 units. EN: DU, SU, TU

E37 MEMS 3411 Fluid Mechanics Laboratory
Physical laboratory exercises focusing on fluid properties and flow phenomena covered in MEMS 3410. Calibration and use of a variety of equipment; acquisition, processing and analysis of data by manual as well as automated methods; training in formal report writing. Prerequisite: MEMS 3410. Credit 1 unit. EN: DU, SU, TU

E37 MEMS 342 Heat Transfer
Introductory treatment of the principles of heat transfer by conduction, convection or radiation. Mathematical analysis of steady and unsteady conduction along with numerical methods. Analytical and semi empirical methods of forced and natural convection systems. Boiling and condensation heat transfer. Radiation between black-body and real surfaces. Radiation network analysis. Physical laboratory exercises focusing on heat-transfer phenomena. Calibration and use of a variety of laboratory instrumentation; acquisition, processing and analysis of data. Prerequisites: MEMS 3410, ESE 317 or ESE 318 and ESE 319. Credit 4 units. EN: DU, SU, TU

E37 MEMS 350 Engineering Mechanics III
A continuation of MEMS 253 containing selected topics in the mechanics of deformable solids, presented at an intermediate level between introductory strength of materials and advanced continuum mechanics. Lectures discuss elastic and elasto-plastic response, failure criteria, composites, beams and structural stability, as well as an introduction of the tensorial formulation of stress and strain and the governing equations of 3D linear elasticity. Mathematical methods from calculus, linear algebra and linear differential equations are used. Computer problems form a significant part of the class. MEMS 255 not required. Prerequisite MEMS 253. Corequisite ESE 318. Credit 3 units. EN: DU, SU, TU

E37 MEMS 3601 Materials Engineering
The application of fundamental materials science principles in engineering disciplines. Topics include: design of new materials having unique property combinations, selection of materials for use in specific service environment, prediction of materials performance under service conditions, development of processes to produce materials with improved properties, structural and functional use of metals, polymers, ceramics and composites. Credit 3 units. EN: DU, SU, TU

E37 MEMS 361 Materials Science
Introduction to the chemistry and physics of engineering materials. Topics include: atomic and molecular interpretation of physical and chemical properties, the relationships between physical and chemical properties, and performance of an engineering material. Laboratory exercises focus on the properties and structure of engineering materials. Prerequisite: Chem 111A. Credit 4 units. EN: DU, SU, TU

E37 MEMS 400 Independent Study
Independent investigation on topic of special interest. Prerequisites: junior or senior standing and permission of department chair. Students must complete the Independent Study Approval form available in the department office. CBTL course. Credit variable, maximum 6 units.

E37 MEMS 4001 Fundamentals of Engineering Review
The topics found in most fundamentals of engineering exams are reviewed and illustrated using examples. A discussion of the importance of licensing exams and the strategies for taking these exams are discussed. The main topics for review include: engineering mathematics, basic chemistry, engineering mechanics, engineering economics, thermodynamics, electrical circuits and material science.

E37 MEMS 4101 Manufacturing Processes
Manufacturing processes and machinery are explained and described. Topics include: analytical tools of machine science, heat transfer, vibrations and control theory are applied to the solution of manufacturing problems, analytical development and
application of engineering theory to manufacturing problems, machine tools and automated production equipment. Credit 3 units. EN : DU, SU, TU

E37 MEMS 411 Mechanical Engineering Design Project
Small student teams complete design projects in an environment simulating a research and development setting. First, working individually, students complete a conceptual design study for three design briefs. These are presented to the instructors and students for review and selection of favored concepts. Following the group concept selection, small teams (3-4 students) are formed for each favored project. These teams produce a preliminary working prototype, an engineering analysis proposal and associated engineering analyses, a final working prototype that is “documented” in an appropriate manner (e.g. a CAD model), and a publication that informs other interested parties of its existence. Prerequisite: MEMS 311. Credit 3 units. EN : DU, SU, TU

E37 MEMS 412 Design of Thermal Systems
Analysis and design of advanced thermo-fluid systems. Student teams participate in the design process, which could involve research, design synthesis, codes, standards, engineering economics, a design project report and formal presentations. Topics include: thermo-fluid systems and components such as: power, heating and refrigeration systems; pumps, fans, compressors, combustors, turbines, nozzles, coils, heat exchangers and piping. Prerequisite: MEMS 301 Thermodynamics. Credit 3 units. EN : DU, SU, TU

E37 MEMS 422 Analysis and Design of Modern Structures II
Analysis and design of concrete elements and structures for strength and deformation. Design and use of concrete beams, beam-columns, long columns, one-way and two-way slab systems, and footings as used in indeterminate frames. Exercises focus on phenomena of structural behavior analysis and design. Prerequisites: MEMS 421. Credit 3 units. EN : DU, SU, TU

E37 MEMS 423 Behavior and Design of Structural Systems
Analysis and design of realistic building and bridge structures with computer-aided design tools. Capstone use of analysis and design concepts in the design of “real-world” structures. Prerequisites: MEMS 422. Credit 4 units. EN : DU, SU, TU

E37 MEMS 4301 Modeling, Simulation and Control
Introduction to simulation and control concepts. Topics include: block diagram representation of single- and multiloop systems; control system components; transient and steady-state performance; stability analysis; Nyquist, Bode and root locus diagrams; compensation using lead, lag and lead-lag networks; design synthesis by Bode plots and root-locus diagrams; state-variable technique; state-transition matrix; state-variable feedback. Prerequisite: ESE 317 or ESE 318 and ESE 319. Credit 3 units. EN : DU, SU, TU

E37 MEMS 4302 Aircraft Flight Dynamics and Control
An integrated treatment of aircraft stability, flight control, aircraft dynamics, flying qualities and the application of control theory to the synthesis of automatic flight control systems. Topics include: flight stability and control, military and civilian aircraft, automatic control systems to provide stabilization, autopilots to aid in navigation and landing. Prerequisites: MEMS 3410, ESE 317 or ESE 318 and ESE 319. Credit 3 units. EN : DU, SU, TU

E37 MEMS 431 Structural Dynamics and Vibrations
Free and forced vibration of multidegree of freedom and distributed parameter mechanical systems and structures. Methods of Laplace transform, complex harmonic balance, matrix formulation and Fourier series. Transient response of continuous systems by partial differential equations and nonlinear structural response. Laboratory experiments. Prerequisites: MEMS 255, ESE 317 or ESE 318 and ESE 319. Credit 4 units. EN : DU, SU, TU

E37 MEMS 4401 Combustion and Environment
Introduction to combustion and its application in devices. Topics include: chemical thermodynamics and kinetics; ignition and explosion; deflagration and detonation waves; transport phenomena and the governing equations for heat and mass transfer in chemically reacting flows; laminar and turbulent flame propagation; non-premixed flames; the emission of combustion-generated pollutants and subsequent interaction with the environment; toxic-waste incineration; and practical combustion devices. Prerequisites: MEMS 301, MEMS 342 or equivalent. Credit 3 units. EN : DU, SU, TU

E37 MEMS 500 Independent Study
Independent investigation on topic of special interest. Prerequisites: graduate standing and permission of the department chair. Students must complete the Independent Study Approval Form available in the department office. Credit variable, maximum 6 units. EN : DU, SU, TU

E37 MEMS 5001 Optimization Methods in Engineering
Analytical methods in design. Topics include: mathematical methods; linear and nonlinear programming; optimality criteria; fully stressed techniques for the design of structures and machine components; topological optimization; search
Engineering techniques; and genetic algorithms. Prerequisites: calculus and computer programming.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 501 Graduate Seminar
This is a required pass/fail course for masters and doctoral degrees. A passing grade is required for each semester of full-time enrollment. A passing grade is received by attendance at the weekly seminars.

E37 MEMS 5101 Analysis and Design of Fluid-Power Systems
Design of hydraulic and pneumatic control and power systems using advanced concepts and analytical tools. Topics include: analysis of fluid flow through orifices and between parallel and inclined planes, theory of spool and flapper valves, feasibility, synthesis, analysis and applications of fluid systems, configuration of pumps, motors, fluid lines and valves, accumulators and storage devices, integration of components into systems, power systems, servo-systems, hydrostatic transmissions, performance diagrams using MATLAB and Simulink, design and analysis of fluid power systems.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5102 Materials Selection in Design
Analysis of the scientific bases of material behavior in the light of research contributions of the past 20 years. Development of a rational approach to the selection of materials to meet a wide range of design requirements for conventional and advanced applications. Although emphasis is placed on mechanical properties, acoustical, optical, thermal and other properties of interest in design are discussed.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5103 Advanced Machine Design
Advanced machine design topics including: stress, strain and strain energy in one dimension; applications to oil-well sucker rods, turbine, compressor and propeller and helicopter blades. Advanced beam theory applied to tie rods; beams on elastic foundation, hooks and curved bars. Helical, spiral and leaf springs. Design of thick cylinders, shrink fits and high-speed rotating disks. Analysis and design of circular and rectangular plates; effect of ribs. Torsion of shafting. Lubrication theory applied to bearings. High-speed ball bearings.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5201 Advanced Topics in Concrete Systems
Analysis and design of prestressed concrete members. Topics include: direct design of composite and noncomposite members for flexure, design of continuous beams, flexural strength, shear strength, and design of anchorage zone.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5202 Advanced Topics for Structural Systems
Advanced topics and current research on plastic design and analysis of space frames; plate and box girders; and torsion in structures. Prerequisite: permission of instructor.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5301 Nonlinear Vibrations
In this course, students are introduced to concepts in nonlinear dynamics and vibration and application of these concepts to nonlinear engineering problems. Specific topics include: modeling of lumped and continuous nonlinear systems (strings, beams and plates); vibrations of buckled structures; perturbation and other approximate analytical methods; the use and limitations of local linearization; properties of nonlinear behavior, such as dimension and Lyapunov exponents; stability of limit cycles; bifurcations; chaos and chaotic vibrations; experimental methods and data analysis for nonlinear systems. Concepts are reinforced with a number of examples from recently published research. Applications include aeroelastic flutter, impact dynamics, machine-tool vibrations, cardiac arrhythmias and control of chaotic behavior.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5302 Theory of Vibrations
Analytical methods in vibrations. Topics include: Duhamel’s integral, Laplace and Fourier transforms and Fourier series with applications to transient response, forced response and vibration isolation; Lagrange’s equations for linear systems, discrete systems, degrees of freedom, reducible coordinates, holonomic constraints and virtual work; matrix methods and state variable approach with applications to frequencies and modes, stability and dynamic response in terms of real and complex modal expansions, dynamic response of continuous systems by theory of partial differential equations, Rayleigh-Ritz and Galerkin energy methods, finite difference and finite element algorithms.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5401 General Thermodynamics
General foundations of thermodynamics valid for small and large systems, and for equilibrium and nonequilibrium states. Topics include: definitions of state, work, energy, entropy, temperature, heat interaction and energy interaction. Applications to simple systems; phase rule; perfect and semi-perfect gas; bulk-flow systems; combustion, energy and entropy balances; availability analysis for thermo-mechanical power generation; and innovative energy-conversion schemes. Prerequisite: graduate standing or permission of instructor.
Credit 3 units. EN : DU, SU, TU
E37 MEMS 5402 Radiation Heat Transfer
Formulation of the governing equations of radiation heat transfer. Topics include: electromagnetic theory of radiation; properties of ideal and real surfaces; techniques for solutions of heat transfer between gray surfaces; radiation in absorbing, emitting and scattering media.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5403 Conduction and Convection Heat Transfer
This course examines heat conduction and convection through various fundamental problems that are constructed from the traditional conservation laws for mass, momentum and energy. Problems include the variable-area fin, the unsteady Dirichlet, Robbins and Rayleigh problems, multi-dimensional steady conduction, the Couette flow problem, duct convection and boundary layer convection. Though some numerics are discussed, emphasis is on mathematical technique and includes the extended power series method, similarity reduction, separation of variables, integral transforms, and approximate integral methods.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5404 Combustion Phenomena
Introduction to fundamental aspects of combustion phenomena including relevant thermochemistry, fluid mechanics and transport processes. Emphasis is on elucidation of the physico-chemical processes, problem formulation and analytical techniques. Topics covered include: ignition, extinction, diffusion flames, particle combustion, deflagrations and detonations.
Prerequisite: graduate standing or permission of instructor.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5410 Fluid Dynamics I
Formulation of the basic concepts and equations governing a Newtonian, viscous, conducting, compressible fluid. Topics include: transport coefficients and the elements of kinetic theory of gases, vorticity, incompressible potential flow; singular solutions; flow over bodies and lifting surfaces; similarity method; viscous flow, boundary layer, low Reynolds number flows, laminar and turbulent flows.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5411 Fluid Dynamics II
Governing equations and thermodynamics relations for compressible flow. Topics include: kinetic theory of gases; steady, one-dimensional flows with friction and heat transfer; shock waves; Rankine-Hugoniot relations; oblique shocks; reflections from walls and flow interfaces, expansion waves, Prandtl-Meyer flow, flow in nozzles, diffusers and inlets, two-and three dimensional flows; perturbation methods; similarity rules; compressible laminar and turbulent boundary layers; acoustic phenomena. Emphasis is relevant to air vehicles.

E37 MEMS 5412 Computational Fluid Dynamics
Computational fluid dynamics relevant to engineering analysis and design. Topics include: fundamentals of finite-difference, finite-volume and finite-element methods; numerical algorithms for parabolic, elliptic and hyperbolic equations; convergence, stability and consistency of numerical algorithms; application of numerical algorithms to selected model equations relevant to fluid flow, grid-generation techniques and convergence acceleration schemes. Prerequisite: senior or graduate standing or permission of the instructor.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5413 Advanced Computational Fluid Dynamics
Prerequisite: MEMS 5412 or permission of the instructor.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5414 Aeroelasticity and Flow-Induced Vibrations
This course deals with the interactions between aerodynamics, dynamics and structures in aerospace systems. Topics covered include unsteady aerodynamics, finite-state aerodynamic models, classical fixed-wing flutter, rotary-wing aeroelasticity and experimental methods in aeroelasticity. Emphasis is given to the prediction of flutter and limit cycles in aeroelastic systems.
Credit 3 units.

E37 MEMS 5415 Viscous Fluid Dynamics
Introduction to viscous flow phenomena; kinematic, transport and thermodynamic properties of liquids and gases; coefficients of viscosity, thermal conductivity and mass diffusion. Boundary conditions and equations of compressible, heat conducting viscous flow; dimensionless parameters. Navier-Stokes equations; transport of vorticity. Solutions for Newtonian fluids; channel and pipe flows, stagnation points. Laminar boundary layers; Blasius and Falkner-Skan flows. Reynolds analogy for heat transfer. Effects of wall suction or blowing, free shear flows, jets, wakes. Axisymmetric boundary layers, 3-dimensional effects, separation. Linearized stability analysis of parallel viscous flows, Orr-Sommerfeld equations, inviscid Rayleigh instability. Effect of compressibility, Crocco-Busemann relation,
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5420 HVAC Analysis and Design I
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5421 HVAC Analysis and Design II
Energy calculations to estimate the quantity of energy needed to heat and cool building structures. Fundamentals of incompressible flow, basics of centrifugal pump performance, and design procedures for water piping systems. Space air diffuser design to assure that temperatures, humidities and air velocities within occupied spaces are acceptable. Air duct design and fan analysis for optimally distributing air through building air duct systems. Performance analysis of refrigeration systems, including the effects of pressure losses and heat transfer. Direct contact heat and mass transfer.
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5422 Solar Energy Thermal Processes
Extraterrestrial solar radiation, solar radiation on earth’s surface, and weather bureau data. Review of selected topics in heat transfer. Methods of solar energy collection and solar energy storage. Transient and long-term solar system performance. Prerequisite: MEMS 342 or equivalent.
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5423 Sustainable Environmental Building Systems
Sustainable design of building lighting and HVAC systems considering performance, life cycle cost and downstream environmental impact. Criteria, codes and standards for comfort, air quality, noise/vibration and illumination. Life cycle and other investment methods to integrate energy consumption/conservation, utility rates, initial cost, system/component longevity, maintenance cost and building productivity. Direct and secondary contributions to acid rain, global warming and ozone depletion.
Credit 3 units. EN: SU, TU

E37 MEMS 5424 Thermo-Fluid Modeling of Renewable Energy Systems
Overview of sustainable energy systems. Fundamentals of energy conversion. Renewable energy sources and energy conversion from wind, biomass, solar-thermal, geothermal and ocean/waves. Applications to energy storage, fuel cells, green air and ground transportation, energy-efficient buildings. Energy-economics modeling, emissions modeling, global warming and climate change.
Credit 3 units. EN: SU, TU

E37 MEMS 5500 Elasticity
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5501 Mechanics of Continua
A broad survey of the general principles governing the mechanics of continuous media. Topics include: general vector and tensor analysis, rigid body motions, deformation, stress and strain rate, large deformation theory, conservation laws of physics, constitutive relations, principles of continuum mechanics and thermodynamics, two-dimensional continua. Prerequisites: ESE 501–502 or instructor’s permission.
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5502 Plates and Shells
Introduction to the linear theory of thin elastic plates and shells. The emphasis is on application and the development of physical intuition. The first part of the course focuses on the analysis of plates under various loading and support conditions. The remainder of the course deals mainly with axisymmetric deformation of shells of revolution. Asymptotic methods are used to solve the governing equations. Applications to pressure vessels, tanks and domes. Prerequisites: BME 240 or MEMS 253; ESE 317 or ESE 318 or 319 or equivalent.
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5503 Structural Stability
Theorems of Equilibrium and Stability. Topics include: classification of instability phenomena, postbuckling behavior and imperfection-sensitivity, systems with multiple degrees of freedom, buckling of columns, beam-columns, and frames using
classical and variational methods and stability and nonlinear behavior of plates and shells. 
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5504 Fracture Mechanics
Classical fracture and fatigue analysis and their limitations. Topics include: Griffith-Irwin, linear-elastic fracture-mechanics analysis, historical aspects, formulation of stability criteria, subcritical crack growth, anisotropic and inhomogeneous effects, fracture-control analysis, with applications to fracture-safety analysis relating to nuclear reactors, aircraft, rotating machinery, elastic-plastic fracture-mechanics analysis and future prospects and applications. Prerequisites: graduate standing or permission of instructor.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5510 Finite Element Analysis
Theory and application of the finite element method. Topics include: basic concepts, generalized formulations, construction of finite element spaces, extensions, shape functions, parametric mappings, numerical integration, mass matrices, stiffness matrices and load vectors, boundary conditions, modeling techniques, computation of stresses, stress resultants and natural frequencies, and control of the errors of approximation. Prerequisite: graduate standing or permission of instructor.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5512 Composite Structures
Introduction to composite materials. Topics include: anisotropic elasticity and laminate theory; beams and columns of composite materials; plates and panels; transverse shear deformation effects; twisting and stretching shear coupling; honeycomb core sandwich panels; composite shells; energy methods for statics, stability and dynamics; hygrothermal effects; strength and failure theories.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5513 Computational Structural Mechanics
An introduction to the analysis and design of structures using finite elements. Topics include: elementary theory of elasticity, plate theories and buckling of plate structures, finite element formulation of 2-D elasticity and plate problems. Hands-on use of finite element software is emphasized. A major design project is included.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5520 Advanced Analytical Mechanics
Lagrange's equations and their applications to holonomic and nonholonomic systems. Topics include: reduction of degrees of freedom by first integrals, variational principles. Hamilton-Jacobi theory, general transformation theory of dynamics, applications such as theory of vibrations and stability of motion, and use of mathematical principles to resolve nonlinear problems. Prerequisite: senior or graduate standing or permission of instructor.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5560 Interfaces and Attachments in Natural and Engineered Structures
Attachment of dissimilar materials in engineering and surgical practice is a perennial challenge. Bimaterial attachment sites are common locations for injury, repeated injury and mechanical failure. Nature presents several highly effective solutions to the challenge of bimaterial attachment that differ from those found in engineering practice. This course bridges the physiologic, surgical and engineering approaches to connecting dissimilar materials and aims to advance the field by providing the first ever cross-disciplinary treatment of the subject. The course elucidates natural bimaterial attachments and outlines engineering principles underlying successful attachments to the communities of tissue engineers and surgeons. The course includes an in-depth analysis of the biology of attachments in the body and mechanisms by which robust attachments are formed. The course also reviews current concepts of attaching dissimilar materials in surgical practice (e.g., for rotator cuff tendon-to-bone repair) and engineering (e.g. attachment of composite wings to the aluminum fuselage of an aircraft). The course concludes with a discussion of bioengineering approaches that are currently being developed to more effectively combine dissimilar materials.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5563 Orthopaedic Biomechanics-Bones and Joints
Basic and advanced solid mechanics applied to the musculoskeletal system, with a primary focus on bone and joint mechanics. Topics include: forces in joints; gait analysis; axial, torsional and bending loading of bones; mechanical properties (elastic, fracture, creep, fatigue) and composition of bone; bone adaptation and basic concepts of bone biology; joint kinematics; total hip and knee replacement; mechanical consequences of injury (fracture) and disease (osteoarthritis). This class is geared to graduate students and upper level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: MEMS 253 or BME 240 or equivalent.
Same as BME 563
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5564 Orthopaedic Biomechanics-Cartilage/Tendon
Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon
and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: MEMS 253 or BME 240 or equivalent. Note: BME 590Z (463/563) Orthopaedic Biomechanics—Bones and Joints is NOT a prerequisite.

Same as BME 564

Credit 3 units.

E37 MEMS 5605 Mechanical Behavior of Composites
Analysis and mechanics of composite materials. Topics include micromechanics, laminated plate theory, hygrothermal behavior, creep, strength, failure modes, fracture toughness, fatigue, structural response, mechanics of processing, nondestructive evaluation and test methods. Prerequisite: permission of the instructor.
Credit 3 units. EN : DU, SU, TU

E37 MEMS 5606 Soft Nanomaterials
Soft nanomaterials, which range from self-assembled monolayers (SAMs) to complex 3-D polymer structures, are gaining increased attention owing to their broad-range applications. The course introduces the fundamental aspects of nanotechnology pertaining to soft matter. Various aspects related to the design, fabrication, characterization and application of soft nanomaterials are discussed. Topics covered include but are not limited to SAMs, polymer brushes, Layer-by-layer assembly, responsive polymers structures (films, capsules), polymer nanocomposites, biomolecules as nanomaterials and soft lithography.
Credit 3 units.

E37 MEMS 5607 Introduction to Polymer Blends and Composites
The course covers topics in multicomponent polymer systems (polymer blends and polymer composites) such as: phase separation and miscibility of polymer blends; surfaces and interfaces in composites; microstructure and mechanical behavior; rubber-toughened plastics; thermoplastic elastomers; block copolymers; fiber-reinforced and laminated composites; techniques of polymer processing with an emphasis on composites processing; melt processing methods such as injection molding and extrusion; solution processing of thin films; selection of suitable processing methods; and materials selection criteria for specific applications. Advanced topics include: nanocomposites such as polymer/CNT composites, biomimetic approaches and current research challenges. Prerequisite: MEMS 361 or equivalent or permission of instructor.
Credit 3 units. EN : SU, TU

E37 MEMS 5608 Introduction to Polymer Science and Engineering
The course introduces: the concept of long-chain or macromolecules; polymer chain structure and configuration; microstructure and mechanical (rheological) behavior; polymer phase transitions (glass transition, melting, crystallization); physical chemistry of polymer solutions (Flory-Huggins theory, solubility parameter, thermodynamics of mixing and phase separation); polymer surfaces and interfaces; overview of polymer processing (extrusion, injection molding, film formation, fiber spinning); and modern applications of synthetic and bio-polymers.
E37 MEMS 5609 Electronic Materials Processing
This course covers “unit processes” for manufacturing semiconductor chips. Topics include: crystal growth and doping of wafers, oxidation and diffusion, ion implantation, deposition, etching, cleaning and lithography. Processes are described with key concepts derived from science and engineering and process integration is covered for devices such as transistors and light emitting diodes. Nanoprocessing concepts are highlighted in the end to provide students with practical and advanced knowledge of semiconductor manufacturing. Prerequisites: undergraduate engineering mathematics, materials science and basic electronics or instructor’s permission.
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5610 Quantitative Materials Science and Engineering
Quantitative Materials Science and Engineering provide students with the basic mathematical foundation needed to understand primary concepts in Materials Science and Engineering (MSE). The course structure involves introduction of mathematical techniques, including Fourier series, ordinary and partial differential equations, special functions, matrix algebra and vector calculus. The introduction of each technique is followed by its direct application to fundamental concepts in MSE, which include topics from thermodynamics, kinetics and phase transformations, structure and properties of hard and soft matter and characterization techniques. This course is intended especially for students pursuing graduate study in materials science, but with little background in upper-level mathematics.
Credit 3 units. EN: SU, TU

E37 MEMS 5611 Principles and Methods of Micro and Nanofabrication
An introduction to the fundamentals of micro- and nano-fabrication processes with emphasis on clean room practices. The physical principles of optical lithography, electron-beam lithography, alternative nanolithography techniques, and thin film deposition and metrology methods. The physical and chemical processes of wet and dry etching. Clean room concepts and safety protocols. Sequential micro-fabrication processes involved in the manufacture of microelectronic and photonic devices. Imaging and characterization of micro- and nano-structures. Examples of practical existing and emerging micro- and nano-devices. Prerequisite: Chem 111A or consent from instructor. Same as CSE 506M
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5700 Aerodynamics
Fundamental concepts of aerodynamics, equations of compressible flows, irrotational flows and potential flow theory, singularity solutions, circulation and vorticity, Kutta-Joukowski theorem, thin airfoil theory, finite wing theory, slender body theory, subsonic compressible flow and Prandtl-Glauert rule, supersonic thin airfoil theory, introduction to performance, basic concepts of airfoil design. Prerequisite: graduate standing or permission of instructor.
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5701 Aerospace Propulsion
Propeller, jet, ramjet and rocket propulsion. Topics include: fundamentals of propulsion systems, gas turbine engines, thermodynamics and compressible flow, one-dimensional gas dynamics, analysis of engine performance, air breathing propulsion system, the analysis and design of engine components, and the fundamentals of ramjet and rocket propulsion.
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5703 Analysis of Rotary-Wing Systems
This course introduces the basic physical principles that govern the dynamics and aerodynamics of helicopters, fans and wind turbines. Simplified equations are developed to illustrate these principles, and the student is introduced to the fundamental analysis tools required for their solution. Topics include: harmonic balance, Floquet theory and perturbation methods.
Credit 3 units. EN: DU, SU, TU

E37 MEMS 5704 Aircraft Structures
Basic elements of the theory of elasticity; application to torsion of prismatic bars with open and closed thin-wall sections; the membrane analogy; the principle of virtual work applied to 2-D elasticity problems. Bending, shear and torsion of open and closed thin-wall section beams; principles of stressed skin construction, structural idealization for the stress analysis of wings, ribs and fuselage structures. Margin of safety of fastened connections and fittings. Stability of plates, thin-wall section columns and stiffened panels. Application of the finite element method for the analysis of fastened connections, structural fittings and problems of local stability of aircraft structural components.
Credit 3 units.

E37 MEMS 5705 Wind Energy Systems
A comprehensive introduction to wind energy systems, a practical means of extracting green and sustainable energy. Topics include: a historical perspective of wind turbines; horizontal axis and vertical axis wind turbines; the basic parameters such as power rating and efficiency; the structural components ranging from blade and hub to nacelle and tower; wind turbine aerodynamics, aeroelasticity and control systems; blade fatigue; statistical wind modeling; unsteady airfoil aerodynamics and downstream wake; and environmental considerations such as noise and aesthetics. Prerequisite:
E37 MEMS 5801 Micro-Electro-Mechanical Systems I
Introduction to MEMS. Topics include: electronic microsensors; thermocouples; thermopiles; diodes; capacitors and transistors; transducer principles; virtual work; electro-mechanical analysis; testing; dynamical macro-models; material properties; fabrication and micro-machining; design principles; and case study.
Prerequisite: graduate standing or permission of the instructor.
Credit 3 units.

E37 MEMS 5802 Micro-Electro-Mechanical Systems II
A second course in MEMS. Topics include: physical microsystems; pressure sensors; accelerometers; microfluids and micro-scale thermal phenomena; electro-osmotic flows; microvalves; micropumps; optical MEMS; active flow control; system and constraints on microsystem design; compliant mechanisms; microfabricated electrochemical sensors; bio-MEMS; and case studies. Prerequisite: MEMS 5801 or permission of instructor.
Credit 3 units.

E37 MEMS 5804 Engineering Project Management
Basic fundamentals and advanced concepts of engineering project management applicable to projects and programs, both large and small. Project management skills, techniques, systems, software and application of management science principles are covered and related to research, engineering, architectural and construction projects from initial evaluations through approval, design, procurement, construction and startup.
Credit 3 units.

E37 MEMS 5912 Biomechanics Journal Club
This journal club is intended for graduate students and advanced undergraduates with an interest in biomechanics. We review landmark and recent publications in areas such as brain, cardiovascular and orthopedic biomechanics, discussing both experimental and modeling approaches. This course meets once weekly at a time to be arranged.
Credit 1 unit.

E37 MEMS 598 Energy Design Project
Credit variable, maximum 6 units.

E37 MEMS 599 Masters Research
Credit variable, maximum 6 units.
Process Control Systems

A Jointly Sponsored Undergraduate Program

Process Control Systems is a program intended to provide students with a broad background in chemical and systems engineering, with emphasis on the science and technology of process automation. Through a careful selection of courses in chemical engineering and systems engineering, a unified approach is developed to the analysis, design, operation and control of chemical and other manufacturing processes. Electives in systems engineering allow further in-depth specialization in applied mathematics, discrete-event systems, robotics, quality control, optimization and dynamical systems.

In addition to the traditional laboratory work in chemistry, physics and chemical engineering, a laboratory course in digital process control is offered based on computers and advanced commercial distributed-control equipment. Familiarity with computers and with process modeling, data acquisition and control software is an essential component of the training. In the senior year, you can elect to complete a major design project either in chemical processing systems (chemical engineering) or in technological or engineering systems (systems engineering).

Upon successful completion, you receive both the Bachelor of Science in Chemical Engineering and the Bachelor of Science in Systems Science and Engineering.

The Process Control Systems program satisfies an increasing demand by manufacturing and petrochemical companies for professionals trained in advanced automation to improve product quality, to reduce costs, to improve capital productivity, and to improve safety and environmental quality. This interdisciplinary program provides the background necessary to combine traditional engineering skills with new systems engineering techniques and meet these challenges. The program is staffed by faculty members from both departments and is supervised by a coordinating committee. You are assigned two advisers, one from each department, who are members of the committee.

Further information about the program can be obtained from the coordinating committee through either of the cooperating departments.

The balance of the curriculum is carefully structured to satisfy the combined degree requirements and to meet the objectives of the program. See the accompanying Process Control Systems program chart (p. 926) for the details. The general degree requirements include the residency and other applicable requirements of the university and the School of Engineering & Applied Science.

The curriculum meets the requirements of both degrees and can be completed in four years. The total number of units required is 141. The semester course load exceeds the usual schoolwide average of 15 units per semester, so you must be highly motivated to accomplish this objective in eight semesters. The course load in individual semesters may be lightened by attending summer school or by adding an additional semester. A number of courses (e.g., ENGR 310, Math 309, ESE 318, ESE 319, ESE 326, ESE 351; and humanities and social sciences courses) usually are offered in the summer as well.

There is no minor in this area.

There are no courses specific to this program.
University of Missouri–St. Louis/Washington University Joint Undergraduate Engineering Program

In 1993, Washington University and the University of Missouri–St. Louis held the first classes in the Joint Undergraduate Engineering Program. This partnership, the first of its kind in the United States, offers University of Missouri–St. Louis students the opportunity to benefit from the engineering program at Washington University and its century-long tradition of excellence. Effective in October 1999, the three bachelor’s degrees (civil, electrical and mechanical engineering) offered in our joint program were accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). Besides being the first undergraduate engineering degrees offered in a public/private partnership, they are also the first such degrees to receive ABET accreditation.

The courses are organized for both full-time students and part-time students with daytime commitments who need to attend classes in the evening. Students who enter the program take about half their course work — mathematics, physics, chemistry, humanities and social sciences — on the campus of the University of Missouri–St. Louis. The remaining half of the degree program, consisting of upper-level engineering courses and laboratories, is taken on the Washington University campus. Students may choose civil, electrical or mechanical engineering. Students receive their undergraduate engineering degrees from the University of Missouri.

For information about this program, please contact the University of Missouri–St. Louis Joint Undergraduate Engineering Program at 314/516-6800 or the Washington University School of Engineering at 314/935-6510.
