The Indian subcontinent has in recent years yielded a number of writers, expatriate or otherwise, whose works articulate the postcolonial experience in the "foreign" English tongue. This course is designed as an introductory survey of such writing, drawing on select subcontinental writers. Covering both fiction and nonfiction by several authors, including R.K. Narayan, Salman Rushdie, Anita Desai, Amitav Ghosh, Sara Suleri, Micheal Ondaatje and Ramesh Gunasekera, we discuss such issues as the nature of the colonial legacy, the status of the English language, problems of translation (linguistic and cultural), the politics of religion, the expatriate identity and the constraints of gender roles.

L14 E Lit 3071 Caribbean Literature in English

Rum! Sun! Beaches! Sun! This is the image of the Caribbean in America today. This course surveys literature and culture from these islands, looking both at and beyond this tourists' paradise. It aims to introduce students to the region's unmistakably vibrant tradition of multicultural mixture, while keeping an eye on the long history of slavery and rebellion out of which the islands' contemporary situation formed. Along the way we encounter a wide variety of texts from the earliest writing focused on life in urban slums, to the first novel ever to have a Rastafarian as its hero, to more contemporary considerations of the region's uncertain place in a U.S.-dominated world. Toward the end of the course, we also look at important films such as The Harder They Come as well as discuss the most globally famous cultural product of the contemporary Caribbean: reggae music. The course involves readings from multiple genres and covers authors such as C.L.R. James, Derek Walcott, Jean Rhys, V.S. Naipaul, Jamaica Kincaid and Caryl Phillips.

L14 E Lit 3075 The American Radical Novel: Literature against Inequality

Intended to help students reckon knowledgably, imaginatively and articulate with our era of escalating social inequality, this class is a writing-intensive study of representative American radical novels stretching from the 19th-century abolitionism of Harriet Beecher Stowe's Uncle Tom's Cabin to the 21st-century dystopianism of Gary Shteyngart's Super Sad True Love Story. Its main goals are two: (1) to introduce students to the long history and current significance of efforts to pit American literature against American inequality; and (2) to improve the quality of advanced student writing in the related fields of American Culture Studies and English literature. The first goal is pursued through close analysis of both radical novels and the contemporary political documents that inform them, juxtaposing such texts as Upton Sinclair's The Jungle and Karl Marx's Communist Manifesto, Alice Walker's Meridian and Martin Luther King Jr.'s "Nonviolence and Racial Justice." The second goal is pursued through hands-on analysis of successful rhetorical strategies sampled from The Hodges Harbrace Handbook, and, more importantly, from the scholarly writing of students themselves.

L14 E Lit 3081 City on a Hill: The Concept and Culture of American Exceptionalism

This course examines the concept, history and culture of American exceptionalism — the idea that America has been especially chosen, or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture — a thesis our class reassesses with the help of modern critics. In the second part of this class, we broaden our discussion to consider the wider (and newer) meanings of American exceptionalism, theorizing the concept while looking at the way it has been revitalized, redefined and redeployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan to the current day. In the end, students gain a firm grasp of the long history and continuing significance — the pervasive impact — of this concept in American culture.

L14 E Lit 3121 The Medieval Romance
The romance grows out of the epic: how we get from the fall of Troy to the fall of Troilus. Readings from Vergil’s *Aeneid* to *Sir Gawain and the Green Knight*.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L14 E Lit 3122 Topics in Literature: Heroes and Lovers
We read *Beowulf*, *Sir Gawain and the Green Knight*, Chaucer’s *Troilus and Criseyde*, *The Mabinogion*, *The Tain*, Margery Kempe and Malory’s *Morte d’Arthur*.

L14 E Lit 312W Topics in English and American Literature: Literature of Consolation
This course explores the theme of consolation in medieval poetry. We read narratives that represent the consolation of a variety of melancholy figures — philosophers in exile, lovers in mourning, citizens in plague-ridden cities, and women disturbed by misogynous writing. We examine the connection between representations of consolation and the act of reading, and think about literature itself (along with other art forms) as a contested site of entertainment, moral guidance, self-fashioning and redemption. Authors may include Boccaccio, Boethius, Chaucer, Christine de Pizan, Abelard and Heloise, and the Pearl-poet. As a writing-intensive class, we spend time writing and talking about writing in the classroom. We read our literary texts as "arguments" about literature in addition to other topics, and we read secondary articles as examples of scholarly writing that we may or may not want to adopt as models.
Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI BU: HUM EN: H

L14 E Lit 313 Topics in English and American Literature
Called the "Age of Revolution," the Romantic Age of British literature, 1770-1830, witnessed the birth of new lyric forms, the effacement of traditional strictures on style and taste, and produced through poetic voice (and its quaverings and multiplications) what might be called, oversimply, the modern subject. Within a developing discourse of human rights and personal freedom, this growing assertion through poetry of individual expressivity allowed William Blake to construct in a single work a visual and verbal "Jerusalem." It encouraged William Wordsworth to write a pathbreaking investigation of the sources of his own creativity that challenged conventional restraints on what topics can, and cannot, be confessed in poetry. Beginning with these two poets, we consider the historical contexts, and the sometimes competing histories of ideas, that shaped the five major British Romantic poets: Blake, Wordsworth, Samuel Taylor Coleridge, Lord Byron, and John Keats. We follow an anthology for much of the poetry, including the poems and prose of influential contemporaries (female as well as male) who included the political philosopher Edmund Burke and Mary Wollstonecraft. Texts also assigned include Mary Shelley’s *Frankenstein* and Byron’s *Don Juan*.

L14 E Lit 340C Introduction to Digital Humanities: Cultural Analysis in the Information Age
It is a truism that computers have changed our lives and the way we think and interact. But in fact systematic efforts to apply current technologies to the study of history and culture have been rare. This course enables students to consider how these technologies might transform the humanities. We explore the various ways in which ideas and data in the humanities can be represented, analyzed and communicated. We also reflect on how the expansion of information technology has transformed and is continuing to transform the humanities, both with regard to their role in the university and in society at large. Readings and classwork are supplemented by small assigned digital projects culminating in a project chosen by the students themselves.

L14 E Lit 344W Writing About Performance
In this writing-intensive course, students develop critical strategies for writing about theatre and other performance events, in the present and in a range of historical periods.
Credit 3 units. A&S: TH, WI BU: HUM

L14 E Lit 3451 Topics in American Literature
Emerging in American films most forcefully during the 1940s, film noir is a cycle of films associated with a distinctive visual style and a cynical worldview. In this course, we explore the sexual politics of film noir as a distinctive vision of American sexual relations every bit as identifiable as the form's stylized lighting and circuitous storytelling. We explore how and why sexual paranoia and perversion seem to animate this genre and why these movies continue to influence "neo-noir" filmmaking into the 21st century, even as film noir's representation of gender and sexuality is inseparable from its literary antecedents, most notably, the so-called "hard-boiled" school of writing. We read examples from this literature by Dashiel Hammett, James Cain, Raymond Chandler and Cornell Woolrich, and discuss these novels and short stories in the context of other artistic and cultural influences on gendered power relations and film noir. We also explore the relationship of these films to censorship and to changing post-World War II cultural values. Films screened in complete prints or in excerpts include many of the following: The Maltese Falcon, Double Indemnity, Murder My Sweet, Phantom Lady, Strangers on a Train, The Big Sleep, The Killers, Mildred Pierce, The High Wall, Sudden Fear, The Big Combo, Laura, The Glass Key, The Big Heat, Kiss Me Deadly, The Crimson Kimono, Touch of Evil, Alphaville, Chinatown, Taxi Driver, Devil in a Blue Dress, The Bad Lieutenant and Memento. Required screenings.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L14 E Lit 3520 Introduction to Postcolonial Literature and Theory
At its zenith, the British Empire encompassed almost a quarter of the globe, allowing the diminutive island nation unprecedented economic, military, and political influence upon the rest of the world. This course introduces some of the foundational critiques of colonialism by theorists such as Frantz Fanon, Aimé Césaire, Edward Said, Homi Bhabha, and Gayatri Spivak, as well as literary works that reflect a postcolonial critique by authors such as V.S. Naipaul, George Lamming, Doris Lessing, and Ngugi wa Thiong'o. The course interrogates how literature could be said to help consolidate Empire as well as ways in which it might function as rebellion against imperial power, with a view toward teasing out the problematicities of race, gender, language, nationalism and identity that postcolonial texts so urgently confront.

L14 E Lit 3551 Topics: Literary Criticism and Theory: Ways of Approaching a Literary Text
Credit 3 units. A&S: LA

L14 E Lit 3552 Introduction to Literary Theory
This course introduces students to some of the most influential theoretical approaches to interpretation in Western culture, to the conceptual and historical debates about theory, and to the keywords used in these debates. Students learn how to write and speak about theoretical texts and how to recognize the theoretical assumptions that underlie acts of interpretation. Theoretical approaches featured may include: formalism; Marxism; psychoanalysis; gender and sexuality studies; structuralism and post-structuralism; postcolonial studies; critical race studies; new historicism and cultural materialism; cultural studies. This course fulfills the literary theory requirement for the major; no substitutions are permitted. In order to preserve necessary seats for English majors, the course is enrolled through the wait list.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L14 E Lit 356 The Art of the Novel
This course takes as its starting point traditional models of the novel and then examines a variety of novels from different traditions — American, British, continental — which, in differing ways, play against this type, bending, challenging or ignoring “the rules.” We are interested in attempting to understand the logic of such idiosyncratic forms, both why each writer is attempting to defy or undo our understanding of a normative “reality” and of the usual novelistic proprieties and how each novel provides its own manner of coherence.

L14 E Lit 3582 Black Literature: Race, Class and Writing in the United States and the Caribbean, 1900-1950
Study of the differences in literary tradition arising from the divergent social, racial and educational milieux of the United States and the West Indies.
Credit 3 units. A&S: TH, SD BU: BA, HUM

L14 E Lit 359 19th-Century American Women Writers
In 1855, Nathaniel Hawthorne wrote to his publisher, William Tichnor, that “America is now wholly given over to a damned mob of scribbling women and I should have no chance of success while the public taste is occupied with their trash.” In this class, we examine works of those scribbling women of the 19th century. We read one of the best-selling novels of the century, one that created a scandal and ruined the author’s literary reputation, along with others that have garnered more attention in our time than their own. In addition to focusing on these women writers, we also explore questions about the canon and American literature: What makes literature “good”? What constitutes American literature? How does an author get in the canon and stay there? Finally, in this writing intensive course, there are frequent writing assignments and a strong emphasis on the essential writing process of drafting and revising.

L14 E Lit 360 The Writings of Philip Roth
Fiction by Philip Roth in chronological order from his earliest to his last major effort.
Credit 3 units. A&S: TH

L14 E Lit 3601 The Traffic in Women and Contemporary European Cinema
What binds society together? One of the most influential answers to this question was offered by French anthropologist Claude Lévi-Strauss. He argued that the fabric of a society is formed by a network of exchanges among kinship groups, which circulate three kinds of objects: economic goods, linguistic signs and women. In this course, we inquire into the place of women in this argument. We trace rudiments of the traditional marriage system (a father figure still “gives away” the bride in the marriage ceremony), its range of displacements in a global economy (transnational wives, nannies and domestic servants), the role of new media in the formation of new systems of trafficking (internet brides), and the place of the debate on gay marriage within the larger conversation. We read texts by Friedrich Engels, Sigmund Freud, Marcel Mauss, Claude Lévi-Strauss, Gayle Rubin, Luce Irigaray, Judith Butler, Barbara Ehrenreich and Arlie Russell Hochschild; and we watch a number of films that dramatize the traffic in women in the context of contemporary Europe: Coline Serreau’s Chaos, Lukas Moodysson’s Lija 4-ever, Cristian Mungiu’s Occident, Nilita Vachani’s When Mother Comes Home for Christmas, Fatih Akin’s Head-on, Jean-Pierre and Luc Dardenne’s The Silence of Lorna.

L14 E Lit 362 The 18th Century: A Study of Major Texts
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L14 E Lit 363C Theatre Culture Studies III
The third of three historical survey courses in theater and performance studies, this course traces the origins of the modern theater. Beginning with Romanticism’s self-conscious break with the past, we study the rise of bourgeois melodrama with its intensely emotional rendering of character and spectacular visual effects. We consider how those effects were made possible by advances in industrial stage technology which reproduced the everyday world with unprecedented realism, and how playwrights responded to those technologies by calling for the theatre to become either a “total work of art” which plunged its spectators into a mythical realm, or a petri dish which analytically presented the struggles of the modern individual within his or her modern milieu. Exploring a range of aesthetic modes (including melodrama, Realism, Naturalism, Aestheticism, Symbolism, Expressionism, the Epic theatre, and the Theatre of the Absurd), we read classic plays by modern playwrights such as Ibsen, Chekhov, Shaw, Pirandello, Brecht, and Beckett to consider how the modern theatre helped its audiences understand as well as adapt to the rapidly changing conditions of modernity.

L14 E Lit 3676 Rhetoric: Ancient and Modern
Rhetoric, or the art of persuasion, has played a prominent and controversial role in political and educational theory and practice. We survey rhetorical texts, ranging from Plato and Aristotle through Augustine and Edmund Burke, to Kenneth Burke and Jürgen Habermas.
Same as L08 Classics 3676
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L14 E Lit 368 The Development of American Romantic Thought: Enlightenment Confidence to Postmodern Questioning
We examine the revolutionary shift in human sensibility commonly known as “Romanticism” by tracing its development in America from the “Fireside Poets” (Bryant, Longfellow) and Transcendentalism (Emerson, Whitman) to anticipations of Modernism and Postmodernism (Henry Adams, Louis Sullivan, Charles Ives). Fulfills the 19th century and American literature requirements for the English major.
Credit 3 units.
L14 E Lit 369 Reading Sex in Premodern England
This course introduces students to the literary representation of gender and sexuality in England from the medieval period to the 18th century. To understand a tradition that addressed the intractable problem of human sexuality in terms very different from ours, we ask: how does premodern culture imagine gendered identities, sexual difference, and erotic desire? How do various contexts — medical, religious, social, private, public — inform the literary representation of gender and sexuality? What are the analogies and economies of the body, the circuits of physical pleasure, and the disciplines of the self that characterize human sexuality? Students have the opportunity to study romances, saints' lives, mystical writings, diaries, plays, sex guides, novels and scientific treatises. By learning how to "read sex" in premodern literature, students acquire a broad cultural and historical understanding of English sexualities before the descent of modern sensibilities.

L14 E Lit 370 The Age of Victoria
Works of fiction, poetry, journalism, children's literature, political cartoons, book illustrations, genre paintings and photographs. The course aims to give a sense of the age in all its diversity and peculiarity, as well as to concentrate on a few central issues and developments in 19th-century British society: e.g., industrialism, materialism, feminism, liberalism, the rise of the social sciences. Readings include works by Tennyson, Matthew Arnold, Lewis Carroll, Dickens, George Eliot, John Stuart Mill, Trollope, Oscar Wilde and Edmund Gosse.
Credit 3 units. A&S: TH Art: HUM BU: HUM

L14 E Lit 371 The Age of Chaucer
Study of the ways in which literature and history interplay between 1340 and 1400. Literary texts include writings by Chaucer, Langland, the Pearl Poet and anonymous composers of songs, dream visions, romances, satires, debates and low stories; attempts to move from these to theoretical and over into historical texts, alienating where necessary and translating where possible.
Credit 3 units. A&S: TH Art: HUM BU: HUM

L14 E Lit 372 The Renaissance
Major texts of the European Renaissance examined to set English literary achievement in a continental context. Among authors studied: Petrarch, Castiglione, Erasmus, More, Luther, Wyatt, Rabelais, Montaigne, Shakespeare, Spenser, Jonson, Milton. Prerequisite: 6 units of literature, junior standing or permission of instructor.

L14 E Lit 3731 Writing and the Representation of Pain
Writing-intensive course on the representation of pain at every level, from private suffering to public policy. Course reader consists of examples of or extracts from a diversity of materials: the Bible and Ovid, medieval religious lyric, saints' lives, visions of hell and damnation, descriptions of visionary illness; Freud's Anna O, Kafka's In the Penal Colony, Wilde's The Nightingale and the Rose, Woolf's On Being Ill, Artaud and the Theater of Cruelty; autobiographical and other writings by Susan Sontag and Inga Clendinnen; theory by Bataille, Deleuze, Dollimore and Elizabeth Grosz; work on pain by Leder, Morris, Rey and others; poetry by Anne Sexton, Sylvia Plath, Gwen Harwood, Alan Jenkins and others. We also read Elaine Scarry's The Body in Pain and two recent novels: Andrew Miller's Ingenious Pain and Manil Suri's The Death of Vishnu.
Credit 3 units. A&S: TH, WI BU: HUM

L14 E Lit 374W Epistolary Literature in the 18th Century: Other Peoples' Letters
In this writing-intensive course, we examine the attraction the letter held for authors and readers alike, taking into consideration the advantages and the disadvantages of the form, its role in the development of the early novel, and current theories of epistolary writing.

Credit 3 units. A&S: TH Art: HUM

L14 E Lit 3752 Modern British Novel
Credit variable, maximum 6 units.

L14 E Lit 375A American Culture Studies: Methods & Visions
What does it mean to study American culture? How should we go about doing this work? In this methods seminar, students explore different approaches to American culture, focusing on a specific topic and a corresponding set of cultural objects especially suited to multidisciplinary investigation. (The particular topic, and associated cultural objects, may vary from semester to semester, and will be specified by the instructor in advance; refer to Course Listings for further details.) Drawing upon their training in different fields, students will engage with the many questions, materials and strategies of cultural study, and find new perspectives on work in their "home" discipline. Much of this work will focus on primary sources and ways of interpreting them. The course is shaped by discussions about research methodologies and preparatory work for a final project (which, if appropriate, may become part of an AMCS web-project). As a Writing Intensive course, AMCS 375A also serves as an occasion for students to think about matters of argument and presentation, and to develop ideas and models for future research. This course is intended for students at the junior level or higher. Preference given to AMCS majors and minors. Same as L98 AMCS 375A

L14 E Lit 381 Banned Books
Why would anyone want to burn a book? Under what circumstances would you support censorship? Several years ago a Russian student was exiled to Siberia for possessing a copy of Emerson's Essays; today, school boards in the United States regularly call for the removal of Huckleberry Finn and The Catcher in the Rye from classrooms and library shelves.
Actions like these dramatize the complex interconnections of literature and society, and they raise questions about what we read and the way we read. The course explores these issues by looking closely at several American and translated European texts that have been challenged on moral, sociopolitical, or religious grounds to determine what some readers have found so threatening about these works. Possible authors: Goethe, Voltaire, Rousseau, Defoe, Hawthorne, Flaubert, Twain, Chopin, Brecht, Salinger, Aldeous Huxley, Ray Bradbury. Brief daily writing assignments.

L14 E Lit 388 African-American Literature: African-American Writers Since the Harlem Renaissance
African-American literature in the 20th and 21st centuries grows from a Harlem Renaissance into a world-shaping institution. Guggenheim, Pulitzer and Nobel prize winners; card-carrying Communists; rock-ridden Republicans and Black Power nationalists; Broadway playwrights; Book-of-the-Month Club novelists; and even a U.S. president are among the many whose fictions and memoirs we study with special attention to the intimate links between black writing and black music. The syllabus thus features authors ranging from poet Alice Dunbar Nelson (born 1875) to satirist Colson Whitehead (born 1969), with more than a dozen stops in between. Written assignments may include two papers and two exams. Prerequisite: none, but related classes such as E Lit 215 and/or AFAS 208 are suggested. Satisfies the American literature requirement in English, and/or one 300-level elective requirement in AFAS.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: HUM

L14 E Lit 3881 Black Women Writers
In this class we explore the range of writing by African-American women over an approximately 200-year span. Many of the texts we explore are novels, although we read autobiographies, poetry and essays, too. Authors studied might include Phillis Wheatley, Pauline Hopkins, Marita Bonner, Gayl Jones, Lynn Nottage and others.

L14 E Lit 399 Senior Research Seminar
This course is tailored to the needs of students who are pursuing honors in English in their senior year. It develops students’ ability to gauge how different approaches affect the research and the outcome of a project in literary studies. It guides them in their research by analyzing and discussing research design, the construction of an archive, and the assessment and use of sources. Assignments include annotated bibliographies, summaries of the critical debate on student topics, abstract writing, research presentations, as well as drafts and final versions of chapters or essays. We workshop many of these assignments in the classroom and practice peer review. The seminar stretches over two semesters, ending before spring break, when honors work is due in the college. It is required for students who pursue honors by course work and by thesis.
Credit 3 units.

L14 E Lit 3991 Senior Research Seminar I

L14 E Lit 402 Introduction to Graduate Studies I: Research Introduction to academic scholarship and related professional activities. A workshop in developing topics, conducting research, preparing and presenting conference papers, articles and grant proposals. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 403 Black and White in American Drama
This course addresses the complex issue of race in America through the 19th and 20th centuries as dramatized by American playwrights, black and white. Authors include Countee Cullen, Lillian Hellman, Eugene O'Neill, Jean Toomer, Langston Hughes and Arthur Miller. Prerequisites: junior standing, two 300-level courses or better. Credit 3 units. A&S: TH Art: HUM

L14 E Lit 404 Topics for Writers: Beckett
Waiting for Godot, Happy Days, Krapp’s Last Tape: these are but three of Samuel Beckett’s revolutionary texts for theater. The complete canon of plays is examined for structure and compositional elements. Students undertake exercises in dramatic composition and perform a chamber presentation of Endgame. Course is intended for writers with some experience of the dramatic form. Intending students must interview with instructor in November. Credit 3 units. A&S: LA Art: HUM

L14 E Lit 405 Living Influences: Poets and the Poets Who’ve Shaped Them
This course examines a number of very contemporary collections of poetry (e.g., from first-book writers such as Karen Volkman and Greg Williamson, to more established writers such as Carl Phillips and Frank Bidart) to discover how generations of writers speak to and through one another. The course considers the nature and possible anxieties of writerly influence and how traditional and/or canonical writers’ voices, verse, and vision have shaped a number of poets writing today. This class requires at least a basic knowledge of poetry in English up to the 1950s as we move freely among writers such as Ben Jonson, George Herbert, Gerard Manly Hopkins and Emily Dickinson, as well as Pound, Eliot, Lowell and Plath. Credit 3 units. A&S: TH Art: HUM

L14 E Lit 407 Old English, Introductory
Study of the Anglo-Saxon language and introduction to major prose and short poetry of the period. Prerequisites: junior standing and 6 units of literature. Credit 3 units. A&S: LA Art: HUM

L14 E Lit 408 Old English Literature
Close study of some major literary texts (e.g., Beowulf, the Exeter book) and major issues (e.g., Anglo-Saxon and Latin culture, traditions of heroic literature) of the Anglo-Saxon tradition. Prerequisite: E Lit 407 or permission of instructor. Credit 3 units. A&S: LA Art: HUM

Comparing the literatures — readings in the literature and theory of English and American Literature. Topics vary according to semester offerings.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 424 Film Theory
This course is an introduction to both classical and contemporary film theory. Beginning with the earliest attempts to treat cinema as a new and unique art form, the course initially reviews the various ways in which film theory attempted to define cinema in terms of its most essential properties. The course then examines more contemporary developments within film theory, more specifically its attempt to incorporate the insights of other critical and analytical paradigms, such as semiotics, psychoanalysis, feminism, queer theory and postmodernism. Throughout the course, we consider questions regarding the ontology of cinema, its relation to spectators, and the various ways in which its formal properties create meaning. Readings for the course include the major works of Sergei Eisenstein, Andre Bazin, Christian Metz, Laura Mulvey and Fredric Jameson. Required screenings.

L14 E Lit 424 Topics in American Literature II: Modernisms in America
This course offers an advanced introduction to both the literature and the concept of modernism, the "ism" used to mark the experimental vernal of early 20th-century writing and to grasp its ties to modernity or the modern social world. As the course title suggests, we devote most of our time to the career of modernism in the United States, a place imagined as both the modernist nation par excellence and the desert modernism escaped to be born. Three groups of primary texts — early modernist experiments, 1920s modernist landmarks, and Great Depression revisions — illuminate the grand ambitions of eccentric literary forms and self-sequestered avant-garde movements; the public disputes and buried alliances between "high" expatriate and Harlem Renaissance modernisms; and the influential Depression-era reinterpretation of modernism as reactionary self-indulgence. The syllabus features fiction, poetry and drama by old and new literary celebrities: Djuna Barnes, John DosPassos, T.S. Eliot, F. Scott Fitzgerald, Mike Gold, Ernest Hemingway, Ella Larsen, Meridel LeSueur, Claude McKay, Clifford Odets, Tillie Olsen, Ezra Pound, Jean Toomer and Richard Wright. A shorter list of critical essays highlights modernism's tendency to theorize itself while introducing 21st-century perspectives from the "New Modernist Studies." Satisfies the American literature requirement. For undergraduates, junior or senior standing is required.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 4240 Topics in American Literature II
Fiction not often found in the standard survey course, such as Harold Frederic's The Damnation of Theron Ware, G. W. Cable's The Grandissimes, Frank Norris' The Octopus, Jack London's Martin Eden, Thornton Wilder's Heaven's My Destination, Dorothy Baker's Young Man With a Horn, R. P. Warren's All the King's Men, Thomas Pynchon's V, and short works by Edith Wharton and Ring Lardner.

L14 E Lit 4244 Topics in African-American Literature
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 4245 Early American Literature: American Modernisms
This seminar offers an advanced introduction to both the literature and the concept of modernism, the "ism" used to mark the experimental vernal of early 20th-century writing and to grasp its ties to modernity, or the modern social world. As the course title suggests, we devote most of our time to the career of modernism in the United States, a place imagined as both the modernist nation par excellence and the desert modernism escaped to be born. Three groups of primary texts — early modernist experiments, 1920s modernist landmarks, and Great Depression revisions — illuminate the grand ambitions of eccentric literary forms and self-sequestered avant-garde movements; the public disputes and buried alliances between "high" expatriate and Harlem Renaissance modernisms; and the influential Depression-era reinterpretation of modernism as reactionary self-indulgence. The syllabus features fiction, poetry and drama by old and new literary celebrities: Djuna Barnes, John DosPassos, T.S. Eliot, F. Scott Fitzgerald, Mike Gold, Ernest Hemingway, Ella Larsen, Meridel LeSueur, Claude McKay, Clifford Odets, Tillie Olsen, Ezra Pound, Jean Toomer and Richard Wright. A shorter list of critical essays highlights modernism's tendency to theorize itself while introducing 21st-century perspectives from the "New Modernist Studies." Satisfies the American literature requirement. For undergraduates, junior or senior standing is required.
Credit 3 units. A&S: TH A&S IQ: HUM, SD Art: HUM

L14 E Lit 425C Humanities by the Numbers: Shakespeare
To what extent can computational techniques that draw on statistical patterns and quantification assist us in literary analysis? Over the semester, we juxtapose the close reading of historical documents or literary works with the "distant reading"
of a large corpus of historical data or literary texts. We ask how the typically "human" scale of reading that lets us respond to literary texts can be captured on the "inhuman" and massive scales at which computers can count, quantify and categorize texts. While this class introduces students to basic statistical and computational techniques, no prior experience with technology is required. Prerequisites: two 200-level or one 300-level course in literature or history. This is a topics-type course and the specific documents and works examined vary from semester to semester. Please consult semester course listings for current offerings.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 426C Imagining the City: Crime and Commerce in Early Modern London
The astonishing demographic and economic growth of early modern London, and the rapid increase in spatial and social mobility that accompanied this growth, seemed to harbinger, in the eyes of many contemporaries, a society in crisis and perhaps on the brink of collapse. As increasing numbers of vagrants or masterless men flocked to the metropolis and a growing number of people — apprentices, domestic labor, street vendors, etc. — lived on the fringes of legitimacy and at risk of lapsing into vagrancy, policing early modern London provided unique challenges for authorities. At the same time, the very notion of the social — a shared space of kinship and community — could often seem to be under threat as an emerging market and a burgeoning commodity culture reshaped the traditional underpinnings of social and economic transactions. Yet, late Tudor and early Stuart London remained by far England's most prosperous metropolis — its primary market, home to a burgeoning print culture and nourishing theater — and emerged, eventually, as the epicenter of a global economy. This course considers the topographic, social and institutional configuration of early modern London and the ways in which these were reimagined and negotiated in the literature of the period. Drawing on the drama of the period and a wide array of pamphlet literature, we discuss how civic institutions handled the growing influx of the poor and adapted to the increasing power of an emerging bourgeoisie who asserted themselves in unprecedented ways. In addition, we consider secondary sources ranging from maps, theories of urban space and social and economic historiography as well as digital archives and computational techniques that allow us to "scale up" our thinking about early modern London to a vast corpus of texts and documents.

Same as L93 IPH 426
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 427 American Literature: The Rise of Realism to World War I
The maturing of American literature from the regional origins of realistic fiction just prior to the Civil War through the early naturalist novel and the beginnings of modern American poetry.
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 428 Modernism and Postmodernism
Readings in early sources of 20th-century developments, followed by a selective survey of literary discourse from the 1920s through the 1990s in the United States. Prerequisites: junior standing and 6 units of literature or graduate standing.
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 4282 English Modernist Fiction
The first half of the 20th century produced some of English fiction’s greatest individual achievements, linked by writers’ attempts to represent, through narrative experiments, a world in which many certainties about self and society were dissolving. Attentive reading of 10 novels or short story collections; study of the historical and cultural contexts to which these writers were responding. Among writers considered: E.M. Forster, Virginia Woolf, D.H. Lawrence, Rebecca West, Joseph Conrad, Katherine Mansfield and Ford Madox Ford.

L14 E Lit 431 English Drama, Exclusive of Shakespeare, to 1642
Studies of selected major plays against a background of change and tradition in English drama from its beginnings to the closing of the theaters.
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 4312 Early Drama
This unit is concerned with English and European drama and spectacle from late Roman theater onward; primarily in England, but with comparative material from France and Italy. The chronological span of the course ends at about 1600; the working assumption is that there is no clean break between "medieval" and "Renaissance" drama, but that the theaters and scripts of the late 16th century should be understood as developing out of, as well as departing from, earlier theatrical traditions and practices.
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 432 Topics in Renaissance Drama
A study of Elizabethan and Jacobean theatrical culture — the plays, players, playwrights and audiences of public theaters, private theaters and banqueting halls. Study includes the plays of Lyly, Kyd, Marlowe, Jonson, Chapman, Ford, Beaumont, Fletcher, Marston, Middleton, Webster and Shakespeare.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L14 E Lit 4323 Reading in the Renaissance: Texts and Practices
Examination of reading practices among original audiences for Wyatt, Sidney, Shakespeare, Donne, Jonson, Herrick, Marvell, Rochester, and Dryden and application to our understanding and experience of early modern texts.
Credit 3 units.

L14 E Lit 434 Topics in English and American Drama
Varies from semester to semester.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H
L14 E Lit 435 Childhood and Society: The Formation of Children's Literature
An intensive examination of some of the major works that have shaped the canon and conception of children's literature in the English-speaking world. Among the authors studied are George Macdonald, Mark Twain, Kenneth Grahame, L. Frank Baum, Lewis Carroll, Robert Louis Stevenson, Rudyard Kipling and others. If time permits at the end of the course, we examine some works that appeared in the Brownies' Book, the children's publication of the NAACP that appeared in 1920 and 1921, edited by W.E.B. Du Bois and Jessie Fauset, a significant attempt to create a literature for children of color.
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 436 Craft of Fiction: Dialogue
A literature/creative writing hybrid course, we concentrate on the element of dialogue in fiction. We focus on 20th-century novels and stories that use dialogue in radical ways or place conversational dynamics at the center of their projects, probably including works by Don DeLillo, Henry Green, Grace Paley and Philip Roth. We consider the architecture of conversations -- the evasions and hidden agendas; the art of the well-made monologue; how speech is shaped by varieties of linguistic capital; and secrets as a narrative device, extending into issues of conspiracy and paranoia. Because this is a craft rather than a traditional literature course, we approach the texts as creative writers (although experience as such is not required), considering what they have to say through a primary emphasis on the means they develop to say it, and we put the craft into practice: assignments include both a critical paper and a short story using radical elements of dialogue. We also make room for some consideration of the dynamics of actual conversations, outside of fiction, through a reading of some conversational analysts and speech-act theorists, and through some real-world experiments.

L14 E Lit 442 Introduction to Romantic Poetry
We read the poetry of the major Romantics — Blake, Wordsworth, Coleridge, Shelley, Byron, and Keats — with attention to their biographical, historical, economic and cultural contexts.
Credit 3 units.

L14 E Lit 444C Psychoanalysis and its Literary Cultures
This course examines interactions between texts from the domains of literature and psychoanalysis. We read theory and literature side by side, in order to ask the following questions: Does the relationship between literary text and theory necessarily entail the subjection of literature to analysis, or can one, as Pierre Bayard asks, apply literature to psychoanalysis? What can psychoanalytic readings tell us more broadly about the act of reading? How can psychoanalysis enrich our sense of the ethical import of reading and writing, and how can literature challenge psychoanalytic goals and values? In terms of psychoanalytic authors, we focus on Freud, Lacan, Klein, Winnicot and Bayard. In terms of literature, we range widely from Sophocles to Henry James.

Introduction to contemporary poetry.
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 4461 American Studies and Poetry: The 20th Century
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 447 Modern British and American Poetry
Modern poetic forms, schools and techniques. Readings in such poets as Yeats, Eliot, Pound, Moore, Auden, Bishop, Hill.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L14 E Lit 4471 Modern Poetry I: Modernisms
American and British poetry before, during and after World War I. Readings include Hardy, Yeats, Frost, Stein, Eliot, Williams, Moore, Johnson, Pound, H.D. and Stevens, as well as selections from Wordsworth, Whitman and Dickinson. First half of two-course sequence; second half optional
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 4472 Modern Poetry II: Postmodernisms
American and British poetry from 1930 to the present. Readings include Stevens, Riding, Crane, Zukofsky, Bunting, Auden, Brooks, Olson, Bishop, Merrill, Ashbery, Hill, Ammons, Rich,
Wright and Howe. Prerequisite: E Lit 4471 or permission of instructor. 
Credit 3 units. A&S: TH: Art: HUM

L14 E Lit 4485 Topics in Irish Literature I
Topics course in Irish literature. 
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L14 E Lit 449 20th-Century Irish Poetry
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 4492 The Irish Literary Revival
The class studies major writings by Oscar Wilde, W.B. Yeats, J.M. Synge, James Joyce and Flann O'Brien within the contexts of the language movement, colonialism, cultural nationalism, the socialist movement and the 1913 Lockout, the Easter Rising and the War for Independence, the Civil War, the founding of the Irish Free State, the Partition and the Irish Threocracy. Wilde's notions of the primacy of art with regard to politics and their elaboration by W.I. Thompson and Declan Kiberd are an organizing principle in the course. The class sees two films, offers oral reports and writes papers. 
Credit 3 units. A&S: TH

L14 E Lit 449A Topics in Literature
Same as L16 Comp Lit 449. 
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L14 E Lit 450 American Film Genres
By close examination of three or four specific types of film narratives, this course will explore how genre has functioned in the Hollywood mode of production. Students will gain an understanding of genre both as a critical construct as well as a form created by practical economic concerns, a means of creating extratextual communication between film artist/producers and audience/consumers. Genres for study will be chosen from the western, the gangster film, the horror movie, the musical, screwball comedy, science fiction, the family melodrama, the woman's film and others. In addition to film showings, there will be readings in genre theory as well as genre analyses of individual films. Required screenings Tuesdays at 4 p.m. 
Same as L53 Film 450. 
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 4505 Interdisciplinary Topics in the Humanities
This seminar will introduce students to the study of literature by attending to the materials and material conditions of its production, distribution, regulation and consumption. We will ask how literary analysis changes when we think about the physical character of the books that we read — their size, their format, the various editions in which they were issued. We will study the history and function of censorship and the ways in which authors and publishers asserted legal and financial interests in the books they produced. We will reflect carefully on how to study reading — by paying attention to the social conditions in which books are consumed, by attending to schooling in literacy and literature, as well as by considering how book producers attempt to shape consumption. Our primary texts will mostly come from early modern England — the world of Shakespeare, Jonson and Milton — but we will also look at texts from before and beyond this world and at secondary literature that will help us think through the problems of literature in all its materiality. 
Same as L93 IPH 450. 
Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI EN: H

L14 E Lit 4531 American Drama
Topics in American Drama. 
Same as L15 Drama 453. 
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L14 E Lit 456 English Novel of the 19th Century
Prose fiction by such writers as Jane Austen, Dickens, Thackeray, George Eliot, the Brontës and Hardy. 
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 458 The Modern Novel
Content and craft in the varying modes of the American, British and continental modern novel by such writers as James, Joyce, Lawrence, Faulkner, Kafka, Mann, Gide and Camus. 
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 4581 Modern British Novel
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L14 E Lit 4582 The North American Novel, 1945 to the Present
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 4583 British Fiction after Modernism
Course attempts to identify characteristics of British postmodern fiction: experimental novels of the 1970s and 1980s — works by, for example, John Fowles, Alasdair Gray and Martin Amis; the "devolution" of British fiction into its constituent Scottish and English strands in the 1980s and 1990s, as well as its simultaneous globalizing as diasporic novelists wrote from Britain about "home." Younger writers, in frequently provocative ways, address the questions of nation, place, class and sexual identity that have dominated the postwar period. 
Credit 3 units. A&S: TH

L14 E Lit 4584 Contemporary Fiction
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L14 E Lit 4591 The Modern European Novel
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 4601 The Shaping of Modern Literature
Themes and major figures associated with the shaping of the modern literary imagination, including such topics as Freudian and Jungian versions of the self, phenomenological thought, the symbolist imagination and such masters as Hegel, Kafka, Kierkegaard, and William and Henry James. Topics vary each semester; consult Course Listings. 
Credit 3 units. A&S: TH Art: HUM
L14 E Lit 461 Topics in English Literature I
Studies in special subjects, e.g., allegory and symbolism in the medieval period; the sonnet in English literature, English poetry and politics. Consult Course Listings.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L14 E Lit 462 Topics in English Literature II
Variable topics, such as Travel and Colonization in the Renaissance; Renaissance Skepticism and the Literature of Doubt.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM

L14 E Lit 4631 Topics in English Literature and History: The 17th Century
Variable topics, such as writing, politics and society in Revolutionary England; life writing and literature in Early Modern England.
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 4653 Banned Books
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 4655 The Pre-History of Blogging: Social Media of the Enlightenment
Same as L93 IPH 465
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L14 E Lit 466 Theory and Methods in the Humanities: What is Interdisciplinarity?
This spring's iteration of the course will give a special emphasis to exploring genealogies of diverse interdisciplinary practices. We will examine theoretical dilemmas and particular questions that have led scholars to conduct research across disciplinary boundaries. Students will be encouraged to apply these insights to their own research.
Same as L93 IPH 405
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L14 E Lit 4693 Topics in European Literature and History
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 472 History of the English Language
Concepts and methods of linguistic study: comparative, historical and descriptive. Application of methods to selected problems in the history of English. Contrastive analysis of excerpts from Old, Middle and later English; sounds, meanings, syntax and styles.
Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM

L14 E Lit 475 Intellectual History of Feminism
We focus on feminist thought in Western culture but also examine non-Western ideas about feminisms. We trace the relationship among emergent feminist ideas and such developments as the rise of scientific methodology, Enlightenment thought, revolutionary movements and the gendering of the political subject, colonialism, romanticism, socialism and global feminisms. Readings are drawn from both primary sources and recent feminist scholarship on the texts under consideration. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: Completion of at least one Women, Gender, and Sexuality Studies course or permission of the instructor.
Same as L77 WGSS 475
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 476 Feminist Literary and Cultural Theory
This course is intended to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisite: advanced course work in WGSS or in literary theory (300-level and above) or permission of the instructor required.
Same as L77 WGSS 419
Credit 3 units. A&S: TH A&S IQ: HUM

L14 E Lit 478 The Craft of Fiction
A literature/creative writing hybrid course concentrating on the element of dialogue in fiction, reading novels and stories that use dialogue in radical ways, including works by Don DeLillo, Henry Green, Zora Neale Hurston, Grace Paley and Philip Roth.
Credit 3 units. A&S: LA Art: HUM

L14 E Lit 479 The Art and Craft of Poetry
An examination of poetry from its beginnings in English to the present day considering the relationship between earlier traditions and the manifestations of those traditions in contemporary poetry. Issues such as image; metaphor and the employment of it; notions of vision; the extent to which vision can spring from the intersection of art and craft. Study of prosody, reading poems that exemplify the successful use of prosodic technique, and trying our own hands at those techniques as well.
Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM

L14 E Lit 481 Selected English Writers I
Concentrated study of one or two major English writers, e.g., Spenser, Dickens, Blake, Yeats. Consult Course Listings.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 482 Selected English Writers II
Concentrated study of one or two major English writers, e.g., Spenser, Dickens, Blake, Yeats. Consult Course Listings.
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 483 Selected American Writers I
Concentrated study of one or two major American writers, e.g., Gertrude Stein and Richard Wright; Emily Dickinson. Consult Course Listings each semester for specific authors.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 484 Selected American Writers II
Credit 3 units. A&S: TH Art: HUM
L14 E Lit 491 Chaucer  
Readings in the *Canterbury Tales*. Lectures on background; critical analysis.  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 493 Spenser  
Readings in the *Faerie Queene* and *Shepheardes Calender*, with attention to Spenser's deliberate fashioning of a literary career.  
Credit 3 units. A&S: TH Art: HUM

L14 E Lit 4930 The Unmaking and Remaking of Europe: The Literature and History of the European War of 1914-1918  
Same as L16 Comp Lit 493  
Credit 3 units.

L14 E Lit 494 Milton  
Major poems and prose works in relation to literary and intellectual currents of the 17th century.  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 4951 Seminar: The 19th-Century European Novel  
Same as L16 Comp Lit 495  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 496 Shakespeare Advanced Course  
A study of Shakespeare's career as a dramatist, with intensive work on particular plays in the light of critical traditions.  
Prerequisite: E Lit 395C or permission of instructor.  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L14 E Lit 4968 Digital Methods in Literary Analysis: Shakespeare by the Numbers  
This course explores how emerging digital techniques can help us read literary texts in new ways. We read a set of Shakespeare plays closely but also work with a large corpus of plays by Shakespeare and his contemporaries as we cover basic text-mining and visualization techniques and use simple statistical and quantitative approaches to think about questions of genre and style. We ask how the typically “human” scale of reading that lets us respond to these texts can be captures on they massive scales at which computers can count, quantify and categorize. What nuance is lost in this translation between “close” and “distant” readings and what insights are gained?  
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L14 E Lit 4969 Shakespeare in Production  
This course examines Shakespeare's comedies in performance. Combining scene work and production history, students gain access to the world of the comedies from both a hands-on, theoretical and historical perspective. Prerequisites: Drama 395C or permission of instructor.  
Same as L15 Drama 469  
Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L14 E Lit 4976 Advanced Seminar in Literature  
This seminar is an interdisciplinary examination of how Americans represented the Civil War during and after the titanic conflict, with special attention given to the period between 1865 and 1915. The course explores how painters, novelists, photographers, sculptors, essayists, journalists, philosophers, historians, and filmmakers engaged the problems of constructing narrative and reconstructing national and individual identity out of the physical and psychological wreckage of a war which demanded horrific sacrifice and the destruction of an enemy that could not be readily dissociated from the self.  
Same as L22 History 4976  
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L14 E Lit 498 The Spenser Lab  
This course involves graduate and undergraduate students in the ongoing work of the Spenser Project, an interinstitutional effort to produce a traditional print edition of the *Complete Works of Edmund Spenser*.  
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L14 E Lit 498W The Spenser Lab  
In this writing-intensive course, the students are given a variety of writing tasks: writing commentaries, introductions, software manuals, grant proposals, software requirements and design documents (SRDDs).  
Credit 4 units. A&S: TH, WI A&S IQ: HUM WI EN: H

Environmental Studies  
Students interested in studying the environment can choose among three majors in the following academic departments: Biology; Earth and Planetary Sciences; and Political Science. The curriculum for these majors is integrated and interdisciplinary, drawing from many disciplines across Arts & Sciences and the university as a whole, and the majors thus capture the strengths of both the traditional academic departments and the interdisciplinary innovation necessary to explore fully the multiple issues and questions posed in the study of the environment. Please visit the Environmental Studies website (http://enst.wustl.edu) for more information.

Please visit the following Bulletin pages for more information on these majors:  
Environmental Biology (p. 247)  
Environmental Earth Sciences (p. 325)  
Environmental Policy (p. 669)

Phone: 314-935-7047  
Email: bowinston@wustl.edu  
Website: http://enst.wustl.edu

Faculty  
Director  
David Fike (http://eps.wustl.edu/people/dave_fike)  
Associate Professor, Director and Contact for Environmental Earth Science  
PhD, Massachusetts Institute of Technology (Earth and Planetary Sciences)

**Associate Director**  
Eleanor Pardini  
Lecturer and Research Scientist, and Associate Director of Environmental Studies and Contact for Environmental Biology  
PhD, University of Georgia  
(Biology)

**Professor**  
William R. Lowry  
Contact for Environmental Policy  
PhD, Stanford University  
(Political Science)

**Additional Faculty**  
Karen DeMatteo  
Lecturer  
PhD, Saint Louis University  
(Environmental Studies; GIS)

Scott Krummenacher  
Lecturer  
PhD, Saint Louis University  
(Political Science)

Maxine I. Lipeles  
Senior Lecturer  
JD, Harvard University  
(Law; Interdisciplinary Environmental Clinic)

Beth Martin  
Senior Lecturer  
MS, Washington University  
(Law; Environmental Studies)

John Parks  
Lecturer  
PhD, Washington University  
(Environmental Studies; University College)

Eric Zencey  
Lecturer  
PhD, Claremont Graduate University  
(Political Philosophy/Science History)

**Majors**  
Students interested in studying the environment can choose among three majors in the following academic departments: Biology; Earth and Planetary Sciences; and Political Science.

Please visit the following Bulletins for more information on these majors:

Environmental Biology (p. 247)  
Environmental Earth Sciences (p. 325)  
Environmental Policy (p. 669)

**Courses**

---

**L82 EnSt 101 Earth's Future: Causes and Consequences of Global Climate Change**

Earth's Future: Causes and Consequences of Global Climate Change examines: 1) the physical basis for climate change; 2) how climates are changing and how we know and assess that climates are changing; and 3) the effects of climate change on natural and human systems. The course is team-taught and involves participation by scholars across the university with expertise in specific subjects. This is a broad, introductory course for first year students and presumes no special subject matter knowledge on the part of the student. Same as I50 InterD 101

Credit 3 units. A&S: NS A&S IQ: NSM BU: SCI

---

**L82 EnSt 109A Quantitative Reasoning in Environmental Science**

Introduction to practical mathematical methods for understanding environmental aspects of our planet, particularly how the environment changes with time through human interactions. Emphasis on intuitive approaches in devising simple relationships for understanding quantitative outcomes of natural processes. Introduction to basic statistical methods, including hypothesis testing, and how statistics can be applied to environmental problems.

Same as L19 EPSc 109A

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

---

**L82 EnSt 110 Environmental Issues**

This course examines the science behind current environmental issues, with emphasis on ecology and Earth science. Students gain an understanding about the consequences of the way that humans currently interact with the natural environment and potential solutions that would allow long-term sustainability of the Earth. Topics include: human population growth, global climate change, energy use, challenges to feeding the world, the interaction between the environment and human health, sustainable design, and the relationship between biodiversity and ecosystem functioning.

Credit 3 units. A&S: NS A&S IQ: NSM BU: SCI

---

**L82 EnSt 122 A&S Freshman Seminar: A Sense of Place: Discovering the Environment of St. Louis**

Students go exploring in and around St Louis. Rivers, prairies, urban landscapes and more. They'll learn about the St Louis backyard and their "home" for the next four years. Through field trips, readings, interviews and discussion, they'll see first-hand what challenges face the environment and the people who live here. They will learn how to examine multiple perspectives, how to think critically and how to approach problems from an interdisciplinary and holistic approach. Students also learn why it is important to know a community at the local level if they're going to affect change on any level — state, national or international. In addition to weekly readings and discussion, this class includes several field trips.

Credit 3 units. A&S: NS A&S IQ: NSM BU: SCI

---

**L82 EnSt 201 Earth and the Environment**

Introduction to the study of the Earth as a dynamic, evolving planet. Emphasis on how internal and surface processes combine to shape the environment. Themes: Earth's interior as revealed by seismic waves; Earth history and global tectonics shown by changes to ocean floors, mountain-building, formation of continents, earthquakes and volcanism; climate history and global biogeochemical cycles, influenced by circulation of atmosphere and oceans, ice ages and human activity. Composition and structure of rocks and minerals. Part of the introductory sequence of courses for all Earth and planetary sciences and environmental studies majors. Three class hours and one two-hour lab a week.

Same as L19 EPSc 201

Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L82 EnSt 210 Undergraduate Teaching Assistant**

Credit 3 units.

---

**L82 EnSt 221A Human Use of the Earth**

Examination of the impacts of a growing population on the Earth, including habitat destruction, resource depletion, and air and water pollution. Population growth, landscape change, and the distribution and uses of the water, mineral, and energy-producing resources of the Earth.

Same as L19 EPSc 221A

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L82 EnSt 222 Topics in Japanese Literature and Culture: Environmental Consciousness in Modern Japanese Literature**

A topics course on Japanese literature and culture; topics vary by semester.

Same as L05 Japan 221

Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: IS EN: H
L82 EnSt 2431 Focus: Missouri's Natural Heritage
Missouri's Natural Heritage is a multidisciplinary two-semester Freshman Focus course. The first semester of the sequence focuses on Missouri geology, climate, archaeology and native megafauna. This provides a foundation on which to examine the ecology, restoration and management of our diverse habitats (prairie, forest, glade and stream) and the biology of our diverse plant and animal wildlife (arthropods, mollusks, fish, salamanders, lizards, birds and mammals) in the second semester. We also introduce basic concepts in biodiversity and resource management with attention to resolution of conflicts of interest. In addition to weekly lecture and discussion, students in this class visit sites across the state during three weekend camping trips and a longer camping trip during winter break. Attendance on field trips is an essential component of the course and grade. Lab fee of $480 covers transportation and meals for all field trips.
Same as L61 Focus 2431
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L82 EnSt 272A Physics and Society
Same as L31 Physics 171A
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

L82 EnSt 290 Sophomore Seminar in Sustainability and the Environment
This course will provide an opportunity for students to evaluate and explore potential paths in environmental studies, and learn presentation skills to carry forward in their careers. Students will also get the opportunity to get out of the classroom and participate in environmental field trips and activities.
Credit 3 units. A&S: NS A&S IQ: NSM

L82 EnSt 299 Directed Internship
Internship with an environmental organization (commercial, not-for-profit, governmental, etc.) where the primary objective is to obtain professional experience outside of the classroom. Student must have a faculty sponsor and must file a Learning Agreement with the Career Center, the faculty sponsor and the site supervisor. A final written project is agreed upon between the student and faculty sponsor before work begins, and is evaluated by the faculty sponsor at the end of the internship. Detailed supervision of the intern is the responsibility of the site supervisor.
Credit variable, maximum 3 units.

L82 EnSt 3053 Nomadic Strategies and Extreme Ecologies
This course explores the archaeology and anthropology of nomadic pastoral societies in light of their ecological, political and cultural strategies and adaptation to extreme environments (deserts, mountains, the arctic). The aim of the course is to understand both the early development of pastoral ways of life, and how nomads have had an essential role in the formation and transfer of culture, language and power from prehistoric time to the current era.
Same as L48 Anthro 3053
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L82 EnSt 3068 The Human History of Climate Change
While climate change has become a hot-button issue in recent decades, it is by no means a new concern. Advisers to the king of France were warning against deforestation in the 18th century and 19th century. Scientific experiments revealed the arrival of acid rain in the industrial centers of Great Britain. This course will examine the longer history of climate change and how it has been addressed as a scientific, political and environmental issue. The course will also introduce students to the field of environmental history and explore how the methods of this field of inquiry challenge traditional historical categories.
Same as L22 History 3068
Credit 3 units. A&S: SS BU: HUM EN: S

L82 EnSt 306B Africa: Peoples and Cultures
An anthropological survey of Africa from the classic ethnographies to contemporary studies of development. Emphasis on the numerous social and economic changes African peoples have experienced from precolonial times to the present.
Same as L48 Anthro 306B
Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: HUM, IS

L82 EnSt 310 Ecological Economics
This course is designed to give students an appropriately advanced understanding of the fundamental assumptions, the conceptual novelties, and the distinctive tools of analysis that comprise the emerging discipline of ecological economics. Often the value of tools is best illustrated through use, so the course also aims to acquaint students with how the conceptual frame of Ecological Economics offers a distinctive approach to some of the most pressing problems our culture faces — problems that have their origin in our perpetual-growth economy which now strains against (and in many places has far transgressed) environmental limits to growth.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L82 EnSt 323 Biogeochemistry
Survey of biogeochemical interactions among Earth's crust, oceans and atmosphere, including perturbations due to human activities. Carbon, nitrogen, phosphorus and sulfur biogeochemical cycles. Greenhouse warming of atmosphere from carbon dioxide and chlorofluorocarbons: effects of inorganic and organic wastes in groundwater systems. Introductory course for students of environmental science and nonscience majors. Prerequisite: permission of instructor.
Same as L19 EPSc 323
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L82 EnSt 332 Environmental and Energy Issues
This course considers the major issues in these increasingly important areas of public policy. We discuss the importance of political processes and actors on such phenomena as pollution, global warming and wilderness protection. This course emphasizes the American experience but also considers
international implications. Two lectures and one section meeting each week.
Same as L32 Pol Sci 332B
Credit 3 units. A&S: SS & A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

L82 EnSt 3322 Brave New Crops
This course introduces students to the major issues surrounding the development and use in genetically modified (GM) crops. Its focus is international, but with particular focus on the developing world. A variety of experts, available locally or through the internet, contribute perspectives. The course also includes field trips.
Same as L48 Anthro 3322
Credit 3 units. A&S: SS & A&S IQ: SSC Arch: SSC Art: SSC BU: ETH

L82 EnSt 335F Introduction to Environmental Ethics
A general survey of current issues in environmental ethics, focusing on problems such as the obligation to future generations, protection of endangered species, animal rights, problems of energy and pollution, wilderness, global justice, and business obligations. Students also learn some ethical and political theory.
Same as L30 Phil 235F
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L82 EnSt 350W Environmental Issues: Writing
For students interested in environmental issues — natural science, social science and policy. This course aims to provide students with the writing skills they need to be successful in the environmental field once they graduate. In doing so, students examine environmental issues and decision-making processes by examining data and facts underlying positions and decisions. They explore the role of audience, purpose and author angle of vision as they examine the role of multiple stakeholders in environmental issues and processes. Students also are exposed to different types of writing used in environmental studies professions. When the course includes a service learning component, students are exposed to the types of writing that are necessary in environmental careers and in environmental non-profits and governmental agencies in particular.
Credit 3 units. A&S: NS, WI A&S IQ: NSM, WI BU: SCI

L82 EnSt 361 Culture and Environment
An introduction to the ecology of human culture, especially how "traditional" cultural ecosystems are organized and how they change with population density. Topics include foragers, extensive and intensive farming, industrial agriculture, the ecology of conflict, and problems in sustainability.
Same as L48 Anthro 361
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: ETH

L82 EnSt 374 Social Landscapes in Global View
From the beginning of the human campaign, societies have socialized the spaces and places where they live. This socialization comes in many forms, including the generation of sacred natural places (e.g., Mt. Fuji) to the construction of planned urban settings where culture is writ large in overt and subtle contexts. Over the past two decades or so, anthropologists, archaeologists and geographers have developed a wide body of research concerning these socially constructed and perceived settings — commonly known as "landscapes." This course takes a tour through time and across the globe to trace the formation of diverse social landscapes, starting in prehistoric times and ending in modern times. We cover various urban landscapes, rural landscapes, nomadic landscapes (and others) and the intersection of the natural environment, the built environments and the symbolism that weaves them together. Chronologically, we range from 3000 BCE to 2009 CE and we cover all the continents. This course also traces the intellectual history of the study of landscape as a social phenomenon and investigates the current methods used to recover and describe social landscapes around the world and through time. Join in situating your own social map alongside the most famous and the most obscure landscapes of the world and trace the global currents of your social landscape!
Same as L48 Anthro 374
Credit 3 units. A&S: SS & A&S IQ: SSC Art: SSC BU: BA EN: S UColl: NW

L82 EnSt 375 Urban Ecology
Urban Ecology: a field of study within ecology that focuses on the urban environment as an ecosystem and attempts to understand how humans and nature can better coexist in these highly modified environments. The ultimate goal is to aid efforts for more sustainable cities through better urban planning and practices. The class format includes both lectures and discussions.
Credit 3 units. A&S: NS & A&S IQ: NSM BU: SCI

L82 EnSt 379 Meltdown: The Archaeology of Climate Change
This course examines the temporal, geographical and environmental aspects of past climate changes, and by using specific examples, explores how climate changes may have affected the evolution of human culture and the course of human history. Archaeological and documentary examples from the Americas, Africa, Asia, Europe and the Near East are used to explore if or how significant events in human history have been influenced by changes in climate.
Same as L48 Anthro 379
Credit 3 units. A&S: SS & A&S IQ: SSC Art: SSC BU: ETH EN: S

L82 EnSt 380 Applications in GIS
This introductory course in Geographic Information Systems (GIS) is designed to provide basic knowledge of GIS theory and applications using the existing state-of-the-art GIS software. The course is taught using a combination of lectures, demonstrations and hands-on, interactive tutorials in the classroom. The first week of the course provides a broad view of how students can display and query spatial data and produce map products. The remainder of the course focuses on applying spatial analytical tools to address questions and solve problems. As the semester develops, more tools are added to students' GIS toolbox so that they can complete a final independent project that integrates material learned during the course. Students are encouraged to design individualized final projects using their own or other available data; however, some already-prepared final projects also are available.
Credit 3 units. A&S: NS & A&S IQ: NSM

L82 EnSt 381 Introduction to Ecology
This course explores the science of ecology, including factors that control the distribution and population dynamics of organisms, the structure and function of biological communities, how energy and nutrients flow across ecosystems, and what
principles govern ecological responses to global climatic and other environmental changes. The class format includes lectures, discussions and small group exercises. Assignments include quantitative data analysis, ecological modeling and scientific writing.

Same as L41 Biol 381
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L82 EnSt 390 Independent Study
Independent study for undergraduates, supervised by a faculty member. Prerequisite: permission of instructor.
Credit variable, maximum 6 units.

L82 EnSt 391 Directed Research in Environmental Studies
Research activities or project in environmental studies done under the direction of an instructor in the program. Permission of an instructor and the chair of the program is required.
Credit variable, maximum 6 units.

L82 EnSt 392 Directed Fieldwork in Environmental Studies
Fieldwork carried out under the direction or supervision of an instructor in the Program. Permission of an instructor and of the chair of the program is required.
Credit variable, maximum 6 units.

L82 EnSt 405 Sustainability Exchange: Community and University Practicums
The Sustainability Exchange will bring together students working in transdisciplinary teams to tackle real-world energy, environmental, and sustainability problems through an experiential form of education. Students will participate in projects with clients and partners on- or off-campus, developed with and guided by faculty advisers drawn from across the university, with the intention of delivering an applicable end-product that explores “wicked” problems requiring innovative methods and solutions. These projects matter to the client or partner. The team-based project will be complemented by a seminar that will explore the field of design and design thinking through problem-solving strategies and methodologies drawn from a wide range of creative practices, including design, engineering and science, as well as contemporary topics in energy, environment and sustainability. Students will draw on these topics to influence their projects. This course is open to all undergraduate juniors and seniors. An application is required; students will be accepted off the wait list following the application process. Credit 3 units. A&S IQ: SSC EN: S

L82 EnSt 408 Earth’s Atmosphere & Global Climate
Structure and dynamics of Earth’s atmosphere. Basic factors controlling global climate of Earth. Quantitative aspects of remote sensing of atmosphere. Remote sensing instrumentation. Prerequisites: Math 233 and Phys 117A (or Phys 197); or permission of instructor.
Same as I50 InterD 406
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L82 EnSt 413 Introduction to Soil Science
Physical, chemical and biological processes that occur within soil systems. Types of soils and how these relate to soil formation. Major components of soil, including soil water, minerals, organic matter and microorganisms. Soils in wetlands and arid regions. Cycling of nutrients and contaminants in soils. Soil quality, conservation and sustainability. Two one-day field trips required. Prerequisites: EPSc 323 or Chem 112A (or AP Chem score of 4) or permission of instructor.
Same as L19 EPSc 413
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L82 EnSt 419 Community Ecology
Basic principles of community ecology, including species interactions, spatial and temporal patterns of biodiversity, and ecosystem functioning. Analytical theory, statistical patterns, and experimental approaches are emphasized. Intended for students wanting a rigorous overview of ecological principles. Prerequisite: at least one of the following courses: Biol 3501, 372, 381, 4170, 4193, EnSt 370 or permission of instructor.
Same as L41 Biol 419
Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM

L82 EnSt 4193 Experimental Ecology Laboratory
Design and interpretation of ecological experiments, with an emphasis on hypothesis testing, sampling methodology, and data analyses. Sessions address fundamental ecological questions and include field, greenhouse, and laboratory (microcosm) studies on a variety of taxa and ecosystems. Generally work is done before dark (5-6 p.m.), although
occasionally goes later (7 p.m.). Includes occasional required Saturday field trips to local sites (e.g., forests, wetlands, prairies, streams) for in-depth study. Assignments are primarily several written assignments, including final projects and in-class participation. Fulfills the upper-level laboratory requirement for the Biology major. One hour of lecture and 4 hours of laboratory per week. Prerequisites: permission of instructor and at least one of the following: Introduction to Ecology (Biol 381), Behavioral Ecology (Biol 372), Biological Conservation (EnSt 370), Population Ecology (Biol 4170), Community Ecology (Biol 419), or Evolution (Biol 3501). Credit will not be awarded for both 4191 and 4193. Enrollment is limited to 15 students. Same as L41 Biol 4193
Credit 4 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

L82 EnSt 428 Hydrology
Survey of principles that govern the flow of water in river and groundwater systems in deep geologic environments. Basic equations of fluid flow, dynamics and the characteristics of drainage basins, rivers, floods and important aquifers. Exploitation of ground water systems. Prerequisites: EPSc 353, Physics 117A (or Physics 197), Math 233, or permission of instructor.
Same as L19 EPSc 428
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L82 EnSt 432 Environmental Mineralogy
Topics connected with environmental mineralogy, some selected by students. Topics may include: mineral dust such as asbestos, containment materials for nuclear waste disposal, environmental ramifications of the processing and use of phosphate fertilizers, lead in the environment, acid mine drainage, microbial mediation of sulfide oxidation, minerals in the human body, weathering of building materials, materials engineering, and engineering of materials for more effective recycling. Three class hours and one two-hour laboratory a week. Participation in discussions, term paper, two field trips required. Most readings from primary sources. Prerequisite: EPSc 352 or permission of instructor.
Same as L19 EPSc 430
Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM

L82 EnSt 444 Environmental Geochemistry
Introduction to the geochemistry of natural waters and the processes that alter their composition. Key principles of aqueous geochemistry and their application to describe the main controls on the chemistry of pristine and polluted soil, surface, and ground water environments. Acids and bases, mineral solubility, carbonate chemistry, chemical speciation, redox reactions, adsorption and ion exchange, and the speciation, mobility and toxicity of metals. Prerequisites: EPSc 201 and Chem 112A (or AP Chem score of 4); or permission of instructor.
Same as L19 EPSc 444
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L82 EnSt 451 Environmental Policy
This course examines the relationship between environmental economics and environmental policy. The course focuses on air pollution, water pollution, and hazardous wastes, with some attention given to biodiversity and global climate change. The course examines critically two prescriptions that economics usually endorses: (1) "balancing" of benefits against costs (e.g., benefit-cost analysis) and the use of risk analysis in evaluating policy alternatives; (2) use of market incentives (e.g., prices, taxes or charges) or "property rights" instead of traditional command-and-control regulations to implement environmental policy. Prerequisite: Econ 1011. Same as L11 Econ 451
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA, ETH

L82 EnSt 481 Advanced GIS
This course is designed to move beyond tools and skills learned in Applications in GIS (EnSt 380/580). Classes will feature hands-on exercises selected to help students master advanced GIS analysis tools and techniques, while providing experience in the planning and execution of real-world projects. Primary emphasis will be on applying fundamental GIS concepts, performing spatial analysis, developing proficiency with core ArcGIS software (e.g., Network Analyst extension), resolution of problems, and efficient delivery of results. Readings from books and scientific literature will introduce key concepts and provide real-world examples that will be reinforced in the hands-on exercises, assignments and projects. As the semester develops, students will gain a variety of new tools and techniques that will allow them to complete a final independent project that integrates the material learned during the course.
Credit 3 units. A&S: NSM

L82 EnSt 4980 Undergraduate Research Seminar
Provides an opportunity for advanced undergraduates to synthesize many of the diverse subdisciplines of Earth and Planetary Sciences while focusing on a research topic. Subject changes each offering. Each subject is unique and timely, but broad enough to encompass wide-ranging interests among students. Students conduct original research, make written reports of the results, and make oral presentations of their projects in class. Prerequisite: senior standing or permission of instructor.
Same as L19 EPSc 498
Credit 3 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

European Studies
The major in European studies is part of the program in International and Area Studies.

The European studies concentration focuses on the New Europe and its historical and cultural contexts, attempting to understand the European contribution to world politics and cultural exchange. It involves study of both traditional and new European cultural products (literature, film, visual art and electronic media) and also of European institutions and contexts. This concentration will educate students interested in understanding Europe for its own sake, but also as the continent connects with other parts of the world. It is committed to interdisciplinary approaches, and students may take courses in the traditional language-and-literature disciplines, as well as in anthropology, art history, economics, history, philosophy and political science. The concentration defines the geography of modern Europe to include the Atlantic world, as well as its Eurasian and Mediterranean neighbors. We offer advanced course work in most major European languages (including French, German, Italian, Russian and Spanish) as well as study abroad opportunities in all these languages.

Majors

The Major in International and Area Studies — Concentration in European Studies

The IAS concentration in European studies focuses on the new Europe and its historical and cultural contexts, attempting to understand the European contribution to world politics and cultural exchange. It involves the study of both traditional and
new European cultural products (literature, film, visual art and electronic media) and also of European institutions and contexts. This concentration will educate students interested both in understanding Europe for its own sake and in exploring how the continent connects with other parts of the world. It is committed to interdisciplinary approaches, and students may take courses in the traditional language and literature disciplines, as well as in anthropology, art history, economics, film, history, music, philosophy and political science. The concentration defines the geography of modern Europe to include the Atlantic world, as well as its Eurasian and Mediterranean neighbors.

**This concentration requires 36 units of course work:**

- 3 units of introductory course work (100- or 200-level)
- 3 units of European history course work (300-level or above from history department offerings on Europe)
- 3 units of non-European world area course work (any level)
- 27 units of advanced course work from a minimum of three different academic disciplines (at least one course must focus on gender, race or class, and at least two must be at the 400 level)

**Additional requirements and regulations:**

- Completion of all IAS course work with a grade of C+ or higher.
- Students must satisfy the standard IAS foreign language requirement (the successful completion of four semesters of one language appropriate to their concentration) with a European language.
- One semester of language must be completed before declaring the major.
- We strongly encourage students to study abroad (https://ias.wustl.edu/undergraduate/study_abroad). For those students who do not study abroad, an additional 3-unit course at the 300 or 400 level is required.
- We strongly prefer students to select a study abroad location consistent with their chosen language of study (e.g., students who wish to study in Spain must satisfy their language requirement with either Spanish or Portuguese).
- Majors must choose their upper-level course work from a minimum of three academic disciplines (for example: anthropology, art history, economics, film, history, literature, music, philosophy and political science).
- No more than 3 credits may be from directed readings, research or independent study excluding the honors thesis.
- The advanced credits must be unique to the IAS major.
- All prime IAS majors must complete a capstone experience.

N.B.: A single course may satisfy more than one of the distribution requirements (disciplinary; race, gender, class; or world area). Some of these requirements may be completed while abroad (http://ias.wustl.edu/undergraduate/study_abroad).

### Introductory course work (choose one from this list, 3 units):

- **History 102C** Western Civilization 3
- **IAS 129** Perspectives on Migration: History, Memory and the Making of Modern Europe 3
- **IAS 244** Introduction to European Studies 3

### Non-European area course work (3 units):

We consider world areas to be Africa, East Asia, Latin America, the Middle East or South Asia. Courses that may be used to satisfy this requirement may include advanced area specific courses or the following:

- **AFAS 209B** African Studies: An Introduction 3
- **AFAS 2230** The African Diaspora: Black Internationalism Across Time and Space 3
- **AMCS 250** Topics in Asian-American Studies 3
- **Art-Arch 111** Introduction to Asian Art 3
- **East Asia 227C** Chinese Civilization 3
- **History 2157** Freshman Seminar: The Meaning of Pakistan: History, Culture, Art 3
- **History 2171** Who Died and Made Them Kings? People, Politics and Power in the Atlantic World, 1500-1800 3
- **IAS 135** Freshman Seminar — Chinatown: Migration, Identity and Space 3
- **Japan 226C** Japanese Civilization 3
- **JINE 208F** History, Text and Identity: Introduction to Jewish Civilization 3
- **JINE 210C** Introduction to Islamic Civilization 3
- **Korean 223C** Korean Civilization 3
- **LatAm 165D** Latin America: Nation, Ethnicity and Social Conflict 3
- **Russ 215C** Introduction to Russian Civilization 3

### Advanced course work: Choose nine courses from current European focused course offerings in the following departments*. All courses must be approved by the student's IAS adviser in order to count for the major. Visit the concentration webpage (http://ias.wustl.edu/european-studies) and master course list for full options.

- African and African-American Studies
- Anthropology
- Art History
- Classics
- Drama
- Economics
- Film and Media Studies
- History
- Interdisciplinary Project in the Humanities
- International and Area Studies

N.B.: A single course may satisfy more than one of the distribution requirements (disciplinary; race, gender, class; or world area). Some of these requirements may be completed while abroad (http://ias.wustl.edu/undergraduate/study_abroad).
• Languages and Literatures
• Music
• Philosophy
• Political Science
• Russian Studies
• Urban Studies
• Women, Gender, and Sexuality Studies

*Students may petition to add a course by following the instructions on the IAS FAQs webpage (http://ias.wustl.edu/faqs).

Additional Information

Language Requirement for the Major in European Studies/ International and Area Studies: All IAS majors and minors must satisfy a foreign language requirement, which entails the successful completion of four semesters of a language appropriate to their concentration while at Washington University. For some students, this may mean the first four semesters of a language; for others who place into advanced language classes, and with approval from IAS language faculty, this may include literature, culture, oral communication and linguistics courses in the target language, once they complete the basic language sequence. Advanced courses in literature, social sciences and culture used to satisfy this requirement may be counted as advanced credit for IAS majors and minors as long as they are cross-listed with IAS or approved for IAS study abroad credit and are not applied toward a language major or minor. A maximum of two of these classes may be completed while abroad on a Washington University-approved program in the target language (may be within the same semester abroad). Native speakers of a foreign language must satisfy the four-semester requirement in another language appropriate to their concentration. Heritage speakers must seek appropriate placement by the coordinator of the language program and complete the four-semester requirement.

Study Abroad: Majors are strongly encouraged to study abroad in one of Washington University’s Overseas Programs during junior year or the summer. Some credit for courses taken abroad may be applied to the major. For those who do not study abroad, an additional 3-credit course at the 300 or 400 level is required.

Senior Honors: Students must confidently expect to graduate with an overall GPA of 3.65 or higher. Students must have maintained a 3.65 grade point average through the sixth semester in order to qualify for Senior Honors. Students should enroll in IAS 485 Preparation for IAS Honors Thesis in the fall of senior year (under the corresponding section number of the faculty member overseeing the student’s thesis), and in IAS 486 IAS Senior Honors Thesis in the spring of senior year in order to be properly tracked by the IAS capstone coordinator.

Minors

There is no minor offered in European studies.

Film and Media Studies

In the 21st century, as our national and global cultures become increasingly dominated by the visual in ubiquitous modes of technology-based communication, the need to become critical viewers, knowledgeable in the history of the most popular art forms of our time and possessing the analytical skills to understand and interpret mass media, is acute.

To address this need, the major in film and media studies requires the rigorous study of history and aesthetics so that students come to understand the creative force of moving image texts, whether digital, electronic or filmic. Courses examine the place of these texts in culture and how their production of meaning relates to industrial and business practices as well as to other artistic endeavors. Complementing the critical studies undergraduate curriculum in Film and Media Studies, courses in production and screenwriting provide — through acts of creation and collaboration — an understanding of the
aesthetic and ethical choices that artists confront in working with moving image-based media. Such practical experience integrates theoretical and historical awareness to further enhance students’ understanding of the ways in which visual culture makes meaning with established and emergent technologies in contemporary society. This major will benefit any student interested in gaining an intellectual perspective on the relationship between art and technology, culture and industry, history and theory. This major trains students in rigorous analytical thinking and provides them with research skills and historical knowledge that will assist them in becoming effective participants in the mediated culture of the 21st century.

The program of Film and Media Studies’ academic mission is focused on the intellectual and professional development of students, but our faculty regard educating the larger Washington University and St. Louis communities about our field of study to be another important element of our work. To that end, we are committed to sponsoring events, whether film festivals, academic lectures or symposia that further discussion of, and intellectual engagement with, all forms of moving image media.

Total units: 18

Elective courses:

In addition to these required courses, students must take 12 credits in advanced electives (300 or higher). All students must take one 3-credit elective that focuses on a national cinema other than that of the United States. Additionally, all students must take one 3-credit critical studies elective at the 400 level or above. A 400-level elective in national cinema may satisfy both these elective requirements, but a total of 12 hours in electives is still required. Electives in critical studies may be drawn from courses on individual directors, genre study, limited historical periods, study of individual crafts (such as acting) and so on. Students with an interest in production may count two production and/or screenwriting courses toward the major within these 12 elective hours.

Additional Information

Senior Honors (Film 499) is intended for majors pursuing honors in Film and Media Studies. In order to enroll for this course, students must apply in advance for honors, possess a minimum cumulative GPA of 3.65, and be approved by a faculty committee.

Minors

Elective courses:
In addition to required courses, students must also take a 3-credit advanced elective (300-level or above) course to complete the minor. Elective courses change every academic year, so please visit our website (http://fms.artsci.wustl.edu) for current course listings.

Additional Information
Internships and independent study do not count toward the minor.

Courses

L53 Film 110 Freshman Seminar: Race and Ethnicity on American Television
This course presents a historical overview of the forms that racial and ethnic representations have taken in American television. The course attempts to chart changes in public perception of racial and ethnic difference in the context of sweeping cultural and social transformations. The course examines notions of medium and ponders the implications for these identities of the contemporary practice of “narrowcasting.” Required screenings. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD Art: HUM BU: BA EN: H

L53 Film 112 Freshman Seminar: Race and Ethnicity in American Cinema
From the early documentary roots of cinema through the Civil Rights movement and to the recent democratization of the means of media production, questions of race and ethnicity have proved crucial both to the content of American films and also to the perspective from which they are made. This class looks at the representation of historical moments from the Civil War to Hurricane Katrina, the production of cinematic stereotypes as well as their appropriation for subversive purposes, and the gradual evolution of multiculturalism as a central factor in the stories told and the telling of stories on the American screen. Students use film texts to develop a critical understanding of one of the most important issues in American history. Required screening TBA. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: BA EN: H

L53 Film 114 Freshman Seminar
Enrollment limited to freshman. Topics vary, consult current semester Course Listings for current topic. Credit 3 units. A&S: LA A&S IQ: HUM BU: BA EN: H

L53 Film 115 Freshman Seminar: Reality on Screen
This course explores the complex relationship between moving images and ideas of the real in both movies and television. It explores theories of representation, surveillance, authenticity, truth and realism in this context. From the earliest “actuality” films to the recent phenomenon of reality television programming, it asks if screen images capture what is “really” happening in front of the camera or if conventions of representation, genre and narrative mediate the reality of these images. More significantly, it inquires into why such questions matter. At issue is the role that moving images on both the big and the small screen have in our understanding of the world as it is and ourselves as we experience it. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L53 Film 116 Freshman Seminar: Cult TV: Critical Approaches to Fans and Fictions
What do such disparate television series as Dr. Who, Star Trek, The Avengers, Monty Python’s Flying Circus, The X-Files, Buffy the Vampire Slayer, Xena: Warrior Princess and Seabab 2021 have in common? They all attract loyal audiences, stimulate “subcultural” sensibilities, lend themselves to “textual poaching,” and thus qualify as examples of “Cult TV,” a term that has become increasingly salient within critical studies of the medium. In this course we explore the subject of cult television from a variety of social, cultural and thematic perspectives, so that by the end of the semester students have gained a deeper understanding of its historical importance as a barometer of both popular and oppositional tastes. We examine how these and other examples of genre-based network and cable programming complicate distinctions between lowbrow and highbrow tastes while sustaining worldwide “interpretative communities” years after their original air dates. Students also examine the importance of syndication, home video technologies, ancillary markets, publishing and the internet in the construction of fan cultures. Required screenings. Credit 3 units. A&S: TH A&S IQ: HUM BU: H

L53 Film 117 Freshman Seminar: Asians in American Film
This course surveys the history of Asian representations in American cinema from the silent period to the contemporary era. Throughout the semester we focus on images of Chinese, Japanese, Koreans, Filipinos and Vietnamese that have become most ingrained in American popular culture over the past century, from Fu Manchu and Madame Butterfly stereotypes popular during the classical studio era to more recent reconfigurations of racialized imagery in Jackie Chan and Jet Li films. We also examine selected works by Asian-American independent writer-directors; films and videos such as Chan is Missing, History and Memory, and Better Luck Tomorrow that challenge the stereotypes and normative tropes of “Orientalism” still permeating mainstream media. Students are asked to frame textual analyses of key films (such as The Cheat, Daughter of Shanghai, Battle Hymn, Flower Drum Song, and Enter the Dragon) within various political, social, cultural and industrial contexts (e.g., anti-Asiatic immigration and labor policies; U.S. foreign policies; the practice of “yellowface”; censorship codes; wars in East and Southeast Asia; anti-miscegenation laws; grassroots campaigns to stem the tide of stereotypes and hate-crimes; etc.). Credit 3 units. A&S: TH EN: H

L53 Film 118 Freshman Seminar: Mr. Kiss Kiss Bang Bang: James Bond in Film, Literature and Popular Culture
Originally a character in Cold War spy literature, James Bond has emerged as an international pop culture phenomenon. In this course, we explore the evolution of James Bond from Ian Fleming to the “spy” parodies in international cinema. We
read several of Fleming's novels and short stories, including Casino Royale (1953), Octopussy (1966) and The Property of a Lady (1967), and discuss these texts in light of post-war spy literature. We screen numerous Bond films, and compare and contrast James Bond the literary and cinematic character, how Bond emerged as a franchise hero through the vision of producers Harry Saltzman and Albert "Cubby" Broccoli, and critical aspects of the film franchise, including its storytelling roots in Hollywood serials, its use of gadgets and special effects, and the role of stardom in their marketing (Sean Connery, Roger Moore, Madonna, Pierce Brosnan and Daniel Craig). Finally, we explore the re-envisioning of Bond in various media and art forms in global popular culture, including music, DC and Marvel Comics, games, children's television and in Asian cinema (Stephen Chow's 1994 From Beijing with Love). Required screenings.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L53 Film 119 Freshman Seminar: Anime as Popular Culture
In the contemporary media landscape, film, television, games, publishing, and merchandizing are increasingly connected and help distribute cultural products across the globe. Japanese animation is one of the earliest and most successful examples of this powerful strategy. This course examines the global franchising industry of Japanese anime to explore basic questions about media and popular culture: How do we define a medium? How do consumer practices shape media and popular culture? What is the impact of globalization on media, and global media on national culture? Our investigations of Japan "cool" and its avid consumer cultures cover: animation aesthetics and technology; media convergence; animation as a market and the role of stardom in their marketing (Sean Connery, Ursula Andress, Roger Moore, Madonna, Pierce Brosnan and Daniel Craig). Finally, we explore the re-envisioning of Bond in various media and art forms in global popular culture, including music, DC and Marvel Comics, games, children's television and in Asian cinema (Stephen Chow's 1994 From Beijing with Love). Required screenings.

L53 Film 121 Freshman Seminar: Youth Culture and Visual Media
Since the advent of cinema through the recent development of online social networking, visual media in the United States and around the world have been identified with a market of youthful consumers and producers. This course looks at the development of youth culture in the United States and its unique relationship to visual media, including film, television, comic books, video games and the internet, in the 20th and 21st centuries. We examine youth culture as a social phenomenon generated by the young, a means of representing the experience of being youthful, and as part of the ongoing debates over the effects of media on the young. As alternately mass culture, counter culture and participatory culture, youth culture holds a privileged place in the history of American visual media and continues to influence production and innovation within the media marketplace.
Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

L53 Film 200 Special Projects
This course is intended for freshmen and sophomores who wish to register for internships. Students must receive program approval prior to beginning the internship. Please consult the program guidelines governing internships.
Credit variable, maximum 3 units.

L53 Film 220 Introduction to Film Studies
How do film images create meaning? What are the tools the film artist uses to create images? This course introduces students to basic techniques of film production and formal methodologies for analyzing film art. Students learn the essential components of film language — staging, camera placement, camera movement, editing, lighting, special effects, film stock, lenses — to heighten perceptual skills in viewing films and increase critical understanding of the ways films function as visual discourse. The course is foundational for the major in film and media studies. Required screenings.
Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

L53 Film 225 Making Movies
This course introduces the core concepts and skills for producing dramatic narrative film and video, building on the Hollywood paradigm. No previous technical experience is required, but students should have taken or be concurrently enrolled in Film 220. This course teaches students how films are put together to tell stories, negotiating between the possibilities of cinematic language and the practicalities of working with machines and other people. In order to develop an understanding of filmmaking, students learn the basics of camera operation, lighting, digital video editing, sound design and recording, casting and directing actors, visual composition and art direction, and production planning and organization. These concepts are put into practice through a series of exercises culminating in a creative, narrative short digital video. This course fulfills the prerequisite for 300- and 400-level video and film production courses in Film and Media Studies and the production requirement in the FMS major. Admission by wait-list only. Prerequisite: Film 220.
Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L53 Film 310 Video Production
An advanced course exploring the creative and technical aspects of video production. Students sharpen their knowledge of cameras, directing, lighting, sound recording, nonlinear systems and narrative structures. In addition to acquiring a theoretical understanding of the production process, students gain practical experience by producing, outside of class time, a short project reflecting their visual and conceptual maturity. Prerequisite: Film 230 Moving Images and Sound or permission of the instructor.
Credit 3 units. A&S: LA A&S IQ: HUM BU: BA EN: H

L53 Film 311 Documentary Production
In parallel with an overview of various documentary genres, ranging from the personal, the poetic, the agitprop and cinema verité, this course offers students the opportunity to produce a short documentary piece on the topic of their choosing. Aesthetic and ethical issues are explored by considering the overall methodology in terms of subjectivity, content, structure and the possible usage of music and/or voice-over. For the sake of completing the project in time, it is recommended that students be familiar with the subject matter of their investigation before taking the course. Prerequisite: Film 230 Moving Images and Sound or permission of the instructor.
Credit 3 units. A&S: LA A&S IQ: HUM BU: BA EN: H

L53 Film 320 British Cinema: A History
In cinema, as in politics, Britain is caught awkwardly between America and Europe, never quite knowing how to position itself. Should it try to compete seriously with Hollywood, or develop a smaller-scale and more distinctive national cinema on the
French or Swedish model? This uncertainty has commonly been seen as a weakness but it can be seen, conversely, as a strength, fostering a rich diversity and complexity both in the output overall and in the work of key British filmmakers such as Michael Powell, David Lean and, in the first half of his career, Alfred Hitchcock. This course traces the fortunes of British cinema from its lively beginnings through a switchback history of slump and recovery, giving equal attention to the work of high-profile directors such as Hitchcock and to important genres such as 1930s documentary, Ealing comedy and Hammer horror. A continuing theme is the complex economic relationship between British cinema and Hollywood: co-productions, trade barriers, the drain of talent to Hollywood, and the intermittent success of British films such as The King's Speech in the American market. Required screenings.

**Credit 3 units. A&S: TH, CD & A&S IQ: HUM, LCD BU: IS EN: H**

---

**L53 Film 326 Samurai, Rebels and Bandits: The Japanese Period Film**

Tales of heroism, crime, revolt and political intrigue. Bloody battles, betrayal, madness and flashing swords. This is the world of jidaigeki eiga, the Japanese period film. In this course, we analyze the complex (and often flamboyant) narrative, visual and thematic structures of films about the age of the samurai. We discuss jidaigeki representations of violence and masculinity, self-sacrifice and rebellion, and the invention of tradition as well as critical uses of history. In addition to the historical content of the films, we study the historical contexts that shaped jidaigeki film production and discuss relevant transformations in Japanese cinema and society. Period films have been shaped by and exert strong influences on Japanese theater, oral storytelling, popular literature, comics, and international film culture, all of which are helpful for understanding the films. As we track changes in jidaigeki style and subject matter, the course introduces theories for interpreting narrative structure, genre repetition and innovation, intertextuality, and representations of “the past.” All readings are in English. No knowledge of Japanese required. No prerequisites. Required screenings.

**Credit 3 units. A&S: TH, CD & A&S IQ: HUM, LCD BU: IS EN: H**

---

**L53 Film 329 Italian Neorealism**

This course explores the visual language of one of the most influential film movements of the 20th century. We concentrate on the origins of neorealism in Italian post-war cinema and history, and focus on the works of filmmakers such as Roberto Rossellini, Vittorio De Sica and Luchino Visconti. We also consider the longer-term influence of the movement both in Italy and elsewhere. Throughout this course, we reflect on the attempt to create a more “cinematic” style, the effects of the political turmoil of May ’68 on film culture, the “art house” reception of French films in the United States, and the broader appeal of recent hypervisual (“cinema du look”) films, such as La Femme Nikita and Amélie. While the primary focus of the course is on French cinema, we also discuss the reciprocal influences between American and French film culture, both in terms of formal influences on filmmaking and theoretical approaches to film studies. French film terms are introduced but no prior knowledge of the language is expected. Required screenings.

**Credit 3 units. A&S: TH, CD & A&S IQ: HUM, LCD BU: IS EN: H**

---

**L53 Film 328 History of German Cinema**

This course explores the major developments of German cinema throughout the 20th century. More specifically, this course engages with issues relating to German film culture’s negotiation of popular filmmaking and art cinema, of Hollywood conventions and European avant-garde sensibilities. Topics include the political functions of German film during the Weimar, the Nazi, the postwar, and the postwall eras; the influence of American mass culture on German film; the role of German émigrés in the classical Hollywood studio system; and the place of German cinema in present-day Europe and in our contemporary age of globalization. Special attention is given to the role of German cinema in building and questioning national identity, to the ways in which German feature films over the past hundred years have used or challenged mainstream conventions to recall the national past and envision alternative futures. Films by directors such as Murnau, Lang, Fassbinder, Herzog, Tykwer and many others. All readings and discussions in English. May not be taken for German major or minor credit. Required screenings.

**Credit 3 units. A&S: TH BU: IS EN: H**

---

**L53 Film 327 The Cinema of Eastern Europe in the Cold War Era**

This course focuses on films made in Japan, Mainland China, Taiwan, Hong Kong and South Korea over the past three decades. Students examine how the global/local geopolitics specific to the post-Cold War period, the passing of authoritarian regimes, the boom and bust of the Asian economy, and international film festivals have influenced the shaping of New East Asian cinemas across borders. Required screenings.

**Credit 3 units. A&S: TH, CD & A&S IQ: HUM, LCD BU: IS EN: H**

---

**L53 Film 323 Contemporary East Asian Cinema**

This course focuses on films made in Japan, Mainland China, Taiwan, Hong Kong and South Korea over the past three decades. Students examine how the global/local geopolitics specific to the post-Cold War period, the passing of authoritarian regimes, the boom and bust of the Asian economy, and international film festivals have influenced the shaping of New East Asian cinemas across borders. Required screenings.

**Credit 3 units. A&S: TH, CD & A&S IQ: HUM, LCD BU: IS EN: H**

---

**L53 Film 324 History of Chinese Cinemas: 1930s-1990s**

This course offers an overview of Chinese cinemas, including those of Mainland China, Hong Kong and Taiwan, over the 20th century. We study major trends such as the left-wing filmmaking in the 1930s, the Maoist revolutionary narratives, Taiwanese healthy realism, the New Cinemas of the three regions, and contemporary transnational productions. Major topics include urban modernity, gender formation, national and transnational cinemas within specific historical contexts. All films come with English subtitles. Required screenings.

**Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H**

---

**L53 Film 325 French Film Culture**

Called “the seventh art,” film has a long tradition of serious popular appreciation and academic study in France. This course offers an overview of French cinema, including the origins of film (Lumière brothers, Méliès), the inventive silent period (which created such avant-garde classics as Un chien andalou), the poetic realism of the ’30s, the difficulties of the war years, the post-war emphasis on historical/nationalist themes in the “tradition of quality” films, the French New Wave’s attempt
possibilities of mimesis in cinema, on the social and political engagement of neorealism, and on the factors that caused its decline.
Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L53 Film 330 History of American Cinema
This course traces the history of the American cinema from the earliest screenings in vaudeville theaters through the birth of the feature film to movies in the age of video. The course examines both the contributions of individual filmmakers as well as the determining contexts of modes of production, distribution and exhibition. The course aims to provide an understanding of the continuing evolution of the American cinema, in its internal development, in its incorporation of new technologies, and in its responses to other national cinemas. Requires screenings. Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

L53 Film 331 The New Hollywood Cinema
This course examines the history of film culture and the film industry in the United States since the end of the classical Hollywood studio system. It pays special attention to the period of auteur-centered filmmaking in the 1970s. During this time, the end of the production code, the financial crisis of the industry, the unparalleled influence of European New Wave and Art films, and the introduction of the first generation of film school graduates (the so-called "movie brats") all combined amidst the tumultuous cultural politics of such movements as the counterculture, civil rights and second-wave feminism to form a film-historical moment often called the Hollywood Renaissance. This brief period was soon followed by a newly reinvigorated Hollywood industry focused on the high-concept blockbuster. Such rapid transformations in the practice and nature of American film not only continue to influence commercial filmmaking today but also continue to shape our understanding of the role of authorship, genre and ideology within Hollywood. The course consider films of the New Hollywood in the context of tensions between radicalism and populism, progressivism and nihilism, entertainment and ideology, artistic and commercial success. Required screenings. Credit 3 units. Art: HUM BU: HUM

L53 Film 333 Making Movies II: Intermediate Narrative Filmmaking
In Making Movies II, students advance their skills in filmmaking through a series of exercises and individual short films culminating in a final narrative project shot in high definition digital video and edited in Final Cut Pro. With faculty guidance and working in groups, students collaborate in producing a narrative film that is a minimum of 10 minutes in length, following three-act structure and involving elements of motivation, conflict and resolution. In addition to this structured approach to content, students are encouraged to achieve a unified aesthetic approach to picture and soundtrack that reinforces/enhances the meaning of their final projects. The course develops student skills through lectures, demonstrations, in-class screening of excerpts and critiques. Topics covered include idea development, preproduction planning, directing actors, composition, lighting and editing. Students are required to assist other students in their productions and attend all classes. Admission by waitlist only. Prerequisite: Film 220 and Film 225 or 230. Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L53 Film 336 Cinema and Ireland
Like many other Anglophone and Francophone countries, Ireland only even started to develop a robust national cinema in the 1970s. As in, for instance, Australia and New Zealand, growth had previously been blocked by the dominance of local screens by films from, on the one hand, the overbearing "imperial" power, Britain, and, on the other, Hollywood, center of an even stronger cultural imperialism. Increased national self-assertion coincided with the weakening of the grip of those two cinemas in the post-classical period. A major focus of the class is on some of the key works of the filmmakers who established themselves in the 1980s, notably Neil Jordan and Jim Sheridan. But, as the title indicates — not simply Irish Cinema — it deals with more than this. Like Ireland itself, Irish cinema is deeply marked by, and preoccupied with, the political and cultural struggles of the past, and recent cinema is illuminated by seeing it in the context of earlier films: Hollywood and British versions of Ireland, whether shot on location or in the studio, as well as the isolated earlier landmarks of an indigenous Irish cinema. We also look at the rich topic of the representation of Irish immigrants in Hollywood films. Required screenings. Credit 3 units. A&S: LA, CD A&S IQ: LCD BU: IS EN: H

L53 Film 340 History of World Cinema
The course surveys the history of cinema as it developed in nations other than the United States. Beginning with the initially dominant film-producing nations of Western Europe, this course considers the development of various national cinemas in Europe, Asia and Third World countries. The course seeks to develop an understanding of each individual film both as an expression of a national culture as well as a possible response to international movements in other art forms. Through the course the course considers how various national cinemas sought ways of dealing with the pervasiveness of Hollywood films, developing their own distinctive styles, which could in turn influence American cinema itself. Priority given to majors. Required screenings. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: HUM, IS

L53 Film 341 Transnational Cinema(s): Film Flows in a Changing World
Across a century of extreme nationalism, Cold War imperialism and increased globalization, moving image culture remains deeply tied to the evolution of global economics, shifting notions of local identity, and human migration. Recent changes in the dynamic of international economics and cultural flow have led to new critical approaches that reassess international cinema as being constructed by relationships that transcend national borders. This course examines multiple ways in which cinema works "transnationally," focusing on recent theories of modernism, globalization and borderless cultures. Exploring a range of contexts from American domination of the early international market, to the recent evolution of Chinese blockbuster action films, to contemporary Palestinian video art, this course looks at the way in which material developments, narrative and aesthetic conventions, and film professionals have circulated over the past century. We also look at how new technologies of production, distribution and exhibition challenge traditional notions of cultural borders. Required screenings and in-class textual analysis are used to complement industrial studies of how transnational flows have come to define contemporary audiovisual media practices. Required screenings. Credit 3 units. A&S: LA A&S IQ: HUM BU: IS EN: H
L53 Film 345 Sexual Politics in Film Noir and Hard-Boiled Literature
Emerging in American films most forcefully during the 1940s, film noir is a cycle of films associated with a distinctive visual style and a cynical worldview. In this course, we explore the sexual politics of film noir as a distinctive vision of American sexual relations every bit as identifiable as the form's stylized lighting and circuitous storytelling. We explore how and why sexual paranoia and perversion seem to animate this genre and why these movies continue to influence "neo-noir" filmmaking into the 21st century, even as film noir's representation of gender and sexuality is inseparable from its literary antecedents, most notably, the so-called "hard-boiled" school of writing. We read examples from this literature by Dashiell Hammett, James Cain, Raymond Chandler and Cornell Woolrich, and discuss these novels and short stories in the context of other artistic and cultural influences on gendered power relations and film noir. We also explore the relationship of these films to censorship and to changing post-World War II cultural values. Films screened in complete prints or in excerpts likely include many of the following: The Maltese Falcon, Double Indemnity, Murder My Sweet, Phantom Lady, Strangers on a Train, The Big Sleep, The Killers, Mildred Pierce, The High Wall, Sudden Fear, The Big Combo, Laura, The Glass Key, The Big Heat, Kiss Me Deadly, The Crimson Kimono, Touch of Evil, Alphaville, Chinatown, Taxi Driver, Devil in a Blue Dress, The Bad Lieutenant and Memento. Required screenings. Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

L53 Film 346 From Golden Age to Wasteland: U.S. Television in the 1950s and 1960s
How did television become the dominant news and entertainment medium of the second half of the 20th century? How did the medium come to define itself and American identities in the post-WW II era? In an era where various social movements began to lay claim to the cultural center, why did "mad men" eventually give way to magical women and fantastic families? This course examines the cultural, industrial and aesthetic changes in U.S. television broadcasting during a time that was crucial to defining its relationship to the public as well as to Hollywood, the government, critics and American commerce. The class explores the relationships and shifts that made television the U.S.'s most popular consensus medium but one that also would profit by the expression of alternative tastes, politics and identities. Required screenings. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L53 Film 349 Media Cultures
This course is an introduction to the interdisciplinary field of cultural and media studies. Through a focus on television and new media, it analyzes current theoretical ideas and debates about culture. Main topics include the relationship between new technologies and everyday life and popular culture; analysis of media messages and images; how media help construct new identities and mark differences between groups; analysis of the globalization of the production and circulation of media culture; the rise of multimedia cultural industries; and the role of the audience. Required screenings. Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

L53 Film 350 History of Electronic Media
This course traces the history of electronic media as they have become the dominant source for entertainment and information in contemporary culture, starting with over-the-air broadcasting of radio and television through to cable and the "narrowcasting" achieved by digital technologies. While some attention is paid to other national industries, the chief focus of the course is on electronic media in the United States to determine, in part, the transformative role they have played in the cultural life of the nation. The course explores the relationship of the electronic media industries to the American film industry, determining how their interactions with the film industry helped mutually shape the productions of both film and electronic media. Required screenings. Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

L53 Film 352 Introduction to Screenwriting
Writers explore the various elements, structures and styles used in crafting a motion picture screenplay. They experience this process as they conceive, develop and execute the first act of a feature-length script. Writers create a screenplay story, present an outline for class discussion and analysis, then craft Act One. Writers are encouraged to consult with the instructor at various stages: concept, outline, character and scene development, and dialogue execution. While the students fashion their screenwriting independently, the class also explores the general elements of theme, genre and voice. A more specific examination of mechanics, the nuts-and-bolts of story construction, plotting, pacing, etc., follows to support the ongoing writing process. In-class exercises aid the writer in sharpening skills and discovering new approaches to form and content. Writers' work is shared and discussed regularly in class. Screening of film scenes and sequences provides students with concrete examples of how dramatic screenwriting evolves once it leaves the writer's hands. Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

L53 Film 353 Writing Episodic Television
This class focuses on all the factors that go into preparing and writing an episode for a network TV series (drama only). Students begin with a "pitch" (verbally or in short outline form) for an idea for a show currently on a network schedule. Once the "pitch" is accepted, the student then completes a "beat sheet," and ultimately a spec script that can run from 62 to 75 pages. Two drafts of the script are required. During the course of this process, students also learn how to research their narrative premises by contacting legal, medical and law enforcement experts in order to guarantee the accuracy of their scripts. In addition to learning the actual writing process, students are expected to watch several television shows and to read books, scripts and industry trade papers as they pertain to the craft and business of television writing. Finally, students also meet agents, producers, directors and other television industry professionals in order to gain their insights into the scriptwriting process and to gain a more global view of the steps involved in bringing their ideas to the screen. Credit 3 units. A&S: LA BU: HUM EN: H

L53 Film 356 Television Culture and Cult TV: Critical Approaches to Fandom
Why do television series inspire passionate involvement on the part of some viewers? What are the differences among being a viewer, an audience member, and a fan? How can we make scholarly sense of cultural practices such as learning to speak Klingon or building a "repli-car" of the General Lee? Studies of fandom have attempted to answer such questions and continue to explore issues that are crucial to understanding contemporary television culture. The phenomenon of "Cult TV" offers fertile
ground for examining the complex dynamics at play among
fans, popular culture, the institutions of American media, and
individual programs. In its exploration of cult television and
fans, this course engages with key issues in contemporary
media such as the proliferation of new media technologies and
the repurposing of existing media forms, the permeable boundaries between high and low or mass and oppositional
culture, and the fragmentation and concentration of media
markets. The class combines close textual analysis with studies
of fan practices to examine a variety of television programs,
from canonical cult texts such as Star Trek and Doctor Who to
"quality" fan favorites such as Designing Women and Cagney & Lacey to contemporary cult/quality hybrids such as Lost and
Heroes. In mapping out this cultural territory, we develop a set
of critical perspectives on audience identities and activities and
examine the continuing and conflicted imagination of fans by
media producers, distributors, regulators and critics. Required
screenings. Prerequisite: Film 220 or Film 350, or consent of
instructor.
Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

L53 Film 357 Quality Television and the "Primetime Novel"
Over the past four decades, the cultural status of television
in the United States has been reconfigured and complicated
with changes in industry and audience formation, regulatory presumptions and production techniques and
strategies. This course examines these interrelated forces, particularly as they have fostered a set of programs and
practices often hailed as "Quality Television." The class
surveys the institutional paradigms that gave rise to particular
generations of programming celebrated as "quality" and analyze
the systems of distinction and cultural value that make the label
socially and industrially salient. We critically investigate the role
of audiences and the conceptions of viewer choice at play in
these developments. In addition, the course analyzes the textual
features that have come to signify narrative complexity and
aesthetic sophistication. We examine foundational historical
examples of this phenomenon from The Mary Tyler Moore Show
to Hill Street Blues and Cagney & Lacey to Northern Exposure
as well as more contemporary broadcast and cable fiction
such as Lost, The Wire and Mad Men. In addition, students are
expected to watch a complete series, chosen in consultation with
the instructor, as part of their final research project. Required
screenings. Prerequisite: Film 220 or Film 350, or consent of
instructor.
Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H

L53 Film 358 Combat Movie Music and Sound after Vietnam
This course considers the Hollywood combat movie genre after
the Vietnam War (post 1975) by listening closely to how these
always noisy films use music and sound effects to tell stories of
American manhood and militarism. Centering on an elite
group of prestige films — action movies with a message for
adult audiences — the course examines 35 years of Hollywood
representations of World War II, the Vietnam War, the Gulf War
and post-9/11 wars against terrorism. Close analysis of how
combat film directors and composers have used music and
sound in conjunction with the cinematic image are set within a
larger context of ancillary texts (source materials, soundtrack
recordings, published and unpublished scripts), media folios
(press kits, reviews, editorials, newspaper and magazine stories and interviews), and scholarly writing from across the disciplines.
Films screened include Apocalypse Now, Platoon, Hamburger
Hill, Courage Under Fire, Saving Private Ryan, The Thin Red
Line, We Were Soldiers, Flags of our Fathers, The Hurt Locker
and Act of Valor, as well as pre-1975 combat films starring
John Wayne. The ability to read music is not required. Required
screenings. Prerequisite: none.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L53 Film 359 The American Musical Film
Film musicals were crucial to the success of the American film
industry from the dawn of sound film in the late 1920s to the
demise of the studio system in the late 1950s. This course
examines the American film musical from a variety of aesthetic,
critical and historical perspectives, with particular attention to
how the genre interacted with popular music and dance and the
major political and social trends of the 1930s, '40s and '50s.
Required screenings.
Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L53 Film 360 The History of the Film Score
This course looks at the role of music in Hollywood films from the
beginning of the sound era to the present. Larger themes include
the importance of technology, industry structures shaping the
nature of scores, notable film music composers, the relationship
between music, gender and genre. music's role in the adaptation
of literary texts to film, the power of directors to shape the
content of film scores, and the importance of popular music as
a driving economic and aesthetic force in film music history.
Films screened include From Here to Eternity, Stagecoach, High
Noon, The Night of the Hunter, Butch Cassidy and the Sundance
Kid, Born on the Fourth of July, Casino, Jarhead and The Social
Network. Required screenings.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L53 Film 361 Film Sound
Although film critics and theorists tend to think of cinema as a
"visual art," this shorthand description of the medium overlooks
the importance of film sound in cinematic storytelling. This
course is intended to provide a general overview of the way
in which film theorists have treated the issue of sound in the
cinema. Among the issues addressed in the course are: the
contribution sound technology and practice make to film form;
the various possible formal relationships between sound and
image; the effects of sound technologies on notions of realism
and verisimilitude; the importance of sound to particular genres,
such as the horror film; and, lastly, the role of sound in film
spectatorship. The course also showcases the work of the most
important sound stylists in film history, such as Fritz Lang, Orson
Welles, Alfred Hitchcock, Robert Altman and David Lynch.
Required screenings.
Credit 3 units. A&S: TH

L53 Film 363 Video Post-Production
While post-production of the soundtrack has been around for
years, post-production of the "visual track" has increasingly
become a major phase in the video and movie-making process.
It often allows filmmakers to enhance existing footage with
potentially dazzling results. As in all our production courses, we
are concerned with developing strong content. The focus is not
on special effects per se, but rather on how they may be used
to enhance the message. Students find a nonprofit organization
of vital importance in need of exposure and produce a Public
Service Announcement to be broadcast. Key post-production
software such as Commination, AfterEffects and Motion are
explored throughout the semester. Prerequisite: Film 230 Moving
Images and Sound or consent of instructor.
Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H
L53 Film 366 Women and Film
The aim of this course is primarily to familiarize students with the work of prominent women directors over the course of the 20th century, from commercial blockbusters to the radical avant-garde. Approaching the films in chronological order, we consider the specific historical and cultural context of each filmmaker’s work. In addition we discuss the films in relation to specific gender and feminist issues such as the status of women’s film genres, representations of men and women on screen and the gender politics of film production. Required screenings. Credit 3 units. A&S: TH, SD A&S IQ: HUM BU: HUM EN: H

L53 Film 370 American Horrors
Horror movies. Fright films. Scream marathons. Blood and gore fest. Why should we want to look at movies that aim to frighten us? What is the attraction of repulsion? Is there an aesthetics of ugliness? Except for some early prestigious literary adaptations such as Dr. Jekyll and Mr. Hyde, the horror film began as a low-class genre, a notch above exploitation movies. In the 1970s and 1980s, it became the dominant commercial genre by offering increasingly graphic images of violence and mayhem. The horror film had arrived: lavish budgets, big stars and dazzling special effects in mainstream major studio films competed with low-budget, no frills productions that helped establish artistically ambitious and quirky filmmakers such as George Romero and David Cronenberg. By a chronological survey of the American horror film, this course explores how differing notions of what is terrifying reflect changing cultural values and norms. Throughout, we consider the difficult questions raised by horror’s simple aim of scaring its audience. In addition to weekly screenings, work for the course includes analytical and theoretical essays on the horror film. Written analyses of films with a close attention to visual style is required. Prerequisite: Film 220. Required screenings. Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L53 Film 371 Making War
This course examines the cinematic representation of war. Using World War II as a case study, students examine a series of combat pictures, documentaries and “home front” films from the 1940s to the present. Several key questions guide the class discussion: How do war films respond to and shape the political worlds in which they are produced? How do these films confront the aftermath of war and the soldier's homecoming? Where is the line between the home front and the front line? More broadly, what does it mean to portray the violence and suffering that war inevitably brings? At the close of the semester, students partake in an in-class symposium presenting their research on the cinematic treatment of other conflicts, from the Civil War to the “War on Terror.” Films include: The Boat, Saving Private Ryan, The Thin Red Line, Why We Fight and Mrs. Miniver. Readings include works by Susan Sontag, Kaja Silverman and W.G. Sebald. Required screenings. Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

L53 Film 376 French New Wave
French cinema from 1958 to 1968 offered La Nouvelle Vague or The New Wave, one of the most innovative, influential and critically discussed movements in film history. The New Wave marked a major turning point in the relationship between film, thought and politics in France, as well as a unique bridge between art cinema and pop culture. Speaking for more than just the youth generation of its own country, it had a major influence on new approaches in subsequent European, American and Asian cinemas. This course offers a detailed look at the social values, artistic motivations and aesthetic experiments embodied in the French New Wave through the films of Jean-Luc Godard, Agnès Varda, François Truffaut, Alain Resnais, Claude Chabrol, Eric Rohmer and others, positioning their work within the larger social, political and cultural environment of this period. As many of these directors collaborated as filmmakers and also were active as film critics and theorists, this class provides a unique insight into the overlapping between visual theory and practice, film and other media, culture and society. Weekly screenings required. Credit 3 units. A&S: TH A&S IQ: HUM BU: IS: H

L53 Film 379 Expressionism in Theater and Film
Same as L15 Drama 379
Credit 3 units. A&S: TH A&S IQ: HUM BU: IS: H

L53 Film 419 Theories of Mass Media
This course explores theories of the mass media with an emphasis on television as well as its convergences with other media and computer technologies. It starts by examining theories that posit the media as instruments of societal maintenance or transformation and then examines the ways in which various theorists have refined or rejected elements of these theories in a quest for both specificity and complexity. In particular, the course examines media and cultural studies’ attempts to synthesize critical paradigms ranging from political economy to semiotics to feminism. The course concludes with an examination of the challenges and opportunities posed to theorizations of the mass media by contemporary circumstances such as media conglomeration, niche marketing and microcasting, and global flows of information, capital and people. Required screenings. Credit 3 units. A&S: LA A&S IQ: HUM BU: BA EN: H

L53 Film 420 Film Theory
This course is an introduction to both classical and contemporary film theory. Beginning with the earliest attempts to treat cinema as a new and unique art form, the course initially reviews the various ways in which film theory attempted to define cinema in terms of its most essential properties. The course then examines more contemporary developments within film theory, more specifically its attempt to incorporate the insights of other critical and analytical paradigms, such as semiotics, psychoanalysis, feminism, queer theory and postmodernism. Throughout the course, we consider questions regarding the ontology of cinema, its relation to spectators, and the various ways in which it’s formal properties create meaning. Readings for the course include the major works of Sergei Eisenstein, Andre Bazin, Christian Metz, Laura Mulvey and Fredric Jameson. Required screenings. Credit 3 units. A&S: TH, WI A&S IQ: HUM WI Art: H

L53 Film 421 Film Historiography
This course is a seminar on the writing of film history for advanced students. Through an engagement with the historiographical writings of scholars, such as Dominic LaCapra, Hayden White and Michel Foucault, students gain an understanding of various genres of film historical writing, an appreciation for the kinds of research that film historians do, and a familiarity with the ways in which film historians delimit their field of study, form research questions and develop hypotheses. In addition to reading and classroom discussions, students are expected to write a fairly lengthy paper (17 to 20 pages) that
L53 Film 443 Memory, Tears and Longing: East Asian Melodrama Film

Excessive emotion, unreasonable sacrifice, hidden truth, untimely knowledge, and forbidden desire — the power of melodrama and its moving representations have fueled the popularity of hundreds, if not thousands, of books, plays and films. Melodrama has variously been defined as a genre, a logic, an effect and a mode, applied to diverse media, divergent cultural traditions, and different historical contexts. The course provides a survey of East Asian melodrama films — as well as films that challenge conventional definitions of melodrama — by pairing Japanese-, Korean-, and Chinese-language productions with key critical texts in melodrama studies. We see classics such as Tokyo Story, Two Stage Sisters, and The Housemaid. We examine melodrama’s complex ties to modernity, tradition and cultural transformation in East Asia; special emphasis is placed on representations of the family, historical change, gender and sexuality. In addition to historical background and film studies concepts, we also consider a range of approaches for thinking about the aesthetics and politics of emotion. No prerequisites. No prior knowledge of East Asian culture or language necessary. Mandatory weekly scheduled screening.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L53 Film 431 Renegades and Radicals: The Japanese New Wave

In 1960, the major studio Shochiku promoted a new crop of directors as the “Japanese New Wave” in response to declining theater attendance, a booming youth culture, and the international success of the French Nouvelle Vague. This course provides an introduction to those iconoclastic filmmakers, who went on to break with major studios and revolutionize oppositional filmmaking in Japan. We analyze the challenging politics and aesthetics of these confrontational films for what they tell us about Japan’s modern history and cinema. The films provoke as well as entertain, often through absurd (sometimes absurd) commentaries on postwar Japanese society and its transformations. Themes include: the legacy of WWII and Japanese imperialism; the student movement; juvenile delinquency; sexual liberation; and Tokyo subcultures. Directors include: Oshima Nagisa, Shinoda Masahiro, Terayama Shuji, Masumura Yasuzo, Suzuki Seijun, Matsumoto Toshio and others. No knowledge of Japanese necessary. Required screenings.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L53 Film 432 Global Art Cinema

How do art films tell stories? The dominant storytelling genre of the contemporary festival circuit, the art film has since World War II combined “realist” and “modernist” impulses. Influenced by Italian neorealism, art films grant priority to characters from working class, sexual and other exploited and imperiled minorities. Drawing on the fine arts, literature and music, art films also experiment with modernist themes and formal principles, such as subjectivity, duration serial structure, denotive ambiguity and reflexivity. This course explores art cinema from a variety of national contexts, analyzing storytelling techniques and themes that challenge the “economical” and diverting forms associated with mainstream commercial filmmaking. Required screenings.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L53 Film 423 Histories of Media Convergence

Entertainment and communications forms combine and blend, and they have done so across millennia. However, the phenomenon of media convergence has taken on a special salience over the last one-and-a-half-centuries, as exemplified by the growing intermixture of film, radio, television, gaming and the internet. In particular, critics, consumers, politicians and producers used convergence as structuring principle in understanding, regulating and planning for the future of media culture. This course engages with contemporary worries and enthusiasms about convergence by considering the specific conditions in which the phenomenon has been understood and practiced. Tracing a historical arc though the 20th century, we first examine convergences of radio and film, film and music publishing, television and film exhibition, and disparate corporate entities as basis for understanding more recent media combinations. Building on that foundation, the majority of the course consists of case studies of media convergence since 1980, considering it in terms of industry, technology, regulation and audiences. These case studies also provide students with a survey of and inquiry into questions of historiographic theory and method. Note: This course satisfies the history and historiography requirement for the FMS Graduate Certificate.

Required screenings.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L53 Film 422 Film Stardom, Performance and Fan Culture

This course focuses the Hollywood star system. We explore stars in relation to celebrity and consumerism, especially how “stardom” is created by a system that seeks to create effects in film viewers whether conceived as audiences, fans or spectators. We examine the performance element of stardom and its relationship to genre, style and changing film technology. Also of concern is how stars and the discursive construction of stardom intersect with gender representation, race, ideology, sexuality, age, disability, nationality and other points of theoretical interest to and historical inquiry in contemporary film studies. While emphasis is placed on mainstream commercial U.S. cinema, students are encouraged to pursue questions beyond this framework within their own research. Required screenings.

Credit 3 units. A&S: LA A&S IQ: HUM BU: BA EN: H

L53 Film 430 Clown Princes

“Dying is easy, comedy is hard,” runs an old theatrical adage. Nevertheless, some of the most popular actors in American film have chosen the hard path by typcasting themselves in comedy, playing repeated variations on the same character. “Comedian comedy,” representing films that showcase the distinctive skills of great clown-actors, is the central concern of this course. We analyze how individual comedians rework performance traditions through the distinctive concerns of their time and culture to create idiosyncratic comic personae. We look at films starring Charles Chaplin, Buster Keaton, Harold Lloyd, Laurel and Hardy, the Marx Brothers, Jack Benny, Peter Sellers, Jim Carrey and Eddie Murphy. Work for the course requires reading in comic theory and analytical essays. Required screenings.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H
L53 Film 444 Topics in Chinese Language Cinema
Variable topics associated with the shaping of Chinese-language cinema, whether originating from the PRC, Hong Kong or Taiwan. This course may take up themes, directors, film genres, special subjects (such as independent film), formal elements (such as cinematography or sound) or issues (the relationship of film to literature, specific cultural movements or political events). Required screenings.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L53 Film 450 American Film Genres
By close examination of three or four specific types of film narratives, this course explores how genre has functioned in the Hollywood mode of production. Students gain an understanding of genre both as a critical construct as well as a form created by practical economic concerns, a means of creating extratextual communication between film artist/producers and audience/consumers. Genres for study are chosen from the Western, the gangster film, the horror movie, the musical, screwball comedy, science fiction, the family melodrama, the woman’s film and others. In addition to film showings, there are readings in genre theory as well as genre analyses of individual films. Required screenings.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L53 Film 451 American Television Genres
Questions of genre are central to any exploration of television’s texts, whether they are being analyzed as craft, commerce or cultural phenomenon. Genre has been used by critics and historians to ascribe “social functions” to groups of programs and to diagnose cultural preoccupations, while genre has been used industrially to manage expectations among audiences, advertisers, programmers, producers and creative professionals. Investigating genres ranging from the soap opera to the Western, workplace situation comedies to sports, and game shows to cop shows, this course explores the role of genre in the production, distribution and reception of American television. Students gain a critical understanding of genre theory and key arguments about the form and function of television texts; they develop a set of tools for analysis of televised narrative and style; the social uses and meanings of genre; the institutional practices and presumptions of the American television industry; and the persistence of textual forms and audience formations in the face of structural changes such as deregulation, media convergence and globalization. Required screenings.
Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

L53 Film 452 Advanced Screenwriting
This course is intended for students who already have taken Film 352 Introduction to Screenwriting. Building on past writing experiences, students explore the demands of writing feature-length screenplays, adaptations and experimental forms. Particular attention is paid to the task of rewriting.
Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM EN: H

L53 Film 454 American Film Melodrama and the Gothic
American film melodrama has been considered both the genre of suffering protagonists, incredible coincidences and weeping spectators as well as a mode of action, suspense and in-the-nick-of-time rescues. In this course, we examine American film melodrama as a dialectic of sentiment and sensation that draws heavily on Gothic tropes of terror, live burial and haunted internal states. We trace the origins of film melodrama and the cinematic Gothic to their literary antecedents, the horrors of the French Revolution, and classical and sensational stage melodramas of the 19th century. In addition to the 1940s Gothic woman’s film cycle, we excavate the Gothic in the maternal melodrama, the suspense thriller, film noir, domestic melodrama, the slasher film and the supernatural horror film. Required screenings.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L53 Film 456 Soundtrack Studies: Music, Voices, Noise
This course considers the interaction of film, sound and music from the silent era to the present by screening representative films from around the world and exploring current directions in scholarship from the disciplines of film studies and musicology. Topics include: historical and critical understandings of the sound track, major film sound theorists (such as Michel Chion), technological shifts (such as synchronized sound, Dolby and digital surround sound), the uses of Richard Wagner (both his music and his ideas), the relationship between a film genre (noir) and sound and music and the relationship between a musical genre (opera) and film, and the juxtaposition of popular and classical, Western and non-Western musical styles in art cinema. Screened films include Meek’s Cutoff, Blow Out, Days of Heaven, Sous le toits de Paris, Love Me Tonight, Casablanca, Alien, Apocalypse Now, La cérémonie, Le Cercle rouge, The Pillow Book, The Scent of Green Papaya, and The Bourne Ultimatum. The course is in seminar format. Readings from recent scholarly work on film sound and music inform class discussions of the screened films. Close analysis of how music, sound and image interact in film making and the film experience lies at the heart of the course. The ability to read music is not required. A primary goal of the course is the development of specific listening skills that are useful when working in this area. Targeted writing assignments ask students to write about film sound and music from a variety of critical and historical perspectives. Prerequisites: graduate status or completion of Film 360 The History of the Film Score, or AMCS 360 or Music 328 and permission of the instructor. Required screenings.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L53 Film 458 Major Film Directors
What does the film director do? In the earliest movies, film directors modeled themselves on their theatrical counterparts: they chiefly focused on how to stage an action in a confined space for a stationary camera that represented an ideal member of the audience. As the camera began to be used to direct audience attention, first through cutting, then through actual movement, the film director evolved from a stage of events to a narrator. By analyzing the work of one or more major film directors, this course explores the art of film direction. We learn how film directors may use the camera to narrate a scene, to provide their own distinctive view of the actions playing out on the movie screen. May be repeated for credit with permission of the instructor. Required screenings.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

L53 Film 460 Taboo: Contesting Race, Sexuality and Violence in American Cinema
Pushing the envelope or going too far? What is the boundary between films that challenge us and films that offend us? This is a course about films that crossed that boundary, most often by presenting images of race, sexuality and violence, images that could attract audiences as much as they offended moral guardians and courted legal sanctions. Because they were denied the First Amendment protection of free speech by a 1915 Supreme Court decision, movies more than any prior art form
were repeatedly subject to various attempts at regulating content by government at federal, state and even municipal levels. Trying to stave off government control, Hollywood instituted forms of self-regulation, first in a rigid regime of censorship and subsequently in the ratings system still in use. Because taboo content often means commercial success, Hollywood could nonetheless produce films that pushed the envelope and occasionally crossed over into more transgressive territory.

While control of content is a top-down attempt to impose moral norms and standards of behavior on a diverse audience, it also reflects changing standards of acceptable public discourse. That topics once barred from dramatic representation by the Production Code — miscegenation, homosexuality and "lower forms of sexuality," abortion, drug addiction — could eventually find a place in American movies speaks to changes in the culture at large. In trying to understand these cultural changes, this course explores films that challenged taboos, defied censorship and caused outrage, ranging from films in the early 20th century that brought on the first attempts to control film content through to films released under the ratings system, which has exerted stricter forms of control. Required screenings.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L53 Film 475 Screening the Holocaust
This course surveys the history of Holocaust representation on film, examining a wide range of documentary and fictional works from 1945 to the present day. Discussions consider a number of key questions, including: What challenges does the Holocaust pose to cinematic representation, and how have filmmakers grappled with them? How have directors worked within and against notions of the Holocaust as unrepresentable, and how have they confronted the challenge of its association with a limited set of highly iconic images? What are the more general ethical and political dimensions of representing the Holocaust onscreen — its victims as well as its perpetrators, the systematic genocide that characterized it, and the sheer absence of so many dead? We also probe the changing significance of cinematic representation of the Holocaust, exploring the medium's increasingly memorial function for audiences ever further removed from the historical moment of its occurrence. Screenings may include The Last Stage; Distant Journey, Night and Fog; Judgment at Nuremberg; Shoah; Europa, Europa; Schindler's List; Train of Life; The Specialist; Photographer; A Film Unfinished; Critical readings by figures such as Giorgio Agamben, Jean Amery, Shoshana Felman, Geoffrey Hartman, Marianne Hirsch, Sidra Israhi, Dominick LaCapra, Alison Landsberg, Berel Lang, Michael Rothberg, and James Young. Required screenings.

Credit 3 units. A&S: TH; SD A&S IQ: HUM, SD EN: H

L53 Film 485 Visualizing Orientalism: Art, Cinema and the Imaginary East 1850-2000
This seminar examines film and modern art within the framework of "Orientalism." Reading foundational texts by Said, and incorporating theory and historical discourse concerned with race, nationalism and colonialism, we explore artistic practice in European photography, painting and decorative arts from 1850 to recent times and European and Hollywood film. We study how power and desire have been inscribed in Western visual culture across the bodies of nations and peoples through conventions such as the harem, the odalisk, the desert and the mysteries of ancient Egypt. To that end, we look at artists such as Delacroix, Ingres, Gérôme, Beardsley and Matisse and screen films such as The Sheik, The Mummy, Salome, Cleopatra, Pepe le Moko, Naked Lunch, Shanghai Gesture, Thief of Baghdad, Princess Tam Tam and The Sheltering Sky. Subjects include the representation of gender, sexuality, desire, race and identity as well as the cultural impact of stereotype and "exotic" spectacle. Students study methods of visual analysis in film studies and art history. All students must attend film screenings.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L53 Film 495 Special Projects
This course is intended for juniors and seniors who wish to register for internships. Students must receive program approval prior to beginning the internship. Please consult the program guidelines governing internships.

Credit variable, maximum 3 units.

L53 Film 499 Study for Honors
This course is intended for majors pursuing honors in Film and Media Studies. In order to enroll for this course, students must apply in advance for honors and be approved by a faculty committee. Please consult the Program guidelines for application deadlines and other requirements.

Credit 3 units.

L53 Film 500 Independent Study
This course is intended for students who wish to pursue areas of study not available within the standard curriculum. In order to enroll for this course, students must have a faculty adviser and submit a contract outlining the work for the course to the Film and Media Studies office. Please consult the program guidelines governing independent study work. Opportunities for Independent Study are available to all undergraduate and graduate students working toward a degree in Arts & Sciences. Registration in an Independent Study requires sponsorship by a faculty member and approval of the Program Director. An Independent Study Proposal form can be obtained from the Film and Media Studies office. All proposals for Film 500 have to be submitted to the FMS main office no later than November 1 for spring semester enrollment and April 1 for Film 500 to be taken in the fall semester. Approval is not automatic. The Independent Study course may be taken for 1 to 3 units per semester, depending upon the proposed work load. A total of 3 units of independent study may be counted toward the 120 units required to complete the Bachelor of Arts degree. Independent Study courses cannot be used to replace required courses for the major or to replace courses that are regularly offered in the curriculum.

Focus
Focus is a special, year-long seminar program open only to freshmen. Several Focus programs are offered every year, each built around a seminar topic reflecting the Focus faculty member's particular area of expertise. Students in a Focus seminar frequently enroll in a companion course chosen by their professor to encourage exploration of the seminar topic from
varying perspectives. A Focus program provides a coherent, group-oriented learning experience with out-of-classroom activities, while still allowing time for electives.

Focus seminars change each year and have included such topics as: Law and Society; The Theater as a Living Art; Writers as Readers; The Literary Culture of Modern Ireland; Women in Science; and Cuba: From Colonialism to Communism. Enrollment in each Focus is limited to 16 students to ensure highly mentored, personalized instruction. All Focus programs constitute integrations and therefore fulfill one of the requirements for the Bachelor of Arts degree. Focus programs are open to all Arts & Sciences students, regardless of their intended majors, and complement any major or pre-professional curriculum.

Courses

L61 Focus 1071 Focus: Memory and Memorialization in American Culture

What do Americans remember, and what do we choose to forget? Who decides? And what do our ever-proliferating memorials and at times obsessive acts of memorialization say about us? In this course, we study cultural memory in the United States from the Civil War to September 11, 2001, by looking at "official" and "vernacular" forms of memorialization, including monuments, roadside crosses, temporary memorials, reenactments, museum exhibits, etc. We seek to understand not only what public acts of memorialization look like and who gets to define them, but how memory is contested or reshaped by such practices. Along the way, we ask how controversies of memory are related to competing ideas of nation, citizenship and
L61 Focus 1072 Focus: Writing Loss, Legacy and Memory
This class involves student writers in acts of remembrance as both a complement to the linked fall semester course Memory and Memorialization in American Culture and as an introduction to a central motive of writers in all traditions: art as a means of transcending trauma and loss, large and small. Writing in multiple genres, from essay to poetry, from reportage to memoir, we explore ways in which writers literally “come to terms” with the past, including idealization, justification and re-interpretation. The course stresses how individual experience, especially loss, can move from private meaning to public when writers can convey their experience as representative of others. It also explores the authority one assumes and creates when speaking for others. Travel to sites such as Washington, D.C., affords students an additional and exciting means of studying collective memory in a broader context that includes observing the interaction of a present-day audience. In addition to documents from field trips, course texts include examples from various genres, as well as selected readings from cultural critics and writers about writing.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L61 Focus 108 Focus: Constantinople, Queen of Cities: Part I
Constantinople, the capital of the Byzantine Empire (330 to 1453), was among the greatest marvels of the medieval world. Renowned for its wealth and sophistication, the city was one of the largest urban centers in the premodern era and the model that cultures both east and west sought to surpass. In this course, we explore the evidence behind this reputation, studying the architectural, social and artistic history of the Queen of Cities. Although renamed Istanbul when conquered in 1453 by the Ottomans, its fame did not fade, and some of its most impressive monuments preserved today, stand as witness to the remarkable achievements of Byzantine culture.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: HUM EN: H

L61 Focus 1081 Focus: From Constantinople to Istanbul
This course is a continuation of the freshman Focus program, Constantinople, Queen of Cities, and is limited to those students who are completing the sequence. It is a requirement for students participating in the summer study trip to Constantinople (Istanbul). This 1-credit course expands upon material covered during the fall semester by considering the post-Byzantine history of Constantinople, both under Ottoman rule and in the modern era. Requirements for this companion course include regular attendance, active participation, and the presentation of two oral reports on site in Istanbul, which are based on fall and spring semester research projects.
Credit 1 unit. A&S: TH A&S IQ: HUM EN: H

L61 Focus 160 Focus: Going Dutch: Art, Science and Discovery in Amsterdam and Beyond
The Netherlands, despite its geographical scale, was once the most powerful and culturally thriving country in Europe. In the 17th century, the great metropolis of Amsterdam and the surrounding cities of Leiden, Delft and Haarlem burgeoned as sites of global trade, scientific innovation, and unprecedented achievements in art. The paintings of Rembrandt van Rijn, Frans Hals, Johannes Vermeer and many others embody the fascination contradictions of a culture caught between Calvinist morals and licentiousness, lucrative commerce and fears of worldly vanity, botanical learning and the tulip craze. The remarkable invention that characterized the Dutch Golden Age led also to the microscope, the fire engine, modernized anatomical dissection, even the founding of New York City. This course surveys the history of the 17th-century Netherlands through the lens of its art and intellectual achievements, ultimately reflecting upon its legacy today.
Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM EN: H

L61 Focus 1701 Focus: The Italian Renaissance I
The Renaissance was one of the most dynamic and influential periods in the history of Western Europe. The Renaissance is replete with contrasts and contradictions, preserving numerous aspects of medieval thought at the same time as developing dramatic new ways of viewing, understanding and expressing the world. While these factors affected all of Europe to different degrees, it was in Italy that these trends first appeared and from which they traveled north, east and west, to influence profoundly the entire continent. This course concentrates on the Italian Renaissance in an effort to gain a panoramic view of its many aspects and the essential characteristics of each subject studied. The fall term examines geography and political entities; wars and political realignments; forms of government and their rulers; social life; manufacturing, trade and economics; the humanist movement; philosophy; the Catholic Reformation and natural sciences and medicine. The spring term concentrates on the arts: architecture, painting and sculpture, literature and music. Prerequisite: admission into The Renaissance Focus program.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L61 Focus 1702 Focus: The Renaissance: An Introduction II
The Renaissance saw a fundamental shift in the character and functions of the arts in Western society. This course examines the basic aesthetics and features of Renaissance literature (poetry, epic poetry, drama), plastic arts (painting, illumination, sculpture, bas-relief), architecture (both sacred and secular) and music (both sacred and secular, including dance). We examine the role of perception in the arts, the relationship of that perception to humanistic, religious and political thought, and the various ways in which the arts communicate that relationship.
Credit 3 units. A&S: TH

L61 Focus 1703 Focus: The Republic of Venice I
The Venetian Republic survived intact from its beginnings in the fifth century AD to the Napoleonic conquest of 1797. This course will introduce students to the unique social, cultural and artistic life of the maritime Republic known as the Serenissima. The fall semester will explore the governmental, social, religious and economic foundations of the republic together with its artistic and architectural expressions up to 1520. The spring term will trace the height of Venice's prosperity and artistic achievements through the painting of Titian, Tintoretto and Veronese, the architecture of Sansovino and Palladio, and the music of Monteverdi and Vivaldi, followed by the city's gradual decline to the tourist mecca and playground for the wealthy of Europe it became toward the end of its existence as an independent state.
Credit 3 units. A&S IQ: HUM
L61 Focus 1910 Focus: Phage Hunters
A research-based laboratory class for freshmen. Students join a national experiment organized by HHMI, with the goal of isolating and characterizing bacteriophage viruses found in the soil in the St. Louis area. Laboratory work includes isolation and purification of your own phage, DNA isolation and restriction mapping, and EM characterization of your phage. Several WU phages are selected for genome sequencing over winter break, and are annotated in the spring in Biol 192 Phage Bioinformatics. Students who successfully isolate and annotate a phage may become co-authors on a scientific paper. Prerequisites: high school courses in biology and chemistry, at least one at the AP or International Baccalaureate level, and permission of the instructor. Limited to 40 students. One-hour lecture, one-hour discussion and three hours lab per week. Credit 3 units. A&S: NS A&S IQ: HUM SCI

L61 Focus 1920 Focus: Phage Bioinformatics
A research-based laboratory class for freshmen. Students join a national experiment organized by HHMI, with the goal of genomic characterization of a local phage. Laboratory work focuses on learning computer-based tools for genome analysis followed by annotation and comparative analysis of the genome of a phage (bacterial virus) that was isolated fall semester at WU and sequenced over winter break. Prerequisites: high school courses in biology, chemistry and physics, at least one at the AP or International Baccalaureate level; permission of the instructor. Limited to 40 students; preference given to those completing Biol 191 Phage Hunters. One-hour lecture, one-hour discussion and three hours lab per week. Credit 3 units. L61 Focus 201 Focus: Nationalism and Identity: The Making of Modern Europe
This course is a reading-and-discussion seminar designed for students interested in an interdisciplinary program in history, literature and language. It covers a series of major topics in French and German history, beginning with the French Revolution and culminating in the origins of World War I. The unifying theme is the concept of the nation and development of nationalism. Major topics include Napoleon, the revolutions of 1848, and German unification; related topics include such issues as women and the concept of the nation. The seminar reads texts such as the Abbe Sieyes: ‘What is the Third Estate? (in translation) and review excerpts from such films as Abel Gance’s Napoleon and Jean Renoir’s La Marseillaise. Credit 3 units. A&S: TH A&S IQ: HUM BU: IS

L61 Focus 202 Focus on French Nationalism 1789-1914: The Formation of French National Identity
Exploration of cultural expressions and depictions of nationalism in France 1789-1914 with emphasis on literary forms — poetry, prose, drama — but including other symbolic modes of expression, against the background of social and political change and in particular against the background of Franco-German relations. Includea investigation of the use of gender to construe the nation; founding myths; the roles of men, women and the family in the nation; the importance of language and other ethnic markers; the creation and function of heroes; versions of the past; cultural stereotyping of the French vs. the German, as well as contemporary critiques of nationalism. Taught in English. Course should be enrolled as 3 units, or 4 units with trip. Corequisite: each student should enroll in the level of French language instruction that follows his or her fall course. Credit variable, maximum 4 units. A&S: TH A&S IQ: HUM BU: SCI

L61 Focus 203 Focus on German Nationalism 1789-1914: The Formation of German National Identity
Exploration of cultural expressions and depictions of nationalism in Germany 1789-1914 with emphasis on literary forms — poetry, prose, drama — but including other symbolic modes of expression, against the background of social and political change and in particular against the background of Franco-German relations. Includea investigation of the use of gender to construe the nation; founding myths; the roles of men, women and the family in the nation; the importance of language and other ethnic markers; the creation and function of heroes; versions of the past; cultural stereotyping of the German vs. the French; as well as contemporary critiques of nationalism. Course should be enrolled as 3 units, or 4 units with trip. Credit variable, maximum 4 units. A&S: TH A&S IQ: HUM BU: HUM

L61 Focus 206 Workshop: Readers as Writers
In the Readers as Writers workshop, we consider the role of influence and revision in the making of a poem. While examining a wide range of poetry in both finished and draft form, we study the ways in which influence and revision bring a poem into existence and reshape its form on the page. Exercises are designed to guide the writing process, using the readings to inspire and inform our own creative work. Guiding texts include, but are not limited to, those being studied in Writers as Readers, which must be taken concurrently. Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

L61 Focus 2061 Workshop: Readers as Writers
In the spring Readers as Writers workshop, we move from the consideration and creation of poetry to the consideration and creation of prose. As a transition between the two genres, we begin by reading and writing the prose poem, a hybrid form that borrows from and is influenced by both genres. We move from there toward a progressive lengthening of line and narrative as we read and write flash fiction, short stories, personal essay and memoir. Guiding texts include, but are not limited to, those being studied in Writers as Readers, which must be taken concurrently. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L61 Focus 2070 Writers As Readers
Writing as a creative response to reading is examined through this seminar. Just as modern students are students of literature, so too were writers in the past students of their literary heritage. How did major English writers — Chaucer, Shakespeare, Milton, Austen, Keats and Yeats, among others — respond to what they read? Students consider the ways these writers resisted, embraced and repudiated the efforts of those who had written before them. Readings and discussions elicit each student’s own creative and critical responses. As happened in the past, the reading writer is answered by the writing reader. Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM
L61 Focus 208 Focus: Global Culture and the Individual: Intercultural Skills for the 21st Century
The emergence of a global society continues to create vast changes in all cultures. How do these changes impact our lives and the way we view ourselves and our place in the world? Students in this Focus seminar use the study of language, culture and literature to examine how they, as individuals, relate to self, community and culture. Students also learn to apply the skills needed to live and work most effectively within the university community and beyond.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: IS EN: S

L61 Focus 2081 Focus: Global Culture and the Individual: Intercultural Skills for the 21st Century
During the spring semester, we continue to find ways to practically apply the skills and knowledge gained during the fall semester. The course is built around projects proposed by students at the end of the fall semester. By the end of the academic year, students have gained a greater understanding of how they relate to, and affect, one another within their own immediate environment, their community, their culture and beyond. The companion course for this Focus seminar continues as a two-semester language sequence at the student’s level of proficiency as determined by a placement test.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

L61 Focus 209 Focus: Wild Ethics and Environmentalism
Fierce political battles are being fought over the preservation of wilderness, partly because wilderness means and has meant so many different things. European settlers saw the New World as a “howling wilderness,” redeemable only by human settlement and improvement. To Native Americans this same land was home, not wilderness. As the frontier of settlement moved west, attitudes toward the wild began to change, with Henry David Thoreau stating “In wildness is the preservation of the world.” This course studies the changing experiences of wilderness and the wild through history, grappling with insights derived from literature, art, philosophy and ecology. The spring semester includes a study of wolf reintroduction in Yellowstone National Park, including a spring break trip to Yellowstone to study wolves in the wild.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L61 Focus 2091 Focus: Wild Ethics and Environmentalism

L61 Focus 215 Focus: The Theater as a Living Art
Moving in and out of practice and theory, this Focus plan interweaves a traditional introductory acting course with discussions of dramatic theory and visits to rehearsals where directors and actors work to shape the play. Must be taken concurrently with Drama 228C. Prerequisite: admission into The Theater Focus program.
Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

L61 Focus 2151 Focus: Theater Topics Course
Companion course to Focus 215.
Credit 3 units. A&S: TH

L61 Focus 216 Focus: The Theater as a Living Art
Continuation of the Focus program: The Theater as a Living Art. Topic varies by year, please consult Course Listings for a description of current offering. Prerequisite: admission to The Theater as a Living Art Focus Program.
Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

L61 Focus 2171 Focus: Women in Science
Throughout the centuries, women were interested and involved in the sciences. Their scientific contributions, however, have often been overlooked and their abilities questioned. In this year-long course, we read biographies of famous women scientists and mathematicians, in addition to scholarly articles, to examine women's involvement in science and mathematics from the 19th century to the present. We explore the ways in which women have pursued scientific knowledge, look at the cultural factors that affected them, and investigate the impact of scientific theory and social conditions on their opportunities and identities. In addition to reading about women in science, we hear a variety of women talk about their careers. Visiting lecturers may include faculty from chemistry, biology, engineering, earth and planetary sciences, medicine, physics, medical administration may visit, as well as female scientists who work in industry. This course is restricted to Women in Science Focus program participants, who must have concurrent enrollment in WGSS 100B Introduction to Women, Gender, and Sexuality Studies.
Credit 1.5 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: BA EN: H

L61 Focus 2172 Focus: Women in Science: Contemporary Issues
Following the history of women in science that we explored in the fall semester, this class begins a discussion and analysis of current issues in gender and science. We look at the feminist critique of science and scientific objectivity before turning to women's careers in science. Several questions are central to our inquiry: Do women “do” science differently? Could alternative science and mathematics education help increase women's representation in fields that continue to be male-dominated like physics, engineering and computer science? How do social expectations of men and women effect career choices and retention? In addition to exploring these issues, we hear from a number of women scientists. Drawing from both the Danforth and Medical School campuses, our visitors include faculty members from chemistry, biology, engineering, earth and planetary sciences, medicine, physics, medical administration, among others, who share their reflections about women and science. This course is restricted to Women in Science Focus program participants.
Credit 1.5 units. A&S: SS, SD A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S
L61 Focus 221 Focus in Law and Society

The legal system has assumed a major role in contemporary American life, a role that locates it as an essential governing authority that articulates the general rights and restraints for American citizens. The Law and Society Focus centers its attention on a few of the social controversies that depict the changes and diversity in the present-day American social order. The seminar particularly spotlights issues that are associated with status of America’s youth and on the privileges and restraints that our legal system extends to its young people. Regular topics for our inquiry include: students’ freedom of expression, privacy in the educational environment, religion in schools, abortion rights of minor females, juvenile criminality, and affirmative action in education. Combining students’ exposure to shaping the law in the abstract with the application of the law in live controversies is an important element of the year’s experiences. Thus the first semester’s course work exclusively involves reading major opinions of the appellate courts, while the second semester’s work entails an extensive commitment to observing the adjudication of disputes in trial courts. Prerequisite: admission to the Law and Society Focus plan.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA, HUM

L61 Focus 222 Seminar in Law and Society

The Law and Society Focus is designed to expose students to some contemporary legal debates in American society and to expand their understanding of those issues as they are adjudicated in our legal system. We explore these current topics within the basic liberal arts tradition, which emphasizes the view that the legal system is a social instrument for seeking a “just society.” The seminar, accordingly, is an introduction to legal controversies as questions of public policies that have philosophical, social, political and economic implications, as well as legal ones. Prerequisite: admission to the Law and Society Focus plan.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: HUM EN: S

L61 Focus 2341 Focus: Italy’s Temples of Knowledge: The History and Controversies of Museums

This course investigates the history of museums in Italy and the political and ethical issues that have developed alongside the institutions themselves to the present day. Our study during the fall semester unfolds chronologically, beginning with such ancient precursors to the modern museum as the Roman House of Pompeii. We study how the museum in Italy developed from the cabinet — for the display to a select audience of philosophical, social, political and economic implications, as well as legal ones. Prerequisite: admission to the Law and Society Focus plan.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: HUM EN: S

L61 Focus 2342 Focus: Italy’s Temples of Knowledge, Part II

This freshman Focus course divides its scope over two semesters. In the fall, students study the history of museums, and in the spring, students study the ethical, political, cultural and interpretive issues that surrounded these institutions. Students also prepare for the spring trip to Italy.

L61 Focus 2351 Focus: Moving and Being Moved: Human Movement in Art, Culture, Sport and Health

This course investigates the significance of movement, individually and collectively, in human experience. Movement can signal a wide variety of states of being — gender, age, ethnicity, mental and physical health — in addition to its stylized expressions as social and concert dance. We use readings, discussions, lectures and correlated movement work to deepen our understanding of what and how movement communicates. The course is team-taught by members of the dance faculty and guest instructors. Concurrent registration in a dance or somatics course is recommended but not required. This course is restricted to Moving and Being Moved Focus program participants.
Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L61 Focus 2352 Focus: Moving and Being Moved: Further Explorations

Continuation of Fall Focus program. Students continue to explore a broad range of topics. At the same time each student deepens his or her experience of a specific movement discipline by enrolling in one of the many dance or somatic practices courses offered by Washington University. The weekly seminar meetings focus on connections between dance and other disciplines: for example, lighting and costume design for dance, arts management, movement and Native American culture, dance and literary theory that treats “the body” metaphorically. However, our weekly meeting also includes time periodically for students to share their experience in their chosen movement centered courses. In-class content continue to be supplemented by field trips and related practical applications. This course is restricted to Moving and Being Moved Focus program participants.
Credit 2 units. A&S: LA A&S IQ: HUM EN: H

L61 Focus 2431 Focus: Missouri’s Natural Heritage, part 1

Missouri’s Natural Heritage is a multidisciplinary two-semester freshman Focus course. The first semester of the sequence focuses on Missouri geology, climate, archaeology and native megafauna. This provides a foundation on which to examine the ecology, restoration and management of our diverse plant and animal wildlife (arthropods, mollusks, fish, salamanders, lizards, birds and mammals) in the second semester. We also introduce basic concepts in biodiversity and resource management with attention to resolution of conflicts of interest. In addition to weekly lecture and discussion, students in this class visit sites across the state during three weekend camping trips and a longer camping trip during winter break. Attendance on field trips is an essential component of the course and grade. Lab fee covers transportation and meals for all field trips.
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L61 Focus 2432 Focus: Missouri’s Natural Heritage, part 2

Missouri’s Natural Heritage is a multidisciplinary two-semester freshman Focus course. The second semester of the sequence focuses on the ecology, restoration and management of our
diverse habitats (prairie, forest, glade and stream) and the biology of our diverse plant and animal wildlife (arthropods, mollusks, fish, salamanders, lizards, birds and mammals). We also apply basic concepts in biodiversity and resource management with attention to resolution of conflicts of interest. In addition to weekly lecture and discussion, students in this class visit sites across the state during three weekend camping trips and a trip to the prairies of western Missouri during spring break. Attendance on field trips is an essential component of the course and grade. Lab fee covers transportation and meals for all field trips.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L61 Focus 2601 Focus: The Argentine Experience: History, Literature, Culture
How have foreigners viewed Argentina over time? What was the meaning of bloodshed among gauchos? What are the origins of tango? And at one point, one third of Argentina's population consisted of Afro-descendants — what happened to them? This Focus course helps students find answers to such questions and more. A history of Argentina from Spanish settlement to the present, focusing on the wars of independence; economic growth and urbanization; immigration; gauchos and popular culture; Juan and Evita Peron; the “Dirty War”; and the transition to democracy and neo-liberalism. The course complements an offering on Argentine Culture in the spring semester. It also provides historical background for a field trip by the students to Buenos Aires, Argentina. It covers the history of one of Latin America's largest and most important countries and gives students the chance to compare processes of cultural, political and economic development with the United States and other countries in the Americas. Prerequisite: admission to the Focus Argentina program.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L61 Focus 2602 Focus: Buenos Aires and the Construction of Argentine Culture
In this course, we examine the various expressions of Argentine culture that have given us gauchos, tango, Jorge Luis Borges and one of the most prolific and honored cinematic traditions of Latin America. In particular, we explore the ways in which history and culture interact to express the experience of Argentina and Buenos Aires. We study films, popular music, dance, literature, sport and theater to gain insight into that experience. This course is part of the Buenos Aires Focus program; it includes a trip to Buenos Aires and is intended to be taken after Focus 2601.

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: IS EN: H

L61 Focus 267 Focus: Cuban Transitions: From Colonialism to Communism
This course examines the Cuban experience from its beginnings as a Spanish colony to its independence. We emphasize happenings in contemporary Cuba and its relations to other countries. Topics studied include, among others, the Tainos, slavery, the preeminence of sugar and tobacco as an economic and cultural force, social structures, race, the “Spanish-American war,” the press, the military and education. We screen documentaries, examine the paintings of Wilfredo Lam and the photographs of Walker Evans, and study the contribution of music to the Cuban ethos. We concentrate on biographies and documentary films of Che Guevara and Fidel Castro. All topics studied also are put into contemporary contexts. Requirements: three short papers (four to six pages) and an oral report.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: IS

L61 Focus 2671 Stranger than Paradise: Cuban Experience of the Revolution
The word “Cuba” strikes a resonant chord with many of us — a mix of curiosity, anxiety and hope — shaped by many years of controversy and stereotyping, on one hand, and myth making, on the other. Whether you want to develop an understanding of Cuban literature on and off the island, or to learn about music and dance history that led up to the Buena Vista Social Club phenomenon, this is a seminar for you. Organized chronologically and thematically as a companion course to Focus 267 Focus: Cuban Transitions: From Colonialism to Communism, it covers a comprehensive range of topics related to contemporary Cuba. Faculty with ample firsthand knowledge of Cuba and invited speakers encourage wide-ranging discussions about the interplay of such issues as the politics of race and sexuality, repression and exile, censorship and dissent. African cultural heritage and syncretic religious practices are presented as both a source of pride for Cubans and a symbol of their unique Caribbean experience. By examining a variety of ideological perspectives in prose fiction, poetry, political speeches, artwork, musical forms, personal testimonies and film, this seminar allows students to exchange perceptions across various disciplines, question myths and erase the distance between theory and context-based critical practice. Prerequisite: successful completion of the first-semester course, Focus 267.

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: IS

L61 Focus 2811 Focus: Literary Culture of Modern Ireland
This course examines the literature of Ireland from the fall of Parnell to the outbreak of World War II. This is the period of an emerging cultural nationalism, a great efflorescence of literature in many genres, and some of the most important political, social and military events in modern Irish history. One of the remarkable things about the period is the close relationship between prominent figures in the literary and artistic world and those in the realm of politics and social change. The result was a rich cross-fertilization of ideas and attitudes that had enormous implications for the future of this embattled island nation. We explore this vital and transformative exchange by close attention to some primary texts of the period. Writers studied include: Yeats, Gregory, Wilde, Synge, Shaw, Joyce, O'Casey and Bowen.

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: IS EN: H

L61 Focus 2812 Focus: Literary Culture of Modern Ireland II
This course explores the intersection of literature and culture in Ireland from the establishment of the Fianna Fail government of de Valera in 1932, through the lean years of the 1940s to '70s, to the economic boom of the Celtic Tiger in the 1990s and beyond. To appreciate this small nation's rocky road to a successful entrance into the European Union, economic security and national confidence, we closely read how Ireland's rich and diverse literature casts a cold but feeling eye on its hard-earned independence and fraught nationalism. For the fiction, poetry and drama of Ireland not only mirrors but often moves the story
of this nation's growth and transformation over the decades of economic, social and political strife.

L61 Focus 2813 Focus: Literary Culture of Modern Ireland and Irish America: Irish-American Writers, Fitzgerald–Kennedy
Credit 1.5 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L61 Focus 2814 Focus: Literary Culture of Modern Ireland and Irish America: Modern and Contemporary Irish Drama
Building on students' coverage of the early days of Dublin's Abbey Theatre, this segment focuses on (mostly) living Irish playwrights whose work develops familiar themes in unfamiliar ways. Brian Friel, whose long career recently was recognized by an elite council of Irish Arts, is represented by Translations and Dancing at Lughnasa. We read plays by Marina Carr, the most important Irish woman playwright since Lady Gregory, often described as "Greek" for her scorching fatalism. Continuity with Synge is evident in work by Martin McDonagh, as is his transformation of Irish stereotypes into grotesques and deep resources of dark humor. Conor McPherson's Shining City is not yet ready to banish a ghost from a psychiatrist's office. Other playwrights represented may include Tom Kilroy and Christina Reid. It is notable that the work of three of these playwrights was produced in New York recently and nominated for Tony awards. Credit 1.5 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L61 Focus 2850 Focus: The Holocaust: A European Experience
Between 1939 and 1945, Nazi troops invaded, occupied and destroyed major parts of Europe. A central aim of the Nazi project was the destruction of European Jewry, the killing of people, and the annihilation of a cultural heritage. This course seeks to deal with questions that, some 60 years after what is now known as the Holocaust, still continue to perplex. Why did Germany turn to a dictatorship of racism, war and mass murder? Why did the Nazis see Jews as the supreme enemy, while also targeting Poles, Ukrainians, Soviets, homosexuals, the Roma and the disabled? The course introduces students to issues that are central to understanding Nazi occupation and extermination regimes. Students look at survival strategies in Western Europe including emigration, resistance movements in Eastern European ghettos, local residents’ reactions to the murder in their midst, and non-European governments’ reactions. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM EN: H

L61 Focus 2851 Freshman Seminar: Representations of the Holocaust in Literature and Film
As the Holocaust recedes into the historical past, our knowledge of the event becomes increasingly dominated by literary and cinematic representations of it. This course focuses on such depictions of the Holocaust in literature and film and raises a number of provocative questions: What does it mean to represent the horror of the Holocaust? Can one effectively depict the event in realistic terms, or do unrealistic representations work better? What happens to the history of the Holocaust when it becomes the subject of a fictional text? Who is authorized to speak for the victims? Are representations of perpetrators appropriate? What types of representations will help us to remember the Holocaust in the 21st century? We will grapple with these challenging questions by examining literary texts by American, European and Israeli authors from a range of genres, including survivor memoirs, fictional narratives, a graphic novel, drama and poetry, and a number of films that depict the Holocaust. Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H

L61 Focus 287 Focus: Writers As Readers Seminar
Participants in this seminar examine how writing serves as a creative response to reading. Just as modern students are students of literature, so too were writers in the past students of their literary heritage and of their contemporary literary moment. We examine how writers, both poets and novelists, responded to, elaborated on, rebelled against and paid homage to their predecessors. Among the writers we consider are Jane Austen and Henry James, Charles Dickens and Dostoevsky, Tennyson and Keats, Kipling and Isaac Babel. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

French
For art lovers, aspiring chefs and those who wish to see the world, the French major and minor offer preparation in language, literature, culture, film and opportunities for study abroad. Our undergraduate program features a rich variety of courses for students interested in studying French in relationship to philosophy and politics as well as to the sciences and the arts. Our summer, semester and year-long study abroad programs in Nice, Toulouse, Paris and Dakar enable students to deepen their understanding and appreciation of French culture by taking courses in the French university system, living with French families, shadowing doctors in French hospitals, holding internships in French businesses, and traveling extensively. Such experiences are the perfect preparation for careers in international business, international medicine, international law, and international relations or diplomacy.
We also provide our students with a range of linguistic, analytical and theoretical tools necessary for a comprehensive understanding and appreciation of French and Francophone literature and culture, to prepare them for a variety of careers or further study. French majors who plan to apply to professional schools or to pursue graduate studies in literature, philosophy, history, art history, music, film, anthropology or other related fields are strongly encouraged to pursue independent research in their senior year. Writing a Senior Honors thesis provides students with a unique opportunity to combine the study of French language, literature and culture with their other interests and to work closely with a member of our faculty. Our faculty takes an active interest in our students, providing support and encouragement throughout their studies in order to prepare them to become dynamic, conscientious and informed members of today's global community.
We are pleased to offer our students an ongoing series of lectures, films and artistic performances, as well as a weekly French table, which all contribute to the intellectually dynamic and personally rewarding social environment of our section. We also regularly invite scholars of international repute to speak or teach on campus and host international colloquia that attract scholars from around the world.

*Students who take French 201D at the university may count it as one course toward the major (out of nine for the second or 10 for the prime). Students also may count one 3-credit course toward the major that is taught in English by a member of the French faculty either within or beyond the bounds of the department at Washington University. This course must be at the 300 level or above and does not replace the requirements in French.

Additional Information
Students must maintain an average of B- or better. Both 400-level courses required for the major must be taken at Washington University. All primary majors must complete a capstone experience by achieving a B+ or better in one of the 400-level seminars.

Study Abroad: French majors are encouraged to participate in a study abroad program. Summer programs are available in Paris, Nice and Senegal, and semester abroad programs are available in Toulouse and Paris. Up to 6 credits from each program can count toward the major. We strongly recommend that students who spend a semester in Toulouse or Paris take French 318D before going abroad. Students spending a semester abroad may take French 318D instead of French 308D. Any student who completes French 318D and does not go abroad should take French 308D as well.

Please refer to the Romance Languages home page (http://rll.wustl.edu) for more information about French study abroad programs.

Senior Honors: Students who have maintained at least a minimum cumulative GPA of 3.65 through the end of the junior year are encouraged to work toward Latin Honors (cum laude, magna cum laude, summa cum laude). To qualify for Latin Honors in the major by thesis, a student must complete special literary research and prepare and orally defend an Honors thesis, which is judged by an Honors faculty committee. To qualify for Latin Honors by course work, a student must complete four literature courses at the 400 level, including two in literature before 1800, and present two critical essays written for those courses to be judged by an Honors faculty committee. Recommendations for Honors are based on performance and the quality of the thesis or critical essays, plus the student's cumulative grade point average.

Transfer Credits: 21 of the 30 units required for the major must be taken in residence. Courses not taken at Washington University may count toward the major only with departmental permission.

*Only one conversation course, taken at home (French 215 or French 216) or abroad, can count toward the minor.

Additional Information

Six credits can count toward the minor from the French for Pre-Medicine Program in Nice. Literature and Medicine, a survey course offered at the Pre-Medicine Program in Nice, can replace French 325 or French 326.

We strongly recommend that students who spend a semester in Toulouse or Paris take French 318 D before going abroad. Students spending a semester abroad may take French 318 D instead of French 308 D. Any student who completes French 318 D and does not go abroad should take French 308 D as well.

Courses taken credit/no credit do not count toward the minor. Students must complete courses taken for the minor with a grade of B- or above and are expected to maintain a B average or better in all French courses.

Courses

L34 French 1011 Essential French 1 Workshop
Application of the curriculum presented in French 101 D. Pass/ Fail only. Grade dependent on attendance and participation. Limited to 12 students. Students must be enrolled concurrently in French 101 D.
Credit 1 unit. A&S: LA EN: H

L34 French 101D French Level 1: Essential French 1
This first course in the French language stresses rapid acquisition of spoken French, listening comprehension, reading and writing skills. It is designed to immerse students as much as possible into French language and culture. The five-day-a-week course is taught in French to impart communicative competence through the acquisition of everyday grammar and vocabulary.

The textbook works with a feature-length French film in order to create a meaningful and culturally relevant context for the grammatical and thematic structures studied. While not required, it is strongly recommended that students enroll in French 1011, a one-credit, pass-fail practice session.
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L34 French 102D French Level 2: Essential French 2
This second course in the French language program focuses on more advanced language skills to stress further rapid acquisition of spoken French, listening comprehension, reading and writing skills. It is designed to immerse students as much as possible into French language and culture. The five-day-a-week course is taught in French to impart communicative competence through the acquisition of everyday grammar and vocabulary.
The textbook works with a feature-length French film in order to create a meaningful and culturally relevant context for the grammatical and thematic structures studied. While not required, it is strongly recommended that students enroll in French 1021, a 1-credit, pass/fail practice session. Prerequisite: French 101 D or equivalent (often recommended for students with two to three years of high school French [seventh and eighth grades counting as one year]).
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L34 French 1051 Advanced Elementary French Practice Session
Application of the curriculum presented in French 102 D or French 105 D. For students with two to four years of high school French. Pass/fail only. Grade dependent on attendance and participation.
Credit 1 unit. A&S: LA A&S IQ: LCD

L34 French 1052 Advanced Elementary French Workshop
Working vocabulary for the Institute taught to emphasize real-life situations abroad. Only for students who have completed French 102 D and 105 D and who plan to attend French Summer Language Institute. Credit/no credit.
Credit 1 unit. A&S: LA A&S IQ: LCD EN: H

L34 French 105D Advanced Elementary French
This course provides an intensive, five-day-a-week review of elementary French, covering in one semester the entire French 101-102 program. It is designed to immerse students as much as possible into French language and culture. The course is taught in French to impart communicative competence through the acquisition of everyday grammar and vocabulary.
The textbook works with a feature-length French film in order to create a meaningful and culturally relevant context for the grammatical and thematic structures studied. While not required, it is strongly recommended that students enroll in French 1051 (01), a 1-credit, pass/fail practice session. This course is often recommended for students with three years of high school French.
Credit 5 units. A&S: LA A&S IQ: LCD BU: HUM, IS
L34 French 201D French Level 3: Intermediate French
An intermediate review course with multiple goals: independent and accurate oral and written communication; comprehension of a variety of French and Francophone materials; review of grammar functions; communicative activities. Prerequisite: French 102D or the equivalent (usually recommended for students with four years of high school French [seventh and eighth grades count as one year]). Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L34 French 202 French Level III at the Summer Institute
This Summer Institute course focuses on the major features of French 201D. Students improve speaking, writing and reading skills in French by combining study of grammatical forms with exercises designed to mirror many experiences they encounter while in France. The location abroad and contact with French host families and other French people facilitate the student's learning experience. Students enrolled in this course also take French 353 and are prepared to enroll in French 307D upon their return to St. Louis. Open only to students attending the Summer Institute in France. Prerequisite: French 102D or 105D. Credit 3 units. BU: IS

L34 French 215 Conversation, Culture, Communication 1: Pop Culture
The course examines popular culture through a focus on what is said and performed, viewed especially but not exclusively through French film. Five thematic units focus on everyday occurrences and themes that mark both French and Francophone experience: the intersection of French History with the lives of ordinary people; the role of the French family in modern life; the motto of the French Revolution and how it applies today; the notions of community and the individual in modern French and Francophone society; the role of the French in the world at large. Active student participation is required; student is required to do at least two oral presentations on the films we see, and in some of the versions, to make their own film. An optional film-viewing is scheduled from 2 to 4 p.m. Fridays. Prerequisite: French 201D or the equivalent; may be taken before or after French 216. Credit 3 units. A&S: LA A&S IQ: LCD BU: ETH

L34 French 216 Conversation, Culture, Communication 2: French Culture Through French Film
This course enables students to pursue their exploration of French culture through French film. Though not a history of French cinema, it introduces some of France's most celebrated actors and directors. We focus on excerpts that illustrate important life themes, including childhood, coming of age, existential crises, the search for happiness, the need for laughter, the threat of crime and violence, the complexities of love, and attitudes toward death. Students are asked to contrast their expectations of how such themes are to be treated with the way in which the French choose to portray them. Students write film reviews as though they were, alternately, an American or a French critic. As a final project, they write their own screenplay and imagine how it might be filmed in France. By the end of the course they have begun to view French culture with a French eye. Prerequisite: French 201D or the equivalent; may be taken before or after French 215. Credit 3 units. A&S: LA A&S IQ: LCD BU: ETH

L34 French 247 Freshman Seminar
Taught in English. Small group seminar devoted to readings and study of other texts such as films, paintings, etc., discussion, writing. Topics vary; interdisciplinary focus. Prerequisite: AP in English, French or History, or permission of the instructor. Does not substitute for any other French course. Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: HUM EN: H

L34 French 250C Voyages and Discoveries: French Masterpieces
Taught in English. Novels and short stories about voyages and discoveries — real and symbolic — where young people confront themselves and crises in their lives. A discussion course with short writing assignments and viewing of films of several works studied. Masterpieces selected from writers such as Voltaire, Balzac, Flaubert, Maupassant, Gide, Colette, Camus, Sartre, Duras and Ernaux, among others. No French background required; students who have completed the English Composition requirement are welcome. Credit 3 units. A&S: TH Art: HUM BU: HUM

L34 French 257 From Champagne to Champlain: French Culture in North America
Taught in English. Following Champlain's founding in 1604 of the first French settlement in Nova Scotia (formerly Acadia), the French began to build what they hoped would be a vast empire, from Quebec to the Gulf of Mexico. Over the next 200 years, French culture and language spread throughout North America and could well have been the dominant one in this country had history moved in different directions. This course examines the history, literature, religion, architecture, music and cuisine of the vast territory known as "New France." Through use of conventional textual documents, as well as films, slides, CDs and field trips to Missouri historical sites, it exposes the student to the continuing richness of French culture all around us. Drawing on local resources (e.g., Fort de Chartres, Cahokia Courthouse and Sainte Genevieve), students learn about many fundamental connections between America and France. Topics include early explorations, Jesuit missions, literary representations of the New World, colonial architecture, the French and Indian War, the Louisiana Purchase, Cajun and Mississippian culture. Credit 3 units. A&S: TH BU: ETH

L34 French 299 Undergraduate Independent Study
Prerequisites: French 201D and permission of the Director of Undergraduate Study. Credit variable, maximum 3 units.

L34 French 307D French Level 4: Advanced French
Thorough review of French grammar with an emphasis on written and oral communication grounded in cultural context. Development of vocabulary and communicative skills through readings and films. Essential for further study of French language and literature. Three class hours per week. Prerequisite: French 201D or the equivalent (usually recommended for students with five years of high school French [7th and 8th grades count as one year]). Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS
L34 French 308D French Level 5: Introduction to Literary and Cultural Analysis
In this course we explore French literature and culture through a broad range of texts, including short stories, films, songs, poems and theatre. Development of creative and analytical writing skills in preparation for upper-level French courses. Should be taken before French 325C or French 326C. Prerequisite: French 307D or the equivalent.

L34 French 318D Preparation for Year in France
Designed to prepare students for the experience of studying abroad (for either a year or a semester, on Washington University-sponsored or -approved programs), this course emphasizes improved oral discussion and writing skills through readings, papers, language lab practice and active class participation. The course provides an introduction to the techniques of explication de texte, commentaire compose and dissertation litteraire. The class discusses various aspects of modern French society as well as topics related to the student's experience abroad, such as the university system, the French family, French social mores, etc. May replace French 308D for candidates attending semester and year abroad programs in a French-speaking country. Required for students planning to study in Toulouse and Paris and recommended for other programs in France.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS

L34 French 321 Topics I
Focusing on topics of cultural and social importance, this course offers students the opportunity to learn about defining moments in the French tradition. The specific topic of the course varies from semester to semester and may include works from different disciplines, such as art, film, gender studies, history, literature, music, philosophy, politics, science. Prerequisite: French 307D.
Credit 3 units. A&S: LA A&S IQ: HUM, LCD, LS BU: ETH

L34 French 322 Topics II
Focusing on topics of cultural and social importance, this course offers students the opportunity to learn about defining moments in the French tradition. The specific topic of the course varies from semester to semester and may include works from different disciplines, such as art, film, gender studies, history, literature, music, philosophy, politics, science. Prerequisite: French 307D.
Credit 3 units. A&S: LA A&S IQ: LCD BU: ETH

L34 French 325 French Literature I: Dramatic Voices: Poets and Playwrights
An interpretation of cultural, philosophical and aesthetic issues as presented in influential works of French poetry and drama from the Middle Ages to the present. May be taken before or after French 325. Prerequisite: French 308D or French 318D.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS BU: HUM EN: H

L34 French 326 French Literature II: Narrative Voices: Fiction and Nonfiction
An investigation of cultural, philosophical and aesthetic issues as presented in influential works of French prose from the Middle Ages to the present. May be taken before or after French 325. Prerequisite: French 308D or French 318D. Section 09 Prosaic Greatness. The title of this course emphasizes both the artistic value of certain major prose texts in French and the everyday facets of knowledge about French culture they convey. From the Middle Ages to the present, influential writers like Montaigne, Pascal, Sand, Flaubert, and Gide have demonstrated how important political, philosophic, literary and artistic concepts have been skillfully passed down from one generation to another through a masterful usage of French prose. By looking closely at the aesthetic and social questions raised by works such as theirs, so characteristic of their times, students come to appreciate better the evolution of French prose and its true place within the general history of France.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS BU: IS EN: H

L34 French 350 Undergraduate Seminar in French Literature and Culture
An exploration of a variety of cultural icons, objects, myths and traditions that define the French experience throughout the centuries. Topics vary. Prerequisite: French 308.
Credit 3 units. A&S: TH Art: HUM BU: HUM

L34 French 352 French Institute Project
Students investigate an important aspect of French life by conducting interviews with French natives and by observing them at work. Supplementing this direct experience with further research, students prepare a presentation on their selected topic for the Institute participants and for their French hosts. Open only to students enrolled in the French Summer Institute.
Credit 2 units. A&S: LA

L34 French 353 Project Plus
This Summer Institute course combines (1) a course that examines French culture as it is represented in the evocative history of French châteaux, the arts and contemporary lifestyle; (2) the student's project; and (3) the student's experiences as part of the community abroad (excursions, visits, group discussions). In class students gain background for appreciating the primary sites of the Institute: in the Loire Valley, Paris and Brittany. The classroom experience is discussion-oriented, with small writing assignments and readings. The project is an individual research program that students conduct with a French native on a particular aspect of French culture. In the past students have dealt with serious topics such as the deportation of the Jewish community in Amboise during World War II; with less grave subjects such as the work of a local wine grower or goat cheese producer, and the culinary repertoire of French and American families; and current topics concerning the political

In the past students have dealt with serious topics such as the deportation of the Jewish community in Amboise during World War II; with less grave subjects such as the work of a local wine grower or goat cheese producer, and the culinary repertoire of French and American families; and current topics concerning the political
situation in Europe and the euro. Following weekly conferences with the teaching staff, students present a formal report on their experiences to an audience comprising other members of the group and the students' host families. Students at the Institute are expected to speak French in all group settings. Assignments in this course are level-appropriate (students enrolled in French 385 complete longer papers and projects than those enrolled in French 202; expectations for conversations are likewise adjusted accordingly). Required of all students attending the Summer Institute in France.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD

L34 French 355 North American Francophone Literature in Translation
Taught in English. The world of French language and literature is not restricted to France alone. It includes several other countries and former colonies whose cultural traditions and productions have grown in global significance as the West has increasingly understood and reacted to its own prejudices and exclusions. This course, the first in a three-semester sequence, focuses on the literature of our closest French-speaking neighbors: French Canadians, Acadians (from Nova Scotia, New Brunswick and northern Maine) and Louisiana Cajuns. That French is the main language of all these groups results, of course, from the early colonial history of North America. Representative writers of these different French-speaking groups, including Antonine Maillet, Gerald Leblanc, Zachary Richard, Philippe Hemon, Michel Tremblay and Marie-Clair Blais, are studied closely in their historical, literary and cultural contexts.
Credit 3 units. A&S: TH

L34 French 364 Literature and Ethics: Out of Cruelty
Same as L16 Comp Lit 364
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH EN: H

L34 French 370 French Social History
Studying *L'Histoire des Mentalités*, this course explores how the concept of sickness, the perception of medicine, the role of the doctor, etc., evolved throughout the centuries. Texts are supplemented by a series of lectures offered by doctors in different specialties. Students complete a project on one area of related research. Open only to students enrolled in the Nice Pre-Med Summer Program.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: BA EN: H

L34 French 375C Biography of a City: Paris
This class has a dual focus: to trace the political and cultural history of Paris throughout the ages since its founding; to highlight Paris as a theme or topos in works of art and in the popular imagination. Thus, we examine both Paris' role as an important historical center as well as its function as a vital cultural symbol. Guest speakers from the departments of Romance Languages, Art History, History, Music, Philosophy and others. Course taught entirely in English.
Credit 3 units. A&S: TH Art: HUM BU: IS

L34 French 376C Cinema and Society
This course explores the history of French cinema through a lens that has long aroused passionate feelings in the francophone world: the social and psychological role of the (post)-industrial workplace. Exploring why the workplace has proved an engaging setting for French cinema, the class will study the Chaplinesque antics of the heroes of René Clair's *À nous la liberté* and the slapstick pathos of Jacques Tati's maladapted *Monsieur Hulot*. Students will also consider how film uses the workplace to dramatize society's differences and tensions, analyzing the tragic drama of social classes in Marcel Carné's *La Règle du jeu* and the sobering view of workplace reform in Laurent Cantet's *Ressources humaines*. The class will consider depictions of workers and bourgeois in the factories by the Lumière brothers (1895) and compelling performances of modern-day workers by Marion Cotillard (*Deux jours, une nuit*) and Omar Sy (*Samba*) in award-winning films from 2014. Our study of film will also address cultural differences between the U.S. and France as we consider the workplace in the context of globalization. There will be an optional extra session for group film viewing. Films will be on reserve in Olin. Prerequisite: French 307D. Taught in French.

L34 French 383C Literature and Society: Ailing Body/Ailing Mind in French Autobiographical Writings
Illness and suffering have inspired a great variety of literary texts from the Middle Ages to the modern era. This course considers works ranging from Montaigne's influential *Essais* through contemporary novels that focus on autobiographical writings in which the author gives a personal account of his or her own direct experience with illness. Open only to students enrolled in the Nice Pre-Med program.
Credit 3 units. Art: HUM

L34 French 385 Cultural Differences
By examining how the French perceive Americans and how the Americans perceive the French, students interrogate stereotypes, biases and differences in values, behaviors and beliefs between the two cultures. The class also examines the misunderstandings that occur as a result of these differences. Students also look within the American culture and within the French culture to evaluate how minorities and marginal groups exist within them. Texts include works by contemporary authors whose different professions (journalist, anthropologist, novelist, etc.) offer different perspectives on the questions of cultural difference. Open only to students enrolled in the Summer Institute in France. Prerequisite: French 307D.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: BA EN: H

L34 French 386 Topics: Paris and New York
Topics in Comparative Literature. Subject matter varies from semester to semester.
Same as L16 Comp Lit 385
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM

L34 French 400 Intensive Translation for Graduate Students I
The first part of a two-semester course sequence in reading and translating French. For graduate students in the humanities, social and natural sciences. Nongraduate students may enroll with permission of the department. Must be followed by French 401.
Credit 3 units. A&S: LA A&S IQ: LCD

L34 French 401 Intensive Translation for Graduate Students II
Continuation of French 400. For graduate students in the humanities, social and natural sciences. Prerequisite: French
credit for French 400 is contingent on completion of French 401. Credit 3 units. A&S: LA A&S IQ: LCD

L34 French 4013 Second Language Acquisition and Technology
This seminar, for undergraduate and graduate students, transforms research and theory about second language acquisition into practice while focusing on technology-driven applications. The course fosters professional development as participants formulate critical skills for evaluating, creating and integrating technology into the language classroom. Course formats include readings, discussions, and demonstrations with technologies. The course is now open to undergraduates. Graduate students can enroll whenever it suits their course planning. The course counts for the Graduate Certificate in Language Instruction and for the undergraduate minor in applied linguistics. This course carries the Social and Behavioral Sciences attribute and can be taken as an elective in several different programs. Same as L12 Educ 4023 Credit 3 units. A&S: SS A&S IQ: SSC EN: H

L34 French 411 Intensive Writing in French
Refinement and expansion of writing skills, mastering of complex grammatical structures and intensive training in the analysis of rhetorical issues are the goals of this course. It focuses on the acquisition of a personal style through creative exercises in composition, including the study of parody, autobiographical forms and short story writing, as well as the practice of formal explication de texte and dissertation. Students complete a series of short papers, each with required revisions. Meets WI requirement. Prerequisite: French 307D, French 308D or equivalent, or permission of instructor. Required for all majors except those who have spent two consecutive semesters in a French-speaking country. Required for master's candidates in French unless waived by director of graduate studies. Credit 3 units. A&S: LA, WI A&S IQ: LCD, LS, WI

L34 French 4131 Advanced French and Translation
Building on the foundation established in the third year, this course aims at an in-depth knowledge of the French language and accuracy in its use. A comparative approach (linguistic and cultural) and systematic exercises are used to attain this goal and assist students in the demanding task of translating, both from English to French and from French to English. This course is mainly devoted to practical training using a wide range of document types, developing strategies of translation and sensitizing students to the problem of cultural transfer. Prerequisites: French 307D and French 308D or French 318D. Writing-intensive. May be taken in place of 411 toward the completion of the French major. Credit 3 units. A&S: LA, WI A&S IQ: LCD, LS, WI EN: H

L34 French 413B Linguistics and Language Learning
The course, taught in English, provides a critical survey of various components involved in the relationship between linguistics and language learning. The course emphasizes the language learner and explores dimensions of second language acquisition. The course begins with an examination of linguistic theories and then highlights the influence of linguistic theories on L2 acquisition research. The course then moves to an exploration of research on language and the brain. With this foundation, the course covers both internal and external factors related to language acquisition, such as language aptitude, age, gender, memory, prior knowledge, etc. In summary, theoretical and research dimensions of both linguistics and language learning are treated. This course counts as a requirement for the Graduate Certificate in Language Instruction and for the undergraduate minor in applied linguistics. Prerequisite: Ling 170 is recommended but not required. Same as L12 Educ 4111 Credit 3 units. A&S: LA A&S IQ: SSC BU: BA EN: S

L34 French 415 The 19th-Century Novel: From Realism to Naturalism to Huysmans
In this seminar we read some of the great realist novels of the 19th century, by the four masters of the genre: Balzac, Stendhal, Flaubert, Zola. We also examine Huysmans’ A Rebours, which was written in reaction to the excesses of Realism. We determine what characterizes the realist novel and how it has evolved from Balzac to Zola. We consider its theoretical orientation, but we also focus on the major themes it addresses: the organization of French society throughout the 19th century, Paris vs. the province, love, money, ambition, dreams, material success, decadence, etc. Prerequisites: French 325 and 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L34 French 416 Renaissance Poetics
An examination of key authors and themes in various genres of the period. Prerequisite: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. Credit 3 units. A&S: TH Art: HUM

L34 French 4161 Special Topics in 19th-Century Literature
Prerequisite: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH Art: HUM

L34 French 417 Poetry and Prose of the Renaissance
During the Renaissance, poetry in France manifested a close relationship to the visual arts, sharing expressive means as well as ends. This course considers the main poetic and philosophical currents of the Renaissance with special emphasis on formal innovation. Poets studied include Clément Marot, Louise Labé, Maurice Scève, Pierre de Ronsard, Joachim Du Bellay, etc. The visual arts, mainly paintings from the 15th to the early 17th century, serve to elucidate poetic images, mythological references and philosophical concepts, and hopefully stimulate reflection on the relationship between the verbal and the visual. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH Art: HUM

L34 French 4171 Travel Abroad in Early Modern Times
This course addresses such questions as national identity; international relations; migration, cultural differences and integration; cultural interactions and influences. It concerns
more specifically the important role humanism played in the spectacular development of vernacular languages and traveling abroad in Early Modern times. It is organized around the following themes: (1) Humanism, nationalism and the growing interest in the vernacular; (2) Humanism and the ongoing project of translation (translatio studii); (3) Humanism and travel abroad; (4) views on foreign cultures and one's own after returning home; (5) "La France" (including at least one session on Lyons and another on Italian artists living in France); and integration and conflicts. Readings include major authors (Rabelais, Montaigne, Marguerite de Navarre, Du Bellay) as well as lesser-known figures (Pasquier, Lery, Thévet), diaries and travelogues. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH

L34 French 4172 Travel in the Renaissance and the Literature of Discovery
Improved modes of transportation under King Francis I facilitated travel in the Renaissance. Men and women were able to view famous cultural monuments on their continent and explore parts of the world where no one had ventured before, returning home with vivid tales of distant lands and exotic peoples. With the advent of the printing press, such fascinating stories were made available to a wider audience. This course examines this literature of discovery, paying special attention to the multiple genres that flourished at the time (historical narratives, diaries, correspondences, travelogues, elegiac poetry, adventure novels) as well as the historical and cultural contexts of these works. Other questions addressed include national identity and cultural differences, cultural interactions and influences, international relations, the impact of humanism, and the concept of curiositas. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L34 French 4173 Renaissance Poetry and Visual Arts
During the Renaissance, poetry in France manifested a close relationship to the visual arts, sharing expressive means as well as ends. This course considers the major poetic and philosophical currents of the Renaissance with special emphasis on formal innovation. Poets studied include Clément Marot, Louise Labé, Maurice Scève, Pierre de Ronsard, Joachim Du Bellay, etc. The visual arts, mainly paintings from the 15th to the early 17th century, serve to elucidate poetic images, mythological references and philosophical concepts, and hopefully stimulate reflection on the relationship between the verbal and the visual. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units.

L34 French 417B Literature of the 16th Century
Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L34 French 4181 Humanism in Crisis: Marguerite de Navarre
The second half of the French 16th century was a time of profound upheaval in politics and religion, as well as of economic and social unrest. The very nature of reason and knowledge, their place and reliability were in serious question. These various "crises" culminated in what is known today as "the collapse of French Humanism." This course focuses on two writers of the mid-century, Marguerite de Navarre and Montaigne, and the solutions that they offered. Special attention is given to the forms of expression adopted by these writers in order to reflect the newly discovered complexity of their world. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH Art: HUM

L34 French 4182 Humanism in Early Modern France: From Rabelais to Montaigne
This course focuses on major aspects of Humanism as exemplified by two of the greatest writers of the 16th century: François Rabelais and Michel de Montaigne. Humanism designates the great intellectual movement of the Renaissance. Initially focused on the recovery of ancient authors and a renewed confidence in man's ability to grasp higher meanings, Humanism became a dynamic cultural program that influenced every aspect of 16th-century intellectual life. As the political and religious turmoil of the Reformation spread, however, Humanist assumptions (the very nature of reason and knowledge, their place and reliability) were in turn questioned. This "crisis" culminated in what is known today as "the collapse of French Humanism." We examine the importance of Humanism by focusing on the themes of education, self-inquiry, religion, gender roles, marriage, travel, health and medicine. We pay special attention to the forms of expression that Rabelais and Montaigne adopt to reflect the newly discovered complexity of their world. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH

L34 French 419 Feminist Literary and Cultural Theory
This course is intended to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisite: advanced course work in WGSS or in literary theory (300-level and above) or permission of the instructor. Same as L77 WGSS 419 Credit 3 units. A&S: TH A&S IQ: HUM

L34 French 4191 The French Islands: From Code Noir to Condé
The French have been dreaming about the tropics ever since transatlantic trade became possible in the 16th century, and literature in French has reflected these dreams ever
since. Closer to our own period, writers from the French Caribbean have written themselves into the French canon, winning prestigious literary prizes. This course links these two phenomena by studying literature from and about the tropics from the 18th century to the present. In our readings, we attempt to see the ways in which the literature from and about France’s island possessions has contributed to the forming of cultural and political relations between France and the islands, but also among the islands and within the Americas. Almost all texts available in English for students not majoring in French; main seminar session taught in English with weekly undergraduate preceptorial in French. Prerequisite: French 325 and French 326. One-hour preceptorial for required for undergraduates. 

Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L34 French 4192 Tragedy and Farce in African Francophone Literature

In 1960, most of the French colonies in Africa gained independence in a largely peaceful transfer of power. Since then, this development has been viewed alternatively as the triumph of self-determination and as a hollow act undermined by neocolonial French ministries, multinational companies and corrupt governments. Reading authors such as Chraibi, Kourouma, Kane, Tansi, and Lopes, we consider the ways that literature enters into dialog with political discourses that seem to call for tragic or farcical portrayal. This course explores the literary construction of nationalistic opposition in colonial Africa and the subsequent disillusionment with its artificiality in tragic or farcical literature from the independence era to the present. Taught in French. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. 

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM EN: H

L34 French 4201 The Novel in the Feminine (Le Roman au feminin)

Informed through feminist criticism (Beauvoir, Cixous, Kristeva), this course examines the deconstruction of the novel as a traditional genre by 20th-century women writers such as Colette, Nathalie Sarraute, Marguerite Duras, Marguerite Yourcenar, Annie Ernaux and Mariama Bâ. We place special emphasis on the representation of the writing woman in the text itself and on the issue of "écriture féminine" in its sociocultural context. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. 

Credit 3 units. A&S: TH Art: HUM

L34 French 4202 Ingenues and Libertines: Writing the Feminine in 19th-Century French Prose

Informed by a close reading of theoretical texts dealing with the paradoxes of "la femme auteur" (the woman author), as Balzac coined it, this seminar explores the many ways of writing the feminine in the margins of 19th-century French fiction. Opposing "dames de cou" (ladies of the court) and "femmes de tête" (women of the mind), we focus on the representation of women as "voeuless de langue" (tongue snatchers) in the works of Mme de Staël, Claire de Duras, George Sand and Marie d’Agoult, among others. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. 

Credit 3 units. A&S: TH Art: HUM

L34 French 4211 The Novel of the 1930s: The Human Condition and the Meaning of Life

Most French novelists of the 1930s were no longer satisfied simply to entertain their readers, to bring formal innovations to their writing, to depict society or to represent human consciousness. Economic transformations, technological advances and the unspeakable horrors of World War I challenged traditional beliefs. Authors therefore dedicated themselves to examining the human condition and the meaning of life. In this seminar we read five major novels of the period by Saint-Exupéry, Mauriac, Malraux, Céline and Sartre. We determine how each author approaches the fundamental questions of human existence and what, if any, answers he provides. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris (or for students who have completed the Paris Business Program, completion of either course). One-hour preceptorial required for undergraduates. 

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM EN: H

L34 French 4221 19th- and 20th-Century French Novel

Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. 

Credit 3 units. A&S: TH Art: HUM

L34 French 423 Contemporary Theater

Readings, analysis and discussion of French theater from Sartre to the present. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. 

Credit 3 units. A&S: TH Art: HUM
L34 French 4231 Visualizing 19th-Century Poetry
At the very end of the 19th century and the beginning of the 20th, Mallarmé and Apollinaire begin to compose seemingly original works that create a host of simultaneous and different meanings through a heightened use of what can be called the “concrete aspects” of the texts themselves: their layout on the page; the imagery they present; even the shape of the particular words and stanzas they employ. But a close reading of earlier 19th-century literature (mostly poetry) composed by various Romantic, Parnassian and Symbolist authors (Victor Hugo, Théophile Gautier, Mari Krysinska, Marceline Desbordes-Valmore, Charles Baudelaire, Arthur Rimbaud and Paul Verlaine) reveals that experimentation in the visualization (as opposed to “mere” reading or writing) of a literary work was already under way. The latter coincided with the evolution of sculpture, photography and, later on, cinema. This course is designed to introduce students to both the production and reception of such works, and to examine their multiple historical and aesthetic causes and effects. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for required for undergraduates. Credit 3 units. A&S: TH & S IQ: HUM, LCD Art: HUM EN: H

L34 French 424 19th- and 20th-Century Poetry
Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for required for undergraduates. Credit 3 units. A&S: TH & S IQ: HUM, LCD EN: H

L34 French 425 19th-Century Poetry
Reading and analysis of poetry of the three major 19th-century schools: romantic, parnassian, symbolist. Emphasis on textual explication. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH & S IQ: HUM, LCD Art: HUM

L34 French 426 Avant-Garde Poetry of the 20th Century
Study of French avant-garde poetic movement of the early 20th century, with emphasis on Futurism, Cubism, Dadaism and Surrealism. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH Art: HUM

L34 French 427 Literature of the 17th Century
Undergraduates only register for this section. Prerequisite: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L34 French 4271 French Classical Theater
A study of works by Corneille, Molière and Racine. We consider how the theater contributes to the rise of absolutism in France in the 17th century. The depiction of kings and the role of primogeniture; the function of sacrifice; the marginalization of women; the glorification of Ancient Rome; Orientalism; tensions between family and state; and the rise of the bourgeoisie in these plays suggest how the dramas played out on stage mirror the historic spectacle of the court over the course of the century as it develops an increasingly centralized authority culminating in the image of an all-powerful Louis XIV. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L34 French 4281 Order in the Court: Classical Struggles During the Reign of Louis XIV
Beginning with a study of Versailles, we examine the spectacular dimensions of artistic production under Louis XIV, including architecture, visual arts and landscapes, in addition to literature. The recent historical novel L’allée du Roi, which details the romance between the king and his mistress and then second wife Mme. de Maintenon, and the Memoires de Saint-Simon help to set the stage for us to appreciate the intrigues at court. Situating the king at the head of a hierarchical and orderly court structure, we examine some of the less harmonious elements of court-dominated life offered in representations by Corneille (Surenna), Molière (Les Femmes Savantes), Racine (Mithridate, Phedre), La Rochefoucauld, La Bruyère, La Fontaine, Mme. de Sévigné. Pascal. We consider the ways in which the court assures its power through primogeniture, the right of the eldest born son to inherit power, as well as through strict codes of etiquette and the generosity of the crown to its loyal and productive followers. We examine how these factors are insufficient to protect the monarchy against the contravening forces of political ambition, family struggles, the emerging role of women, religious faith and the devastating effects of war and disease. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. Credit 3 units. A&S: TH

L34 French 431 Literature of the 18th Century
Prerequisite: French 325 or 326. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L34 French 4311 Voices of Dissent: Enlightenment Principle and Social Protest
The 18th century saw a rise in overtly moralizing texts, on the one hand, and unapologetically immoralist philosophies on the other. We focus on texts that avoid these extremes, allowing multiple voices to be heard. With the aid of excerpts from Genette, Bakhtine, Todorov and Barthes, we identify the voices of dissent in several 18th-century genres, including satire, the tale, the novella, the philosophical dialogue, theater, autobiography and the epistolary novel. By reading authors such as Voltaire, Montesquieu, Prévost, Diderot, Cazotte, Rousseau, Beaumarchais and Charrrière, students come to appreciate a third tendency in 18th-century texts that is crucial to our understanding of the Enlightenment: the tendency to validate conflicting perspectives. We consider whether a moral can be derived from a text that consistently questions the voice of authority. We analyze the implications of such questioning in the years before the Revolution. Finally, we consider the extent to which the overzealous censorship laws of the period may have obliged authors to couch socially controversial ideas in narrative
forms that seem to deny their own assertions. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One hour preceptorial required for undergraduates.
Credit 3 units. A&S: TH

L34 French 4321 Art, Revolution and Society
This course examines major 18th-century aesthetic treatises and literary texts that explore solutions for aesthetic quandaries. Authors include d’Alembert ("Preface a l’Encyclopédie"), Rousseau ("Discours sur les Sciences et les Arts, Lettre a d’Alembert"), Diderot ("Entretiens sur le Fils Naturel", Le Paradoxe du Comedien, Le Neveu de Rameau"), Cazotte ("Le Diable Amoureux"), Beaumarchais ("Le Barbier de Seville, Le Mariage de Figaro"), Staeli ("De la Litterature, Corinne"). These works allow us to study some of the major insights into the aesthetics of music, painting and the performing arts with an eye to how these aesthetic "revolutions" expanded the scope and influenced the form of the French language and literary texts. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L34 French 4331 Women of Letters
We investigate the representation of women in 18th-century texts. Why did the novel and epistolary fiction become so closely associated with women as writers, heroines and readers in the course of the century? Why were women considered exemplary and yet, at the same time, a threat? The 18th century saw the rise of the salons led by women well-versed in philosophy, literature, art and politics. It saw the reinforcement of the opposition between the public and the private sphere. Woman was the incarnation of the ideal of liberty and yet excluded from the "rights of man." Rousseau praised women’s role as nurturers and peacemakers but cast into doubt their capacity for genius. Literary texts that feature women became a sparring ground for two of the century’s major literary trends: Sensibilité and Libertinage, for a woman’s sensitivity was thought to contain the seeds of virtue and licentiousness. We investigate philosophical discourses on the senses and emotions and political discourses on republican responsibility. We read these texts in conjunction with the literary works of men and women authors, including Prevoix, Marivaux, Graffigny, Riccoboni, Diderot, Rousseau, Chariere, Lactose, Sade and Staeli. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One hour preceptorial required for undergraduates.
Credit 3 units. A&S: TH Art: HUM

L34 French 4341 Enlightenment Energy: Comedy, Eroticism and the Grotesque
In this course we examine works in which the comic, the erotic and the grotesque — base urges that 18th-century audiences deplored yet found entertaining — made inroads into the literature of the time. The Enlightenment was highly suspicious of impulses and intuitions that challenged or escaped the bounds of virtue, sentiment and reason. French philosophers debated whether genius lay in the supreme mastery or the spontaneous creation of art, whether talent was inborn or could be acquired through practice. Reading texts that span the long 18th century, by authors such as Moliere, Marivaux, Crebillon fils, Voltaire, Diderot, Restif de la Bretonne, Beaumarchais, Sade and Hugo, we investigate how the satirical, the bawdy and the profane served as the wellspring of Enlightenment inspiration, giving rise to visions of an ideal society. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S: TH

L34 French 4351 Philosophical Fictions
The French Enlightenment witnessed a veritable explosion of short fiction, including philosophical, oriental, moral and libertine tales bearing such self-conscious titles as A Thousand and One Follies and This Is Not a Tale. Though written by the literary elite and not considered children's literature, the genre enjoyed widespread popular appeal and had the power to shape mentalities. Often satirical in tone, these tales served to convey and question contemporary political, philosophical, scientific, religious and moral trends. They inspired some of the most vivid illustrations of the day and were often circulated as part of the literary underground. We read works by Crebillon fils, Voltaire, Diderot, Cazotte, Charriere, Sade and Stael alongside excerpts from French cultural history on 18th-century mentalities, salons and print culture. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L34 French 436 Romanticism
This course studies pre-Romantic themes in the works of Madame de Staël and Chateaubriand and of their evolution in the poems of Lamartine, Musset and Vigny, the theater of Victor Hugo, and the novels of George Sand and Victor Hugo. Emphasis is placed on the emergence of a "littérature du moi" (literature of the self), the redefinition of the place of the artist in society after "la bataille romantique," and the stylistic innovations that lead to "modernism." Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S: TH Art: HUM

L34 French 4391 Classicism/A-Classicism
Among the hallmarks of 17th century, French classicism celebrated reason, order, balance and a power often associated with the great achievements of Ancient Greece and Rome. Reason, however, coexisted with dreams and madness; order encountered threats both political and sexual; disharmony persisted despite longings for justice; and depictions of Antiquity flourished alongside those of the Orient, the exotic other world of the East. The course explores these "a-classicisms," or countervailing forces, by studying the challenges that ground the struggles and seductions in dramas by Corneille, Molière and Racine as well as in the novels of Madame de Lafayette. We read Graffigny’s Lettres d'une Peruvienne, Prévoix’s Manon Lescaut, Laclos’ Liaisons Dangereuses to understand classicism retrospectively, through the "a-classicism" of the 18th century's treatment of identity, alienation, desire and societal tensions. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S: TH
L34 French 4392 Commemorating the King
The court of Louis XIV at Versailles was remarkable for its grandeur, its consolidation of power and its celebration of the Sun King. Arguably, all aspects of court life were regulated by the crown and all things produced — whether wars or monuments; art or science; novels or histories — were tributes to the king. All reflected a certain "ideology of commemoration," that is, an implicit or explicit validation of the monarch's privilege and prestige, both for his contemporaries and for posterity. We explore how authors (including Louis XIV, La Bruyère, La Rochefoucauld, Perrault, La Fontaine), artists (Lebrun, Rigaud, Poussin, Félibien) and historiographers/memorialists (Racine, Saint Simon) support the ambitions of the crown through their works. Modern critics Elias, Marin, Burke and Merlin guide our research into the activities of the royal family, the ideology of absolutism and the role of art in affirming the power of Versailles as we continue to memorialize it through surviving texts, monuments and images. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM

L34 French 440 Parnassian and Symbolist Literature
This course offers an examination of key writers and texts of the Parnassian and Symbolist schools of the 19th century. Readings include poetry, drama and prose. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM

L34 French 441 From Symbolism to Surrealism
This course presents a survey of major French dramatic works from the late 1800s to the mid-20th century, including both innovative plays and theoretical treatises by celebrated writers such as Maeterlinck, Villiers de l’Isle-Adam, Jarry, Apollinaire, Breton, Vitrac and Artaud. It examines how in running contrary to other important movements of their general time period (e.g., Romanticism, Realism, Naturalism) these works constitute major examples of what will come to be widely known as Modernism. Attention will also be paid to the ways in which these types of plays gave rise to later forms of theater, like those found in Existentialism and the Théâtre de l’Absurde. Prerequisite: French 325 or Fr 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM

L34 French 443 Contemporary Francophone Literature
A general survey of Francophone literature. This course examines representative texts of Quebec, "Acadia," Africa, and West Indies. Authors to include Antoine Maillet, Louis Hémon, Michel Tremblay, Gérard Leblanc, Anne Hébert, Maryse Condé, along with the influential poets of "négritude," Senghor and Césaire. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD A&S IQ: HUM A&S: TH

L34 French 444 Modern Francophone Poetry
The first half of this course consists of close readings of the founders of Négritude: Césaire, Senghor and Damas. While the political and historical impact of these poets is discussed in some depth, we analyze their poetry primarily in terms of its aesthetic value and concerns. We study American influences such as jazz and the poetry of the Harlem Renaissance along with French influences. The second half of this course focuses on the contemporary poetic scene in Africa and the Caribbean. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH Art: HUM

L34 French 447 The Medieval Literary Arts
How do medieval French writers understand the structures and functions of the human body? What kinds of bodies are considered disabled? Are womanhood, childhood and old age construed as disabilities? In this course we read texts of varied genre — fables, saints’ lives, fabliaux, poems, romances, journals and chronicles — as we consider how, if at all, disability exists as a social or literary construct in the Middle Ages. Texts include Philippe de Beaumanoir’s Manékinke, Courtetbarbe’s Trois Aveugles de Compiègne, Guillaume de Machaut’s Voir Dit and the farce Le Garçon et l’Aveugle; excerpts from Jean de Meun’s Roman de la Rose, from the Ovide Moralisé and from Christine de Pizan’s Mutacion de Fortune; and poems by Rutebeuf, Deschamps and Molinet, as well as critical and theoretical texts from the emerging discipline of disability studies. Texts are available in modern French; no prior study of Old French language is necessary. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L34 French 448 From Arthur to the Grail
Conducted in English. A broad survey of the Arthurian legend: its origins; its elaboration in French, English and other medieval literatures; and its expression in modern literature (especially English and American) and in the visual arts, film and music. All readings available in English. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH Art: HUM BU: HUM

L34 French 450 Women and the Medieval French Literary Tradition
The Middle Ages constitute a beginning — a period when new languages and literatures came into being, along with Romanesque book — illumination and stained glass, Gothic cathedrals, Gregorian chant, Troubadour song, Crusades for the Holy Land and quests for the Holy Grail. Medieval French Literature is therefore a new literature, defining itself against antique models and its own rich multilingual, highly visual and oral culture. This course provides an overview of this diverse and fascinating French literary tradition while focusing on the status of women in the literary production of the Middle Ages. Particular attention is given to women’s role in the creation of texts as authors and patrons. We also examine how gender roles are constructed and challenged through the literary representation of female characters. Readings include examples from major genres: Marie de France’s Lais, Chrétien de Troyes’ Lancelot, Rutebeuf’s Vie de Sainte Elysabel, the anonymous Aucassin et Nicolette, as well as Fabliaux, poetry of the Trouvères and...
Trobaritz, excerpts of the Roman de la Rose, and works by Christine de Pizan. All readings and discussions are in modern French. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH Art: HUM

L34 French 451 French Literature of the Middle Ages I
French literature from the beginning to 1250. The course emphasizes chansons de geste, courtly romance and lyric, and early drama. Most works read in modern French. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L34 French 452 French Literature of the Middle Ages II: I, Object
In this seminar we will explore the significance of objects and objectification in medieval French literature. What happens when people are treated as “love objects” in lyric poetry, or when inanimate objects take on human properties in comical or allegorical texts? How do the “transactions” of fictional wills and legacies bind one human subject to another? We will approach these questions through a number of theoretical perspectives, including psychoanalytic, poststructuralist, posthuman, and thing theory. Texts include poems of the troubadours and trouvères, fabliaux, the Roman de la Rose, René d’Anjou’s Livre du cuer d’amours espris, and Villon’s Testament. Texts will be read in modern French; no prior study of Old French language is necessary. Prerequisite: French 325 or 326 or the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L34 French 453 History of the French Language
Study of phonetic and morphological evolution of the French language with side glances at historical events that shaped this development. No previous knowledge of Latin necessary. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: LA

L34 French 456 Romance Philology
Study of the evolution of the major Romance languages from their common Latin origins. Knowledge of classical Latin not required, but acquaintance with phonetics of at least one Romance language extremely helpful. Conducted in English. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: LA

L34 French 4581 Sacrifice and Service: Masculinity and the Medieval French Literary Tradition
The Middle Ages constitute a beginning: a period when new languages and literatures — along with Gothic cathedrals, Troubadour song, Romanesque art, Crusades for the Holy Land and quests for the Holy Grail — come into being. By focusing on the notion of service, we study how medieval society establishes a hierarchy of power that encompasses religious, feudal, and courtly relationships. Particular attention is given to the construction and testing of gender roles. What are men and women asked to sacrifice? Whom and what are they supposed to serve? How do the concepts of honor and heroism motivate the service of knights and heroines to their king and God? Texts include: La Chanson de Roland, La Quete du Saint-Graal, La Vie de Saint Alexixs, Le Jeu d’Adam, Béroul’s and Thomas’ versions of Le Roman de Tristan, Chrétien de Troyes’ Le Chevalier au Lion ou Yvain, Rutebeuf’s Miracle de Théophile and Christine de Pizan’s famous poem on Jeanne d’Arc. All readings in modern French. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH

L34 French 459 Writing North Africa
This seminar studies French travel writing related to North Africa, as well as the major works of literature from and about Algeria, Morocco and Tunisia, as a prelude for reading the texts of those countries’ Francophone literature now considered canonical. We consider how colonial-era writing by authors such as Eugène Fromentin and Pierre Benoît defines the colonial "exotic." We then examine the way the former empire wrote its own literature in the language of the former colonizer, in the works of post-independence authors such as Kateb Yacine, Assia Djebar and Abdelkebir Khatibi, who both observe and revise the conventions of postcolonial literature. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L34 French 460 Topics in European History IV
A detailed look at the contributions of major French theorists such as Beauvoir, Cixous, Irigaray, Kristeva and the interpretation of French feminism in America. We study French feminist theory with an eye to psychoanalysis; maternity as metaphor and experience; women and language and/or
Marxist-feminist theory; and aesthetics. Conducted in French. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. Credit 3 units. A&S: TH

L34 French 461 Topics in French Literature and History
How genre affects both the production of a given literary text and its perception by the reader. Representative texts from different centuries and movements. Prerequisites: French 325C and 326C (or, for students who have completed the Paris Business Program, completion of either course). One-hour preceptorial for undergraduates only. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM EN: H

L34 French 466 Second Language Acquisition
There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first and second language acquisition; the role of linguistic, cognitive, and sociocultural factors; insights gained from analyzing learners’ errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second language acquisition; and a critical appraisal of different theories of second language acquisition. Both theoretical and instructional implications of second language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required. Same as L44 Ling 466 Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L34 French 469 Reading and Writing in a Second Language
In the past decade the process of becoming literate in a second language has received considerable attention by researchers and instructors. This course, taught in English, extends issues in L2 literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include: individual learner differences; the extent to which reading and writing are interrelated; text types and literary forms; literacy and social power; and universal cognitive operations. Students discuss how to bridge research and practice, and they create activities that are included in a reading and writing portfolio. Course counts toward the Graduate Certificate in Language Instruction. Credit 3 units. A&S: LA A&S IQ: LCD

L34 French 470 Suffering and Self-Expression in Early Modern French Literature
How did early modern people cope with disease, suffering and death? With the advancement of medical science, in particular with Ambroise Paré, who saw it as his mission to ease his patients’ pain, a new sensitivity toward man’s suffering began to develop. Working within the historical and scientific context of the time, this course examines old and emerging attitudes toward man’s suffering with special emphasis on the relationship between suffering and artistic expression. Topics discussed include: suffering as part of the human condition; suffering and faith; suffering and early modern medicine; medicine and religion; gendered views of illness; disease/suffering as a vehicle of relief and self-expression; literary treatment of suffering and disease, including melancholia, depression, suicide, kidney stone, mourning, aging, etc.; images of the ailing body and the ailing mind in early modern texts; disease as a theme and a metaphor. Various genres are covered (fiction, poetry, drama, essay, travelogue). Authors likely include Maurice Scève, Hélisene de Crenne, Louise Labé, Joachim Du Bellay, Pierre de Ronsard, Marguerite de Navarre, Jean-Baptiste Chassignet, Gabrielle de Coignard and Michel de Montaigne. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates only. Credit 3 units. Art: HUM

L34 French 481 Sartre and Existentialism
This course studies French existentialism in light of recent intellectual developments, especially postmodernism; detailed study of Sartre’s major literary and critical works. Conducted in French, nonmajors may do written work in English. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH Art: HUM

L34 French 482 Avant-Garde, Postmodern and Modernity
We study the history and evolution of an avant-garde in French literature, possible definitions of the postmodern, description of the different areas of modernity. Readings both theoretical and literary. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH Art: HUM

L34 French 483 Gender and Genre
A sampling of the diverse contributions made by French women to literary history, this course examines what prompted women to write in the 16th century: what they wrote about; which genres they chose; how these women were viewed by their contemporaries; etc. Prerequisites: French 325 or 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH, SD A&S IQ: HUM, LCD, SD Art: HUM

L34 French 492 Contemporary French Literary Criticism
The first half of the course deals with works of Roland Barthes; the second examines relationship of philosophy to literature and explores how the ideas of Foucault, Lacan, Derrida, Deleuze, Girard and Baudrillard can be applied to the study of literary texts. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH Art: HUM
L34 French 493 Selected French Writers
Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S: TH Art: HUM

L34 French 495 Honors
To be considered for graduation with Honors, students must: (1) participate satisfactorily in two 400-level literature courses and (2) enroll in French 495 and submit an Honors Thesis approved by the department at least two months before graduation. Prerequisite: 3.0 grade point average. Qualified students should consult the department. Credit 3 units. A&S: TH

L34 French 4951 Honors
To be considered for graduation with Honors, students must: (1) participate satisfactorily in two 400-level literature courses and (2) enroll in French 495 and submit an Honors Thesis approved by the department at least two months before graduation. Prerequisite: 3.0 grade point average. Qualified students should consult the department. Pass/fail. Credit 3 units. A&S: TH EN: H

Germanic Languages and Literatures
Germanic Languages and Literatures offers a diverse and challenging program of study in the language, literature and culture of the German-speaking countries. In this program, students study the German language intensively and explore German literature and culture from the Middle Ages to the present. They also have the opportunity to learn business German and to study contemporary Germany.

Beginning students are taught German through a combination of main classes and subsections and rapidly acquire speaking skills through intensive interactive classroom activities. Intermediate German combines a three-hour main class with a subsection to enable students to work steadily on speaking, writing, listening and reading skills. Advanced language courses help students to polish their basic German and to improve their facility to use complicated grammatical structures and to express complex ideas orally and in writing.

In Washington University’s German program, students take courses from internationally recognized faculty members who are leaders in their fields and who have been recognized for their expertise in undergraduate teaching. Faculty areas of interest include literature and history, film, prose narrative, gender studies, philosophy, the history of German cultural institutions, the history of literary genres, literature before 1700, contemporary literature, and German-Jewish literature. All German classes are small, thus facilitating lively faculty-student interaction. Our collection of contemporary German literature, housed in Olin Library, is the largest in North America and attracts many visiting scholars to our campus.

Students of German can choose among several study abroad programs, and they can take advantage of an array of co-curricular activities including film series, the German honorary society Delta Phi Alpha, lectures by guest speakers, and readings by visiting authors. Many German students also elect to assist with the annual German Day for high school students from Missouri and Illinois and thus to transmit their interest in German to the next generation of students.

A degree in German prepares students for graduate study in German language, literature and culture; language education; comparative literature; and linguistics. Students also may choose to combine a degree in German with another major in the college and upon graduation to pursue graduate degrees in, for example, art history, business, environmental studies, international and area studies, law or medicine. In addition to careers in academia, our graduates have pursued careers in diverse fields, including international banking, diplomacy, publishing and law.

Majors
The Major in Germanic Languages and Literatures
Total units required: 24

Required courses:
German 340C or German 341 and the Senior Assessment (undertaken in conjunction with a 400-level seminar) are required of all majors. German 340C or German 341 is required for admission to all 400-level courses except German 401, German 404 and German 408D. Admission to 400-level courses (except German 401, German 404 and German 408D) without completion of German 340C or German 341 is by departmental permission only.

Elective courses:
Students interested in studying German may declare German as their major or second major. Majors or second majors are required to complete 24 credit hours of upper-level courses (300 and 400), at least 12 of which are on the 400 level. If students begin German at Washington University and follow the regular sequence of courses (German 101D–German 102D–German 210D), they will be ready to begin the German major after three semesters. With
the exception of German 340C or German 341, only courses taught in German will count toward the major. Students who wish to receive Honors in German will write an honors thesis and must sign up for German 497/498 (with departmental permission) in addition to the 24 hours required for the major (for a total of 30 credit hours). All majors and second majors are required in their senior year to participate in the senior assessment interview.

Applications for admission to the honors program must be submitted by the first week of classes in the fall semester of the senior year. Forms are available from Cecily Stewart Hawksworth (cecilyhawksworth@wustl.edu) (Ridgley Hall, Room 324).

Please Note: For both majors and minors, at least half of the courses on the 300-level and above must have been acquired either in residence at Washington University or in overseas programs affiliated with Washington University.

Additional Information

Study Abroad: German majors or minors are encouraged to participate in one of the overseas study programs. The German department sponsors a semester and a year abroad at the University of Tübingen, Germany. To participate in the Tübingen program, students must complete German 301D (for the semester program) and German 302D (for the year program) or the equivalent by the time the program begins. Upon returning to campus, German majors are required to take at least one 400-level course (other than German 497–German 498) during their senior year.

Washington University sponsors an eight-week summer program in Göttingen, Germany. Students who have taken at least one semester of German may be eligible for this intensive language program. Especially if students are interested in business, the department encourages them to apply for the Webster University International Business Internship or for the business internship in Koblenz, Germany, arranged by Washington University’s Olin Business School.

Senior Thesis in German, Departmental Distinction in German, and Latin Honors in German: Students who wish to be eligible for Distinction in German must write a senior thesis in German in their final year at Washington University. Students receiving Distinction in German may additionally qualify for Latin Honors in German. The student chooses a thesis topic with the help of a faculty thesis adviser from the department. Upon acceptance of the thesis proposal (normally in the fall of the senior year), the student registers for the German 497–498 sequence. The student presents the senior thesis to the thesis adviser and a second reader approximately six weeks before the conclusion of the final semester at the university.

Minors

The Minor in Germanic Languages and Literatures

Units required: 15

Required courses: Students who intend to minor in German must complete 15 upper-level credit courses taken in German (300- and 400-level). With the exception of German 340C or German 341, only courses taught in German will count toward the major. At least 3 of these units must be at the 400 level.

Please Note: For both majors and minors, at least half of the courses at the 300 level and above must have been acquired either in residence at Washington University or in overseas programs affiliated with Washington University.

Additional Information

We strongly encourage minors to take German 340C German Literature and the Modern Era (with discussion section) or German 341 German Thought and the Modern Era (with discussion section) because either course serves as a prerequisite for all 400-level courses except German 401, German 404 and German 408D. Any credits obtained at the 300 or 400 level during the summer institute program in Göttingen may count toward the minor.

Courses

L21 German 100D Continuing German for Students with High School German

Builds on students’ previous knowledge of German language and culture, reviewing and reinforcing the four language skills of listening, speaking, reading and writing in cultural contexts with special emphasis on communicative competence. In addition to the regular class meetings, students sign up after the semester begins for a once-weekly subsection (time to be arranged). Prerequisites: placement by examination and at least two years of high school German, or permission of instructor. Students who complete this course successfully may enter German 102D or 290D.

Credit 3 units. A&S: LA BU: HUM, IS

L21 German 101D Basic German: Core Course I

Introductory program; no previous German required. Students develop their competence in listening, speaking, reading and writing German by means of interpersonal, interpretive and presentational communicative practice. This first course serves as an introduction to German grammar and culture; goals range from developing the communicative skills necessary to find an apartment to being able to read modern German poetry. Students learn how to apply their knowledge of basic cases and tenses in order to hold a conversation or write a letter describing their interests, family, goals, routines, etc. and to discover personal information about others. In addition to the regular class
meetings, students should sign up for a twice-weekly subsection. Students who complete this course successfully should enter German 102D. Credit 5 units. A&S: LA & S IQ: LCD, LS BU: HUM, IS

L21 German 102D Basic German: Core Course II
Continuation of German 100D or 101D. In preparation for more advanced academic study in German, this second course further introduces students to fundamental German grammar, culture and history. It comprises a combination of situational lessons and tasks that challenge students' critical thinking abilities. Students in German 102 familiarize themselves with the language necessary to understand and give directions, apply for a job and speak with a doctor; students also read more advanced content such as Grimm's fairy tales and a text from Franz Kafka. In addition to the regular class meetings, students sign up after the semester begins for a twice-weekly subsection. Prerequisite: German 100D, 101D, the equivalent, or placement by examination. Students who complete this course successfully should enter German 210D. Credit 5 units. A&S: LA & A IQ: LCD, LS BU: HUM, IS

L21 German 111D Elementary German I
Development of speaking, listening, reading and writing skills. Exposure to cultural topics. Laboratory work included. Offered during Summer School only. Credit 4 units. A&S: LA A & IQ: LCD BU: IS

L21 German 112D Elementary German II
Continuation of Elementary German I. Further development of all skills. Exposure to cultural topics and to fiction and nonfiction texts. Laboratory work included. Prerequisite: German 111D or equivalent. Offered during Summer School only. Credit 4 units. A&S: LA A & IQ: LCD BU: IS

L21 German 210D Intermediate German: Core Course III
Continuation of German 102D. Reading and discussion in German of short literary and nonliterary texts combined with an intensive grammar review. Further development of writing skills. In addition to the regular class meetings, students sign up after the semester begins for a subsection (time to be arranged). Prerequisite: German 102D or equivalent, or placement by examination. Students who complete this course successfully should enter German 301D or 313. Credit 4 units. A&S: LA A & IQ: LCD, LS BU: HUM, IS

L21 German 240 Mad Science? The Ethics of Knowledge, Technology and Knowledge in the German World
This interdisciplinary lecture course explores the long pursuit of ethical questions concerning science, technology and medicine in the German-speaking world. Beginning with the medieval period and extending into the present, the class examines a range of texts in order to track the transition from pre-Enlightenment notions of the human to the modern concept of the reasoning subject, from the embrace of technology in the 19th century to its murderous implementation under fascism in the 20th, from post-war debates about human nature to 21st-century debates about bioethics — asking how a culture that once espoused reason, knowledge and technology as forces that could direct our inner and outer nature devolved in the early 20th century into myth, irrationalism and genocide, and how in the aftermath of the Nazi period, German culture continues to wrestle with the quandaries of scientific and technological advancement in ways that raise more universal questions about the ethics of progress. Led by a faculty member from the German department with regular guest lectures by faculty from across the disciplines, including literature, history, the arts, medicine and philosophy. In conjunction with the lectures, students read literary, critical and historical writings that address the broader topics of the course. Possible session topics include: Medieval Concepts of Race; the Science of Witchcraft; Early Modern Midwifery; Nietzsche Reads Darwin; the Birth of Science as a Discipline; Making the Forensic Case for Ritual Murder; Sex in Vienna; Nazi Medicine Then and Now; Machine Monsters of the Modern Age; Body Worlds and Contemporary Bioethics. Twice-weekly lecture with one one-hour discussion section. Lectures, readings and discussions in English. Open to freshmen. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L21 German 299 An Internship for Liberal Arts Students
An Internship for Liberal Arts Students: A course for students participating in a preapproved internship program. Students work together with a faculty adviser to determine the exact nature and scope of the work to be undertaken to receive German credit. All credit is subject to the approval of the department. Credit 1 unit.

L21 German 301D Advanced German: Core Course IV
Discussion of literary and nonliterary texts combined with an intensive grammar review. Systematic introduction to the expressive functions of German with an emphasis on spoken and written communication. In addition to the regular class meetings, students should sign up for a twice-weekly subsection. Prerequisite: German 210D, the equivalent or placement by examination. Students who complete this course successfully should enter German 302D. Credit 4 units. A&S: LA A & IQ: LCD, LS BU: HUM, IS

L21 German 302D Advanced German: Core Course V
Continuation of German 301D. Refinement and expansion of German communication skills (speaking, listening, writing, reading), deepening understanding of German grammatical structures, acquisition of more sophisticated and varied vocabulary, introduction to stylistics through discussion and analysis of literary and nonliterary texts. In addition to the regular class meetings, students should sign up for a twice-weekly subsection. Prerequisite: German 301D or equivalent or placement by examination. Students completing this course successfully may enter the 400 level. Credit 4 units. A&S: LA A & IQ: LCD, LS BU: HUM, IS

L21 German 313 Conversational German
Practice in speaking and vocabulary development in cultural contexts. Prerequisite: German 210D or equivalent, or placement by examination. Two hours a week. May be repeated for credit. Credit 1 unit. A&S: LA & S IQ: LCD BU: IS EN: H

L21 German 314A The Legend of King Arthur in the Middle Ages
This course examines the medieval tradition of King Arthur that arose in northern Europe from the "dark ages" to the invention of printing. The objective of this course is to achieve a thematic, historical and structural insight into some of the best examples of medieval storytelling and understand why they continue to cast a
spell over readers today. You may want to try your own hand at Arthurian storytelling after you have learned the building blocks. The course also lays a foundation for the study of premodern literature, the medieval and early modern world, and the national cultures of France, Germany and Britain.

Same as L93 IPH 313A

L21 German 328 Topics in German Studies
This course explores the major developments of German cinema throughout the 20th century. More specifically, this course engages with issues relating to German film cultures negotiation of popular filmmaking and art cinema, of Hollywood conventions and European avant-garde sensibilities. Topics include the political functions of German film during the Weimar, the Nazi, the postwar and the postwall eras; the influence of American mass culture on German film; the role of German émigrés in the classical Hollywood studio system; and the place of German cinema in present-day Europe and in our contemporary age of globalization. Special attention is given to the role of German cinema in building and questioning national identity, to the ways in which German feature films over the past 100 years have used or challenged mainstream conventions to recall the national past and envision alternative futures. Films by directors such as Murnau, Lang, Fassbinder, Herzog, Tykwer and many others. All readings and discussions in English. May not be taken for German major or minor credit. Required screenings.
Same as L53 Film 328
Credit 3 units. A&S: TH BU: IS EN: H

L21 German 329 Topics in German Literature I
Content variable.
Same as L16 Comp Lit 393

L21 German 331 Topics in Holocaust Studies
Content variable.

L21 German 334C Masterpieces of Modern German Literature in Translation
Content variable.
Credit 3 units. A&S: TH Art: HUM BU: IS

L21 German 340C German Literature and the Modern Era
Introduction in English to German writers from 1750 to the present. Discussion focuses on questions such as the role of outsiders in society, the human psyche, technology, war, gender, the individual and mass culture, and modern and postmodern sensibilities as they are posed in predominantly literary texts and in relation to the changing political and cultural faces of Germany over the past 250 years. Readings include works in translation by some of the most influential figures of the German tradition, such as Goethe, Nietzsche, Freud, Kafka, Thomas Mann, Brecht and Christa Wolf. Open to first-year students, nonmajors and majors. Required for admission to 400-level courses (except German 404 and 408D). Qualifies for major or minor credit when taken in conjunction with a one-hour discussion section in German. The discussion section provides an introduction to critical German vocabulary and is open to students with prior knowledge of German (German 210D or equivalent or placement by examination).
Credit variable, maximum 4 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: ETH, IS

L21 German 341 German Thought and the Modern Era
In this introduction to the intellectual history of the German-speaking world from roughly 1750 to the present, we read English translations of works by some of the most influential figures in the German tradition, including Kant, Hegel, Marx, Nietzsche, Freud, Adorno, Heidegger, Arendt, Habermas and others. Our discussions focus on topics such as secularization, what it means to be modern, the possibility of progress, the role of art and culture in social life, the critique of mass society, and the interpretation of the Nazi past. We consider the arguments of these thinkers both on their own terms and against the backdrop of the historical contexts in which they were written. Open to first-year students, non-majors and majors. Admission to 400-level courses (except 401, 404 and 408D) is contingent on completion of this course or German 340C. Qualifies for major or minor credit when taken in conjunction with one-hour discussion section in German. The discussion section provides introduction to critical German vocabulary and is open to students with prior knowledge of German (German 210D or equivalent, or placement by examination). Credit 3 or 4 units. Credit variable, maximum 4 units. A&S: TH A&S IQ: HUM BU: ETH EN: H

L21 German 401 Advanced German Core Course VI
Designed to foster advanced proficiency in German through analysis and discussion of a wide variety of high-level texts and through practice in advanced composition. Discussions and papers focus on questions of style, rhetoric and cultural specificity and on developing expertise in textual interpretation. Additional emphasis on problems of advanced German grammar encountered by English speakers and on subtleties of style and idiomatic expression in spoken and written German. Prerequisite: German 302D or the equivalent or permission of instructor.
Credit 3 units. A&S: LA A&S IQ: LCD, LS

L21 German 402 Advanced Grammar and Style Lab
Take your German skills to the next level! This 1-unit lab is designed for advanced students seeking to master the finer points of German grammar and style through targeted exercises and discussion. Students learn to construct sophisticated, elegant and accurate sentences, with the goal of improving their effectiveness as writers and speakers of German. A rotating weekly focus covers such topics as: complex sentence structures; advanced passive and subjunctive forms; idiomatic prepositional and verb phrases; and infinitive constructions. Prerequisite: German 302 or the equivalent. 1 unit; 1.5 hours, 1x weekly.
Credit 1 unit. A&S: LA

L21 German 4031 Lectures on German Literature and Culture
Four lectures in German on German literature and culture by a distinguished visiting professor. Students present class notes in German and write four one-page reaction papers (in German; to be revised) as well as a final three- to five-page reaction paper (in German). Attendance is required for those taking the course for credit. Credit/no credit only.
Credit 1 unit. A&S: TH A&S IQ: HUM, LCD Art: HUM
L21 German 408D German as a Language of Business
This course introduces students to concepts and issues relevant to German business and economics and helps them to develop the language skills necessary to succeed in the German business world. We concentrate on the basic elements of the German economic system, looking at Germany as a site of production and exchange, the legal structure of German firms, the relations between labor and management, and strategies for product development and marketing in national and international contexts. Students also are introduced to specific German business practices, including forms of communication, management styles and general corporate culture. Students learn business vocabulary, writing skills for business correspondence, oral presentation techniques, and reading and comprehension strategies for German newspapers and news reports. All discussions, readings and assignments are in German. Prerequisite: German 302D.
Credit 3 units.
A&S: LA A&S IQ: LCD, LS BU: IS

L21 German 4100 German Literature and Culture, 1150-1750
Exploration of medieval and early modern literature and culture within sociohistorical contexts. Genres and themes vary and may include visual culture; representation; the development of fictionality and historical writing; questions of race, gender and class; courtly culture; law; magic and marvels; and medical and scientific epistemologies. Readings may include such genres as the heroic epic, drama, "Minnesang," the courtly novel, the Arthurian epic, fables, the novella, religious or devotional literature, witch tracts, pamphlets, political writings, the "Volkbuch," the picaresque novel, and the essay. Discussion, readings and papers in German. Prerequisite: Refer to Overview and Majors sections.
Credit 3 units.
A&S: TH, WI A&S IQ: HUM, LCD, LS, WI EN: H

L21 German 4101 German Literature and Culture, 1750-1830
Exploration of the literature and culture of the Enlightenment, Storm and Stress, Weimar Classicism, and Romanticism within sociohistorical contexts. Genres and themes vary and may include the representation of history, absolutism and rebellion, the formation of bourgeois society, questions of national identity, aesthetics, gender, romantic love, and the fantastic. Reading and discussion of texts by authors such as Lessing, Goethe, Schiller, Kant, Novalis, Günderode, the Brothers Grimm, Kleist, E.T.A. Hoffmann, Eichendorff, Bettina von Arnim. Discussion, readings and papers in German. Prerequisite: Refer to Overview and Majors sections.
Credit 3 units.
A&S: TH, WI A&S IQ: HUM, LCD, LS, WI Art: HUM

L21 German 4102 German Literature and Culture, 1830-1914
Exploration of 19th-century literature and culture within sociohistorical contexts. Genres and themes vary and may include the representation of history, liberalism and restoration, nationalism, industrialization, colonialism, class, race and gender conflicts, materialism, secularization and fin-de-siècle. Reading and discussion of texts by authors such as Büchner, Heine, Marx, Storm, Keller, Meyer, Fontane, Drost-Hülshoff, Nietzsche, Ebner-Eschenbach, Schnitzler, Rilke. Discussion, readings and papers in German. Prerequisite: Refer to Overview and Majors sections.
Credit 3 units.

L21 German 4103 German Literature and Culture, 1914 to the Present
Exploration of modern and contemporary literature within sociohistorical contexts. Genres and themes vary and may include the representation of history, the crisis of modernity, the two World Wars, the Weimar Republic, the Third Reich, generational conflicts, the women's movement and postmodern society. Reading and discussion of texts by authors such as Wedekind, Freud, Mann, Kafka, Brecht, Seghers, Böll, Bachmann, Grass, Wolf. Discussion, readings and papers in German. Prerequisite: Refer to Majors section.
Credit 3 units.
A&S: TH, CD, WI A&S IQ: HUM, LCD, LS, WI Art: HUM

L21 German 4104 Studies in Genre
Exploration of the definition, style, form and content that characterize a specific genre. Investigation of the social, cultural, political and economic forces that lead to the formation and transformation of a particular genre. Examination of generic differences and of the effectiveness of a given genre in articulating the concerns of a writer or period. Topics and periods vary from semester to semester. Discussion, readings and papers in German; some theoretical readings in English. Prerequisite: Refer to Majors section.
Credit 3 units.
A&S: TH, CD, WI A&S IQ: HUM, LCD, LS, WI Art: HUM

L21 German 4105 Topics in German Studies
Focus on particular cultural forms such as literature, film, historiography, social institutions, philosophy, the arts or on relationships between them. Course examines how cultural meanings are produced, interpreted and employed. Topics vary and may include national identity, anti-Semitism, cultural diversity, construction of values, questions of tradition, the magical, the erotic, symbolic narrative and the city. Course may address issues across a narrow or broad time frame. Discussion, readings and papers in German. Prerequisite: Visit website.
Credit 3 units.
A&S: TH, CD, WI A&S IQ: HUM, LCD, LS, WI Art: HUM

L21 German 4106 Studies in Gender
Investigation of the constructions of gender in literary and other texts and their sociohistorical contexts. Particular attention to the gendered conditions of writing and reading, engendering of the subject and indicators of gender. Topics and periods vary from semester to semester and include gender and genre, education, religion, politics, cultural and state institutions, science, sexuality and human reproduction. Discussion, readings and papers in German; some theoretical readings in English. May be repeated with different content. Prerequisite: Refer to Overview and Majors sections.
Credit 3 units.
A&S: TH, SD, WI A&S IQ: HUM, LCD, LS, SD, WI EN: H

L21 German 411 German Language Seminar: History of the German Language
Treatment of the historical development of German phonology, morphology, syntax and lexicography. Focus on the emergence of New High German. Examination of the relationship of standard German to its dialects and to other Germanic languages, particularly English. Conducted in German; papers in German.
Prerequisite: German 302D or the equivalent or permission of instructor.
Credit 3 units. A&S: LA

L21 German 414 German Language Seminar: Structure of the German Language
Advanced course for undergraduates that enables better understanding of the language and sublanguages of modern German in terms of linguistic theory. Particular attention to semantics and pragmatics, i.e., to German viewed as a "sign" of human communication, value, interaction. Conducted in German; papers in German. Prerequisite: German 302D or the equivalent or permission of instructor.
Credit 3 units. A&S: LA

L21 German 4224 The 1904 St. Louis World's Fair: German and Austrian Art Exhibited
The St. Louis World's Fair of 1904 (The Louisiana Purchase Exposition) was one of the greatest events of its time. At the beginning of the course, we deal with the historical development that lead to the purchase of the Louisiana Territory in 1803 and have a look at the grand dimensions of the World's Fair (connected with the Olympic Games). Of central importance are the Art Exhibits from Germany and Austria with their cultural-political implications. The German Emperor had a hand in selecting the German paintings to be sent to St. Louis, and his opposition against modern movements like Impressionism caused opposition in Germany. Austria was different: In their Art Nouveau Pavilion they included secessionists (Hagenbund). The Wiener Werkstätten (Vienna's Workshops) attracted a lot of attention. Different from the paintings, German Arts and Crafts represented avant-garde movements. We visit libraries, archives and museums in St. Louis that have World's Fair holdings. The seminar is for advanced undergraduate students but beginning graduate students can take it with permission of the instructor. Same as L53 IAS 4224
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L21 German 4225 European Utopian Settlements in the American Midwest (1814-1865): Diversity and Antislavery
During the first part of the 19th century a number of utopian visionaries from Europe (Germany, France and England) tried to establish communities in the American Midwest. These colonies were based either on religious or philosophical/social ideals which could be traced back to interpretations of the Old and the New Testament or to Enlightenment principles of freedom and equality that had been propagated during the revolutions in Europe of 1789, 1830 and 1848 which in turn had been influenced by the American war of independence. These groups showed strong anti-slavery convictions. The Midwest was chosen since the areas in the vicinity of the confluence of the Mississippi and the Missouri were seen as open to new social experiments. Part of the seminar are field trips to the St. Louis-based Missouri History Library as well as to the St. Louis Public Library and one-day excursions to New Harmony in Indiana, Nauvoo in Illinois, and to small towns in Warren County, Missouri. Same as L97 IAS 4225
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L21 German 453 Theories of Literary and Cultural Analysis
This seminar familiarizes advanced undergraduate and graduate students with concepts and methodologies that are foundational for research in the humanities. Our discussions are organized around a range of conceptual categories that have constituted the focus of scholarly reflection in the past few decades, categories such as text, genre, image, medium, discourse, discipline, subjectivity, gender, race, culture, politics and history. Our consideration of these categories also requires us to examine key currents in recent literary theory and cultural criticism, including (post)structuralism, psychoanalysis, Marxist theory, feminism and gender theory, postcolonial studies, cognitive science, book history, visual studies and media theory. Although this seminar does not aim to offer an intellectual history, seminar members acquire a sense of some of the key trends in cultural theory since 1945 as well as an awareness of the limits and possibilities that characterize each of them. The course also includes an introduction to the tools of scholarly research. Readings and discussions in English. Prerequisite: permission of the department.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L21 German 457 Introduction to Linguistics and the Structure of German
Introduction to the structure of the German language and to linguistic theory: phonology, morphology, syntax, semantics, as well as semiotic, pragmatic and sociolinguistic theories. Undergraduate students sign up for German 414. M/W 1:00-2:30 p.m.
Credit 3 units. A&S: LA A&S IQ: LCD

L21 German 4901 Major Film Directors
What does the film director do? In the earliest movies, film directors modeled themselves on their theatrical counterparts: They chiefly focused on how to stage an action in a confined space for a stationary camera that represented an ideal member of the audience. As the camera began to be used to direct audience attention, first through cutting, then through actual movement, the film director evolved from a stager of events to a narrator. By analyzing the work of one or more major film directors, this course explores the art of film direction. We learn how film directors may use the camera to narrate a scene to provide their own distinctive view of the actions playing out on the movie screen. May be repeated for credit with permission of the instructor. Required screenings. Same as L53 Film 458
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

L21 German 493 The Task of the Translator
This course offers an introduction to the theory and practice of translation, consisting of three main components. First, students have the opportunity to translate a wide range of fiction and nonfiction texts from a variety of genres (short stories, philosophy, journalism, academic prose). The focus is on translation from German to English, but we also translate from English to German. Next, we read selections from key works on the theory of translation, from Martin Luther's 16th-century treatise on his Bible translation to 20th-century essays by philosophers such as Walter Benjamin. Finally, we read and discuss excerpts from some of the most celebrated literary and philosophical translations of the past 200 years, including German translations of authors ranging from Shakespeare to J.K. Rowling as well as English translations of authors such as Goethe and Kafka. The course aims to give students a sense of the challenges and rewards of translation as well as a deeper understanding of the relationship between language, thought and culture.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H
L21 German 497 Independent Work for Senior Honors
Research for an Honors thesis, on a topic chosen in conjunction with the adviser. Emphasis on independent study and writing. Open to students with previous course work in German at the 400 level, an overall 3.0 grade point average, and at least a B+ average in advanced work in German. Prerequisites: senior standing and permission of the undergraduate adviser. Credit 3 units.

L21 German 498 Independent Work for Senior Honors
Continuation of German 497. Completion of thesis. Quality of the thesis determines whether the student receives credit only or Honors in German. Prerequisite: German 497. Credit 3 units.

L21 German 4ABR Germanic Languages and Literatures
Course Work Completed Abroad
Credit variable, maximum 12 units.

**Greek**

The Department of Classics offers course work in the language, history, literature, archaeology and culture of ancient Greece. At the heart of these courses are classes in the Greek language. Students of beginning Greek master the grammar in two semesters and go on immediately, in the third semester, to read Plato and Homer. Thereafter students have the opportunity to study numerous Greek authors, including the great tragedians, the historians Herodotus and Thucydides, and the New Testament, as well as ancient inscriptions. We maintain a strong program in Greek, from the textbook to graduate seminars, where our most advanced undergraduates are often working alongside graduate students in our vigorous and growing graduate program; they also have the opportunity to do their own research or to assist in faculty members’ research projects. It is a remarkable and dynamic environment, one that students find both rewarding and stimulating.

Resources on campus supporting the study of ancient Greek include collections of Greek papyri and art and the Wulfing Coin Collection, one of the largest collections of ancient coins owned by an American university. The Department of Classics also offers a variety of courses in Greek history, literature, archaeology and culture, addressed both to the general undergraduate population and to those pursuing majors and minors within the department.

**Additional Information**

**Study Abroad:** Washington University is associated with both the Intercollegiate Center for Classical Studies (ICCS) in Rome (http://sa.wustl.edu/index.cfm?FuseAction=Programs.ViewProgram&Program_ID=10117) and the College Year in Athens (CYA) (http://sa.wustl.edu/index.cfm?FuseAction=Programs.ViewProgram&Program_ID=10112). Students interested in studying in one of these programs should consult Professor Timothy Moore (tmoore26@wustl.edu), the study abroad adviser for Classics.

**Contact:** Cathy Marler
**Phone:** 314-935-5123
**Email:** classics@wustl.edu
**Website:** http://classics.artsci.wustl.edu

**Faculty**

For a list of affiliated faculty, please visit the Department of Classics faculty (p. 282) page.

**Majors**

Students interested in Greek should explore either the major in Classics (p. 283) or the major in Ancient Studies (p. 283) offered through the Department of Classics (p. 282).

**Minors**

Students interested in Greek should explore either the minor in Classics (p. 284) or the minor in Ancient Studies (p. 284) offered through the Department of Classics (p. 282).

**Courses**

**L09 Greek 101D Beginning Greek I**
An introduction to Classical Greek (Attic), which will prepare the student to read texts in Greek history, philosophy, and medicine as well as the New Testament. This course builds the foundations for readings in Greek tragedy, comedy, and lyric poetry. Our goal will be to develop reading knowledge as rapidly and efficiently as possible. By the end of the year the student should be reading continuous Greek prose. Credit 4 units. A&S IQ: LCD, LS BU: HUM, IS

**L09 Greek 102D Beginning Greek II**
Continuation of the program begun in Greek 101D. Students will complete their initial study of Classical Greek grammar and will begin reading selections from ancient Greek authors. Prerequisite: Greek 101D or permission of the instructor. Credit 4 units. A&S: LA & S IQ: LCD, LS BU: HUM, IS

**L09 Greek 190D Intensive Beginning Greek I**
An intensive study of Attic Greek. Credit 5 units. A&S: LA & S IQ: LCD, LS BU: IS

**L09 Greek 210 Intensive Beginning Greek II**
Completion of work begun in Greek 190D followed by readings in original Greek poetry and prose. Successful completion of Greek 210 will allow the student to proceed directly to Greek 318C. Prerequisite: Greek 190D or placement by examination. Credit 5 units. A&S: LA & S IQ: LCD, LS BU: HUM, IS EN: H
L09 Greek 215D Intermediate Greek I
Reading of Greek prose texts accompanied by review of morphology and syntax and exercises in vocabulary building. Prerequisite: Greek 102D or permission of the instructor. Credit 3 units. A&S: LA BU: HUM, IS

L09 Greek 301 Intermediate Greek: The New Testament in Context
A reading of texts from the New Testament as well as others of relevance to the religions of the Roman Empire. Prerequisite: Greek 317C or permission of the instructor. Credit 3 units. A&S: LA BU: HUM

L09 Greek 316C Intermediate Greek II
Readings in various forms of Greek poetry and prose as foundation for advanced study of Greek literature. Prerequisite: Greek 215D or permission of the instructor. Credit 3 units. A&S: LA BU: HUM

L09 Greek 317C Introduction to Greek Literature
Introduction to Attic prose through the reading of Plato’s Apology and related texts. Prerequisite: Greek 316C or Greek 317C. Credit 3 units. A&S: LA BU: HUM

L09 Greek 318C Introduction to Greek Literature
Introduction to epic poetry through the reading of selections from Homer’s Iliad and Odyssey. Prerequisite: Greek 210, Greek 316C or Greek 317C. Credit 3 units. A&S: LA BU: HUM

L09 Greek 350W Writing about Greek Literature
Greek courses at the 300 level with enhanced writing requirements may be taken under this designation as writing-intensive courses. Required: permission of instructor. Credit 3 units. A&S: LA, WI BU: HUM

L09 Greek 400 Independent Study
Credit 3 units.

L09 Greek 411 Homer: The Odyssey
Credit 3 units. A&S: TH BU: HUM

L09 Greek 413 Homer: The Iliad
Credit 3 units. A&S: TH BU: HUM

L09 Greek 416 Hesiod
Credit 3 units. A&S: TH BU: HUM

L09 Greek 418 The Epic Tradition
Intensive readings in Greek epic, including Homer, Hesiod, Apollonius Rhodius and a sampling of later hexameters (The Orphic Argonautica, Nonnus). The emphasis is on the continuities and the discontinuities in the evolution of the genre. Credit 3 units. A&S: TH BU: HUM

L09 Greek 421 Sophocles
Credit 3 units. A&S: TH BU: HUM

L09 Greek 422 Euripides
The tragedies of Euripides are among the most powerful dramas ever produced. In this class we will read one or more plays of Euripides in Greek as well as scholarly works on the tragedies. Among the topics discussed will be language and style, meter and music, mythological and historical backgrounds, elements of performance, and Euripides’ influence in the modern world. Prerequisites: Greek 318C or permission of the instructor and sophomore standing or above. Credit 3 units. A&S: TH BU: HUM

L09 Greek 423 Aeschylus
Reading of Aeschylus’ Prometheus Bound and The Persians and study of relevant secondary literature. Credit 3 units. A&S: TH BU: HUM

L09 Greek 424 Aristophanes
Credit 3 units. A&S: TH BU: HUM

L09 Greek 430 Herodotus
Credit 3 units.

L09 Greek 431 Thucydides
Credit 3 units. A&S: TH

L09 Greek 432 The Attic Orators
Credit 3 units.

L09 Greek 435 Classical Historical Prose
Credit 3 units.

L09 Greek 436 Attic Prose of the 4th Century BC
Selected texts of Attic orators Xenophon, Plato or Aristotle; specific readings for each semester in Course Listings. May be repeated for credit for study of a different author or text. Credit 3 units. A&S: TH

L09 Greek 437 Topics in Greek Poetry
Reading in Greek and discussion of one or more texts by one or more ancient Greek poets. May be repeated for credit for study of different texts. Credit 3 units.

L09 Greek 438W Topics in Greek Literature
Advanced Greek seminars with enhanced writing requirements may be taken under this designation as writing-intensive courses. Required: permission of instructor. Credit 3 units. A&S: TH, WI

L09 Greek 439 The Greek Novel
Credit 3 units. A&S: TH, BU: HUM

L09 Greek 420 Aristotle
Credit 3 units. A&S: TH BU: HUM
L09 Greek 451 Plato
Credit 3 units. A&S: LA EN: H

L09 Greek 497 Study for Honors
Students interested in pursuing honors should consult the Director of Undergraduate Studies in the Department of Classics.
Prerequisite: overall GPA of 3.65.
Credit 3 units. A&S: TH A&S IQ: HUM

L09 Greek 499 Study for Honors
Students interested in pursuing honors should consult the Director of Undergraduate Studies in the Department of Classics.
Prerequisite: overall GPA of 3.65.
Credit 3 units. A&S: TH

Hebrew
The Department of Jewish, Islamic and Near Eastern Languages and Cultures offers a major and a minor in Hebrew. As a major in Hebrew, students can expect to gain proficiency in the language, study the area's literary and cultural landmarks, and gain familiarity with the historical context.

Language Placement: Placement tests are required for all students entering our language programs. Students may be eligible for up to 6 units of back credit based on advanced placement and successful completion of the recommended course. Native speakers are not eligible for back credit; evidence of secondary or post-secondary study of the language is required. Any units received from back credit cannot be counted toward the major or minor.

Phone: 314-935-5110 or 314-935-8567
Email: artsci-jinelc@wustl.edu
Website: http://jinelc.wustl.edu

Faculty
For a list of affiliated faculty, please visit the Department of Jewish, Islamic and Near Eastern Languages and Cultures faculty (p. 543) page.

Majors

The Major in Hebrew
Prerequisites:
• Beginning Modern Hebrew I (HBRW 105D), Beginning Modern Hebrew II (HBRW 106D), Intermediate Modern Hebrew I (HBRW 213D), Intermediate Modern Hebrew II (HBRW 214D) — whether by course work or placement

Required courses (30 units)
• History, Text and Identity: Introduction to Jewish Civilization (JINE 208F)
• Introduction to Islamic Civilization (JINE 210C)
• 12 units from courses in Hebrew at the 300 or 400 level
• 6 units from 300- or 400-level courses in Jewish studies and Hebrew literature and culture
• 3 additional elective units at the 300 or 400 level in Jewish, Islamic and Near Eastern Studies
• Capstone Seminar (HBRW 4001)

Senior honors
• HBRW 488, HBRW 489 + thesis (A student must take capstone even when writing a senior honors thesis.)

Additional Information
• Two semesters of the field language must be taken at Washington University.
• 300- or 400-level courses of a language may be counted toward the major.
• A maximum of 12 units from 300- or 400-level language courses can be counted toward the major.
• Note that 300- or 400-level courses that include the study of texts in the original language may be considered courses about history, literature or religious studies rather than language courses.
• Back credit granted for language courses does not count for the major.
• Students enrolled in Washington University study abroad programs (during the regular academic semester) can earn a maximum of 9 units subject to review by their adviser and the Director of Undergraduate Studies (DUS). Summer programs and transfer courses can be granted as much as 6 units subject to review by their adviser and the DUS. However, a limit of 9 units in total can be applied to the major, whether the units are earned in study abroad, summer programs, or transfer courses.
• No credit will be given for courses taken outside the department other than those which are cross-listed.
• A minimum of 27 units is required for the major. 21 of those must be from 300- or 400-level courses.
• Double counting courses: A maximum of 3 units used for the major can be counted toward another major or minor.
• To be eligible for Senior Honors a student must maintain a GPA of 3.65 through the sixth semester.
• A Capstone Seminar may be taken in junior or senior year.
• Students have to maintain an average of B in all courses for the major. A grade of B- must be earned in each language course in order to advance to the next level.
• No pass/fail course can count toward either prerequisites or the major.

Study Abroad: Students majoring in Hebrew are encouraged to participate in the Washington University Study Abroad program. The university currently sponsors preapproved programs of study at the Hebrew University in Jerusalem, the University of Haifa, Aalim Arabic Program in Morocco, Boğaziçi University in Istanbul, and the American University of Cairo. Students
may enroll in summer programs anytime at their discretion; however, semester abroad is usually during the junior year and after a minimum of one year of language study at Washington University.

**Senior Honors:** Jewish, Islamic and Near Eastern studies majors who have a cumulative GPA of 3.65 or higher after six semesters are eligible to apply for candidacy for departmental senior honors. Once they receive departmental approval, candidates must satisfactorily complete a senior honors thesis in order to be considered for departmental honors. Please visit the department webpage [http://jinelc.wustl.edu/undergraduate/senior-honors-guidelines-and-evaluation-form](http://jinelc.wustl.edu/undergraduate/senior-honors-guidelines-and-evaluation-form) for further information and requirements.

**Minors**

**The Minor in Hebrew**

**Prerequisites:**
- Beginning Modern Hebrew I (HBRW 105D), Beginning Modern Hebrew II (HBRW 106D) or Advanced Beginning Modern Hebrew I (HBRW 151D) — whether by course work or placement

**Required courses (18 units)**
- History, Text and Identity: Introduction to Jewish Civilization (JINE 208F)
- 9 credit units from 200-, 300-, or 400-level courses in Hebrew language
- 6 credit units from 300- or 400-level courses in Jewish studies and Hebrew literature and culture

**Additional Information**

**Regulations for all language and culture minors**
- Two semesters of the language must be taken at Washington University.
- No more than 12 credit units can be from language courses.
- Note that 300- or 400-level courses that include the study of texts in the original language may be considered courses about history, literature or religious studies rather than language courses.
- Preapproved Washington University study abroad programs during the regular academic semester, summer programs, and transfer courses can earn a maximum of 3 credits subject to review by the adviser and the DUS.
- Back credit granted for language courses does not count for the minor.
- No credits will be given to courses taken outside the department other than those which are cross-listed.
- A minimum of 18 credits is required for the minor.
- Double counting courses: A maximum of 3 credits used for the minor can be counted for another major or minor.
- Students have to maintain an average of B for the minor. A grade of B must be earned in each language course in order to advance to the next language course.
- No pass/fail course can count toward either prerequisites or the minor.

**Courses**

**L74 HBRW 101D Beginning Biblical Hebrew I**
This course prepares the student to read Biblical literature in Hebrew. Same as L75 JINE 101D.
Credit 3 units. A&S: LA A&S IQ: LCD, LS EN: H

**L74 HBRW 105D Beginning Modern Hebrew I**
For the student with no knowledge of Hebrew. Students with background in Hebrew are required to take the placement exam and encouraged to consider HBRW 151D. Foundation for modern conversational Hebrew. Skills for writing and speaking introduced. Five class hours a week plus laboratory work. Limit: 15 students per section. Same as L75 JINE 105D.
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

**L74 HBRW 106D Beginning Modern Hebrew II**
Foundation for modern conversational Hebrew. Skills for writing and speaking introduced. Three class hours a week plus laboratory work. Limit: 15 students per section. Same as L75 JINE 106D.
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS EN: H

**L74 HBRW 151D Advanced Beginning Modern Hebrew I**
Designed for the student with some background in Hebrew. Emphasis is on review of grammar, increased fluency and vocabulary enrichment. This course prepares students for HBRW 106D. Limit 15 students. Same as L75 JINE 151D.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

**L74 HBRW 179 Freshman Seminar: Midrash**
The aim of this course is to introduce students to Midrash, the highly fascinating literature of rabbinic biblical interpretation. Among the topics studied are: How did the classical rabbis read the Bible? What is the relationship between the plain meaning of the biblical text and the polyphone interpretations of Midrash? How can numerous, at times even contradictory, interpretations of the same verse coexist? What is the function of imaginative narratives, parables and folklore in Midrash? Initially the Midrashic logic may seem elusive from the viewpoint of a modern Western reader; in turn its creative thinking proves to be smart, playful, at times even slippery, and yet substantial. Addressing the literary, historical and cultural context in which rabbinic Midrash developed, we get to know a variety of Midrashic collections and styles covering a time span from late antiquity to the Middle Ages. All primary sources are read in translation. Throughout the semester we devote time to discussing practical questions such as how to use the
library's catalogue and (electronic) reference sources, as well as techniques for structuring and writing students essays.

Same as L75 JINE 179
Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H

L74 HBRW 208F History, Text, and Identity: An Introduction to Jewish Civilization
The anthropologist Clifford Geertz once famously invoked Max Weber in writing that "man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs." The main goal of this course — designed as an introduction to Jewish history, culture and society — is to investigate the "webs of significance" produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester we focus on the following historical settings: seventh-century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period, we investigate the social and political conditions of Jewish life; identify the major texts that Jews possessed, studied and produced; determine the non-Jewish influences on their attitudes and aspirations; and explore the efforts that Jews made to define what it meant to be part of a Jewish collective.
Same as L75 JINE 208F
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH, IS EN: H

L74 HBRW 213D Intermediate Modern Hebrew I
Reading and discussion on the intermediate level of selected topics pertaining to contemporary Israel. Review and further study of grammar and development of conversational skills. Prerequisite: grade of B- or better in HBRW 106D or placement by examination. Same as L75 JINE 213D
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L74 HBRW 214D Intermediate Modern Hebrew II
Intermediate modern Hebrew reading and discussion of modern Hebrew fiction. Development of language skills in special drill sessions. Conducted in Hebrew. Prerequisite: HBRW 213D or equivalent. Same as L75 JINE 214D
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L74 HBRW 300 Intro to the Hebrew Bible/Old Testament
A survey of the Hebrew Bible (Old Testament) through the historical and cultural context of the ancient Near East. Traditional Jewish and Christian interpretation of the Bible is discussed. No knowledge of Hebrew required; no prerequisites. Same as L23 Re St 300
Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM

L74 HBRW 301C Kings, Priests, Prophets and Rabbis: The Jews in the Ancient World
We trace Israelite and Jewish history from its beginnings in the biblical period (circa 1200 BCE) through the rise of rabbinic Judaism and Christianity until the birth of Islam (circa 620 CE). We explore how Israel emerged as a distinct people and why the rise of the imperial powers transformed the political, social and religious institutions of ancient Israel. We illuminate why the religion of the Bible developed into rabbinic Judaism and Christianity and how rabbinic literature and institutions were created.
Same as L75 JINE 301C
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: BA, HUM

L74 HBRW 306 Modern Jewish Writers
What is Jewish literature? While we begin with — and return to — the traditional question of definition/s, we take an unorthodox approach to the course. Reading beyond Bellow, Ozick and Wiesel, we look for enlightenment in unexpected places: Egypt, Latin America, Australia. Recent works by Philip Roth, Andre Aciman, Simone Zelitch and Terri-ann White are supplemented by guest lectures, film, short stories and significant essays. We focus on issues of language, memory and place. Background knowledge is not required, though it is warmly welcomed.
Same as L16 Comp Lit 306

L74 HBRW 3082 From the Temple to the Talmud: The Emergence of Rabbinic Judaism
This course offers a survey of the historical, literary, social, and conceptual development of Rabbinic Judaism from its emergence in late antiquity to the early Middle Ages. The goal of the course is to study Rabbinic Judaism as a dynamic phenomenon — as a constantly developing religious system. Among the topics explored are: How did Judaism evolve from a sacrificial cult to a text-based religion? How did the "Rabbis" emerge as a movement after the destruction of the Second Temple and how could they replace the old priestly elite? How did Rabbinic Judaism develop in its two centers of origin, Palestine (the Land of Israel) and Babylonia (Iraq), to become the dominant form of Judaism under the rule of Islam? How did Jewish ritual and liturgy develop under Rabbinic influence? How were the Rabbis organized and was there diversity within the group? What was the Rabbs' view of women; how did they perceive non-Rabbinic Jews and non-Jews? As Rabbinic Literature is used as the main source to answer these questions, the course provides an introduction to the Mishnah, the Palestinian and Babylonian Talmuds, and the Midrash-collections — a literature that defines the character of Judaism down to our own times. All texts are read in translation.
Same as L23 Re St 3082
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L74 HBRW 320D Third-Level Modern Hebrew I
Improves proficiency in the oral and written use of modern Hebrew through reading and discussion of short stories, Israeli newspaper articles, and other selected materials. Students discuss, in Hebrew, current events and public issues related to contemporary Israeli society. Prerequisite: grade of B- or better in HBRW 214D or placement by examination. Same as L75 JINE 320D.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L74 HBRW 322D Third-Level Modern Hebrew II
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS
L74 HBRW 324 Hebrew of the Media
Reading and discussion of newspaper articles. Viewing and analysis of television news programs and films. Prepares students to become familiar with the language and typical issues of the Israeli media and to discuss in writing and speech the issues in the news. Prerequisite: HBRW 322 or by departmental approval. Same as L75 JINE 3241.
Credit 3 units. A&S: LA

L74 HBRW 3350 Out of the Shtetl: Jewish Life in Central and Eastern Europe in the 19th and 20th Centuries
Out of the Shtetl is a course about tradition and transformation; small towns and urban centers; ethnicity and citizenship; nations, states and empires. At its core, it asks the question: What did it mean for the Jews of Central and Eastern Europe to emerge from small market towns and villages to confront modern ethnicities, nations and empires? What lasting impact did the shtetl experience have on Jewish life in a rapidly changing environment? The focus is on the Jewish historical experience in the countries that make up Central and Eastern Europe (mainly the Bohemian lands, Hungary, Poland and Russia) from the late 18th century to the fall of the Soviet Union. Among the topics that we cover are: Jews and the nobility in Poland-Lithuania; the multicultural, imperial state; Hasidism and its opponents; absolutism and reform in imperial settings; the emergence of modern European nationalisms and their impact on Jewish identity; anti-Semitism and popular violence; nationalist and radical movements among Jews; war, revolution and genocide; and the transition from Soviet dominion to democratic states. Same as L22 History 3350
Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L74 HBRW 335C Becoming "Modern": Emancipation, Anti-Semitism and Nationalism in Modern Jewish History
This course offers a survey of the Jewish experience in the modern world by asking, at the outset, what it means to be — or to become — modern. To answer this question, we look at two broad trends that took shape toward the end of the 18th century — the Enlightenment and the formation of the modern state — and we track changes and developments in Jewish life down to the close of the 20th century with analyses of the (very different) American and Israeli settings. The cultural, social, and political lives of Jews have undergone major transformations and dislocations over this time — from innovation to revolution, exclusion to integration, calamity to triumphs. The themes that we will be exploring in depth include the campaigns for and against Jewish “emancipation”; acculturation and religious reform; traditionalism and modernism in Eastern Europe; the rise of political and racial anti-Semitism; mass migration and the formation of American Jewry; varieties of Jewish national politics; Jewish-Gentile relations between the World Wars; the destruction of European Jewry; the emergence of a Jewish nation-state; and Jewish culture and identity since 1945. Same as L22 History 335C
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: ETH, HUM

L74 HBRW 340 Israeli Women Writers
Study of selected novels and shorter fiction by women. Attention to the texts as women's writing and as products of Israeli literature. No knowledge of Hebrew necessary; all readings in English translation. Same as L77 WGSS 340, L75 JINE 340.
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L74 HBRW 349 Yidishkayt: Yiddish Literature in English Translation
This course traces the emergence, development, flourish and near-decline of Yiddish literature, beginning with some of the earliest writings to appear in Yiddish in the late Middle Ages and early modern period, continuing with 19th-century attempts to establish a modern Yiddish literature and the 20th-century emergence of both a classical canon and a literary avant-garde, and ending with post-Holocaust attempts to retain a Yiddish literary culture in the near absence of Yiddish-speaking communities. Focusing on the role of Yiddish as the “national” language of Ashkenaz, the course examines the ways in which Yiddish literature has responded to the social conditions of European Jewish life, exploring among others the relationship between Yiddish and the non-Jewish cultures in which it existed, the tensions between secular trends versus religious tradition, life in the shtetl and in the metropolis, immigration from the old world to the new, and Yiddish literary responses to the Holocaust. Same as L75 JINE 349
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: IS EN: H

L74 HBRW 350 Israeli Culture and Society
An examination of critical issues in contemporary Israeli culture and society, such as ethnicity, speech, humor, religious identity, and the Arab population, using readings in English translation from a variety of disciplines: folklore, literary criticism, political science, sociology, psychology, anthropology. Prerequisite: sophomore standing, or permission of instructor. Same as L75 JINE 350
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Art: HUM BU: HUM

L74 HBRW 357 The Holocaust in the Sephardic World
The course aims to provide students with a comprehensive understanding of the Holocaust, of its impact on the Sephardic world, of present-day debates on the “globalization” of the Holocaust, and of the ways in which these debates influence contemporary conflicts between Jews, Arabs and Christians in Southern Europe and North Africa. We turn to the history of these conflicts, and study the Sephardic diaspora by focusing on the consequences that the 1492 expulsion had within the Iberian Peninsula, in Europe, and in the Mediterranean world. We study Sephardic communities in Europe and North Africa and their interactions with Christians and Muslims before World War II. Once we have examined the history of the Holocaust and its impact on the Sephardic world in a more general sense, our readings focus on the different effects of the Holocaust’s “long reach” into Southeastern Europe, the Balkans and North Africa, paying close attention to interactions among Jews, local communities, and the Nazi invaders. Finally, we address the memory of the Sephardic experience of the Holocaust and the role of Holocaust commemoration in different parts of the world. We approach these topics through historiographies, memoirs, novels, poetry and film. Same as L97 IAS 357
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H
L74 HBRW 359 Travelers, Tricksters and Storytellers: Jewish Travel Narratives and Autobiographies, 1100-1800
Premodern Jewish literature includes a number of highly fascinating travelogues and autobiographies that are still awaiting their discovery by a broader readership. In this course, we explore a variety of texts ranging from medieval to early modern times. They were written by Jewish authors (both Ashkenazi and Sephardic) originating from Spain, Italy, Germany and the Ottoman Empire — among them pilgrims, rabbis, merchants, and one savvy business woman. We read them as responses to historical circumstances and as expressions of Jewish identity in its changing relationship to the Christian or Muslim environment in which the authors lived or traveled. Specifically, we ask questions such as: What is it about travel writing that enables its authors (and readers) to reflect on themes of identity and difference? How does this genre produce representations of an Other, against which and through which it defines a particular sense of self? What are the commonalities and differences between (Jewish) travelogues and autobiographies? To what extent are these texts reliable accounts of their authors’ personal experiences and to what extent do they serve their own self-fashioning? How did premodern Jewish writers portray Christians, Muslims and Jews from other cultural backgrounds than their own? How did they construe the role of women in a world dominated by men? How did they reflect on history, geography and other fields of knowledge that were not covered by the traditional Jewish curriculum; and how did they respond to the challenges of early modernity?
Same as L75 JINE 359
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L74 HBRW 384 Intro to Biblical Hebrew
This course enables students to read the Bible in the original Hebrew. Review of Hebrew grammar. History of the Hebrew language. Intended for students with a foundation in modern Hebrew. Prerequisite: HBRW 214D or instructor's permission. Same as L75 JINE 3841.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

L74 HBRW 385D Topics in Biblical Hebrew Texts
Prerequisite: HBRW 384 or permission of the instructor. Same as L23 Re S1 385D, L75 JINE 385D.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L74 HBRW 387C Topics in Hebrew Literature
Hebrew works read in English translation. Prerequisite: sophomore standing; previous courses in literature recommended. Same as L75 JINE 387C.
Credit 3 units. A&S: TH Art: HUM

L74 HBRW 390 Topics in Migration and Identity: Genocide and Migration: Flight and Displacement under Nazi Regime
The course examines migration movements that are related to the Nazi genocide in Europe. Grounded in a study of the Nazi project to reshape the European geopolitical map, students explore how the mass movement of people is impacted by geopolitics, political violence, and economical considerations. Class materials address the relationship between identity formation and social exclusion, thus opening up a critical investigation of concepts of citizenship, human rights, and their institutional frameworks (states, international organizations, etc.) more generally. Students work with a variety of sources, including primary sources, scholarly analyses, podcasts, literary works and film to study migrations related to the prehistory, policies and aftermath of the Nazi regime. The class provides insights into issues of expulsion, refuge, forced migration, settlement projects, ethnic cleansing and others, but also demonstrates the global impact and long-term repercussions of political and genocidal violence. Looking at the Nazi regime through the lens of migration shows that the Nazi genocide is embedded in a history of racism, colonization and mass violence.
Same as L97 IAS 390
Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L74 HBRW 4001 Capstone Seminar
The capstone course for Jewish, Islamic and Near Eastern Studies majors, Arabic majors, and Hebrew majors. The course content is subject to change.
Same as L75 JINE 4001
Credit 3 units. A&S IQ: HUM EN: H

L74 HBRW 4010 Fourth-Level Modern Hebrew I
Introduction to modern Israeli literature and literary analysis for the advanced student of Hebrew. Topics include selected genres, influential writers, and the relationship between literature and society. Conducted in Hebrew. Prerequisite: grade of B- or better in HBRW 321D, or permission of instructor. Same as L75 JINE 4010.
Credit 3 units. A&S: LA, WI A&S IQ: LCD, WI BU: HUM, IS

L74 HBRW 401W Seminar in Hebrew Literature
This course is designated as Writing Intensive. Same as L75 JINE 401W
Credit 3 units. A&S: LA, WI A&S IQ: LCD, WI BU: HUM, IS

L74 HBRW 402 Fourth-Level Modern Hebrew II
Students with advanced proficiency maintain and develop reading, speaking and writing skills. Class conducted in Hebrew. Readings focus on key works of Hebrew poetry and fiction from earlier in this century and from contemporary Israel; additional reading and discussion of essays and editorials from current Israeli press, viewing of films and current news broadcasts produced in Israel. Prerequisite: HBRW 4010. Same as L75 JINE 402.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L74 HBRW 420 Topics in Modern Hebrew Literature
Various themes in Hebrew belles lettres, e.g., the intertwining of politics and literature, the survival of rabbinic metaphors. Same as L75 JINE 420.
Credit 3 units. A&S: LA A&S IQ: LCD Art: HUM

L74 HBRW 421 Study of Selected Texts in Modern Hebrew Literature
Major works in Hebrew belles lettres by writers such as Bialik and Agnon studied in detail and depth.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM EN: H

L74 HBRW 440 Topics in Rabbinic Texts: Mishnah and Gemara
The course aims to introduce students to independent reading of selected rabbinic texts in the original language. We focus on a number of topics representing the range of rabbinic discussion,
including legal, narrative and ethical issues. At the same time, we study the necessary linguistic tools for understanding rabbinic texts. Prerequisites: HBRW 385 or HBRW 401 or instructor's permission. Same as L75 JINE 440, L23 Re St 4401. Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L74 HBRW 444 The Mystical Tradition in Judaism
What is Jewish "mysticism"? What is its relationship to the category of "religion"? Is Jewish mysticism just one form of a general phenomenon common to a variety of religious traditions or is it a specific interpretation of biblical, rabbinic, and other Jewish traditions? Taking the above questions as a starting point, this course aims at a systematic and historically contextualized analysis of a broad range of Jewish texts that are commonly classified as "mystical." (All primary texts are read in translation.) At the same time, we explore such overarching themes as: the interplay of esoteric exegesis of the Bible and visionary experiences; the place of traditional Jewish law (halakhah) within mystical thought and practice; the role of gender, sexuality, and the body in Jewish mystical speculation and prayer; the relationship between mysticism and messianism; Ashkenazic and Sephardic traditions and their mutual impact on Jewish mysticism; the "absence of women" from Jewish mystical movements; esoteric traditions of an elite vs. mysticism as a communal endeavor; and the tension between innovation and (the claim to) tradition in the history of Jewish mysticism. Same as L23 Re St 444 Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, IS

L74 HBRW 488 Independent Work for Senior Honors
This course to be taken in the fall semester. Prerequisite: senior standing, eligibility for honors, and permission of the department. Credit 3 units.

L74 HBRW 489 Independent Work for Senior Honors
This course to be taken in the spring semester. Prerequisite: senior standing, eligibility for honors, and permission of the department. Credit 3 units.

L74 HBRW 4973 Guided Readings in Hebrew
Prerequisites: senior standing, and permission of the instructor and the department chair. Same as L75 JINE 4973. Credit variable, maximum 5 units. A&S: LA

L74 HBRW 4982 Guided Readings in Akkadian
Prerequisites: permission of the instructor and the department chair. Same as L75 JINE 4987. Credit variable, maximum 6 units.

L74 HBRW 4983 Guided Readings in Hebrew
Prerequisites: senior standing, and permission of the instructor and the department chair. Same as L75 JINE 4983. Credit variable, maximum 5 units. A&S: LA

L74 HBRW 4984 Guided Readings in Aramaic
Prerequisites: permission of the instructor and the department chair. Same as L75 JINE 4984. Credit variable, maximum 6 units.

L74 HBRW 4985 Guided Readings in Biblical Hebrew
Prerequisites: permission of the instructor and the department chair. Same as L75 JINE 4985. Credit variable, maximum 6 units.

**Hindi**

The Department of Jewish, Islamic and Near Eastern Languages and Cultures offers a minor in Hindi (South Asian language and culture).

**Language Placement:** Placement tests are required for all students entering our language programs. Students may be eligible for up to 6 units of back credit based on advanced placement and successful completion of the recommended course. Native speakers are not eligible for back credit; evidence of secondary or post-secondary study of the language is required. Any units received from back credit cannot be counted toward the major or minor.

**Phone:** 314-935-5110 or 314-935-8567

**Email:** artsci-jinelc@wustl.edu

**Website:** [http://jinelc.wustl.edu](http://jinelc.wustl.edu)

**Faculty**

For a list of affiliated faculty, please visit the Department of Jewish, Islamic and Near Eastern Languages and Cultures faculty (p. 543) page.

**Majors**

The Department of Jewish, Islamic and Near Eastern Languages and Cultures does not offer a major in this area. Please visit the JINELC (p. 544) page for a list of available majors.

**Minors**

**The Minor in South Asian Languages and Cultures (Hindi)**

**Prerequisites**

- Beginning Hindi I (Hindi 111D), and Beginning Hindi II (Hindi 112D) or Advanced Beginning Hindi I (Hindi 151D) — whether by course work or placement

**Required courses (18 Units)**

- Introduction to Islamic Civilization (JINE 210C) (or another civilization course with adviser approval)
- 9 units from 200-, 300-, or 400-level courses in Hindi language
- 6 units from 300- or 400-level courses in South Asian studies or South Asian literature and culture

**Additional Information**

Regulations for all language and culture minors
Courses

L73 Hindi 111D Beginning Hindi I
An introduction to the most widely spoken language of South Asia. Along with an understanding of grammar, the course offers practice in all four skills: listening, speaking, reading and writing. The Hindi (Devanagari) script is used for reading and writing.
Note: Students with some previous Hindi language background must take a placement examination.
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS EN: H

L73 Hindi 112D Beginning Hindi II
Continuation of 101D, devoted to the further development of basic skills — listening, speaking, reading and writing — with a particular emphasis on the acquisition of speaking proficiency. Prerequisite: Hindi 111D or placement by examination.

L73 Hindi 151D Advanced Beginning Hindi I
Designed for the student with some background in Hindi. Emphasis on review of grammar, increased fluency and vocabulary enrichment. Prerequisite: placement by examination or instructor’s permission.
Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

L73 Hindi 201 Intermediate Hindi I
Continuing practice in listening, speaking and grammatical understanding. The Hindi (Devanagari) script is used for reading and writing. Prerequisite: grade of B- or better in Hindi 112D or placement by examination.
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L73 Hindi 202 Intermediate Hindi II
Continuation of Hindi 201. Prerequisite: grade of B- or better in Hindi 201 or placement by examination.
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L73 Hindi 299 Undergraduate Independent Study
Prerequisites: Hindi 202 and permission of the instructor and the department chair.
Credit variable, maximum 6 units.

L73 Hindi 301 Advanced Hindi I
This course is designed to help students gain advanced proficiency in the oral and written use of Hindi through reading and discussion of short stories, newspaper articles and other selected materials. Prerequisite: grade of B- or better in Hindi 202 or placement by examination.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L73 Hindi 302 Advanced Hindi II
This course is a continuation of Hindi 301. It is designed to continue students’ advanced proficiency in the oral and written use of Hindi through reading and discussion of short stories, newspaper articles and other selected materials. Prerequisite: grade of B- or better in Hindi 301 or placement by examination.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L73 Hindi 307 The Writing of the Indian Subcontinent
The Indian Subcontinent has in recent years yielded a number of writers, expatriate or otherwise, whose works articulate the postcolonial experience in the “foreign” English tongue.
This course is designed to be an introductory survey of such writing, drawing on select Subcontinental writers. Covering both fiction and nonfiction by several authors including R.K. Narayan, Salman Rushdie, Anita Desai, Amitav Ghosh, Sara Suleri, Micheal Ondaatjie and Romesh Gunesekera, we discuss such issues as the nature of the colonial legacy, the status of the English language, problems of translation (linguistic and cultural), the politics of religion, the expatriate identity, and the constraints of gender roles. Same as L14 E Lit 307
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM
L73 Hindi 3292 Topics in Politics: Modern South Asian Politics
This course focuses on the recent political history and development of South Asia. It begins with a review of the British colonial period and the Independence movement. The remainder of the course examines different political issues in India, Pakistan, Bangladesh and Sri Lanka. Topics include political mobilization, land reform, law and politics, social movements, religious and caste politics, the rise of religious nationalism, and political control of the economy.
Same as L32 Pol Sci 3292
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: HUM, IS

L73 Hindi 330 Topics in South Asian Literature and Culture
An introduction to major texts of South Asian literature, both traditional and modern, in their cultural context. Specific topics, texts and themes may vary from year to year. The course assumes no previous acquaintance with the material. All readings are in English or English translation.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L73 Hindi 350 Introduction to South Asian Literature in Translation
Credit 3 units. A&S: TH, CD BU: HUM

L73 Hindi 3670 Gurus, Saints, and Scientists: Religion in Modern South Asia
Many long-standing South Asian traditions have been subject to radical reinterpretation, and many new religious movements have arisen, as South Asians have grappled with how to accommodate their traditions of learning and practice to what they have perceived to be the conditions of modern life. In this course we consider some of the factors that have contributed to religious change in South Asia, including British colonialism, sedentarization and globalization, and new discourses of democracy and equality. We consider how new religious organizations were part and parcel with movements for social equality and political recognition; examine the intellectual contributions of major thinkers like Swami Vivekananda, Sayyd Ahmad Khan, and Mohandas Gandhi; and explore how Hindu, Islamic, and other South Asian traditions were recast in the molds of natural science, social science, and world religion.
Same as L23 Re St 3670
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: ETH EN: H

L73 Hindi 38C8 Religion and Politics in South Asia: Writing-Intensive Seminar
The relationship between religion, community and nation is a topic of central concern and contestation in the study of South Asian history. This course explores alternative positions and debates on such topics as: changing religious identities; understandings of the proper relationship between religion, community, and nation in India and Pakistan; and the violence of Partition (the division of India and Pakistan in 1947). The course treats India, Pakistan and other South Asian regions in the colonial and postcolonial periods.
Same as L22 History 38C8
Credit 3 units. A&S: TH, CD, WI A&S IQ: HUM, LCD, WI BU: IS EN: H

L73 Hindi 3921 Secular & Religious: A Global History
Recent years have seen a dramatic rethinking of the past in nearly every corner of the world as scholars revisit fundamental questions about the importance of religion for individuals, societies and politics. Is religion as a personal orientation in decline? Is Europe becoming more secular? Is secularism a European invention? Many scholars now argue that "religion" is a European term that doesn't apply in Asian societies. This course brings together cutting-edge historical scholarship on Europe and Asia in pursuit of a truly global understanding. Countries covered vary, but may include Britain, France, Turkey, China, Japan, India and Pakistan.
Same as L22 History 3921
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L73 Hindi 399 Independent Study
Prerequisite: permission of instructor and the department.
Credit variable, maximum 6 units.

L73 Hindi 39SC Imperialism and Sexuality: India, South Asia and the World: Writing-Intensive Seminar
What is the connection between the appropriation of other people's resources and the obsession with sex? Why is "race" essential to the sexual imperatives of imperialism? How has the nexus between "race," sexuality and imperial entitlement reproduced itself despite the end of formal colonialism? By studying a variety of colonial documents, memoirs produced by colonized subjects, novels, films and scholarship on imperialism, we seek to understand the history of imperialism's sexual desires, and its continuation in our world today.
Same as L22 History 39SC
Credit 3 units. A&S: TH, CD, SD, WI A&S IQ: HUM, LCD, WI BU: IS EN: H

L73 Hindi 499 Independent Study
Prerequisite: permission of instructor and the department.
Credit variable, maximum 6 units.

History
The Department of History engages its students through a study of the past. We are committed to the idea that the most compelling stories are often the most revealing ones. In addition to teaching students the particular skills of historical inquiry, we provide them with tools that serve them beyond their majors and beyond the university.

The discipline of history poses challenging questions about the ways that human beings have made the worlds they live in. There are many approaches to history. Some historians study politics, whether that means political parties or the ways that people who never held public office nonetheless act to shape public life. Others study the lived experience of everyday Americans or the popular culture that reflects how people understand the world around them.

Still others are especially interested in the kinds of stories about the past that we tell ourselves, for those stories reveal a
great deal about our own society as well as that of a different
time. While it is not true that history repeats itself, it is true that
without knowledge of the past we are unable to understand
the present. The Department of History encourages all
undergraduates to incorporate the discipline of historical thinking
into their liberal arts education. Students will learn to organize
and interpret data, to write with precision and clarity, to develop
logical and convincing arguments, and to combine careful
research with creativity.

In all of our courses, we emphasize the kinds of skills that
will help students to succeed both in classes at Washington
University and in their postgraduate careers. For our majors and
minors, we offer the opportunity to work closely with a faculty
mentor to develop a coherent yet challenging program of study.
The history major is structured to be flexible, and we encourage
students both to pursue established interests and to explore
topics, time periods and locales that may be less familiar. We
offer a broad range of courses from the ancient world to the
present, and across Africa, Asia, the Mideast, Europe and the
Americans.

We have many opportunities for small-group learning and
discussion, including freshman seminars, our Historical
Methods seminar, writing-intensive seminars and advanced
seminars. Prior to graduation, every major is expected to
demonstrate mastery of the field through an advanced seminar,
an independent research project, formal fieldwork in the
historical and archival professions, or writing a senior honors
thesis.

Some history majors go on to pursue graduate work in the
field and become professional historians, but most find that the
knowledge and skills they build through history courses fit them
for a wide range of careers. Our graduates have attended law
or medical school, and have pursued careers in government,
education, research, business, communications, international
agencies, publishing, museums and archives, public advocacy
and many other fields.

I. Introductory Courses (6 credits required)

One introductory survey (100-level)

One additional introductory course, chosen from any 100- or 200-level course home-based or cross-listed in History and taught by history department faculty. This course can be an introductory survey, but it does not have to be.

*Note: A score of 5 on the AP European, U.S. or World History examination will constitute completion of the introductory survey History 102C, History 163, or History 164 respectively, and 3 units of credit equivalent to History 102C, 163, or 164 will be awarded, for a maximum of 6 credits toward the major and/or minor. A score of 4 on any of these exams may earn 3 units of elective credit but will not be counted toward the major or minor.

II. Upper-Level Courses:

At least 18 300- or 400-level units plus a capstone experience (for a minimum of 22 advanced units). Requirements at this level include:

• at least one course designated "premodern" and one course designated "modern"
• at least one course from three of the following geographical areas: Africa, East Asia, South Asia, Europe, Latin America, Middle East, the United States, or transregional history (please refer to Notes below*)
• History 301 Historical Methods, a required methods course for all majors
• the Capstone Experience: History majors must, prior to graduation, complete a capstone experience consisting of:
  • successful completion of the Senior Honors Thesis; or
  • an Advanced Seminar; or
  • an independent research project with a significant writing component (History 500); or
  • directed fieldwork in the historical or archival profession, with a significant writing component (History 4001/History 4002)

*Notes:

1. International Baccalaureate: The department recognizes the superior preparation many students have received in the IB program; however, no credit is awarded for the International Baccalaureate.
2. The department recognizes that some students take their first history course, or develop an interest in majoring in history, only in their junior year, and then face a dilemma in choosing between required introductory courses and upper-level course work more appropriate to their abilities. Such students, with the recommendation of their adviser in History, may petition the Director of Undergraduate Studies to permit a designated upper-level course to substitute for one of the introductory courses. In all such cases, the
minimum number of units in the minor remains 18, and in the major, 28.
3. All upper-level units must be separate courses, not double-counted toward a minor or second major. (Exception: Double majors may count one course for both majors if it is cross-listed between the two departments). Courses in the major are excluded from the credit/no credit option.
4. If a student chooses to count a transregional course toward the geographical requirement, at least one of the two other geographical areas the student counts toward the major must cover a region that is not included in the transregional course. For example, a student who has completed courses in U.S. and Latin American history could not count a transregional course that examines the comparative history of the U.S. and Latin America. But a student who has taken a transregional course on the U.S. and Latin America could take a course on either U.S. or Latin American history, and would then need to take a course covering an area other than the U.S. or Latin America in order to satisfy the third area requirement.

Additional Information

Fieldwork: History majors are eligible for fieldwork at the Missouri Historical Society or at other museums. Opportunities also are sometimes available in the special collections at Olin Library, with local businesses, and at historical sites.

Study Abroad: Students are encouraged to participate in various overseas studies programs, which normally may fulfill up to 6 units of credit for the major or minor.

Senior Honors: Students who have a strong academic record may work toward Latin Honors. It is recommended that students pursuing honors complete two advanced seminars in the junior year. Students graduating with Latin Honors must meet GPA requirements and satisfactorily complete History 399 Senior Honors Thesis and Colloquium: Writing-Intensive Seminar, while writing a thesis during the senior year.

Minors

The Minor in History

Units required: 18

I. Introductory Courses (6 units required):

One introductory survey (100-level)

One additional introductory course, chosen from any 100- or 200-level course home-based or cross-listed in History and taught by history department faculty. This course can be an introductory survey, but it does not have to be.

II. Upper-Level Courses:

12 additional units, 9 of which must be at the 300 or 400 level.

*Notes:

1. A score of 5 on the AP European, U.S. or World History examination will constitute completion of History 102C, History 163, or History 164 respectively, and 3 units of credit equivalent to History 102C, 163, or 164 will be awarded, for a maximum of 6 credits toward the minor. A score of 4 on any of these exams may earn 3 units of elective credit but will not be counted toward the major or minor.
2. All 18 units must be separate courses not double-counted toward the major or another minor. Courses in the minor may not be taken credit/no-credit.
3. The department recognizes that some students take their first history course, or develop an interest in declaring a minor in history, only in their junior year, and then face a dilemma in choosing between required introductory courses and upper-level course work more appropriate to their abilities. Such students, with the recommendation of their adviser in History, may petition the Director of Undergraduate Studies to permit a designated upper-level course to substitute for one of the introductory courses. In all such cases, the minimum number of units in the minor remains 18.

Courses

L22 History 101C Western Civilization

This course surveys the period from ca. 3500 BCE to 1650 CE in the West. As we examine the civilizations of Mesopotamia, the ancient Mediterranean and medieval and early modern Europe, we focus on themes of cultural contact, conflict and change in order to understand the complex roots of conventional "Western" history. Introductory course to the major and minor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L22 History 102C Western Civilization

This course provides an introduction to the history of modern Europe. It begins by following Europeans from the upheavals of the Enlightenment to the French Revolution, and from the industrial revolution to the era of nation-state building; continues by exploring how Europeans became embroiled in the scramble for empire, the era of "totalitarianism," and two disastrous world wars; and ends by examining how Europeans coped with the divisions of the Cold War, the collapse of communism, and the challenges of unification and resurgent nationalism. Introductory course to the major and minor.

L22 History 1118 Freshman Seminar: Women in Latin American History

Women have been active players in the construction of Latin American nations. In the last two decades, leading scholars in the field have taken up the challenge of documenting women's participation. This research explosion has produced fruitful results to allow for the development of specialized courses. This
course looks at the nation-building process through the lens of Latin American women. The course examines the expectations, responsibilities and limitations women confronted in their varied roles from the Wars of Independence to the social revolutions and dictatorial regimes of the 20th century. Besides looking at their political and economic lives, students will explore the changing gender roles and relations within marriage and the family, as well as the changing sexual and maternal mores.

Credit 3 units. BU: BA, IS

L22 History 131C Early Political Thought: Text and Tradition
A selected survey of the political and moral thought of Europe from the rise of Athenian democracy to the Renaissance, with emphasis on analysis and discussion of writers such as Thucydides, Plato, Aristotle, St. Augustine, Castiglione and Machiavelli. The course aims to introduce students to basic texts in the intellectual history of Western Europe, understood both as products of a particular time and place and as self-contained arguments that strive to instruct and persuade. The texts are simultaneously used to chart the careers of such fundamental notions as liberty, virtue and justice. Preference given to Text and Tradition and IPH students.

Same as L93 IPH 203C

Credit 3 units. A&S: TH & A&S IQ: HUM Art: HUM BU: HUM

L22 History 1500 Silver, Slaves and the State: Globalization in the 18th Century
In this class, students look at how silver, and also porcelain, tobacco and salt, shaped the early modern world. The course looks at how merchants and adventurers, as well as pilgrims, pirates, migrants and captives, encountered very different facets of that world, and tried to make sense of it. This course also studies how these attempts at exchange, how that process of "making sense," transformed how men and women of the 18th century, around the globe, saw their territories and their fellow humans. This is a world history class.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L22 History 154 Freshman Seminar: Saints and Society
The topic of this course is saints and society in medieval and early modern Europe. It explores the complex relationships between exceptional holy men and women, the historical settings in which they lived, and the religious and cultural traditions on which they drew. It considers saints as both embodiments of the highest ideals of their societies and radical challenges to ordinary patterns of social existence.

Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H

L22 History 1550 Temple & Palace in World History: Religion & Politics in the Premodern Mediterranean
This course aims to examine the ways in which temple and palace cooperated with and competed against each other in the Middle East from ancient to the present times. As sites of spiritual and political power, temples and palaces have played a major role in human history. They have been a source of cooperation and conflict by inspiring and regulating the spiritual and social lives of people, including how they enacted laws, developed cultures, established institutions, and interacted with each other as individuals, families and societies. We will trace how their interactions produced various models of authority, law and social association and how they collectively and separately rationalized social hierarchy and diversity in human societies, including the notions of equality, justice, hierarchy, morality, meritocracy, status, coercion and persuasion, gender and class in various contexts. We will begin our examination from the "city-states" of ancient Mesopotamia and move on to study the empires of the Islamicate Middle East, including the Caliphate, the Seljuk, Mamluk, Safavid, and Ottoman Empires. We will conclude the semester with a comparative overview of this enduring theme in world history to shed some light on our own experiences today. Introductory course to the major and minor.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L22 History 163 Freedom, Citizenship and the Making of American Life
This course offers a broad survey of American history from the era before European settlement of North America to the late 20th century. The course explores the emergence and geographic expansion of the United States and addresses changes in what it meant to be an American during the nation's history. Tracing major changes in the nation's economic structures, politics, social order and culture, the course chronicles, among other issues, changes in the meanings of freedom, citizenship and American identity. Introductory course to the major and minor.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Art: HUM BU: HUM

L22 History 164 Introduction to World History: The Second World War in World History
As an introduction to world and comparative history, this course tours the globe in an era when the world was engulfed by war. The Second World War was a period of intense violence, upheaval and profound change that touched every continent in one way or another by destroying, remaking and inventing international, domestic and local institutions. Where conventional studies of the conflict focus on military and diplomatic matters, this course surveys the causes, scope and consequences of World War II for a representative sample of the common people of Europe, the Americas, Africa, the Middle East and Asia. It uses the war's influence on race, gender, disease, propaganda, technology, literature, film, music and material culture to introduce students to the basic concepts and methodologies of world and comparative history.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Art: HUM BU: IS EN: H

L22 History 1640 Health and Disease in World History
Health and disease are universal human experiences, yet vary profoundly across time and place. Extending from ancient times to the present, this course surveys that variety from a global perspective. We explore medical traditions from around the world, then examine how these responded to major epidemic diseases such as the Black Death. We study the globalization of disease and the emergence of scientific medicine after 1450, then turn to the interrelated histories of health and disease in the modern era. Throughout, we attend carefully to how the biological aspects of health and disease have shaped world history, while at the same time exploring the powerful mediating role of social, cultural, economic, and political factors — from religious beliefs and dietary practices to inequality, poverty, empire and war — in determining the myriad ways in which health and disease have been experienced and understood. Introductory course to the major and minor.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H
L22 History 1680 Beatrice's Last Smile: A History of the Medieval World, 200-1500
The medieval world, stretching from the Mediterranean to the Americas, lasted from the third to the 16th centuries. This course is a sweeping historical narrative framed around holiness. By vividly interweaving stories about men, women, children, gods, angels and demons, it is possible to evoke the reality of holiness in ideas, spaces, buildings, smells, rivers, religion, art, noises, trees, blood, shoes, etc., from one century to another. Students study the Late Roman Empire, Christianization, paganism, the "barbarian" invasions, the rise of Islam, the Carolingians, Vikings, Anglo-Saxons, and the Crusades, just to name a few. Students read poets, philosophers, historians and novelists, which are often the only surviving fragments of wills or testimonies.

L22 History 176 Freshman Seminar: A Nation Apart? Jewish Identity in an Age of Nationalism
Same as L75 JINE 176
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L22 History 1771 Freshman Seminar: Jewish and Islamic Migrations in the 20th Century
This course will investigate how the Exodus has been, and continues to be, a crucial source of identity for both Jews and Judaism. We will explore how the Exodus has functioned as the primary model from which Jews have created historical self-understanding and theological meaning. We will investigate how and why this story continues to be vital to Jews throughout the unfolding of the Jewish experience. How does the Exodus remain pertinent? How has the Exodus been reimagined multiple times throughout the history of Judaism? Why has the Passover celebration been transformed radically in different Jewish communities? We will analyze many types of expression: historical sources, liturgy, art, commentaries, theology, literature, film, mysticism and music.

L22 History 201A Puzzles and Revolutions: Text and Tradition
One major force in human history, including the arts, has been inquiry into the natural world. Especially after 1600, natural science, by virtue of its role in the development of technology and the improvement of health, has brought about great changes on all scales of human existence, first in Western Europe and then globally. In this course, the changing character of inquiry into the natural world, from antiquity forward, will be the object of study. Does natural science enable us, for example, to study nature as it is in itself, or are perspectives or frameworks inescapable? How is it that natural science has, especially since 1800, proved so useful in the development of technology? How has it impinged on the arts? The requirements will include writing several short papers and brief responses to the readings.
Credit 3 units. A&S: TH BU: BA EN: H

L22 History 2030 Freshman Seminar: The Enigma of Thomas Jefferson
Who was Thomas Jefferson, and why has his reputation undergone so many changes? This course is an exercise in understanding how professional historians and the general public discover and use the past. It therefore sets four primary goals: to recover the past on its own terms; to understand the many different methods and standards applied in interpreting the past; to understand how and why each generation changes the way it views the past as it seeks to make it "useable"; and to develop the skills of exposition and argumentation necessary to describe and analyze complex historical issues and to express critical ideas effectively.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L22 History 2081 History, Text, and Identity: An Intro to Jewish Civilization
The anthropologist Clifford Geertz once famously invoked Max Weber in writing that "man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs." The main goal of this course — designed as an introduction to Jewish history, culture and society — will be to investigate the "webs of significance" produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester we will focus on the following historical settings: seventh-century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period we will investigate the social and political conditions of Jewish life; identify the major texts that Jews possessed, studied, and produced; determine the non-Jewish influences on their attitudes and aspirations; and the explore the efforts that Jews made to define what it meant to be part of a Jewish collective.

L22 History 2090 Freshman Seminar: Chinese Diasporas
China has had one of the most mobile populations in world history. This freshman seminar explores migration patterns and networks in the creation of Chinese diasporas in the early modern and modern eras (1500-present). Rather than focus exclusively on the history of China or the Chinese overseas, this course more broadly considers practices and networks that sustained and linked internal and external migrations.
Credit 3 units. A&S: TH BU: BA EN: H

L22 History 2091 Freshman Seminar: The City in Early Modern Europe
From the city-states of Renaissance Italy to the 18th-century boomtowns of London and Paris, cities functioned as political, economic and cultural centers, creating unique opportunities and challenges for their diverse inhabitants. Using a wide variety of primary and secondary sources, this course examines how men and women, rich and poor, established citizens and marginal groups, tried to understand and manage life in the city. Their
conflicting experiences and expectations created not only social and economic unrest, but also a resilient social infrastructure, a tradition of popular participation in politics, and a rich legacy of cultural accomplishment. Topics studied include: urban political and economic organization; the creation and use of public spaces; religion as a source of community and conflict; and urban crime and public punishment.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: BA, HUM

L22 History 2093 Sophomore Seminar: Mobilizing Shame: Violence, the Media, and International Intervention

Deciding when and when not to intervene in the affairs of a foreign and autonomous state has become a hot-button issue in light of the occupation of Iraq and Afghanistan, and of the more recent lending of support to Syrian rebels. In this course, students examine the emergence of the "international community," the development of human rights, the rise of the war correspondent as a mythical figure, the creation of supranational political and military institutions, the influence of the media on public sympathies, and the changing nature of global politics. Case studies may include: the Greek War of Independence, the Crimean War, the break-up of the Ottoman Empire, the Spanish Civil War, the Second World War, the Vietnam War, Apartheid in South Africa, the Rwandan genocide, the Somali Civil War, and the Balkan conflicts of the 1990s. Sophomores receive priority registration. Enrollment takes place through the waitlist only.

L22 History 2157 Freshman Seminar: The Meaning of Pakistan: History, Culture, Art

Pakistan is the second-largest Muslim nation and the sixth most populous country in the world. Flanked by two rapidly growing superpowers and continually at the forefront of another global entanglement over Afghanistan, Pakistan has been forged through successive world historical epochs: colonialism, decolonization, the Cold War, neo-liberalism and the War on Terror. This course situates Pakistan in the context of U.S. imperialism, Indian regional hegemony, Chinese globalization and then turns to the powerful and diverse struggles launched by its own citizens against these external forces.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L22 History 2170 How to Sit on an Iron Throne: Reading Early Modern Politics & Violence Through Game of Thrones

This class attempts to enthusiastically pillage Game of Thrones and investigate what possible storylines were supplied by the history of 15th-17th century Europe. These storylines are heavily politicized in Game of Thrones and thus offers an exceptional opportunity to investigate how early modern men and women thought about power, fought with words and gift, built loyalties, betrayed one another, killed one another, married one another, and fielded armies of soldiers and cronies. Through the characters of Jon Snow and Tyrion Lannister, students study the historical stain of bastardy, and with the help of Cersei Lannister, Catelyn Tully and Arya Stark, the place of women in webs of power also is examined.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

Who were the few, and who were the many, in the early-modern Atlantic World? The discovery of the Americas and the coalescing of an Atlantic World would do much to transform profoundly the common understanding of the body politics in the early-modern world. The Americas provided new models of kingship and empire; Aztecs and Incas ruled in ways which both seemed familiar and strange to Spaniards' eyes. In the Caribbean, the North, and the Amazon, nomadic and semi-nomadic nations presented even more puzzling situations, where no one seemed to rule. And yet other nations, such as the Iroquois, were experimenting with new political forms. This course is thus focused on tracking this multitude of experiences from a socio-political and anthropological perspective, rather than through intellectual history.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD

L22 History 217C The Atlantic World, 1000-1800

Survey of the peoples, cultures and civilizations that bordered and traveled the Atlantic Ocean from Norse voyages up to the Napoleonic Wars. Examines the importance of the Atlantic as a frontier, an economic resource, a highway, and an impetus to technological innovation. Considers also the political, cultural, economic and demographic effects of increasing contact among Europeans, Americans and Africans.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD
Black women, much like their male counterparts, have shaped the contours of African-American history and culture. Still, close study of African-American women's history has burgeoned only within the past few decades as scholars continue to uncover the multifaceted lives of black women. This course will explore the lived experiences of black women in North America through a significant focus on the critical themes of violence and sexuality. We will examine African-American women as the perpetrators and the victims of violence and as the objects of sexual surveillance, as well as explore a range of contemporary perpetrators and the victims of violence and as the objects of sexual surveillance, as well as explore a range of contemporary debates concerning the intersections of race, class and gender, particularly within the evolving hip-hop movement. We will take an interdisciplinary approach through historical narratives, literature, biographies, films and documentaries.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

L22 History 2255 Freshman Seminar: The Caribbean and the African Diaspora
For many, the Caribbean evokes images of an exotic place with beautiful beaches, friendly, happy "natives" and unbridled hedonism. Yet, much more than a distant vacation destination for "first world" consumption, the Caribbean has long been closely intertwined with major events in World History. This course explores the ways in which the Caribbean has been a part of the making of World History, beginning in the 14th century and ending in the contemporary period. Themes covered will include: capitalism and slavery; the Haitian Revolution and its global reverberations; U.S. imperialism in the Caribbean; the impact of Caribbean migration on British culture; Caribbean sports; music and food in a global context; and the contributions of Caribbean thinkers to anti-colonial and anti-imperialist thought and action.
Credit 3 units. A&S: CD A&S IQ: LCD BU: IS EN: H

L22 History 2443 Freshman Seminar: The Nuremberg Trials and International Justice
This course is an exercise in understanding how professional historians and the general public discover and use the past. The main goals of this course are to understand the many different methods and standards applied to the past; to understand how and why each generation changes the past as it seeks to make it "usable"; and to develop the skills of exposition and argumentation necessary to describe and analyze complex historical issues and to express critical ideas effectively. The subject of this inquiry will be the Nuremberg trials — the innovations and critiques around the law and politics of the trials themselves, as well as the trials' legacies for ideas about international justice in postwar America and the world. Course requirements include a 15-page research paper and a series of short reaction papers to the assigned readings.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L22 History 2590 Freshman Seminar: From the "City on a Hill" to 9/11: Religion and Social Justice in America
From the Puritans' search to build the "city on a hill," to the growing conflation of Islam with terrorism, Americans have long nurtured a self-identity as "God's chosen people," an idea that has helped them justify and normalize a theology of both conquest and suffering. This course analyzes how religion served to both buttress and contest notions of social domination, punishment, reform and revolution in the United States from the colonial era to the present. Attention is paid to the voices of established religious leaders for whom the Church was their home, as well as religious dissidents who were often outcast as lunatics. Topics include the American Jeremiad, abolitionism, slave rebellions, Native American Catholicism, Fundamentalism, the Catholic Worker Movement, Pacifism, the Black Freedom Struggle, the Moral Majority and Post-9/11 military and gender interventions with the Islamic world.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L22 History 260 Migrations in Past and Present: An Introduction to Migration Studies
Same as L97 IAS 260
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L22 History 2651 Crime and Punishment in England, 1500-1750
In this course, we will study the history and cultural role of crime and punishment, exploring the relationships between laws and the people who made, broke, enforced, or selectively ignored them. We will read recent historical work on English crime, as well as primary sources such as legal handbooks, news pamphlets, ballads and sermons. Topics will include theft, homicide, witchcraft, rape, riots, and broader questions of how and why criminality and social discipline changed over time. Class meetings will be built around conversation, with occasional lectures as needed to provide historical and historiographical background. Digital humanities resources will fuel both class discussions and students' final projects. By working toward an understanding of crime and punishment, students will gain insight into the power structures, gender dynamics, religious tensions, and political dealings of early-modern England.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L22 History 2674 Sophomore Seminar: Slavery and Memory in American Popular Culture
Sophomores receive priority registration. The history of slavery has long created a sense of unease within the consciousness of many Americans. Recognizing this continued reality, this seminar examines how slavery is both remembered and silenced within contemporary popular culture. Although slavery scholarship continues to expand, how do everyday Americans gain access to the history of bondage? Moreover, how does the country as a whole embrace or perhaps deny what some deem a "stain" in American history? Taking an interdisciplinary approach to these intriguing queries, we examine a range of sources: literature, public history, art/poetry, visual culture, movies and documentaries, as well as contemporary music including reggae and hip-hop. The centerpiece of this course covers North American society, however, in order to offer a critical point of contrast students are challenged to explore the varied ways slavery is commemorated in others parts of the African diaspora.

L22 History 270 Globalization and its Discontents
Today, the heady promises of globalization appear to have failed us. The notion of global markets and global citizens seems to have remained at best, an ideal. Meanwhile the world's majority has witnessed a staggering decline in education, nutrition, health and even physical mobility. Nowhere have
these developments passed unquestioned: from the rise of the so-called Maoist insurgency in India to the Occupy movement in the U.S., people and especially the youth have expressed their outrage in creative and unconventional ways. In this course we plot the long and necessarily violent history of forging global interconnections. We next focus on the past 40 years to theorize the new social formations spawned by specific aspects of contemporary globalization such as the internet and the English language. Finally we look to the environmental and social abuses committed in the name of global connectivity and the massive protests against those atrocities. The lens for our analysis will be India, South Asia and their relationship with the United States. We will approach a range of novels, films and popular cultural artifacts as we build our own understanding of the nature, critique and promise of globalization. This is a sophomore-only seminar.

L22 History 2845 Freshman Seminar: States of Nature: The Natural Order of Society in Western Thought
This small-group discussion course gives full attention to the major moments and movements of modern European history, 1650 to the present. We also examine some fundamental texts in the Western traditions, from the Enlightenment to Romanticism; from Marxism to Darwinism and feminism; to the diverse thought of the 20th century. Its organizing idea is that an evolving notion of "nature" and "the natural order" has impacted Europe's definition of the state, and shaped its image of a just society. This course fulfills one of the introductory course requirements for the major in history; however, students cannot get credit for both this course and History 102C.

L22 History 2850 Freshman Seminar: The Holocaust: A European Experience
Between 1939 and 1945, Nazi troops invaded, occupied and destroyed major parts of Europe. A central aim of the Nazi project was the destruction of European Jewry, the killing of people, and the annihilation of a cultural heritage. This course seeks to deal with questions that, some sixty years after what is now known as the Holocaust, still continue to perplex. Why did Germany turn to a dictatorship of racism, war and mass murder? Why did the Nazis see Jews as the supreme enemy, and why did they turn against their allies, Poles, Ukrainians, Soviets, homosexuals, the Roma and the disabled? The course introduces students to issues that are central to understanding Nazi occupation and extermination regimes. Students look at survival strategies in Western Europe including emigration, resistance movements in Eastern European ghettos, local residents' reactions to the murder in their midst, and non-European governments' reactions.

L22 History 299 Undergraduate Internship in History
Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement, which the student obtains from the Career Center and which must be filled out and signed by the Career Center and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., eight to 10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours. Students may not receive credit for work done for pay but are encouraged to obtain written evaluations about such work for the student's academic adviser and career placement file. Credit variable, maximum 3 units.

L22 History 3026 Home, Bittersweet Home: Histories of Housing and Homeownership in America Since 1850
The idea of owning one's own home has been central to realizations of the American dream or the "good life." By 1931, Herbert Hoover called the idea "a sentiment deep in the heart of our race and of American life." While the dream continues, the reality of homeownership has been elusive or fraught with struggle and sacrifice for many Americans. If home ownership is such a central part of American identity, why have so many generations of Americans struggled to achieve it? In this course, we explore the histories of different versions of home and homeownership by touching down in different locations at pivotal moments in order to investigate the varied meanings of housing and homeownership in the context of a particular place and time in American history. Using a case-study approach, the course travels across time and space to explore diverse forms of housing, including the following: the big house and slave house in the South under slavery, the immigrant tenement in New York City, the company town in south Chicago, the Midwest homestead, the planned postwar suburban neighborhood, high rise public housing and gated communities. This format exposes students to the important role of federal and local policies as well as themes of housing including: homes as private and domestic realms; housing as a commodity and the largest form of American debt; housing as an icon and encoder of social status; housing as exclusionary and inclusionary; housing as racial or socioeconomic discrimination; the suburbs and their discontents; and the recent housing crisis.

L22 History 3043 Renaissance Europe
The Renaissance was a time of tremendous cultural change, global expansion and political and religious conflict that gave birth to the modern world. Yet, these dynamic developments were produced by an anxious society, where limited technological capabilities and an increasingly rigid system of social and gender divisions discouraged innovation and encouraged repressive measures. This course seeks to answer the question of how these contradictory impulses shaped the European Renaissance.

L22 History 3066 The American City in the 19th and 20th Centuries
This course explores the cultural, political and economic history of U.S. cities in the 19th and 20th centuries. The course focuses on New York, Chicago, St. Louis, Los Angeles and Atlanta, although other cities may be included. Students conduct significant primary research on sections of St. Louis, developing a detailed history of one of the city's neighborhoods. Much of the course readings address broad themes such as immigration, industrialization, deindustrialization and race and gender relations in American cities.

459
L22 History 3068 The Human History of Climate Change
While climate change has become a hot-button issue in recent decades, it is by no means a new concern. Advisers to the king of France were warning against deforestation in the 18th century and 19th century. Scientific experiments revealed the arrival of acid rain in the industrial centers of Great Britain. This course examines the longer history of climate change and how it has been addressed as a scientific, political and environmental issue. The course also introduces students to the field of environmental history and explores how the methods of this field of inquiry challenge traditional historical categories. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: HUM

L22 History 306M Visualizing Segregation
This interdisciplinary course is designed to introduce students to the history of three of America's major cities. We will explore the political, social, and cultural histories of each of these cities while tracing changes in architecture and the built environment. We chose these three cities for their diverse and intersecting histories. In many ways, St. Louis, Chicago, and New Orleans represent the major social and political forces that forged the modern American city. From westward expansion and the growth of the slave system, through mass European immigration and industrialization, the rise of Jim Crow and the decline of American industry, suburbanization, mass incarceration, and gentrification: all are visible in the landscapes of these American cities. Segregation of social groups, so often seen as natural or inevitable, is the result of historical processes, political decisions, public policies and individual actions. The course, in addition, will provide students with the opportunity to use some of the research techniques employed by urban scholars. We will engage in a major research project, tracing the history of St. Louis through a variety of primary sources. Our aim will be to trace the historical processes that generated urban landscapes divided along lines of race, class, ethnicity or religion. Same as I50 InterD 306M Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD

L22 History 3072 Cracks in the Republic: Discontent, Dissent and Protest in America, 1950-1975
This course examines the rise and impact of several major political, social and cultural protest movements in the United States during the middle part of the 20th century. It focuses on the Beats, Civil Rights, New Left, Anti-Vietnam War, Counter-Culture, Black Nationalism, Ethnic Consciousness, Women's Liberation and Gay/Lesbian Liberation, and contextualizes these movements within major national and international developments including Jim Crow and de facto segregation, middle-class ennui, and the Cold War. We pay special attention to the role of youth activism and the methods of dissent and protest used to challenge the status quo. Throughout the course we ask and seek answers to the following questions: What was the nature of these movements? What were their differences and similarities? How was the United States changed significantly during this period and what remained relatively the same? Were those engaged in activism unrealistic in their assumptions, discontent, dissent and protest, or was it a time when many Americans, even those who were passive or who opposed the protesters, reflected upon issues of privilege and political, economic and social power? Credit 4 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: HUM

L22 History 3073 The Global War on Terrorism
This course presents an historical assessment of the Global War on Terrorism (GWOT) from the perspective of its major participants: militant Sunni Islamist jihadists, especially the Al-Qaeda network, and the nation-states that oppose them, particularly the United States and its allies. The course concludes by analyzing the current state and future of Islamist jihad and the GWOT. Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L22 History 3082 City on a Hill: The Concept and Culture of American Exceptionalism
This course examines the concept, history and culture of American exceptionalism — the idea that America has been specially chosen or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture — a thesis our class reassesses with the help of modern critics. In the second part of this class, we broaden our discussion to consider the wider (and newer) meanings of American exceptionalism, theorizing the concept while looking at the way it has been revitalized, redefined and redeployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan to the current day. In the end, students gain a firm grasp of the long history and continuing significance — the pervasive impact — of this concept in American culture. Same as L98 AMCS 3081 Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

L22 History 3091 Poverty and Social Reform in American History
This course explores the history of dominant ideas about the causes of and solutions to poverty in American society from the early republic to the end of the 20th century. We investigate changing economic, cultural and political conditions that gave rise to new populations of impoverished Americans and to the expansion or contraction of poverty rates at various times in American history. We focus primarily on how various social commentators, political activists and reformers defined poverty, explained its causes, and struggled to ameliorate its effects. The course aims to highlight changes in theories and ideas about the relationship between dependence and independence, personal responsibility and social obligation, and the state and the citizen. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: BA EN: H

L22 History 3105 American Holidays, Rituals and Celebrations
This seminar examines a variety of holidays, festivals and rituals in American history and culture. Topics include: conflicts over Christmas, the sentiments of greeting cards, African-American emancipation celebrations, Roman Catholic festivals dedicated to the Virgin Mary, modern renderings of Jewish ritual (including Hanukkah), the masculinity embodied in fraternal lodge ceremonies, Neopagan festivals, and Halloween Hell Houses. Various interpretive approaches are explored, and the intent is to broach a wide range of questions about history and tradition, gender and race, public memory and civic ceremony,
moral order and carnival, through this topical focus on ritual and performance. A major emphasis is also placed on original research and writing, evident in the weight given the concluding seminar report and the final paper.

L22 History 3122 Race, Caste, Conversion: Social Movements in South Asia
It is a truism that caste-based injustice is one of the abiding forms of inequality in South Asia. But what precisely is a caste, and how is injustice to be removed? In this course, students explore different theories of caste, beginning with the race-inflected theories of the 19th century; and different approaches to the remediation of inequalities, including social reform, religious conversion, political organization and legal remedies. Students also compare caste reform with gender reform and consider how the experience of caste is inflected by gender.

Credit 3 units. A&S: TH, CD, SD EN: H

L22 History 313C Islamic History: 600-1200
The cultural, intellectual and political history of the Islamic Middle East, beginning with the prophetic mission of Muhammad and concluding with the Mongol conquests. Topics covered include: the life of Muhammad; the early Muslim conquests; the institution of the caliphate; the translation movement from Greek into Arabic and the emergence of Arabic as a language of learning and artistic expression; the development of new educational, legal and piestistic institutions; changes in agriculture, crafts, commerce and the growth of urban culture; multiculturalism and inter-confessional interaction; and large-scale movements of nomadic peoples.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: IS

L22 History 3149 The Late Ottoman Middle East
This course surveys the Middle East in the late Ottoman period (essentially the 18th and 19th centuries, up to World War I). It examines the central Ottoman state and the Ottoman provinces as they were incorporated into the world economy, and how they responded to their peripheralization in that process. Students focus on how everyday people's lived experiences were affected by the increased monetarization of social and economic relations; changes in patterns of land tenure and agriculture; the rise of colonialism; state efforts at modernization and reform; shifts in gender relations; and debates over the relationship of religion to community and political identity.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L22 History 314C Islamic History: 1200-1800
An introduction to Islamic politics and societies from the Mongol conquests to the 13th century to the collapse and weakening of the colossal "gunpowder" empires of the Ottomans, Safavids and Mughals in the early 18th century. Broadly speaking, this course covers the Middle Period (1000-1800) of Islamic history, sandwiched between the Early and High Caliphal periods (600-100) on the one hand and the Modern Period (1800-present) on the other hand. Familiarity with the Early and High Caliphal periods is not assumed. The course is not a "survey" of this period but a series of "windows" that allows students to develop both an in-depth understanding of some key features of Islamic societies and a clear appreciation of the challenges (as well as the rewards!) that await historians of the Middle Period. Particular attention is given to the Mamluk and Ottoman Middle East, Safavid Iran and Mughal India.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: IS

L22 History 3150 The Middle East in the 20th Century
This course surveys the history of the Middle East since World War I. Major analytical themes include: colonialism; Orientalism; the formation of the regional nation-state system; the formation and political mobilization of new social classes; changing gender relations; the development of new forms of appropriation of economic surplus (oil, urban industry) in the new global economy; the role of religion; the Middle East as an arena of the Cold War; conflict in Israel/Palestine; and new conceptions of identity associated with these developments (Arabism, local patriotism, Islamism).

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD Art: HUM BU: IS EN: H

L22 History 3161 Chinese Social History: Urban Transformations
The course examines major themes and debates in Chinese urban history since the mid-19th century. Topics include: the Western impact; the construction of modernity; elite activism and authoritarianism; consumerism and nationalism; shifting gender roles; political mobilization and social networking; and the Communist revolution. Understanding and analyzing the nuance and difference in views and interpretations in historical writings (historiography) are essential.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L22 History 3162 Early Modern China: 1350-1800
This course examines political, socioeconomic and intellectual — cultural developments in Chinese society from the middle of the 14th century to 1800. This chronological focus largely corresponds to the last two imperial dynasties, the Ming (1368-1644) and Qing (1644-1911). Thematically, the course emphasizes such early-modern indigenous developments as increasing commercialization, social mobility and questioning of received cultural values.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: IS EN: H
L22 History 3163 Historical Landscape and National Identity in Modern China
This course attempts to ground the history of modern China in physical space such as imperial palaces, monuments and memorials, campuses, homes and residential neighborhoods, recreational facilities, streets, prisons, factories, gardens, and churches. Using methods of historical and cultural anthropological analysis, the course invests the places where we see with historical meaning. Through exploring the ritual, political, and historical significance of historical landmarks, the course investigates the forces that have transformed physical spaces into symbols of national, local, and personal identity. The historical events and processes we examine along the way through the sites include the changing notion of rulership, national identity, state-building, colonialism and imperialism, global capitalism and international tourism. Acknowledging and understanding the fact that these meanings and significances are fluid, multiple, contradictory, and changing over time are an important concern of this course.
Same as L03 East Asia 3163
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L22 History 3165 The Chinese Diaspora to 1949
China has had one of the most mobile populations in world history. This course explores migration patterns and networks in the creation of Chinese diasporas in the early modern and modern eras (1500-present). Rather than focus exclusively on the history of China or the Chinese overseas, this course more broadly considers practices and networks that sustained and linked internal and external migrations. Specific topics include: the internal migration that has helped to consolidate the borders of the modern Chinese state, such as Chinese migration to the southwest in the 18th century, to Taiwan in the 19th and 19th centuries, and into western China in recent decades as well as overseas Chinese migration to Southeast Asia, Australia, Europe and the Americas, including St. Louis. In addition to examining how Chinese immigrants have adapted to local conditions both within and outside China, this course explores the practices that have created and sustained diasporic networks in nearly every part of the world today.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L22 History 3166 Modern China: 1890s to the Present
A survey of China’s history from the clash with Western powers in the 1800s to the present-day economic revolution. This course examines the background to the 1911 revolution that destroyed the old political order. Then it follows the great cultural and political movements that lead to the Communist victory in 1949. The development of the People’s Republic is examined in detail, from Mao to the global economy.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: IS

L22 History 3172 Queer Histories
Queer history is a profoundly political project. Scholars and activists use queer histories to assert theories of identity formation, build communities, and advance a vision of the meanings of sexuality in modern life and the place of queer people in national communities. This history of alternative sexual identities is narrated in a variety of settings — the internet as well as the academy, art and film as well as the streets — and draws upon numerous disciplines, including anthropology, geography, sociology, oral history, fiction and memoir, as well as history. This discussion-based course will examine the sites and genres of queer history, with particular attention to moments of contestation and debate about its contours and meanings.

L22 History 3192 Modern South Asia
This course covers the history of the Indian subcontinent in the 19th and 20th centuries. We look closely at a number of issues including colonialism in India; anticolonial movements; the experiences of women; the interplay between religion and national identity; and popular culture in modern India. Political and social history are emphasized equally.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM, IS

L22 History 3194 Environment and Empire
In this course we study British imperialism from the ground up. At bottom, the British empire was about extracting the wealth contained in the labour and the natural resources of the colonized. How did imperial efforts to maximize productivity and profits impact the ecological balance of forests, pastures and farm lands, rivers and rainfall, animals and humans? We ask, with environmental historians of the U.S., how colonialism marked a watershed of radical ecological change. The course covers examples from Asia to Africa, with a focus on the “jewel in the crown” of the British empire: the Indian subcontinent. We learn how the colonized contributed to the science of environmentalism, and how they forged a distinctive politics of environmentalism built upon local resistance and global vision, inspired by religious traditions and formative thinkers, not least Mahatma Gandhi.

L22 History 3202 Japan From Earliest Times to 1868
A survey of the history of the Japanese archipelago from prehistory to the Meiji Restoration of 1868, this course is designed to acquaint students with pre-industrial Japanese society and the discipline of history. In addition to tracing political, social and cultural narratives across time, we focus on three themes: the emergence of a centralized state and the subsequent transition from aristocratic to warrior to commoner rule; interactions with the world beyond Japan’s borders; and issues of gender and sexuality.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L22 History 320C Japan Since 1868
For some, “Japan” evokes “Hello Kitty,” animated films, cartoons and sushi. For others, the Nanjing Atrocities, “Comfort Women,” the Bataan Death March and problematic textbooks. For still others, woodblock prints, tea ceremony and cherry blossoms, or Sony Walkmans and Toyotas. Still others may hold no image at all. Tracing the story of Japan’s transformations, from a pre-industrial peasant society managed by samurai-bureaucrats into an expansionist nation-state and then to its current paradoxical guise of a peaceful nation of culture led by conservative nationalists, provides the means for deepening our understanding of historical change in one region and grappling with the methods and aims of the discipline of history.

L22 History 3212 Special Topics in History: Keble College, Oxford
Consult department. Credit variable, maximum 10 units. A&S: TH

L22 History 321C Introduction to Colonial Latin America until 1825
This course surveys the history of Latin America from the pre-Columbian civilizations through the Iberian exploration and conquest of the Americas until the Wars of Independence (roughly 1400-1815). Stressing the experiences and cultural contributions of Americans, Europeans and Africans, we consider the following topics through primary written documents, first-hand accounts, and excellent secondary scholarship, as well as through art, music and architecture: Aztec, Maya, Inca and Iberian civilizations; models of conquest in comparative perspective (Spanish, Portuguese and Amerindian); environmental histories; consolidation of colonialism in labor, tributary and judicial systems; race, ethnicity, slavery, caste and class; religion and the Catholic Church and Inquisition; sugar and mining industries, trade and global economies; urban and rural life; the roles of women, gender and sexuality in the colonies. Geographically, we cover Mexico, the Andes, and to a lesser extent, Brazil, the Southwest, Cuba, and the Southern Cone. Premodern, Latin America. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: HUM, IS

L22 History 3220 Modern Mexico: Land, Politics and Development
This course is designed to provide students with an overview of the political, social, economic and cultural history of Mexico from the era of independence (roughly 1810) to the present. Lectures outline basic theoretical models for analyzing historical trends and then present a basic chronological historical narrative. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L22 History 322C Modern Latin America
This course aims to present a survey of Latin American history from Independence to the present. Topics to be covered include the Wars of Independence; caudillismo; nationalism; liberalism; slavery and indigenous peoples; urbanization, industrialization and populism; ideas of race and ethnicity; the Mexican and Cuban Revolutions; U.S. intervention; modernity, modernism and modernization; motherhood and citizenship; the Cold War; terror and violence under military dictatorships and popular resistance movements. While the course aims to provide students with an understanding of the region, it focuses primarily on the experiences of Mexico, Cuba, Brazil, Argentina and Central America. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS

L22 History 3230 Black Power Across Africa and the Diaspora: International Dimensions of the Black Power Movement
This seminar explores the Black Power Movement as an international phenomenon. By situating Black Power within an African World context, this course examines the advent and intersections of Black Power politics in the United States, parts of Africa (including Ghana, Algeria, Nigeria and Tanzania), the Caribbean (Jamaica, Bermuda, the Bahamas and Cuba), South America (Brazil) and Canada. Particular emphasis is placed upon unique and contested definitions of “Black Power” as it was articulated, constructed and enacted in each region. Same as L90 AFAS 3231 Credit 3 units. L22 History 3262 The Early Medieval World: 300-1000
A principal theme of this course is the Christianization of Europe. From the emergence of the Christian church in the Roman Empire and the conversion of the emperor Constantine in 312 through the turbulent adoptions of Christianity by different cultures in the Early Middle Ages; the rise of Islam in the seventh century; the Arab conquests of north Africa and southern Europe; and the Byzantine empire, especially in Constantinople. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L22 History 3263 The High Middle Ages: 1000-1500
This course begins with the first millennium in the West and ends with the arrival of Europeans in the Americas. The course explores topics such as the relationship of popes to kings, of cities to villages, Jews to Christians, of vernacular literature to Latin, knights to peasants, the sacred to the profane. Topics include: different forms of religious life; farming; heresy; the shift from a penitential culture to a confessional one; the crusades; troubadour poetry; the Mongol Empire; universities; leprosy; and the conquest of New Spain. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: IS EN: H

L22 History 3266 Scholarship and the Screen: Medieval History and Modern Film
Historical films are surprisingly accurate reflections of modern historiographical trends in the study of the Middle Ages. This course uses films on the Middle Ages, medieval documentary evidence, slavery from the time the film was released, and current scholarship. It explores the shifts in historical interpretation of the Middle Ages over the past century and engages in debates over what evoking the past means for the scholar and the filmmaker. Credit 3 units. L22 History 3293 Beautiful Losers: The French in North America, 1500-1850
Adventurous fur-traders, fun-loving carnival-goers, magnanimous noblemen, simple but goodhearted Catholic peasants; the portrait of the French in the Americas rarely goes beyond these time-honored stereotypes. The French have usually been treated as quaint remnants of a bygone age, vanquished first by the British army, and then by the march of modernity. This class seeks to rescue these historical actors from the typecasting to which we often condemn them. Through this examination of the French presence in the Americas, we rethink and revisit the familiar stories of British North America, stories of slavery, commerce, property, piety and migration. The contrasted
L22 History 331 19th-Century China: Violence and Transformation
This course traces the history of China over the course of the 19th century, with an emphasis on social and cultural history. This was one of the most tumultuous centuries in Chinese history, during which China faced threats from abroad in the form of Western and Japanese imperialism, and from within, in the form of environmental degradation and rebellions resulting in an unprecedented loss of human life. The 19th century has thus often been portrayed as a period of sharp decline for China. At the same time, we explore the ways in which the origins of the dynamic society and economy found in China today, as well as the worldwide influence of overseas Chinese, can be traced to this century of turmoil.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: ETH, IS
exclusion to integration, calamity to triumphs. The themes that we explore in depth include the campaigns for and against Jewish "emancipation"; acculturation and religious reform; traditionalism and modernism in Eastern Europe; the rise of political and racial anti-Semitism; mass migration and the formation of American Jewry; varieties of Jewish national politics; Jewish-Gentile relations between the World Wars; the destruction of European Jewry; the emergence of a Jewish nation-state; and Jewish culture and identity since 1945.

L22 History 336C History of the Jews in Islamic Lands
This course is a survey of Jewish communities in the Islamic world, their social, cultural and intellectual life from the rise of Islam to the Imperial Age. Topics include: Muhammad, the Qur'an and the Jews; the legal status of Jews under Islam; the spread of Rabbinic Judaism in the Abbasid empire; the development of new Jewish identities under Islam (Karaite); Jewish traders and scholars in Fatimid Egypt; the flourishing of Jewish civilization in Muslim Spain (al-Andalus); and Sephardi (Spanish) Jews in the Ottoman empire. On this background, we look closely at some of the major Jewish philosophical and poetical works originating in Islamic lands. Another important source we study are documents from the Cairo Genizah, reflecting social history, the status of women and other aspects of daily life. Primary and secondary readings (in translation) are supplemented by audiovisual materials.

L22 History 3402 Money and Morals in the Age of Merchant Capital
Current events have showcased both the tremendous power and the moral questions surrounding global capitalism. Neither of these elements is new. Between the late medieval period and the 18th century, Europe underwent an economic transformation that, while creating an expansive and dynamic European economy, also prompted much debate and discussion about the changing patterns of production, consumption and social relations that went hand-in-hand with new economic practices. As state officials worked to make economic policies fit in with national priorities, other writers proclaimed that stock market bubbles, shady business practices, and the materialism and fickleness of consumers signaled the decline of morality and civilization. This course examines both theory and practice to develop a cultural history of merchant capitalism. Topics covered include: merchant training, the creation of public financial and stock markets, proto-industrialization, European colonization and trade, mercantilism, the figure of the merchant in literature, and Adam Smith's The Wealth of Nations.

L22 History 3413 Women in Early Modern Europe
From the Renaissance to the Enlightenment, European women experienced tremendous change as Europe witnessed religious upheaval, economic retrenchment, political consolidation and intellectual revolution. However, many of the core ideas about women's role and status remained remarkably stable during this period, and women continually struggled to create opportunities for themselves. We examine both the changing and unchanging nature of women's lives through sources such as conduct manuals for women; biographies about women from different economic, social and religious backgrounds; and the works of female authors.

L22 History 3416 War, Genocide and Gender in Modern Europe
This course explores the ways in which gender and gender relations shaped and were shaped by war and genocide in 20th-century Europe. The course approaches the subject from various vantage points, including economic, social and cultural history, and draws on comparisons between different regions. Topics covered will include: new wartime tasks for women; soldiers' treatment of civilians under occupation, including sexual violence; how combatants dealt with fear, injury and the loss of comrades; masculine attributes of soldiers and officers of different nations and in different wartime roles; survival strategies and the relation to expectations with regard to people's (perceived) gender identity; the meanings of patriotism for women and men during war; and gender-specific experiences of genocide.

L22 History 3420 Americans and Their Presidents
How have Americans understood what it means to be President of the United States? This seminar uses that question as a point of departure for a multidisciplinary cultural approach to the presidency in the United States, examining the shifting roles of the chief executive from George Washington through Barack Obama. In addition to a consideration of the President's political and policymaking roles, this course examines how the lived experiences of presidents have informed the ways Americans have conceived of public and private life within a broader political culture. In the process, this course uses the presidency as a means to explore topics ranging from electioneering to gender, foreign policy to popular media. Readings are drawn from a broad range of fields.

L22 History 3424 Childhood Culture and Religion in Medieval Europe
From child saints to child scholars and from child crusaders to child casualties, the experience of childhood varied widely throughout the European Middle Ages. This course will explore how medieval Jews, Christians, and Muslims developed some
parallel and some very much divergent concepts of childhood, 
childrearing, and the proper cultural roles for children in their 
respective societies. Our readings will combine primary and 
secondary sources from multiple perspectives and multiple 
regions of Europe and the Mediterranean World, including a 
few weeks on the history and cultural legacy of the so-called 
Children’s Crusade of 1312. We will conclude with a brief survey 
of medieval childhood and its stereotypes as seen through 
contemporary children’s books and TV shows. This course 
fulfills the Language & Cultural Diversity requirement for Arts 
& Sciences.

L22 History 343C Europe in the Age of Reformation
How should people act toward each other, toward political 
authorities and toward their God? Who decided what was the 
“right” faith: the individual? the family? the state? Could a 
community survive religious division? What should states do 
about individuals or communities who refused to conform in 
matters of religion? With Martin Luther’s challenge to the Roman 
Catholic Church, the debates over these questions transformed 
European theology, society and politics. In this class we examine 
the development of Protestant and Radical theology, the 
Reformers’ relations with established political authorities, the 
response of the Catholic Church, the development of new 
social and cultural expectations, the control of marginalized 
religious groups such as Jews, Muslims and Anabaptists, and 
the experiment of the New World.

L22 History 3445 Riots and Revolution: A History of Modern 
France from 1789 to the Present
This course surveys the history of France in the 19th and 20th 
centuries, from the French Revolution through the European 
Union. The focus in this course is on the relationship between 
Paris and the provinces and how the dynamic between the 
seemingly all-powerful capital and its periphery, both colonial 
and metropolitan, played into the history of modern France. 
Major topics include: the legacy of the French Revolution; the 
development of French nationalism; popular political uprisings; 
the meaning of modernity; colonialism; French cultural capital; 
and the changing fortunes of France on the international stage. 
Modern, Europe. Prerequisite: Consult semester Course

L22 History 3446 The Rise and Fall of Indian Country, 
1776-1900
What does the phrase "Indian Country" mean in American 
history? Was it a sovereign state with complex political societies, 
an ill-defined place distinguished by a savage wilderness, or 
something else entirely? By examining the long history of Indian 
Country as both a physical space and a political concept, this 
course asks questions about how North America’s indigenous 
people shaped the political history of the continental interior 
from the establishment of the United States to the closing 
of the frontier in the 1890s. Indian Country as a historical 
concept touches on some of the crucial aspects of American 
history: race, space and political identity, and challenges our 
assumptions about what government, nationality and cultural 
identity look like in the American context.

L22 History 3447 Visualizing Blackness: Histories of the 
African Diaspora Through Film
The African diaspora and, more importantly, variations of 
blackness, black bodies, and black culture have long captured 
the imagination of audiences across the globe. Taking a cue 
from exciting trends in popular culture, this course bridges the 
world of history, film and culture to explore where and how 
historical themes specific to African-descended peoples are 
generated on screen (film and television). Fusing the film world 
with digital media (i.e., online series and "webisodes") this 
class allows students to critically engage diasporic narratives 
of blackness that emerge in popular and independent films not 
only from the United States but other important locales including 
Australia, Brazil, Britain and Canada. Moving across time and 
place, class discussions center on an array of fascinating yet 
critical themes including racial/ethnic stereotyping, gender, 
violence, sexuality, spirituality/conjuring and education. Students 
should be either of junior- or senior-level and have taken at least 
one AFAS course. Permission of the instructor is required for 
enrollment.

L22 History 3450 Modern Germany
This course surveys the political, social, economic and cultural 
forces that have shaped German history since 1800. After 
examining the multiplicity of German states that existed in 
1800, we identify the key factors that resulted in unification in 
1871. We then turn to a study of modern Germany in its various 
forms, from the Empire through the Weimar Republic and Third 
Reich, to postwar division and reunification. A major focus is the 
continuities and discontinuities of German history, particularly 
with regard to the historical roots of Nazism and attempts to 
"break with the past" after 1945.

L22 History 3481 Rethinking the "Second Wave": The History of U.S. Feminisms, 1960-1990
The U.S. women’s movement has been called “the twentieth century’s most influential movement,” but until recently assessments of its origins, characteristics, and impact have been largely impressionistic and subjective, left to movement participants and popular culture. Building on a recent explosion of historical studies of American feminism, this course examines the history of the so-called “second wave” of the women’s movement from its origins in the early 1960s to its alleged demise in the late 1980s. Topics to be covered include the origins of feminist activism; the traditional history of the women’s movement and recent revisions; how race and class shaped the feminist movement; how feminist ideas and organizing transformed American society; feminism and individual experience; and responses to the women’s movement. In this discussion-based course, we read scholarly analyses of the women’s movement as well as memoirs, popular essays, and many primary documents from the period.

L22 History 3554 Revolution with an Accent: The Haitian and French Revolutions, 1770-1805
How can politics enact fundamental changes? What make those changes a “revolution”? How do we judge the legitimacy of such changes? When these questions arise over the course of ordinary political arguments, the example of the French Revolution often looms large, casting a shadow tinted with blood and Terror. Much less present in the collective political imagination is the Haitian Revolution. These two events are complex and complicated, and are filled with fascinating, chilling, inspired characters, enflamed rhetoric and challenging questions. This course examines both the unfolding of events and the rise and fall of protagonists within these two revolutions and explores the ways that issues such as religion, state finance, loyalty, race and slavery became politicized.

L22 History 3561 Andean History: Culture and Politics
Since pre-Columbian times, the central Andean mountain system, combining highlands, coastal and jungle areas, has been the focus of multietnic politics. Within this highly variegated geographical and cultural-historical space, emerged the Inca Empire, the Viceroyalty of Peru — Spain’s core South American colony, and the central Andean republics of Ecuador, Peru, and Bolivia. Taking a chronological and thematic approach, this course will examine pre-Columbian Andean societies, Inca rule, Andean transformations under Spanish colonialism, post-independence nation-state formation, state-Indian relations, reform and revolutionary movements, and neoliberal policies and the rise of new social movements and ethnic politics. This course focuses primarily on the development of popular and elite political cultures, and the nature and complexity of local, regional, and national power relations. Same as L97 IAS 356.

L22 History 3593 The Wheels of Commerce: From the Industrial Revolution to Global Capitalism
John Maynard Keynes once said, "The ideas of economists and political philosophers both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else. Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economist." In this course we focus our attention on the blind spot that Keynes so astutely identified. We study seminal works in the history of political economy (Smith, Malthus, Marx, Keynes, Krugman, etc.) and explore the social, economic and political histories in which they were grounded. We begin with the Industrial Revolution in Britain, the works of Adam Smith, and the emergence of political economy as a field of inquiry. We end with the globalization of the 1970s, the works of Joseph Stiglitz, and the challenges that a more interconnected world has posed both for the organization of the economy and the practice of economics as a discipline.
Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

L22 History 3596 The First World War and the Making of Modern Europe
World War I ushered our age into existence. Its memories still haunt us and its aftershocks shaped the course of the 20th century. The Russian Revolution, the emergence of new national states, fascism, Nazism, World War II and the Cold War are all its products. Today, many of the ethnic and national conflicts that triggered war in 1914 have resurfaced. Understanding World War I, in short, is crucial to understanding our own era.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: IS EN: H

L22 History 3599 Travelers, Tricksters and Storytellers: Jewish Travel Narratives and Autobiographies, 1100-1800
Premodern Jewish literature includes a number of highly fascinating travelogues and autobiographies that are still awaiting their discovery by a broader readership. In this course, we explore a variety of texts ranging from medieval to early modern times. They were written by Jewish authors (both Ashkenazi and Sephardic) originating from Spain, Italy, Germany and the Ottoman Empire — among them pilgrims, rabbis, merchants, and one savvy business woman. We read them as responses to historical circumstances and as expressions of Jewish identity in its changing relationship to the Christian or Muslim environment in which the authors lived or traveled. Specifically, we ask questions such as: What is it about travel writing that enables its authors (and readers) to reflect on themes of identity and difference? How does this genre produce representations of an Other, against which and through which it defines a particular sense of self? What are the commonalities and differences between (Jewish) travelogues and autobiographies? To what extent are these texts reliable accounts of their authors’ personal experiences and to what extent do they serve their own self-fashioning? How did premodern Jewish writers portray Christians, Muslims and Jews from other cultural backgrounds than their own? How did they construe the role of women in a world dominated by men? How did they reflect on history, geography and other fields of knowledge that were not covered by the traditional Jewish curriculum; and how did they respond to the challenges of early modernity?
Same as L75 JINE 359
L22 History 355M Hands on the Past: History, Murder and the Archive
The future depends on the past. This course taps into that understanding by offering an alternative hands-on methods class to encourage undergraduate student engagement with history and archives, both on- and offline. In this particular class, students will be nurtured to more deeply interact with the historical past by exploring gender, race, violence and sexuality through three central questions explored throughout the course: What and how is African-American history conducted? How do we best document the past with students fully at the intellectual table of production and preservation? How do we make history with history? These exciting and diverse interests will be pursued through in-class discussions and course assigned readings, but especially by taking a spring break research project trip across Missouri to various local repositories and the state archives, to activate and fuel the idea of putting hands on the past. Doing so will facilitate learning beyond the confine of books and the classroom to give deeper treatment to the Missouri state penitentiary, female convicts, prison executions, pardons/clemency, local archival management and preservation, library sciences, and the art of storytelling in the digital age.
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD BU: BA EN: S

L22 History 3600 Topics in Caribbean History: Beyond Sea, Sunshine and Soca: Blacks in the Caribbean
This course examines major themes in the history of the Caribbean from the 15th to the 20th century. The first half of the course will focus on the 15th to the 19th century, exploring issues such as indigenous societies, European encounter and conquest, plantation slavery, the resistance of enslaved Africans and emancipation. The remainder of the course focuses on aspects of the cultural, economic, political and social experiences of Caribbean peoples during the 20th century. Major areas of inquiry include the labor rebellions of the 1950s, decolonization, diasporic alliances, Black Power, identity, construction and the politics of tourism. While the English-speaking Caribbean constitutes the main focus, references will be made to other areas such as Cuba and Haiti. Additionally, the Caribbean will be considered in a multilayered way with a view to investigating the local (actors within national boundaries), and the classroom to give deeper treatment to the Missouri state penitentiary, female convicts, prison executions, pardons/clemency, local archival management and preservation, library sciences, and the art of storytelling in the digital age.

L22 History 3630 Mapping the World of Black Criminality
Ideas concerning the evolution of violence, crime, and criminal behavior have been framed around many different groups. Yet, what does a typical criminal look like? How does race — more specifically blackness — alter these conversations, inscribing greater fears about criminal behaviors? This course taps into this reality examining the varied ways people of African descent have been and continue to be particularly imagined as a distinctly criminal population. Taking a dual approach, students will consider the historical roots of the policing of black bodies alongside the social history of black crime while also foregrounding where and how black females fit into these critical conversations of crime and vice. Employing a panoramic approach, students will examine historical narratives, movies and documentaries, literature, popular culture through poetry and contemporary music, as well as the prison industrial complex system. The prerequisite for the course is L90 3880 (Terror and Violence in the Black Atlantic) and/or permission from the instructor, which will be determined based on a student’s past experience in courses that explore factors of race and identity.
Enrollment limit: 20.

L22 History 3632 The American Frontier: 1776-1848
This course examines the nation’s shifting frontier from independence through the Mexican-American War. It considers people and places in flux as their nationality, demography and social order underwent dramatic changes. Students make use of an extensive electronic archive of primary sources including period documents, historic maps and contemporary art work, in order to consider how these sources confirm, reject or expand on the ideas they encounter in published scholarship.
L22 History 365 The New Republic: The United States, 1776-1850

"Go get yourself some democracy!" Americans have so often preached to other nations. But just how did Americans themselves go about creating the world's largest and most successful democratic republic? And how democratic was this violent new nation that reeled from one crisis to another, and ultimately to the brink of collapse in its first 75 years? This survey of American history from the creation of the Republic to the eve of the Civil War explores the Revolution and its ambiguous legacies, the starkly paradoxical "marriage" of slavery and freedom, and the creation of much of the America that we know; mass political parties; a powerful Presidency; sustained capitalist growth; individualistic creeds; formalized and folkloric racism; heteronormative patriarchal family life; technological innovation; literary experimentation; distinctively American legal, scientific and religious cultures; and the modern movements of labor, feminism, and African-American empowerment. Attendance required.

L22 History 366 The Civil War and Reconstruction: 1848-1877

This course focuses on the Civil War and Reconstruction as the central drama and pivot of American life in the 19th century and, also, of American history itself, to the present day. How do we begin to understand the significance of the killing fields of the American Civil War, its three-quarters of a million dead? The bloody conflict, and its causes and consequences, are explored from multiple perspectives: those of individuals such as Lincoln, McClellan, Davis, Douglass, Grant and Lee, who made momentous choices of the era; of groups such as the African-American freedpeople and the Radical Republicans, whose struggles for freedom and power helped shape the actions of individuals; and of the historians, novelists, filmmakers and social movements that have fought to define the war's legacy for modern America. How is the Civil War both long ended and, at the same time, very much alive and still contested in contemporary America? How has it shaped modern Americans' eruptive engagement with race?

L22 History 3662 Experts, Administrators and Soldiers: Governance and Development in Postcolonial Africa

Between 1957 and 1975, one African territory after another made the transition from European colony to independent nation state. Widespread optimism that these "transfers of power" would bring a new era of prosperity and dignity dissipated quickly as the new nations struggled with political instability, military coups, social unrest and persistent poverty. This course traces the origins of African governance and economic development from their imperial origins into the independence era. By exploring nation-building, economic planning and public administration from the perspective of political elites, foreign experts and ordinary people, the class takes an intimate look at how colonies became nation-states. This course is designed for first and second year students with an interest in African studies and international public administration.

L22 History 367 America in the Age of Inequality: The Gilded Age and the Progressive Era, 1877-1919

This course explores dramatic changes in American society during the half-century from the Civil War to the end of World War I. We discuss industrialization; mass immigration from Europe, Asia and Latin America; the vast movement of rural people to cities; the fall of Reconstruction and rise of Jim Crow; the expansion of organized labor; birth of American Socialism; and the rise of the American empire in the Caribbean and the Philippines. The course, in addition, analyzes the many and varied social reform efforts of the turn of the 20th century, from women's suffrage to anti-lynching campaigns; from trust-busting and anti-immigrant crusades to the settlement house movement.

L22 History 3670 The Long Civil Rights Movement

The Civil Rights Movement is known as a southern movement, led by church leaders and college students, fought through sit-ins and marches, dealing primarily with non-economic objectives, framed by a black and white paradigm, and limited to a single tumultuous decade. This course seeks to broaden our understanding of the movement geographically, chronologically and thematically. It pays special attention to struggles fought in the North, West and Southwest; it seeks to question binaries constructed around "confrontational" and "accommodationist" leaders; it reveals how Latinos, Native Americans and Asian Americans impacted and were impacted by the movement; and it seeks to link the public memory of this movement with contemporary racial politics.

L22 History 3672 Medicine, Healing and Experimentation in the Contours of Black History

Conversations regarding the history of medicine continue to undergo considerable transformation within academic and the general public. The infamous Tuskegee syphilis experiment serves as a marker in the historical consciousness regarding African Americans and the medical profession. This course taps into this particular evolution, prompting students to broaden
their gaze to explore the often delicate relationship of people of African descent within the realm of medicine and healing. Tracing the social nature of these medical interactions from the period of enslavement through the 20th century, this course examines the changing patterns of disease and illness, social responses to physical and psychological ailments, and the experimental and exploitative use of black bodies in the field of medicine. As a history course, the focus is extended toward the underpinnings of race and gender in the medical treatment allocated across time and space — the United States, Caribbean and Latin America — to give further insight into the roots of contemporary practice of medicine.

L22 History 373 History of United States Foreign Relations to 1914
This course explores the major diplomatic, political, legal and economic issues shaping U.S. foreign relations in the 18th, 19th and early 20th centuries, up until the U.S. entry into World War I. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM, IS EN: H

This course explores the major diplomatic, political, legal and economic issues shaping U.S. foreign relations with the wider world from the 1920s to the “fall of Communism” in 1989. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM, IS EN: H

L22 History 3751 Women, Gender and Sexuality in Postwar America
We explore the history of the United States since 1945 by focusing on the ways that gender and sexuality have shaped the lives of Americans, particularly the diverse group of women who make up more than half the nation's population. Topics include: domesticity and the culture of the 1950s; gendering the Cold War; the gender politics of racial liberation; the sexual revolution; second-wave feminism and the transformation of American culture; the new right's gender politics; and the impact of new conceptions of sexual and gender identity at century's end. Course texts include scholarly literature, memoirs, novels and film. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: BA

L22 History 3789 Building St. Louis History
This course aims to provide a national and local understanding of how Americans and St. Louisans dealt with the problems of racism, poverty and sexism from 1945 to the present. While history courses traditionally require that students analyze the credibility and subjectivity of each historical source, this course further challenges students to use the methods of oral history to compare evidence from oral historical memory with written texts. By comparing St. Louis history with that of the rest of the nation, students analyze regional differences and understand the unique historical conditions that shaped this city. Credit 4 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L22 History 3803 Ancient Greek and Roman Medicine
This course introduces the student to the practice and theory of medicine in the ancient Mediterranean, beginning in Egypt and continuing through Greece and Rome. In the end, we will find ourselves in the Middle Ages. Our focus will be on Greco-Roman medicine: how disease was understood; how disease was treated surgically, pharmacologically, and through diet; the intellectual origins of Greek medicine; the related close relationship between Greco-Roman medicine and philosophy; and the social status of medical practitioners. We will also discuss how medicine was written and in what terms its practitioners conceived it. Same as L08 Classics 3801 Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L22 History 3840 Migration and Modernity: Human Mobility, Identity and State Formation — Russian/Soviet/post-Soviet Context
This class introduces students to a broad history of 19th- and 20th-century Russia and the Soviet Union alongside problems of migration. In this class, students will be introduced to the historical, social, and political dimensions of migration within, to, and from the Russian Empire, the Soviet Union, and its successor states. We will look at the intersection of the movement of people with long-term economic, social and political transformations, but also pay attention to crucial events and phenomena of Soviet history that set large-scale migrations in motion. Course materials will, for instance, address mass movements related to modernization and internal colonization, analyze the role of revolutionary change and warfare for forced displacement, and study the implications of geopolitical changes in the aftermath of the breakdown of the USSR for human rights discourses. Alongside the historically grounded overview, the class explores concepts of citizenship, diaspora, nationality policy, gender specific experiences of migration, and the ethics and political economy of migration politics, thereby highlighting how current trends in Russian society are indicative of broader discourses on difference and social transformation. Same as L97 IAS 384 Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD EN: H

L22 History 3860 Empire in East Asia: Theory and History (WI)
An introduction to how historians and anthropologists incorporate theoretical insights into their work, this course first “reverse engineers” the main arguments in several insightful books and articles on empire in Asia, all of which are informed by the work of Michel Foucault. Retaining our theoretical knowledge, we then focus on the more empirical aspects of the Japanese empire in Korea, including settler colonialism, the colonial economy, representations of colonialism and the long-term ramifications of empire. We conclude with a general assessment of the history of empire. In these ways, this course seeks to equip students with a knowledge of empire in East Asia in the late 19th and 20th centuries while simultaneously investigating the nature of that knowledge. Same as L97 IAS 386 Credit 3 units. A&S: TH, CD, WI A&S IQ: HUM, LCD, WI BU: IS EN: H

L22 History 3880 Terror and Violence in the Black Atlantic
From the period of bondage through the 21st century, terror and racialized violence have consistently been used as a form of
social control. This course is constructed to explore the historical foundations of extreme threats of violence inflicted among populations of African descent. The fabric of American culture has given birth to its own unique brand of terrorism, of which this class spends considerable time interrogating. Yet, in recognizing that these practices are commonly found in other parts of the Black Atlantic, students will be encouraged to take a comparative view to better tease out the wider strands of violence operative in places like England, the Caribbean, and Latin America. Within this course, we will explore the varied ways in which music, films, newspapers, and historical narratives shed light on these often life-altering stories of the past. Some of the themes touched upon include: the use of punishment/exploitation during the era of slavery; lynching; sexual violence; race riots; police brutality; motherhood; black power; and community activism. Same as L90 AFAS 3880
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

L22 History 388C How Free is Free?: African-American History Since Emancipation
The events that unfolded in Ferguson revealed the contradictions of a national government that is led by a black president yet also sanctions the susceptibility of its black citizens to police brutality. What has freedom really meant for African Americans since emancipation? This course addresses key events and movements that shaped African Americans' definition and pursuit of freedom and citizenship, emphasizing various strategies, successes, failures and legacies developed as a result. While paying attention to the progress that African Americans have attained in various political, economic and cultural arenas, this course also analyzes new forms of racism, labor exploitation and disenfranchisement that African Americans face in the 21st century. Key developments include the Reconstruction, Jim Crow, the Harlem Renaissance, the World Wars, the Civil Rights Movement, and mass incarceration. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM

L22 History 3891 East Asia Since 1945: From Empire to Cold War
This course examines the historical forces behind the transformation of East Asia from war-torn territory under Japanese military and colonial control into distinct nations ordered by Cold War politics. We begin with the 1945 dismantling of the Japanese empire and continue with the emergence of the People's Republic of China, the Republic of China (Taiwan), the two Koreas and Vietnam, all of which resulted from major conflicts in post-war Asia. We conclude with a look at East Asia in the post-Cold War era. Credit 3 units. A&S: TH, CD EN: H

L22 History 38A8 Women, Men and Gender in Africa: Writing-Intensive Seminar
This seminar explores the ways in which gender relations have been produced, reproduced and transformed through the everyday actions of women and men in Africa. The focus is both on agency and on structures of power, as we move from a consideration of gender relations during the 19th-century jihads in West Africa to problems of love, sexuality and marriage in contemporary South Africa. Credit 3 units. A&S: TH, CD, WI A&S IQ: HUM, LCD, WI BU: BA EN: H

L22 History 38B9 Understanding Lincoln: Writing-Intensive Seminar
This course explores the life, art (political and literary) and historical significance of Abraham Lincoln. It focuses first on how he understood himself and foregrounds his inspired conception of his own world-historical role in the Civil War. The course also traces how the larger world furnished the contexts of Lincoln's career, how his consciousness, speeches and writings, and presidential decisions can be understood against the backdrop of the revolutionary national democratic upheavals of the 19th century. Finally the course investigates how the 16th president, so controversial in his day, has remained a subject of cultural contestation, with historians, novelists, poets, cartoonists, filmmakers, advertisers and politicians struggling over his memory and meaning, to the present. Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI EN: H

L22 History 38C8 Religion and Politics in South Asia: Writing-Intensive Seminar
The relationship between religion, community and nation is a topic of central concern and contestation in the study of South Asian history. This course explores alternative positions and debates on such topics as: changing religious identities; understandings of the proper relationship between religion, community and nation in India and Pakistan; and the violence of Partition (the division of India and Pakistan in 1947). The course treats India, Pakistan and other South Asian regions in the colonial and postcolonial periods. Credit 3 units. A&S: TH, CD, WI A&S IQ: HUM, LCD, WI BU: IS EN: H

L22 History 38M8 The Making of the Modern American Landscape — Writing-Intensive Seminar
This writing-intensive seminar explores environmental change in relation to human actions in the United States. It provides a vision of American history from the perspective of the land itself. It traces transformations in the organization and uses of landed property from the 18th-century surveys of western lands through the expansion of slavery and the cotton kingdom; the construction of irrigation systems in the west; the emergence of new technologies of production and communication in 19th-century cities to the mass production of suburban housing; and finally to the rise of Disneyland and Las Vegas. Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI BU: HUM EN: H

L22 History 38R8 The Russian Revolution: Writing-Intensive Seminar
The Ten Days that Shook the World divided Russian, European and American society from 1917 until the dissolution of the USSR in 1991. This seminar examines major interpretations of the Russian Revolution through readings and a series of written exercises including a formal book review, a comparative essay and an analytical research paper. Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI BU: HUM EN: H

L22 History 3921 Secular & Religious: A Global History
Recent years have seen a dramatic rethinking of the past in nearly every corner of the world as scholars revisit fundamental questions about the importance of religion for individuals, societies and politics. Is religion as a personal orientation in decline? Is Europe becoming more secular? Is secularism a European invention? Many scholars now argue that "religion" is a European term that doesn't apply in Asian societies. This
course brings together cutting-edge historical scholarship on Europe and Asia in pursuit of a truly global understanding. Countries covered vary, but may include Britain, France, Turkey, China, Japan, India and Pakistan.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L22 History 393 Medieval Christianity
This course surveys the historical development of Christian doctrine, ecclesiastical organization, and religious practice between the fifth century and the 15th, with an emphasis on the interaction of religion, culture, politics and society. Topics covered include: the Christianization of Europe; monasticism; the liturgy; sacramental theology and practice; the Gregorian reform; religious architecture; the mendicant orders and the attack on heresy; lay devotions; the papal monarchy; schism and conciliarism; and the reform movements of the 15th century.

L22 History 3960 Women and Social Class
This course examines the intersection of class and gender from the late 18th century to the present. It begins by asking how a focus on women challenges conventional notions of class. Some of the topics covered include women, race and class; class and family formation: women, class and globalization; class and feminist politics; women and work; class and domestic labor; women and unionization; and class and sexual identity. The emphasis is on women and class in the U.S., but includes analysis of women and class in a broader, global context. This course examines these topics using nonfictional and fictional texts. Prerequisites: one 100- or 200-level Women, Gender, and Sexuality Studies Course or permission of instructor.

Same as L77 WGSS 396

L22 History 39H8 England’s Internal Empire, 1500-1700: Writing-Intensive Seminar
The establishment and the costs of English hegemony over the British Isles. Political and cultural aggression, religious conflict, and social and economic development all contributed to identity formation, whether in the triumphant metropolitan core or in the embittered Celtic periphery.

Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI BU: IS EN: H

L22 History 39J8 Mapping the Early Modern World: Writing-Intensive Seminar
Societies use maps not just to see the world, but also to assign meaning and order to space: both nearby spaces and spaces on the other side of the world. In this writing-intensive seminar, we study how maps were created, circulated and interpreted between the 16th and 18th century, when Europeans came into contact with new regions throughout the world and reshaped their own backyards through the rise of the modern state and the development of national identity.

Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI EN: H

L22 History 39S8 Rivers: A Comparative Approach to Chinese and World History: Writing-Intensive Seminar
This course uses rivers as geographical frames of reference to address a variety of issues, including physical and social mobility, agriculture and commerce, the state, environmental history and construction of cultural meanings. Each week begins with a focus on the West River, which flows through two provinces in southern China. Readings on the West River are matched with readings that address similar topics but focus on other important rivers in the world. The temporal focus is approximately 1500-1900, a period that witnessed the zenith of rivers as modes of transportation and commerce.

Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI
L22 History 39SC Imperialism and Sexuality: India, South Asia and the World: Writing-Intensive Seminar
What is the connection between the appropriation of other people's resources and the obsession with sex? Why is "race" essential to the sexual imperative of imperialism? How has the nexus between "race," sexuality and imperial entitlement reproduced itself despite the end of formal colonialism? By studying a variety of colonial documents, memoirs produced by colonized subjects, novels, films and scholarship on imperialism, we seek to understand the history of imperialism's sexual desires and its continuation in our world today.
Credit 3 units. A&S: TH, CD, SD, WI A&S IQ: HUM, LCD, WI BU: IS EN: H

L22 History 39SL Blacks, Latinos and Afro-Latinos: Constructing Difference and Identity: Writing-Intensive Seminar
Dominant discourses on Black-Latino relations focus on job competition, while a few others celebrate the future of an America led by "people of color." What is at stake in these narratives? How did we come to understand what is "black" and "Latino"? Students taking this course examine the history of African Americans' and Latinos' racialization under British, Spanish, and American empires, paying attention to both the construction of the racial "Other" by European elites, the reclaiming of identities by the racially marginalized through the Black and Brown liberation movements of the 1960s and 1970s, and the movements' impacts on black-Latino electoral and grassroots coalitions, mass incarceration of youth, and Afro-diasporic productions of hip-hop.

L22 History 4040 Senior Seminar: Convivencia or Reconquista? Muslims, Jews and Christians in Medieval Iberia
Senior Seminar. This seminar will provide an opportunity to explore in some depth various facets of the convivencia ("dwelling together"; coexistence) of Muslims, Jews, and Christians in medieval Iberia. While we will pick up the timeline with the emergence of an Ibero-Islamic society in the eighth century CE, the seminar's historical horizon stretches up to the turn of the 15th to the 16th century, when Spanish Jews and Muslims were equally faced with the choice between exile and conversion to Christianity. Until about the mid-11th centuries Muslims dominated most of the Iberian Peninsula. From roughly the mid-11th through 15th centuries, Christians ruled much and eventually all of Spain and Portugal. Through a process termed, from a Christian perspective, as reconquista ("reconquest"), Catholic kingdoms acquired large Muslim enclaves. As borders moved, Jewish communities found themselves under varying Muslim or Christian dominion, or migrated from one realm to the other. Interactions between the three ethno-religious communities occurred throughout, some characterized by mutual respect and shared creativity and others by rivalry and strife. The course focuses on these religious and cultural contacts, placing them in various historical and geographic contexts. It will raise questions concerning the ambiguities of religious change and concerning the interplay of persecution and toleration. Methodologically, the seminar emphasizes the study of primary sources, including documentary, historiographical, literary and poetical texts. In the course of their study, attention will be paid to peculiarities of genre, and difficulties involved in formulating historical assessments. In this sense, we will also aim at developing critical reading skills in relation to secondary literature. Seniors in Jewish, Islamic and Near Eastern Studies will be given preference in admission. Advanced students in other fields are asked to contact the instructor prior to enrollment.

L22 History 4051 Diaspora in Jewish and Islamic Experience
L22 History 4080 Nuns
Nuns — women vowed to a shared life of poverty, chastity, and obedience in a cloistered community — were central figures in medieval and early modern religion and society. This course explores life in the convent, with the distinctive culture that developed among communities of women, and the complex relations between the world of the cloister and the world outside the cloister. We look at how female celibacy served social and political, as well as religious, interests. We read works by nuns: both willing and unwilling; and works about nuns: nuns behaving well, and nuns behaving scandalously badly; nuns embracing their heavenly spouse, and nuns putting on plays; nuns possessed by the devil, and nuns managing their possessions; nuns as enraptured visionaries, and nuns grappling with the mundane realities of life in a cloistered community.

L22 History 4120 Rainbow Radicalisms: Ethnic Nationalism, the Black Panther Party and the Politics of the New Left
The Black Panther Party remains one of the most iconic groups of the 1960s and 1970s. Perhaps one of the most understudied aspects of the Panther's legacy is their radical influence upon other American racial and ethnic groups, including Asian Americans, Mexican Americans, Puerto Ricans and American Indians, among others. This seminar will consider the emergence of ethnic and racial nationalism among these various groups, as a result of their contact and relationship(s) with the Black Panther Party. Considering the politics of groups like the Red Guard, the Brown Berets, the Young Lords and the American Indian Movement, this course will chart the rise and fall of rainbow radicalism as a general offspring of the Black Power Movement and part and parcel of what is commonly referred to as "the New Left." It will also consider these groups in relation to the State by probing the dynamic push and pull between repression and democracy. Ultimately, this course will grant insight into the contemporary racial domain and current political landscape of America as we discuss how these groups helped to shape modern identity formations, discourses on multiculturalism and definitions of "minority," "diversity," and "equality."

L22 History 4154 From Decolonization to Globalization: Postcolonial South Asia
Independence from European colonialism was a victory for some people, although for the majority, the experience of nation-building and the Cold War only sanctioned further inequities. A further set-back arrived in the guise of globalization. The countries of Bangladesh, India, Pakistan, Nepal and Sri-Lanka have grappled differently with the many varieties of 20th-century transnational power. This course studies the histories of decolonization, nation-building and the Cold War for those South Asian countries created since the 1940s and traces the manner by which ordinary people have interrogated the multiple levels of state power unleashed upon them since the formal end of European colonialism.

L22 History 4225 European Utopian Settlements in the American Midwest (1814-1864): Diversity and Antislavery
During the first part of the 19th century a number of utopian visionaries from Europe (Germany, France and England) tried to establish communities in the American Midwest. These colonies were based either on religious or philosophical/social ideals which could be traced back to interpretations of the Old and the New Testament or to Enlightenment principles of freedom and equality that had been propagated during the revolutions in Europe of 1789, 1830 and 1848 which in turn had been influenced by the American war of independence. These groups showed strong antislavery convictions. The Midwest was chosen since the areas in the vicinity of the confluence of the Mississippi and the Missouri were seen as open to new social experiments. Part of the seminar are field trips to the St. Louis-based Missouri History Library as well as to the St. Louis Public Library and one-day excursions to New Harmony in Indiana, Nauvoo in Illinois, and to small towns in Warren County, Missouri.

L22 History 4242 Culture and Politics in the People's Republic of China: New Approaches
This course inquires into the political, ideological and social frameworks that shaped the cultural production and consumption in the People's Republic of China (PRC). In the realm of literature, film, architecture, and material culture and everyday life, this course pays a close attention to the contestation and negotiation between policy makers, cultural producers, censors and consumers. Understanding the specific contour of how this process unfolded in China allows us to trace the interplay between culture and politics in the formative years of revolutionary China (1949-1966), high socialism (1966-1978), the reform era (1978-1992), and post-socialist China (1992 to present). The course examines new scholarship in fields of social and cultural history, literary studies, and gender studies; and it explores the ways in which new empirical sources, theoretical frameworks, and research methods reinvestigate and challenge conventional knowledge of the PRC that have been shaped by the rise and fall of Cold War politics, the development of area studies in the U.S., and the evolving U.S.-China relations. Prerequisites: Advanced undergraduate students must have taken no fewer than two China-related courses at the 300 level or higher. Graduate students should be proficient in scholarly Chinese, as they are expected to read scholarly publications and primary materials in Chinese.

L22 History 4420 Empire and Memory: World of Books and Literary Culture in the Medieval Middle East
The subject of this course is an in-depth study of medieval Arabic historiography from the eighth through the 13th centuries, when the Mongols ran over the remnants of the Abbassid caliphate, established their own rule over Eurasia, and thereby sparked new questions about the past. After the initial survey of medieval Islamic history as background, we will focus on the development of historiographical writing in its sociopolitical context and examine one by one the most major historiographical traditions and philosophies from the eighth through the 13th centuries: prophetic traditions, belles lettres, annals, biographical dictionaries, and genealogical literature.

L22 History 4444 The Mystical Tradition in Judaism: Magic and Mysticism in the 15th to 19th Century
What is Jewish "mysticism"? What is its relationship to the category of "religion"? Is Jewish mysticism just one form of a general phenomenon common to a variety of religious traditions or is it a specific interpretation of biblical, rabbinic, and other Jewish traditions? Taking the above questions as a starting point, this course aims at a systematic and historically contextualized analysis of a broad range of Jewish texts that are commonly classified as "mystical." (All primary texts are read in translation.) At the same time, we explore such overarching themes as: the interplay of esoteric exegesis of the Bible and visionary experiences; the place of traditional Jewish law (halakha) within mystical thought and practice; the role of gender, sexuality, and the body in Jewish mystical speculation and prayer; the relationship between mysticism and messianism; Ashkenazi and Sephardic traditions and their mutual impact on Jewish mysticism; the "absence of women" from Jewish mystical movements; esoteric traditions of an elite vs. mysticism as a communal endeavor; and the tension between innovation and (the claim to) tradition in the history of Jewish mysticism.

L22 History 4480 Russian Intellectual History
This seminar-style discussion and research course examines major currents in Russian intellectual life from the age of Peter the Great to the revolutions of 1905. Its primary focus is on Russians' perception of themselves as a part of Western Civilization. Authors include: the Ukrainian humanists; the so-called Russian Enlightenment; romantic nationalists; Slavophiles and Westernizers; the literature of the Golden Age; nihilists; and the early Marxists. Students enrolling in the course should attempt to acquire a copy of (out of print) Marc Raiff, ed., Russian Intellectual History: an Anthology.

L22 History 449C Imperial Russia
The Russian tsars, from Peter the Great to Nicholas II, built the empire that became the Soviet Union. Now that the USSR is gone, historians focus not only on the governance of the Russians, but also on the fate of scores of nationalities ruled by them. This course also explores the changing reputation of Russia's rulers, especially the women rulers of the 18th century; the rise of an intelligentsia committed to radical reform; the fate of millions of serfs, and the government's efforts to steer a path between Muscovite traditions and a dynamic West.
Credit 3 units. A&S: TH A&S IQ: HUM

L22 History 4555 Advanced Topics in Modern Chinese History
This course introduces students to the variety of scholarly interpretations of modern Chinese history. Weekly class meetings focus on important historiographical topics. Acknowledging and understanding the nuance and difference in views and interpretations in historical writings (historiography) are essential. The course seeks to develop students' historical research and analytical skills, such as locating secondary sources, incorporating historians' interpretations, and developing and sustaining a thesis based on secondary sources in student research. This course is designed for graduate students in History, Chinese Literature, and East Asian Studies.
Same as L03 East Asia 555
Credit 3 units.
L22 History 4564 American Pragmatism
This course examines the history of American pragmatism through three of its primary founders, the philosophers Charles Peirce, William James and John Dewey. It considers pragmatism as a response to the experience of uncertainty brought on by modernity and contextualizes it amid late 19th- and early 20th-century thought and politics, namely, scientific methodology, evolutionary theory, the probabilistic revolution, Transcendentalism, the rise of secularism, slavery, Abolitionism and the Civil War. Major essays by each thinker are read as well as three intellectual biographies and one critical survey. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L22 History 4610 Latin American Populism and Neo-Populism
A salient feature of Latin America in the 20th and early 21st centuries has been the recurrence of populism. Mass-based political and social movements animated by nationalist and reformist impulses dominated Latin American politics in the 1920s, 1930s-60s, and 1980s to the present. This course provides a general historical and theoretically informed analysis of the origins, internal dynamics, and outcomes of classical populist and neo-populist governments and parties. Among the notable populist and neo-populist cases to be examined include: Peronism in Argentina, Velasquismo in Ecuador, Cardenismo in Mexico, APRA in Peru, Varguismo in Brazil, Garcia/Fujimori in Peru, Menen/Kirchner in Argentina, and Hugo Chávez in Venezuela. Issues pertaining to leader-follower relations, populist discourses, citizenship rights, populist gender and racial policies, labor and social reforms, and mass mobilization politics will also be explored. L22 History 4689 American Intellectual History to 1865
This course presents an overview of American intellectual history from the early 17th century and the founding of the first English settlements in North America to the mid-19th century and the American Civil War. We investigate how different thinkers responded to and helped shape key events and processes in colonial and early American history, concentrating in particular on developments in religious, political, social, scientific and educational thought. We cover major topics such as: Puritanism, the Enlightenment, Evangelicalism, Romanticism and the inner Civil War. We address concepts central to the formation of the nation’s identity including those of the covenant, republicanism, citizenship, equality, freedom, liberty, natural law, Transcendentalism, order, reason, progress and democracy.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L22 History 469 American Intellectual History Since 1865
This course concentrates on social, cultural, philosophical and political thought since the end of the Civil War, and investigates how American thinkers have responded to the challenge of modernity. After an examination of the end of the old religious order and the revolt against Victorianism, it analyzes the subsequent rise of pragmatism, progressivism, literary modernism, radical liberalism, political realism, protest movements and the New Left, neo-conservatism and the New Right, and the current state of intellectuals in post-9/11 America. The format combines mini-lectures with in-depth discussions of primary texts by Harold Frederic, Charlotte Perkins Gilman, Jane Addams, Henry Adams, George Santayana, Charles Peirce, William James, John Dewey, Walter Lippmann, W.E.B. Du Bois, Randolph Bourne, Malcolm Cowley, Edmund Wilson, Richard Wright, Sidney Hook, Reinhold Niebuhr, Hannah Arendt, Daniel Bell, C. Wright Mills, James Baldwin, Betty Friedan, Noam Chomsky and Christopher Lasch, among many others.

L22 History 4742 Americans and Their Presidents
How have Americans understood what it means to be President of the United States? This seminar uses that question as a point of departure for a multidisciplinary cultural approach to the presidency in the United States, examining the shifting roles of the chief executive from George Washington through George W. Bush. In addition to a consideration of the President’s political and policymaking roles, this course examines how the lived experiences of presidents have informed the ways Americans have conceived of public and private life within a broader political culture. In the process, this course uses the presidency as a means to explore topics ranging from electioneering to gender, foreign policy to popular media. Readings are drawn from a broad range of fields.

L22 History 4751 Intellectual History of Feminism
We focus on feminist thought in Western culture but also examine non-Western ideas about feminisms. We trace the relationship among emergent feminist ideas and such developments as the rise of scientific methodology, Enlightenment thought, revolutionary movements and the gendering of the political subject, colonialism, romanticism, socialism, and global feminisms. Readings are drawn from both primary sources and recent feminist scholarship on the texts under consideration.
Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite:
L22 History 4761 Money, Exchange and Power: Economy and Society in the Ancient Mediterranean World
From seaworld and banking to slavery and the impact of new technology, the economy of the ancient Mediterranean world constitutes a particularly dynamic field of study. To examine a society’s underlying economics is to gain critical insight into those historical phenomena that are themselves the product of multiple, overlapping dimensions of human action and thought. This course engages directly with a fascinating array of primary evidence for economic behaviors, beliefs, structures, and institutions among the Romans, Greeks, and their neighbors. We will also explore the methodological challenges and implications of that evidence as well as a variety of modern theoretical approaches. This year our focus is mainly upon developments among the Greeks, ranging from the transformative invention of coinage to the rise of commercial networks centered around religious sanctuaries like Delos. Prerequisites: Classics 341C or 342C or 345C or 346C or permission of instructor. Same as L77 WGSS 475.
Credit 3 units. A&S: TH A&S IQ: HUM: H

L22 History 4790 Empire and Messianism in the Middle East
Senior Seminar: This course looks at imperial politics in its relations to monotheistic messianic movements and ideologies in the Islamic Mediterranean from the late antiquity to the 16th century. Messianic beliefs offered political hope, rallied opposition against the existing rule, defined and ordered lived reality for imperial subjects, presented a political leitmotiv for rulers, and advocated a just sociopolitical order to be realized in the immediate or indefinite future. Thus, this course attempts to see how politics became messianic by its very ability to promise a better future. Despite the chronological scope of the course, we will examine only specific ideas, practices and movements as case studies to study in-depth various facets of messianic movements and thought in their geographic and historical context. We will use primary sources, which will be the main methodological focus of the course, and secondary literature. We aim to develop skills in identifying, reading, analyzing and dealing with primary sources in their variety and critically engaging modern scholarship on the political role of messianism. Students will write a term paper and several reports on preassigned readings, and make regular class presentations. Admission preference will be given to graduating seniors in JINELC, but the course is open to all advanced students provided that they consult the instructor prior to enrolling. Knowledge of a relevant primary source language is highly desired but not required. Same as L75 JINE 4970.
Credit 3 units. A&S: TH A&S IQ: HUM: H

L22 History 4791 Senior Seminar in Religious Studies: Saints and Society
The topic for this seminar differs every year. Previous topics include Pilgrimage and Sacred Space in Antiquity; Religion in a Global Context; and Engendering Religion. The seminar is offered every spring semester and is required of all religious studies majors, with the exception of those writing an honors thesis. The class is also open, with the permission of the instructor, to other advanced undergraduates with previous course work in Religious Studies.

L22 History 4907 Advanced Seminar: Women and Social Movements in the United States
In this course we examine U.S. women's participation in diverse movements during the 19th and 20th centuries, ranging from suffrage and feminism, to the labor movement, civil rights activism, and conservative and queer movements. Among our questions: How does the social position of different groups of women shape their participation in social movements? Why are certain social movements successful, and how do we define success? What does looking at women's experience in particular tell us about social movements in general?
Credit 3 units. A&S: TH SD

L22 History 4914 Advanced Seminar: Japan in World War II — History and Memory
This course examines the history of World War II in Asia and how it has been remembered in the postwar era. We trace the war, from the first Japanese military attack on China in 1931 through the U.S. atomic bombings of Hiroshima and Nagasaki in 1945. We also examine several postwar controversies concerning how the war has been forgotten and remembered in Japan, in the rest of Asia and in the United States. Goals include grasping the empirical history of the war as a step to becoming familiar with the theories and methods of memory studies in History.
Credit 3 units. A&S: TH A&S IQ: HUM LCD Art: HUM

L22 History 4918 Advanced Seminar: Sexuality in the United States
Does sex have a history, and if so, how can we study it? This seminar examines important themes in the history of sexuality: the relationship between sexual ideologies and practices; racial hierarchy and sexuality; the policing of sexuality; construction of sexual identities and communities; and sexual politics at the end of the century. Students also spend time discussing theoretical approaches to the history of sexuality, as well as methodological issues, including problems of source and interpretation.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L22 History 4941 Advanced Seminar: The Inquisition in Europe, Asia and Latin America, 1200-1700
This seminar studies the history of the Inquisition from its beginnings in southern France in the first half of the 13th century up to the investigations undertaken by Dominicans and Franciscans in 17th-century Mexico and Peru. Along the way the seminar focuses upon other inquisitions in Europe (especially those made in Italy, Spain and Germany), and the hunt for heresy in Goa and the Philippines. This seminar reads inquisitional manuals (books on how to conduct an inquisition) and original inquisitional documents (the records of the trials and interrogations). Consequently, the history of heresy and witchcraft, as understood by people in the past and historians in the present, is discussed.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L22 History 4942 Advanced Seminar: Europe's "Jewish Question": Emancipation, Anti-Semitism and Jewish-Christian Confrontation
The so-called "Jewish Question" was a product of European modernity. It emerged in conjunction with the formation of modern states, Enlightenment projects for political reform, the decline of religious influence in society, and struggles over Jewish emancipation. In this seminar, students examine the unusual career of this obsession from the 16th through the 20th century by focusing selectively on a number of illustrative episodes: Christian Hebraism and the Reformation; the Enlightenment assault on religious power; European debates on Jewish emancipation; the emergence of the "Jewish Question" in the 19th century; anti-Semitism as a modern political phenomenon; the renewed discourse of Jewish "ritual murder" at the turn of the 20th century; Zionism and other forms of Jewish nationalism; and the question of anti-Zionism in the reformulation of the "Jewish Question" during the past half-century.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L22 History 4946 Advanced Seminar: The Federalist and Its Critics
An intensive examination of the debates generated over the ratification of the United States Constitution. At the center of the debate were the 85 Federalist essays composed by Alexander Hamilton, James Madison and John Jay under the collective pseudonym of "Publius." Though of limited impact at the time, The Federalist essays framed the agenda for continuing debate and have become a foundation of American political thought. Their support of an unprecedented national plan of an entirely revamped system of national government raised issues of politics, philosophy, economics and human psychology. For that reason, this course title announces that we study the interaction of political philosophy and the practical realities of politics.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L22 History 4965 Advanced Seminar: Magic, Heresy, and Witchcraft in the Middle Ages, 350-1550
This seminar will study the history of magic, heresy and witchcraft in the medieval world. It will begin in the fourth century after the conversion of Constantine the Great and will end with the great witchcraft trials of the 15th and 16th centuries. The seminar will read magical treatises, ecclesiastical polemics against vulgar belief, inquisitorial trials, chronicles and histories, in our attempt to define what was considered the ordinary and
the extraordinary, the natural and the supernatural, good and evil, and the boundaries of heaven and earth. A common theme throughout this course will be the definition of evil and the powers of the devil.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L22 History 4967 Advanced Seminar: Migration and Travel in China, 1500-1900

Despite the growing importance of native-place identities during the late Imperial era, China had an increasingly mobile population. This course examines the movement of people in China approximately from 1500 to 1900, including voluntary and forced migration, travel associated with trade, travel for civil service examinations and official postings, exile, urban sojourning, religious pilgrimages, and touring. In addition, this course focuses on relations between locals and sojourners or migrants, as well as the perceived dangers that geographical mobilities posed for the state and the social order.

Credit 3 units. A&S: TH

L22 History 4974 Advanced Seminar: Gender, Property and Law in American Society

This course aims to explore the intersections of gender relations, work and property in law, custom and culture from the colonial period to the late 20th century. We read a wide range of articles and books, all of which in some way address the relationships among gender ideologies, social practices and property relations in American society.

Credit 3 units. A&S: TH

L22 History 4976 Advanced Seminar: The American Trauma: Representing the Civil War in Art, Literature and Politics

This seminar is an interdisciplinary examination of how Americans represented the Civil War during and after the titanic conflict, with special attention given to the period between the 1865 and 1915. The course explores how painters, novelists, photographers, sculptors, essayists, journalists, philosophers, historians and filmmakers engaged the problems of constructing narrative and reconstructing national and individual identity out of the physical and psychological wreckage of a war which demanded horrific sacrifice and the destruction of an enemy that could not be readily dissociated from the self.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L22 History 4977 Advanced Seminar: A Long Road to Uhuru and Nation: The Social History of Modern Kenya

This seminar challenges the popular Western view that the African continent is a single place and that Africans are homogenous or inherently tribal. Focusing on the lived experiences of imperial rule, the struggle for independence, and the process of nation building, it explores the development of an African country. The seminar focuses on how common men, women and adolescents wrestled with the problem of turning a colony into the modern Kenyan nation. Admission to the seminar requires permission of the instructor and at least one previous upper-level course in African history.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L22 History 4979 Advanced Seminar: Gender, Race and Class in South Africa, 1880-Present

By focusing on the complex historical dynamics of race, gender and class in South Africa over the past 120 years, this course is aimed at understanding the development of segregation, apartheid and racial capitalism, as well as the emergence of multiple forms of resistance to counter white minority rule. Topics include: white settler expansion and the defeat of the African peasantry; the rise of mining capital and the emergence of a racially divided working class; the origins of African and Afrikaner nationalisms; migrant labor and the subordination of African women; and the prospects for a nonracial, nonsexist democracy in a unified South Africa.

L22 History 4981 Advanced Seminar: Historical Perspectives on Human Rights and Globalization

This course offers a historical perspective on the modern international human rights regime, using materials drawn from diplomatic, legal, political and cultural studies. Successful completion of this seminar involves designing, researching, and writing a 25- to 30-page paper on a historically oriented, human rights-related topic of student's choice.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L22 History 4982 Advanced Seminar: Women and Confucian Culture in Early Modern East Asia

This course explores the lives of women in East Asia during a period when both local elites and central states sought to Confucianize society. We focus on Ming (1368-1644) and Qing (1644-1911) China, but also examine these issues in two other early-modern East Asian societies: Yi/Choson (1329-1910) Korea and Tokugawa (1600-1868) Japan.

Credit 3 units. A&S: TH

L22 History 4983 Advanced Seminar: Renaissance Florence and Venice

Venice was the most famously stable city-state in Renaissance Italy. Florence the most notoriously unstable one. This course explores how those contrasting political environments and experiences shaped social relations and cultural production (and vice versa) in those two cities.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L22 History 4984 Advanced Seminar: The Problem of Freedom: The Age of Democratic Revolution in the Americas

Ever since the improbable alliance of the English pirate and slave trader Sir Francis Drake and the fugitive slave Cimarrons on the Atlantic coast of Panama many centuries ago, the history of freedom in the New World has unfolded in unlikely fits and starts. The course explores two related conjectures: first, that maroon politics (the often short-lived alliances between slaves, quasi-free blacks and white allies), slave rebellion, provincial secession and civil war were the widespread and normative conditions of postcolonial regimes throughout the New World; and second, that the problem of freedom was especially challenging in a New World environment in which freedom was fleeting and tended to decompose. Special attention is given to antislavery insurgencies, interracial politics and alliances in the United States and the perspectives on freedom they produced, but the readings also include materials on debates over freedom in the Caribbean and South America over the course of the long age of democratic revolution, 1760-1880.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H
L22 History 4987 Advanced Seminar: Antislavery — The Legal Assault on Slavery in St. Louis
This seminar begins with a survey of the legal and constitutional arguments made against slavery in English and American courts since the 1600s, and examines the culture and tactics of antislavery as it emerged in Antebellum America, as well as the meaning of the Dred Scott decision. Students research a particular freedom suit from the online manuscript court records of the St. Louis Circuit Court.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L22 History 4990 Advanced Seminar: History of the Body
Do bodies have a history? Recent research suggests that they do. Historians have tapped a wide variety of sources — including vital statistics, paintings and photographs, hospital records, and sex manuals — to reconstruct changes in how humans have conceptualized and experienced their own bodies. We pay particular attention to the intersection of European cultural history and history of medicine since 1500.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L22 History 4993 Advanced Seminar: Women and Religion in Medieval Europe
This course explores the religious experience of women in medieval Europe and attempts a gendered analysis of the Christian Middle Ages. In it, we examine the religious experience of women in a variety of settings — from household to convent. In particular, we try to understand how and why women came to assume public roles of unprecedented prominence in European religious culture between the 12th century and the 16th, even though the institutional church barred them from the priesthood and religious precepts remained a principal source of the ideology of female inferiority.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L22 History 4998 Advanced Seminar: Violence as Redemption: Holy War and Inquisitions in the Middle Ages
This seminar studies the history of heresy, crusading and inquisition from the 11th to the 13th century. It begins with the apparent rise of heresy in Latin Christendom in the 11th century, examines the idea of holy war in Christianity and Islam during the 12th century, culminating with the Albigensian Crusade and the early inquisitions into heretical depravity in southern France.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L22 History 49BV Advanced Seminar: Topics in Environmental History
This course is an introduction to the study of environmental history. The semester begins with a general inquiry into the methods of the field and then we use what we have learned to move into a focused subtopic. Readings include seminal works in the field, as well as philosophical, scientific and science fiction texts that help us to explore more abstract questions dealing with the relationship between humankind and the natural world.
Credit 3 units.

L22 History 49CA Advanced Seminar: Religion and the Secular: Struggles over Modernity
A generation ago, scholars and observers around the world felt assured that modernization would bring the quiet retreat of religion from public life. But the theory of secularization now stands debunked by world events, and a host of questions has been reopened. This course provides students with a forum to think through these issues as they prepare research papers on topics of their own choosing.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L22 History 49IR Independent Research for Capstone
This course is to be taken in addition to any Advanced Seminar for which a student registers.
Credit 1 unit. EN: H

L22 History 49JK Advanced Seminar: Blood and Sacred Bodies: Ritual Murder and Host Desecration Accusations
This seminar follows the history of the ritual murder and Host desecration accusations from the origins in 12th- and 13th-century Europe to the 20th century. It pays close attention to the social and political functions of the narratives; their symbolic importance in Christianity’s salvific drama; attacks on such beliefs from both within and outside the community of the faithful; the suppression and decline of the ritual murder accusation; the integration of Jews into European societies in the 19th century; and the reappearance of the blood libel in the aftermath of emancipation.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L22 History 49MA Advanced Seminar: Visual Culture and American History
How does United States history look different with visual culture at the center of the story? Focusing on the 19th century in particular, this course investigates how images and other visual objects did not simply reflect, but also shaped society, culture, politics, ideas and identities. The course moves from the Revolution to the mass-culture society of the early-20th century. During this period, America experienced a litany of profound transformations in the growth of cities to the emancipation of slaves. How does the study of visual culture shed new light on major eras, themes and questions of this era? This is an especially fruitful period to assess visual culture as a historical source and force because of the birth and influence of various media and institutions, from photography and film to illustrated magazines and international expositions.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L22 History 49MB Advanced Seminar: Women and Gender in Modern Caribbean History
This course highlights women in the “making” of Caribbean history, and it considers how “men” and “women” were made in the English-speaking Caribbean from emancipation (1838) to
the present. We explore women and gender issues within the context of significant political shifts including the transition from slavery to wage and indentured labor, the labor rebellions of the 1930s, the rise of labor unions and political parties, anti-colonial activism, decolonization and nationalism. We also situate the Caribbean within an international context, paying attention to migration, black internationalism and the Third World movement. Finally, we examine the relationship between gendered notions of Caribbean nationhood/s with a view to uncovering how assumptions about family, race, class, sexuality, aesthetics and the body have interacted with wider political processes, and how such assumptions have changed or endured over time.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD EN: H

L22 History 49MG Advanced Seminar: Planning Global Cities
This team-taught advanced seminar addresses the history and theory of a variety of metropolitan environments from the mid-19th century to the present. Readings move from the 19th-century state-centered urbanism of Paris or Vienna, through the colonial remaking of cities such as Manila or Caracas and their connections to urban reform and the City Beautiful movement in the United States, then through the rise of planning, zoning, auto-centered cities, federal interventions such as urban renewal, the emergence of the preservation movement and new urbanism.

Credit 3 units.

L22 History 49NR Advanced Seminar: Egypt and the Arab Spring: Middle Eastern Revolution in Historical Perspective
The uprisings of the Arab Spring of 2011 captivated global media and observers. The movements brought down established regimes in Tunisia, Libya, Yemen and Egypt. The focus of this course is to understand the historical background and primary contemporary issues that have shaped Egypt's Arab Spring, and to examine the huge popular effort to document Egypt's revolution. Each student designs, researches and writes a 25-page paper on a topic of his/her choice related to the Arab Spring. Prior knowledge of the Middle East suggested but not required.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L22 History 49PK Advanced Seminar: The Founding Fathers' Government in an Electronic Age
This is a research seminar that examines how Americans sought to translate their notions of government into a realistic set of priorities and a functioning set of public institutions. Extending from 1789 through the 1820s, this course investigates how the federal government came into being, what it did, and who populated the civilian and military rank of American officialdom. This is also a course in digital history. Students create new knowledge through their own contributions to an ongoing digital project that seeks to reconstitute the early federal workforce. In the process, students learn a variety of digital techniques, ranging from encoding languages to electronic systems to software packages.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L22 History 49SA Advanced Seminar: Slavery in America: The Politics of Knowledge Production
This course focuses on the long history of black chattel slavery in America, from origins to emancipation. The course foregrounds the struggles over power, life and death that were at the heart of slavery's traumatic and grotesquely violent 250-year career in North America, with attention to hemispheric context. At the same time, it highlights the fiercely contested historical battleground where scholars have argued about how to define American slavery — as a system or site of labor; reproduction; law; property and dispossession; racial and gender domination; sexual abuse and usurpation; psychological terror and interdependency; containment and marooning; selfhood and nationality; agency; revolutionary liberation; and millennial redemption.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L22 History 49SC Advanced Seminar: Incredible India!
Yoga, the Kamasutra, nonviolence, poverty, royalty, population, asceticism, vegetarianism, anticolonialism, democracy, Hinduism: All these and more signify the idea of India. This course uncovers the history by which "India" has come to occupy a privileged position in the global imaginary. We view the circulation of India as a cultural resource over the centuries and ask what popular assumptions are made about it at a time of heightened globalization; how does the idea of India circulate and through what kinds of pathways; what political role does this seemingly cultural notion of India fulfill? Finally, what is the connection between such an idea of India and the rise of a new, U.S. centered, imperial formation?

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L22 History 49TP Advanced Seminar: Whose Nairobi?
Opportunity and Inequality in a 20th-Century African City
Visitors to East Africa often hear the cautionary refrain, "Nairobi is not Kenya." But over the past century, Kenya's largest city has meant distinctly different things to distinctly different people. Starting as a simple railway camp in the late 19th century, and shaped by decades of colonial racial and ethnic segregation, it has grown into a global "mega-city," where Kenyans from every background and every corner of the country interact with an equally diverse cast of foreigners. Focusing on the realities of the day-to-day, this research seminar deploys a wide variety of historical evidence to better understand how ordinary people experienced, and were shaped by, Nairobi during the long and turbulent 20th century. This seminar's centerpiece is an extensive and original research paper that offers students the opportunity to work a wide variety of primary sources including archives, city planning reports, maps, images of the built environment, music, material culture, memoirs and narrative fiction.

Credit 3 units. A&S: CD A&S IQ: LCD EN: H

L22 History 49VB Advanced Seminar: Money Talks: Readings in Economic History
To date, economic history has been dominated by quantitative research. In recent years, however, there has been a turn toward more qualitative analysis. With his landmark "Capital in the Twenty-First Century," Thomas Piketty argued that Economics ought to return to its origins in political and moral philosophy. Similarly, on this side of the Atlantic, a new generation of historians has begun to revisit the history of capitalism with methods that combine both numbers and narrative. In this advanced seminar, students will read both contemporary and seminal works in the field of economic history as well as writings from a wide variety of social scientists and humanistic scholars who study the economy. The aim of this course is to think critically about the historical construction of both economics as a discipline and "the economy" as a field of inquiry.

Credit 3 units. A&S IQ: HUM
Interdisciplinary Project in the Humanities

The Interdisciplinary Project in the Humanities (IPH) is a rigorous program for highly motivated students whose interests lead them beyond traditional academic categories. The major, which usually leads to a degree with honors, combines an introductory core — a concentrated study of texts central to the European and American philosophical, religious and literary traditions — with an area of concentration: an advanced sequence of courses and research tailored to the special interests of each student in the program. For students pursuing concentrations in (for example) American intellectual history, in the European avant-garde in the 20th century, or in Renaissance political thought (to take three among many possible concentrations), the introductory core provides a crucial foundation for advanced interdisciplinary work. The core also provides a useful background for students undertaking comparative concentrations — for example, in Buddhist, Christian and Muslim mystical literature, or in the influence of Russian fiction in East Asia.

All students in the major learn to write and speak clearly and flexibly; they are given broad exposure to a range of canonical texts; they are trained in the historical and formal analysis of those and other texts; they become skilled in at least one foreign language; and they are given considerable experience in independent research. Their work in the humanities bridges disciplines and fosters in them the two fundamental interpretive skills of contextualization and criticism. Students in the program will be well prepared for a range of graduate programs in the humanities, for professional careers in law and public service, and for the vital work of critical citizenship and adult intellectual discovery.

</tbody>
</table>
Core Program

Students typically enter the core program in the freshman year, but generally not later than the spring of the sophomore year. The core consists of either four courses drawn from the program in Text and Tradition or two courses in the Text and Tradition program in combination with a Focus program in the humanities. (Some of the current Focus offerings in the humanities include Cuba: From Colonialism to Communism, Writers as Readers/Readers as Writers, and Literary Culture of Modern Ireland. Please refer to the Focus (p. 412) page for more information.) Students in the core program apply for admission to the major in the sophomore year by submitting a portfolio of three previously written essays and a letter of recommendation from a Text and Tradition professor.

Once admitted to the program, each student designs, in consultation with the IPH faculty, a program of advanced coursework. In the second semester of the sophomore year, students enroll in an upper-level course in social or political history, in the history of a literary or other aesthetic form, or in the history of some institution or cultural practice (e.g., history of science or history of philosophy); in this semester they also undertake their first sustained research projects under the mentorship of a member of the IPH faculty.

In the spring semester of the junior year, students take the Thesis Prospectus Workshop in anticipation of their capstone project, and the Theory and Methods seminar. In February and March, students seeking honors take the written and oral comprehensive exam.

In the fall of the senior year, students take the Interdisciplinary Topics in the Humanities and the Senior Thesis Tutorial, and in the spring, they take a capstone Senior Colloquium. In addition, they complete and present their capstone project under the mentorship of a member of the IPH faculty.

Areas of Concentration

Some degree of specialization is a useful aspect of education in the humanities. With their faculty mentors, students construct a coherent, interdisciplinary sequence of five courses for advanced study. Each student's sequence, or "area of concentration," which must always include at least one course in political or cultural history, will normally be taken between the third and seventh semesters of the program. Recent concentrations have included modernism and politics; Muslim ethics and jurisprudence; philosophy of education; opera; space law; and the history of the novel. Some students will pursue concentrations that reflect the longstanding research interests of a number of faculty in the humanities. Among these latter, fully developed concentrations are the tracks in Renaissance Studies; Literature and History; and History of Media.

Students in the Renaissance Studies track enroll either in Text and Tradition or in the Renaissance Focus program during their first year. They have a wide range of courses from which to construct their period-specific cluster; as they develop their senior project, they are able to work closely with faculty from several different departments who make up Washington University's active group of Renaissance scholars.

Students in the Literature and History track are expected to complete 9 units of course work in history and 9 units in literature; most satisfy the bulk of this requirement in the course of completing their sophomore history course, junior period cluster, advanced foreign language course, and thesis and thesis-related courses.

Required courses, in addition to the above listed for the major are:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPH 301</td>
<td>Sophomore Research Tutorial</td>
<td>2</td>
</tr>
<tr>

<td>3</td>
</tr>
<tr>
<td>IPH 455</td>
<td>IPH Senior Colloquium: Interdisciplinary Topics in the Humanities</td>
<td>3</td>
</tr>
</tbody>
</table>

Total units: 17

The remaining 9-12 credits required for the major will be made up from the area of concentration courses, to be determined through discussions with the director of IPH.

Minors

The Minor in Text and Tradition

Text and tradition is a minor open to first-year and sophomore students in the College of Arts & Sciences by special registration. It provides a compact, integrated sequence of five courses. In this program students read, reflect on and analyze, both orally and in writing, the foundational texts of Western literary, philosophical, scientific and political culture.

If students are majoring in a science, the text and tradition minor gives a firm grounding in the humanities. All courses in the minor fulfill Arts & Sciences distribution requirements. Five courses satisfy the requirements for a minor in text and tradition.

Units required: 15

Required courses:

Five of the following 10 courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPH 201A</td>
<td>Puzzles and Revolutions: Text and Tradition</td>
<td>3</td>
</tr>

<td>3</td>
</tr>
</tbody>
</table>
Elective courses:

Students may elect to substitute for one of the above Text and Tradition courses a course that is text-centered and emphasizes primary sources. Prior consultation and approval is required.

**Additional Information**

Enrollment by application only. Students must earn a grade of C or better for the course to count toward the minor.

**Courses**

**L93 IPH 170 Freshman Seminar: The Color of Modern Life**

Color is crucial to modern life. Drawing from a range of disciplines including art history, literature, and history of science, we examine the different meanings and functions of color across the visual arts and architecture, in retail, and even in medicine. We consider different technologies and theories of color developed during the 19th and 20th centuries in Europe and the United States. What industrial developments have influenced chromatic possibilities and varieties? In what ways has color's impact on the senses been articulated and experienced? How has it been used to transform or to critique economic, political and social activity? How did modern technology and thought transform color and its uses and how has color transformed modern life?

Same as L01 Art-Arch 170

**L93 IPH 175 Freshman Seminar: Seeing is Believing: Visuality, Power and Truth**

How does seeing work? Does the process of seeing begin with light bouncing off of objects and into our eyes — or when we ascertain what we are looking at? Visual interactions are far too neutral perceptions of objective truth, as they always involve interpretation of the world. Yet visual representations are one of the most common ways that we classify and understand the world around us. This course considers seeing as it affects social, spiritual and political life: from religious practices of iconic representation and iconoclasm (and the politics these practices engender), to the technological practices of reproduction in creating "realistic" forgeries, to the ways that visibility can be a technology of power. This freshman seminar considers examples from across a wide range of times and places. We begin by exploring visually, representation, art and the ways that these produce meaning. We then move to examining several premodern and contemporary visual practices of major religions, considering how practices and ideologies of the visual vary dramatically across space and time. Next, we explore the relationship of changing technologies to notions of reality and authenticity. We then consider how techniques of visuality can be used for domination, particularly in contexts of economic and racial inequality. Finally, we examine the ways in which people use visual codes to define themselves through clothes, hair and other visible signs of identity. Throughout, students use the tools of art history, anthropology and religious studies to gain a greater critical understanding of the practices, ideologies and histories through which seeing meaningfully emerges across space and time.

Credit 3 units. A&S IQ: HUM: H

**L93 IPH 201A Puzzles and Revolutions: Text and Tradition**

One major force in human history, including the arts, has been inquiry into the natural world. Especially after 1600, natural science, by virtue of its role in the development of technology and the improvement of health, has brought about great changes on all scales of human existence, first in Western Europe and then globally. In this course, the changing character of inquiry into the natural world, from antiquity forward, is the object of study. Does natural science enable us, for example, to study nature as it is in itself, or are perspectives or frameworks inescapable? How is it that natural science has, especially since 1800, proved so useful in the development of technology? How has it impinged on the arts? The requirements include writing several short papers and brief responses to the readings.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: SCI EN: H

**L93 IPH 201B The Great Economists: Text and Tradition**

Examination of the great economic thinkers, the problems they sought to solve, the historically conditioned assumptions that they bring to their work, and the moral issues they raise. The class reads from the works of Adam Smith, Ricardo, Malthus, Marx, Veblen, Keynes, Schumpeter, Galbraith, and others as well as commentary from Heilbroner. These readings are paired with selected texts on the social and moral issues of their times. Open only to participants in Text and Tradition.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: SCI EN: H

**L93 IPH 201C Classical to Renaissance Literature: Text and Tradition**

As we study some of the most influential of ancient works, we address the basic questions of liberal education. Why ought the classics be read in the first place? How is it that Western culture has come to value certain fundamental questions, even to the point of encouraging opposition? Texts include selections from the Old Testament, Homer, Aeschylus, Sophocles, Virgil, Ovid, Petrarch, Montaigne, and Shakespeare. Preference given to Text and Tradition and IPH students. Non-minor or major juniors and seniors with permission of professor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

**L93 IPH 203C Early Political Thought: Text and Tradition**

A selected survey of the political and moral thought of Europe from the rise of Athenian democracy to the Renaissance, with emphasis on analysis and discussion of writers such as Thucydides, Plato, Aristotle, St. Augustine, Castiglione and
Machiavelli. The course aims to introduce students to basic texts in the intellectual history of Western Europe, understood both as products of a particular time and place and as self-contained arguments that strive to instruct and persuade. The texts are simultaneously used to chart the careers of such fundamental notions as liberty, virtue and justice. Preference given to Text and Tradition and IPH students. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L93 IPH 204 Darwin and the Modern Ache
D.H. Lawrence reminds us how exciting and instructive it can be to watch the way our fictions take in a new cultural idea as important as Darwinism; as the theory shocks our defenseless bodies, our literature reacts with fresh forms and consciousness that enable us to feel the wound of moral, metaphysical, psychological, biological insecurity and humiliation without becoming merely helpless readers and carriers of our pain. We still feel longings for a creation by design in a post-Darwinian world shaped by thinkers most responsive to evolutionary theory, Nietzsche, Freud, Marx. This semester we study some modern texts most sensitive and susceptible to what Hardy calls the "modern ache" of Darwin's thought, of Ibsen, Hardy, Conrad, Strindberg, Kafka, D.H. Lawrence and Robert Frost. Preference given to Text and Tradition and IPH students. Credit 3 units. A&S: TH

L93 IPH 206 The Idea of America
Credit 3 units. A&S: TH

L93 IPH 207C Modern Political Thought: Text and Tradition
A course in European history and thought since 1600 which addresses two themes: the search for a moral code, and the legitimate role of the state. Both are ancient inquiries, but they acquired important and novel interpretations in the West after the Reformation and the gunpowder revolution, and the rise of the modern statecraft grounded in both. One uniquely Western approach to these questions was the search for the primitive or "natural" situation of mankind, and readings in this genre provide some of the texts for the course. Parallel to presentation of the political history of modern Europe, such writers may be discussed as Locke from the 17th century, Montesquieu and Rousseau from the 18th, Marx and Darwin from the 19th, and the writings of anthropologists and philosophers from the 20th. Preference given to Text and Tradition and IPH students. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L93 IPH 209 Scriptures and Cultural Traditions: America's Bible
Certain books, "sacred scriptures," shape U.S. society and culture in powerful and complex ways. Many religious communities believe that Scriptures are ancient texts that are ever-flowing sources of timeless truths. Often the truths advanced by one faith conflict with those to which another subscribes, and one of the great challenges that the human community faces involves reconciling these conflicting messages and learning to respect the faiths of others. Some religious movements, of which Mormonism has been the most successful example, have claimed to have uncovered or revealed new scriptures as a means of explaining their cultural authority. This course will therefore consist of three parts. First, we will work to define the concept of "Scriptures" with particular attention to the Hebrew Scriptures and the Christian New Testament: what Scriptures are, what they do, and how varying motifs within them have engaged historic communities. Second, we will explore the enduring interest in extending scripture through the discovery or creation of new sacred texts. In this case, the Book of Mormon. Third, we will examine the appropriation of the Bible in American political and public life. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: ETH EN: H

L93 IPH 211A Digital Humanities: Information Representation, Analysis and Modeling
It is a truism that computers have changed our lives, the way we think, but in fact systematic efforts to apply current technologies to the thinking about history and culture have been rare. This course enables students to consider how these technologies might transform the humanities. Students explore the various ways that ideas and data in the humanities can be represented, analyzed and communicated. Topics include forms of information, modeling and simulation, geospatial (GIS) and temporal representations of data, and ways of creating and using audio and visual information. Readings and classwork are supplemented by small assigned digital projects culminating in a project chosen by the students themselves. Students should be comfortable with using the internet and a word processor. No other special computing skills are required. Credit 3 units.

L93 IPH 214 Text and Tradition: Cross-Currents I
This course revisits the cultural and intellectual terrain of Classical to Renaissance Literature (Hum 201) and Early Political Thought (Hum 203), purposefully mixing a different set of texts of very different kinds. We delve closely into how works belonging to the same cultural moment but different genres can reflect upon one another, and we address how works issuing from different periods can speak to one another. Along the way, we work on refining our talents as close readers and careful writers, and we think carefully about the critic's role in creating canons and inventing intertextual dialogues. Authors studied include Aristophanes, Euripides, Plato, Seneca, Boethius, Dante and Petrarch. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM EN: H

L93 IPH 220 Introduction to Research in the Humanities
This course gives students interested in the humanities the opportunity to learn about areas of current faculty research in literature, history, philosophy, art history, music and other areas of the humanities. What are the archives for research in the humanities? How do humanities scholars develop a research agenda and what analytic tools do they bring to bear on their work? What are the biographies of new ideas in literature, history and the arts? Credit 1 unit. A&S: TH A&S IQ: HUM Art: HUM BU: HUM EN: H

L93 IPH 228 Introduction to Aural Cultures: Silence, Noise, Music
This interdisciplinary course explores a range of issues related to contemporary hearing and the aural worlds of the past. Our basic aim is to consider the many ways in which sound becomes meaningful. We discuss diverse figures and topics ranging from John Cage (the composer-philosopher of silence and random sounds), Gregorian Chant, and Bach, to Muzak, the development of recording technology, and recent research in music cognition. Other subjects discussed include aesthetics, politics, performance practice, taste, popular music, sound and music in film, and music in other cultures. The ability to read

488
music is not required. Pairs well with the Introduction to Visual Culture.
Same as L27 Music 228
Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM EN: H

L93 IPH 230 Visual Culture
In this interdisciplinary course, we explore the long history of vision and visual representation from antiquity to the present so as to shed light on how people at different moments have understood vision, have seen their own seeing and have encoded this seeing in different artifacts and media — from ancient cave painting to modernist paintings and motion pictures. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L93 IPH 255 Freshman Seminar: Luxury: The Culture and Ethics of Expensive Taste
As the current economical downturn began, newspapers reported on shoppers leaving designer stores with merchandise hidden in unmarked, brown bags. But the idea that the consumption of luxury goods carries with it moral implications is far from new. In this seminar, we trace the history of the concept of luxury as it crossed economic, cultural and political borders and debates over several centuries. Taking a cue from Aristotle, we focus on Renaissance and Enlightenment France and England, a period when the emergence of a "middling class" brought forward the dangers and the benefits of a wide-scale circulation of exotic foods, rich fabrics, porcelain and other expensive commodities.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L93 IPH 260 From Literature to Opera: An Introduction to the Extravagant Art
Much operatic repertoire is based on classics of literature, from the very first operas of 1598-1600 to the present day. From Literature to Opera will introduce students to the world of opera through a close study of a few select works based on major literary subjects, beginning with the literary works themselves and proceeding to the ways they are adapted for the stage and transformed into another genre through their dramatic musical settings. One work will be selected from the live transmissions of the Metropolitan Opera where we will have an opportunity to see something of how a major work is produced on the stage. For 2016 the works studied will be Virgil's and Ovid's versions of the Orpheus myth and Claudio Monteverdi's setting of 1607. Shakespeare will be represented by the ultimate tragedy of words, Othello, and Giuseppe Verdi's Otello of 1887. The course will conclude with the Metropolitan Opera live production of Giacomo Puccini's Madame Butterfly of 1904, based on a play by David Belasco. No previous musical experience required. The class will be conducted as a seminar focused on student participation. Each student will choose an opera based on a literary work as the subject of two 10-page papers. The first, due at midterm, will study the literary source and the way it is adapted as an operatic text (libretto). The second, due at the end of finals week, will analyze how the libretto is dramatized through the music. One of the important purposes of class discussion will be to develop a usable vocabulary for describing music and its dramatic effects.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L93 IPH 299 Research Internship in the Humanities
Credit variable, maximum 3 units.

L93 IPH 301 Sophomore Research Tutorial
A practical introduction to research in the humanities. Students develop and complete a project in a research area of possible long-term interest.
Credit 2 units. A&S: TH A&S IQ: HUM EN: H

L93 IPH 305 The Cultural History of the Robot
This course surveys the history of the desire to perfect or eliminate what is most human through the creation of artificial men and women. Familiar questions — Can robots feel? Can we tell who is a robot? — are considered alongside the traditional use of robots to understand or emblazon justice, sin, progress and modernity, self-awareness or simplicity, indifference, virtuosity, authorship, invention and art itself. Examples are drawn from both fictional and real robots in literature and film. Texts may include: Homer, Hesiod, Spenser, Descartes, Hobbes, Vaucanson, Villiers de l'Isle-Adam, Shelley, Hoffmann, Capek, Filisberto-Hernandez, Lem, Lang and Scott. This course is intended primarily for sophomores considering a major in the Interdisciplinary Project in the Humanities. Freshmen are considered by permission of the instructor.
Credit 3 units. A&S: TH BU: ETH EN: H

L93 IPH 3050 Literary Modernities: Text and Tradition
The course examines the various facets of modernity in major works of European, Eurasian and, sometimes, American literature from the early 17th century to the 1920s, starting with Don Quixote. We explore, among other things, the eruption of the novel, the secularization of autobiography, the literary discovery of the city, the rise of literary and aesthetic criticism that takes literature and art seriously as political and social institutions. In addition to literary works, the course engages with two or three important models of critical practice, e.g., Wollstonecraft's Vindication of the Rights of Women, Marx's German Ideology, Freud's The Interpretation of Dreams, T.S. Eliot's Tradition and the Individual Talent, or perhaps that great work of fictionalized literary criticism, Borges' "Pierre Menard, Author of the Quixote."
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L93 IPH 306 Opera: Text and Con-text
We focus on operas drawn primarily from the French, Italian and German traditions that served as watershed moments in the history of literature, music, philosophy and criticism. We read source texts (including famed literary works by Molière, Beaumarchais, Scott, Hugo, Béroul, Maeterlink, Merimée, Hoffmann and James), view performances in their entirety, discuss the literary works, philosophy and criticism that the works inspired, and consider the American reception of the works, including their influence on pop culture. Students gain a sense of opera's vital role at the intersection of the arts (text, music and dance) and the disciplines (History, Philosophy, Cultural Studies, Postcolonial Studies, Gender Studies), learning to approach the study of the genre from multiple perspectives. Preference is given to IPH majors and Text and Tradition students, though others are welcome.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: IS EN: H
L93 IPH 310 An Intellectual History of Sex and Gender: Text and Tradition
When did sexuality begin? Is it safe to assume that gender constructions are universal and timeless? In this course, we engage with a broad range of readings that serve as primary texts in the "history of sexuality and gender." Our aims are threefold: to analyze the literary evidence we have for sexuality and gender identity in Western culture, to survey modern scholarly approaches to those same texts and to consider the ways in which these modern theoretical frameworks have become the most recent set of "primary" texts on sexuality and gender.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: BA EN: H

L93 IPH 313A The Legend of King Arthur in the Middle Ages
This course examines the medieval tradition of King Arthur that arose in northern Europe from the "dark ages" to the invention of printing. The objective of this course is to achieve a thematic, historical and structural insight into some of the best examples of medieval storytelling and understand why they continue to cast a spell over readers today. You may want to try your own hand at Arthurian storytelling after you have learned the building blocks. The course also lays a foundation for the study of premodern literature, the medieval and early modern world, and the national cultures of France, Germany and Britain.

L93 IPH 315 Independent Study in the Interdisciplinary Project in the Humanities
Credit 3 units.

L93 IPH 318 Lincoln: Then and Now
A study of Abraham Lincoln's writings and of how they emerge from his reading and his experiences. We read his speeches and other writings to investigate his political and social philosophy. And we look at this legacy, politically and culturally.

L93 IPH 3191 The European Avant Garde: Interdisciplinary Studies in the Humanities, 20th Century
The first half of the 20th century witnessed the emergence of artistic movements characterized by revolt against tradition, emphasis on radical experimentation and redefinition of the art work. This course familiarizes students with the avant-garde's main currents: Italian Futurism, English Vorticism, Russian Constructivism, "stateless" Dadaism and French Surrealism. We ask ourselves how to define the avant-garde, how it is related to modernity and whether its aesthetic is necessarily political. Texts include Futurist Manifestos, Cendrars' Trans-Siberian Prose, Stein's Tender Buttons, Breton's Nadja. We also examine artworks such as Duchamp's "Large Glass" and films such as Buñuel's Un Chien Andalou.

L93 IPH 3311 Laughter from Joubert to Bataille: Interdisciplinary Studies in the Humanities
In this course we trace a tradition of writing on laughter. While we read texts that might explain laughter by way of comedy or humor, we are interested in laughter itself. What does the body in laughter look like? How does laughter sound? Where, when and how does laughter happen? What is laughter's relation to language, to song, to thought? What kind of communities does laughter form? We read texts by Joubert, Erasmus, Hobbes, Descartes, Chesterfield, Kant, Bergson, Freud, Bataille, Sarraute and Ellison. We listen to music such as Louis Armstrong's "Laughin' Louie" and we watch films including Laughing Gas, The Man Who Laughs and A Question of Silence.
Credit 3 units. A&S: TH & A&S IQ: HUM Art: HUM EN: H

L93 IPH 332 Visual Culture
In this interdisciplinary course, we explore this long history of vision and visual representation from antiquity to the present so as to shed light on how people at different moments have understood vision, have seen their own seeing and have encoded this seeing in different artifacts and media. More specifically, we explore the role of the visual in the historical production of subjectivity and collectivity; the political, religious and ideological uses and abuses of vision; the relation of images to words and stories; the implication of sight in competing systems of truth, enlightenment and scientific progress; and the function of seeing within different media of art, entertainment and virtualization — from ancient cave painting, medieval icons and early modern church designs to modernist paintings and motion pictures.

L93 IPH 340 Introduction to Digital Humanities: Cultural Analysis in the Digital Age
It is a truism that computers have changed our lives and the way we think and interact. But in fact systematic efforts to apply current technologies to the study of history and culture have been rare. This course enables students to consider how these technologies might transform the humanities. We explore the various ways in which ideas and data in the humanities can be represented, analyzed and communicated. We also reflect on how the expansion of information technology has transformed and is continuing to transform the humanities, both with regard to their role in the university and in society at large. Readings and classwork are supplemented by small assigned digital projects culminating in a project chosen by the students themselves.
Credit 3 units. A&S: TH & A&S IQ: HUM Art: HUM EN: H

L93 IPH 3560 Russia and the West
There are few problems as enduring and central to Russian history as the question of the West — Russia's most passionate romance and most bitter letdown. In this seminar we read and think about Russian culture from the 17th to the 20th centuries through the lens of this obsession. The course focuses on the transfer of ideas and migrant communities. We study the intellectual products of Russian interactions with the West — constitutional projects, scientific and economic thought, the Westernizer-Slavophile controversy, and revolutions. We consider the presence of European communities in Russia: German and British migrants who filled important niches in state service, trade and scholarship; Italian sculptors and architects who designed some of Russia's most famous and symbolically potent monuments; Parian aristocratic expatriates in the wake of the French Revolution; Communist workers and intellectuals, refugees from Nazi Germany; and foreign journalists who, in the late Soviet decades, trafficked illicit ideas, texts and art works. In the end, we follow Russians into successive waves of emigration to Europe and the United States.
Credit 3 units. A&S: TH & A&S IQ: HUM Art: HUM EN: H
Europe: Coline Serreau's 'brides'), and the place of the debate on gay marriage within new media in the formation of new systems of trafficking (internet (transnational wives, nannies and domestic servants), the role of ceremony), its range of displacements in a global economy this argument. We trace rudiments of the traditional marriage to this question was offered by French anthropologist Claude Lévi-Strauss. He argued that the fabric of a society is formed by a network of exchanges among kinship groups, which circulate three kinds of objects: economic goods, linguistic signs and women. In this course, we inquire into the place of women in this argument. We trace rudiments of the traditional marriage system (a father figure still "gives away" the bride in the marriage ceremony), its range of displacements in a global economy (transnational wives, nannies and domestic servants), the role of new media in the formation of new systems of trafficking (internet brides), and the place of the debate on gay marriage within the larger conversation. We read texts by Friedrich Engels, Sigmund Freud, Marcel Mauss, Claude Lévi-Strauss, Gayle Rubin, Lucie Irigaray, Judith Butler, Barbara Ehrenreich and Arlie Russell Hochschild; and we watch a number of films that dramatize the traffic in women in the context of contemporary Europe: Coline Serreau’s ‘Chaos, Lukas Moodysson’s ‘LiIja 4-ever, Cristian Mungiu’s ‘Occident, NiIta Vachani’s ‘When Mothers Come Home for Christmas, Fatih Akin’s ‘Head-on, Jean-Pierre and Luc Dardenne’s ‘The Silence of Lorna.

L93 IPH 360 The Traffic in Women and Contemporary European Cinema
What binds society together? One of the most influential answers to this question was offered by French anthropologist Claude Lévi-Strauss. He argued that the fabric of a society is formed by a network of exchanges among kinship groups, which circulate three kinds of objects: economic goods, linguistic signs and women. In this course, we inquire into the place of women in this argument. We trace rudiments of the traditional marriage system (a father figure still "gives away" the bride in the marriage ceremony), its range of displacements in a global economy (transnational wives, nannies and domestic servants), the role of new media in the formation of new systems of trafficking (internet brides), and the place of the debate on gay marriage within the larger conversation. We read texts by Friedrich Engels, Sigmund Freud, Marcel Mauss, Claude Lévi-Strauss, Gayle Rubin, Lucie Irigaray, Judith Butler, Barbara Ehrenreich and Arlie Russell Hochschild; and we watch a number of films that dramatize the traffic in women in the context of contemporary Europe: Coline Serreau’s ‘Chaos, Lukas Moodysson’s ‘LiIja 4-ever, Cristian Mungiu’s ‘Occident, NiIta Vachani’s ‘When Mothers Come Home for Christmas, Fatih Akin’s ‘Head-on, Jean-Pierre and Luc Dardenne’s ‘The Silence of Lorna.

L93 IPH 370 Women Writers at Court: Japanese Examples in Comparative Context
Court women in 10th- and 11th-century Japan produced literary works that have dominated the vernacular canon from their day to the present, a situation without parallel elsewhere in the premodern world. This course combines readings of poetry, poetic diaries and prose narrative by Japanese women with an exploration of the political, cultural and social conditions that permitted women to flourish as writers.
We also consider characteristics of courtly literature and issues of gender, genre and canonicity more broadly, drawing on the circumstances and writings of women in the medieval West for comparison.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L93 IPH 3951 Shakespeare’s Sonnets: Framing the Sequence
We begin by exploring ways of reading a small number of individual sonnets, proceeding thereafter to think about patterns of meaning in language and image across broader groupings and the sequence as a whole. We investigate the influence of earlier sonnet tradition, especially Petrarch’s sonnets, and the relationship of the poems to modes of sexuality and selfhood. Finally, we ask how some of Shakespeare’s most creative readers — including Wilde, Booth, and Vendler — have responded to the challenges of the sonnets. Students work on writing their own commentary on a group of poems.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L93 IPH 401 IPH Thesis Prospectus Workshop
Students assist each other in developing viable thesis topics, compiling bibliographies, and preparing research plans. Students give formal and informal oral presentations of their proposed topics. Prospectuses and, if possible, drafts of first chapters are peer-edited.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L93 IPH 403 Senior Thesis Tutorial
Credit 3 units.

L93 IPH 405 Theory and Methods in the Humanities: What is Interdisciplinarity?
This spring’s iteration of the course will give a special emphasis to exploring genealogies of diverse interdisciplinary practices. We will examine theoretical dilemmas and particular questions that have led scholars to conduct research across disciplinary boundaries. Students will be encouraged to apply these insights to their own research.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L93 IPH 4111 Pastoral Literature: Interdisciplinary Studies in the Humanities, Antiquity
This course open with a survey of the classical tradition in pastoral/bucolic. We consider questions of genre, intertextuality and ideology, and we ask how the lives and loves of herders become favored ground for literary remediation of issues of surface and depth, reality and illusion, artifice and sincerity. This portion involves intensive reading in translation of Theocritus, Vergil and Longus. In the second half of the semester, we consider the survival, adaptation and deformation of ancient pastoral themes, forms and modes of thought in British and American writing from the 19th and 20th centuries. We read works of Mark Twain, Kenneth Grahame, Thomas Hardy and Tom Stoppard.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L93 IPH 4171 Roman Remains: Traces of Classical Rome in Modern British Literature
This course examines the use of the Roman textual and material inheritance in poets, novelists and critics of the late 19th and 20th centuries working in Britain, and asks how modernity addresses the claims of the classical tradition. We place Thomas Hardy’s ‘Poems of 1912-13 next to Vergil’s ‘Aeneid, then survey Hardy’s relationship to the visible remains of Rome and the people it conquered — roads, barrows, forts — in the landscape of Dorset. After examining the representation of the Celtic hill-fort in fiction, and the legacy of Vergilian representations of the countryside in poetry, we consider representations of Rome in light of modern imperialism (Joseph Conrad’s ‘Heart of Darkness and Ezra Pound’s ‘Homage to Sextus Propertius) and examine the place of Vergil in T.S. Eliot’s critical and poetic practice.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L93 IPH 419A Economic Life in Modern Social and Cultural Theory
Social and cultural theorists have developed many perspectives on economic life, ranging from actor-network theory to new institutionalism. Yet recent ethnographic work, for instance in consumption studies and in the anthropology of financial markets, has raised all sorts of problems for theorists. Our course ask whether we really can generalize about economic life and, if so, how far such generalizations might extend into fields such as intimate relations or artistic production. Readings include work by Bourdieu, Callon, Geertz, Hochschild, Mauss and Zelizer.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S
L93 IPH 425 Humanities by the Numbers
To what extent can computational techniques that draw on statistical patterns and quantification assist us in literary analysis? Over the semester, we juxtapose the close reading of historical documents or literary works with the "distant reading" of a large corpus of historical data or literary texts. We ask how the typically "human" scale of reading that lets us respond to literary texts can be captured on the "inhuman" and massive scales at which computers can count, quantify and categorize texts. While this class introduces students to basic statistical and computational techniques, no prior experience with technology is required. Prerequisites: two 200-level or one 300-level course in literature or history. This is a topics-type course and the specific documents and works examined vary from semester to semester. Consult semester Course Listings for current offerings.
Credit 3 units. A&S: TH & A&S IQ: HUM EN: H

L93 IPH 426 Imagining the City: Crime and Commerce in Early Modern London
The astonishing demographic and economic growth of early modern London, and the rapid increase in spatial and social mobility that accompanied this growth seemed to harbinger, in the eyes of many contemporaries, a society in crisis and perhaps on the brink of collapse. As increasing numbers of vagrants or masterless men flocked to the metropolis and a growing number of people — apprentices, domestic labor, street vendors, etc. — lived on the fringes of legitimacy and at risk of lapsing into vagrancy, policing early modern London provided unique challenges for authorities. At the same time, the very notion of the social — a shared space of kinship and community — could often seem to be under threat as an emerging market and a burgeoning commodity culture reshaped the traditional underpinnings of social and economic transactions. Yet, late Tudor and early Stuart London remained by far England's most prosperous metropolis, its primary market, home to a burgeoning print culture and nourishing theater and emerged, eventually, as the epicenter of a global economy. This course considers the topographic, social and institutional configuration of early modern London and the ways in which these were reimagined and negotiated in the literature of the period. Drawing on the drama of the period and a wide array of pamphlet literature, we discuss how civic institutions handled the growing influx of the poor and adapted to the increasing power of an emerging bourgeoisie who asserted themselves in unprecedented ways. In addition we consider secondary sources ranging from maps, theories of urban space and social and economic historiography as well as digital archives and computational techniques that allow us to "scale up" our thinking about early modern London to a vast corpus of texts and documents.
Credit 3 units. A&S: TH & A&S IQ: HUM EN: H

L93 IPH 430 Data Manipulation for the Humanities
The course will present basic data modeling concepts and will focus on their application to data clean-up and organization (text markup, Excel and SQL). Aiming to give humanities students the tools they will need to assemble and manage large data sets relevant to their research, the course will teach fundamental skills in programming relevant to data management (using Python); it will also teach database design and querying (SQL). The course will cover a number of "basics": the difference between word processing files, plaintext files, and structured XML; best practices for version control and software "hygiene"; methods for cleaning up data; regular expressions (and similar tools built into most word processors). It will proceed to data modeling: lists (Excel, Python); identifiers/keys and values (Excel, Python, SQL); tables/relations (SQL and/or data frames); joins (problem in Excel, solution in SQL, or data frames); hierarchies (problem in SQL/databases, solution in XML); and network graph structures (nodes and edges in CSV). It will entail basic scripting in Python, concentrating on using scripts to get data from the web, and the mastery of string handling.
Credit 1 unit.

L93 IPH 431 Statistics for Humanities Scholars
A survey of statistical ideas and principles. The course will expose students to tools and techniques useful for quantitative research in the humanities, many of which will be addressed more extensively in other courses: tools for text-processing and information extraction, natural language processing techniques, clustering & classification, and graphics. The course will consider how to use qualitative data and media as input for modeling and will address the use of statistics and data visualization in academic and public discourse. By the end of the course, students should be able to evaluate statistical arguments and visualizations in the humanities with appropriate appreciation and skepticism. Details. Core topics include: sampling, experimentation, chance phenomena, distributions, exploration of data, measures of central tendency and variability, and methods of statistical testing and inference. In the early weeks, students will develop some facility in the use of Excel; thereafter, students will learn how to use Python or R for statistical analyses.
Credit 3 units. A&S: HUM, AN EN: H

L93 IPH 435 Psychoanalysis and its Literary Cultures
This course examines interactions between texts from the domains of literature and psychoanalysis. We read theory and literature side by side, in order to ask the following questions: Does the relationship between literary text and theory necessarily entail the subjection of literature to analysis, or can one, as Pierre Bayard asks, apply literature to psychoanalysis? What can psychoanalytic readings tell us more broadly about the act of reading? How can psychoanalysis enrich our sense of the ethical import of reading and writing, and how can literature challenge psychoanalytic goals and values? In terms of psychoanalytic authors, we focus on Freud, Lacan, Klein, Winnicott and Bayard. In terms of literature, we range widely from Sophocles to Henry James.
Credit 3 units. A&S: TH & A&S IQ: HUM EN: H

L93 IPH 444 Psychoanalysis and its Literary Cultures
This course examines interactions between texts from the domains of literature and psychoanalysis. L93 IPH 450 Interdisciplinary Topics in the Humanities: Romancing the Ruins: Victorian Rome
This course will explore the legacy of ancient Rome in the literary, visual, social, and material culture of 19th-century Britain. Once a province of Rome, Britain, in the 19th century, with its vastly expanding empire, technological supremacy, and political and commercial power saw itself as Rome’s successor in both its republican and imperial phases and, perhaps, in its decline and fall. The Latin and Greek classics were the common possession of the British elite; Romantic and Victorian poets adapted the works and generic forms of Virgil and Horace; popular literature based on Roman themes surged in popularity, and the decadent movement at the end of the century appropriated for its own purposes themes and tropes found in Latin poetry. Genres under discussion will include historiography (Gibbon), fiction (Hardy, Kipling, Conrad), poetry (Housman, Macaulay, Tennsony, Swinburne), visual art (Poynter, Milias, Alma-Tadema) and architecture. We will also investigate a
range of evidence from material culture: How did the developing discipline of archaeology represent the traces of Roman antiquity in Britain in relation to the pre-Roman and later Christian past? Throughout the course we will consider theoretical questions that arise from the study of cultural reception: We will address how and to what ends one culture is both informed by and appropriates another. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L93 IPH 456 Marxism After Marx: Philosophy and Radicalism in the 20th Century
As claims around the supposed post-modernity of our contemporary situation have ebbed, so scholars have returned once more to perhaps the defining philosophical and political voice of modernity, Karl Marx. This course prepares students to engage in current debates in the humanities over the nature of the political, the dynamics of class, the relative importance of the economy to "culture," and the historical situatedness of philosophical knowledge, all through close readings of the "Western Marxist" philosophical tradition. That tradition, developing in Continental Europe and later the United States, sought to revitalize Marx's account of historical development through attention to art, literature and the broader Western philosophical canon, often with the intention of accounting for the failures of Soviet Communism. The course begins with a condensed primer to Marx's original ideas, before turning to the extension of Marxist philosophy in the ideas of Lenin, Lukács, the Frankfurt School, Louis Althusser, the British "New Left," Lucio Colletti and Antonio Negri, before addressing more contemporary authors including Fredric Jameson and Alain Badiou. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L93 IPH 465 The Pre-history of Blogging: Social Media of the Enlightenment
This course explores the ways in which the Enlightenment — in France, England, Germany and the United States — was shaped by the emergence of new literary forms, media and technologies of communication. Like our blogs, Facebook and email, the 18th century had its new social media — newspapers and literary journals, letters that surged through the national postal systems — as well as new social institutions, such as salons and coffeehouses, that served as forums for public debate. We examine these novelties in order to investigate the often ambivalent heritage of the Enlightenment: the use of media to exchange knowledge and express dissent; the use of media for surveillance and state control. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L93 IPH 476 The Intellectual History of Psychoanalysis
This course explores the development of psychoanalytic ideas from their beginnings in 19th-century psychiatry to their various permutations in 20th-century Europe. While it is often assumed by mainstream psychologists that psychoanalytic ideas are outdated and have been superseded by developments in experimental psychology, scholars in the humanities as well as a growing number in philosophy and in neuroscience have recently returned to Freud as an exemplar of interdisciplinary innovation and creativity, both inside and outside the clinic. And thus while the course is largely theoretical and philosophical in its emphasis, charting the theoretical disagreements and revisions of psychoanalysis's first 50 years that culminated in Jacques Lacan's famed and highly controversial "return to Freud" in Paris in 1953, it also comments implicitly on the current state of psychoanalysis as a clinical practice outside the boundaries of mainstream psychology, a practice increasingly influential on practitioners at the cutting edge of therapeutic and neuropsychological research. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

International and Area Studies
International and Area Studies (IAS) offers an interdisciplinary major that allows undergraduate students to develop a broad understanding of the world, while exploring the diversity and richness of other cultures. One of the hallmarks of the contemporary era is the complex relationship between globalization and local differences. New information technologies and worldwide markets connect people, ideas and products throughout the globe. Yet even in this context of globalization, strong attachments to local languages, cultures and societies remain. In some ways, differences among people — whether of government, economy, religion or ethnicity — are becoming more pronounced.

How can we understand these tensions between the global and the local? International and Area Studies courses explore this question in a combination of ways that makes it unique among undergraduate majors at Washington University. IAS is committed to an interdisciplinary perspective that spans the humanities and social sciences and encourages both a contemporary and a historical point of view. It introduces IAS majors to comparative local, international and global perspectives on important issues in the 21st century.

IAS challenges students to master a foreign language as well as the cultural contexts in which the language is spoken, but it also requires study of more than one world area. In addition to conventional course work, IAS encourages exploration of contemporary foreign affairs through speakers, conferences and faculty panels; and provides an introduction to international careers. The program provides robust support for foreign study and independent research, and IAS majors frequently take advantage of one of Washington University’s overseas programs during the junior year or the summer.

There are five concentrations available to IAS majors: (1) IAS with a concentration in development; (2) IAS with a concentration in Eurasian studies; (3) IAS with a concentration in European studies; (4) IAS with a concentration in global cultural studies; and (5) IAS with a concentration in international affairs.

Majors
The Major in International and Area Studies

There are five concentrations available to IAS majors: (1) development; (2) Eurasian studies; (3) European studies; (4) global cultural studies; and (5) international affairs.

Please visit the following pages for more information about their requirements:

- Concentration in development (p. 521)
- Concentration in Eurasian studies (p. 524)
- Concentration in global cultural studies (p. 527)
- Concentration in international affairs (p. 529)

Please visit the separate European studies (p. 394) page for information on this concentration.

Total units required: 36 graded credits plus four semesters of any modern foreign language.

Required courses:
- These depend on the concentration.

Elective courses:
- Depending on the concentration, two to four lower-level courses (3 credits each, typically at the 100 or 200 level, may be at the 300 or 400 level).
- Depending on the concentration, eight to ten upper-level courses (3 credits each, at the 300 or 400 level).

Regulations:
- Completion of all IAS course work with a grade of C+ or higher; all courses for the major must be taken for a letter grade.
- Students must satisfy the standard IAS foreign language requirement with a language appropriate to their concentration and consistent with their study abroad location (more details below).
- Students must complete one semester of language before declaring the major.
- We strongly encourage students to study abroad. For those who do not study abroad, an additional 3 credits at the 300 or 400 level are required (more details below).
- We strongly prefer students to select a study abroad location consistent with their chosen language of study (e.g., students who wish to study in Latin America must satisfy their language requirement with either Spanish or Portuguese).
- Throughout the course of completing the IAS major, students must show depth in at least one world area by taking a minimum of two courses focused on the same area, and breadth by taking a third course focused on a different area. We consider world areas to be Africa, East Asia, Europe,
Latin America, the Middle East, North America (for some concentrations) and South Asia.

- Students must choose their upper-level course work from a minimum of three academic disciplines (for example, anthropology, art history, economics, film, history, literature, music, philosophy and political science).
- No more than 12 total credits earned outside of the day school of Washington University may be applied to a student's IAS major. This limit includes credits from study abroad (never more than 6 credits from a single semester, 3 from a summer, or 12 from a year), University College, or summer school from other U.S. universities, or any combination thereof. (400-level credits must be earned on campus or in Washington University courses taught abroad.)
- No more than 3 credits may be from directed readings, research or independent study excluding the honors thesis.
- The advanced credits must be unique to the IAS major.
- At least 6 credits must be at the 400 level.

Additional Information

Language Requirement: All IAS majors must satisfy a foreign language requirement which entails the successful completion of four semesters of a language appropriate to their concentration while at Washington University. For some students, this may mean the first four semesters of a language; for others who place into advanced language classes, and with approval from IAS language faculty, this may include literature, culture, oral communication and linguistic courses in the target language, once they complete the basic language sequence. Advanced courses in literature, social sciences and culture used to satisfy this requirement may be counted as advanced credit for IAS majors as long as they are cross-listed with IAS or approved for IAS study abroad credit and are not applied toward a language major or minor. A maximum of two of these classes may be completed while abroad on a Washington University approved program in the target language (may be within the same semester abroad). Native speakers of a foreign language must satisfy the four-semester requirement in another language appropriate to their concentration. Heritage speakers must seek appropriate placement by the coordinator of the language program and complete the four-semester requirement.

Study Abroad: Majors are strongly encouraged to study abroad in one of Washington University’s overseas programs during junior year or the summer. Some credit for courses taken abroad may be applied to the major. For those who do not study abroad, an additional 3-credit course at the 300 or 400 level is required.

Senior Honors: Students must confidently expect to graduate with an overall GPA of 3.65 or higher in order to qualify for Senior Honors. Students should enroll in IAS 485 Preparation for IAS Honors Thesis in the fall of senior year, and in IAS 486 IAS Senior Honors Thesis in the spring of senior year (under the corresponding section number of the faculty member overseeing their thesis) in order to be properly tracked by the IAS capstone coordinator.

Minors

The International and Area Studies program does not offer a minor.

Courses

L97 IAS 103B International Public Affairs
We live in a complex, fast-paced world. Technological advances and economic interdependence bring us closer together, even as globalization creates new challenges that cannot be solved by one country alone. In this class we examine the forces that affect competition and cooperation in a globalized world. Students engage with influential social science literature on these topics, participate in classroom discussion, and take part in classroom activities, such as debates and policy-making simulations, to build a deeper understanding of these theories. In addition, students work on semester-long policy projects to build practical skills in problem solving, team building, and communication. This course is restricted to freshmen in the Global Citizenship program.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: IS EN: S

L97 IAS 107 A World on the Move: Post-Conflict Migrations
Migration is the human face to our modern era of globalization, entailing incredible costs, risks and returns for migrants along with important consequences for host societies, sending societies and the wider world. This course offers a new perspective on how and why people move by examining general theories and practices of migration and then analyzing various geographic locations, policies and individual experiences through the detailed study of two cases of global movement that occurred after the end of World War II and again after September 11, 2001. While close attention is paid to Europe, as both host and home to many migrants during these two key moments, we also spend time visiting North Africa, the Middle East, South Asia, Latin America and the United States to follow the paths of important migrant groups during these eras. We contextualize the historical factors that led to these migrations, the social and economic consequences of these large movements of people, but spend the bulk of our time looking at the multiple perspectives of peoples involved from migrants themselves (both forced and voluntary), refugees and displaced people, soldiers, government officials from both host and home societies, representatives from the host society and more.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L97 IAS 125 Migration and the Migrant Experience
Regular migrations of people across international borders continue to perplex governments, policy experts and human rights advocates. This course uses the lived experiences of the millions of people who have moved and currently move between Mexico and the United States each year to think about migration’s meanings in local, multinational and global contexts. What does the relocation of individuals, families
and communities tell us about boundaries, nation states and globalization? What does it mean to be a transnational citizen? What is the relevance — and responsibility — of nation states in the new "global" world? Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L97 IAS 127 Migration in the Global World: Stories

The expression "Stories of Migration" has a variety of meanings. A "story" is a narrative that has a beginning, middle and an end; an account of imaginary or real people and events told for entertainment, a report of an item of news in a newspaper, magazine or broadcast; or an account of past events in someone's life or in the development of something. This course is restricted to and required of participants in the International Leadership Program. A story also can be a way to make sense of the world, and, as we discuss throughout the semester, a tool to change the world. This course is based on the premise that in order to shape the future of migration in the global context, it is imperative to understand how stories of migration emerge, are told, passed on, shared, translated, disseminated, collected, challenged and retold. For these purposes we examine a wide range of stories of migration from the past decade. We experiment with both low-tech and high-tech media in order to come up with different ways to showcase stories of migration, and to assess the actual repercussions that these stories of migration have. While we address migration in the global context, we focus on three regions: the U.S. Mexican border, the Mediterranean and St. Louis. We study immigrant communities in these different locations and analyze a variety of narrative forms and structures in order to discern the impact that stories of migration have both locally and globally. Course materials include novels, memoirs, journalism, essays, short stories, graphic novels, radio programs, film and performance pieces. This course is restricted to freshmen in the International Leadership program.
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM EN: H

L97 IAS 129 Perspectives on Migration: History, Memory and the Making of Modern Europe

Politicians in several European countries recently declared that "multiculturalism has failed," emphasizing immigration as the cause of contemporary social and political conflict and denying the historical role of migration on the European continent. However, from Teutonic and Slavic settlement migration in the first 10 centuries AD to recent guest worker programs and immigration from former colonies, encounters between different cultures, religions, and forms of social organization have been a staple of European societies' development and contributed to producing the continent's geopolitical map as we know it today. In this course we trace significant mass movements of people in Europe and the historical and political repercussions of these migrations to try to understand why some migrations are remembered and others are not. We also study how notions of "otherness" and "diversity" have come to be central points of contention within current discourses in Europe. Primary sources, autobiographical narratives, scholarly analyses and a range of visual material including maps are the basis for class lectures and individual and group work assignments in this course. This course is restricted to and required of participants in the International Leadership program.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L97 IAS 135 Freshman Seminar — Chinatown: Migration, Identity and Space

"Chinatown," as a cultural symbol and a spatial entity, links various topics and studies in this course. Our survey starts with a historical and geographical glimpse of Chinatowns in the U.S. through the real life stories of their residents. This is followed by an in-depth study of Chinese restaurants and food all over the world using texts, images and films that reveal how Chinese cuisine is inherited in and adapted to each local culture and society. The seminar culminates in a discussion of Chinese migration and settlement, the representations of identity, and the cultural and spatial constructions in particular historical and social contexts. The assignments include field trips to Chinese businesses, and a debate on whether or not Olive Boulevard constitutes a Chinatown in St. Louis.
Credit 3 units. A&S: CD A&S IQ: HUM, LCD BU: IS EN: H

L97 IAS 140 East Asia in the World

This course covers the geopolitical history of 20th-century East Asia, from its colonial constellation through its transformation into Cold War nation-states. We then use an interdisciplinary approach to investigate contemporary problems accompanying the emergence of regional economies and institutions. We grapple with the question of when people in East Asia — China, Taiwan, the Koreas and Japan — act as members of a transnational region and when they act in ideological, national or local terms. We evaluate different disciplinary approaches in order to understand the combination of knowledge and skills necessary for drawing meaningful research conclusions. In reading articles produced by a range of scholars and institutions, the course is also an introduction to the politics of the production of knowledge about East Asia. We then apply our knowledge to a real-world conflict and give team presentations on our proposed solutions. This course is restricted to freshmen in the Global Citizenship program.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L97 IAS 1500 Silver, Slaves, and the State: Globalization in the 18th Century

Same as L22 History 1500

L97 IAS 1503 Workshop for the Global Citizenship Program

This workshop, which is restricted to and required of participants in the Global Citizenship Program, is a companion to the core GCP fall course. The workshop will foster critical thinking, provide leadership opportunities, and build community among students as they collaborate to plan an event of international concern. Students will also be visited by guest lecturers.
Credit 1 unit.

L97 IAS 1504 Workshop for the Global Citizenship Program

This workshop, which is restricted to and required of participants in the Global Citizenship program, is a continuation of the fall L97 IAS 1503 workshop. Students plan a second campus event, and an optional off-campus trip provides further opportunities to engage with experts at large and gain new perspectives on the topics discussed in class.
Credit 1 unit.
L97 IAS 155 Freshman Seminar: Mapping the World: Introduction to Human Geography
What is human geography and why is it important? This course addresses these questions by introducing students to the fundamentals of the discipline of human geography. A geographic perspective emphasizes the spatial aspects of a variety of human and natural phenomena. This course first provides a broad understanding of the major concepts of human geography, including place, space, scale and landscape. It then utilizes these concepts to explore the distribution, diffusion and interaction of social and cultural processes across local, regional, national and global scales. Topics include language, religion, migration, population, natural resources, economic development, agriculture, and urbanization. In addition to providing a general understanding of geographic concepts, this course seeks to engender a greater appreciation of the importance of geographic perspectives in an increasingly interconnected and globalized world. No prerequisites.
Credit 3 units. A&S IQ: SSC BU: SCI EN: S

L97 IAS 160 World Politics and the Global Economy
Globalization, the accelerating rate of interaction between people of different countries, creates a qualitative shift in the relationship between nations, communities and economies. Conflict and war is one form of international interaction. Movement of capital, goods, services, production, information, disease, environmental degradation and people across national boundaries are other forms of international interactions. This course introduces major approaches, questions and controversies in the study of global political-economic relations. In a small group seminar we examine the building blocks of world politics, the sources of international conflict and cooperation, and the globalization of material and social relations. This course is restricted to freshmen in the Global Citizenship program. No prerequisites.

L97 IAS 244 Introduction to European Studies
This course provides an introduction to the study of contemporary Europe through an historical examination of the moments of crisis, and their political and cultural aftermath, that shaped modern Europe and continue to define it today. These crises include: the revolutions of 1848, the advent of 19th-century nationalisms, the Great War, the Spanish Civil War, the rise and defeat of state fascism, the Cold War, the formation of the EEC and Union, May 1968, and the return of right-wing politics. After the study of these traditions, the final portion of the semester considers contemporary Europe since 1991, considering such subjects as Green politics, internal migration and immigration, and the culture of the European Union.

L97 IAS 260 Migrations in Past and Present: Introduction to Migration Studies
The course, grounded in a multidisciplinary approach, provides an introduction to the study of migration, featuring significant mass movements in the past 150 years and crucial concepts of historical and theoretical analyses of the movement of people. Course units explore continuities, trends and shifts in human migration and migration policy and how they affect individual immigrants' lives. A variety of sources, such as oral history, films, novels, legal documents and scholarly secondary analysis help students to consider different perspectives on internal and international migrations, from the individual migrant to civil society, from political regulation to economic consideration.
Throughout the course, students deepen their understanding of migration as a result of social transformation, force or individual choice. We study concepts of the nation-state and citizenship, the political economy of migration, gender, sexuality and migration, and notions of identity and social inclusion more generally to build a sound critique of contemporary discourses on immigration.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L97 IAS 270 Sophomore Seminar: Globalization and Its Discontents
Today, the heady promises of globalization appear to have failed us. The notion of global markets and global citizens seems to have remained at best, an ideal. Meanwhile the world's majority has witnessed a staggering decline in education, nutrition, health and even physical mobility. Nowhere have these developments passed unquestioned: from the rise of the so-called Maoist insurgency in India to the Occupy movement in the U.S., people and especially the youth have expressed their outrage in creative and unconventional ways. In this course we plot the long and necessarily violent history of forging global interconnections. We next focus on the past 40 years to theorize the new social formations spawned by specific aspects of contemporary globalization such as the Internet and the English language. Finally we look to the environmental and social abuses committed in the name of global connectivity and the massive protests against these atrocities. The lens for our analysis is India, South Asia and their relationship with the United States. We approach a range of novels, films and popular cultural artifacts as we build our own understanding of the nature, critique and promise of globalization. This is a sophomore-only seminar.

L97 IAS 3040 International Law and Politics
What is international law? Does it really constrain governments? If so, how? In this class we will examine these questions through a mixture of political science and legal theories. Students will become familiar with the major theories in both disciplines and be introduced to the basic tenets of public international law. Students also will develop basic skills in legal research by reading and briefing cases from international tribunals and through an international law moot court simulation.

L97 IAS 314B International Politics
Globalization, the accelerating rate of interaction between people of different countries, creates a qualitative shift in the relationship between nation-states and national economies. Conflict and war is one form of international interaction. Movement of capital, goods, services, production, information, disease, environmental degradation and people across national boundaries are other forms of international interactions. This course introduces major approaches, questions and controversies in the study of global political-economic relations. In a small group seminar we examine the building blocks of world politics, the sources of international conflict and cooperation, and the globalization of material and social relations.

L97 IAS 315 Indian Barbie, Asian Tigers and IT Dreams: Politics of Globalization and Development in South Asia
This course explores how South Asia is at the heart of current debates about globalization, development, empire, gender, sexually and ethnic identity. We raise questions such as: What has lead to sex trafficking in Nepal? Can information technology solve India's social problems and unemployment? What is biopiracy and how are South Asian activists challenging the global corporatization of world food and water supplies? Readings, films and discussions take us to countries such as Bangladesh, Nepal, Pakistan, Sri Lanka and India.

L97 IAS 3204 Civic Scholars Study Abroad Semester One: Self Awareness, Civic Life, and Citizenship
This is the first semester, foundation course for students in the study abroad cohort Civic Scholars program of the Gephart Institute for Civic and Community Engagement. This program recognizes rising juniors enrolled in a study abroad program fall of their junior year who have demonstrated exemplary commitment to civic engagement and community service while at Washington University. The Civic Scholars program recognizes Washington University undergraduate students who exemplify future potential for civic leadership. Rising juniors are selected for the program based on their commitment to community service and civic engagement. Through this four-semester program, cohorts receive intensive leadership training and...
mentorship to prepare them for a life dedicated to public service, and a scholarship of $5,000 to support a substantial civic project or internship. The program begins with a cohort retreat, and students will complete a course each semester in the program. Students will apply their $5,000 scholarship toward a civic project during the summer between junior and senior year. This course provides students with a context for examining civic engagement and developing civic leadership skills. Through lectures, guest speakers, readings, excursions and class discussion, students will 1) explore the history and current status of civic engagement; and 2) prepare for the implementation of a civic project the summer between their junior and senior years. Students will meet in a structured class to discuss concepts, engage in critical reflection, and develop leadership skills. In addition, students will critically reflect on course content to enrich their learning. This is a one-credit course offered between spring break and the end of the semester.

Credit 1 unit. A&S: SS & A&S IQ: SSC EN: S

L97 IAS 3205 Civic Scholars Study Abroad Semester Two: Civic Engagement in Action
This is the second semester, foundation course for students in the Civic Scholars Program of the Gephart Institute for Civic and Community Engagement. The Civic Scholars program recognizes Washington University undergraduate students who exemplify future potential for civic leadership. Rising juniors are selected for the program based on their commitment to community service and civic engagement. Through this four-semester program, cohorts receive intensive leadership training and mentorship to prepare them for a life dedicated to public service, and a scholarship of $5,000 to support a substantial civic project or internship. The program begins with a cohort retreat, and students complete a course each semester in the program. Students apply their $5,000 scholarship toward a civic project during the summer between junior and senior year. This second course provides students in the Civic Scholars Program of the Gephart Institute for Civic and Community Engagement with a context for developing their civic projects. Students engage in a semester-long research and project planning process tied to their civic projects. Through research, lectures, workshops and presentations, students develop a project proposal for their civic projects. Students meet in class to discuss concepts, engage in critical reflection, and develop skills for project implementation.

L97 IAS 3248 Intercultural Communication

"Intercultural communication" and "cross-cultural communication" are interchangeable terms in referring to the field of studies covered in this course. This course is designed to further students' sensibility toward cultural variables and to cultivate their practical skills in managing cultural diversity in everyday life and business. Our interrogation focuses on how cultural variables affect the thought, behavior, and value systems, the transmission and interpretation of messages, and characteristics of interpersonal and cross-cultural communication. We learn key concepts in this field (verbal and nonverbal communication, individualism and collectivism, stereotypes and ethnocentrism, etc.) and issues of particular concern in the current world (gender, race, inter-ethnic/racial
relations, and intercultural communication in classrooms, medical care, and international business, etc.). Credit 3 units. A&S: SS, CD A&S IQ: LCD; SSC BU: BA EN: S

L97 IAS 3266 "East" and "West" in Jewish Imagination and Politics
How have Jews, as a paradigmatic diasporic people, understood their place between "East" and "West," and their relationships with other Jews and non-Jews within, across, and beyond the vast territorial expanse of Eurasia? What has it meant to identify, to be identified, and to live as Jews in Eurasia and beyond — both before and after the State of Israel? We begin with the origin of world Jewry, follow the various and interrelated experiences of Jews under Christendom and Islam, and, through carefully chosen vignettes, trace how the modern concepts of “East” and “West” have shaped the course of Jewish history, politics and imagination for millennia.

L97 IAS 328B Gateway to Development
Why do some nations develop while others languish? What accounts for disparities in wealth and opportunity in the world? These are far more than simply economic questions because development creates economic, political, and social surpluses, skills and capabilities that can be allocated to other tasks. Societies that attain development become more capable actors in world affairs and are better able to address problems confronting their domestic societies. This seminar explores what governments and societies do to promote or hinder growth and development, and how those actions influence social arenas.

### L97 IAS 343 Text, Memory and Identity
This course explores issues of collective memory and identity through the study of texts such as national myths and official histories taught in schools. The focus is on texts themselves and how they are produced (e.g., by the state, popular culture) and consumed. The course has two components, methodological and analytical. In the first, we read a number of theoretical works devoted to definitions of the text from a historical and structural point of view. In the second, we analyze various key works that have played a crucial role in the formation of communities of memory and identity and the borders that separate them. The course is comparative, multidisciplinary and international in its scope.

As an introductory course to Asian-American Studies, this course explores key issues in the field revolving around the concept of "model minority." It explores the origins of this concept, analyzes the social discourses about Asian Americans as a model minority, and through interrogations of complex experiences and heterogeneity among Asian Americans (including Pacific Islanders), it aims to dismantle the model minority myth. This course is designed to respond to the students' interest in Asian-American Studies as well as to fit into the broader discussion on race and ethnicity in the United States. It approaches race and ethnicity by focusing on one designated pan-ethnic group, and uses multidisciplinary inquiries inspired by the fields of history, sociology, anthropology, law and education, all of which are concerned with the conceptual framework of "model minority."
Iberian Peninsula, in Europe and in the Mediterranean world. We study Sephardic communities in Europe and North Africa and their interactions with Christians and Muslims before World War II. Once we have examined the history of the Holocaust and its impact on the Sephardic world in a more general sense, our readings focus on the different effects of the Holocaust’s “long reach” into Southeastern Europe, the Balkans and North Africa, paying close attention to interactions among Jews, local communities and the Nazi invaders. Finally, we address the memory of the Sephardic experience of the Holocaust and the role of Holocaust commemoration in different parts of the world. We approach these topics through historiographies, memoirs, novels, poetry and film.

L97 IAS 3602 Borders, Checkpoints and the Frontiers of Literature
Borders are some of the most strange, dangerous, and changeable places in the world. They help define not only where we are but also who we are. This course reads literature from and about border regions around the world: the Mexican-American frontera, the Indian and Pakistani Partition line, the German Iron Curtain, the African colonial borders, and the Israeli-Palestinian divisions. Even if we live far from any international boundary, the notion of the border shapes our thinking about the world. Literature is a place where borders are vividly imagined, marked and debated in ways that both affect preexisting frontiers and help draw new ones on the ground. We read all texts in English.

L97 IAS 363 Russian Literature and Opera: Transpositions and Transgressions
This interdisciplinary course surveys the intersections between Russian literature and opera from the 19th century to the present. Literary works in a variety of genres (short stories, narrative poems, plays and novels) by Russian authors (with Pushkin as a clear favorite) have inspired generations of Russian composers, resulting in significant operatic adaptations, including Tchaikovsky’s *Eugene Onegin*, based on Pushkin, Prokofiev’s *The Gambler*, based on Dostoevsky, and Shostakovich’s *The Nose*, based on Gogol. For each pairing of author and composer, we read and discuss the literary text before considering the ways in which the original was refined, trimmed and generally transformed for the operatic stage. We frequently view opera productions and consider issues of staging, embodiment and fidelity to the original. The broader goal of the class is to consider the possibilities and limits of artistic media, specifically the points of agreement or dissonance between literature and music.

L97 IAS 364 Anarchism: History, Theory and Praxis
This course analyzes the origins, historical trajectories and influence of anarchism from its classical period (1860s-1930s) until the present. It examines the major personalities, complex ideas, vexing controversies and diverse movements associated with anarcho-collectivism, anarcho-communism, individualist anarchism, anarcho-syndicalism, anarchist feminism, green anarchism, lifestyle anarchism and poststructuralist anarchism. In doing so, it explores traditional anarchist concerns with state power, authority, social inequality, capitalism, nationalism, imperialism and militarism. It also analyzes anarchism’s conception of individual and collective liberation, mutual aid, workers’ organization, internationalism, direct democracy, education, women’s emancipation, sexual freedom and social ecology. Special attention is given to past and contemporary globalization processes and their relation to the dissemination and reception of anarchism in the global South. Credit 3 units. L97 IAS 374 Russian Literature and Empire
In this course we explore Russian literary works (from the 19th century to the present day) that address issues of empire. We consider the building of the Russian empire during tsarist times with the conquest of Siberia, Ukraine, the Crimea, the Caucasus, Central Asia and the Far East; then we look at the remaking of the Russian empire as the Soviet Union under the "anti-imperialist" communist regime; we conclude with a glance at the legacy of empire in contemporary Russia, with a focus on the Chechen Wars. Some of the topics we discuss include the poetics of space, orientalism, authority and rebellion, imperial bureaucracy, religious identities, migration and deportation, and multiculturalism. We do close readings of works by Pushkin, Lermontov, Gogol, Tolstoy, Chekhov, Babel, Platonov, Iskander, Aitmatov, Petrushevskaya and others. Primary readings are supplemented with critical articles and several films. All readings are in English translation. No prerequisites. Credit 3 units. L97 IAS 3750 Topics in Russian Lit and Culture: Madmen or Visionaries? (WI)
Where is the borderline between "insanity" and the "visionary" experience? What is the correlation between madness and creativity? How does the Russian conception of madness compare to the Western one? In general, how do our cultural experiences shape our perception of madness? These are some of the questions we address in this course as we explore the role and representation of madness in Russian culture and literature. Class discussions focus on close readings of formative works by Pushkin, Gogol, Dostoevsky, Tolstoy, Chekhov, Gippius and Nijinsky. These primary literary texts are supplemented by critical and theoretical articles as well as film. This is a writing-intensive course: workshops are required. All readings are in English translation. No prerequisites. Credit 3 units. A&S: TH, CD, WI A&S IQ: HUM, LCD, WI BU: IS EN: H
This course focuses on several waves of Russian emigration in the 20th century: the so-called "White Russian" emigration in the wake of the 1917 Revolution; the exile of dissidents and defectors from behind the "Iron Curtain"; Jewish emigration in the 1950s; and migrations and displacements after the disintegration of the Soviet Union. Through our exploration of materials, for instance, address mass movements related to Soviet history that set large-scale migrations in motion. Course credit 3 units. L97 IAS 3822 From McDonald's to K-Pop: New Movements in East Asia
This course aims to help students to obtain competent knowledge about contemporary East Asian cultures and societies. We explore a broad set of topics in a transregional setting, from gender, filial piety and kinship to the upsurge of new waves, including consumer and pop cultures, the "cuteness" culture, and individualization. Our interrogation examines cultural variables, transregional dynamism, local receptions of "Western" influences, and the global impact of cultural movement in East Asia. Credit 3 units. L97 IAS 384 Migration and Modernity: Human Mobility, Identity and State Formation — Russian/Soviet/post-Soviet Context
This class introduces students to a broad history of 19th- and 20th-century Russia and the Soviet Union alongside problems of migration. In this class, students are introduced to the historical, social and political dimensions of migration within, to and from the Russian Empire, the Soviet Union and its successor states. We look at the intersection of the movement of people with long-term economic, social and political transformations, but also pay attention to crucial events and phenomena of Soviet history that set large-scale migrations in motion. Course materials, for instance, address mass movements related to modernization and internal colonization, analyze the role of revolutionary change and warfare for forced displacement, and study the implications of geopolitical changes in the aftermath of the breakdown of the USSR for human rights discourses.
Alongside the historically grounded overview, the class explores concepts of citizenship, diaspora, nationality policy, gender specific experiences of migration, and the ethics and political economy of migration politics, thereby highlighting how current trends in Russian society are indicative of broader discourses on difference and social transformation.

L97 IAS 386 Empire in East Asia: Theory and History (WI)
An introduction to how historians and anthropologists incorporate theoretical insights into their work, this course first "reverse engineers" the main arguments in several insightful books and articles on empire in Asia, all of which are informed by the work of Michel Foucault. Retaining our theoretical knowledge, we then focus on the more empirical aspects of the Japanese empire in Korea, including settler colonialism, the colonial economy, representations of colonialism and the long-term ramifications of empire. We conclude with a general assessment of the history of empire. In these ways, this course seeks to equip students with a knowledge of empire in East Asia in the late 19th and 20th centuries while simultaneously investigating the nature of that knowledge.

L97 IAS 3893 Topics in Migration and Identity
The course examines migration movements that are related to the Nazi genocide in Europe. Grounded in a study of the Nazi project to reshape the European geopolitical map, students explore how the mass movement of people is impacted by geopolitics, political violence, and economical considerations. Class materials address the relationship between identity formation and social exclusion, thus opening up a critical investigation of concepts of citizenship, human rights, and their institutional frameworks (states, international organizations, etc.) more generally. Students work with a variety of sources, including primary sources, scholarly analyses, podcasts, literary works and film to study migrations related to the prehistory, policies and aftermath of the Nazi regime. The class provides insights into issues of expulsion, refuge, forced migration, settlement projects, ethnic cleansing and others, but also demonstrates the global impact and long-term repercussions of political and genocidal violence. Looking at the Nazi regime through the lens of migration shows that the Nazi genocide is embedded in a history of racism, colonialization and mass violence.

L97 IAS 396 Comintern: The Communist International’s Global Impact
The Communist International was the third of the global left-wing organizations aimed to develop communist organizations around the globe to aid the development of a proletarian revolution. Begun in 1919, hosted in Moscow, and closely tied to the developing USSR, the Comintern hosted seven World Congresses and thirteen Enlarged Plenums before Stalin dissolved it in 1943. This course examines the history of the nearly 25 years of the Comintern, paying particular attention to engagement with countries outside of the Soviet sphere. Class texts provide a general historical overview and interrogate
central ideological arguments/debates across several countries and political systems. Course materials look at the Comintern’s engagement with Fascism and the Spanish Civil War, ideas of Nationalism and Internationalism, and Self-Determination in the Colonial World. Class units are designed to highlight regional similarities and differences, taking a global approach to the study of Communism. Students gain an understanding of the global political complexities developing after World War I and leading to World War II. Reflecting on the critique of imperialist capitalism offered by the Comintern, students explore liberation struggles and ideological dictatorships around the globe.

L97 IAS 4005 Directed Research in IAS
Students in Directed Research will be part of the IAS Undergraduate Research Assistant Group. Research assistants learn valuable skills and gain practical experience working on IAS-affiliated faculty research projects. All IAS students are encouraged to apply, but the program will be especially beneficial for sophomores and juniors who are planning to write a senior thesis. Students will be assigned to work on a faculty research project and will be expected to provide five hours of research work per week to the project. In addition, students will meet for weekly workshops where we will introduce multidisciplinary research perspectives, skills and resources. Students must complete a separate application and be approved by the instructor to enroll.

L97 IAS 402 The Meaning of National Security in the 21st Century
The 21st century has brought with it new challenges to national security. Standard assumptions about nations and the borders that separate them have been brought into question, and one of the results of this is that the very meaning of national security is undergoing change. Instead of threats to security coming from outside national boundaries, they now often exist within and across borders. This course focuses on contemporary ideas about these issues. It includes a brief overview of current discussions of national security, but it is primarily devoted to examining the conceptual resources we have for making sense of national security in a new world.

This seminar examines two subgroups: child immigrants and the native-born children of immigrants. It interrogates cultural/ethnic identity, cultural adaptation, bilingualism and biculturalism, and challenges and achievements of this young generation through ethnography, literature and sociological accounts. We aim to scrutinize the studies of the “1.5” generation and the second generation, and theories such as “segmented assimilation,” across a wide range of ethnic groups, from people of East Asian origins to those with Latin American ancestries, by mainly focusing on their experiences in the United States.

L97 IAS 4062 The Art of Borrowing: The "West" in Japanese Life
This course aims to examine Western influences in Japan and Japan's reconceptualizing the "West" in various aspects of popular culture, including cuisine, sports, music, language, advertising, entertainment and domesticity. It is primarily an anthropological survey with historical references on Japan's turn to Western civilization in the modern era. The course explores Japanese perceptions of the "West," and how Japanese consume the "West" by attaching meanings to "Western" symbols and practices, and making them part of Japanese culture and life. Rather than explicating Japan's relationship with the West, the course scrutinizes the "West" constructed within Japanese discourse, as both a racial/ethnic other and a cultural fantasy. Course assignments include a round-table discussion on specific topics relating to cultural integration and internationalization, and globalization and localization. Credit 3 units. L97 IAS 420 Islam, Immigrants and the Future of European Culture
Coming from Turkey, North and West Africa, Pakistan and elsewhere, Muslim immigrants in Europe are changing what it means to be a European. In the process, they have brought questions of cultural identity into the international media. Examining literature, the press, and secondary studies, this writing-intensive course studies the ways in which national governments and institutions have chosen to deal with the arrival of large numbers of Muslims as permanent residents. We consider what the various controversies and prejudices surrounding their presence mean for the future of European culture. Such issues as citizenship, assimilation, the right to cultural difference, and the use of cultural and religious symbols are among our major interests. No foreign language background is assumed. Priority is given to IAS majors for this WI course.

L97 IAS 4201 International Relations of Latin America
This course examines Latin American foreign relations in the world from the 1820s to the present with a primary emphasis on the period since 1945. Focusing on inter-state and transnational relations, it seeks to historically contextualize and analyze long term patterns and trends between Latin American states and between Latin America and the United States, Europe, and the global South. Given Latin America’s shared experience with imperialism and more recently with neo-imperialism, special attention is paid to the ways Latin America has sought to manage and/or resist foreign domination, especially U.S. hegemonic pretensions. To this end it analyzes patterns of inter-American conflict and cooperation. When, why, and under what conditions Latin America articulated an independent foreign policy, forged anti-imperialist blocs, embraced U.S. sponsored diplomatic efforts and military alliances, and pursued Latin American unity and solidarity are closely examined. To better understand the continuities, discontinuities, contradictions and complexities of Latin American foreign policy, this course also assesses the influence of changing regional and national political cultures from both a theoretical and a historical perspective. In doing so, it explores how elite culture, the balance of domestic social forces, ideological and economic development, and shared cultural identities and meanings informed national political cultures and how these in turn shaped Latin American foreign policies.

L97 IAS 422 Europe, Questions of Identity and Unity
Nation states and their cultures have been changed by globalization. Within this process, continentalization has played an important role. The European Union is only half a century old, but continental unity has been discussed and demanded by European writers and thinkers for hundreds of years. We read essays on Europe (its identity, its cultural diversity and its cultural roots, contemporary problems and future goals) by writers such as Coleridge, Madame de Staël, Novalis, Chateaubriand, Heine, Nerval, Hugo, Thomas Mann, Ernst Jünger, T.S. Eliot, Klaus Mann, de Madariaga, Kundera, Enzensberger, Frischmuth and Drakulic; we discuss studies reinventing Europe by philosophers such as the Abbé de Saint-Pierre, Kant, Hegel, Nietzsche and Ortega y Gasset; we deal with the mythological figure of Europa and her resurrection in the world of art; we study the Nazarene painters of the early 19th century in Rome and discuss portraits of Bonaparte by French painters of the time. Comparative Literature students meet with the instructor for an additional two hours per month.

L97 IAS 4224 The 1904 St. Louis World’s Fair: German and Austrian Art Exhibited
The St. Louis World’s Fair of 1904 (The Louisiana Purchase Exposition) was one of the greatest events of its time. At the beginning of the course, we deal with the historical development that lead to the purchase of the Louisiana Territory in 1803 and have a look at the grand dimensions of the World’s Fair (connected with the Olympic Games). Of central importance are the Art Exhibits from Germany and Austria with their cultural-political implications. The German Emperor had a hand in selecting the German paintings to be sent to St. Louis, and his opposition against modern movements like Impressionism caused opposition in Germany. Austria was different: In their Art Nouveau Pavilion they included secessionists (Hagenbund), The Wiener Werkstätten (Vienna’s Workshops) attracted a lot of attention. Different from the paintings, German Arts and Crafts represented avant-garde movements. We visit libraries, archives and museums in St. Louis that have World’s Fair holdings. The seminar is for advanced undergraduate students but beginning graduate students can take it with permission of the instructor.

L97 IAS 4225 European Utopian Settlements in the American Midwest (1814-1864): Diversity and Antislavery
During the first part of the 19th century, a number of utopian visionaries from Europe (Germany, France and England) tried to establish communities in the American Midwest. These colonies were based either on religious or philosophical/social ideals which could be traced back to interpretations of the Old and the New Testament or to Enlightenment principles of freedom and equality that had been propagated during the revolutions in Europe of 1789, 1830 and 1848 which in turn had been influenced by the American war of independence. These groups showed strong antislavery convictions. The Midwest was chosen since the areas in the vicinity of the confluence of the Mississippi and the Missouri were seen as open to new social experiments. Part of the seminar are field trips to the St. Louis-based Missouri History Library as well as to the St. Louis Public Library and one-day excursions to New Harmony in Indiana, Nauvoo in Illinois, and to small towns in Warren County, Missouri.

## Arts & Sciences (10/04/16)

1. **L97 IAS 4246 State Failure, State Success and Development**
   - Why do some nations develop while others languish? This course takes an interdisciplinary approach to examining the role governments play in development and economic outcomes. Knee-jerk ideologues from all parts of the political spectrum make competing arguments, most of which are overly simplistic and ignore good social science. Some argue that state involvement in the economy hinders economic activity and development, while others argue for greater state involvement. Such arguments are often poorly informed by systematic rigorous research. We look at some of the competing arguments about governments in failed and successful states and compare those arguments to the empirical world or data. In so doing we recognize that how governments affect development and economic outcomes in society is neither straightforward nor consistent with any of the simplistic ideological screeds that often dominate public discourse.

L97 IAS 452 Immigration, Identity and New Technology
This course examines how immigration is being transformed by changes in information and communication technology. With these new technologies, immigrants can stay in contact with family and friends much more easily, travel to and maintain relationships in their home countries, and form bonds with other immigrants in the new country. How do these changes affect how immigrants view themselves in their new countries? Are they more or less likely to settle permanently? Do they change their patterns of political participation? We answer these and other questions using literature from sociology, communication, psychology, anthropology and political science. Students are expected to explore internet sources as well as traditional materials.

L97 IAS 4611 Latin American Populism and Neo-Populism
A salient feature of Latin America in the 20th and early 21st centuries has been the recurrence of populism. Mass-based political and social movements animated by nationalist and reformist impulses dominated Latin American politics in the 1920s, 1930s-'60s, and 1980s to the present. This course provides a general historical and theoretically informed analysis of the origins, internal dynamics and outcomes of classical populist and neopopulist governments and parties. Among the notable populist and neopopulist cases examined include: Peronism in Argentina, Velasquismo in Ecuador, Cardenismo in Mexico, A PRA in Peru, Vargasismo in Brazil, Garcia/Fujimori in Peru, Mener/Kirchners in Argentina, and Hugo Chavez in Venezuela. Issues pertaining to leader-follower relations, populist discourses, citizenship rights, populist gender and racial policies, labor and social reforms, and mass mobilization politics also are explored.

L97 IAS 4622 Labor and Labor Movements in Global History
Focusing on the period from mid-19th century (industrial revolution) until the present neoliberal capitalist era, this course analyzes working class formation, organization, collective action, and politics on a worldwide scale. It seeks to explore the connections between historical and contemporary workers’ movements in the global North and global South, eschewing national perspectives and global/local dichotomies. Special attention is given to Latin American workers and labor movements. In particular, it examines the influence of immigration, the role of export workers, the impact of radical ideologies, the development of labor relations systems, the nature of informal work, and recent struggles for workers' control. The principal aim of this course is to introduce students to the key topics and themes pertaining to global labor history. These themes are varied and complex and range from workers’ struggles.
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD EN: S

L97 IAS 4633 20th-Century Latin American Revolutions
Latin America was arguably one of the most "revolutionary" regions of the world in the 20th century. It registered four “great revolutions”: Mexico 1910, Bolivia 1952, Cuba 1959, and Nicaragua 1979. These social revolutions entailed a substantial, violent, and voluntarist struggle for political power and the overthrow of the established political, economic, social and cultural orders. In the wake of these successful revolutions, new revolutionary institutions of governance were founded, radical structural changes were implemented, and a new revolutionary ethos was adopted. With the exception perhaps of the Bolivian Revolution, these revolutions had a profound impact on Latin American and world politics. The primary aim of this course is to analyze and compare the causes, processes and outcomes of the Mexican, Cuban and Nicaraguan revolutions.

L97 IAS 4660 Geographies of Development in Latin America: Critical Perspectives and Contemporary Challenges
This course provides an overview to the geographies of development throughout Latin America. We begin by examining a variety of theoretical perspectives, definitions and critiques of "development." We highlight the uneven processes of development at multiple, overlapping scales and the power imbalances inherent in much of development discourse. In the second half of the course we focus our considerations
toward specific contemporary trends and development issues, utilizing case studies drawn primarily from Latin America. These themes include sustainability, NGOs, social movements, social capital, security and conflict, identity, ethnicity and gender issues, participatory development, and micro-credit and conditional cash transfers. Students acquire the critical theoretical tools to develop their own perspectives on how development geographies play out in Latin America.

Credit 3 units. A&S: SS; SD A&S IQ: SSC; SD EN: S

L97 IAS 4662 Central American Geographies of Violence
This course provides an in-depth examination of the geographies of violence in Central America. As a region frequently characterized as endemic to violence, it is vital to analyze and contextualize the violence. Approaching violence in Central America from a geographic perspective involves not only locating and “placing” the violence, but also thinking relationally about the multiple, overlapping scales of activity, both within and beyond the region. The course is divided into five parts. In the first two sections of the course, we begin with an overview of the physical and human geography of the region and outline key historic moments and their legacies, including colonization, international relations (with an emphasis on U.S. interventions), civil war, genocide and torture. Simultaneously, we delve into various theoretical approaches for understanding the nature of multiple types of violence. In the third section of the course, we focus on neoliberal violence, insecurity and development and address issues such as urbanization, violent crime, issues with free trade and labor, and environmental issues. For the final two sections, we draw from contemporary case studies in the region. We will address identity and violence (discussing indigenous issues, racism, genocide and gender) and in the last section we will cover migration, gangs, drug-trafficking, U.S. security responses and re-militarization. While we will continue to consider these types of violence through the various theoretical frameworks introduced in the first part of the course, we will also examine and analyze reports on contemporary violence and policy recommendations from multiple sources (multilateral organizations, governments, think tanks, and other nongovernmental organizations). Throughout the course we will also discuss current events occurring in Central America and how they directly or indirectly relate to the topic of geographies of violence.

L97 IAS 474 National Narratives and Collective Memory
This course examines how national narratives shape the ideas of nation-states about themselves and others. It considers cultural, psychological and political aspects of narratives used to interpret the past and understand the present. In addition to reviewing conceptual foundations from the humanities and social sciences, particular national narratives are considered as case studies.

L97 IAS 4761 Politics of Global Finance
Global finance underwent stunning transformations over the past 30 years. The changes contribute to interdependence, challenge national sovereignty, alter state-society relations, affect economic development, and influence the distribution of wealth and power in the global political economy. The seminar examines the political economy of monetary relations, the globalisation of capital markets, and their effects upon domestic and international affairs.

L97 IAS 477 Cultures of Memory in Post-War Germany and Japan
Post-war German and Japanese societies have long grappled with the issue of how to confront and commemorate World War II. This interdisciplinary course, team-taught by specialists in these fields, explores key aspects of postwar culture under four central rubrics: defeat, guilt, memory and renewal. We examine constructions of memory in a diverse range of texts, including historical, literary and cinematic narratives. Several key questions guide our discussions. What is the relationship between perpetration and suffering? How do different cultures represent and repress wartime experience and how do these articulations and omissions shape memory? How are memories of war participation and trauma shared and transmitted across generations? What do we remember and why?

L97 IAS 4792 Globalization and National Politics
This seminar examines globalization and its interaction with national politics: the movement of ideas, capital, goods, services, production and people across national borders; and provides a skeletal framework for the global political economy. Politicians, policymakers and societies discover new opportunities, but also dilemmas as expanding interdependence challenge traditional notions of sovereignty and national policy autonomy.

L97 IAS 485 Preparation for IAS Honors Thesis
This course (which meets regularly and earns 3 credits toward IAS major requirements) prepares students for writing an original research paper. In addition to working with their thesis adviser independently, the seminar provides structure, feedback and guidance. Students identify and develop a thesis proposal. Their research question, theory and methods of analysis will be examined, and they develop and refine presentation skills through the presentations of their proposals and results at various stages of progress. Prerequisites: 1) a GPA of 3.65 at the time of application to the thesis program; 2) the identification of a thesis supervisor; and 3) the approval of the IAS Honors Program Director. Attendance is mandatory.

L97 IAS 4869 Reading War and Peace  
What is it like to enter into a fictional world for a semester? In this course we read Leo Tolstoy’s War and Peace in its entirety. Set during the Napoleonic wars (1805-1812), War and Peace takes the reader on a panoramic journey from the battlefield to the hay field, from the war room to the ballroom. It is a vivid portrayal of 19th-century Russian society as well as a penetrating examination of the causes and consequences of violence and the nature of love and family dynamics. In our discussions, we explore philosophies of history, issues of social injustice and gender inequality, the psychology of human suffering and joy, questions of literary form and genre, and the very experience of reading a long work of fiction. We begin with a selection of Tolstoy’s early works that laid the foundation for War and Peace and conclude with a few of Tolstoy’s late works that had an enormous influence on, among others, Mahatma Gandhi. Primary texts are supplemented with literary theory and film. All readings are in English.

### Concentration in Development (IAS)

**The Major in International and Area Studies — Concentration in Development**

All societies change over time, sometimes for better, sometimes for worse, and sometimes the definition of what is better or worse is a matter of intense debate. Why do some societies develop while others languish? What accounts for disparities in wealth, political freedoms, and access to basic resources like food and health care? How do transnational factors like climate change, urbanization and globalization affect these disparities?

**Concentration objectives:** The IAS concentration in development offers an interdisciplinary approach to understanding societal changes over time in areas as diverse as environment, ethics, gender, health, political economy, population, urban development, social justice and other areas of development.

This concentration requires 36 units of course work:

- 3 units Research Methods course work (any level)
- 6 units of introductory course work (100-200 level) from two different academic disciplines
- 9 units of advanced course work from the Core Courses list (300-400 level)
• 15 units of advanced course work from a minimum of three different academic disciplines (at least two must be at the 400 level)
• 3 units additional course work (any level)

**Additional requirements and regulations:**

- Completion of all IAS course work with a grade of C+ or higher.
- Students must satisfy the standard IAS foreign language requirement: the successful completion of four semesters of one language appropriate to their concentration.
- One semester of language must be completed before declaring the major.
- We strongly encourage students to study abroad (https://ias.wustl.edu/undergraduate/study_abroad). For those students who do not study abroad, an additional 3-unit course at the 300 or 400 level is required.
- We strongly prefer students to select a study abroad location consistent with their chosen language of study (e.g., students who wish to study in Latin America must satisfy their language requirement with either Spanish or Portuguese).
- Throughout the course of completing the major, students must show **depth** in at least one world area by taking a minimum two courses focused on the same area, and **breadth** by taking a third course focused on a different area. We consider world areas to be Africa, East Asia, Europe, Latin America, the Middle East, North America and South Asia.
- Majors must choose their upper-level course work from a minimum of three academic disciplines (for example: anthropology, economics, history and political science).
- No more than 3 credits may be from directed readings, research or independent study excluding the honors thesis.
- The advanced credits must be unique to the IAS major.
- At least 6 credits must be at the 400 level.

**N.B.:** A single course may satisfy more than one of the distribution requirements (disciplinary or world area). Some of these requirements may be completed while abroad (http://ias.wustl.edu/undergraduate/study_abroad).

*Students may petition to add a course by following the instructions on the IAS FAQs webpage (http://ias.wustl.edu/faqs).

**Additional Information**

**Language Requirement for the Major in Development/International and Area Studies**: All IAS majors must satisfy a foreign language requirement that entails the successful completion of four semesters of a language appropriate to their concentration while at Washington University. For some students, this may mean the first four semesters of a language; for others who place into advanced language classes, and with approval from IAS language faculty, this may include literature, culture, oral communication and linguistic courses in the target language, once they complete the basic language sequence. Advanced courses in literature, social sciences and culture used to satisfy this requirement may be counted as advanced credit for IAS majors as long as they are cross-listed with IAS or approved for IAS study abroad credit and are not applied toward a language major or minor. A maximum of two of these classes may be completed while abroad on a Washington University approved program in the target language (may be within the same semester abroad). Native speakers of a foreign language must satisfy the four-semester requirement in another language appropriate to their concentration. Heritage speakers must seek appropriate placement by the coordinator of the language program and complete the four-semester requirement.

**Study Abroad**: Majors are strongly encouraged to study abroad in one of Washington University’s Overseas Programs during junior year or the summer. Some credit for courses taken abroad may be applied to the major. For those who do not study abroad, an additional 3-credit course at the 300 or 400 level is required.

**Senior Honors**: Students must confidently expect to graduate with an overall GPA of 3.65 or higher in order to qualify for Senior Honors. Students should enroll in IAS 485 Preparation for IAS Honors Thesis in the fall of senior year, and in IAS 486 IAS Senior Honors Thesis in the spring of senior year (under the corresponding section number of the faculty member overseeing their thesis) in order to be properly tracked by the IAS capstone coordinator.

**Concentration in Eurasian Studies (IAS)**

**The Major in International and Area Studies — Concentration in Eurasian Studies: New Silk Roads**

This track focuses on the social, cultural and economic interconnections among the peoples of Eurasia. We define Eurasia as the vast landmass stretching east/west from China to Europe and north/south from Siberia into the Caucasus, the Crimean Peninsula, Central Asia and the Himalayas. Ancient trade routes that crisscrossed the interior spaces of Europe and Asia, known collectively as the Silk Road, served as a globalizing thoroughfare for the movement of peoples, cultural practices, religious values and commodities. Recent infrastructural improvements in these areas, as well as international economic, environmental and political concerns, have once again opened up transnational economic networks and cross-cultural exchange along these “new silk roads.” For this concentration, students draw from a variety of disciplines to study not only specific geographical regions but also vital intersections and interrelationships among regions and peoples.

**This concentration requires 36 units of course work:**

- 6 units of introductory course work (100-200 level)
- 30 units of advanced course work from a minimum of three academic disciplines (at least two must be at the 400 level), and dealing with three different regions (Eastern, Western and Central Eurasia) or with a transregional focus.

**Additional requirements and regulations:**

- Completion of all IAS course work with a grade of C+ or higher.
- Students must satisfy the standard IAS foreign language requirement (the successful completion of four semesters of one language appropriate to their concentration) with Arabic, Chinese, Hebrew, Hindi, Russian or another Eurasian language as decided in consultation with their IAS adviser.
- One semester of language must be completed before declaring the major.
- We strongly encourage students to study abroad (https://ias.wustl.edu/undergraduate/study_abroad). Russian Language and Literature study abroad programs (https://ias.wustl.edu/russian/study-abroad) are an especially good fit for this concentration, though other programs may also apply. For those students who do not study abroad, an additional 3-unit course at the 300 or 400 level is required.
- Throughout the course of completing the Eurasian studies major, students must take course work dealing with three different regions (Eastern, Western and Central Eurasia) or with a transregional focus.
• No more than 3 credits may be from directed readings, research or independent study excluding the honors thesis.
• The advanced credits must be unique to the IAS major.
• At least 6 credits must be at the 400 level.

N.B.: A single course may satisfy more than one of these distribution requirements (disciplinary or regional). Some of these requirements may be completed while abroad.

**Strongly recommended courses (3 units each):**

- Anthro 3775 Ancient Eurasia and the New Silk Roads 3
- IAS 374 Russian Literature and Empire 3

**Introductory courses (choose one to two from this list; 3 to 6 units):**

- Comp Lit 215C Introduction to Comparative Practice I 3
- History 1500 Silver, Slaves and the State: Globalization in the 18th Century 3
- IAS 103B International Public Affairs 3
- IAS 125 Migration and the Migrant Experience 3
- IAS 127 Migration in the Global World: Stories 3
- IAS 129 Perspectives on Migration: History, Memory and the Making of Modern Europe 3
- IAS 140 East Asia in the World 3
- IAS 160 World Politics and the Global Economy 3
- IAS 244 Introduction to European Studies 3
- JINE 208F History, Text and Identity: Introduction to Jewish Civilization 3
- JINE 210C Introduction to Islamic Civilization 3
- Russ 215C Introduction to Russian Civilization 3

If a student chooses only one from above, the other course may be chosen from this list (3 units):

- Chinese 227C Chinese Civilization 3
- History 2157 Freshman Seminar: The Meaning of Pakistan: History, Culture, Art 3
- IAS 127 Migration in the Global World: Stories 3
- IAS 129 Perspectives on Migration: History, Memory and the Making of Modern Europe 3
- IAS 135 Freshman Seminar — Chinatown: Migration, Identity and Space 3
- IAS 140 East Asia in the World 3
- IAS 155 Freshman Seminar: Mapping the World: Introduction to Human Geography 3
- IAS 160 World Politics and the Global Economy 3
- IAS 223 Korean Civilization 3
- Korean 223C Korean Civilization 3

**Advanced courses**: Choose 10 courses from the current internationally-focused course offerings* in the following areas of study. All courses must be approved by the student’s IAS adviser in order to count for the major.

*Students may petition to add a course to this list by following the instructions on the IAS FAQs webpage ([http://ias.wustl.edu/faqs](http://ias.wustl.edu/faqs)).

- Anthropology
  - Anthro 3051 Anthropology of Tibet and the Himalayas 3
  - Anthro 3053 Nomadic Strategies and Extreme Ecologies 3

Concentration in Global Cultural Studies (IAS)

The Major in International and Area Studies — Concentration in Global Cultural Studies

The IAS concentration in global cultural studies focuses on the practical and theoretical issues arising from cross-cultural encounters around the world. It studies these by examining traditional cultural products (literature, film, visual art and music), but also by investigating their broader political and social contexts. This track addresses compelling issues of cultural interchange for students interested in cultures for their own sake, as well as in careers in NGOs and international business and law. It is committed to interdisciplinary approaches to contemporary problems, and students may take courses in the traditional language-and-literature disciplines, as well as in anthropology, art history, film, history, music and philosophy.

This concentration requires 36 units of course work:

- 6 units of disciplinary introductions and methods (100-200 level)
- 6 units of world area course work (any level)
- 24 units of advanced course work from a minimum of three different academic disciplines (at least one course must focus on gender, race or class, and at least two must be at the 400 level)

Additional requirements and regulations:

- Completion of all IAS course work with a grade of C+ or higher.
- Students must satisfy the standard IAS foreign language requirement: the successful completion of four semesters of one language appropriate to their concentration.
- One semester of language must be completed before declaring the major.
- We strongly encourage students to study abroad (https://ias.wustl.edu/undergraduate/study_abroad). For those students who do not study abroad, an additional 3-unit course at the 300 or 400 level is required.
- We strongly prefer students to select a study abroad location consistent with their chosen language of study (e.g., students who wish to study in Latin America must satisfy their language requirement with either Spanish or Portuguese).
- Throughout the course of completing the major, students must show depth in at least one world area by taking a minimum two courses focused on the same area, and breadth by taking a third course focused on a different area. We consider world areas to be Africa, East Asia, Europe, Latin America, the Middle East, North America and South Asia.
- Majors must choose their upper-level course work from a minimum of three academic disciplines (for example: anthropology, art history, film, history, languages and literature, music and political science).
- No more than 3 credits may be from directed readings, research or independent study excluding the honors thesis.
- The advanced credits must be unique to the IAS major.
- At least 6 credits must be at the 400 level.

N.B.: A single course may satisfy more than one of the distribution requirements (disciplinary; race, gender, class; or world area). Some of these requirements may be completed while abroad (http://ias.wustl.edu/undergraduate/study_abroad).

Disciplinary introductions and methods (choose two from this list*; 6 units):

- Anthro 160B Introduction to Cultural Anthropology 3
- Art-Arch 111 Introduction to Asian Art 3
- Art-Arch 215 Introduction to Modern Art, Architecture and Design 3
- Comp Lit 204 Crossing Borders: An Introduction to Comparative Literature 3
- Comp Lit 211 World Literature 3
- Comp Lit 213E Introduction to Comparative Arts 3
- Econ 1011 Introduction to Microeconomics 3
- Econ 1021 Introduction to Macroeconomics 3
- Film 220 Introduction to Film Studies 3
- History 1500 Silver, Slaves and the State: Globalization in the 18th Century 3
- History 164 Introduction to World History: The Second World War in World History 3
- History 1640 Health and Disease in World History 3
- InterD 130 The Art of Medicine 3
- IAS 103B International Public Affairs 3
- IAS 127 Migration in the Global World: Stories 3
IAS 129  Perspectives on Migration: History, Memory and the Making of Modern Europe  3
IAS 155  Freshman Seminar: Mapping the World: Introduction to Human Geography  3
IAS 260  Migrations in Past and Present: Introduction to Migration Studies  3
IAS 270  Sophomore Seminar: Globalization and Its Discontents  3
Introduction to Literature courses as appropriate (English, Comp Lit or foreign language) 3
IPH 175  Freshman Seminar: Seeing is Believing: Visuality, Power and Truth  3
IPH 207C  Modern Political Thought: Text and Tradition  3
Music 1021  Musics of the World  3
Phil 120F  Problems in Philosophy  3
Phil 131F  Present Moral Problems  3
WGSS 100B  Introduction to Women, Gender, and Sexuality Studies  3
WGSS 206  Sexuality and the State: Introduction to Sexuality Studies  3

*Students may petition to add a course by following the instructions on the IAS FAQs webpage (http://ias.wustl.edu/faqs).

World area courses:

Throughout the course of completing the global cultural studies major, students must show depth in at least one world area by taking a minimum two courses focused on the same area, and breadth by taking a third course focused on a different area. We consider world areas to be Africa, East Asia, Europe, Latin America, Middle East and South Asia.

Of these three courses, one must be at advanced level and will count toward the 24 credits of advanced work needed to complete the major.

The other two courses may be taken at any level; however, if advanced courses are used to fulfill any of these 6 credits, they will not also be counted toward the required 24 credits of advanced course work. Examples of lower-level classes that may be used to satisfy this requirement:

AFAS 162  Freshman Seminar: Contextualizing Problems in Contemporary Africa  3
AFAS 209B  African Studies: An Introduction  3
AFAS 2230  The African Diaspora: Black Internationalism Across Time and Space  3
AMCS 250  Topics in Asian-American Studies  3
East Asia 227C  Chinese Civilization  3
History 102C  Western Civilization  3
History 2157  Freshman Seminar: The Meaning of Pakistan: History, Culture, Art  3

Advanced courses: Choose eight courses from current relevant internationally-focused course offerings in the following departments*. All courses must be approved by the student's IAS adviser in order to count for the major. Visit the concentration webpage (http://ias.wustl.edu/global-cultural-studies) and master course list for full options.

- African and African-American Studies
- American Culture Studies
- Anthropology
- Art History
- Children's Studies
- Classics
- Dance
- Drama
- Economics
- Film and Media Studies
- History
- Interdisciplinary Project in the Humanities
- International and Area Studies
- Languages and Literatures
- Latin American Studies
- Music
- Philosophy
- Political Science
- Psychology
- Religious Studies
- Russian Studies
- Women, Gender, and Sexuality Studies
*Students may petition to add a course by following the instructions on the IAS FAQs webpage (http://ias.wustl.edu/faqs).

**Additional Information**

**Language Requirement for the Major in Global Cultural Studies/International and Area Studies:** All IAS majors must satisfy a foreign language requirement that entails the successful completion of four semesters of a language appropriate to their concentration while at Washington University. For some students, this may mean the first four semesters of a language; for others who place into advanced language classes, and with approval from IAS language faculty, this may include literature, culture, oral communication and linguistic courses in the target language, once they complete the basic language sequence. Advanced courses in literature, social sciences and culture used to satisfy this requirement may be counted as advanced credit for IAS majors as long as they are cross-listed with IAS or approved for IAS study abroad credit and are not applied toward a language major or minor. A maximum of two of these classes may be completed while abroad on a Washington University approved program in the target language (may be within the same semester abroad). Native speakers of a foreign language must satisfy the four-semester requirement in another language appropriate to their concentration. Heritage speakers must seek appropriate placement by the coordinator of the language program and complete the four-semester requirement.

**Study Abroad:** Majors are strongly encouraged to study abroad in one of Washington University’s Overseas Programs during junior year or the summer. Some credit for courses taken abroad may be applied to the major. For those who do not study abroad, an additional 3-credit course at the 300 or 400 level is required.

**Senior Honors:** Students must confidently expect to graduate with an overall GPA of 3.65 or higher in order to qualify for Senior Honors. Students should enroll in IAS 485 Preparation for IAS Honors Thesis in the fall of senior year, and in IAS 486 IAS Senior Honors Thesis in the spring of senior year (under the corresponding section number of the faculty member overseeing their thesis) in order to be properly tracked by the IAS capstone coordinator.

**Concentration in International Affairs (IAS)**

**The Major in International and Area Studies — Concentration in International Affairs**

Why do states, nations and societies cooperate, compromise and fight? Breathtaking changes in political, economic and social relations have taken place over the past several centuries. Living and working in this rapidly changing global environment presents great opportunities to advance the human condition, create political liberties, recast bargains between governments and their societies, transform social welfare, and advance the boundaries of knowledge and scientific exploration. Yet the same environment presents great risks as people fear loss of identity, worry about economic subordination and loss to those beyond their borders, encounter the export of environmental degradation, and confront potential decline in personal and social autonomy. Our heightened economic, political, social, cultural and environmental interdependence generates serious challenges, which create the possibility for conflict but also for cooperation and compromise.

**Concentration objectives:** The IAS concentration in international affairs offers an interdisciplinary approach to understanding relations between societies. It provides opportunities to examine complex global issues and processes from multiple perspectives, to help understand the fundamental processes of cooperation, compromise and conflict in the global arena. The program provides students with knowledge and skills for understanding and working with difficult international and cross-cultural problems that states, societies and communities face.

**This concentration requires 36 units of IAS course work:**

- 3 units of Research Methods course work (any level)
- 6 units of introductory course work (100-200 level) from two different academic disciplines
- 9 units of advanced course work (300-400 level) from the Core Courses list
- 15 units of advanced course work from a minimum of three different academic disciplines (at least two must be at the 400 level)
- 3 units additional course work (any level)

**Additional requirements and regulations:**

- Completion of all IAS course work with a grade of C+ or higher.
- Students must satisfy the standard IAS foreign language requirement: the successful completion of four semesters of one language appropriate to their concentration.
• One semester of language must be completed before declaring the major.
• We strongly encourage students to study abroad (https://ias.wustl.edu/undergraduate/study_abroad). For those students who do not study abroad, an additional 3-unit course at the 300 or 400 level is required.
• We strongly prefer students to select a study abroad location consistent with their chosen language of study (e.g., students who wish to study in Latin America must satisfy their language requirement with either Spanish or Portuguese).
• Throughout the course of completing the major, students must show depth in at least one world area by taking a minimum two courses focused on the same area, and breadth by taking a third course focused on a different area. We consider world areas to be Africa, East Asia, Europe, Latin America, Middle East, North America and South Asia.
• Majors must choose their upper-level course work from a minimum of three academic disciplines (for example: anthropology, economics, history and political science).
• No more than 3 credits may be from directed readings, research or independent study excluding the honors thesis.
• The advanced credits must be unique to the IAS major.
• At least 6 credits must be at the 400 level.

N.B.: A single course may satisfy more than one of the distribution requirements (disciplinary or world area). Some of these requirements may be completed while abroad (http://ias.wustl.edu/undergraduate/study_abroad).

**Advanced courses:** Choose five courses from current relevant internationally-focused course offerings in the following departments:* All courses must be approved by the student’s IAS adviser in order to count for the major. Visit the concentration webpage (http://ias.wustl.edu/international-affairs) and master course list for full options.

- African and African-American Studies
- Anthropology
- East Asian Languages and Cultures
- Economics
- History
- International and Area Studies
- Jewish, Islamic and Near Eastern Languages and Cultures
- Latin American Studies
- Political Science
- University College — Geographic Information Systems; International Affairs; International Studies; Sustainability
- Women, Gender, and Sexuality Studies

*Students may petition to add a course by following the instructions on the IAS FAQs webpage (http://ias.wustl.edu/faqs).

**Additional Information**

**Language Requirement for the Major in International Affairs/International and Area Studies:** All IAS majors must satisfy a foreign language requirement that entails the successful completion of four semesters of a language appropriate to their concentration while at Washington University. For some students, this may mean the first four semesters of a language; for others who place into advanced language classes, and with approval from IAS language faculty, this may include literature, culture, oral communication and linguistic courses in the target language, once they complete the basic language sequence. Advanced courses in literature, social sciences and culture used to satisfy this requirement may be counted as advanced credit for IAS majors as long as they are cross-listed with IAS or approved for IAS study abroad credit and are not applied toward a language major or minor. A maximum of two of these classes may be completed while abroad on a Washington University approved program in the target language (may be within the same semester abroad). Native speakers of a foreign language must satisfy the four-semester requirement in another language appropriate to their concentration. Heritage speakers must seek appropriate placement by the coordinator of the language program and complete the four-semester requirement.

**Study Abroad:** Majors are strongly encouraged to study abroad in one of Washington University’s Overseas Programs during junior year or the summer. Some credit for courses taken abroad may be applied to the major. For those who do not study abroad, an additional 3-credit course at the 300 or 400 level is required.

**Senior Honors:** Students must confidently expect to graduate with an overall GPA of 3.65 or higher in order to qualify for Senior Honors. Students should enroll in IAS 485 Preparation for IAS Honors Thesis in the fall of senior year, and in IAS 486 IAS Senior Honors Thesis in the spring of senior year (under the corresponding section number of the faculty member overseeing their thesis) in order to be properly tracked by the IAS capstone coordinator.

**Italian**

Students who are lovers of ancient Rome or Renaissance Florence, of soccer, pasta or Petrarch, will find something for them in the Italian program. Our undergraduate curriculum affords preparation in language, literature and culture as well as opportunities for travel and study abroad. We offer a rich variety of courses in Italian language, literature and culture,
with particular attention to their relation to history, politics and the arts. Our summer, semester and year-long study abroad programs in Castelraimondo (Le Marche) and Padua also will enable students to immerse themselves in Italian culture, thereby deepening their understanding of it. The study of Italian will prepare students for a career in international business, international medicine, international law, international relations or diplomacy, as well as in the fine arts and teaching.

Italian majors who plan to apply to professional schools or to pursue graduate studies in Italian literature, comparative literature, philosophy, history, art history, music, film or other related fields are encouraged to pursue independent research in the senior year. Writing a senior honors thesis provides students with a unique opportunity to apply the knowledge they acquire in their courses to a topic of their choosing, through close collaboration with a member of our faculty. In this and all aspects of students' preparation, we take an active interest in them, providing support and encouragement throughout their studies as they become dynamic, conscientious and informed members of today's global community. Nor is our program limited to the courses we teach. We also offer ongoing series of lectures, films and artistic performances, as well as student-organized social activities through ITALO, our student organization, all of which contribute to the intellectually dynamic and personally rewarding social environment of our section. Benvenuti a tutti!

Two Italian 400-level seminars 6

**Additional Information**

Students must maintain an average of B- or better and must maintain a B or better in Italian. Courses taken credit/no credit do not count toward the Italian major.

**Study Abroad:** Students are strongly encouraged to participate in a study abroad program (http://rll.wustl.edu/italian/castelraimondo). Our six-week summer program is in Castelraimondo in the Marche region. Our semester abroad program is affiliated with Boston University's Centro in Padua. These programs are considered in residence.

**Senior Honors:** Students are encouraged to work toward Latin Honors (cum laude, magna cum laude, summa cum laude). To qualify for Latin Honors in the major by thesis, a student must complete special literary research and prepare and orally defend an Honors thesis, which is judged by an Honors faculty committee. To qualify for Latin Honors by course work, a student must enroll in: 1) Ital 4951 (Senior Honors, fall of senior year); and 2) Ital 495 (Senior Honors, spring of the senior year). Recommendations for Honors are based on performance and the quality of the thesis, plus the student's cumulative grade point average. (Please refer to departmental guidelines (http://rll.wustl.edu/latin-honors) for more information about Latin Honors.)

**Transfer Credits:** 18 of the 27 units required for the major must be taken in residence. Courses not taken at Washington University may count toward the major only with departmental permission.

**Minors**

L36 Ital 106D Accelerated Beginning Italian I
Designed for students whose previous study of French or Spanish enables them to grasp the principles and rules of Italian grammar more efficiently. Emphasis on all four language skills: speaking, listening, reading, writing. Prerequisites: undergraduates, four years of high school French or Spanish, or French/Spanish 201D; no prerequisite for graduate students in Romance languages; graduate students in other fields admitted by permission of instructor.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L36 Ital 107D Accelerated Elementary Italian II
Continuation of Italian 106D. Designed for students whose previous study of French or Spanish enables them to grasp the principles and rules of Italian grammar more efficiently. Emphasis on all four language skills: speaking, listening, reading, writing. Prerequisite: Italian 106D or permission of instructor.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS

L36 Ital 201D Italian, Level III
This course offers an intensive review of the basics of Italian grammar and introduces new features of Italian necessary for the advancing student. Readings appropriate to the third semester complement the grammar study. Students speak and write in Italian at all times in an effort to integrate what they have learned. Regular compositions and exams, as well as a final exam. Prerequisite: Ital 102D or higher.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L36 Ital 215 Conversation/Culture
This course examines popular culture through a focus on what is said and performed. The course consists of thematic units focusing on everyday occurrences and themes that mark the Italian experience, such as conversation in the Italian bar; poignant views of life expressed in films and other media; daily experiences depicted in poems and songs; public and private politics; the role of the meal in real life, art and literature. As students advance through each thematic module, they develop a creative project in which they put into practice (by a skit/presentation/text/art work) what they have learned. Prerequisite: Ital 102D or the equivalent.
Credit 3 units. A&S: LA A&S IQ: LCD BU: HUM, IS

L36 Ital 216 Conversation
A continuation of Ital 215, this course emphasizes the development of speaking skills in Italian through study of aspects of contemporary Italian culture in particular art, music, film and politics.
Credit 2 units.

L36 Ital 247 Freshman Seminar
Taught in English. Small group seminar devoted to readings and study of other texts such as films, paintings, etc.; discussion and writing. Topics vary; interdisciplinary focus.
Credit 3 units.

L36 Ital 249 Refracted Light: How Others View Italy
Throughout the centuries Italy has both enjoyed and suffered the fascinated gaze of foreigners, who have written about it, painted it, made music and films about it. Drawing principally on prose writings from the 18th to the 20th centuries, in such...
varied genres as the short story, the novel, the mystery novel, travel writing and the memoir, this course examines the images of Italy that non-Italians project. Beyond learning about Italy, students consider their own “idea” of Italy, examine their own frame of reference and cultural biases, interrogate a variety of stereotypes, and ponder how well one can truly understand a place as an outsider or reader. Authors studied include Stendhal, Dickens, James, Forster and Mann, as well as such contemporary writers as Michael Dibdin and Shirley Hazzard.

Credit 3 units.

L36 Ital 2991 Undergraduate Independent Study
Prerequisite: Ital 201D and permission of the department. No more than 6 units may be earned by a student.
Credit 3 units. A&S IQ: HUM EN: H

L36 Ital 301 Oral Communication I
Designed to offer students an opportunity to practice and refine their conversational skills while expanding their practical vocabulary. Wide variety of topics for discussion; brief oral reports. Regular homework assignments with emphasis on web-based research and learning. Prerequisite: Ital 201D.
Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

L36 Ital 307D Grammar and Composition I
This course features advanced lessons in Italian grammar and vocabulary and an introduction to prose analysis, with the goal of improving both reading and writing in Italian. The basis of our work will be a series of readings of major 19th- through 21st-century literary works focused on childhood and young adulthood in Italy. Grammar exams and regular composition assignments. Essential for further study of Italian language and literature, this course must be taken before or concurrently with Ital 323C and 324C. Prerequisite: Ital 201D, or permission of instructor.
Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

L36 Ital 308D Grammar and Composition II
A continuation of Italian 307D, this course features advanced lessons in Italian syntax and vocabulary and an introduction to the analysis of poetry and theatrical texts, with the goal of improving both reading and writing in Italian. The basis of our work is a series of readings having a common theme, desire requited and unrequited. We think about what poets desire, how they give verbal expression to it, and how the success or failure of their pursuit informs their writing. Likewise we look at how playwrights exploit this theme as a plot device. Readings include poetry by Petrarch, Michelangelo, Tasso and Montale, as well as two comedies. Grammar exams and regular composition assignments; final exam. Essential for further study of Italian language and literature, this course must be taken concurrently with Italian 323C or 324C. Prerequisite: Ital 307D or permission of instructor.
Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

L36 Ital 310 Advanced Italian Grammar in Padua
This advanced Italian grammar course is taught every year in the Boston University program in Padua, Italy, with which Washington University is affiliated. The course allows students to further their mastery of Italian grammar and syntax, in order to achieve a level of full satisfaction of comprehension and active communication. Readings include newspaper articles and literary essays; students write brief compositions while taking weekly tests. Open only to Washington University students enrolled in the Padua, Italy, program with Boston University.
Credit 4 units.

L36 Ital 311 Introduction to Contemporary Italy
This course is taught every year in the Boston University program in Padua, Italy, with which Washington University is affiliated. The course focuses on refining students' ability to express themselves in Italian while presenting an overview of the history and society of contemporary Italy. Readings include works by authors who are particularly significant to Italian literature of the 20th century, as well as an array of other materials. Open only to Washington University students enrolled in the Padua, Italy, program with Boston University.
Credit 4 units.

L36 Ital 319 Advanced Conversational Italian
Designed to offer students with strong proficiency in Italian an opportunity to practice and refine their conversational skills through the study, rehearsal and performance of theatrical scenes or an Italian comedy from the repertoire of such chief literary figures as Machiavelli, Goldoni, Pirandello, Natalia Ginzburg and Dario Fo. Prerequisite: Ital 215 or placement by examination.
Credit 3 units. A&S: LA A&S IQ: LCD BU: IS

L36 Ital 320 Independent Study
Credit variable, maximum 3 units.

L36 Ital 321 Independent Study
Credit variable, maximum 3 units.

L36 Ital 322 Topics
Same as Drama 3221. A multidisciplinary course focusing on a significant aspect of Italian culture. The topic differs from semester to semester and may draw on art, film, history, gender studies, literature, music, philosophy, politics, science. Prerequisite: previous or concurrent enrollment in Ital 307D.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: HUM EN: H

L36 Ital 3221 Topics: The Jewish Experience in Italy
This course examines the social and political history of the Jews of Italy from the period of Italian unification through the end of World War II. We look through two different prisms: first, the constant of Jews’ minority status in a Catholic country at a time when Church doctrine was hostile to them, and second, their changing status during significant moments in the brief history of the Italian monarchy. Under the latter rubric, we study the rehabilitation of the Jews under liberal political philosophies, their problematic relationship with Fascism, and finally the arrival of the Holocaust in Italy and efforts to defend Jews against Nazi genocide. We approach these topics wherever possible through primary texts, including essays, memoirs and novels. Reading knowledge of Italian is not required. Readings in English; some readings in Italian for Italian majors. Discussion in English. Three five-page papers. Please note: The Ital 5221 cross-listing course is for graduate students only. Prerequisite for Italian majors: Ital 307D; no prerequisite for students in other majors.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: HUM EN: H

L36 Ital 3222 Topics: From Basilisks to Botticelli: The Birth, Development and Politics of Museums in Italy
This course investigates the rise and cultural authority of museums in Italy from the Renaissance to the 20th century. The course unfolds chronologically, beginning with the distant
L36 Ital 323C Italian Literature I
Introductory survey of Italian literature from its beginnings in the Middle Ages through the late Renaissance. Analysis of the predominant genres: lyric, religious narrative, novella, treatise, chivalric epic. Previous or concurrent enrollment in Ital 307D or 308D recommended. Prerequisite: Ital 201D. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art; HUM BU: HUM, IS

L36 Ital 323W Italian Literature I — Writing-Intensive Seminar
Introductory survey of Italian literature from its beginnings in the Middle Ages through the late Renaissance. Analysis of the predominant genres: lyric, religious narrative, novella, treatise, chivalric epic. This is a writing-intensive version of the previously offered course Ital 323C. Prerequisite: Ital 201D. Previous or concurrent enrollment in Ital 307D or 308D recommended. Credit 3 units. A&S: TH, LA, WI A&S IQ: HUM, LCD, LS BU: IS EN: H

L36 Ital 324W Italian Literature II — Writing-Intensive
Framed by the age old questions of Italian national identity and language, this introductory literature course undertakes a chronological survey of the history of Italian literature from the 1600s to the present day. We study select works by major authors, including Galileo Galilei's "heretical" dialogues, the realistic comedies of Carlo Goldoni, poems and essays by the Romantic poet Giacomo Leopardi, the revolutionary dramas of Luigi Pirandello, the Futurist's celebration of speed and technology in the visual and literary arts, and the postmodern fiction of Italo Calvino. This is a writing-intensive version of the previously offered course Ital 324C. Prerequisite: Ital 201D. Previous or concurrent enrollment in Ital 307D or 308D recommended. Credit 3 units. A&S: TH, LA, WI A&S IQ: HUM, LCD, LS, WI BU: IS EN: H

L36 Ital 327 History of the Italian Language
In this course we trace the evolution of Italian from its very earliest written manifestations to its increasing internationalization in the 20th and 21st centuries. We study the natural evolution of Italian up until the 16th century; its codification as a literary language during the 16th century; the debates over the institution of a national language that coincided with the unification of Italy in the 19th century; the recovery of dialects as literary languages in the 20th century; and the more recent incorporation of words and phrases originating outside of Italy. Along the way we come to understand the reasons why we study a particular form of Italian in school, and we consider the implications of these choices not only for our own learning but for Italian literature and its sense of nationhood. Credit 3 units. A&S: TH, LA A&S IQ: HUM, LCD, LS BU: IS EN: H

L36 Ital 332 Topics in Film Studies: Italian Cinema
Among the great European- and world-cinematic traditions, Italian cinema ranks near the top. Making its breakthrough around 1945, it has continued to surprise and challenge audiences in the decades that followed. After a brief review of the early decades of Italian film, we focus on the first two decades of postwar cinema, beginning with neorealism, continuing through the boom years of the 1950s, and ending with the new introspection of the 1960s. Looking at the movies of five great directors — Rossellini, De Sica, Fellini, Antonioni and Visconti — we consider their evolving aesthetic and their engagement with both history writ large and the social and political issues that inform Italian life as the nation struggles to reconstruct an identity shattered by fascism and war. Course conducted in English; Italian majors must read in Italian, others in English translation. Three class hours per week plus a three-hour film viewing. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art; HUM BU: IS

L36 Ital 334 Topics in Italian Cinema
A companion to Ital 332, this course focuses on a select topic in the history of Italian cinema, such as the work of a single director or a significant cinematic movement. Course conducted in English. Italian majors read in Italian, others in English translation. Prerequisite for Italian majors: Ital 307D; Prerequisite for nonmajors: Ital 332, Film 220, or permission of instructor. Credit 3 units. A&S: TH BU: IS

L36 Ital 404 Senior Independent Study in Italian
Prerequisites: senior status; Ital 307D, 308D, 323C, 324C; and permission of instructor. Credit 3 units. A&S: TH

L36 Ital 419 Feminist Literary and Cultural Theory
This course is intended to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. Note: This course is in the core curriculum for the Women, Gender and Sexuality Studies graduate certificate. Prerequisite: advanced course work in WGSS or in literary theory (300-level and above) or permission of the instructor. Same as L77 WGSS 419 Credit 3 units. A&S: TH A&S IQ: HUM

L36 Ital 428 The New Sicilian School
The unification of Italy in the mid-19th century led to the creation of a new "Sicilian School," the first since that of the court poets associated with Frederick II in the 13th century. These new Sicilian writers have given us many narrative masterpieces, focusing on common concerns such as the island's identity over two millennia and the impact of Italian nationalism; the rise
of bourgeois culture and the decline of indigenous patriarchal structures; the rule of law and the role of the Mafia; and the politics of language. We read novels by Verga, Pirandello, Vittorini, Brancati, Tomasi di Lampedusa and Sciascia. Course taught in Italian or English.
Credit 3 units. A&S: TH, WI A&S IQ: HUM, LCD Art: HUM EN: H

L36 Ital 430 Divergent Voices: Italian Women Writers
This course engages the fictional and political works of Italian women writers from the 17th century to the present day. We will read one of the acclaimed Neapolitan novels of Elena Ferrante, who is considered by many to be the most important Italian fiction writer of her generation. We will examine a cloistered Venetian nun’s defiant 1654 indictment of the misogynist society that forced her into the convent. We will confront the reality of a woman writer who in 1901 was compelled to choose between her child and her literary career. Among other contemporary writers, we will study the humorous and radical feminist one-acts of playwright Franca Rame. Taught in English. No final.
Credit 3 units. A&S: TH, SD A&S IQ: HUM EN: H

L36 Ital 432 Divergent Voices: Italian Women Writers
This course examines select novels, poetry and political writings by such noted authors as Sibilla Aleramo, Dacia Maraini, Luisa Muraro and Anna Banti. Special attention is paid to the historical, political and cultural contexts that influenced authors and their work. Textual and critical analysis focuses on such issues as historical revisionism in women’s writing, female subjectivity and the origins and development of contemporary Italian feminist thought and practice. Taught in English.
Credit 3 units. A&S: TH, SD, WI A&S IQ: HUM, LCD, SD Art: HUM

L36 Ital 433 Literature of the Italian Enlightenment
This course aims to explore the spectrum of intellectual and literary discourse of the Italian Enlightenment by examining a wide array of texts and genres. Readings include selections from Enlightenment and popular periodicals, scientific tracts on human anatomy, women’s fashion magazines, the reformed theater of Carlo Goldoni, as well as Arcadian poetry, and literary criticism. We study the rise and characteristics of “coffee culture” during this age. We pay special attention to the “woman question,” which stood at the center of 18th-century Italian intellectual discourse, and which was critical to the contemporary drive to define the enlightened nation-state. The class is conducted as a workshop in which students and instructor collaborate in the realization of course goals. Readings in Italian or English; discussion in English. Prerequisite: Ital 323C or Ital 324C.
Credit 3 units. A&S: TH, WI Art: HUM

L36 Ital 437 Caffe, Cadavers, Comedy and Castrati: Italy in the Age of the Grand Tour
Taught in English. With French libertine philosopher the Marquis de Sade, German novelist Johann Wolfgang von Goethe, Romantic poet Lord Byron and other illustrious travelers of high birth and good fortune who sought finishing enrichment by making their Grand Tour to Italy from the mid-18th through the early 19th centuries, we explore the richness and variety of Italian life and culture as depicted by both Grand Tourists as well as their Italian interlocutors. Chief among our destinations are Venice, Bologna, Florence and Rome. Attractions typical of the early modern Tour circumscribe our journey. Coffee houses first appeared in the 18th century and, in ways strikingly similar to their function today, became the real and symbolic centers of social, intellectual and civil exchange. We explore 18th-century coffee culture through comedies and Enlightenment and popular journals that took them as their theme, as well as through a study of the coffee houses themselves, a number of which are still in existence. Theaters, concert halls, gaming houses, literary and scientific academies, galleries, churches and universities are part of the standardized itinerary we follow. During the period, anatomy and physiology attained new legitimacy as crucial scientific disciplines and we visit both the anatomical theater at the University of Bologna, where the annual Carnival dissection took place, as well as the first museum of anatomy and obstetrics founded in the Bolognese Institute of Sciences in 1742 by Pope Benedict XIV. We visit archeological excavation sites, in particular Pompeii and Herculaneum. Fashion, an obsessive preoccupation of the day, also is a point of interest in our travels. Through primary and recently published secondary sources we also encounter the remarkable authority of Italian women unmatched anywhere else in Europe at the time. Prerequisite: at least one 300-level literature course. Readings in Italian or English.
Credit 3 units. A&S: TH, CD, WI A&S IQ: HUM, LCD BU: HUM EN: H

L36 Ital 456 Romance Philology
Same as L34 French 456
Credit 3 units. A&S: LA

L36 Ital 473 Machiavelli and Guicciardini
The development of modern political science in 16th-century Italy. We address questions of both theory and methodology in Machiavelli’s and Guicciardini’s political visions. We also pay close attention to the Florentine context of their work, as well as to the influence of historical examples, both classical and contemporary, in the development of their analyses. Finally, we ask how the examples they set, and the theories they promulgate, can have resonance in addressing political questions in our own age. Readings in Italian or English; discussion in English.
Credit 3 units. A&S: TH, WI A&S IQ: HUM, LCD EN: H

L36 Ital 481 Dante
This course features an in-depth approach to Dante’s “Inferno,” the first, and in many ways the most famous, of the three parts of the Divina Commedia. We study the structure of the poem as well as the structure of Dante’s Hell, his verse form and use of the vernacular, his notion of sin and punishment and its relation to the theological traditions of which he is an heir. Because so much of the poem is rooted in and extends Dante’s autobiography — literary, sentimental and political — we also read two other important texts by him, his early Vita Nuova (New Life) and his political treatise, Monarchy. Reading knowledge of Italian helpful but not required. Course conducted in English.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L36 Ital 483 Boccaccio: Decameron
The unrivaled master of late medieval Italian prose, Boccaccio is also a strikingly modern author whose works address such questions as the relationship between literature and history; God and man; storyteller and audience; gender, language and power; literature and truth. With these and other concerns in mind, we read his masterpiece, the Decameron, a collection of 100 tales set in the Black Plague of 1348. We then contrast it to his late
Corbaccio, ostensibly a misogynist novel but a text that finally resists such a flattening judgment. Readings in Italian or English; discussion in English. Prerequisite: 3 units of literature.
Credit 3 units. A&S: TH, WI A&S IQ: HUM, LCD Art: HUM

L36 Ital 485 Ariosto: Orlando Furioso
A close reading of this Renaissance masterpiece with attention to questions of structure and sources, the themes of love and madness, the representation of court life. Readings in Italian or English; discussion in English.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L36 Ital 491 Postmodernism
This course explores the complex significance of Italian Postmodernism through an examination of the theoretical arguments and literary works that have shaped the cultural and political debate of the past 50 years. Students study, among others, the critical theories of "open work" (Umberto Eco), "literature as lie" (Manganelli), and "weak thought" (Gianni Vattimo) that developed from the neo–avant-garde movement of the 1960s. Analysis focuses on the novels of four authors who have had a defining influence on Italian postmodern thought and narrative forms: Carlo Emilio Gadda, Italo Calvino, Luigi Malerba and Umberto Eco. Course conducted in English; Italian majors read in Italian, others in English translation. Prerequisite for Italian majors: Ital 307D or permission of instructor.
Credit 3 units. A&S: TH, WI

L36 Ital 492 The Italian Detective Novel
The detective novel has an unusual and exceptionally brief history in Italy. Only within the past 35 years has an Italian version or, more precisely, subversion of the genre emerged and come to dominate the Italian literary scene. Prominent Italian writers such as Italo Calvino, Umberto Eco, Leonardo Sciascia and Luigi Malerba have deconstructed the conventions of the detective novel in order to portray the disorder and arbitrary meaning of the postmodern world. This course explores the history of the "anti-detective" novel in Italy and the philosophical and political questions the genre evokes. Readings in Italian and English. Conducted in English.
Credit 3 units. A&S: TH, WI Art: HUM

L36 Ital 495 Senior Honors
Prerequisites: senior standing, at least one course at the 400 level, and acceptance into the Honors program.
Credit 3 units. A&S: TH

L36 Ital 4951 Honors
Prerequisites: senior standing, at least one course at the 400 level, and acceptance into the Honors program. Pass/fail.
Credit 3 units. A&S: TH EN: H

Japanese
The Department of East Asian Languages and Cultures (EALC) offers a major and a minor in Japanese language and culture. As a major in Japanese, a student can expect to gain some proficiency in the language and to acquire a foundation in Japanese literature, history and culture from earliest times to the present. All students majoring in Japanese must complete first- and second-level Japanese or its equivalent. They also must complete a prerequisite 200-level Civilization course and the two-semester literature survey, as well as additional advanced-level courses (300- or 400-level).

In addition, all prime majors must complete the required EALC Capstone Experience. The department strongly encourages overseas study of Japanese language and culture. All majors and minors are expected to maintain at least a B- average in all departmental courses.

Language Placement: Placement tests are required for all students entering our language programs, with the exception of those students who have had no previous knowledge of the language and are planning to enroll in the first semester of the first year of instruction. Students who test into second-year Japanese and satisfactorily complete (with a grade of B- or better) at least one semester of language study may petition for 3 units of retroactive credit; students who test into third year or above and satisfactorily complete (with a grade of B- or better) at least one semester of language study may petition for 6 units of retroactive credit. Credit is limited to 3 units for testing into second year and 6 units for testing into third year or above. Please note that students with native language proficiency as determined by the individual language section, as well as students who enroll in courses below their placement level, are ineligible for retroactive credit units. Students who misrepresent their language proficiency so as to gain entrance to a course at the elementary or intermediate level will be dropped from that course.

Majors
The Major in Japanese Language and Culture

Units required: 24 upper-level (300-level or above) units
Prerequisites:
1. First- and second-level Modern Japanese or the equivalent
2. Japan 226C Japanese Civilization

Requirements:
24 advanced (300-level) and above units to include:
1. Japan 332C Japanese Literature: Beginnings to 19th Century
2. Japan 333C The Modern Voice in Japanese Literature
3. 400-level Capstone course (prime majors)
   - Japanese prime majors may satisfy their capstone requirement in one of two ways, both of which require a presentation in the EALC Senior Symposium in the spring.
     a) Successful completion of a senior honors thesis. This option, which also entitles the student to Latin Honors, requires a minimum of a 3.65 GPA. The thesis is researched and written over two semesters, for a total of 6 units, which are in addition to the 24 upper-level units required for the major.
     b) Successful completion of an approved 400-level seminar course, to be taken in the senior year. (This course may be included among the 24 advanced units for the major.)

Additional Notes
1. With adviser approval, students may include one course in a related area offered outside the department among the 24 advanced units. (For example, a student with focus on Japan/Japanese may take one course in Film and Media Studies or Art History that focuses on Japan.) With adviser approval, students may count one course from another area within the department among the 24 advanced units. (For example, a student with focus on Japan/Japanese may take one course in either Korean or Chinese.)
2. Students must earn at least a B- in language courses in order to continue to the next level. They must also maintain at least a B- average in all required courses for the major. Students who do not meet this requirement may either repeat the course(s) in question or successfully complete an approved equivalent course or courses (either during the summer or in a study abroad program).
3. Courses for the minor may not be taken Credit/No Credit.
4. Normally, no more than 3 units of transfer or study abroad non-language courses may be applied to the major.
5. EALC awards Departmental Honors to majors as an acknowledgment of exemplary work in the major.

Minors
The Minor in Japanese Language and Culture
Units required: 18 units
Requirements:
- Two semesters of Japanese language
- At least 9 units must be 300-level or above
- And the following three courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Japan 226C</td>

</tbody>
</table>

Additional Information
- Students must earn at least a B- in their language courses in order to continue to the next level. They also must maintain at least a B- average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course(s) in question or successfully complete an approved equivalent course or courses (either during the summer or in a study abroad program).
- Courses for the minor may not be taken Credit/No Credit.
- Normally, no more than 3 units of transfer or study abroad non-language courses may be applied to the minor.

Courses

L05 Japan 103D First-Level Modern Japanese I
An introduction to spoken Japanese following a systematic study of grammatical structures presented in context. Emphasis is on developing skills in oral communication through performance. Students with some previous Japanese language background must take the placement examination. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L05 Japan 104D First-Level Modern Japanese II
Continuation of Japan 103D. An introduction to spoken Japanese following a systematic study of grammatical structures presented in context. Emphasis is on developing skills in oral communication through performance. Prerequisite: grade of B- or better in Japan 103D. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS EN: H

L05 Japan 119 Freshman Seminar: Anime as Popular Culture
In the contemporary media landscape, film, television, games, publishing and merchandizing are increasingly connected and help distribute cultural products across the globe. Japanese animation is one of the earliest and most successful examples of this powerful strategy. This course examines the global franchising industry of Japanese anime to explore basic questions about media and popular culture: How do we define a medium? How do consumer practices shape media and popular culture? What is the impact of globalization on media, and global media on national culture? Our investigations of Japan "cool" and its avid consumer cultures cover: animation aesthetics and technology; media convergence; anime fan cultures; science-fiction and remaking the body, history and identity through global media. No prerequisites. Enrollment limited to 15 college freshmen. In addition to class meetings, there is a mandatory weekly scheduled screening. Same as L53 Film 119
Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

L05 Japan 213 Second-Level Modern Japanese I
Continued development of communication skills with special emphasis on speaking. Students develop reading/writing skills with an additional 300 kanji during the year. Prerequisite: grade of B- or better in 214D or placement by examination. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L05 Japan 214 Second-Level Modern Japanese II
Continuation of Japan 213. Continued development of communication skills with special emphasis on speaking. Students develop reading/writing skills with an additional 300 kanji during the year. Prerequisite: grade of B- or better in Japan 213 or placement by examination. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS EN: H

L05 Japan 221 Topics: Japanese Popular Culture
A topics course on Japanese literature and culture; topics vary by semester. Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: IS EN: H

L05 Japan 226C Japanese Civilization

L05 Japan 294 Images of East Asia
A variety of topics offered individually which reflect the images of East Asian cultures. Same as L03 East Asia 294 Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L05 Japan 299 Independent Study
Prerequisite: Japan 213 and permission of the department. Credit variable, maximum 6 units.

L05 Japan 320C Japan Since 1868
For some, “Japan” evokes Hello Kitty, animated films, cartoons and sushi. For others, the Nanjing Atrocity, “Comfort Women,” the Bataan Death March, and problematic textbooks. For still others, woodblock prints, tea ceremony, and cherry blossoms, or Sony Walkmans and Toyotas. Still others may hold no image at all. Tracing the story of Japan’s transformations, from a pre-industrial peasant society managed by samurai-bureaucrats into an expansionist nation-state and then to its present: an overview of Japanese cultural history, focusing on the ideological and cultural contexts that shaped jidaigeki film production and discuss relevant transformations in Japanese cinema and society. Period films have been shaped by and exert strong influences on Japanese theater, oral storytelling, popular literature, comics, and international film culture, all of which are helpful for understanding the films. As we track changes in jidaigeki style and subject matter, the course introduces theories for interpreting narrative structure, genre repetition and innovation, intertextuality, and representations of “the past.” All readings are in English. No knowledge of Japanese required. No prerequisites. Required screenings Tuesdays at 7 p.m. Same as L53 Film 326 Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L05 Japan 332C Japanese Literature: Beginnings to 19th Century
This survey of Japanese literature covers antiquity to the early 19th century. Emphasis on the ideological and cultural contexts for the emergence of a variety of traditions, including poetry, diaries, narrative and theater. Required of all Japanese majors and recommended for all Chinese majors. No knowledge of Japanese language is required. Sophomore standing and above recommended. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM

L05 Japan 333C The Modern Voice in Japanese Literature
This survey explores the emerging modern voice in Japanese literature, with emphasis on prose fiction. After a brief introduction to earlier centuries, we focus on the short stories and novels of the 20th century. Among the authors considered are Natsume Soseki, Nagai Kafu, Tanizaki Jun'ichiro, and Nobel laureates Kawabata Yasunari and Oe Kenzaburo. Discussions center on issues of modernity, gender, and literary self-representation. Required of all Japanese majors and recommended for all Chinese majors. No knowledge of Japanese language required. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: ETH

L05 Japan 336 The Floating World in Japanese Literature
This survey of Japanese literature covers the 17th to the 19th century. Primary focus is on the Genroku era (1688-1703), which witnessed the growth of lively urban centers and the emergence of a robust literary voice. Emphasis on the

L05 Japan 324 A User's Guide to Japanese Poetry
This course introduces the art and craft of Japanese poetry, one of the world's great literary traditions. Exploring the many styles of traditional verse — the poetic diary, linked verse, haiku and others — and their historical contexts, we gain insights into Japanese aesthetics and study the unique conventions of Japanese poetic production that have evolved over a span of some 1500 years. The course also incorporates a "haiku workshop," where we engage in group-centered poetry writing and critiquing. No prior knowledge of Japanese is required. Credit 3 units. A&S: LA A&S IQ: LCD BU: HUM EN: H
ideological and cultural contexts for the development of a variety of new innovations in the genre of poetry (haiku), theater (kabuki and bunraku) and prose (kana zoshi). Recommended for both Japanese and Chinese majors. No knowledge of Japanese language is required. Sophomore standing and above recommended. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Art: HUM

L05 Japan 3412 Japanese Art
Surveying the arts of Japan from prehistory to present, this course focuses especially on early modern, modern and contemporary art. Emphasizing painting, sculpture, architecture and print culture, the course also explores the tea ceremony, fashion, calligraphy, garden design and ceramics. Major course themes include collectors and collecting, relationships between artists and patrons, the role of political and military culture or art, contact with China, artistic responses to the West, and the effects of gender and social status on art. Same as L01 Art Arch 3412. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: AH, GFAH EN: H

L05 Japan 346 Japanese Literature in Translation II
This topics course explores Japanese literature in translation. Topics vary by semester. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L05 Japan 4062 The Art of Borrowing: The "West" in Japanese Life
This course aims to examine Western influences in Japan and Japan's reconceptualizing the "West" in various aspects of popular culture, including cuisine, sports, music, language, advertising, entertainment and domesticity. It is primarily an anthropological survey with historical references on Japan's turn to Western civilization in the modern era. The course explores Japanese perceptions of the "West," and how Japanese consume the "West" by attaching meanings to "Western" symbols and practices, and making them part of Japanese culture and life. Rather than explicating Japan's relationship with the West, the course scrutinizes the "West" constructed within Japanese discourse, as both a racial/ethnic other and a cultural fantasy. Course assignments include a round-table discussion on specific topics relating to cultural integration and internationalization, and globalization and localization. Same as L97 IAS 4062. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L05 Japan 412 Third-Level Modern Japanese I
Emphasis on further development of speaking, listening, reading and writing skills. Prerequisite: grade of B- or better in Japan 214 or placement by examination. Credit 4 units for undergraduates, 3 units for graduate students. Credit variable, maximum 4 units. A&S: LA A&S IQ: LCD, LS BU: IS

L05 Japan 413 Third-Level Modern Japanese II
Continuation of Japan 412. Emphasis on further development of speaking, listening, reading and writing skills. Prerequisite: minimum grade of B- in Japan 412 or placement by examination. Credit 4 units for undergraduates, 3 units for graduate students. Credit variable, maximum 4 units. A&S: LA A&S IQ: LCD, LS BU: IS

L05 Japan 418 Gender and Sexuality in East Asian Religions
In this course we explore the role of women in the indigenous religious traditions of China, Japan and Korea (Confucianism, Daoism, Shamanism and Shinto), as well as Buddhism, Christianity and Islam. We begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses; shamans and mediums; hermits and recluses; and ordinary laywomen — both historically and so today, providing trenchant (sometimes absurdist) commentaries on postwar Japanese society and its transformations. Themes include: the legacy of WWII and Japanese imperialism; the student movement; juvenile delinquency; sexual liberation; and Tokyo subcultures. Directors include: Oshima Nagisa, Shinoda Masahiro, Terayama Shuji, Masumura Yasuzo, Suzuki Seijun, Matsumoto Toshio, and others. No knowledge of Japanese necessary. Mandatory weekly screening: Tuesdays at 7 p.m. Same as L23 Re St 418. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD EN: H

L05 Japan 431 Renegades and Radicals
In 1960, the major studio Shochiku promoted a new crop of directors as the "Japanese New Wave" in response to declining theater attendance, a booming youth culture, and the international success of the French Nouvelle Vague. This course provides an introduction to those iconoclastic filmmakers, who went on to break with major studios and revolutionize oppositional filmmaking in Japan. We analyze the challenging politics and aesthetics of these confrontational films for what they tell us about Japan's modern history and cinema. The films provoke as well as entertain, providing trenchant (sometimes absurd) commentaries on postwar Japanese society and its transformations. Themes include: the legacy of WWII and Japanese imperialism; the student movement; juvenile delinquency; sexual liberation; and Tokyo subcultures. Directors include: Oshima Nagisa, Shinoda Masahiro, Terayama Shuji, Masumura Yasuzo, Suzuki Seijun, Matsumoto Toshio, and others. No knowledge of Japanese necessary. Mandatory weekly screening: Tuesdays at 7 p.m. Same as L53 Film 431. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L05 Japan 443 Memory, Tears and Longing: East Asian Melodrama Film
Excessive emotion, unreasonable sacrifice, hidden truth, untimely knowledge, and forbidden desire — the power of melodrama and its moving representations have fueled the popularity of hundreds, if not thousands, of books, plays and films. Melodrama has variously been defined as a genre, a logic, an affect, and a mode, applied to diverse media, divergent cultural traditions, and different historical contexts. The course provides a survey of East Asian melodrama films — as well as films that challenge conventional definitions of melodrama — by pairing Japanese, Korean, and Chinese-language productions with key critical texts in melodrama studies. We will see classics such as Tokyo Story, Two Stage Sisters, and The Housemaid. We will examine melodrama's complex ties to modernity, tradition, and cultural transformation in East Asia; special emphasis will be placed on representations of the family,
**L05 Japan 445 Japanese Fiction: Writing Intensive Seminar**
A study of the themes, styles and genres of Japanese fiction as revealed in representative works of major authors such as Soseki, Tanizaki and Kawabata. Topics include the question of the Japanese literary canon, the varieties of Japanese literary selfhood, literature by and about women, and tradition versus modernity. All works read in English translation. Prerequisites: junior standing and 6 units of literature.
Credit 3 units. A&S: TH, CD, WI A&S IQ: HUM, LCD, WI Art: HUM

**L05 Japan 446 Modern Japanese Women Writers: Writing Intensive Seminar**
Japanese women have been scripted by Western (male) imagination as gentle, self-effacing creatures. From their (re)emergence in the late 19th century to their dominance in the late 20th, Japanese women writers have presented an image of their countrywomen as anything but demure. Struggling to define their voices against ever-shifting expectations and social contexts, the women they create in their fiction are valiant, if not at times violent. This course examines the various manifestations of the female image in female-authored modern Japanese fiction. Writers considered are Higuchi Ichiyo, Hirabayashi Taiko, Uno Chiyoh, Enchi Fumiko, Yamada Eimi and others. A selection of novels and shorter fiction are available in English translation, and students need not be familiar with Japanese. Prerequisites: 6 units of literature/women's studies and junior standing, or permission of the instructor. Writing-intensive course.
Credit 3 units. A&S: TH, CD, SD, WI A&S IQ: HUM, LCD, SD, WI EN: H

**L05 Japan 447 The Japanese Theater**
An investigation, using English materials, of the major developments and forms of the Japanese theater, from Noh and its antecedents to the rise of a modern drama. In this course we are less concerned with the performative aspects of theatrical arts (though these will be introduced via videos) than with the ways in which dramatic texts influenced and borrowed from the literary tradition. Readings from major theatrical texts, secondary studies on Japanese theater, and literary sources. Prerequisite: junior standing or permission of instructor.
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Art: HUM

**L05 Japan 448 Japanese Poetry**
A comprehensive survey of Japanese poetry from the eighth century to the present day. Topics include the development of the great tradition of court poetry in the Heian period (ca. 800-1200) and its full flowering during the medieval period (ca. 1200-1600), the influence of the Zen aesthetic, the emergence of linked verse and haiku, and the transformation of the classical kabuki theater, and the representation of women. Prerequisites: junior standing and 6 units of literature course work.
Credit 3 units. A&S: TH Art: HUM

**L05 Japan 449 Modern Japanese Women Writers: Writing Intensive Seminar**
Japanese women have been scripted by Western (male) imagination as gentle, self-effacing creatures. From their (re)emergence in the late 19th century to their dominance in the late 20th, Japanese women writers have presented an image of their countrywomen as anything but demure. Struggling to define their voices against ever-shifting expectations and social contexts, the women they create in their fiction are valiant, if not at times violent. This course examines the various manifestations of the female image in female-authored modern Japanese fiction. Writers considered are Higuchi Ichiyo, Hirabayashi Taiko, Uno Chiyoh, Enchi Fumiko, Yamada Eimi and others. A selection of novels and shorter fiction is available in English translation, and students need not be familiar with Japanese. Prerequisites: 6 units of literature/women's studies and junior standing, or permission of the instructor. Writing-intensive course.
Credit 3 units. A&S: TH, CD, SD, WI A&S IQ: HUM, LCD, SD, WI EN: H

**L05 Japan 450 Masterworks of Early Japanese Literature**
An intensive study of one of the central texts of classical Japanese literature. Selection of texts rotate among works including: The Tale of Genji, court diaries, poetry anthologies, Noh drama, The Tale of the Heike, setsuwa collections, and medieval memoirs. In addition to exploring the historical, literary, and cultural significance of the work from its genesis to the present age, students engage in a close reading of the text and an investigation of the primary theoretical issues and approaches associated with the work both in Japan and abroad. Prerequisite: junior standing. Prior knowledge of early Japanese literature or history is recommended. Texts are read in English translation.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD

**L05 Japan 458 Fourth-Level Modern Japanese I**
Mastery of more sophisticated skills in spoken and written Japanese. Newspaper articles, editorials, essays, short stories, etc., are selected for readings and discussions in accordance with the interests and needs of participating students. Prerequisite: grade of B- or better in Japan 413 or placement by examination.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS
L05 Japan 459 Fourth-Level Modern Japanese II
Continuation of Japan 458. Mastery of more sophisticated skills in both spoken and written Japanese. Newspaper articles, editorials, essays, short stories, etc., are selected for readings and discussions in accordance with the interests and needs of participating students. Required of all students desiring subsequent tutorial assistance from the Department. Prerequisite: grade of B- or better in Japan 458, or placement by examination.
Credit 3 units. A&S: LA A&S IQ: LCD, LS

L05 Japan 460 Premodern Japanese I
Readings in classical literary texts using materials from standard modern annotated editions. Kambun introduced in second semester. Prerequisite: Japan 412-413 or concurrent registration.
Credit 3 units. A&S: LA A&S IQ: LCD, LS

L05 Japan 461 Premodern Japanese II
A continuation of Japan 460. Readings in classical literary texts using materials from standard modern annotated editions as well as the introduction of skills necessary for reading original texts, including kambun and hentaigana. Prerequisite: Japan 413 or concurrent registration; Japan 460 or equivalent.
Credit 3 units. A&S: LA A&S IQ: LCD, LS

L05 Japan 464 Japanese Textual Analysis
This course introduces the advanced student of Japanese to a variety of prose narratives in the modern language. Readings, which include literary texts and topical essays on aspects of Japanese society and culture, reflect the needs and interests of the enrolled students. Focus is on close reading and syntactic analysis of the selected texts. Regular translation exercises gauge the mastery of grammar, syntax and idiomatic usages. All readings are in Japanese, with class discussion conducted predominantly in English. A final translation project, chosen by the student in consultation with the instructor, is required. Prerequisite: Japan 458 or instructor's permission.
Credit 3 units. A&S: LA A&S IQ: LCD

L05 Japan 471 Topics in Japanese Culture
A topics course on Japanese culture; topics vary by semester. Same as L03 East Asia 471
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L05 Japan 486 Independent Work for Senior Honors
This course is taken in the fall semester. Prerequisite: senior standing, eligibility for honors, and permission of the department. Credit 3 units.

L05 Japan 487 Independent Work for Senior Honors
This course is taken in the spring semester. Prerequisite: senior standing, eligibility for honors, and permission of the department. Credit 3 units.

L05 Japan 491 Topics in Japanese Literature & History
A topics course on Japanese literature and history; topics vary by semester. Prerequisite: permission of instructor.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L05 Japan 4911 Modern Japan and the Invention of Tradition
A discourse of "uniqueness" has been a prominent feature of Japanese culture in the 20th century, both before and after the Pacific War. This course explores the domain of nativist expression in modern Japan. While focusing on literary texts by writers such as Kawabata and Tanizaki, we also consider a range of artistic, cinematic, and cultural production. Considerable attention is paid to "Nihonjinron," an important — and best-selling — genre of "Japanese uniqueness" writing. Our goal is to make sense of the complex intersection of traditionalism and modernism in 20th-century Japan, and to consider the larger question of modern nationhood and the construction of national identity.
Same as L03 East Asia 4911
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L05 Japan 499 Guided Readings in Japanese
Prerequisites: senior standing and permission of the instructor and the department chair. Course usually taken after successful completion of Japan 459. May be repeated once.
Credit variable, maximum 3 units. A&S: LA

Jewish, Islamic and Near Eastern Languages and Cultures
Jewish, Islamic and Near Eastern Languages and Cultures is an academic department, unique in North America, in which Jewish Studies and Islamic Studies are integrated. It is an interdisciplinary department whose purpose is to explore the historical experience; literary, religious and cultural expression; and political and material life of the Jewish, Islamic and Near Eastern civilizations. Whether students favor the study of language, literature, religion, history or politics, they will find in our courses a way to deepen their appreciation of these complex and diverse societies and cultures. Students will also be encouraged to explore the interaction of Jews and Muslims with neighboring societies and cultures in the Middle East, Europe, North Africa, and other parts of the world.

Our majors and minors have gone on to do many things after graduation. Many have entered professional schools in such fields as law, journalism, education, the rabbinate or ministry, government, and communal or social work. Others have gone on to do graduate work in either Jewish or Islamic studies or in related disciplines. Still others have combined their interest in Jewish, Islamic and Near Eastern languages and cultures with careers in business, medicine or scientific research. All have found the major to have been an intellectually and emotionally rewarding experience and an important component of their overall development.

Our goals are to:

1. Convey an appreciation for the complexities, depth, diversity and cultural richness of Jewish and Islamic civilizations in their historical context from antiquity to the present.

Our majors and minors have gone on to do many things after graduation. Many have entered professional schools in such fields as law, journalism, education, the rabbinate or ministry, government, and communal or social work. Others have gone on to do graduate work in either Jewish or Islamic studies or in related disciplines. Our goals are to:

1. Convey an appreciation for the complexities, depth, diversity and cultural richness of Jewish and Islamic civilizations in their historical context from antiquity to the present.
2. Explore the interaction of Jewish, Islamic and other Near Eastern societies and cultures with neighboring peoples both within and outside the Middle East.
3. Encourage mastery of the primary languages and literatures in which Jews and Muslims have expressed their cultures.
4. Prepare students for graduate or professional studies in these or related fields.

**Majors**

As majors in one of the Near Eastern languages and literatures (Arabic; Hebrew; or Jewish, Islamic and Near Eastern studies), students can expect to gain proficiency in one or more Near Eastern languages, study the area's literary and cultural landmarks, and gain familiarity with Jewish, Islamic and Near Eastern history and civilizations.

**The Majors**

For information on the major in Arabic, visit the Arabic (p. 211) page of this Bulletin.

For information on the major in Hebrew, visit the Hebrew (p. 442) page of this Bulletin.

For information on the major in Jewish, Islamic and Near Eastern studies, visit the Jewish, Islamic and Near Eastern Studies (p. 545) page of this Bulletin.

**Minors**

**The Minors**

For information on the minor in Arabic, visit the Arabic (p. 212) page of this Bulletin.

For information on the minor in Hebrew, visit the Hebrew (p. 443) page of this Bulletin.

For information on the minor in Jewish, Islamic and Near Eastern studies, visit the Jewish, Islamic and Near Eastern Studies (p. 546) page of this Bulletin.

For information on the minor in South Asian languages and culture (Hindi), visit the Hindi (p. 447) page of this Bulletin.

**Courses**

For Arabic courses, visit the Arabic (p. 212) page of this Bulletin.

For Hebrew courses, visit the Hebrew (p. 443) page of this Bulletin.

For Jewish, Islamic and Near Eastern Studies courses, visit the Jewish, Islamic and Near Eastern Studies (p. 546) page of this Bulletin.

**Jewish, Islamic and Near Eastern Studies**

Jewish, Islamic and Near Eastern Studies is an interdisciplinary program whose purpose is to explore the historical experience; literary, religious and cultural expression; and political and material life of the Jewish, Islamic and Near Eastern civilizations. Our program is unique in the United States because it integrates Islamic studies and Jewish studies. Whether students favor the study of language, literature, religion, history or politics, they will find in our courses a way to deepen their appreciation of these complex and diverse societies and cultures. Students also will be encouraged to explore the interaction of Jews and Muslims with neighboring societies and cultures in the Middle East, Europe, North Africa and other parts of the world.

Our majors and minors have gone on to do many diverse things after graduation. Many have entered professional schools in such fields as law, journalism, education, the ministry or rabbinate, government and communal or social work. Others have gone on to do graduate work in either Jewish or Islamic studies or related disciplines. Still others have combined their interest in Jewish, Islamic and Near Eastern studies with careers in business, medicine or scientific research. All have found the major to have been an intellectually and emotionally rewarding experience and an important component of their overall development.

**Faculty**

For a list of affiliated faculty, please visit the Department of Jewish, Islamic and Near Eastern Languages and Cultures faculty (p. 543) page.
Majors

The Major in Jewish, Islamic and Near Eastern Studies

Students who wish to major in Jewish, Islamic and Near Eastern studies will select one of three tracks: comparative Jewish and Islamic studies, Islamic studies, or Jewish studies.

Comparative Jewish and Islamic Studies

Prerequisites

• Primary field language (chosen from Arabic or Hebrew). A student must complete four semesters of one language, whether by course work or placement.

• Second field language. A student must complete two semesters of a second language. (Example: If a student takes Arabic as the primary language, then that student must take Hebrew as the second language; if a student takes Hebrew as the primary language, then that student must take Arabic as the second language).

Required courses (30 units)

• JINE 210C Introduction to Islamic Civilization
• JINE 208F History, Text and Identity: Introduction to Jewish Civilization
• 9 units from 300- or 400-level courses in Islamic studies and/or Arabic language and literature
• 9 units from 300- or 400-level courses in Jewish studies and/or Hebrew language and literature
• 3 additional elective units at the 300 or 400 level in Jewish, Islamic and Near Eastern Studies
• JINE 4001 Capstone Seminar

Senior honors

• JINE 499, JINE 4991 + thesis (A student must take capstone even when writing senior honors thesis.)

Islamic Studies

Prerequisites

• Arab 107D, Arab 108D, Arab 207D, and Arab 208D — whether by course work or placement

Required courses (30 units)

• JINE 210C Introduction to Islamic Civilization
• JINE 208F History, Text and Identity: Introduction to Jewish Civilization
• 15 units from 300- or 400-level courses in Islamic studies and/or Arabic language and literature
• 3 additional elective units at the 300 or 400 level in Jewish, Islamic and Near Eastern Studies
• JINE 4001 Capstone Seminar

Senior honors

• JINE 499, JINE 4991 + thesis (A student must take capstone even when writing senior honors thesis.)

Jewish Studies

Prerequisites

• HBRW 105D, HBRW 106D, HBRW 213D, HBRW 214D — whether by course work or placement

Required courses (30 units)

• JINE 208F History, Text and Identity: Introduction to Jewish Civilization
• JINE 210C Introduction to Islamic Civilization
• 15 units from 300- or 400-level courses in Jewish studies and/or Hebrew language and literature
• 3 units from 300- or 400-level courses in Islamic studies or Arabic language and literature
• 3 additional elective units at the 300 or 400 level in Jewish, Islamic and Near Eastern Studies
• JINE 4001 Capstone Seminar

Senior honors

• JINE 499, JINE 4991 + thesis (A student must take capstone even when writing senior honors thesis.)

Additional Information

Regulations for Jewish, Islamic and Near Eastern studies majors

• At least two semesters of the primary field language must be taken at Washington University.

• A maximum of 6 units from 300- or 400-level language courses can be counted toward the major.
• Note that 300- or 400-level courses that include the study of texts in the original language may be considered courses about history, literature or religious studies rather than language courses.

• Back credit granted for language courses does not count for the major.

• Students enrolled in Washington University study abroad programs (during the regular academic semester) can earn a maximum of 9 units subject to review by their adviser and Director of Undergraduate Studies (DUS). Summer programs and transfer courses can be granted as much as 6 units subject to review by the adviser and the DUS. However, a limit of 9 units in total can be applied to the major, whether the units are earned in study abroad, summer programs, or transfer courses.
• No credit will be given for courses taken outside the department other than those which are cross-listed.
• A minimum of 27 units is required for the major. 21 of those must be from 300- or 400-level courses.
• To be eligible for Senior Honors a student must maintain a GPA of 3.65 through the sixth semester.
• The Capstone Seminar may be taken in junior or senior year.
• Students have to maintain an average of B in all courses for the major. A grade of B- must be earned in each language course in order to advance to the next level.
• No pass/fail course can count toward either prerequisites or the major.

Study Abroad: Students majoring in Jewish, Islamic and Near Eastern studies are encouraged to participate in the Washington University Study Abroad program. The university currently sponsors preapproved programs of study at the Hebrew University in Jerusalem, the University of Haifa, Aalim Arabic Program in Morocco, Boğaziçi University in Istanbul, and the American University of Cairo.

Senior Honors: Jewish, Islamic and Near Eastern studies majors who have a cumulative GPA of 3.65 or higher after six semesters are eligible to apply for candidacy for departmental senior honors. Once they receive departmental approval, candidates must satisfactorily complete a senior honors thesis in order to be considered for departmental honors. Please visit the department webpage (http://jineelc.wustl.edu/undergraduate/senior-honors-guidelines-and-evaluation-form) for further information and requirements.

Minors

The Minor in Jewish, Islamic and Near Eastern Studies

Students who wish to minor in Jewish, Islamic and Near Eastern studies will select one of three tracks: comparative Jewish and Islamic studies, Islamic studies, or Jewish studies.

Comparative Jewish and Islamic Studies

Required courses (18 units)
• JINE 210C Introduction to Islamic Civilization
• JINE 208F History, Text and Identity: Introduction to Jewish Civilization
• 6 units from 300- or 400-level courses in Islamic studies and/or Arabic languages and literature
• 6 units from 300- or 400-level courses in Jewish studies and/or Hebrew language and literature

Islamic Studies

Required courses (18 units)
• JINE 210C Introduction to Islamic Civilization
• 12 units from 300- or 400-level courses in Islamic studies and/or Arabic language and literature
• 3 units from 300- or 400-level courses in Jewish studies or Hebrew language and literature

Jewish Studies

Required courses (18 units)
• JINE 208F History, Text and Identity: Introduction to Jewish Civilization
• 12 units from 300- or 400-level courses in Jewish studies and/or Hebrew language and literature
• 3 units from 300- or 400-level courses in Islamic studies or Arabic language and literature

Additional Information

Regulations for minors in Jewish, Islamic and Near Eastern studies

• Maximum of 3 units for language at any level (100- through 400-level) are allowed toward the minor.
• Note that 300- or 400-level courses that include the study of texts in the original language may be considered courses about history, literature or religious studies rather than language courses.
• Preapproved Washington University study abroad programs during the regular academic semester, summer programs, and transfer courses can earn a maximum of 3 units subject to review by the adviser and the DUS.
• Back credit granted for language courses does not count for the minor.
• No credit will be given to courses taken outside the department other than those which are cross-listed.
• A minimum of 18 units is required for the minor.
• Students have to maintain an average of B for the minor. A grade of B- must be earned in each language course in order to advance to the next language course.
• No pass/fail course can count toward either prerequisites or the minor.

Courses

L75 JINE 101D Beginning Biblical Hebrew I
This course prepares the student to read Biblical literature in Hebrew.
Same as L74 HBRW 101D
Credit 3 units. A&S: LA A&S IQ: LCD, LS EN: H
L75 JINE 1021 Musics of the World
This course provides an introduction to the field of ethnomusicology as well as a survey of selected musics from around the world. We investigate not only musical sound itself but how music interacts with other cultural domains, such as religion/cosmology, politics, economics and social structure. The course uses case studies from regions around world (such as Indonesia, India, the Middle East, Sub-Saharan Africa, and Latin America) to illustrate the conceptual problems and methodologies raised by the cross-cultural study of music, as well as acquaint students with the rich variety of music around the globe.
Same as L27 Music 1021
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: HUM EN: H

L75 JINE 105D Beginning Modern Hebrew I
For the student with no knowledge of Hebrew. Students with background in Hebrew are required to take the placement exam and encouraged to consider HBRW 151D. Foundation for modern conversational Hebrew. Skills for writing and speaking introduced. Five class hours a week plus laboratory work. Limit: 15 students per section.
Same as L74 HBRW 105D
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS EN: H

L75 JINE 106D Beginning Modern Hebrew II
Foundation for modern conversational Hebrew. Skills for writing and speaking introduced. Three class hours a week plus laboratory work. Limit: 15 students per section.
Same as L74 HBRW 106D
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS EN: H

L75 JINE 107D Beginning Arabic I
Introduction to modern Arabic; concentrates on rapidly developing basic skills in reading, writing, speaking and understanding. Five class hours, including one culture hour, and additional drill or laboratory hours. Students with previous Arabic language background must take a placement examination.
Same as L49 Arab 107D
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS EN: H

L75 JINE 108D Beginning Arabic II
Continuation of Arab 107D. Emphasis on enhancing skills in reading, writing, speaking and aural comprehension of modern Arabic. Prerequisite: grade of B- or better in Arab 107D or placement by examination. Five class hours a week with additional drill or laboratory hours arranged by instructor.
Same as L49 Arab 108D
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L75 JINE 111D Beginning Hindi I
An introduction to the most widely spoken language of South Asia. Along with an understanding of grammar, the course offers practice in all four skills: listening, speaking, reading and writing. The Hindi (Devanagari) script is used for reading and writing. Note: Students with some previous Hindi language background must take a placement examination.
Same as L73 Hindi 111D
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS EN: H

L75 JINE 112D Beginning Hindi II
Continuation of Hindi 101D, devoted to the further development of basic skills — listening, speaking, reading and writing — with a particular emphasis on the acquisition of speaking proficiency. Prerequisite: Hindi 111D or placement by examination.
Same as L73 Hindi 112D
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS EN: H

L75 JINE 116D Beginning Persian I
Introduction to modern Persian; concentrates on rapidly developing basic skills in speaking, reading, writing, and understanding modern Persian. Five class hours a week and additional drill or laboratory hours as assigned by instructor.
Same as L47 Pers 116D
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L75 JINE 117D Beginning Persian II
Introduction to modern Persian; concentrates on rapidly developing basic skills in speaking, reading, writing, and understanding modern Persian. Five class hours a week and additional drill or laboratory hours as assigned by instructor.
Same as L47 Pers 117D
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L75 JINE 151D Advanced Beginning Modern Hebrew I
Designed for the student with some background in Hebrew. Emphasis will be on review of grammar, increased fluency and vocabulary enrichment. This course prepares students for HBRW 106D. Limit 15 students.
Same as L74 HBRW 151D
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L75 JINE 1550 Temple & Palace in World History: Religion & Politics in the Premodern Mediterranean
This course aims to examine the ways in which temple and palace cooperated with and competed against each other in ancient and medieval worlds. Temple and palace have played a major role in human history as a source of cooperation and conflict by inspiring and regulating the spiritual and social lives of people, including how they enacted laws, developed cultures, established institutions, and interacted with each other as individuals, families and societies. This course traces how the institutional embodiments of religion and politics, temple and palace, and their interactions, produced various models of authority, law and social association and how they collectively and separately rationalized social hierarchy and diversity in human societies.
Same as L22 History 1550
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L75 JINE 175 Discovering the Other and the Self: Jewish Travel Literature and Autobiographical Writing, 1200-1800
Travel literature usually describes "other" places and peoples — otherness and the unfamiliar are its major themes. At the same time, travel writers reflect on notions of the Sell and the home. Autobiography is a representation of one's self. However, the self can only be explored in relation to others. Reading early Jewish travel accounts and autobiographies from the Middle Ages to the 18th century, this class addresses questions such as: How did premodern Jews perceive themselves in a world dominated by Christians and Muslims? Where did they locate themselves between East and West? Did Jewish travelers going from the lands of Christendom to those of Islam...
share certain "Western" perceptions of the Islamic world? How did a Jew from Renaissance Italy negotiate between Jewish and Italian identities? Were Egyptian Jews to him distant relatives, or ultimately foreigners, "Orientals"? How did a German Jewish businesswoman view her role within a rapidly changing, yet male-dominated society? All primary sources are read in translation. In the course of their study, attention is paid to peculiarities of literary genre and the problem of how to differentiate between fact and fiction. Throughout the semester we devote time to discussing practical questions such as how to use the library's catalog and (electronic) reference sources, as well as techniques for structuring and writing students' essays. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: ETH EN: H

L75 JINE 176 Freshman Seminar: A Nation Apart? Jewish Identity in an Age of Nationalism
This course invites students to explore the varieties and limits of Jewish identity in a world in which nations appear to be the driving forces of history. In the "age of nationalism," beginning in the second half of the 19th and continuing to the end of the 20th century, traditional forms of Jewish identity as well as the place of Jews within the social fabric became problematic. Who were the Jews as individuals and as a collective? A nation? A religious group? Neither exactly? And what was their relationship to the emerging, modern nations of Europe to be? Did the process of emancipation resolve the problem? To what extent was antisemitism a response to the dilemma of defining and situating Jews in the new European order? How has the existence of a Jewish nation state in the Middle East affected Jewish identity in other parts of the world? Finally, how has globalization altered the relationship of Jews to the state as well as toward other Jews? Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L75 JINE 1771 Freshman Seminar: The Exodus in the Jewish Experience
This course investigates how the Exodus has been, and continues to be, a crucial source of identity for both Jews and Judaism. We explore how the Exodus has functioned as the primary model from which Jews have created historical self-understanding and theological meaning. We investigate how and why this story continues to be vital to Jews throughout the unfolding of the Jewish experience. How does the Exodus remain pertinent? How has the Exodus been reimagined multiple times throughout the history of Judaism? Why has the Passover celebration been transformed radically in different Jewish communities? We analyze many types of expression: historical sources, liturgy, art, commentaries, theology, literature, film, mysticism and music. Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L75 JINE 179 Freshman Seminar: Midrash: The Imaginative Interpretation of Biblical Texts
The aim of this seminar is to introduce students to Midrash, the highly fascinating literature of Rabbinic Biblical interpretation. Among the topics studied are: How did the classical Rabbis read the Bible? What is the relationship between the plain meaning of the Biblical text and the polyphone interpretations of Midrash? How can numerous, at times even contradictory, interpretations of the same verse coexist? What is the function of imaginative narratives, parables and folklore in Midrash? Initially the Midrashic logic may seem elusive from the viewpoint of a modern Western reader, in turn its creative thinking proves to be smart, playful, at times even slippery, and yet substantial. Addressing the literary, historical and cultural context in which Rabbinic Midrash developed, we get to know a variety of Midrashic collections and styles covering a time span from late antiquity to the Middle Ages. All primary sources are read in translation. Throughout the semester we devote time to discussing practical questions such as how to use the library's catalog and (electronic) reference sources, as well as techniques for structuring and writing students' essays. Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H
hours a week with additional drill or laboratory hours arranged by instructor. 
Same as L49 Arab 208D  
Credit 5 units. A&S: LA & S IQ: LCD, LS BU: HUM, IS 

L75 JINE 208F History, Text and Identity: Introduction to Jewish Civilization  
The anthropologist Clifford Geertz once famously invoked Max Weber in writing that “man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs.” The main goal of this course — designed as an introduction to Jewish history, culture and society — is to investigate the “webs of significance” produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester we focus on the following historical settings: seventh-century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period we investigate the social and political conditions of Jewish life; identify the major texts that Jews possessed, studied and produced; determine the non-Jewish influences on their attitudes and aspirations; and the explore the efforts that Jews made to define what it meant to be part of a Jewish collective.  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH, IS EN: H  

L75 JINE 2091 Scriptures and Cultural Traditions  
Certain books, “sacred scriptures,” shape U.S. society and culture in powerful and complex ways. Many religious communities believe that Scriptures are ancient texts that are ever-flowing sources of timeless truths. Often the truths advanced by one faith conflict with those to which another subscribes, and one of the great challenges that the human community faces involves reconciling these conflicting messages and learning to respect the faiths of others. Some religious movements, of which Mormonism has been the most successful example, have claimed to have uncovered or revealed new scriptures as a means of explaining their cultural authority. This course will therefore consist of three parts. First, we will work to define the concept of “Scriptures” with particular attention to the Hebrew Scriptures and the Christian New Testament: what Scriptures are, what they do, and how varying motifs within them have engaged historic communities. Second, we will explore the enduring interest in extending scripture through the discovery or creation of new sacred texts, in this case, the Book of Mormon. Third, we will examine the appropriation of the Bible in American political and public life.  
Same as L93 IPH 209  

L75 JINE 210C Introduction to Islamic Civilization  
A historical survey of Islamic civilization in global perspective. Chronological coverage of social, political, economic and cultural history are balanced with focused attention to special topics, which include: aspects of Islam as religion; science, medicine and technology in Islamic societies; art and architecture; philosophy and theology; interaction between Islamdom and Christendom; Islamic history in the Middle East, South Asia, Southeast Asia and Central Asia as well as Africa; European colonialism; globalization of Islam and contemporary Islam.  
Credit 5 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: ETH, IS 

L75 JINE 2123D Intermediate Modern Hebrew I  
Reading and discussion on the intermediate level of selected topics pertaining to contemporary Israel. Review and further study of grammar and development of conversational skills. Prerequisite: grade of B- or better in HBRW 106D or placement by examination.  
Same as L74 HBRW 213D  
Credit 5 units. A&S: LA & S IQ: LCD, LS BU: HUM, IS 

L75 JINE 214C Introduction to Comparative Literature  
This course permits the close examination of a particular theme or question studied comparatively, that is, with a cross-cultural focus involving at least two national literatures. Topics are often interdisciplinary; they explore questions pertinent to literary study that also engage history, philosophy and/or the visual arts. Although the majority of works studied are texts, the course frequently pursues comparisons of texts and images (painting, photography, film). Requirements may include frequent short papers, response papers and/or exams.  
Same as L16 Comp Lit 215C  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM 

L75 JINE 214D Intermediate Modern Hebrew II  
Intermediate modern Hebrew reading and discussion of modern Hebrew fiction. Development of language skills in special drill sessions. Conducted in Hebrew. Prerequisite: HBRW 213D or equivalent.  
Same as L74 HBRW 214D  
Credit 5 units. A&S: LA & S IQ: LCD, LS BU: HUM, IS 

L75 JINE 2157 Freshman Seminar: The Meaning of Pakistan: History, Culture, Art  
Pakistan is the second largest Muslim nation and the sixth most populous country in the world. Flanked by two rapidly growing superpowers, and continually at the forefront of another global entanglement over Afghanistan, Pakistan has been forged through successive world historical epochs: colonialism, decolonization, the Cold War, neo-liberalism, and the War on Terror. This course situates Pakistan in the context of U.S. imperialism, Indian regional hegemony, Chinese globalization and then turns to the powerful and diverse struggles launched by its own citizens against these external forces.  
Same as L22 History 2157  
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H 

L75 JINE 216D Intermediate Persian I  
Rapid development of skills in speaking, reading, writing, and understanding modern Persian. Reading of annotated, classical, and modern texts; elementary composition. Prerequisite: Persian 117D or equivalent.  
Same as L47 Pers 216D  
Credit 5 units. A&S: LA & S IQ: LCD, LS BU: HUM, IS 

L75 JINE 217D Intermediate Persian II  
A continuation of Persian 216D. Emphasis on enhancing skills in speaking, reading, writing, and understanding modern Persian.
Reading of annotated classical and modern texts; elementary composition. Prerequisite: Persian 216D, or equivalent. Five class hours a week with additional drill or laboratory hours as assigned.
Same as L47 Pers 217D
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS

L75 JINE 225C Introduction to India Culture and Civilization
Credit 3 units. A&S: TH BU: ETH

L75 JINE 240 Representations of the Holocaust in Literature and Film
As the Holocaust recedes into the historical past, our knowledge of the event becomes increasingly dominated by literary and cinematic representations of it. This course focuses on such depictions of the Holocaust in literature and film and raises a number of provocative questions: What does it mean to represent the horror of the Holocaust? Can one effectively depict the event in realistic terms, or do unrealistic representations work better? What happens to the history of the Holocaust when it becomes the subject of a fictional text? Who is authorized to speak for the victims? Are representations of perpetrators appropriate? What types of representations help us to remember the Holocaust in the 21st century? We grapple with these challenging questions by examining both literary texts by American, European and Israeli authors from a range of genres, including survivor memoirs, fictional narratives, a graphic novel, drama and poetry, and a number of films that depict the Holocaust.
Credit 3 units. A&S: TH A&S IQ: HUM BU: BA, HUM EN: H

L75 JINE 2850 Freshman Seminar: The Holocaust: A European Experience
Between 1939 and 1945, Nazi troops invaded, occupied and destroyed major parts of Europe. A central aim of the Nazi project was the destruction of European Jewry, the killing of people, and the annihilation of a cultural heritage. This course seeks to deal with questions that, some 60 years after what is now known as the Holocaust, still continue to perplex. Why did Germany turn to a dictatorship of racism, war and mass murder? Why did the Nazis see Jews as the supreme enemy, while also targeting Poles, Ukranians, Soviets, homosexuals, the Roma and the disabled? The course introduces students to issues that are central to understanding Nazi occupation and extermination regimes. Students will look at survival strategies in Western Europe including emigration, resistance movements in Eastern European ghettos, local residents' reactions to the murder in their midst, and non-European governments' reactions.
Same as L61 Focus 2850
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM EN: H

L75 JINE 301 Advanced Hindi I
This course is designed to help students gain advanced proficiency in the oral and written use of Hindi through reading and discussion of short stories, newspaper articles, and other selected materials. Prerequisite: grade of B- or better in L73 Hindi 202 or placement by examination.
Same as L73 Hindi 301
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L75 JINE 3012 Biblical Law and the Origins of Western Justice
This course explores how law developed from the earliest periods of human history and how religious ideas and social institutions shaped law. The course also illuminates how biblical law was influenced by earlier cultures and how the ancient Israelites reshaped the law they inherited. It further analyzes the impact of biblical law on Western culture and investigates how the law dealt with those of different social classes and ethnic groups, and we probe how women were treated by the law.
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD EN: H

L75 JINE 301C Kings, Priests, Prophets and Rabbis: The Jews in the Ancient World
We trace Israelite and Jewish history from its beginnings in the biblical period (ca. 1200 BCE) through the rise of rabbinic Judaism and Christianity until the birth of Islam (ca. 620 CE). We explore how Israel emerged as a distinct people and why the rise of the imperial powers transformed the political, social and religious institutions of ancient Israel. We illuminate why the religion of the Bible developed into rabbinic Judaism and Christianity and how rabbinic literature and institutions were created.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: BA, HUM

L75 JINE 301M Historical Methods — Middle Eastern History
This is a small-group reading course in which students are introduced to the skills essential to the historian's craft. Emphasis is on acquiring research skills, learning to read historical works critically, and learning to use primary and secondary sources to make a persuasive and original argument. Consult Course Listings for current topics. Required for history majors. Preference given to history majors; other interested students welcome.
Same as L22 History 301M
Credit 3 units. A&S: TH BU: IS EN: H

L75 JINE 302 Introduction to the History and Culture of Ancient Mesopotamia
This course introduces students to the first great human civilization, Ancient Mesopotamia. Combining textual evidence and material remains we survey all major facets of Mesopotamian culture: the environment, political history and "everyday life" including portraits of several material, social and economic aspects of society: religion, myth, art, science and medicine. The course focuses on helping the student to understand empathetically the Mesopotamian worldview, to interact with primary materials (in translation), and to evaluate the ideas of historians dedicated to investigating this culture. Because some of the practices of this ancient culture are quite different from our own (e.g., magic, divination, the gods), yet others have made important contributions to world civilization...
L75 JINE 3020 Advanced Hindi II
This course is a continuation of Hindi 301. It is designed to continue students’ advanced proficiency in the oral and written use of Hindi through reading and discussion of short stories, newspaper articles and other selected materials. Prerequisite: grade of B- or better in Hindi 301 or placement by examination. Same as L73 Hindi 302
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L75 JINE 3061 Modern Jewish Writers
What is Jewish literature? While we begin with — and return to — the traditional question of definition’s we take an unorthodox approach to the course. Reading beyond Bellow, Ozick and Wiesel, we look for enlightenment in unexpected places: Egypt, Latin America, Australia. Recent works by Philip Roth, Andre Aciman, Simone Zelitch and Terri-ann White are supplemented by guest lectures, film, short stories and significant essays. We focus on issues of language, memory and place. Background knowledge is not required, though it is warmly welcomed. Same as L16 Comp Lit 306

L75 JINE 3062 Islam, Culture and Society in West Africa
This course explores the introduction of Islam into West Africa beginning in the 10th century and explores its expansion and development in the region, placing emphasis on the 19th century to present day. It focuses on the development of West African Muslim cultural, social, religious and political life, to understand not only how the religion affected societies, but also how West African local societies shaped Islam. The course also aims to introduce students to a critical understanding of Islamic writing in West Africa. It also examines the organization of Muslim Sufi orders in West Africa through time and space. The course is organized around a series of lectures and readings as well as print and visual media. Same as L90 AFAS 3062

L75 JINE 3070 The Writing of the Indian Subcontinent
The Indian subcontinent has in recent years yielded a number of writers, expatriate or otherwise, whose works articulate the postcolonial experience in the “foreign” English tongue. This course is designed as an introductory survey of such writing, drawing on select subcontinental writers. Covering both fiction and nonfiction by several authors, including R.K. Narayan, Salman Rushdie, Anita Desai, Amitav Ghosh, Sara Suleri, Micheal Ondaatje and Romesh Gunesekera, we discuss such issues as the nature of the colonial legacy, the status of the English language, problems of translation (linguistic and cultural), the politics of religion, the expatriate identity and the constraints of gender roles. Same as L14 É Lit 307
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM

L75 JINE 3072 Advanced Arabic I
Continuation of Arab 208D. Competence in reading, writing, speaking, listening and culture is developed through intensive exposure to classical and modern standard Arabic in its written and audio-visual forms. Prerequisite: grade of B- or better in Arab 208D or placement by examination. Three class hours a week with one additional laboratory hour as assigned by instructor. Same as L49 Arab 307D

L75 JINE 3073 The Global War on Terrorism
This course presents an historical assessment of the Global War on Terrorism (GWOT) from the perspective of its major participants: militant Sunni Islamist jihadists, especially the Al-Qaeda network, and the nation states that oppose them, particularly the United States and its allies. The course then concludes by analyzing the current state and future of Islamist jihad and the GWOT. Same as L22 History 3073
Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L75 JINE 307D Advanced Arabic II
Continuation of Arab 307D. Continued integration of language development through reading, writing, speaking and listening activities centered around advanced authentic material. This semester proves critical for making the transition from Modern Arabic to Classical Arabic, including Qur’anic Arabic. Continued development of colloquial Arabic. Prerequisite: Arab 307D or equivalent.
Same as L49 Arab 308D
Credit 4 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L75 JINE 309 Classical Jewish Philosophy
The history of Jewish philosophy, from the ancient world through medieval thinkers such as Maimonides and Halevi, is surveyed in the context of the development of Western philosophy. Credit 3 units. A&S: TH BU: ETH
L75 JINE 310 Contemporary Jewish Thought
A study of the representative figures and problems of modern Jewish thought from Spinoza to the present. Other topics include: the impact of the European Enlightenment; Zionism; Buber; Rosenzweig; Kaplan; and Soloveitchik. Prerequisite: JINE 208F or the equivalent.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L75 JINE 3101 The Problem of Evil
The question of how God can allow evil to occur to the righteous or innocent people has been a perennial dilemma in religion and philosophy. We study the classic statement of the problem in the biblical book of Job, the ancient Near Eastern literature on which Job is based, and traditional Jewish and Christian interpretation of Job. We study the major approach to the problem of evil in Western philosophical and religious thought.
Same as L23 Re St 3101

L75 JINE 312 Introduction to the History and Cultures of Turkey
Since ancient times, the Anatolian Peninsula, the land surrounded by the Black Sea, the Aegean and the Mediterranean Seas, has been a home and a passageway to a multitude of diverse peoples. This course is intended to offer an overview of Turkey, its history, peoples, cultures, socioeconomic and political structures and institutions within the context of modern and contemporary global trends since the 19th century through the prism of long durée developments and processes. As an introductory and preparatory course, it aims primarily at familiarizing students with scholarly themes, questions and problems which aids those who wish to further delve into studying the deep and complex fabric of the Turkish society, culture and history.
Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L75 JINE 3120 South Asian Religious Traditions
In this course, we take a considered look at the diverse religious traditions that have shaped and enriched life on the Indian subcontinent and beyond. India, Pakistan, Nepal, Bangladesh and Sri Lanka are home to Hindu, Islamic, Buddhist, Jain, Christian, and Sikh traditions of learning and practice, among others. This course provides an in-depth survey of the traditions of South Asia, while attending to the borrowings and contestations which have blurred and defined the boundaries between traditions over time. We explore the central teachings, practices and debates of these traditions as we explore mythology, poetry and narrative; ritual and performance; social relations and political life at selected moments in the history of South Asia.

L75 JINE 3122 From Country to Heavy Metal: Ancient Civilizations of the Old World
This course explores the archaeology of Europe, the Near East and Central Asia from approximately 10,000 years ago to classical times (ending before Ancient Greece). This prehistoric epoch saw major developments among various civilizations of the Old World, such as the introduction of agriculture, animal domestication, the growth of cities, and technological developments such as pottery, metallurgy and horse-riding. A major focus is the trajectory of cultural innovations of regional populations through time, and the complexity of their social, political and ritual practices. We also investigate the variation in human adaptive strategies to various environmental and social contexts, from hunter/gatherers to early Neolithic farmers, to the interactions between nomadic populations and larger scale, urban societies in the Bronze and Iron Ages.

L75 JINE 313C Islamic History 622-1200
The cultural, intellectual, and political history of the Islamic Middle East, beginning with the prophetic mission of Muhammad and concluding with the Mongol conquests. Topics covered include: the life of Muhammad; the early Muslim conquests; the institution of the caliphate; the translation movement from Greek into Arabic and the emergence of Arabic as a language of learning and artistic expression; the development of new educational, legal and pietistic institutions; changes in agriculture, crafts, commerce and the growth of urban culture; multiculturalism and inter-confessional interaction; and large-scale movements of nomadic peoples.
Same as L22 History 313C
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: IS

L75 JINE 3149 The Late Ottoman Middle East
This course surveys the Middle East in the late Ottoman period (essentially the 18th and 19th centuries, up to the First World War). It examines the central Ottoman state and the Ottoman provinces as they were incorporated into the world economy, and how they responded to their peripheralization in that process. Students focus on how everyday people's lived experiences were affected by the increased monetarization of social and economic relations; changes in patterns of land tenure and agriculture; the rise of colonialism; state efforts at modernization and reform; shifts in gender relations; and debates over the relationship of religion to community and political identity.
Same as L22 History 3149

L75 JINE 316 Advanced Persian I
Selected readings from classical Persian prose and poetry. Prose readings from historical, mystical, and ethical literature by such authors as Bayaghli, 'Attar and Sâ'di. Poetry from significant lyrical genres, such as qasida and ghazal, as well as examples from heroic and romantic epics. Continued emphasis on developing skills in writing, speaking, and understanding Persian. Frequent use of traditional music, slides, and videos to enhance cultural awareness. Prerequisite: Pers 217D or equivalent.
Same as L47 Pers 316
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L75 JINE 3192 Modern South Asia
This course covers the history of the Indian subcontinent in the 19th and 20th centuries. We look closely at a number of issues including colonialism in India; anti-colonial movements; the experiences of women; the interplay between religion and national identity; and popular culture in modern India. Political and social history are emphasized equally.
Same as L22 History 3192
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM, IS

L75 JINE 3194 Environment and Empire
In this course we study British imperialism from the ground up. At bottom, the British empire was about extracting the wealth contained in the labour and the natural resources of the colonized. How did imperial efforts to maximize productivity and profits impact the ecological balance of forests, pastures, and farm lands, rivers and rainfall, animals and humans? We'll ask, with environmental historians of the U.S., how colonialism marked a watershed of radical ecological change. The course will cover examples from Asia to Africa, with a focus on the "Jewel in the crown" of the British empire: the Indian subcontinent. We'll learn how the colonized contributed to the science of environmentalism, and how they forged a distinctive politics of environmentalism built upon local resistance and global vision, inspired by religious traditions and formative thinkers, not least Mahatma Gandhi.
Same as L22 History 3194
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L75 JINE 3200 An Introduction to Literature and Visual Culture in the Arab World
The course aims to provide a framework within which the literary and image cultures of the Arabic-speaking peoples have developed. This is done through a combination of contextual analysis and close reading of seminal texts and films. Our starting points are foundational sources such as the Qur'an and classical prose and poetry. From the later period, emphasis is on fiction and cinema.
Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L75 JINE 320D Advanced Modern Hebrew I
Improves proficiency in the oral and written use of modern Hebrew through reading and discussion of short stories, Israeli newspaper articles, and other selected materials. Students discuss, in Hebrew, current events and public issues related to contemporary Israeli society. Prerequisite: grade of B- or better in HBRW 214D or placement by examination.
Same as L74 HBRW 320D
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L75 JINE 3221 Topics: The Jewish Experience in Italy, 1850-1945
This course examines the social and political history of the Jews of Italy from the period of Italian unification through the end of the Second World War. We look through two different prisms: first, the constant of Jews' minority status in a Catholic country at a time when Church doctrine was hostile to them and second, their changing status during significant moments in the brief history of the Italian monarchy. Under the latter rubric we study the rehabilitation of the Jews under liberal political philosophies, their problematic relationship with Fascism, and finally the arrival of the Holocaust in Italy and efforts to defend Jews against Nazi genocide. We approach these topics wherever possible through primary texts, including essays, memoirs and novels. Reading knowledge of Italian is not required. Readings in English; some readings in Italian for Italian majors. Discussion in English.
Prerequisite for Italian majors: Italian 307D; no prerequisite for students in other majors. Three five-page papers.
Same as L36 Ital 3221
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L75 JINE 3224 Hebrew of the Media
Reading and discussion of newspaper articles. Viewing and analysis of television news programs and films. Prepares students to become familiar with the language and typical issues of the Israeli media and to discuss in writing and speech the issues in the news. Prerequisite: HBRW 322 or by departmental approval.
Same as L74 HBRW 324
Credit 3 units. A&S: LA

L75 JINE 3241 Hebrew of the Media
Reading and discussion of newspaper articles. Viewing and analysis of television news programs and films. Prepares students to become familiar with the language and typical issues of the Israeli media and to discuss in writing and speech the issues in the news. L75 JINE 3250 Introduction to Arabic Literature
A survey of the major genres and themes in Arabic literature from the pre-Islamic era to the modern period. Texts include pre-Islamic, classical and Sufi poetry, as well as popular tales and critical prose from the Umayyad and Abbasid empires and Andalusia. The modern sections of the course interrogate political commitment in Arabic literature and introduce students to feminist and magical realist novels from North Africa and the Levant. All readings are in English translation.
Same as L49 Arab 325
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L75 JINE 3266 "East" and "West" in Jewish Imagination and Politics
How have Jews, as a paradigmatic diasporic people, understood their place between "East" and "West," and their relationships with other Jews and non-Jews within, across, and beyond the vast territorial expanse of Eurasia? What has it meant to identify, to be identified, and to live as Jews in Eurasia and beyond — both before and after the State of Israel? We begin with the origin of world Jewry, follow the various and interrelated experiences of Jews under Christendom and Islam, and, through carefully chosen vignettes, trace how the modern concepts of "East" and "West" have shaped the course of Jewish history, politics and imagination for millennia.
Same as L97 IAS 3266
L75 JINE 3273 Introduction to Israel Studies
An exploration of Israel in the Jewish experience from antiquity to modernity and in the history and culture of the Middle East. Special attention is paid to the modern state of Israel and current issues in its politics, economy and society. JINE 5273 is intended for graduate students only.
Credit 3 units. A&S: TH & A&S IQ: HUM; LCD; SD EN: H

L75 JINE 3292 Topics in Politics: Modern South Asian Politics
This course focuses on the recent political history and development of South Asia. It begins with a review of the British colonial period and the Independence movement. The remainder of the course examines different political issues in India, Pakistan, Bangladesh and Sri Lanka. Topics include political mobilization, land reform, law and politics, social movements, religious and caste politics, the rise of religious nationalism, and political control of the economy.

L75 JINE 331C Becoming "Modern": Emancipation, Antisemitism, and Nationalism in Modern Jewish History
This course offers a survey of the Jewish experience in the modern world by asking, at the outset, what it means to be — or to become — modern. To answer this question, we look at two broad trends that took shape toward the end of the 18th century — the Enlightenment and the formation of the modern state — and we track changes and developments in Jewish life down to the close of the 20th century with analyses of the very different American and Israeli settings. The cultural, social, and political lives of Jews have undergone major transformations and dislocations over this time — from innovation to revolution, exclusion to integration, calamity to triumphs. The themes that we will be exploring in depth include the campaigns for and against Jewish "emancipation:" acculturation and religious reform; traditionalism and modernism in Eastern Europe; the rise of political and racial antisemitism; mass migration and the formation of American Jewry; varieties of Jewish national politics; Jewish-Gentile relations between the World Wars; the

L75 JINE 332C Crusade, Conflict, and Coexistence: The Jews in Christian Europe
This course investigates some of the major themes in the history of the Jews in Europe, from the high middle ages to the eve of the French Revolution. Jews constituted a classic, nearly continuous minority in the premodern Christian world — a world which was not known for tolerating dissent. Or was it? One of the main purposes of the course is to investigate the phenomenon of majority/minority relations, to examine the ways in which the Jewish community interacted with and experienced European societies, cultures and politics. We look at the dynamics of boundary formation and cultural distinctiveness; the limits of religious and social tolerance; the nature and contexts of persecution; and the prospects for Jewish integration to Europe during the course of the Enlightenment era. Our course also highlights the particular historical experiences, cultural and religious developments, and communal patterns of the Jews during this time.
Same as L22 History 3324
Credit 3 units. A&S: TH, CD & A&S IQ: HUM, LCD BU: ETH, HUM, IS

L75 JINE 3350 Out of the Shtetl
Out of the Shtetl is a course about tradition and transformation; small towns and urban centers; ethnicity and citizenship; nations, states and empires. At its core, it asks the question, what did it mean for the Jews of Central and Eastern Europe to emerge from small market towns and villages to confront modern ethnicities, nations and empires? What lasting impact did the shtetl experience have on Jewish life in a rapidly changing environment? The focus is on the Jewish historical experience in the countries that make up Central and Eastern Europe (mainly the Bohemian lands, Hungary, Poland, and Russia) from the late 18th century to the fall of the Soviet Union. Among the topics that we cover: Jews and the nobility in Poland-Lithuania; the multi-cultural, imperial state; Hasidism and its opponents; absolutism and reform in imperial settings; the emergence of modern European nationalisms and their impact on Jewish identity; antisemitism and popular violence; nationalist and radical movements among Jews; war, revolution and genocide; and the transition from Soviet dominion to democratic states. Same as L22 History 3350

L75 JINE 3331 The Holocaust
Origins, causes and significance of the Nazi attempt to destroy European Jewry within the context of European and Jewish history. Related themes: the Holocaust in literature; the psychology of murderers and victims, bystanders and survivors; contemporary implications of the Holocaust for theology and politics.
Same as L22 History 331
Credit 3 units. A&S: TH, SD & A&S IQ: HUM, SD Art: HUM BU: ETH, HUM, IS: EN: H
L75 JINE 336C History of the Jews in Islamic Lands
This course is a survey of Jewish communities in the Islamic world, their social, cultural and intellectual life from the rise of Islam to the Imperial Age. Topics include: Muhammad, the Qur'an and the Jews; the legal status of Jews under Islam; the spread of Rabbinic Judaism in the Abbasid empire; the development of new Jewish identities under Islam (Karaites); Jewish traders and scholars in Fatimid Egypt; the flourishing of Jewish civilization in Muslim Spain (al-Andalus); and Sephardi (Spanish) Jews in the Ottoman empire. On this background, we look closely at some of the major Jewish philosophical and poetical works originating in Islamic lands. Another important source we study are documents from the Cairo Genizah, reflecting social history, the status of women and other aspects of daily life. Primary and secondary readings (in translation) are supplemented by audiovisual materials.
Same as L22 History 336C
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: ETH, HUM

L75 JINE 340 Israeli Women Writers
Study of selected novels and shorter fiction by women. Attention to the texts as women's writing and as products of Israeli literature. No knowledge of Hebrew necessary; all readings in English translation.

Credit 3 units. A&S: TH, CD, SD, WI A&S IQ: HUM, LCD, SD, WI Art: HUM BU: HUM

L75 JINE 341 The Jewish People in America
History of the Jews in North America from the colonial era to the present. Close reading of primary sources, with an emphasis on the central issues and tensions in American Jewish life; political, social and economic transformations; and religious trends.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L75 JINE 3411 Children and Childhood in World Religions
This course investigates the roles children play in some of the world's major religious traditions and how those traditions construct their concepts of childhood. From child disciples to child martyrs, from the miraculous childhoods of religious founders to the rites marking childhood's end, and from divine commandments involving fertility to those mandating celibacy, we explore a wide range of different religions' teachings about children and childhood. We combine primary and secondary sources including written texts, movies/video, and web-based content in order to learn more about the complex relationships between children and the religious traditions of Judaism, Christianity, Islam, Hinduism, Buddhism and Confucianism.
Same as L66 ChSt 341
Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: IS EN: H

L75 JINE 3415 Jewish-Gentile Relations in the United States, 1830-1970
Throughout their history Jews faced non-Jewish majorities, and America was no different. Yet unlike Europe, the United States has been, overall, a very hospitable place for Jews, and many of them came to see their new country as "the Promised Land." The course focuses on the relations between Jews and their non-Jewish neighbors from the beginning of a significant Jewish immigration to the United States in the 1830s. The course ends in the 1970s in order to analyze what most historians interpret as a rightward and inward turn of American Jewry (especially after 1967) and link it to the larger wave of ethnic revival in America. As a whole, the course looks at the interethnic and interreligious dimensions of American Jewish life and relates them to the larger American context. How did American Jews view their fellow countrymen and how did these opinions, in turn, affect Jewish integration into the larger society? How did the gamut of relations with other groups, which ran from animosity to coalition building and amity, change the country's political and cultural landscape? How did political and class differences within Jewish communities influence the character of interaction with other communities? Can we learn from the Jewish case about more general patterns of majority-minority relations in America?
Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

L75 JINE 3421 Childhood, Culture and Religion in Medieval Europe
From child saints to child scholars and from child crusaders to child casualties, the experience of childhood varied widely throughout the European Middle Ages. This course explores how medieval Jews, Christians, and Muslims developed some parallel and some very much divergent concepts of childhood, childrearing, and the proper cultural roles for children in their respective societies. Our readings combine primary and secondary sources from multiple perspectives and multiple regions of Europe and the Mediterranean World, including a few weeks on the history and cultural legacy of the so-called Children's Crusade of 1312. We conclude with a brief survey of medieval childhood and its stereotypes as seen through contemporary children's books and TV shows. This course fulfills the Language & Cultural Diversity requirement for Arts & Sciences.
Same as L66 ChSt 342
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L75 JINE 3422 Art of the Islamic World
This course surveys the art and architecture of societies where Muslims were dominant or where they formed significant minorities from the seventh through the 20th centuries. It examines the form and function of architecture and works of art as well as the social, historical and cultural contexts, patterns of use, and evolving meanings attributed to art by the users. The course follows a chronological order, where selected visual materials are treated along chosen themes. Themes include the creation of a distinctive visual culture in the emerging Islamic polity; the development of urban institutions; key architectural types such as the mosque, madrasa, caravanserai, palace and mausoleum; art objects and the arts of the illustrated book; cultural interconnections along trade and pilgrimage routes; Westernization and modernization in art and architecture.
Same as L01 Art-Arch 3422

L75 JINE 344 Imagining the Holocaust in Contemporary Jewish Literature
Recent public discourse on the Holocaust has displayed an anxiety that, with the gradual dying out of the survivor
generation, the Holocaust too will soon pass into oblivion and one day be forgotten. Accompanying this anxiety about the vanishing eyewitness and the crisis of forgetting is often a parallel skepticism about narratives of the Holocaust that are not rooted in the direct experience of the survivor. Despite an injunction against fictional and imaginative representations of the Holocaust by survivors such as Elie Wiesel, however, the past 20 years have seen a wave of imaginative literature about the Holocaust written by non-survivors. This course examines recent post-Holocaust literature, both fictional and autobiographical, by contemporary Jewish writers from Europe, Israel and the United States, including works by Art Spiegelman, David Grossman, Aharon Appelfeld, Nathan Englander, Anne Michaels, Nava Semai, Patrick Modiano, Jurek Becker and others. Central to our inquiry into this literature is the questions of language, narrative structure, referentiality, artistic representation, intergenerational trauma, vicarious memory and post-Holocaust Jewish identity.

Credit 3 units. A&S: TH Art; HUM BU: HUM

**L75 JINE 345 Mesopotamian Mythology: Stories from Ancient Iraq**

In this course we read, explore and interpret various ancient myths originating from the fertile crescent, especially ancient Iraq, between the years 2500 and 400 BCE. The Epic of Gilgamesh, the Enuma Elish, myths of the goddess Ishtar as well as various flood and creation accounts are among those we read. Cultural background information is examined to situate each myth in its ancient context. Various theories of interpreting myth also are explored in order to appreciate the power and the many uses of these multivalent stories. Several basic questions underlie all that we do throughout the semester: What is myth? How should we understand the conceptualization of the category “myth” (in other words: How does myth work?) Does myth still play a role in our own modern cultures?

Credit 3 units. A&S: TH, BU: HUM

**L75 JINE 346 Islamic Law**

This course presents a general overview of Islamic law and an introduction to the study of religious legal authority which values consensus. It then explores the formation of the major schools of law. Next it debates the notions of “ijtihad” and “taqlid” and discuss how open and independent legal decisions have been in the Islamic world. It also traces the transmission of legal knowledge in religious institutions across time and place by focusing on medieval Muslim societies and by closely examining the education of a modern-day Ayatollah.

Credit 3 units. A&S: TH, BU: HUM

**L75 JINE 349 Yidishkayt: Yiddish Literature in English Translation**

This course traces the emergence, development, flourish and near-decline of Yiddish literature, beginning with some of the earliest writings to appear in Yiddish in the late Middle Ages and early modern period, continuing with 19th-century attempts to establish a modern Yiddish literature and the 20th-century emergence of both a classical canon and a literary avant-garde, and ending with post-Holocaust attempts to retain a Yiddish literary culture in the near absence of Yiddish-speaking communities. Focusing on the role of Yiddish as the “national” language of Ashkenaz, the course examines the ways in which Yiddish literature has responded to the social conditions of European Jewish life, exploring among others the relationship between Yiddish and the non-Jewish cultures in which it existed, the tensions between secular trends versus religious tradition, life in the shtetl and in the metropolis, immigration from the old world to the new, and Yiddish literary responses to the Holocaust.

Credit 3 units. A&S: TH, BU: HUM

**L75 JINE 350 Israeli Culture and Society**

An examination of critical issues in contemporary Israeli culture and society, such as ethnicity, speech, humor, religious identity and the Arab population, using readings in English translation from a variety of disciplines: folklore, literary criticism, political science, sociology, psychology, anthropology. Prerequisite: sophomore standing or permission of instructor.

Credit 3 units. A&S: TH, BU: HUM

**L75 JINE 351 Muhammad in History and Literature**

This course intends to examine the life and representations of the Prophet Muhammad from the perspective of multiple spiritual sensibilities as articulated in various literary genres from medieval to modern periods. The course is divided roughly into two parts. One part deals with the history of Muhammad and the related historiographical questions. The second part deals with the representations of Muhammad in juristic, theological, Sufi, etc., literature. Because of the availability of primary sources in English translation, there is a healthy dose of primary source reading and analysis throughout the semester. Those students with advanced Arabic (and Persian and Turkish) skills are encouraged to engage sources in their original language.

Credit 3 units. A&S: TH, BU: HUM

**L75 JINE 352 Iraqi Literature**

This course introduces students to major works in Iraqi literature in the 20th and 21st centuries, with a focus on the post-World War II period up to the present day. Same as L49 Arab 352

Credit 3 units. A&S: TH, BU: HUM

**L75 JINE 353 Understanding Indian (Hindi/Urdu) Literature: Through Text and Images (Visual)**

This course focuses on literary and cultural traditions of South Asia in general and India in particular. Students will be introduced to a variety of contemporary literary genres through text and visuals. Weekly readings and class discussions will be followed by a film screening from the popular Hindi cinema, known as Bollywood industry of India, to demonstrate how literary writings influence modern day cultural traditions. Students will also work on films based on literary texts by well-known writers of the subcontinent. These readings and films focus on various social, cultural, political and historical aspects of Indian society. Students will be encouraged to explore these issues in their written assignments as well as in the class discussions.

Credit 3 units.

**L75 JINE 354 Anthropological and Sociological Study of Muslim Societies**

This course introduces students to anthropological and sociological scholarship on Muslim societies. Attention will be given to the broad theoretical and methodological issues which orient such scholarship. These issues include the nature of Muslim religious and cultural traditions, the nature
of modernization and rationalization in Muslim societies, and the nature of sociopolitical relations between "Islam" and the "West." The course explores the preceding issues through a series of ethnographic and historical case studies, with a special focus on Muslim communities in the Middle East, Southeast Asia, and Europe. Case studies address a range of specific topics, including religious knowledge and authority, capitalism and economic modernization, religion and politics, gender and sexuality, as well as migration and globalization.

L75 JINE 357 The Holocaust in the Sephardic World
The course aims to provide students with a comprehensive understanding of the Holocaust, of its impact on the Sephardic world, of present-day debates on the "globalization" of the Holocaust, and of the ways in which these debates influence contemporary conflicts between Jews, Arabs and Christians in Southern Europe and North Africa. We turn to the histories of these conflicts and study the Sephardic diaspora by focusing on the consequences that the 1492 expulsion had within the Iberian Peninsula, in Europe and in the Mediterranean world. We study Sephardic communities in Europe and North Africa and their interactions with Christians and Muslims before World War II. Once we have examined the history of the Holocaust and its impact on the Sephardic world in a more general sense, our readings focus on the different effects of the Holocaust’s “long reach” into Southeastern Europe, the Balkans and North Africa, paying close attention to interactions among Jews, local communities and the Nazi invaders. Finally, we address the memory of the Sephardic experience of the Holocaust and the role of Holocaust commemoration in different parts of the world. We approach these topics through historiographies, memoirs, novels, poetry and film.

L75 JINE 3581 Musica Ebraica: Jewish Identities in Western Music from 1600 to the 21st Century
The course explores Western music from the 17th century to the 21st century through the prism of musical works that were written by Jews and for Jews and of musical compositions reflecting their composers identifying themselves as Jews. Jewish art music from these periods are examined against the background of musical development in general, the social, political and religious context of the composers, and written reflections about Jewish music. Examples of Jewish art music are analyzed through different approaches in order to determine the cultural interrelationships between Jews and non-Jews, Jewish cultural autonomy, and the perception of Jewishness in music.
Credit 3 units. A&S: LA, CD A&S IQ: LCD BU: HUM EN: H

L75 JINE 3582 Music in Jewish Culture and Society
The common term "Jewish Music" raises numerous questions that emanate from the difficulty to define "Jewish" identity of any given music. This course deals with various approaches to the definition of Jewish music, perceived as a cultural and sociological component in the Jewish communities throughout the diaspora. We survey the functions in which music is performed in traditional Jewish communities, especially Jewish liturgy, and the substantial vicissitudes in these musics after the European Enlightenment, European colonialism in north-Africa, and in the Mediterranean. We study the background and the different characteristics of selected Jewish communities — Ashkenazic, Sephardic, Italian, Yemenite and others — as well as instrumental music, questions of gender and the relationship between music and text. A secondary goal of this course is the study of the bibliography and discography of Jewish musics.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L75 JINE 3583 The Soundtrack of Israeli History
This course explores connections between Israeli history, nationality and culture, and between Israeli art music. Such an encounter between reveals the reflection of, and responses to, local social developments in various historic and constitutive moments in Israeli history such as: the fifth Aliya (wave of immigration) in the 1930s, the statehood years, the waning of nationalistic sentiments in the late 1950s, the aftermath of Israeli wars, the negotiation between Israeli and Jewish identities, and even artistic expressions of postmodernity within the Israeli context. These histories are surveyed through historical studies as well as through their musics and against the background of developments in 20th-century music.

L75 JINE 3584 Music in the Holocaust: Portrayals in Sound from Past and Present
The course explores Germany’s road to totalitarianism through three different stages seen through its musical contexts: the embedding of “music labels” against Jews in 19th-century European culture in general and German culture in particular; the association of Jewish culture with the threat of modernism until World War II; and Nazi policies in the 1930s regarding music and their repercussion on musical activities in the different ghettos (especially Terezin and Lodz). The last segment of this class deals with the challenge of commemorating the holocaust through music.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L75 JINE 3585 Islam, Music, Muslim Media
How do Muslim individuals and communities understand and negotiate the relationship between sound and spirituality? How does Islamic philosophy challenge Western definitions of music? How do music and cultural practices reflect and shape diverse Muslim identities and political struggles? To what extent can we speak of an "Islamic world," musical or otherwise? In this course, we investigate Islamic musics and musical practices in the lives and experiences of Muslims throughout the world. We approach our study of Muslim musical practices with the understanding that the social, cultural and political contexts where music is created, disseminated, and consumed inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We engage with a variety of academic, musical and media texts to develop interdisciplinary analyses about Islam, music, sound experience, and Muslim subjectivities. Issues of nationalism and transnationalism, class, race and ethnicity, gender and sexualities, colonialism and postcolonialism, history and memory remain central to our exploration of spirituality and religion in Muslim musical and cultural practices.

L75 JINE 359 Travelers, Tricksters and Storytellers: Jewish Travel Narratives and Autobiographies, 1100-1800

Premodern Jewish literature includes a number of highly fascinating travelogues and autobiographies that are still awaiting their discovery by a broader readership. In this course, we explore a variety of texts ranging from medieval to early modern times. They were written by Jewish authors (both Ashkenazi and Sephardic) originating from Spain, Italy, Germany and the Ottoman Empire — among them pilgrims, rabbis, merchants, and one savvy business woman. We read them as responses to historical circumstances and as expressions of Jewish identity in its changing relationship to the Christian or Muslim environment in which the authors lived or traveled. Specifically, we ask questions such as: What is it about travel writing that enables its authors (and readers) to reflect on themes of identity and difference? How does this genre produce representations of an Other, against which and through which it defines a particular sense of self? What are the commonalities and differences between (Jewish) travelogues and autobiographies? To what extent are these texts reliable accounts of their authors’ personal experiences and to what extent do they serve their own self-fashioning? How did premodern Jewish writers portray Christians, Muslims and Jews from other cultural backgrounds than their own? How did they construe the role of women in a world dominated by men? How did they reflect on history, geography and other fields of knowledge that were not covered by the traditional Jewish curriculum; and how did they respond to the challenges of early modernity?

L75 JINE 3602 Borders, Checkpoints and the Frontiers of Literature

Borders are some of the most strange, dangerous, and changeable places in the world. They help define not only where we are but also who we are. This course reads literature from and about border regions around the world: the Mexican-American frontera, the Indian and Pakistani Partition line, the German Iron Curtain, the African colonial borders, and the Israeli-Palestinian divisions. Even if we live far from any international boundary, the notion of the border shapes our thinking about the world. Literature is a place where borders are vividly imagined, marked and debated in ways that both affect preexisting frontiers and help draw new ones on the ground. We read all texts in English.

L75 JINE 361 City of Peace: Baghdad in Medieval Times (ca. 762-1250)

The subject of this course is an exploration of the city of Baghdad in medieval times from its foundation in the eighth century to its sack by the Mongols in the 13th. Starting from the background history of its location in Mesopotamia, we study the reasons of its foundation in that location and examine its topography, city planning and layout, institutions, citizens, neighborhoods, markets, libraries and workshops to discuss life in the city. Because Baghdad was the seat of the Abbasid caliphate at the time, we examine its role as the hub of the empire (in politics, administration, economy and literature), and its links to and rivalries with other provincial cities.

L75 JINE 3670 Gurus, Saints, and Scientists: Religion in Modern South Asia

Many long-standing South Asian traditions have been subject to radical reinterpretation, and many new religious movements have arisen, as South Asians have grappled with how to accommodate their traditions of learning and practice to what they have perceived to be the conditions of modern life. In this course we consider some of the factors that have contributed to religious change in South Asia, including British colonialism, sedentarization and globalization, and new discourses of democracy and equality. We consider how new religious organizations were part and parcel with movements for social equality and political recognition; examine the intellectual contributions of major thinkers like Swami Vivekananda, Sayyid Ahmad Khan, and Mohandas Gandhi; and explore how Hindu, Islamic, and other South Asian traditions were recast in the molds of natural science, social science, and world religion.

L75 JINE 3751 In the Beginning: Creation Myths of the Biblical World
This course studies myths and epic literature from the Bible, ancient Egypt, the ancient Near East and ancient Greece about the birth of the gods, the creation of the world and of humanity, and the establishment of societies. These masterpieces of ancient literature recount the deeds of gods and heroes and humanity’s eternal struggle to come to terms with the world, supernatural powers, love, lust and death. This course examines how each culture borrows traditions and recasts them in a distinct idiom. The course further examines different approaches to mythology and to the study of ancient cultures and the Bible.

L75 JINE 3900 Topics in Migration and Identity
The course examines migration movements that are related to the Nazi genocide in Europe. Grounded in a study of the Nazi project to reshape the European geopolitical map, students explore how the mass movement of people is impacted by geopolitics, political violence, and economical considerations. Class materials address the relationship between identity formation and social exclusion, thus opening up a critical investigation of concepts of citizenship, human rights, and their institutional frameworks (states, international organizations, etc.) more generally. Students work with a variety of sources, including primary sources, scholarly analyses, podcasts, literary works and film to study migrations related to the prehistory, policies and aftermath of the Nazi regime. The class provides insights into issues of expulsion, refuge, forced migration, settlement projects, ethnic cleansing and others, but also
demonstrates the global impact and long-term repercussions of political and genocidal violence. Looking at the Nazi regime through the lens of migration shows that the Nazi genocide is embedded in a history of racism, colonization and mass violence.

L75 JINE 3921 Secular & Religious: A Global History  
Recent years have seen a dramatic rethinking of the past in nearly every corner of the world as scholars revisit fundamental questions about the importance of religion for individuals, societies and politics. Is religion as a personal orientation in decline? Is Europe becoming more secular? Is secularism a European invention? Many scholars now argue that "religion" is a European term that doesn't apply in Asian societies. This course brings together cutting-edge historical scholarship on Europe and Asia in pursuit of a truly global understanding. Countries covered vary, but may include Britain, France, Turkey, China, Japan, India and Pakistan.

L75 JINE 4042 Competing Ideologies and Nationalisms in the Arab-Israeli Arena  
We trace the roots of modern ideologies and nationalisms in the Middle East and analyze how they have developed in modern times under the influence of both secular and religious ideas. We examine how international politics have exerted their influence and how Arab and Israeli nationalism have affected one another. Among the topics discussed are Shi’ism, Nasserism, Zionism and fundamentalism.  
Credit 3 units. A&S: SS A&S IQ: SSC BU: IS EN: S
L75 JINE 405 Diaspora in Jewish and Islamic Experience

The polarities of diaspora and home — periphery and center, wandering and rest, exile and return — have played important roles in the historical experience and religious culture of both Jews and Muslims. For long stretches of time, Jewish culture has been marked by the historical condition of statelessness combined with a theology of redemptive return. Paradoxically, it was the significant political and military success of Islam in its first millennium that helped to create a far-flung diaspora well removed from its center in Arabia. The institution of pilgrimage to Mecca counterbalanced a sense of distance and remove. More recently, modern nationalisms, war, and postcolonial politics — including the Israeli-Palestinian conflict — have done much to underscore the continuing dilemmas of diaspora and home in both Jewish and Islamic identity. The goal of the seminar is to offer a comparative, historical perspective on this theme and to encourage students to examine an aspect of the diaspora experience in depth. (Note: This course fulfills the capstone requirement for Jewish, Islamic and Near Eastern Studies. It also qualifies as a history department advanced seminar.)

L75 JINE 4060 Convivencia or Reconquista? Muslims, Jews and Christians in Medieval Iberia

Senior Seminar. This seminar provides an opportunity to explore in some depth various facets of the convivencia (“dwelling together”; coexistence) of Muslims, Jews and Christians in medieval Iberia. While we pick up the timeline with the emergence of an Ibero-Islamic society in the eighth century CE, the seminar’s historical horizon stretches up to the turn of the 15th to the 16th century, when Spanish Jews and Muslims were equally faced with the choice between exile and conversion to Christianity. Until about the mid-11th through 15th centuries, Christians ruled much and eventually all of Spain and Portugal. Through a process termed, from a Christian perspective, as reconquista (“reconquest”), Catholic kingdoms acquired large Muslim enclaves. As borders moved, Jewish communities found themselves under varying Muslim or Christian dominion, or migrated from one realm to the other. Interactions between the three ethno-religious communities occurred throughout, some characterized by mutual respect and shared creativity and others by rivalry and strife. The course focuses on these religious and cultural contacts, placing them in various historical and geographic contexts. It raises questions concerning the ambiguities of religious change and concerning the interplay of persecution and toleration. Methodologically, the seminar emphasizes the study of primary sources, including documentary, historiographical, literary and poietic texts. In the course of their study, attention is paid to peculiarities of genre and difficulties involved in formulating historical assessments. In this sense, we also aim at developing critical reading skills in relation to secondary literature. Seniors in Jewish, Islamic and Near Eastern Studies are given preference in admission. Advanced students in other fields are asked to contact the instructor prior to enrollment.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L75 JINE 407 Fourth-Level Arabic I

Focused reading and discussion of classical and modern texts centered on selected topics in Arabic literature, poetry and media. Continued development of oral, aural and writing skills. Students’ interests are taken into consideration before finalizing the selection of texts. Practice in writing and grammar. Prerequisite: grade of B- or better in Arab 308D or placement by examination.

Same as L49 Arab 407

L75 JINE 4070 Judaism and Islam in Comparative Perspective

The historical trajectories of Rabbinic Judaism and Islam are intimately intertwined. Moreover, a strong argument can be made that Rabbinic Judaism and Islam bear some obvious affinities with one another. Nevertheless, the two traditions generally continue to be studied in isolation from one another. The goals of this seminar are (1) to foster better understanding of areas of historical contact and interactions between Jewish and Islamic civilizations and (2) to start the work of developing a common framework for the comparative study of the two traditions. We examine examples of sustained and meaningful contact such as Muslim-Jewish symbiosis in early Islam as well as interaction on the level of philosophical and theological discourses between medieval Jews and Muslims. We also attempt to identify instances of affinity between the two traditions through comparative study of their exegetical, messianic, legal and mystical dimensions. Seniors in Jewish, Islamic and Near Eastern Studies are given preference in admission. This is the capstone course in JINES. Advanced students from other departments and programs should contact the instructor prior to enrollment.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L75 JINE 4081 Fourth-Level Arabic II

Readings and discussion in Arabic of selected classical texts. Students’ interests will be taken into consideration before finalizing the selection of texts. Practice in writing and grammar. Continued development of colloquial Arabic.

Same as L49 Arab 408

L75 JINE 409 Beyond Geography: The Meaning of Place in the Near East

This course considers the importance of place in the Middle East with particular reference to Jewish and Islamic traditions. Topics include the creation of holy sites, the concept of sacred space, the practice of pilgrimages, and the tropes of exile and return. Texts range from analytical essays to novels, memoirs and films by authors such as Edward Said, Naguib Mahfouz, Taher Ben Jelloun, Elif Shafak, A.B. Yehoshua, Shulamit Hareven and Hanan Al-Shaykh. Requirements include participation, short assignments and a seminar paper. This course fulfills the capstone requirement for students majoring in Jewish, Islamic and Near Eastern Languages and Cultures, but is open to advanced undergraduates and graduate students. Prerequisites: course work in JINES and senior standing or permission of instructor.

L75 JINE 412 Islamic Theology
This course explores major themes of early Islamic theology as developed by the Mutazilite, Ash'ARite, and Maturidi schools. Some attention is paid to defunct theological systems, the traces of which have remained in the heresiographical literature. Most readings are in primary sources in English translation, though the students are also introduced to some secondary literature on various themes. Some comparative theology with reference to the Judo-Christian tradition are a regular feature of class discussion. Topics include (but are not limited to): debates over the createdness of the Qur'an; predestination and foreknowledge; God's attributes; the nature of language; the nature of the human soul; and creation and afterlife.

L75 JINE 4154 Postcolonial South Asia: Nations, Cultures, and Identities in Transnational Perspective
Independence from European colonialism was a victory for some people, although for the majority, the experience of nation-building and the Cold War only sanctioned further inequalities. A further set-back arrived in the guise of Globalization. The countries of Bangladesh, India, Pakistan, Nepal and Sri-Lanka have grappled differently with the many varieties of 20th-century transnational power. This course studies the histories of decolonization, nation-building and the Cold War for those South Asian countries created since the 1940s and traces the manner by which ordinary people have interrogated the multiple levels of state power unleashed upon them since the formal end of European colonialism.

L75 JINE 4201 Islam, Immigrants and the Future of European Culture
Coming from Turkey, North and West Africa, Pakistan, and elsewhere, Muslim immigrants in Europe are changing what it means to be a European. In the process, they have brought questions of cultural identity into the international media. Examining literature, the press, and secondary studies, this writing-intensive course studies the ways in which national governments and institutions have chosen to deal with the arrival of large numbers of Muslims as permanent residents. We consider what the various controversies and prejudices surrounding their presence mean for the future of European culture. Such issues as citizenship, assimilation, the right to cultural difference, and the use of cultural and religious symbols are among our major interests. No foreign language background is assumed. Priority is given to IAS majors for this WI course.

L75 JINE 4213 Sufism and Islamic Brotherhoods in Africa
Muslim societies are prevalent in Africa — from the Horn, the North, the East to the West, with smaller conclaves in Central and South Africa. Islam has played an influential role in these diverse societies, particularly through its Sufi form. Even though Sufism originated in the Arabian Peninsula, it has fit well with African beliefs and cultures. This course aims to explore Sufi beliefs, values and practices in Africa. It reconsiders the academic constructions of “African Islam” by exploring education, intellectual life, economics, gender roles, social inequalities and politics. The goal is to show that Africa is a dynamic part of the Muslim world and not a peripheral one, as it is most often portrayed by the international media or historically, through travelers and colonial accounts. African Muslim brotherhoods have served as political mediators between countries and people (i.e., the role of the Tijaniyya in the diplomatic rivalry between Morocco and Algeria, or its role in reconciliation of clanic rivalries in Sudan). In addition, the course pays attention to hierarchy in particular tariqa. Finally, the course examines how African Sufi orders have shaped their teachings to fit transnational demands over the 20th and 21st century. We explore these issues through readings, current media, lectures and special guest speakers.

L75 JINE 4274 Palestine, Israel and the Arab-Israeli Conflict
This course examines the history of the Arab-Israeli conflict from the mid-19th century to the present. Topics include: Palestine in the late Ottoman period; the development of modern Zionism; British colonialism and the establishment of the Palestine Mandate; Arab-Jewish relations during the Mandate; the growth of Palestinian nationalism and resistance; the establishment of the state of Israel and the dispersion of the Palestinians in 1948; the Arab-Israeli wars; both Palestinian uprisings; and the peace process.

L75 JINE 440 Topics in Rabbinic Texts
The course aims to introduce students to independent reading of selected rabbinic texts in the original language. We will focus on a number of topics representing the range of rabbinic discussion, including legal, narrative, and ethical issues. At the same time, we will study the necessary linguistic tools for understanding rabbinic texts. Prerequisites: HBRW 385 or HBRW 401 or instructor's permission.

L75 JINE 442 Empire and Memory: Approaches to Islamic Historiography (ca. 800-1250)
This course is an in-depth study of medieval Arabic historiography from the eighth through the 13th centuries, when the Mongols ran over the remnants of the Abbasid caliphate, established their own rule over Eurasia, and thereby sparked new questions about the past. After the initial survey of medieval Islamic history as background, we focus on the development of historiographical writing, i.e., the role of the Tijaniyya in its sociopolitical context and examine one by one the most major historiographical traditions and philosophies from the eighth through the 13th centuries: prophetic traditions, belles lettres, annals, biographical dictionaries and genealogical literature.

<td>L75 JINE 475</td>
<td>Screening the Holocaust</td>
<td>3</td>
<td>This course surveys the history of Holocaust representation on film, examining a wide range of documentary and fictional works from 1945 to the present day. Discussions will consider a number of key questions, including: What challenges does the Holocaust pose to cinematic representation, and how have filmmakers grappled with them? How have directors worked within and against notions of the Holocaust as unrepresentable, and how have they confronted the challenge of its association with a limited set of highly iconic images? What are the more general ethical and political dimensions of representing the Holocaust onscreen — its victims as well as its perpetrators, the systematic genocidal violence that characterized it, and the sheer absence of so many dead? We will also probe the changing significance of cinematic representation of the Holocaust, exploring the medium's increasingly memorial function for audiences ever further removed from the historical moment of its occurrence. Screenings may include The Last Stage, Distant Journey, Night and Fog, Judgment at Nuremberg, Shoah, Europa, Europa; Schindler's List; Train of Life; The Specialist; Photographer: A Film Unfinished. Critical readings by figures such as Giorgio Agamben, Jean Amery, Shoshana Felman, Geoffrey Hartman, Marianne Hirsch, Sidra Israhi, Dominick LaCapra, Alison Landsberg, Berel Lang, Michael Rothberg, and James Young. Required screenings Thursdays at 4 p.m.. Credit 3 units. A&amp;S: TH &amp; A&amp;S IQ: HUM EN: H</td>

<td>L75 JINE 487</td>
<td>Topics in Jewish and Near Eastern Studies: Readings in Midrash</td>
<td>3</td>
<td>The aim of this course is to learn to read Midrash, the literature of classical Rabbinic Biblical interpretation. Addressing the literary, historical and cultural context in which rabbinic Midrash developed, we get to know a variety of Midrashic collections covering a time span from late antiquity to the Islamic Middle Ages. These works were composed according to a complex set of exegetical and literary rules illustrated by the selected readings. Certain Midrashic genres reflect their origins in academic discourses, while others were delivered as public sermons, drawing on parables, legends and folk lore. Among the topics studied are: How did the Rabbis read the Bible? What is the relationship between the plain meaning of the Biblical text and the polyphone interpretations of Midrash? Is Midrash a commentary or a literary discourse in its own right? Initially the Midrashic logic may seem elusive from the viewpoint of a modern Western reader, in turn its creative thinking proves to be smart, playful, at times even slippery, and yet substantial. All texts are read in translation. Credit 3 units. A&amp;S: TH &amp; A&amp;S IQ: HUM</td>

L75 JINE 492 Adv. Sem: Europe’s “Jewish Question”: Emancipation, Antisemitism, & Jewish-Christian Confrontation
The so-called “Jewish Question” was a product of European modernity. It emerged in conjunction with the formation of modern states, Enlightenment projects for political reform, the decline of religious influence in society, and struggles over Jewish emancipation. In this seminar, students will examine the unusual career of this obsession from the 16th through the 20th century by focusing selectively on a number of illustrative episodes: Christian Hebraism and the Reformation; the Enlightenment assault on religious power; European debates on Jewish emancipation; the emergence of the “Jewish Question” in the 19th century; antisemitism as a modern political phenomenon; the renewed discourse of Jewish “ritual murder” at the turn of the 20th century; Zionism and other forms of Jewish nationalism; and the question of anti-Zionism in the reformation of the “Jewish Question” during the past half-century.

L75 JINE 4944 Advanced Seminar: The Inquisition in Europe, Asia and Latin America, 1200-1700
This seminar studies the history of the Inquisition from its beginnings in southern France in the first half of the 13th century up to the investigations undertaken by Dominicans and Franciscans in 17th-century Mexico and Peru. Along the way the seminar focuses upon other inquisitions in Europe (especially those made in Italy, Spain and Germany), and the hunt for heresy in Goa and the Philippines. This seminar reads inquisitional manuals (books on how to conduct an inquisition), and original inquisitional documents (the records of the trials and interrogations). Consequently, the history of heresy and witchcraft, as understood by people in the past and historians in the present, is discussed.

L75 JINE 4970 Empire and Messianism in the Middle East
Senior Seminar: This course looks at imperial politics in its relations to monotheistic messianic movements and ideologies in the Islamic Mediterranean from the late antiquity to the 16th century. Messianic beliefs offered political hope, rallied opposition against the existing rule, defined and ordered lived reality for imperial subjects, presented a political leitmotiv for rulers, and advocated a just sociopolitical order to be realized in the immediate or indefinite future. Thus, this course attempts to see how politics became messianic by its very ability to promise a better future. Despite the chronological scope of the course, we examine only specific ideas, practices and movements as case studies to study in depth various facets of messianic movements and thought in their geographic and historical context. We use primary sources, which are the main methodological focus of the course, and secondary literature. We aim to develop skills in identifying, reading, analyzing and dealing with primary sources in their variety and critically engaging modern scholarship on the political role of Messianism. Students write a term paper and several reports on preassigned readings, and make regular class presentations. Admission preference is given to graduating seniors in JINELC; but the course is open to all advanced students provided that they consult the instructor prior to enrolling. Knowledge of a relevant primary source language is highly desired but not required.

L75 JINE 49JK Advanced Seminar: Blood and Sacred Bodies: Ritual Murder and Host Desecration Accusations
This seminar follows the history of the Ritual Murder and Host Desecration accusations from the origins in 12th- and 13th-century Europe to the 20th century. It pays close attention to the social and political functions of the narratives; their symbolic importance in Christianity’s salvific drama; attacks on such beliefs from both within and outside the community of the faithful; the suppression and decline of the ritual murder accusation; the integration of Jews into European societies in the 19th century; and the reappearance of the blood libel in the aftermath of emancipation.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L75 JINE 49NR Advanced Seminar: Egypt and the Arab Spring: Middle Eastern Revolution in Historical Perspective
The uprisings of the Arab Spring of 2011 captivated global media and observers. The movements brought down established regimes in Tunisia, Libya, Yemen and Egypt. The focus of this course is to understand the historical background and primary contemporary issues that have shaped Egypt’s Arab Spring, and to examine the huge popular effort to document Egypt’s revolution. Each student designs, researches and writes a 25-page paper on a topic of his or her choice related to the Arab Spring. Prior knowledge of the Middle East suggested but not required.
Same as L22 History 49NR
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L75 JINE 49SC Advanced Seminar: Incredible India?
Yoga, the Kamasutra, nonviolence, poverty, royalty, population, asceticism, vegetarianism, anticolonialism, democracy, Hinduism: All these and more signify the idea of India. This course uncovers the history by which “India” has come to occupy a privileged position in the global imaginary. We view the circulation of India as a cultural resource over the centuries and ask what popular assumptions are made about it at a time of heightened globalization; how does the idea of India circulate and through what kinds of pathways; what political role does this seemingly cultural notion of India fulfill? Finally, what is the connection between such an idea of India and the rise of a new, U.S. centered, imperial formation?

Korean

The Department of East Asian Languages and Cultures (EALC) offers a major and a minor in Korean language and culture. As a major in Korean, a student can expect to gain some proficiency in the language and to acquire a foundation in Korean literature, history and culture from earliest times to the present. All students majoring in Korean must complete first- and second-level Korean or its equivalent. They also must complete a prerequisite 200-level Civilization course and two literature/culture courses, as well as additional advanced-level courses (300- or 400-level). In addition, all prime majors must complete the required EALC Capstone Experience.

The department strongly encourages overseas study of Korean language and culture. All majors and minors are expected to maintain at least a B- average in all departmental courses.

Language Placement: Placement tests are required for all students entering our language programs, with the exception of those students who have had no previous knowledge of the language and are planning to enroll in the first semester of the first year of instruction. Students who test into second-year Korean and satisfactorily complete (with a grade of B– or better) at least one semester of language study may petition for 3 units of retroactive credit; students who test into third year or above and satisfactorily complete (with a grade of B– or better) at least one semester of language study may petition for 6 units.
of retroactive credit. Credit is limited to 3 units for testing into second year and 6 units for testing into third year or above. Please note that students with native language proficiency as determined by the individual language section, as well as students who enroll in courses below their placement level, are ineligible for retroactive credit units. Students who misrepresent their language proficiency so as to gain entrance to a course at the elementary or intermediate level will be dropped from that course.

Faculty

For a list of affiliated faculty, please visit the Department of East Asian Languages and Cultures faculty (p. 333) page.

Majors

The Major in Korean Language and Culture

Units required: 24 upper-level (300-level or above) units

Prerequisites:
1. First- and second-level Modern Korean or the equivalent
2. Korean 223C Korean Civilization

Requirements:
24 advanced (300-level and above) units to include:
1. Korean 352 Literature of Modern and Contemporary Korea
2. Korean 355 Topics in Korean Literature and Culture
3. 400-level Capstone course (prime majors)
   • Korean prime majors may satisfy their capstone requirement in one of two ways, both of which require a presentation at the EALC Senior Symposium in the spring.
   a) Successful completion of a senior honors thesis. This option, which also entitles the student to Latin Honors, requires a minimum of a 3.65 GPA. The thesis is researched and written over two semesters, for a total of 6 units, which are in addition to the 24 upper-level units required for the major.
   b) Successful completion of an approved 400-level seminar course, to be taken in the senior year. (This course may be included among the 24 advanced units for the major.)

Additional Information
1. With adviser approval, students may include one course in a related area offered outside the department among the 24 advanced units. (For example, a student with focus on Korea/Korean may take one course in Film and Media Studies or Art History that focuses on Korea.) With adviser approval, students may count one course from another area within the department among the 24 advanced units. (For example, a student with focus on Korea/Korean may take one course in either Chinese or Japanese.)
2. Students must earn at least a B- in language courses in order to continue to the next level. They must also maintain at least a B- average in all required courses for the major. Students who do not meet this requirement may either repeat the course(s) in question or earn at least a B- in an approved equivalent course or courses (either during the summer or in a study abroad program).
3. Courses for the major may not be taken Credit/No Credit.
4. Normally, no more than 6 units of transfer or study abroad non-language courses may be applied to the major.
5. Normally, no more than 3 units of Independent Study may be counted toward the required upper-level 24 units.
6. EALC awards Departmental Honors to majors as an acknowledgment of exemplary work in the major.

Minors

The Minor in Korean Language and Culture

Units required: 18 units

Requirements:
• Two semesters of Korean language
• At least 9 units must be 300-level or above
• And the following three courses:
  Korean 223C Korean Civilization  3  
  Korean 352 Literature of Modern and Contemporary Korea  3  
  Korean 355 Topics in Korean Literature and Culture  3

Additional Information
• Students must earn at least a B- in their language courses in order to continue to the next level. They must also maintain at least a B- average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course(s) in question or successfully complete an approved equivalent course or courses (either during the summer or in a study abroad program).
• Korean 437 and Korean 438 can fulfill either the language requirement or an upper-level elective requirement.
• Courses for the minor may not be taken Credit/No Credit.
• Normally, no more than 3 units of transfer or study abroad non-language courses may be applied to the minor.
Courses

L51 Korean 117D First-Level Modern Korean I
Introduction to the modern spoken and written language of Korea. Acquisition of the fundamentals of grammar, morphology and oral communication skills. Note: students with some previous Korean language background must take the placement examination. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L51 Korean 118D First-Level Modern Korean II
Emphasis is placed upon the understanding, speaking, reading and writing of Korean. Continuation of the acquisition of the fundamentals of grammar and morphology. Prerequisite: grade of B- or better in Korean 117D or placement by examination. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L51 Korean 217 Second-Level Modern Korean I
Second-year course in standard modern Korean. Emphasis is placed upon speaking, reading and writing of modern Korean. Prerequisite: grade of B- or better in Korean 118D or placement by examination. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L51 Korean 218 Second-Level Modern Korean II
Continuation of second-year course in standard modern Korean. Prerequisite: grade of B- or better in Korean 217 or placement by examination. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L51 Korean 223C Korean Civilization
A comprehensive introduction to the study of Korea. Following a historical survey, the course examines key cultural themes and social institutions and explores aspects of Korea's relationship with its East Asian neighbors. Attention also is paid to contemporary issues, social problems and cultural trends. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L51 Korean 298 Korean Undergraduate Teaching Assistants
In this course undergraduate students with native or near native proficiency in Korean assist in the first-, second-, and third-level modern Korean language classes by serving as one-on-one session tutors, lab drill and practice session tutors, or discussion leaders under close supervision of the faculty. Students can only enroll in the class with permission from the faculty member. Interested students must contact mmkim@wustl.edu for information. Credit 1 unit.

L51 Korean 299 Independent Study
Prerequisite: permission of the instructor and the department chair. Credit variable, maximum 6 units.

L51 Korean 346 Topics in East Asian Religion
This course explores one of the various topics in East Asian Religions. Same as L23 Re St 346 Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM EN: H

L51 Korean 352 Literature of Modern and Contemporary Korea
This undergraduate course surveys the major writers and works of 20th-century Korean literature. During the 20th century, Korea went through a radical process of modernization. From its colonization by Japan, to its suffering of a civil war within the cold war order, to its growth into a cultural and economic powerhouse, Korea's historical experience is at once unique and typical of that of a third-world nation. By immersing ourselves in the most distinctive literary voices from Korea, we examine how the Korean experience of modernization was filtered through its cultural production. In class discussion, we pay special attention to the writers' construction of the self and the nation. How do social categories such as ethnicity, class, gender and race figure in the varying images of the self? And how do these images relate to the literary vision of the nation? Along the way, we observe the prominent ideas, themes and genres of Korean literature. This class combines discussion with lecture with students strongly encouraged to participate. All literary texts are in English translation and no previous knowledge of Korean is required. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L51 Korean 355 Topics in Korean Literature and Culture
A topics course in Korean literature and culture; topics vary by semester. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD EN: H

L51 Korean 403 Topics in East Asian Religions
Topics in East Asian Religions is a course for advanced undergraduate and graduate students on specific themes and methodological issues in East Asian religions. Same as L23 Re St 403 Credit 3 units. A&S: TH, CD A&S IQ: HUM EN: H

L51 Korean 417 Third-Level Modern Korean I
Third-year course in standard modern Korean. Emphasis is placed upon reading and writing of modern Korean. Prerequisite: grade of B- or better in Korean 218 or placement by examination. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS

L51 Korean 418 Third-Level Modern Korean II
Continuation of third-year course in standard modern Korean. Emphasis is placed upon reading and writing. Prerequisite: grade of B- or better in Korean 417 or placement by examination. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS

L51 Korean 4181 Gender and Sexuality in East Asian Religions
In this course we explore the role of women in the indigenous religious traditions of China, Japan and Korea (Confucianism, Daoism, Shamanism and Shinto), as well as Buddhism, Christianity and Islam. We begin by considering the images of women (whether mythical or historical) in traditional religious
scriptures and historical or literary texts. We then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses; shamans and mediums; hermits and recluses; and ordinary laywomen — both historically and in more recent times. Class materials include: literary and religious texts; historical and ethnological studies; biographies and memoirs; and occasional videos and films. Prerequisites: This class is conducted as a seminar, with minimal lectures; substantial reading and writing; and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, need to obtain the instructor's permission before enrolling.

Same as L23 Re St 418
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD EN: H

L51 Korean 427 Fourth-Level Modern Korean I
Fourth-year course in standard modern Korean (advanced level). Emphasis is placed on developing proficiency in all four areas of language skills (speaking, listening, reading and writing) beyond the intermediate level. Prerequisite: grade of B- or better in Korean 418 or placement by examination.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L51 Korean 428 Fourth-Level Modern Korean II
Continuation of the fourth-year course in standard modern Korean. Emphasis is placed upon the further development of speaking, listening, reading and writing, beyond the intermediate level. Prerequisite: grade of B- or better in Korean 427 or placement by examination.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L51 Korean 437 Contemporary Korean I: Topics in Korean Literature and Culture
Advanced- to high advanced-level Korean course in standard modern Korean. Emphasis is placed on developing an advanced level of reading proficiency in Korean and writing ability in Korean for an academic or professional purpose. This course to be taken in the fall semester. Prerequisite: grade of B- or better in Korean 418 or placement by examination with instructor's permission.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L51 Korean 438 Contemporary Korean II: Topics in Korean Literature and Culture
Continuation of Korean 437. Advanced- to high advanced-level Korean course in standard modern Korean. Emphasis is placed on developing an advanced level of reading proficiency in Korean and writing ability in Korean for an academic or professional purpose. This course to be taken in the spring semester. Prerequisite: grade of B- or higher in Korean 437 or placement by examination with instructor's permission.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L51 Korean 455 Topics in Korean Literature and Culture
Varied topics in Korean literature and culture. Subject matter varies by semester; consult current semester listings for topic.
Credit 3 units. A&S: LA, CD A&S IQ: LCD EN: H

L51 Korean 495 Guided Readings in Korean
This course normally is taken after successful completion of Korean 416 or by instructor's permission. May be repeated once. Prerequisite: instructor's permission.
Credit 2 units.

L51 Korean 497 Guided Readings in Korean
This course normally is taken after successful completion of Korean 418 or by instructor's permission. May be repeated once. Prerequisite: instructor's permission.
Credit variable, maximum 3 units. A&S: LA EN: H

Latin
The Department of Classics offers course work in the language, history, literature, archaeology and culture of ancient Rome. At the heart of these courses are classes in the Latin language. Students of beginning Latin master the grammar in two semesters and go on immediately, in the third semester, to read authors such as Cicero and Vergil. Students who have studied Latin in high school begin with a placement exam, and many can begin their studies in more advanced courses. Students have the opportunity to study numerous Latin authors, including the great poets Vergil and Ovid, the historians Livy and Tacitus, and the novelists Apuleius and Petronius. More advanced undergraduates often work alongside graduate students in our vigorous graduate program, and they also have the opportunity to do their own research or to assist in faculty members' research projects. It is a remarkable and dynamic environment, one that students find both rewarding and stimulating. Resources on campus supporting the study of Latin include the Wulfing Coin Collection, one of the largest collections of ancient coins owned by an American university.

Additional Information
Study Abroad: Washington University is associated with both the Intercollegiate Center for Classical Studies (ICCS) in Rome (http://sa.wustl.edu/index.cfm?FuseAction=Programs.ViewProgram&Program_ID=10117) and the College Year in Athens (CYA) (http://sa.wustl.edu/index.cfm?FuseAction=Programs.ViewProgram&Program_ID=10112). Students interested in studying in one of these programs should consult Professor Timothy Moore (tmoore26@wustl.edu), the study abroad adviser for Classics.

Faculty
For a list of affiliated faculty, please visit the Department of Classics faculty (p. 282) page.
Majors

Students interested in Latin should explore either the major in Classics (p. 283) or the major in Ancient Studies (p. 283) offered through the Department of Classics (p. 282).

Minors

Students interested in Latin should explore either the minor in Classics (p. 284) or the minor in Ancient Studies (p. 284) offered through the Department of Classics. (p. 282)

Courses

L10 Latin 101D Beginning Latin I
An introduction to Latin, the language of Ancient Rome and the European Middle Ages and Renaissance, and the most important source of English medical and scientific terms. Beginning with the foundations of Latin grammar, students work toward developing reading knowledge with the goal of reading literary texts. Students who have already begun their study of Latin should consult the chair of the department.
Credit 4 units. A&S: LA & A&S IQ: LCD, LS BU: HUM, IS

L10 Latin 102D Beginning Latin II
Continuation and completion of the program begun in Latin 101D. Prerequisite: Latin 101D or equivalent or permission of instructor.
Credit 4 units. A&S: LA & A&S IQ: LCD, LS BU: HUM, IS

L10 Latin 190D Intensive Elementary Latin I
An accelerated study of Latin grammar. For students with previous knowledge of Latin, graduate students outside of Classics, and for students willing to work at an accelerated pace.
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L10 Latin 210 Intensive Elementary Latin II
Completion of work begun in Latin 190D followed by readings in original Latin poetry and prose. Successful completion of Latin 210 with a grade of B+ or better allows the student to proceed directly to Latin 318C.
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: IS

L10 Latin 301 Introduction to Latin Literature I
Review of Latin grammar and syntax and development of reading skills and translation techniques through short readings from original texts in prose and poetry such as Caesar and Ovid. Prerequisites: Latin 102D or Latin 190D, placement by examination, or permission of instructor.

L10 Latin 3161 Introduction to Latin Literature II: Elementary Prose and Poetry
Appreciation of literary forms through study of selected elementary literary texts in Latin prose and poetry. Prerequisite: Latin 301, placement by examination or permission of the instructor.

L10 Latin 3171 Survey of Latin Literature: The Republic
A sampling of the major literary achievements of the last two centuries of the Roman Republic, including prose and verse authors. Readings are typically drawn from Catullus, Lucretius, Caesar, and Cicero. There will be regular, selective grammar review and discussion of translation strategies. Prerequisite: Latin 102D or Latin 190D with a grade of B+ or better, or Latin 301 and Latin 3161, or placement by examination.

L10 Latin 3181 Survey of Latin Literature: The Empire
Readings in the verse and prose literature of the Roman Empire, particularly its first two centuries, with targeted grammar review and stylistic analysis. Readings may be drawn from Vergil, Livy, Suetonius, or other appropriate authors. Prerequisite: Latin 102D with a grade of B+ or better, or Latin 301, or Latin 3161, or placement by examination.

L10 Latin 350W Writing about Latin Literature
Latin courses at the 300 level with enhanced writing requirements may be taken under this designation as writing-intensive courses. Required: permission of instructor.
Credit 3 units. A&S: TH, WI A&S IQ: HUM, LCD, WI BU: HUM EN: H

L10 Latin 370 Topics in Latin Literature
Study in selected problems, eras or generic sequences; specific topic for each semester in Course Listings. May be repeated for credit for study of different topics. Prerequisites: Latin 318C or permission of instructor.
Credit 3 units. A&S: TH BU: HUM

L10 Latin 400 Independent Study
Credit 3 units.

L10 Latin 401 Medieval Latin
Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS Art: HUM

L10 Latin 413 Latin Philosophical Writers
Readings among various writers of philosophy in Latin, ranging from Cicero to Seneca to Augustine. Texts vary; therefore, course may be taken more than once.

L10 Latin 415 Cicero

L10 Latin 416 Seneca
### L10 Latin 4161 Seneca: Philosopher and Friend
Seneca the Younger was a philosopher, politician, playwright and propagandist; he rose from the province of Spain to become tutor and adviser to Nero, only to fall from favor and commit suicide at the emperor's command. We will study Seneca's life and works, focusing on the *Epistulae Morales* and select philosophical treatises. We will pay special attention to issues of language and style, cultural and historical context, and ideological and philosophical content. Prerequisites: Latin 3171 and Latin 3181 (or equivalent) and sophomore standing or above.
Credit 3 units. A&S: TH, LA, CD A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM EN: H

### L10 Latin 419 Julius Caesar and His Image
Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS EN: H

### L10 Latin 421 Roman Comedy
Credit 3 units.

### L10 Latin 4215 Plautus
Readings from the comedies of Plautus. Discussion of play production in Republican Rome, reception and interpretation. The advanced-level Latin reading load is supplemented by secondary readings, quizzes and short reports. Prerequisites: Latin 3171 and Latin 3181 (or equivalent) and sophomore standing or above.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM EN: H

### L10 Latin 422 Lucretius
Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM

### L10 Latin 431 Vergil: The Aeneid
Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS Art: HUM

### L10 Latin 432 Horace on Poetry
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

### L10 Latin 433 Ovid
Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS EN: H

### L10 Latin 441 Roman Satire
Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS EN: H

### L10 Latin 444 Latin Prose Composition
Readings in Cicero coupled with exercises in composition of Latin prose, with attention to grammatical and idiomatic accuracy as well as elegance of style.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM

### L10 Latin 451 The Roman Historians
Credit 3 units. A&S: TH

### L10 Latin 465 Silver Latin Epic: Lucan
Lucan's epic poem about the civil war between Caesar and Pompey, written under Nero, investigates themes of individuality, citizenship, morality, and historical inevitability in Roman history. We will read selections from the poem, focusing on Lucan's literary models and poetic style; his treatment of the past and of historical figures like Caesar, Pompey and Cato; and Lucan's place in the political, philosophical and literary world of Neronian Rome. Prerequisites: Latin 3171 and Latin 3181 (or equivalent) and sophomore standing or above.
Credit 3 units. A&S: TH, LA, CD A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM EN: H

### L10 Latin 471 Elegiac Poetry
Credit 3 units. A&S: TH Art: HUM

### L10 Latin 493 Readings in Latin Prose: Apuleius
A survey of the major genres of Latin prose, history, oratory and philosophy. Authors may include Caesar, Cicero, Seneca, Tacitus. Aim is to develop reading facility and understanding.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS Art: HUM

### Latin American Studies
Latin American Studies is a gateway to the region and its cultures, politics and history. The major in Latin American
Studies (LAS) can be studied on its own, providing knowledge about a region valuable for employers across different fields and industries. Focusing on Latin America allows students to engage with one of the most fascinating historical trajectories in the world, to explore diverse cultures where the traditional and the modern are always negotiating, and to participate in vibrant business, intellectual and political scenes. Latin America is a region at the forefront of policy reform, embedded in the complex networks of global economics, development, social engagement and cultural expression. Because of the region's importance, the LAS major provides key skills for today's jobs.

A major or minor in Latin American Studies is also an excellent complement to any other major program. Latin America is the location of major U.S. trade partners, and Latin American immigrants constitute the largest segment of market growth in the U.S., including in the major economic markets of Boston, California, New York, Chicago, Texas and Florida. This makes the LAS major a great companion to a business degree. In this world, business majors and MBA graduates with a Latin American Studies background have a comparative advantage in the world market, as large corporations seek executives with a better understanding of the region's complex social, cultural and economic issues.

Pre-medical students and public health majors will find value in the fact that the growing Latino population and the diverse Latin American peoples are two major fields in the health care field. Majors in IAS, political science, economics and other social sciences can complete their studies by becoming experts in one of the most economically and politically complex regions in the world, a true policy laboratory. Scientists of all disciplines work in the region's spectacular biodiversity. LAS students can attend study abroad programs across the region, earn credit, and explore any field of study.

Latin America offers an increasing number of study abroad and fellowship opportunities. At Washington University, we have in place in-house programs in Chile, Mexico and Ecuador, with other countries forthcoming. Some of our students apply to other programs and fellowships with environmental, political and social organizations in the region. NGOs and institutions such as Fulbright, Comexus, the Ford foundation, Human Rights Watch and Greenpeace have a strong presence in Latin America, and students with a Latin American background have a wide array of fellowship and internship opportunities available to them.

Given these and more reasons, Washington University students are everyday more encouraged to look into Latin American Studies. In the job market, in the academic field and in the world at large, Latin America is the way to go! Latin American Studies alumni have gone on to work in the coffee industry, at the Center for International Policy and other nonprofit think tanks, or have pursued graduate degrees in such fields as international relations and public policy.

The Major in Latin American Studies

The major in Latin American Studies allows undergraduate students to pursue an in-depth study of Latin America across diverse disciplines, theoretical approaches and historical periods. Through regular courses, seminars and additional activities such as film series, programs abroad, lectures, and the like, students will explore the processes that resulted in the integration of the so-called New World and Western civilizations, from the discovery of America to the present. An essential aspect of this major is the focus on economic, social, and political dynamics corresponding to intercultural relations developed between indigenous cultures, Creole societies, European and North American nations.

This aspect of the major stresses the study of social change, migration, social movements, multiculturalism, inequality, violence and social justice, and combines regional analysis with critical interdisciplinary approaches. The program of study combines the analysis of urban environments, issues of education, gender, language, ethnicity, modernization and
border studies. It emphasizes transatlantic approaches as well as the study of topics related to autochthonous cultures in their conflictive interaction with Western traditions, systems of domination, values, and economic/political projects.

Focusing on Latin America allows students to engage with a fascinating historical trajectory that promotes a multifaceted reflection on colonialism, diversity issues, economic development, and international relations. The major has been designed to provide students with a historical background that will be instrumental both in itself, as an exciting field of specialization, and in combination with their pursuit of other fields of inquiry such as international relations, business, globalization, and the like. Latin America is a region embedded in the complex networks of global economics, development, social engagement, and cultural innovation.

The Latin American Studies major offers a sound, updated, and competitive approach to the study of the region both in its specificity and in its connections to the world, through the study of Latin America’s processes of internationalization and its changing position in global scenarios. This major has also been designed to further contribute to the university mission of improving engagement with race, ethnicity and diversity.

**Credit Requirements**

The major in Latin American Studies requires students to complete 30 credits. At least 24 units must be at the 300 level or higher and at least 9 units must be at the 400 level. All credits must be exclusive to the major and may not be double counted, unless the College of Arts & Sciences regulations state otherwise. Credits must be fulfilled as follows:

- 3 units for the successful completion of LatAm 165D Latin America: Nation, Ethnicity and Social Conflict, offered yearly. LatAm 165C can also fulfill this requirement.
- 3 units for the successful completion of an elective introductory class at the 100, 200 or 300 levels. Classes that fulfill this requirement must meet the approval of the Director of Undergraduate Studies. This requirement may also be fulfilled with an approved course abroad or with a 300-level elective approved by the DUS.
- 3 units in history or politics at the 300 level or higher. Courses may come from relevant offerings in the departments of History or Political Science, the International and Area Studies (IAS) program, or study abroad. Courses must be cross-listed with LatAm (L45) or approved by the DUS. Existing examples of courses include but are not limited to:
  - **Political Science**: LatAm 326B Latin American Politics (offered yearly); LatAm 4231 Contemporary Issues in Latin America (every two years).
  - **History**: LatAm 321C Introduction to Colonial Latin America (yearly); LatAm 322C Modern Latin America (yearly); LatAm 3220 Modern Mexico (every 2 to 3 years).
- **IAS**: LatAm 356 Andean History: Culture and Politics (yearly); LatAm 4201 International Relations of Latin America (yearly); LatAm 4661 Populism and Neopopulism in Latin America (yearly); LatAm 4660 Geographies of Development in Latin America: Critical Perspectives and Contemporary Challenges (yearly).
- 3 units in literary or cultural studies at the 300 level or higher. These may include courses offered by the departments of Romance Languages and Literatures; Art History and Archaeology; LASP home-based courses; and study abroad. Courses include but are not limited to: LatAm 343 Latin American Literatures and Cultures (every semester); LatAm 331 Hispanic Art/Arte Hispano (yearly); LatAm 3800 Survey of Hispanic Cultures; LatAm 4500 Seminar on Hispanic Cultures; LatAm 381 Mexican Visual Culture; and LatAm 3824 Film and Revolution in Latin America.
- 3 units in anthropology or pre-Columbian cultures at the 300 level or higher. These courses may come from offerings in the anthropology department or study abroad. These include: LatAm 3351 The Ancient Maya: Archaeology and History (yearly); LatAm 3092 Indigenous Peoples and Movements in Latin America (yearly), LatAm 3093 Anthropology of Modern Latin America; and Anthro 3093 Anthropology of Modern Latin America.
- 9 units of elective credit at the 300 level or higher. At least 3 of these units must be fulfilled at the 400 level. 3 units of elective credit may be fulfilled through an honors thesis (LatAm 486) or a Latin American Studies Special Project (LatAm 425).
- 6 units of a Latin American Seminar. Seminar courses are 400-level classes designed as such, taught by core LASP faculty on theoretical issues related to the region. These include Latin American Cultural Studies (LatAm 461); LatAm 457 Gender and Modernity in Latin America; LatAm 463 Seminar on Urban Cultures in Latin America; LatAm 464 Nation and Desire in Latin America; and LatAm 483 Bodily Injuries: Violence, Fear and Representation in Latin America.

**Capstone.** Prime majors in Latin American Studies must fulfill their capstone requirement by writing an honors thesis (if the student meets the College of Arts & Sciences requirements to do so), writing a Latin American research paper (LatAm 425) or completing the two LAS seminar classes with a grade of B+ or better.

**Language requirement.** LASP requires all majors to complete a language requirement in Spanish or Portuguese. The Spanish requirement may be fulfilled by:

- Successful completion of Spanish Level 4: Grammar and Composition (Span 307D) with a grade of B- or higher.
• Placing in Spanish Advanced Reading and Writing (Span 308E) through the Spanish program's placement test as a freshman.
• Native or heritage speaker status, as determined by the Director of Undergraduate Studies in LASP or in Spanish.
• Successful completion of a program abroad, conducted in Spanish, with a minimum of 3 credit units in the target language.

The Portuguese requirement may be fulfilled by:

• Successful completion of Reading and Conversation II: Intermediate Portuguese (Portug 220) with a grade of B- or higher.
• Native or heritage speaker status, as determined by the Director of Undergraduate Studies, in LASP or in Spanish.
• Successful completion of a program abroad, conducted in Portuguese, with a minimum of 3 credit units in the target language.

Study Abroad

All majors in Latin American Studies must complete at least a study abroad experience in Latin America. This requirement may be fulfilled by any Focus (p. 412) program in the region, or by completion of a summer or semester program in the region approved by the Office of Overseas Programs.

Students who attend study abroad programs may request credit for appropriate courses at the 300 level, approved by the Director of Undergraduate Studies. A maximum of 9 credits for one semester or equivalent of study abroad, or 12 credits for more than one semester, is allowed. LatAm 165D and 400-level credit must be completed in residence at Washington University.

Students unable to attend a study abroad program may complete an additional 3 units of 300-level elective credit instead.

For previous Latin American Studies major requirements, please visit our website (https://lasprogram.wustl.edu/old-major-requirements).

Minors

The Minor in Latin American Studies

The minor in Latin American Studies allows undergraduate students pursuing other major programs to complement their existing curriculum with a study of Latin America across diverse disciplines, and the way in which the region engages with the Western World, to which it belongs, at large. The minor in Latin American Studies is conceived as an option for students across a variety of disciplines in the social sciences, the humanities, the sciences, the pre-med program, business and engineering to add knowledge about Latin America to their professional portfolio. The vast relations that the United States has with Latin America in all fields make the minor in Latin American Studies

the source of valuable skills for our existing population. It also allows students in other major programs to access discussions on socioeconomic and ethnic diversity in one of the regions central to those debates in the world.

Credit Requirements

The minor in Latin American Studies requires students to complete 18 credits. At least 15 units must be at the 300 level or higher and at least 3 units must be at the 400 level. All credits must be exclusive to the minor and may not be double counted, unless the College of Arts & Sciences regulations state otherwise. The requirements for the minor mirror some requirements for the major as specified above. Credits must be fulfilled as follows:

• 3 units for the successful completion of LatAm 165D Latin America: Nation, Ethnicity and Social Conflict. LatAm 165C can also fulfill this requirement.
• 3 units in history or politics at the 300 level or higher. Courses may come from relevant offerings in the departments of History or Political Science, the International and Area Studies program, or study abroad.
• 3 units in literary or cultural studies at the 300 level or higher. These may include courses offered by the departments of Romance Languages and Literatures; Art History and Archeology; LASP home-based courses; and study-abroad.
• 3 units in anthropology or pre-Columbian cultures at the 300 level or higher. These courses may come from offerings in the anthropology department or study abroad.
• 3 units of elective credit at the 300 level or higher.
• 3 units of a Latin American Seminar. Seminar courses are 400-level classes designed as such, taught by core LASP faculty on theoretical issues related to the region.

Language requirement. LASP requires all minors to complete a language requirement in Spanish or Portuguese. The Spanish requirement may be fulfilled by:

• Successful completion of Span 202 Intermediate Spanish II with a grade of B- or higher.
• Placing in Span 307D Spanish Level 4: Grammar and Composition through the Spanish program's placement test as a freshman.
• Native or heritage speaker status, as determined by the Director of Undergraduate Studies in LASP or in Spanish.
• Successful completion of a program abroad, conducted in Spanish, with a minimum of 3 credit units in the target language.

The Portuguese requirement may be fulfilled by:

• Successful completion of Portug 215 Reading and Conversation I with a grade of B- or higher.
• Native or heritage speaker status, as determined by the Director of Undergraduate Studies in LASP or in Spanish.
• Successful completion of a program abroad, conducted in Portuguese, with a minimum of 3 credit units in the target language.

### Study Abroad

All minors in LASP are strongly encouraged, but not required, to pursue a study abroad program in the region. Students who attend study abroad programs may request credit for appropriate courses at the 300 level, approved by the Director of Undergraduate Studies. A maximum of 6 credits is allowed. LatAm 165D and the Seminar requirement must be completed in residence at Washington University.

For previous Latin American Studies minor requirements, please visit our website (https://lasprogram.wustl.edu/old-minor-requirements).

### Courses

---

**L45 LatAm 1118 Freshman Seminar: Women in Latin American History**

Women have been active players in the construction of Latin American nations. In the last two decades, leading scholars in the field have taken up the challenge of documenting women's participation. This research explosion has produced fruitful results to allow for the development of specialized courses. This course looks at the nation-building process through the lens of Latin American women. The course examines the expectations, responsibilities and limitations women confronted in their varied roles from the Wars of Independence to the social revolutions and dictatorial regimes of the 20th century. Besides looking at their political and economic lives, students will explore the changing gender roles and relations within marriage and the family, as well as the changing sexual and maternal mores. 

Same as L22 History 1118

Credit 3 units. BU: BA, IS

---

**L45 LatAm 165D Latin America: Nation, Ethnicity and Social Conflict**

This class is an interdisciplinary introduction to the academic study of modern and contemporary Latin America. The course focuses on main issues in Latin American politics, history and culture, both in the continent at large and in the specific regions and subregions within it. The class will particularly explore topics such as nation creation, national identity, modes of citizenship, the role of race, ethnicity, gender and class in the region's historical development, as well as social and political conflicts, which have defined the region over the centuries. This course is suggested before taking any other upper-level courses on Latin America or going abroad to other countries, and required for all Latin American Studies majors and minors. Through the course, students gain basic bibliographic knowledge and experience with research tools for a comparative study of Latin American politics society and culture. 

Prerequisites: none.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

---

**L45 LatAm 301L Historical Methods: Latin American History**

This is a small-group reading course in which students are introduced to the skills essential to the historian's craft. Emphasis is on acquiring research skills, learning to read historical works critically, and learning to use primary and secondary sources to make a persuasive and original argument. Consult Course Listings for current topics. Required for history majors. Preference given to history majors; other interested students welcome.

Same as L22 History 301L

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L45 LatAm 305 Survey of Mexican Cultures**

This course provides an interdisciplinary introduction to the study of Mexico, with a particular focus on the 20th and the 21st century. The class will cover the main historical and cultural processes of Mexico in this period: The Mexican Revolution; the consolidation of a one-party political system; the construction of Mexican national identity and the arrival of neoliberalism. The course also focuses on the main aspects of Mexico's relationship to the United States: the Free Trade Agreement, the history of Mexican migration and the Drug War. From this framework, the course touches upon questions of race (particularly the politics of racial mixture), modernization, construction of social identities and the unique nature of governance in Mexico, due to the single-party regime. It also touches on Mexico's specificities and particularities due to the uniqueness of situation as the southern neighbor of the United States. Prerequisites: none.

Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

---

**L45 LatAm 3092 Indigenous Peoples and Movements in Latin America**

This course focuses on the contemporary lives and political struggles of Indigenous Peoples in Latin America, with specific focus on Ecuador, Peru, and Bolivia. Through course lectures, ethnographic texts, and four in-depth case studies, we explore how the politics of Indigeneity articulate with political and economic processes including neo/colonialism, global capitalism, state transformation and social movement struggle. Themes include: demands for territory and autonomy; environmentalism and natural resource exploitation; gender and economic inequality; race, racism and political violence; language and education; and the complexities of building multicultural or “plurinational” democracies.

Credit 3 units. A&S: SS, CD, SD A&S IQ: LCD, SSC Arch: SSC Art; SSC BU: IS

---

**L45 LatAm 3093 Anthropology of Modern Latin America**

A survey of current issues in the anthropological study of culture, politics and change across contemporary Latin American and the Caribbean. Topics include machismo and feminismo, the drug war, race and mestizaje, yuppies and revolutionaries, ethnic movements, pop culture, violence, multinational business, and the cultural politics of U.S.-Latin American relations. Attention is given to the ways that anthropology is used to understand complex cultural and social processes in a region thoroughly shaped by globalization.

L45 LatAm 310C Ancient Civilizations of the New World
An examination of the Inca empire in Peru, and the Maya and Aztec empires in Mexico, through the inquiry into the roots, development, form, and evolutionary history of pre-Columbian civilization in each region from its earliest times to the rise of the classic kingdoms. Examples of respective artistic accomplishments are presented and discussed.
Same as L48 Anthro 310C
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Arch: SSC Art: AH BU: HUM

L45 LatAm 321C Introduction to Colonial Latin America
This course surveys the history of Latin America from the pre-Columbian civilizations through the Iberian exploration and conquest of the Americas until the Wars of Independence (roughly 1400–1815). Stressing the experiences and cultural contributions of Americans, Europeans and Africans, we consider the following topics through primary written documents, firsthand accounts, and excellent secondary scholarship, as well as through art, music and architecture: Aztec, Maya, Inca and Iberian civilizations; models of conquest in comparative perspective (Spanish, Portuguese and Amerindian); environmental histories; consolidation of colonialism in labor, tributary and judicial systems; race, ethnicity, slavery, caste and class; religion and the Catholic Church and Inquisition; sugar and mining industries, trade and global economies; urban and rural life; the roles of women, gender and sexuality in the colonies.
Geographically, we cover Mexico, the Andes and, to a lesser extent, Brazil, the Southwest, Cuba, and the Southern Cone. Premodern, Latin America.
Same as L22 History 321C
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: HUM, IS

L45 LatAm 3220 Modern Mexico
This course is designed to provide students with an overview of the political, social, economic and cultural history of Mexico from the era of Independence (roughly 1810) to the present. Lectures outline basic theoretical models for analyzing historical trends and then present a basic chronological historical narrative.
Same as L22 History 3220
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: HUM, IS EN: H

L45 LatAm 322C Modern Latin America
This course aims to present a survey of Latin American history from Independence to the present. Topics to be covered include the Wars of Independence; caudillismo; nationalism; liberalism; slavery and indigenous peoples; urbanization, industrialization and populism; ideas of race & ethnicity; the Mexican and Cuban Revolutions; U.S. intervention; modernity, modernism and modernization; motherhood and citizenship; the Cold War; terror and violence under military dictatorships and popular resistance movements. While the course aims to provide students with an understanding of the region, it will focus primarily on the experiences of Mexico, Cuba, Brazil, Argentina and Central America.
Same as L22 History 322C
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS

L45 LatAm 326B Latin American Politics
This course is an introduction to the politics in Latin America, focusing on the trend toward the establishment of democracy.

We examine the impact of political culture, economic development, and the legacy of authoritarian regimes on contemporary politics. The course also reviews many of the most pressing challenges confronting governments Latin American governments: the role of the military in politics, the reform of political institutions, threats from radical guerrillas and drug traffickers, debt and economic restructuring, and relations with the United States. Country studies focus on Argentina, Brazil, Chile, Peru, Mexico, and Nicaragua. Prerequisites: 100-level introductory course in Political Science or its equivalent in History or IAS.

L45 LatAm 331 Hispanic Art/Arte Hispano
This course focuses on the most important movements, artistic expressions and its representatives of the art history of Latin America and Spain. From the pre-Columbian art of the Mayas, Aztecs and Incas, to the syncretism of Postcolonial Latin American art, the Mexican Muralism and the self-reconstruction portraits of Mexican artist Frida Kahlo to the Chicano Art in the U.S.A. From the Medieval paintings of religious Spain, to the criticism of the Spanish nobility by Diego Velazquez, the Spanish Civil War of Guernica by Pablo Picasso, to the Surrealism of Salvador Dali and Antonio Gaudi. The students visit the St. Louis and the Kemper Art Museums. Prerequisite: Span 308E. May be used for elective credit in the Spanish major or minor. In Spanish.
Same as L38 Span 331
Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: IS EN: H

L45 LatAm 3351 The Ancient Maya: Archaeology and History
This course focuses on the ancient Maya civilization because there are many exciting new breakthroughs in the study of the Maya. The Olmec civilization and the civilization of Teotihuacan in the Valley of Mexico are considered as they related to the rise and development of the Maya civilization. The ancient Maya were the only Pre-Columbian civilization to leave us a written record that we can use to understand their politics, religion and history. This course is about Maya ancient history and Maya glyphic texts, combined with the images of Maya life from their many forms of art. The combination of glyphic texts, art and archaeology now can provide a uniquely detailed reconstruction of ancient history in a New World civilization.

L45 LatAm 3352 Spanish-American Literature of the Long 19th Century
This survey examines the changing roles of literature and its creators during the period that saw the end of the powerful Spanish empire and the emergence of the political framework of independent nations we are familiar with today. Students are introduced to prominent themes such as independence writing, the experience of race in literature, romanticism, civilization vs. barbarism, the appeal of literature to popular classes, modernismo, the place of literature in nation building and in shaping national identity, and the idea of the past as present.
Prerequisite: Span 307D or permission of instructor; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. In Spanish.
Same as L38 Span 3352
L45 LatAm 3354 Ancient Mesoamerica
Mesoamerica encompasses the Pre-Columbian complex societies of Mexico and upper Central America, including Guatemala, Belize, and parts of Honduras and El Salvador. It was an agrarian world of great and enduring cities, far-flung trade networks, transcendent religions, kingdoms and empires. This survey lecture course begins with the pioneering hunters and gatherers, reviews the establishment of farming communities and the first Olmec Formative states, the flowering of highland Mexican Classic Period Teotihuacan and other great cities like Taja in Veracruz, the dynasties of the lowland Maya and summarizes with the Aztec Empire and the period of the Spanish Conquest. The course touches on the many and diverse other cultures that contributed to this vibrant world.

Credit 3 units. A&S: TH, CD  A&S IQ: HUM, LCD, LS  EN: H

L45 LatAm 335C Spanish-American Literature I
A survey of major figures and literary trends in Spanish America from 1492 to Modernismo (1880). Emphasis on the writings of either Colón or Columbus, Cortés, Bernal Díaz, Las Casas, Inca Garcilaso de la Vega and Aztec reactions to the Conquest in the early period and on Sor Juana in colonial times. After the period of independence from Spain (1810–24), the focus is on the literary representation of the making of the new nations, and cultural autonomy. Readings include chapters of a picaresque novel, the representation of dictatorship, civilization vs. barbarism, the gaucho epic, and 19th-century fiction. Lectures and class discussions of the readings; exams, papers, and short reports. Prerequisites: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. In Spanish.
Same as L38 Span 335C

L45 LatAm 336C Spanish-American Literature II
A survey of major Latin American literary works focusing on canonical works of the 20th and 21st centuries in their cultural and historical contexts. The course includes discussions of major literary movements such as the avant-gardes, the Boom, and the post-Boom. Other topics may include the literary and cultural responses to revolution, dictatorship and the evolving definitions of Latin America. Authors may include Quiroga, Neruda, Guillén, Vallejo, Borges, Cortázar, Rulfo, Carpentier, García Márquez, Poniatowska, Fuentes, Ferré and others. Prerequisites: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. In Spanish.

L45 LatAm 343 Latin American Literatures and Cultures
How did Latin America become Latin America? This course explores the different inventions and redefinitions of the region through its literatures and cultures. Beginning with the encounter of Europeans with America, students engage themes like colonization and colonialism, urban and rural cultures, nation formation, modernization, media and popular culture, as well as gender and race relations. Authors studied may include Colón, Sor Juana, Sarmiento, Neruda, Borges, García Márquez, or Morejón. Prerequisites: Spanish 308E or concurrent enrollment in 308E. Taught in Spanish.

L45 LatAm 356 Andean History: Culture and Politics
Since pre-Columbian times, the central Andean mountain system, combining highlands, coastal and jungle areas, has been the locus of multietnic politics. Within this highly variegated geographical and cultural-historical space, emerged the Inca Empire, the Viceroyalty of Peru — Spain's core South American colony, and the central Andean republics of Ecuador, Peru and Bolivia. Taking a chronological and thematized approach, this course examines pre-Columbian Andean societies, Inca rule, Andean transformations under Spanish colonialism, post-independence nation-state formation, state-Indian relations, reform and revolutionary movements, and neo-liberal policies and the rise of new social movements and ethnic politics. This course focuses primarily on the development of popular and elite political cultures, and the nature and complexity of local, regional and national power relations.
Same as L97 IAS 356
Credit 3 units. A&S: SS, CD  A&S IQ: LCD, SSC BU: IS EN: S

L45 LatAm 364 Anarchism: History, Theory, and Praxis
This course analyzes the origins, historical trajectories, and influence of anarchism from its classical period (1860s-1930s) until the present. It examines the major personalities, complex ideas, vexing controversies, and diverse movements associated with anarchist-collectivism, anarcho-communism, individualist anarchism, anarcho-syndicalism, anarchist feminism, green anarchism, lifestyle anarchism, and poststructuralist anarchism. In doing so, it explores traditional anarchist concerns with state power, authority, social inequality, capitalism, nationalism, imperialism and militarism, and the rise of new social movements and ethnic politics. This course focuses primarily on the development of popular and elite political cultures, and the nature and complexity of local, regional and national power relations.

L45 LatAm 3824 Film and Revolution in Latin America
This class is a Writing Intensive course focused on the study of the way in which four landmark Latin American revolutions (The Independence Wars, The Mexican Revolution, The Cuban Revolution and The Bolivarian Revolution) are represented in cinema. Each one of these revolutions constitutes a unit of study, and students are expected to work with historical texts, films and works of film theory and criticism for each one of them. The course engages in subjects such as the difference between fiction and nonfiction films when representing history, the politics that underlie specific representations; the way in which cinema questions and revises ideas developed by historians; and the uses of film in creating popular views of history in Latin America. Students develop a research project comparing two revolutionary processes over the semester. Prerequisite: L97 IAS 165C
L45 LatAm 4107 Latin America and the Rise of the Global South
The rise of the global south — and the reordering of global geopolitics, economics and cultural imaginaries — is characterized by progressive change and intense conflict. Economic growth coincides with the impacts of global warming, the assault on natural resources, the rise of new consumers and the entrenchment of deep inequalities. We also see the emergence of cultural and political formations that range from the horrific to the inspiring. Latin America is a central node of the new global south. Here history takes unpredictable turns in the face of declining U.S. hegemony, the economic growth of Brazil, legacies of militarism and political violence, a feverish attack on nature, resurgent economic nationalism, and defiant "anti-globalization" movements. Through close reading of contemporary ethnographies of Latin America we explore emergent cultural and political-economic processes in the region, we consider south-south articulations (theoretical, cultural, political-economic) between Latin America, China, Africa and India, and we reflect on the changing role, meaning and relationships of the United States in the region.

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC EN: S

L45 LatAm 4201 International Relations of Latin America
This course examines Latin American foreign relations in the world from the 1820s to the present with a primary emphasis on the period since 1945. Focusing on inter-state and transnational relations, it seeks to historically contextualize and analyze long term patterns and trends between Latin American states and between Latin America and the United States, Europe, and the global South. Given Latin America’s shared experience with imperialism and more recently with neo-imperialism, special attention will be paid to the ways Latin America has sought to manage and/or resist foreign domination, especially U.S. hegemonic pretensions. To this end it will analyze patterns of inter-American conflict and cooperation. When, why, and under what conditions Latin America articulated an independent foreign policy, forged anti-imperialist blocs, embraced U.S. sponsored diplomatic efforts and military alliances, and pursued Latin American unity and solidarity will be closely examined. To better understand the continuities, discontinuities, contradictions, and complexities of Latin American foreign policy, this course will also assess the influence of changing regional and national political cultures from both a theoretical and a historical perspective. In doing so, it explores how elite culture, the balance of domestic social forces, ideological and economic development, and shared cultural identities and meanings informed national political cultures and how these in turn shaped Latin American foreign policies.

L45 LatAm 4231 Contemporary Issues in Latin America
How do the institutional designs of contemporary democratic governments help us understand the nature of participation and representation? We concentrate on variations in the powers granted presidents by constitutions as well as the institutional determinants of whether executives are likely to find support for their policies in the legislature. In addition, we explore how incentives established by electoral laws influence the priorities of members of congress. Given all these variations in democratic institutional design, can voters go to the polls with the confidence that politicians will implement the economic policies for which their parties have long stood or which they promised in their campaigns?
Same as L32 Pol Sci 4231

L45 LatAm 4240 Latin American Literature and Theory: Reading the State, Culture and Desire
In this course, we pair literary and theoretical texts in order to hone a way of reading in which theory and literature are mutually informative, provocative and inspiring. The idea of these loose groupings is not to prescribe a particular relationship between given literary and theoretical texts but rather is a way to begin negotiating the necessarily multiple relationships of theory and literature. These pairings come to seem more artificial over the course of the semester as we trace a network of relations that begins to look more and more like the Borgesian map that covered up the entire territory it described. The object of the course is, thus, not to define or prioritize a particular set of relations but rather to practice a way of reading literature theoretically and theory literarily, by which the strengths of both are allowed to come to the forefront in their complexity. Thematically, the course has several nuclei: the triangulation of State, culture and art (Piglia/Foucault, Burman/Agamben); a psychoanalytic approach to art as desire (Lispector/Lacan/...
Cixous, and finally, a third nucleus about which the first two comingle completely: "post-State," proliferating desire, ibidinal economies wherein the State is anachronism and failure (Artt/Deleuze; Sorín/Virilio/Sitrin, Sassen; Bolano/Zizek). Readings may include: Piglia, Foucault, Agamben, Arlt, Deleuze, Virilio, Sassen, Borges, Benjamin, Bolano, Zizek, Lispector, Lacan, Cixous, as well as the films Garaje Olimpo and Historias minimas. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish. Same as L38 Span 424

L45 LatAm 4282 Voice Into Print: The Art of Storytelling in Spanish-American Short Story
The short story has been a central part of the extraordinary originality and vitality of Spanish American writing, and it enjoys great popularity among scholars and general public alike. Integrating a wide range of complementary sources (critical essays, paintings, film), this course brings together the best examples of the genre that span over a hundred years of the history of Spanish American literature and exemplifies a variety of themes and forms: from the fantastic to the "magical-realist," from crime fiction to romance, from rural to urban. Special emphasis is placed on the topics of gender, ethnicity, religious syncretism, political resistance, and popular culture. Students familiar with the "canonical" works of Quiroga, Borges, Rufio, Fuentes, Cortazar, Garcia Marquez or Valenzuela discover many more vibrant voices representing a variety of national literatures: Sommers and Roa Bastos (Paraguay), Ponte, Bobes and Padura (Cuba), Vega and Ferré (Puerto Rico), Onetti and Peri Rossi (Uruguay). Significant selections of pertinent criticism and the connections between print media or print culture and power worthwhile. This long century was the most war-torn in the region's history. Not only did writers engage issues of war on what was almost a daily basis, but war generated a wealth of new modes of literature. Debates on the slave trade and abolition also occurred during the 1800s, and largely in writing. And while places such as Lima, Peru and Mexico City were established printing centers during the Iberian occupation of the Americas, true printing revolutions were not widespread until during and after the wars for independence. One of the results to emerge during the first third of the century was that writing and print media gave legitimacy to incipient republican states, wedding print to power in new ways. And by the end of the century, educators and state bureaucrats teamed up to push for public primary education and literacy as components of progressive, "civilized" nations. Add to this the visual technologies and an overall surge in new forms of symbolic communication through print, and it is easy to see why this period offers such a rich backdrop for observing how print and power fit into the landscape we now know as Latin America. We pay special attention to themes including writing as a legitimizing force, writing and nation building, and the intersection of print with war, race, identity formation, modernity and ideologies. Readings include archival materials, wartime and popular poetry, novels by authors such as Jorge Isaacs and Ignacio Altamirano, writings by Simon Bolivar and Domingo Sarmiento, and modernista poetry and prose. Historical and theoretical selections guide our analysis of primary sources. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates.

L45 LatAm 433 The Inconvenient Indio: Imagining Indigenous Cultures in Peru and Bolivia
In the cultural history of the Andean nations, the Indio has always been a powerful yet perpetually unstable signifier, whose meaning is constantly redefined by non-Indians. An archaic residue for some, the bedrock of a new society for others, the Indio conjures contradictory imaginaries of articulation, combination, disjunction and metamorphosis that have shaped a wide range of debates: from assimilation and mestizaje in the context of nation-building and modernity, to the politicizing of ethnic identities in the context of immigration and globalization. Focusing on Peru and Bolivia, this course examines these cultural imaginaries and the debates in which they appear, as well as the models of community and identity they suggest. In doing so, we discuss topics such as the discourse of illness, indigenismo, transculturation, heterogeneity, violence and memory. Materials analyzed include poetry by Cesar Vallejo and Carlos Oquendo de Amat; essays by José Carlos Mariátegui and...
L45 LatAm 4517 Anthropology and Development
The Bolivia-Brazil Project. This writing-intensive seminar examines the cultural politics of global "development" through an in-depth focus on Bolivia and Brazil. Brazil, a rising giant, has taken a central place in global energy and agroindustry and leads the Global South on the world stage. Bolivia, rich with natural gas, fuels Brazil and suffers collateral resource conflicts, yet inspires many through indigenous struggles to rethink economy, nature and society. Both countries express changing global geopolitics repositioning Latin American economies along east-west (China-India-Africa) — as well as north-south (U.S./Europe) — axes. In this course we consider how global political economies linking Bolivia and Brazil are interwoven with change in public cultures, territorial orders and flows, environmental dislocations, nationalism and identity, and how social movement struggles gendered inequalities, poverty, racism, indigeneity and democracy. Students acquire a foundation in anthropological approaches to development theory and ethnography and in-depth knowledge of Bolivia and Brazil. Through independent case studies tied to the instructor's "Bolivia-Brazil Project," students gain skills in research and writing on the cultural, social and political complexities of this thing we call "development." Knowledge of Spanish and/or Portuguese and some prior knowledge of Latin America is encouraged, though not required. Same as L48 Anthro 4517 Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI BU: ETH EN: S

Same as L38 Span 4533 Credit 3 units. A&S: TH Art: HUM

L45 LatAm 457 Gender and Modernity in Latin America
The purpose of this course is to introduce students to the particular forms modernity assumes in Latin American countries and to the ways in which national cultures, identity politics and gender issues interweave during the 20th century. The course discusses three particular articulations of this topic: (1) Gender and the national question in Argentina: Eva Peron; (2) Gender and Visual Arts: Frida Kahlo; and (3) Gender and Ethnicity: Rigoberta Menchu. Through these iconic figures students are introduced to the specific features that characterized three very different but representative cultural scenarios in Latin America. In each case, the context for the emergence of these highly influential public figures is studied from historical, social and cultural perspectives. In order to explore the cultural and political significance of Eva Peron, Frida Kahlo and Rigoberta Menchu, the course utilizes literary texts (speeches, letters, diaries, etc.), visual materials (photography, films and paintings) and critical bibliography. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L45 LatAm 4572 Primitivism and Modernity in Latin America
Credit 3 units. EN: H
nature of informal work, and recent struggles for workers' control. The principal aim of this course is to introduce students to the key topics and themes pertaining to global labor history. These themes are varied and complex and range from workers' struggles.

Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD EN: S

L45 LatAm 463 Seminar on Urban Cultures in Latin America
The course focuses on the key role urban development and urban cultures have had in Latin America, with particular emphasis on contemporary times. The goal of the course is to discuss the connections between the formation and expansion of cities, the definitions of citizenship, and the role of modernity in the development of “high” and “popular” cultures within different historical and geocultural contexts. Particular attention is paid to the issues of race, class and gender. The course, which uses an interdisciplinary and comparative approach, also focuses on the phenomena of marginality, cultural resistance, nationalism and consumerism as well as on the role played by the media in contemporary Latin American societies. Some of the cultural expressions analyzed in the course are music (rock, pop, rap), sports, film and video. Prerequisite: IAS 165C Survey of Latin American Culture.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L45 LatAm 464 Nation and Desire in Latin America
The purpose of this course is to analyze the process of nation formation in Latin America from the imaginaries of the “Creole nation” to the first half of the 20th century. Class discussion encompasses the study of theories on nation formation and nationalism as well as textual representations of national projects, such as Simon Bolivar’s letters and discourses, selections from Facundo, Civilization and Barbarism by Domingo F. Sarmiento; selected texts by Andres Bello, Alfonso Reyes, et al; Ariel, by J.E. Rodo; Pedro Henriquez Urena’s Seis ensayos en busca de nuestra expresion; Jose Vasconcelos’ La raza cosmica; José Carlos Mariategui’s Siete ensayos de interpretacion de la realidad peruana; and José Martí’s “Nuestra América” and other essays. Some of the main topics discussed are the leading role of Creole elites in the consolidation of national cultures, the marginalization of women as well as indigenous and Afro-Hispanic populations, and the role of nationalism in the shaping of modern societies. Colonialism, Occidentalism, liberalism, positivism, nationalism and modernity are some of the concepts that are explored both theoretically and in their particular discursive usages. Finally, the concept of nation(alism) is studied as a political/rhetorical device and as the resulting expression of agency, interest and desire, in peripheral societies.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L45 LatAm 465 Cities, Race and Development in Latin America
This course offers a multidisciplinary approach to the study of the Latin American city: its history, development and inherent economic, social, cultural, ethnic and political tensions. Lectures, readings and class debates will explore interactions between the materiality and structure of Latin American modern cities and the social and cultural phenomena related to urban life in multicultural societies. Particular attention will be devoted to the effects of internal/external migration, and to the development of public spaces and sites of memory. Patterns of social segregation, marginalization, inequality and the like, will be analyzed in order to elaborate on the contemporary challenges of the city in a globalized yet traditional world. In addition to the analysis of living, institutional and commercial spaces, the course will cover social dynamics that break the discipline of the city through different forms of transgression, including crime, informal housing and underground movements. The goal of the course is to expose students to historical and social developments as exemplified in a variety of urban environments, and to encourage reflection on issues of social justice related to the living conditions of rural, disadvantaged and indigenous populations. The course will be conducted in English. Mandatory readings will be in English. Additional readings in Spanish will be required for those students fluent in the language. Prerequisites: none.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L45 LatAm 4660 Geographies of Development in Latin America: Critical Perspectives and Contemporary Challenges
This course provides an overview to the geographies of development throughout Latin America. We begin by examining a variety of theoretical perspectives, definitions and critiques of “development.” We highlight the uneven processes of development at multiple, overlapping scales and the power imbalances inherent in much of development discourse. In the second half of the course we focus our considerations toward specific contemporary trends and development issues, utilizing case studies drawn primarily from Latin America. These themes include sustainability, NGOs, social movements, social capital, security and conflict, identity, ethnicity and gender issues, participatory development, and micro-credit and conditional cash transfers. Students acquire the critical theoretical tools to develop their own perspectives on how development geographies play out in Latin America.
Same as L97 IAS 4660
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD EN: S

L45 LatAm 4662 Central American Geographies of Violence
This course provides an in-depth examination of the geographies of violence in Central America. As a region frequently characterized as endemically prone to violence, it is vital to analyze and contextualize the violence. Approaching violence in Central America from a geographic perspective involves not only locating and “placing” the violence, but also thinking relationally about the multiple, overlapping scales of activity, both within and beyond the region. The course is divided into five parts. In the first two sections of the course, we begin with an overview of the physical and human geography of the region and outline key historic moments and their legacies, including colonization, international relations (with an emphasis on U.S. interventions), civil war, genocide and torture. Simultaneously, we delve into various theoretical approaches for understanding the nature of multiple types of violence. In the third section of the course, we focus on neoliberal violence, insecurity and development and address issues such as urbanization, violent crime, issues with free trade and labor, and environmental issues. For the final two sections, we draw from contemporary case studies in the region. We will address identity (discussing indigenous issues, racism, genocide and gender) and in the last section we will cover migration, gangs, drug-trafficking, U.S. security responses, and re-militarization. While we will
continue to consider these types of violence through the various theoretical frameworks introduced in the first part of the course, we will also examine and analyze reports on contemporary violence and policy recommendations from multiple sources (multilateral organizations, governments, think tanks, and other nongovernmental organizations). Throughout the course we will also discuss current events occurring in Central America and how they directly or indirectly relate to the topic of geographies of violence.

L45 LatAm 474 Mexican Film in the Age of NAFTA (1990–2010)
Starting in the 1990s, as NAFTA came into effect, Mexico revitalized its film industry and managed to produce not only a somewhat sustainable market within the country, but also a set of recognized figures in acting (Salma Hayek, Gael García, Diego Luna), directing (Guillermo del Toro, Alfonso Cuarón, Alejandro González Iñárritu), and moviemaking in general (Emmanuel Lubezki, Rodrigo Prieto and others). This course explores the underlying processes that allowed for such a rebirth. The main focus of the course is to understand the contradictory impact of neoliberalism in film, understanding neoliberalism as the economic doctrine of unbridled free markets, and its social and cultural consequences. Paradoxically, neoliberalism allowed the industry to become financially and aesthetically viable, while becoming inaccessible to the lower classes in Mexico. The course mostly develops four of these processes: the undermining of nationalism as the main topic, the displacement of the target audience from the working classes, both rural and urban, to the urban middle class; the transformation of political cinema from the leftist films of the 70s to the conservative ideologies of neoliberal politics and the intersection of Mexican film to the global market of so-called “art house cinema.” Students compare films that have reached an international market with those viewed only within Mexico. In addition, students are introduced to critical approaches that allow them to appreciate these movies in the context of film aesthetics, social identities, and the relationship between film and economic development. Movies are shown outside of class in Spanish with English subtitles. The class is conducted in English. Written course work may be pursued in English or Spanish. No prerequisite.

L45 LatAm 485 Latin American Studies Thesis Preparation
This is the first course in the two-semester thesis for Latin American studies thesis writers. Enrollment requires approval of LASP and the undergraduate director.
Credit 3 units.

L45 LatAm 486 Latin American Studies Thesis
This is the second course in the sequence for Latin American Studies thesis writers. Enrollment requires completion of LatAm 485 and permission from LASP and the undergraduate director.
Credit 3 units.

L45 LatAm 488 Narrating Mexico City
The city has been one of the central topics of modern Mexican literature. Ever since the emergence of the modern capital at the end of the 19th century, urban culture became one of the central concerns of Mexican and Latin American intellectuals across the continent. With the emergence of the megalopolis and the new centrality of questions of violence, postmodernity and urban experience, Mexican literature and film have contributed, in the past 20 years, new ways to approach, discuss and narrate the city. This class seeks to tackle different meanings of Mexico City in the cultural discourse of Mexico, by exploring novels (Carlos Fuentes, José Emilio Pacheco, Juan Villoro), poems (Manuel Mapes Arce, Vicente Quirarte, Fabio Morábito), urban chronicles (Carlos Monsiváis, Elena Poniatowska, José Joaquín Alonso), and films (Amores perros, Todo el poder, Vivir mata). Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.
Same as L38 Span 488

L45 LatAm 489 Cities of the Past Future: Literary Institutions and Peripheral Modernity in the Latin American Avant-garde
This class proposes a study of the Latin American avant-garde as a phenomenon of “peripheral modernity” and as a critique of the “institution literature” developed by 19th century and modernista liberalisms. This reading, rather than merely proposing a one-by-one reading of canonical texts, seeks to engage the avant-garde as a global cultural phenomenon with impact in literature, art, society and ideology. To achieve this, the class focuses on four regional contexts of the avant-garde. First, we visit post-Revolutionary Mexico, to understand the way in which the avant-garde redefined notions of literature in Latin America by carefully analyzing the stakes of groups such as the estridentistas or the contemporaneos. Second, we analyze the reinvention of Buenos Aires as a literary city in the 1920s and others, bio-politics, etc. Finally, violence is presented in different contexts and associated to different activities (ordinary crimes, narco-cultures, maras, political movements, domestic environments) and different situations (e.g., violence in rural areas, violence in the borderlands, violence and migration). In all cases the course calls for a reflection on the interrelations between private/public spheres, gender politics, ideological/aesthetic values, and individual/institutional levels. The role of memory and emotions is emphasized as a crucial element for the construction/mobilization of subjectivity and for the elaboration of agendas that challenge the State’s monopoly of legitimate violence and propose alternative and often perverse forms of association and mobilization at the margins of institutional configurations.

L45 LatAm 489 Cities of the Past Future: Literary Institutions and Peripheral Modernity in the Latin American Avant-garde
1930s to understand the impact of “peripheral modernity” in the constitution of the avant-garde as a specifically Latin American phenomenon. Third, we discuss the impact of the semana de arte moderno of São Paulo, to understand how the idea of “antropophagia” created an articulation of the avant-garde with debates of cultural identity and transculturation. Finally, we go to the Andes to understand how avant-garde phenomena dealt with the questions of “divergent modernities.” Authors discussed include Arqueles Vela, Manuel Maples Arce, Jorge Cuesta, Xavier Villaurrutia, Jorge Luis Borges, Oliverio Girondo, Roberto Arlt, Mario de Andrade, Oswaldo de Andrade, Manuel Bandeira, César Vallejo, Pablo Palacio, César Moro and José Carlos Mariátegui. Scholarship includes Peter Bürger, Matei Calinescu, Renato Poggioli, Rubén Gallo, Pedro Angel Palou, Beatriz Sarlo, Fernando Rosenberg, Haroldo de Campos, William Rowe and Roland Forgués. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

L45 LatAm 354 A View from the Southern Cone: Perspectives on Art, Literature and Culture
This course will deal with current issues of cultural, social, political and literary importance related to the Southern Cone. We shall study selected texts from Argentina, Chile and Uruguay as well as contemporary films and drama productions. This course will seek to determine what specifically can be expressed about national identity, globalization and the environment as these countries face the 21st century. Course requirements include four short essays and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. May be repeated for credit. Conducted in Spanish.

Same as L38 Span 354 Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: ETH EN: H

L45 LatAm 3800 Surveys of Hispanic Cultures
This course surveys cultures in specific contexts (Latin America and Spain) and in different historical periods, from the Middle Ages to the present. The course provides students with critical and methodological tools in order to carry out an articulate and informed cultural analysis. Prerequisite: Span 307D; concurrent registration in Span 308E is recommended. In Spanish. Topics vary from semester to semester. Refer to section description for current offering.

Legal Studies
The legal studies minor is an interdisciplinary program that allows students to study the role of law and legal institutions in society.

Students who minor in legal studies learn about law in courses from anthropology, economics, history, philosophy, political science and other disciplines. The curriculum emphasizes the forces that shape law and the ways that peoples of different cultures and from different historical periods have used and interpreted the law.

Because Legal Studies is interdisciplinary in nature and offers a variety of courses, each student can design a course of study that addresses his or her individual needs and interests.

Students may choose to take advantage of internships available in law and government. Legal Studies is an excellent pre-law program. It also prepares students well for other graduate study, as well as for careers in academia, business, politics or social services.

Legal Studies, please visit the Legal Studies website (http://legalstudies.artsci.wustl.edu/about) or contact the director of Legal Studies.

The following is a list of courses that have been offered in Legal Studies in recent years. Note that some of these courses are not currently offered, and some new courses may also be offered in the future. Students are encouraged to develop critical reasoning skills that can be widely applied. Same as L30 Phil 100G
Credit 3 units. A&S: LA, QA A&S IQ: NSM, AN Art: NSM BU: HUM EN: H

L84 Lw St 131F Present Moral Problems
An investigation of a range of contemporary moral issues and controversies that draws on philosophical ethics and culturewide moral considerations. Topics may include: racism, world hunger, war and terrorism, the distribution of income and wealth, gender discrimination, pornography, lesbian and gay rights, abortion, euthanasia, and capital punishment. The aim of the course is to present diverse points of view regarding these topics and to provide conceptual and theoretical tools that enable the student to make headway in thinking carefully and critically about the issues.
Same as L30 Phil 131F
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L84 Lw St 2260 Sociological Approaches to American Health
The major objective of the course is to provide beginning students with the theoretical (conceptual) and empirical tools necessary to understand how health and illness and health care delivery in the United States are significantly influenced by the social structure in which they are embedded. Students demonstrate this understanding through designing and implementing a research project grounded in sociological theory and sound methodological strategies for collecting and analyzing data. Working in teams, students produce a research report suitable for a poster presentation or newsletter to a variety of audiences.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L84 Lw St 233F Biomedical Ethics
Introduces the major intellectual insights of game theory in a nontechnical fashion, and examines the influence game theory has had on geopolitics, social philosophy, psychology, art and
the humanities. In addition to covering the basic machinery of the theory, the class: participates in numerous illustrative classroom games; examines game theory in film, literature and literary criticism; sees how game theory has contributed to social theory; and learns about the background of game theory and its history and perception as a hoped-for tool in the Cold War. Grades based on problems, short essays, two short-essay exams, and participation.

L84 Lw St 299 Undergraduate Internship in Legal Studies
Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement which the student obtains from the Career Center and which must be filled out and signed by the Career Center and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., 8-10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours. Students may not receive credit for work done for pay but are encouraged to obtain written evaluations about such work for the student's academic adviser and career placement file.
Credit variable, maximum 3 units.

L84 Lw St 3012 Biblical Law and the Origins of Western Justice
Same as L75 JINE 3012
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD EN: H

L84 Lw St 312 Argumentation
This advanced writing course examines the strategies of argumentation, exploring such elements of argument as the enthymeme, the three appeals, claim types and fallacies. Prerequisites: Writing 1 (Writing 100) and junior standing. A note for students and advisers: when registering refer to WebSTAC for updated information on section times and available seats.
Same as L13 Writing 312
Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI Arch: HUM Art: HUM BU: BA

L84 Lw St 315 Introduction to Social Psychology
Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory and political psychology, among other issues. Prerequisite: Psych 100B.
Same as L33 Psych 315

L84 Lw St 3201 Religious Freedom in America
Same as I50 InterD 320
Credit 3 units. A&S IQ: HUM, SD EN: H

L84 Lw St 3255 The Development of the American Constitution
The practical meaning of the Constitution has changed since 1787 — not only as a result of normal amendments and court interpretations, but also through normal politics and unconventional transformations. After initial discussion of the nature of the Constitution and of constitutional interpretation, the course examines important instances of such change processes. These have resulted in important reformulations, usually gradual but occasionally sudden, of executive branch powers, the judicial system, the electoral system, federalism, economic regulation, and civil rights. The course then devotes special attention to several present-day issues of constitutional politics, such as presidential war powers, the use and misuse of secret agencies, the "unitary executive theory," and the special constitutional significance of the Justice Department. Prerequisite: L32 Pol Sci 101B American Politics. Formerly L32 Pol Sci 3254 Constitutional Politics in the U.S.; students who have taken that class are not eligible.
Same as L32 Pol Sci 3255
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L84 Lw St 330C Culture and Identity
Topics course focusing on instances of identity and culture within the American scope. Varies by semester; consult Course Listings for description of current semester's offering.
Same as L98 AMCS 330C

L84 Lw St 331 Theories of Social Justice
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Same as L32 Pol Sci 331
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: HUM

L84 Lw St 3325 Constitutional Politics in the United States
The principal purpose of this course is to introduce students to the politics of constitutional interpretation. We first discuss the origins of the constitution, the structure operation and work of courts, and judicial decision making. Afterward, we examine various areas of the law relating to institutional powers and constraints (e.g., federalism, presidential powers, Congressional authority). In so doing, we develop an understanding for the legal doctrine in each area of the law and also examine explanations for the legal change we observe.
Same as L32 Pol Sci 3325
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

L84 Lw St 3373 Law and Culture
We live in an age when social policy is increasingly displaced into the realm of law, when justice and equality are matters of courtroom debate rather than public discussion. Legal language has become a key resource in all kinds of struggles over livelihood and ways of life. In this course, we study the cultural dimensions of law and law's changing relationship to state power, the global economy, social movements, and everyday life. We approach law as a system of rules, obligations, and procedures, but also a cultural practice, moral regime, and disciplinary technique. How are relationships between legal, political, and economic realms structured and with what
consequences? How does law provide tools for both social struggle and social control? What does anthropology contribute to research on these issues? In exploring these questions, we combine readings from classical legal anthropology with recent ethnographic work from around the globe.

Same as L48 Anthro 3373
Credit 3 units. A&S: SS & S IQ: LCD, SSC Art: SSC BU: ETH EN: S

L84 Lw St 344 Courts and Civil Liberties
This course focuses on constitutional law principles in the Bill of Rights, and examines how Supreme Court decisions influence these principles in everyday life. We explore how the courts, and particularly the Supreme Court, have interpreted these rights in light of changing times and emerging issues. Topics include the First Amendment; free exercise of religion and the establishment clause; freedom of speech, assembly and association; freedom of the press; the Fourth Amendment and the rights of those accused and convicted of crimes; the right to privacy, including reproductive freedom and the right to die; equal protection and civil rights, including race, gender, sexual orientation; immigrants' rights and voting rights; and civil liberties after September 11. Recommended for the Liberal Arts and Business (LAB) Certificate.

Same as L32 Pol Sci 344
Credit 3 units. A&S: SS & S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH, HUM

L84 Lw St 3441 Defendant's Rights
This course explores the operations of the American criminal justice system. Substantial emphasis on the constitutional rights accorded to the criminally accused. Readings consist primarily, but not exclusively, of Supreme Court cases.

Same as L32 Pol Sci 3441
Credit 3 units. A&S: SS & S IQ: SSC Arch: SSC BU: BA, ETH

L84 Lw St 346 Philosophy of Law
This course first focuses on the philosophical foundations of law, examining both the relationship between law and rules, as well as the types of legal reasoning. Second, the course focuses on philosophical issues that arise in the key substantive areas of law: contracts, torts, property, criminal law, and constitutional law, as well as specialized areas such as family and employment law. The course ends with a brief discussion of several problems in legal ethics. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in Philosophy and PNP.

Same as L30 Phil 346
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM BU: ETH

L84 Lw St 3507 Legal Conflict in Modern American Society
Thousands of lawsuits are filed daily in the state and federal courts of the United States. The disputes underlying those lawsuits are as messy and complex as the human, commercial, cultural and political dynamics that trigger them, and the legal processes for resolving those disputes are expensive, time-consuming and, for most citizens, seemingly impenetrable. At the same time, law and legal conflict permeate public discourse in the United States to a degree that is unique in the world, even among the community of long-established democracies. The overarching objective of the course is to prepare our undergraduate students to participate constructively in that discourse by providing them with a conceptual framework for understanding both the conduct and resolution of legal conflict by American legal institutions, and the evolution of — and values underlying — the substantive law American courts apply to these conflicts. This is, at core, a course in the kind of legal or litigation "literacy" that should be expected of the graduates of first-tier American universities. Some of the legal controversies that are used to help develop that "literacy" include those surrounding the permissible use of lethal force in self-defense, the constitutionality of affirmative action in university admissions, contracts that are unconscionably one-sided, sexual harassment in the workplace, the duty of landlords to prevent criminal assaults on their tenants, groundwater pollution alleged to cause pediatric cancers, and warrantless searches of cellphone locator data by police.

Same as L98 AMCS 3507
Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM BU: BA EN: H

L84 Lw St 3510 The Supreme Court
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Same as L32 Pol Sci 3510
Credit 3 units. A&S: SS & S IQ: SSC Arch: SSC BU: BA

L84 Lw St 3561 Women and the Law
We explore the development of women's legal rights by examining the ways in which social constructions of gender, race, class and sexuality have shaped American legal concepts within the limited bounds of traditional legal reasoning. We begin by placing our current legal framework, and its gender, race and other societal assumptions, in an historical and Constitutional context. We then examine many of the critical questions raised by feminist theory, feminist legal thought and other critical perspectives. For example, is the legal subject gendered as male, and, if so, how effectively can women use the law to gain greater social equity? What paradoxes have emerged in areas, such as employment discrimination, family law or reproductive rights, as women have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? The course is thematic, but we spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women.

Same as L77 WGSS 3561
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

L84 Lw St 3562 Introduction to Forensic Psychology
This course is an introduction to the interaction between psychology and the legal system. The contribution of psychology to such legal areas as family law, juvenile delinquency, criminal cases, law enforcement, and correctional psychology are surveyed. Topics covered include domestic violence, child abuse, personal injury, eyewitness testimony, insanity, sex offenders and psychopaths. Legal standards regarding insanity, civil commitment and expert testimony are reviewed. We also focus on the emerging contributions of neuroscience to the field of forensic psychology. Prerequisite: Psych 100B.

Same as L33 Psych 356
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S
L84 Lw St 358 Law, Politics and Society
This course offers an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system in contrast to legal mythology, as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce students to legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law.
Same as L32 Pol Sci 358
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L84 Lw St 3670 The Long Civil Rights Movement
The Civil Rights Movement is known as a southern movement, led by church leaders and college students, fought through sit-ins and marches, dealing primarily with non-economic objectives, framed by a black and white paradigm, and limited to a single tumultuous decade. This course seeks to broaden our understanding of the movement geographically, chronologically and thematically. It pays special attention to struggles fought in the North, West and Southwest; it seeks to question binaries constructed around "confrontational" and "accommodationist" leaders; it reveals how Latinos, Native Americans, and Asian Americans impacted and were impacted by the movement; and it seeks to link the public memory of this movement with contemporary racial politics.
Same as L22 History 3670

L84 Lw St 3713 Law in American Life I: English and Colonial Foundations to 1776
Credit 3 units. A&S: TH BU: ETH

L84 Lw St 372C Law in American Life II: 1776 to the Present
Among the many contradictions of American history, none has been more recurrent than the tension of justice and law — of aspiration and reality — as Americans have sought to make good on the promises of the Revolution. Although we pride ourselves as a nation devoted to the principle of "equal justice under the law," the terms "equal" and "justice" have prompted bitter debate, and the way we place them "under law" has divided Americans as often as it has united them. It is the purpose of this course to examine the many and conflicting ways in which Americans have sought to use "law" to achieve the goals of the republic established in 1776. Viewing "law" as the contested terrain of justice, cultural construction, social necessity and self-interest, this course pays close attention to the way Americans have used, abused or evaded "law" throughout their national history.
Same as L22 History 372C
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: ETH, IS

L84 Lw St 389 Power, Justice and the City
This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by "privatism" in cities and their suburbs. In addition, the course devotes considerable attention to honing students' writing skills, through class assignments that stress rewriting and revising, and also through four in-class writing workshops devoted to formulating a thesis and making an argument, revising and rewriting, writing with style, and peer consultation.
Same as L32 Pol Sci 389
Credit 3 units. A&S: SS, SD, WI A&S IQ: SSC, SD, WI Arch: SSC Art: SSC BU: BA EN: S

L84 Lw St 389A Power, Justice and the City
This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by "privatism" in cities and their suburbs.
Same as L32 Pol Sci 389A
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD BU: BA EN: S

L84 Lw St 391 History of Political Thought I: Justice, Virtue and the Soul
This course offers a critical introduction to the main issues and debates in Western political theory, including but not limited to the topics of justice, legitimacy, equality, democracy, liberty, sovereignty and the role of history in the political and social world. This course is designed to be the first in a three-semester sequence on the history of political thought, and students are encouraged, but not required, to take the courses in chronological sequence. The first semester begins with ancient Greek political thought, and follows its development up to the early 16th century.
Same as L32 Pol Sci 391
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L84 Lw St 392 History of Political Thought II: Legitimacy, Equality and the Social Contract
Government is often justified as legitimate on the grounds that it is based on the consent of the governed. In History of Political Thought II, "Legitimacy, Equality and the Social Contract," we examine the origins of this view, focusing our attention on canonical works in the social contract tradition, by Thomas Hobbes (1588–1679), John Locke (1632–1704), Jean-Jacques Rousseau (1712–1778), David Hume (1711–1776) and Immanuel Kant (1724–1804). This course is the second in a three-semester sequence on the history of political thought. Students are encouraged but not required to take all three courses. Prerequisite: one previous course in political theory or political philosophy.
Same as L32 Pol Sci 392
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L84 Lw St 393 History of Political Thought III: Liberty, Democracy and Revolution
How, if at all, should the political institutions of the modern state express and secure the liberty and equality of citizens? What is the political significance of private property? Is world history to be understood as progress toward one best form of government — capitalist democracy, perhaps, or communism? What forces drive history? We address these and other timeless political questions through close reading and rigorous analysis of classic texts in the history of Western political thought. Authors studied
L84 Lw St 4002 Directed Fieldwork in Legal Research
A fieldwork project in empirical and/or archival legal research under the direction of a member of the Washington University faculty. The fieldwork may be planned and undertaken individually or as part of a formal project. Permission of supervising faculty member and director of the program is required. Credit variable, maximum 6 units. A&S: TH EN: H

L84 Lw St 4013 Negotiating Major Legislation in Congress
Same as L32 Pol Sci 4013
Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

L84 Lw St 403 Economics of Law
The course provides an introduction to the economic analysis of law. Mastery of basic economic approaches to the study of legal institutions is a valuable skill that benefits a broad range of students. The course covers the fundamental contributions made by the economic approach in five core areas: Property, Contracts, Torts, Litigation and Crime. Time permitting we cover other areas of the law such as Family, Privacy, and Discrimination Law. About 50% of the course is devoted to formal economic modeling of legal issues. Approximately 30% of the course is focused on empirical tests of the insights from the early theoretical contributions in the field and the theoretical models developed in class. The remaining 20% of the course uses classic legal cases to illustrate the real-world applications of the theoretical models developed in class. Prerequisite: Econ 4011. Econ 413 is recommended. Same as L11 Econ 403
Credit 3 units. A&S: SS A&S IQ: SSC

L84 Lw St 4030 Political Theory of Education
This course explores issues of authority, legitimacy, citizenship, freedom and equality through contemporary readings in the political theory of education. What is to be done when parents, citizens, and educational experts make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? How should public schools aim to equip their students for the responsibilities of citizenship in a diverse liberal democratic state? What do the concepts of equality and opportunity mean in the context of education, and (how) should governments pursue these values through education policy? We explore these issues through contemporary works of political theory as well as through considering a number of important U.S. court cases, including those dealing with the schooling of children from minority religious and cultural groups, affirmative action in university admissions, and school desegregation plans. Prerequisite: one previous course in political theory or political philosophy. Same as L32 Pol Sci 4030
Credit 3 units. A&S: SS A&S IQ: SSC BU: ETH EN: S

L84 Lw St 4400 Advanced Social and Political Philosophy
A selective investigation of one or two advanced topics in the philosophical understanding of society, government and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism, communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism, and the rights of cultural minorities. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor. Same as L30 Phil 4400
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L84 Lw St 472 Social Theory and Anthropology
A seminar on social theory and its ethnographic implications. Course combines major works of modern social theory, including Marx, Weber, and Durkheim, with current work by contemporary anthropologists, such as Clifford Geertz, Eric Wolf, Marshall Sahlins, and Fredrik Barth, and ethnographers from related disciplines, such as Pierre Bourdieu and Paul Willis. Prerequisite: previous anthropology course work or permission of instructor. Same as L48 Anthro 472
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

L84 Lw St 4981 Historical Perspectives on Human Rights and Globalization
This course offers a historical perspective on the modern international human rights regime, using materials drawn from diplomatic, legal, political, and cultural studies. Successful completion of this seminar involves designing, researching and writing a 25-30 page paper on a historically-oriented, human-rights-related topic of student's choice. Same as L22 History 4981
Credit 3 units. A&S: TH A&S IQ: HUM

Linguistics
At Washington University, the Linguistics program offers an undergraduate major and minor. The core of the Linguistics program is the study of the form language takes. Students examine how words are built from sounds, how sentences are built from words, and how all this structure manages to communicate meaning. With a good understanding of these formal properties, students can pursue other questions about language. How does language change over time? Do diverse languages have more in common than meets the eye? What functions does language play in society? What is its relation to thought? What are its biological and psychological underpinnings? And just how do children manage to acquire language so well in the first place?
Linguistics takes a scientific approach to the study of language and develops skills in data analysis and scientific experimental methods. Linguistics students may or may not speak many languages, but they definitely will learn how to collect and analyze data about languages in an effort to answer these questions.

And just how do children manage to acquire language so well in the first place?
Linguistics takes a scientific approach to the study of language and develops skills in data analysis and scientific experimental methods. Linguistics students may or may not speak many languages, but they definitely will learn how to collect and analyze data about languages in an effort to answer these questions.

Linguistics
At Washington University, the Linguistics program offers an undergraduate major and minor. The core of the Linguistics program is the study of the form language takes. Students examine how words are built from sounds, how sentences are built from words, and how all this structure manages to communicate meaning. With a good understanding of these formal properties, students can pursue other questions about language. How does language change over time? Do diverse languages have more in common than meets the eye? What functions does language play in society? What is its relation to thought? What are its biological and psychological underpinnings? And just how do children manage to acquire language so well in the first place?
Linguistics takes a scientific approach to the study of language and develops skills in data analysis and scientific experimental methods. Linguistics students may or may not speak many languages, but they definitely will learn how to collect and analyze data about languages in an effort to answer these questions.

Educ 234  Introduction to Speech and Hearing Disorders  3
Phil 301G  Symbolic Logic  3
Psych 4351  Reading and Reading Development  3
Span 370  Introduction to Hispanic Linguistics  3

Under certain circumstances, students may count toward their major a limited number of relevant classes not listed here. Such circumstances include study abroad and preparation for a specialized capstone. A specific plan of study must be worked out in advance with advisers in the Linguistics program.

Language requirement: Majors should normally have foreign language competency equivalent to one year of study at the college level. Classes taken to fulfill this requirement do not normally count toward the 30 total units required for the major.

Additional Information

Capstone: A senior project is required of primary majors. This normally will be done while taking Ling 495 or Ling 500, or by completing the Senior Honors program (Ling 499).

Senior Honors: Students with a university GPA of 3.65 and a Linguistics GPA of 3.65 at the end of their junior year may apply to enter the honors program by submitting a proposal for a senior thesis. If admitted into the program, the student registers for 3 units of Ling 499 in each semester of the senior year. The student must complete the thesis and pass an oral defense by the middle of March.

Minors

The Minor in Linguistics

Units required: 15, of which 9 must be in courses numbered 300 or higher

Required course:
Ling 170D  Introduction to Linguistics  3

Elective courses: 12 units. At least 6 units must come from this list:
Ling 309  Syntactic Analysis  3
Ling 311  Introduction to Semantics  3
Ling 312  Phonetics  3
Ling 313  Phonological Analysis  3
Ling 317  Introduction to Computational Linguistics  3
Ling 320  Historical and Comparative Linguistics  3
Ling 339  Introduction to Sociolinguistics  3

Remaining units may come from any course acceptable as an elective for the major.

Courses

L44 Ling 170D Introduction to Linguistics

Language is one of the fundamental capacities of the human species, and there are many interesting and meaningful ways in which it can be studied. This course explores the core components of linguistic theory: speech sounds (phonetics and phonology), word formation (morphology), sentence structure (syntax) and meaning (semantics). It also provides an overview of interdisciplinary ideas and research on how language is acquired and processed, its relation to the mind-brain and to society, and the question of whether the essential properties of language can be replicated outside the human mind (specifically, in chimpanzees or computer programs).

Credit 3 units. A&S: LA  A&S IQ: SSC  BU: BA, HUM  EN: S

L44 Ling 225D Latin and Greek in Current English

This course provides a study of the impact of Latin and Greek on the English language through intensive study of the Latin and Greek roots, prefixes and suffixes that are most commonly found in English technical and nontechnical vocabulary. Some attention is also paid to the linguistic principles by which these elements have entered the English language.

Same as L08 Classics 225D

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM  BU: HUM

L44 Ling 234 Introduction to Speech and Hearing Disorders

Introduction to the fields of speech-language pathology, audiology, education of hearing-impaired children, and speech and hearing sciences. Normal speech and hearing processes are discussed, as well as communication disorders. Selected research topics in speech and hearing sciences are presented.

Same as L12 Educ 234

Credit 3 units. BU: BA EN: S

L44 Ling 301G Symbolic Logic

In the first half of the course we study some features of truth-functional and first-order classical logics, including studying the model theory and metatheory for first-order logic in much greater depth than in Phil 100. In the second half of the course we go on to study three different styles of proof-system: tableaux, axiomatic, and natural deduction. This course continues on where Phil 100: An Introduction to Logic and Critical Analysis leaves off. It is recommended for students who have already taken that introductory course, or for students who already have a strong background in mathematics. Priority given to majors in philosophy and PNP.

Same as L30 Phil 301G

Credit 3 units. A&S: LA A&S IQ: NSM, AN Art: NSM BU: HUM
L44 Ling 306G Philosophy of Language
A survey of major philosophical problems concerning meaning, reference and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues are selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke, and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.
Credit 3 units.

L44 Ling 309 Syntactic Analysis
The ability to produce and understand an infinite number of sentences is perhaps the most fascinating aspect of the human language faculty. Syntax is the study of how the brain organizes sentences from smaller phrases and words. This course explores syntactic analysis from several perspectives within generative linguistics, focusing primarily on the Government and Binding framework but also introducing Minimalist and Optimality Theoretic approaches. Topics discussed include phrase structure, transformations, case theory, thematic roles and anaphora. Assignments help students learn to construct and compare analyses of syntactic problems in English and other languages. Prerequisite: Ling 170D or 440, or permission of instructor.
Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

L44 Ling 311 Introduction to Semantics
Semantics is the branch of linguistics that studies how speakers assign meaning to words, sentences and larger units of discourse. We combine perspectives from both linguistics and philosophy to explore a variety of topics including polysemy, compositionality, quantification, anaphora, definite descriptions, attitude reports, presupposition and implicature. Prerequisite: Ling 170D or Phil 301G or permission of instructor.
Credit 3 units. A&S: LA A&S IQ: SSC BU: HUM EN: S

L44 Ling 315 Morphology
Concepts covered: morphemic analysis and investigation of morphological processes. Additional topics may include relationship of morphology to language-typology and to syntax. Prerequisite: Ling 170D, or permission of instructor.
Credit 3 units. A&S: LA A&S IQ: SSC EN: S

L44 Ling 317 Introduction to Computational Linguistics
Use of computers to analyze, understand and generate human language. Emphasis on appreciating practical applications such as text analysis; search and creation of dictionaries and corpora; information retrieval; machine translation; and speech interfaces. Survey of rule-based and statistical techniques. Students acquire programming skills appropriate for solving small- to medium-scale problems in linguistics and text processing, using a language such as Python. Students have regular programming assignments and complete a semester project. No previous knowledge of programming required. Prerequisites: Ling 170D or permission of instructor.
Credit 3 units. A&S: LA A&S IQ: SSC EN: H, S

L44 Ling 320 Historical and Comparative Linguistics
Historical linguistics focuses on how languages change over time. Comparative linguistics focuses on their similarities and differences. In this course we trace some of the differences and changes in sound (phonetics and phonology), word formation (morphology), sentence structure (syntax) and meaning (semantics). Topics include linguistic universals; the structural and genetic classification of languages; the techniques of reconstructing proto-languages; and the causes of language change. Examples from Indo-European languages (for example, Greek, English and Spanish) and from Native American languages (for example, Quechua and Mayan) are emphasized. Prerequisite: Ling 170D.
Credit 3 units. A&S: LA A&S IQ: SSC Art: HUM BU: HUM EN: S

L44 Ling 339 Introduction to Sociolinguistics
Studies of language in social context are presented, including research related to diglossia, bilingualism, pidginization, creolization and dialectology. Discourse analyses and conversational analyses of face-to-face conversation are examined in methodological and analytical terms. Beyond assigned readings, critical discourse analyses, the ethnography of speaking, the sociology of language, and accommodation theory are also considered. Students are required to develop a course project related to one or more studies of language in use. Experimental studies of sociophonetics and sociohistorical linguistics are presented during lectures to demonstrate advanced interdisciplinary research with potential educational and legal relevance. Prerequisite: Ling 170D.
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD EN: S
L44 Ling 341 Linguistic Diversity in the United States
Linguistic diversity has always existed within the United States, and this course begins with a survey of many of the indigenous Native American languages that existed prior to European colonization. The emphasis of this course is linguistic research, as we examine diverse studies of language across the nation with respect to regional differences, racial and ethnic differences, historical differences, and differences in education and economic status. American bilingualism is explored, as are many of the dialects that have evolved in different parts of the nation. Students study a range of sophisticated linguistic analyses of language diversity in different parts of the United States at different points in the nation's history. The culmination of the course explores practical linguistic applications in legal and educational contexts. Prerequisites: Ling 170D and some familiarity with elementary statistics. Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD EN: S

L44 Ling 3701 Introduction to Hispanic Linguistics
An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages. Same as L38 Span 370 Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

L44 Ling 390 Linguistics Service Learning I
Because language is fundamental to human communication, differences in language can present particularly difficult barriers to learning. Taking classes in a language that is not your native language, for example, presents special challenges both to students and their teachers. For speakers of nonstandard dialects, taking classes in a standard dialect presents subtler — and in some ways, even more difficult — challenges. This course provides students with a concrete understanding of the practical difficulties arising from linguistic differences and helps them discover ways in which these difficulties can be addressed. In particular, students are expected to devote two hours per week tutoring local K-12 students and to keep a journal focusing on the nature of language learning within the scope of other second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners’ errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent same as L38 Span 370 Credit 3 units. A&S: LA A&S IQ: SSC  BU: SSC  EN: S

L44 Ling 396 Linguistics Seminar
Readings on a selected topic in theoretical linguistics with an emphasis on discussion, presentation and writing. Prerequisite: varies with topic. Credit 3 units. A&S: TH A&S IQ: SSC EN: H, S

L44 Ling 408 Psychology of Language
This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B. Same as L33 Psych 433 Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

L44 Ling 466 Second Language Acquisition
There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first- and second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners’ errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent same as L38 Span 4691 Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L44 Ling 4691 Second Language Reading and Writing: Theory, Research and Practice
This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in applied linguistics and an elective for the Graduate Certificate in Language Instruction. Same as L38 Span 4691 Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L44 Ling 478 Topics in Linguistics
Meets with designated linguistics course, but with additional writing and research required for graduate credit and certification. Credit 3 units. A&S: LA A&S IQ: SSC EN: S

L44 Ling 495 Senior Seminar in Linguistics
The Senior Seminar affords students an opportunity to integrate the various fields of linguistics. Readings, discussions and presentations let students address issues that combine the content and the research methods of areas such as phonetics, phonology, morphology, syntax, diachrony and semantics. Students have individual projects within the scope of the semester's particular topic, but the class as a whole helps in
choosing, developing and refining the treatment. This course fulfills the requirement for a senior capstone for primary majors in linguistics. It is the normal option for students who wish to take the capstone as a regular class rather than as sponsored independent study.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L44 Ling 499 Independent Work For Senior Honors
Prerequisites: senior standing and permission of the Linguistics program.
Credit variable, maximum 6 units.

Literature and History

Literature and History offers the opportunity to explore an integrated program of literary, political and historical studies under the auspices of the Interdisciplinary Project in the Humanities (p. 484) (IPH). Students interested in Literature and History can pursue it as a fully developed track within the IPH. (A full description of the requirements for completing the Literature and History program may be found in the general listing for the Interdisciplinary Project in the Humanities (p. 485).

Minors

There is no minor in this area. Interested students are encouraged to please explore the minor in text and tradition offered by the Interdisciplinary Project in the Humanities (p. 486).

Courses

There are no courses associated with this program. Please visit Interdisciplinary Project in the Humanities (p. 487).

Mathematics

Mathematics has always held a central position in the liberal arts, and over time it has also come to play an important role in more and more aspects of our lives. Mathematical analysis and modeling are involved in many areas, far beyond the traditional association of mathematics with the physical sciences and engineering. This fact is reflected in the diversity of the students who study at least some mathematics during their time at Washington University — students who recognize the importance of quantitative skills in a world that becomes more and more technological.

Students major in mathematics for many reasons. Some are planning academic careers in mathematics or statistics that involve teaching or research. Others plan to work as actuaries or at other jobs in industry or government. Some plan careers in secondary education. Many majors do not intend to become "mathematicians" at all, but simply realize that quantitative training is a valuable asset in many kinds of careers; often, work in mathematics or statistics is meant to complement their study in other areas. Still other majors just view mathematics as an interesting concentration in their liberal arts education, even though they plan to enter professional fields such as medicine or law.

The Mathematics program gives majors and minors a broad introduction to the subject. Majors choose among several tracks to complete their study; these tracks add different emphases to their programs, reflecting individual interests or professional goals. Majors are encouraged to complete additional work (perhaps even a minor or second major) in other related areas.

 Majors

The Major in Mathematics

Total units required: 36-39
All mathematics majors are required to complete

Math 131 Calculus I 3
Math 132 Calculus II 3
Math 233 Calculus III 3

Total units 9

In addition, each major is required to complete the courses
in one of the following five tracks and to participate in a
departmental exit interview shortly before graduation.

Traditional

Math 3200 Elementary to Intermediate Statistics and
Data Analysis 3
or Math 493 Probability 3

Math 310 Foundations for Higher Mathematics 3
Math 4111 Introduction to Analysis 6
& Math 4121 and Introduction to Lebesgue Integration

595
Math 429 Linear Algebra
& Math 430 and Modern Algebra
Three additional upper-level mathematics electives. Two of these could be Math 309 and Math 318 (or Math 308). At least one elective must be at the 400 level.

Total 27 upper-level mathematics units

Probability/Statistics
One course in computer science chosen from CSE 131, CSE 132, CSE 200, CSE 247
Math 309 Matrix Algebra
Math 3200 Elementary to Intermediate Statistics and Data Analysis
Math 310 Foundations for Higher Mathematics
Math 318 Introduction to Calculus of Several Variables
or Math 308 Mathematics for the Physical Sciences
Math 493 Probability
& Math 494 and Mathematical Statistics
Two additional upper-level mathematics electives in the areas of probability or statistics.

Total 24 upper-level mathematics units

Applied
One course in computer science chosen from CSE 131, CSE 132, CSE 200, CSE 247
Math 217 Differential Equations
Math 309 Matrix Algebra
Math 3200 Elementary to Intermediate Statistics and Data Analysis
or Math 493 Probability
Math 310 Foundations for Higher Mathematics
Math 318 Introduction to Calculus of Several Variables
or Math 308 Mathematics for the Physical Sciences
Math 449 Numerical Applied Mathematics
& Math 450 and Topics in Applied Mathematics
Two additional upper-level mathematics electives. Major track must include at least one of Math 410, Math 415, Math 416, or Math 411.

Total 24 upper-level mathematics units

Mathematics for Secondary Education
(This track also requires a major in secondary education)
One course in computer science chosen from CSE 131, CSE 132, CSE 200, CSE 247
Math 309 Matrix Algebra
Math 3200 Elementary to Intermediate Statistics and Data Analysis
or Math 493 Probability

Total 24 upper-level mathematics units

Math 310 Foundations for Higher Mathematics
Math 318 Introduction to Calculus of Several Variables
or Math 308 Mathematics for the Physical Sciences
Math 302 Elementary Geometry From an Advanced Point of View
Math 331 Algebraic Systems
Two additional upper-level mathematics electives

Total 24 upper-level mathematics units

Mathematics (Economics Emphasis)
Three economics courses:
Econ 1011 and Econ 1021
One Economics course chosen from among Econ 4011, Econ 4151, or Econ 467
and
Math 309 Matrix Algebra
Math 3200 Elementary to Intermediate Statistics and Data Analysis
or Math 493 Probability
Math 310 Foundations for Higher Mathematics
Math 4111 Introduction to Analysis
& Math 4121 and Introduction to Lebesgue Integration
Three additional upper-level courses from among Math 318, Math 429, Math 456, or any 400-level probability or statistics course. The major must include at least one of Math 493 or Math 429.

Total 24 upper-level mathematics units + 3 upper-level economics units

Notes applying to all major tracks

1. Students who entered Washington University before fall 2015 should visit the Prior Bulletins (http://bulletin.wustl.edu/prior) section of this Bulletin to view the major requirements that were in place for the appropriate year of matriculation. These requirements can also be found from the department's undergraduate webpage (http://wumath.wustl.edu).

2. Upper-level mathematics courses are those whose course number begins with a "3" or higher; e.g., Math 3***. Lower-level courses do not count toward upper-level mathematics requirements even if cross-listed as an upper-level course in another department or program. For example, if Math 2200 were cross-listed by another department as 3***, then registering for that 3*** course would not satisfy an upper-level mathematics requirement.

3. All required courses (lower- and upper-level) must be completed with a grade of C- or better.

4. Math 318 Introduction to Calculus of Several Variables and Math 308 Mathematics for the Physical Sciences cannot both be used to fulfill major requirements.
5. Courses transferred from other accredited colleges and universities with department approval can be counted. However,
   a. courses transferred from a two-year college (such as a community college) cannot be used to satisfy upper-level requirements;
   b. at least half the upper-level units required in a major must be earned at Washington University or in a Washington University-approved Overseas Study program;
   c. courses from University College cannot be used to fulfill major requirements.

6. At most 3 units for independent study or research work can count toward the major requirements.

7. No upper-level course used to satisfy a major requirement can be counted toward the requirements of any other major or minor (no “double-counting”).

8. Certain approved substitutions are found at the Undergraduate link on the department's webpage (http://wumath.wustl.edu). However, in all cases, at most one substitution can be used that involves a course not home-based in the Department of Mathematics.

Additional Information

Independent Study: Majors with a plan for independent work or a research project may apply for independent study with a faculty member. Majors are encouraged (but not required) to consider a senior project or an honors project.

Graduation with Awards for Distinction or Latin Honors:
The department offers the awards Distinction in Mathematics, High Distinction in Mathematics, and Highest Distinction in Mathematics. Recommendations for students to receive Latin Honors (which are awarded by the College of Arts & Sciences, not the department) are keyed to the requirements for the Distinction Awards, as indicated below. In these requirements, “regularly scheduled mathematics course” refers to a course that is home-based in the mathematics department (L24) and is not an independent study or research course.

- Core Course Work for All Distinction Awards (Core Course Work alone earns no award)
  a) at least 3.65 GPA in upper-level mathematics (L24) courses
  b) completion with grades of B or better (not B-) of
     i) one of the course sequences Math 4111-4121, 429-430, 493-494, 449-450, and
     ii) three additional regularly-scheduled 400-500 level mathematics courses
- Distinction in Mathematics. Awarded for Core Course Work plus
  a) completion of one additional regularly-scheduled mathematics course at the 400-500 level with grade of B or better (not B-), or
  b) passing the first actuarial exam (Exam P) from Society of Actuaries
- High Distinction in Mathematics. Awarded for Core Course Work plus satisfactory completion of an honors thesis. Details about honors theses are available on the department's webpage (http://wumath.wustl.edu).
- Highest Distinction in Mathematics. Awarded for Core Course Work plus satisfactory completion of an honors thesis plus one of the following:
  a) course work includes completion of at least one of the graduate sequences Math 5021-5022, 5031-5032, 5041-5042(3), 5051-5052, 5061-5062 and passing the graduate qualifying exam for that course sequence, or
  b) course work includes all the requirements for the department's Honors Program in Statistics (http://wumath.wustl.edu/undergraduate/information-math-majors/honors-program-statistics)
- Latin Honors. For majors in the College of Arts & Sciences, the department will recommend that the AB degree be awarded with Latin Honors if the student has an overall GPA of 3.65, as required by the college, and has earned the department award of High or Highest Distinction. These majors must apply to the department for admission to Candidacy for Latin Honors by the end of their junior year. The level of Latin Honors (cum laude, magna cum laude or summa cum laude) is determined by the college as described in the Arts & Sciences Academic Honors & Awards (p. 789) section of this Bulletin.

More details are available on the department's webpage (http://wumath.wustl.edu).

Study Abroad: Students interested in a semester or year abroad studying mathematics intensively should consider the Budapest Semesters in Mathematics Program (http://www.budapestsemesters.com).

Additional Information

1. Students who entered Washington University before fall 2015 should visit the Prior Bulletins (http://bulletin.wustl.edu/prior) section of this Bulletin to view the minor requirements that were in place for the appropriate year of matriculation. These requirements can also be found from the department's undergraduate webpage (http://wumath.wustl.edu).

2. All required courses (lower- and upper-level) must be completed with a letter grade of C- or better.

3. Math 318 and Math 308 cannot both be used to fulfill minor requirements.

4. Courses transferred from other accredited colleges and universities with department approval can be counted. However,
   a. courses transferred from a two-year college (such as a community college) cannot be used to satisfy upper-level requirements;
   b. at least 6 of the upper-level units required in a minor must be earned at Washington University or in a Washington University-approved Overseas Study Program;
   c. courses from University College cannot be used to fulfill major requirements.

5. No upper-level course used to satisfy a minor requirement can be counted toward the requirements of any other major or minor (no "double-counting").

6. At least three of the four upper-level courses required in the minor must be courses "home-based" in the math department. One approved course from another department may be substituted. Approved substitutions can be found on the department webpage (http://wumath.wustl.edu).

Courses

L24 Math 100 Foundations for Calculus
A limited enrollment class for students planning to take calculus but who need additional precalculus preparation. The course aims to build both the technical skills and the conceptual understanding needed to succeed in calculus. Course emphasizes links between the graphical, numeric and algebraic viewpoints. A variety of approaches are used to present the material. Prerequisites: two years of high school algebra and a course in geometry (or the equivalent). Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 1011 Introduction to Statistics
Basic concepts of statistics. Data collection (sampling, designing experiments), data organization (tables, graphs, frequency distributions, numerical summarization of data), statistical inference (elementary probability and hypothesis testing). Prerequisite: two years of high school algebra. Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 109 Mathematics and Music

L24 Math 131 Calculus I
Derivatives of algebraic, trigonometric and transcendental functions, techniques of differentiation, Mean Value Theorem, applications of the derivative. The definite integral and Fundamental Theorem of Calculus. Areas. Simpler integration techniques. Prerequisites: high-school algebra and precalculus, including trigonometry. Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 132 Calculus II
Continuation of Math 131. A brief review of the definite integral and Fundamental Theorem of Calculus. Techniques of integration, applications of the integral, sequences and series, Taylor polynomials and series, and some material on differential equations. Prerequisite: Math 131 or a B or better in a one-year high school calculus course, or permission of the department. Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 203 Honors Mathematics I
This is the first half of a one-year calculus sequence for first year students with a strong interest in mathematics with an emphasis on rigor and proofs. The course begins at the beginning but assumes the students have already studied the material from a more "mechanical" view. Students who complete both semesters will have completed the material Calc III and other topics that may let them move through the upper-level math curriculum more quickly. Sets, functions, real numbers, and methods of proof. The Riemann-Darboux integral, limits and continuity, differentiation, and the fundamental theorems of calculus. Sequences and series of real numbers and of functions. Vector spaces and linear maps. Prerequisite: Score of 5 on the AP Calculus Exam, BC version, or the equivalent. Credit 4 units. A&S: NS, QA A&S IQ: NSM, AN
L24 Math 204 Honors Mathematics II
Matrices, linear systems, and determinants. Eigenvalues and eigenvectors, diagonalization, and the spectral theorem. Scalar and vector fields, differential and integral calculus of several variables, and the fundamental theorems of Green, Gauss, and Stokes. Restricted to first year students who have completed Math 203 in the fall semester. Math 204 can replace Math 233 in major/minor requirements.
Credit 4 units. A&S: NS, QA A&S IQ: NSM, AN

L24 Math 217 Differential Equations
Introduction to ordinary differential equations: first-order equations, linear equations, systems of equations, series solutions, Laplace transform methods, numerical solutions. Prerequisite: Math 233 (or Math 233 concurrently).
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM

L24 Math 220 Finite Mathematics
Topics selected from number theory, combinatorics and graph theory. Methods of proof and practical applications: for example, calendars, scheduling, communications, encryption. Prerequisite: high school algebra.
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM

L24 Math 2200 Elementary Probability and Statistics
An introduction to probability and statistics. Discrete and continuous random variables, mean and variance, hypothesis testing and confidence limits, nonparametric methods. Student’s t, analysis of variance, regression and contingency tables. Graphing calculator with statistical distribution functions (such as the TI-83) may be required. Prerequisite: Math 131.
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM

L24 Math 233 Calculus III
Multivariable calculus. Topics include differential and integral calculus of functions of two or three variables: vectors and curves in space, partial derivatives, multiple integrals, line integrals, vector calculus at least through Green’s Theorem. Prerequisite: Math 132 or a score of 4-5 on the Advanced Placement Calculus Exam (BC version).
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM

L24 Math 266 Math for Elementary School Teachers
A review of elementary school mathematics at a level beyond its usual presentation in the schools. Applications of all concepts are given in abundance. Restricted to majors in Elementary Education. Prerequisite: two years of high school mathematics.
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM

L24 Math 302 Elementary Geometry From an Advanced Point of View
A rigorous modern treatment of Euclidean geometry and an introduction to non-Euclidean geometry. Prerequisite: Math 310 or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 308 Mathematics for the Physical Sciences
Continuation of Math 233 emphasizing topics of interest in the physical sciences. Topics in multivariable and vector calculus (div, grad, curl); line, surface integrals and connections to electromagnetism; Fourier series and integrals; boundary value problems (diffusion and wave equations); additional topics if time permits. Students may not receive credit toward a math major or minor for both Math 308 and Math 318. Prerequisite: Math 233 and 217, or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L24 Math 309 Matrix Algebra
An introductory course in linear algebra that focuses on Euclidean n-space, matrices and related computations. Topics include: systems of linear equations, row reduction, matrix operations, determinants, linear independence, dimension, rank, change of basis, diagonalization, eigenvalues, eigenvectors, orthogonality, symmetric matrices, least square approximation, quadratic forms. Introduction to abstract vector spaces. Prerequisite: Math 132.
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 310 Foundations for Higher Mathematics
An introduction to the rigorous techniques used in more advanced mathematics. Topics include: propositional logic, use of quantifiers, set theory, methods of proof and disproof (counterexamples), foundations of mathematics. Use of these tools in the construction of number systems and in other areas such as elementary number theory, combinatorial arguments and elementary proofs in analysis. Prerequisite: Math 233.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 310W Foundations for Higher Mathematics with Writing
Refer to the description for Math 310. Math 310W is a writing-intensive version of Math 310. Students participate in the regular Math 310 lectures and are responsible for all the exams and assignments associated with Math 310. Students in Math 310W have one additional meeting each week to deal with writing issues. At least three papers (four to five pages in length) are required, each with at least one revision. Prerequisite: Math 233 or permission of instructor.
Credit 4 units. A&S: NS, WI A&S IQ: NSM, WI

L24 Math 312 Differential Equations and Dynamical Systems
Qualitative theory of ordinary differential equations. Picard’s existence and uniqueness theorem, the phase plane, Poincare-Bendixon theory, stationary points, attractors and repellors, graphical methods. Physical applications, including chaos, are indicated. Prerequisite: Math 217.
Credit 3 units. A&S: NS Art: NSM

L24 Math 318 Introduction to Calculus of Several Variables
Selected topics for functions of several variables involving some matrix algebra and presented at a level of rigor intermediate between that of Calculus III and higher-level analysis courses. Students may not receive credit toward a mathematics major or minor for both Math 308 and 318. Prerequisites: Math 233 and Math 309.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM
L24 Math 3200 Elementary to Intermediate Statistics and Data Analysis
An introduction to probability and statistics. Discrete and continuous random variables, mean and variance, hypothesis testing and confidence limits, Bayesian inference, nonparametric methods, Student's t, contingency tables, multifactor analysis of variance, fixed effects, random effects, mixed models, multiple regression, maximum likelihood and logistic regression. Graphing calculator with Z, t, chi-square and F distribution functions (such as the TI-83 series) may be required. Calculus and the SAS software package are both used in an essential way. Prerequisite: Math 233 or permission of the instructor. Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN

L24 Math 322 Biostatistics
A second course in elementary statistics with applications to life sciences and medicine. Review of basic statistics using biological and medical examples. New topics include incidence and prevalence, medical diagnosis, sensitivity and specificity, Bayes' rule, decision making, maximum likelihood, logistic regression, ROC curves and survival analysis. Prerequisites: Math 3200, or a strong performance in Math 2200 and permission of the instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 331 Algebraic Systems
Polynomials, binomial expansions, factoring, rings (integers and polynomials), unique factorization, and other topics relevant to the high school curriculum. Designed for future secondary school teachers and other students looking for a course in algebra at a less abstract level than Math 430. Prerequisite: Math 310 or permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 3351 Elementary Theory of Numbers
Divisibility properties of integers, congruences, quadratic reciprocity, Diophantine equations. Introduction to continued fractions and a brief discussion of public key cryptography. Prerequisite: Math 310 or permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 350 Topics in Applied Mathematics
Topics change with each offering of the course. Past topics have included "Mathematics and Multimedia," "The Mathematics and Chemistry of Reaction-Diffusion Systems," "Mathematical Biology," and "Simulation Analysis of Random Processes" and "Introduction to Monte Carlo Methods." Prerequisites will vary but always include at least Math 233, Math 309 and basic programming skills in some language. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 370 Introduction to Combinatorics
Basics of enumeration (combinations, permutations and enumeration of functions between finite sets), generating functions; the inclusion-exclusion principle, partition theory and introductory graph theory. As time permits, additional topics may include Ramsey's Theorem, probabilistic methods in combinatorics and algebraic methods in combinatorics. Prerequisites: Math 132, 309 and 310, or permission of the instructor. Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN

L24 Math 371 Graph Theory
Introduction to graph theory including the basic definitions and theorems and some more advanced topics that drive much current research in graph theory: Ramsey's Theorem, random graph theory and, if time permits, Szemerédi's regularity lemma. Graphs are studied as abstract objects; however, graph theory is also of interest to applied mathematicians because graphs are natural models for networks (social, electric). Prerequisite: Math 310 or a roughly equivalent course, or permission of instructor. Students should know what a proof is and how to produce one. Some informal understanding of probability is helpful, but students need not have taken a probability course. Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 400 Undergraduate Independent Study
Approval of instructor required. Credit variable, maximum 3 units.

L24 Math 403C Mathematical Logic I
A first course in mathematical logic, an introduction to both proof theory and model theory. The structure and properties of first-order logic are studied in detail, with attention to such notions as axiomatic theory, proof, model, completeness, compactness and decidability. Prerequisite: Phil 301G or equivalent, or a background in mathematics. Same as L30 Phil 403
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L24 Math 404C Mathematical Logic II
Gödel's Incompleteness Theorem: its proof, its consequences, its reverberations. Prerequisite: Phil 403 or a strong background in mathematics. Same as L30 Phil 404
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L24 Math 406 Topics in Analysis: Special Bases in Analysis
The course considers the construction of specific orthonormal bases for the Hilbert spaces L^2(R^n). We look at the Fourier series bases in L^2([0,1]), which are then used for the construction of two types of orthonormal bases in the more general setting of R^n: wavelets and Gabor bases. Some aspects of extensions to other Hilbert spaces are considered. In general, these bases are used to analyze "signals" or functions on R^n having either real or complex values, and they should be "efficient" in some sense. We look at the types of efficiency that are most useful in several types of application in sciences and engineering. Prerequisites: Math 233, 309, and 310, or permission of instructor. In particular, students are expected to understand derivatives and Riemann integration; topics related to the more general Lebesgue integral are discussed as needed. Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 407 An Introduction to Differential Geometry
A study of properties of curves and surfaces in 3-dimensional Euclidean space. The course is essentially a modern recounting of a seminal paper of Gauss. Prerequisites: Math 233 and Math 309.
Credit 3 units. A&S: NS

L24 Math 408 Nonparametric Statistics
Statistical methods that make few or no assumptions about the data distribution. Permutation tests of different types;
nonparametric confidence intervals and correlation coefficients; jackknife and bootstrap resampling; nonparametric regressions. If there is time, topics chosen from density estimation and kernel regression. Short computer programs will be written in a language like R or C. Prerequisites: CSE 131 or 200, Math 3200 and Math 493, or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 410 Introduction to Fourier Series and Integrals
The basic theory of Fourier series and Fourier integrals including different types of convergence. Applications to certain differential equations. Prerequisites: Math 233 and Math 309.
Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 4111 Introduction to Analysis
The real number system and the least upper-bound property; metric spaces (completeness, compactness and connectedness); continuous functions (in R^n; on compact spaces; on connected spaces); C(X) (pointwise and uniform convergence; Weierstrass approximation theorem); differentiation (mean value theorem; Taylor’s theorem); the contraction mapping theorem; the inverse and implicit function theorems. Prerequisite: Math 310 or permission or instructor.
Credit 3 units. A&S: NS, QA A&S IQ: NSM

L24 Math 4121 Introduction to Lebesgue Integration
Riemann integration; measurable functions; measures; Lebesgue measure; the Lebesgue integral; integrable functions; L^p spaces; modes of convergence; decomposition of measures; product measures. Prerequisite: Math 4111 or permission of the instructor.
Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 415 Partial Differential Equations
Introduction to the theory of PDE’s with applications to selected classical problems in physics and engineering. Linear and quasilinear first-order equations, derivation of some of the classical PDE’s of physics, and standard solution techniques for boundary and initial value problems. Preliminary topics such as orthogonal functions, Fourier series and variational methods introduced as needed. Prerequisites: Math 217 and Math 309, or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 416 Complex Variables
Analytic functions, elementary functions and their properties, line integrals, the Cauchy integral formula, power series, residues, poles, conformal mapping and applications. Prerequisites: Math 318, Math 308 or ESE 317, or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 4171 Topology I
An introduction to the most important ideas of topology. Course includes necessary ideas from set theory, topological spaces, subspaces, products and quotients, compactness and connectedness. Some time is also devoted to the particular case of metric spaces (including topics such as separability, completeness, completions, the Baire Category Theorem, and equivalents of compactness in metric spaces). Prerequisite: Math 4111 or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 418 Introduction to Topology and Modern Analysis II
Continuation of Math 417. May include some algebraic topology (depending on material covered in 417). Prerequisite: Math 417. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 4181 Topology II
A continuation of Math 417I featuring more advanced topics in topology. The content may vary with each offering. Prerequisite: Math 417I, or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 420 Experimental Design
A first course in the design and analysis of experiments, from the point of view of regression. Factorial, randomized block, split-plot, Latin square, and similar design. Prerequisite: CSE 131 or 200, Math 3200, or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 429 Linear Algebra
An introduction to the linear algebra of finite-dimensional vector spaces. Includes systems of equations, matrices, determinants, inner product spaces, spectral theory. Prerequisite: Math 310 or permission of instructor. Math 309 is not an explicit prerequisite but students already should be familiar with such basic topics from matrix theory as matrix operations, linear systems, row reduction and Gaussian elimination. Material on these topics in early chapters of the text are covered very quickly.
Credit 3 units. A&S: NS, QA A&S IQ: NSM Art: NSM

L24 Math 430 Modern Algebra
Introduction to groups, rings and fields. Includes permutation groups, group and ring homomorphisms, field extensions, connections with linear algebra. Prerequisite: Math 429 or permission of the instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 434 Survival Analysis
Life table analysis and testing, mortality and failure rates, Kaplan-Meier or product-limit estimators, hypothesis testing and estimation in the presence of random arrivals and departures, and the Cox proportional hazards model. Techniques of survival analysis are used in medical research, industrial planning and the insurance industry. Prerequisites: CSE 131 or 200, Math 309 and 3200, or permission of the instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 4351 Number Theory and Cryptography
The course covers many of the basics of elementary number theory, providing a base from which to approach modern algebra, algebraic number theory and analytic number theory. It also introduces one of the most important real-world applications of mathematics, namely the use of number theory in public key cryptography. Topics from number theory include divisibility (Euclidean algorithm, primes, Fundamental Theorem of Arithmetic), congruences (modular arithmetic, Chinese Remainder Theorem, primality testing and factorization). Topics from cryptography include RSA encryption, Diffie-Hellman key exchange and elliptic curve cryptography. Topics about algebraic numbers may be include if time permits. Prerequisites: Math 233, 309 and 310 (or permission of instructor).
Credit 3 units. A&S: NS & A&S IQ: NSM

L24 Math 436 Algebraic Geometry
Introduction to affine and projective algebraic varieties; the Zariski topology; regular and rational mappings; simple and singular points; divisors and differential forms; genus; the Riemann-Roch theorem. Prerequisites: Math 318, Math 429 and Math 430, or permission of the instructor.
Credit 3 units. A&S: NS Art: NSM

L24 Math 439 Linear Statistical Models
Theory and practice of linear regression, analysis of variance (ANOVA) and their extensions, including testing, estimation, confidence interval procedures, modeling, regression diagnostics and plots, polynomial regression, colinearity and confounding, model selection, geometry of least squares, etc. The theory will be approached mainly from the frequentist perspective, and use of the computer (mostly R) to analyze data will be emphasized. Prerequisite: CSE 131 or 200, Math 3200 and a course in linear algebra (such as Math 309 or 429), or permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 4392 Advanced Linear Statistical Models
Review of basic linear models relevant for the course; generalized linear models including logistic and Poisson regression (heterogeneous variance structure, quasilikelihood); linear mixed-effects models (estimation of variance components, maximum likelihood estimation, restricted maximum likelihood, generalized estimating equations), generalized linear mixed-effects models for discrete data, models for longitudinal data, optional multivariate models as time permits. The computer software R is used for examples and homework problems. Implementation in SAS is mentioned for several specialized models. Prerequisites: Math 439 and a course in linear algebra (such as Math 309 or Math 429), or consent of instructor. Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 449 Numerical Applied Mathematics
Computer arithmetic, error propagation, condition number and stability; mathematical modeling, approximation and convergence; roots of functions; calculus of finite differences; implicit and explicit methods for initial value and boundary value problems; numerical integration; numerical solution of linear systems, matrix equations and eigensystems; Fourier transforms; optimization. Various software packages may be introduced and used. Prerequisites: CSE 200 or CSE 131 (or other computer background with permission of the instructor); Math 217 and Math 309. Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 450 Topics in Applied Mathematics
Topic may vary with each offering of the course. Prerequisites: CSE 131 (or 200) and Math 449, or permission of the instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 456 Topics in Financial Mathematics
An introduction to the principles and methods of financial mathematics, with a focus on discrete-time stochastic models. Topics include no-arbitrage pricing of financial derivatives, risk-neutral probability measures, the Cox-Ross-Rubenstein and Black-Scholes-Merton options pricing models, and implied volatility. Prerequisites: Math 233 and Math 3200 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 459 Bayesian Statistics
Introduces the Bayesian approach to statistical inference for data analysis in a variety of applications. Topics include: comparison of Bayesian and frequentist methods, Bayesian model specification, choice of priors, computational methods such as rejection sampling, and stochastic simulation (Markov chain Monte Carlo), empirical Bayes method, hands-on Bayesian data analysis using appropriate software. Prerequisites: Math 493 and either Math 3200 or 494; or permission of the instructor. Some programming experience such as CSE 131 is also helpful (consult with the instructor). Credit 3 units. A&S: NS & A&S IQ: NSM

L24 Math 460 Multivariate Statistical Analysis
Review of basic random vectors and linear algebra relevant for the course; sample mean, variance and correlation as matrix operations and their geometric interpretation; multivariate normal distributions; sampling distributions and properties of sample mean and variance; Hotelling’s T^2 and likelihood ratio tests; one-way MANOVA; two-way MANOVA; multivariate regression models; principal components analysis; factor analysis; discrimination and classification; clustering and grouping. The computer software R will be used for examples and homework problems. Implementation in SAS will be mentioned for several specialized analyses. Prerequisites: CSE 131 or 200, Math 493, Math 439, and a course in linear algebra (e.g., Math 309 or 429), or consent of instructor. Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 461 Time Series Analysis
Time series data types; autocorrelation and nonstationarity; autoregressive moving average models; model selection methods; bootstrap confidence intervals; trend and seasonality; forecasting; nonlinear time series; filtering and smoothing; autoregressive conditional heteroscedasticity models; multivariate time series; vector autoregression; frequency domain; spectral density; state-space models; Kalman filter. Emphasis on real-world applications and data analysis using statistical software. Prerequisites: Math 493 and either Math 3200 or 494; or permission of the instructor. Some programming experience may also be helpful (consult with the instructor). Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 469 Linear Algebra in Combinatorics
Many problems in combinatorics can be solved in surprising ways using linear algebra. The course will consider several types of problems to which linear algebra methods can be applied, reviewing some requisite ideas from linear algebra (and perhaps learning some new ones) along the way. Prerequisites: Math 310 and Math 429, or permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 470 Graph Theory
Graph theory entails aspects of counting theory, combinatorics, algebra, geometry and even some analysis. This course presents many of the most basic concepts and then develops several modern applications. Topics include fundamental results and uses of graphs, Euler's theorem, the adjacency matrix, eigenvalues and the Laplacian, isoperimetric problems, paths and flows, randomness in graphs, symmetric graphs, subgraphs,
Harnack inequalities, Sobolev inequalities. Prerequisites Math 310 and Math 318 (or equivalent background with permission of the instructor).
Credit 3 units. A&S: NS A&S IQ: NSM

L24 Math 475 Statistical Computation
An introduction to programming in SAS (Statistical Analysis System) and applied statistics using SAS: contingency tables and Mantel-Haenszel tests; general linear models and matrix operations; simple, multilinear, and stepwise regressions; ANOVAs with nested and crossed interactions; ANOVAs and regressions with vector-valued data (MANOVAs). Topics chosen from discriminant analysis, principal components analysis, logistic regression, survival analysis, and generalized linear models. Prior acquaintance with SAS at the level introduced in Math 3200 is assumed. Prerequisites: CSE 131 or 200, Math 3200 and 493 (or 493 concurrently), or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 481 Group Representations
Ideas and techniques in representation theory of finite groups and Lie groups.
Credit 3 units. A&S: NS

L24 Math 493 Probability
Mathematical theory and application of probability at the advanced undergraduate level; a calculus-based introduction to probability theory. Topics include the computational basics of probability theory, combinatorial methods, conditional probability including Bayes' theorem, random variables and distributions, expectations and moments, the classical distributions, and the central limit theorem. Prerequisites: Math 316 or Math 308 and permission of the instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 494 Mathematical Statistics
Theory of estimation, minimum variance and unbiased estimators, maximum likelihood theory, Bayesian estimation, prior and posterior distributions, confidence intervals for general estimators, standard estimators and distributions such as the Student-t and F-distribution from a more advanced viewpoint, hypothesis testing, the Neymann-Pearson Lemma (about best possible tests), linear models, and other topics as time permits. Prerequisites: CSE 131 or 200, Math 3200 and 493, or permission of the instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 495 Stochastic Processes
Content varies with each offering of the course. Past offerings have included such topics as random walks, Markov chains, Gaussian processes, empirical processes, Markov jump processes and a short introduction to martingales, Brownian motion and stochastic integrals. Prerequisites: Math 318 and Math 493, or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L24 Math 496 Topics in Statistics
Topic varies with each offering.
Credit 3 units. A&S: NS Art: NSM

L24 Math 496A Topics in Algebra
Topic varies with each offering.

L24 Math 497 Topics in Mathematics
Selected topics in undergraduate mathematics.
Credit 1 unit. A&S: NS Art: NSM

L24 Math 499 Study for Honors
Prerequisites: junior or senior standing, eligibility for honors work in mathematics and permission of the department’s Director of Undergraduate Studies.
Credit 3 units. Art: NSM

Medical Humanities
The minor in medical humanities draws on courses from a variety of departments and programs including art history, classics, history, languages and literature, music, philosophy, and gender and sexuality studies. It is available to undergraduates beginning with the class of 2018. An application process will control admission into the minor for at least its first two years. The minor is housed in the Washington University Center for the Humanities.

The minor approaches health, disease and medical care as culturally embedded human experiences that vary across time and place. In addition to exploring health, disease and medical care as core human experiences, the program of study is designed to provide a solid grounding in the textual-historical approach essential to all humanities scholarship. The minor combines disciplinary diversity with thematic unity to engage students with a set of tightly related “big” topics and issues. These include the contested meanings of health and disease; the ethical dimensions of medicine; illness narratives; debates over health and development; the role of medicine in war, empire and nation building; the relationship between religion and medicine; exchange and friction between biomedicine and other healing traditions; and the burden of disease as it relates to gender, race and class.

Medical Humanities aspires to instill values shared by all humanities disciplines: to appreciate multiple worlds and viewpoints, to communicate clearly and gracefully, and to read and think critically. Students will emerge from the minor able to apply the insights and critical methods of literature, philosophy, history and the arts to subjects often left solely to the natural and social sciences. Its goal is to demonstrate the enduring relevance of humanistic inquiry to understanding a basic realm of human experience.

Additional Information

The minor is available beginning with the Washington University Class of 2018. Interested students may be admitted to the medical humanities minor as early as their sophomore year. The minor will require a written application and a brief interview, with the aim of accepting 15-20 students per graduating class for the minor's first two years.

An up-to-date list of medical humanities courses and medical humanities affiliate courses can be found by searching Washington University Course Listings for the "CFH MH" and "CFH MHA" attributes, or by consulting the lists online (http://cenhum.artsci.wustl.edu/undergraduate/medical_humanities/requirements).

Courses

For Medical Humanities courses, please consult the Minors section of this page or search Course Listings (https://acadinfo.wustl.edu/Courselists/Semester/Search.aspx) for the CFH MH (Medical Humanities) and CFH MHA (Medical Humanities: Affiliate) attributes.

Medicine and Society

The Medicine and Society Program is an exciting opportunity for undergraduate students in Arts & Sciences who are interested in exploring the interface of culture, behavior and health from a social science perspective. The program addresses the important social and cultural foundations of health and illness in human societies, with a specific emphasis upon service and research opportunities. The program is supported by a grant from the Danforth Foundation and administered through the Department of Anthropology.

Eligibility

The Medicine and Society Program is a four-year program designed for students entering their freshman year. Upon acceptance to Washington University in the spring, students may apply online for admission to the program by indicating their interest in Medicine and Society. A description of the program and how to apply online is in Getting Started, a brochure sent to students in mid-May.

Admission to this program is highly competitive. Academic credentials, aptitude and interest in a health-related career, and personal statements all will be considered in selecting 20 participants to join the freshman cohort. The program will
particularly appeal to students with a long-term commitment to careers in the health professions and related areas.

**Curriculum**

Medicine and Society has its intellectual and programmatic roots in the field of medical anthropology, which is broadly defined as the study of human health and illness across culture, time and space. Medical anthropologists examine the role of culture and society in shaping illness experiences. Foci of inquiry may include such issues as traditional health beliefs and practices; cultural clashes between traditional medicine and biomedicine; political and economic foundations of health disparities; alternative and complementary medicine; social and behavioral factors affecting disease rates; and public health responses to emerging health problems. These topics all share a focus on community as a primary area of inquiry and population as a primary unit of analysis.

**The Program**

**Requirements for the Medicine and Society Program**

Once admitted to the program, students must complete the following:

- Freshman Medicine and Society Seminar
- Community Health Internship
- Anthro 260 Topics in Health and Community
- A major or minor in anthropology or the global health and environment track of anthropology
- Senior Capstone or Honors Thesis

Students who are accepted into the Medicine and Society Program are enrolled in a year-long Freshman Seminar on culture, health and society in the Department of Anthropology. This seminar provides the academic foundation for future community health work in St. Louis. Beginning in the sophomore year, students identify and select a community health site for internship placement. The internship opportunity provides students with a location for focusing their interest and involvement in community health and allows students to participate in the work of the host organization. During the junior and senior years, academic and service activities intensify at the internship site, culminating in a Senior Honors thesis or Capstone project based upon original research and investigation. All students in the Medicine and Society Program are encouraged to graduate with honors, based upon their independent research and academic achievement.

This course of study provides an excellent foundation for future graduate work in medicine, public health or any of the allied health professions such as nursing or physical and occupational therapy. Students who complete the program also will be highly competitive for admission to other professional schools such as law, business or social work.

**Personnel**

Medicine and Society is directed by Bradley Stoner, a medical anthropologist and infectious disease physician at Washington University. Dr. Stoner has extensive experience as a physician and public health researcher and holds a joint appointment in the Department of Internal Medicine at Washington University School of Medicine. He oversees student training in medical anthropology and placement in the community internship sites. Dr. Stoner is assisted in these efforts by Rebecca Lester, who serves as assistant director of the program. Students also have full access to other faculty in anthropology and related disciplines who offer courses of relevance and interest.

PhD, Northwestern University
(Women, Gender, and Sexuality Studies)

Majors
The Medicine and Society Program is not a major/minor program; it is a four-year program that is available by application only.

Current students who are interested in the Medicine and Society curriculum are advised to investigate a major (p. 186) or minor in anthropology (p. 187) with a focus on medical anthropology or the optional global health and environment track (p. 186) of the anthropology major or minor.

Minors
The Medicine and Society Program is not a major/minor program; it is a four-year program that is available by application only.

Current students who are interested in the Medicine and Society curriculum are advised to investigate a major (p. 186) or minor in anthropology (p. 187) with a focus on medical anthropology or the optional global health and environment track (p. 186) of the anthropology major or minor.

Courses
Please refer to the requirements in the Medicine and Society Overview section where required courses are listed. Please visit the Anthropology (p. 187) page for specific course information.

Medieval and Renaissance Studies
Interested students may pursue a minor in Medieval and Renaissance studies or a major in Renaissance studies under the auspices of the Interdisciplinary Project in the Humanities (IPH). The major offers students the opportunity to gain a broad understanding of the early modern world, the seedbed of modern Western civilization, through the integrated study of Renaissance literature, history, philosophy, art history and music. (A full description of the requirements for completing the Renaissance studies track in the Interdisciplinary Project in the Humanities may be found in the general listing for the IPH (p. 484).)

Courses are drawn from a wide range of departments. This allows students to develop their own course of study, to select areas of concentration that are of particular personal interest, and to work closely with faculty from different areas. Students study the themes and social issues of the period through art, history, literature and popular culture. Topics examined include the rise of urban life, the flowering of vernacular languages and new literary genres, the growing emphasis on education, the reconception of pictorial representation and architectural space, the expression and subversion of power in politics and culture, and the transformation of religious doctrines and institutions.

Minors

The Minor in Medieval and Renaissance Studies

The minor in Western Medieval studies and the minor in Renaissance studies have the same structure. Students must complete two years of college-level language study in Spanish, French, Italian, Latin, German, Arabic or Greek and are encouraged to continue their foreign language study further. They are expected to take six additional courses; three should come from the following list:

- Art-Arch 113 History of Western Art, Architecture and Design 3
- History 101C Western Civilization 3
- IPH 201C Classical to Renaissance Literature: Text and Tradition 3
- IPH 203C Early Political Thought: Text and Tradition 3
- IPH 209 Scriptures and Cultural Traditions: America’s Bible 3

Units required: 18

Students interested in pursuing the minor in Medieval and Renaissance studies should contact the offices of the Interdisciplinary Project in the Humanities (p. 484).

Additional Information

In addition, students must take three courses in either Medieval or Renaissance studies (depending on the concentration chosen) from at least two different departments or programs. Students will select these three courses in consultation with their minor adviser: Michael Sherberg (http://rll.wustl.edu/people/sherberg) for Western Medieval studies and Joseph Loewenstein (http://english.artsci.wustl.edu/Joe_Loewenstein) for Renaissance studies.

Courses

Please visit the Interdisciplinary Project in the Humanities (p. 484).

Mind, Brain and Behavior

How do we think? What is human consciousness? What is the relationship between the mind, the brain and behavior? During the past few decades, an explosive growth of knowledge in the cognitive sciences has begun to yield answers to fundamental mysteries about the nature of human thought. Students in this two-year program investigate new theories and problems emerging from this interdisciplinary area of study.

The Mind, Brain and Behavior (MBB) program, which is open to incoming freshmen in the College of Arts & Sciences, is a two-year program that engages students with the research culture of the university. The program builds upon areas of
research strength and increasing faculty collaboration within the university. It brings together faculty from several departments and students who share an interest in an area of study to create a lively intellectual and social community; to foster a culture of inquiry; and to enable students, early in their undergraduate career, to participate in research. For more information on the application process, visit the first-year programs webpage (http://college.artsci.wustl.edu/firstyearprograms).

During the first year, freshmen take two core courses that provide an introduction to the interdisciplinary study of the mind-brain (MBB 120A Introduction to Study of the Mind-Brain: Psychological, Biological and Philosophical Perspectives; and MBB 122 Introduction to the Study of the Mind Brain II). These courses are taught collaboratively by faculty members from different disciplines. In the sophomore year, students are able to undertake research under the supervision of a faculty member who serves as a research mentor for the MBB program (MBB 300 Research in Mind, Brain and Behavior). Sophomores may choose among several research options, each combining independent work with opportunities to work collaboratively.

Participation in Mind, Brain and Behavior is fully compatible with all majors and pre-professional programs. Enrollment in Mind, Brain and Behavior is limited to 45 students each year.

Majors

The Mind, Brain and Behavior (MBB) program, which is open to incoming freshmen in the College of Arts & Sciences, is a two-year program that engages students with the research culture of the university. There is no major in this area.

Minors

The Mind, Brain and Behavior (MBB) program, which is open to incoming freshmen in the College of Arts & Sciences, is a two-year program that engages students with the research culture of the university. There is no minor in this area.

Courses

L96 MBB 120A Introduction to Study of the Mind-Brain: Psychological, Biological and Philosophical Perspectives
A consideration of three primary areas of research in cognitive science: attention, memory and language. These topics are used to illustrate the techniques by which mental abilities are investigated and explained in psychology and neuroscience: the focus, in particular, is on the use of reaction time studies, brain imaging and cell recordings to isolate the basic components that make up complex functions. In addition to the central concepts and theories in each area, the course addresses philosophical implications of this research concerning how the mind and brain are related, how the mind-brain encodes or represents information, and the nature of consciousness. And there is an emphasis on applying these findings to important problems, such as Alzheimer's disease and deficits due to brain damage. The class is taught by three members of the faculty from different disciplines and combines a whole-group lecture with small discussion classes. The goal is to give students a good understanding of the interdisciplinary nature of cognitive science and to help them develop the ability to think and write critically about scientific research into the mind-brain. Prerequisite: admission to the Mind, Brain and Behavior program. Credit 3 units. A&S: NS A&S IQ: NSM BU: SCI

L96 MBB 122 Introduction to the Study of the Mind Brain II
In this course, participants in the Mind, Brain and Behavior program continue their exploration of cognitive science. We explore different frameworks for thinking about how the different branches of cognitive science relate to each other. The course contains an introduction to relevant topics in the philosophy of science and the philosophy of mind. Prerequisite: MBB/PNP 120. Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L96 MBB 300 Research in Mind, Brain and Behavior
An introduction to research for students in the Mind, Brain and Behavior program. Students work under the supervision of a
Music

The Department of Music offers a music program of exceptional quality and diversity. In this varied course of study, where music is approached as a liberal and fine art, rather than as an isolated, separate subject, students may pursue practical and creative music making or study musical traditions and individual works. Music courses are open to all students in the university.

We offer students the opportunity to develop performance skills in voice or instruments through private instruction or through participation in small or large ensembles. Private music lessons with our prominent faculty, including members of the St. Louis Symphony, are available in voice, piano, organ, guitar, and all orchestral and jazz instruments.

Music majors can explore critical issues of tradition, individual composers, compositional craft, aesthetic interpretation, and music’s social and cultural significance through a wide range of courses from introductory classes to highly specialized seminars. Instruction is available in jazz, popular music, world musics, the history and literature of Western music, ethnomusicology, music theory and analysis, musical composition, and electronic music. All performance, creative and academic endeavors in music are supported by a thorough grounding in musicianship and keyboard skills.

Music majors may take advantage of study abroad programs in music in Italy, England and France. Summer research projects under faculty direction also are available.

Several options are available for students interested in music: the Bachelor of Arts degree with a major in music, the Bachelor of Music degree, a minor in music, and a minor in jazz studies. Students may take the AB degree in combination with a major in another field or as their primary major in a broad liberal arts education. Majoring in music can prepare students well for graduate work and for a variety of musical careers and other professions.

Performance Opportunities

Ensembles: The department sponsors numerous performing ensembles that draw members from the university and the surrounding community. Students must audition for admission to the ensembles. All ensembles are available for graded credit, for credit/no credit, or off roster. Ensembles give one or more public performance each semester. Students who are enrolled for credit in one of the department’s ensembles may be entitled to a scholarship that covers a portion of the fee for applied music lessons.

Vocal Ensembles: Concert Choir, Chamber Choir

Instrumental Ensembles: Flute Choir, Jazz Band, Chamber String Ensembles, Symphony Orchestra, Wind Ensemble, Jazz Combos

Applied Music: Students may take lessons in voice, piano, organ, guitar, and all orchestral and jazz instruments in the appropriate course sequences. A separate fee is charged for private instruction. Music majors and minors receive an applied music scholarship to cover all or a portion of the fee, respectively. If students enroll for credit in one of the department’s ensembles, they are entitled to a scholarship for a portion of the applied music fee each semester they are enrolled. In addition, the department has a limited number of partial scholarships based on need and merit.

DMA, University of Illinois

Majors

Becoming a Music Major: Students who plan to declare a major in music should consult with the department as early as possible. Students interested in pursuing a music major should begin the appropriate course sequences in music theory, music history, keyboard skills and musicianship. All music majors must complete a senior capstone, which could take the form of a thesis, recital, lecture-demonstration, composition portfolio or 400-level course.

The Bachelor of Arts in Music Major

Total units required: 45

Upper-level elective units (courses, applied music or ensembles)

The Bachelor of Music Major

Total units required: 74-78

Declaration of this major must be approved by the department before the end of a student's sophomore year. In addition to the required courses, majors must complete a minimum of 12 to 30 units in advanced courses, depending on the area of concentration. Students may earn the BMus degree with concentration in performance, composition, music theory, or music history and culture, or they may pursue a general program combining two or more areas.

Each concentration requires a major senior capstone, such as a thesis, recital, lecture-demonstration or composition portfolio. All majors also must pass a keyboard proficiency examination.

### Applied Music and Ensemble Requirements

In addition to the courses listed above, BMus students also must register for applied music lessons and at least one ensemble every semester once the major has been declared. Students with a performance emphasis must take at least 2 units of applied music lessons per semester; all others must take at least 1 unit per semester.

#### Elective courses:
Each of the five BMus concentrations includes additional requirements, as follows:

**Performance Emphasis:**

- Upper-level music history elective (other than Music 3011-Music 3013) 3
- Music 4221 Introduction to the Analysis of 20th-Century Music 3
- 400- or 500-level music theory elective 3
- Music 439 Diction I 3
- Junior half-recital 0

**Theory Emphasis:**

- Music 4221 Introduction to the Analysis of 20th-Century Music 3
- 400- or 500-level electives 12
- Upper-level music history elective (other than Music 3011-Music 3013) 3
- or Music 429 & Music 430 Composition and Composition

**Composition Emphasis:**

- Upper-level music composition (Music 429, Music 430, repeatable) 12
- Upper-level music history elective (other than Music 3011-Music 3013) 3
- Music 4221 Introduction to the Analysis of 20th-Century Music 3
- 400- or 500-level music theory electives 6

**History and Culture Emphasis:**

- Upper-level music history electives (other than Music 3011-Music 3013) 15
- Music 4221 Introduction to the Analysis of 20th-Century Music 3
- 400- or 500-level music theory electives 6

**General Emphasis:**

- Upper-level music history electives (other than Music 3011-Music 3013) 6
- Music 4221 Introduction to the Analysis of 20th-Century Music 3
- 400- or 500-level music theory electives 6
- Elective units 9

#### Senior Honors:

Music majors are encouraged to work toward Latin Honors. To qualify, students must have an outstanding academic record and satisfactorily complete a senior capstone project (in Music 4993), including an oral examination with a faculty committee. Project proposals are due at the end of the junior year.

### Minors

**The Minor in Music — General Studies**

- **Units required:** 18

  **Required courses:**
  - Music 121C & Music 122C Classical Theory I and Classical Theory II 6
  - or Music 121J & Music 122J Jazz Theory I and Jazz Theory II
  - One of the following three courses:
    - Music 3011 Music History I 3
    - or Music 3012 Music History II
    - or Music 3013 Music History III
  - Lower-level electives 3
  - Upper-level electives 6
  - Total units 18

For the elective units, a maximum of 6 units of ensemble participation may be included.

### Additional Information

Special scholarships are available for the study of applied music.

Additional Information

The minor requires 18 units of credit in courses offered by the Department of Music of which at least 9 must be at the 300 level or above. Upper-level credits may be obtained in Ensemble Performance or Applied Music if the requisite standard is attained. Other upper-level credits in Music or kindred studies (such as African and African-American Studies) may be approved at the discretion of the department chair.

Courses

L27 Music 100B Preregistration: Brass Applied Music
Credit variable, maximum 2 units. EN: H

L27 Music 100D Preregistration: Percussion Applied Music
Credit variable, maximum 2 units.

Credit variable, maximum 2 units.

L27 Music 100W Preregistration: Woodwinds Applied Music
Credit variable, maximum 2 units.

L27 Music 101E Introductory Survey of Western Music I
A survey of "art" music in Western culture from the Middle Ages to the mid-18th century. Emphasis in the first term is on sacred and secular music of the church, court and middle-class society in its historical and cultural context. Regular listening and writing assignments are designed to develop the capacity to hear perceptively and write critically about the music studied. No prior knowledge of musical notation required. This course is not recommended for music minors or majors. For a one-semester course covering Western classical and popular music and music from other cultures, refer to Music 114E.
Credit 3 units. A&S: LA & A&S IQ: HUM Art: AH BU: HUM

L27 Music 1021 Musics of the World
This course provides an introduction to the field of ethnomusicology as well as a survey of selected musics from around the world. We investigate not only musical sound itself but how music interacts with other cultural domains, such as religion/cosmology, politics, economics and social structure. The course uses case studies from regions around the world (such as Indonesia, India, the Middle East, sub-Saharan Africa and Latin America) to illustrate the conceptual problems and methodologies raised by the cross-cultural study of music, as well as to acquaint students with the rich variety of music around the globe.
Credit 3 units. A&S: TH, CD & A&S IQ: HUM, LCD BU: HUM EN: H

L27 Music 1022 Popular Music in American Culture
American popular music from the 1800s to the present, with emphasis on technology, social and political contexts, and popular music as a realm of interracial encounter. Musics covered include early jazz, classic blues, swing, classic pop, rock ‘n’ roll, soul, disco, hip-hop and the changing relationship between popular music, film and television.
Credit 3 units. A&S: LA, SD & A&S IQ: HUM, SD BU: HUM EN: H

L27 Music 1023 Beethoven in His Time and Ours
Ludwig van Beethoven not only composed some of the most significant works of Western classical music — he continues to make his mark as the prototypical “troubled genius,” symbol for a wide range of political causes, subject of numerous films, and classical music’s main representative in American pop culture. We begin with an exploration of Beethoven’s life, music and historical context and continue by tracing how, after his death, Beethoven became a cultural hero whose image took on a life of its own. Throughout, we unravel the interaction of music, culture and mythmaking. No previous musical experience required.
Credit 3 units. A&S: TH & A&S IQ: HUM BU: HUM EN: H

L27 Music 1024 Mozart: The Humor, Science and Politics of Music
Wolfgang Amadeus Mozart is one of the most recognized composers of “classical” music. A child prodigy of astonishing precocity, he has come to symbolize genius for Western culture — a composer whose music embodies superhuman, even utopian beauty and perfection. In this course, we learn that there was more to Mozart. Mozart was a lover of codes and puzzles who delighted in the science of music, a sampler of non-Western music, and a musical humorist whose comedies make
providing varied — ranging from cynical to poignant — about politics, gender and morality. Our focus works include Mozart's Symphonies, piano music, string quartets, and such comedies as The Magic Flute and The Marriage of Figaro. We also explore Mozart's afterlife — how his music has figured in film, literature and popular culture. This course is open to all undergraduates. No previous musical course work or experience is required.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L27 Music 102E Introductory Survey of Western Music II
A survey of "art" music in Western culture from the middle of the 18th century to the present. Music of composers from Haydn and Mozart to George Crumb and John Cage are studied in its historical and cultural context. Regular listening and writing assignments are designed to develop the capacity to hear perceptively and write critically about the music studied. No prior knowledge of musical notation required. This course is not recommended for music minors or majors.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

L27 Music 103E Theory I: Introduction to Music Theory
Vocabularies and skills basic to music theory introduced through concentrated work in notation, the development of specific compositional skills, and musical analysis. Concepts of musical structure and aesthetic experience are explored through the study of music from three periods of the western tradition: medieval liturgical chant, music of the Classical period, and music of the early 20th century. Ability to read musical notation required. Keyboard skills desirable. Music 103E is the entry-level course for all music minors and majors.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

L27 Music 104E Music Theory II
A systematic introduction to the basic principles of tonality as manifested in Western European music of the 18th and early 19th centuries. Topics include pitch, time, line and linear elaboration, counterpoint, harmony, phrase, form and chromaticism. The principles are explored through both musical composition and interpretation of musical art works. Prerequisite: Music 103E.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

L27 Music 105 History of Jazz
History of jazz to the present, including its African elements.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

L27 Music 107 Listening Laboratory
Optional analytical listening sessions to supplement Music 101E and 102E respectively. Taped listening assignments. Required of music majors and of students in the first-year seminar section. Concurrent registration in Music 101E or 102E is required.

Credit 1 unit. A&S: LA A&S IQ: HUM

L27 Music 109 Ragtime
A history of ragtime music: survey of composers and performers. Emphasis on St. Louis and the music of Scott Joplin. University College students should register for U24 109 Section 02.

Credit 2 units. A&S: LA A&S IQ: HUM BU: HUM

L27 Music 1091 Jazz Theory I
Jazz Theory I introduces the jazz music language as a preparation for the study of improvisation. The course study consists of basic music theory including music-reading skills and notation, scales, intervals and triads. An introduction to extended tertian chords as derived from the 21 modes of the major, melodic and harmonic minor scales forms the basis of the jazz harmonic language. The study of chord progression and chord substitution, song form and the blues prepares the student for a detailed study of the modern jazz language.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L27 Music 1092 Jazz Theory II
Jazz Theory II outlines the harmonic, rhythmic and improvisational practices from the Bebop period of the late 1940s to the jazz music of the present day. Discussions include intermediate to advanced chord substitution, quartal and bitonal harmony, modal improvisation, pentatonic scales and polyrhythmic drumming, concentrating on the work the major improvisers of the 1950s to 1970s. Prerequisite: Music 1091.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L27 Music 109M Mathematics and Music

Same as L24 Math 109
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Arch: NSM Art: NSM

L27 Music 110G Study in Guitar
Students taking guitar off-roster/not for credit.

L27 Music 110P Studies in Piano
Students taking strings not for credit.

L27 Music 110V Study in Voice
Students taking guitar off-roster/not for credit.

L27 Music 110S Study in Strings
Students taking strings not for credit.

L27 Music 110W Study in Woodwinds
Students taking woodwinds not for credit.

L27 Music 113 Fundamentals of Music
This course provides a broad overview of music fundamentals designed to enhance the student's experience of music as well as provide a foundation for further study in music theory. Students become acquainted with the basic vocabulary and building blocks of music: intervals, rhythms, scales, triads, chords and harmony.
L27 Music 114E Exploring Music
A wide-ranging introduction to music in its many forms. Western classical and popular music are studied along with music from other cultures to highlight the varied conceptions, functions and practices of music in different times and places. Discussion of specific pieces facilitates growth in basic musical skills and provide insights into music's multifaceted historical/cultural resonances. No previous musical background required. Includes regular reading and listening assignments.
Credit 3 units. A&S: LA & S IQ: HUM BU: HUM

L27 Music 115 Reading Music
Elements of music notation for those with little or no music-reading skill. Designed to develop a basic acquaintance with the principles of notation for students enrolled in introductory courses, applied music and ensembles as well as those with a general interest in learning to read music.
Credit 1 unit. A&S: LA

L27 Music 1161 Freshman Seminar: Writing About Music
This course explores the various ways in which writers from the 18th century to the present discuss music. Issues include respect for a tried and true musical "canon," music as an imitative vs. absolute art form, and a focus on performing virtuously/spectacle vs. musical content. In addition to reading what previous authors have written, students write on a regular basis about examples from classical, popular and non-Western music and critique each others' work. Ability to read music is not required.
Credit 3 units. A&S: LA & S IQ: HUM BU: HUM

L27 Music 1162 Freshman Seminar: Bruce Springsteen's USA
This course examines the career and work of Bruce Springsteen as songwriter, singer, rock musician, pop star, and public figure. Conducted in seminar format, the primary course materials are Springsteen's recordings and videos, as well as the many interviews he has given. Selections from the vast body of popular and academic scholarship on Springsteen also informs class discussions. The course is limited to freshmen.
Credit 3 units. A&S: LA & S IQ: HUM BU: HUM EN: H

L27 Music 1163 Freshman Seminar: Youth in Revolt: Popular Music as Protest
When is popular music also protest music? In this course we will listen to music linked to the mid-century Civil Rights Movement, the Vietnam War, Black Power, the wars in Iraq, Occupy Wall Street, and the recent confrontations between protestors and the police. While exploring genres such as rock, soul, pop, punk, hip-hop and grunge, we will ask how popular musics might express or embody various forms of protest in American life. Selections from contemporaneous testimonials, alternative presses, interviews, and popular and academic writing will also inform our discussions.
Credit 3 units. A&S IQ: HUM EN: H

L27 Music 119 Guitar Class I
Jazz Guitar Class I introduces the fundamentals of music as a preparation for the study of jazz proper, guiding the student to the development of an operational musical language on the instrument. This performance practice class consists of basic music theory realized on the guitar including major and minor diatonic and pentatonic scales, triads in all positions and inversions, seventh chords and an introduction to extended tertian chords. As well, music reading, rhythmic skills and basic performance techniques are emphasized. The course culminates in the reading of jazz lead-sheets where students play the melody in all positions of the key and also play the harmony from chord symbols. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly.
Credit 1 unit.

L27 Music 120 Guitar Class II
Jazz Guitar Class II reinforces the materials of Music 119 including scales and triads in all positions, while introducing new materials including 9th, 11th, 13th and altered chords. An introduction to improvisation, this course stresses making music in real time through the embellishment of melody, the study of arpeggio, the modes of the major scale and idiomatic devices of the jazz language. The course stresses the development of strong rhythmic skills while furthering a proper technique. Jazz Guitar II culminates in the reading of jazz lead-sheets where the student improvises in fundamental ways. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly.
Credit 1 unit.

L27 Music 121C Classical Theory I
Introduction to vocabularies and skills basic to music theory through concentrated work in notation, the development of specific compositional skills, and musical analysis. Concepts of musical structure and aesthetic experience are explored through the study of music from the Western classical tradition. Ability to read musical notation required. Keyboard skills desirable. Students who register for Music 121C are required to register for one of the subsections.
Credit 3 units. A&S: LA & S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 121J Jazz Theory I
Introduction to the jazz music language as a preparation for the study of improvisation. The course of study consists of basic music theory including music-reading skills and notation, scales, intervals and triads. An introduction to extended tertian chords as derived from the 21 modes of the major, melodic and harmonic minor scales forms the basis of the jazz harmonic language. The study of chord progression and chord substitution, song form, and the blues prepares the student for a detailed study of the modern jazz language. Students who register for Music 121J are required to register for one of the subsections.
Credit 3 units. A&S: LA & S IQ: HUM BU: HUM EN: H

L27 Music 122C Classical Theory II
A review of diatonic harmony and followed by a study of chromatic harmony and issues of tonality and form. Topics include tonicization and modulation, chromatic voice-leading, modal mixture, altered and extended chords, modulation to foreign keys, and elaboration of diatonic sequences. Work
involves written and class-related exercises, analysis of 18th- and 19th-century works, and model composition. Students who register for Music 122C are required to register for one of the subsections. Prerequisite: Music 121C. Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L27 Music 122J Jazz Theory II
A study of the harmonic, rhythmic, and improvisational practices from the Bebop period of the late 1940s to the jazz music of the present day. Discussions include intermediate to advanced chord substitution, quartal and bitonal harmony, modal improvisation, pentatonic scales, and polyrhythmic drumming, concentrating on the major improvisors of the 1950s-1970s. Students who register for Music 122J are required to register for one of the subsections. Prerequisite: Music 121J. Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L27 Music 1232 Keyboard Skills I
An introduction to basic techniques of keyboard harmony using intervals, scales and root position chords. Transposition and sight-reading skills developed. Prerequisite: permission of instructor for nonmajors. One and one-half class hours a week. Credit 1 unit.

L27 Music 1242 Keyboard Skills II
An introduction to basic techniques of keyboard harmony using intervals, scales and root position chords. Transposition and sight-reading skills developed. Prerequisite: permission of instructor for nonmajors. One and one-half class hours a week. Credit 1 unit.

L27 Music 128 Selected Area for Special Study
In-depth study in areas of special interest. Credit 3 units. A&S: TH BU: HUM

L27 Music 129 Composition Workshop
An introductory course in contemporary music composition, with a 30-minute private lesson and weekly master class. Credit 2 units.

L27 Music 130 Composition Workshop
An introductory course in contemporary music composition, with a 30-minute private lesson and weekly master class. Prerequisite: Music 129 or permission of instructor. Credit 2 units.

L27 Music 151G Introductory Guitar
Credit variable, maximum 2 units.

L27 Music 151P Introductory Piano
Credit variable, maximum 2 units.

L27 Music 151S Introductory Strings
Credit variable, maximum 2 units.

L27 Music 151V Introductory Voice
Credit variable, maximum 2 units.

L27 Music 151W Introductory Winds and Percussion
Credit variable, maximum 2 units.

L27 Music 159 Piano Class
Intended for students with little to no formal musical training. An introduction to keyboard fundamentals through the study of note reading, intervals, technique and repertoire. Students may self-enroll or be placed by audition. There is a $150 lab fee for the course. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the fee is prorated accordingly. Credit 1 unit. A&S: LA EN: H

L27 Music 160 Piano Class
Continuation of L27 Music 159. Prerequisite: Music 159 or permission of instructor. There is a $150 lab fee for the course. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the fee is prorated accordingly. Credit 1 unit. A&S: LA EN: H

L27 Music 170G Jazz Guitar
Credit variable, maximum 2 units.

L27 Music 170J Jazz Brass
Credit variable, maximum 3 units.

L27 Music 170P Jazz Piano
Credit variable, maximum 2 units.

L27 Music 170S Jazz Strings
Credit variable, maximum 2 units.

L27 Music 170V Jazz Voice
Credit variable, maximum 2 units.

L27 Music 170W Jazz Winds and Percussion
Credit variable, maximum 2 units.

L27 Music 175G Guitar
Credit variable, maximum 2 units.

L27 Music 175O Organ
Credit variable, maximum 2 units.

L27 Music 175P Piano
Credit variable, maximum 2 units.

L27 Music 175S Strings
Credit variable, maximum 2 units.

L27 Music 175V Voice
Credit variable, maximum 2 units.
L27 Music 175W Winds and Percussion  
Credit variable, maximum 2 units.

L27 Music 177C Voice Class: Fundamentals of Singing Technique  
Voice Class teaches basic techniques of bel canto vocal production that apply to singing solo repertoire and singing in choral ensembles. Basic techniques include breathing in singing, resonance, articulation and registration. Study of the International Phonetic Alphabet, very basic skills for reading music and vocal health issues also are included. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly.
Credit 1 unit. A&S: LA

L27 Music 178C Voice Class II: Fundamentals of Singing Technique  
Voice Class teaches basic techniques of bel canto vocal production that apply to singing solo repertoire and singing in choral ensembles. Basic techniques include breathing in singing, resonance, articulation and registration. Study of the International Phonetic Alphabet in English and Italian, skills for reading music, in-depth study in musical interpretation, and acting skills. More advanced work in poetic analysis and line reading. Prerequisite: Music 177C or approval by instructor by audition. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly.
Credit 1 unit.

L27 Music 221 Music Theory III  
Concentrated study of the principles of tonal counterpoint and their application to the interpretation of Bach keyboard suites. Class work includes both writing and analysis. Prerequisite: Music 104E.
Credit 3 units. A&S: LA A&S IQ: HUM

L27 Music 2211 Opera Projects  
Students may contract with a faculty supervisor for credit for work on opera productions or research. Contracts must be signed by the student and the faculty supervisor before the work can commence. Prerequisite: permission of the instructor.
Credit variable, maximum 2 units.

L27 Music 2212 Opera Projects  
Students may contract with a faculty supervisor for credit for work on opera productions or research. Contracts must be signed by the student and the faculty supervisor before the work can commence. Prerequisite: permission of the instructor.
Credit variable, maximum 2 units.

L27 Music 2213 Singers’ Performance Workshop  
Developing performance skills for young singers in musical theatre, opera and opera that help students prepare music for rehearsal, performance and audition. Semester’s work includes musical, vocal and diction coachings, research and dramatic analysis. The class culminates in the preparation and performance of both solo and ensemble pieces. Prerequisite: audition and permission of instructor.
Credit 3 units. A&S IQ: HUM EN: H

L27 Music 221C Classical Theory III  
A synthesis of the knowledge gained in Theory I-II as it applies to the detailed analysis of 18th-, 19th-, and selected 20th-century works (Bach through Brahms). Prerequisite: Music 122C or 122J.
Credit 3 units. BU: HUM

L27 Music 222 Music Theory IV  
Continuation of Music 221 with study of 18th- and 19th-century harmonic, textural and structural procedures (Bach through Brahms). Prerequisite: Music 221.
Credit 3 units. A&S: LA A&S IQ: HUM

L27 Music 2231 Musicianship I  
Basic ear training, sight singing and dictation skills. Three hours a week. Prerequisite: Music 104E.
Credit 1 unit.

L27 Music 2232 Keyboard Skills III  
Intermediate skills in score reading as well as the introduction of inversions, figured bass and improvising melodies. Prerequisites: Music 1242 and permission of instructor for nonmajors. One and one-half class hours a week.
Credit 1 unit.

L27 Music 2241 Musicianship III  
Continuation of Music 2231. Intermediate-level ear training, sight singing and dictation skills. Prerequisite: Music 2231. Two and one-half class hours a week.
Credit 1 unit.

L27 Music 2242 Keyboard Skills IV  
Intermediate skills in score reading as well as the introduction of inversions, figured bass and improvising melodies. Prerequisite: permission of instructor for nonmajors. Concurrent registration in Music 2231 and 2241 required of all music majors. One and one-half class hours a week.
Credit 1 unit.

L27 Music 227 Selected Area for Special Study  
In-depth study in areas of special interest. Prerequisite: permission of instructor.
Credit 3 units.

L27 Music 228 Selected Area for Special Study  
In-depth study in areas of special interest. Prerequisite: permission of instructor.
Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L27 Music 229 Composition I  
An intermediate course in contemporary music composition, with a 30-minute private lesson and weekly master class. Prerequisite: Music 130 or permission of instructor.
Credit 2 units.
L27 Music 230 Composition
An intermediate course in contemporary music composition, with a 30-minute private lesson and weekly master class. Prerequisite: Music 229 or permission of instructor. Credit 2 units.

L27 Music 231C Small Chamber Ensembles
Students interested in performance of chamber music are organized into various ensembles and assigned a coach. A public chamber music concert is given once each semester. May be repeated for credit. Prerequisite: permission of the instructor. Consult Course Listings for more information. Credit variable, maximum 1 units.

L27 Music 232W Chamber Winds
A group of select woodwind and brass players who form brass and woodwind choirs and smaller ensembles such as quintets and quartets. The weekly rehearsals are coached. The ensembles perform on student recitals and at various campus functions. Credit 1 unit.

L27 Music 233 Jazz Band
Study of the literature of big band jazz. Concerts presented each semester. May be repeated for credit. Prerequisite: admission by audition. Two and one-half rehearsal hours a week. Credit 1 unit.

L27 Music 234S Symphony Orchestra
Performance and reading of works for orchestra. May be repeated for credit. Prerequisite: admission by audition. Two and one-half class hours a week including sectionals. Credit 1 unit.

L27 Music 235F Flute Choir
Weekly two-hour rehearsals of flute ensemble literature of many styles, Bach to bop. Developing skills of tone production, technique, intonation, sight reading and musicianship. One performance per semester required. Prerequisite: admission by audition. Special fee applicable. Credit variable, maximum 1 units.

L27 Music 236J Jazz Combo
Students are placed in small combos for regular, weekly coaching. May be repeated for credit. Prerequisite: permission of department. Credit variable, maximum 1 units.

L27 Music 237 Concert Choir
A study of the repertoire of the vocal ensemble from the Renaissance to the 20th century, with performance in public concerts. May be repeated for credit. Prerequisite: audition and consent of instructor. Four class hours a week. Credit variable, maximum 2 units.

L27 Music 238 Chamber Choir
Study and performance of advanced repertoire for small vocal ensemble from Renaissance to the present. May be repeated for credit. Prerequisites: audition and consent of instructor. Credit 1 unit.

L27 Music 2601 From Literature to Opera: An Introduction to the Extravagant Art
Much operatic repertoire is based on classics of literature, from the very first operas of 1598-1600 to the present day. From Literature to Opera will introduce students to the world of opera through a close study of a few select works based on major literary subjects, beginning with the literary works themselves and proceeding to the ways they are adapted for the stage and transformed into another genre through their dramatic musical settings. One work will be selected from the live transmissions of the Metropolitan Opera where we will have an opportunity to see something of how a major work is produced on the stage. For 2016 the works studied will be Virgil's and Ovid's versions of the Orpheus myth and Claudio Monteverdi's setting of 1607. Next we will move on to Pierre Beaumarchais' "Figaro" comedies The Barber of Seville and The Marriage of Figaro and Wolfgang Mozart's The Marriage of Figaro of 1786. Shakespeare will be represented by the ultimate tragedy of words, Othello, and Giuseppe Verdi's Otello of 1887. The course will conclude with the Metropolitan Opera live production of Giacomo Puccini's Madame Butterfly of 1904, based on a play by David Belasco. No previous musical experience required. The class will be conducted as a seminar focused on student participation. Each student will choose an opera based on a literary work as the subject of two 10-page papers. The first, due at midterm, will study the literary source and the way it is adapted as an operatic text (libretto). The second, due at the end of finals week, will analyze how the libretto is dramatized through the music. One of the important purposes of class discussion will be to develop a usable vocabulary for describing music and its dramatic effects. Same as L93 IPH 260 Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L27 Music 270G Jazz Guitar
Credit variable, maximum 2 units.

L27 Music 270J Jazz Brass
Credit variable, maximum 3 units.

L27 Music 270P Jazz Piano
Credit variable, maximum 2 units.

L27 Music 270S Jazz Strings
Credit variable, maximum 2 units.

L27 Music 270V Jazz Voice
Credit variable, maximum 2 units.

L27 Music 270W Jazz Winds and Percussion
Credit variable, maximum 2 units.

L27 Music 275G Guitar
Credit variable, maximum 2 units.

L27 Music 275O Organ
Credit variable, maximum 2 units.

L27 Music 275P Piano
Credit variable, maximum 2 units.
L27 Music 275S Strings
Credit variable, maximum 2 units.

L27 Music 275V Voice
Credit variable, maximum 2 units.

L27 Music 275W Winds and Percussion
Credit variable, maximum 2 units.

L27 Music 295 Independent Study: Language and Arts
Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit. Credit variable, maximum 3 units.

L27 Music 296 Independent Study: Textual and Historical Studies
Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit. Credit variable, maximum 3 units.

L27 Music 298 Directed Internship
Students receive credit for a faculty-directed and approved internship, usually with a music professional or musical organization. The primary objective of the internship is to obtain professional experience outside the classroom. Students obtain a Learning Agreement from the Career Center and have it signed by the Career Center, the faculty sponsor and the site supervisor, if appropriate. A final written project is agreed upon before work begins and is evaluated by the faculty sponsor at the end of the internship. Students may not receive credit for work done for pay but are encouraged to obtain written evaluations of such work for the student's academic adviser and career placement file. Credit should correspond to actual time spent in work activities: e.g., eight to 10 hours per week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours. Consult department for faculty selections in this course. Credit variable, maximum 3 units.

L27 Music 299 Performance Project
Students may contract with a faculty supervisor for credit for work on musical performance projects or research on musical performance. Contracts must be signed by the student, the faculty supervisor and the department chair before the student's work on the project commences. Consult department for faculty selections in this course. Credit variable, maximum 3 units.

L27 Music 3011 Music History I
A study of music history and literature from the Middle Ages to 1750. Composers treated include Machaut, Dufay, Josquin, Palestrina, Monteverdi, Vivaldi, Handel and Bach. Prerequisite: Music 103.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

L27 Music 3012 Music History II
A study of music history and literature from 1750 to 1850. Composers treated include Haydn, Mozart, Beethoven, Schumann and his contemporaries. Prerequisite: Music 3011 or Music 104E.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

L27 Music 3013 Music History III
A study of music history and literature from 1850 to the present. Composers treated include Liszt, Wagner, Brahms, Tchaikovsky, Mahler, Debussy, Stravinsky, Schoenberg, Boulez, Stockhausen, Cage, Glass, Reich and Adams. Prerequisite: Music 3012 or Music 104.
Credit 3 units. A&S: TH WI A&S IQ: HUM WI BU: HUM

L27 Music 3014 Ethnomusicology
This course provides an introduction to the field of ethnomusicology, defined broadly as "the study of music in — or as — culture" or "the study of people making music." We explore the varied ethno-geographic, anthropological, historical, and music-analytical approaches that ethnomusicologists have employed to explain the vital role of music-making in diverse human societies. We seek to understand the social significance of a variety of musical practices, drawing on ethnomusicological scholarship to address music's performance, circulation and reception. Case studies from around the world demonstrate the multiple ways that sound shapes — and is shaped by — issues of cultural practice and representation, ideologies of authenticity, intersectional identities, cultural memory, ideas and structures of tradition, colonialism and postcolonialism, transnationalism and globalization. Our case studies introduce students to a number of important musical genres and traditions, including (in the order in which they appear in the class): Mbira (Zimbabwe), Andean Kena music (Peru), Jazz (U.S.), Samba (Brazil), Gamelan (Java), Funk (U.S.), Egyptian music, Ottoman-Turkish classical music, Karnatic Music (South India), Gisaeng music (Korea), Ngoma (South Africa), Agbekor (Ghana), Hip-hop (U.S.), and Noise (Japan). Prerequisites: Music 121C and 122C (Theory I and II) or Music 121J and 122J (Jazz Theory I and II).
Credit 3 units. A&S: TH CD A&S IQ: HUM LCD BU: BA EN: H

L27 Music 3015 American Popular Music and Media
This course considers the history of American popular music as delivered by successive mass media platforms in the industrial and post-industrial eras: from mass-produced sheet music in the mid-19th century to digital music and video on the internet. Historical contextualization and in depth analysis of musical scores and various kinds of audio recordings and audiovisual texts are at the center of the course. Topics considered include: the history of sound recording technologies and formats; the role of electronic mass media structures (radio, film, television, the internet); urbanization, national commercial music centers (New York, Hollywood, Nashville), and the importance of regional sounds in a national context; the formation and transformation of select genres (rock, country, various black music); legal frameworks relating to music as a commodity (copyright, sampling); the impact of visual media on music dissemination, performance and meanings; and how recorded media of all kinds have transformed the act of listening. Issues of race, gender, sexuality, personal, and national identity are considered across the course. Prerequisites: Music 121C and 122C (Theory I and II) or Music 121J and 122J (Jazz Theory I and II).
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

A&S: TH, CD  A&S IQ: HUM, LCD BU: BA  EN: H

A&S: TH, WI  A&S IQ: HUM BU: HUM
L27 Music 3021 Music of the African Diaspora
This course explores musical cross-fertilization between the African continent and South America, the Caribbean and Europe. Beginning with traditional musics from selected regions of the African continent, the course examines the cultural and musical implications of transnational musical flows on peoples of the African diaspora and their multicultural audiences. Credit 3 units. A&S: TH, CD & S IQ: HUM, LCD BU: IS

L27 Music 3022 Native American Musical Traditions of the Western United States
Exploration of music and its historical and contemporary contexts among Native American cultures of the Southwest and the Northern Plains, chiefly Navajo and Lakota, but with some considerations of Pueblo, Shoshone and other nations. Examinations of intertribal pow-wow movements, crossover musics, European appropriation and refashioning of Native American culture in Hollywood and elsewhere. Credit 3 units. A&S: TH, CD & S IQ: HUM, LCD Art: HUM BU: HUM

L27 Music 3023 Jazz in American Culture
This course addresses the role of jazz within the context of 20th-century African-American and American cultural history, with particular emphasis on the ways in which jazz has shaped, and has been shaped by, ideas about race, gender, economics and politics. We make use of recordings and primary sources from the 1910s to the present in order to address the relationship between jazz performances and critical and historical thinking about jazz. This course in not a survey, and students already should be familiar with basic jazz history. Prerequisite: Music 105 or permission of instructor. Credit 3 units. A&S: TH, SD & S IQ: HUM, SD BU: HUM

L27 Music 3024 From Cage to Glass and Beyond
Explores the various directions composers took in the second half of the 20th century, including "chance" music of John Cage, minimalism of Philip Glass and postmodernism. Includes concert attendance. Prerequisite: ability to read music is advisable but not required. Credit 3 units. A&S: TH BU: HUM

L27 Music 3025 Women of Music
Popular music and art music around the world, from the perspective of women. The roles of women as creators, performers, sponsors and consumers. The representation of women in music and how it relates to cultures of the past and present. Credit 3 units. A&S: TH, SD & S IQ: HUM, SD EN: H

L27 Music 3027 Close Harmony: A Cappella Musical Traditions
An examination of ensemble music for unaccompanied voices. Although it focuses on the Western art tradition (e.g., Renaissance sacred and secular polyphony), it also addresses genres of "world music" (Yankton Sioux choral peyote songs, Makwayera singing of Zimbabwe) and less "high style," more popular unaccompanied vocal textures (e.g., shape-note, barbershop, spirituals, the Comedian Harmonists, male gospel quartets, doowop). Study of the historical and cultural contexts of the various musical types balances examination of representative musical works. Prerequisite: the ability to read music, permission of instructor; Music 103 is highly recommended, but not required. Credit 3 units. A&S: TH & S IQ: HUM EN: H

L27 Music 3028 Music of the 1960s
The music of the 1960s played a significant and widely noted role in an era of global political and social upheaval. This course surveys a broad range of music produced during the decade, spanning the world but with emphasis on Anglo-American popular music. While a music course traditionally deals with a single genre such as "world music," classical or jazz, this course analyzes several genres together to show how each influenced the others and how all were informed by broader social and cultural concerns. The course thus both familiarizes students with diverse musical traditions and introduces them to a new way of thinking about music and culture. Topics discussed include the transnational music industry; the contested concept of "folk" and "traditional" music; music and political protest; music and migration; and music's relation to ethnic and class identity. Credit 3 units. A&S: TH & S IQ: HUM BU: HUM EN: H

L27 Music 3031 Music and Healing
In this course, we broadly consider issues of music and healing, drawing from the fields of medical ethnomusicology, medical anthropology, music therapy, and psychology. Our case studies are multi-sited, as we interrogate musical healings and healing music from diverse global and historical perspectives. We approach our study of musical practices with the understanding that the social, cultural and political contexts where "music" and "healing" are themselves created inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We read a variety of academic literature and use media texts and listening examples to develop interdisciplinary and cross-cultural analyses of music and healing. Issues of national consciousness, postcolonialism, gender, sexuality, race, ethnicity, class, religion, disability and the role of history/memory remain central to our explorations of music and healing. Credit 3 units. A&S: CD & S IQ: LCD EN: H

L27 Music 3051 Text and Music
How do composers respond to the structure and meaning of text? Can spoken language become musical sound? Can musical sounds become textual signifiers? The course explores these questions by examining a broad range of music, including Gregorian chant, Japanese Noh drama, English madrigals, Bach cantatas, 19th-century German lieder, operas by Mozart and Wagner, American musical theater, high modernist works by Schoenberg, Stockhausen, Berio and Lansky, as well as popular music. Some knowledge of music theory is required, and familiarity with German is helpful, though all texts are provided with English translations. A lot of listening and reading, several short and analytical assignments, three essays. Prerequisite: one year of music theory or permission of instructor. Credit 3 units. A&S: TH

L27 Music 3091 Jazz Improvisation I
An introduction to improvising music in the jazz tradition, including diatonic and chromatic harmony, extended chords, modes and jazz scales. Exercises in basic aspects of the blues
and in the styles of be-bop and modern jazz. Prerequisite: Music 1091.
Credit 3 units. BU: HUM

L27 Music 3112 Choral Music before 1800
A study of choral music of the Western world, from the medieval period through the 18th century, examining both the repertoire itself and the evolution of the choral form. Topics include the development of various choral forms, the role of choral music in sacred and secular settings, the changing nature of choirs over the centuries, and the hallmarks of choral style and performance practice in the Medieval, Renaissance, Baroque and Classical periods. Choral music for small and large forces, both for voices alone and with accompaniment, are surveyed. Works from each period are examined from textual, analytical and cultural perspectives. Composers studied include Palestrina, Monteverdi, Handel, J. S. Bach, Mozart and Haydn, as well as lesser-known contemporaries. Prerequisite: ability to read music is helpful, but not required.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L27 Music 3113 Choral Music from Beethoven to the Present
A study of choral music of the Western world from the time of Beethoven to the present, examining both the repertoire itself and the evolution of the choral instrument. Topics include the development of various choral forms, the role of choral music in sacred and secular settings, the changing nature of choirs over the centuries, and the hallmarks of choral style and performance practice in the late Classical, Romantic, and Contemporary periods. Choral music for small and large forces, both for voices alone and with accompaniment, are surveyed. Works from each period are examined from textual, analytical and cultural perspectives. Composers studied include masters such as Beethoven, Schubert, Brahms, Britten, Stravinsky, as well as well-established present-day composers such as Lauridsen, Larsen and Whitacre. Prerequisites: Ability to read music is helpful, but not required.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L27 Music 3132 Romantic Revolutions in European Music and Culture
The early 19th century in Europe witnessed sweeping changes in social, political and cultural life, but some of the most fascinating happened in music. This course considers intersections between Romantic thinking about music — which inspired an idealistic vision of the art form as a source of quasi-spiritual experience — and other contemporary “revolutions.” To what extent was Romantic music a “holy art” that offered a refuge from the world? In what ways was it a worldly participant itself and the evolution of the chorus. Topics include the development of various choral forms, the role of choral music in sacred and secular settings, the changing nature of choirs over the centuries, and the hallmarks of choral style and performance practice in the late Classical, Romantic, and Contemporary periods. Choral music for small and large forces, both for voices alone and with accompaniment, are surveyed. Works from each period are examined from textual, analytical and cultural perspectives. Composers studied include masters such as Beethoven, Schubert, Brahms, Britten, Stravinsky, as well as well-established present-day composers such as Lauridsen, Larsen and Whitacre. Prerequisites: Ability to read music is helpful, but not required.
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L27 Music 315 Selected Areas for Special Study I
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L27 Music 317 Selected Area for Special Study
In-depth study in areas of special interest.
Credit 3 units. A&S: TH

L27 Music 320 The American Musical Film
Film musicals were crucial to the success of the American film industry from the dawn of sound film in the late 1920s to the demise of the studio system in the late 1950s. This course examines the American film musical from a variety of aesthetic, critical and historical perspectives, with particular attention to how the genre interacted with popular music and dance and the major political and social trends of the Thirties, Forties and Fifties. Required screenings.
Same as L53 Film 359
Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L27 Music 321T Music Theory IV: Topics in Music Theory
Credit 3 units. BU: HUM

L27 Music 3221 Music Cognition
An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.
Credit 3 units. A&S: NS A&S IQ: NSM BU: HUM

L27 Music 3231 Advanced Musicianship
Individualized instruction in advanced ear training, sight singing and dictation skills. Prerequisite: Music 2241.
Credit 3 units. BU: HUM

L27 Music 3232 Keyboard Skills V
Advanced skills in score reading, figured bass and improvisation, as well as drills, including seventh chords and modulation. Prerequisite: Music 2242. One and one-half class hours a week.
Credit 1 unit.

L27 Music 3237 The Art of Popular Song: From Folk and Musical Theatre to Rock and Contemporary A Capella
This course explores the art of songwriting through the lens of American popular music. Students examine landmark songs from multiple eras and create their own original songs in a variety of styles, from classical music, folk music and Broadway to rock, pop and a capella. Through composing and arranging, listening and analysis, students gain insight into the sonic structure and cultural significance of popular music. The course also responds to students’ individual interests and performance backgrounds, offering opportunities to write music for vocal ensembles, small groups, singer-songwriter formats, and electronic media.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 3242 Keyboard Skills VI
Advanced skills in score reading, figured bass and improvisation, as well as drills, including seventh chords and modulation. Prerequisite: Music 2242. One and one-half class hours a week.
Credit 1 unit.
L27 Music 325 Instrumentation and Orchestration
A study of the principles of instrumentation and orchestration. In-class assignments aid in the understanding of the capabilities and limitations of the orchestral instruments. Analysis of orchestral scores provides insight into efficient and creative use of the orchestra. Prerequisite: Music 103E or permission of the instructor. Credit 3 units.

L27 Music 326 Orchestration
A practicum in writing for orchestra and groups of orchestral instruments. Prerequisite: Music 325. Credit 3 units.

L27 Music 328 History of the Film Score
This course looks at the role of music in Hollywood films from the beginning of the sound era to the present. Larger themes include the importance of technology, industry structures shaping the nature of scores, notable film music composers, the relationship between music, gender and genre, music's role in the adaptation of literary texts to film, the power of directors to shape the content of film scores, and the importance of popular music as a driving economic and aesthetic force in film music history. Films screened include From Here to Eternity, Stagecoach, High Noon, The Night of the Hunter, Butch Cassidy and the Sundance Kid, Born on the Fourth of July, Casino, Jarhead and The Social Network. Required screenings. Same as L53 Film 360 Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L27 Music 329 Advanced Composition Workshop I
A more advanced course in contemporary music composition, with a 50-minute private lesson and weekly master class. Prerequisite: Music 230 or permission of instructor. Credit 3 units.

L27 Music 330 Advanced Composition Workshop
A more advanced course in contemporary music composition, with a 50-minute private lesson and weekly master class. Prerequisite: Music 329 or permission of instructor. Credit variable, maximum 3 units.

L27 Music 3313 Interactivity and DSP
This course is a project-based course in interactivity and digital signal processing using the MaxMSP programming environment. It will cover the composition of interactive computer music, as well as the theory and application of MIDI, synthesis, and digital signal processing. Programming examples, along with scores and recordings, will be presented for weekly study in class. Readings from the required texts, tutorials that demonstrate programming with MaxMSP, and weekly exercises that promote an understanding of the programming demonstrated in class, will be assigned for completion outside of class. Students will also produce a midterm project and final project. These will be interactive pieces that utilize the different techniques that have been discussed in class and experimented with in the exercises. Both pieces should be planned in advance and worked on throughout the semester. The final exam will be a short programming exercise that covers topics that have been presented in class and realized in the weekly exercises, and it will be completed in the scheduled two-hour exam period. Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 3370 Music and Performance
In his 1998 book, Musicking, Christopher Small asserts that music is not a thing but an activity — something that people do. Starting from this premise, this course explores musical performance as a live event, one in which additional aspects of performance — dramatic enactments, costume, choreography, and stage design — also come into play. While recorded music plays an important role in our investigations, we focus on musical events that take place before and with live audiences. Exploring the choices of performers and the expectations of audience members in settings from gospel churches to Radio City Music Hall, this course moves through a wide variety of musical genres, including cabaret, blues, opera, protest song, musical theater and rock. We examine artists whose work blurs the line between “music” and “theater,” including George Clinton, Taylor Mac, and Gertrude Stein, as well as everyday people, such as the singers of the Civil Rights Movement, who used the power of live musical performance to change the course of human history. We also attend performances around St. Louis, guided by the interests of the class. Students with an interest in music, theater, dance, cultural history, American studies, and African-American studies are especially welcome.

L27 Music 339 Introduction to Conducting I
Fundamentals of conducting, including the study of transposing instruments and practice in score reading. Prerequisite: permission of instructor. Credit 2 units.

L27 Music 340 Introduction to Conducting II
Fundamentals of conducting, including the study of transposing instruments and practice in score reading. Prerequisite: permission of instructor. Credit 2 units.

L27 Music 3431 West African Music and Dance in Context
A West African dance course specifically focused on the Ivorian dance traditions of the Baule, Beté Dan, Lobi, Makine, and Senufo peoples. The course addresses the relationship between music and dance as well as their social and cultural significance. We include the study of myths, art, costumes and masks as they relate to various dances and musics. A studio course with related reading material. Same as L29 Dance 343 Credit 2 units. A&S: LA A&S IQ: HUM EN: H

L27 Music 3581 Musica Ebraica: Jewish Identities in Western Music From 1600 to the 21st Century
Same as L75 JINE 3581 Credit 3 units. A&S: LA, CD A&S IQ: LCD BU: HUM EN: H

L27 Music 3582 Music in Jewish Culture and Society
The common term "Jewish Music" raises numerous questions that emanate from the difficulty to define "Jewish" identity of any given music. This course deals with various approaches to the definition of Jewish music, perceived as a cultural and sociological component in the Jewish communities throughout the diaspora. We survey the functions in which music is performed in traditional Jewish communities, especially Jewish liturgy, and the substantial vicissitudes in these musics after the European Enlightenment, European colonialism in north-
Africa, and in the Mediterranean. We study the background and the different characteristics of selected Jewish communities — Ashkenazic, Sephardic, Italian, Yemenite, and others — as well as instrumental music, questions of gender, and the relationship between music and text. A secondary goal of this course is the study of the bibliography and discography of Jewish musics. Same as L75 JINE 3582
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

Same as L75 JINE 3584
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L27 Music 3585 Islam, Music, Muslim Media
How do Muslim individuals and communities understand and negotiate the relationship between sound and spirituality? How does Islamic philosophy challenge Western definitions of music? How do music and cultural practices reflect and shape diverse Muslim identities and political struggles? To what extent can we speak of an "Islamic world," musical or otherwise? In this course, we investigate Islamic musics and musical practices in the lives and experiences of Muslims throughout the world. We approach our study of Muslim musical practices with the understanding that the social, cultural and political contexts where music is created, disseminated and consumed inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We engage with a variety of academic, musical and media texts to develop interdisciplinary analyses about Islam, music, sound experience and Muslim subjectivities. Issues of nationalism and transnationalism, class, race and ethnicity, gender and sexualities, colonialism and postcolonialism, history and memory remain central to our exploration of spirituality and religion in Muslim musical and cultural practices.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L27 Music 3586 Combat Movie Music and Sound After Vietnam
This course considers the Hollywood combat movie genre after the Vietnam War (post 1975) by listening closely to how these always noisy films use music and sound effects to tell stories of American manhood and militarism. Centering on an elite group of prestige films — action movies with a message for adult audiences — the course examines thirty-five years of Hollywood representations of World War II, the Vietnam War, the Gulf War, and post-9/11 wars against terrorism. Close analysis of how combat film directors and composers have used music and sound in conjunction with the cinematic image are set within a larger context of ancillary texts (source materials, soundtrack recordings, published and unpublished scripts), media folios (press kits, reviews, editorials, newspaper and magazine stories and interviews), and scholarly writing from across the disciplines. Films screened include Apocalypse Now, Platoon, Hamburger Hill, Courage Under Fire, Saving Private Ryan, The Thin Red Line, We Were Soldiers, Flags of our Fathers, The Hurt Locker, and Act of Valor, as well as pre-1975 combat films starring John Wayne. The ability to read music is not required. Required screenings. Prequisites: none.

L27 Music 3951 Independent Study: Language and Arts
Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit. Consult department for faculty selections in this course.
Credit variable, maximum 3 units.

L27 Music 3961 Independent Study: Textual and Historical Studies
Supervised independent study in areas in which there are no current course offerings. Student must submit to the department
chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit. Consult department for faculty selection. Credit variable, maximum 3 units.

L27 Music 400 Independent Study  
Credit 3 units.

L27 Music 401 Elementary Technique of Electronic Music  
Individual and small group instruction in "classical" procedures and relevant electronic technology. Prerequisite: open to music majors; to others by permission of instructor. Credit contingent upon completion of Music 402. Credit 3 units.

L27 Music 402 Advanced Techniques of Electronic Music  
Practical composition studies to build technique in electronic music. Prerequisite: Music 401. Credit 3 units.

L27 Music 411 Music of the Medieval Period  
An intensive survey of Western monophonic and polyphonic music from the beginnings of Christian chant to ca. 1450. Prerequisites: Music 3011 or permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM

L27 Music 412 Music of the Renaissance Period  
A survey of music literature from ca. 1450 to ca. 1600. Prerequisite: Music 3011 or permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

L27 Music 413 Music in the Baroque Era  
An intensive survey of the primary musical forms and styles in 17th-century Italy, France, Germany and England. Prerequisite: Music 3012 or permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM

L27 Music 4131 Music in the 18th Century  
Musical activity in Europe during the 18th century is the subject of this course, which brings the high baroque, galant and classical eras into a single narrative. Patronage, publishing, star performers and highly specific musical publics were central to the music-making across the century. How these forces shaped the professional and creative lives of major 18th-century composers is a principal theme of the course. A broad range of 18th-century instrumental and vocal music is surveyed, including works by Corelli, F. Couperin, Vivaldi, Rameau, Telemann, Handel, Hasse, Haydn, Mozart, D. Scarlatti and several members of the Bach family. Extensive listening assignments and score analysis are supplemented by readings drawn from recent scholarship and examination of 18th-century music publishing and other period sources in facsimile. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L27 Music 414 Music of the Classic Period  
An intensive survey of music literature from ca. 1750 to ca. 1830 with attention to the music of Haydn, Mozart, Beethoven and some of their predecessors. Prerequisite: Music 3012 or permission of instructor. Credit 3 units. A&S: TH

L27 Music 415 Music of the Romantic Period  
Credit 3 units. A&S: TH

L27 Music 416 Contemporary Music  
Survey of musical styles from the end of the 19th century to the Postmodernism of the 1980s. Developments in music considered in context of intellectual history of the century with specific attention to parallels with literature and visual arts. Readings from a variety of sources and extensive listening assignments. Prerequisite: Music 3013 or permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM

L27 Music 421 Introduction to the Analysis of 20th-Century Music  
An introduction to theory and analysis of music from the 20th-century repertoire. In-class analysis and individual assignments emphasize aural understanding and tools for modeling pitch structures in post-tonal and 12-tone works. In the latter portion of the course focus turns toward works in which pitch structures play a smaller role. Prerequisite: Music 222 (for undergraduates) or Music 423 (for graduates). Credit 3 units. A&S: TH A&S IQ: HUM

L27 Music 422 Analysis I  
A study of structural principles underlying music of all periods: motivic usage, melodic shape, varieties of texture and structure with an emphasis on fugue, variation forms and proportional forms such as rondo and sonata-allegro. Prerequisite: graduate standing or permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM

L27 Music 423 Analysis II  
Continuation of Music 422, concentrating on approaches to larger and more complex works of classically tonal music, including 18th-century symphonies and string quartets, late works by Beethoven, chamber music and symphonies of Brahms and symphonies of Mahler. Prerequisite: Music 423 or permission of instructor. Credit 3 units. A&S: TH

L27 Music 425 Counterpoint I  
Concentrated independent study in 16th-century contrapuntal composition. Prerequisite: Music 222. Credit 3 units.

L27 Music 426 Counterpoint II  
Concentrated independent study in 18th-century contrapuntal composition. Prerequisite: Music 222. Credit 3 units.

L27 Music 427 Selected Areas for Special Study  
Concentrated independent study in 18th-century contrapuntal composition. Prerequisite: senior standing, graduate standing or permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L27 Music 428 Selected Areas for Special Study II  
In-depth study in areas of special interest. Prerequisite: senior standing, graduate standing or permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM EN: H
L27 Music 4261 The Italian Madrigal
The most important musical genre of the late Renaissance, the madrigal, intersects with poetry, theater and the visual arts, and thus, constitutes an ideal point of entry to early modern Italy. This course explores the stylistic development of the madrigal from its origins in the early 16th century to its demise some hundred years later. The course is structured around close readings of madrigals by Verdelot, Arcadelt, Willaert, Wert, Marenzio, Luzzaschi, Fontanelli, Gesualdo and Monteverdi. Secondary readings focus on the relation between words and music; the construction of subjectivity; concepts of mode; theories of chromaticism; and performance practice, framed in the context of 16th-century society and culture. Prerequisite: Music 3011, graduate standing or permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L27 Music 4262 The “Crossover” Tradition in Anglo-American Music Theater
The musical stage in the United States and Britain has remained a vital artistic and commercial arena over the past 100 years despite the emergence of mass media formats such as film and television. Audiences continue to clamor for stage stories where actors sing or singers act, and composers, writers, producers and directors have created a stunning variety of musical theater styles to meet the demand. This course surveys important English-language operas, operettas and singer-centered musicals from the turn of the 20th century to the start of the 21st with an emphasis on “crossover” works that blur the lines between opera and the commercial musical stage. All the works included in the course continue to be performed today, forming a core repertory of music theater works in English that emphasize singers and singing. The overlapping, ever-changing spheres of the opera house and Broadway and West End theaters provide the geography of the course, which is peopled by performers, creators and audiences. In-class analysis of 14 works focuses on how the singing voice has been used as an expressive vehicle and how theater singers have adapted to an age of amplification and recording. Works studied include Carousel, Sweeney Todd, The Phantom of the Opera, Show Boat, Candide, Street Scene, The Pirates of Penzance, The Light in the Piazza, My Fair Lady, Albert Herring, Porgy and Bess, The Most Happy Fella, Margaret Garner and The Student Prince. In-class singing is encouraged as a means to get inside the musical and dramatic values of these works. Prerequisites: ability to read music, and graduate or upper-division standing. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L27 Music 429 Composition
Concentrated independent work in composition and a weekly master class for experienced composers. Prerequisite: Music 330 or permission of instructor. Credit 3 units.

L27 Music 430 Composition
Concentrated independent work in composition and a weekly master class for experienced composers. Prerequisite: Music 429 or permission of instructor. Credit 3 units. A&S: LA A&S IQ: HUM

L27 Music 431 Piano Pedagogy I
The study of the fundamentals of teaching from beginning to advanced levels. A syllabus is developed through discussion of lesson plans for each level. The class participates actively in demonstrations. Credit 3 units.

L27 Music 4370 Music and Performance
In his 1998 book, Musicking, Christopher Small asserts that music is not a thing but an activity — something that people do. Starting from this premise, this course explores musical performance as a live event, one in which additional aspects of performance — dramatic enactments, costume, choreography, and stage design — also come into play. While recorded music plays an important role in our investigations, we focus on musical events that take place before and with live audiences. Exploring the choices of performers and the expectations of audience members in settings from gospel churches to Radio City Music Hall, this course moves through a wide variety of musical genres, including cabaret, blues, opera, protest song, musical theater, and rock. We examine artists whose work blurs the line between “music” and “theater,” including George Clinton, Taylor Mac, and Gertrude Stein, as well as everyday people, such as the singers of the Civil Rights Movement, who used the power of live musical performance to change the course of human history. We also attend performances around St. Louis, guided by the interests of the class. Students with an interest in music, theater, dance, cultural history, American studies, and African-American studies are especially welcome. Same as L98 AMCS 4370 Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L27 Music 4371 Opera Production
Intensive training in the principles and techniques of the opera stage. Prerequisites: two years of vocal training and audition or Drama 343. Credit variable, maximum 3 units.

L27 Music 4372 Voice Pedagogy
Preparation of participants to train the singing voice through examinations of physical, phonological, neurological and psychological aspects of vocal function, followed by observation and practice teaching. Prerequisite: permission of instructor. Credit 3 units.

L27 Music 4375 Vocal Literature
A survey of song literature through listening and performing. Prerequisite: permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM

L27 Music 4376 Opera Literature: Various Composers Each Semester
A study of a composer’s principal stage masterpieces, with an emphasis on the different genres and theatrical conventions to which they belong, and on the writings for voices. Credit 3 units. A&S: TH

L27 Music 438 Piano Pedagogy II
This course explores the repertoire, techniques, and teaching methods appropriate for the intermediate to early-advanced level piano student. Repertoire projects emphasize progressive technique and musical skills for the advancing student. Studio and master-class teaching experience. Credit 3 units.
L27 Music 4381 Literature of the Piano
An analytical survey of piano literature from Bach to Boulez. Prerequisite: graduate or senior standing or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L27 Music 439 Diction I
Principles of Italian, French and German pronunciation covered in an interrelated approach; application of these principles to songs. Prerequisite: permission of instructor. Credit 3 units. A&S: LA A&S IQ: HUM

L27 Music 4392 Pedagogy III
Students survey texts and materials addressing group dynamics and learning theories. Teaching experience is gained through observation and some supervised teaching of various levels of group piano. Credit 3 units.

L27 Music 440 Diction II
Principles of Italian, French and German pronunciation covered in an interrelated approach; application of these principles to songs. Prerequisite: permission of instructor. Credit 3 units. A&S: LA A&S IQ: HUM

L27 Music 4539 Advanced Conducting I
Advanced training in conducting skills, including opportunities to conduct ensembles on campus. Prerequisite: graduate standing or permission of instructor. Credit 2 units.

L27 Music 4540 Advanced Conducting II
Advanced training in conducting skills, including opportunities to conduct ensembles on campus. Prerequisite: graduate standing or permission of instructor. Credit 3 units.

L27 Music 4561 Soundtrack Studies: Music, Voices, Noise
This course considers the interaction of film, sound and music from the silent era to the present by screening representative films from around the world and exploring current directions in scholarship from the disciplines of film studies and musicology. Topics include: historical and critical understandings of the sound track, major film sound theorists (such as Michel Chion), technological shifts (such as synchronized sound, Dolby and digital surround sound), the uses of Richard Wagner (both his music and his ideas), the relationship between a film genre (noir) and sound and music and the relationship between a musical genre (opera) and film, and the juxtaposition of popular and classical, Western and non-Western musical styles in art cinema. Films screened include Meek's Cutoff, Blow Out, Days of Heaven, Sous le toits de Paris, Love Me Tonight, Casablanca, Alien, Apocalypse Now, La cérémonie, Le Cercle rouge, The Pillow Book, The Scent of Green Papaya, and The Bourne Ultimatum. The course is in seminar format. Readings from recent scholarly work on film sound and music inform class discussions of the screened films. Close analysis of how music, sound and image interact in film making and the film experience lies at the heart of the course. The ability to read music is not required. A primary goal of the course is the development of specific listening skills that are useful when working in this area. Targeted writing assignments ask students to write about

Pathfinder Program in Environmental Sustainability

The Pathfinder Program in Environmental Sustainability focuses on an interdisciplinary study of the environment with a small group of motivated undergraduates and a senior faculty member and is meant to meet selected College of Arts & Sciences breadth course requirements. Through case studies, field trips and carefully selected ancillary courses, students examine the issues surrounding environmental sustainability and the preservation of the environment for future generations. The Pathfinder Program supports the concept that taking interrelated courses and learning both analytical and technical skills as a freshman and sophomore helps prepare students for in-depth study in their academic majors.

Performing Arts

Performing Arts at Washington University comprise dance (p. 628) and drama (p. 628).

Dance

Students may select dance (p. 303) as a major through the Performing Arts Department. This course of study combines intensive studio work in technique and theory of modern dance, ballet and composition with seminars examining dance as a global phenomenon with forms reflecting culturally specific historical, aesthetic and anthropological features. The program also includes a broad range of courses such as stagecraft, music resources, improvisation, anatomy for dancers, pedagogy, dance therapy, musical theater dance, world dance forms, jazz and tap. Students also may choose to minor in modern dance or ballet or in world music, dance and theater. The interdisciplinary minor in world music, dance and theater encourages students already interested in the performing arts to explore those outside Euro-American traditions. A certificate program in somatic studies is offered through the University College division of Arts & Sciences.

The senior capstone experience is framed in consultation with Performing Arts faculty. In April, prior to registration for the fall semester, dance majors discuss the capstone requirement with their adviser. The dance capstone requirement can be satisfied by a senior honors thesis or senior dance project. The format may range from a research paper or written analysis of the student's dance development to a project emphasizing movement expression (e.g., the creation of a video résumé, a performance, or a choreographic project). In all cases, dance capstones have a written component. Those who study dance at Washington University learn from faculty members who have both professional experience and academic degrees. Students also have the opportunity to study with guest artists-in-residence who teach master classes and set choreography.

Students may audition for the Washington University Dance Theatre, which holds annual auditions for students. Selected students will appear in faculty and guest artist-choreographed concerts in Edison Theatre. Dance students particularly interested in performance may, with the approval of its director, rehearse and perform with The Slaughter Project, Washington University's dance company in residence. Students may also participate in departmental drama productions as well as student work in choreography and theater. Each year, students have the opportunity to attend the regional American College Dance Conference to adjudicate work, perform, and take master classes.

Dance students may pursue study abroad at University of Auckland, New Zealand; University of Ghana, Legon; and Roehampton University, London. With approval from the Dance program, courses at these institutions may fulfill dance major and minor requirements. Courses in other disciplines taught at these institutions may also be accepted by Washington University.

Drama

The drama (p. 311) major combines the historical, cultural and literary study of theater and performance with a full array of courses regarding theatrical production, including acting, directing, performance art, design (set, costume, lighting, sound) and playwriting.

The theater and performance studies faculty offer courses in theater history, performance studies, and dramatic and performance theory. Majors also may take cross-listed courses in such departments as African and African-American studies; classics; English; East Asian languages and cultures; and film and media studies. Our courses analyze theater and performance as resonant and significant cultural practices, both historically and currently. Courses combine rigorous critical analysis with attention to the corporeal and material embodiment of actual performance.

In small, individualized classes (capped by a maximum of 16 students) characterized by a high number of weekly contact hours (generally six), professionally and academically experienced faculty teach a rigorous system of production courses. A carefully graduated four-semester sequence in acting culminates in a capstone class for seniors (Acting IV) focused on individual projects. A two-tiered directing sequence issues into a public showing of student-directed work, and some students have chosen to direct a fully designed production as their Senior Honors thesis. Recent graduates of the acting and directing sequence have been placed in prestigious MFA programs, internships and jobs in regional American theaters, as well as in various professional schools and graduate programs. A nationally recognized program in design and technical theater.
works students through a structure of costume, scene, lighting and sound design courses, with several electives on such topics as mask making and baroque costume that are informed by historical and cultural study. A highly successful playwriting program, enriched by the annual A.E. Hotchner Playwriting Competition and annual workshops run by leading American dramaturges, has produced playwrights whose work is now being performed in nationally recognized venues such as Chicago’s Steppenwolf Theater.

The culture of performance is abundantly rich at Washington University. A wide array of student theater groups, with a particular focus on improvisation, provides many opportunities for student-generated performance on campus.

Since 1991, the Performing Arts Department and Globe Education (London) have been running a national summer program held at Shakespeare’s Globe in London. This four-week program includes a 3-unit course on the textual, historical and cultural study of Shakespeare; a 3-unit course on acting Shakespeare (with particular attention to acting on the Globe stage); master classes taught by Globe personnel; playgoing in London and Stratford; and more.

Majors

The Minor in World Music, Dance and Theater

Required units: 17-19

Required courses:
- Music 1021 Musics of the World 3
- Dance 315 Dance Spectrum 3

And one to two of the following courses (3-5 units):
- AFAS 301 A History of African-American Theater 3
- Chinese 467 The Chinese Theater 3
- Drama 223 Cross-Cultural Women Playwrights 3
- Dance 343 West African Music and Dance in Context 2
- Japan 446 The Japanese Theater 3

Elective courses (choose 8 units):
- Drama 368 Black Theater Workshop III 3
- Music 3021 Music of the African Diaspora 3
- Music 3022 Native American Musical Traditions of the Western United States 3
- Dance 305Z Music Resources for Dance 2
- Dance 328 Contemporary Dance and the Michio Ito Method 2
- Dance 340 Ballet as Ethnic Dance and Classical Art 3
- Dance 343 West African Music and Dance in Context 2

Additional electives available in University College (U31):
- Dance 235 Dance Doorway to India 2
- Dance 328 Dance of West Africa: Intermediate 2
- Dance 335 Bharata Natyam as Movement Narrative 1

Additional Information

This is an interdisciplinary minor, drawing on the distinctive methodologies and training inherent in several disciplines. This minor encourages the student already interested in the performing arts to explore those outside Euro-American traditions. However, students majoring in fields such as anthropology, political science, psychology, education, comparative literature, history and foreign languages may find this minor a useful complement to their primary discipline.

The Minor in Ballet

For the minor in ballet, visit the Dance (p. 304) page of this Bulletin.

The Minor in Modern Dance

For the minor in modern dance, visit the Dance (p. 304) page of this Bulletin.

The Minor in Drama

For the minor in drama, visit the Drama (p. 312) page of this Bulletin.

Courses

Dance

For dance courses, visit the Dance (p. 305) page of this Bulletin.

Drama

For drama courses, visit the Drama (p. 312) page of this Bulletin.

Philosophy

Philosophy tackles central questions in human life, such as: What counts as human knowledge? How should I live? What is truth? How is the mind related to the body? What is a just society? These difficult but fundamental questions are rigorously explored in philosophy and worked through by drawing on the historical tradition and utilizing careful reasoning. Because philosophers have shaped many of the central ideas on which Western civilization is based, the study of philosophy plays a vital role in a well-rounded liberal arts education.

Philosophy courses at Washington University provide opportunities to gain deeper knowledge of the history of philosophy, from the work of the ancient philosophers Plato and Aristotle through key thinkers such as Descartes and Kant to the present. Students can study the interface between philosophy and other disciplines (such as psychology, environmental studies, women’s studies, law and political science); they also can examine the methods of inquiry and underlying conceptual frameworks of scientific work itself. Courses in logic equip students to think and argue clearly and rigorously, while courses in analytic philosophy allow for the exploration of fundamental questions about knowledge and metaphysics. The department offers a variety of courses in ethics, where students can consider...
different theoretical approaches to current political, social, medical and environmental problems.

Majors

Please refer to the following sections for more information about:

- The Major in Philosophy (p. 632)
  - Philosophy Research Track (p. 632)
  - Law and Policy Track (p. 633)
  - Philosophy of Science Track (p. 633)

The Major in Philosophy

Total units required: 27 units, of which at least 6 units must be at the 400 level, and an additional 15 units must be at the 300 level or above.

Majors are encouraged to take more than this minimum number of courses, especially if they are considering graduate work in philosophy. Majors and minors are encouraged to fulfill the writing-intensive requirement by taking Phil 390 Philosophical Writing. All majors are required to complete a capstone experience in philosophy, either an Honors thesis (Phil 499) or the Philosophy Capstone Course (Phil 3991). Majors who are planning to do graduate work in philosophy should attain at least reading proficiency in German, Greek, Latin or French.

Required courses:

Majors must complete at least one core course in each of the three areas below. Students who do not take Phil 390 will be required to take one additional core course. The core courses, by area, are:

Contemporary/Analytic Philosophy:

<table>
<thead>
<tr>

<td>3</td>
</tr>
</tbody>
</table>

On occasion it may be appropriate to substitute a 400-level course in one of these areas for a 300-level core course; individual petitions for substitutions will be considered by the undergraduate director. Generally, for a course to count either as "core" or as partly satisfying the requirement for 6 units at the 400 level, it must be home-based in Philosophy. At most, 3 units of credit in Phil 499 or Phil 500 can be counted toward the required 6 units of 400-level course work.

Optional tracks: The department offers the following three special tracks through the major: the philosophy research track (http://philosophy.artsci.wustl.edu/undergraduate/philosophy-research-track), the law and policy track (http://philosophy.artsci.wustl.edu/undergraduate/law-and-policy-track), and the philosophy of science track (http://philosophy.artsci.wustl.edu/undergraduate/philosophy-science-track).

Philosophy Research Track

The philosophy research track is especially recommended for students who plan to pursue graduate studies and an advanced degree in philosophy — a must for anyone interested in a career as a university or college philosophy teacher. It will give the student a broad background in philosophy, which is a competitive advantage when applying to graduate programs in the field.
Requirements:
• At least 36 units total
• Phil 100G Logic and Critical Analysis
• One 100-level class in addition to Phil 100G Logic and Critical Analysis, preferably Phil 120F Problems in Philosophy or Phil 125C Great Philosophers
• In Contemporary/Analytic:
  Phil 301G Symbolic Logic 3
  Phil 3113 Theory of Knowledge 3
  or Phil 3481 Introduction to Metaphysics 3
  Phil 306G Philosophy of Language 3
  or Phil 315 Philosophy of Mind 3
  or Phil 321G Philosophy of Science 3
  Total units 9
  • In History: Any two core courses (a 400-level History course may be substituted for a second 300-level course):
    Phil 347C Ancient Philosophy 3
    Phil 349C Descartes to Hume 3
    Phil 357C Kant and 19th-Century Philosophy 3
    Phil 358 Conceptual Foundations of Modern Science 3
  • In Value Theory (Phil 4310 or Phil 4315 can satisfy a 400-level requirement):
    Phil 331F Classical Ethical Theories 3
    Phil 4310 20th-Century Metaethics 3
    or Phil 4315 Normative Ethical Theory 3
    Total units 6
• Phil 390 Philosophical Writing or another core course
• Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
• At least 30 units at the 300 level or above (including core courses)*
• At least 6 of those 30 units at the 400 level**
• Courses taken pass/fail cannot count toward the major.

Law and Policy Track
This track is especially recommended for students who intend to pursue a career in law or public policy. The track involves taking certain specific courses for the major, and possibly a few extra courses, that will provide the student with additional preparation and a competitive edge when applying to law school, post-graduate programs in public policy, and related jobs.

Requirements:
• At least 27 units total
• Phil 100G Logic and Critical Analysis or Phil 301G Symbolic Logic

• Strongly recommended: a 100-level class in addition to Phil 100G Logic and Critical Analysis
• One core course in Contemporary/Analytic and one core course in History

  Contemporary/Analytic Courses:
  - Phil 301G Symbolic Logic 3
  - Phil 306G Philosophy of Language 3
  - Phil 3113 Theory of Knowledge 3
  - Phil 315 Philosophy of Mind 3
  - Phil 321G Philosophy of Science 3
  - Phil 3481 Introduction to Metaphysics 3

  History Courses:
  - Phil 347C Ancient Philosophy 3
  - Phil 349C Descartes to Hume 3
  - Phil 357C Kant and 19th-Century Philosophy 3
  - Phil 358 Conceptual Foundations of Modern Science 3
  • Phil 340F Social and Political Philosophy and Phil 346 Philosophy of Law
  • Strongly recommended: at least one other Value Theory course:
    - Phil 340F Social and Political Philosophy 3
    - Phil 346 Philosophy of Law 3
  • Strongly recommended: at least one 200-level course
  • Phil 390 Philosophical Writing or another core course
  • Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
  • At least 21 units at the 300 level or above (including core courses)*
  • At least 6 of those 21 units at the 400 level**
  • Courses taken pass/fail cannot count toward the major.

Philosophy of Science Track
The philosophy of science track is available only as a second major in combination with work in one or more of the sciences. It is intended for those students with a scientific background who have an interest in pursuing philosophical issues relating to the natural and physical sciences.

Requirements:
• At least 27 units total

  In Contemporary/Analytic:
  - Phil 301G Symbolic Logic 3
  - Phil 321G Philosophy of Science 3
  Total units 6

  In History: Any one of the core courses listed below:
  - Phil 347C Ancient Philosophy 3
Phil 349C Descartes to Hume 3
Phil 357C Kant and 19th-Century Philosophy 3
Phil 358 Conceptual Foundations of Modern Science 3

- In Advanced Philosophy of Science:
  Phil 4210 Topics in Advanced Philosophy of Science 3
- Any three of the Supplementary Courses listed below, which must include Phil 390 Philosophical Writing if the writing-intensive requirement is to be fulfilled in Philosophy
- Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
- At least 27 units at the 300 level or above (including core courses)*
- At least 6 of those 27 units at the 400 level**
- Courses taken pass/fail cannot count toward the major.

Supplementary Courses:

  General Philosophy Courses:
  Phil 390 Philosophical Writing 3
  Phil 426 Theories of Concepts 3

  Logic and Method Courses:
  Phil 403 Mathematical Logic 1 3
  Phil 404 Mathematical Logic II 3
  Phil 405 Philosophical Logic 3
  Phil 4051 Philosophy of Logic 3

  Epistemology and Metaphysics Courses:
  Phil 3113 Theory of Knowledge 3
  Phil 3481 Introduction to Metaphysics 3
  Phil 4141 Advanced Epistemology 3
  Phil 4142 Advanced Metaphysics 3
  Phil 4332 Cognition and Computation 3

  Life and Science Courses:
  Phil 423 Philosophy of Biological Science 3
  Phil 452 Aristotle 3

  Mind and Science Courses:
  Phil 315 Philosophy of Mind 3
  Phil 418 Current Controversies in Cognitive Science 3
  Phil 419 Philosophy of Psychology 3
  Phil 4212 Philosophy of Neuroscience 3
  PNP 495 PNP Seminar (with approval of topic) 3

Additional Information

Senior Honors: Eligible majors are encouraged to work toward Senior Honors. To qualify, students must have the agreement of a faculty member to serve as thesis adviser. In addition, they must have, at the end of the junior year, at least a 3.65 overall GPA. For important additional information regarding Senior Honors, consult our webpage (http://philosophy.artsci.wustl.edu/undergraduate/honors-thesis-philosophy).

The Writing-Intensive Seminar: Majors are encouraged to fulfill their writing-intensive requirement by taking Phil 390, which is specially designated as writing-intensive. It is typically taken in the junior year and is limited to 15 students. Significant attention is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays. A philosophy major who does not take a philosophy writing-intensive seminar must take a fourth core course, in any of the three core areas. Priority is given to philosophy majors and minors who have not yet completed their writing-intensive requirement.

Capstone Experience: All philosophy majors are required to complete a capstone experience either by writing an honors thesis or by taking the Philosophy Capstone Course (Phil 3991). Please be aware that the Capstone Course is offered only in the spring semester, so students will need to plan their class schedules accordingly if they decide not to do an honors thesis. To qualify for doing an honors thesis, students must have, at the end of the junior year, at least a 3.5 GPA in the major, a 3.5 GPA in advanced philosophy courses, and a 3.65 overall GPA. Alternatively, majors should sign up for Phil 3991 (a 3-credit course), which will draw together a variety of different philosophical areas. Only philosophy majors of senior standing may take this course; preference is given to students not pursuing honors.

*At least 27 units of the required upper-level courses must be completed with a minimum of a C-.

**Three of these credits (one course) must not be from Honors Thesis or Independent Study.

Study Abroad: Students can pursue the philosophy major while studying abroad. The department has special study abroad arrangements with University College, London; King's College, London; Trinity College, Dublin (Ireland); Sussex University (U.K.); Utrecht University (the Netherlands); and the University of Auckland (New Zealand). Information about study abroad and about specific overseas programs is available from the departmental website (http://philosophy.artsci.wustl.edu/undergraduate/study-abroad) and the Study Abroad adviser.

Minors

Please refer to the following sections for more information about:

- The Minor in Philosophy (p. 634)
- The Minor in Philosophy of Science (p. 635)

The Minor in Philosophy

Units required: 18

Required courses:
Philosophy minors are required to complete at least 12 units at the 300 level or above, which must include at least one course in each of the following three “core” areas:

**Contemporary/Analytic Philosophy:**
- Phil 301G Symbolic Logic 3
- Phil 306G Philosophy of Language 3
- Phil 3113 Theory of Knowledge 3
- Phil 315 Philosophy of Mind 3
- Phil 321G Philosophy of Science 3
- Phil 3481 Introduction to Metaphysics 3

**History of Philosophy:**
- Phil 347C Ancient Philosophy 3
- Phil 349C Descartes to Hume 3
- Phil 357C Kant and 19th-Century Philosophy 3
- Phil 358 Conceptual Foundations of Modern Science 3

**Value Theory:**
- Phil 331F Classical Ethical Theories 3
- Phil 339F Philosophy of the Arts 3
- Phil 340F Social and Political Philosophy 3
- Phil 345F Issues in Applied Ethics: 3
- Phil 346 Philosophy of Law 3

**Additional Information**

Minors are encouraged to take the writing-intensive course Philosophical Writing (Phil 390). A philosophy minor must receive a grade of C- or above in each course. Many philosophy courses also can be taken as part of a minor in history, philosophy of science, or legal studies.

**The Minor in Philosophy of Science**

**Units required:** 18

**Required courses:**
- Phil 301G Symbolic Logic 3
- Phil 321G Philosophy of Science 3
- Phil 4210 Topics in Advanced Philosophy of Science 3

**Total units:** 9

**Elective courses:**

At least one course from the following four:
- Phil 347C Ancient Philosophy 3
- Phil 349C Descartes to Hume 3
- Phil 357C Kant and 19th-Century Philosophy 3
- Phil 358 Conceptual Foundations of Modern Science 3

At least one course from the following:
- Phil 3113 Theory of Knowledge 3
- Phil 315 Philosophy of Mind 3
- Phil 3481 Introduction to Metaphysics 3
- Phil 390 Philosophical Writing 3
- Phil 403 Mathematical Logic 1 3
- Phil 404 Mathematical Logic II 3
- Phil 405 Philosophical Logic 3
- Phil 4051 Philosophy of Logic 3
- Phil 4141 Advanced Epistemology 3
- Phil 4142 Advanced Metaphysics 3
- Phil 418 Current Controversies in Cognitive Science 3
- Phil 419 Philosophy of Psychology 3
- Phil 4212 Philosophy of Neuroscience 3
- Phil 423 Philosophy of Biological Science 3
- Phil 426 Theories of Concepts 3
- Phil 4332 Cognition and Computation 3
- Phil 452 Aristotle 3
- PNP 495 PNP Seminar (with approval of topic) 3

**Courses**

**L30 Phil 100G Logic and Critical Analysis**
Introduction to the elementary tools of logic required for constructing and critically evaluating arguments and the claims they support. Topics include: the nature of an argument; argument structure; how arguments can fail both in structure and in content; formal and informal fallacies; propositional logic and predicate calculus; and critical analysis of rhetorical strategies for presenting arguments. Students are encouraged to develop critical reasoning skills that can be applied widely.
Credit 3 units. A&S: LA, QA A&S IQ: NSM, AN Art: NSM BU: HUM EN: H

**L30 Phil 102 Introduction to Scientific Reasoning**
This course analyzes scientists’ reasoning strategies. Case studies from the history of astronomy, epidemiology, molecular biology, and neuroscience provide a basis for understanding of the character of scientific theories and the means by which they are evaluated. Special attention is given to the construction and evaluation of statistical and causal hypotheses, including experimental design, and to the use of scientific knowledge in public policy decision-making. Students acquire basic skills in critical thinking and scientific reasoning and an introductory understanding of issues in the philosophy of science.
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: HUM

**L30 Phil 120F Problems in Philosophy**
Introduction to philosophical methods and concepts through an investigation of major issues in Western philosophy such as: what counts as knowledge; truth and belief; the existence
L30 Phil 125C Great Philosophers
In this course we focus on some of the most important texts in the history of Western philosophy in order to discuss a wide range of central philosophical problems. We typically consider, for example, the existence of God, the justification of claims to knowledge, and the requirements of a good human life, including the demands of morality. Among the philosophers most likely studied are Plato, Aristotle, Descartes, Hume, Kant, Marx, Nietzsche, and Wittgenstein. Our goal is not just to appreciate the genius of some great philosophers but also to grapple with the current philosophical problems they have bequeathed to us.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 131F Present Moral Problems
An investigation of a range of contemporary moral issues and controversies that draws on philosophical ethics and culturewide moral considerations. Topics may include: racism, world hunger, war and terrorism, the distribution of income and wealth, gender discrimination, pornography, lesbian and gay rights, abortion, euthanasia, and capital punishment. The aim of the course is to present diverse points of view regarding these topics and to provide conceptual and theoretical tools that enable the student to make headway in thinking carefully and critically about the issues.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 233F Biomedical Ethics
A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 235F Introduction to Environmental Ethics
A general survey of current issues in environmental ethics, focusing on problems such as the obligation to future generations, protection of endangered species, animal rights, problems of energy and pollution, wilderness, global justice, and business obligations. Students also learn some ethical and political theory.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 239 Topics in Philosophy and Environment
Philosophical questions are central to study of the environment. Such questions span many philosophical fields including metaethics, value theory, applied ethics, aesthetics, political philosophy and philosophy of science. Given such a diversity of important questions, this course focuses on a different intersection of philosophy and environment each time it runs. It aims to develop students’ understanding of the complex philosophical claims and problems that lie behind environmental values, practices and policies. Examples of topics considered are: wilderness, food and agriculture, and animals.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 297 Undergraduate Independent Study
Prerequisite: permission of the department.
Credit variable, maximum 6 units.

L30 Phil 299 Internship in Philosophy
Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement, which the student obtains from the Career Center and which must be filled out and signed by the Career Center, the site supervisor and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., eight to 10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours.
Credit variable, maximum 3 units.

L30 Phil 3001 Philosophy of Medicine
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L30 Phil 301G Symbolic Logic
In the first half of the course we study some features of truth — functional and first-order classical logics, including studying the model theory and metatheory for first-order logic in much greater depth than in Phil 100. In the second half of the course we go on to study three different styles of proof system — tableaux, axiomatic and natural deduction. This course continues where Phil 100 An introduction to Logic and Critical Analysis leaves off. It is recommended for students who already have taken that introductory course, or for students who already have a strong background in mathematics. Priority given to majors in philosophy and PNP.
Credit 3 units. A&S: LA A&S IQ: NSM, AN BU: HUM

L30 Phil 306G Philosophy of Language
A survey of major philosophical problems concerning meaning, reference and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues are selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisites: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in philosophy and PNP.
Credit 3 units. A&S: LA A&S IQ: NSM, AN BU: HUM

L30 Phil 308 Introduction to Semantics
Semantics is the branch of linguistics which studies how speakers assign meaning to words, sentences, and larger units of discourse. We combine perspectives from both linguistics and philosophy to explore a variety of topics including polysemy, compositionality, quantification, anaphora, definite descriptions, attitude reports, presupposition and implicature. Prerequisite: Ling 170D or Phil 301G or permission of instructor.
Same as L44 Ling 311
Credit 3 units. A&S: LA A&S IQ: SSC BU: HUM EN: S

L30 Phil 309 Topics in the Wilderness
Philosophical questions are central to study of the environment. Such questions span many philosophical fields including...
metaethics, value theory, applied ethics, aesthetics, political philosophy and philosophy of science. Given such a diversity of important questions, this course focuses on a different intersection of philosophy and environment each time it runs. It aims to develop students’ understanding of the complex philosophical claims and problems that lie behind environmental values, practices and policies. Examples of topics considered are: wilderness, food and agriculture, and animals.

Credit 3 units. A&S: TH & A&S IQ: HUM BU: ETH

L30 Phil 310 Contemporary Jewish Thought
Same as L75 JINE 310
Credit 3 units. A&S: TH & A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 3101 Topics in Philosophy of Religion
The question of how God can allow evil to occur to the righteous or innocent people has been a perennial dilemma in religion and philosophy. We study the classic statement of the problem in the biblical book of Job, the ancient Near Eastern literature on which Job is based, and traditional Jewish and Christian interpretation of Job. We study the major approach to the problem of evil in Western philosophical and religious thought.

Same as L23 Re St 3101
Credit 3 units. A&S: TH & A&S IQ: HUM BU: ETH EN: H

L30 Phil 3113 Theory of Knowledge
This course focuses on issues in epistemology with the aim of providing a survey of contemporary work. The course begins with a close reading of Descartes’ first three Meditations. These should help us set some of the problems that figure in more recent work and provide an introduction to certain fundamental epistemological concepts. No particular background is assumed, but participants are expected to come to class prepared to discuss topics at an advanced level. Readings are taken from original sources and can be challenging. Although most assignments are reasonably short, students should allow time for careful reading and re-reading. Prerequisite: one 100- or 200-level course in philosophy or permission of instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L30 Phil 315 Philosophy of Mind
An introduction to philosophical analyses of the nature of mind, especially those developed by contemporary philosophers. The focus is on questions such as the following: What is a mind? How does it relate to a person’s brain? How does it relate to a person’s body and the external world? Can a mind exist in a very different kind of body (e.g., a computer or a robot)? Does thinking require a language-like code? If so, can non-linguistic species think? What is it to have a mental image or to experience pain? Prerequisite: one 100- or 200-level course in philosophy or permission of instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L30 Phil 316 Mind and Morals
This course explores a number of issues at the intersection of ethics and cognitive science. Possible topics include: Are we rational? Do we know our own thoughts and motivations? Can one believe that one ought to do something without being motivated to do it? Do emotions impair or enhance our ability to reason? How do moral beliefs develop through childhood? Are traits such as intelligence and character unchangeable, and what implications follow if they are (or are not)? Does retaining my identity over time require having the same mind, and, if so, am I the same person now as I was as a child? Are nonhuman animals worthy of moral consideration? If brain activity is determined by causal laws, can we have free will? Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 321G Philosophy of Science
Pivotal concepts common to empirical sciences are examined and clarified. These include: explanation, confirmation, prediction, systematization, empirical significance, and the relationship of all these concepts to the structure of scientific theory. Examples may be drawn from both contemporary and historical science, including the social, biological and physical sciences. Students with a background in science are particularly encouraged to consider this course. Priority given to majors in philosophy and PNP.

L30 Phil 327 Philosophy of Religion
Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H

L30 Phil 3311 Tragedy
What is the relationship between freedom and luck? How do men and women respond to large forces beyond their control? Is character a struggle against outside events, or is it a submission to destiny? What happens when two ethical principles, taken absolutely, collide together? What is the nature of evil, and how does good respond to it? In ancient Greece, Renaissance England, 17th-century Europe, modern Europe, and postcolonial Africa, the form of tragedy has grappled with these questions, generating both a rich body of imaginative literature and equally compelling philosophical reflections about tragedy. This course explores great works of tragic literature by authors such as Homer, Aeschylus, Sophocles, Shakespeare, Racine, Ibsen, Dostoevsky, Miller, and Soyinka, and examines philosophers such as Plato, Aristotle, Hegel, Kierkegaard, Nietzsche, Well, and Arendt in order to explore the questions raised by tragedy.

Same as L16 Comp Lit 331C
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L30 Phil 331F Classical Ethical Theories
Intensive readings of great works in the history of ethics, especially by Plato, Aristotle, Hume, Kant, and Mill. Topics may include: the sources of moral knowledge, the nature of practical moral judgment, the moral role of emotion and desire, weakness of will, moral autonomy, and the universality of moral norms. Prerequisites: one course in philosophy at the 100 or 200 level, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 3321 Feminist Philosophy
This course focuses on influential normative issues of government, community, culture and interpersonal relationships that bear on women’s lives in distinctive ways. We consider diverse topics from varied feminist perspectives. Probable topics include: race/ethnicity and gender; care and justice; varieties of oppression; feminism; sexuality; radical democracy; violence against women; and whether philosophical modes of investigation are biased against women.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: ETH EN: H
L30 Phil 339F Philosophy of the Arts
An examination both of general issues that apply to all types of art and of issues specific to particular art forms. For example, what is art? What are the central artistic values: beauty, truth, emotional expressiveness, representational power, or something else? Does art have a moral or political function? How can we account for the history of art and for different artistic styles? In regard to selected forms, there are important questions concerning how pictures represent, whether music and dance are forms of "language," and the nature of literary interpretation. Some consideration is given to the relation of psychology and theories of the mind to art. Prerequisite: one course in philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 340F Social and Political Philosophy
Study of certain fundamental issues concerning government, society and culture. For example: What are the nature and limits of legitimate political authority? Are ordinary human beings capable of governing themselves justly? Do citizens have a duty to obey the state? If so, to what extent, if at all, is that duty grounded in consent or contract? Should the state limit or regulate the personal relationships of citizens, such as marriage, family and sexuality? How should social institutions rectify a history of political or social injustice against oppressed groups? Readings from historical and contemporary sources. Prerequisite: one course in philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH, HUM

L30 Phil 345F Issues in Applied Ethics:
Advanced study of a selected topic in applied ethics. Abstract ethical theories and methods are brought to bear on the moral problems that arise in an area of social and professional practice such as medicine, business, law, journalism, engineering, or scientific and humanistic research. Possible topics include: reproductive health care and policy, the just distribution of medical resources, the social responsibilities of corporations, accountability in the media and public office, and the ethics of research on or affecting human subjects. Prerequisites: one course at the 100 or 200 level in applied ethics; or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 346 Philosophy of Law
This course first focuses on the philosophical foundations of law, examining both the relationship between law and rules, as well as the types of legal reasoning. Second, the course focuses on philosophical issues that arise in the key substantive areas of law: contracts, torts, property, criminal law and constitutional law, as well in specialized areas such as family and employment law. The course ends with a brief discussion of several problems in legal ethics. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 347C Ancient Philosophy
An examination of the high-water marks of philosophy in ancient Greece and Rome, focusing primarily on Plato and Aristotle. A wide range of philosophical problems is discussed, including the nature of the good life, the justification of knowledge, and the ultimate nature of mind and world. Attention is paid to how these problems unfolded in their historical context and to how the ancient treatments of them compare to contemporary efforts. Prerequisites: one course in philosophy at the 100 or 200 level, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 3481 Introduction to Metaphysics
This course is an introduction to central debates of contemporary analytic metaphysics. Metaphysics is concerned with the nature of the most general kinds of things and the relationship between these things. We discuss the nature of and relationship between properties, material objects, persons, time, space and modality. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L30 Phil 349C Descartes to Hume
An examination of major philosophical systems and problems in modern philosophy as presented in the original writings of the 17th and 18th centuries. Topics may include rationalism and empiricism, idealism, materialism and skepticism, with readings selected from the continental rationalists Descartes, Spinoza and Leibniz, and from the British empiricists Locke, Berkeley and Hume. Central problems include the mind-body problem, representationalism and transcendentalism. Prerequisite: one course in philosophy at the 100 or 200 level or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH
L30 Phil 357C Kant and 19th-Century Philosophy
Examination of Kant and 19th-century philosophy. We discuss Kant’s “Copernican Turn” in metaphysics and epistemology, as well as his moral philosophy, and we study works of selected 19th-century philosophers such as Hegel, Marx, Mill and Nietzsche. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in philosophy and PNP.
Credit 3 units. A&S: TH & A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 358 Conceptual Foundations of Modern Science
The aim of this course is to present some of the basic concepts underlying modern science. Insofar as many of those concepts first appeared or became predominant in the 17th and early 18th centuries, the course concentrates on primary works from that period. Among the concepts studied are: (1) nature and natures: the ontology of matter and force; causal closure; (2) methods: observing and intervening, systematic and organized; (3) explanations: appeal to laws and mechanisms; teleology. Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in philosophy and PNP.
Credit 3 units. A&S: TH & A&S IQ: HUM BU: HUM EN: H

L30 Phil 359 Conceptual Foundations of Modern Science II
This course focuses on second-order logic, paraconsistent logics and second-order logic. In the last weeks of the course, we examine some outright challengers, including intuitionistic and paraconsistent logics. After evaluating the arguments for and against these challenges, the course draws together a variety of philosophical specializations. Must be taken by all philosophy majors who are not writing an honors project. Work for the course typically consists of one written project, one oral presentation, and one commentary on another student’s oral presentation. Prerequisites: senior standing and major in philosophy; preference given to those majors not pursuing Honors.
Credit 3 units. A&S: TH & A&S IQ: HUM BU: HUM

L30 Phil 366 Art and the Mind-Brain
In recent years, there has been a growing interest in the bearing of cognitive science on the perception and understanding of art. This interest has roots in tradition: historically, art, aesthetics and vision science have often been linked. But the growth of knowledge in cognitive science has opened up new opportunities for understanding art and addressing philosophical questions. The converse is also true. The production, perception and understanding of art are human capacities that can shed light on the workings of the mind and brain. This course considers questions such as: What is art? How do pictures represent? Does art express emotion? Why does art have a history? Prerequisite: one 100- or 200-level course in philosophy or permission of the instructor. Priority given to majors in philosophy and PNP.
Credit 3 units. A&S: TH & A&S IQ: HUM BU: HUM EN: H

L30 Phil 375 Existentialism
The philosophical systems of selected philosophers such as Kierkegaard, Nietzsche and Sartre are examined to determine their historical origins, their ontological and epistemological ramifications, and their relationships to contemporary philosophy. Prerequisite: one course in philosophy at the 100 or 200 level or permission of the instructor.
Credit 3 units. A&S: TH & A&S IQ: HUM BU: HUM EN: H

L30 Phil 3801 Ancient Greek and Roman Medicine
This course introduces the student to the practice and theory of medicine in the ancient Mediterranean, beginning in Egypt and continuing through Greece and Rome. In the end, we will find ourselves in the Middle Ages. Our focus will be on Greco-Roman medicine: how disease was understood; how disease was treated surgically, pharmacologically, and through diet; the intellectual origins of Greek medicine; the related close relationship between Greco-Roman medicine and philosophy; and the social status of medical practitioners. We will also discuss how medicine was written and in what terms its practitioners conceived it.
Same as L08 Classics 3801

L30 Phil 390 Philosophical Writing
This seminar has a different topic of central philosophical importance each semester. Significant attention also is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays. Limited to 15 students. Priority is given to philosophy majors and minors who have not yet completed their writing-intensive requirement.
Credit 3 units. A&S: TH, WI & A&S IQ: HUM, WI BU: HUM EN: H

L30 Phil 397 Undergraduate Independent Study
Credit variable, maximum 6 units.

L30 Phil 3991 Philosophy Capstone Course
This course focuses either on classic writings from the past century or on contemporary writings that address a major philosophical concern, such as “the meaning of life” or “the concept of self.” In either case, the course draws together a variety of philosophical specializations. Must be taken by all philosophy majors who are not writing an honors project. Work for the course typically consists of one written project, one oral presentation, and one commentary on another student’s oral presentation. Prerequisites: senior standing and major in philosophy; preference given to those majors not pursuing Honors.
Credit 3 units. A&S: TH & A&S IQ: HUM BU: HUM

L30 Phil 403 Mathematical Logic 1
A first course in mathematical logic, an introduction to both proof theory and model theory. The structure and properties of first-order logic are studied in detail, with attention to such notions as axiomatic theory, proof, model, completeness, compactness and decidability. Prerequisite: Phil 301G or equivalent or a background in mathematics.
Credit 3 units. A&S: TH & A&S IQ: HUM BU: HUM

L30 Phil 404 Mathematical Logic II
Godel’s Incompleteness Theorem: its proof, its consequences, its reverberations. Prerequisite: Phil 403 or a strong background in mathematics.
Credit 3 units. A&S: TH & A&S IQ: HUM BU: HUM

L30 Phil 405 Philosophical Logic
What the philosophy student needs to know of logic, its techniques and its use as a tool in philosophical analysis. Some attention to the history of the subject and to its metatheory. Prerequisite: previous exposure to formal logic, or permission of instructor.
Credit 3 units. A&S: LA

L30 Phil 4051 Philosophy of Logic
This course surveys some important issues in the philosophy of logic. We begin with basic foundational issues in classical logic, including the relation of logic to psychological reasoning and Tarski’s definition of logical consequence, and gradually go on to consider the motivations and status of well-known extensions (sometimes regarded as “neo-classical” logics) such as modal logics and second-order logic. In the last weeks of the course, we examine some outright challengers, including intuitionistic and paraconsistent logics. After evaluating the arguments
for and against these challenges, we examine one recent, controversial view-logical pluralism — which suggests that we might not need to choose among the rival systems. Many of the readings for this course are classics of contemporary philosophy, and the subject is likely to be of especial interest to students who have interests in logic, and in the philosophy and foundations of mathematics and language. Some of the important ideas in the course presuppose at least a basic acquaintance with formal logic, and hence either Phil 100 or Phil 301 (or permission of the instructor) are prerequisites.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L30 Phil 4061 Topics in the Philosophy of Language**

Focus on the work of a single philosopher of language such as Carnap, Chomsky, Foucault, or Kripke, or on a central topic such as the theory of reference, the theory of meaning, or the problem of cross-cultural translation. Prerequisite: one course in epistemology, philosophy of language, or analytic philosophy, or permission of instructor.

Credit 3 units. A&S: TH

---

**L30 Phil 4065 Advanced Philosophy of Language**

An advanced-level treatment of basic topics in the philosophy of language as this discipline is understood in the analytic tradition. The main positions and the problems they pose are surveyed; focal themes include meaning, reference and truth. The aim of the course is to help students develop effective expository techniques and to provide them with the necessary conceptual resources to analyze and criticize different theoretical views. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM

---

**L30 Phil 4070 Global Justice**

This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course will be of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally.

Same as L32 Pol Sci 4070

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

**L30 Phil 410 Theories of Perception**

A consideration of recent work in philosophy and cognitive science on the nature of perception and its contribution to thought, knowledge and behavior. Special attention is paid to two questions: To what extent can perceptual experience be changed through learning? In what sense do perceptual states have content? The relation of these issues to more general theories of mental content, to the possibility of objective and theory-neutral observation in science, and to the directness or indirectness of perception are discussed. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of instructor.

Credit 3 units. A&S: TH

---

**L30 Phil 4141 Advanced Epistemology**

Competing theories of knowledge and belief justification are considered. Careful attention is given to selected problems such as skepticism, certainty, foundations, coherence, perception, induction. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

**L30 Phil 4142 Advanced Metaphysics**

Through readings from both classical and contemporary sources, a single traditional metaphysical concern is made the subject of careful and detailed analytic attention. Possible topics include such concepts as substance, category, cause, identity, reality and possibility, and such positions as metaphysical realism, idealism, materialism, relativism and idealism. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

**L30 Phil 418 Current Controversies in Cognitive Science**

An advanced survey of current debates in cognitive science with an emphasis on the philosophical issues raised by these debates. Topics may include: evolutionary psychology; innateness and neural plasticity; perception and action; consciousness; connectionism; robotics; embodied cognition; moral reason; emergence and artificial life; concepts and content; animal cognition. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor.

Same as L64 PNP 418

Credit 3 units. A&S: TH A&S IQ: HUM

---

**L30 Phil 419 Philosophy of Psychology**

An investigation of the philosophical presuppositions and implications of various traditions in psychology, including behaviorism, Gestalt and cognitivism, with a special emphasis on the development of the information processing approach of contemporary cognitivism. The conception of psychological phenomena, data and explanation central to each of these traditions are examined, and typical topics include the debates between propositional and imagistic models of representation, different accounts of concepts and categorization, and the relation of psychology to ethics. Prerequisites: one previous course in philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM

---

**L30 Phil 4202 Contemporary Feminisms**

The purpose of this course is to provide a framework, a map, within which students can locate feminist ideas. The course, which may be presented historically, explores and compares different types of feminism selected from, for example, the following feminisms: liberal; Marxist; socialist; radical; lesbian; black; existentialist; postmodern. The class considers how such feminisms analyze the nature and sources of women's oppressions, the worlds they envision, and the means they use to bring about change. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: completion of at least one women, gender, and sexuality studies course or permission of the instructor.

Same as L77 WGSS 420

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM

640
L30 Phil 4210 Topics in Advanced Philosophy of Science
This course varies in topics related to philosophy of science from semester to semester. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 4212 Philosophy of Neuroscience
This course focuses on the historical roots of neuroscience as well as its contemporary developments. Topics include: (1) the nature of explanatory strategies in neuroscience; (2) the relation between neuroscience research and higher-level disciplines such as psychology; and (3) the epistemology of the investigatory tools of neuroscience. Prerequisite: one previous course in philosophy at the 300 level, graduate standing or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 423 Philosophy of Biological Science
This course examines a number of theoretical, conceptual and methodological issues that arise in the attempts of biologists to explain living systems. One sort of problem concerns the relation between biology (and biological descriptions and explanations) and physics and chemistry. Biological phenomena have often seemed very different from ordinary physical phenomena in being teleological or goal oriented. Vitalists, accordingly, resisted the attempt to invoke physics and chemistry in the attempt to explain biological phenomena. But recently biology has come more and more to draw upon physics and chemistry; we examine the conceptual frameworks that underlie these efforts. Another sort of problem concerns the adaptiveness of living organisms. Charles Darwin offered one naturalistic explanation of this feature, an explanation that was further developed in this century as the synthetic theory of evolution. A number of controversial issues have arisen within this context of adaptation, and the range of levels at which selection can occur. The ubiquity of evolution, moreover, has been challenged in recent years, as a number of non-selectionist explanations have recently been put forward. We consider the arguments for the synthetic theory and these alternatives. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 426 Theories of Concepts
Concepts are the building blocks of thought. They are implicated in just about every cognitive task. Beyond that, there is little consensus. What information do concepts encode? How are they acquired? How are they combined to form thoughts? How are they related to perception and imagery? Each of these questions has been answered in numerous ways. In this course, we explore competing theories of concepts that have been proposed by philosophers, psychologists and other cognitive scientists. No prior acquaintance with these issues is required. Prerequisite: one previous course in philosophy at the 300 level, graduate standing or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 430 Topics in Ethics
Selected advanced topics in ethics. Prerequisite: 6 units of philosophy, or permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM

L30 Phil 4310 20th-Century Metaethics
An examination of metaphysical and epistemological issues in ethics. Topics include: the nature of the good and the right, the meaning of ethical terms, the logic of moral argument, and the status of moral knowledge. We consider philosophical works written since 1900 by such authors as Moore, Ross, Stevenson, Ayer, Foot, Hare, Brink, Harmon, Blackburn, and McDowell. Prerequisites: one previous course in philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 4315 Normative Ethical Theory
An exploration of the three major normative ethical theories debated by philosophers in the last 100 years: Kantian ethics, utilitarianism and virtue theory. Authors covered in the course may include: Henry Sidgwick, R.M. Hare, R.B. Brandt, John Rawls, Bernard Williams, Philippa Foot, Thomas Nagel, Christine Korsgaard, Michael Slote and Barbara Herman. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 4320 British Moralists
An investigation of the work of the great British moral philosophers of the 17th-19th centuries, especially Hobbes, Hume, and Mill. Other figures may include Reid, Butler, Hutcheson, Bentham, and Sidgwick. In considering these philosophers, we explore the relations between normative ethics, moral psychology, and political philosophy, and may include a discussion of legal, social and economic philosophies as well. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 4332 Cognition and Computation
Same as L64 PNP 4332
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L30 Phil 438 Aesthetics
A careful consideration of selected issues regarding the experience of visual art, architecture, music or literature, as well as the power or beauty of nature, people and artifacts. For example, is there a special form of aesthetic experience or aesthetic attitude? In what do aesthetic power and beauty consist? Are they different in art and nature? Do the artists’ intentions matter? Some central concerns are: how do visual art and literary texts have “meaning,” what role do the viewer’s or reader’s interpretations play, and how might recent work in cognitive science and social theory shed light on these issues? Prerequisites: one course in philosophy at the 300 level, graduate standing or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L30 Phil 4400 Advanced Social and Political Philosophy
A selective investigation of one or two advanced topics in the philosophical understanding of society, government and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism, communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism and the rights of cultural minorities. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM
L30 Phil 451 Plato
An examination of some of Plato's most important dialogues, typically including Gargias, Phaedo, and The Republic, with the aim of grasping the development of Plato's most influential thoughts in ethics and in metaphysics and epistemology. In order to provide both historical understanding and philosophical evaluation, attention is paid to the context and structure of the dialogues and to the best of recent secondary literature. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 452 Aristotle
This course offers a maximally full and detailed introduction to the works of Aristotle. His logic, natural philosophy, psychology, metaphysics, ethics and political philosophy are discussed, and stress is laid on the interpretive problems facing contemporary philosophers seeking to understand Aristotle's achievement. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 4530 Hellenistic Philosophy
The Hellenistic Age, traditionally dated from the death of Alexander and his (Macedonian) Empire at 323 BCE to the birth of Augustus' (Roman) Empire in 31 BCE, gave the West three of its most innovative and influential schools of philosophy: Epicureanism, Skepticism and Stoicism. This course investigates the central features of their thought. Special attention is paid to the still-relevant debates between the Stoics and Skeptics about the possibility of knowledge, to the disagreements among all three schools about the issues of freedom, responsibility and determinism, and to their ethical theories. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 4550 Continental Rationalism
A rationalist is a philosopher for whom at least one certain truth is inborn or comes from reason rather than from empirical or sensory experience. The major systematic writings of Descartes, Spinoza and Leibniz are examined with a focus on the question: does the epistemology determine the ontology of these philosophical systems or vice versa? The lines of development connecting these philosophers are traced, and such enduring problems as the relation of mind to body are examined. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 4563 Marxism After Marx: Philosophy and Radicalism in the 20th Century
As claims around the supposed "post-modernity" of our contemporary situation have ebbed, so scholars have returned once more to perhaps the defining philosophical and political voice of modernity, Karl Marx. This course prepares students to engage in current debates in the humanities over the nature of the political, the dynamics of class, the relative importance of the economy to "culture," and the historical situatedness of philosophical knowledge, all through close readings of the Western Marxist philosophical tradition. That tradition, developing in Continental Europe and later the United States, sought to revitalize Marx's account of historical development through attention to art, literature and the broader Western philosophical canon, often with the intention of accounting for the failures of Soviet Communism. The course begins with a condensed primer to Marx's original ideas, before turning to the extension of Marxist philosophy in the ideas of Lenin, Lukács, the Frankfurt School, Louis Althusser, the British "New Left," Lucio Colletti and Antonio Negri, before addressing more contemporary authors including Fredric Jameson and Alain Badiou. Same as L93 IPH 456 Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L30 Phil 4570 Kant's Critique of Pure Reason
An in-depth investigation of Kant's Critique of Pure Reason, one of the most important books in the history of Western philosophy. Some supplementary readings from other philosophers are used to situate Kant's work in a systematic and historical context, to present some "Kantian" positions in current philosophy, and to bring in some important contrasting views and criticisms. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 4575 Kant and Kantian Practical Philosophy
An in-depth examination of Kant's practical philosophy: his moral and political theory. Readings include the Critique of Practical Reason, parts of the Metaphysics of Morals, Perpetual Peace and other writings. Supplementary readings are used to situate Kant's work in its systematic and historical context, to provide orientation in the world of Kant scholarship, and to introduce important contrasting views and criticisms. We also discuss recent reformulations of Kantian themes in the works of contemporary philosophers. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM

L30 Phil 464 Advanced Continental Philosophy
A study of selected texts by such major figures of 20th-century continental philosophy as Husserl, Heidegger, Merleau-Ponty, Sartre, de Beauvoir, Levinas, Habermas, Foucault, Derrida and Irigaray. Such topics as phenomenology, hermeneutics, existentialism, critical theory, structuralism and post-structuralism are investigated. Prerequisite: one course in philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 465 Topics in the History of Philosophy
Study of individual philosophers or themes from the ancient, medieval, and/or modern periods. Examples: Spinoza, St. Thomas Aquinas, neo-Platonism, universalism in ancient and medieval thought, ancient and modern theories of space and time. Prerequisite: 6 units in philosophy or permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 4751 Intellectual History of Feminism
We focus on feminist thought in Western culture but also examine non-Western ideas about feminisms. We trace the relationship among emergent feminist ideas and such developments as the rise of scientific methodology, Enlightenment thought, revolutionary movements and the gendering of the political subject, colonialism, romanticism, socialism and global feminisms. Readings are drawn from both
primary sources and recent feminist scholarship on the texts under consideration. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: Completion of at least one women, gender, and sexuality studies course or permission of the instructor.

Same as L77 WGSS 475
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L30 Phil 497 Undergraduate Independent Study
Prerequisite: permission of the department.
Credit variable, maximum 6 units.

L30 Phil 499 Study for Honors

L30 Phil 4ABR Advanced Philosophy Course Work
Completed Abroad
Credit 3 units.

Philosophy-Neuroscience-Psychology

Philosophy-Neuroscience-Psychology (PNP) is an interdisciplinary program that provides an opportunity to examine the mind from multiple perspectives. Students who choose to major in PNP will learn to bring some of the newest findings in science to bear on some of the oldest questions in philosophy; equally important, they will see new questions emerge and learn to pursue those as well. Examples include: Is the mind–brain a single entity, or does having a mind involve something over and above the activity of a brain? What assumptions are made by cognitive psychologists when they divide mental activity into separate processes and use response times or other measures of task performance to describe those processes? What assumptions are made by neuroscientists when they use imaging techniques to determine where in the brain a cognitive process is carried out? What are we to make of Chomsky’s claim that language is an innate mental organ designed to generate an infinite number of sentences? PNP majors will seek answers to questions such as these in courses offered by PNP and PNP’s affiliated departments.

Faculty

Director

Ron Mallon (http://philosophy.artsci.wustl.edu/people/ron-mallon)
Professor
PhD, Rutgers University
(Philosophy; Philosophy-Neuroscience-Psychology)

Core Faculty

Carl F. Craver (http://philosophy.artsci.wustl.edu/people/Carl_Craver)
Professor
PhD, University of Pittsburgh
(Philosophy; Philosophy-Neuroscience-Psychology)

John Doris (http://philosophy.artsci.wustl.edu/people/John_Doris)
Professor
PhD, University of Michigan
(Philosophy; Philosophy-Neuroscience-Psychology)

Brett D. Hyde (http://philosophy.artsci.wustl.edu/people/Brett_Hyde)
Associate Professor
PhD, Rutgers University
(Philosophy; Linguistics; Philosophy-Neuroscience-Psychology)

Casey O’Callaghan (http://pnp.artsci.wustl.edu/people/casey-ocallaghan)
Professor
PhD, Princeton University
(Philosophy; Philosophy-Neuroscience-Psychology)

Mark Rollins (http://philosophy.artsci.wustl.edu/people/mark-rollins)
Professor; Chair, Performing Arts Dept.; Dean, University College
PhD, Columbia University
(Philosophy; Philosophy-Neuroscience-Psychology)

Elizabeth Schechter (http://philosophy.artsci.wustl.edu/people/elizabeth-schechter)
Assistant Professor
PhD, University of Maryland
(Philosophy; Philosophy-Neuroscience-Psychology)

Postdoctoral Fellows

Joseph McCaffrey
PhD, University of Pittsburgh

Natalia Washington (http://philosophy.artsci.wustl.edu/people/natalia-washington)
PhD, Purdue University
Participating Faculty

Richard A. Abrams (http://psychweb.wustl.edu/people/richard-abrams)
Professor
PhD, University of Michigan
(Psychological & Brain Sciences)

David A. Balota (http://psychweb.wustl.edu/people/david-balota)
Professor
PhD, University of South Carolina
(Psychological & Brain Sciences)

Deanna M. Barch (http://psychweb.wustl.edu/people/deanna-barch)
Professor
PhD, University of Illinois
(Psychological & Brain Sciences)

Joe Barcroft (http://rll.wustl.edu/people/barcroft)
Professor
PhD, University of Illinois at Urbana-Champaign
(Romance Languages and Literatures)

Cindy Brantmeier (http://rll.wustl.edu/people/brantmeier)
Professor
PhD, Indiana University
(Romance Languages and Literatures; Education)

Todd S. Braver (http://psychweb.wustl.edu/people/todd-braver)
Professor
PhD, Carnegie Mellon University
(Psychological & Brain Sciences)

John Bruer (http://philosophy.artsci.wustl.edu/people/John_Bruer)
Adjunct Professor
PhD, Rockefeller University
( Philosophy)

Dennis DesChene (http://philosophy.artsci.wustl.edu/people/Dennis_DesChene)
Professor
PhD, Stanford University
(Philosophy; Interdisciplinary Project in the Humanities)

Janet M. Duchek (http://psychweb.wustl.edu/people/janet-duchek)
Associate Professor
PhD, Washington University
(Psychological & Brain Sciences)

Leonard Green (http://psychweb.wustl.edu/green)
Professor
PhD, State University of New York--Stony Brook
(Psychological & Brain Sciences; Economics)

John Heil (http://philosophy.artsci.wustl.edu/people/John_Heil)
Professor
PhD, Vanderbilt University
(Philosophy)

Erik Herzog (http://wubio.wustl.edu/herzog)
Professor
PhD, Syracuse University, Institute for Sensory Research
(Biology)

Lori Markson (http://psychweb.wustl.edu/markson)
Associate Professor
PhD, University of Arizona
(Psychological & Brain Sciences)

Kathleen McDermott (http://psychweb.wustl.edu/mcdermott)
Professor
PhD, Rice University
(Psychological & Brain Sciences)

Camillo Padoa-Schioppa (http://thalamus.wustl.edu/cps)
Associate Professor
PhD, Massachusetts Institute of Technology
(Anatomy and Neurobiology; Biological Engineering)

Jonathan Peelle (http://jonathanpeelle.net)
Assistant Professor
PhD, Brandeis University
(Otolaryngology)

Anya Plutynski (http://philosophy.artsci.wustl.edu/people/anya-plutynski)
Associate Professor
PhD, University of Pennsylvania

(Psychological & Brain Sciences)
Majors

The Major in Philosophy-Neuroscience-Psychology

I. Core Undergraduate Requirements for PNP

Required for all students, regardless of track:

Entry Sequence

Choose one of the following:

PNP Sequence

- PNP 200 Introduction Cognitive Science and
- PNP 201 Inquiry in the Cognitive Sciences or Psych 301 Experimental Psychology

or

Mind, Brain, Behavior Sequence (MBB)

- MBB 120A Introduction to Study of the Mind-Brain: Psychological, Biological and Philosophical Perspectives
- MBB 122 Introduction to the Study of the Mind Brain II or PNP 200 Introduction Cognitive Science

Core Philosophy Requirements

Prerequisites:

- Phil 100G Logic and Critical Analysis 3
- or Phil 120F Problems in Philosophy
- or Phil 125C Great Philosophers

Upper division: Two courses at the 300 or 400 level.

Majors must take either

- PNP 315 Philosophy of Mind, or
- PNP 306 Philosophy of Language

and another from the list below:

- PNP 301 Symbolic Logic 3
- PNP 306 Philosophy of Language 3
- PNP 315 Philosophy of Mind 3
- PNP 316 Mind and Morals 3
- PNP 321 Philosophy of Science 3
- Phil 339F Philosophy of the Arts 3
- Phil 3481 Introduction to Metaphysics 3
Core Psychological & Brain Sciences Requirements

**Prerequisite:** Psych 100B Introduction to Psychology

**Upper division:** Two courses at the 300 or 400 level.

Unless a student has completed MBB 120A with a grade of B- or higher, he or she must take PNP 360 Cognitive Psychology, or PNP 408 Psychology of Language and another from the list below:

<table>

II. Track-specific Requirements

**Courses required for the Cognitive Neuroscience (CN) track**

**Prerequisites:** Biol 2960 or Psych 3401* and permission of instructor; Biol 3058 recommended.

**Upper division:** Two neuroscience courses at the 300 or 400 level. Students must take:

Biol 3411 Principles of the Nervous System 3

Psych 3604 Cognitive Neuroscience 3

*Psych 3401 Biological Psychology can count toward the depth requirement in neuroscience, if taken as a prerequisite.*

**Courses required for the Language, Cognition and Culture (LCC) track**

**Prerequisites:**

Anthro 170D Introduction to Linguistics 3

Anthro 150A Introduction to Human Evolution 3

**Upper division:** Two courses at the 300 or 400 level, chosen from those below:

<table>

</tbody>
</table>

### III. Depth Requirement

Students on the CN track must complete at least 9 units, including at least 3 units at the 400 level or above, in one area of either philosophy, psychology or neuroscience.

Students on the LCC track must complete at least 9 units, including at least 3 units at the 400 level or above, in one area of either philosophy, psychology, anthropology or linguistics. Note that courses from another major may count toward satisfying the depth requirement, provided that students have at least 18 stand-alone units in PNP at the 300 level or above.

Three units of MBB 300 may be counted toward the depth requirement, in an area appropriate to the research undertaken (e.g., a psychology research project would count toward the psychology depth requirement). All 9 depth requirement units must be taken in a single area.

**IV. Capstone**

The Capstone is required for honors students and first majors; it is recommended for second majors. It consists of one of the following:

- A PNP Honors project (PNP 499, 6 units; requires PNP Honors form to be filled out and approved by Honors Coordinator).
- The 2-unit PNP Reading Class (formerly PNP Book Club) plus the PNP Seminar (PNP 495) of PNP 496
- The PNP Reading Class (formerly PNP Book Club) plus 3 advanced units of independent study, PNP 500. The independent study details are available on the PNP website (https://pnp.artsci.wustl.edu/undergraduate/independent-study).
Units from a capstone experience can count toward the depth requirement in either the CN or LCC tracks.

**Minors**

**The Minor in Philosophy-Neuroscience-Psychology**

Units required: 15

Required courses: Minors are required to complete at least 15 units, of which 9 must be at the 300 level or above.

The minor is composed of a 6-unit introductory sequence (PNP 200 and PNP 201, or MBB 120A and MBB 122), followed by:

- 3 units in Philosophy:
  - PNP 315 Philosophy of Mind/Phil 315
  - PNP 306 Philosophy of Language/Phil 306G
- 3 units of Neuroscience:
  - PNP 3411 Principles of the Nervous System/Biol 3411
  - Psych 3604 Cognitive Neuroscience
- 3 units in Psychology:
  - PNP 360 Cognitive Psychology/Psych 360
  - PNP 408 Psychology of Language

**Additional Information**

Psych 100B is the prerequisite for all psychological & brain science courses at the 300 level and above. Note that no more than 6 units counted toward a minor in PNP may be transferred or earned abroad, and no more than 3 units may be counted toward another major or minor.

**Courses**

---

**L64 PNP 201 Inquiry in the Cognitive Sciences**

Understanding the mind-brain involves orchestrating a variety of conceptual tools and modes of inquiry from the cognitive sciences. This course offers a hands-on introduction to a variety of research tactics used in the behavioral and biological sciences and emphasizes the advantages of combining them. For example, neuroimaging can enhance the interpretation of experiments by cognitive psychologists and modeling can be used to simulate and understand the effects of brain lesions. Prerequisite: completion of at least one of the following courses: Psych 100B, Phil 120F, Phil 125C, Biol 296A, MBB 120 or Ling 170D.

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN

---

**L64 PNP 3001 Research in the Mind, Brain, and Behavior**

An introduction to research for students in the Mind, Brain and Behavior program (formerly known as Hewlett Program). Students work under the supervision of a mentor. Prerequisite: admission to the Mind, Brain and Behavior program, completion of MBB/PNP 122, and permission of the mentor.

Same as L96 MBB 300

Credit 3 units. A&S: NS A&S IQ: NSM

---

**L64 PNP 301 Symbolic Logic**

In the first half of the course we study some features of truth-functional and first-order classical logics, including studying the model theory and metatheory for first-order logic in much greater depth than in Phil 100. In the second half of the course we go on to study three different styles of proof-system: tableaux, axiomatic, and natural deduction. This course continues on where Phil 100: An Introduction to Logic and Critical Analysis leaves off. It is recommended for students who have already taken that introductory course, or for students who already have a strong background in mathematics. Priority given to majors in philosophy and PNP.

Same as L96 MBB 301G

Credit 3 units. A&S: LA A&S IQ: NSM, AN Art: NSM BU: HUM

---

**L64 PNP 306 Philosophy of Language**

A survey of major philosophical problems concerning meaning, reference and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues are selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 306G

Credit 3 units. A&S: LA A&S IQ: NSM, AN Art: NSM BU: HUM

---

**L64 PNP 309 Syntactic Analysis**

The ability to produce and understand an infinite number of sentences is perhaps the most fascinating aspect of the human language faculty. Syntax is the study of how the brain organizes sentences from smaller phrases and words. This course explores syntactic analysis from several perspectives within generative linguistics, focusing primarily on the Government and Binding framework but also introducing Minimalist and Optimality Theoretic approaches. Topics include phrase structure, transformations, case theory, thematic roles and anaphora. Assignments help students learn to construct and
compare analyses of syntactic problems in English and other languages. Prerequisite: Ling 170D or permission of instructor. Same as L44 Ling 309
Credit 3 units. A&S: LA A&S IQ: SSC BU: HUM EN: S

L64 PNP 3111 Introduction to Semantics
Semantics is the branch of linguistics which studies how speakers assign meaning to words, sentences, and larger units of discourse. We combine perspectives from both linguistics and philosophy to explore a variety of topics including polysemy, compositionality, quantification, anaphora, definite descriptions, attitude reports, presupposition and implicature. Prerequisite: Ling 170D or Phil 301G or permission of instructor. Same as L44 Ling 311
Credit 3 units. A&S: LA A&S IQ: SSC BU: HUM EN: S

L64 PNP 313 Phonological Analysis
There are several important abilities involved in the use of human language, one of these being the ability to organize speech sounds. The system that the brain uses to accomplish this task is the subject matter of phonology. This course explores phonology from several perspectives within generative linguistics, including both traditional rule-based and current Optimality Theoretic approaches. Topics discussed include phonological features, lexical phonology, prosodic morphology, tone, and metrical stress. Assignments help students learn to analyze phonological problems in a variety of languages and to evaluate the consequences of using different analytic approaches. Prerequisite: Ling 170D or permission of instructor. Same as L44 Ling 313
Credit 3 units. A&S: LA A&S IQ: SSC BU: BA EN: S

L64 PNP 315 Philosophy of Mind
An introduction to philosophical analyses of the nature of mind, especially those developed by contemporary philosophers. The focus is on questions such as the following: What is a mind? How does it relate to a person’s brain? How does it relate to a person’s body and the external world? Can a mind exist in a very different kind of body (e.g., a computer or a robot)? Does thinking require a language-like code? If so, can nonlinguistic species think? What is it to have a mental image or to experience pain? Prerequisites: one course in philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Same as L30 Phil 315
Credit 3 units. A&S: TH A&S IQ: SSC BU: HUM BU: HUM EN: H

L64 PNP 3151 Introduction to Social Psychology
Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory, and political psychology, among other issues. Prerequisite: Psych 100B. Same as L33 Psych 315
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 316 Mind and Morals
This course explores a number of issues at the intersection of ethics and cognitive science. Possible topics include: Are we rational? Do we know our own thoughts and motivations? Can one believe that one ought to do something without being motivated to do it? Do emotions impair or enhance our ability to reason? How do moral beliefs develop through childhood? Are traits such as intelligence and character unchangeable, and what implications follow if they are (or are not)? Does retaining my identity over time require having the same mind, and, if so, am I the same person now as I was as a child? Are nonhuman animals worthy of moral consideration? If brain activity is determined by causal laws, can we have free will? Prerequisites: one course in philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Same as L30 Phil 316
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L64 PNP 3171 Introduction to Computational Linguistics
Use of computers to analyze, understand, and generate human language. Emphasis on appreciating practical applications such as text analysis, search and creation of dictionaries and corpora, information retrieval, machine translation, and speech interfaces. Survey of rule-based and statistical techniques. Students acquire programming skills appropriate for solving small- to medium-scale problems in linguistics and text processing, using a language such as Python. Students have regular programming assignments and complete a semester project. No previous knowledge of programming required. Prerequisite: L44 Ling 170D.
Same as L44 Ling 317
Credit 3 units. A&S: LA A&S IQ: SSC EN: H, S

L64 PNP 320 Historical and Comparative Linguistics
Historical linguistics focuses on how languages change over time. Comparative linguistics focuses on their similarities and differences. In this course we trace some of the differences and changes in sound (phonetics and phonology), word formation (morphology), sentence structure (syntax), and meaning (semantics). Topics include linguistic universals, the structural and genetic classification of languages, the techniques of reconstructing proto-languages, and the causes of language change. Examples from Indo-European languages (for example, Greek, English, and Spanish) and from Native American languages (for example, Quechua and Mayan) are emphasized. Prerequisite: Ling 170D.
Same as L44 Ling 320
Credit 3 units. A&S: LA A&S IQ: SSC Art: HUM BU: HUM EN: S

L64 PNP 321 Philosophy of Science
Pivotal concepts common to empirical sciences are examined and clarified. These include: explanation, confirmation, prediction, systematization, empirical significance, and the relationship of all these concepts to the structure of scientific theory. Examples may be drawn from both contemporary and historical science, including the social, biological, and physical sciences. Students with a background in science are particularly encouraged to consider this course. Priority given to majors in philosophy and PNP.
Same as L30 Phil 321G

L64 PNP 3211 Developmental Psychology
This course concentrates on the cognitive and social development of the person from conception to adolescence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior. Prerequisite: Psych 100B.
Same as L33 Psych 321
L64 PNP 3221 Music Cognition
An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.
Same as L27 Music 3221
Credit 3 units. A&S: NS A&S IQ: NSM BU: SCI

L64 PNP 323 Play and Development
Same as L12 Educ 337
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L64 PNP 330 Sensation and Perception
What's involved in seeing and hearing? This course covers perceptions from the physical stimuli (light and sound) that impinge upon the sensory receptors through the higher-level percepts that the stimuli generate. Demonstrations and illusions are used as we learn about the anatomy and physiology of the sensory systems, and study the brain mechanisms that are involved in vision and audition. Prerequisite: Psych 100B.
Same as L33 Psych 330
Credit 3 units. A&S: NS A&S IQ: NSM BU: HUM

L64 PNP 3401 Biological Psychology
An introduction to biological mechanisms underlying behavior. Topics include the physiology of nerve cells, anatomy of the nervous system, control of sensory and motor activity, arousal and sleep, motivation and higher mental processes. Prerequisite: Psych 100B.
Same as L33 Psych 3401
Credit 3 units. A&S: NS A&S IQ: NSM BU: BA, SCI

L64 PNP 3411 Principles of the Nervous System
The basic anatomical, physiological, and chemical organization of the nervous system; how nerve cells communicate with each other, the ionic basis of nerve signals, the function and properties of chemical agents in the nervous system, the development of neural circuitry, and how neurons interact to produce behavior. Prerequisite: Biol 2960, Biol 2970 recommended, Biol 3058 recommended or Psych 3401 and permission of instructor.
Same as L41 Biol 3411
Credit 3 units. A&S: NS A&S IQ: NSM BU: SCI

L64 PNP 3451 Genes, Environment and Human Behavior
This class examines how genetic influences impact various dimensions of human behavior, ranging from personality to clinical disorders. Topics covered include methods used to study genetic influence, how genetic predispositions interact with the environment, and ethical implications of genetic research in psychology. Prerequisite: Psych 100B.
Same as L33 Psych 345
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 349 Descartes to Hume
An examination of major philosophical systems and problems in modern philosophy as presented in the original writings of the 17th and 18th centuries. Topics may include rationalism and empiricism, idealism, materialism, and skepticism, with readings selected from the continental rationalists, Descartes, Spinoza, and Leibniz, and from the British empiricists, Locke, Berkeley, and Hume. Central problems include the mind-body problem, representationalism and transcendentalism. Prerequisite: one course in philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.
Same as L30 Phil 349C
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

L64 PNP 350 Physics of the Brain
Concepts and techniques of physics are applied to study the functioning of neurons and neuronal circuits in the brain. Neurons and neural systems are modeled at two levels: (i) at the physical level, in terms of the electrical and chemical signals that are generated and transmitted and (ii) at the information-processing level, in terms of the computational tasks performed. Specific topics include: neuronal electrophysiology, neural codes, neural plasticity, sensory processing, neural network architectures and learning algorithms, and neural networks as dynamical and statistical systems. Course grade is based primarily on an individualized term project. Prerequisite: Physics 117A-118A, Physics 197-198, or permission of the instructor.
Same as L31 Physics 350
Credit 3 units. A&S: NS A&S IQ: NSM BU: SCI EN: SU, TU

L64 PNP 3531 Psychology of Personality
Review of basic theoretical orientations to the understanding of personality and complex human behavior. Overview of related techniques, procedures, and findings of personality assessment and personality research. Discussion of critical issues in evaluation of personality theories. Prerequisite: Psych 100B.
Same as L33 Psych 353
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

L64 PNP 3541 Abnormal Psychology
This is an introductory course in psychopathology or the scientific study of mental health disorders. The course includes definitions, theories and classification of abnormal behavior. Content focuses on symptoms, classification, prevalence, etiology, and treatment of mental health disorders, including mood, anxiety, eating, schizophrenia spectrum, substance use and personality disorders. Prerequisite: Psych 100B.
Same as L33 Psych 354
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

L64 PNP 355 Physics of Vision
How do the eyes capture an image and convert it to neural messages that ultimately result in visual experience? This lecture and demonstration course covers the physics of how we see. The course is addressed to physics, pre-medical, and life-sciences students with an interest in biophysics. Topics include physical properties of light, evolution of the eyes, image formation in the eye, image sampling with an array of photoreceptors, transducing light into electrical signals,
on the workings of the mind and brain. This course considers
questions such as: What is art? How do pictures represent?
Does art express emotion? Why does art have a history?
Prerequisite: one 100- or 200-level course in philosophy
or permission of the instructor. Priority given to majors in
philosophy and PNP.

Same as L30 Phil 366
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L64 PNP 3661 Psychology of Creativity
Same as L12 Educ 366
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

L64 PNP 3662 Primate Biology
This course takes a multifaceted introductory approach to the
primates, the closest relatives of human beings, by investigating
anatomy, growth and development, reproduction, behavioral
adaptations, ecology, geographic distribution, taxonomy
evolution. Emphasis is placed not only on the apes
and monkeys, but also on the lesser-known lemurs, lorises, bshbabies, tarsiers and many others. The importance of
primate biology to the discipline of anthropology is discussed.
Intended for students who have already taken Anthro 150A, and
recommended for students who wish to take the more advanced
400-level courses on primates. Prerequisite: Anthro 150A or
permission of instructor.

Same as L48 Anthro 3661
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L64 PNP 3701 Introduction to Hispanic Linguistics
An introduction to the scientific study of the Spanish language,
including the sound system (phonetics and phonology), word
formation (morphology), formation of phrases and sentences
(syntax), and the use of the language to convey meaning
(grammatics). At each level of analysis, selected
comparisons are made between Spanish and English and
between Spanish and other languages. The course also
examines different historical, regional and social varieties
of Spanish and situations of Spanish in contact with other
languages.

Same as L38 Span 370
Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

L64 PNP 3700 Human Learning and Memory
A survey of issues related to the encoding, storage and retrieval
of information in humans. Topics include memory improvement
strategies, people with extraordinary memories, memory illusions
distortions, among other topics. Limited to 25 students.
Prerequisite: Psych 100B.

Same as L33 Psych 380
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

L64 PNP 390 PNP Reading Class
Each time this course is offered a book is selected that does
an exemplary job of bringing together insights and results
from multiple disciplines in targeting an important topic. We
read and discuss the book and possibly a small amount of
supplementary reading. A short presentation and paper are
required. Prerequisite: PNP major standing.

Credit 2 units. A&S: SS A&S IQ: SSC BU: HUM EN: S

L64 PNP 3661 Conceptual Foundations of Modern Science
The aim of this course is to present some of the basic concepts
underlying modern science. Insofar as many of those concepts
first appeared or became predominant in the 17th and early
18th centuries, the course concentrates on primary works from
that period. Among the concepts studied are: (1) nature and
natures: the ontology of matter and force; causal closure; (2)
modes: observing and intervening, systematic and organized;
(3) explanations: appeal to laws and mechanisms; teleology.
Prerequisite: one 100- or 200-level course in philosophy
or permission of the instructor. Priority given to majors in
philosophy and PNP.

Same as L30 Phil 358
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

L64 PNP 360 Cognitive Psychology
Introduction to the study of thought processing from an
information-processing approach. Emphasis on theoretical
models grounded in empirical support. Topics include pattern
recognition, attention, memory, reasoning, language processes,
decision-making and problem-solving. Prerequisite: Psych 100B.

Same as L33 Psyh 360
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

L64 PNP 361 Psychology of Learning
Basic learning processes in animals, such as conditioning,
reinforcement, punishment, and constraints on learning.
Comparisons and interactions between classical and operant
conditioning. Consideration given to learning theorists and
theories, along with applications from the laboratory to the "real
world." Prerequisite: Psych 100B.

Same as L33 Psyh 361
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

L64 PNP 362 The Biological Basis of Human Behavior
Infidelity, marriage customs, inner city violence, infanticide,
intelligence...Are the behavioral patterns we see genetically fixed
and racially variable? What is the evolutionary and biological
basis of human behavior? This course offers a critical evaluation
of these from an anthropological perspective.

Same as L48 Anthro 362
Credit 3 units. A&S: NS, CD, SD A&S IQ: LCD, NSM, SD Arch:
NSM Art: NSM BU: BA

L64 PNP 366 Art and the Mind-Brain
In recent years, there has been a growing interest in the bearing
of cognitive science on the perception and understanding of art.
This interest has roots in tradition: historically, art, aesthetics
evision science and philosophy have often been linked. But the growth
in cognitive science has opened up new opportunities
for understanding art and addressing philosophical questions.
The convergence is also true. The production, perception
and understanding of art are human capacities that can shed light

on the workings of the mind and brain. This course considers
questions such as: What is art? How do pictures represent?
Does art express emotion? Why does art have a history?
Prerequisite: one 100- or 200-level course in philosophy
or permission of the instructor. Priority given to majors in
philosophy and PNP.

Same as L30 Phil 366
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM
L64 PNP 396 Linguistics Seminar
Readings on a selected topic in theoretical linguistics with an emphasis on discussion, presentation and writing. Prerequisite: varies with topic.
Same as L44 Ling 396
Credit 3 units. A&S: TH A&S IQ: SSC EN: H, S

L64 PNP 402 The Physiology and Biophysics of Consciousness
This course explores the questions surrounding the search to understand the biophysical substrate of consciousness. Some areas explored: (1) Can consciousness be addressed like any other biological property in the sense that it has evolved by natural selection and that some elements of it are present in simple model systems, such as the fruit fly? Can insight be gained studying simple model systems? (2) Where in the brain is consciousness? What is the pattern of neurological events that occurs during consciousness? Is brain activity generating consciousness localized or distributed? Does it involve interacting brain regions? Does brain activity generating consciousness migrate to different brain regions? (3) How does the dynamic core hypothesis of Edelman relate to these questions? What can functional brain imaging add to these questions? Are Gamma waves involved in higher mental activity, and do they promote synchronized firing of neurons from different brain areas? How does this relate to the binding problem? (4) How does the brain's ability to function as a computer relate to consciousness? In many respects the brain functions as a computer using electrical signals called Action Potentials. Action potentials in neuronal networks function in an analogous way as DC electrical impulses function in computer circuits. What is the output of computation in an electrical device? What are the theoretical limitations regarding what computation can achieve and ask whether electrical activity in the brain also has a fundamentally different purpose in addition to computation. (5) Is our knowledge of the physical world too primitive and incomplete to understand consciousness? The brain is an electronic device and consciousness clearly depends on its electrical activity. Yet, electrical forces are poorly understood, both in the context of classical physics and quantum physics. Will understanding consciousness have to wait for a unified theory that more accurately describes electrical forces? Taught in the Medical School: McDonnell Science Building 983. Prerequisites: Biol 3411 or equivalent; college-level physics, some knowledge of computers.
Credit 2 units. A&S: NS A&S IQ: NSM

L64 PNP 4023 Models of Social Science
What distinguishes the social sciences from the natural sciences? What goals and assumptions do they share? Does studying “humans” with free will pose any problems for applying the methods of the natural sciences to the study of society? How do various social sciences — in particular anthropology, economics and political science — differ from one another? And where did the social sciences (both the disciplines and the conceptual issues) come from historically? These are the animating questions of this course. This class explores these questions in historical and contemporary perspective, as they relate to the rise of the social sciences as a set of academic disciplines. We set out the theoretical structure of the scientific method, paying particularly close attention to the relationships between theory and evidence, inference and hypotheses. Next we consider four problems and methods of the social sciences. These include questions of i) treating human beings as a rational actors; ii) attributing causal forces other than a person's own will to human behavior; iii) empirical observations and inference; and iv) the role of interpretation. In all four cases, we are interested in asking: Toward what solutions have these problems lead social scientists, and what other sets of difficulties do their solutions raise? We also pay particularly close attention to the role that concepts play in social analysis.
Same as L98 AMCS 4023
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

L64 PNP 404 Laboratory of Neurophysiology
Neurophysiology is the study of living neurons. Students record electrical activity of cells to learn principles of the nervous system including sensory transduction and coding, intercellular communication and motor control. The course meets for 9 hours each week. Students may leave the lab for up to 2 hours. Prerequisites: Biol 3411 or Psych 4411 and permission of Student Coordinator, Erin Gerrity. Biol 3411 may be taken concurrently.
Same as L41 Biol 404
Credit 4 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

L64 PNP 4041 Math Logic II
Same as L30 Phil 404
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L64 PNP 4046 Primate Ecology and Social Structure
Survey of the ecology, individual and social behavior, adaptations, and interactions of the major groups of primates. Emphasis on studies designed to examine the relationships among ecology, morphophysiology, and behavior. Methods used in collecting data on primates in the field. Prerequisite: Anthro 150A or one 100-level biology course.
Same as L48 Anthro 406
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L64 PNP 4065 Advanced Philosophy of Language
An advanced-level treatment of basic topics in the philosophy of language as this discipline is understood in the analytic tradition. The main positions and the problems they pose are surveyed; focal themes include meaning, reference and truth. The aim of the course is to help students develop effective expository techniques and to provide them with the necessary conceptual resources to analyze and criticize different theoretical views. Prerequisite: one course in philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 4065
Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM

L64 PNP 408 Psychology of Language
This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B.
Same as L33 Psych 433
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC
L64 PNP 4141 Advanced Epistemology
Competing theories of knowledge and belief justification are considered. Careful attention is given to selected problems such as skepticism, certainty, foundations, coherence, perception, induction. Prerequisite: one course in philosophy at the 300 level, graduate standing or permission of the instructor.
Same as L30 Phil 4141
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L64 PNP 4142 Advanced Metaphysics
Through readings from both classical and contemporary sources, a single traditional metaphysical concern will be made the subject of careful and detailed analytic attention. Possible topics include such concepts as substance, category, cause, identity, reality and possibility, and such positions as metaphysical realism, idealism, materialism, relativism and irrealism. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 4142
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L64 PNP 418 Current Controversies in Cognitive Science
An advanced survey of current debates in cognitive science with an emphasis on the philosophical issues raised by these debates. Topics may include: evolutionary psychology; innateness and neural plasticity; perception and action; consciousness; connectionism; robotics; embodied cognition; moral reason; emergence and artificial life; concepts and content; animal cognition. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L64 PNP 419 Philosophy of Psychology
An investigation of the philosophical presuppositions and implications of various traditions in psychology, including behaviorism, Gestalt and cognitivism, with a special emphasis on the development of the information processing approach of contemporary cognitivism. The conception of psychological phenomena, data and explanation central to each of these traditions are examined, and typical topics include the debates between propositional and imagistic models of representation, different accounts of concepts and categorization, and the relation of psychology to ethics. Prerequisite: one previous course in philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 419
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L64 PNP 4190 Primate Behavior
Same as L48 Anthro 419
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L64 PNP 4192 Primate Cognition
This course investigates historical and current views regarding the cognitive capacities of nonhuman primates, and the extent to which these abilities are shared with humans. Topics for this class include: social cognition, problem-solving, tool use, culture, communication, theory of mind, deception, self-recognition, imitation, and numerical cognition. The classes involve discussion and critical evaluation of theory and methods in this challenging and exciting area of primate cognitive research.

L64 PNP 4210 Topics in Advanced Philosophy of Science
This course varies in topics related to philosophy of science from semester to semester. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 4210
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L64 PNP 4212 Philosophy of Neuroscience
This course focuses on the historical roots of neuroscience as well as its contemporary developments. Topics include: (1) the nature of explanatory strategies in neuroscience; (2) the relation between neuroscience research and higher-level disciplines such as psychology; and (3) the epistemology of the investigatory tools of neuroscience. Prerequisites: one previous course in philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 4212
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L64 PNP 426 Theories of Concepts
Same as L30 Phil 426
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L64 PNP 4302 Cognitive Psychology Applied to Education
This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning and comprehension with special focus on areas, theory and research that have potential application to education. Thus, the course provides selective coverage of theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes is explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. Prerequisites: junior/senior status, 9 units in psychology and Psych 100B or junior/senior status, 9 units in education and Psych 100B.
Same as L33 Psych 4302
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L64 PNP 4315 Culture, Language and the Education of Black Students
Same as L12 Educ 4315
Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC EN: S

L64 PNP 4332 Cognition and Computation
This course introduces students to some of the key frameworks for thinking about the mind in computational terms. We look at some basic topics in the theory of computation, in addition to considering philosophical issues raised by computational models of cognitive processes. This course is required for graduate students in the PNP PhD program. Prerequisites: at least two 400-level PNP courses cross-listed in Philosophy.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L64 PNP 4450 Functional Neuroimaging Methods
This course is intended for students wishing to become sophisticated producers or consumers of functional
neuroimaging data. Emphasis is on extracting the most information from neuroimaging techniques toward the goal of answering psychologically motivated questions. A number of issues relating to neuroimaging methodology are covered, including technical principles, acquisition options, potential sources of artifact, experimental design, software tools, and analytical techniques. Class approach is hands-on, with students gaining experience in actually acquiring and working with neuroimaging data. Prerequisites: graduate standing or permission of instructor.

Same as L33 Psych 4450
Credit 3 units. A&S: SS & A&S IQ: SSC Art: SSC EN: S

L64 PNP 4488 The Cognitive Neuroscience of Film

To understand complex events in real life depends on perception, action and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar uses results from psychology and neuroscience to try to better understand the experience of a movie viewer, and uses theory and practice to explore psychological hypotheses about perception. Prerequisite: Psych 360 or Psych 3604, or Psych 4604, or graduate standing in psychology.

Same as L33 Psych 488
Credit 3 units. A&S: NS & A&S IQ: NSM

L64 PNP 466 Second Language Acquisition

There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first- and second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners' errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required.

Same as L44 Ling 466
Credit 3 units. A&S: LA & A&S IQ: HUM EN: H

L64 PNP 467 Grammar and Vocabulary Acquisition

This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing; explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such as a learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices.

Same as L38 Span 467
Credit 3 units. A&S: LA & A&S IQ: LCD BU: BA EN: H

L64 PNP 4691 Second Language Reading and Writing: Theory, Research and Practice

This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literacy forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in applied linguistics and an elective for the Graduate Certificate in Language Instruction.

Same as L38 Span 4691
Credit 3 units. A&S: SS & A&S IQ: SSC EN: S

L64 PNP 495 PNP Seminar

Subject varies per semester. Not always offered as writing-intensive, refer to individual semester listing. Prerequisites: a 300-level philosophy course (Phil/PNP 315 is recommended) and PNP major standing or approval of instructor.

Credit 3 units. A&S: SS & A&S IQ: SSC EN: S

L64 PNP 495W PNP Seminar: Writing Intensive

Subject varies per semester. Fulfills Writing Intensive (WI) requirement. Prerequisites: a 300-level philosophy course (Phil/PNP 315 is recommended); and PNP major standing or approval of instructor.

Credit 3 units. A&S: SS & WI & A&S IQ: SSC WI: EN: S

L64 PNP 496 PNP Seminar

Subject varies each semester. Prerequisites: a 300-level philosophy course (Phil/PNP 315 is recommended); and PNP major standing or approval of instructor.

Credit 3 units. A&S: SS & A&S IQ: SSC EN: S

L64 PNP 499 Study for Honors

Prerequisites: Visit http://pnp.artsci.wustl.edu/undergraduate/honors/prerequisites.

Credit 3 units. A&S: SS & A&S IQ: SSC EN: S

Physical Education

Undergraduate students may take both lecture-laboratory and performance courses through the Department of Athletics. A total of 12 performance units may be included in the 120 units required for graduation. All courses are offered only on a credit/no credit basis.

Contact: Paula Hardy-Mumm
Phone: 314-935-5185
Email: paulah@wustl.edu
Website: http://bearsports.wustl.edu/athletics_department/about
Faculty
Deputy Director of Athletics

Chris Peacock (http://bearssports.wustl.edu/information/directory/bios/Peacock)
MS, Sports Management, University of Massachusetts

Majors

Students may take both lecture-laboratory and performance courses through the Department of Athletics; however, there is no major in this area.

Minors

Students may take both lecture-laboratory and performance courses through the Department of Athletics; however, there is no minor in this area.

Courses

L28 P.E. 115 Topics in Physical Education: Beginning Weight Training
Beginning Weight Training. Major emphasis is on strength development.
Credit 1 unit.

L28 P.E. 120 Topics in Physical Education: Varsity Sports
Varsity Sports. Prerequisite: permission of instructor.
Credit 1 unit.

L28 P.E. 1201 Fundamentals of Rowing for Fitness
This course focuses on the effective use of Concept II Rowing as a tool to learn the rowing stroke as well as to maintain aerobic fitness and develop strength. Emphasis is placed on the correct use of technique to decrease risk of injury and on varying duration and intensity of work on the machine to develop different energy systems; and using these new skills in developing lifetime fitness. Instruction includes the use of video tape and video monitoring. Athlete shoes and clothes that are not baggy are needed to participate. There is a minimum amount of running of light low-impact aerobic activity required as a warm-up.
Credit 1 unit.

L28 P.E. 121 Topics in Physical Education: Varsity Sports
Varsity Sports. Prerequisite: permission of instructor.
Credit 1 unit.

L28 P.E. 132 Topics in Physical Education: High-Intensity Conditioning
Credit 1 unit.

L28 P.E. 135 Step Aerobics
Step Aerobics. A low-impact aerobic class in which choreography and equipment are combined to meet the needs of participants at all levels of fitness. There is a fee of $45.00 for this course.
Credit 1 unit.

L28 P.E. 136 Fitness and Conditioning
Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time.
Credit 1 unit.

L28 P.E. 137 Spinnin'
Music, stationary bicycles, and an instructor who cues students to ride through hills, valleys and other terrain, changing resistance and pace to simulate different types of riding. All levels welcome — students can tailor the ride to fit their personal fitness goals and needs. A water bottle and towel are required for this class.
Credit 1 unit.

L28 P.E. 139 Topics in Physical Education: Advanced Tennis
Advanced Tennis.
Credit 1 unit.

L28 P.E. 140 Topics in Physical Education: Beginning Tennis
Beginning Tennis.
Credit 1 unit.

L28 P.E. 143 Intermediate Tennis
Intermediate Tennis.
Credit 1 unit.

L28 P.E. 148 Topics in Physical Education: Individual Physical Education
Individual physical education. Prerequisite: medical referral.
Credit 1 unit.

L28 P.E. 212 Topics in Physical Education: Intermediate and Advanced Basketball
Intermediate and advanced basketball. Designed to develop an appreciation for basketball through team competition and activity. Individual instruction and skill development also are available.
Credit 1 unit.

L28 P.E. 214 Topics in Physical Education: Advanced Weight Training
Major emphasis on muscular strength and flexibility through free weight resistance exercise. Pre- and post-assessment of physical fitness levels may be established. Prerequisite: Beginning Weight Training.
Credit 1 unit.

L28 P.E. 215 Weight Training
Beginning weight training. Major emphasis on strength development.
Credit 1 unit.

**L28 P.E. 216 Soccer**
Designed to develop an appreciation for soccer through the development of soccer skills, concepts of group play and team competition. All students who register must check in with the departmental office during the first two weeks of the semester. Credit 1 unit.

**L28 P.E. 220 Topics in Physical Education: Varsity Sports**
Prerequisite: permission of the department.
Credit 1 unit.

**L28 P.E. 2201 Fundamentals of Rowing for Fitness**
This course focuses on the effective use of Concept II Rowing effective as a tool to learn the rowing stroke as well as to maintain aerobic fitness and develop strength. Emphasis is placed on the correct use of technique to decrease risk of injury; on varying duration and intensity of work on the machine to develop different energy systems; and on using these new skills in developing lifetime fitness. Instruction includes the use of video tape and video monitoring. Athletic shoes and clothes that are not baggy are needed to participate. There is a minimum amount of running or light low-impact aerobic activity required as a warm-up.
Credit 1 unit.

**L28 P.E. 221 Topics in Physical Education: Varsity Sports**
Prerequisite: permission of the department.
Credit 1 unit.

**L28 P.E. 223 Topics in Physical Education: High-Intensity Conditioning**
High-intensity conditioning. Varied program of high-intensity conditioning techniques designed for individual needs. Supervised areas covered are: cardiovascular and strength testing; weight training; plo-metric training; flexibility and stretching and aerobic and anerobic training.
Credit 1 unit.

**L28 P.E. 234 Topics in Physical Education: Lifeguard Training**
The course provides skill instruction and knowledge needed to prevent and respond to aquatic emergencies in a pool setting. Successful completion of requirements results in certification in American Red Cross Lifeguard Training for swimming pools, CPR and First Aid. Prerequisite: swimming test given during the first week of class.
Credit 1 unit.

**L28 P.E. 235 Topics in Physical Education: Step Aerobics**
Step Aerobics. Section 01: Step Plus: Primarily designed around step aerobics with occasional workouts using other fitness techniques such as box aerobics, interval training. Section 02: Combo Training: Combination of many fitness techniques, such as step aerobics, box aerobics, low-impact.
Credit 1 unit.

**L28 P.E. 236 Topics in Physical Education: Fitness and Conditioning**
Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time. Students required to attend an orientation session. Step Plus: primarily designed around step aerobics with occasional workouts using other fitness techniques; i.e., box aerobics, interval training. Combo Training: combination of many fitness techniques; i.e., step aerobics, box aerobics, low-impact.
Prerequisite: P.E. 208.
Credit 1 unit.

**L28 P.E. 237 Spinnin’**
Credit 1 unit.

**L28 P.E. 239 Topics in Physical Education**
Credit 1 unit.

**L28 P.E. 240 Topics in Physical Education: Intermediate Tennis**
Intermediate Tennis. Note: Eight- or nine-week course. All students who register must check in with the departmental office during the first two weeks of the semester.
Credit 1 unit.

**L28 P.E. 248 Topics in Physical Education: Individual Physical Education**
Individual physical education. Prerequisite: medical referral needed.
Credit 1 unit.

**L28 P.E. 255 Topics in Physical Education: Practicum in Sports Leadership**
Practicum in sports leadership. Participation in formal leadership tasks under the direction of the Washington University Athletic Department personnel. Selection of task and scope of work is determined before enrollment by conference with instructor.
Prerequisite: permission of the department.
Credit 1 unit.

**L28 P.E. 258 Spinnin’**
Music, stationary bicycles and an instructor who cues students to ride through hills, valleys and other terrain, changing resistance and pace to simulate different types of riding. All levels welcome — students can tailor the ride to fit their personal fitness goals and needs. A water bottle and towel are required.
Credit 1 unit.

**L28 P.E. 291 Fundamentals of Athletic Training**
Study of the duties of the athletic trainer, in relation to physical education classes, competitive sports and recreation, including study and practice of first-aid care and prevention of injuries.
Credit variable, maximum 3 units.

**Physics**

Physics is the discipline that deals with the most fundamental aspects of our universe, such as the properties of atoms, nuclei and elementary particles; the nature of the forces between them;
and the collective behavior of atoms in solids, liquids and gases. It deals with the entire universe, from its birth to its ultimate fate. At the same time, physics provides the tools that help us to understand extremely complex everyday things, like the behavior of sand piles, the strength of materials, or processes in the brain. Physics seeks to discover and understand the mathematical rules that govern the behavior of things. Its early successes in comprehending motion, thermodynamics, electricity and magnetism provided a foundation upon which other physical sciences have grown.

For students planning a career in science and technology or planning to pursue graduate studies in physics, astronomy, earth sciences, environmental sciences, medical physics, meteorology or oceanography, a major in physics provides a solid foundation. The program is sufficiently flexible to allow students to combine a physics major with a second major in chemistry, mathematics or engineering, or with pre-medical studies, or with other disciplines in the humanities and social sciences. In addition to the fundamentals of physics, the program is designed to give students a broad range of skills in laboratory techniques, critical thinking, computer use and teamwork, which will serve them well in their chosen careers. In consultation with a faculty adviser, students may design a program of study to meet individual goals and interests. Physics majors are strongly encouraged to participate in physics research projects directed by faculty members.

**Introductory Physics:** Physics 197–Physics 198 is a calculus-based introduction to physics intended for adequately prepared students interested in majoring in science or engineering or undertaking pre-medical studies. Physics 197 and 198 are more interactive, active-learning courses than traditional general physics courses. Calculus II (Math 132) is a corequisite for Physics 197. An alternative and more traditional calculus-based sequence, Physics 117A–Physics 118A, also may be taken by students with these interests. For Physics 117A, Calculus I (Math 131) is a corequisite. Physics 117A also fulfills the requirements of the College of Architecture.

The department offers several other courses of general interest to the nonscience student. In most cases, these have no prerequisite.

Majors

The Major in Physics

Total units required: 42-49

Prerequisites: As prerequisites for the major, students should complete Physics I and II (Physics 197 and Physics 198) or General Physics I and II (Physics 117A and Physics 118A) during the first year. Majors should consider taking Physics 217, Physics 316 or Physics 321, Physics 318, and Physics 411 in the second year.

Required Physics courses: Students are required to complete a minimum program of 21 units of advanced courses (300-level or higher) in Physics. These 21 units must include:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 322</td>
<td>Physical Measurement Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 411</td>
<td>Mechanics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 421</td>
<td>Electricity and Magnetism</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>One additional upper-level laboratory course. Choose from:</td>
<td></td>
</tr>
<tr>
<td>Physics 316</td>
<td>Optics and Wave Physics Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 321</td>
<td>Electronics Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 360</td>
<td>Biophysics Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 435</td>
<td>Nuclear and Radiochemistry Lab</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>Students not taking Physics 217 must take either Physics 318 Introduction to Quantum Physics II or Physics 471 Quantum Mechanics.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>The remaining physics courses must be at the 300 level or above, excluding Physics 341, Physics 342, Physics 441, Physics 442, Physics 499 and Physics 500.</td>
<td></td>
</tr>
</tbody>
</table>

Recommended Physics courses: In addition to the above requirements, students who are preparing for graduate study in physics or astronomy should consider taking:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 422</td>
<td>Electricity and Magnetism II</td>
<td>3</td>
</tr>
<tr>
<td>Physics 463</td>
<td>Statistical Mechanics and Thermodynamics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 471</td>
<td>Quantum Mechanics</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>As well as some of:</td>
<td></td>
</tr>
<tr>
<td>Physics 472</td>
<td>Solid State Physics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 474</td>
<td>Introduction to Particle Physics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 476</td>
<td>Astrophysics</td>
<td>3</td>
</tr>
</tbody>
</table>

and additional lab courses

Students also should consider taking Physics 501/Math 501–Physics 502/Math 502 and additional mathematics courses.

Students who are preparing for employment after the AB degree should take additional laboratory courses from the following choices:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 316</td>
<td>Optics and Wave Physics Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 321</td>
<td>Electronics Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 322</td>
<td>Physical Measurement Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 360</td>
<td>Biophysics Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 435</td>
<td>Nuclear and Radiochemistry Lab</td>
<td>3</td>
</tr>
</tbody>
</table>

Other relevant courses may include:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 314</td>
<td>Physics of the Heart</td>
<td>3</td>
</tr>
<tr>
<td>Physics 350</td>
<td>Physics of the Brain</td>
<td>3</td>
</tr>
<tr>
<td>Physics 351</td>
<td>Introduction to Biomedical Physics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 352</td>
<td>Physics of Biomolecules</td>
<td>3</td>
</tr>
<tr>
<td>Physics 355</td>
<td>Physics of Vision</td>
<td>3</td>
</tr>
</tbody>
</table>
Physics 422  Electricity and Magnetism II  3  
Physics 463  Statistical Mechanics and Thermodynamics  3  
Physics 471  Quantum Mechanics  3  
Physics 472  Solid State Physics  3  

Students also might consider:  
Chem 435  Nuclear and Radiochemistry Lab  3  
Chem 436  Radioactivity and Its Applications  3  

Students who are preparing for medical school should give special consideration to:  
Physics 314  Physics of the Heart  3  
Physics 316  Optics and Wave Physics Laboratory  3  
Physics 321  Electronics Laboratory  3  
Physics 344  Energy and Environmental Physics  3  
or Physics 444  Energy and Environmental Physics  3  
Physics 350  Physics of the Brain  3  
Physics 351  Introduction to Biomedical Physics  3  
Physics 352  Physics of Biomolecules  3  
Physics 355  Physics of Vision  3  
Physics 360  Biophysics Laboratory  3  

**Math courses required for the physics major:**  
| Math 131 | Calculus I | 3 |  
| Math 132 | Calculus II | 3 |  
| Math 233 | Calculus III | 3 |  
| Math 217 | Differential Equations (We recommend that Math 217 precede Physics 411) | 3 |  
| Total units | | 12 |  

**Math courses recommended for the physics major:**  
- Math 308 Mathematics for the Physical Sciences or ESE 318 Engineering Mathematics A (We recommend that this course precede Physics 421.)  
- Math 309 Matrix Algebra (We recommend that Math 309 precede Physics 471.)  
- Physics 501/Math 501 and Physics 502/Math 502 also are recommended.  

**Science-breadth requirement:** Majors must select three of the following courses to satisfy the science-breadth requirement. One of the three courses must be Chem 111A, Chem 112A, Chem 401 or Chem 402.  

| Chemistry  | Units  |  
|---|---|---|  
| Chem 111A | General Chemistry I | 3 |  
| Chem 112A | General Chemistry II | 3 |  
| Chem 151 | General Chemistry Laboratory I | 2 |  
| Chem 152 | General Chemistry Laboratory II | 2 |  
| Chem 401 | Physical Chemistry I | 3 |  
| Chem 402 | Physical Chemistry II | 3 |  
| Chem 445 | Instrumental Methods: Physical Chemistry | 3 |  
| CSE 131 | Computer Science I | 3 |  
| CSE 132 | Computer Science II | 3 |  

**Additional Information**  

**Senior Honors:** Students are encouraged to work toward Latin Honors (cum laude, magna cum laude, summa cum laude). To qualify, students must meet the academic requirements of the college and successfully complete a suitable project under the supervision of a faculty member in the department. The project, whether experimental or theoretical, should demonstrate the student's capacity for independent work. Honors candidates must apply to the Undergraduate Studies Committee no later than the first day of classes senior year. The application should include a description of the proposed project, co-signed by the supervising professor. A written report of the completed work must be submitted to the committee by a deadline in March. By enrolling in Physics 499, students may earn up to 6 units of credit for the honors project.  

The physics department also offers physics majors the possibility to earn departmental distinctions. These distinctions require the same GPA cutoff as Latin Honors (p. 789) but are calculated exclusively from the grades in physics courses (all courses with the prefix L31). Three levels of distinction are offered: (1) highest distinction, (2) high distinction, and (3) distinction. The highest and high distinctions require at least one semester of undergraduate research and a senior thesis describing the results, and are limited to the top 15 percent (highest distinction) and top 15-50 percent (high distinction) of the physics majors in their senior year ranked by their GPA in the physics courses. Students meeting the GPA cutoff but not undertaking undergraduate research and a senior thesis may only receive the third level of distinction.  

**Minors**  

**The Minor in Physics**  

**Units required:** 17  

**Required courses:**  

| Physics 117A | General Physics I | 4 |  
| Physics 197 | Physics I |  
| Physics 118A | General Physics II | 4 |  
| Physics 198 | Physics II |  
| Physics 217 | Introduction to Quantum Physics | 3 |  
| Physics 318 | Introduction to Quantum Physics II | 3 |  
| Total units | | 14 |  

**Elective courses:**  

At least one course at the 300 level or above (with the exception of Physics 303, Physics 304, Physics 341, Physics 342, Physics
441, Physics 442, Physics 499 and Physics 500) with a grade of C– or better.

**Additional Information**

Corequisite for taking Physics 117A General Physics I is enrollment in or placement out of Math 131 Calculus I. Math 132 Calculus II is a corequisite for Physics 197 Physics I. Calculus II also is necessary to provide adequate preparation for Physics 217/318 Quantum Physics I, II. Note that for some advanced courses, Math 233 Calculus III and Math 217 Differential Equations are prerequisites.

**Additional Information**

This is a minor for students interested in the discussion and application of methods and techniques from physics to topics in the area of biology and medicine. The program may be of interest to the pre-medicine student or the research-oriented science major. New courses are being developed that also will satisfy these requirements.

**Courses**

**L31 Physics 101A Basic Physical Science**

An introduction to the concepts and modes of thought involved in understanding the physical world. The focus is not only on everyday phenomena (e.g., falling objects, skidding cars, the tides) but also on questions of cosmic significance (e.g., relativity, the Big Bang, black holes, the origin of the elements). Verbal reasoning is emphasized. No prerequisites.

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN BU: SCI

**L31 Physics 107A How Things Work**

Why is the sky blue? How can a baseball curve? Natural and manmade phenomena can be understood by simple and basic ideas of physics. This course illustrates these underlying principles by using examples from everyday life as well as from physics and other fields. Because the phenomena are many and the principles are few we find that apparently very different events sometimes have similar explanations; we come to understand how the stretching of a rubber band is related to ice skating, and how the blue of the sky is related to the red of the sunset and the white color of milk. No prerequisites.

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

**L31 Physics 110A Awesome Ideas in Physics**

The ideas of physics that have revolutionized our perception of the world and reality. Emphasis is on understanding a selected set of crucial concepts without losing track of the numbers. Using the writings of Hawking, Feynman and Lightman, a study is made of such topics as energy and conservation laws, the relativity of time, the wave-particle duality, the modern picture of matter at the smallest and the largest distance scales, and the history of the universe. Must be taken for a letter grade. No prerequisites.

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI
L31 Physics 111 Variational Calculus — A Mathematical Blade for Cutting-Edge Science
Variational calculus, a fancy generalization of ordinary calculus, is the study of functionals. In variational calculus one tries to find the special function that extremizes a functional. The applications of variational calculus are ubiquitous in modern science. Variational calculus is the mathematical setting for describing the physical world. In all areas of classical and quantum physics, the physical world is expressed in terms of functions that extremize specific functionals. In this seminar variational calculus is explained at an elementary level and many of its applications in science are examined. A good understanding of elementary first-year calculus is required to take this seminar.
Credit 3 units. A&S: NS, QA

L31 Physics 117A General Physics I
Calculus-based introduction to the concepts, laws and structure of physics. Topics include kinematics, Newton's laws, energy, linear momentum, angular momentum, the conservation laws, gravitational force, harmonic motion, wave motion and interference, sound and special relativity. Prerequisite: previous or concurrent enrollment in Math 131 Calculus I or permission of instructor. Concurrent registration in a Physics 117 lab section is required. Credit may not be obtained for both Physics 117A and Physics 197.
Credit 4 units. A&S: NS, QA A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

L31 Physics 118A General Physics II
Continuation of Physics 117. Calculus-based introduction to concepts, laws and structure of physics. Topics include electromagnetic forces and fields, direct current circuits, capacitance and inductance, electromagnetic radiation, light, geometrical and physical optics, interference and diffraction, early quantum theory, and nuclear physics. Prerequisite: Physics 117A, Physics 197 or permission of instructor. Concurrent registration in a Physics 118 lab section is required. Previous or concurrent enrollment in Calculus II Math 132 is recommended. Credit may not be obtained for both Physics 118 and Physics 198.
Credit 4 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

L31 Physics 125A Solar System Astronomy
Designed for the nonscience major, this course deals with the planets, their moons and rings, comets, meteors and interplanetary dust particles. In order to understand both classical astronomy and the results obtained from modern telescopes and the space program, basic scientific ideas (including optics and the laws of motion) are reviewed first. There also is some discussion of astronomical history to show how we have arrived at our present ideas of the structure and evolution of the solar system. Prerequisites: high school algebra and trigonometry or concurrent enrollment in Math 131.
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

L31 Physics 126A Stars, Galaxies and Cosmology
Intended as a general survey for the nonscience major. Topics include the structure and evolution of stars, such as red giants, white dwarfs, neutron stars, pulsars and black holes; galaxies and quasars; cosmology and the Big Bang theory. Prerequisites: high school algebra and trigonometry, or concurrent enrollment in Math 131.
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

L31 Physics 141 Selected Topics in Physics I
Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.
Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L31 Physics 142 Selected Topics in Physics II
Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.
Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L31 Physics 171A Physics and Society
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

L31 Physics 197 Physics I
An advanced, calculus-based introduction to central concepts in modern physics for students who desire to major in physics or another physical science, or who have a special interest in physics. The course is structured around three themes that are treated in depth: conservation laws, Newtonian physics, and special relativity. A daily regimen of homework and reading as well as active class participation are integral parts of the course.
Corequisite: Calculus II (Math 132). Concurrent registration in a Physics 197 lab section is required. Credit may not be obtained for both Physics 117 and Physics 197.
Credit 4 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

L31 Physics 198 Physics II
Continuation of Physics 197. An advanced, calculus-based introduction to central concepts in physics for students who desire to major in physics or another physical science, or who have a special interest in physics. The course is structured around three themes that are treated in depth: electricity and magnetism, quantum physics, and statistical and thermal physics. A daily regimen of homework and reading as well
as active class participation are integral parts of the course. Prerequisites: Physics 117A and Calculus II. Students who have not taken Physics 117 may not register for Physics 198. Concurrent registration in a Physics 198 lab section is required. Credit may not be obtained for both Physics 118 and Physics 198.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM, AN BU: SCI

L31 Physics 216 Introduction to Relativity: The Special Theory
Introduction to the special and general theories of relativity. Einstein's postulates of the principle of relativity and the constancy of the speed of light. Simple kinematics and dynamics: simultaneity, time dilation, space-time diagrams, twin and other "paradoxes," E=mc^2, laws of motion. Elements of general relativity; curved spacetime, experimental tests, black holes, gravitational waves. Prerequisite: Physics 117A, Physics 197 or permission of the instructor.

Credit 1 unit. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L31 Physics 217 Introduction to Quantum Physics
Theoretical and experimental basis for quantum mechanics, following the historical development of 20th-century physics. Failure of classical physics; the Bohr theory of the atom; the Heisenberg uncertainty principle; the Schroedinger equation; atomic and molecular structure. Prerequisites: Physics 117A and 118A or Physics 197 and 198.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM BU: SCI

L31 Physics 219 Energy and the Environment
Examination of the topic of energy from many human-relevant perspectives. Humans use an enormous amount of energy, at the rate of 18 terawatts. Where does this energy come from? How long will it last? What are the consequences? Examination of energy resources and consumption from scientific, social, economic and political viewpoints. Relationship of energy to concepts such as heat, work and power. Energy use by society. Energy sources, pros and cons of use, availability now and in the future, Types, abundance, advantages, challenges of renewable energy sources. Prerequisite: one year of high-school physics or chemistry.

Same as L19 EPSc 219

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L31 Physics 241 Select Topics in Physics II
Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Prerequisites: Physics 117A–Physics 118A or Physics 197–Physics 198. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: IS

L31 Physics 312 Introduction to Astrophysics
This course covers the physics needed for higher-level astrophysics courses, and is a requirement for those courses. Furthermore, it gives a first introduction to several topics in modern astrophysics, including stars (stellar structure and evolution), compact objects (neutron stars and black holes), galaxies (galactic structure), and cosmology. The course should be taken by everybody interested in astrophysics. Prerequisite: Physics 117A and 118A; or Physics 197 and 198; or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L31 Physics 314 Physics of the Heart
A lecture and demonstration course that may be of particular interest to premedical and life-science students. Basic physics of the human cardiovascular system. Elasticity of vessels: properties of elastin and collagen. Energetics of the circulation: arterial and venous blood pressure, total fluid energy, gravitational potential energy, kinetic energy. Streamline flow and turbulence: effects of stenosis. Static and dynamic energy consumption of the heart: cardiac efficiency, the tension-time integral, Laplace's law, Starling's law. Metabolism of cardiac muscle. Electrophysiology: the heartbeat and cardiac arrhythmias. The physics of phonocardiograms, echocardiograms and other non-invasive techniques for physical assessment of cardiac abnormalities, including ischemia and myocardial infarction. Models of mechanical properties: contractile element, series elastic and parallel elastic elements. Corequisite: Physics 118A, Physics 198 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM BU: SCI EN: SU, TU

L31 Physics 316 Optics and Wave Physics Laboratory
Introduction to optics and to treatment of experimental data. Experiments and lectures on refraction, interference, diffraction, polarization and coherence properties of waves with emphasis on light. Data analysis using statistical methods. Prerequisites: Physics 117A–Physics 118A or Physics 197–Physics 198.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI EN: SU, TU

L31 Physics 318 Introduction to Quantum Physics II
Application of elementary quantum principles to atomic and molecular physics, solid-state physics, and nuclear and particle physics. Prerequisite: Physics 217.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM BU: SCI

L31 Physics 321 Electronics Laboratory
Elements of linear and nonlinear circuits, amplifiers, feedback, with applications in experimental physics. Prerequisite: Physics 118A, Physics 198 or permission of instructor. Two three-hour laboratories and two one-hour lectures a week.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM BU: SCI EN: DU, SU, TU
L31 Physics 322 Physical Measurement Laboratory
A variety of classical and modern experiments in physics, including five experiments in nuclear radiation. Use of computers in experiment control, data acquisition, and data analysis. Development of skills in writing lab notebooks and formal reports and giving short oral presentations on experiments. Two laboratory periods each week. Prerequisites: Physics 217 or permission of instructor; junior- or senior-level standing. Credit 3 units. A&S: NS, WI A&S IQ: NSM, AN, WI Art: NSM BU: SCI EN: TU

L31 Physics 341 Selected Topics in Physics III
Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair. Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L31 Physics 342 Selected Topics in Physics III
Topics of special interest (e.g., holography, relativity, nuclear power, computer application in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair. Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L31 Physics 344 Energy and Environmental Physics
This intermediate-level course applies basic physics principles to this increasingly important area. It is designed for all science and engineering majors with an interest in energy and environmental issues. Topics covered include population trends, fossil fuel use, renewable energy sources, energy storage strategies and climate change. Particular emphasis is given to the use of the fundamental laws of physics, such as energy conservation, as well as more general concepts such as local and global stability, chaotic behavior, probability and risk. The aim of the course is the development of analytical skills and familiarity with important concepts, in order to enable an independent and informed view of environmental problems and possible solutions. A one-year introductory physics class on the level of Physics 117–118 or 197–198 is required. This course also may be taken as Physics 444, which requires an additional independent project. Credit 3 units. A&S: NS A&S IQ: NSM, AN BU: SCI

L31 Physics 350 Physics of the Brain
Concepts and techniques of physics are applied to study the functioning of neurons and neuronal circuits in the brain. Neurons and neural systems are modeled at two levels: (1) at the physical level, in terms of the electrical and chemical signals that are generated and transmitted, and (2) at the information-processing level, in terms of the computational tasks performed. Specific topics include: neuronal electrophysiology, neural codes, neural plasticity, sensory processing, neural network architectures and learning algorithms, and neural networks as dynamical and statistical systems. Course grade is based primarily on an individualized term project. Prerequisites: Physics 117A–118A, Physics 197–198, or permission of the instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI EN: SU, TU

L31 Physics 351 Introduction to Biomedical Physics
Principles and application of key physical methods used in the diagnosis and treatment of diseases, and in biomedical research. Topics include interaction of radiation with living systems; fundamentals of optical and electron microscopy; imaging via X-rays, magnetic resonance and ultrasound; and electrical properties of organs and cells. Prerequisite: Physics 117A–118A or Physics 197–198. Credit 3 units. A&S: NS Art: NSM BU: SCI EN: TU

L31 Physics 352 Physics of Biomolecules
This course emphasizes the application of physical laws and concepts in understanding biomolecules and their interactions, and in developing tools to investigate their biological properties and functionalities. Topics include (1) a general introduction to biomolecules and cells, (2) physics of biopolymers as modeled by stochastic analyses, (3) transport processes in biological systems including diffusion, reaction kinetics and "life at low Reynolds number," and (4) the physics of fluorescence and its contemporary applications to dynamics of biomolecules, such as optical tweezers. Prerequisite: Physics 117–118 or Physics 197–198. Some familiarity with thermodynamics; Chem 111A–112A recommended. Credit 3 units. A&S: NS A&S IQ: NSM, AN

L31 Physics 355 Physics of Vision
How do the eyes capture an image and convert it to neural messages that ultimately result in visual experience? This lecture and demonstration course covers the physics of how we see. The course is addressed to physics, premedical and life-sciences students with an interest in biophysics. Topics include physical properties of light, evolution of the eyes, image formation in the eye, image sampling with an array of photoreceptors, transducing light into electrical signals, color coding, retinal organization, computing with nerve cells, compressing the 3-D world into optic nerve signals, inferring the 3-D world from optic nerve signals, biomechanics of eye movement, engineered vision in machines. The functional impact of biophysical mechanisms for visual experience is illustrated with psychophysical demonstrations. Corequisite: Physics 117A, Physics 197 or permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI EN: SU, TU

L31 Physics 360 Biophysics Laboratory
This laboratory course consists of "table-top" experiments in biological physics that are designed to introduce the student to concepts, methods and biological model systems in biophysics. Most experiments combine experimentation with computer simulations. The list of available experiments includes electrophysiology, human bioelectricity, optical tweezers, ultrasonic imaging, mass spectrometer and viscosity measurements. Prerequisites: prior completion of Physics 117A–118A, Physics 197–198 or permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM
L31 Physics 400 Physical Science in 12 Problems
Exercises related to general chemistry, classical mechanics, quantum mechanics, statistical mechanics, thermodynamics and kinetics, are solved with numerical software. Each exercise is accompanied by a lecture, a software template solving a problem and a related take-home problem. The software allows us to focus on, and treat in a transparent fashion, physical problems without the unwieldy idealizations and contrivances found in textbooks. Prerequisites: General Chem, concurrent enrollment with Chem 401 and prior or concurrent enrollment in General Physics.
Credit 1 unit. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L31 Physics 411 Mechanics
Motion of a point particle, rotational motion, oscillation, gravitation and central forces, Lagrangian and Hamiltonian formulation. Prerequisites: Physics 117A–118A or Physics 197–198, Math 217 or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L31 Physics 421 Electricity and Magnetism
Starting from Coulomb’s law, the Biot-Savart law and Faraday’s law, the electrical and magnetic fields are defined and applied. Maxwell’s equations are derived and their consequences, such as electromagnetic waves and relativity, are explored. Prerequisites: Physics 117A–118A or Physics 197–198, Math 217 or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM BU: DU, SU, TU

L31 Physics 422 Electricity and Magnetism II
The second course in a two-part series covering the classical theory of electricity and magnetism leading to the derivation and application of Maxwell’s equation. Topics in electrodynamics including Faraday’s law, the displacement current and Maxwell’s equations in vacuum and in matter are covered. Electromagnetic waves and radiation, special relativity and relativistic electrodynamics also are discussed. Prerequisite: Physics 421 or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM BU: DU, SU, TU

L31 Physics 427 Introduction to Computational Physics
Lectures and hands-on experience in computational physics combining topics in numerical analysis, algorithms, statistics, visualization and computer algebra with projects in contemporary areas of physics. Prerequisites: Physics 217 or equivalent and familiarity with a programming language.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L31 Physics 435 Nuclear and Radiochemistry Lab
Application of radiochemical techniques to problems in chemistry, physics, and nuclear medicine. Prerequisites: 3 units of physical chemistry and permission of instructor. One lecture hour and five hours of laboratory a week.
Same as L07 Chem 435
Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 436 Introduction to the Atomic Nucleus
Introduction to the production and decay of radioactive nuclides, the structure and properties of nuclei, and the applications of nuclear and radiochemical techniques to current scientific problems. Prerequisites: one year each of chemistry, mathematics and physics.
Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 441 Selected Topics in Physics IV
Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor’s consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.
Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L31 Physics 442 Selected Topics in Physics IV
Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor’s consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.
Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM

L31 Physics 444 Energy and Environmental Physics
This intermediate-level course applies basic physics principles to this increasingly important area. It is designed for all science and engineering majors with an interest in energy and environmental issues. Topics covered include population trends, fossil fuel use, renewable energy sources, energy storage strategies and climate change. Particular emphasis is given to the use of the fundamental laws of physics, such as energy conservation, as well as more general concepts such as local and global stability, chaotic behavior, probability and risk. The aim of the course is the development of analytical skills and familiarity with important concepts, in order to enable an independent and informed view of environmental problems and possible solutions. A one-year introductory physics class on the level of Physics 117-118 or Physics 197-198 is required. This course may also be taken as Physics 344. Physics 444 requires an additional independent project.
Same as L31 Physics 344
Credit 3 units. A&S: NS A&S IQ: NSM, AN BU: SCI

L31 Physics 446 Galactic Astrophysics
This course discusses the motion of stars, gas, and dark matter in galaxies with the aim to gain a deep understanding of the morphologies and the kinematics of galaxies and galaxy clusters. The lectures focus on the dynamics and statistical mechanics of a collection of stars — treated as a collisionless system. The course begins with a discussion of potential theory and proceeds to discuss the density and phase distributions of stars in star clusters and galaxies, thus leading to an understanding of the equilibria and stability of these systems.
Topics such as Chandrasekhar’s dynamical friction, cosmology, the growth of density perturbations, galaxy formation, and dark matter constitute the final topics of discussion. This course is available for advanced undergraduates. Prerequisites: Physics 312, 411, and 463, or permission by the instructor, and graduate students.

Same as L31 Physics 546
Credit 3 units.

L31 Physics 450 Physics of the Brain
Contents are the same as Physics 350. Also intended for graduate students. Includes a more sophisticated term project than Physics 350. Prerequisites: Physics 117A–118A or Physics 197–198, or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI EN: SU, TU

L31 Physics 455 Physics of Vision
Contents are the same as Physics 355. Also intended for graduate students. Includes a more sophisticated term project than Physics 355. Corequisite: Physics 117A , Physics 197 or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L31 Physics 456 Stellar Astrophysics
The course Stellar Astrophysics discusses the physical processes that play a role inside stars. Relevant physical processes include emissions and absorption processes, radiation transfer, convective transfer, the weak and strong interactions, nuclear processes and nuclear burning, and the thermodynamics of equilibrium and non-equilibrium processes in stellar interiors. Subsequently, these processes are used to explain the structure and evolution of stars of different mass ranges. Finally, the course discusses endpoints of stellar evolution including white dwarfs, neutron stars, black holes, supernova explosions and gamma-ray burst. Prerequisites: Physics 312, Physics 318, or permission of instructor.
Same as L31 Physics 556
Credit 3 units.

L31 Physics 460 X-Ray & Gamma-Ray Astrophysics
Observers started to use X-ray and gamma-rays in the ’60s and ’70s to explore the cosmos with high-energy photons. The sky looks dramatically different at these energies with bright flares from mass accreting black holes and gamma-ray bursts and large diffuse emission from supernova remnants and cosmic rays interacting with galactic matter and magnetic fields dominating the emission. This course gives a comprehensive overview of the underlying physics and observable phenomenology. Topics covered include the history of X-ray and gamma-ray astronomy, high-energy radiation processes, particle heating and acceleration, accretion physics, blast waves and shocks, black holes, neutron stars, supernova remnants, gamma-ray bursts, and galaxy clusters. Prerequisite: L31 Physics 312.
Credit 3 units. A&S: NS A&S IQ: NSM

L31 Physics 463 Statistical Mechanics and Thermodynamics
Basic methods of classical and quantum statistical mechanics, thermodynamics and transport theory. Prerequisite: Physics 217 or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM

L31 Physics 471 Quantum Mechanics
Origins of quantum theory, wave packets and uncertainty relations, Schrödinger’s equation in one dimension; step potentials and harmonic oscillators; eigenfunctions and eigenvalues; Schrödinger’s equation in three dimensions; the hydrogen atom; symmetry; spin and the periodic table; approximation methods for time independent problems; quantum statistics. Prerequisite: Math 217, Physics 217, Physics 421 or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM EN: SU, TU

L31 Physics 472 Solid State Physics
Crystal structures, binding energies, thermal properties, dielectrics, magnetism, free electron theory of metals, band theory, semiconductors, defects in solids. Prerequisite: Physics 471.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L31 Physics 474 Introduction to Particle Physics
Introduction to the standard model of particle physics, including symmetries, conservation laws, the weak interaction, the strong interaction, quark confinement and some more exotic ideas such as grand unified theories. Prerequisite: Physics 471.
Credit 3 units. A&S: NS A&S IQ: NSM AN Art: NSM

L31 Physics 476 Astrophysics
This Astrophysics course focuses on cosmic rays. Victor Hess discovered in 1912 that ionizing radiation impinging on the top of Earth’s atmosphere. Even though physicists have been studying cosmic rays (the ionizing radiation) for more than 100 years now with a fantastic repertoire of experimental and theoretical tools, cosmic rays never stop to surprise us, and cosmic ray physicists are still pushing the frontier of cosmic exploration in many ways. This course gives an introduction into this exciting topic covering historical and recent cosmic ray measurements at all energies, particle and antiparticle observations, and neutrino observations. The presently favored models of cosmic ray acceleration and transport are discussed in detail, and some topics of current interest are highlighted (including the production of particles and antiparticles by dark matter). The course also covers radio astronomy and highlights the clues about the origin of the cosmic rays that can be obtained from radio observations. Prerequisite: Physics 312 or permission of instructor.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L31 Physics 477 Physics of Finite and Infinite Nuclear Systems
Credit 3 units. A&S: NS A&S IQ: NSM
L31 Physics 478 From Black Holes to the Big Bang
An introduction to general relativity. The goal is to illustrate important features of general relativity without the full-blown mathematics of Einstein's equations by restricting attention to spherically symmetric spacetimes. Topics include: principle of equivalence; curved spacetime; spherical stars and black holes; the Big Bang model, observational cosmology. Prerequisite: Physics 411 or permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L31 Physics 482 Research Seminar
Designed to introduce students to current developments in physics and to research carried out by faculty. Topics vary each year. Each member of the department addresses their particular specialty. Interested undergraduates may take this seminar in their junior or senior year. Must be taken pass/fail. Credit 1 unit. A&S: NS A&S IQ: NSM Art: NSM

L31 Physics 499 Honors Program
Prerequisites: junior standing, an average grade of B or better, and permission of the chair of the department. Program and credit to be determined; maximum 6 units. A&S: NS Art: NSM

Political Science
The Department of Political Science offers undergraduates the opportunity to study all aspects of politics using cutting-edge technical and theoretical tools. Our courses are animated by longstanding problems related to the use of power, its rightful exercise by governments and individual actors, and the institutions that affect how that power is exercised. Reflecting the breadth of the discipline, we offer a range of classes, including courses on elections and electoral politics; international political economy; justice and the state; and comparative analyses of political institutions across states.

A major in political science thus exposes students to the primary themes of the discipline: American politics, comparative politics, international politics, judicial politics, political methodology and political theory. A major in political science can prepare students well for professional training and advanced study in law, business, education, journalism, policy analysis, political science, public administration, social work and urban planning. Political science graduates enter careers in business; federal, state and local government; the media; and nonprofit organizations.

Because political science is a broad discipline, students often choose to combine the major with such related fields as African and African-American studies; American culture studies; anthropology; economics; environmental policy; history; international studies; Jewish, Islamic and Near Eastern studies; Latin American studies; philosophy; psychology; and women, gender and sexuality studies.

Majors

The Major in Political Science

Total units: Students who major in political science are required to complete 30 graded units (10 classes) in political science with a C or better, distributed as follows:

Required courses:

- Substantive Introductory Courses: 6 graded units must come from any two introductory classes. (Note: If student scored a 4 or 5 in AP credit, he or she may place out of the associated introductory course and replace it with an upper-level course in a related subfield.)

- Methodology Course: 3 graded units must come from Pol Sci 363 Quantitative Political Methodology. All majors are urged to take this course in the fall of their sophomore year. (Note: Some statistics courses offered in other departments will allow students to opt out of this class, but those credits will not count toward their political science major. These courses include U25 PolSci 323 Introduction to Quantitative Methods [subject to the limit of 6 “outside” credit units], QBA 121 Managerial Statistics II, Math 3200 Elementary to Intermediate Statistics and Data Analysis, and ESE 326 Probability and Statistics for Engineering.)

Elective courses:

- Distribution Requirement: 18 graded units must come from any six 300- or 400-level classes. Of these 18 units, students must complete at least one 3-unit course in three of the following five fields: American politics, comparative politics, international politics, political methodology, or political theory. (Note: Pol Sci 363 does not count toward this upper-level distribution requirement.)

- Other courses: A student’s remaining graded units may be earned by any political science course or independent study. However, credits given for writing a senior thesis (detailed in Senior Thesis section below) do not count toward the major.

Limitations

No more than 6 units from the following may count toward the major: study abroad, summer school, Pol Sci 419 Teaching Practicum in Political Science, transfer credit, and University College.

No more than 6 units from the following may count toward the major: Pol Sci 413 Directed Research, Pol Sci 412 Directed Readings, and independent study.

Additional Information

Concentrations: Political science majors may concentrate in a subfield of political science by taking (as part of their distribution requirement) three upper-level courses in any one of the five subfields (American politics, comparative politics, international politics, political methodology, or political theory) and submitting a subfield concentration form. Students may earn concentrations in up to two subfields. The successful completion of a subfield concentration will be listed on a student’s transcript.

Senior Thesis/Capstone Option: The department encourages serious students to pursue independent research by working toward a senior thesis. Students admitted to this program work closely with a faculty adviser for a full calendar year, beginning at the end of their junior year. Students writing a senior thesis

669
receive 6 units of college credit for two semesters of work by enrolling in Pol Sci 415 Senior Thesis Research; however, this credit does not count toward the completion of the political science major. Although there is no GPA requirement for writing a senior thesis, an application is required. For more information, contact the department office. All majors may apply.

To qualify to write a senior thesis, students must:

• Complete Pol Sci 363 Quantitative Political Methodology or its equivalent by the fall of their junior year (all majors are strongly urged to take this in the fall of their sophomore year);
• Complete Pol Sci 495 Research Design and Methods in the spring semester of their junior year;
• Complete a second methods course appropriate for their thesis by the start of their senior year. (A complete list of courses can be found on our website our website (http:// polisci.wustl.edu); Pol Sci 495 does not count toward this requirement);
• Complete a subfield concentration (detailed in Concentrations section above) by the end of the fall of their senior year in the subfield appropriate for their senior thesis. At least two-thirds of the concentration must be completed by the end of their junior year;
• Apply during their junior year for admission into the program;
• Students planning to study abroad and write a senior thesis should take Pol Sci 363 Quantitative Political Methodology in the fall of their sophomore year and should go abroad during the fall of their junior year. Students who wish to study abroad in the spring of their junior year and write a thesis senior year, must meet with the Director of Undergraduate Study before the start of their junior year.

Senior Honors: To graduate with Latin Honors, students must successfully complete a senior thesis and have a minimum grade point average of 3.65, as specified by the College of Arts & Sciences.

The Major in Environmental Policy

Required units: 40

Students who major in environmental policy will be required to complete 40 graded units (13 classes) distributed as follows:

• 16 units from required foundation courses
• 9 units from research methods requirements
• 12 units from the list of upper-division courses in the social sciences
• 3 units from a substantive distribution requirement

At least 24 of those total units must be at the 300-400 level.

We also strongly recommend that students complete a capstone experience. Possible options include a senior honors thesis, the environmental law clinic, or an appropriate internship. We intend to develop more capstone possibilities in the future.

Required courses:

All students take the following five foundation courses (16 units):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Anthro 361</td>
<td>Culture and Environment</td>
<td>3</td>

<td>3</td>
</tr>
<tr>
<td><strong>Total units</strong></td>
<td></td>
<td>9</td>
</tr>
</tbody>
</table>

**Note: Students may opt out of this class if they complete one of the approved courses below; however, students who chose this option must take another upper-level class to complete the 40 required units.

University College: U25 Introduction to Quantitative Methods (PolSci 323)
Business School: Managerial Statistics II (QBA 121)
Math: Elementary to Intermediate Statistics and Data Analysis (Math 3200)
Engineering: Probability and Statistics for Engineering (ESE 326)

Upper-Division Requirements:

Students need 15 additional units of upper-level course work (300-400 level) distributed in the following way:

(1) 9 units (three courses) must come from the following political science courses***:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pol Sci 3070</td>
<td>Politics and Policymaking in the American States</td>
<td>3</td>
</tr>
<tr>

</tr>
<tr>
<td>Pol Sci 3240</td>
<td>The Political Economy of Public Goods</td>
<td>3</td>
</tr>
</tbody>
</table>
### Minors

#### The Minor in Political Science

**Units required:** 15

**Required courses:** Students must take a minimum of 15 graded units of course work with a C or better, including at least 9 advanced units.

**Additional Information**

No more than 3 units may be counted from among the following:
- Pol Sci 412 Directed Readings
- Pol Sci 413 Directed Research
- Pol Sci 419 Teaching Practicum in Political Science
- Summer school
- University College courses
- Credits from another institution including study abroad.

Courses

L32 Pol Sci 101B American Politics
This course provides an overview of the politics of the American system of government. Among the topics covered are the historical developments of American politics, federalism, political participation (voting, interest groups, parties), institutions (congress, the courts, the president and public opinion). A theme underlying our examination of these and other topics is the fact that political actors are purposive in their strategic pursuit of various objectives. We explore the many ways in which this aspect of political behavior impacts institutions and the interactions between political actors throughout the American political system.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA UColl: PSA

L32 Pol Sci 102B Introduction to Comparative Politics
One of the primary goals of a course in comparative politics is to familiarize students with a broad array of political systems. The approach taken in this course can best be characterized as the active acquisition and use of a set of tools for looking at the political world. In other words, instead of putting emphasis on what textbook writers think political scientists know, in this course the emphasis is on “how we know what we know” and on building knowledge. This approach equips students with a set of tools to use long after the course is over. These comparative tools are focused on historical, recent and current events, and students are provided the opportunity to delve more deeply into a study of the parts of the world they find most interesting.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA, IS UColl: PSC

L32 Pol Sci 103B International Politics
Globalization, the accelerating rate of interaction between people of different countries, creates a qualitative shift in the relationship between nation-states and national economies. Conflict and war is one form of international interaction. Movement of capital, goods, services, production, information, disease, environmental degradation, and people across national boundaries are other forms of international interactions. This course introduces the study of global political-economic relations. We focus upon building a toolkit that will help us understand the micro-foundations of the globalization of material and social relations.
Credit 3 units. A&S: SS A&S IQ: SSC BU: ETH, IS

L32 Pol Sci 1041 Freshman Seminar: Introduction to Political Theory
Why is democracy a good form of government? What if a benevolent dictator arose who wrote and enforced laws that were just and equitable? What if she honored the sanctity of human life and its flourishing, guaranteed a full range of liberties to her citizens— including political ones, such as the right of free speech and organization (but not including the right to rule)? Given the problems of most living democracies, why wouldn’t this be a better regime than a democratic one? And are people really capable of governing themselves anyway? Why should we trust them so? In short, what’s so special about “democracy” and its corresponding idol, “public opinion,” that people bow to them as hallowed virtues of a good society? In this class we provide a framework in which these and other central questions of political theory have been and can be addressed. This course is designed to introduce students to the main theoretical issues of Western political theory, including but not limited to the following concepts: justice, legitimacy, equality, democracy, liberty, sovereignty and the role of history in the political and social world. In short, the questions are meant to explore the underlying assumptions and themes of contemporary politics and political science research today. The course is designed around the careful reading of primary text materials and engagement with contemporary problems of politics available on the front pages of any daily newspaper. Although designed as a two-semester class, students may enroll in either one or both.
In this first semester, we lay out the fundamental themes of political theory in Plato’s Republic and Aristotle’s Politics asking, among other things, what justice is and what place democracy has among other forms of government. Passing briefly onto Augustine and Aquinas’ struggles with religion and civil society, we emerge in modernity with Machiavelli’s Prince and question whether the “good” and the “political” are or ought to be different aims. We conclude the semester with the social contract theory of Hobbes and Locke in which political legitimacy is based on the terms familiar to citizens of modernity: the right to rule is somehow related to a citizen’s consent to be governed. In the spring semester, we turn to the struggle that modernity and the Enlightenment raised for issues of politics, including that of history, nature, institution building and economics, guided by the texts of Rousseau, Hamilton and Madison, Tocqueville, Mill, Marx, Nietzsche, and Weber.
Credit 3 units. A&S: SS EN: S

L32 Pol Sci 2010 Introduction to Environmental Policy
This course provides an introduction to and overview of environmental policy. Subjects covered include the policy process, the behavior of interest groups and political parties, and the actions of policymakers like Congress and the president. We also examine issues such as pollution control, climate change and biodiversity.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 203C Early Political Thought: Text and Tradition
A selected survey of the political and moral thought of Europe from the rise of Athenian democracy to the Renaissance with emphasis on analysis and discussion of writers such as Thucydides, Plato, Aristotle, St. Augustine, Castiglione and Machiavelli. The course aims to introduce students to basic texts in the intellectual history of Western Europe, understood both as products of a particular time and place and as self-contained arguments that strive to instruct and persuade. The texts are
simultaneously used to chart the careers of such fundamental notions as liberty, virtue and justice. Preference given to Text and Tradition and IPH students.
Same as L93 IPH 203C
Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

L32 Pol Sci 226 The Immigrant Experience
This course explores the history and politics of immigrant groups in the 19th- and 20th-century United States. Topics include legislation, patterns of migration, comparisons of different waves of immigration, and changing social attitudes. This course is a core requirement for the ethnic studies concentration in American Culture Studies.
Same as L98 AMCS 202
Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: ETH, HUM

L32 Pol Sci 227 Just Do It! Skills That Turn Passion Into Policy
The course focuses on skills related to the democratic expression of political rights and responsibilities. The course balances background knowledge of the issues with application. Students explore how to use coalition building and advocacy skills to relate to personal issues to public issues. Students research a current Missouri bill, create a strategic plan for its passage or failure, and prepare to give testimony on such bill in a mock House of Representatives committee hearing. Students also learn about ethical dilemmas in policy and politics and create a plan for turning their passions into policy.
Credit 1 unit. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 245A Fair Division in Theory and Practice
The concept of fair division is a central tenet in the design of procedures aimed at generating equitable social outcomes and mitigating conflict. At the national level, such procedures include systems of apportionment, voting, and legislative districting, to name a few. On a smaller scale, these procedures could govern how assets are divided in a divorce, or how to divide a cake. While “fairness” in theory is indisputably a good thing, in practice the courts, politicians, and even mathematicians have grappled with the question of what it means for a procedure to be fair. This course examines algorithms and applications of procedures that aim to divide or allocate resources fairly. Some of these procedures were developed by mathematicians looking for formulas that satisfy mathematical properties such as envy-freeness and equitability. All of the procedures we consider are based on problems, short essays, two short essay exams and participation.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L32 Pol Sci 245B Game Theory in Science and Culture
Introduces the major intellectual insights of game theory in a nontechnical fashion, and examines the influence game theory has had on geopolitics, social philosophy, psychology, art and the humanities. In addition to covering the basic machinery of the theory, the class participates in numerous illustrative classroom games; examines game theory in film, literature and literary criticism; sees how game theory has contributed to social theory; and learns about the background of game theory and its history and perception as a hoped-for tool in the Cold War. Grades based on problems, short essays, two short essay exams and participation.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L32 Pol Sci 3010 Gender and Politics
This course surveys central topics in the study of gender and politics, covering such issues as women's participation in political parties and social movements, women as voters and candidates in political elections, feminism and the state, and gender and international politics. It draws on examples from various world regions and time periods to analyze similarities and differences across cases around the globe.
Credit 3 units. A&S: SS EN: S

L32 Pol Sci 3011 Computational Modeling in the Social Sciences
This course introduces students to the theory and practice of computational modeling in social science. Computational modeling allows us to explore topics — including complexity, emergence and dynamics — that are difficult to study using traditional analytic methods. This course covers the theoretical foundations behind computational modeling in addition to offering an introduction to the design and programming of such models.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L32 Pol Sci 3012 Advanced Modeling in the Social Sciences
This course explores advanced topics and issues in the building and validation of models in the social sciences. The principal component of the course is the design and development of an individual research project by each student. The conclusion of the course involves a public research symposium with a poster session in which all students present their models and findings to the broader campus community. Prerequisite: Pol Sci 3011 Computational Modeling in Social Science.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L32 Pol Sci 3024 International Institutions
This course surveys in historically and theoretically informed fashion the role of various international institutions in international relations. It addresses the fundamental question of the contribution of international institutions to world order. The course first traces the historical evolution of international organizations before turning to international institutions since World War II. It then focuses on the following: the most important regional international organization, the European Union; the most important international organizations dealing with the
issues of peace and security, the United Nations and NATO; and the major international economic institutions, the WTO, the IMF and the World Bank. Prerequisite: Pol Sci 103B Introduction to International Politics.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: IS EN: S

L32 Pol Sci 3031 Race and Ethnicity in American Politics
This seminar discusses the continuing importance of race and ethnicity in American politics and the politics of racial minority groups in America. It examines the disadvantage minorities have in the American political structure, including problems with political participation. It examines how the structure and functions of the branches of government and its bureaucracy affect the aspirations of minorities. The role of pressure groups on political structure is discussed. Additional discussion focuses on urban politics and tensions.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3044 Foundations of American Democracy
Since its founding, the United States of America has been strongly identified with principles of democratic rule. This course provides an introduction to some philosophical and historical foundations of American democracy. Over the course of the semester, we ask what democracy means and what it requires. We examine thinking about political rights and liberty at the American founding. We ask what democratic inclusion and political equality entail. We ask what democracy means, and what it should mean, in the American context, and whether and to what extent American institutions embody democratic ideals.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3055 The Comparative Study of Legislative Institutions
This course focuses on understanding the variation in legislative institutions around the world.
Credit 3 units. A&S: SS A&S IQ: SSC BU: IS EN: S

L32 Pol Sci 306 American Political Thought
This is a course on American political and constitutional thought. The main theme is the problem of freedom: how it should be understood, and the constitutional and other conditions which sustain it. We also touch on questions of leadership, class and foreign policy as they relate to the main theme. We begin with the political thought of the American colonists, then turn to the Federalist/Anti-Federalist debate on the constitution, and trace these lines of thinking to a point just before the outbreak of the Civil War. Apart from writings of prominent American political thinkers such as Madison, Jefferson, Adams, Hamilton and Calhoun, we also consider the work of the foreign observer of American life and honorary American, Alexis de Tocqueville.
Credit 3 units.

L32 Pol Sci 3070 Politics and Policymaking in the American States
The American federal system is often overlooked in discussions about politics in the United States; however, state governments unquestionably touch the lives of Americans every day. As such, an education in American politics is not complete without serious examination of state governments and their political institutions. This course illuminates the importance of the American states in U.S. politics and policymaking by critically examining topics such as intergovernmental relations; the historical evolution of American federalism; the organization and processes associated with state legislative, executive and judicial branches; state elections; political parties; interest groups; and specific state policy areas such as budgeting, welfare, education and the environment. Prerequisite: Pol Sci 101B.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3073 Global War on Terrorism
This course presents an historical assessment of the Global War on Terrorism (GWOT) from the perspective of its major participants: militant Sunni Islamist jihadists, especially the Al-Qaeda network, and the nation-states that oppose them, particularly the United States and its allies. The course then concludes by analyzing the current state and future of Islamist jihad and the GWOT.
Same as L22 History 3073
Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L32 Pol Sci 3090 Civil War and Peace
This course examines the causes and consequences of intrastate conflict as well as the potential solutions to it, drawing on examples from countries throughout the world, including Bosnia-Herzegovina, India, Iraq, Russia, Rwanda, Spain, etc. We consider many potential causes of intrastate violence, including ethnic and religious identities, economic and security concerns, elite manipulation, and international diffusion. In order to understand the challenges that countries face recovering from violence, we subsequently examine different ways in which conflicts are conducted, as well as their consequences, including economic underdevelopment, rape, child soldiers and disease. Finally, using what we have learned about the causes and consequences of conflict, we analyze the utility of different tools for managing intrastate conflict, including, but not limited to, minority representation, consociationalism, decentralization and partition.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3093 Politics of the European Union
This course is designed to introduce undergraduates at the junior- and senior-level to the history and politics of the European Union (EU) and European integration. In the first part of the class, students learn about the interplay of theory and practice in the history of European integration. In the second part, we study the institutions and decision-making processes with reference to the theoretical concepts developed earlier in the course. From there, we examine some of the key EU policies and their implementation. In the final two sections of the course, we look at constitutional politics, and some of the more recent policies and developments.
Credit 3 units. A&S: SS A&S IQ: SSC BU: IS EN: S

L32 Pol Sci 3103 Topics:
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3115 Indian Barbie, Asian Tigers and IT Dreams: Politics of Globalization and Development in South Asia
Same as L97 IAS 315
Credit 3 units. A&S: SS, CD, SD A&S IQ: LCD, SSC BU: IS EN: S
L32 Pol Sci 316B African-American Politics
This course examines the historical and contemporary efforts by African Americans to gain full inclusion as citizens in the U.S. political system. The course focuses on topics such as the politics of the Civil Rights Movement; African-American political participation; and the tension between racial group politics and class politics. Same as L90 AFAS 3161
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 3180 Democracy: Causes and Consequences
This course examines the major international and domestic causes and consequences of democracy worldwide.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 320A Religious Freedom in America
Same as IS 301 InterD 320
Credit 3 units. A&S IQ: HUM, SD EN: H

L32 Pol Sci 321 Comparative European Politics
This course is designed to provide students with an introduction to politics in Europe, with a focus on national politics. The course has two main goals. One goal is that students acquire a general understanding of the institutions of democratic governance and how they affect how voters' preferences are translated into government policy. As most European states are variations of parliamentary democracies, we pay particular attention to the connection between voters and policymakers through parliamentary institutions. The second goal is that students achieve a basic understanding of specific political systems in Europe and appreciate current political issues particularly those related to democratic transitions in Eastern Europe. Prerequisites: Pol Sci 102B Intro to Comparative Politics; Pol Sci 363 Quantitative Political Methodology (can be taken concurrently).
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA, IS

L32 Pol Sci 3211 Public Opinion and American Democracy
This course is about the salience of public opinion and its influence on American Politics. Topics covered include many of the theories developed to explain how public opinion is formed, if and why it changes, and the relationship between public opinion and the political behavior of citizens and elites. Therefore, the course describes and analyzes many of the factors that influence the formation, structure and variation in public opinion: information processing, education, core values, racial attitudes, political orientation (ideology and party identification), political elites, social groups, the media and religion. Additional topics include presidential approval, congressional approval and the relationship between public opinion and public policy. The course also trains students in several concepts of statistical analysis (assuming no prior knowledge) so that students can use these tools as part of their own research projects. Prerequisite: previous course work in American politics or communications.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

L32 Pol Sci 3240 The Political Economy of Public Goods
This course explores the nature of public goods by investigating the economic and political rationales for providing them. We explore the endogenous creation of public goods, such as the formation of mutually agreed upon constitutions to protect property rights and the exogenous imposition of public goods, such as the regulatory framework that provides clean air. Through the use of efficiency analysis, we explore the costs and benefits to alternative institutional arrangements, such as private property or market exchanges, to the government or voluntary provision of public goods.
Credit 3 units.

L32 Pol Sci 3255 Development of the American Constitution
The practical meaning of the Constitution has changed since 1787 — not only as a result of normal amendments and court interpretations, but also through normal politics and unconventional transformations. After initial discussion of the nature of the Constitution and of constitutional interpretation, the course examines important instances of such change processes. These have resulted in important reformulations, usually gradual but occasionally sudden, of executive branch powers, the judicial system, the electoral system, federalism, economic regulation and civil rights. The course then devotes special attention to several present-day issues of constitutional politics, such as presidential war powers, the use and misuse of secret agencies, the "unitary executive theory," and the special constitutional significance of the Justice Department. Prerequisites: Pol Sci 101B American Politics. Formerly Pol Sci 3254 Constitutional Politics in the United States; students who have taken that class are not eligible.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 326B Latin American Politics
This course is an introduction to the politics in Latin America, focusing on the trend toward the establishment of democracy. We examine the impact of political culture, economic development, and the legacy of authoritarian regimes on contemporary politics. The course also reviews many of the most pressing challenges confronting Latin American governments: the role of the military in politics; the reform of political institutions; threats from radical guerrillas and drug traffickers; debt and economic restructuring; and relations with the United States. Country studies focus on Argentina, Brazil, Chile, Peru, Mexico and Nicaragua. Prerequisite: 100-level introductory course in political science or its equivalent in history or international and area studies.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 327B African Politics
A survey of politics in the states of sub-Saharan Africa. Major themes include the givens of African politics; the colonial inheritance; ethnicity, race and politics; religion and politics; forms and styles of rule and governance; pathologies and nonformal politics; and the international relation of African states. Requirements include two short papers and a written briefing on an assigned country.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: IS
L32 Pol Sci 3280 Political Intolerance in World Politics
This course is an investigation into the meaning, causes and consequences of political intolerance. The goal is to expose students to contemporary research on (a) how political intolerance is conceptualized and understood, especially within the context of theories of democracy; (b) how political intolerance can be measured, both at the level of the individual and the institution/society; (c) where intolerance originates, both in terms of individual psychology and system-level politics; and (d) what consequences flow from intolerance, especially in terms of legal and extra-legal political repression, as well as cultural consequences (e.g., a "culture of conformity"). The course makes little distinction between American politics and politics in other parts of the world (although no knowledge of specific non-U.S. systems is required as a prerequisite).
Credit 3 units. A&S: SS A&S IQ: SSC BU: IS EN: S

L32 Pol Sci 3292 Topics in Politics: Modern South Asian Politics
This course focuses on the recent political history and development of South Asia. It begins with a review of the British colonial period and the Independence movement. The remainder of the course examines different political issues in India, Pakistan, Bangladesh and Sri Lanka. Topics include political mobilization; land reform; law and politics; social movements; religious and caste politics; the rise of religious nationalism; and political control of the economy.
Credit 3 units. A&S: SS A&S IQ: SSC BU: HUM, IS

L32 Pol Sci 3296 Race and Ethnicity in the United States
This course is designed to explore relations within and between the racial and ethnic groups of the United States. We examine the social, economic, and political similarities and differences of African Americans, Asian Americans, Latinos, and New Immigrants that distinguish their American experience. Of particular interest are their respective experiences in relation to one another and the majority population for understanding the origins of conflict and unanimity within and between the different groups. We pay specific attention to events in Ferguson, Missouri, and the tensions between political leaders, policing and minorities more generally, the disproportionate levels of poverty experienced by African Americans and Mexican Americans, and the vilifying of certain minorities by the majority population. Same as L98 AMCS 3296
Credit 3 units. A&S IQ: HUM, SD EN: H

L32 Pol Sci 3302 Politics and Policies of Immigration in the United States
This class examines the history and politics of American immigration from colonial times to the present. It begins with an overview of the colonial period, then discusses the immigration waves of the 19th and early 20th centuries, and concludes with an examination of current topics and debates about immigration. Issues include racial, ethnic and class relations among groups; changes in immigration policies over time; comparative group experiences; transnational issues in immigration; and the impact of immigration on other American social and political processes and events. This class is a writing-intensive and modified version of Pol Sci 226/AMCS 202. Students who have taken that course should not take this course. Because this is a writing-intensive class, we also spend time studying research papers and writing.
Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

L32 Pol Sci 331 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: HUM

L32 Pol Sci 331B Gender and American Politics
This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category and the relationship between gender, race, ethnicity and power. Second, we study gender-based social movements, including the suffrage and women's rights movements, women's participation in the Civil Rights Movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement. Third, we examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights.
Credit 3 units. A&S: SS, SD BU: BA, ETH

L32 Pol Sci 3321 Topics in Politics: Constitutionalism and Democracy
An introductory analysis of a range of issues related to constitutions and democratic government. The main focus is on such theoretical questions as: Why do societies produce constitutions? Why do subsequent generations abide by them? What is the relationship between constitutional principles and democratic decision making? Who benefits from constitutional constraints?
Credit 3 units. A&S: SS BU: BA

L32 Pol Sci 3323 The Democracy Lab
The U.S. states are often called laboratories of democracy because the lessons learned from an "experiment" in one state or city can inform other governments. This course embraces the idea that we can act as scientists in the laboratories of local government. The course teaches students about research design. We also help them design their own experiments and then give students the opportunity to work with local officials to help design, conduct and analyze an experiment relating to governance.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 3325 Topics in Politics: Constitutionalism in the United States
The principal purpose of this course is to introduce students to the politics of constitutional interpretation. We first discuss the origins of the Constitution; the structure, operation and work of courts; and judicial decision making. Afterwards, we examine various areas of the law relating to institutional powers and constraints (e.g., federalism, presidential powers, Congressional authority). In so doing, we develop an understanding for the legal doctrine in each area of the law and also examine explanations for the legal change we observe.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA
L32 Pol Sci 332B Environmental and Energy Issues
This course considers the major issues in these increasingly important areas of public policy. We discuss the importance of political processes and actors on such phenomenon as pollution, global warming, and wilderness protection. This course emphasizes the American experience but also considers international implications. Two lectures and one section meeting each week.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

L32 Pol Sci 333 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

L32 Pol Sci 3363 Interchangeables, Influentials, and Essentials
Do you want to know how to obtain power? How to influence the powerful? Or even how to unseat those in power? In this course, we focus on how leaders, of all types, get and keep their jobs. Regardless of setting — democratic or dictatorial (or corporate, for that matter) — it is all about those whom the leader finds to be interchangeable, those the leader finds influential, and those who are essential. Students learn the “Rules to Rule By” and why, when leaders follow them, they often behave badly causing those they govern to suffer.
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3381 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

L32 Pol Sci 340 Topics: Environmental Justice
This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

L32 Pol Sci 3400 Social and Political Philosophy
Study of certain fundamental issues concerning government, society and culture. For example: What are the nature and limits of legitimate political authority? Are ordinary human beings capable of governing themselves justly? Do citizens have a duty to obey the state? If so, to what extent, if at all, is that duty grounded in consent or contract? Should the state limit or regulate the personal relationships of citizens, such as marriage, family and sexuality? How should social institutions rectify a history of political or social injustice against oppressed groups? Readings from historical and contemporary sources. Prerequisite: one course in philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.
Same as L30 Phil 340F
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH, HUM

L32 Pol Sci 3401 Topics in Political Thought
This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: ETH

L32 Pol Sci 3403 The Politics of Congressional Elections
This course introduces students to the study of American legislative elections. The first part of the course focuses on congressional election campaigns, in which we discuss who runs for office, the incumbency advantage, campaign finance, congressional primaries, electoral competition, voter turnout, and vote choice. The second part of the course examines how electoral factors affect legislative politics, focusing on questions involving representation, accountability and lawmaking. Prerequisite: L32 Pol Sci 101B Intro to American Politics.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 342 The American Presidency
Consideration of part played by the president in American politics and public policy. The powers of the president; the staffing and organization of the executive office; the relations of the president with Congress, the bureaucracy and other participants in American politics; presidential elections. Recommended: Pol Sci 101B.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA

L32 Pol Sci 3422 Americans and Their Presidents
How have Americans understood what it means to be President of the United States? This seminar uses that question as a point of departure for a multidisciplinary cultural approach to the presidency in the United States, examining the shifting roles of the chief executive from George Washington through Barack Obama. In addition to a consideration of the President’s political and policymaking roles, this course examines how the lived experiences of presidents have informed the ways Americans have conceived of public and private life within a broader political culture. In the process, this course uses the presidency as a means to explore topics ranging from electioneering to gender, foreign policy to popular media. Readings are drawn from a broad range of fields.
Same as L98 AMCS 3422
Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

L32 Pol Sci 3431 Constitutional Law
Introduction to constitutional law and practice in the United States. Emphasis on the role of the U.S. Supreme Court as an interpreter of the Constitution.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA

L32 Pol Sci 344 Courts and Civil Liberties
This course focuses on constitutional law principles in the Bill of Rights, and examines how Supreme Court decisions influence these principles in everyday life. We explore how the courts, and particularly the Supreme Court, have interpreted these rights in light of changing times and emerging issues. Topics include the First Amendment; free exercise of religion and the establishment clause; freedom of speech, assembly and
association; freedom of the press; the Fourth Amendment and the rights of those accused and convicted of crimes; the right to privacy, including reproductive freedom and the right to die; equal protection and civil rights, including race, gender, sexual orientation; immigrants’ rights and voting rights; and civil liberties after September 11. Recommended for the Liberal Arts and Business (LAB) Certificate.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH, HUM

L32 Pol Sci 3441 Defendant’s Rights
This course explores the operations of the American criminal justice system. Substantial emphasis on the constitutional rights accorded to the criminally accused. Readings consist primarily, but not exclusively, of Supreme Court cases.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH

L32 Pol Sci 3462 The Politics of Privacy in the Digital Age
This course explores the changing nature of privacy in contemporary society.

Credit 3 units. A&S: SS A&S IQ: SSC BU: ETH EN: S UColl: PSA, PSC

L32 Pol Sci 349 Politics in Bureaucracies
Focuses on politics and political conflicts involving bureaucratic organizations, primarily but not exclusively those of the federal government. Attention given to the characteristics of bureaucratic organizations and their members; their relations with one another as well as with other participants in policymaking also considered. Major activities within bureaucracies — planning, program development, organizing, budgeting and service delivery — discussed with a view to clarifying their political implications and consequences; problems associated with controlling and changing bureaucracies.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

L32 Pol Sci 3551 The Welfare State and Social Policy in America
How can we understand the recent debate about fundamental health care reform? Should social security be partially or wholly privatized? Was the 1996 welfare reform a success? Contemporary political questions frequently focus on the American welfare state and the social policies that compose it. The first half of this course describes the American welfare state broadly construed, places it in a comparative context, and elucidates major political science explanations for the size and scope of American social policy. We touch on several areas of social policy while constructing the generalized lenses through which particular political outcomes can be understood. The second part of the course then focuses on three major aspects of the American welfare state: health care, old age pensions and policies related to work, poverty and inequality.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3552 Political Economy of Democracy
In the past few years, a number of important books have appeared that combine elements of economics reasoning and political science, in an effort to understand the wide variation in economic development in the world. This course deals with the logic apparatus underpinning these books. In addition, the course introduces the student to the theoretical apparatus that can be used to examine democratic institutions in the developed world, and the success or otherwise of moves to democratization in the less-developed world.

Credit 3 units. A&S: SS A&S IQ: SSC BU: IS: S

L32 Pol Sci 3561 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S: SS A&S IQ: SSC BU: IS: S

L32 Pol Sci 3575 US Foreign Policy: Theory and Practice
In this class we focus on the procedures and institutions that shape U.S. foreign policy decisions. This is neither a course on international relations theory nor a history of U.S. foreign policy. Rather, this course examines the domestic politics surrounding U.S. foreign policy decisions. How do public opinion, electoral politics, and interest groups shape foreign policy? Which branch controls foreign policy — the president, Congress, the courts? Or is it ultimately the foreign affairs bureaucracy that pulls the strings? We examine these topics through reading and writing assignments, class discussion, and simulations to promote deeper understanding and build practical skills.

Same as L97 IAS 3575

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3578 Law, Politics and Society
This course is an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system (in contrast to legal mythology), as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce students to legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 359 The Mathematics of Elections
Voting procedures provide the most common means of aggregating the preferences of individuals into societal outcomes. These procedures play an integral role in our daily lives, from having a show of hands to decide which type of pizza to order for a club meeting, to electing a president. This course examines the effects that different voting procedures have on how groups make decisions. We evaluate electoral
systems mathematically, by considering the various properties that procedures may or may not satisfy. A classic example is Arrow's Impossibility Theorem, which tells us that every electoral system must fail to satisfy one or more criteria of fairness or sensibility. In addition to Arrow's claim, we examine other legislative paradoxes and learn why the choice of electoral procedure is critical to our understanding of how "good" and "bad" decisions can be made. We also discuss the comparative properties of electoral systems in operation, such as fairness, proportionality, representativeness and legitimacy.

Credit 3 units. A&S: SS & S & S: SSC BU: BA EN: S

L32 Pol Sci 3610 Legislative Politics
This course is an introduction to the politics of the U.S. Congress and the federal lawmaking process. We focus on the behavior of individual legislators and the role they play in crafting federal legislation in policy areas such as health care, civil rights and the environment. In general we examine questions such as: Why do legislators behave as they do? Whose interests are being represented?

Credit 3 units. A&S: SS & S & S: SSC BU: BA EN: S

L32 Pol Sci 3620 Politics and the Theory of Games
This course is intended to cover through analytical discussion and illustrations the basic concepts and major achievements of Game Theory in different subfields of research in the social sciences today. We discuss examples of the usefulness of cooperative and noncooperative game theory to the study of human behavior in general and political science and political economy in particular.

Credit 3 units. A&S: SS & S & S: SSC Art: SSC BU: BA

L32 Pol Sci 3630 Quantitative Political Methodology
This is an introduction to research methodology and quantitative analysis for social scientists. Students are introduced to the logic of social scientific inquiry, and to the basic statistical tools used to study politics. Students learn and apply the following to answer substantive questions: measurement, descriptive analysis, correlation, graphical analysis, hypothesis testing, confidence intervals, analysis of variance and regression analysis. Major components of the course include learning how to collect, manage and analyze data using computer software, and how to effectively communicate to others results from statistical analyses. Students work collaboratively on research projects in which they pose their own questions, design a study, collect and analyze the data, and present their findings in a research paper.

Credit 3 units. A&S: SS, QA A&S IQ: SSC, AN EN: S

L32 Pol Sci 3690 Politics of International Trade
In this course we study the relationship between international trade and domestic politics. We cover the basic models of international trade, the distributional consequences of international trade, the relationship between trade and economic development, an analysis of the trade protectionism (causes and consequences) and an analysis of international organizations related to international trade (special focus on the World Trade Organization). Prerequisite: Pol Sci 103B.

Credit 3 units. A&S: SS & S & S: SSC BU: IS EN: S

L32 Pol Sci 3730 International Political Economy
Analysis of the interplay of economics and politics in the world arena, focused primarily on the political basis of economic policies in both advanced and less-developed societies. Treating differing perspectives on the international economy, production, trade and finance, and international economic relations. Prerequisite: junior standing or permission of instructor.

Credit 3 units. A&S: SS BU: IS

L32 Pol Sci 3740 Contemporary American Foreign Policy
This course surveys post-war American foreign policy in historical perspective. It begins by evaluating the rise of the United States as a world power during the 20th century. Its current position of primacy and its consequences in the post-Cold War period, and the distinctive traditions and institutions shaping the making of American foreign policy. It then examines the origins of the strategy of containment in the early Cold War period before considering how these debates animated the changing course of American foreign policy through the various phases of the Cold War conflict. The course concludes by analyzing American foreign policy since the end of the Cold War, up to and including debates about the consequences of September 11, 2001, for the United States’ position of primacy, the Bush Doctrine and the American-led intervention in and subsequent occupation of Iraq.

Credit 3 units. A&S: SS & S & S: SSC Art: SSC BU: IS

L32 Pol Sci 3781 Topics in Politics: Israeli Politics

L32 Pol Sci 3782 Topics in Comparative Politics: Terrorism and Political Violence
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S: SS & S & S: SSC BU: BA EN: S

L32 Pol Sci 3810 The Politics of Electoral Systems
It is impossible to appreciate the variety of electoral systems used to select legislative bodies without taking a comparative perspective. We begin this course with a brief consideration of what goals political founders and reformers are pursuing when they design an electoral system. Then we define the conceptual dimensions along which electoral rules can vary. With these basic concepts in hand, we then study specific national cases to assess the impact of electoral laws on party systems, legislative behavior, and interbranch relations. After completing a series of case studies, we return to a comparative perspective to discuss recent scholarly research in this field. This research conceives of
electoral systems as incentive structures for voters, candidates, parties and politicians. To wrap up the course, we return to the question of what founders and reformers can hope to achieve when selecting electoral systems.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI BU: BA EN: S

L32 Pol Sci 389 Power, Justice and the City
This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by "privatism" in cities and their suburbs. In addition, the course devotes considerable attention to honing students' writing skills, through class assignments that stress rewriting and revising, and also through four in-class writing workshops devoted to formulating a thesis and making an argument; revising and rewriting; writing with style; and peer consultation.

Credit 3 units. A&S: SS, SD, WI A&S IQ: SSC, SD, WI Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 389A Power, Justice and the City
This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by "privatism" in cities and their suburbs.

Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD BU: BA EN: S

L32 Pol Sci 391 History of Political Thought I: Justice, Virtue and the Soul
This course offers a critical introduction to the main issues and debates in Western political theory, including but not limited to the topics of justice, legitimacy, equality, democracy, liberty, sovereignty and the role of history in the political and social world. This course is the first in a three-semester sequence on the history of political thought, and students are encouraged but not required to take the courses in chronological sequence. The first semester begins with ancient Greek political thought and follows its development up to the early 16th century.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 391A Democracy and Citizenship Seminar II
What does it mean to be a citizen in a democratic society? What are the rights of citizenship and what are its responsibilities? How are the answers to these questions different for citizens of the United States of America, with its particular history, values and status in the world? Enrollment in this seminar is limited to freshmen who have been admitted to the Democracy and Citizenship Focus program.

Credit 1 unit.

L32 Pol Sci 392 History of Political Thought II: Legitimacy, Equality and the Social Contract
Government is often justified as legitimate on the grounds that it is based on the consent of the governed. In this course, we examine the origins of this view, focusing our attention on canonical works in the social contract tradition, by Thomas Hobbes (1588-1679), John Locke (1632-1704), Jean-Jacques Rousseau (1712-1778), David Hume (1711-1776) and Immanuel Kant (1724-1804). This course is the second in a three-semester sequence on the history of political thought. Students are encouraged but not required to take all three courses.

Prerequisite: one previous course in political theory or political philosophy.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 393 History of Political Thought III: Liberty, Democracy and Revolution
How, if at all, should the political institutions of the modern state express and secure the liberty and equality of citizens? What is the political significance of private property? Is world history to be understood as progress toward one best form of government — capitalist democracy, perhaps, or communism? What forces drive history? We address these and other timeless political questions through close reading and rigorous analysis of classic texts in the history of Western political thought. Authors studied include Kant, Hegel, Marx, Tocqueville, John Stuart Mill and Nietzsche. Prerequisite: one previous course in political theory or political philosophy. The course is designed to be the third in a three-semester sequence on the history of political thought, and students are encouraged but not required to take the courses in chronological sequence.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 4001 American Democracy and the Policymaking Process
This course is part of the Semester in DC Program
Credit 3 units. EN: S

L32 Pol Sci 4010 Pluralism, Liberalism and Education
How should liberal democratic states respond to religious and cultural pluralism? In what ways is pluralism different from mere disagreement, and what normative implications does pluralism have for public policy? How can liberal states justify using their coercive power against a background of pluralism and in ways that systematically disadvantage certain religious and cultural groups in society? In particular, what is to be done when religious parents and the liberal state make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? Readings are taken from contemporary political philosophy. Prerequisites: Pol Sci 106, Pol Sci 107, Phil 340 or permission of instructor.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L32 Pol Sci 4013 Negotiating Major Legislation in Congress
This course examines the outcomes of the legislative process in the United States. The first third of the course examines key concepts and major determinants of the negotiation process: majority rule instability, agenda control, political parties, the amendment process and the uncovered set. The rest of the course examines the negotiations that led to some of the most significant legislation in the past 100 years, from the Federal Reserve Act of 1913 through the Voting Rights Act of 1965 to the immigration bill of 2006. Along with other assignments, each student writes several drafts of a major research project on a major piece of legislation. Each research project examines the amendments offered, the strategic intentions of the amendments' sponsors, the agenda process and the role of party. Prerequisite: Pol Sci 101B.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S
L32 Pol Sci 402 Topics in Political Thought
Credit 3 units. A&S: SS & A&S IQ: SSC EN: S

The 21st century has brought with it new challenges to national security. Standard assumptions about nations and the borders that separate them have been brought into question, and one of the results of this is that the very meaning of national security is undergoing change. Instead of threats to security coming from outside national boundaries, they now often exist within and across borders. This course focuses on contemporary ideas about these issues. It includes a brief overview of current discussions of national security, but it is primarily devoted to examining the conceptual resources we have for making sense of national security in a new world.
Same as L97 IAS 402
Credit 3 units. A&S: SS & A&S IQ: SSC

L32 Pol Sci 4025 Experiments in Politics
This is a lab-style seminar in which we design, field and analyze an experimental study on political attitudes or political behavior. Our ultimate goal is to publish a scholarly article in a peer-reviewed journal in political science. Prerequisite: Pol Sci 363 Quantitative Political Methodology (can be taken concurrently). Credit 3 units.

L32 Pol Sci 4030 Political Theory of Education
This course explores issues of authority, legitimacy, citizenship, freedom and equality through contemporary readings in the political theory of education. What is to be done when parents, citizens and educational experts make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? How should public schools aim to equip their students for the responsibilities of citizenship in a diverse liberal democratic state? What do the concepts of equality and equality of opportunity mean in the context of education, and (how) should governments pursue these values through education policy? We explore these issues through contemporary works of political theory as well as through considering a number of important U.S. court cases, including those dealing with the schooling of children from minority religious and cultural groups, affirmative action in university admissions, and school desegregation plans. Prerequisite: one previous course in political theory or political philosophy. Credit 3 units. A&S: SS & A&S IQ: SSC BU: ETH EN: S

L32 Pol Sci 4040 Capstone Seminar in International Politics: Public Policy Responses to Global Poverty
This course is designed for senior political science majors with a background in international politics (refer to prerequisites). In this course we examine the theoretical and empirical literature on the causes of global poverty and evaluate public policy responses from the international community. Topics include: foreign aid (including micro finance), debt relief, trade reform, global health initiatives and private-public partnerships. Students are expected to have a strong theoretical background in the tools and concepts in political science and a strong interest in development topics. As a capstone class, the teaching style focuses on a student-centered classroom, where students run the class and help moderate discussions with outside speakers. Prerequisites: Pol Sci 103B, one advanced course in international politics, and a second advanced course in either international or comparative politics.
Credit 3 units. A&S: SS A&S IQ: SSC

L32 Pol Sci 4043 Public Policy Analysis, Assessment and Practical Wisdom
This course provides an introduction to the study, professional practice, ex-ante and ex-post assessment of public policy and the professional practice of public analysis. We rely heavily on David L. Weimer and Aidan R. Vining’s text, Policy Analysis: Concepts and Practice. This course covers a series of critical concepts in the understanding of practicing, analyzing and assessing public policy.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L32 Pol Sci 405 Topics in Political Thought
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: ETH

L32 Pol Sci 4050 Political Representation
In this class we study the concept of representation. Historically, has representation been conceived? Conceptually, what should count as political representation, and must it always be democratic? As a normative problem, what should representatives do? And how should institutions be designed to foster these normative ends? Readings provide a broad overview of the subject and address enduring questions, including problems of minority representation, voting rights and redistricting. Prerequisite: Pol Sci 106 or Pol Sci 107.
Credit 3 units. A&S: SS A&S IQ: SSC BU: ETH EN: S

L32 Pol Sci 406 Topics in Political Thought
Questions regarding the relationship between the state and civil society are among the most enduring in political science — and the most pressing in contemporary political practice. This course examines an array of texts in political theory and recent empirical studies of the relationship between state and civil society. Among the questions we address are the following: What kinds of groups “count” as being part of civil society? What is the relationship between the state and civil society in a democracy? Can we meaningfully distinguish between political associations and economic associations? What is the relationship between voluntary associations and the market? What is the purpose of civil society? This course focuses on close readings of the assigned texts and consideration of contemporary understandings of the topic. It is aimed at students interested in comparative politics, political philosophy and political economy.
Credit 3 units. A&S: SS A&S IQ: SSC BU: ETH EN: S

L32 Pol Sci 4070 Global Justice
This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course is of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: ETH EN: S
L32 Pol Sci 412 Directed Readings
This is a course of readings in political science taken under the direction of an instructor in the department. Credit variable, maximum 3 units. A&S: SS

L32 Pol Sci 413 Directed Research
Research activities or project in political science done under the direction of an instructor in the department. Credit variable, maximum 3 units. A&S: SS

L32 Pol Sci 4131 Intolerance and Prejudice
Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315.
Same as L33 Psych 413
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

L32 Pol Sci 414 Directed Fieldwork
This course is a fieldwork project carried out under the direction of an instructor in the department. Credit variable, maximum 9 units. A&S: SS

L32 Pol Sci 415 Senior Thesis Research
Intensive research, conducted under the supervision and guidance of a faculty sponsor of the thesis. Credit variable, maximum 3 units. A&S: SS

L32 Pol Sci 419 Teaching Practicum in Political Science
This course is an opportunity for undergraduates to assist in course instruction, tutoring and preparation of problems, readings and exam materials with permission and under supervision of instructor. This course counts toward up to 6 hours of credit in an advanced field for the political science major. Credit variable, maximum 3 units. A&S: SS EN: S

L32 Pol Sci 4212 Elections
This course examines how politicians and policies are selected by citizens in democracies. The literature exploring the rules and procedures that govern elections is perhaps the most theoretically and empirically sophisticated body of knowledge in the study of politics. We explore how differences in these institutional rules across a variety of democracies shape the types of strategic choices voters make, the coalitions that legislators form, whose interests are represented, the structure of parties, the career paths of politicians, and the policies that governments pursue. We further investigate how, when and why electoral rules are changed with reference to several recent cases of electoral reform. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L32 Pol Sci 4231 Contemporary Issues in Latin America
How do the institutional designs of contemporary democratic governments help us understand the nature and quality of representation? We concentrate on variations in the powers granted presidents by constitutions as well as the institutional determinants of whether executives are likely to find support for their policies in the legislature. In addition, we explore how incentives established by electoral laws influence the priorities of members of congress. Given all these variations in democratic institutional design, can voters go to the polls with the confidence that politicians will implement the economic policies for which their parties have long stood or which they promised in their campaigns? Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: IS

L32 Pol Sci 4241 Topics in American Politics: Race and Politics
From the moment enslaved Africans were brought to American shores, race and racism has been central to the American political project. In this class we examine how notions of race and racism inform conceptions of citizenship, the allocation of state resources, the development of political parties, and political participation. We also examine the way that race and racism influence public opinion. Credit 3 units. A&S: SS

L32 Pol Sci 4261 Topics in American Politics: Politics of the Civil Rights Movement
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests. Prerequisite: Pol Sci 101B. Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Art: SSC EN: S

L32 Pol Sci 4263 Topics in American Politics: Race and Prejudice
Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315.
Same as L33 Psych 413
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

L32 Pol Sci 4281 Comparative Political Parties
This course examines the political polarization of the American political parties and explores its effects on the mass public and American democracy more generally. We examine what exactly is polarization, how it is measured, historical changes, potential causes, and its potential effects on the mass public and governance. Prerequisites: L32 Pol Sci 101B Intro to American Politics, L32 Pol Sci 363 Quantitative Political Methodology or equivalent. Credit 3 units. A&S: SS A&S IQ: SSC BU: BA

L32 Pol Sci 4291 Polarization in American Politics
This course examines the political polarization of the American political parties and explores its effects on the mass public and American democracy more generally. We examine what exactly is polarization, how it is measured, historical changes, potential causes, and its potential effects on the mass public and governance. Prerequisites: L32 Pol Sci 101B Intro to American Politics, L32 Pol Sci 363 Quantitative Political Methodology or equivalent. Credit 3 units.

L32 Pol Sci 4331 Topics in Comparative Politics
Credit 3 units. A&S: SS A&S IQ: SSC

L32 Pol Sci 4341 Intolerance and Prejudice
Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315.
Same as L33 Psych 413
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

L32 Pol Sci 4361 Contemporary Issues in Latin America
How do the institutional designs of contemporary democratic governments help us understand the nature and quality of representation? We concentrate on variations in the powers granted presidents by constitutions as well as the institutional determinants of whether executives are likely to find support for their policies in the legislature. In addition, we explore how incentives established by electoral laws influence the priorities of members of congress. Given all these variations in democratic institutional design, can voters go to the polls with the confidence that politicians will implement the economic policies for which their parties have long stood or which they promised in their campaigns? Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: IS

L32 Pol Sci 4421 Topics in American Politics: Race and Politics
From the moment enslaved Africans were brought to American shores, race and racism has been central to the American political project. In this class we examine how notions of race and racism inform conceptions of citizenship, the allocation of state resources, the development of political parties, and political participation. We also examine the way that race and racism influence public opinion. Credit 3 units. A&S: SS
L32 Pol Sci 4373 Immigration, Identity and the Internet
This class examines a critical issue in contemporary societies: How do changes in technology affect the process of immigration and how immigrant identity is shaped?
Credit 3 units. A&S: SS, CD, WI A&S IQ: LCD, SSC, WI Arch:
SSC Art: SSC EN: S

L32 Pol Sci 4400 Advanced Social and Political Philosophy
A selective investigation of one or two advanced topics in the philosophical understanding of society, government and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism, communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism, and the rights of cultural minorities. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 4400
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L32 Pol Sci 4402 Topics in Political and Social Theory: Constitutionalism
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S: SS EN: S

L32 Pol Sci 4451 Contemporary Politics in India
This seminar examines current topics and controversies in contemporary Indian politics. The course has three main foci: the links between politics and economic liberalization over the past two decades; the links between aspirative identities such as religion, caste and gender and contemporary political processes, including ethnic and gender quotas; and the changes in party politics at the national and state levels that have accompanied the decline of Congress party dominance. Specific topics include the role of caste and religion in contemporary politics; the rise of state parties and its effects on federal relations; the effects of economic reform and globalization on economy and society; urbanization and migration flows; the rise of modern Hindu nationalism; and the links between collective violence and electoral politics.
Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC BU: IS EN: S

L32 Pol Sci 4504 Contemporary Democratic Theory
Contemporary debates in democratic theory have produced a number of challenging and provocative accounts of how democratic institutions can and should work. In this course we analyze a number of competing theories of democracy and assess the similarities and differences among them. Although the course focuses primarily on theoretical issues, special attention is given to how empirical research in the social sciences on democratic institutions and procedures informs and clarifies these debates.
Credit 3 units. A&S: SS, WI

L32 Pol Sci 4505 American Political Parties
This seminar introduced students to core literature on political parties with a strong bias toward recent research.
Credit 3 units. A&S: SS A&S IQ: SSSC EN: S

L32 Pol Sci 451 Topics in American Politics: Supreme Court
This seminar has two purposes: to introduce students to the state of the art in studies of the Supreme Court and to cover a series of particular topics with emphasis on the major controversies within the field of law and the courts.
Credit 3 units. A&S: SS

L32 Pol Sci 4513 Topics in Politics: Criminal Law and Criminal Justice: Homicide
Seminar investigates current controversies surrounding the homicide laws. Topics include the definitions of homicide and claims of self-defense, the controversies about admissions of evidence at various stages of prosecution, and the debates about the use of capital punishment (including the capital punishment of youths). Includes general academic readings, readings of recent court opinions, and guest discussants from the legal community.
Credit 3 units. A&S; SS, WI A&S IQ: SSC, WI Art: SSC BU: BA

L32 Pol Sci 4522 Topics in American Politics
This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S: SS

L32 Pol Sci 4551 Seminar in Political Economy
This research seminar introduces the student to recent work on the political economy of democracy. We start with a historical account of the development of democratic institutions in Britain and the United States, and then continue with recent work on modeling elections. We compare elections in countries that make use of proportional electoral systems, such as Israel, with those like the United States and Britain that are highly majoritarian. Finally, we discuss the forces of democratization and globalization. The required work for the seminar is a research paper approximately 20 pages (double-spaced) in length.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: S

L32 Pol Sci 4552 Comparative Political Economy
This seminar introduces the student to aspects of social choice theory, applied to themes to do with the economic origins of democracy, democratization and the stability of social orders. We read and discuss a number of recent books: Acemoglu and Robinson on Economic Origins; North, Weingast and Wallis on Violence and Social Order; Przeworski on Democracy and Development; Ferguson on Money; Collier on Wars, Guns and Votes. If time permits, we discuss recent work by Stern on the Economics of Climate Change. Students are expected to work on two short research papers, either empirically or theoretically based, and make a presentation of their work near the end of the semester.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L32 Pol Sci 4562 Marxism After Marx: Philosophy and Radicalism in the 20th Century
As claims around the supposed post-modernity of our contemporary situation have ebbed, so scholars have returned once more to perhaps the defining philosophical and political voice of modernity, Karl Marx. This course prepares students to engage in current debates in the humanities over the nature of the political, the dynamics of class, the relative importance of the economy to “culture,” and the historical situatedness.
L32 Pol Sci 4621 Politics and the Theory of Games
This course covers basic primitives and more sophisticated tools of game theory as they are used in contemporary political science. It covers some issues of the forefront of contemporary research in game theory as the central analytical tool in studying the science of politics. The main substantive issues are the emergence of law and order in society, markets vs. political mechanisms, and the distinctive characteristics of parliamentary vs. presidential democratic systems. The course also includes some real case studies, basic experiments and, in general, a lot of fun.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

L32 Pol Sci 4625 Topics in Politics
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

This course focuses on America's involvement in Vietnam from the era of French colonialism through the collapse of United States intervention. Special attention is given to political, military, economic, and cultural aspects, as well as to international relationships, and the significance of the experience and subsequent developments upon both American and Vietnamese societies.
Same as L22 History 4894
Credit 3 units. A&S: TH A&S IQ: HUM

L32 Pol Sci 4730 Political Economy of Multinational Enterprises
In this class we explore the literature in political science and economics on the relationship between multinational enterprises and domestic governments. The four main themes of the course are: (1) defining and understanding multinational enterprises; (2) governments attracting and competing for multinationals; (3) the impact of multinationals on economic development and groups within society; and (4) attempts to regulate multinationals both domestically and internationally. Prerequisite: Pol Sci 102 or 103B.
Credit 3 units. A&S: SS A&S IQ: SSC BU: IS EN: S

L32 Pol Sci 4731 Global Political Economy
This course borrows on the insights of international relations scholarship and economic theory to develop a broad understanding of international economic relations. Specifically, this course attempts to address the following two sets of questions: (1) How do global economic relations fit into the broader category of international relations? How do the existing theories in international relations (liberalism, realism and Marxism) help us understand international economic relations between nation-states? (2) What are the effects of these international economic forces (trade, finance and multinational production) on domestic governments and societies?
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: IS EN: S

L32 Pol Sci 475 Topics in International Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: IS

L32 Pol Sci 4761 Politics of International Finance
In this course we examine the complex relationship between international finance, economic development, and domestic politics by drawing on the recent scholarly literature in economics, political science and finance. The focus is on the theoretical literature on both the determinants of international financial flows and its effects on domestic societies. Specially, we focus on five forms of international finance: (1) international equity markets (stocks), (2) flows of foreign direct investment (multinational corporations), (3) currency markets (with a special focus on currency crises), (4) international debt and (5) international aid.
Credit 3 units. A&S: SS EN: S

L32 Pol Sci 4772 Globalization and National Politics
This seminar examines globalization and its interaction with national politics. The movements of ideas, capital, goods, services, production and people across national borders provide a skeletal framework for the global political economy. Politicians, policymakers and societies discover new opportunities, but also dilemmas, as expanding interdependence challenges traditional notions of sovereignty and national policy autonomy. Prerequisite: Pol Sci 102 or Pol Sci 103.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

L32 Pol Sci 480 Topics in International Politics: Growth and Development
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

L32 Pol Sci 481 Seminar on American Election and Voting
Survey of major contributions to the study of American elections and voting behavior; patterns of voting through time as well as contemporary cross-sectional patterns.
Credit 3 units. A&S: SS

L32 Pol Sci 489 Politics of Regulation
Events such as the Gulf oil spill and the economic meltdown have dramatized the importance of regulation in the United States, and at the same time called into question the most fundamental beliefs about the nature of the regulatory process. This course reviews the notion of market failure as basic to understanding the rationale for government regulation; it also examines theories of governmental failure as a source of skepticism and concern regarding impediments to effective regulation. Much of the course reviews the development of regulatory machinery in the 20th century. We examine the political forces that have resulted in expansion of the institutions
of regulation — interest groups, partisan conflict, legislative negotiation, and executive leadership. We examine these forces in detail in examining the political and legislative response to recent financial and environmental crises.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

L32 Pol Sci 491 Collection and Analysis of Qualitative Data
This course covers basic techniques for collecting, interpreting and analyzing qualitative data. Students select a research project, collect appropriate qualitative data and conduct a preliminary analysis. Students learn how to gather several types of qualitative data, including participant observation and open- and closed-ended interviews. In addition, they evaluate and analyze primary data collected by others including oral histories, archival records, interview transcripts. We consider the advantages and disadvantages of non-randomly collected data, such as those gathered though ethnographic and archival methods. We assess the utility of building statistical datasets from such data, and students learn the basic techniques of using computer programs such as Nvivo and Atlas.ti for qualitative data. Biweekly assignments that focus on different aspects of collection and analysis are designed to help students produce a research paper as a final project.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L32 Pol Sci 495 Research Design and Methods
This course provides an introduction to qualitative and quantitative research methods in political science. Topics address issues related to theory building as well as theory testing. Technical issues related to these methods are not the focus of this course, as are theoretical issues regarding the advantages and disadvantages of the different approaches. Ultimately, the goal of this course is twofold: (1) to instruct students to critically analyze scholarly articles with particular attention to research design; and (2) to guide students in how to design an original research project. Both the reading assignments, including methodological and applied readings, and the written assignments are directed toward these goals.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 496 Game Theory and Collective Choice
An introduction to models of collective choice important in political science, including game theory, the spatial voting model and axiomatic social choice theory. The course concentrates primarily on noncooperative game theory, whose main topics include: strategic and sequential forms, Nash equilibrium, solution by backward induction, imperfect information, repeated games; and applications to voting, campaigning, public goods, agenda design, bargaining and collective action. With noncooperative games as a foundation, the course then examines cooperative game theory (games in coalition form), voting as a social choice mechanism (including the median voter theorem and global cycling theorems), and social-choice possibility theorems (such as Arrow’s Theorem). Prerequisite: Math 131 Calculus I or Pol Sci 5052 Mathematical Modeling, or equivalent.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L32 Pol Sci 49PK The Founding Fathers’ Government in an Electronic Age
This is a research seminar that examines how Americans sought to translate their notions of government into a realistic set of priorities and a functioning set of public institutions. Extending from 1789 through the 1820s, this course investigates how the federal government came into being, what it did, and who populated the civilian and military rank of American officialdom. This is also a course in digital history. Students create new knowledge through their own contributions to an ongoing digital project that seeks to reconstruct the early federal workforce. In the process, students learn a variety of digital techniques, ranging from encoding languages to electronic systems to software packages.

Same as L22 History 49PK
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

Portuguese

Portuguese is the sole official language of nine countries spanning four continents. These include: Angola, Brazil, Cape Verde, Guinea-Bissau, Mozambique, Portugal, and São Tomé and Príncipe. In addition, Portuguese enjoys co-official language status in East Timor, Equatorial Guinea, and Macau. Moreover, Portuguese is the fifth most common language spoken on the internet.

Among the countries where Portuguese is an official language, Brazil, of course, stands out as a formidable emerging 21st-century economic power. With a population of more than 190 million people, it is one of the 10 largest markets in the world.

Students learning Portuguese are often initially attracted by the array of vibrant Lusophone cultures worldwide, but the language is also appealing for pragmatic reasons to increasing numbers of business, economics, political science, anthropology, and environmental studies majors. Many students are interested in Latin American Studies or globalization, or are curious about Brazil’s rich natural resources and booming technology industry.

Portuguese is an outstanding supplement to any student’s education and, for those already fluent in Spanish, represents the chance to take a fast-paced course sequence and be fluent more quickly in multiple languages.

At Washington University, Portuguese classes are marked by the same joyful, positive environment characteristic of many Lusophone cultures. Outside the classroom, students can improve their fluency at Mesa Lusófona, a conversation table, as well as at Lusophone Movie Nights, in addition to choosing from study abroad programs affiliated with the university, either for the summer or for an entire semester.

Bem-vindos!

Faculty

For a list of affiliated faculty, please visit the Department of Romance Languages and Literatures faculty (p. 724) page.
Majors

The Department of Romance Languages and Literatures offers two years of intensive course work in Portuguese and, while there is not yet an official major in this area, students can opt to include Portuguese as one of their three (3) languages of concentration in the pursuit of a Romance languages major. For more information about this option, please contact: Dr. Valéria M. Souza (vsouza@wustl.edu).

Minors

The Department of Romance Languages and Literatures offers course work in Portuguese; however, there is not yet a minor in this area.

Courses

L37 Portug 101 Portuguese I
Introduction to Portuguese language. The course emphasizes acquisition of communicative ability. It also covers basic grammar points through reading and writing activities. Classes are taught entirely in Portuguese. No prior experience in the language is required. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L37 Portug 102A Portuguese II
Introduction to Portuguese language. This second course in the Portuguese program emphasizes acquisition of communicative ability. It also covers basic grammar structures through reading and writing activities. Classes are taught entirely in Portuguese. Prerequisite: Portug 101 or permission of instructor. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L37 Portug 103 Portuguese for Spanish Speakers I
Intensive and accelerated course especially designed to take advantage of students' knowledge of Spanish and to promote a more rapid learning of Portuguese. Classes are entirely taught in Portuguese and stress oral communication, basic use of grammar, reading and writing skills. Intermediate online placement exam in Spanish is required. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

L37 Portug 104 Portuguese for Spanish Speakers II
This course intends to offer a sequence in the learning process initiated in Portug 103. It is a fast-paced class, designated for Spanish speakers with the objective of improving conversational, writing and reading skills. Prerequisite: Portug 103 or permission of instructor. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

L37 Portug 215 Reading and Conversation I
The goal of this course is to review and enhance the content learned at the basic level. Through culturally relevant readings and related conversational activities, students are expected to enrich their vocabulary, gain fluency, and improve both reading comprehension and writing skills. Prerequisites: two college semesters of Portuguese or permission of instructor. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L37 Portug 220 Reading and Conversation II: Intermediate Portuguese
This course is a continuation of Portug 215, therefore an intermediate level in the Portuguese section. Its main goal is to improve students' reading proficiency, as well as to provide a class environment in which conversational skills can be practiced and made into a solid foundation. In addition, the class provides tools to expand vocabulary and promote a cultural understanding of Brazil. Prerequisite: Portug 215 or permission of instructor Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

L37 Portug 400 Independent Study
Credit variable.

Praxis

The Praxis program provides an exciting opportunity to combine the analytical reading, writing and thinking skills of a liberal arts education with the marketable skills required in the 21st century to take students into career paths of their own design.

Eligibility Requirements: The program is designed for students entering their sophomore year. Students must fill out an application for the program (available online (http://college.artscl.wustl.edu/praxis)). Students may apply to the program after their first semester freshman year, and applicants are accepted on a rolling basis through the first semester junior year. Students must have maintained at least a 3.0 grade point average in their first semester to be considered eligible.

Faculty: The Arts & Sciences faculty, from a wide variety of backgrounds, have helped to develop the program and are eager to teach, monitor and mentor the Praxis students. In addition, leaders in business, nonprofit organizations and government, many of whom discovered the foundation for their success in liberal arts studies, will be lecturers in the signature Praxis courses.

Focused Workforce Curriculum: Not only does the Praxis program provide students with the foundation of a liberal arts education, the curriculum is designed specifically to provide students with many additional tools essential for their future in the world of work. Besides the specialized content of a particular field, the student will be acquiring the expertise essential for his or her first job as well as for careers that may not yet exist:

• Analysis of multiple perspectives essential in the increasing globalization of our world
• Critical thinking
• Familiarity with quantitative analysis and methods
• Outstanding writing and speaking skills
• Foreign language literacy and culture
• Team and group work expertise and psychology
• Essential skills in traditional and emerging technology

Internships: The Praxis experience culminates in an internship taken normally at the end of the junior year that allows students to synthesize the tools and theories they have learned and use them in the workplace. Locations for internships may include national and international sites.

Community: The success of our students is central to our program. The academic advisers, as well as each Praxis faculty member, assist students in tailoring their education to their own interests and goals. In particular, each student's faculty mentor closely monitors the student's progress. The faculty and staff and all the Praxis students form a supportive community that stimulates and encourages the highest standards of excellence in the students' studies and in their chosen careers.

The Program

1. Leadership and group experience (3 units) (fall of sophomore year)
   
   Required: Praxis 201 Leaders in Context

2. Information technology skills (2 units) (fall of sophomore year)
   
   Required: Praxis 207 Fluency in Sociotechnology

3. Communication skills, both written and oral (3 units) (spring of sophomore year)
   
   Required: Praxis 285 Communication That Works

4. Analytic and problem-solving requirement (3 units)
   
   Required: Econ 1011 Introduction to Microeconomics

5. Quantitative skills (3 units)
   
   Required: A course in statistics (select one from below):
   
   Math 1011 Introduction to Statistics 3
   Math 2200 Elementary Probability and Statistics 3
   Math 3200 Elementary to Intermediate Statistics and Data Analysis 3
   Pol Sci 363 Quantitative Political Methodology 3
   Psych 300 Introduction to Psychological Statistics 3

6. International perspective or experience (3 units)
   
   Required:
   
   The study of any language through the 300 level or Study Abroad or One course in international economics or economic development (must be 300-level or above)

7. Internship (3 units)
   
   As the capstone experience of the Praxis program, the internship allows students to put into practice the skills and knowledge learned in the Praxis curriculum. The Praxis internship is conducted with the mentorship of a sponsoring Praxis faculty member and usually occurs by the end of the junior year. Students should contact the Praxis internship coordinator and have a faculty mentor in place before beginning the internship. It is not possible to fulfill the internship portion of the Praxis program with an internship that occurred before completing the majority of Praxis requirements, and the internship should consist of 135 hours.

   Upon completion of the internship, there are two options available for students in order to fulfill the Praxis internship requirement. In conjunction with the approval of the faculty sponsor, the student submits a 10-page paper exploring the relevant issues and questions set by the sponsoring faculty. Depending on the topic, nature of the internship and discretion of the sponsoring faculty, a daily journal may be submitted in lieu of the 10-page paper. For full details as to the requirements for this internship, contact Dean Joy Kiefer (jkiefer@wustl.edu). Required for completion of the Praxis program.

8. Praxis Seniors Master Class (1 unit)

   As a capstone to the Praxis program experience, this course revisits the major themes of the core Praxis courses in order to analyze their meanings in an interdisciplinary way. Students learn and explore the deeper applications of the topics introduced to them in their Praxis course work at a time in which they can reflect about what they have learned in the context of their internship experience.

   Interdisciplinary lectures from the Praxis associated faculty in political science, anthropology and psychology will include the topics of organizational culture, leadership, followership, cooperation, communication, decision-making and presentation. This course is a requirement for the seniors enrolled in the Praxis program.

PhD, Washington University
(College of Arts & Sciences)

Participating Faculty
Robert W. Duffy
Lecturer
AB, Washington University
Credit 3 units. This course studies the fundamentals of technology and how that technology is effectively implemented in organizations and affects human interactions and processes. We consider much of Microsoft Office: Excel, Access and PowerPoint and how the presentation of data in these forms affects our decision-making processes and how humans interact using these technologies. We also develop web skills with a close look at how presentation of information and data in general forms or does not function based simply on how it is presented. This course is limited only to students enrolled in the Praxis program. Credit 2 units. A&S: SS & S IQ: SSC Arch: SSC Art: SSC EN: S

This course seeks to add in-depth sophistication to the functional skills acquired in one of the Praxis core courses, Fluency in Sociotechnology. Through interdisciplinary reading and exercises, the course illustrates to students that not all visual messages are created equal even when they contain the same information. For example, the most commonly used presentation tool, Microsoft PowerPoint, is routinely used in ways that misrepresents the data it is meant to explain. Organizations often create confusing and complicated spreadsheets that produce numerous and costly errors, the very thing the software is meant to eliminate. Furthermore, websites are regularly so difficult to navigate and use they unknowingly hemorrhage profits and customers, the two things the technology is designed to attract. In this course, students learn the social, psychological and organizational implications of using these technologies so they may become more skillful and effective practitioners. This course is limited only to students in the Praxis program. Prerequisite: Praxis 207 Fluency in Sociotechnology. Credit 3 units. A&S: SS & S IQ: SSC EN: S

L62 Praxis 285 Communication That Works
This course focuses on the communication forms and skills essential to contemporary living and working. Various forms of writing for different audiences and purposes: business letters, memorandums, proposals, reports, press releases, speeches as well as public speaking are practiced and critiqued. The use of technology common in public speaking is practiced and critiqued. The use of technology common in public presentations is expected. Course reading is supplemented with viewing and listening. Final grade is based on combination of quizzes, writing assignments and demonstration of speaking skills. This course is limited only to students enrolled in the Praxis program. Credit 3 units. A&S: LA & S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L62 Praxis 286 Entrepreneurship and the Liberal Arts
It is a little-known truth that more entrepreneurs come out of Arts & Sciences than any other college. This course begins by exploring why this is so, examining in particular the creative and innovative qualities developed in liberal arts that are crucial to the success of the entrepreneur. We then move on to examine entrepreneurs in action, hearing from those in the field and reading of others, learning how the liberal arts proved instrumental in various ways to their development and ultimate success as entrepreneurs. Credit 3 units. A&S: TH & S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L62 Praxis 300 Praxis Seniors Master Class
As a capstone to the Praxis Program experience, this course revisits the major themes of the core Praxis courses in order
to analyze their meanings in an interdisciplinary way. Students learn and explore the deeper applications of the topics introduced to them in their Praxis course work at a time in which they can reflect about what they have learned in the context of their internship experience. Interdisciplinary lectures from the Praxis associated faculty in political science, anthropology, psychology, topics include organizational culture, leadership, followership, cooperation, communication, decision-making and presentation. This course is a requirement for seniors enrolled in the Praxis program.
Credit 1 unit. A&S: SS A&S IQ: SSC EN: S

L62 Praxis 367 Seminar in Positive Psychology
Reviews the relatively recent development in the field known as “Positive Psychology.” Topics may include: happiness and life-satisfaction, positive self-esteem, creativity, caring relationships, love (passionate and otherwise), empathy, optimism, ambition, moral character development, attachment, compassion, forgiveness, helping, work ethics, and successful aging. Designed to take a sampling of those aspects of psychology that emphasize the positive side of human nature. Prerequisites: Psych 100B, junior or senior standing.
Same as L33 Psych 367
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

Psychological & Brain Sciences
Psychological & Brain Sciences allows students to examine in depth the study of behavior in the areas of:

- Aging and development
- Biological bases of behavior
- Clinical and abnormal psychology
- Cognition
- Cognitive neuroscience
- Learning and memory
- Personality
- Sensation and perception
- Social interactions

The Department of Psychological & Brain Sciences at Washington University has particular strengths in the areas of:

- Aging
- Behavioral economics
- Human development
- Cognitive neuroscience
- Judgment and decision making
- Learning and operant conditioning
- Neuropsychology
- Personality and individual differences
- Adult psychopathology
- Sensory processes in vision and audition
- Social theories of self and social processes
- Human emotion

Opportunities for undergraduates include:

- Research involvement with faculty members
- Supervised internships with community service agencies
- Practicum in Applied Behavior Analysis
- Study abroad
- Concentrations within the major
- Senior Honors
- Membership in Psi Chi, the national honor society in psychology

**Majors**

The Department of Psychological & Brain Sciences (P&BS) offers the following majors:

- Psychological & Brain Sciences (p. 692)
  - Concentrations in Psychological & Brain Sciences (p. 693)
- Cognitive Neuroscience (p. 695)

**The Major in Psychological & Brain Sciences**

The field of psychology encompasses a large and diverse area of study that is empirical, theoretical and practical. As the science concerned with the study of behavior, psychology includes such areas as biological bases of behavior; brain-behavior interactions; learning; memory; cognition; motivation; sensation and perception; the study of social interactions, persuasion and attitudes; aging and development; personality; clinical, abnormal and health psychology; and leisure and work experiences. Psychology is a multipurpose, valuable discipline in which to major. It has relevance for those considering careers in law, medicine, the health professions, education and business. In addition, it provides important skills and knowledge for those who may not be planning additional schooling.

**Total units required:** 34 units, of which at least 25 must be at the 300 level or above.

**Required courses:**

- Psych 100B Introduction to Psychology is a prerequisite for all upper-level courses (numbered 300 and above).

- Exemption from Psych 100B is possible in the following circumstances:
  - Completion of an equivalent course transferred from another institution, if approved by the Director of Undergraduate Studies.
  - An AP Psychology test score of 5 or IB score of 6 or 7. *(N.B. AP or IB earns exemption from Psych 100B but no credit.)*
  - Psych 300 Introduction to Psychological Statistics
  - Math 2200, or Math 3200, or both Marketing Statistics QBA 120 & QBA 121 may substitute for Psych 300, although no units of major credit will be awarded.
  - Psych 301 Experimental Psychology or Psych 3011 Experimental Psychology

**Core requirements:** At least one course from each of the following five categories:

- **Social/Personality:**
  - Psych 315 Introduction to Social Psychology 3
  - Psych 353 Psychology of Personality 3

- **Abnormal/Affective Psychology:**
  - Psych 3501 Psychotherapy: Introduction to Practice and Research 3
  - Psych 354 Abnormal Psychology 3
  - Psych 3645 Understanding Emotions 3

- **Biological/Neurological Bases of Behavior:**
  - Psych 330 Sensation and Perception 3
  - Psych 3401 Biological Psychology 3
  - Psych 345 Genes, Environment and Human Behavior 3
  - Psych 3604 Cognitive Neuroscience 3
  - Psych 374 Drugs, Brain and Behavior 3

- **Behavior and Cognition:**
  - Psych 360 Cognitive Psychology 3
  - Psych 361 Psychology of Learning 3
  - Psych 380 Human Learning and Memory 3
  - Psych 433 Psychology of Language 3

- **Lifespan Development:**
  - Psych 321 Developmental Psychology 3
  - Psych 325 Psychology of Adolescence 3
  - Psych 326 Introduction to the Psychology of Aging 3
  - Psych 427 Social Gerontology 3

**Elective courses:** An additional 9 units of course work

No more than 6 units from the following categories may be used to satisfy the minimum requirements for the psychological & brain sciences major:
• 100-/200-level classes (other than Psych 100B)
• Psych 333 Independent Study in Psychological and Brain Sciences
• Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences
• Psych 498 Study for Honors and Psych 499 Study for Honors
• University College-approved psychology classes
• Cross-listed courses not home-based in Psychological & Brain Sciences
• Transfer classes (students transferring from another college, please refer to the Transfer Credit section below)

Additional Information

Transfer Credit: If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the psychological & brain sciences department for their applicability toward the major. At least 18 units of course work in Psychological & Brain Sciences must be completed at Washington University to earn a major.

Senior Honors: The primary goal of the Honors Program in psychological & brain sciences is to provide students who have achieved a superior academic record the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

• Overall and psychological & brain sciences GPAs ≥ 3.65
• Completion of both Psych 300 and Psych 301 (or Psych 3011)
• An approved honors research adviser

Concentrations in Psychological & Brain Sciences

To augment the broadly based psychological & brain sciences major, the department offers concentrations for students who wish to engage more intensively with a specific area within the discipline. The concentrations are meant as an enrichment of the major, but all of the units for the concentrations may be part of the regular P&BS major requirements.

A concentration requires a minimum of 12 units, which include required and elective courses, one of which must be at the 400 level. In addition, to complete a concentration, students will have to undertake an approved research assistantship (Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences), or an approved internship, practicum or honors thesis.

A concentration will be a valuable experience for students planning on graduate study in psychology or related fields, or for those who have a particular interest or want to gain expertise in one of the approved concentrations. Each concentration will have a member of the faculty as the contact person to meet with and advise students in the concentration.

Courses taken for a concentration may be used to fulfill no more than one of the Core categories or distribution requirements of a psychological & brain sciences major. None of the units for a concentration can be counted for any other major or minor (i.e., there is no double counting). For those doing the psychological & brain sciences: cognitive neuroscience major, the cognitive neuroscience concentration is not an option.

There are six concentrations, listed below:

Cognition in Children — This concentration allows students to acquire deeper knowledge of cognition and its development in the first few years of life. The courses for the concentration consider child development more generally and then explore in more depth the early development of cognitive, conceptual and social-cognitive abilities. Adviser/coordinator: Professor Lori Markson.

Course work required: Psych 321 Developmental Psychology
Electives (must include two classes, at least one of which is at the 400 level):

Psych 358 Language Acquisition 3
Psych 4046 Developmental Neuropsychology 3
Psych 4591 The Development of Social Cognition 3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Lori Markson, Rebecca Treiman, Desirée White.

Cognitive Neuroscience — This concentration allows students to acquire deeper knowledge of the relation between mind and brain. The courses for the concentration consider the neurobiological basis for psychological functions at a more general level, and then explore in greater depth specialized topics relating to how higher cognitive processes, such as memory, attention, perception and emotion, emerge from brain function. Adviser/coordinator: Professor Todd Braver.

Course work required:

Psych 3401 Biological Psychology 3
or Psych 344 Principles of the Nervous System

Electives (must include two classes, at least one of which is at the 400 level):

Psych 3604 Cognitive Neuroscience 3
Psych 374 Drugs, Brain and Behavior 3
Psych 4046 Developmental Neuropsychology 3
Psych 4413 Advanced Cognitive Neuroscience 3
Psych 4450 Functional Neuroimaging Methods 3
Psych 4745  Genes, Brain and Behavior: Pathways to Psychopathology  3
Psych 4765  Inside the Disordered Brain: Biological Bases of the Major Mental Disorders  3
Psych 488  The Cognitive Neuroscience of Film  3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Deanna Barch, Todd Braver, Ryan Bogdan, Ian Dobbins, Denise Head, Kathleen McDermott, Jeff Zacks.

Reading, Language and Language Acquisition — This concentration provides students with a deep and broad knowledge of linguistic development. The courses look in-depth at the development of written and spoken language. Adviser/coordinator: Professor Rebecca Treiman.

Course work required: Ling 170D Introduction to Linguistics
Electives (must include two classes, at least one of which is at the 400 level):
Psych 234  Introduction to Speech and Hearing Disorders  3
Psych 358  Language Acquisition  3
Psych 358W  Language Acquisition (WI)  3
Psych 433  Psychology of Language  3
Psych 4351  Reading and Reading Development  3
Psych 4352  Reading and Reading Development WI  3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Rebecca Treiman, David Balota, Lori Markson, Mitchell Sommers.

Lifespan Development — Many introductory courses in developmental psychology focus on changes that occur from birth to adolescence. The supplemental concentration in lifespan development provides students with an understanding of the cognitive and physiological changes that occur over the lifespan, with a primary focus on older adulthood. A major goal of the concentration is to provide students with an understanding of the similarities and differences in development at different stages of the lifespan. Adviser/coordinator: Professor Mitchell Sommers.

Course work required:
Psych 326  Introduction to the Psychology of Aging  3
Psych 427  Social Gerontology  3
Electives (must include one of the following courses):
Psych 321  Developmental Psychology  3
Psych 4301  Contemporary Topics in Cognitive Development  3

Research mentorship or internship experience: Students can complete this aspect of the concentration with either a prior approved research mentorship or an approved internship related to older adults. Successful completion of a paper is required in either case. Relevant faculty for research mentorship: Mitchell Sommers, David Balota, Brian Carpenter, Sandra Hale, Denise Head, Lori Markson. Possible internships: Work in an assisted-living facility or other community-based program designed to assist older adults. Other internships are available; contact Dr. Brian Carpenter for opportunities.

Experimental Psychopathology — This concentration allows students to acquire more advanced knowledge of the ways in which psychologists study mental disorders. Current research has demonstrated the importance of integrating psychological and biological variables in understanding the classification, etiology and treatment of a wide variety of mental disorders, including schizophrenia, mood disorders, anxiety disorders, substance use disorders and eating disorders. Students who pursue this concentration will develop a broadly-based appreciation for conceptual and methodological issues that are central to research in psychopathology. Adviser/coordinator: Professor Deanna Barch.

Course work required: Psych 354 Abnormal Psychology
Electives (must include two classes, at least one of which is at the 400 level):
Psych 345  Genes, Environment and Human Behavior  3
Psych 374  Drugs, Brain and Behavior  3
Psych 4541  Personality and Psychopathology  3
Psych 4557  Biopsychosocial Aspects of Eating Disorders and Obesity  3
Psych 4745  Genes, Brain and Behavior: Pathways to Psychopathology  3
Psych 4765  Inside the Disordered Brain: Biological Bases of the Major Mental Disorders  3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Deanna Barch, Ryan Bogdan, Josh Jackson, Tom Oltmanns, Tom Rodebaugh, Renee Thompson, Denise Wilfley.

Personality and Individual Differences — This concentration allows students to acquire deeper knowledge of how and why individuals differ from one another and the ways in which individual (e.g., personality, self) and group differences (e.g., gender) influence behavior, emotion, experience, identity and psychopathology. The core course for the concentration (Psych 353) considers personality more generally. The seminars explore in depth specific aspects of personality and individual differences, including biological bases of individual differences (i.e., genetics), the interpersonal processes associated with personality and personality judgment, individual differences in self and identity, group differences and personality pathology. Adviser/coordinator: Professor Tammy English.
Course work required: Psych 353 Psychology of Personality

Electives (must include two classes, at least one of which is at the 400 level):

Psych 3645 Understanding Emotions 3
Psych 367 Positive Psychology: The Science of Happiness 3
Psych 413 Contemporary Topics in Social Psychology 3
Psych 4541 Personality and Psychopathology 3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Tammy English, Josh Jackson, Randy Larsen, Tom Oltmanns, Michael Strube, Renee Thompson, Heike Winterheld.

The Major in Cognitive Neuroscience

How does the brain think? Cognitive neuroscience refers to the scientific study of the linkage between mental functions and the operation of the brain and nervous system. The goal of cognitive neuroscience is to provide an understanding of psychological processes, such as attention, memory, thinking and emotion, in terms of physical principles and biological components. At the same time, it aims to provide an understanding of the psychological constraints on how the brain functions, computes, and generates behavior. Students who pursue the undergraduate major in psychological & brain sciences: cognitive neuroscience will gain a strong foundation in how to study the brain and mind at various levels of analysis, including cellular biology, brain systems, cognitive and affective function, and neural computation. In addition, they will gain an appreciation of the relation between healthy cognitive and brain function and its breakdown in various disease states and disorders. A cognitive neuroscience degree provides excellent preparation for a career in health and medical professions, scientific research, computer fields, education, and the law.

Total units required: 37 units/12 courses (plus prerequisites).

Prerequisites Outside of Psychological & Brain Sciences (6 units):

Math 132 Calculus II 3
Biol 2960 Principles of Biology I 4

Note: Each of these prerequisites has its own prerequisites — Math 132 requires Math 131, and Biol 2960 requires Chem 111A and Chem 112A (concurrently).

Note: These are Biology and Pre-Med prerequisites as well and are typically completed in the freshman year. They might alternatively be satisfied through AP or any other already-approved mechanism from the respective department or the college.

Core Requirements (19 units/6 courses):

<table>
<thead>
<tr>

</table>

Total units: 19

Note: The first three requirements (i.e., Psych 100B, 300, and 301/3011) are the same as those for the regular psychological & brain sciences major).

Note: L33 Psych 344 is home-based in Biology; students should register under the cross-listed Psych L33 course designation, not L41 Biol 3411.

Exemption from Psych 100B is possible in the following circumstances:

- Completion of an equivalent course transferred from another institution, if approved by the Director of Undergraduate Studies.
- An AP Psychology test score of 5 or IB score of 6 or 7. (N.B. AP or IB earns exemption from Psych 100B but no credit.)

Math 2200, or Math 3200, or both Marketing Statistics QBA 120 & QBA 121 may substitute for Psych 300, although no units of major credit will be awarded.

Additional Biological & Cognitive Distributions (6 units/2 courses): One each from A & B:

Group A eligible courses:

</table>
Or, with prior approval, another course involving a significant computational/programming component.

**Capstone/Depth requirement (9 units/3 courses): One each from A, B, C:**

(Note: None of these can be used to also fulfill any of the other requirements — i.e., no double counting.)

*Group A eligible courses:*
- Psych 4046 Developmental Neuropsychology 3
- Psych 4182 Perception, Thought and Action 3
- Psych 4413 Advanced Cognitive Neuroscience 3
- Psych 4450 Functional Neuroimaging Methods 3
- Psych 4745 Genes, Brain and Behavior: Pathways to Psychopathology 3
- Psych 4765 Inside the Disordered Brain: Biological Bases of the Major Mental Disorders 3
- Psych 488 The Cognitive Neuroscience of Film 3

*or* an appropriate 400-level course from outside the department (with prior approval), e.g.:
- Biol 4030 Biological Clocks 3
- Biol 404 Laboratory of Neurophysiology 4
- Biol 4580 Principles of Human Anatomy and Development 3
- Phil 4212 Philosophy of Neuroscience 3

*Group B eligible courses in capstone research/writing intensive experience:*
- Psych 4046 Developmental Neuropsychology 3
- Psych 4413 Advanced Cognitive Neuroscience 3
- Psych 444B Independent Study for the Major in P&BS: Cognitive Neuroscience 3
- Psych 498 Study for Honors 3

*Group C eligible courses: An additional 3 units from group A or group B or, by prior approval: MBB 300, Psych 333, or Psych 498/Psych 499.*

**Acceptance into the Psychological & Brain Sciences: Cognitive Neuroscience Major**

Acceptance to the major is contingent on an application and then approval by the major committee. As part of this application, the student will meet with an appropriate adviser who will carefully review the requirements and oversee the student's progress. A brief paragraph statement from the student on why they feel that the cognitive neuroscience major is appropriate for them will be requested as part of the application.

Washington University students will be considered for admission to the cognitive neuroscience major no sooner than in their third semester (sophomore year). Decisions are based upon the student's application, academic record, and interview with the major adviser.

**Minors**

**The Minor in Psychological & Brain Sciences**

Units required: 15

**Required course:** Psych 100B Introduction to Psychology

**Elective courses:**

Four additional courses (i.e., a minimum of 12 units of additional course work) in Psychological & Brain Sciences, all of which must be at the 300 level or above.

**Additional Information**

No more than 3 units of an approved cross-listed course originating outside the Department of Psychological & Brain Sciences, an approved psychology course taken in University College, an approved psychology course taken at another university, or an independent study-type course (e.g., Psych 500) may count toward the minor. (Transfer students must complete at least 9 advanced units of home-based Psychological & Brain Sciences courses at Washington University.)

For those who have a broad or general interest in psychological and brain sciences, we recommend taking several courses from the five core areas (i.e., Social/Personality; Abnormal/Affective Psychology; Biological/Neurological Bases of Behavior; Behavior and Cognition; and Lifespan Development).

For those students who want to concentrate in a more specialized area, courses can reflect such specialization. For example, a student interested in the helping professions or counseling may wish to select from such courses as Psych 353 Psychology of Personality, Psych 354 Abnormal Psychology, Psych 361 Psychology of Learning, and Psych 321 Developmental Psychology. A student wishing to pursue a specialization in experimental psychology/neuroscientific bases of behavior might select from such classes as Psych 3401 Biological Psychology, Psych 361 Psychology of Learning, Psych 330 Sensation and Perception, Psych 360 Cognitive Psychology, and Psych 3604 Cognitive Neuroscience, and consider doing Independent Study (Psych 333).

**Courses**

**L33 Psych 100B Introduction to Psychology**

A survey and analysis of concepts, theory and research covering the areas of learning, memory, social, abnormal, clinical, physiological and sensory psychology. This is a general survey course designed to introduce students to the diversity of areas,
approaches and theories that comprise the study of mind and behavior. Psych 100B is required of all majors and is prerequisite to all upper-level courses in psychology. Open to freshmen. Note: For students enrolled in Psych 100B who are interested in exploring a few areas of psychology within a seminar format, refer to the companion course, Psych 102 Seminar: Introduction to Psychology.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

L33 Psych 102 Seminar: Introduction to Psychology
This seminar enables students enrolled in Psych 100B to explore in greater depth several of the ideas and concepts in contemporary psychology. Open to freshmen who are concurrently enrolled in or have completed Psych 100B. Also open to sophomores who are concurrently enrolled in Psych 100B. Sections are limited to 15 students. Credit 1 unit. A&S: SS A&S IQ: SSC Art: SSC

L33 Psych 105 Psychology of Young Adulthood: College Years
This course covers selected topics relevant to the developmental, social, personal and cognitive issues confronting young adults during their college years. Material is drawn mainly from the field of psychology, and the emphasis is on the scientific basis of concepts and on empirically supported strategies for growth and development. The knowledge gained may contribute to academic success, personal development and a more rewarding social and academic experience over the course of college and beyond. Freshman standing, entering first-year undergraduates only. Credit 1 unit.

L33 Psych 106 The Science of Effective Study Strategies
You have now spent at least 12 years in school, studying for exams and/or tests (for most of you, that’s most of your lifetime). What can current research tell us about how well we study, whether we make efficient study decisions, and whether our study strategies are effective? This course offers an overview of current research from cognitive and educational psychology on effective study strategies. Throughout this course, students are encouraged to develop their understanding of scientific research and evaluate evidence supporting study strategies. Prerequisite: open only to freshmen and sophomores. Credit/no credit only. Credit 1 unit. A&S: SS A&S IQ: SSC EN: S

L33 Psych 109 Research Seminar in Psychology
Weekly presentations by various members of the psychology faculty; introduces students to research areas and current issues. Attendance at all lectures required. Open to freshmen and sophomores only. Prerequisite: Psych 100B. Credit/no credit only. Credit 1 unit. A&S: SS A&S IQ: SSC Art: SSC

L33 Psych 111 Mindfulness: Science and Practice
Mindfulness is a term that is becoming increasingly used in popular culture to refer to a set of skills associated with increased attentional focus, successful stress-management, and improved health, sleep, and emotional well-being. This course will expose students to the various facets of mindfulness from both an applied and scientific perspective, both through the teaching of mindfulness skills through a set of easy-to-learn practices and exercises, and through a survey of empirical research regarding mindfulness effects on cognition, emotion, brain function and health. The goal of the seminar will be to provide practical skills that can contribute to personal development, emotional well-being and academic success, while also developing critical thinking skills in learning how to read and evaluate primary scientific literature on mindfulness. Open to freshmen only. Credit 1 unit.

L33 Psych 219 The Infant Mind
What goes on inside the mind of an infant? Descartes argued that the infant was entirely bound by sensation; thus, to think like a baby was to not think at all. Over the past few decades, however, research has revealed that the mind of the infant is abuzz with activity, capable of quickly learning astonishing amounts of information in a relatively short time. In this course we explore different topics concerning the inner workings of the infant mind. We cover topics such as imagination, language, memory, emotions and morality. This course is open to students from all majors, but Psych 100B is highly recommended. Enrollment is restricted to 24 sophomores or by permission of the instructor. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L33 Psych 221 Freshman Seminar: Introduction to Memory Studies
This course focuses on memory not only as an individual phenomenon but also as the basis for the transmission of culture and the construction of collective identity. We survey such topics as experimental methods and findings in the study of individual memory; questions of accuracy and vividness of memory and witness reports; repressed memories; transmission of cultural norms and identity through narratives; shared historical memories; individual trauma and historical upheaval; revision of the past and political usage of collective memory. Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 225 Internship in Psychology
An opportunity to gain supervised, applied experience in a nonacademic, community service agency. For a description of prerequisites, goals, agency selection, registration policies and course requirements, obtain a copy of A Guide to Internships in Psychology from the Psychology department office. In addition to work at their internship site, students are required to meet regularly with the internship coordinator. This course can be taken only once. CBTL (http://www.gephardtinstitute.wustl.edu/CBTL/Pages/overview.aspx) course. Credit/no credit only. Credit 3 units.

L33 Psych 234 Introduction to Speech and Hearing Disorders
Introduction to the fields of speech-language pathology, audiology, education of hearing-impaired children, and speech and hearing sciences. Normal speech and hearing processes are discussed, as well as communication disorders. Selected research topics in speech and hearing sciences are presented. Same as L12 Educ 234 Credit 3 units. BU: BA EN: S
L33 Psych 235 Practicum in Applied Behavior Analysis: Autism Spectrum Disorder
An opportunity to be trained in applied behavior analytic techniques and to work with a child with autism/pervasive developmental disorder. Training and supervision are arranged and coordinated by the family of the child and their consultant. To receive credit, students must undertake a year’s work with the child, complete the minimum number of hours of training and therapy, and attend regular therapy meetings. In addition, students must meet with the practicum coordinator for discussion of assigned readings and presentations on autism and therapy. Completion of a paper also is required. For further information and petition form, pick up the Practicum brochure from the department. This course can be taken only once for credit. Credit/no credit only. Enrollment through the practicum coordinator only. CBTL (http://www.gephardtinstitute.wustl.edu/CBTL/Pages/overview.aspx) course. Credit 4 units.

L33 Psych 246 Mindfulness in Psychology and Eastern Philosophies: Sophomore Seminar
This course is intended to explore the connection between psychology and Eastern philosophies, including aspects of Buddhism, mindfulness, Zen meditation and yogic traditions. Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L33 Psych 300 Introduction to Psychological Statistics
Descriptive statistics including correlation and regression. Inferential statistics including nonparametric and parametric tests of significance through two-way analysis of variance. Course emphasizes underlying logic and is not primarily mathematical, although knowledge of elementary algebra is essential. Prerequisite: Psych 100B. Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM

L33 Psych 301 Experimental Psychology
This course provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation while the laboratory component provides an introduction to a range of psychological phenomena through hands-on experience in experimentation. Each student also completes an independent research project of his or her own design under supervision of a faculty member. Enrollment limited to 15 students. Prerequisites: Psych 100B and concurrent enrollment in Psych 300. Credit 4 units. A&S: NS A&S IQ: NSM BU: BA

L33 Psych 304 Educational Psychology
A course in psychological concepts relevant to education. Organized around four basic issues: how humans think and learn; how children, adolescents and adults differ in their cognitive and moral development; the sense in which motivation and intention explain why people act as they do; how such key human characteristics as intelligence, motivation and academic achievement can be measured. Prerequisite: sophomore standing. Offered fall and spring semester. Same as L12 Educ 304. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

L33 Psych 3091 Lesbian, Gay, Bisexual Identity Development
This course familiarizes students with current perspectives, gender socialization, identity formation across the life span, cultural prejudices, the liberation movement, and recent legal changes affecting stigmatized minorities. Prerequisite: Psych 100B. Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Art: SSC BU: BA

L33 Psych 314 Behavior Modification and Self-Management
Provides an overview of behavior modification and its applications for behavior change in various personal and social contexts. An important focus is on how behavioral tools can be used to enhance the personal change process leading to effective self-improvement. Prerequisite: Psych 100B. Enrollment limited to 15. Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 315 Introduction to Social Psychology
Introduction to the scientific study of individual behavior in a social context. Topics: person perception; stereotyping and prejudice; attitudes; memory; and political psychology, among other issues. Prerequisite: Psych 100B. Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSCBU: BA EN: S

L33 Psych 3195 Abnormal Child Psychology
This course familiarizes students with current perspectives on the nature, causes, assessment, treatment and prevention of child psychiatric disorders and related family dysfunction. Theoretical perspectives and research findings are discussed pertaining to anxiety, depression, conduct disorder, attention deficit/hyperactivity disorder, autism, learning impairments and parent-child conflict. Prerequisite: Psych 100B. Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S
L33 Psych 321 Developmental Psychology
This course concentrates on the cognitive and social development of the person from conception to adolescence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior. Prerequisite: Psych 100B.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

L33 Psych 3211 Music Cognition
An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects. Same as L27 Music 3221
Credit 3 units. A&S: NS A&S IQ: NSM BU: HUM

L33 Psych 323 Play and Development
An examination of current research and theory in play, in development and education, from infancy through the early school years. Topics include play and the development of language, social skills, creativity and cognitive abilities. We also examine the uses of play in educational contexts, focusing on preschool and the early primary grades. Prerequisite: Psych 321 or Educ 304.
Same as L12 Educ 337
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L33 Psych 3242 Introduction to African-American Psychology
This course provides an introduction to the experiences of African Americans from a psychological perspective. Throughout the course, we consider a range of theoretical and methodological approaches that scholars have developed to conceptualize the thoughts, styles and behaviors of African Americans. The course begins with an overview of these theories, methodologies and frameworks. The second part of the course is devoted to exploring psychological research around pertinent topics in the field such as racism and discrimination, gender, achievement and schooling, kinship and family, racial identity, religion and spirituality, and mental health. Finally, we conclude the course with discussions of current topics, controversies and recent advances in African-American psychology. Prerequisite: Psych 100B or permission of instructor.
Same as L90 AFAS 3242
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 325 Psychology of Adolescence
A broad introduction to adolescence as a developmental period of transition and change. The major topics include the fundamental changes of adolescence; the context of adolescence; and processes of psychological development. Prerequisite: Psych 100B.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

L33 Psych 326 Introduction to the Psychology of Aging
Study of the processes of aging in the individual in terms of their behavioral effects. Age changes in biological functions, sensation, perception, intelligence, learning, memory and creativity are studied to understand the capacities and potentials of the mature and older person. Limited to 20 students. Prerequisite: Psych 100B.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L33 Psych 330 Sensation and Perception
What's involved in seeing and hearing? This course covers perception from the physical stimuli (light and sound) that impinge upon the sensory receptors through the higher-level percepts that the stimuli generate. Demonstrations and illusions are used as we learn about the anatomy and physiology of the sensory systems and study the brain mechanisms that are involved in vision and audition. Prerequisite: Psych 100B.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA, SCI

L33 Psych 333 Independent Study in Psychological and Brain Sciences
Prerequisites: Psych 100B and permission of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work. Credit to be arranged. A maximum of 6 units may be applied toward upper-division credits required for the major. The electronic Petition for Supervision of Independent Study form is available online. Students will be enrolled only after their form is approved by the faculty supervisor and forwarded to the Undergraduate Coordinator. CR/NC only.
Credit variable, maximum 3 units.

L33 Psych 3401 Biological Psychology
An introduction to biological mechanisms underlying behavior. Topics include the physiology of nerve cells: anatomy of the nervous system; control of sensory and motor activity, arousal and sleep; motivation; and higher mental processes. Prerequisite: Psych 100B.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L33 Psych 344 Principles of the Nervous System
The basic anatomical, physiological and chemical organization of the nervous system; how nerve cells communicate with each other, the ionic basis of nerve signals, the function and properties of chemical agents in the nervous system, the development of neural circuitry, and how neurons interact to produce behavior. Prerequisite: Biol 2960, Biol 2970 recommended, Biol 3058 recommended or Psych 3401 and permission of instructor.
Same as L41 Biol 3411
Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L33 Psych 345 Genes, Environment and Human Behavior
This class examines how genetic influences impact various dimensions of human behavior, ranging from personality to clinical disorders. Topics covered include methods used to study genetic influence, how genetic predispositions interact with the environment, and ethical implications of genetic research in psychology. Prerequisite: Psych 100B.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S
L33 Psych 347 Environmental Psychology
Explores relations between people and their physical and social environments. Topics include interactions between human behavior and toxins, habitat destruction/species extinction, exhaustion of fossil fuels, and climate change as well as environmental contributors to psychopathology. The course examines the influence of space on human behavior and the design of homes, work areas, educational settings, and urban environments. Prerequisite: Psych 100B.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L33 Psych 3501 Psychotherapy: Introduction to Practice and Research
This is an introductory course in psychotherapy: The treatment of psychological problems through the application of interventions grounded in psychological theory and focusing on behavior or mental processes. Students become familiar with the more popular schools of psychotherapy, including their historical context, characteristic techniques, theoretical underpinnings and current research support. Students also gain an appreciation of the problems and solutions in researching psychotherapy, as well as emerging variations on psychotherapy procedures. Prerequisite: Psych 100B.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L33 Psych 353 Psychology of Personality
Review of basic theoretical orientations to the understanding of personality and complex human behavior. Overview of related techniques, procedures and findings of personality assessment and personality research. Discussion of critical issues in evaluation of personality theories. Prerequisite: Psych 100B.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

L33 Psych 354 Abnormal Psychology
This is an introductory course in psychopathology or the scientific study of mental health disorders. The course includes definitions, theories and classifications of abnormal behavior. Content focuses on symptoms, classification, prevalence, etiology and treatment of mental health disorders, including mood, anxiety, eating, schizophrenia spectrum, substance use and personality disorders. Prerequisite: Psych 100B.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

L33 Psych 356 Introduction to Forensic Psychology
This course is an introduction to the interaction between psychology and the legal system. The contribution of psychology to such legal areas as family law, juvenile delinquency, criminal cases, law enforcement and correctional psychology is surveyed. Topics covered include domestic violence, child abuse, personal injury, eyewitness testimony, insanity, sex offenders and psychopaths. Legal standards regarding insanity, civil commitment and expert testimony are reviewed. We also focus on the emerging contributions of neuroscience to the field of forensic psychology. Prerequisite: Psych 100B.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 357 Introduction to Clinical Psychology
A survey of clinical psychology. Emphasis is placed on historical and recent developments in the field (e.g., managed care), as well as the consideration of the roles, functions and techniques of clinical psychologists including psychological testing and psychotherapy. Prerequisites: Psych 100B and either Psych 353 or Psych 354.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

L33 Psych 358 Language Acquisition
This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include: biological bases of language development; development of phonology, syntax, and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisites: Psych 100B and Ling 170D.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

L33 Psych 358W Language Acquisition
This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include: biological bases of language development; development of phonology, syntax and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisites: Psych 100B and Ling 170D and junior or senior standing. Writing-intensive.
Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

L33 Psych 360 Cognitive Psychology
Introduction to the study of thought processing from an information-processing approach. Emphasis on theoretical models grounded in empirical support. Topics include pattern recognition, attention, memory, reasoning, language processes, decision making and problem solving. Prerequisite: Psych 100B.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

L33 Psych 3604 Cognitive Neuroscience
A general introduction to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis is placed on how emerging methods and approaches from both neuroscience and cognitive psychology have been integrated to yield new insights into the organization and structure of higher mental processes. Topics include perception, attention, memory, language and executive control. Prerequisite: Psych 100B.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L33 Psych 361 Psychology of Learning
Basic learning processes in animals, such as conditioning, reinforcement, punishment and constraints on learning. Comparisons and interactions between classical and operant conditioning. Consideration given to learning theorists and recent developments in the field (e.g., managed care), as well as the consideration of the roles, functions and techniques of clinical psychologists including psychological testing and psychotherapy. Prerequisites: Psych 100B and either Psych 353 or Psych 354.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

L33 Psych 361A Psychology of Learning: Laboratory
This laboratory course is a supplement to the Psych 361 Psychology of Learning class. Students gain firsthand
experience, via a virtual rat, of principles and procedures related to the acquisition and maintenance of behavior. Weekly lab meetings introduce Pavlovian and operant principles, which are then implemented as laboratory exercises with the virtual rat. Concurrent enrollment in Psych 361 required. Credit 1 unit. A&S: NS A&S IQ: NSM

L33 Psych 3645 Understanding Emotions
Emotions shape and are shaped by our subjective experiences, physiology, behaviors, cognitions, social interactions and health. Their complexity and significance make the study of emotions particularly exciting and challenging. This course offers an overview of theory and research on emotions with content stretching across psychological disciplines, including personality, social, clinical, developmental and neuropsychology. Course content includes definitions of emotions, physiological changes associated with emotions, and individual differences in emotional experience. The course also examines how culture, cognitions and relationships shape and are shaped by emotions and how emotions are related to physical and mental health. Prerequisite: Psych 100B. Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L33 Psych 366 Psychology of Creativity
Same as L12 Educ 366 Credit 3 units. A&S: SS A&S IQ: SSC BU: BA

L33 Psych 367 Positive Psychology: The Science of Happiness
Reviews the relatively recent development in the field known as “Positive Psychology.” Topics may include: happiness and life-satisfaction, positive self-esteem, creativity, caring relationships, love (passionate and otherwise), empathy, optimism, ambition, moral character development, attachment, compassion, forgiveness, helping, work ethics, and successful aging. Designed to take a sampling of those aspects of psychology that emphasize the positive side of human nature. Prerequisites: Psych 100B, junior or senior standing. Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L33 Psych 374 Drugs, Brain and Behavior
This course reviews information pertaining both to medications used to treat psychiatric disorders and to psychoactive drugs of abuse. By learning principles of pharmacology and mechanisms of action of these agents, students develop an enhanced knowledge of the brain mechanisms underlying abnormal human behavior. Prerequisites: Psych 100B and one of the following: Psych 354 or Psych 3401 or Psych 344. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

L33 Psych 380 Human Learning and Memory
A survey of issues related to the encoding, storage and retrieval of information in humans. Topics include memory improvement strategies, people with extraordinary memories, memory illusions and distortions, among other topics. Limited to 25 students. Prerequisite: Psych 100B. Credit 3 units. A&S: NS A&S IQ: NSM BU: BA

L33 Psych 399 Living, Dying and Death: A Biopsychosocial Approach to Understanding the End of Life
This survey course examines dying and death from biological, psychological and social perspectives. Topics include theoretical and research approaches to studying dying and death; historical and cross-cultural attitudes; psychological understanding and coping with death over the life span; the process of dying and definitions of death; health care professionals and treatment approaches for the dying; assisted death and other ethical/legal issues, grief and bereavement, mass tragedy and public death, and planning for death. Prerequisite: Psych 100B. Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 4046 Developmental Neuropsychology
Development of the brain and associated changes in cognitive abilities are discussed, with an emphasis on recent research that integrates the theoretical perspectives of cognitive psychology and neuropsychology. Discussion focuses on early development and disorders affecting the brain such as cerebral palsy, sickle cell disease and autism. Prerequisite: Psych 321, Psych 360, Psych 3604 or Psych 3401. Credit 3 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

L33 Psych 413 Contemporary Topics in Social Psychology
Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

L33 Psych 4135 Human Behavior in Extreme Situations
This course familiarizes students with psychological theory and research that attempts to answer the question: What are the protective factors that help people who find themselves in an extreme situation respond constructively to the stress they must cope with? Extreme situations are characterized by conditions that force individuals and groups to adapt themselves involuntarily, entirely and with the greatest of speed. Readings are drawn from two sources (a) literature that describes extreme situations and human response to the trauma they cause (e.g., prisoner behavior in Nazi concentration camps, brainwashing of American soldiers during the Korean War, and response to a natural disaster and an airliner crash), and (b) research on potentially protective psychological variables such as coping and resilience. Prerequisites: junior or senior standing and 6 hours of advanced, home-based psychology course work. Enrollment limited to 17. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L33 Psych 4175 Applied Statistical Analysis with R
This course is designed to introduce R as both a means of applied statistical analysis as well as a window into data organization and programming. The goal of the course is to teach the tools needed to take a raw dataset and not only perform a statistical test in R, but also to learn how to arrange the dataset to perform a variety of tests, to choose the appropriate test, and to visualize the results. Students gain practical knowledge of how to use statistics in research. Prerequisites: Psych 300, or Math 2200 or Math 3200, or other approved university statistics course; or graduate standing in psychology, or graduate standing in another department by permission. Credit 3 units.

L33 Psych 4182 Perception, Thought and Action
This course focuses on current topics in visual perception, visual attention, eye movements and sensory-motor behavior.
Readings consist of recent journal articles. Class meetings emphasize presentation and discussion of the material in the readings. Prerequisite: previous course work in cognitive psychology, experimental psychology or perception.
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

L33 Psych 4227 The Psychology of Close Relationships
This course examines close relationships from a scientific perspective. The course focuses on intimate relationships but also touches on friendships and family relationships. The objective of this course is to introduce students to the scientific perspective of close relationships. Students learn how research psychologists apply the scientific method of data collection and analysis to investigate how people experience and think about relationships. We explore questions such as: Why are people attracted to some people but not others? How do relationships develop over time? How does each person’s personality influence the trajectory of a relationship? How do external factors (e.g., social norms, stress, life events) influence relationships? How do gender and sexual orientation influence people’s experiences in romantic relationships? Prerequisites: Psych 100B and Psych 301.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L33 Psych 427 Social Gerontology
This course provides an introduction to aging and growing old, from an interdisciplinary perspective. Specific attention is paid to demographics, physical health and illness, mental health, interpersonal relations, work issues, living arrangements, ethics, and death and dying. Prerequisites: junior or senior standing and completion of 6 advanced units in Psych.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

L33 Psych 4301 Contemporary Topics in Cognitive Development
Cognitive Developmental topics include: Piagetian abilities (e.g., conservation, formal reasoning), basic cognitive abilities (e.g., processing speed), executive functions (e.g., working memory), and other current topics (e.g., processing facial stimuli). Prerequisite: Psych 321 or 360.
Credit 3 units. A&S: SS, WI

L33 Psych 4302 Cognitive Psychology Applied to Education
This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning and comprehension with special focus on areas, theory and research that have potential application to education. Thus, the course provides selective coverage of theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes are explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. Prerequisites: junior/senior status; 9 units in psychology and Psych 100B or junior/senior status; 9 units in Education and Psych 100B.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L33 Psych 4305 Psychological Science: Fact and Fiction
Skeptical analysis of psychological science as practiced and popularized in the media. Analysis of discrepancies between media and scientific claims regarding areas such as repressed memory, brain imaging, heritability and psychotherapy. Additional examination of scientific career demands such as peer review, journal publication and research funding. These topics are interwoven with a review of common errors in reasoning particularly with respect to probabilistic reasoning and the public misperception of the practice and principles of scientific psychology. Prerequisite: junior or senior standing and completion of 6 advanced units in psychology.
Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

L33 Psych 433 Psychology of Language
This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B.
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

L33 Psych 4351 Reading and Reading Development
This seminar surveys current research on reading and spelling skills and their development. Students read and discuss journal articles that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. Prerequisites: permission of instructor and previous course work in experimental psychology or psychology of language.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L33 Psych 4352 Reading and Reading Development WI
This writing-intensive seminar surveys current research on reading and spelling skills and their development. Students read and discuss articles and chapters that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. Prerequisites: Psych 100B and Ling 170D and junior or senior standing.
Credit 3 units. A&S: SS, WI A&S IQ: SD, WI EN: S

L33 Psych 4361 Psychological Perspectives on the Self
Historical and contemporary theories related to the self in social psychology. Emphasis on contemporary research and a focus on the self as a construct central to understanding important social phenomena. Topics include definitions and measurement of the self; motivational implications of the self for impression management, ability appraisal, self-regulation and social inference. Prerequisites: Psych 100B and Psych 315.
Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI Art: SSC

L33 Psych 4408 Trauma and Memory
A thorough investigation of the effects of trauma on memory in both individuals and collective groups. Topics include flashbulb memories; forgetting and repression; post-traumatic stress and memory; and effects of trauma on individual and group identity. Prerequisites: Psych 100B and 6 units of advanced-level psychology or anthropology course work.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L33 Psych 4413 Advanced Cognitive Neuroscience
An intensive, case-study based approach to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis is placed...
on understanding and evaluating cutting-edge neuroscience research that has yielded new insights into the organization and structure of higher mental processes. Students develop critical thinking and writing skills via a strong class participation component and a writing intensive format. Topics include perception, attention, memory, language, emotion and executive control. Writing-Intensive. Declared psychology majors are given priority over others to enroll. Prerequisites: Psych 100B and either Psych 3401 or Psych 344/Biol 3411 or Psych 3604. Credit 3 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

L33 Psych 444A Independent Study for a Supplemental Concentration
Prerequisites: acceptance into a supplemental concentration in Psychological & Brain Sciences (only for students who matriculated prior to 2016). Written permission (Petition for Supervision of Psych 444A) of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student’s work is also required. In addition to the approved research for the supplemental concentration, an APA-study research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444A forms are available in the Psychology Building, room 207B. Students will be enrolled only after they have completed both the Petition for a Supplemental Concentration in P&BS and the Petition for Supervision of P&BS 444A, and returned them to the Undergraduate Coordinator in Psychology 207B. Open only to P&BS majors. Max 3 units. Credit 3 units.

L33 Psych 444B Independent Study for the Major in P&BS: Cognitive Neuroscience
Prerequisites: acceptance into the P&BS cognitive neuroscience major. Permission of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work is also required. In addition to the approved research in the area of cognitive neuroscience, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444B forms are available in the Psychology Building, room 207B. Students will be enrolled only after they have completed the petition and returned it to the Undergraduate Coordinator in Psychology 207B. Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences
Prerequisites: acceptance into a concentration in Psychological & Brain Sciences (only for students who matriculate after fall 2016). Written permission (Petition for Supervision of P&BS 444C) of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student’s work is also required. In addition to the approved research for the concentration, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444C forms are available in the Psychology Building, room 207B. Students will be enrolled only after they have completed both the Petition for a Concentration in P&BS and the Petition for Supervision of P&BS 444C, and returned them to the Undergraduate Coordinator in 207B. Open only to P&BS majors. Credit 3 units.

L33 Psych 4450 Functional Neuroimaging Methods
This course is intended for students wishing to become sophisticated producers or consumers of functional neuroimaging data. Emphasis is on extracting the most information from neuroimaging techniques toward the goal of answering psychologically motivated questions. A number of issues relating to neuroimaging methodology are covered, including technical principles; acquisition options; potential sources of artifact; experimental design; software tools; and analytical techniques. Class approach is hands-on, with students gaining experience in actually acquiring and working with neuroimaging data. Prerequisite: graduate standing or permission of instructor. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

L33 Psych 4535 Personality Judgment: How We Perceive Ourselves and Others
This course examines how we form judgments of people's personalities. The central question is the accuracy of personality judgments. The readings examine theory and research concerning this topic, and class discussion focuses on critical evaluations of the readings and generation of new research questions. This course examines personality judgment from a scientific perspective and addresses such questions as: How should accuracy be measured? What do you have to know about a person to judge their personality accurately? Does accuracy increase with greater acquaintance? Who makes a good judge of personality? How well do relationship partners know each others' personalities? How is judging our own personality similar to or different from judging others' personalities? How accurate are our perceptions of our own personality? How can the accuracy of personality judgment be improved? Prerequisites: at least 6 units of home-based psychology courses and Psych 353. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L33 Psych 4541 Personality and Psychopathology
This course is an advanced seminar in the study of personality disorders. It covers a range of conceptual and methodological issues involved in scientific efforts to understand ways in which pathological personality features disrupt people's lives. Students learn about the similarities and distinctions between normal and pathological features of personality as well as the role that personality may play with regard to the causes and treatment of other kinds of mental disorder. A laboratory component of the class focuses on the development of practical skills in conducting research interviews designed to elicit information about personality and social adjustment. Prerequisites: Psych 354, junior or senior standing, and permission of the instructor. Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4557 Biopsychosocial Aspects of Eating Disorders and Obesity
The aim of this seminar course is to examine the epidemiology, etiology, prevention and treatment of body image, eating disorders and obesity. An emphasis is placed on understanding the characteristic symptoms of excessive dieting, body image disturbance and binge eating, not only as formal psychiatric syndromes but as a representation of disordered processes reflecting social-cultural, psychological and biological disturbances. Students also learn about the clinical characteristics, medical sequelae and physical aspects of eating disorders and obesity. Prerequisites: Psych 100B and junior/senior standing plus 6 units of advanced home-based psychology.
L33 Psych 4591 The Development of Social Cognition
This course explores what is known about the development of social cognition. Our starting point is infants’ capacity to navigate the social world, for instance, detecting agents, identifying social partners and learning from those around us. We consider what happens when the human ability to reason about others breaks down (as with autism), and what this can teach us about typical development. Each week we cover one topic and a related set of readings. Class meetings are devoted to active discussion and debate about the content of the readings. Students are required to write a weekly reaction paper to the readings to promote class discussion and give an in-class presentation on a novel research topic at the end of the semester. Graduate students may have additional course requirements. Prerequisites: Psych 100B and one of the following: Psych 315 or Psych 321 or Psych 360.
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L33 Psych 4592 The Development of Social Cognition
From birth we are surrounded by other social beings, making children’s ability to navigate the social world a foundational capacity. This writing-intensive course explores how children navigate the social world. We discuss topics such as infants’ concept of agency, intentional understanding, children's learning from and about others, trust and skepticism, social groups, and morality. We also consider what happens when the human ability to reason about the mind and understand behavior breaks down (as with autism spectrum disorders), and what this can teach us about typical development. In addition, we also examine the core differences in humans and animals in this domain, by exploring selected topics in the emerging scientific literature in comparative social cognition. Writing Intensive. Prerequisites: L33 Psych 315 or 321 or 360. Junior or senior standing or permission of instructor required.
Credit 3 units.

L33 Psych 4615 The Science of Paying Attention
What processes underlie humans’ ability to “pay” attention? This course introduces students to theories of attention and cognitive control. Students develop an understanding of empirical approaches to studying the control of attention, and examine factors that facilitate and impair humans' ability to pay attention. A final section examines attention and cognitive control challenges that accompany aging and select psychological disorders such as ADHD, and applications of attention and cognitive control research to the classroom, driving, and other contexts. Prerequisites: Psych 100B and Psych 360.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4625 Autobiographical Memory
This course investigates how people create and remember their personal life histories, with an emphasis on empirical studies within the cognitive tradition. Possible topics include childhood amnesia, false memories, emotional memories, the role of motivation in remembering, and how personal events are represented in memory. Prerequisite: Psych 360 or Psych 301 or Psych 380.
Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI Art: SSC

L33 Psych 4647 Ancient Madness
In this course we ask what madness meant in Greek and Roman culture. We find reading strategies that are sensitive both to ancient evidence and to the ethical demands of talking about, evaluating and categorizing people treated as mad. While we concentrate on literary (particularly tragic and epic), philosophical, and medical texts, we also look at visual representations and evidence from ritual and cult. An important part of our project involves tracing the afterlife of classical ideas. The history of melancholia grounds this aspect of the course. We then consider how antiquity informs psychoanalysis, and how ancient madness might partake in a critique of contemporary understandings of what it means to be mentally ill. Same as L08 Classics 4647
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L33 Psych 4651 History and Modern Systems of Psychology
An introduction to the history of psychology. This course begins with a brief consideration of forces leading to development of psychology in the mid-1800s. It then examines the birth of modern psychology in Germany, and the schools of psychology that emerged early in the 20th century. Newer orientations and ideas are considered in the final segment of the course. We also consider the impact of psychology on American public life during the 20th century. Prerequisite: Psych 100B, junior or senior standing and 6 units of advanced home-based psychology courses or permission of the instructor.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L33 Psych 4702 Current Debates in Psychology
In this seminar we debate issues of current controversy in psychology. Topics range from perception (Can subliminal messages affect behavior?) to development (Do children in daycare develop differently than children cared for at home?) to mental illness (Is road rage a real psychological illness?). Discussions are based on readings of primary research and review articles, and are augmented by written assignments. Prerequisite: completion of 6 units of advanced home-based psychology courses.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L33 Psych 4745 Genes, Brain and Behavior: Pathways to Psychopathology
This seminar introduces students to emerging methods and recent empirical literature evaluating links between genes, brain and behavior, that is beginning to illuminate specific biological pathways shaping risk for and the emergence of psychopathology. In particular, the course focuses on the design, analysis and interpretation of multimodal research (e.g., IMRI, PET, EEG, pharmacology, molecular genetics, environmental assessment/manipulation) examining the biological underpinnings of behavioral traits relevant to
psychopathology. Seminar readings are primary journal articles, reviews and book chapters. Prerequisite: Psych 3401 (or equivalent). Credit 3 units. A&S: SS & S IQ: SSC, SD EN: S

L33 Psych 4746 Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior
This seminar will introduce students to methods and recent empirical literature evaluating links between genes, brain and behavior. This research is beginning to illuminate specific biological pathways shaping risk for psychopathology. In particular, the course focuses on the design, analysis, and interpretation of multimodal research (e.g., IMRI, PET, EEG, pharmacology, molecular genetics, environmental assessment/ manipulation) examining the biological underpinnings of behavior relevant to psychopathology. Primary journal articles, reviews, and book chapters are the readings for this seminar. Prerequisites: Psych 100B and Psych 345 or Psych 3401 or Biol 2970; or graduate standing (prior course work in psychology, neuroscience, and genetics is advised). Credit 3 units. A&S: NS & S IQ: NSM

L33 Psych 4765 Inside the Disordered Brain: Biological Bases of the Major Mental Disorders
How do subtle disturbances in brain circuits lead to abnormal behavior and psychopathology? This course provides students with a working knowledge of our rapidly evolving understanding of brain circuits that create order in our social, emotional and cognitive worlds, and how disorder within these circuits leads to a broad range of psychopathology including depression, anxiety, phobias, PTSD, OCD, addiction, schizophrenia, psychopathy and violence. Prerequisite: Psych 3401, graduate standing, or permission of instructor. Credit 3 units. A&S: NS & S IQ: NSM Art: NSM

L33 Psych 488 The Cognitive Neuroscience of Film
To understand complex events in real life depends on perception, action and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar uses results from psychology and neuroscience to try to better understand the experience of a movie viewer, and uses theory and practice to explore psychological hypotheses about perception. Prerequisite: Psych 360 or Psych 3604 or Psych 4604, or graduate standing in Psychology. Credit 3 units. A&S: NS & S IQ: NSM

L33 Psych 4891 The Science and Politics of Testing in the United States
Why do tests permeate American Society? Tests have been integral to the decision-making process in many venues of American culture-e.g., immigration opportunities, voting rights, college admissions, workforce considerations, special education placement, educational reform, and graduation requirements. The credibility of these decisions depends upon the claim that a particular test is a scientific instrument and relevant to the decision-making process. This claim is worthy of study. The purpose of this course is twofold. The first purpose is to examine how the nexus of science and politics influence testing practices in American society. The second purpose is explore how testing practices influence the culture of schools, civil liberties, the work place, and public discourse about merit. Same as L12 Educ 4891 Credit units. A&S: SS, SD & S IQ: SSC, SD EN: S

L33 Psych 494 Behavioral Psychology Readings Group
This weekly journal-style readings class provides the opportunity to read and discuss seminal as well as current papers on the conceptual aspects of behavioral psychology and relevant research. Points of contact among behaviorism, cognitivism and neuroscience, and the natural lines of fracture, are examined. Prerequisite: permission of instructor. Credit 1 unit. A&S: SS & S IQ: SSC EN: S

L33 Psych 4971 Undergraduate Teaching
Limited opportunities for outstanding undergraduates to serve as teaching assistants for selected departmental courses. Prerequisites: Psychology majors only, junior/senior standing and permission of psychology adviser, course instructor and departmental approval. Credit cannot be counted toward fulfilling the requirements for the major or minor in psychology. Credit/No Credit only. Enrollment by department only. Credit 2 units.

L33 Psych 498 Study for Honors
Acceptance into the Honors Program is based on superior performance as evidenced by the student’s record in undergraduate course work and the written agreement (Petition for Permission to Enroll) of a member of the faculty of the department (or other approved supervisor) to supervise an Honors project. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the department. Recommendation for an Honors degree is based on the evaluation of the written thesis and the student’s overall performance as an undergraduate. Students in the Honors Program meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. Psych 498 is a writing-intensive course. All students must meet with Dr. Sommers prior to registering. Prerequisite: Psych 301 or equivalent and permission of instructor. Credit 3 units. A&S: SS, WI & S IQ: SSC, WI Art: SSC

L33 Psych 499 Study for Honors
Acceptance into the Honors Program is based on superior performance as evidenced by the student’s record in undergraduate course work and the written agreement (Petition for Permission to Enroll) of a member of the faculty of the department (or other approved supervisor) to supervise an Honors project. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the Department. Recommendation for an Honors degree is based on the evaluation of the written thesis and the student’s overall performance as an undergraduate. Students in the Honors Program meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. Permission of instructor is required for this course. All students must meet with Dr. Sommers prior to registering. Prerequisite: Psych 301 or Psych 3011. Credit 3 units. A&S: SS & S IQ: SSC Art: SSC
Religion and Politics

The John C. Danforth Center on Religion and Politics serves as an ideologically neutral venue for fostering rigorous scholarship and informing broad academic and public communities about the intersections of religion and U.S. politics.

The Center's programs include:

• Public lectures, conferences and symposia relating to issues at the intersection of religion and U.S. politics;
• Research colloquia on American religion, politics and culture, in which scholars and students discuss cutting-edge research;
• Religion & Politics, an online journal engaging a diverse array of scholars, journalists and public leaders;
• New courses on American religion and politics for Washington University students. The courses contribute to an interdisciplinary undergraduate minor in religion and politics.

The Center offers a religion and politics minor, an interdisciplinary program that combines resources from the Danforth Center on Religion and Politics with relevant offerings from other academic programs, including Religious Studies, Political Science, History, American Culture Studies, African-American Studies, English, and Women, Gender, and Sexuality Studies. Designed to complement and contribute to students' major fields of study, the minor also aims to augment the undergraduate education of those considering postgraduate professional programs in public policy, education, law, medicine or social work. The religion and politics minor provides an opportunity for exploring in sustained ways how religion and politics have intersected American culture, both in historical and contemporary terms.

As part of the program, students may examine any number of issues such as church-state relations, religion's role in shaping gender and sexuality debates, religion and electoral politics, public conflicts over the nexus of religion and science, religion's entwining with reform movements (from abolition to environmentalism), or confluences of religion and politics in national vocabularies, media and imagination.

Majors

The Center does not offer a major. Interested students are encouraged to explore the minor in religion and politics. Please refer to the Minors section for more information.

Minors

The Minor in Religion and Politics

Required units: 15

15 units of course work, including:

• One required course: This should be completed prior to the second semester of the junior year.
  RelPol 201 Religion and American Society (3 units)
or RelPol 225 Religion and Politics in American History (3 units)

- 12 additional units (must be 300-level or above), 9 of which must be taught by Center faculty.

**Required activities:**

Attendance at five auxiliary events, such as lectures, colloquia, panels, conferences and lunch discussions, sponsored by the Center on Religion and Politics.

**Courses**

---

**L57 RelPol 201 Religion and American Society**

This course explores religious life in the United States. We focus our study on groups and movements that highlight distinctive ways of being both “religious” and “American,” including the Americanization of global religions in the U.S. context. Major themes include religious encounter and conflict; secularization, resurgent traditionalism and new religious establishments; experimentalism, eclecticism and so-called “spiritual” countercultures; the relationship between religious change and broader social and political currents (including clashes over race, class, gender and sexuality); and the challenges of religious multiplicity in the United States. Students: (1) acquire knowledge of the disparate religions practiced in North America during the 20th century and beyond; (2) examine some of the chief conflicts as well as alliances between religion and the American social order in a global context; and (3) develop interpretive tools for understanding religion’s present and enduring role in the U.S. and the world.

Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H

**L57 RelPol 225 Religion and Politics in American History**

The First Amendment to the U.S. Constitution is often recognized as a catalyst for church and state relations in the United States, and yet even close attention to the framing of the religion clauses and their subsequent interpretation in courts of law and public opinion provide only a glimpse of the complexity of religion and politics in America. As a constitutional category, religion affords protections to American citizens — but both the designation of “religion” and “citizen” have been contested throughout the nation’s history. The promise of the Constitution has been equally fraught, as different constituencies vie for the designation of “religion” and “citizen” have been contested throughout the nation’s history. The promise of the Constitution has been equally fraught, as different constituencies vie for the designation of “religion” and “citizen” have been contested throughout the nation’s history. The promise of the Constitution has been equally fraught, as different constituencies vie for the designation of “religion” and “citizen” have been contested throughout the nation’s history. from state forces like the police and FBI. Students will gain an understanding of what social conditions, religious structures and institutions, and personal experiences led to the emergence and then the assassinations of these two figures. We will discuss the subtleties of their political analyses, pinpointing the key differences and similarities of their philosophies, approaches and legacies, and we will apply these debates of the mid-20th century to contemporary events and social movements in terms of how their legacies are articulated and what we can learn from them in struggles for justice and recognition in 21st-century America and beyond.

L57 RelPol 320 Religious Freedom in America
This interdisciplinary course, co-taught by a law school professor and an American historian, concerns the intersection of religion, liberty and law in American culture. It introduces students to the major texts and historical episodes of the Founding Fathers, using legal history and case law, intellectual and social history, and political philosophy. It will address issues of significant contemporary debate — from the role of religious groups on college campuses to bakers and gay weddings — along with the deep historical background, from English settlement of North America and the making of the Constitution, through the Civil War, to the Cold War and the recent political developments.

L57 RelPol 321 American Religion and the Politics of Gender and Sexuality
Religious beliefs about gender and sexuality have long played a vital role in American politics, vividly evident in debates over such issues as birth control, censorship, pornography, funding for AIDS research, abortion, contraceptives access, abstinence-only sex education, sexual harassment, same-sex marriage, and more. Educated citizens need to understand the impact of these religiously inflected debates on our political culture. This course explores the centrality of sex to religion and politics in the U.S., emphasizing Christianity (both Protestant and Catholic forms) and its weighty social and political role regulating the behavior of women and men, children and teens, as well as its uses in legal and judicial decisions. Alongside scholarly readings in gender and sexuality, we will discuss popular devotional texts — on chastity, marriage, and homosexuality — with a political bent. Students will leave the course able to analyze how religious beliefs about sex shape specific gender norms central to U.S. politics.

L57 RelPol 3504 The Making of American Conservatism Since 1932, from Herbert Hoover to the Tea Party
Beginning with Hayek’s The Road to Serfdom and Buckley’s God and Man at Yale, this course examines some of the major conservative writers and thinkers in the United States since World War II. The course includes readings by Russell Kirk, Richard Weaver, Barry Goldwater, Phyllis Schlafly, Irving Kristol, Newt Gingrich, and Pat Buchanan as well younger conservatives like Mark Steyn, Jonah Goldberg, Ramesh Ponnuru, S.E. Cupp, and Kevin Williamson. Several classes are devoted to black conservatives including Thomas Sowell, Shelby Steele, and Walter Williams. We will try to answer the questions: What is conservatism and who are its adherents? Can we speak of conservatism in the singular or are there several types of conservatism? Are the various forms of conservatism politically and intellectually compatible? How has conservatism changed since Reagan and the 1980s? What inroads has conservatism made in the cultural and political life of the United States? Is the United States essentially a conservative nation? Time permitting; we may also watch a few Hollywood movies by conservative filmmakers.

L57 RelPol 360 Religion and the Modern Civil Rights Movement, 1954-1968
The modern Civil Rights Movement is a landmark event in the nation’s political, civic, cultural and social history. In many contexts, this movement was for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy “The Soul of the Nation.” This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.

L57 RelPol 370 Religion and the Origins of Capitalism
This course explores the economic, cultural and social history of the origins of Anglo-American capitalism from 1500 to 1800. Throughout we will discuss the worldviews and day-to-day business decisions of the merchants who created England’s transatlantic market order and empire. Rather than treat early capitalism only in terms of material or purely economic dynamics, it probes the intellectual constructs that combined with commercial innovation to transform capitilization into a vast system.

L57 RelPol 385 Religion and Politics in the Long 1920s
This course is a historical survey of the dynamic relationship between religion and politics during the 1920s. The 1920s were a tipping point for a great deal of the fundamental issues that shaped the 20th century in the U.S. This course seeks to investigate how religious activism, evangelism, discourse, practice and reinvention contributed to and was shaped by such change.

L57 RelPol 395 Topics in Religion and Politics: Religion and Environment in American History
This upper-level course explores the interactions between human societies and the natural world during the long history of the United States (roughly the 17th century to the present), with continental and ultimately global contexts in mind. Its focus is on the ways religion — ideas, individuals, and institutions of faith — have shaped how humans envision, understand, organize, encounter, and inhabit nature, and on the ways American faiths have been defined by these engagements with earth and its material and imagined properties. Accompanying this primary focus is a second thrust, that which connects matters of religion and environment to major political trends, both as they have been triggered and realized by individuals and communities and as they have helped determine national and international political trajectories. Issues discussed in the
course include Native American conceptions of environment and their clash with European settlement, the effects of Christian ecological interpretation and invasion, missionaries, farming, and resource management in the west, industrialization and its religious discontents, emerging debates between preservation and conservation, government and church-based initiatives to regulate land and subsurface wealth, the ascent of environmental concern and activism in the long-1970s, and the very recent (and current) debates of oil, energy, and global warming, which have fractured the American religious landscape. Besides surveying this long history of religion and environment, and gaining a command of class material, students develop, more generally, interpretive tools for understanding religion’s present and enduring role in the U.S. and the world; acquire knowledge of the disparate religions practiced in North America during the 20th century and beyond; and examine some of the chief conflicts as well as alliances between religion and the American natural and social order in a global context.

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art; HUM EN: H

L57 RelPol 410 The FBI and Religion
This seminar examines the relationship between the Federal Bureau of Investigation (FBI) and religion (i.e., faith communities, clerics and religious professionals) as a way to study and understand 20th-century religion and politics. The course investigates the history of the FBI as well as the various ways in which the FBI and religious groups have interacted. The course pays particular attention to what the professor calls the four interrelated “modes” of FBI-religious engagement: counter-intelligence and surveillance, coordination and cooperation, censorship and publicity, and consultation.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L57 RelPol 4121 American Religion, Politics, and Culture: Historical Foundations
This seminar offers a wide-ranging overview of the leading historical scholarship concerning the busy intersections of American religion and politics. Topics include: church-state relations, religion and foreign policy, religion and social justice, religion and the science wars, the rise of the Religious Right, and the role of religion in public life. Prerequisites: advanced undergraduate or graduate standing in a related field or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L57 RelPol 4122 American Religion, Politics & Culture: Commentary from Alexis de Tocqueville to Contemporary Pundits
This research-oriented seminar involves in-depth historiographical investigation of leading scholarship at the busy intersections of American religion, politics and culture. The second semester focuses on classic and contemporary commentaries on the American religious and political scene from Alexis de Tocqueville through today’s leading pundits. Some sessions will include a visiting scholar engaged in cutting-edge research — a feature that will allow seminar members to work with important scholars from beyond the university. Possible topics include: church-state relations, religion and foreign policy, religion and civil rights, religion and the science wars, the rise of the Religious Right, and the role of religion in national elections. The seminar is taught under the auspices of the John C. Danforth Center on Religion and Politics and is offered in two complementary parts (though enrollment in either one of the two is certainly possible). Its ambition is to build up a community of inquirers engaged in the core questions that animate the Danforth Center. Prerequisites: Advanced undergraduate or graduate standing in AMCS, History, or Religious Studies or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L57 RelPol 430 Pilgrims and Seekers: American Spirituality from Transcendentalism to the New Age
The seminar focuses on the formation of “spirituality” in American culture from the Transcendentalist world of Ralph Waldo Emerson and Walt Whitman on through more recent expressions of the “spiritual-but-not-religious” sensibility. For the purposes of this course, “spirituality” is usefully placed in quotation marks in order to emphasize its peculiar construction as something positively distinct from “religion” — a reordering of American religious thought and experience that we explore in historical and contemporaneous terms. The social and political consequences of this turn to the spiritual over the religious also is explored: for example, the consecration of liberal individualism, the environmental vision of nature mysticism, the blessing of a “bourgeois-bohemian” consumerism, and the negotiation of cultural pluralism.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L57 RelPol 485 Christian Nation, Secular Republic
The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic, and those conjoined framings have created recurrent conflict throughout American history. This seminar is designed to introduce advanced undergraduates and graduate students to current discussions of religion, secularism, and unbelief in American religious and political history. The course also places a complementary emphasis on close readings of crucial primary works, say, about the rise of deistic toleration or the persisting political power of Christianity-in textual particulars. The course takes as its starting point Charles Taylor's monumental account A Secular Age and works from there through various episodes of the Enlightenment and its long aftermath.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L57 RelPol 489 Religion and the State: Global Mission, Global Empire
This course explores the complex intersections among U.S. political power on a global stage, and religious institutions and identities. Readings and discussions are organized around two very broad questions. First: How has this nation’s history been shaped by religious “others” both inside and outside its borders? Second: How have perceptions of those others in turn affected U.S. responses to circumstances of global consequence —
including, for example, foreign policy and diplomacy, missionary activity, and economic practices?
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

Religious Studies

Few will contest the fact that, despite predictions to the contrary, religion continues to play a central role in contemporary culture, politics, identity and conflict in every part of the globe. At the same time, the fast-moving forces of globalization, migration and technology continue to bring diverse religious communities into closer proximity, often creating new religious communities in the process. As a result, it has become ever more essential for people living in today’s world to be "religiously literate."

The Religious Studies program at Washington University in St. Louis is designed to provide students with the opportunity not only to acquire basic knowledge of the beliefs and practices of the major world religions but also to learn how to engage in an empathetic but critical appraisal of both their historic and their contemporary significance. Many of the courses offered through our program are taught by faculty in different disciplines and areas, including history, English, classics, anthropology, American religion and politics, and East Asian studies. They explore religion and religious traditions in all their interdisciplinary complexity — often comparatively, sometimes thematically, and almost always in specific historical and cultural contexts. In addition to our courses, every year the program hosts events designed to foster a lively intellectual community of students and faculty, including public lectures as well as more informal gatherings of people interested in the study of religion.

Whether students are interested in preparing for advanced academic study of religion or a career as a religious professional, are seeking a more systematic exposure to the academic study of religion to complement their studies in another area, or simply feel the need to acquire a greater religious literacy as part of their general education, the major or minor in religious studies offers an excellent opportunity to develop a deeper understanding and appreciation of the complex ways in which religious traditions inform human thought and behavior.

The Major in Religious Studies
Total units required: 30 units; 24 must be 300-level or above
Required courses (6 units):
Re St 102 Thinking About Religion 3
Senior Capstone Experience: (3 units) In their senior year, all religious studies majors (with the exception of those students who have qualified for and elected to write an honors thesis) are required to take Re St 479 Senior Seminar in Religious Studies. The topic of this seminar varies from year to year. Recent topics include: Saints and Society; Religion and the Secular: Struggles over Modernity; and Pilgrimage and Sacred Space in Antiquity.

Elective courses: (21 units; 18 must be 300-level or above): All majors must take at least seven courses chosen from among the offerings in religious studies. Those courses will be selected to achieve both breadth and depth of knowledge in the field.

To foster breadth of knowledge, the electives must include one course in four different Religious Traditions/areas such as: Judaism, Christianity, Islam, Buddhism, Asian religions, and religions of the ancient Mediterranean world.

To foster depth of knowledge, the electives must include a concentration of three courses in one religious tradition or a set of closely related traditions (from the list above) and a secondary concentration of two courses in another tradition or set of traditions. Alternatively, students may, with permission of their adviser, opt to create a thematic concentration that reflects their own more specific interests. Examples of such thematic concentrations include (but are not limited to): "Religion and the Arts," "Religion and Politics," and "Gender and Religion."

Note: Any one course can count toward both the depth and breadth requirements.

For models illustrating possible combinations of depth and breadth (including thematic concentrations), visit the Religious Studies website (http://religiousstudies.artsci.wustl.edu/program/major).

Additional Information

Senior Honors: Qualified majors are encouraged to apply for Senior Honors. Applications are available online (http://religiousstudies.artsci.wustl.edu/program/honors) and are due prior to the end of the junior year. Students wishing to pursue this option need to meet the minimum honors requirements stated in this Bulletin and satisfactorily complete, during the senior year, Re St 498 Independent Work for Senior Honors I (fall) and Re St 499 Independent Work for Senior Honors II (spring). Full guidelines are available on the Religious Studies website.

Transfer Credit: A maximum of 6 units of course work completed elsewhere, whether another college or university or through a Washington University-approved study abroad program, may be applied toward the major. Credit will be awarded only to those courses that have been approved by the Religious Studies program.

Minors

The Minor in Religious Studies

Total units required: 18 units; 12 must be 300-level or above

Required courses: (6 units):

<table>
<thead>
<tr>

Total units: 6

Elective courses: (12 units; 9 must be 300-level or above): Students may choose the remaining elective courses according to individual interest and in consultation with their advisers.

Additional Information

Transfer Credit: A maximum of 3 units of course work completed elsewhere, whether another college or university or through a Washington University-approved study abroad program, may be applied toward the minor. Credit will be awarded only to those courses that have been approved by the Religious Studies program.

Courses

L23 Re St 102 Thinking About Religion

Everyone agrees that religion is vitally important, but people rarely agree about what religion is. This course introduces students to the questions posed about religion, and the methods by which they are answered. Beginning with the central question, What is religion? we ask: How has religion served political power? How does the experience of religion create or change perceptions of reality? How does religious practice maintain or subvert gender roles? How does commemoration of the past shape communities in the present? How are religious identities formed, and how do they change? What is religious art? How does something become sacred? We explore these and other questions using case studies drawn from a range of sources that represent different regions, traditions, and scholarly approaches. This course is required for religious studies majors and minors. Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 1550 Temple & Palace in World History: Religion & Politics in the Premodern Mediterranean

This course aims to examine the ways in which temple and palace cooperated with and competed against each other in ancient and medieval worlds. Temple and palace have played a major role in human history as a source of cooperation and conflict by inspiring and regulating the spiritual and social lives of people, including how they enacted laws, developed
cultures, established institutions, and interacted with each other as individuals, families and societies. This course traces how the institutional embodiments of religion and politics, temple and palace, and their interactions, produced various models of authority, law and social association and how they collectively and separately rationalized social hierarchy and diversity in human societies.

L23 Re St 2010 Religion and American Society
This course explores religious life in the United States. We will focus our study on groups and movements that highlight distinctive ways of being both "religious" and "American," including the Americanization of global religions in the U.S. context. Major theories will include religious encounter and conflict; secularization, resurgent traditionalism, and new religious establishments; experimentalism, eclecticism, and so-called "spiritual" countercultures; the relationship between religious change and broader social and political currents (including clashes over race, class, gender and sexuality); and the challenges of religious multiplicity in the U.S. Students will: 1) acquire knowledge of the disparate religions practiced in North America during the 20th century and beyond; 2) examine some of the chief conflicts as well as alliances between religion and the American social order in a global context; and 3) develop interpretive tools for understanding religion's present and enduring role in the U.S. and the world.

L23 Re St 208F History, Text and Identity: Introduction to Jewish Civilization
The anthropologist Clifford Geertz once famously invoked Max Weber in writing that "man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs." The main goal of this course — designed as an introduction to Jewish history, culture and society — is to investigate the "webs of significance" produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester we focus on the following historical settings: seventh-century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period we investigate the social and political conditions of Jewish life; identify the major texts that Jews possessed, studied and produced; determine the non-Jewish influences on their attitudes and aspirations; and the explore the efforts that Jews made to define what it meant to be part of a Jewish collective.
Same as L75 JINE 210C
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, IS

L23 Re St 210C Introduction to Islamic Civilization
A historical survey of Islamic civilization in global perspective. Chronological coverage of social, political, economic and cultural history are balanced with focused attention to special topics, which include: aspects of Islam as religion; science, medicine and technology in Islamic societies; art and architecture; philosophy and theology; interaction between Islam and Christendom; Islamic history in the Middle East, South Asia, Southeast Asia and Central Asia as well as Africa; European colonialism; globalization of Islam and contemporary Islam.

L23 Re St 224 Islamic Religion
Survey of the development of Islamic practice and thought from the emergence of Islam in early seventh century CE to the present.
Credit 3 units. A&S: TH, CD BU: ETH, IS EN: H

L23 Re St 235 Religion and Politics in Early America
This course introduces students to the history of religion and politics in America from the English settlements of Virginia and Massachusetts Bay during the early 17th century through the constitutional debates of the 1780s. It pays attention to both formal legal issues regarding religious establishments and wider matters concerning political sentiments and their relationship to religious ideas or values. The course does not advocate a defining argument or single ideological "point," but, rather, facilitates a series of observations of how different positions on the role of religion in early America made sense in their respective historical contexts. Social, political, and intellectual variables made for shifting understandings of what religious ideas mattered to public life in America and how those ideas ought to shape civil affairs.
Same as L57 RelPol 235
Credit 3 units. A&S IQ: HUM BU: BA EN: H

L23 Re St 236F Introduction to East Asian Religions
This introductory course provides a basic, yet systematic, overview of certain major religious traditions that evolved in East Asia, particularly in China and Japan, but also in Korea. We begin with the classical Chinese traditions of Confucianism and Daoism, then turn our attention to Buddhism, which originated in India (ca. 500 BCE) and was later introduced into China (first century CE), Korea (fourth century CE) and Japan (sixth century CE). We then examine the Japanese tradition of Shinto, and focus more specifically upon the development of new Japanese forms of Buddhism. The course ends with a brief look at the coming of some of these religions to the West, and in particular the United States.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD EN: H

L23 Re St 3013 The Daoist Traditions
This course offers an introduction to the history, practices and worldviews that define the Daoist tradition. Through both secondary scholarship and primary texts, we consider the history of Daoism in reference to the continuities and discontinuities of formative concepts, social norms, and religious practices. Our inquiry into this history centers on consideration of the social forces that have driven the development of Daoism from the second century to the modern day. Special consideration is given to specific Daoist groups and their textual and practical traditions: the Celestial Masters (Tianshi), Great Clarity (Taiqing), Upper Clarity (Shangqing), Numinous Treasure (Lingbao), and Complete Perfection (Quanzhen). Throughout the semester we also reflect on certain topics and themes concerning the Daoist tradition. These include constructions of identity and community, material culture, the construction of sacred space, and cultivation techniques.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: ETH EN: H

L23 Re St 3031 Christianity in the Modern World
Survey of Christianity since the Reformation. Focus on the divisions in Christianity, its responses to modern science, the rise of capitalism, and European expansion into Africa, Asia, and the Americas. Attention to ecumenism and the contemporary status of Christianity in the world.
Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H

L23 Re St 3062 Islam, Culture and Society in West Africa
This course explores the introduction of Islam into West Africa beginning in the 10th century and explore its expansion and development in the region, placing emphasis on the 19th century to present day. It focuses on the development of West African Muslim cultural, social, religious and political life, to understand not only how the religion affected societies, but also how West African local societies shaped Islam. The course also aims to introduce students to a critical understanding of Islamic writing in West Africa. It also examines the organization of Muslim Sufi orders in West Africa through time and space. The course is organized around a series of lectures, readings, as well as print and visual media.

L23 Re St 307F Introduction to the New Testament
What can be known — from an historical perspective — about the life and teachings of Jesus and his earliest followers? How did Jesus see himself and how did his followers see him? How did the lives, teachings and deaths of Jesus and his followers come to form the heart of a new movement? If Jesus and the apostles were all Jews, how did Christianity emerge as a distinct “religion”? This course investigates these questions through a focus on the earliest sources for Jesus and his first followers, including and extending beyond the canonical books of the Christian New Testament. Our approach in this course is historical and literary, rather than theological or confessional: We ask what Jesus, his first followers, and their Jewish and “pagan” contemporaries did and believed, and we try to catch glimpses of the worlds in which they lived and the cultures which they took for granted.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L23 Re St 3080 City on a Hill: The Concept and Culture of American Exceptionalism
This course examines the concept, history and culture of American exceptionalism: the idea that America has been specially chosen or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a “city on a hill.” This sermon has been called the “ur-text” of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture — a thesis our class reassesses with the help of modern critics. In the second part of this class, we broaden our discussion to consider the wider (and newer) meanings of American exceptionalism, theorizing the concept while looking at the way it has been revitalized, redefined and redeployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan to the current day. In the end, students gain a firm grasp of the long history and continuing significance — the pervasive impact — of this concept in American culture.

L23 Re St 3082 From the Temple to the Talmud: The Emergence of Rabbinic Judaism
This course offers a survey of the historical, literary, social and conceptual development of Rabbinic Judaism from its emergence in late antiquity to the early Middle Ages. The goal of the course is to study Rabbinic Judaism as a dynamic phenomenon — as a constantly developing religious system. Among the topics explored are: How did Judaism evolve from a sacrificial cult to a text-based religion? How did the “Rabbis” emerge as a movement after the destruction of the Second Temple and how could they replace the old priestly elite? How did Rabbinic Judaism develop in its two centers of origin, Palestine (the Land of Israel) and Babylonia (Iraq), to become the dominant form of Judaism under the rule of Islam? How did Jewish ritual and liturgy develop under Rabbinic influence? How were the Rabbis organized and was there diversity within the group? What was the Rabbis’ view of women? How did they perceive non-Rabbinic Jews and non-
Jews? As Rabbincic Literature is used as the main source to answer these questions, the course provides an introduction to the Mishnah, the Palestinian and Babylonian Talmuds, and the Midrash collections — a literature that defines the character of Judaism down to our own times. All texts are read in translation. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L23 Re St 3101 The Problem of Evil
The question of how God can allow evil to occur to the righteous or innocent people has been a perennial dilemma in religion and philosophy. We study the classic statement of the problem in the biblical book of Job, the ancient Near Eastern literature on which Job is based, and traditional Jewish and Christian interpretation of Job. We study the major approaches to the problem of evil in Western philosophical and religious thought. Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H

L23 Re St 3105 American Holidays, Rituals and Celebrations
This seminar examines a variety of holidays, festivals and rituals in American history and culture. Topics include: conflicts over Christmas, the sentiments of greeting cards, African-American emancipation celebrations, Roman Catholic festivals dedicated to the Virgin Mary, modern renderings of Jewish ritual (including Hanukkah), the masculinity embodied in fraternal lodge ceremonies, Neopagan festivals, and Halloween Hell Houses. Various interpretative approaches are explored, and the intent is to broach a wide range of questions about history and tradition, gender and race, public memory and civic memory, moral order and carnival, through this topical focus on ritual and performance. A major emphasis is also placed on original research and writing, evident in the weight given the concluding seminar report and the final paper. Same as L98 AMCS 3105

L23 Re St 3110 Buddhist Traditions
This course examines the historical development of Buddhism from its origins in South Asia in the sixth to fifth century BCE, through the transmission of the teachings and practices to East Asia, Southeast Asia and Tibet, to contemporary transformations of the tradition in the modern West. In the first third of the course, we focus on the biographical and ritual expressions of the historical Buddha’s life story, the foundational teachings attributed to the Buddha, and the formation and development of the Buddhist community. In the second third, we examine the rise of the Mahayana, the development of the Mahayana pantheon and rituals, and the spread of Mahayana in East Asia. In the final third, we explore the Theravada tradition in Sri Lanka and Thailand, then Tantric Buddhism in India, Tibet and East Asia. We close the course with an overview of Buddhism in the modern West.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: ETH EN: H UColl: NW

L23 Re St 3112 South Asian Religious Traditions
The Indian subcontinent is home to Hindu, Islamic, Buddhist, Jain, and Sikh traditions, among others. In this course we explore several traditions that are vital to life in India, Pakistan and beyond. We first encounter each tradition through narrative, with the support of visual media. We then explore how contemporary adherents make these traditions meaningful for themselves — in their everyday lives, in their struggles for social change, and in their political statements and contestations.

Students will have the opportunity for creative projects or individual research. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H UColl: NW

L23 Re St 313C Islamic History 622-1200
The cultural, intellectual, and political history of the Islamic Middle East, beginning with the prophetic mission of Muhammad and concluding with the Mongol conquests. Topics covered include: the life of Muhammad; the early Muslim conquests; the institution of the caliphate; the translation movement from Greek into Arabic and the emergence of Arabic as a language of learning and artistic expression; the development of new educational, legal and pietistic institutions; changes in agriculture, crafts, commerce and the growth of urban culture; multiculturalism and inter-confessional interaction; and large-scale movements of nomadic peoples. Same as L22 History 313C
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

L23 Re St 314C Islamic History 1200-1800
An introduction to Islamic politics and societies from the Mongol conquests to the 13th century to the collapse and weakening of the colossal “gunpowder” empires of the Ottomans, Safavids and Mughals in the early 18th century. Broadly speaking, this course covers the Middle Period (1000-1800) of Islamic history, sandwiched between the Early and High Caliphal periods (600-1000) on the one hand and the Modern Period (1800-present) on the other hand. Familiarity with the Early and High Caliphal periods is not assumed. The course is not a “survey” of this period but a series of “windows” that allows students to develop both an in-depth understanding of some key features of Islamic societies and a clear appreciation of the challenges (as well as the rewards!) that await historians of the Middle Period. Particular attention is given to the Mamluk and Ottoman Middle East, Safavid Iran and Mughal India. Same as L22 History 314C
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM

L23 Re St 3192 Modern South Asia
This course covers the history of the Indian subcontinent in the 19th and 20th centuries. We look closely at a number of issues including colonialism in India; anticolonial movements; the experiences of women; the interplay between religion and national identity; and popular culture in modern India. Political and social history are emphasized equally. Same as L22 History 3192

L23 Re St 320 Religious Freedom in America
Same as I50 InterD 320
Credit 3 units. A&S IQ: HUM, SD EN: H

L23 Re St 3262 The Early Medieval World 300-1000
A principal theme of this course is the Christianization of Europe. From the emergence of the Christian church in the Roman Empire and the conversion of the emperor Constantine in 312 through the turbulent adoptions of Christianity by different cultures in the Early Middle Ages, the rise of Islam in the seventh century; the Arab conquests of north Africa and southern Europe; and the Byzantine empire, especially in Constantinople.
L23 Re St 3263 The High Middle Ages: 1000-1500
This course begins with the first millennium in the West and ends with the arrival of Europeans in the Americas. The course explores topics such as the relationship of popes to kings, of cities to villages, Jews to Christians, of vernacular literature to Latin, knights to peasants, the sacred to the profane. Topics include: different forms of religious life; farming; heresy; the shift from a penitential culture to a confessional one; the crusades; troubadour poetry; the Mongol Empire; universities; leprosy; and the conquest of New Spain.

L23 Re St 3266 "East" and "West" in Jewish Imagination and Politics
How have Jews, as a paradigmatic diasporic people, understood their place between "East" and "West," and their relationships with other Jews and non-Jews within, across, and beyond the vast territorial expanse of Eurasia? What has it meant to identify, to be identified, and to live as Jews in Eurasia and beyond — both before and after the State of Israel? We begin with the origin of world Jewry, follow the various and interrelated experiences of Jews under Christendom and Islam, and, through carefully chosen vignettes, trace how the modern concepts of "East" and "West" have shaped the course of Jewish history, politics and imagination for millennia.

L23 Re St 3313 Women and Islam
An anthropological study of the position of women in the contemporary Muslim world, with examples drawn primarily from the Middle East but also from Asia, Africa, Europe and the United States. Students examine ethnographic, historical and literary works, including those written by Muslim women. Topics having a major impact on the construction of gender include Islamic belief and ritual, modest dress (veiling), notions of marriage and the family, modernization, nationalism and the nation-state, politics and protest, legal reform, formal education, work and Westernization. The course includes a visit to a St. Louis mosque, discussions with Muslim women, and films.
Same as L48 Anthro 3313

L23 Re St 334C Crusade, Conflict, and Coexistence: Jews in Christian Europe
This course investigates some of the major themes in the history of the Jews in Europe, from the High Middle Ages to the eve of the French Revolution. Jews constituted a classic, nearly continuous minority in the premodern Christian world — a world which was not known for tolerating dissent. Or was it? One of the main purposes of the course is to investigate the phenomenon of majority/minority relations, to examine the ways in which the Jewish community interacted with and experienced European societies, cultures and politics. We look at the dynamics of boundary formation and cultural distinctiveness; the limits of religious and social tolerance; the nature and contexts of persecution; and the prospects for Jewish integration to Europe during the course of the Enlightenment era. Our course also highlights the particular historical experiences, cultural and religious developments, and communal patterns of the Jews during this time.
Same as L22 History 334C

L23 Re St 3350 Out of the Shtetl: Jews in Central and Eastern Europe Between Empire, State and Nation
Out of the Shtetl is a course about tradition and transformation; small towns and urban centers; ethnicity and citizenship; nations, states and empires. At its core, it asks the question, what did it mean for the Jews of Central and Eastern Europe to emerge from small market towns and villages to confront modern ethnicities, nations and empires? What lasting impact did the shtetl experience have on Jewish life in a rapidly changing environment? The focus is on the Jewish historical experience in the countries that make up Central and Eastern Europe (mainly the Bohemian lands, Hungary, Poland, and Russia) from the late 18th century to the fall of the Soviet Union. Among the topics that we cover: Jews and the nobility in Poland-Lithuania; the multi-cultural, imperial state; Hasidism and its opponents; absolutism and reform in imperial settings; the emergence of modern European nationalism and their impact on Jewish identity; antisemitism and popular violence; nationalist and radical movements among Jews; war, revolution and genocide; and the transition from Soviet dominion to democratic states.
Same as L22 History 3350
Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H
rise of political and racial antisemitism; mass migration and the formation of American Jewry; varieties of Jewish national politics; Jewish-Gentile relations between the World Wars; the destruction of European Jewry; the emergence of a Jewish nation-state; and Jewish culture and identity since 1945.

L23 Re St 336C History of the Jews in Islamic Lands
This course is a survey of Jewish communities in the Islamic world, their social, cultural and intellectual life from the rise of Islam to the Imperial Age. Topics include: Muhammad, the Qur'an and the Jews; the legal status of Jews under Islam; the spread of Rabbinic Judaism in the Abbasid empire; the development of new Jewish identities under Islam (Karaïtes); Jewish traders and scholars in Fatimid Egypt; the flourishing of Jewish civilization in Muslim Spain (al-Andalus); and Sephardi (Spanish) Jews in the Ottoman empire. On this background, we look closely at some of the major Jewish philosophical and poetical works originating in Islamic lands. Another important source we study are documents from the Cairo Genizah, reflecting social history, the status of women and other aspects of daily life. Primary and secondary readings (in translation) are supplemented by audiovisual materials.

L23 Re St 3421 Childhood, Culture and Religion in Medieval Europe
From child saints to child scholars and from child crusaders to child casualties, the experience of childhood varied widely throughout the European Middle Ages. This course explores how medieval Jews, Christians and Muslims developed some parallel and some very much divergent concepts of childhood, childrearing, and the proper cultural roles for children in their respective societies. Our readings combine primary and secondary sources from multiple perspectives and multiple regions of Europe and the Mediterranean World, including a few weeks on the history and cultural legacy of the so-called Children's Crusade of 1312. We conclude with a brief survey of medieval childhood and its stereotypes as seen through contemporary children's books and TV shows. This course fulfills the Language & Cultural Diversity requirement for Arts & Sciences.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM EN: H

L23 Re St 3422 Art of the Islamic World
This course surveys the art and architecture of societies where Muslims were dominant or where they formed significant minorities from the seventh through the 20th centuries. It examines the form and function of architecture and works of art as well as the social, historical and cultural contexts, patterns of use, and evolving meanings attributed to art by the users. The course follows a chronological order, where selected visual materials are treated along chosen themes. Themes include the creation of a distinctive visual culture in the emerging Islamic polity; the development of urban institutions; key architectural types such as the mosque, madrasa, caravanserai, palace and mausoleum; art objects and the arts of the illustrated book; cultural interconnections along trade and pilgrimage routes; Westernization and modernization in art and architecture.

Same as L01 Art-Arch 3422

L23 Re St 343C Europe in the Age of the Reformation
How should people act toward each other, toward political authorities and toward their God? Who decided what was the "right" faith? the individual's the family's the state? Could a community survive religious division? What should states do about individuals or communities who refused to conform in matters of religion? With Martin Luther's challenge to the Roman Catholic Church, the debates over these questions transformed European theology, society and politics. In this class we examine the development of Protestant and Radical theology, the Reformers' relations with established political authorities, the response of the Catholic Church, the development of new social and cultural expectations, the control of marginalized religious groups such as Jews, Muslims and Anabaptists, and the experiment of the New World.

L23 Re St 3513 Muhammad in History and Literature
This course intends to examine the life and representations of the Prophet Muhammad from the perspective of multiple spiritual sensibilities as articulated in various literary genres from medieval to modern periods. The course is divided roughly into two parts. One part deals with the history of Muhammad and the related historiographical questions. The second part deals with the representations of Muhammad in juristic, theological, Sufi, etc., literature. Because of the availability of primary sources in English translation, there is a healthy dose of primary source reading and analysis throughout the semester. Those students with advanced Arabic (and Persian and Turkish) skills are encouraged to engage sources in their original language.

Same as L75 JINE 351
L23 Re St 3540 Anthropological and Sociological Study of Muslim Societies
This course introduces students to anthropological and sociological scholarship on Muslim societies. Attention will be given to the broad theoretical and methodological issues which orient such scholarship. These issues include the nature of Muslim religious and cultural traditions, the nature of modernization and rationalization in Muslim societies, and the nature of sociopolitical relations between "Islam" and the "West." The course explores the preceding issues through a series of ethnographic and historical case studies, with a special focus on Muslim communities in the Middle East, Southeast Asia, and Europe. Case studies address a range of specific topics, including religious knowledge and authority, capitalism and economic modernization, religion and politics, gender and sexuality, as well as migration and globalization.

L23 Re St 359 Travelers, Tricksters and Storytellers: Jewish Travel Narratives and Autobiographies, 1100-1800
Premodern Jewish literature includes a number of highly fascinating travelogues and autobiographies that are still awaiting their discovery by a broader readership. In this course, we explore a variety of texts ranging from medieval to early modern times. They were written by Jewish authors (both Ashkenazi and Sephardic) originating from Spain, Italy, Germany and the Ottoman Empire — among them pilgrims, rabbis, merchants, and one savvy business woman. We read them as responses to historical circumstances and as expressions of Jewish identity in its changing relationship to the Christian or Muslim environment in which the authors lived or traveled. Specifically, we ask questions such as: What is it about travel writing that enables its authors (and readers) to reflect on themes of identity and difference? How does this genre produce representations of an Other, against which and through which it defines a particular sense of self? What are the commonalities and differences between (Jewish) travelogues and autobiographies? To what extent are these texts reliable accounts of their authors' personal experiences, and to what extent do they serve their own self-fashioning? How did premodern Jewish writers portray Christians, Muslims and Jews from other cultural backgrounds than their own? How did they construe the role of women in a world dominated by men? How did they reflect on history, geography and other fields of knowledge that were not covered by the traditional Jewish curriculum; and how did they respond to the challenges of early modernity?
Same as L75 JINE 359
Credit 3 units. A&S IQ: LCD, SSC BU: IS EN: S

L23 Re St 3600 Religion and the Modern Civil Rights Movements, 1954-1968
The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.

L23 Re St 366 Approaches to the Qur'an
The place of the Qur'an in Islamic religion and society. Equal emphasis on text: the Qur'an's history, contents, and literary features; and context: the place of the Qur'an in everyday life, its oral recitation, artistic uses, and scholarly interpretation. Knowledge of Arabic not required.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: ETH

L23 Re St 3670 Gurus, Saints and Scientists: Religion in Modern South Asia
Many long-standing South Asian traditions have been subject to radical reinterpretation, and many new religious movements have arisen, as South Asians have grappled with how to accommodate their traditions of learning and practice to what they have perceived to be the conditions of modern life. In this course we consider some of the factors that have contributed to religious change in South Asia, including British colonialism, sedentarization and globalization, and new discourses of democracy and equality. We consider how new religious organizations were part and parcel with movements for social equality and political recognition; examine the intellectual contributions of major thinkers like Swami Vivekananda, Sayyid Ahmad Khan and Mohandas Gandhi; and explore how Hindu, Islamic and other South Asian traditions were recast in the molds of natural science, social science and world religion.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: ETH

L23 Re St 368 Theories and Methods in the Study of Religion
What is religion? In this course, we explore how religious ritual may help to clarify the nature and function of religion. We first consider "classic" theories of religion and ritual, such as those of James Frazer, Sigmund Freud, Emile Durkheim, Mircea Eliade, Max Weber, E.E. Evans-Pritchard, and Clifford Geertz. We then consider more recent theories of ritual and its relationship to religion (such as those of Victor Turner and Maurice Bloch). Alongside, and in light of, these theoretical writings, we look at specific instances of ritual practice from various cultures and periods. Note: This course is required for religious studies majors and minors. It is recommended that this course be taken after completion of L23 Re St 102 Thinking About Religion.
Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H
L23 Re St 370C Islamic Movements: Reform, Revival, Revolt
As a religion and a social/intellectual and political movement, Islam has undergone constant reassessment since its inception 14 centuries ago; thus modern fundamentalist movements are the latest manifestation of long-term trends. An overview of this historical process, concentrating on contemporary Islamic movements and works by seminal thinkers.

L23 Re St 380 Topics in Religious Studies
The topic for this course varies. Recent topics include: Religion and Violence; It’s the End of the World As We Know It: Apocalypse in the Biblical World; and North American Religious Experience.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

L23 Re St 3831 Magicians, Healers and Holy Men
Magic is perhaps not one of the first words one associates with Greco-Roman antiquity. Yet for most individuals living in the ancient Mediterranean, including philosophers, businessmen, and politicians, magic was a part of everyday life. Casting spells, fashioning voodoo dolls, wearing amulets, ingesting potions, and reading the stars are just some of the activities performed by individuals at every level of society. This course examines Greco-Roman, early Christian, and Judaic "magical" practices. Students read spell-books which teach how to read the stars, make people fall in love, bring harm to enemies, lock up success in business, and win fame and the respect of peers. Students also look at what is said, both in antiquity and in contemporary scholarship, about magic and the people who practiced it, which helps illuminate the fascinating relationship between magic, medicine, and religion.
Same as L08 Classics 3831

L23 Re St 3921 Secular and Religious: A Global History
Recent years have seen a dramatic rethinking of the past in nearly every corner of the world as scholars revisit fundamental questions about the importance of religion for individuals, societies and politics. Is religion as a personal orientation in decline? Is Europe becoming more secular? Is secularism a European invention? Many scholars now argue that “religion” is a European term that doesn’t apply in Asian societies. This course brings together cutting-edge historical scholarship on Europe and Asia in pursuit of a truly global understanding. Countries covered vary, but may include Britain, France, Turkey, China, Japan, India and Pakistan.

L23 Re St 393 Medieval Christianity
This course surveys the historical development of Christian doctrine, ecclesiastical organization, and religious practice between the fifth century and the 15th, with an emphasis on the interaction of religion, culture, politics and society. Topics covered include: the Christianization of Europe; monasticism; the liturgy; sacramental theology and practice; the Gregorian reform; religious architecture; the mendicant orders and the attack on heresy; lay devotions; the papal monarchy; schism and conciliarism; and the reform movements of the 15th century.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L23 Re St 3977 The Making of the Modern Catholic Church
This course examines the work of three church councils that put their stamp on the Catholic Church at key moments in its history, making it what it is today. The first section is dedicated to the Fourth Lateran Council (1215), which defined the high medieval church as an all-encompassing papal monarchy with broad powers over the lives of all Europeans, Christian and non-
Christian alike. In the second section we turn our attention to
the Council of Trent (1545-1563), which responded to the threat
posed by the Protestant Reformation by reforming the Catholic
church, tightening ecclesiastical discipline, improving clerical
education, and defining and defending Catholic doctrine. We
conclude with a consideration of the largest church council ever,
Vatican II (1962-1965), which reformed the liturgy and redefined
the church to meet the challenges of the modern, multicultural,
postcolonial world.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L23 Re St 4041 Islam and Politics
Blending history and ethnography, this course covers politics in
the Islamic world in historical and contemporary times. Topics
include history of Islam, uniformity and diversity in belief and
practice (global patterns, local realities), revolution and social
change, women and veiling, and the international dimensions of
resurgent Islam. Geographical focus extends from Morocco to
Indonesia; discussion of other Muslim communities is included
(Bosnia, Chechnya, sub-Saharan Africa, U.S.).

L23 Re St 4060 Convivencia or Reconquista? Muslims, Jews
and Christians in Medieval Iberia
Senior Seminar. This seminar will provide an opportunity
to explore in some depth various facets of the convivencia
(“dwelling together”; coexistence) of Muslims, Jews, and
Christians in medieval Iberia. While we will pick up the timeline
with the emergence of an Ibero-Islamic society in the eighth
century CE, the seminar’s historical horizon stretches up to the
turn of the 15th to the 16th century, when Spanish Jews and
Muslims were equally faced with the choice between exile and
conversion to Christianity. Until about the mid-11th centuries
Muslims dominated most of the Iberian Peninsula. From roughly
the mid-11th through 15th centuries, Christians ruled much and
eventually all of Spain and Portugal. Through a process termed,
from a Christian perspective, as reconquista (“reconquest”),
Catholic kingdoms acquired large Muslim enclaves. As borders
moved, Jewish communities found themselves under varying
Muslim or Christian dominion, or migrated from one realm
to the other. Interactions between the three ethno-religious
communities occurred throughout, some characterized by mutual
respect and shared creativity and others by rivalry and strife.
The course focuses on these religious and cultural contacts,
placing them in various historical and geographic contexts. It will
raise questions concerning the ambiguities of religious change
and concerning the interplay of persecution and toleration.
Methodologically, the seminar emphasizes the study of primary
sources, including documentary, historiographical, literary
and poetical texts. In the course of their study, attention will
be paid to peculiarities of genre, and difficulties involved in
formulating historical assessments. In this sense, we will also
aim at developing critical reading skills in relation to secondary
literature. Seniors in Jewish, Islamic and Near Eastern Studies
will be given preference in admission. Advanced students
in other fields are asked to contact the instructor prior to
enrollment.

L23 Re St 408 Nuns
Nuns — women vowed to a shared life of poverty, chastity and
obedience in a cloistered community — were central figures in
medieval and early modern religion and society. This course
explores life in the convent, with the distinctive culture that
developed among communities of women, and the complex
relations between the world of the cloister and the world outside
the cloister. We look at how female celibacy served social
and political, as well as religious, interests. We read works
by nuns: both willing and unwilling; and works about nuns;
nuns behaving well, and nuns behaving scandalously badly;
nuns embracing their heavenly spouse, and nuns putting on
plays; nuns possessed by the devil, and nuns managing their
possessions; nuns as enraptured visionaries; and nuns grappling
with the mundane realities of life in a cloistered community.

L23 Re St 4105 Power, Authority and Spirituality in Oceanic Art
Focusing on the material culture of the Pacific, this seminar
considers the similarities and differences in political and
spiritual power and authority throughout Polynesia, Melanesia
and Micronesia. The seminar examines how material forms
embodied the immaterial divine and spiritual power associated
with gods and ancestors and considers how objects understood
to contain these powers were used in local contexts and
with neighboring communities and Westerners. Included in
the discussions are objects (both ritual and utilitarian), body
modification and decoration/ornamentation, dress, architecture,
religion/ritual, warfare and exchange. We consider what the
materials used in these categories tell us about local concepts of
ancestral or divine power, about indigenous understandings of
the local environment and its importance, and also how objects
were understood as mediators of the relationships between
humans and ancestors or divine beings. Prerequisites: Intro
to Western Art (L01 Art-Arch 113) or Intro to Modern Art (L01
Art-Arch 215); one 300-level course in art history preferred; or
permission of instructor.
Same as L01 Art-Arch 4105
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L23 Re St 412 Islamic Theology
This course explores major themes of early Islamic theology
as developed by the Mutazilite, Aṯ’ārīte, and Maturidi schools.
Some attention is paid to defunct theological systems, the
traces of which have remained in the heresiographical literature.
Most readings are in primary sources in English translation,
though the students are also introduced to some secondary
literature on various themes. Some comparative theology with
reference to the Judeo-Christian tradition is a regular feature of class discussion. Topics include (but are not limited to): debates over the createdness of the Qur'an, predestination and foreknowledge; God's attributes; the nature of language; the nature of the human soul; and creation and afterlife.
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L23 Re St 413 Topics in Islam
Saintly mediators between God and man play a central role in Islamic piety. A focus on major aspects of saintly mediation such as the emergence and spread of the cult of saints, its place within Islamic religiosity in comparison with prophecy, and the institutional framework within which such mediation occurs. Related issues such as conversion to Islam and Islamization of originally non-Islamic beliefs and practices addressed. Prerequisite: JINE 210C or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L23 Re St 415 Topics in Judaism
In this course we explore the role of women in the indigenous religious traditions of China, Japan and Korea (Confucianism, Daoism, Shamanism and Shinto), as well as Buddhism, Christianity and Islam. We begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses; shamans and mediums; hermits and recluse; and ordinary laywomen — both historically and in more recent times. Class materials include: literary and religious texts; historical and ethnological studies; biographies and memoirs; and occasional videos and films. Prerequisites: This class is conducted as a seminar, with minimal lectures; substantial reading and writing; and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, need to obtain the instructor's permission before enrolling.
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD EN: H

L23 Re St 418 Gender and Sexuality in East Asian Religions
In this course we explore the role of women in the indigenous religious traditions of China, Japan and Korea (Confucianism, Daoism, Shamanism and Shinto), as well as Buddhism, Christianity and Islam. We begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses; shamans and mediums; hermits and recluse; and ordinary laywomen — both historically and in more recent times. L23 Re St 4213 Sufism and Islamic Brotherhoods in Africa
Muslim societies are prevalent in Africa — from the Horn, the North, the East to the West, with smaller conclaves in Central and South Africa. Islam has played an influential role in these diverse societies, particularly through its Sufi form. Even though Sufism originated in the Arabian Peninsula, it has fit well with African beliefs and cultures. This course aims to explore Sufi beliefs, values and practices in Africa. It reconsiders the academic constructions of “African Islam” by exploring education, intellectual life, economics, gender roles, social inequalities and politics. The goal is to show that Africa is a dynamic part of the Muslim world and not a peripheral one, as it is most often portrayed by the international media or historically, through travelers and colonial accounts. African Muslim brotherhoods have served as political mediators between countries and people (i.e., the role of the Tijaniyya in the diplomatic rivalry between Morocco and Algeria, or its role in reconciliation of clanic rivalries in Sudan). In addition, the course pays attention to hierarchy in particular tariqa. Finally, the course examines how African Sufi orders have shaped their teachings to fit transnational demands over the 20th and 21st century. We explore these issues through readings, current media, lectures and special guest speakers.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L23 Re St 4225 European Utopian Settlements in the American Midwest (1814-1864): Diversity and Antislavery
During the first part of the 19th century a number of utopian visionaries from Europe (Germany, France and England) tried to establish communities in the American Midwest. These colonies were based either on religious or philosophical/social ideals which could be traced back to interpretations of the Old and the New Testament or to Enlightenment principles of freedom and equality that had been propagated during the revolutions in Europe of 1789, 1830 and 1848 which in turn had been influenced by the American war of independence. These groups showed strong antislavery convictions. The Midwest was chosen since the areas in the vicinity of the confluence of the Mississippi and the Missouri were seen as open to new social experiments. Part of the seminar are field trips to the St. Louis-based Missouri History Library as well as to the St. Louis Public Library and one-day excursions to New Harmony in Indiana, Nauvoo in Illinois, and to small towns in Warren County, Missouri.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L23 Re St 425 Zen Buddhism
This course is designed as an exploration of the history, teachings, practices and literature of Zen Buddhism in China (Chan), Korea (Sôn), Japan (Zen), and the United States. We discuss how Zen's conception of its history is related to its identity as a special tradition within Mahayana Buddhism, as well as its basic teachings on the primacy of enlightenment, the role of practice, the nature of the mind, and the limitations of language. We also look at Zen Buddhism and its relation to the arts, including poetry and painting, especially in East Asia. Finally, we briefly explore the response of Zen teachers and practitioners to questions of war, the environment and other contemporary issues. Open to seniors and graduate students.
Prerequisites: L23 Re St 311 Buddhist Traditions or instructor's permission.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L23 Re St 4300 Pilgrims and Seekers: American Spirituality from Transcendentalism to the New Age
The seminar focuses on the formation of “spirituality” in American culture from the transcendentalist world of Ralph Waldo Emerson and Walt Whitman on through more recent expressions of the “spiritual-but-not-religious” sensibility. For the purposes of this course, “spirituality” is usefully placed in quotation marks in order to emphasize its peculiar construction as something positively distinct from “religion” — a re-ordering of American religious thought and experience that we will explore in historical and contemporaneous terms. The social and political consequences of this turn to the spiritual over the religious will also be explored: for example, the consecration of liberal individualism, the environmental vision of nature mysticism, the blessing of a “bourgeois-bohemian” consumerism, and the negotiation of cultural pluralism.
Same as L57 RelPol 430
Credit 3 units. A&S: TH A&S IQ: HUM EN: H
L23 Re St 432 Early Christianity and Classical Culture
This course explores the development of Early Christianity from the Apostolic fathers (late first century CE) to Augustine in the fifth century. We will be focused on contextualizing these early Christian communities within the classical Greek and Roman worlds through which they spread, examining their engagement with Greco-Roman models of rhetoric, philosophy and literature. Prerequisites: L23 307F Introduction to the New Testament or previous work in Classical Studies recommended but not required. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L23 Re St 4380 Islam, Transnationalism, and the African Diaspora
This course is designed for students who are interested in religion among African immigrants and African diaspora communities living mostly, but not exclusively, in Europe and North America, especially during waves of migration to the Americas. We begin in the days of the transatlantic slave trade, where we examine how interactions, bricolage, and influences of Christianity, Judaism, African indigenous religions, and Islam have impacted the African diaspora living in the Americas. We equally examine how Islam served as a means of resistance to slavery and provided a spiritual connection with the motherland. Same as L90 AFAS 438 Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L23 Re St 4401 Topics in Rabbinic Texts
The course aims to introduce students to independent reading of selected rabbinic texts in the original language. We will focus on a number of topics representing the range of rabbinic discussion, including legal, narrative, and ethical issues. At the same time, we will study the necessary linguistic tools for understanding rabbinic texts. Prerequisites: HBRW 385 or HBRW 401 or instructor’s permission. Same as L74 HBRW 440 Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L23 Re St 444 The Mystical Tradition in Judaism
What is Jewish “mysticism”? What is its relationship to the category of “religion”? Is Jewish mysticism just one form of a general phenomenon common to a variety of religious traditions or is it a specific interpretation of biblical, rabbinic, and other Jewish traditions? Taking the above questions as a starting point, this course aims at a systematic and historically contextualized analysis of a broad range of Jewish texts that are commonly classified as “mystical.” (All primary texts are read in translation.) At the same time, we explore such overarching themes as: the interplay of esoteric exegesis of the Bible and visionary experiences; the place of traditional Jewish law (halakhah) within mystical thought and practice; the role of gender, sexuality, and the body in Jewish mystical speculation and prayer; the relationship between mysticism and messianism; Ashkenazic and Sephardic traditions and their mutual impact on Jewish mysticism; the “absence of women” from Jewish mystical movements; esoteric traditions of an elite vs. mysticism as a communal endeavor; and the tension between innovation and (the claim to) tradition in the history of Jewish mysticism. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, IS

L23 Re St 4491 American Unbelief from the Enlightenment to the New Atheism
This seminar examines American freethinkers, secularists, humanists, and atheists from Tom Paine and Ernestine Rose through Madalyn Murray O’Hair and Sam Harris. Topics emphasized include: church-state relations; social radicalism and women’s rights; secular versus Christian imaginations of the nation; and the recent flourishing of the new atheists and religious “Nones.” Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L23 Re St 4711 Topics in Religious Studies: Gender and Religion in China
In this course, we explore the images, roles and experience of women in Chinese religions: Confucianism, Daoism, Buddhism, and so-called “popular” religion. Topics discussed include: gender concepts, norms and roles in each religious tradition; notions of femininity and attitudes toward the female body; biographies of women in Confucian, Daoist, and Buddhist literature; female goddesses and deities; and the place of the Buddhist and Daoist nun and laywoman in Chinese society. All readings are in English or in English translation. Prerequisite: senior/graduate standing. Students with no previous background in Chinese religion, literature or culture need to obtain instructor’s permission before enrolling. Credit 3 units. A&S: TH A&S IQ: HUM

L23 Re St 479 Senior Seminar in Religious Studies
The topic for this seminar differs every year. Previous topics include Saints and Society; Religion and the Secular: Struggles over Modernity; and Pilgrimage and Sacred Space in Antiquity. The seminar is offered every spring semester and is required of all religious studies majors, with the exception of those writing an honors thesis. The class is also open, with the permission of the instructor, to other advanced undergraduates with previous course work in Religious Studies. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L23 Re St 4790 Advanced Seminar: Empire and Messianism in the Middle East
Senior Seminar: This course looks at imperial politics in its relations to monotheistic messianic movements and ideologies in the Islamic Mediterranean from the late antiquity to the 16th century. Messianic beliefs offered political hope, rallied opposition against the existing rule, defined and ordered lived reality for imperial subjects, presented a political leitmotiv for rulers, and advocated a just sociopolitical order to be realized in the immediate or indefinite future. Thus, this course attempts to see how politics became messianic by its very ability to promise a better future. Despite the chronological scope of the course, we examine only specific ideas, practices and movements as case studies to study in depth various facets of messianic movements and thought in their geographic and historical context. We use primary sources, which are the main methodological focus of the course, and secondary literature. We aim to develop skills in identifying, reading, analyzing and dealing with primary sources in their variety and critically engaging modern scholarship on the political role of Messianism. Students write a term paper and several reports on preassigned readings, and make regular class presentations. Admission preference is given to graduating seniors in JINELC, but the course is open to all advanced students provided that they consult the instructor prior to enrolling. Knowledge of a relevant primary source language is highly desired but not required.
L23 Re St 480 Topics in Buddhist Traditions
The topic for this course varies.

L23 Re St 4811 Reading Seminar in Religion and Chinese Literature
A seminar on religion and Chinese literature with varying topics. Prerequisite: instructor's permission. Same as L04 Chinese 481
Credit 3 units. A&S: TH & A&S IQ: HUM, LCD Art: HUM

L23 Re St 486 Europe's "Jewish Question": Emancipation, Anti-Semitism and Jewish-Christian Confrontation
The so-called "Jewish Question" was a product of European modernity. It emerged in conjunction with the formation of modern states, Enlightenment projects for political reform, the decline of religious influence in society, and struggles over Jewish emancipation. In this seminar, students examine the unusual career of this obsession from the 16th through the 20th century by focusing selectively on a number of illustrative episodes: Christian Hebraism and the Reformation; the Enlightenment assault on religious power; European debates on Jewish emancipation; the emergence of the "Jewish Question" in the 19th century; anti-Semitism as a modern political phenomenon; the renewed discourse of Jewish "ritual murder" at the turn of the 20th century; Zionism and other forms of Jewish nationalism; and the question of anti-Zionism in the reformation of the "Jewish Question" during the past half-century. Same as L22 History 4942
Credit 3 units. A&S: TH & A&S IQ: HUM

L23 Re St 490 Topics in Islamic Thought
The topic for this course varies.
Credit 3 units. A&S: TH & A&S IQ: HUM

L23 Re St 495 Religion and the State: Global Mission, Global Empire
This course explores the complex intersections among U.S. political power on a global stage, and religious institutions and identities. Readings and discussions are organized around two very broad questions. First: How has this nation's history been shaped by religious "others" both inside and outside its borders? Second: How have perceptions of those others in turn affected U.S. responses to circumstances of global consequence — including, for example, foreign policy and diplomacy, missionary activity, and economic practices? Same as L57 Re/Pol 495
Credit 3 units. A&S: TH & A&S IQ: HUM

L23 Re St 498 Independent Work for Senior Honors I
Investigation of a topic, chosen in conjunction with a faculty adviser, on which the student prepares a paper and is examined. Students enroll in L23 Re St 498 in the fall semester and L23 Re St 499 in the spring semester. Prerequisite: admission to the Honors Program.
Credit 3 units.

L23 Re St 499 Independent Work for Senior Honors II
Investigation of a topic, chosen in conjunction with a faculty adviser, on which the student prepares a paper and is examined. Students enroll in L23 Re St 498 in the fall semester and L23 Re St 499 in the spring semester. Prerequisite: admission to the Honors Program.
Credit 3 units.

L23 Re St 4993 Advanced Seminar in History: Women and Religion in Medieval Europe
This course explores the religious experience of women in medieval Europe and attempts a gendered analysis of the Christian Middle Ages. In it, we examine the religious experience of women in a variety of settings — from household to convent. In particular, we try to understand how and why women came to assume public roles of unprecedented prominence in European religious culture between the 12th century and the 16th, even though the institutional church barred them from the priesthood and religious precepts remained a principal source of the ideology of female inferiority. Same as L22 History 4993
Credit 3 units. A&S: TH & A&S IQ: HUM

L23 Re St 499CA Advanced Seminar in History: Religion and the Secular: Critical Perspectives from South Asia
A generation ago, scholars and observers around the world felt assured that modernization would bring the quiet retreat of religion from public life. But the theory of secularization now stands debunked by world events, and a host of questions has been reopened. This course provides students with a forum to think through these issues as they prepare research papers on topics of their own choosing. Same as L22 History 499CA
Credit 3 units. A&S: TH, CD & A&S IQ: HUM, LCD EN: H

L23 Re St 49JK Advance Seminar in History: Blood and Sacred Bodies: Ritual Murder and Host Desecration Accusations
This seminar follows the history of the ritual murder and Host desecration accusations from the origins in 12th- and 13th-century Europe to the 20th century. It pays close attention to the social and political functions of the narratives; their symbolic importance in Christianity's salvific drama; attacks on such beliefs from both within and outside the community of the faithful; the suppression and decline of the ritual murder accusation; the integration of Jews into European societies in the 19th century; and the reappearance of the blood libel in the aftermath of emancipation. Same as L22 History 49JK
Credit 3 units. A&S: TH, CD & A&S IQ: HUM, LCD EN: H

Romance Languages and Literatures
Romance Languages and Literatures offers vibrant programs in French, Italian, Portuguese and Spanish. Our language classes have long been popular with undergraduates, including those interested in international travel and those who anticipate a global dimension to their future careers. All of our classes focus on culture writ large: We study great texts and we do so with an
eye to gender roles, traditions, communities, individual freedom, social obligations and many other topics of critical importance today. We offer concentrations in French, Italian and Spanish, as well as applied linguistics and introductory Portuguese.

Our undergraduate programs in French, Italian and Spanish include a compelling series of language, literature, culture and civilization courses that introduce students to the global Hispanic, Francophone and Italophone communities. The curriculum affords students the opportunity to become fluent in a foreign language, enrich their historical and cultural understanding, and acquaint themselves with influential intellectual, literary and artistic traditions.

Students also benefit from linguistic and cultural immersion opportunities through our many summer, semester and year-long study abroad programs. These programs offer unique possibilities to combine foreign language training with other interests, including participating in business internships in Paris; pursuing fieldwork in Cameroon; studying art history in Italy, literature in Madrid, or Andean culture in Ecuador. These experiences lead to a variety of career paths, including international law, international business, medicine, journalism, and graduate studies in political science, international relations, history, anthropology, art history, comparative literature, French and film studies. In order to prepare our students to take full advantage of such opportunities, our faculty provide an innovative range of courses that combine the study of literature with contemporaneous developments in philosophy, science, music, art and theory.

For undergraduates interested in cross-language study, we offer two programs. First, students may elect to major in Romance languages and literatures. This major requires advanced course work in French, Italian and Spanish, with one of the three languages as the focus of primary emphasis. Second, they may minor in applied linguistics, studying the theoretical, empirical and practical foundations of teaching and learning languages. The minor is available to all majors on campus but is particularly suited to language majors.

Majors
Prospective Romance languages majors should consult with the director of Undergraduate Language Studies of the chosen language as early as possible.

For the French major, please visit the French (p. 420) page.

For the Italian major, please visit the Italian (p. 532) page.

For the Spanish major, please visit the Spanish (p. 731) page.

The Major in Romance Languages and Literatures
Like our other majors, the Romance languages major requires a writing-intensive course and a capstone experience. Further details are available on the department's website (http://rll.wustl.edu).

Total units required: A minimum of 42 units at the 300 and 400 level, distributed among French, Italian and Spanish.

Required courses:

• Language I: courses through the 400 level, including 307, 308, two literature surveys (French 325 and French 326, or Ital 323W and Ital 324W, or Span 335C and Span 336C), and two 400-level courses (in Italian, two literature courses; in French, either two literature courses or one literature course and French 411; in Spanish, either two literature courses or one literature and one linguistics course).

• Language II: courses through the 400 level, including 307, 308, at least two literature surveys (French 325 and French 326, or Ital 323W and Ital 324W, or Span 335C and Span 336C), and one 400-level course (in Italian and French, a literature course; in Spanish, either literature or linguistics).

• Language III: courses through and including one literature survey (307, 308, plus, depending on the language, French 325 or French 326; Ital 323W or Ital 324W; Span 335C or Span 336C).

• One WI (writing-intensive) course either in Spanish or Italian, or via French 411 (fall only).

• A capstone experience, either by completing Latin Honors or by completing a senior undergraduate seminar in the junior or senior year with a grade of B+ or better. We encourage students to consider doing an honors thesis, perhaps combining French and Spanish. The 6 units of 495 (honors) would be above and beyond the requirements listed above for each language.

Students need to take these classes for a letter grade and earn a B- or better, with a B average overall, per departmental requirements of all majors.
Students need approval from directors of undergraduate studies for Italian, French and Spanish for this major.

Additional Information

Students who plan to teach or pursue graduate study should consider taking a second foreign language, as well as linguistics courses. In all departmental courses for the major the student must receive a grade of B- or above. Each student’s progress toward achieving the objectives of the major will be assessed on a regular basis and by a variety of means. More information is available in the departmental mission statement.

Spanish Honors in Linguistics: To qualify for Spanish Honors in Linguistics in the major by thesis, a student must complete linguistic research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. The honors thesis in linguistics may include scientific experiments conducted in Spanish. The written thesis will include several drafts, all of which will be written in Spanish.

Study Abroad: Students are encouraged to participate in a study abroad program. Programs are available in France, Italy, Spain, Ecuador, Mexico and Chile.

Senior Honors: Students who have maintained at least a 3.65 overall cumulative GPA through the end of the junior year are encouraged to work toward Latin Honors (cum laude, magna cum laude, summa cum laude). To qualify for Latin Honors in the major by thesis, a student must complete special literary research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. To qualify for Latin Honors by course work, the student must complete four literature courses at the 400 level, including two in literature before 1800, and present two critical essays written for those courses to be judged by an honors faculty committee. Recommendations for honors are based on performance and the quality of the thesis or critical essays, plus the cumulative grade point average.

Minors

For the minor in French, visit the French (p. 420) page.
For the minor in Italian, visit the Italian (p. 532) page.
For the minor in Spanish, visit the Spanish (p. 733) page.

Courses

French

For French courses, visit the French (p. 421) page of this Bulletin.

Italian

Portuguese

For Portuguese courses, visit the Portuguese (p. 686) page of this Bulletin.

Spanish

For Spanish courses, visit the Spanish (p. 734) page of this Bulletin.

Russian Language and Literature

Students who want to achieve a high level of proficiency in the Russian language and study Russian literature in depth can pursue a minor in Russian language and literature. The program offers elementary through third-year language courses and a number of courses on 19th- and 20th-century Russian literature (in translation) on a wide variety of topics. Students are strongly encouraged to study abroad.

An independent minor, Russian language and literature (http://ias.wustl.edu/russian/russian-language-literature) is administered by International and Area Studies. Students undertaking this minor are encouraged to consider a major in Eurasian studies (p. 524) (through IAS), comparative literature (p. 292) or history (p. 452), all of which can be pursued with a focus on Russia and the former Soviet Union.

Regulations:
- Students can earn up to 6 credits from a semester or summer study abroad program, with the approval of the Russian language and literature adviser.
- All advanced units must be unique to the Russian language and literature minor (i.e., not counted toward any other major or minor).
- Students must earn at least a B- in language courses in order to continue to the next level. They must also maintain at least a B- average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course(s) in question or earn at least a B- in an approved equivalent course or courses (either during the summer or in a study abroad program).

Additional Information
Study Abroad: Students are strongly encouraged to participate in a Washington University study abroad program in St. Petersburg, Russia. Semester options include both language and area studies programs. Although the summer program is language-focused only, there are programs available for students at any language level, including beginning. The university’s programs in St. Petersburg are conducted under the auspices of the Council for International Educational Exchange (CIEE), the longest running such program in Russia. Financial aid may be available for these programs through both Washington University and CIEE.

Courses
video materials produced in Russia and conveying an up-to-the-minute picture of contemporary Russian life.
Credit 4 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L39 Russ 212D Intermediate Russian
Continuation of 211D, completes comprehensive review of Russian grammar and further advances conversational, reading, writing and listening skills. Revised textbook with new audio and video materials that convey an up-to-the-minute picture of contemporary Russian life.
Credit 4 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L39 Russ 215C Introduction to Russian Civilization
This course provides an overview of the main currents and developments in Russian culture and the arts from the earliest records to the present day. Exploring literary texts, film, music, architecture, the visual arts and popular culture, we discuss the self-identity of a people neither European nor Asian. Topics include the introduction of Orthodox Christianity, the "Tatar yoke," reactions to the "Europeanization" of Russia, Soviet propaganda and post-Soviet everyday life. Does the Russian Federation of today represent a complete break with the past or a reemergence of certain cultural constants? Knowledge of Russian language not required. Freshmen welcome.
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD, LS BU: HUM, IS

L39 Russ 315 Selected Areas for Special Study I: Russian Music
Same as L27 Music 315
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L39 Russ 322D Third-Year Russian
Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts and write compositions. Prerequisite: Russ 212D or equivalent.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L39 Russ 324D Third-Year Russian
Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts and write compositions. Prerequisite: Russ 322D or equivalent.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L39 Russ 350C The 19th-Century Russian Novel (WI)
The 19th-century "realistic" novel elevated Russian literature to world literary significance. In this course we do close readings of three major Russian novels: Alexander Pushkin's *Eugene Onegin*, Fyodor Dostoevsky's *Crime and Punishment* and Lev Tolstoy's *Anna Karenina*. While we consider a variety of formal and thematic concerns, special emphasis is placed on the social context and on questions of Russian cultural identity. Readings and discussions are supplemented by critical articles and film. This is a writing-intensive course: workshops are required. All readings are in English translation. No prerequisites.
Credit 3 units. A&S: TH, SD, WI A&S IQ: HUM, LCD, SD, WI Art: HUM BU: HUM

L39 Russ 3559 Socialist and Secular? A Social History of the Soviet Union
Same as L22 History 3559
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L39 Russ 356 20th-Century Russian History
Same as L22 History 356C
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: IS

L39 Russ 3560 Russia and the West
Same as L93 I PH 3560
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

L39 Russ 363 Russian Literature and Opera: Transpositions and Transgressions
Same as L97 IAS 363
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

L39 Russ 364 Anarchism: History, Theory, and Praxis
Same as L97 IAS 364
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L39 Russ 375 Topics in Russian Lit and Culture: Madmen or Visionaries? (WI)
Same as L97 IAS 3750
Credit 3 units. A&S: TH, CD, WI A&S IQ: HUM, LCD, WI BU: IS EN: H

L39 Russ 379 Russians Abroad: Literature, Migration, Identity
Same as L97 IAS 379
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L39 Russ 3880 The Russian Revolution: Writing-Intensive Seminar
Same as L22 History 38R8
Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI BU: IS EN: H

L39 Russ 396 Comintern: The Communist International's Global Impact
Same as L97 IAS 396
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L39 Russ 404 Fourth-Year Russian
Further develops students' abilities in all spheres of the language: speaking, listening, reading, writing. Vocabulary building, conversation practice and student compositions based on materials from the Russian mass media, contemporary films and readings in modern Russian literature. Prerequisite: three years of college Russian or equivalent.
Credit 3 units. A&S: LA A&S IQ: LCD, LS
on materials from the Russian mass media, contemporary films and readings in modern Russian literature. Prerequisite: three years of college Russian or equivalent.
Credit 3 units. A&S: LA A&S IQ: LCD, LS

L39 Russ 431 Russia Today and Yesterday: Cultural Perspectives (in Russian)
On the basis of contemporary literature, official media, popular songs and films, the course examines the ever-changing culture of the Russian people and society during the pre- and post-perestroika periods. Class discussions, lectures and student presentations. Prerequisite: three years of college Russian or the equivalent.
Credit 3 units. A&S: LA A&S IQ: LCD, LS Art: HUM BU: IS

L39 Russ 432 Russia Today and Yesterday (in Russian)
Readings of 19th- and 20th-century Russian writers, as well as other literary and non-literary texts. Refinement and expansion of Russian communication skills (speaking, listening, writing, reading). Class discussions, student presentations, compositions. Prerequisite: Russ 431 or the equivalent.
Credit 3 units. A&S: LA A&S IQ: LCD, LS Art: HUM

L39 Russ 4442 The Jewish Experience in Eastern Europe
Same as L22 History 4442
Credit 3 units. A&S: TH, CD

L39 Russ 448 Russian History to the 18th Century
Same as L22 History 448C
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

L39 Russ 449 Imperial Russia
Same as L22 History 449C
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

L39 Russ 4869 Reading War and Peace
Same as L97 IAS 4869
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD EN: H

Sociological analysis begins from theoretical perspectives that explain how the structures that organize and govern social systems emerge and change. Our curriculum and research also emphasize an understanding of social processes that is well grounded in empirical data on how societies actually function. The evolving program will give students the research tools to develop their own perspectives on social function. We also seek to engage with social policies and formal and informal social institutions to better understand the world in which we live and to help guide social change.

Majors

The Department of Sociology was re-established in 2015, and its first courses were offered in the fall semester of 2015. Plans are underway to introduce a major during the 2016-17 academic year, but it is not yet possible to declare a sociology major.
L40 SOC 2010 Sociology of Race and Ethnicity
An overview of sociological understandings of race and ethnicity, with a particular focus on race and ethnic relations in the contemporary United States. We begin by investigating how sociologists understand racial and ethnic distinctions, asking: What comprises a racial or ethnic group? We then shift our attention to patterns of racial and ethnic inequality in the U.S., investigating the intersection of economic and racial/ethnic stratification. After analyzing national trends in race and ethnic stratification, we narrow our focus to particular regions and metropolitan areas, including St. Louis, to shed light on pressing public concerns such as the interrelationships between race/ethnicity and the criminal justice system. The course also looks beyond U.S. borders and asks: How is race/ethnicity understood in other countries? What makes our own system of racial and ethnic stratification distinctive? Are there common patterns of racial and ethnic classification shared by many societies? Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2020 Order and Change in Society
Identification and analysis of processes that create social order and forces that generate social change. What kinds of structures make social life coherent so that we all can navigate a wide range of social settings? How do societies sometimes mobilize to alter the status quo, and what kinds of barriers limit those efforts to change social systems? This course engages with such core issues through a sociological lens. Specific topics include: the emergence of social roles and status systems; how social networks matter in communities, schools and other groups; and the performance, reproduction and subversion of privilege and inequality. No prerequisites. Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L40 SOC 2030 Social Movements
Social movements are collective efforts to produce political, economic and/or cultural change. This course draws on a range of historical and contemporary case studies to analyze such collective actions by interrogating distinctive aspects of movements and their associated campaigns. Key questions include: When and where do movements occur, who participates and why, how do protest strategies and tactics develop, how do police and other movement targets react to challenges to the status quo, and how can we assess the direct and indirect impacts of contention? Introductory level, no prerequisites. Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2110 Social Inequality in America
Americans face different challenges and opportunities that depend on a variety of characteristics, including race, class, gender and sexual orientation. This class examines these intersecting categories from a sociological perspective — not simply as ways to classify people, but as social constructions that help to explain social inequality. We examine these systems in a variety of institutional contexts, such as popular culture, family life, education, the criminal justice system and the labor force. Introductory level, no prerequisites. Credit 3 units. A&S IQ: SSC, SD EN: S

L40 SOC 3001 Social Theory
Overview of major theoretical frameworks used by sociologists to understand social behavior and group patterns. Explores classical theories, including those developed by Marx, Weber, and Durkheim along with contemporary perspectives such as exchange and feminist theories. Class discussions and writing assignments emphasize application of theory to understand current social experiences and structures. The course has no specific prerequisites, but students should be prepared for intensive study of challenging ideas and the application of these ideas in new contexts relevant to modern society. Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L40 SOC 3030 Introduction to Research Methods
Overview of research methods commonly used to investigate sociological phenomena including experiments, surveys, ethnographic field research, and analysis of existing data. The course explores general issues in sociological research, such as research design, conceptualization and measurement, reliability, validity, sampling and ethical conduct. We also review applications of research methods in specific sociological studies and analyze how research results are communicated. This is a core course in the study of sociology. It has no specific prerequisites but some familiarity with sociological analysis is recommended. Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L40 SOC 3212 The Social Construction of Race
Examination of race, ethnicity and racism from a sociological perspective to understand race as a socially constructed phenomenon manifested in a wide range of social institutions. The course focuses on how race and racism impact contemporary social problems and public policy issues including immigration, affirmative action, education, media representation and work. Application of sociological analysis to understand current race-related events. This course has no specific prerequisites but completion of an introductory course in sociology is recommended before enrollment. Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

Undergraduate students interested in specializing in sociology should contact the department office for information on how to use the rapidly evolving curriculum to support their educational objectives.

Minors
The Department of Sociology was re-established in 2015, and its first courses were offered in the fall semester of 2015. Plans are underway to introduce a minor during the 2016-17 academic year, but it is not yet possible to declare a sociology minor. Undergraduate students interested in specializing in sociology should contact the department office for information on how to use the rapidly evolving curriculum to support their educational objectives.

Courses

L40 SOC 3310 The New Inequality
Exploration of recent trends of economic inequality in the United States that have reached levels not seen since before the Great Depression. We examine factors that account for the decades-long increase in economic disparities, paying particular attention to patterns in educational attainment, political developments, and the role of technological change. We will also compare recent movements in economic inequality and macroeconomic performance in the U.S. with other advanced industrialized nations. This course has no specific prerequisites but completion of an introductory course in sociology is recommended before enrollment.
Credit 3 units. A&S: SS, SD, WI A&S IQ: SSC, SD, WI Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 3350 Poverty and the New American City
Exploration of structural changes that are transforming the American urban landscape, especially for low-income populations. We begin with a review of classic theories of urban poverty and consider their relevance in the modern context. We then analyze key political, economic, demographic and geographic shifts in how urban poverty is organized and reproduced, including gentrification, immigration, social policy reform and the credit crisis. Special attention will be devoted to exploring the social and political implications of changing urban policy approaches, as well as the "suburbanization" of poverty. We will conclude by discussing how urban poverty interfaces with broader social structures, including law, markets and the state. Prerequisite: an introductory course in sociology or consent of the instructor.
Credit 3 units. A&S IQ: SSC EN: S

L40 SOC 3710 Sociology of Immigration
A review of theoretical and empirical research on how and why people migrate across international borders, and the consequences of international migration for immigrants and natives in the United States. While immigration is one of the most controversial issues in the contemporary United States, these contentious debates are not new. Americans once voiced the same concerns about the economic and social impact of Southern and Eastern European immigrants that today are aimed at immigrants from Latin America, Asia, Africa and the Caribbean. In this course we will compare historical (1880-1920) and contemporary (1965-present) waves of immigration to the United States. We will explore why and how people migrate, immigrant integration, the impact of immigration on native-born Americans, and how government policies — at the national, state, and local level — shape immigrant assimilation and what it means to be considered truly "American" in a social as well as a legal sense. Prerequisite: completion of an introductory sociology course or consent of the instructor.
Credit 3 units. A&S IQ: SSC EN: S

L40 SOC 3910 Economic Realities of the American Dream
Exploration of the realities of economic life in the U.S. and how they correspond to the American Dream. Interdisciplinary perspectives from economics, sociology and other areas of social inquiry. Emphasis on the consistency between empirical data and different concepts of the American Dream. Specific topics to include sources of economic growth and changing living standards, unemployment, impact of globalization on U.S. citizens, economic mobility, poverty and inequality, and social justice. Prerequisites: Econ 1011 and Econ 1021, or consent of the instructors.

Spanish
Speaking Spanish is the key to unlocking the cultures, traditions and experiences of 20 different countries throughout the world. From the medieval knights and Don Quixote through the modern novels by prize-winning authors and the world of film, the Spanish faculty at the Department of Romance Languages and Literatures guides Spanish students into the unexpected territories of Europe and Latin America, territories that are as rich geographically as they are culturally. Students who major and minor in Spanish graduate with top-notch communication skills. Our students speak Spanish and they speak culture, which are valuable professional skills today. The exponential growth of the Spanish-speaking population in the United States, the constant presence of Latin America at the top of America’s political and business agenda, and the continued lure of Spain as a gateway to Europe and parts of Africa makes speaking Spanish and the ability to interpret the cultures of Spanish-speaking countries two of the most profitable and enjoyable skills that one can acquire.

Study Abroad opportunities complement our courses in St. Louis, including Freshman Focus programs in Argentina and Cuba; summer programs in Argentina and Spain; and semester programs in Chile and Spain. In addition, our Spanish program is linked to volunteer opportunities with the Latino community in St. Louis. For more information on the Spanish major and minor visit our website (http://rll.wustl.edu/spanish/undergrad).

 Majors
 The Major in Spanish
Required units: 27-30
A minimum of 30 units (double majors: 27 units) at the 300 level or above, of which 21 units must be taken in residence. Study
at Washington University's own programs in Spain or Chile is considered "in residence."

**Required courses**

The following courses must be included in the 30 units:

**Advanced Grammar and Composition (6 units)**

- Span 307D Spanish Level 4: Grammar and Composition (or elective if placed in L38 Span 308E)
- Span 308E Advanced Reading and Writing (L38 Span 308E is now offered instead of L38 Span 307D)
  - Students who place out of L38 Span 307D through Washington University's placement exam and consultation with the Director of Undergraduate Studies receive back credits toward graduation but not toward the major. These students need to take another advanced (300- or 400-level) Spanish course to obtain the credits typically obtained through L38 Span 307D.
  - L38 Span 307D is a prerequisite for the 300-level literature surveys.
  - Students are strongly encouraged also to take L38 Span 308E before registering for the survey classes but may take 308E and their first 300-level survey concurrently (listed below).

**Three Literature Survey courses (9 units)**

Three of the following courses, including one Peninsular and one Spanish-American course:

- Span 341 Literary and Cultural Studies in Spanish 3
- Span 342 Iberian Literatures and Cultures 3
- Span 343 Latin American Literatures and Cultures 3

**Study Abroad:**

- Span 354 A View from the Southern Cone: Perspectives on Art, Literature and Culture (Chile) 3
- Span 3341 Spanish Literature II in Chile/Spain (Spain) 3
- Span 3361 Spanish-American Literature II in Chile/Spain (Spain/Chile) 3

**Notes for students considering 400-level courses and study abroad:**

- A minimum of two survey courses are prerequisites for all 400-level courses.
- One literature course taken in the Chile or Spain Romance languages and literatures semester programs, designated as an acceptable substitute, may be used as one of the three required 300-level survey courses. Students who still must fulfill a survey on campus after returning from study abroad may, with permission of the Director of Undergraduate Studies in Spanish, petition to take an appropriate 400-level seminar in place of the remaining 300-level survey course. Otherwise, students may not take a 400-level course to replace a required 300-level survey course.

**One Culture or Linguistics Survey Course (3 units)**

Choose one from:

- Span 370 Introduction to Hispanic Linguistics 3
- Span 380 Topics in Hispanic Cultures 3

**Study Abroad:**

- Span 3181 Spanish Culture and Civilization 3
- Span 311 Hispanic Culture and Civilization I (summer in Madrid) 3
- Span 313 Chilean Contemporary Culture (Chile) 3

**Two 400-Level Seminars (6 units)**

- Span 405W Major Seminar (selected topics)
- Span 410 Major Seminar (selected topics)

Other 400-level class *taught in Spanish*

- *Beginning 2016-17, students may take 405W or 410 in any combination; 405W will fulfill the College's Writing Intensive requirement for those who need it.*
- When offered, *one* of the following language seminars may be substituted for one of the two 400-level literature seminars:
  - Span 417 Phonology and Second Language Acquisition
  - Span 411 Advanced Grammar and Syntax
  - Span 370 (or consent of the instructor) is a prerequisite for the 400-level linguistics courses taught in Spanish.

**Elective courses (two for single majors; one for double majors)**

- Span 324 Conversation in Cinema (Span 324 is the only University College course that can count as elective credit for the major and minor) 3
- Span 331 Hispanic Art/Arte Hispano 3
- Span 351 Business Spanish 3
- Span 353 Medical Spanish 3

Any other advanced 300- or 400-level Spanish (L38) class taught by a Romance languages and literatures faculty member
• Only one elective course taught in English may be taken, when available, for the major.

Study Abroad:

• Span 322 Advanced Conversation in Spain
• Elective credit from semester programs in Santiago or Madrid
• Elective from the Latin American Studies summer program in Buenos Aires (either Latin American and Argentine Literature or Argentine History)
• Elective credit from Petitioned, Organization for Tropical Studies, School for International Training, or Comparative Literature Programs (refer to Study Abroad guidelines on our website)
• Spanish courses completed (and approved) from Study Abroad programs other than those at Washington University may be used for Spanish elective credit only.
• All Study Abroad credit requires authorization from the Director of Undergraduate Studies.

Other Requirements

Prior to declaring a major, students are required to fill out a questionnaire about their previous preparation and objectives in studying Spanish. As seniors they may fill out an optional survey about the major. Double-major seniors may elect to do their capstone experience in a 400-level course; single majors must do so. The capstone may be fulfilled through the completion of a 400-level class with a B+ or better, or via Honors (refer to Honors guidelines on our website). All qualified majors in the school of Arts & Sciences may elect to meet the requirements for honors. To be eligible to earn honors in Spanish, Spanish must be the student's prime major.

Recommended for prospective teachers:
1. A second language
2. Span 466, Span 467, Span 469, Span 413, Span 417, Span 411
3. Semester or year in Spain or Chile

Recommended for prospective graduate students:
1. A second language related to student's area of interests
2. Advanced work in other literatures, literary criticism and theory, and related course work in other literature or film programs
3. Year in Spain or Chile
4. Senior Honors by thesis or course work (refer to Honors guidelines on our website). Students who have maintained at least a minimum cumulative GPA of 3.65 through the end of the junior year are encouraged to work toward Latin Honors (cum laude, magna cum laude, summa cum laude).

Minors

The Minor in Spanish

Units required: 18

The Spanish minor includes 18 units, of which 12 must be taken in residence. Students must complete courses with a grade of B- or above and maintain a B average or better overall in Spanish. Courses taken Credit/No Credit (Pass/Fail) do not count toward the Spanish minor.

Required courses

Advanced Grammar and Composition (6 credits)

Span 307D Spanish Level 4: Grammar and Composition (or elective if placed in 308E). Spanish 307D is a prerequisite for the 300-level literature surveys.

Span 308E Advanced Reading and Writing (Spanish 308E is now offered instead of 308D). Students are strongly encouraged also to take Spanish 308E before registering for the 300-level survey classes but may take 308E and their first 300-level survey concurrently.

Two Literature and Culture Surveys (6 credits)

Two of the following courses, including one Peninsular and one Spanish American course:

- Span 341 Literary and Cultural Studies in Spanish 3
- Span 342 Iberian Literatures and Cultures 3
- Span 343 Latin American Literatures and Cultures 3

Study Abroad:

- Span 354 A View from the Southern Cone: Perspectives on Art, Literature and Culture 3
- Span 3341 Spanish Literature II in Chile/Spain 3
- Span 3361 Spanish-American Literature II in Chile/Spain 3

Notes for students studying abroad and/or students considering the major in Spanish:

• A minimum of two survey courses are prerequisites for all 400-level courses.
• One literature course taken in the Chile or Spain RLL semester programs, designated by the department as an acceptable substitute, may count as one of the three required 300-level surveys. Students who return from Study Abroad needing to complete one outstanding survey may, with permission of the Director of Undergraduate Studies in Spanish, petition to take an appropriate 400-level seminar.
in place of the remaining 300-level survey. Students who do not receive approval from the Director of Undergraduate Studies may not take a 400-level course in place of a required 300-level survey course.

**One Culture or Linguistics Survey Course (3 credits)**

One of the following courses:

- Span 370 Introduction to Hispanic Linguistics 3
- Span 380 Topics in Hispanic Cultures 3

Study Abroad:
- Span 311 Hispanic Culture and Civilization I 3
- Span 3181 Spanish Culture and Civilization 3
- Span 313 Chilean Contemporary Culture 3

**One Elective Course (3 credits)**

One of the following courses:

- Span 331 Hispanic Art/Arte Hispano 3
- Span 351 Business Spanish 3
- Span 353 Medical Spanish 3

Any other advanced-level Spanish course offerings either at the 300 or 400 level or approved study abroad course.

Study Abroad:
- Span 322 Advanced Conversation in Spain
- Elective credit from semester programs in Santiago or Madrid
- Elective credit from the Latin American studies summer program in Buenos Aires (either Latin American and Argentine Literature or Argentine History)
- Elective credit from petitioned OTS, SIT, or Comparative Literature Program (refer to Study Abroad guidelines on our website [http://rll.wustl.edu/abroad](http://rll.wustl.edu/abroad))
- Spanish courses completed (and approved) from Study Abroad programs other than those at Washington University may be used for Spanish elective credit only. All Study Abroad credit requires authorization by the Director of Undergraduate Studies.

**Courses**

L38 Span 101D Spanish Level 1
Beginning language program stressing rapid acquisition of communicative ability. In addition to four hours of master class, students must enroll for two hours of additional practice and do one hour of assessed independent learning activities with multimedia resources.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L38 Span 102 Elementary Spanish
Second semester of the beginning language program stressing acquisition of spoken ability together with attention to the development of reading, writing and listening skills. In addition to three hours of class, students complete weekly, assessed independent learning activities with multimedia resources. Prerequisite: Span 101D or placement by examination.
Credit 3 units. A&S: LA A&S IQ: LCD, LS

L38 Span 102D Spanish Level 2
Beginning language program stressing rapid acquisition of communicative ability. In addition to four hours of master class, students must enroll for two hours of additional practice and do one hour of assessed independent learning activities with multimedia resources. Prerequisite: Span 101D or placement by examination.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L38 Span 201D Intermediate Spanish I
An accelerated intermediate-level grammar review taught by a team of instructors in a MWF grammar class and a T/TH literature/composition class. Reviews basic and some advanced skills intensively with increased emphasis upon reading, writing, culture, and vocabulary learning. Prerequisite: Span 102D or placement by examination. Students must register for both a T/TH and a MWF class.
Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L38 Span 202 Intermediate Spanish II
The second half of a two-semester intermediate-level sequence. This class continues to review basic knowledge and to introduce advanced skills in grammar, reading, writing, culture and vocabulary. Prerequisite: Span201E or placement by examination.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L38 Span 202E Intermediate Spanish I
The first half of a two-semester intermediate-level sequence. Reviews basic knowledge and introduces advanced skills in grammar, reading, writing, culture and vocabulary. Prerequisite: Span102D, or placement by examination.
Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L38 Span 203 Intermediate Spanish Conversation and Culture
Practice of spoken Spanish and expansion of vocabulary in a wide range of topics. Discussion and role play based on short readings, music and film. Use of the World Wide Web for up-to-date news and culture. Oral presentations and limited writing. Prerequisite: 201D or equivalent. Concurrent enrollment in Span 307D recommended.
Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H
L38 Span 245 Women's Fiction in Contemporary Spain
This course focuses on selected novels and short stories by 20th-century women writers in Spain, beginning with those writing during the post-Civil War years (1939-1975) and ending with the new generation of women writers who emerged after the end of the Franco dictatorship (post-1975). Discussions center on both political and aesthetic issues in the contexts of post-war and post-Franco Spain, including the effects of political repression and censorship; representations of gender and sexuality; and literature's relationship to feminist and nationalist movements in Spain. When relevant, other cultural media, such as film and music, are used in conjunction with our reading and analysis of literary texts. The course is taught in English. Credit 3 units. A&S: TH Art: HUM BU: IS EN: H

L38 Span 246 Freshman Seminar: Latin American Women in History and Culture: Icons and Idols
In English. This class takes an in-depth look at various iconic female figures in the history of Latin America, examining their (self-) representation in history, literature, art and other cultural manifestations. We examine their lives, writings and art to learn more about the historical and cultural moment they lived in; how this moment shaped their lives and how they, in turn, shaped their historical moment. We aim to draw the larger conclusions of how women in history, despite hostile circumstances, have managed to forge political, cultural and artistic identities and make an impact on the world around them. We study these women in a chronological fashion, showing how society's attitudes changed toward women and how, in some ways, paradoxically, stayed the same. The women we study are all very different in terms of identity, historical period and sociocultural background but all are similar in terms of their desire to overcome convention and resist repression — sometimes with very tragic results. Figures we study include La Malinche, Sor Juana Inés de la Cruz, Manuela Sáenz, Delmira Agustini, Frida Kahlo, Eva Perón, the Mothers of the Plaza de Mayo, Rigoberta Menchú and Ingrid Betancourt. Prerequisite: concurrent registration in individually appropriate level of Spanish language course is required. Credit 3 units. A&S: TH, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

L38 Span 247 Freshman Seminar
Same as WGSS 247. Taught in English. Small group seminar devoted to readings and study of other texts such as films, paintings, etc., active discussion, writing. Topics vary; interdisciplinary focus. Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: ETH EN: H

L38 Span 251 Latin American Nomads and Travelers
Rites of passage and trespassing representing Latin American immigrants, nomads and travelers in narrative and film. This course is designed to map the multicultural context of travel, nomadism, displacement and immigration while studying narrative texts (Before Night Falls; Heading South, Looking North; Life on the Hyphen; Translated Woman: Crossing the Border With Esperanza's Story) and films (El Norte, Gringuito, Old Gringo, Stand and Deliver) by Latin American and Latino authors. We look at the images, metaphors and myths that pervade current conceptualizations of the borders and explore the variety of ways in which postcolonial rites of passage and trespassing inform the aesthetics of contemporary Latin American cultural expression. In English. Credit 3 units. A&S: TH BU: IS

L38 Span 252 Introduction to Latino/a Studies: Exploring Memory
The course is an interdisciplinary introduction to Latino Studies, a discipline that studies the experiences and conditions of U.S. Latinos drawing from both the Social Sciences and Humanities. The course presents and analyzes works that include methodological strategies and analytical approaches to learning about U.S. Latinos. We analyze the social, political, and cultural forces that have affected the experiences of Latinos/as with particular attention to the ways in which historical, collective, familial, and personal memories have shaped and continue to shape these experiences. We explore the intersections of history, place and identity through a selection of works, including literary and media studies, in order to understand the principle questions and concerns in the major fields of interest to U.S. Latino Studies. Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

L38 Span 299 Undergraduate Independent Study
Prerequisites: Span 201D and permission of the department. Credit variable, maximum 3 units.

L38 Span 307D Spanish Level 4: Grammar and Composition
This course combines a review of Spanish grammar and syntax with the analysis of several concrete examples of cultural production in Spanish. This dual emphasis on refining linguistic skills already studied, and exploring the cultural diversity of the Spanish-speaking world, will provide students with the tools for effective and culturally appropriate written and oral communication in Spanish necessary for establishing strong cross-cultural relations in today's interconnected world. Prerequisites: Span 201D or Span 202 or placement by examination. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L38 Span 308D Spanish Level 4: Grammar and Composition 2
In-depth study of the process of writing, designed to prepare the Spanish major to write literary analysis. Literary texts studied as examples of writing styles. Regular compositions. Prerequisite: Span 307D or placement by examination. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS

L38 Span 308E Advanced Reading and Writing
In-depth study of the process of advanced reading and writing designed to prepare the Spanish major for upper-level courses. Literary texts studied as examples of writing styles. Regular compositions. Prerequisite: Span 307D or placement by examination. Conducted in Spanish. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: IS EN: H

L38 Span 310 Advanced Intermediate Spanish in Spain
Continued study of Spanish grammar and syntax at Washington University's Madrid Carlos III University Program. A course designed for non-native speakers of Spanish, to refine communicative abilities in all four skills. Prerequisite: placement by exam at Carlos III. Credit variable, maximum 4 units.
L38 Span 311 Hispanic Culture and Civilization I
Study of aspects of the political, social and cultural life of contemporary Spain and Portugal and their historical development. Class discussion; readings with compositions. Conducted in Spanish. May be repeated for credit. Prerequisite: Span 201D. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: BA EN: H

L38 Span 312 Topics in Hispanic Culture and Civilization II
Study of aspects of the political, social and cultural life of contemporary Latin America and their historical development. Class discussion; readings with compositions. Conducted in Spanish. Prerequisite: Span 201D or placement by examination. Credit 3 units. A&S: TH, CD BU: BA EN: H

L38 Span 313 Chilean Contemporary Culture
This two-week course provides a panoramic view of Chilean contemporary culture, focusing on the years from 1988 to the present. We examine the representation of current issues in literature, the arts and the media, and study topics such as governmental institutions, the constitution of 1980, the economy, the role of the Catholic Church, public policy concerning culture, etc. The course meets three hours a day, and there are several guest lecturers. Conducted in Spanish. Requirements: two short papers, short reports in class of the news or a cultural activity students have attended, and participation in class discussions. Course includes an all-day cultural excursion on Saturday, which features a visit to one of Neruda's houses, a history museum, etc. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: ETH

L38 Span 317 Advanced Spanish Language in Chile/Spain
Continued study of Spanish grammar and syntax at Washington University's program in Chile or Spain. A course designed for non-native speakers of Spanish to refine mastery of difficult uses and structures in all four skills. Prerequisite: placement by exam or program director. Credit variable, maximum 4 units.

L38 Span 3181 Spanish Culture and Civilization
This course is intended to acquaint students with important aspects of Spanish culture, including history, civilization, society, politics and the arts, dating from the first invasions of the Peninsula to the present. Students gain an awareness of the ethnic, cultural and aesthetic diversity of Spain as a country of multiple autonomous regions, by working with written texts and other media and by visits to various locations. The broader aim of the course is to enable students to engage with and to analyze Spanish culture from an intellectually critical perspective and knowledge of its sociohistorical distinctiveness. Requirements include active participation within all classes and excursions, presentations and various written assignments. This course is taught in Madrid, as part of the Washington University Carlos III Program. Conducted in Spanish. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

L38 Span 322 Advanced Conversation in Spain
Designed to offer students with advanced skills in Spanish an opportunity to refine their ability to discuss a variety of topics. Various media such as films, television, newspapers and other modes of communication are used for oral presentations and some writing. Prerequisite: Span 301, 307D or 308E, or multiple 300-level courses. Credit 3 units. A&S: LA A&S IQ: LCD EN: H

L38 Span 325 Exploration, Traveling and the Double Gaze: Mapping Geography and Identity in Colonial Spanish America
In this course we examine the geographical, cultural and ideological mapping as described in the travel/exploration chronicles of the 16th, 17th and 18th centuries. We focus on the Southern hemisphere (Peru) as well as the Northern Frontier (Mexico, New Mexico, La Florida, Colorado) while reading narrative texts such as Columbus’ Diario, Cabeza de Vaca’s Naufragios, Inca Garcilaso de la Vega’s The Florida of the Inca, Francisco Vásquez de Coronado’s Narratives of the Coronado Expedition, and Alonso Carrió de la Vandaera’s El Lazarillo de ciegos caminantes (guide for travelers in 18th-century Spanish America). We use art work and historical maps for our study of the cultural and ideological representations of alterity and of the geography of the colonial empire. In English. Credit 3 units. A&S: TH

L38 Span 331 Hispanic Art/Arte Hispano
This course focuses on the most important movements, artistic expressions and its representatives of the art history of Latin America and Spain. From the Pre-Columbian art of the Mayas, Aztecs and Incas, to the syncretism of Postcolonial Latin American art, the Mexican Muralism and the self-reconstruction portraits of Mexican artist Frida Kahlo to the Chicano Art in the USA. From the Medieval paintings of religious Spain, to the criticism of the Spanish nobility by Diego Velazquez, the Spanish Civil War of Guernica by Pablo Picasso, to the Surrealism of Salvador Dalí and Antonio Gaudi. The students visit the St. Louis and the Kemper Art Museums. Prerequisite: Span 308E. May be used for elective credit in the Spanish major or minor. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: IS EN: H

L38 Span 3321 Spanish Film Studies in Spain
An introduction to contemporary Spanish film taught at Washington University’s program in Spain. Prerequisite: approval of Washington University’s program director. Credit 3 units. BU: IS

L38 Span 3331 Spanish Literature I in Chile/Spain
Introductory survey of Spanish literature from its beginnings in the Middle Ages to the baroque period at Washington University’s program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. Art: HUM

L38 Span 3332 Early Modern Spanish Texts: Whose Golden Age Do They Represent?
This course studies a series of work from 16th- and 17th-century Spain canonized by later readers as classics of national Spanish literature, that daringly experiment with the literary genres of their period to incorporate discourses from daily life, thereby revealing the decadence of imperial Spain and questioning the representation of this period as a “Golden Age.” Includes the Lazarillo de Tormes, El Abencerraje, Fuenteovejuna, La vida es suefro, La dama boba and short narratives by Cervantes and Maria de Zayas. Prerequisites: Span 307D; concurrent
enrollment in Span 308E is allowed; completion of Span 308E is recommended. In Spanish. Credit 3 units. A&S: TH, SD A&S IQ: HUM, LCD, LS, SD BU: IS EN: H

L38 Span 3334 Medieval Iberia: A World with Many Faces, Through its Texts and Other Cultural Artifacts
This course offers a panoramic vision of the medieval literature of the Iberian Peninsula, from its beginnings until the end of the Middle Ages (11th to 15th centuries). We read student modernized and annotated versions of some of the most famous works of this period, originally written in Castilian: lyric and epic poetry, ballads, miracles and exemplary stories, and the first act of Celestina. This selection includes works written by Christian, Hispano-Arabic and Hispano-Hebrew authors, and also some works originally written in other languages of the Peninsula (Arabic, Hebrew, Portuguese and Latin), that were translated into Castilian during the Middle Ages and are now considered part of the corpus of Castilian literature, because they significantly influenced Castilian authors of this and later periods. We also use music, art, images of old manuscripts and books, and secondary readings that help us better understand the cultural context of this period. Our discussion of the texts include topics such as the relations among the three main Cultures of the Peninsula: Arabic, Jewish and Christian; the role of the Christian Church in medieval society, the situation of minority and women, the presence of oral tradition in written texts, and the creation and spread of manuscripts and early printed books. Prerequisite: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, LS, SD BU: HUM EN: H

L38 Span 3341 Spanish Literature II in Chile/Spain
An introduction to key texts from Spanish literature in the 19th and 20th centuries at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. Art: HUM

L38 Span 334C Spanish Literature II
An introduction to key texts from Spanish literature and culture in the 19th, 20th and 21st centuries in their specific historical contexts. Topics may include encounters between Arabs, Christians and Jews in the Iberian peninsula; issues of gender and sexuality; the modern city; discourses of nationalism; the Spanish Civil War; the Francoist dictatorship; transition to democracy; and contemporary challenges in an increasingly multicultural and multiracial society. Prerequisites: Span 307D; concurrent registration in Span 308E is allowed; completion of Span 308E is recommended. In Spanish. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD, LS Art: HUM BU: IS

L38 Span 3351 Spanish-American Literature I in Chile/Spain
A survey of major figures and literary trends in Spanish America from 1492 to Modernismo (1880); at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. Art: HUM

L38 Span 3352 Spanish-American Literature of the Long 19th Century: From Empire to Nation
This survey examines the changing roles of literature and its creators during the period that saw the end of the powerful Spanish empire and the emergence of the political framework of independent nations we are familiar with today. Students are introduced to prominent themes such as independence writing, the experience of race in literature, romanticism, civilization vs. barbarism, the appeal of literature to popular classes, modernismo, the place of literature in nation building and in shaping national identity, and the idea of the past as present. Prerequisites: Span 307D or permission of instructor; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. In Spanish. Credit 3 units. A&S: TH & A&S IQ: HUM, LCD, LS EN: H

L38 Span 335C Spanish-American Literature I
A survey of major Latin American literary works focusing on canonical works of the 20th and 21st centuries in their cultural and historical contexts. The course includes discussions of major literary movements such as the avant-garde, the Boom and the post-Boom. Other topics may include the literary and cultural responses to revolution, dictatorship and the evolving definitions of Latin America. Authors may include Quiroga, Neruda, Guíllén, Vallejo, Borges, Cortázár, Ruízo, Carpentier, García Márquez, Poniatowska, Fuentes, Ferré and others. Prerequisites: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD, LS Art: HUM BU: IS

L38 Span 336C Spanish-American Literature II
A survey of major Spanish-American literary works from the end of the 19th century to the contemporary period at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. Art: HUM

L38 Span 3361 Spanish-American Literature II in Chile/Spain
A survey of major Spanish-American literary works from the end of the 19th century to the contemporary period at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. Art: HUM

L38 Span 337C The Chilean Short Story
In this course we trace the trajectory of the short story in Chile in the 19th century with special attention to such literary movements as realism, naturalism, vanguardism, surrealism and the new narrative, including the literature written during the dictatorship. The course tries to determine what specifically can be expressed about national identity through narrative, and is
informed by historical, political and sociological analyses. The course includes several field trips to related sites and guest lectures by major Chilean writers and critics. Class requirements include a short essay, a long final essay and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. Conducted in Spanish. Credit 3 units. A&S: TH Art: HUM

L38 Span 340 Nationalism in Action: The Spanish-American War
We study nationalism as it was in evidence in the Spanish-American War in the United States and in Spain as an outgrowth of each country’s history. We read periodicals of the period and study caricatures and other artistic expressions, as well as writings by authors such as Stephen Crane, Galdós, Mark Twain, Fernando Ortíz, Ivan Musciant and others. Cuba, Puerto Rico and the Philippines are included in the scope of the course. Students are expected to present a book report orally and to write it formally; in addition, a term paper of about 15 pages on a topic chosen in consultation with the instructor serves as a final project. The course is conducted in English although students able to read other languages may do some of the readings in the original. May count as elective credit for the major if work is done in Spanish. Enrollment limited to 15 students. Credit 3 units. A&S: TH

L38 Span 341 Literary and Cultural Studies in Spanish
This course is an introduction to cultural and literary analysis within Iberian and Latin American cultures. The course covers a wide variety of materials that span different countries, historical periods, and various cultural and literary forms. The main objective of the course is to introduce students to key historical, geographical and political aspects of these cultures, while at the same time applying different approaches of cultural analysis. The course is structured upon key central concepts as they are particularly related to the cultures of the Iberian Peninsula and Latin America, such as nation, colonialism/postcolonialism; modernity and postmodernity; popular and visual media; gender, race, migration and social class. The course combines the reading of literary texts, films and other cultural forms, with the examination of introductory critical works related to the key concepts that are explored throughout the semester. Prerequisites: Span 308E or concurrent enrollment in 308E. Taught in Spanish. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

L38 Span 342 Iberian Literatures and Cultures
Which are the cultures that shape what Spain is today? This course explores the diversity of the Iberian Peninsula through its literatures and cultures. As part of both the Mediterranean and Western Europe, the Iberian Peninsula has been shaped through a dynamic of conflict and negotiation between various cultures, languages and religions. Students engage themes such as internal colonization, imperialism, multiculturalism, regional identities, nation formation, migration, media and popular culture, modernization, and gender and race relations, as they relate to our understanding of the country today. Focuses may include but are not limited to the following: multiculturalism of the Middle Ages, the Muslim and Jewish presence in Spain, identity narratives and power relations, stage and performance traditions, as well as authors and artists like Cervantes, Galdós, García Lorca, Picasso, Almodóvar. Prerequisites: Span 308E or concurrent enrollment in 308E. Taught in Spanish. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

L38 Span 343 Latin American Literatures and Cultures
How did Latin America become Latin America? This course explores the different inventions and reinventions of the region through its literatures and cultures. Beginning with the encounter of Europeans with America, students engage themes like colonization and colonialism, urban and rural cultures, nation formation, modernization, media and popular culture, as well as gender and race relations. Authors studied may include Colón, Sor Juana, Sarmiento, Neruda, Borges, García Márquez, or Morejón. Prerequisites: Spanish 308E or concurrent enrollment in 308E. Taught in Spanish. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

L38 Span 349 Don Quixote in Translation
Because Cervantes’ masterpiece is considered to be the first modern novel, it is absolutely essential to any understanding of literature as a whole. By way of a close textual reading, this course focuses on all the ways Don Quixote recapitulates almost the entire Western tradition and how it anticipates so many of the later developments of the novel. Course conducted in English. Credit 3 units. A&S: TH Art: HUM

L38 Span 350 Undergraduate Seminar in Spanish Literature and Culture
Taught in Spanish. Topics vary. Can be repeated for credit. This course can be counted as one of the three surveys required to obtain a Spanish major. Prerequisites: Span 307D; concurrent registration in Span 308E is recommended. Satisfies the 300-level literature survey requirement for the Spanish major and minor. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L38 Span 3501 Latin American Women Writers in Translation
Study of major 20th-century women writers in English translation. We read poems, plays, essays and short fiction by authors such as Agustini, Ocampo, Mistral, Bombal, Gambaro, Ferré, Valenzuela and others. Class conducted in English. Spanish majors do the readings and papers in Spanish. Enrollment limit 25. Credit 3 units. A&S: TH Art: HUM BU: IS

L38 Span 3502 Spanish-American Short Novel

L38 Span 3503 Fiction, Crime and Enigma: Clues to Detective Narrative from the Americas
Ever since the detective story took readers by storm during the last decades of the 19th century, the genre of detective fiction has continued to flourish while undergoing numerous transformations. Latin American literature is well known for the alternative re-readings of the crime fiction canon by well-established writers who broke canonical rules of classical and hard-boiled detective narrative and both parodied and politicized the genre through endless experimentation. In this course,
we focus on the intersection of action and enigma, clues and patterns of a crime, the unraveling of a puzzle and the solution of a mystery in narratives by Poe, Borges, Chandler, Hammett, Valenzuela, Píglia, García Márquez and others, as well as in selected films based on their works. In English.

Credit 3 units. A&S: TH Art: HUM

L38 Span 3504 The Spanish Short Story During the Past 50 Years
This course surveys a half century of short fiction in Spain, emphasizing the works written since 1970. We focus on the most significant, representative movements in relation to their historical and social contexts. Writers studied include Camilo José Cela, Miguel Delibes, Ignacio Aldecoa, Ana María Matute, Carmen Martín Gaite, Juan Benet, José María Merino, Luis Mateo Díez, Esther Tusquets, Cristina Fernández Cubas, Soledad Puértolas, Javier Marías, Antonio Muñoz Molina and Marina Mayoral. Prerequisites: Span 307E; concurrent registration in Span 308D is recommended. Paper, midterm and final exams. In Spanish.

Credit 3 units. A&S: TH Art: HUM

L38 Span 3505 Borges in Translation
Comprehensive study of Borges' major works. Analysis of basic themes, philosophical implications and structural elements present in Borges' poetry, essays and short stories. We also study a number of film adaptations of Borges' work, as well as a number of texts by writers he has influenced.

Credit 3 units. A&S: TH Art: HUM

L38 Span 3506 Women Writers of Early Modern Spain
This course analyzes early modern women's writings (both secular and religious) by considering sociohistorical context, genre studies (autobiography, convent narratives, short prose fiction, poetry and theater) and feminist criticism. Critical approaches included consider issues of self-representation and subjectivity; performance; mysticism; life writing; feminist and lesbian utopias; cross-dressing; the body and spirituality; and the role of the Inquisition and confessors in the collaborative process of confessional writing. Class conducted in English. Spanish majors do the readings and papers in Spanish.

Credit 3 units. A&S: TH Art: HUM

L38 Span 351 Business Spanish
Study of language and structures used in conducting business in the Hispanic world. We use actual materials from various businesses — advertising, marketing, real estate, accounting. Particular stress on speaking and writing. Prerequisite: Span 308E or permission of instructor.

Credit 3 units. A&S: LA A&S IQ: LCD BU: IS

L38 Span 353 Medical Spanish
Designed for future medical professionals, this course provides students with a complete vocabulary and cultural sensitivity necessary for treating Spanish-speaking patients. While the main focus is oral/aural, written exams, varied reading and some research are required. Volunteer work recommended for enrolled students. Advanced students are given priority. Prerequisite: Span 307D.

Credit 3 units. A&S: LA A&S IQ: LCD BU: IS

L38 Span 354 A View from the Southern Cone: Perspectives on Art, Literature and Culture
This course deals with current issues of cultural, social, political and literary importance related to the Southern Cone. We study selected texts from Argentina, Chile and Uruguay as well as contemporary films and drama productions. This course seeks to determine what specifically can be expressed about national identity, globalization and the environment as these countries face the 21st century. Course requirements include four short essays and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. May be repeated for credit. Conducted in Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: ETH EN: H

L38 Span 360 Literature Topics Course in Spain
Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prerequisite: approval of Washington University's Madrid Program director and Carlos III.

Credit variable, maximum 3 units. Art: HUM

L38 Span 3601 Cultural Studies Topics Course in Spain
Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prerequisite: approval of Washington University's Madrid Program director and Carlos III.

Credit variable, maximum 3 units.

L38 Span 370 Introduction to Hispanic Linguistics
An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax) and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages.

Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

L38 Span 380 Topics in Hispanic Cultures
This course surveys cultures in specific contexts (Latin America and Spain) and in different historical periods, from the Middle Ages to the present. The course provides students with critical and methodological tools in order to carry out an articulate and informed cultural analysis. Prerequisites: Span 307D; concurrent registration in Span 308E is recommended. In Spanish. Topics vary from semester to semester. Consult section description for current offering.

L38 Span 400 Intensive Translation for Graduate Students I
The first part of a two-semester course sequence in reading and translating Spanish. For graduate students in the humanities and social and natural sciences. Nongraduate students may enroll with permission of the department. Must be followed by Span 401.

Credit 3 units. A&S: LA A&S IQ: LCD
L38 Span 401 Intensive Translation for Graduate Students II
Continuation of Span 400. For graduate students in the humanities and social and natural sciences. Prerequisite: Span 400. Credit for Span 400 is contingent on completion of Span 401.
Credit 3 units. A&S: LA A&S IQ: LCD

L38 Span 4013 Second-Language Acquisition and Technology
This seminar, for undergraduate and graduate students, transforms research and theory about second-language acquisition into practice while focusing on technology-driven applications. The course fosters professional development as participants formulate critical skills for evaluating, creating and integrating technology into the language classroom. Course formats include readings, discussions and demonstrations with technologies. The course is now open to undergraduates. Graduate students can enroll whenever it suits their course planning. The course counts for the Graduate Certificate in Language Instruction and for the undergraduate minor in applied linguistics. This course carries the Social and Behavioral Sciences attribute and can be taken as an elective in several different programs.
Same as L12 Educ 4023
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L38 Span 405W Major Seminar
An undergraduate seminar. Topics vary. This is a writing-intensive course, which requires a minimum of three papers of approximately four to five pages in length, with rewrites; 50 percent of the grade must come from written work. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. In Spanish.
Credit 3 units. A&S: TH, WI A&S IQ: HUM, LCD, WI EN: H

L38 Span 406 The Spanish Symbiosis: Christians, Moors and Jews
This course explores the contributions of Christians, Muslims and Jews in the Spanish peninsula, which led to what historians have called a convivencia (the peaceful and productive coexistence of these groups in medieval Spain). At times, and against an arrangement that was often troubled and tested. Among the topics studied are the Visigothic kingdom, the "Golden Age" of Muslim and Jewish Spain, the reconquista (reconquest; a series of campaigns by Christian states to recapture territory from the Moors), the age of Alfonso X, the Inquisition, the conquest of the New World, the expulsion of the Jews and the Moriscos (Moors), and the formation of modern Spain. We read historical accounts by Vives, Américo Castro, Benassar. Literary texts in translation include some of the greatest works of the Spanish tradition: The Cid, The Celestina, Galdós' Compassion, Goytisolo's Count Julian, Ariñés' 1492 and excerpts from Fuentes' Terra Nostra, among others. Pertinent films are discussed in class. Prerequisite: reading knowledge of Spanish, Hebrew or Arabic, or permission of instructor.
Credit 3 units. A&S: TH, CD Art: HUM

L38 Span 407 Seminar in Spain: Cultural Encounters
The Spanish, Latinos and non-Hispanic North American vis-a-vis "the Other." Designed to study the historical and ideological bases of attitudes and mutual perceptions that inform these three cultures' understanding of each other. Analysis of literary and extra-literary representations of the three identities in question teach students to think critically about the cultural, religious and political foundations of intercultural perceptions. Washington University students' experiences living in Spain provide a context for them to examine their own attitudes about "Hispanidad," as well as to learn about their own cultures (American, "Latino") as they are understood from abroad. Study of theoretical concepts of identity, ethnicity, minority, gender, culture and intercultural communication enables students to participate in practical discussions based on observation and experience with an objective, critical understanding of how they perceive and are perceived by others. Fulfills 400-level literature course requirement for the Spanish major. Prerequisites: Span 307D, Span 308E and two 300-level literature surveys or the equivalent in Spanish. Course taught in Madrid, Spain, through the Washington University Madrid Program.
Credit 3 units. A&S: TH

L38 Span 408 Topics in Medieval Literature and Culture
This is a writing-intensive course that requires a minimum of three papers of approximately four to five pages in length, with rewrites; 50 percent of the grade must come from written work. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD

L38 Span 410 Major Seminar
An undergraduate seminar. Topics vary. Prerequisites: Span 307D and Span 308E and at least two 300-level literature/culture surveys taught in Spanish. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD

L38 Span 411 Advanced Grammar and Syntax
This course presents a detailed study of Spanish syntax. Different theories (including generative theory) as well as the relationship between (morpho) syntax and other linguistic subsystems are considered. Special attention is also given to Spanish/English contrasts of particular interest to language learners and teachers. Prerequisites: 6 units of 300-level Spanish, or permission of instructor.
Credit 3 units. A&S: LA A&S IQ: LCD

L38 Span 4111 Advanced Grammar and Syntax in Spain
Detailed study of contemporary Spanish syntax. Special attention to fine points of grammar and syntax necessary for communication at the advanced level, taught at Washington University's Carlos III Program in Madrid. Prerequisite: placement by exam.
Credit variable, maximum 4 units.

L38 Span 4112 Bilingual Advanced Grammar and Syntax in Spain
Detailed study of contemporary Spanish syntax for bilingual students, taught at Washington University's Carlos III Program in Madrid. Prerequisite: placement by exam or program director.
Credit 3 units.

L38 Span 413 Linguistics and Language Learning
The course, taught in English, provides a critical survey of various components involved in the relationship between linguistics and language learning. The course emphasizes the language learner and explores dimensions of second-language acquisition. The course begins with an examination of
linguistic theories and then highlights the influence of linguistic theories on L2 acquisition research. The course then moves to an exploration of research on language and the brain. With this foundation, the course covers both internal and external factors related to language acquisition, such as language aptitude, age, gender, memory, prior knowledge, etc. In summary, theoretical and research dimensions of both linguistics and language learning are treated. This course counts as a requirement for the Graduate Certificate in Language Instruction and for the undergraduate minor in applied linguistics. Prerequisite: Ling 170 is recommended but not required.

Same as L12 Educ 4111
Credit 3 units. A&S: LA A&S IQ: SSC BU: BA EN: S

L38 Span 416 Introduction to Hispanic Linguistics
An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages. Preceptorial for undergraduates only.
Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

L38 Span 417 Spanish Phonetics, Phonology and Dialectology
This course, conducted in Spanish, explores the linguistic varieties of the 21 Spanish-speaking countries from both a historical and a synchronic perspective. The course begins with a traditional look at Spanish phonetics and phonology, with all students memorizing and utilizing the International Phonetic Alphabet. Course readings and discussions extend beyond the descriptive and include a search for the sources of language variation within the Spanish-speaking world. Particular attention is devoted to language contact and bilingualism. Students read in areas such as history, sociolinguistics, dialectology and sociology, as well as traditional linguistic studies, in designing their projects concerning phonetics, phonology and dialect diversification.
Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

L38 Span 419 Feminist Literary and Cultural Theory
This course intends to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories. Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisites: advanced course work in WGSS or in literary theory (300-level and above) or permission of the instructor required.
Same as L77 WGSS 419
Credit 3 units. A&S: TH A&S IQ: HUM

L38 Span 420 Captivity and Its Consequences: Horror, Desire and Nostalgia in Colonial Narratives
The objective of this course is to examine the formation and evolution of narratives of captivity in Latin American texts and their visual representations from the first indigenous and European contacts to the end of the colonial period. Prerequisite: Span 307D, Span 308E and at least two 300-level courses taught in Spanish; in Spanish.
Credit 3 units. A&S: TH

L38 Span 421 Spanish-American Literature of the Colonial Period
A selective survey of the literature of the three centuries between the first encounters of the European and American Indian cultures and independence from Spain. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units. A&S: TH, CD Art: HUM

L38 Span 423 Trotaconventos, Celestina & Co.: Go-Betweens, Love, Witchcraft and Other Related Subjects
In this course we study how the literary figure known as the "go-between" evolved in Spanish literature, from its origins in Roman literature, the Cantigas and the Exempla, to its culmination in the Libro de buen amor and the Tragicomedia de Calisto y Melibea, also called Celestina. We also read a selection of texts that were influenced by Celestina and examine how their authors recreated Celestina's characters and theme. Our analysis of the go-between leads us to a series of reflections about various related subjects, including the literary representation of love, the uses of language and magic as instruments of manipulation and power, and the ethical problems associated with such uses. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Preceptorial for undergraduates only; in Spanish.
Credit 3 units. A&S: TH

L38 Span 424 Latin American Literature and Theory: Reading the State, Culture and Desire
In this course, we pair literary and theoretical texts in order to hone a way of reading in which theory and literature are mutually informative, provocative and inspiring. The idea of these loose groupings is not to prescribe a particular relationship between given literary and theoretical texts but rather is a way to begin negotiating the necessarily multiple relationships of theory and literature. These pairings come to seem more artificial over the course of the semester as we trace a network of relations that begins to look more and more like the Borgesian map that covered up the entire territory it described. The object of the course is, thus, not to define or prioritize a particular set of relations but rather to practice a way of reading literature theoretically and theory literarily, by which the strengths of both are allowed to come to the forefront in their complexity. Thematically, the course has several nuclei: the triangulation of State, culture and art (Pigliola/Foucault, Burman/Agamben), a psychoanalytic approach to art as desire (Lispector/Lacan/Cixous); and finally, a third nucleus about which the first two commingle completely: "post-State," proliferating desire, libidinal economies wherein the State is anachronism and failure (Arta/
Deleuze; Sorín/Virilio/Sitrin, Sassen; Bolaño/Zizek). Readings may include: Piglia, Foucault, Agamben, Arlt, Deleuze, Virilio, Sassen, Borges, Benjamin, Bolaño, Zizek, Lispector, Lacan, Cixous, as well as the films Garage Olimpo and Historias mínimas. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish. Credit 3 units. A&S: TH & A&S IQ: HUM, LCD EN: H

L38 Span 425 Humanism, Magic and Rhetoric in 15th-Century Castilian Literature
This course offers a panoramic view of 15th-century Castilian literature. We study a selection of texts produced both in the Castilian court and in some centers of higher learning, especially the University of Salamanca. The secondary readings help us to better understand the cultural context of the time and deepen our knowledge of four subjects that were highly present in the minds of 15th-century authors: humanism, rhetoric, love and magic. Because some of the texts selected for this course were written by (or have been attributed to) “converso” authors, we also examine the phenomenon of “converso” literature. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. One hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH, CD & A&S IQ: HUM, LCD EN: H

L38 Span 426 Latin American Theater
Survey of dramatic and theatrical currents from the late 19th century to the present. The course focuses on tracing the themes of nationalism, cultural identity, immigration, class displacement and the effects of consumerism in representative plays from the Rio de la Plata, Chile, Colombia and Mexico. The course studies manifestations of the sainete, the grotesco criollo, theater of the absurd, as well as the popular independent theater movements of the 1960s and 70s. Theoretical works studied include those of Brecht, Picato, esslin. Authors studied: Dragún, Payró, Cossa, Wolff, Sánchez, Díaz, Carballido, Gambaro, Buenaventura. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One hour preceptorial for undergraduates only; in Spanish. Credit 3 units. A&S: TH, SD

L38 Span 4261 The Erotics of Violence in Latin America
The course is based on a combined analysis of theories on violence, nation and urban spaces, and the study of literary texts pertaining to the Latin American post-Boom. Some of the authors be studied are Ricardo Piglia, Fernando Vallejo, Jorge Franco, Roberto Bolaño, Mario Mendoza, Laura Restrepo, Evelio Rosero, Santiago Roncaglio, Alonso Cueto, Martin Kohan, Guillermo Arriaga, Daniel Alarcón, Pauli Lins, etc. The course is conducted in Spanish and focuses on the interconnections between sexuality, violence and political issues, and on the discursive strategies used for the representation of collective subjectivities and social conflict in Latin American societies. Credit 3 units. A&S: TH & A&S IQ: HUM, LCD EN: H

L38 Span 4281 Creative Difference: Reclaiming Spanish-American "Traditional" Novel
This class focuses on a selection of aesthetically and socially representative 19th- and early 20th-century Spanish-American novels. Integrating a wide range of sources (critical essays, paintings, film), we explore abolitionist issues in Sab (Cuba), the reinvention of Amerindian legacies in Aves sin nido (Peru), and the different facets of modernization and nation-building in Los de abajo (Mexico) and La vorágine (Colombia). Students should finish the course with a broader knowledge of Spanish-American literary history, a deeper understanding of textual representations of gender, class and multiethnic identities, and a sharper awareness of their potential as reader and critic. Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates; in Spanish. Credit 3 units. A&S: TH, SD Art: HUM

L38 Span 4282 Voice into Print: The Art of Storytelling in Spanish-American Short Story
The short story has been a central part of the extraordinary originality and vitality of Spanish-American writing, and it enjoys great popularity among scholars and the general public alike. Integrating a wide range of complementary sources (critical essays, paintings, film), this course brings together the best examples of the genre that span over a hundred years of the history of Spanish-American literature and exemplifies a variety of themes and forms: from the fantastic to the "magical-realist," from crime fiction to romance, from rural to urban. Special emphasis is placed on the topics of gender, ethnicity, religious syncretism, political resistance, and popular culture. Students familiar with the "canonical" works of Quiroga, Borges, Rufo, Fuentes, Cortázar, García Márquez or Valenzuela discover many more vibrant voices representing a variety of national literatures: Sommers and Roa Bastos (Paraguay), Ponte, Bobes and Padura (Cuba), Vega and Ferré (Puerto Rico), Onetti and Peri Rossi (Uruguay). Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites for undergraduate students: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. One hour preceptorial for undergraduates only; in Spanish. Credit 3 units. A&S: TH, CD Art: HUM

L38 Span 4291 The Politics and Poetics of Spanish-American New Novel
When Spanish-American writers gained acclaim in the world literary scene in the so-called "Boom" of the 1960s, their spectacular success was often linked with the so-called magical realism that draws upon the oral and written tradition of both European and regional heritage (African, Amerindian) and shapes them to forge a uniquely Latin American poetics. Through theoretically informed approach, this course offers an overview of the most acclaimed Spanish-American novels published between 1950 and 1970, with special attention given to the divergent cultural legacies and political uses of "magical realism." Specific notions of New World/Old World, modernization/tradition, nation building/otherness are explored in novels such as: Los pasos perdidos by Carpentier (Cuba), Pedro Páramo by Rulfo (Mexico), La ciudad y los perros by Vargas Llosa (Peru), Los recuerdos del porvenir by Garro (Mexico), La tracción de Rita Hayworth by Puig (Argentina), and Cien años de soledad by García Márquez (Colombia). Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish. Credit 3 units. A&S: TH, CD Art: HUM

L38 Span 430 Latin American Essay
Study of the principal movements and outstanding figures in the Spanish-American essay from the colonial period to the present.
L38 Span 4301 Print and Power in 19th-Century Latin America

Open to advanced undergraduate and graduate students, this seminar covers one of the most fascinating periods in Latin American history and cultural production, spanning from the eve of the wars for independence to eve of the Mexican Revolution (1800-1910). Several reasons make this period and the connections between print media or print culture and power worthwhile. This long century was the most war-torn in the region’s history. Not only did writers engage issues of war on what was almost a daily basis, but war generated a wealth of new modes of literature. Debates on the slave trade and abolition also occurred during the 1800s, and largely in writing. And while places such as Lima, Peru and Mexico City were established printing centers during the Iberian occupation of the Americas, true printing revolutions were not widespread until during and after the wars for independence. One of the results to emerge during the first third of the century was that writing and print media gave legitimacy to incipient republican states, wedding print to power in new ways. And by the end of the century, educators and state bureaucrats teamed up to push for public primary education and literacy as components of progressive, “civilized” nations. Add to this the visual technologies and an overall surge in new forms of symbolic communication through print, and it is easy to see why this period offers such a rich backdrop for observing how print and power fit into the landscape we now know as Latin America. We pay special attention to themes including writing as a legitimizing force, writing and nation building, and the intersection of print with war, race, identity formation, modernity and ideologies. Readings include archival materials, wartime and popular poetry, novels by authors such as Jorge Isaacs and Ignacio Altamirano, writings by Simon Bolivar and Domingo Sarmiento, and modernista poetry and prose. Historical and theoretical selections guide our analysis of primary sources. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L38 Span 431 Latin American Poetry I

Survey of the major figures of Latin American poetry from the colonial period to modernism. Poets studied include Sor Juana, Caviedes, Avellaneda, Marti, Darío, Silva, Najera. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH Art: HUM

L38 Span 432 Latin American Poetry II

Survey of contemporary Latin American poetry, “postmodernismo” to the present. Poets studied include González Martínez, Vallejo, Neruda, Huidobro, Paz, Parra, Orozco, Pizarnik, Cardenal, Belli. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L38 Span 433 Spanish-American New Novel

This course offers a critical overview of the most acclaimed Spanish-American novels published between 1950 and 1970. The following texts are read critically with special attention given to the problematic of canonicity and formal experimentation: Los pasos perdidos by Carpentier, Pedro Páramo by Rulfo, La ciudad y los perros by Vargas Llosa, Los recuerdos del porvenir by Garro, La traición de Rita Hayworth by Puig and Cien años de soledad by García Márquez. Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L38 Span 434 The 19th-Century Spanish Novel

Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH Art: HUM

L38 Span 435 Mediterranean Cultural Studies

This course is a cultural studies seminar for advanced undergraduate and graduate students. Taking a Mediterranean perspective as a background (and we certainly spend some time discussing what such a perspective entails), we investigate the different historical, political and cultural crossings that have been taking place and are taking place at the Iberian Peninsula. Rather than a historical or chronological survey, the different sections of the course focus on the questions and conflicts that arise in these different Mediterranean encounters. These appear articulated in a series of texts that include literature, film, historical documents, song and art. Even though we mainly concentrate on texts from the second part of the 20th century, the historical background, particularly regarding the Arab and Sephardic presence in Spain, is highlighted throughout the semester. The interdisciplinary approach of this course allows students to explore human and Mediterranean geography, analyze different genres, and, finally, discuss present problems and debates from a historical perspective. Some of the issues addressed include: the question of a Mediterranean perspective, Arab and Sephardic Spain, the Mediterranean during the Spanish Civil War and World War II, old and new migrations, sexuality, globalization, and tourism. Course requirements include short papers at the end of every section and a final paper for undergraduate students, a presentation on a related topic, and a research paper for graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units.

L38 Span 436 Spanish-American Fiction: 1970 to the Present

Study of Spanish-American narrative from the early 1970s to the present. Includes novels by writers both established before the 1970s (Vargas Llosa, García Márquez, Fuentes) and writers associated with the newest novelistic trends (Elitz, Fuguet, Martinez, Paz, Valenzuela). Prerequisite: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM
L38 Span 4361 Latin American Prose Fiction: 1975 to Present
Study of Latin American narrative from the late 1970s to the present includes both recent novels of writers established before the 1970s (Vargas Llosa, García Márquez, Fuentes) and younger writers associated with the post-"Boom" phenomenon. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH Art: HUM

L38 Span 442 Literature and Revolution
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L38 Span 443 The Inconvenient Indio: Imagining Indigenous Cultures in Peru and Bolivia
In the cultural history of the Andean nations, the Indio has always been a powerful yet perpetually unstable signifier, whose meaning is constantly redefined by non-Indians. An archaic residue for some, the bedrock of a new society for others, the Indio conjures contradictory imaginations of articulation, combination, disjunction and metamorphosis that have shaped a wide range of debates: from assimilation and mestizaje in the context of nation-building and modernity, to the politicizing of ethnic identities in the context of immigration and globalization. Focusing on Peru and Bolivia, this course examines these cultural imaginaries and the debates in which they appear, as well as the models of community and identity they suggest. In doing so, we discuss topics such as the discourse of illness, indigenismo, transculturation, heterogeneity, violence and memory. Materials analyzed include poetry by César Vallejo and Carlos Oquendo de Amat; essays by José Carlos Mariátegui and Ángel Rama; José María Arguedas's novel Los ríos profundos; Jorge Sanjinés's film El Coraje del pueblo; and theatrical performances by Grupo Yuyachkani. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates; in Spanish. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L38 Span 4471 Spanish-American Women Writers I
A study of women's writing from the turn of the century to 1970. Readings include novels, short stories, poetry, essays and autobiographical texts. Prerequisites: Span 307D, Span 308E and at least two 300-level literature course taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH, SD Art: HUM

L38 Span 4472 Spanish-American Women Writers II
A study of contemporary women's writing from 1970 to the present within a feminist theoretical framework. Topics include the construction of gender, female subjectivity, love and power, women and politics, literary strategies, etc. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH, SD Art: HUM

L38 Span 450 Special Topics in Hispanic Literature and Culture
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. May be repeated for credit. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Arch: HUM Art: HUM

L38 Span 4502 Latin American Narrative in Film
Analysis and discussion of a select group of films, focusing on their literary origins or their peculiar elaboration of critical conflicts in contemporary Latin American society. Films by Litín, Puenzo, Lombardi, Skarmeta, Solanas, Gutiérrez Alea, Lilenthal and others. Novels by Vargas Llosa, Carpentier, Amado, Puig, Skarmeta and Soriano. Course conducted in English. Does not fulfill 400-level literature requirement. Credit 3 units. A&S: TH

L38 Span 4503 Latin American Film: Argentine Cinema
This course examines the development of cinema in Argentina, from the earliest attempts to codify a particularly Argentine perspective in Tango musicals to the present day. We explore the relationships between both film and nation building and film and revolution. We also study the role of cinema in national memory, using the cinema of the post-dictatorship as a case study. We read widely in film, cultural and political theory to enrich our study of the various films under consideration. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Conducted in Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: IS

L38 Span 450C Advanced Seminar Abroad in Spanish and Latin American Literature
Credit 3 units.

L38 Span 451 Medieval Spanish Literature
Study of the development of the principal literary traditions of medieval Spain, emphasizing major genres, themes and styles. Consideration of various critical approaches and responses to medieval texts. Lectures, papers and class reports. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L38 Span 453 Survey of 18th-Century Latin American Narrative
Exploring new ways of thinking; scientific observation and traveling; historiography; and the organization of knowledge. Analysis and discussion of a variety of 18th-century Latin American narratives such as conventual writing by women, memoirs, travel, scientific writing and newspaper articles, to understand how that century's attempts to compile, question, seek, build and reform came about. The narratives are regarded in their historical context and in a dialogue with some of the most recent literary studies about 18th-century Latin America. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. Credit 3 units. A&S: TH Art: HUM
L38 Span 4533 Narratives of Fear: Violence in Latin American Literature
This course analyzes different representations of violence in Latin American literature. Based on a critical analysis of 19th- and early 20th-century texts, we study how the recognition and legitimation of violence occurs in the context of hierarchical relationships in the society. Also we study how the literary images of bandits, pirates, thieves and assassins become the counter-discourse of the views of progress sustained by the hegemonic powers. The role of power and ideology is discussed in texts that define different levels of violence as a cultural manifestation.
Credit 3 units. A&S: TH Art: HUM

L38 Span 455 History of the Language
A study of the evolution of Spanish and its dialects from Latin to contemporary usage. Knowledge of Latin helpful but not required. Prerequisites: Span 307D and Span 308E.
Credit 3 units. A&S: LA

L38 Span 456 Romance Philology
Same as L34 French 456
Credit 3 units. A&S: LA

L38 Span 457 Exemplarity, the Writing of History and the Beginnings of Chivalry in Medieval Spain
This course is devoted to the study of exemplarity, historical discourse and chivalric fiction in medieval Iberia. It begins with an introductory selection of 13th-century texts that prepares students to better understand the development of Castillian identity, as shown in a selection of historical chronicles, and in some of the most canonical texts of the 15th century, such as El Libro del Conde Lucanor, El Libro de buen amor and El Libro del caballero Zifar.
Credit 3 units. A&S TH A&S IQ: HUM, LCD EN: H

L38 Span 458 Gender, Politics and Writing in Women’s Fiction of the Post-Franco Era
This course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco’s death and continue to write into the new century (Esther Tusquets, Cristina Fernández Cubas, Rosa Montero, Carmen Riera and Adalaida García Morales), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucía Etxebarria and Espido Freire). We consider the works of these women within their cultural, historical and political contexts, addressing issues such as the representation of gender and sexuality; the cultural impact of feminism, nationalism and globalization; and the influence of the publishing industry and the market on literary production. Whenever available, film adaptations of these literary works are used in conjunction with the readings. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. A&S: TH Art: HUM

L38 Span 459 16th- and 17th-Century Drama
Study of early modern Spain’s highly influential and innovative Comedias, from Lope de Vega’s creation of new popular forms for public Corrales to the spectacles of court theater for elite audiences in the generation that followed. Includes study of selected plays, as both texts and performances. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH & A&S IQ: HUM, LCD Art: HUM

L38 Span 461 Cervantes: Don Quixote
Study of the famous work that launched the novel, giving voice to surprisingly different forms of experience and identity as it narrates the life of a crazed reader who attempts to rewrite his own history by becoming a knight errant. Includes Parts 1 and 2 of Cervantes’ Don Quixote, a range of critical readings, and the use of visual media that reflect how this work has in subsequent centuries entered popular culture. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH & A&S IQ: HUM, LCD Art: HUM

L38 Span 4611 The Golden Age Novelas
A detailed study of the novela, or novella, genre in 17th-century Spain, including selected novelas ejemplares by Cervantes and selected novelas amorosas and Desengaños amorosos by María de Zayas. The course considers the problem of exemplarity, the representation of transgression or deviancy, literary tradition and sociohistorical context in these works. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH Art: HUM

L38 Span 462 16th- and 17th-Century Prose
Reading of works that are groundbreaking in the formal development of Golden Age Spanish literature and in the representation of ideas concerning national and individual identity during the imperial period. To include Dialogo de la lengua, Lazarillo de Tormes, Diana and selected works by Guevara, Cervantes, Quevedo and Zayas. Seminar discussions and research paper. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L38 Span 463 16th- and 17th-Century Poetry
Classical Spanish poetry during the Renaissance and the baroque periods. Poets range from the Marques de Santillana and Garcilaso de la Vega to Luis de Gongora, San Juan de la Cruz and Francisco de Quevedo. Movements and trends explored include the tradition of courtly love, culteranism, Spanish mysticism and conceptismo. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH Art: HUM

L38 Span 464 Self-Representation and Picaraesque Fiction in Early Modern Spain
This course investigates self-representation through the figure of the picaro and fictional autobiography in the representative works of the Spanish picaresque genre (Lazarillo, Guzmán de Alfarache and El buscón). We also examine the figure of the picara in novels with female protagonists such as La lozana andaluza and La pícara Justina (as well as a short story by María de Zayas) and consider the relation of the picara to women’s roles in Spanish fiction and culture. This course considers aspects of gender, ethnicity, class and desire in the sociohistorical context of picaresque fiction as well as...
L38 Span 465 The Spanish Trickster
A study of Spain's major picaresque novels in the Golden Age in the context of early modern Europe. Translations of works such as the Lazarillo and El béccon, as well as selected foreign imitations and parodies of the Spanish picaresque from the 17th and 18th centuries. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Does not fulfill the 400-level literature requirement for the Spanish major but is applicable to other credit required for the major. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH Art: HUM

L38 Span 466 Second-Language Acquisition
There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first- and second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners' errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required.
Same as L44 Ling 466
Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L38 Span 467 Grammar and Vocabulary Acquisition
This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing; explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such as a learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices.
Credit 3 units. A&S: LA A&S IQ: LCD BU: BA EN: H

L38 Span 468 Don Quixote
A close reading of the English translation of Cervantes' masterpiece, with special attention given to the European literary context. Conducted in English.
Credit 3 units. A&S: TH Art: HUM

L38 Span 469 Reading and Writing in a Second Language
This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second-language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in Applied Linguistics and an elective for the Graduate Certificate in Language Instruction.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD

L38 Span 4691 Second Language Reading and Writing: Theory, Research and Practice
This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second-language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in applied linguistics and an elective for the Graduate Certificate in Language Instruction. This course carries the Social and Behavioral Sciences attribute.

L38 Span 471 Borges
Comprehensive study of Borges's major works. Analysis of basic themes, philosophical implications and structural elements present in Borges' poetry, essays and short stories. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L38 Span 472 19th-Century Novel
Departing from writings on realism by both 19th-century European writers and more contemporary literary theorists, the course carries out a critical reappraisal of the notion of "realism" in the 19th-century Spanish novel. Texts covered include selected works of Benito Pérez Galdós, Leopoldo Alas (Clarín), and Emilia Pardo Bazán that represent different periods of their literary trajectory. Daily readings and discussions focus on issues such as: the "reality effect"; the poetics of detail; naturalism in the Spanish context; the aesthetics of beginnings and endings; gender and consumption; fin-de-siècle crisis of gender ("New Women" and emasculated men); the problem of modernity; and the intersections of gender, class and national identity. These critical issues are situated in the context of theoretical discussions on the complex, and often ambivalent, function of realist discourse in Spanish fin-de-siècle culture and society. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM
L38 Span 473 Romanticism
The origins of romanticism as a movement explored before reading and analyzing key works by the main Spanish romantic writers: Cádalso, El Duque de Rivas, Espronceda, Larra, Mesonero Romanos, Becciu, Campooamor and Zorrilla. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH Art: HUM

L38 Span 474 Mexican Film in the Age of NAFTA (1990-2010)
Starting in the 1990s, as NAFTA came into effect, Mexico revitalized its film industry and managed to produce not only a somewhat sustainable market within the country, but also a set of recognized figures in acting (Salma Hayek, Gael García, Diego Luna), directing (Guillermo del Toro, Alfonso Cuarón, Alejandro González Iñarritu), and moviemaking in general (Emmanuel Lubezki, Rodrigo Prieto, and others). This course explores the underlying processes that allowed for such a rebirth. The main focus of the course is to understand the contradictory impact of neoliberalism in film, understanding neoliberalism as the economic doctrine of unbridled free markets, and its social and cultural consequences. Paradoxically, neoliberalism allowed the industry to become financially and aesthetically viable, while becoming inaccessible to the lower classes in Mexico. The course mostly develops four of these processes: the undermining of nationalism as the main topic; the displacement of the target audience from the working classes, both rural and urban, to the urban middle class; the transformation of political cinema from the leftist films of the 70s to the conservative ideologies of neoliberal politics; and the intersection of Mexican film to the global market of so-called "art house cinema." Students compare films that have reached an international market with those viewed only within Mexico. In addition, students are introduced to critical approaches that allow them to appreciate these movies in the context of film aesthetics, social identities, and the relationship between film and economic development. Movies are shown outside of class in Spanish with English subtitles. The class is conducted in English. Written course work may be pursued in English or Spanish. No prerequisites.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L38 Span 475 The Other in Contemporary Spanish Fiction
An examination of the various manifestations of "the other" in works of Delibes, Perez Reverte, Matute, Goytisolo, Riera, Atxaga. Aspects studied include history, culture, religion, language and gender. Ancillary readings treat theoretical as well as critical issues. Two or three short papers (two to three pages) and a longer paper with specific installments and revisions due during the semester (undergraduates, 15 pages; graduates, 20 pages). Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L38 Span 476 20th-Century Novel
A study of the novel in 20th-century Spain, focusing on the contemporary period. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L38 Span 477 Generation of 1898: Theater and Poetry
Analysis of works by Azorin, Unamuno, Baroja, Maeztu and Valle-Inclán. Various approaches to each work encouraged, and the theory of "generations" questioned. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH Art: HUM

L38 Span 478 Discourses on Gender in 19th- and 20th-Century Spain
This course focuses on discourses on gender, from the late 19th century to the present in the context of feminism in Spain. We explore the social, political and cultural role of Spanish women (writers) within their specific historical contexts, with a special attention to their struggle to construct a new female subjectivity through their writings. To this end, their narrative fiction (novels, short stories) are read in conjunction with nonfiction writings (essays, journalism, etc.). Authors studied include 19th-century proto-feminists such as Emilia Pardo Bazán and Concepción Arenal; early 20th-century writers such as Carmen de Burgos, Margarita Nelken, and other female activists of the Republican period; and women writers of the post-War and post-Franco eras. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduate students. In Spanish.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, LCD, SD EN: H

L38 Span 480 The Generation of ’98
An analysis of the Spanish-American War, the warring parties, and particularly of the literature it created in Spain by authors such as Unamuno, Machado, Valle-Inclán, Azorín and Baroja. The "desastre" led to introspective analyses of philosophy, education, and history. It attempted to rediscover the Hispanic ethos, to re-create its landscape poetically, and to become European without losing its Spanish roots. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH Art: HUM

L38 Span 481 Modern Drama
Readings from 19th- and 20th-century playwrights such as Zorrilla, Benavente, Valle-Inclán, Lorca, Buero-Vallejo. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L38 Span 482 Topics in 19th-Century Spanish Cultural Studies
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L38 Span 486 20th-Century Novel
A study of the novel in 20th-century Spain, focusing on the contemporary period. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

L38 Span 487 Narrating Mexico City
The city has been one of the central topics of modern Mexican literature. Ever since the emergence of the modern capital at the end of the 19th century, urban culture became one of the central concerns of Mexican and Latin American intellectuals across the continent. With the emergence of the megalopolis and the new centrality of violence, postmodernity and...
urban experience, Mexican literature and film have contributed, in the past 20 years, new ways to approach, discuss and narrate the city. This class seeks to tackle different meanings of Mexico City in the cultural discourse of Mexico, by exploring novels (Carlos Fuentes, José Emilio Pacheco, Juan Villoro), poems (Manuel Mapes Arce, Vicente Quirarte, Fabio Morábito), urban chronicles (Carlos Monsiváis, Elena Poniatowska, José Joaquín Blanco) and films (Amores perros, Todo el poder, Vivir mata). Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L38 Span 489 Cities of the Past Future: Literary Institutions & Peripheral Modernity in the Latin American Avant-Garde

This class proposes a study of the Latin American avant-garde as a phenomenon of “peripheral modernity” and as a critique of the “institution literature” developed by 19th century and modernista liberalisms. This reading, rather than merely proposing a one-by-one reading of canonic texts, seeks to engage the avant-garde as a global cultural phenomenon with impact in literature, art, society and ideology. To achieve this, the class focuses on four regional contexts of the avant-garde. First, we visit post-Revolutionary Mexico, to understand the way in which the avant-garde redefined notions of literature in Latin America by carefully analyzing the stakes of groups such as the estridentistas or the contemporaneos. Second, we analyze the reinvention of Buenos Aires as a literary city in the 1920s and 1930s to understand the impact of “peripheral modernity” in the constitution of the avant-garde as a specifically Latin American phenomenon. Third, we discuss the impact of the semana de arte moderno of São Paulo, to understand how the idea of “antropophagia” created an articulation of the avant-garde with debates of cultural identity and transculturation. Finally, we go to the Andes to understand how avant-garde phenomena dealt with the questions of “divergent modernities.” Authors discussed include Arqueles Vela, Manuel Maples Arce, Jorge Cuesta, Xavier Villaurrutia, Jorge Luis Borges, Oliverio Girondo, Roberto Arlt, Mario de Andrade, Oswald de Andrade, Manuel Bandeira, César Vallejo, Pablo Palacio, César Moro and José Carlos Mariátegui. Scholarship includes Peter Bürger, Matei Calinescu, Renato Poggioli, Rubén Gallo, Pedro Angel Palou, Beatriz Sarlo, Fernando Rosenblum, Haroldo de Campos, William Rowe and Roland Forgues. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

L38 Span 490 Spanish Women’s Fiction on the Edge of the Millennium

The course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco’s death and continue to write into the new century (Cristina Fernandez Cubas, Rosa Montero, Soledad Puértolas and Carme Riera), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucía Etxebarria, Belén Gopegui). We consider not only the aesthetic innovations of these writers, but also their preoccupation with the following sociopolitical and cultural issues: connections between gender, sexuality and writing; their response to feminist literary criticism and politics; and their relationship to the market and consumer society in the context of globalization. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH, SD Art: HUM

L38 Span 491 18th- to 19th-Century Literature

Readings in various genres covering significant figures and works in neoclassicism, romanticism and realism. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH Art: HUM

L38 Span 492 The Avant-Garde in Spain: Poetry/Visual Art/ Cinema

This course examines the development of the avant-garde in Spain during the two decades prior to the Spanish Civil War (1936-1939) from an interdisciplinary perspective, including poetry, the visual arts and cinema. We first study the development of the historical avant-garde through a study of four key avant-garde movements either developed by Spanish artists or taking place in Spain: Cubismo (Pablo Picasso, Juan Gris), Creacionismo (Vicente Huidobro, Gerardo Diego), Ultraísmo (Gomez de la Serna, Cansinos-Assens, Pedro Salinas) and Surrealismo (Luis Buñuel, Salvador Dalí, Rafael Alberti, Luis Cernuda, Federico García Lorca and Joan Miró). We then analyze different connections with the historical avant-garde traceable in the work of a later generation of experimental Spanish poets and artists working under the strict censorship existing during Franco’s fascist dictatorship, such as Jose Val del Omar, Joan Brossa, Antoni Tàpies, José Angel Valente, Pere Gimferrer, Jose Miguel Ullán and José Luis Guerin. We also incorporate in our discussion theoretical writings by various critics including Ortega y Gasset, Peter Burger, C. Brian Morris, and Román Gubern. Prerequisites: Span 307D, Span 308D and at least two 300-level literature/culture courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.

Credit 3 units. A&S: LA A&S IQ: LCD EN: H

L38 Span 493 20th-Century Poetry

Examination of 20th-century Spanish poetry from Machado and Juan Ramon Jimenez to the Generation of ’27 and younger poets. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH Art: HUM

L38 Span 495 Honors

Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prerequisite: permission of Director of Undergraduate Studies. Preregistration not permitted.

Credit variable, maximum 3 units. A&S: TH

L38 Span 4951 Honors

Credit 3 units. A&S: TH/EN: H
L38 Span 498 Contemporary Spanish Novel
A study of modern novels by established authors, such as Benet, Goytisolo and Martin Gaite, and new figures such as Landero, Millas and Puertolas. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH

L38 Span 499 Contemporary Spanish Novel II: 1965 to Present
A study of modern novels by established authors, such as Benet, Goytisolo and Martin Gaite, and new figures such as Landero, Millas and Puertolas. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH: HUM

Speech and Hearing
The minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine and is designed for students interested in exploring topics related to human communication. Course work provides an overview of the fields of hearing, deafness, language and speech, with opportunities to explore related topics in more depth. This minor is especially valuable for students in fields such as psychology, education, philosophy-neuroscience-psychology (PNP), and linguistics, but has broad applicability for many fields of study. Course work completed as part of this minor can also be used to fulfill the total units requirements for graduation, and as prerequisites for graduate studies in audiology, deaf education and speech-language pathology; however, the minor may not be used as an Integration in Arts & Sciences Integrated Inquiry (IQ) curriculum and does not otherwise fulfill any Arts & Sciences distribution requirements.

Contact: William W. Clark
Phone: 314-747-0104
Email: clarkw@wustl.edu
Website: http://pacs.wustl.edu

Faculty
Program Director
William W. Clark (http://pacs.wustl.edu/our-faculty/william-w-clark-phd)

PhD, Massachusetts Institute of Technology

Majors
There is no major in this area. The minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (http://pacs.wustl.edu) at Washington University School of Medicine. The program also offers graduate programs in the fields of audiology, deaf education, and speech and hearing sciences, leading to the following degrees: Doctor of Audiology (AuD), Master of Science in Deaf Education (MSDE), Doctor of Philosophy (PhD)—Speech and Hearing Sciences.

Minors
The Minor in Speech and Hearing
Total units required: 15

Required courses:

Educ 234 Introduction to Speech and Hearing Disorders

Elective courses:

At least four of the following, totaling at least 12 units:

- PACS (M89) 401 Anatomy and Physiology of Speech and Hearing (3 units)
- PACS (M89) 421 Introduction to Electroacoustics (3 units)
- PACS (M89) 424 Speech and Hearing Sciences (1 unit)
- PACS (M89) 4301 Sign Language I (2 units)
PACS (M89) 4302 Sign Language II (2 units)
PACS (M89) 434 Typical Language Development (3 units)
PACS (M89) 543 Survey of Speech and Language Disorders (3 units)
PACS (M89) 544 Clinical Observation and Methods in Speech-Language Pathology (3 units)
PACS (M89) 5601 Clinical Audiology I (3 units)

Educ 408 Education and Psychology of Exceptional Children
Psych 433 Psychology of Language
Ling 170D Introduction to Linguistics
Ling 312 Phonetics

Additional Information
As the minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine, it may not be used as an Integration and does not otherwise fulfill any Arts & Sciences distribution requirements.

This minor is composed of a minimum of 15 hours that focus on the study of speech, language and hearing. Of these, at least nine (9) units must be at the 300 level or above. Courses to count toward the minor must be approved in advance by the minor adviser, and one or more elective courses must come from M89 PACS. Additional courses not listed may be allowed, with advance approval of the minor adviser, based on the student's individual area(s) of interest. Some courses may be subject to instructor approval in advance.

Special notes for students interested in continuing their studies in either the Doctor of Audiology (AuD) or Master of Science in Deaf Education (MSDE) program in PACS: Please consult the minor adviser for information on the appropriate course of study. In such cases, course work should focus upon applicable prerequisite courses; required introductory course work that can be waived during graduate enrollment; and other applicable requirements for professional certification. Completing other required course work prior to matriculation in one of the PACS graduate programs may impact a student's full-time status, course of study, tuition, scholarship amount, and/or other aspects of enrollment.

Courses
Speech and Hearing Sciences course work is offered by the Program in Audiology and Communication Sciences at Washington University School of Medicine. Urban Studies
The interdisciplinary major in urban studies is ideal for students drawn to serious examination of the profound issues confronting urban/metropolitan America. Urban Studies seeks to prepare students, indeed our nation's future leaders, for the challenge of solving these issues. We seek to prepare students to research and investigate issues concerned with evolving patterns of metropolitanism and the necessity for central city reconstruction; problems associated with gentrification, urban sprawl and affordable housing; crises confronting newly emerging immigrant communities and the social cleavages of urban marginalized communities; unemployment and underemployment; law and justice; HIV/AIDS and issues of public health; the economic underdevelopment of poor communities; race and inequality; the paradox of declining welfare rolls amidst escalating poverty rates; underperforming urban schools; and the in-migration and out-migration of the city and its schools, among others. All available social indices suggest that such domestic issues in our central cities will only increase in significance in the years ahead. The fact that many of the aforementioned issues are deeply embedded in cities of the world makes Urban Studies not just focused on domestic cities but global cities as well.

Urban studies is a stand-alone major. The students presently in the program are jointly pursuing study in urban studies and in pre-law, pre-medicine, political science, educational studies, environmental studies, economics, international and area studies, philosophy-neuroscience-psychology, architecture, and comparative arts, among others. Our purpose is to prepare students to critically engage the social, political and economic dilemmas facing our cities, both domestically and internationally, with intellectual rigor, integrity, sensitivity and compassion.

The program draws faculty and course work from the various academic units including, but not limited to, Arts & Sciences, the George Warren Brown School of Social Work, the School of Law, the College of Architecture, and the Graduate School of Architecture & Urban Design. To complement our course work, Urban Studies accepts internships based locally, nationally or internationally, with appropriate support documents.

Majors

The Major in Urban Studies

Total required units: 33 units, 21 of which must be 300-level or above. Of these 21 advanced units, no more than 6 units may be from independent study courses.

Required courses:
URST 299 The Study of Cities and Metropolitan America; one introductory course in math or applied statistics; one 400-level independent study or an internship located locally, nationally or internationally; and a senior thesis (or senior seminar if offered).

Elective courses: There are five subject area concentrations in Urban Studies: neighborhoods and community development; urban education; cities of the world; public policy/social policy; and public health. Once a student declares a major in urban studies, he or she will be assigned a major adviser who will help the student formulate the area concentration.

Because of the nature of the major and requirements of the nonresidential components, majors are strongly encouraged to declare by their third semester in residency.

Additional Information

Study Abroad: The program offers the International Urban Scholars Study Abroad Program through Oxford University, the London School of Economics and Political Science, University of Cape Town in South Africa, and Fudan University in Shanghai, China.

Senior Honors: Urban studies majors are encouraged to work for Senior Honors, for which they may apply in the junior year. Acceptance into the program is based on the student's previous academic performance and a proposal to a core (not affiliated) faculty member in Urban Studies who agrees to supervise the honors research. The honors candidate must complete honors thesis research, which is evaluated by a three-member faculty committee.
Minors
The Minor in Urban Studies

Total required units: 15

Required courses:
URST 299 The Study of Cities and Metropolitan America 3

Elective courses:
12 units at the 300 level or above. All courses for the minor must be taken for a letter grade, with a passing grade of C or better. These courses must be home-based in three different departments or programs and may not include courses in the student’s major field. A complete list of general courses that count toward the urban studies minor is published each semester in WUCRSL. No more than 3 units may be counted from among the following: directed readings, independent study, internships, University College, or credits from another institution including study abroad.

Additional Information
The minor in urban studies facilitates the study of urbanization across the globe, from multiple disciplinary perspectives, and is designed to complement any major field of study. Students are encouraged to pursue course work in companion with their major field of interest, that is distinctive yet complementary to the study of urbanization, which impacts all fields of inquiry. Courses must be selected in consultation with the program director/adviser in Urban Studies.

Courses

L18 URST 101 Introduction to Urban Studies
This course provides a survey of the field of urban studies, utilizing the City of St. Louis as a field site. The major purpose of the course is to gradually reveal how a city operates internally, and how it operates externally with its sister cities, surrounding metropolitan areas and neighboring states, amidst competing and often contradictory interests. Utilizing historical analysis as a guide, the course briefly revisits the experiences of previous waves of ethnic groups to the St. Louis metropolitan area, as a lens for understanding the current social, political and economic dilemmas that many urban dwellers in St. Louis now face. The course reveals to students the intricacies of social welfare issues and policies among high density populations, in St. Louis, that are homogeneous and heterogeneous, at the same time. Visits and discussions with various governmental and nongovernmental agencies, and how such agencies function or dysfunction for various constituencies allow students to ask crucial questions regarding equality of opportunity in a democratic society. Students also encounter diverse communities and neighborhoods and the intended and unintended consequences of social welfare policies designed to ameliorate urban dilemmas such as poverty and inequality, homelessness, educational underachievement, gentrification, migration and immigration, development, health care, fiscal issues, the informal economy, and issues concerned with crime and social justice, among others. Readings are reinforced and challenged through visits, interactions and observations with broad constituencies and institutions, ranging from city officials to community residents. As such, this course offers a survey discussion of the rich interdisciplinary field of urban studies for those who may be interested in pursuing a standalone major in the field of urban studies.
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L18 URST 163 Freedom, Citizenship, and the Making of American Culture
This course offers a broad survey of American history from the era before European settlement of North America to the late 20th century. The course explores the emergence and geographic expansion of the United States and addresses changes in what it meant to be an American during the nation's history. Tracing major changes in the nation’s economic structures, politics, social order and culture, the course chronicles, among other issues, changes in the meanings of freedom, citizenship and American identity. Introductory course to the major and minor.
Same as L22 History 163
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Art: HUM BU: HUM

L18 URST 2020 The Immigrant Experience
This course explores the history and politics of immigrant groups in the 19th- and 20th-century United States. Topics include legislation, patterns of migration, comparisons of different waves of immigration, and changing social attitudes. This course is a core requirement for the ethnic studies concentration in American Culture Studies.

L18 URST 2091 Freshman Seminar: The City in Early Modern Europe
From the city-states of Renaissance Italy to the 18th-century boomtowns of London and Paris, cities functioned as political, economic and cultural centers, creating unique opportunities and challenges for their diverse inhabitants. Using a wide variety of primary and secondary sources, this course examines how men and women, rich and poor, established citizens and marginal groups, tried to understand and manage life in the city. Their conflicting experiences and expectations created not only social and economic unrest, but also a resilient social infrastructure, a tradition of popular participation in politics, and a rich legacy of cultural accomplishment. Topics studied include: urban political and economic organization; the creation and use of public spaces; religion as a source of community and conflict; and urban crime and public punishment.
Same as L22 History 2091
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: BA, HUM

L18 URST 226 Sociological Approaches to American Health
The major objective of the course is to provide beginning students with the theoretical (conceptual) and empirical tools necessary to understand how health and illness and health...
care delivery in the United States are significantly influenced by the social structure in which they are embedded. Students demonstrate this understanding through designing and implementing a research project grounded in sociological theory and sound methodological strategies for collecting and analyzing data. Working in teams, students produce a research report suitable for a poster presentation or newsletter to a variety of audiences.

L18 URST 233 Biomedical Ethics
A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.

L18 URST 298 Practicum in Urban Studies
Practicum with an urban studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the urban studies adviser. Enrollment by permission of the instructor. Credit variable, maximum 3 units.

L18 URST 299 The Study of Cities and Metropolitan America
This course serves as the introductory course analyzing the forces shaping America’s cities and surrounding metropolitan areas. It examines strategies for dealing with many of the profound social issues affecting urban/ metropolitan America. Emanating from a historical perspective, it examines the ways in which industrialization and deindustrialization shaped Northern American cities and the consequences of deindustrialization on urban citizenry. It further surveys the demographic and spatial transformation of American cities, examining the consequences of urban transformation on federal, state and local politics on society and on her institutions. Similarly, the course focuses on the origin and societal changes and emerging goals of urban development, gentrification and evolving patterns of metropolitanism and the necessity for central city as well as neighborhood reconstruction. The dynamics of racial residential segregation; crime and punishment; issues of academic achievement and under-achievement; and the social cleavages of urban marginalized communities, family structure, urban homelessness, urban sprawl and health care among others, are viewed from the perspective of social justice by exploring social, political, economic, racial and ethnic factors that impact on access, equity and care. Various theoretical perspectives and philosophies are introduced that have dominated the discourse on race and urban poverty. A field-based component complements the course work, and is designed to build interest, awareness and skills in preparation for outreach to urban communities. Prerequisite: sophomore standing.

L18 URST 303 Independent Study in Urban Studies
Independent study with an urban studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the urban studies adviser. Enrollment by permission of the instructor. Credit variable, maximum 3 units. EN: S

L18 URST 3036 Migration and Modernity: Human Mobility, Identity and State Formation — Russian/Soviet/Post-Soviet Context
This class introduces students to a broad history of 19th- and 20th-century Russia and the Soviet Union alongside problems of migration. In this class, students are introduced to the historical, social and political dimensions of migration within, to and from the Russian Empire, the Soviet Union and its successor states. We look at the intersection of the movement of people with long-term economic, social and political transformations, but also pay attention to crucial events and phenomena of Soviet history that set large-scale migrations in motion. Course materials, for instance, address mass movements related to modernization and internal colonization, analyze the role of revolutionary change and warfare for forced displacement, and study the implications of geopolitical changes in the aftermath of the breakdown of the USSR for human rights discourses. Alongside the historically grounded overview, the class explores concepts of citizenship, diaspora, nationality policy, gender specific experiences of migration, and the ethics and political economy of migration politics, thereby highlighting how current trends in Russian society are indicative of broader discourses on difference and social transformation.

Same as L97 IAS 384
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM EN: H

L18 URST 304 Educational Psychology
A course in psychological concepts relevant to education. Organized around four basic issues: how humans think and learn; how children, adolescents and adults differ in their cognitive and moral development; the sense in which motivation and intention explain why people act as they do; how such key human characteristics as intelligence, motivation and academic achievement can be measured. Prerequisite: sophomore standing. Offered fall and spring semesters.

L18 URST 308 Human Variation
A survey of human biological diversity, considering its adaptive and taxonomic significance from the perspective of origins and distribution of traits and adaptation. Prerequisite: Anthro 150A or introductory biology.
Same as L48 Anthro 307A
Credit 3 units. A&S: NS, SD, QA A&S IQ: NSM, AN, SD Arch: NSM Art: NSM BU: SCI

L18 URST 3091 Poverty and Social Reform in American History
This course explores the history of dominant ideas about the causes of and solutions to poverty in American society from the early republic to the end of the 20th century. We will investigate changing economic, cultural, and political conditions that gave rise to new populations of impoverished Americans, and to the expansion or contraction of poverty rates at various times in American history. We will, however, focus primarily on how various social commentators, political activists and reformers defined poverty, explained its causes, and struggled to ameliorate its effects. The course aims to highlight changes in theories and ideas about the relationship between dependence and independence, personal responsibility and social obligation, and the state and the citizen.
Same as L22 History 3091
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: BA EN: H

L18 URST 313B Education, Childhood and Society
An examination of childhood, child development and education from different perspectives. Observation of children in a variety of settings, including classrooms. Through historical, sociological, psychological and political readings, students clarify current ideas about children, investigate the nature of childhood, and begin to understand how and why childhood is constructed as it is. Prerequisite: sophomore standing. Limited to 45 students.
Same as L12 Educ 313B
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BA: BU

L18 URST 3141 Literacies, Schools and Communities
The well-known “literacy crisis” has forced scholars from many nations to turn their attention to learning about linguistic, cultural and class diversity of students and what this means for learning in schools. In this course we engage with the perceived disjuncture between homes, communities and schools in an era of higher literacy standards, local literacies and community knowledge. We examine the contribution of sociolinguistics to what we know about language and literacy education, achievement and how this relates to social transformation within and across communities. Students can expect theoretical and methodological conversations as we use critical discourse theories, systemic linguistic approaches and empowerment theories as lenses to formulate, challenge and critique the existing status of language and literacy education.
Same as L12 Educ 314
Credit 3 units. A&S: LA A&S IQ: HUM BU: BA EN: H

L18 URST 315 Introduction to Social Psychology
Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory and political psychology, among other issues. Prerequisite: Psych 100B.
Same as L33 Psych 315

L18 URST 316 Contemporary Women’s Health
We identify and study a broad range of health issues that are either unique to women or of special importance to women. The roles that women play as both providers and consumers of health care in the United States are examined. The interface of gender, race, and class and their impact on an individual’s access to and experience in the health care system are central concerns. Topics are wide-ranging and include discussions of breast cancer, mental health, cardiovascular disease in women, women and eating (from anorexia to obesity), reproductive issues (from menstruation to fertility to menopause), as well as the politics of women’s health, gender differences in health status, the effect of employment on health, the history of women’s health research.

L18 URST 316F Rediscovering the Child: Interdisciplinary Workshops in an Urban Middle School
It is said that at this time in history the entire country must make a commitment to improve the positive possibilities of education. We must work to lift people who are underserved; we must expand the range of abilities for those who are caught in only one kind of training; and we must each learn to be creative thinkers contributing our abilities to many sectors of our society. In this course, we expand our views about learning by experimenting with the creative process of lateral thinking. In the first six weeks of the semester, we learn about learning by meeting with exceptional people with many scholarly, professional, and civic engagement accomplishments. We also learn by working in teams to develop an exciting set of 2-D/3-D, hands-on, problem-solving workshops for middle-schoolers from economically disadvantaged urban families; the workshop curriculum is based upon students’ knowledge and passion as well as their interests. During the last eight weeks, we deliver these workshops once a week to students at Compton-Drew Middle School (adjacent to the Science Center in the city of St. Louis). In this course we celebrate the choices of studies we each pursue, and expand our experience by learning from each other’s knowledge bases and creativity. The course is open to students from all disciplines and schools, freshmen through seniors, and meets the multidisciplinary fieldwork requirement for AMCS majors. To meet compliance with University Policies on Minors, all students participating in this class will be required to undergo a fingerprinting background check, which is done on campus, prior to interacting with the Compton-Drew students.
The cost of this background check is covered by the lab and materials fee added to this course.
Same as L98 AMCS 316F
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L18 URST 3206 Global Gender Issues
This course compares the life experiences of women and men in societies throughout the world. We discuss the evidence regarding the universal subordination of women, and examine explanations that propose to situate women’s and men’s personality attributes, roles and responsibilities in the biological or cultural domains. In general, through readings, films and lectures, the class provides a cross-cultural perspective on
ideas regarding gender and how gendered meanings, practices, performances serve as structuring principles in society.

Same as L48 Anthro 3206

L18 URST 3211 Introduction to Colonial Latin America
This course surveys the history of Latin America from the pre-Columbian civilizations through the Iberian exploration and conquest of the Americas until the Wars of Independence (roughly 1400-1815). Stressing the experiences and cultural contributions of Americans, Europeans and Africans, we consider the following topics through primary written documents, firsthand accounts and excellent secondary scholarship, as well as through art, music and architecture: Aztec, Maya, Inca and Iberian civilizations; models of conquest in comparative perspective (Spanish, Portuguese and Amerindian); environmental histories; consolidation of colonialism in labor, tributary and judicial systems; race, ethnicity, slavery, caste and class; religion and the Catholic Church and Inquisition; sugar and mining industries, trade and global economies; urban and rural life; the roles of women, gender and sexuality in the colonies. Geographically, we cover Mexico, the Andes and, to a lesser extent, Brazil, the Southwest, Cuba, and the Southern Cone. Premodern, Latin America.

Same as L22 History 321C
Credit 3 units. A&S: TH, CD, SD & A&S IQ: HUM, LCD, SD BU: HUM, IS

L18 URST 326 American Economic History
Basic theoretical concepts applied to analyze the changing structure and performance of the American economy from colonial times to the present. Prerequisites: Econ 1011 and Econ 1021.

Same as L11 Econ 326
Credit 3 units. A&S: SS & A&S IQ: SSC Art: SSC BU: BA EN: S

L18 URST 3280 Political Intolerance in World Politics
This course is an investigation into the meaning, causes and consequences of political intolerance. The goal is to expose students to contemporary research on (a) how political intolerance is conceptualized and understood, especially within the context of theories of democracy; (b) how political intolerance can be measured, both at the level of the individual and the institution/society; (c) where intolerance originates, both in terms of individual psychology and system-level politics; and (d) what consequences flow from intolerance, especially in terms of legal and extra-legal political repression, as well as cultural consequences (e.g., a “culture of conformity”). The course makes little distinction between American politics and politics in other parts of the world (although no knowledge of specific non-U.S. systems is required as a prerequisite).

Same as L32 Pol Sci 3280
Credit 3 units. A&S: SS & A&S IQ: SSC BU: IS EN: S

L18 URST 3283 Introduction to Global Health
This course provides a general introduction to the field of public health. It examines the philosophy, history, organization, functions, activities and results of public health research and practice. Case studies include infectious and chronic diseases, mental health, maternal and reproductive health, food safety and nutrition, environmental health, and global public health. Students are encouraged to look at health issues from a systemic and population-level perspective, and to think critically about health systems and problems, especially health disparities and health care delivery to diverse populations. No background in anthropology or public health is required.

Same as L48 Anthro 3283
Credit 3 units. A&S: SS & A&S IQ: SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L18 URST 3319 Health, Healing and Ethics: Introduction to Medical Anthropology
A cross-cultural exploration of cultures and social organizations of medical systems, the global exportation of biomedicine, and ethical dilemmas associated with medical technologies and global disparities in health.

Same as L48 Anthro 3310
Credit 3 units. A&S: SS, CD & A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: ETH EN: S

L18 URST 3352 China's Urban Experience: Shanghai and Beyond
This course studies the history of Chinese cities from the mid-19th century to the late 20th century. It situates the investigation of urban transformation in two contexts: the domestic context of modern China’s reform and revolution; and the global context of the international flow of people, products, capitals and ideas. It chooses a local narrative approach and situates the investigation in one of China’s largest, complex, and most dynamic and globalized cities — Shanghai. The experience of the city and its people reveals the creative and controversial ways people redefined, reconfigured and reshaped forces such as imperialism, nationalism, consumerism, authoritarianism, liberalism, communism and capitalism. The course also seeks to go beyond the "Shanghai model" by comparing Shanghai with other Chinese cities. It presents a range of the urban experience in modern China.

Same as L03 East Asia 3352
Credit 3 units. A&S: TH & A&S IQ: HUM BU: IS EN: H

L18 URST 3361 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Same as L32 Pol Sci 336
Credit 3 units. A&S: SS & A&S IQ: SSC Art: SSC BU: BA

L18 URST 3405 For Freedom's Sake: The Civil Rights Movement in America
This course provides an introduction to the period of struggle in American history known as the Civil Rights Movement. Our primary task is to survey the major historical figures, organizations, locations, strategies and ideas that coalesced to make the history of the movement. The course broadly covers the years of the Black Freedom Struggle between 1945 and 1971, with a sharper focus on the pivotal years of 1954-1965. By placing the movement within a broader context, the course seeks to identify the historical developments and social realities...
that made the movement necessary and possible. The class also looks at the years following the movement, and the general transition from Civil Rights to Black Power.

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: BA EN: H

L18 URST 343 Understanding the Evidence: Provocative Topics of Contemporary Women's Health and Reproduction
Contemporary topics of women's health and reproduction are used as vehicles to introduce the student to the world of evidence-based data acquisition. Selected topics span and cross a multitude of contemporary boundaries. Issues evoke moral, ethical, religious, cultural, political and medical foundations of thought. Students are provided introductory detail to each topic and subsequently embark on an independent critical review of current data and opinion to formulate their own said notions. Examples of targeted topics for the upcoming semester include, but are not limited to: Abortion, Human Cloning, Genetics, Elective Cesarean Section, Fetal Surgery, Hormone Replacement, Refusal of Medical Care, Medical Reimbursement, Liability Crisis and Gender Bias of Medical Care.

Same as L77 WGSS 343
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

L18 URST 3472 Global Energy and the American Dream
This lecture course explores the historical, cultural and political relationship between America and global energy, focusing on oil, coal, natural gas, biofuels and alternatives. Through case studies at home and abroad, we examine how cultural, environmental, economic and geopolitical processes are entangled with changing patterns of energy-related resource extraction, production, distribution and use. America’s changing position as global consumer and dreamer is linked to increasingly violent contests over energy abroad while our fuel-dependent dreams begin with an introduction to the basic terminology, concepts, and methods of population studies, followed by a survey of human population trends through history. The course then investigates biological and social dimensions of marriage and childbearing, critically examines family planning policies, deals with the social impacts of epidemics and population ageing, and looks at connections between population movements and climate change.

Same as L11 Econ 348
Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L18 URST 352 Health Economics
Analysis of consumer demand for health care, medical technology and the role of health insurance. Emphasis placed on behavior of the physician (whether he acts as an agent for the consumer or on his own behalf); on the use of paramedics, preventive care, outpatient care and the general market organization of the health industry. The major concern is the rising cost of health care and appropriate public policy responses. Prerequisite: Econ 1011.

L18 URST 3531 The Welfare State and Social Policy in America
How can we understand the recent debate about fundamental health care reform? Should social security be partially or wholly privatized? Was the 1996 welfare reform a success? Contemporary political questions frequently focus on the American welfare state and the social policies that compose it. The first half of this course describes the American welfare state broadly construed, places it in a comparative context, and elucidates major political science explanations for the size and scope of American social policy. We touch on several areas of social policy while constructing the generalized lenses through which particular political outcomes can be understood. The second part of the course then focuses on three major aspects of the American welfare state: health care, old age pensions and policies related to work, poverty and inequality.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

L18 URST 3581 Law, Politics and Society
This course is an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system in contrast to legal mythology, as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce students to legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law.

Same as L32 Pol Sci 358
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L18 URST 361 Culture and Environment
An introduction to the ecology of human culture, especially how "traditional" cultural ecosystems are organized and how they change with population density. Topics include foragers, extensive and intensive farming, industrial agriculture, the ecology of conflict, and problems in sustainability.

Same as L48 Anthro 361
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: ETH

L18 URST 3612 Population and Society
This review of population processes and their social ramifications begins with an introduction to the basic terminology, concepts, and methods of population studies, followed by a survey of human population trends through history. The course then investigates biological and social dimensions of marriage and childbearing, critically examines family planning policies, deals with the social impacts of epidemics and population ageing, and looks at connections between population movements and climate change.

**L18 URST 3626 Adventures in Nosology: The Nature and Meaning of Disease**
What is a “disease” and how do you diagnose one? What are “medicines” and how, when, and for what purpose should they be used? These questions reflect universal human concerns, but the answers given to these questions have varied enormously in different times and places. The course considers the nature of health, illness, disease and its treatment, beginning with a detailed examination of the traditional ethnomedical system of the Hausa people of northern Nigeria. Using this West African medical system as a baseline for comparison, the course then explores the nature of “nosology” (the classification of diseases) and the underlying logic of different therapeutic systems in different times and cultures, including our own. The course draws on ethnography, the history of medicine, bioethics and human biology to understand how these questions are asked and answered in different societies, times and places.

**L18 URST 372C Law in American Life: 1776 to the Present**
Among the many contradictions of American history, none has been more recurrent than the tension of justice and law — of aspiration and reality — as Americans have sought to make good on the promises of the Revolution. Although we pride ourselves as a nation devoted to the principle of “equal justice under the law,” the terms “equal” and “justice” have prompted bitter debate, and the way we place them “under law” has divided Americans as often as it has united them. It is the purpose of this course to examine the many and conflicting ways in which Americans have sought to use “law” to achieve the goals of the republic established in 1776. Viewing “law” as the contested terrain of justice, cultural construction, social necessity and self-interest, this course pays close attention to the way Americans have used, abused or evaded “law” throughout their national history.

**L18 URST 380 Applications in GIS**
This introductory course in Geographic Information Systems (GIS) is designed to provide basic knowledge of GIS theory and applications using the existing state-of-the-art GIS software. The course is taught using a combination of lectures, demonstrations and hands-on, interactive tutorials in the classroom. The first week of the course provides a broad view of how students can display and query spatial data and produce map products. The remainder of the course focuses on applying spatial analytical tools to address questions and solve problems. As the semester develops, more tools are added to students’ GIS toolbox so that they can complete a final independent project that integrates material learned during the course. Students are encouraged to design individualized final projects using their own or other available data; however, some already-prepared final projects also are available.

**L18 URST 3874 International Public Health**
This course explores current topics in international public health using a case-study-based approach, emphasizing public health issues affecting low- and middle-income countries; introduction to the tools and methods of international public health research and programs; in-depth examination and critique of the roles of local and national governments, international agencies and third-party donors in international public health work; and the contributions of anthropology to the international public health agenda.

Same as L48 Anthro 3874
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

**L18 URST 389A Power, Justice and the City**
This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative
and practical dilemmas posed by "privatism" in cities and their suburbs.
Same as L32 Pol Sci 389A
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD BU: BA EN: S

L18 URST 394 Urban Development and the Global Economy
This course is designed to familiarize students with the urban effects of economic globalization and to provide students with tools that enable them to engage in scholarly and practical debates on economic growth and the city. Students are exposed to a variety of theoretical statements comparative studies, and case-specific research focusing on cities and the global economy. Topics include: industrial reorganization and its connection to the urban form; the ability of "dead" cities to adapt to economic change; how economic innovation is encouraged or suppressed within cities; growth coalitions and urban politics; networks and culture in relation to capitalist commitment to urban space; and the role of the arts and entertainment in new development versus production-based paradigms.
Same as L98 AMCS 394
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

L18 URST 396 Women and Social Class
This course examines the intersection of class and gender from the late 19th century to the present. It begins by asking how a focus on women challenges conventional notions of class.
Some of the topics covered include women, race and class; class and family formation; women, class and globalization; class and feminist politics; women and work; class and domestic labor; women and unionization; and class and sexual identity.
The emphasis is on women and class in the U.S., but includes analysis of women and class in a broader, global context. This course examines these topics using nonfictional and fictional texts.
Prerequisites: one 100- or 200-level women, gender and sexuality studies course or permission of instructor.
Same as L77 WGSS 396
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: BA EN: H

L18 URST 400 Urban Education in Multiracial Societies
This course offers students an analysis of the historical development and contemporary contexts of urban education in English-speaking, multiracial societies. It examines legal decisions, relevant policy decisions, and salient economic determinants that inform urban systems of education in Western societies including, but not limited to, the United States, Canada, Great Britain, and South Africa. The course draws on quantitative, qualitative, and comparative data as an empirical foundation to provide a basis for a cross-cultural understanding of the formalized and uniform system of public schooling characteristic of education in urban settings. Given the social and material exigencies that shape urban school systems in contemporary societies, special attention is given in this course to the roles of migration, immigration urbanization, criminal justice, industrialism, de-industrialism, and globalization in shaping educational outcomes for diverse students in the aforementioned settings. Prerequisite: junior standing or permission of instructor.
Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

L18 URST 403 Directed Study in Urban Studies
Directed study with an urban studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the urban studies adviser. Enrollment by permission of the instructor.
Credit variable, maximum 3 units.

L18 URST 403 Video Microanalysis: Methods and Tools
The purpose of this course is to explore video microanalysis as a methodological tool for studying and valuing unconscious aspects of culturally diverse settings. Utilizing a social/cultural theoretical lens, this type of analysis reveals fleeting actions, subtle movements, peripheral events, and nonverbal communication that are not easily identified in real time viewing. Specifically we may look at facial expressions, direction of gaze, hand movements, body position, and use of material resources as micro techniques to expand our capacity to explore minute aspects and alternative interpretations of social interactions.
Same as L12 Educ 4033
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD EN: S

L18 URST 404 Directed Readings in Urban Studies
This course consists of readings in urban studies that deal with a range of contemporary issues, focusing on cities and the surrounding metropolitan regions. It can be taken only under the direction of the director of the urban studies program. Prerequisite: permission of instructor. The student must be a declared major in urban studies. Consult program approval form.
Credit 3 units.

L18 URST 4041 Islam and Politics
Blending history and ethnography, this course covers politics in the Islamic world in historical and contemporary times. Topics include history of Islam, uniformity and diversity in belief and practice (global patterns, local realities), revolution and social change, women and veiling, and the international dimensions of resurgent Islam. Geographical focus extends from Morocco to Indonesia; discussion of other Muslim communities is included (Bosnia, Chechnya, sub-Saharan Africa, U.S.).

L18 URST 4070 Global Justice
This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course is of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally.
Same as L32 Pol Sci 4070
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

L18 URST 4071 Metropolitan Finance
This course is an interdisciplinary examination of fiscal policies in metropolitan regions and the related public policies that can make them better or worse places for living and working. A particular focus is on the financial structures and arrangements — both public and private — that support or hinder quality of life in urban spaces. Core topics of study include the potential
impact of decentralized governments on metropolitan economic development, determination of optimal arrangements for sharing fiscal responsibilities among levels of government, evaluation of local revenue and expenditure decisions, and assessment of prospects and options for intergovernmental fiscal reform. The course is consistent in its approach to policy. Drawing on literature in sociology, education, public finance, community development, political economy and other related fields, the course readings and experiences explore how fiscal policies can and do affect urban dwellers and their well-being. This is a departure from many public finance courses. Such an approach leads to very different questions: How do liquor zoning regulations influence minority and nonminority children in schools? Should whites be paid to move into minority neighborhoods or vice versa? This approach to the study of metropolitan finance puts an emphasis on topics such as child care, public transportation, minimum wage, housing codes, street behavior, homelessness, incarceration, alcohol, sports stadiums, illicit drugs, tax abatements, water service, garbage collection, schools, higher education, sprawl and technological change, with consideration given to political, institutional and cultural factors. Students are required to attend hearings, meetings and other relevant functions associated with the development of public financial policy. Prerequisites: URST 299 and either junior standing or permission of the instructor. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L18 URST 4102 Latin America and the Rise of the Global South
The rise of the global south — and the reordering of global geopolitics, economics and cultural imaginaries — is characterized by progressive change and intense conflict. Economic growth coincides with the impacts of global warming, the assault on natural resources, the rise of new consumers and the entrenchment of deep inequalities. We also see the emergence of cultural and political formations that range from the horrific to the inspiring. Latin America is a central node of the new global south. Here history takes unpredictable turns in the face of declining U.S. hegemony, the economic growth of Brazil, legacies of militarism and political violence, a feverish attack on nature, resurgent economic nationalism, and defiant "anti-globalization" movements. Through close reading of contemporary ethnographies of Latin America we explore emergent cultural and political-economic processes in the region; we consider how the "digital turn" began to shape how individuals learn, communicate and interact with one another. Current and emerging media technologies have continued to change how individuals (youth and adults alike) gather information; consume, produce and disseminate texts; and participate in both local and global communities through print- and screen-based platforms such as email, blog, podcast and mash-ups, among others. In this course, we explore what we mean by technology, the various types and uses of technology and the relationship of technology to literacy and culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates; ethics and responsibilities; drug testing and marketing; the making of the AIDS industry and "risk" categories; prevention and education strategies; interaction between biomedicine and alternative healing systems; and medical advances and hopes. Same as L48 Anthro 4134 Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Arch: SSC Art: SSC EN: S

L18 URST 418 Studying the City: Approaches to Social Research
In this course we explore social science/social scientific research methods. The course is designed primarily for students majoring in urban studies. However, the research skills that students acquire can be applied to any substantive topic in the social sciences. The main goal of this course is that students develop the skills to independently design and execute high-quality social research, regardless of their substantive interests. To develop these skills we read about methods, assess published research from a methodological perspective, and complete original research projects. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L18 URST 4211 New Media Literacy and Popular Culture in Education
At the closing of the 20th century, the "digital turn" began to shape how individuals learn, communicate and interact with one another. Current and emerging media technologies have continued to change how individuals (youth and adults alike) gather information; consume, produce and disseminate texts; and participate in both local and global communities through print- and screen-based platforms such as email, blog, podcast and mash-ups, among others. In this course, we explore what we mean by technology, the various types and uses of technology and the relationship of technology to literacy and education. We begin with characteristics of "new media" and the skills to independently design and execute high-quality social research, regardless of their substantive interests. To develop these skills we read about methods, assess published research from a methodological perspective, and complete original research projects. Credit 3 units. A&S: SS A&S IQ: SSC EN: S
L18 URST 4289 Neighborhoods, Schools, and Social Inequality
A major purpose of the course is to study the research and policy literature related to neighborhoods, schools, and the corresponding opportunity structure in urban America. The course is informed by theoretical models drawn from economics, political science, sociology, anthropology, education, and law. A major focus is to gain greater understanding of the experiences and opportunity structure(s) of urban dwellers, in general, and urban youth, in particular. While major emphasis is placed on data derived from the interface of urban environments and the corresponding institutions within them, the generational experiences of various ethnic groups complement the course foci.

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC EN: S

L18 URST 4411 In the Field: Ethnographic and Qualitative Methods
This course provides an introduction to ethnographic and qualitative research. Ethnography is the study of culture and social organization primarily through participant observation and interviewing. Ethnographic research provides descriptive and interpretative analyses of the routine practices of everyday life. Ethnographic accounts represent different ways people live and make sense of their experiences and describe the types of social organization (for example, gender relations, class systems, racial divisions, or cultural contexts) that, in part, serve to structure or pattern social behavior. Students conduct a small-scale qualitative research project, and in the process they gain skills in various qualitative research methods. This course is suitable for both undergraduate and graduate students. One purpose of the course is to help students plan for subsequent thesis research, independent study projects, or dissertation research.
Same as L98 AMCS 441
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

L18 URST 4511 Race, Ethnicity, and Culture: Qualitative Inquiry into Urban Education I
Drawing on traditional and recent advances in the field of qualitative studies, this course is the first in a series to examine ethnographic research at the interlocking domains of race, ethnicity, class, gender and culture. The emphasis in this course is on how these concepts are constructed in urban educational institutions. The course includes a field component that involves local elementary and/or middle schools.
Same as L90 AFAS 4511
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

L18 URST 4512 Environmental Policy
Course examines the relationship between environmental economics and environmental policy. The course focuses on air pollution, water pollution and hazardous wastes, with some attention given to biodiversity and global climate change. The course examines critically two prescriptions that economics usually endorses: (1) "balancing" of benefits against costs (e.g., benefit-cost analysis) and the use of risk analysis in evaluating policy alternatives; and (2) use of market incentives (e.g., prices, taxes or charges) or "property rights" instead of traditional command-and-control regulations to implement environmental policy. Prerequisite: Econ 1011.
Same as L11 Econ 451
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH

L18 URST 453 Sociology of Education
This course provides an overview of sociological theory and research on education in contemporary U.S. society. Drawing from sociological perspectives, it covers the implications of schools and schooling for social inequality, mobility, and group relations. It examines major theoretical perspectives on the purpose and social organization of mass education in the United States, and topics related to the organization and function of schools, access to educational resources, and group disparities in school experiences and outcomes.
Same as L12 Educ 453B
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA, ETH

L18 URST 455 Topics in Urban Studies
Prerequisites: URST 299 and senior standing.
Credit 3 units. A&S: SS

L18 URST 4601 Urban Economics
Economic function of the city and the role of the city in a national economy. Local decision-making; financing of local government expenditures. Analysis of selected urban problems, such as causes and effects of housing market segregation; crime; and urban transport systems. Prerequisite: Econ 4011.
Same as L11 Econ 460
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

L18 URST 4608 The Education of Black Children and Youth in the United States
This course provides an overview of the education of Black children and youth in the United States. Covering both pre- and post-Brown eras, this course applies a deep reading to the classic works of DuBois and Anderson as well as the more recent works of Kozol, Delpit, and Foster. The social, political, and historical contexts of education, as essential aspects of American and African-American culture and life, are placed in the foreground of course inquiries.
Same as L12 Educ 4608
Credit 3 units. A&S: TH, SD, WI A&S IQ: HUM, SD, WI Art: HUM EN: H

L18 URST 461B Construction and Experience of Black Adolescence
This course examines the construct of black adolescence from the general perspectives of anthropology, sociology and psychology. It begins by studying the construct of black adolescence as an "invention" of the social and behavioral sciences. The course then draws upon narrative data, autobiography, literature and multimedia sources authored by black youth to recast black adolescence as a complex social, psychological, cultural and political phenomenon. This course
L18 URST 462 Politics of Education
Politics is interpreted broadly to include not just government, but any situation in which people have to solve a problem or come to a decision. This course focuses on schools and the processes through which certain stories, identities and practices are promoted, and others, not. Special attention is given to Latin American workers and labor movements. In particular, it examines the influence of immigration, the role of export workers, the impact of radical ideologies, the development of labor relations systems, the nature of informal work, and recent struggles for workers' control. The principal aim of this course is to introduce students to the key topics and themes pertaining to global labor history. These themes are varied and complex and range from workers' struggles. Same as L97 IAS 4622
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD EN: S

L18 URST 4622 Labor and Labor Movements in Global History
Focusing on the period from mid-19th century (industrial revolution) until the present neoliberal capitalist era, this course analyzes working class formation, organization, collective action, and politics on a worldwide scale. It seeks to explore the connections between historical and contemporary workers' movements in the global North and global South, eschewing national perspectives and global/local dichotomies. Special attention is given to Latin American workers and labor movements. In particular, it examines the influence of immigration, the role of export workers, the impact of radical ideologies, the development of labor relations systems, the nature of informal work, and recent struggles for workers' control. The principal aim of this course is to introduce students to the key topics and themes pertaining to global labor history. These themes are varied and complex and range from workers' struggles. Same as L97 IAS 4622
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD EN: S

L18 URST 472 Topics in Growth and Development
This course highlights important empirical facts concerning growth and development in various countries at different development stages. Fundamental growth theory is then provided for explaining these facts systematically and for evaluating the consequences of commonly adopted development policies. Topics vary, but may include population, human capital and labor market development, R&D and innovation, finance and growth, modernization and industrial transformation, world income disparities and poverty problems, institutions and political economy issues, environmental and social factors, and international trade and economic integration. Prerequisites: Econ 4011 and Econ 4021. Same as L11 Econ 472
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

L18 URST 476 The City in American Arts and Popular Culture, 1910-1940
Using visual media-painting; prints and illustration; film and animation — along with studies of vaudeville, and other forms of popular and mass entertainment — this seminar analyzes the presence of the city as a theme that registers a range of cultural attitudes toward the modern. Through close readings of visual and verbal texts, we consider such issues as the relationship between work and leisure, and between high culture and popular arts. We look at critiques and celebrations as well as at how the popular arts help the ordinary man and women to negotiate the challenges of the new mechanized and overscaled urban environment. Prerequisites: 300-level course in American 20th-century cultural history, or American art or literature; or permission of instructor. Same as L01 Art-Arch 475
Credit 3 units. A&S: TH A&S IQ: SSC, SD EN: S

L18 URST 4792 Globalization and National Politics
This seminar examines globalization and its interaction with national politics; the movement of ideas, capital, goods, services, production and people across national borders; and provides a skeletal framework for the global political economy. Politicians, policymakers and societies discover new opportunities, but also dilemmas as expanding interdependence challenge traditional notions of sovereignty and national policy autonomy. Same as L97 IAS 4792
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

L18 URST 482 Senior Thesis in Urban Studies
This course is required for students to complete the degree requirements in urban studies. Students discuss research methods and make regular research reports both to the instructor and for other students. Credit 3 units.

L18 URST 4872 Colonial Cities and the Making of Modernity
Same as L22 History 4872
Credit 3 units. A&S: TH, CD A&S IQ: SSC, SD Art: SSC EN: H

L18 URST 4882 Anthropology and Public Health
Anthropological approaches to public health practice and research; role of anthropology in public health systems; cross-cultural public health research; community vs. institutional bases of public health advocacy. Same as L48 Anthro 4882
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: ETH

L18 URST 4883 The Political Economy of Health
This course reviews social science contributions to understanding health as a function of political and economic influences. Considers the ways in which personal health is affected by macrosocial processes. Examines effects of globalization, international development and political instability on the health of individuals. Examples drawn from the U.S. and international contexts. Prerequisite: junior standing or above. Same as L48 Anthro 4883
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: ETH

L18 URST 4891 Education and Public Policy in the United States
This course takes a triangulated approach to the field of public policy as it relates to education and social problems. First, the course emphasizes theories of public policy that frame the field of policy studies. Major questions extending from this course feature include: What is public policy, policy behavior, its defining processes/features, and what social function does it serve? Second, the course emphasizes the skills related to the exercise of policy analysis. These skills include the crafting of technical documents within the field of public policy (e.g., a policy brief) and the application of scientific methods to the exploration of social problems/governmental actions. Likely
issues related to this course feature include the use of scientific knowledge in political arenas, engagement with stakeholders and the intended/unintended consequences of policy science to political decision-making. Third, this course simulates the policy-making context through students' participation in mock congressional testimonies. These focal areas become central to an understanding of four social concerns: school desegregation following the Brown decisions; affirmative action in higher education; Head Start programs; and/or the ESEA Act of 1965, also known as No Child Left Behind. Educational opportunity, achievement inequality and social change are the primary interests that link these course features.

UColl: ACS

L18 URST 4892 The Science and Politics of Testing in the United States
Why do tests permeate American Society? Tests have been integral to the decision-making process in many venues of American culture—e.g., immigration opportunities, voting rights, college admissions, workforce considerations, special education placement, educational reform, and graduation requirements. The credibility of these decisions depends upon the claim that a particular test is a scientific instrument and relevant to the decision-making process. This claim is worthy of study. The purpose of this course is twofold. The first purpose is to examine how the nexus of science and politics influence testing practices in American society. The second purpose is to explore how testing practices influence the culture of schools, civil liberties, the workplace, and public discourse about merit.

L18 URST 4982 The Business of Us All: In/equality in Practice and Theory
This course uses a transdisciplinary approach to discuss in/equality and its interrelated topics of inequality, inequity and social justice. While the focus is on the U.S., predominantly, lessons learned from our global partners are important components of our discussions. The course will emphasize the implications of our findings for other ethnic/racial minorities around the world. Equality speaks to issues of priority, fairness and impartiality. On the other hand, inequality is defined as marked difference among individuals or groups of individuals in the distribution of social goods. Inequity, which considers bias, discrimination and injustice in distributive systems, pushes the discussion further. As the various forms of social, political and economic inequalities are mutually reinforced, we examine economic inequality, residential segregation and housing quality; disinvestment in neighborhoods and communities; resource allocation to low income, city and predominantly ethnic minority schools; academic underachievement of minority youth; access to and provision of appropriate healthcare; curtailment of social welfare programs; the presentation of stereotypical images of persons of color in the media and school curricula; morbidity, mortality, and longevity rates for persons of color; environmental hazards; the surge in incarceration related to substance abuse and escalating criminal prosecution, as well as discriminatory behavior of police and judges. All of the foregoing is made worse by race and gender status variables. Such factors cannot be considered inconsequential to social im/mobility and inequality in the larger society. The collateral damage borne by the intergenerational transfer of social im/mobility and inequality to future generations are integral to course discussions.

Women, Gender, and Sexuality Studies
Courses in the Department of Women, Gender, and Sexuality Studies (WGSS) examine how gender and sexuality affect many aspects of the world in which we live, including political structures; social relations; economic institutions; the production of literature, art and history; and representations of gender, sexuality, race, class and ethnicity. The curriculum provides opportunities to explore the specificity of gendered experiences, concerns and perspectives and to see how these vary among different social groups and at different points in time. The department has four areas of focus around which courses are organized: literature/theory/history; sexuality/the body/health; global and transnational feminist and gender studies; and critical race studies of gender and sexuality. Students may choose to concentrate in one of these areas or to investigate all four.

The Department of Women, Gender, and Sexuality Studies offers both interdisciplinary courses based in the department and more disciplinary-based courses coming from departments and programs throughout the university. Examples of interdisciplinary courses located within the department include: Introduction to Women, Gender, and Sexuality Studies; Black Masculinities;
Among the first in the nation (est. 1972), the Department of Women, Gender, and Sexuality Studies at Washington University has emphasized the importance of gender to such disciplines and interdisciplinary programs as philosophy, psychology, history, education, law, architecture, art history and archaeology, anthropology, political science, international studies, American culture studies, and studies in culture and languages.

Women, Gender, and Sexuality Studies students are often leaders in campus organizations that deal with issues concerning women, gender relations, sexuality and health. They also participate in a wide spectrum of co-curricular organizations available to undergraduates, including Students for Choice, Uncle Joe's Peer Counseling, MORE, Student Forum on Sexuality, and SARAH.

Women, Gender, and Sexuality Studies encourages students to think critically and to participate actively in their education. Most classes are small, rely heavily on classroom discussion, and emphasize interaction between faculty and students. Courses in Women, Gender, and Sexuality Studies can be taken as electives, toward a primary or secondary major, or toward a minor. Graduate students can pursue a certificate in Women, Gender, and Sexuality Studies.

Women, Gender, and Sexuality Studies can help students prepare for a career that involves women's and men's concerns or issues of gender or sexuality. Many graduates who continue their schooling choose to focus on such issues in medical school, law school, public health programs or social work. Some students envisage a career in college or university teaching, where they can apply a gender studies focus. Other students find jobs in social agencies focused on women's or gender issues. Others currently are employed in such areas as health care, business, education, the arts, media, politics and law.

### Majors

**The Major in Women, Gender, and Sexuality Studies**

**Total required units:** 27 units

**3 credits of the introductory course:** WGSS 100B Introduction to Women, Gender, and Sexuality Studies

**3 credits of theory:**

The following courses may fulfill this requirement:

- **WGSS 3013** On Love and Intimacy: Theorizing Kinship in the Multiple 3
- **WGSS 3031** Queer Theory 3
- **WGSS 335** Feminist Theory 3

- **WGSS 383** Topics in Women, Gender, and Sexuality Studies: Spectacular Blackness, Race Gender & Visual Culture 3
- **WGSS 4012** Advanced Queer Theory: The Intimacy of Precarity 3
- **WGSS 406** Queering Theory: A Multidisciplinary Approach 3
- **WGSS 416** The Politics of Pleasure 3
- **WGSS 419** Feminist Literary and Cultural Theory 3
- **WGSS 420** Contemporary Feminisms 3
- **WGSS 421** From Mammy to the Welfare Queen: African-American Women Theorize Identity 3
- **WGSS 475** Intellectual History of Feminisms 3

Note: The 400-level theory classes also will satisfy the requirement for a 400-level class.

**3 credits of a research methods or service learning course:**

The following courses may fulfill this requirement:

- **WGSS 3132** Service Learning: Girls' Studies 4
- **WGSS 3171** Service Learning: Women and Prison 4
- **WGSS 3942** Service Learning: Projects in Domestic Violence 4
- **WGSS 417W** Feminist Research Methodologies 3

Any other service learning course approved by WGSS

**3 credits at the 400 level or an honors thesis:**

- Any home-based or cross-listed WGSS class at the 400 level or a WGSS honors thesis will satisfy this requirement.

**3 credits of a historical context course:**

- A course home-based or cross-listed in WGSS that explores gender, sex or sexuality in a historical context or studies the history of these categories.

**3 credits of an ethnic/global/racial context course:**

- A course home-based or cross-listed in WGSS that considers gender and ethnicity, or gender and race, or gender in a global context.

**9 credits of WGSS courses** in addition to the credits required in the categories above:

- Courses home-based or cross-listed in WGSS.

Note: Only two home-based or cross-listed WGSS courses below the 300 level may be counted toward the 27 required units for the major.

### Additional Information

**Study Abroad:** We strongly encourage and support students who wish to study abroad and will accept up to 9 credits from approved programs. Please contact Barbara Baumgartner (http://wgss.artsci.wustl.edu/people/baumgartner_barbara), WGSS Study Abroad supervisor, about this option.
Honors: The honors program in Women, Gender, and Sexuality Studies is open to majors who have strong academic records. Students who have maintained a cumulative 3.65 grade point average through five semesters and have at least a 3.65 in the major may be considered for honors. Application to the program must be made by April 1 of junior year (no late applications will be accepted).

Minors
The Minor in Women, Gender, and Sexuality Studies

Units required: 18 units, 12 of which are at or above the 300 level. All 18 units must be separate courses not double-counted toward a major. All minor courses must be home-based or cross-listed in Women, Gender, and Sexuality Studies. All courses taken for the minor must be taken for a grade.

Required courses:
Individual programs are designed in consultation with an adviser in light of the student's interests and abilities, major course of study, and plans for the future. All courses must be home-based or cross-listed in Women, Gender, and Sexuality Studies.

Courses

L77 WGSS 100B Introduction to Women, Gender, and Sexuality Studies
This course will provide an introduction to the major and concepts in the interdisciplinary field of women, gender, and sexuality studies. We will examine the meanings attached to terms such as "man," "woman," "gay," and "sex." Topics discussed may include the history of feminist movements, masculinity, biological frameworks for understanding gender, intimate violence, sexual identities, and intersectionality. Five seats are reserved for freshmen, sophomores, juniors and seniors in each section. One section is reserved for freshman and sophomore students only. Attendance mandatory first day in order to reserve class enrollment. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA, HUM EN: H

L77 WGSS 102 Women in Science: An Introduction
Throughout the centuries, women were interested and involved in the sciences. Their scientific contributions, however, have often been overlooked and their abilities questioned. The 2005 proposition by Harvard's President Larry Summers that women's innate differences explain why fewer women succeed in math and science suggests that women continue to face assumptions about their scientific competence. In addition to examining the history of women's participation in science, this class explores the continuing cultural and economic barriers to women interested in science. Starting with a historical overview of women in science, we look at the contributions of women scientists. We review the numbers of women in various fields with good representation, such as biology, and those with few women, such as physics and computer science. Like the prestigious journal Science, we also explore whether women do science differently. This course is restricted to Women in Science Focus program participants. Credit 1 unit. A&S: TH Art: HUM EN: H

L77 WGSS 1118 Freshman Seminar: Women in Latin American History
Women have been active players in the construction of Latin American nations. In the last two decades, leading scholars in the field have taken up the challenge of documenting women's participation. This research explosion has produced fruitful results to allow for the development of specialized courses. This course looks at the nation-building process through the lens of Latin American women. The course examines the expectations, responsibilities and limitations women confronted in their varied roles from the Wars of Independence to the social revolutions and dictatorial regimes of the 20th century. Besides looking at their political and economic lives, students will explore the changing gender roles and relations within marriage and the family, as well as the changing sexual and maternal mores. Same as L22 History 1118. Credit 3 units. BU: BA, IS

L77 WGSS 1135 Freshman Seminar: The World of Cleopatra
Cleopatra, the last queen of ancient Egypt, captivated her contemporaries and has fascinated the Western world ever since her famous suicide by asp in 31 BCE. She was a woman of contrasts: Pharaoh of Egypt and Greco-Macedonian queen; seductive woman and shrewd political strategist; a ruthless monarch using every means available to consolidate her position in the face of the encroaching power of the Roman Empire. Through texts and material culture, the seminar seeks to understand Cleopatra in the context both of her native Egypt and of the wider Mediterranean world. We thus examine the traditions of Pharaonic Egypt; the historical events that brought Egypt under the control of the Macedonian Ptolemies (Cleopatra's dynasty); the wider stage of East-West tension and conquest in which Cleopatra struggled to maintain her power; her relationships (political and personal) with famous men of her day (Caesar, Herod, Mark Antony); her capital city of Alexandria, the largest metropolis of its day; Cleopatra's brilliant court and its luxury arts; and finally the many Cleopatras that have populated art and literature of later times. We emerge with a sense of Cleopatra, both as a unique individual and as a product of her time. Same as L08 Classics 1135. Credit 3 units. A&S: TH, CD A&S IQ: HUM Art: AH BU: IS EN: H

L77 WGSS 205 Introduction to LGBTQ Studies
This course offers an introduction to the topics, questions and approaches that characterize the rapidly growing field of lesbian/gay/bisexual/transsexual/queer studies. Using an interdisciplinary approach, we explore such topics as the relation between gender and sexual identity, the history of same-sex relations, homophobia and heterosexism, queer cultures and LGBTQ politics, particularly in the United States. Our focus is on asking whether and how "LGBTQ" functions as a coherent category of analysis or identity, and we pay particular attention to differences (of race, age, gender, sexual practice, class, national origin, temperament, etc.) that are contained within, and often
disrupt, that category. This course is not open to students who have taken WGSS 203 or 3031.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: BA EN: H

L77 WGSS 206 Sexuality and the State: Introduction to Sexuality Studies
Taking Michel Foucault's idea of biopolitics as a starting point, this course examines the ways in which sexuality has been produced and regulated by the state. Drawing on history, theory and literature, we look at contemporary examples of the relationship between the state and sexuality. What assumptions lie behind our ideas of sexuality? How are bodies linked by the prevailing logic of sexuality? How does sexuality inform the way that we see bodies as gendered, raced or able-bodied? In addition to looking at the relationship between sexuality and capitalism, religion, and nation, this course asks how these ideas are embodied in particular raced and gendered ideologies.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: BA EN: H

L77 WGSS 214C Introduction to Women's Texts
Discussion of canonical and nontraditional texts, most by women. Emphasis on how these texts represent gender, how literature contributes to identity formation, and how women have used the written word to change their social and imaginative conditions.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: HUM

L77 WGSS 2171 Focus: Women in Science
Same as L61 Focus 2171
Credit 1.5 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: BA EN: H

Black women, much like their male counterparts, have shaped the contours of African-American history and culture. Still, close study of African-American women's history has burgeoned only within the past few decades as scholars continue to uncover the multifaceted lives of Black women. This course explores the lived experiences of Black women in North America through a significant focus on the critical themes of violence and sexuality. We examine African-American women as the perpetrators and the victims of violence and as the objects of sexual surveillance and we explore a range of contemporary debates concerning the intersections of race, class and gender, particularly within the evolving hip-hop movement. We take an interdisciplinary approach through historical narratives, literature, biographies, films and documentaries.
Same as L90 AFAS 2250
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 240 Not Members of this Club: Women and Slaves in the Greco-Roman World
Both the Athenian Democracy and the Roman Senatorial Oligarchy were societies in which political power was the exclusive property of free, citizen males. With very few exceptions, the astounding accomplishments of those societies were also the creations of free, citizen males. This course examines the lives of two disparate but comparable groups of outsiders within Greek and Roman society. The status, rights and accomplishments of Athenian and Roman women are explored and placed in the context of other premodern societies. Likewise, the institution of slavery in Greece and Rome is explored and compared with other slave-holding societies, ancient and modern.
Same as L08 Classics 240

L77 WGSS 299 Independent Study: Internships
This course number is to be used for internships only. Credit variable, maximum 3 units. Art: HUM

L77 WGSS 2991 Undergraduate Teaching Assistant
In this course an advanced undergraduate can assist a faculty member in the teaching of an introductory-level Women, Gender, and Sexuality Studies course. Students can enroll in one course only after having obtained permission from a faculty member who is willing to supervise. Students do not engage in any grading but may serve in a variety of other capacities — as discussion leaders, in providing logistical support, or in otherwise assisting with the transmission of course material.
Art: HUM

L77 WGSS 3002 Feminist Fire!: Radical Black Women in the 20th Century
Black women have been at the forefront of the Black radical tradition since its inception. Often marginalized in both the scholarship and popular memory, there exists a long unbroken chain of women who have organized around the principles of anti-sexism, anti-racism, and anti-capitalism. Frequently critical of heterosexist projects as well, these women have been the primary force driving the segment of the Black radical tradition that is commonly referred to as Black Feminism. Remaining cognizant of the fact that Black Feminist thought has also flourished as an academic enterprise — complete with its own theoretical interventions (i.e., standpoint theory, intersectionality, dissemblance, etc.) and competing scholarly agendas — this course thinks through the project of Black Feminism as a social movement driven by activism and vigorous political action for social change. Focusing on grassroots efforts at organizing, movement building, consciousness raising, policy reform, and political mobilization, Feminist Fire centers Black Feminists who explicitly embraced a critical posture toward capitalism as
L77 WGSS 3013 On Love and Intimacy: Theorizing Kinship in the Multiple

Love and intimacy are terms that have a lot of cultural cache. In this course, we analyze the ways in which intimacy has been embedded within certain discourses of privacy, rights and individuality. In addition to the couple form, we examine friendship, celibacy, therapy and relationships people form with pets and with objects to flesh out intimacy’s multiplicities to see how these forces impact these affective tides. This course brings together history, critical theory and film to think through various expressions of intimacy and what it means to relate to the other. Prerequisites: any 100- or 200-level Women, Gender, and Sexuality Studies course or permission from the instructor. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: BA, ETH EN: H

L77 WGSS 303 Gender and Education

Same as L12 Educ 303
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Art: SSC BU: BA EN: S

L77 WGSS 3031 Queer Theory

This course provides students with an interdisciplinary examination of the history, politics and cultural expressions of gay and lesbian communities in American culture. It explores the ways lesbians, gay men, bisexual and transgendered people construct, participate in and resist various constructions of gender and sexuality. We question desire and social/cultural power, the nature and power of social change, etc. Particular attention is paid to examining the roots and effects of heterosexism and homophobia, the call for hate crime legislation, the ethics of “outing” and “passing,” the impact of AIDS, partnership recognition and domestic violence on LGBT communities. Throughout the course students are encouraged to examine the intersections of gender, race, ethnicity and social class with sexual orientation.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 304 Sex, Gender and Popular Culture

A critical survey of sex and gender in the production, reception and content of contemporary popular culture. Possible topics include: television, film, advertising, popular fiction, music, comics, internet, foodways and fashion. Themes include: the representation and stylization of sexed and gendered bodies; popular models of sexual and gendered social relations; production of normative and alternative sex and gender identities through media consumption; sex and gender in systems of popular cultural production.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: BA EN: H

L77 WGSS 3041 Making Sex and Gender: Understanding the History of the Body

This course provides an overview of the history of the body from antiquity to modern times using an interdisciplinary approach. By exploring selections from medical texts, literature, fashion, art, accounts of “new world” exploration, legal records, self-help books and contemporary media representations of human bodies, we consider the changing historical perception of the body. The intersection of gender, race and class factor significantly in our discussions of how the body has been construed historically and how it is currently being constructed in contemporary American culture. This course also provides an introduction to feminist/gender methodologies that apply to understanding the history of the body. This course is not open to students who have taken WGSS 204. Prerequisite: any 100- or 200-level WGSS course or permission of instructor. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: BA EN: H

L77 WGSS 310 From Hysteria to Hysterectomy: Women’s Health Care in America

This course examines issues surrounding women’s health care in America. While the scope is broad, the major emphasis is on the 19th and 20th centuries. Through an examination of popular writing, scientific/medical writing, letters, diaries and fiction, we look at the changing perceptions and conceptions of women’s bodies and health in America.

L77 WGSS 3101 An Intellectual History of Sex and Gender

When did sexuality begin? Is it safe to assume that gender constructions are universal and timeless? In this course, we engage with a broad range of readings that serve as primary texts in the history of sexuality and gender. Our aims are threefold: to analyze the literary evidence we have for sexuality and gender identity in Western culture, to survey modern scholarly approaches to those same texts and to consider the ways in which these modern theoretical frameworks have become the most recent set of “primary” texts on sexuality and gender.

L77 WGSS 3132 Service Learning: Girls’ Studies

2012 marked the 100th anniversary of Girl Scouts of America, an organization that has played a significant role in defining what it means to be a girl in American culture. This class looks back at girlhood over the past 100 years to today by exploring topics that include literature for girls, the education of girls, sports and girlhood, marketing to girls, girls’ health and sexuality, and, of course, the history of organizations for girls in the United States and abroad. This course introduces students to the emerging field of Girl Studies within the field of Feminist/Gender Studies research. Because the course builds upon basic
knowledge of women's movements in the U.S. and builds upon
an understanding of core women and gender studies readings, students must take Introduction to Women and Gender Studies or Introduction to Sexuality Studies before enrolling in this course. This course includes a fieldwork component in addition to regular course meetings. Prerequisite: any 100-level WGSS course. CBTL (http://www.gephardtinstitute.wustl.edu/CBTL/Pages/overview.aspx) course.
Credit 4 units. A&S: TH A&S IQ: HUM BU: BA EN: H

L77 WGSS 313A Topics in English & American Literature: Dreams
Called the "Age of Revolution," the Romantic Age of British literature, 1770-1830, witnessed the birth of new lyric forms, the effacement of traditional strictures on style and taste, and produced through poetic voice (and its quaverings and multiplications) what might be called, oversimply, the modern subject. Within a developing discourse of human rights and personal freedom, this growing assertion through poetry of individual expressivity allowed William Blake to construct in a single work a visual and verbal "Jerusalem." It encouraged William Wordsworth to write a pathbreaking investigation of the sources of his own creativity that challenged conventional restraints on what topics can, and cannot, be confessed in poetry. Beginning with these two poets, we consider the historical contexts, and the sometimes competing histories of ideas, that shaped the five major British Romantic poets: Blake, Wordsworth, Samuel Taylor Coleridge, Lord Byron, and John Keats. We follow an anthology for much of the poetry, including the poems and prose of influential contemporaries (female as well as male) who included the political philosopher Edmund Burke and Mary Wollstonecraft. Texts assigned also include Mary Shelley's Frankenstein and Byron's Don Juan.

L77 WGSS 316 Contemporary Women's Health
We identify and study a broad range of health issues that are either unique to women or of special importance to women. The roles that women play as both providers and consumers of health care in the United States are examined. The interface of gender, race and class and their impact on an individual's access to and experience in the health care system are central concerns. Topics are wide-ranging and include discussions of breast cancer, mental health, cardiovascular disease in women, women and eating (from anorexia to obesity), reproductive issues (from menstruation to fertility to menopause), as well as the politics of women's health, gender differences in health status, the effect of employment on health, the history of women's health research.

L77 WGSS 317I Service Learning: Women and Prison
Since President Reagan declared a war on drugs in the 1980s, the numbers of women in prison has increased dramatically. Due to mandatory minimum sentencing requirements and increasingly punitive prisoners for nonviolent offenses, there are no more than 200,000 women incarcerated in the United States with more than 1 million on probation and parole. While women are the fastest growing population in prison, men still make up the vast majority of prisoners, and the system is largely geared toward men and their needs. In this course, we explore the historical and contemporary issues of girls and women who are convicted of a crime. Through readings, films, reflective writings and facility tours, we explore the impact of incarceration on women and their families. While our scope is national, we focus on the corrections system in Missouri. Prerequisite: Introduction to Women and Gender Studies or Introduction to Sexuality Studies. CBTL (http://www.gephardtinstitute.wustl.edu/CBTL/Pages/overview.aspx) course.

L77 WGSS 3172 Queer Histories
Queer history is a profoundly political project. Scholars and activists use queer histories to assert theories of identity formation, build communities and advance a vision of the meanings of sexuality in modern life and the place of queer people in national communities. This history of alternative sexual identities is narrated in a variety of settings — the internet as well as the academy, art and film as well as the streets — and draws upon numerous disciplines, including anthropology, geography, sociology, oral history, fiction and memoir, as well as history. This discussion-based course examines the sites and genres of queer history, with particular attention to moments of contestation and debate about its contours and meanings.

L77 WGSS 3201 Gender, Culture and Madness
This course explores the relationships among gender constructs, cultural values and definitions of mental health and illness. Understandings of the proper roles, sensibilities, emotions and dispositions of women and men are often culturally and morally loaded as indicators of the "proper" selves permitted in a given context. Across cultures, then, gender often becomes an expressive idiom for the relative health of the self. Gender identities or presentations that run counter to these conventions are frequently identified as disordered and in need of fixing. In this course, we take up these issues through three fundamental themes: the social and cultural (re)production of gendered bodies and dispositions; the normalization of these productions and the subsequent location of "madness" in divergent or dissonant experiences of embodiment; and the situation of discourses of "madness" within debates of resistance and conformity, selfhood and agency.

L77 WGSS 3206 Global Gender Issues
This course compares the life experiences of women and men in societies throughout the world. We discuss the evidence regarding the universal subordination of women, and examine explanations that propose to situate women's and men's personality attributes, roles and responsibilities in the biological or cultural domains. In general, through readings, films and lectures, the class provides a cross-cultural perspective on ideas regarding gender and how gendered meanings, practices, performances serve as structuring principles in society.

L77 WGSS 323 Selected American Writers: Walt Whitman in His Time and Ours
Intensive study of one or more American writers. Consult Course Listings for offerings in any given semester.

L77 WGSS 323A Sex Trafficking
Both in the United States and on a global level, interrelated inequities in gender, sex, power, class, opportunity, education, culture, politics, race, and sexual objectification are among the social phenomena that contribute to the larger number of women and girls who enter into systems of prostitution and sex trafficking. We will examine the dynamics of sex trafficking on a local and global level from various perspectives, with particular attention given to the sexed and gendered social conditions that impact sex trafficking. In studying the extent and nature of the problem we will look at demand, prevalence, experiences of victims, methods of traffickers, child trafficking, cultural dynamics, and global power dynamics. We also examine international, federal and state legislation along with organizational and grassroots efforts to prevent and respond to sex trafficking.

L77 WGSS 3255 Black Masculinities
This course investigates and explores how manhood, or masculinity, interacts with ideas of sexuality in public and private life. Together, we look closely at writers who offer cultural and theoretical frameworks to challenge our ideas of what black manhood is and should be, particularly those writers who are bold enough to represent same-sex desire among black men and women. Authors include James Baldwin, Essex Hemphill, Mark Anthony Neal, Mignon Moore, and E. Patrick Johnson.

L77 WGSS 3313 Topics in Gender & Religion
This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we will examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category, and the relationship between gender, race, ethnicity and power. Second, we will study gender-based social movements, including the suffrage and women's rights movements, women's participation in the civil rights movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement. Third, we will examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we will examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights.

L77 WGSS 3323 Topics in Gender and Religion
An anthropological study of the position of women in the contemporary Muslim world, with examples drawn primarily from the Middle East but also from Asia, Africa, Europe and the United States. Students examine ethnographic, historical and literary works, including those written by Muslim women. Topics having a major impact on the construction of gender include Islamic belief and ritual, modest dress (veiling), notions of marriage and the family, modernization, nationalism and the nation-state, politics and protest, legal reform, formal education, work and Westernization. The course includes a visit to a St. Louis mosque, discussions with Muslim women, and films.

L77 WGSS 335 Feminist Theory
This course begins by examining the 19th- and early 20th-century historical context out of which contemporary feminist theory emerged. We then turn to the 1960s and the emergence of the "Second Wave" of feminism. We focus on some of the major theories that developed during the 1960s, 1970s and 1980s and the conflicts and internal problems these theories generated. We then examine some of the ways these problems were resolved in feminist theory of the 1990s. The last part of the course focuses on topics of concern to contemporary feminists — such as the family, sexuality and globalization — and the contributions feminist theory brings to these topics. Open to graduate students by enrolling in WGSS 500; contact the Women, Gender, and Sexuality Studies office for details.

L77 WGSS 337 Women's Literature: Before Thelma and Louise: American Women's Adventure Stories
American literature is filled with adventurers and adventure stories. Some of the most exciting tales were written by women. Their adventures include Mary Rowlandson's autobiography of her capture by and life with the Indians, E.D.E.N. Southworth's story of a 19th-century heroine who rescues imprisoned maidens and fights duels, and Octavia Butler's science fiction account of a 20th-century black woman who is transported back through time to an antebellum plantation. Until recently, American women authors and their stories were largely dismissed because they were perceived to focus on domestic concerns, which were seen as narrow and trivial. But the works of many women authors are far different from sentimental domestic fiction. In addition to looking closely at the historical and cultural conditions in which the narratives were written, we examine the ways in which these writers conform to and rebel against cultural prescriptions about femininity. Finally, we read some contemporary and current criticism about these works and American women's writing and discuss the politics of canon formation. Tentative Reading List: Mary Rowlandson, The Captivity and Restoration of Mrs. Mary Rowlandson (1682); The Journal of Madam Knight (1704); Catharine Maria Sedgwick, Hope Leslie (1827); E.D.E.N. Southworth, The Hidden Hand (1858); Zora Neale Hurston, Their Eyes Were Watching God (1937); Octavia Butler, Kindred (1979); Paule Marshall, Praisesong for the Widow (1983).
Writing-intensive.

L77 WGSS 3416 War, Genocide and Gender in Modern Europe
This course explores the way in which gender and gender relations shaped and were shaped by war and genocide in 20th-century Europe. The course approaches the subject from various vantage points, including economic, social and cultural history, and draws on comparisons between different regions. Topics covered will include: new wartime tasks for women; soldiers' treatment of civilians under occupation, including sexual violence; how combatants dealt with fear, injury and the loss of comrades; masculine attributes of soldiers and officers of different nations and in different wartime roles; survival strategies and the relation to expectations with regard to people's (perceived) gender identity; the meanings of patriotism for women and men during war; and gender specific experiences of genocide.

L77 WGSS 343 Understanding the Evidence: Provocative Topics of Contemporary Women's Health and Reproduction
Contemporary topics of women's health and reproduction are used as vehicles to introduce the student to the world of evidence-based data acquisition. Selected topics span and cross a multitude of contemporary boundaries. Issues evoke moral, ethical, religious, cultural, political and medical foundations of thought. The student is provided introductory detail to each topic and subsequently embark on an independent critical review of current data and opinion to formulate their own said notions. Examples of targeted topics for the upcoming semester include, but are not limited to: abortion, human cloning, genetics, elective Cesarean section, fetal surgery, hormone replacement, refusal of medical care, medical reimbursement, liability crisis and gender bias of medical care.

L77 WGSS 345A Sexual Politics in Film Noir and Hardboiled Literature
Emerging in American films most forcefully during the 1940s, film noir is a cycle of films associated with a distinctive visual style and a cynical worldview. In this course, we explore the sexual politics of film noir as a distinctive vision of American sexual relations every bit as identifiable as the form's stylized lighting and circuitous storytelling. We explore how and why sexual paranoia and perversion seem to animate this genre and why these movies continue to influence "neo-noir" filmmaking into the 21st century, even as film noir's representation of gender and sexuality is inseparable from its literary antecedents, most notably, the so-called "hard-boiled" school of writing. We read examples from this literature by Dashiell Hammett, James Cain, Raymond Chandler and Cornell Woolrich, and discuss these novels and short stories in the context of other artistic and cultural influences on gendered power relations and film noir. We also explore the relationship of these films to censorship and to changing post-World War II cultural values. Films screened in complete prints or in excerpts likely include many of the following: The Maltese Falcon, Double Indemnity, Murder My Sweet, Phantom Lady, Strangers on a Train, The Big Sleep, The Killers, Mildred Pierce, The High Wall, Sudden Fear, The Big Combo, Laura, The Glass Key, The Big Heat, The Barefoot Executive, Me Deadly, The Crimson Kimono, Touch of Evil, Alphaville, Chinatown, Taxi Driver, Devil in a Blue Dress, The Bad Lieutenant and Memento. Required screenings.

L77 WGSS 347 Gender and Citizenship: Writing-Intensive Seminar
In this writing-intensive course we examine how ideas about gender have shaped the ways Americans understand what it means to be a citizen. We focus on a variety of cases in the past and present to explore the means by which women and men have claimed the rights and responsibilities of citizenship. The types of questions that we ask include: What rights or duties devolve from the status of citizen? Who qualifies for citizenship and what qualifies them? What distinct models of citizenship have been available to Americans? How have individuals used notions of gender identity to make claims to political subjectivity? And finally, how do gendered claims to citizenship intersect or conflict with claims based on race, class, ethnicity or humanity? Prerequisite: previous course work in Women, Gender and Sexuality Studies or permission of the instructor. Not open to students who have taken WGSS 210
Credit 3 units. A&S: TH, WI BU: BA EN: H

L77 WGSS 348 Rethinking the Second Wave: Race, Sexuality and Class in the Feminist Movement 1960-1990
The U.S. women's movement has been called "the 20th century's most influential movement," but until recently assessments of its origins, characteristics and impact have been largely impressionistic and subjective, left to movement participants and popular culture. Building on a recent explosion of historical studies of American feminism, this course examines the history of the so-called "second wave" of the women's movement from its origins in the early 1960s to its alleged demise in the late 1980s. Topics covered include the origins of feminist activism; the traditional history of the women's
movement and recent revisions; how race and class shaped the feminist movement; how feminist ideas and organizing transformed American society; feminism and individual experience; and responses to the women's movement. In this discussion-based course, we read scholarly analyses of the women's movement as well as memoirs, popular essays and many primary documents from the period.

L77 WGSS 3561 Women and the Law
We explore the development of women's legal rights by examining the ways in which social constructions of gender, race, class and sexuality have shaped American legal concepts within the limited bounds of traditional legal reasoning. We begin by placing our current legal framework, and its gender, race and other societal assumptions, in an historical and Constitutional context. We then examine many of the critical questions raised by feminist theory, feminist legal thought and other critical perspectives. For example, is the legal subject gendered as male, and, if so, how effectively can women use the law to gain greater social equity? What paradoxes have emerged in areas, such as employment discrimination, family law or reproductive rights, as women have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? The course is thematic, but we spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women.

L77 WGSS 358 Scribbling Women: 19th-Century American Women Writers
In 1855, Nathaniel Hawthorne wrote to his publisher, William Tichi, that "America is now wholly given over to a damned mob of scribbling women, and I should have no chance of success while the public taste is occupied with their trash."
In this class, we examine works of those scribbling women of the 19th century. We read one of the best-selling novels of the century, one that created a scandal and ruined the author's literary reputation, along with others that have garnered more attention in our time than their own. In addition to focusing on these women writers, we also explore questions about the canon of American literature: What makes literature "good"? What constitutes American literature? How does an author get in the canon and stay there? Finally, in this writing-intensive course, there are frequent writing assignments and a strong emphasis on the essential writing process of drafting and revising.

L77 WGSS 360 Trans* Studies
Trans* Studies is an interdisciplinary course that was previously named Transgender Studies. The new course title represents the development of the field and the identity in U.S. culture. In this course students engage with the following questions: When and why did the category gender emerge? What is the relationship between sex, sexuality and gender? How have the fields of medicine and psychology dealt with gender? How have approaches to "gender dysphoria" changed over time? Why is LGBT grouped together as a social movement? What are the advantages and disadvantages of this grouping? What are the legal obstacles faced by people who resist normative gender categories? What legal obstacles are faced by people who transition from one sex to another? To what extent do U.S. citizens have autonomy over defining their gender or sex? How are trans people represented in fiction? What does it mean to apply transgender theory to interpret fictional accounts of trans? Any of the following are suitable (but not required) courses to take before enrolling in this class: WGSS 100B, WGSS 105, WGSS 205 or WGSS 3091.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 3601 The Traffic in Women and Contemporary European Cinema
What binds society together? One of the most influential answers to this question was offered by French anthropologist Claude Lévi-Strauss. He argued that the fabric of a society is formed by a network of exchanges among kinship groups, which circulate three kinds of objects: economic goods, linguistic signs and women. In this course, we inquire into the place of women in this argument. We trace rudiments of the traditional marriage system (a father figure still "gives away" the bride in the marriage ceremony), its range of displacements in a global economy (transnational wives, nannies and domestic servants), the role of new media in the formation of new systems of trafficking (internet brides), and the place of the debate on gay marriage within the larger conversation. We read texts by Friedrich Engels, Sigmund Freud, Marcel Mauss, Claude Lévi-Strauss, Gayle Rubin, Luce Irigaray, Judith Butler, Barbara Ehrenreich and Arlie Russell Hochschild; and we watch a number of films that dramatize the traffic in women in the context of contemporary Europe: Coline Serreau's Chaos, Lukas Moodysson's Lilja 4ever, Cristian Mungiu's Occident, Nilita Vachani's When Mother Comes Home for Christmas, Fatih Akin's Head-on, Jean-Pierre and Luc Dardenne's The Silence of Lorna.

L77 WGSS 361 Women and Social Movements: Gender and Sexuality in US Social Movements
This course examines the history of grassroots activism and political engagement of women in the U.S. Looking at social movements organized by women or around issues of gender and sexuality, class texts interrogate women's participation in, and exclusion from, political life. Key movements organizing the course units include, among others: the Temperance Movement, Abolitionist Movements, the Women's Suffrage Movements, Women's Labor Movements, Women's Global Peace Movements, and Recent Immigration Movements. Readings and discussion pay particular attention to the movements of women of color, as well as the critiques of women of color of dominant women's movements. Course materials analyze how methods of organizing reflect traditional forms of "doing politics," but also strategies and tactics for defining problems and posing solutions particular to women. Prerequisites: any 100- or 200-level Women, Gender, and Sexuality Studies course or permission from the instructor. Credit 3 units. A&S: TH, SD & A&S IQ: HUM, SD BU: BA EN: H

L77 WGSS 363 Neither Man Nor Woman: Transgender Ethnographies in Global Context
This seminar examines transnational and gender variance more broadly in a global context that includes, but does not privilege, Western analytical frameworks. We read ethnographic accounts of gender diversity that complicate Western notions of sex, gender and sexuality. In particular, we interrogate the idea of transgenderism as a crossing from one gender to an opposite one (i.e., male to female or female to male), investigate the relationship between gender identity and sexuality, and examine the particularities of local gender forms in cultural context. Any of the following are suitable (but not required) courses to take before enrolling in this class: L77 WGSS 100B, L77 WGSS 105, L77 WGSS 205 or L77 WGSS 3091. Credit 3 units. L77 WGSS 3751 Topics in Women's History: Women, Gender and Sexuality in Postwar America
We explore the history of the United States since 1945 by focusing on the ways that gender and sexuality have shaped the lives of Americans, particularly the diverse group of women who make up more than half the nation's population. Topics include: domesticity and the culture of the 1950s; gendering the cold war; the gender politics of racial liberation; the sexual revolution; second-wave feminism and the transformation of American culture; the new right's gender politics; and the impact of new conceptions of sexual and gender identity at century's end. Course texts include scholarly literature, memoirs, novels and film. Same as L22 History 3751
Credit 3 units. A&S: TH, SD & A&S IQ: HUM, SD Art: HUM BU: BA

L77 WGSS 3820 Writing Women of Imperial China
Women writers can be found throughout most of China's imperial history, and from the 16th century on, there were an extraordinary number of women writing and publishing their poetry collections. Despite this fact, only a very few writings by women were included in the traditional literary canon and until recently, they were not considered worthy of scholarly attention. Fortunately, there is now a growing body of critical studies on, and translations of, these women writers. In this course, we explore the writings of Chinese women from the first to the early 20th centuries, and discuss the changing historical and social contexts within which these women wrote and the obstacles of both genre and gender that had to be overcome in order to ensure that their voices were heard. Prerequisite: at least one course in Chinese literature or culture, or instructor's permission. Same as L04 Chinese 382

L77 WGSS 384 Gender & Consumer Culture in U.S. Fiction of the Late 19th and Early 20th Century
The decades between the end of the Civil War and the 1930s saw the rise of a mass consumer culture that would dramatically reshape America. The fiction writers of this period, keen to capture the spirit of the age, helped to create the enduring idea that consumerism and an orientation toward material acquisition are at the heart of gendered concepts of American identity. Their stories documented, and sometimes celebrated, the emergence of recognizable "types" of American womanhood and manhood — such as self-made millionaires, ambitious "working girls," bargain-hunting middle-class housewives, and the commercially minded women and men of the social and intellectual elite. At the same time, their stories articulated anxieties about U.S. consumer culture and its impact on the world. Students in this course will read, discuss and write about novels and short stories by writers such as Henry James, Mary Wilkins Freeman, Kate Chopin, Theodore Dreiser, Edith Wharton, Nella Larsen, Langston Hughes, and F. Scott Fitzgerald. Students
in the course will also examine primary materials such as magazine advertisements, and will read and respond to relevant scholarship on the period. Writing Intensive course.

L77 WGSS 393 Gender Violence
This course explores the issue of violence against women within families, by strangers in the workplace, and within the context of international and domestic political activity. In each area, issues of race, class, culture and sexuality are examined as well as legal, medical and sociological responses. Readings cover current statistical data research and theory as well as information on the history of the battered women's movement, the rape crisis center movement, violent repression of women's political expressions internationally, and the effect of violence on immigrant and indigenous women in the United States and abroad. Not open to students who have taken U92 (UCollege) WGSS 363.
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Art: SSC BU: BA EN: S

L77 WGSS 3942 Service Learning: Projects in Domestic Violence
In this course, we explore the links between the theories and practices of Women, Gender, and Sexuality Studies through a combination of research and direct community engagement. Course readings focus on the ways that poverty and violence, along with race and gender expectations, shape the lives of women. A required community service project for this course asks students to examine the relationship between the course readings and the lives of actual women in St. Louis. Over the course of the semester, students design and execute programming for women at a local community agency. This is a writing-intensive course. Students must contact instructor for permission to enroll. CBTL (http://www.gephardtinstitute.wustl.edu/CBTL/Pages/overview.aspx) course.
Credit 4 units. A&S: SS, SD, WI A&S IQ: SSC, SD, WI EN: S

L77 WGSS 3943 Violence Against Women Court Project
The seminar explores the links between the theories and practices of Women, Gender, and Sexuality Studies through a combination of readings, discussion and direct community engagement. Readings focus on the legal system and the ways domestic violence is confronted and how criminal justice interventions have responded to new theories and research about the nature of intimate partner violence. Particular attention is directed to the ways that issues of race, poverty, parenthood and sexual orientation influence the criminal justice response and shape the lives of abused women. Students participate in a court advocacy program to investigate the important discrepancies between theory and practice in the field. Students are required to take L77 WGSS 393 or have taken L77 WGSS 393 to enroll in the seminar.
Credit 1 unit. A&S: SS A&S IQ: SSC BU: BA EN: S

L77 WGSS 396 Women and Social Class
This course examines the intersection of class and gender from the late 19th century to the present. It begins by asking how a focus on women challenges conventional notions of class. Some of the topics covered include women, race and class; class and family formation; women, class and globalization; class and feminist politics; women and work; class and domestic labor; women and unionization; and class and sexual identity. The emphasis is on women and class in the United States, but includes analysis of women and class in a broader, global context. This course examines these topics using nonfiction and fiction texts. Prerequisite: one 100- or 200-level WGSS course or permission of instructor.

L77 WGSS 39F8 Gender and Sexuality in 1950s America: Writing Intensive Seminar
Historians have recently begun to reconsider the dominant view of the 1950s as an era characterized by complacency and conformity. In this writing intensive seminar we will use the prism of gender history to gain a more complex understanding of the intricate relationship between conformity and crisis, domesticity and dissent that characterized the 1950s for both women and men.

L77 WGSS 39SC Imperialism and Sexuality: India, South Asia and the World: Writing-Intensive Seminar
What is the connection between the appropriation of other people's resources and the obsession with sex? Why is "race" essential to the sexual imperatives of imperialism? How has the nexus between "race," sexuality and imperial entitlement reproduced itself despite the end of formal colonialism? By studying a variety of colonial documents, memoirs produced by colonized subjects, novels, films and scholarship on imperialism, we seek to understand the history of imperialism's sexual desires and its continuation in our world today.

L77 WGSS 4012 Advanced Queer Theory: The Intimacy of Precarity
This seminar uses precarity to produce a map of some trends in queer theory today in order to outline the stakes of this current intellectual work and ask how we can use this work to rethink sexuality. In outlining the current stakes of precarity, this seminar focuses on two main threads of queer theory — queer of color critique and public feelings — because both of these spaces have enabled complex theoretical and political discussions centered around precarity and both also introduce historical framings of queer theory. By orienting their contributions to queer
studies around precarity, these scholars are asking both how one lives with this condition and what formations of knowledge have produced these conditions of liminality and vulnerability. Overall, this emphasis on precarity has made certain tensions surrounding the place of difference within queer theory visible and highlighted the role of structures, particularly neoliberalism, which is a particular nexus of collision between the state and formations of capital, over the individual.

**L77 WGSS 402 Transnational Reproductive Health Issues: Meanings, Technologies, Practices**

This course covers recent scholarship on gender and reproductive health, including such issues as reproduction and the disciplinary power of the state, contested reproductive relations within families and communities, and the implications of global flows of biotechnology, population and information for reproductive strategies at the local level. We also explore how transnational migration and globalization have shaped reproductive health, the diverse meanings associated with reproductive processes, and decisions concerning reproduction. Reproduction serves as a focus to illuminate the cultural politics of gender, power and sexuality.

**L77 WGSS 403 Race, Sex and Sexuality: Concepts of Identity**

This course examines changes in the meanings of three concepts of identity — race, sex and sexuality — from the early modern period to the present. The course begins by looking at early modern constructions of these concepts in Western Europe. We then focus on changes occurring during the course of the 18th and 19th centuries in Europe and the United States and at how such changes were similar and different among these three concepts. We then examine 20th-century challenges to 19th-century constructions. The course concludes by studying the relationship between these challenges and 20th-century identity political movements organized around these concepts. Prerequisite: completion of at least one WGSS course or permission of the instructor.

Credit 3 units. A&S: TH, SD

**L77 WGSS 406 Queering Theory: A Multidisciplinary Approach**

This class aims to use theory to destabilize the concepts of race, sexuality, gender, disability and academic methodology. This class submerges students in some of the most influential texts in queer theory. The selected readings range across many disciplines, including biology, philosophy, anthropology, sociology, history and cultural studies. The core premise of this class is that to queer something is to destabilize it. Therefore, not all of the readings specifically are about gay, lesbian, bisexual or transgender people. However, these readings help any scholar in their future work in queer theory. Prerequisite: any 300-level WGSS class or equivalent or permission from instructor.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

**L77 WGSS 408A Nuns**

Nuns — women vowed to a shared life of poverty, chastity and obedience in a cloistered community — were central figures in medieval and early modern religion and society. This course explores life in the convent, with the distinctive culture that developed among communities of women, and the complex relations between the world of the cloister and the world outside the cloister. We look at how female celibacy served social and political, as well as religious, interests. We read works by nuns: both willing and unwilling; and works about nuns: nuns behaving well, and nuns behaving scandalously badly; nuns embracing their heavenly spouse, and nuns putting on plays; nuns possessed by the devil, and nuns managing their possessions; nuns as enraptured visionaries, and nuns grappling with the mundane realities of life in a cloistered community.

**L77 WGSS 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics**

In the year 2000, HIV became the world's leading infectious cause of adult death, and in the next 10 years, AIDS was expected to kill more people than all wars of the 20th century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not lack of knowledge or resources, but global inequalities and the conceptual frameworks with which we understand health, human interaction and sexuality. This course emphasizes the ethnographic approach for cultural analysis of responses to HIV/AIDS. Students explore the relationship between local communities and wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power and culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin...
and transmission debates; ethics and responsibilities; drug testing and marketing; the making of the AIDS industry and "risk" categories; prevention and education strategies; interaction between biomedicine and alternative healing systems; and medical advances and hopes.

L77 WGSS 414 Gender, Religion, Medicine and Science
Until recently the histories of science, medicine and religion were written by men and for men. These fields did not critically analyze gender or sexuality. Neither masculinity nor femininity were topics of interest in the studies of great scientists or famous theologians. Sexuality in scientific writing and religious thought barely received more than a sentence or two in the writings of historians. What changed? Feminist/Queer theory made us rethink the way we learn about the history of medicine, science and religion. Despite these great strides, we are only beginning to explore the interplay between these fields from a feminist/queer perspective. In other words, while feminist/queer scholars have deepened our understandings of both science and religion, they have only recently begun to examine the relationship between these two fields. This course explores how feminist research has broadened our understanding of the interplay between the authority of religion, science and medicine in historical and contemporary studies. Some of the topics we explore include: conception and gestation, birth control, birthing, sexuality and aging. Prerequisites: Introduction to Women and Gender Studies and at least one 300-level WGSS course that addresses feminist and/or queer theory such as: Masculinities, Making Sex and Gender, Transgender Studies.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L77 WGSS 416 The Politics of Pleasure
This 400-level seminar interrogates the concept of pleasure. Pleasure occupies a fraught space in feminist and queer theory. This course examines several ways that people have theorized pleasure as a space for politics, a space for conservatism, or a way to think about racialized difference. This course is not interested in defining what pleasure is, but it interrogates what the stakes of talking about pleasure have been within contemporary theory and culture. Beginning with an examination of pleasure in the context of early 20th-century sexology, this course looks at the sex wars of the 1970s, the turn toward pleasure as a space of protest, and ends by thinking of ways to imagine pleasure outside of current paradigms of sexuality. The course takes gender, race and sexuality as central analytic components to understand how pleasure is defined and who has access to it. Either Introduction to Sexuality Studies or Introduction to Women, Gender and Sexuality Studies are prerequisites.
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L77 WGSS 417W Feminist Research Methodologies
Research is the foundation of academic knowledge and of much knowledge produced outside of the academy in think tanks, nonprofit organizations, social service agencies, corporations, and many other venues of economic and social activity. Informed by theory, and shaped by specific methods, research can and does help to frame problems, contribute to policymaking, and evaluate the effectiveness of programs and policies. Research is employed in a variety of ways in the different disciplines within the academy and within different practices outside of the academy. This course examines the different ways in which research is conducted and examines the reasons for these differences and the ways in which they contribute to or hamper feminist goals. The course also explores the ways in which some research methods are privileged over others in hegemonic understandings of what counts as "research" and of what counts as "knowledge." The course examines how gender theory and feminist politics shape the kinds of research questions researchers ask, the types of materials and other information researchers use, and the ways researchers define our relationships with our sources of data, evidence and other information. Students are expected to reflect on and engage with feminist approaches to research in this course in order to develop and complete a detailed research proposal. Prerequisite: At least two courses in WGSS, including Introduction to WGSS or Sexuality Studies at the 100 or 200 levels and one 300-level WGSS course, preferably in feminist or queer theory. This class is a writing-intensive course.
Credit 3 units. A&S: WI A&S IQ: WI

L77 WGSS 418C Gender and Sexuality in East Asian Religions
In this course we explore the role of women in the indigenous religious traditions of China, Japan and Korea (Confucianism, Daoism, Shamanism and Shinto), as well as Buddhism, Christianity and Islam. We begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses; shamans and mediums; hermits and recluses; and ordinary laywomen — both historically and in more recent times. Class materials include: literary and religious texts; historical and ethnological studies; biographies and memoirs; and occasional videos and films. Prerequisites: This class is conducted as a seminar, with minimal lectures; substantial reading and writing; and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, need to obtain the instructor's permission before enrolling.

L77 WGSS 419 Feminist Literary and Cultural Theory
This course is intended to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. Note: this course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisite: advanced course work in WGSS or in literary theory (300-level and above), or permission of the instructor required.
Credit 3 units. A&S: TH A&S IQ: HUM

L77 WGSS 420 Contemporary Feminisms
The purpose of this course is to provide a framework, a map, within which students can locate feminist ideas. The course, which may be presented historically, explores and
compares different types of feminism selected from, for
example, the following feminisms: liberal, Marxist, socialist,
radical, lesbian, black, existentialist, postmodern. The class
considers how such feminisms analyze the nature and sources
of women's oppressions, the worlds they envision, and the
means they use to bring about change. Note: This course is
in the core curriculum for the Women, Gender, and Sexuality
Studies graduate certificate. Permission of instructor required.
Prerequisite: completion of at least one WGSS course or
permission of the instructor.

L77 WGSS 421 From Mammy to the Welfare Queen: African-
American Women Theorize Identity
How do representations of identity affect how we see ourselves
and the world sees us? African-American women have been
particularly concerned with this question, as the stories and
pictures circulated about black female identity have had a
profound impact on their understandings of themselves and
discourse. In this course we look at how black feminist
theorists from a variety of intellectual traditions have explored
the impact of theories of identity on our world. We look at their
discussions of slavery, colonialism, sexuality, motherhood,
citizenship, and what it means to be human.

L77 WGSS 430A Divergent Voices: Italian Women Writers
This course juxtaposes the fictional and political writings by
Italian women writers from the 17th century to the present
day with artworks representing women from the same periods
in the exhibition "Wanting Women," in the Kemper Teaching
Gallery. Through close readings of visual images of women and
literary texts by them, we extend our analysis of constructions
of femininity and women's critical responses and methods of
resistance. Among the works by Italian women writers, we
examine the defiant indictment of a Venetian nun writing from
her monastic cell in 1654 against the society that forced her into
the convent. We hear the learned oration in defense of women's
education spoken in 1763 from the podium of a major academy
by a woman poet and mathematician. We confront the reality of
a woman writer who, in 1901, was compelled to choose between
her child and her literary career. We analyze the radical feminist
voice of a woman "at war" with misogynist society in Italy of the
1960s. Along with contemporary literary works, we study the
unique voice, history and politics of Italian separatist feminism.
Taught in English.

L77 WGSS 436 Black Sexual Politics
Borrowing from Patricia Hill Collins' perspective in Black
Sexual Politics, this seminar examines the historic and popular
understandings of black sexuality and how they maintain color
line, as well as threaten to spread what Hill Collins refers to
as a "new brand of racism." Particularly, this course engages
questions about sexuality that have only begun to be discussed
with African-American Studies and the larger public sphere.
Taking the intersections of identities very seriously, this course
interrogates the ways in which these constructions have affected
black women, while also being attentive to how "others" are
implicated within discourses of black sexuality. Similarly, we will
also engage the various distortions of black men — depictions
of the black and masculine as almost always violent, sexually
and socially irresponsible, brutish, questionable and unfaithful.
Together we will use various critical texts and media to better
understand the impact and the importance of visual and material
images in the interplay of race, sex and politics in contemporary
America.
Credit 3 units. A&S IQ: SSC, SD EN: S

L77 WGSS 4363 Sex, Gender and Power
This seminar explores various ways anthropologists have
conceptualized the intersection of sex, gender and power
in their ethnographies. Key questions revolve around the
processes through which biological categories of sex become
socially significant, and interact with various regimes of power
such as the state, family, religion, medicine, the market and
science in everyday life. We examine how the social processes
and regulatory mechanisms associated with gender and
sexuality create systems of hierarchy, domination, resistance,
meaning, identity and affection. Course materials are primarily
ethnographies, supplemented with articles. The aim of the
course is to develop students' critical reading, discussion and
writing skills. Prerequisite: upper-level Anthro or Women,
Gender, and Sexuality Studies courses, or permission of
instructor.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L77 WGSS 4494 Modern Japanese Women Writers
Japanese women have been scripted by Western (male) imagination as gentle, self-effacing creatures. From their (re)emergence in the late 19th century to their dominance in the late 20th, Japanese women writers have presented an image of their countrywomen as anything but demure. Struggling to define their voices against ever-shifting expectations and social contexts, the women they create in their fiction are manifestations of the female image in female-authored modern Japanese fiction. Writers considered are Higuchi Ichiyo, Hirabayashi Taiko, Uno Chiyô, Enchi Fumiko, Yamada Eimi, and others. A selection of novels and shorter fiction are available in English translation, and students need not be familiar with Japanese. Prerequisites: 6 units of literature/women’s studies and junior standing, or permission of the instructor.

L77 WGSS 4581 Gender, Politics and Writing in Women’s Fiction of the Post-Franco Era
This course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco’s death and continue to write into the new century (Esther Tusquets, Cristina Fernández Cubas, Rosa Montero, Carmen Riera and Adelaida García Morales), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucía Etxebarria and Espido Freire). We consider the works of these women within their cultural, historical and political contexts, addressing issues such as the representation of gender and sexuality; the cultural impact of feminism, nationalism and globalization; and the influence of the publishing industry and the market on literary production. Whenever available, film adaptations of these literary works are used in conjunction with the readings. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One hour preceptorial for undergraduates only. In Spanish.
Same as L38 Span 458
Credit 3 units. A&S: TH Art: HUM

L77 WGSS 4601 Taboo: Contesting Race, Sexuality and Violence in American Cinema
Pushing the envelope or going too far? What is the boundary between films that challenge us and films that offend us? This is a course about films that crossed that boundary, most often by presenting images of race, sexuality and violence, images that could attract audiences as much as they offended moral guardians and courted legal sanctions. Because they were denied the First Amendment protection of free speech by a 1915 Supreme Court decision, movies more than any prior art form were repeatedly subject to various attempts at regulating content by government at federal, state, and even municipal levels. Trying to stave off government control, Hollywood instituted forms of self-regulation, first in a rigid regime of censorship and subsequently in the Ratings system still in use. Because taboo content often means commercial success, Hollywood could nonetheless produce films that pushed the envelope and occasionally crossed over into more transgressive territory. While control of content is a top-down attempt to impose moral norms and standards of behavior on a diverse audience, it also
reflects changing standards of acceptable public discourse. That topics once barred from dramatic representation by the Production Code — miscegenation, homosexuality and "lower forms of sexuality," abortion, drug addiction — could eventually find a place in American movies speaks to changes in the culture at large. In trying to understand these cultural changes, this course explores films that challenged taboos, defied censorship, and caused outrage, ranging from films in the early 20th century that brought on the first attempts to control film content through to films released under the ratings system, which has exerted subtler forms of control. Required screenings. Same as L53 Film 460

L77 WGSS 4711 Gender and Religion in China
In this course, we explore the images, roles and experience of women in Chinese religions: Confucianism, Daoism, Buddhism, and so-called "popular" religion. Topics discussed include: gender concepts, norms and roles in each religious tradition; notions of femininity and attitudes toward the female body; biographies of women in Confucian, Daoist, and Buddhist literature; female goddesses and deities; and the place of the Buddhist and Daoist nun and laywoman in Chinese society. All readings are in English or in English translation. Prerequisite: senior/graduate standing. Students with no previous background in Chinese religion, literature or culture need to obtain instructor's permission before enrolling.
Same as L23 Re St 4711
Credit 3 units. A&S: TH A&S IQ: HUM

L77 WGSS 475 Intellectual History of Feminisms
We focus on feminist thought in Western culture but also examine non-Western ideas about feminisms. We trace the relationship among emergent feminist ideas and such developments as the rise of scientific methodology; Enlightenment thought; revolutionary movements and the gendering of the political subject; colonialism; romanticism; socialism; and global feminisms. Readings are drawn from both primary sources and recent feminist scholarship on the texts under consideration. Note: this course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite:

completion of at least one WGSS course or permission of the instructor.

L77 WGSS 481 Selected English Writers I
Concentrated study of one or two major English writers, e.g., Spenser, Dickens, Blake, Yeats. Consult Course Listings.
Same as L14 E Lit 481
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L77 WGSS 482 Reading Seminar in Gender and Chinese Literature: Women in the Chinese Literary Tradition
A seminar on gender and Chinese literature with varying topics. Prerequisite: Chinese 341 or instructor's permission.
Same as L04 Chinese 482
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L77 WGSS 483 Gender and Genre
A sampling of the diverse contributions made by French women to literary history, this course examines what prompted women to write in the 16th century; what they wrote about; which genres they chose; how these women were viewed by their contemporaries; etc. Prerequisites: French 325 or 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Same as L34 French 483
Credit 3 units. A&S: TH, SD A&S IQ: HUM, LCD, SD Art: HUM

L77 WGSS 487A Discourses on Gender in 19th- and 20th-Century Spain
This course focuses on discourses on gender, from the late 19th century to the present in the context of feminism in Spain. We explore the social, political and cultural role of Spanish women (writers) within their specific historical contexts, with a special attention to their struggle to construct a new female subjectivity through their writings. To this end, their narrative fiction (novels, short stories) are read in conjunction with nonfiction writings (essays, journalism, etc.). Authors studied include 19th-century proto-feminists such as Emilia Pardo Bazán and Concepción Arenal; early 20th-century writers such as Carmen de Burgos, Margarita Nelken, and other female activists of the Republican period; and women writers of the post-War and post-Franco eras. Prerequisites: Span 307D, Span 308E and at least two
L77 WGSS 4908 Advanced Seminar: Women in American Society: Women in Social Movements
In this course we will examine U.S. women's participation in diverse movements during the 19th and 20th centuries, ranging from suffrage and feminism, to the labor movement, civil rights activism, and conservative and queer movements. Among our questions: How does the social position of different groups of women shape their participation in social movements? Why are certain social movements successful, and how do we define success? What does looking at women's experience in particular tell us about social movements in general?
Same as L22 History 4907
Credit 3 units. A&S: TH, SD

L77 WGSS 4918 Advanced Seminar: Sexuality in the United States
Does sex have a history, and if so, how can we study it? This seminar examines important themes in the history of sexuality: the relationship between sexual ideologies and practices; racial hierarchy and sexuality; the policing of sexuality; construction of sexual identities and communities; and sexual politics at the end of the century. Students will also spend time discussing theoretical approaches to the history of sexuality, as well as methodological issues, including problems of source and interpretation.
Same as L22 History 4918
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L77 WGSS 4974 Advanced Seminar in History: Gender and Property Law
This course aims to explore the intersections of gender relations, work and property in law, custom and culture from the colonial period to the late 20th century. We will read a wide range of articles and books, all of which in some way address the relationships among gender ideologies, social practices, and property relations in American society.
Same as L22 History 4974
Credit 3 units. A&S: TH

L77 WGSS 498 Supervised Reading and Research
This course is designed for students who are pursuing an independent study project as part of the department Honors Program. Students must apply to the department. May be repeated once. Prerequisite: senior standing and permission of the department.
Credit 3 units.

L77 WGSS 4982 Advanced Seminar: Women and Confucian Culture in Early Modern East Asia
This course explores the lives of women in East Asia during a period when both local elites and central states sought to Confucianize society. We will focus on Ming (1368-1644) and Qing (1644-1911) China, but will also examine these issues in two other early modern East Asian societies: Yi/Choson (1329-1910) Korea and Tokugawa (1600-1868) Japan.
Same as L22 History 4982
Credit 3 units. A&S: TH

L77 WGSS 499 Honors Thesis: Research and Writing
Enrollment in this course is limited to students accepted into the Honors Program. Petition for permission to enroll is available in the Women, Gender, and Sexuality Studies Office, McMillian Hall, Room 210.
Credit 3 units. A&S: TH EN: H

L77 WGSS 4990 Advanced Seminar: History of the Body
Do bodies have a history? Recent research suggests that they do. Historians have tapped a wide variety of sources — including vital statistics, paintings and photographs, hospital records, and sex manuals — to reconstruct changes in how humans have conceptualized and experienced their own bodies. We pay particular attention to the intersection of European cultural history and the history of medicine since 1500.
Same as L22 History 4990
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

L77 WGSS 4993 Advanced Seminar: Women and Religion in Medieval Europe
This course explores the religious experience of women in medieval Europe and attempts a gendered analysis of the Christian Middle Ages. In it, we will examine the religious experience of women in a variety of settings — from household to convent. In particular, we will try to understand how and why women came to assume public roles of unprecedented prominence in European religious culture between the 12th century and the 16th, even though the institutional church barred them from the priesthood and religious precepts remained a principal source of the ideology of female inferiority.
Same as L22 History 4993
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

L77 WGSS 49MB Advanced Seminar: Women and Gender in Modern Caribbean History
This course will highlight women in the “making” of Caribbean history, and it will consider how “men” and “women” were made in the English-speaking Caribbean from emancipation (1838) to the present. We will explore women and gender issues within the context of significant political shifts including the transition from slavery to wage and indentured labor, the labor rebellions of the 1930s, the rise of labor unions and political parties, anti-colonial activism, decolonization and nationalism. We will also situate the Caribbean within an international context, paying attention to migration, black internationalism and the Third World movement. Finally, we will examine the relationship between gendered notions of Caribbean nationhood/s with a view to uncovering how assumptions about family, race, class, sexuality, aesthetics and the body have interacted with wider political processes, and how such assumptions have changed or endured over time.
Same as L22 History 49MB
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD EN: H

Writing
The English department offers a full range of courses in the writing of poetry, fiction, drama and various forms of nonfiction, as well as advanced courses in expository writing.

An English major with a special interest in writing may complete a major in English literature with a concentration in creative
writing. Alternatively, a student completing the regular English major may count toward this major up to 9 upper-division units of classes designated Writing toward the English major.

The department also offers a minor in writing, which can be combined with any major, including the English major. In this latter case, students are advised to take English and American literature courses (designated L14 E Lit) exclusively for the English major and Writing courses (designated L13 Writing) exclusively for the writing minor.

Except where noted, students are expected to receive a grade of C or better in each course.

Website: http://english.artsci.wustl.edu

Faculty
For a list of affiliated faculty, please visit the Department of English faculty (p. 369) page.

 Majors
While the English department does not offer a writing major, they do offer the option of completing an English major with a creative writing concentration. To complete the major, students must take five creative writing courses, including at least three upper-division courses. Students will specialize in one particular genre — poetry, fiction or creative nonfiction — ultimately taking a three-course sequence in that genre (200-, 300- and 400-level) while taking at least one course outside this genre. The concentration will not change the requirements of the English major and thus requires 6 additional credit hours compared to a regular English major.

Students interested in majoring in English literature with a concentration in creative writing should visit the English (p. 370) page of this Bulletin for additional information.

Minors
The Minor in Writing
The Department of English offers a minor in writing. Students who wish to take a writing minor in addition to an English major are advised to take English and American literature courses (designated L14 E Lit) exclusively for the major and writing courses (designated L13 Writing) exclusively for the minor.

For complete information about the writing minor, please visit the English (p. 371) page in this Bulletin.

Courses
Courses listed on this page include L13 Writing (p. 783) and L59 CWP (p. 787) (Writing Center). Please note: L59 classes do not normally count toward the writing minor.

Writing

L13 Writing 203 The Sentence in English
Though formal knowledge of English grammar is not always necessary for effective writing, learning it can help students understand how sentences are put together, and it can allow them to develop their own writing using a new set of skills. The Reed-Kellogg system of diagramming is a method of learning grammar by creating “pictures,” or maps, of sentences. These pictures show the logical relations between words, phrases and clauses, and they illustrate the choices writers are making as they craft individual sentences. Using a recent textbook by Eugene Moutoux, we learn to diagram sentences both famous and ordinary, both contemporary and of historical interest. Our aims are (1) to learn both the “rules” and the peculiarities of English grammar, (2) to understand how the structure of a sentence can influence its meaning, and (3) to use this knowledge productively in crafting and revising our own prose. By the end of the course, students should be able to diagram just about any sentence in English, whatever the genre or time period, including their own. Extensive practice in writing and revising sentences gives students a consciousness of how grammar and syntax influence the meaning and effectiveness of their own writing.
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

L13 Writing 205 Writing the Visual World
Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 211 Writing 2
This course invites students to pursue a writing project that centers on their own intellectual interests and that complicates their approaches to researched, creative and analytical work. Consult section description for details about specific class emphases. Limit: 12 students. Prerequisite: CWP 100 College Writing 1.
Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L13 Writing 212 Principles of Rhetoric
The study of rhetoric, one of the original seven liberal arts, is perhaps more relevant today, in a world where diverse opinions reverberate 24/7 from television and the internet, than in ancient times when rhetors invented arguments to help people choose the best course of action when they disagreed about important political, religious, or social issues. How do we make our voices heard? How can we invent and present compelling written discourse? This course introduces students to common rhetorical principles and to the disciplinary history of rhetoric and compositional studies. Assignments in this class include rhetorical exercise in invention and craft, imitations, and varied compositions, ranging from the personal to critical, from the biographical to argumentative. We examine rhetorical principles (audience, context, kairos, exigency, ethos, pathos, logos, and so forth) that are employed, for example, not only in literary analysis but in law, politics, education and science. We aim for a mastery of craft and a refinement of thought.
L13 Writing 213 The Long Essay
This course is designed for skilled writers who want to bring more complexity and depth to their style and content. Emphasis is on the innovation that can occur when we give sustained interest to our subjects in a long work. The class is particularly well-suited to students who wish to produce extended works of creative nonfiction, honors theses, or artist statements. Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L13 Writing 220 Creative Nonfiction Writing 1
A course designed to introduce students to the fundamental craft elements involved in writing creative nonfiction. While the course covers the major forms within the genre of creative nonfiction, including literary journalism, biography, profiles, nature writing and travel writing, special emphasis is given to personal essay and memoir. Prerequisite: CWP 100 College Writing 1. Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 221 Fiction Writing 1
A course designed to introduce students to the fundamental craft elements involved in writing fiction. Prerequisite: CWP 100 College Writing 1. Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

L13 Writing 222 Poetry Writing 1
A course designed to introduce students to the fundamental craft elements involved in writing poetry. Prerequisite: Writing 1. Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

L13 Writing 224 Playwriting
An introductory course in playwriting. Limited to 8 students. Prerequisites: CWP 100 College Writing 1 and permission of the instructor. Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 298 Journalism: Communications Internship
For students undertaking projects in newspaper or magazine journalism, in radio or television, or in business, government, foundations and the arts. The student must secure permission of the chair of the Undergraduate Committee, file a description of his or her project with the department and, at the end of the semester, submit a significant portfolio of writing together with an evaluation by the internship supervisor. Up to 3 units acceptable toward the writing minor, but cannot be counted toward the English major or literature minor. Prerequisite: CWP 100 College Writing 1. Must be taken credit/no credit. Credit variable, maximum 3 units.

L13 Writing 309 Writing the Natural World
For students interested in the environment and natural sciences. This course brings together essays from a wide range of communities including biology, physics, medicine, environmental studies, creative writing and more. Readings and assignments are intended to enhance students’ understanding of the relationship between writing and their experience/knowledge of the natural world. Major assignments allow students to follow, explore and write about their own unique interest in a related subject, and include a personal essay, an expository essay, and a researched argumentative essay, as well as peer review workshops, oral presentations, and revision. Students record and explore their own experiences of nature in short creative assignments that prepare them for the major papers. Prerequisites: CWP 100 College Writing 1 and junior standing. Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI Arch: HUM Art: HUM BU: SCI EN: H

L13 Writing 310 Guided Research in Composition: Theory and Pedagogy of One-to-One Writing Instruction
This course teaches theoretical and practical approaches to the tutoring of writing, specifically focusing on tutoring writing within the context of undergraduate courses. Students learn collaborative methods of tutoring writing, explore different approaches to writing comments on student work in various content areas, and examine the connections between writing and thinking. Students analyze their own writing processes and learn how to help others through the writing and revision process. Readings and discussions focus on writing theory and pedagogy, and students practice one-to-one methods in mock conferences and with sample essays. Assignments: two short essays, a longer research paper and presentation, and a journal. Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L13 Writing 311 Exposition
This advanced writing course considers style in relationship to audience and purpose, asking the writer to engage more consciously with writing conventions, and to explore strategies appropriate to various writing situations. Prerequisites: CWP 100 College Writing 1 and junior standing. A note for students and advisers: when registering refer to WebSTAC for updated information on section times and available seats. Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM

L13 Writing 3111 Exposition (Visual)
This advanced writing course emphasizes writing and visual analysis, asking students to examine important forms of visual media to develop a sophisticated sense of the strategies, techniques and the rhetoric of visual representation. Prerequisites: CWP 100 College Writing 1 and junior standing. Credit 3 units. A&S: LA

L13 Writing 3112 Exposition: Writing and Medicine
For students who have a particular interest in health, illness and medical care. Exposition is a course that considers style in relationship to audience and purpose, asking the writer to engage more consciously with writing conventions, and to explore strategies appropriate to various writing situations, from the more experimental and performative to the more formal and scholarly. The course involves frequent practice in analyzing and critiquing, with special attention to techniques of organization, argument and emphasis. Students in this special section of Exposition read essays, journalism and personal narratives about the experience of physicians and patients in the modern health care system. Students use expository writing to think critically and personally about their own experiences with illness and disease. Pre-medical students might use this opportunity to write and think about the anticipated rewards and challenges of the profession they hope to join.
L13 Writing 312 Argumentation
This advanced writing course examines the strategies of argumentation, exploring such elements of argument as the enthymeme, the three appeals, claim types and fallacies. Prerequisites: CWP 100 College Writing 1 and junior standing. A note for students and advisers: when registering refer to WebSTAC for updated information on section times and available seats.
Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 314 Topics in Composition
An advanced writing course focusing on selected topics related to writing. Topics chosen by department/instructor. Consult section description for details about specific class emphases. (Note: In some cases, this course may be cross-listed with other programs/departments and may satisfy the writing-intensive requirement.) Prerequisites: CWP 100 College Writing 1 and junior standing.
Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI EN: H

L13 Writing 320 Creative Nonfiction Writing 2
This course is aimed at undergraduates who have taken Nonfiction Writing 1 and wish to pursue both their development as writers and the study of craft in the context of a more rigorous workshop. Prerequisites: CWP 100 College Writing 1, Writing 220 Creative Nonfiction Writing 1.

L13 Writing 321 Fiction Writing 2
This course is aimed at undergraduates who have taken Fiction Writing 1 and wish to pursue both their development as writers and the study of craft in the context of a more rigorous workshop. Prerequisites: Writing 220, Writing 221.
Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

L13 Writing 321W Mellon Undergraduate Fellows Seminar
Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI EN: H

L13 Writing 322 Poetry Writing 2
This course is aimed at undergraduates who have taken Poetry Writing 1 and wish to pursue both their development as poets and the study of craft in the context of a more rigorous workshop. Prerequisites: Writing 221, Writing 222.
Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

L13 Writing 322W Kling Undergraduate Honors Fellowship Seminar
Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI EN: H

L13 Writing 323 Fiction Writing: The Short-Short, Sudden Fiction, and Microfiction
This course is aimed at undergraduates who have taken Fiction Writing 1 or Poetry Writing 1 and wish to further explore the craft of fiction through the medium of the short-short story. The course focuses on reading, writing and thinking critically about short-shorts.

L13 Writing 324 Fiction Writing: Coming of Age in the Short Story
A fiction writing course that explores coming of age themes.
Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

L13 Writing 325 Poetry Writing: The Poetry of Travel
This course is offered for students who have taken Poetry 1 and are interested in further developing their craft.
Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L13 Writing 326 Fiction Writing: Stories in the Suburbs
In the 1950s, the suburbs were still somewhat of a novelty in American culture — most people still lived in cities and small towns, or on the farm. Back then, Levitowns and the like were embraced with either gee-whiz optimism, or seen as sinister dystopias where youth, ideals and romance went to fester and die. But now that the American mainstream is stucco McMansions, strip malls and big box stores; now that the suburbs have become more ethnically diverse; now that literature is being generated from these places instead of just about them, how have stories set in the ‘burbs changed? We read short stories written from the 1950s until the present day exploring this particular setting, and, through a series of exercises, workshops and our own short fiction, we explore the milieu as writers (whether we happen to be from the suburbs or not), always on the lookout for the unexpected in these familiar places.
Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L13 Writing 327 Creative Nonfiction: Personal Essay and Memoir
This is an intermediate course in writing creative nonfiction, with a concentration on personal essay and memoir. Prerequisite: Writing 220 Creative Nonfiction Writing 1.

L13 Writing 330 Fiction Writing: Fiction and Obsession
Desire is at the heart of fiction, from the forces that drive the decisions characters make to the ways stories work on us as readers.
Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L13 Writing 331 Fiction Writing: Historical Fiction
A literature/creative writing hybrid course, students read a number of contemporary historical fictions and then write one of their own. We consider the ways in which these fictions inhabit, depart from and reflect upon the histonography and history they're built from — upon the indeterminacy of the historical record, and the limits of its reach — but we also discuss fiction’s responsiblity to historical ‘facts’ and documents, and the relevance of fictions among nonfictions in approaching an event or figure. Prerequisites: CWP 100 College Writing 1, Writing 221 Fiction 1.
Credit 3 units. A&S: LA A&S IQ: HUM EN: H
L13 Writing 352 Introduction to Screenwriting
Writers explore the various elements, structures and styles used in crafting a motion picture screenplay. They experience this process as they conceive, develop and execute the first act of a feature-length script. Writers create a screenplay story, present an outline for class discussion and analysis, then craft Act One. Writers are encouraged to consult with the instructor at various stages: concept, outline, character and scene development, and dialogue execution. While the students fashion their screenwriting independently, the class also explores the general elements of theme, genre and voice. A more specific examination of mechanics, the nuts and bolts of story construction, plotting, pacing, etc., follows to support the ongoing writing process. In-class exercises aid the writer in sharpening skills and discovering new approaches to form and content. Writers’ work is shared and discussed regularly in class. Screening of film scenes and sequences provides students with concrete examples of how dramatic screenwriting evolves once it leaves the writer’s hands.

Same as L53 Film 352
Credit 3 units. A&S: LA & S IQ: HUM Arch: HUM Art: HUM BU: HUM

L13 Writing 401 Writing for Children and Young Adults
In this course we examine various genres of writing for young people: poetry, fiction and nonfiction.
Credit 3 units. A&S: LA

L13 Writing 403 Dramaturgy Workshop
A laboratory course that investigates dramaturgy from four vantage points: New Play Dramaturgy, Institutional Dramaturgy, Dramaturgy of Classics, and Dramaturgical Approaches to Nontraditional and Devised Theater. This is a “hands-on” course where student dramaturgs not only pursue the study of dramaturgy, but work actively and collaboratively with playwrights, actors and each other. Prerequisite: Drama 343.
Same as L15 Drama 403
Credit 3 units. A&S: LA A&S IQ: HUM

L13 Writing 4131 Topics in Composition
Composition topics course — offerings vary from semester to semester.
Credit 3 units. A&S: TH & S IQ: HUM EN: H

L13 Writing 420 Advanced Nonfiction
Credit 3 units. A&S & IQ: HUM EN: H

L13 Writing 421 Advanced Fiction Writing
For qualified students who wish to continue their creative writing and reading through immersion in an intensive fiction workshop. Students wishing to enroll must not only register but also submit eight poems. The sample must include a cover page with: student’s name, the semester he or she took Poetry Writing 2, and the name of the Poetry Writing 2 instructor. Submit samples to the English Department mailbox of the L13 Writing 421 instructor no later than April 20. No one is officially enrolled in this class until contacted by the instructor. Prerequisites: CWP 100 College Writing 1, Writing 222 Poetry Writing 1, Writing 322 Poetry Writing 2.
Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L13 Writing 422 Advanced Poetry Writing
For qualified students who wish to continue their creative writing and reading through immersion in an intensive poetry workshop. Students wishing to enroll must not only register but also submit eight poems. The sample must include a cover page with: student’s name, the semester he or she took Poetry Writing 2, and the name of the Poetry Writing 2 instructor. Submit samples to the English Department mailbox of the L13 Writing 421 instructor no later than April 20. No one is officially enrolled in this class until contacted by the instructor. Prerequisites: CWP 100 College Writing 1, Writing 222 Poetry Writing 1, Writing 322 Poetry Writing 2.
Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L13 Writing 423 Proseminar in Writing: Nonfiction Prose
For students qualified to pursue their own projects in nonfiction prose; criticism by other members of the class and by the instructor. Limit: 12 students. Prerequisite: permission of instructor upon submission of writing samples.
Credit 3 units. A&S: LA

L13 Writing 424 Poetry Tutorial
These credits are available to students who have completed Writing 222 Poetry I and Writing 322 Poetry II. This is an opportunity for students who have already completed Writing 422 Advanced Poetry, or who are not able to take Advanced Poetry because of scheduling conflicts, to meet individually with the instructor to develop a portfolio of poems. During weekly meetings students explore various writing processes and revision techniques. There are directed readings and discussions of selected topics related to contemporary poetry and poetics. Credits may be taken concurrently with Advanced Poetry. Permission of the instructor is required.
Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L13 Writing 432 The Craft of Poetry
An investigation into the art and craft of poetry, in order to consider the choices a poet makes in the process of composing and revising. The students are asked to complete many poetry writing exercises, as well as the writing of critical papers, in their investigation of poetic forms and modes from many historical periods. (This course is highly recommended for those who have completed or are taking the 300-level creative writing courses and to students in The Writing Program.)
Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM

L13 Writing 4521 Advanced Screenwriting
This course is intended for students who have already taken Film 352 Introduction to Screenwriting. Building on past writing experiences, students explore the demands of writing feature-length screenplays, adaptations and experimental forms. Particular attention is paid to the task of rewriting.
Same as L53 Film 452
Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM EN: H

L13 Writing 4521 Advanced Screenwriting
Credit 3 units.
L13 Writing 4731 Advanced Playwriting
This course explores the tendencies and relationship between each individual student writer and the page. Exercises dispel any lingering doctrine that presupposes a certain style of writing. A large part of the class centers around collaborations. The writers write scenes as a final project for an acting class, and also work with two professional actors in an extended writing project that culminates in a script-in-hand presentation. The informal moments between collaborations look at the process beyond the first draft — i.e., the playground of language, nonverbal options, and the maintaining of “the work” through rewrites, readings, workshops and productions. Prerequisite: Drama 227
Introduction to Playwriting.
Same as L15 Drama 473
Credit 3 units. A&S: LA A&S IQ: HUM

Writing Center Courses

L59 CWP 100 College Writing 1
This course teaches writing as a way of thinking and learning. Throughout the semester, students explore writing as a creative and intellectual process. They learn how to brainstorm, explore and structure ideas on a page; share their writing and learn how to give and take constructive criticism; and learn how to revise their work, both for issues related to the paper’s larger idea and for issues related to grammar and style. By regularly working their way through the writing process, students develop the habits and skills that make advanced study possible: paying close attention to the words and ideas of others; forming and responding to arguments of others; and refining a lucid style of prose that meets the expectations of the audience and occasion. This course is taught in small sections of 12 students or fewer. Credit 3 units.

L59 CWP 1001 Fundamentals of Academic Writing
A preparatory course required of some students before they take CWP 100 College Writing 1 (placement to be determined by the department). Particular attention is paid to reading comprehension, critical thinking, organization of ideas and grammar. In some cases, students may be required to enroll in a one-credit tutorial along with this course. Credit 3 units. A&S: LA A&S IQ: HUM EN: H

L59 CWP 200 Writing Workshop
An intensive workshop focusing on selected topics related to writing. Topics chosen by the department/instructor. Must be taken for credit. Consult course and section descriptions in online course listings for details about workshop emphases. Credit 1 unit. A&S: LA A&S IQ: HUM EN: H

Degree Requirements
The faculty of the College of Arts & Sciences believes each student should strive toward breadth and depth of study, as represented in the formal requirements. The faculty also believes that primary responsibility for selection of an academic program rests with the student, in consultation with academic advisers. This freedom of choice carries with it a corresponding responsibility for the consequence of such choices, and students are therefore expected to familiarize themselves with and meet the requirements detailed below.

Planning
The degree requirements for the Bachelor of Arts degree in Arts & Sciences are designed to provide students with strong and sustained training in writing and numerical applications; to enable students to construct a coherent program in which courses reinforce each other in challenging and productive ways; and to take advantage of two distinctive features of the academic environment at Washington University — the strong tradition of cooperation among faculty working in different disciplines and the fact that teaching and learning at Washington University draw energies from an environment of vigorous and creative research.

The College of Arts & Sciences regards active student engagement in curricular planning as central to successful student learning. Each semester, students’ advisers will help them project a personalized academic plan that responds to what they have already learned — about the university, about the structure and aims of intellectual disciplines, and about themselves.

By the end of the sophomore year, students must have declared a major and constructed and nominated a preliminary online curricular plan that will satisfy all the following General Education requirements:

Basic Skills
A. College Writing I (3 units): Students demonstrate proficiency in reading and writing English and begin to develop mature skills in framing and revising arguments by completing course work determined by The College Writing Program with grades of C- or better. This requirement should be completed in the freshman year.

B. Applied Numeracy (3 units): Students develop their skills in numerical applications by completing one of an approved list of "AN" courses with a grade of C- or better. Students often find
that there is an AN course in their major field of interest. This course may also satisfy other degree requirements.

C. Social Differentiation (3 units): Students take one course that substantially engages in the analysis of such forms of social differentiation as race, class, ethnicity and gender. This course, which may be taken credit/no credit, must be selected from an approved list of "SD" courses; it may also satisfy other requirements.

D. Writing-Intensive Course (3 units): To consolidate their written communication skills, students must take a writing-intensive course, preferably in their major field. The course, selected from an approved list of "WI" courses, must be completed with a C- or better; it may also satisfy other requirements.

Area Requirements

A. Students must complete course work in each of the following academic areas:

1. Humanities (HUM): three courses totaling at least 9 units
2. Natural Sciences and Mathematics (NSM): three courses totaling at least 9 units
3. Social Sciences (SSC): three courses totaling at least 9 units
4. Linguistic and Cultural Diversity (LCD): in this area, students take either three sequenced courses of at least 3 units each in a single foreign language, or at least four courses designated "LCD" of at least 3 units each

Up to 12 units of the area requirements may be taken credit/no credit.

B. To achieve depth and coherence, students must complete three integrations in at least two of the four areas of study (HUM, NSM, SSC, LCD). There are four types of integrations:

- Majors, second majors and minors
- Focus and other multisemester first-year programs
- Designated study away programs
- Integrated inquiries

For a detailed list of Integrations, visit the Course Listings website (https://acadinfo.wustl.edu/CourseListings/IQ/Integrations.aspx).

The Major

Students must complete a major of no fewer than 18 units of courses numbered 300 or above with a grade of C- or better. Degree completion is based on the primary major of record. At least half of the units for the major must be completed in residence. Students are strongly encouraged to complete a capstone experience in their major as a way of culminating their undergraduate education.

For more details regarding majors — including information on second majors, special majors, and majors across schools — visit the main Arts & Sciences (p. 121) section of this Bulletin.

For more information regarding specific departments' major requirements, visit the Majors pages (p. 795) of this Bulletin.

Additional Requirements

A. Students must complete 120 units with at least 30 units in advanced courses (numbered 300-level and above). The 30 units in advanced courses may include the number of advanced units required for the major.

B. Students must have an overall GPA of at least 2.0.

C. Students must earn the final 30 units toward the degree at Washington University, enrolled in the College of Arts & Sciences. Students pursuing 3-2 degrees should follow the requirements laid out by their master's programs.

D. Students must be recommended by the College of Arts & Sciences to the Board of Trustees.

Regulations

A. No more than 24 units may be earned using the credit/no credit option, and no more than 12 of the 24 credit/no credit units may be for area distribution requirements.

B. No more than 15 units of pre-matriculation credit may be counted toward the degree. Pre-matriculation sources include Advanced Placement (AP), International Baccalaureate (IB), British Advanced (A) Levels, and course credit earned by proficiency (i.e., back credit). For the class entering in the fall of 2016 and later, pre-matriculation sources also include college courses taken after the sophomore year in high school but not applied toward the high school diploma; for the classes entering prior to fall 2016, such courses may be included only if they were taken after the junior year in high school. Credits earned via the High School Summer Scholars or High School College Access programs through University College are considered to be pre-matriculation units and are subject to the same regulation.

C. Students may not earn more than 12 units toward the bachelor's degree in group and/or individual performance courses. Exceptions may be made for students majoring in departments requiring a large number of performance courses for the major, such as dance, drama and music.

D. No more than 12 units of work may be taken outside the College of Arts & Sciences during the first and sophomore years. Thereafter, additional work may be taken with the approval of the adviser, provided that the student earns at least 90 units of credit in Arts & Sciences course work.

E. No more than 18 units of credit in independent study may be applied to the AB; no more than 6 units of independent study may be attempted in a single semester.

F. No more than 6 units of internship credit may be applied to the AB; no more than 3 units of internship credit may be attempted in a single semester.
G. A student may receive no more than a total of two majors and one minor or one major and two minors.

Transfer Students

Transfer students matriculating in the academic year 2016-17 will follow the requirements of the Integrated Inquiry Curriculum, outlined above. Where appropriate, previous course work may be applied to the distribution requirements based on the following guidelines:

A. Transfer students who have not taken a college writing course at their prior school will take College Writing 1 in their first year at Washington University. Students who have taken such a course may be eligible to submit a writing portfolio to the College Writing Program for evaluation. The program director will review the portfolio to determine if the College Writing 1 requirement has been satisfied or if the student must complete additional writing course work.

B. The transfer advisers will evaluate a student’s transcript on an individual basis. Generally speaking, a student transferring after one year at another school may count the other institution’s course work toward the college’s area requirements; however, the three required integrations must be completed through courses taken in residence.

C. Transfer students must be enrolled for at least four consecutive full-time semesters to satisfy the residency requirement. They must complete a minimum number of units at Washington University and a minimum number of units in the College of Arts & Sciences, according to the following table. No more than 3 units per semester may be taken on a credit/no credit basis.

Finalization of the Transcript

Conferral of the degree finalizes the student’s academic record at Washington University. No changes can be made to the student’s academic record after May 31 for a spring degree, October 31 for a summer degree, or January 31 for a fall degree. All students are strongly advised to obtain a copy of their final transcript, available for order from the Office of the University Registrar via WebSTAC (http://webstac.wustl.edu).

Academic Honors & Awards

Dean’s List: At the end of each semester, in recognition of exceptional scholarship, the college compiles a list of those students whose work has been particularly worthy of commendation. Students will be cited on the Dean’s List if they complete a minimum of 14 units of graded work while achieving a grade point average of 3.6 for the semester. No incomplete or “N” grades may be outstanding as part of the semester record. All work must be completed and grades posted by the first day of the following semester in order to be considered for Dean’s List. For spring semester courses, all work must be completed by the beginning of Summer Session II (typically mid-June).

College Honors: Upon assessment by the College Office, the AB with College Honors will be awarded to any student who achieves college-wide academic excellence as measured by a cumulative grade point average of 3.6 or better throughout eight semesters and who does not receive Latin Honors.

Latin Honors: To be eligible for Latin Honors, the student must have maintained a 3.65 grade point average through the sixth semester and must be accepted for candidacy by the relevant department or program. Latin Honors candidates must enroll in such courses as their department or program may require, satisfactorily complete a significant project appropriate to the nature of the discipline, and pass such written and/or oral examinations as the department or program may set. To earn such honors, candidates must also have maintained the minimum 3.65 grade point average through the final semester.

Upon certification by the department that the Latin Honors program has been satisfactorily completed, the student may be awarded the AB cum laude, magna cum laude, or summa cum laude according to the following proportions: the top 15 percent in overall grade point average of the full cohort of Latin Honors candidates who complete the necessary requirements of their major departments will graduate summa cum laude; the next 35 percent magna cum laude; the next 50 percent cum laude.

To be eligible for Latin Honors, transfer students must have earned a minimum of 48 letter-graded Washington University units prior to the final semester. Grades earned at other institutions do not figure in the calculation of minimum averages required for eligibility for Latin Honors.

Phi Beta Kappa: For more than 200 years, election to Phi Beta Kappa has been a distinctive recognition of intellectual accomplishment in the liberal arts and sciences. The Washington University chapter, Beta of Missouri, established in 1913, strives to enhance worthy intellectual endeavors and to recognize individual achievement.

Candidates for Phi Beta Kappa should have demonstrated both superior scholarship and breadth and depth of interest in the liberal arts. Study of a foreign language and of mathematics, while not required, strongly enhances candidacy. Extensive study in pre-professional fields detracts from candidacy.

Students do not apply for Phi Beta Kappa; rather, each year the Washington University chapter elects students into membership from the College of Arts & Sciences. The chapter also gives the annual Burton M. Wheeler Book Award for distinguished achievement in the first year. Selection committees are
composed of Washington University faculty who are members of Phi Beta Kappa.

Departmental Prizes and Awards

Several departments recognize the superior achievement of graduating seniors with election to the honor societies of their major fields. These honor societies include Sigma Gamma Epsilon for earth and planetary sciences students, Omicron Delta Epsilon for economics students, Delta Phi Alpha for German students, Phi Alpha Theta for history students, Sigma Iota Rho for international and area studies students, Pi Mu Epsilon for mathematics students, Mu Phi Epsilon for music students, Pi Sigma Alpha for political science students, and Psi Chi for psychological & brain sciences students.

Departments may recognize work a student has accomplished within the major by awarding the major with highest distinction, high distinction, or distinction.

In a number of academic fields, special recognition is given to students whose accomplishments have been exceptionally noteworthy. The majority of such awards carry modest monetary prizes and include the following, listed alphabetically by department:

- Best essay on any subject related to African-American culture and life in the United States (African and African-American Studies)
- Henry Hampton Prize for Best Civil Rights Essay
- James Baldwin Essay Prize for Best Essay on African-American Culture and Life in the U.S.
- Julius Nyerere Essay Prize for Best Essay on African Culture and Life
- Louis Lomax Journalism Prize in African and African-American Studies
- Ralph Bunche Prize for Best Political Science Essay about Africans or African Americans
- Sylvia Wynter Essay Prize for Best Essay on African Culture and Life Outside of the U.S.
- Lynne Cooper Harvey Undergraduate Writing Prize in American Culture Studies
- John W. Bennett Prize to the Outstanding Graduating Senior in Anthropology
- Mark S. Weil Prize for Distinction in Art History and Museum Practice
- Murphy Family Prize for Outstanding Honors Thesis in Art History and Archaeology
- Yale Book Prize for Distinction in Art History and Archaeology
- Harrison D. Stalker Prize in Biology
- Marian Smith Spector Prize for Outstanding Graduate in Biology
- John C. Snowden Prize for Outstanding Senior in Chemistry
- The Hemholtz Award in Chemistry
- The Lipkin Award in Chemistry
- The Wahl Award in Chemistry
- The Weissman Award in Chemistry
- Stanley Spector Memorial Award for Outstanding Paper in East Asian Languages and Cultures
- Ansehl Prize for Excellence in Chinese
- Yukiko Takahashi Prize for Excellence in Japanese
- Carl Conrad Prize for Excellence in Classical Studies
- Eugene Tavenner Prize for Excellence in the Study of Classics
- Edward Weltin Award for Excellence in the Study of Ancient History
- Liselotte Dieckmann Prize for Excellence in Comparative Literature
- William H. Matheson Prize for Excellence in Comparative Literature
- A.E. Hotchner Playwriting Competition Award
- Annelise Mertz Memorial Award for Outstanding Achievement in Modern Dance
- Ian D.W. Cramer Prize for Outstanding Achievement in Dance
- John J. Jutkowitz Memorial Prize for Outstanding Contributions in Performing Arts
- Margaret Ewing Memorial Prize for Outstanding Achievement in Acting
- Stephen H. Duncan Prize for Outstanding Achievement in Design and Technical Theatre
- Courtney Werner Memorial Prize for Outstanding Academic Achievement in Earth and Planetary Sciences
- Ernest L. Ohle Jr. Award for Outstanding Potential in Earth and Planetary Sciences
- Margaret E. Bewig Memorial Field Camp Award for Academic Merit in Earth and Planetary Sciences
- Adam Smith Prize for Excellence in Economics
- Hyman P. Minsky Prize for Excellence in Economics
- Olin Prize for Excellence in Economics
- Howard Nemero Prize Award in Poetry
- James Merrill Prize for Poetry
- Julia Viola McNeely Prize for Poetry
- Norma Lowry Memorial Prize in Poetry
- Roger Conant Hatch Prize for Lyric Poetry
- F. Ward Denys Prize for Critical Prose
- Herbert E. Metz Prize for Literary Criticism
- Leanna Boysko Prize for Best Essay in English Literature
- Admussen Prize for Outstanding Senior Honors Thesis in French
- Cecilia L. Hospes Scholarship for Study Abroad in Germany
• David Bronsen Prize for Excellence in German Studies
• Raoul Wallenberg Prize for Excellence in Swedish Studies
• J. Walter Goldstein Prize for Best Senior Thesis in History
• Rowland T. Berthoff Award in History
• Shirley McDonald Wallace Prize in History
• Madeleine Albright Scholarship for Special Scholarly Achievement in International and Area Studies
• Outstanding Senior Honors Thesis in International and Area Studies
• The International and Area Studies Portfolio Prize
• Stone Prize for Excellence in International Studies Research
• Paul and Silvia Rava Prize for Excellence in Italian Studies
• David and Sarah Visenberg Prize for Outstanding Thesis in Jewish Studies
• Steven S. Schwarzszend Prize for Overall Excellence in Jewish Studies
• Martin Silverstein Award for Outstanding Student in Mathematics/Statistics and Probability
• Putnam Examination Prize for Mathematics
• Ross Middlemiss Prize for Outstanding Mathematics Major
• Antoinette Frances Dames Award for Productive Scholarship in Music
• Clare M. Westmont Award in Music
• The Friends of Music Award
• Lewis B. Hilton Award in Music
• Helen Stenner Memorial Essay Prize in Philosophy
• Nishi Luthra Prize for Outstanding Graduate in Philosophy
• Greg Delos Prize for Undergraduate Research in Physics
• Robert N. Varney Prize for Excellence in Introductory Physics
• Antoinette Frances Dames Prizes for Lower-Division Paper in Political Science
• Antoinette Frances Dames Prizes for Upper-Division Paper in Political Science
• Antoinette Frances Dames Prizes for Best Senior Honors Thesis in Political Science
• Arnold J. Lien Prize for Outstanding Graduate in Political Science
• Grossman-Alexander Prize for Outstanding Graduate in American Politics
• Robert H. Salisbury Prize for Initiative, Leadership, and Service in Political Science
• Todd Lewis Friedman Memorial Prize for Outstanding Work in Comparative or International Politics
• William Benton Parshall Prize for Outstanding Paper on Women in Politics
• Hyman Meltzer Memorial Award for Undergraduate Research in Psychology

• John A. Stern Award for Undergraduate Research in Psychology
• Louis G. Zelson Prize for Study Abroad in Spain
• Sherman Eoff Prize for Excellence in Spanish
• Helen Power Women, Gender, and Sexuality Studies Award for Scholarship and Service

Academic Regulations

Attendance

Successful education at the college level depends to a large extent on regular attendance at classes and laboratories. The College of Arts & Sciences has no fixed rules for "cuts" or "excused absences" but leaves to the judgment of each department or instructor the number of absences of any kind a student may have and still expect to pass a course. The faculty expects each instructor to give reasonable consideration to unavoidable absences and to the feasibility of making up missed work. The student is expected to explain to instructors the reasons for such absences and to discuss the possibility of completing missed assignments.

Units and Grades

The grading system used by the College of Arts & Sciences assumes that evaluation is useful to effective learning and that grades provide an indicator of accomplishment to the student, to advisers and the College Office, to graduate and professional schools, and to employers to whom the student chooses to submit them. Grades are symbols of achievement in a particular endeavor and should not be confused either with achievement itself or with personal worth.

Grades are important, particularly for students with pre-professional interests, but the student whose concern for grades is primary may lose sight of the total educational process.

Auditing a Course

Students may register for a specific course as an auditor, which entitles them to all the privileges of a regularly enrolled member of the class. Audit courses do not count toward the degree. Consult the instructor on the requirements of a successful audit, as unsatisfactory performance results in a grade of Z. A successful audit results in a grade of L.

Incomplete Grades

If a student experiences medical or personal problems that make satisfactory completion of course work difficult or unlikely, he or she may request a grade of Incomplete (I) from one or more instructors. In such a situation, the student should take the following steps:

1. Meet with the instructor before the final examination or due date for the final paper to discuss the request.
2. If the instructor consents, agree on the work remaining to complete the course and on a date when it will be submitted.

If these steps are not followed, the instructor is under no obligation to award a grade of I. Failure to submit completed work by the last day of classes of the next full semester will result in the I grade being changed automatically to a grade of F. For spring semester courses, this will be the last day of summer classes, typically mid-August.

By action of the faculty of the College of Arts & Sciences and the ArtSci Council, the college limits the number of accrued grades of Incomplete (I). The policy is intended to protect the student from building an overwhelming burden of unfulfilled course work. The regulation reads as follows: “Students who accrue three or more Incompletes will not be permitted to enroll for any subsequent semester until the number is reduced to two or fewer.” Should students have too many Incompletes, they will be declared ineligible for subsequent semesters until they have complied with the regulation. Compliance is normally achieved by the posting of grades online, but it also may be achieved by a note from the professor(s) to the College Office confirming that the student has turned in all requisite assignments for the relevant class(es).

Pass/Fail Option

To encourage students to enroll in courses they might not otherwise take, the faculty has established the credit/no credit option under which a student may register in courses and receive a grade of credit (CR) or no credit (NCR). In any semester, a full-time student may enroll in one course under the credit/no credit option. A maximum of 24 units earned under this option may be applied toward the AB degree. Students must designate which course is to be taken under the credit/no credit option each semester at the time of registration. No change into or out of the option may be made after the dates designated in the dates and deadlines calendar, published online in Course Listings (https://courses.wustl.edu) each semester.

No more than 12 of the 24 units allowed for the credit/no credit option may be applied to area distribution requirements.

It is the student’s responsibility to discuss with the faculty member what constitutes a successful pass/credit in a particular course. Although the general pass mark is a C-, instructors have the discretion to set the pass mark higher in their individual courses.

The first-year writing course, the writing-intensive course, the applied numeracy course, and courses in the major and minor are excluded from the credit/no credit option. Pre-professional and prospective graduate students should also consider seriously the strong probability that professional schools may seek more definite grades than CR in courses that are required or strongly recommended for admission to professional or graduate study.

A few courses particularly designated by departments may require enrollment on a credit/no credit basis. When so required, students are permitted to elect an additional course to be taken credit/no credit but should consider carefully the consequences of that choice.

Reading Days and Final Examination Period

When registering for classes at Washington University, students commit to all course requirements including the examination procedures chosen and announced by the course instructor. In selecting courses, students are advised to take note of all final exam information. Students anticipating conflicts in their final examination schedule should seek to resolve them with the relevant instructors before enrolling. Students should not register for courses that result in three or more final examinations on one day. If a student does so, the instructors are not obligated to offer an alternative exam.
Final exam days and times are subject to change. The most current final exam schedule information can be found on the Course Listings (https://courses.wustl.edu) website.

**Minimum and Maximum Course Loads**

The average course load necessary to fulfill the required 120 units for the bachelor's degree in a timely fashion is 15 units — typically five courses — in each semester. Except for reasons of health or other special circumstances, students must take a minimum of 12 units to be considered full-time. Students may not enroll for more than 21 units without permission and an additional per-unit tuition charge. Any enrollment between 12 and 18 units is considered typical.

Courses in the college that require more preparation and class time than average — foreign languages, mathematics and science — may carry 4 or 5 units of credit. When enrolled in these and other demanding courses, students should consider taking fewer than 15 units of academic work in a particular semester, then balancing such intensive semesters with modest increased units in subsequent semesters.

**Repeating a Course**

Students whose performance in a course has not met their expectations are permitted to retake the course, receive a second grade, and have the letter R, denoting the retake, placed next to the grade for the first enrollment. All registrations will show on the transcript; however, only the grade and units of the final enrollment will be used to calculate the GPA.

Please note: This procedure is not pedagogically sound and should be avoided in all but serious cases, such as a grade of D in a course required for the major.

**Regulations:** While courses initially taken credit/no credit (pass/fail) may be retaken for a letter grade, courses initially taken for a letter grade must be retaken for a letter grade. Credit earned in the original enrollment will not be revoked should a failing grade be earned in the second or subsequent enrollments. Except in the case of a retake of an unsuccessful audit, the retake policy will not be invoked if the grade option for any of the enrollments is audit.

No student may use the retake option to replace a failing course grade received as a sanction for violation of the Academic Integrity Policy.

**Academic Probation and Suspension**

Students are expected to maintain the highest level of scholarship during their time at Washington University. At a minimum, however, students must meet the standards set by the faculty as well as those mandated by the U.S. Department of Education. Those who do not complete at least 12 units or achieve a semester grade point average of 2.0 or better for each semester are subject to probation or, in extreme cases of poor academic performance, suspension. In certain cases, students who have completed at least 12 units and have a semester grade point average of at least 2.0 for each semester may still be placed on academic warning or probation if the Committee on Academic Progress identifies areas of significant concern about a student's progress.

Students must make acceptable progress toward meeting degree requirements. Students must be on pace to complete their program by attempting no more than 150 percent of the credits required. Anytime students fall below completing 2/3 or fewer of the credits they have attempted overall, they are considered to not be achieving satisfactory academic progress (SAP). The college will work with those students to develop a plan to help them achieve acceptable pace within a set period of semesters. Additionally, if it is determined that a student cannot complete his or her program within the 150 percent maximum credits, the student may not continue their program of study at Washington University.

In the event of an academic warning or probation, or failure to meet SAP, the student will be matched with a progress counselor for the following semester. The student must complete an academic agreement with the progress counselor to map out how improvement will be achieved. Failure to establish these guidelines with the progress counselor by the deadline the Committee provides may result in the termination of the student's enrollment for that semester. Furthermore, should a student agree to, but persistently fail to abide by, the terms established in the agreement, suspension may be invoked during the semester.

In order to be eligible for a return to good academic standing, a student on warning or probation must complete at least 12 units of credit and earn no single grade of C- or lower. Students who do not meet this standard may be subject to academic suspension from the college. Students suspended for academic deficiency are not eligible for readmission to the College of Arts & Sciences until they demonstrate, under the conditions set for each individual case, a capacity to work productively at the level required by the college curriculum.

**Leaves of Absence**

For certain students, time spent away from the academic setting is of great value in discovering objectives and gaining experiences not available within the academic community. Undergraduates in good standing at the completion of a term are eligible to take a leave of absence (LOA) upon petition to the College Office. Students on an LOA are assured reinstatement for the next two years. Before returning, students are asked to notify the College Office and submit a Reinstatement Form at least six weeks prior to the beginning of the appropriate term.

A student wishing to take a medical leave of absence (MLOA) must have a recommendation from Student Health Services.
submitted to the appropriate dean in the College Office prior to leaving and prior to re-enrollment. Upon reviewing the recommendations from Student Health Services and the student's file, the dean in the College Office will decide whether or not to grant the request for the MLOA and/or for re-enrollment.

**Transfer Credit**

With preapproval, courses from accredited colleges and universities can be transferred to Washington University and will count toward a student's 120 units required for the Bachelor of Arts degree; such courses may also serve as prerequisites to advanced courses and may count, with prior departmental approval, toward a student's major or minor. They do not, however, substitute in Integrations or count toward other Arts & Sciences distribution requirements. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity Policy.

For further information pertaining to transfer credit, matriculating freshmen should visit the Pre-Matriculation Credit (p. 121) section in this Bulletin; transfer students, visit the Transfer Students (p. 787) section in this Bulletin.

**Military Training**

Army and Air Force ROTC programs are available at Washington University.

ROTC courses numbered I25 MILS 301C, MILS 302C, MILS 401C, MILS 402C and AFROTC courses numbered I02 MAIR 301, MAIR 302, MAIR 401, MAIR 402 will be granted full credit toward the AB degree, for a total of 12 units. The courses do not count toward the 90 minimum Arts & Sciences units required for the Bachelor of Arts degree but will instead be categorized in the 30 maximum units that students may earn in courses taken from Olin Business School, the School of Engineering & Applied Science, University College, or the Sam Fox School. These courses are letter graded and will count toward the GPA, as do courses from University College and the professional schools listed above.

ROTC courses numbered I25 MILS 101C, MILS 102C, MILS 201C, MILS 202C and AFROTC courses numbered I02 MAIR 101, MAIR 102, MAIR 201, MAIR 202 will be granted 1 credit each for the Physical Training component, as commensurate with performance courses currently receiving credit toward the Bachelor of Arts degree, including courses listed under L28 Physical Education. Such courses will not count toward the GPA.

**University College Courses**

Students in the College of Arts & Sciences may enroll in course work offered by University College (http://ucollege.wustl.edu) as long as they do not exceed one course a semester and a maximum total of 24 units. University College courses are subject to the degree requirement that stipulates only 30 units from any of the other schools of the university may be applied to the Bachelor of Arts degree. University College courses do not fulfill distribution requirements and can only count for a major or minor with approval from the relevant department. Students in the College of Arts & Sciences do not receive credit for online courses offered by University College.

Business

About Olin Business School

Students have many reasons to choose Olin Business School, starting with freshman entry, which allows them to begin studying business while considering other interests and career options. Not only does this build a strong business foundation, it often leads to the pursuit of double majors and minors, both inside Olin and with other Washington University schools. Olin School students take 40 percent of their classes outside the business school, giving them a chance to explore passions and create their own path.

The Olin Business School is a welcoming community where everyone values teamwork and collaboration in addition to personal achievement. Faculty members, well known for their thought leadership and dedication to teaching, genuinely care about student success in the program. It’s the kind of place where students form lifelong relationships, both personal and professional.

Students will find many opportunities to apply what they’ve learned in class to real-world situations on campus, in St. Louis, and around the globe. These experiential learning opportunities — study abroad programs, practicums, internships, entrepreneurial studies and more — prepare students to compete in a constantly changing, global marketplace.

An Olin School undergraduate degree teaches students critical-thinking skills that enable them to solve the right problems and to make decisions quickly and confidently. It’s an exceptional launching pad for success, whatever career path a student chooses to take after graduation.

Bachelor of Science in Business Administration (BSBA)

Olin Business School offers a full-time Bachelor of Science in Business Administration (BSBA) degree program of instruction. Undergraduate students at the Olin School may choose to major in one or two professional fields in business as part of their degrees. Our BSBA students enroll in business courses in their freshman year. The curriculum covers the core functional areas of business. At least one major course of study in a field of business and at least 40 percent of the course work must be in nonbusiness fields — from fine arts to science — allowing students to pursue individual careers and ensuring a well-rounded educational experience.

Majors

BSBAs are offered the option to focus their studies in a specific field of business. While a business student is not required to declare a business major, almost all our business students earn at least one professional major. A student may pursue one or two majors from the list below:

- Accounting
- Economics and Strategy
- Entrepreneurship
- Finance
- Health Care Management
- Leadership and Strategic Management
- Marketing
- Operations and Supply Chain Management

Specific requirements for each major can be found in the “Majors for BSBA Degree Candidates” section of this page.

Combined Majors

Business students have the option to major in more than one field of study. BSBA students can earn a total of two majors either in business or one in business and one outside of the Olin School. For example, a student could earn a BSBA degree with a major in finance and a major in English literature from the College of Arts & Sciences. Students must complete the specific courses required for the second major, but they are not required to complete the general requirements for the second degree. Students should consult with their academic advisers for additional information. Upon completion, the student’s transcript would show a BSBA degree along with the earned second major. A diploma is awarded for the degree, with reference to any major(s) on the official transcript.

Minors

Many departments and schools in the university offer minors. Business students also can pursue a minor outside of Olin Business School in any recognized academic discipline offered within the university by satisfactorily completing all the requirements for both the BSBA degree and the minor. Required courses for a minor outside of business may range from 15 to 27 units, depending on the specific regulations of the academic department. A business student who applies for a minor and completes all of the requirements will have the award of the minor noted on the official transcript. A student must be approved for admission to a minor program by the department offering the minor.

Business students typically may not minor in a business subject. However, BSBA students may choose our business of sports minor, business of entertainment minor, or the international business minor offered through the Olin Business School. Additional information, as well as information for students from other schools of Washington University who wish to pursue business minors, can be found in the “Minors for Non-BSBA Degree Candidates” section of this page.
Combined Degrees

A student also can earn two undergraduate degrees simultaneously — a BSBA degree and another undergraduate degree offered at the university. The student must be admitted to the other degree-granting program, and he or she must meet specific degree requirements for both schools. Typically, this option requires additional time to complete all requirements. For example, if a student combines a business degree with a degree from the College of Arts & Sciences, the student must complete a minimum of 150 units between the two disciplines. Of the 150 units, at least 90 units must be from the College of Arts & Sciences and at least 60 units from Olin Business School. Some courses may be used to satisfy both degree requirements simultaneously. Because requirements for a second degree vary from discipline to discipline, students should talk with their primary adviser to plan their program.

Joint Undergraduate and Business Master's Degrees

Master of Business Administration (MBA)

A special five-year program combining an undergraduate degree with the Master of Business Administration degree is available to a select number of undergraduates. Often referred to as the 3+2 program, it combines three years of undergraduate study and two years of MBA study for completion of both degrees in five years. Joint programs include: the AB/MBA degrees offered with the College of Arts & Sciences, the BS/MBA degrees offered with the School of Engineering & Applied Science, and the BSBA/MBA degrees offered through Olin Business School.

Admission to the 3+2 program is extremely competitive. The student must have a superior academic record, an outstanding performance on the Graduate Management Admission Test (GMAT) or Graduate Record Exam (GRE) and substantive summer internship experience in a related field.

Students apply during the winter of their junior year and begin the full-time MBA program in the fall semester. They must complete at least 90 units of undergraduate course work before entering Olin's MBA program and then complete an additional 66 units of graduate-level courses. Students should consult their academic adviser during their sophomore year regarding specific degree requirements. If a student's undergraduate major is in the School of Engineering & Applied Science or the College of Arts & Sciences, up to 15 units of remaining undergraduate courses will apply toward the 66 units required in the MBA program. If a student's undergraduate major is in Olin Business School, up to 6 units of remaining undergraduate course work will apply toward the 66 units required in the MBA program. Visit the MBA website page on joint degrees (http://www.olin.wustl.edu/EN-US/academic-programs/full-time-MBA/academics/joint-degrees/) for more information, including additional requirements for Arts & Sciences candidates.

To apply, contact the Graduate Programs Office in Knight Hall, Room 310, or send an email to mba@olin.wustl.edu.

Specialized Master's Programs

A specialized master's degree is highly concentrated and singular in focus, providing intensive education in one business discipline. Olin Business School offers a variety of specialized master's programs. Visit our website (http://olin.wustl.edu/SMP) for details. Further information is available in the Graduate Programs Office in Knight Hall, Room 310, or by emailing the programs using the contact information below.

Undergraduate students interested in pursuing a specialized master's degree should contact the Graduate Programs Office as early as possible. Combined Program General Principles and Guidelines are as follows:

1. Undergraduate students should apply to an SMP program during their junior year (as defined by credit hours) in order to allow sufficient lead time for an admissions decision and for academic planning.
2. Undergraduate students who have been admitted to a combined SMP program will be limited to taking a maximum of 21 graduate credit hours during their senior year while still officially coded as an undergraduate student.
3. Students must enroll for at least one full-time semester (fall, spring or summer) coded and registered as a graduate student.
4. Tuition for the graduate semester will be applied at the full-time graduate program rate for the specific degree program the student is pursuing.
5. If the student needs additional course work beyond the immersive graduate semester, they will be charged the full-time or part-time graduate tuition rate — whichever applies based on the number of credit hours.

For students at Washington University, the GMAT/GRE requirement and $100 application fee are waived.

Master of Accounting (MACC)

For career interests in public or corporate accounting, consulting or financial services, the Olin School's Master of Accounting (MACC) program will prepare students for an exciting and challenging future. This program requires 33 graduate-level credit units in addition to the course work requirements for an undergraduate degree. Course work is included to help meet eligibility requirements to sit for the CPA exam in states with the "150-hour rule." It is expected that students will have completed Intermediate Financial Accounting before beginning the program.

Visit the MACC website (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/master-of-accounting/Pages/default.aspx) or email macccinfo@wustl.edu.
Master of Science in Customer Analytics (MSCA)

The MSCA program provides students with the tools to become analytics-driven business managers, well-versed to guide firms in the emerging era of big data and data-driven decision-making. Washington University’s Olin Business School, School of Engineering & Applied Science, and the College of Arts & Sciences have partnered with business technology industry leader IBM to create a curriculum that will help students formulate and implement analytics-driven approaches to marketing.

Completion of the degree requires a minimum of 39 credits of graduate-level (500-level) structured course work, in addition to the course requirements for an undergraduate degree. A two-day course in SPSS programming is taught in August and required as a foundations course. Students must maintain a minimum GPA of 3.0. Applicants to the MSCA program should have taken at least two courses in calculus or equivalent course work and one course in statistics.

Visit the MSCA website (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/ms-in-customer-analytics/Pages/default.aspx) or email mscainfo@wustl.edu (MSCAInfo@wustl.edu).

Master of Science in Finance (MSF)

Graduates of the Olin School’s Master of Science in Finance (MSF) develop highly targeted skills by selecting the curriculum track best suited to their career aspirations. These rigorous and comprehensive graduate programs offer in-depth training in securities research, asset management, derivative pricing, fixed income and corporate finance for students pursuing specialized finance careers:

- The Corporate Finance and Investments track requires 30.5 graduate-level credit units in addition to the course requirements for an undergraduate degree. It prepares students for careers in asset management, sales and trading, industry finance and consulting.
- The Quantitative Finance track requires 39 graduate-level credit units in addition to the course requirements for an undergraduate degree. It prepares students for careers in credit risk analysis, derivative pricing, risk management modeling and financial software development.
- The Accelerated MSF track requires 30 graduate-level credit units in addition to the course requirements for an undergraduate degree. The program format allows students to begin their degree during the summer following their junior year of undergraduate study and complete the degree during the summer upon graduation from their undergraduate program of study. Courses focus on investment theory and practice.

Applicants to the MSF program must have taken microeconomics, statistics and calculus.

Visit the MSF website (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSF/ Pages/default.aspx) or email msfinanceinfo@wustl.edu (MSFinanceInfo@wustl.edu).

Global Master of Finance Program (GMF)

To meet demand for graduates with global financial expertise, Olin Business School offers programs that feature study at the campuses of five prestigious international universities.

- Singapore Management University (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/SMU-MAF/Pages/default.aspx)
- Yonsei University in South Korea (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/Yonsei-MBA/Pages/default.aspx)
- IDC Herzliya in Israel (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/IDC-MSF/Pages/default.aspx)
- WHU Otto Beisheim School of Management in Germany (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/WHU/Pages/default.aspx)
- Universitat Pompeu Fabra, Barcelona School of Management in Spain (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/UPF/Pages/default.aspx)

Applicants to the Global Master of Finance dual degree program should have taken microeconomics, statistics and calculus.

Visit the GMF website (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/Pages/default.aspx) or email globalfinance@wustl.edu.

Master of Science in Supply Chain Management (MS/SCM)

Exceptional management of the production and delivery of a firm’s products and services — its supply chain — is essential. The Master of Science in Supply Chain Management degree equips graduates to stand out in this challenging and critically important career field. This program provides students with comprehensive preparation in all areas relevant to sophisticated management of a company’s supply chain, whether the company is engaged in manufacturing or in the delivery of complex services.

Completion of the degree requires a minimum of 36 graduate-level credit hours in addition to the course requirements for an undergraduate degree.

Visit the MSSCM website (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MS-
Supply-chain-management/Pages/default.aspx) or email msscminfo@wustl.edu (MSSCMInfo@wustl.edu).

**Special Opportunities**

**Center for Experiential Learning**

The Center for Experiential Learning (CEL) is an educational center located in the Olin Business School. The CEL is focused on creating innovative learning opportunities with meaningful impact in the business and nonprofit communities. Visit our website (http://www.olin.wustl.edu/cel/Pages/default.aspx) for more information. Courses available to undergraduate students include:

- The CEL Practicum engages students in real-world, team-based consulting projects. Through a semester-long experience, students apply and enhance their critical thinking skills though work with business leaders in organizations ranging from start-ups to Fortune 500 companies.
- Taylor Community Consulting Program (TCCP) connects students with agencies in the local nonprofit sector for a six-week consulting project. Through team-based, applied learning projects, students enable positive change in the St. Louis community.
- CEL Entrepreneurial Consulting Team (CElect) delivers impact to the St. Louis start-up community in a semester-long experience. Students work with local entrepreneurs, applying their critical thinking skills to early-stage business challenges in marketing, resource management and strategy.

**Entrepreneurship**

Olin School offers both a major and minor in entrepreneurship, a business plan course known as the Hatchery, and the CEL. Entrepreneurial Consulting Team (described above). There are also many university-wide resources including the Skandalaris Center for Interdisciplinary Innovation and Entrepreneurial Studies. Read about entrepreneurship opportunities on the Olin School’s Undergraduate Programs/academics/Pages/default.aspx) for more information.

**Independent Study**

Independent study under the direction of a faculty member is available on a selective basis. The purpose of independent study is to provide an opportunity for students to pursue subject matter beyond the specific course offerings found in the Olin School. Projects may be done for 1 to 6 units, but normally no more than 3 units will be granted in any one semester. For more information, please refer to the Olin School's Undergraduate Student Handbook.

Students may apply a maximum of 6 units of independent study in business and 6 units outside of the Olin School toward the 120-unit degree requirement.

**Internship for Credit Opportunities**

Olin Business School freshmen and sophomores who have a summer internship can enroll in MGT 450A for academic credit. This online course is designed to deepen a student’s overall learning gained from an internship. Students enroll in this 1.5-credit course on a Pass/Fail basis. While this course will be listed on a student's academic transcript, it will not count toward the 120 units needed for graduation.

Olin Business School juniors or seniors who have completed the core requirement and one advanced elective in the appropriate major field may apply to receive credit for internship experience. Students must work under the direction of a faculty member to complete an academic paper/project. The Internship Petition Form must be submitted to the student's academic adviser by the end of the second week of the academic semester. A maximum of 6 units of internship course work may be applied toward the BSBA degree.

**Management Communication Center**

Olin students benefit from free, personalized coaching and practice opportunities with communication consultants that complement a range of required and elective communication courses. Consultants help students expand their ability to craft succinct, precise communications. Students develop strategies through coaching, rehearsals, web-based information, and critique sessions. Located in Simon Hall, the Center includes private consultation rooms, computer kiosks and a boardroom with an LCD screen, laptop and recording equipment. Visit our website (http://www.olin.wustl.edu/EN-US/partners-resources/facilities-services/Pages/Management-Communication-Center.aspx) for more information.

**Study Abroad**

A business student has the opportunity to participate in various study abroad programs. Students may choose to (1) apply to one of the Olin School's International Internship Programs, (2) apply to participate in a semester study abroad program, or (3) apply to participate in one of the study abroad programs sponsored by the Office of International and Area Studies in the College of Arts & Sciences. Detailed information is available on the Global Opportunities website (http://sa.wustl.edu) or in the BSBA Programs office.

**International Internship Programs**

Our International Internship Programs offer students the opportunity to combine classroom learning with an internship in Herzliya/Tel Aviv, Germany, London, Sydney, Hong Kong, Singapore or Paris. Students earn 15 units of academic credit in any of these programs by completing:

- A total of 15 units of academic credit in business or language/cultural studies.
• Full-time internship placement of approximately 10-12 weeks (in Herzliya/Tel Aviv, London, Paris, Sydney, Hong Kong, Singapore or Germany) for credit.
• A significant research project in conjunction with the internship experience.
• European Study Tour for programs in Europe, and Colloquium/Study Tour Series for programs outside of Europe, for credit.

The International Internship Programs are open to all Olin Business School juniors and seniors who have completed the equivalent of four semesters of course work (60 units) and the specific prerequisites for the particular program of study. Second majors in business also may be eligible to apply. There is a minimum GPA requirement of 3.0 in the student’s overall course work and 3.0 in the student’s professional course work. Eligibility requirements are subject to change.

Other Study Abroad Opportunities through Olin Business School

Olin Business School students may participate in study abroad programs at Chinese University of Hong Kong or Hong Kong University of Science and Technology in Hong Kong; Bocconi University in Milan, Italy; the University of Melbourne in Australia; ESCP Business School in Paris, France; University College Dublin in Dublin, Ireland; St. Andrews University in Scotland; Carlos III University of Madrid, Spain; Singapore Management University in Singapore; WHU in Vallendar, Germany; FGV in São Paulo, Brazil; or Fudan University in Shanghai, China. Students may participate in any of these programs and take course work that allows them to continue their studies toward their Olin School degree without interruption.

The Olin School also offers several summer programs lasting from two to eight weeks for 3 to 6 credits. Visit the Global Opportunities website (http://sa.wustl.edu) for more information.

Israel Summer Business Academy (ISBA)

Olin Business School students may participate in the Israel Summer Business Academy (ISBA), administered by Washington University in St. Louis but open to students from all institutions. This unique opportunity, open to undergraduate students of all faiths and beliefs, allows students to study and immerse themselves in the Israeli business environment. Students will learn about entrepreneurship, innovation, and start-up consulting through course work, speakers, company visits, and consulting while earning 6 units of academic credit. ISBA is a collaboration between Olin Business School at Washington University in St. Louis and the Interdisciplinary Center (IDC) in Herzliya, Israel. This program offers a chance for students from all kinds of backgrounds to learn firsthand about business in Israel, a country that has built itself around entrepreneurship. For more information please visit the Global Opportunities website (http://sa.wustl.edu).

Undergraduate Teaching Assistantships

In this challenging program, outstanding students are chosen to assist various professors with their course development work or research efforts. Students may conduct library research, perform computer programming, develop new learning materials for class, assist other students with their writing skills, or tutor in various areas of the curriculum.

Participation in the Undergraduate Teaching Assistantship (UTA) program is voluntary and may begin as early as the first year. As a participant, students are paid the going rate for student assistants. UTA experience also impresses company recruiters.

Academic Support Services

Academic Advising

Olin Business School provides students with expert academic advising and support. BSBA Student Services has nine academic advisers who serve as professional advisers to all undergraduate students on procedural matters, course planning, registration and other academic matters.

The Olin School Peer Ambassadors

In this program, undergraduate business students who are familiar with the university and with the Olin School’s programs and policies help incoming students make a smooth transition to the university by providing informal peer advising services throughout their first year here.

Weston Career Center

To provide students with personalized career planning and job search services, Olin Business School operates its own career center in Knight and Bauer Halls. The Weston Career Center (WCC) delivers a variety of career management programs and services to Olin Business School students pursuing their BSBA, MBA, Master of Accounting, MS Customer Analytics, MS Supply Chain Management and MS Finance degrees. Services include: one-on-one advising and consultation with a functional career specialist, workshops and professional development seminars, company information sessions, mock interviews, self-assessments, résumé and cover letter writing, and networking—all the tools needed for an effective job search.

On-campus interviews take place in the Knight and Bauer Hall Interview Suite or Danforth Center throughout the academic year. Business students are encouraged to meet with the center’s staff early in the school year to discuss career and professional goals. The WCC also maintains an extension office in Simon Hall for quick questions and technical support. For more information, visit our website (http://olincareers.wustl.edu/EN-US/Pages/default.aspx), or contact the Weston Career Center by phone at 314-935-5950 or email at wcc@olin.wustl.edu.

Donald Danforth Jr. Distinguished Professor Emeritus of Business  
PhD, University of Minnesota

Ambar Rao  
Fossett Distinguished Professor Emeritus of Marketing

J. George Robinson  
Professor Emeritus of Marketing

Robert L. Virgil Jr.  
Dean Emeritus of the John M. Olin Business School and Professor Emeritus of Accounting

John E. Walsh Jr.  
(Management)

Majors

Majors for BSBA Degree Candidates

In addition to the 41 core professional units (listed on the Degree Requirements (p. 828) page of this Bulletin), a BSBA degree candidate must complete at least 19 professional elective units. Students may apply these professional electives toward a specific professional major. Majors in the business curriculum are offered as an option to focus their studies in a specific field of business. All major courses must be taken in residence.  
Course work from an approved Washington University study abroad program will count as in-residence work. However, only one course per major may be taken through a study abroad experience.

Students may select a major from the following disciplines:

- Accounting (p. 809)
- Economics and Strategy (p. 809)
- Entrepreneurship (p. 809)
- Finance (p. 810)
- Health Care Management (p. 810)
- Leadership and Strategic Management (p. 810)
- Marketing (p. 811)
- Operations and Supply Chain Management (p. 811)

The Major in Accounting

Total units required: 15

- Accounting Core: 6 units  
  ACCT 3610 Intermediate Financial Accounting Theory I  
  ACCT 3620 Intermediate Financial Accounting II

- Accounting Elective Choices: 9 units  
  ACCT 464 Auditing 3  
  ACCT 466 Financial Statement Analysis 3  
  ACCT 467 Income Tax Fundamentals 3  
  ACCT 4680 Advanced Financial Accounting Problems 3

The Major in Economics and Strategy

Total units required: 12

- Economics and Strategy Core: 12 units  
  MEC 370 Game Theory for Business 3  
  MEC 400K Research Analysis in Industry 3  
  MEC 470 Market Competition and Value Appropriation 3  
  MEC 471 Empirical Techniques for Industry Analysis 3

The Major in Entrepreneurship

Total units required: 15

Entrepreneurship Core: 6 units  
MGT 421 Introduction to Entrepreneurship 3  
MGT 424 Business Planning for New Enterprises (The Hatchery) 3

Entrepreneurship Electives: 9 units (must select 3 units from each category)  

- Industry Elective Choices: (at least 3 units required)  
  CSE 131 Computer Science I 3  
  Econ 335 Money and Banking 3  
  FIN 549H Special Topics: Real Estate Finance 1.5  
  INTL 320 Business, Innovation and Entrepreneurship in Israel 3  
  MEC 460 Economics of Entertainment 3  
  MGT 320 Olin Grand Rounds: The Business and Practice of Medicine 3  
  MGT 380 Business Strategy 3  
  MGT 440 Sports Management 1.5  
  MGT 500T Social Entrepreneurship 3  
  MKT 465 Retail Management 3  
  MGT 450C Venture Consulting 3

Experiential Elective Choices: (at least 3 units required)

**Class of 2020 Degree Requirements:**

For a comprehensive view of our degree program, please review the requirements on our website (http://www.olin.wustl.edu/EN-US/academic-programs/bs-business-administration/academics/Pages/curriculum.aspx).

**Academic Options for Non-BSBA Degree Students**

A student in another undergraduate division of the university may choose to complete a second major or a minor in a business discipline.

**Second Majors**

Any non-BSBA degree student may earn a second major in a specific major discipline offered through Olin Business School. This opportunity allows students to combine their academic interests between two schools. If students wish to pursue a second major in business, they are required to follow the degree requirements for their primary school/major along with a set of core business requirements and 12-15 units of professional electives.

**Core Business Requirements:**

<table>

<td></td>
</tr>
</tbody>
</table>

**Total units** 24

*Second majors may substitute Math 2200, Math 3200, ESE 326 or Pol Sci 363 for QBA 120.

Students may select a second major from the following disciplines:

- Accounting (p. 812)
- Economics and Strategy (p. 812)**
- Entrepreneurship (p. 812)
- Finance (p. 812)
- Health Care Management (p. 813)
- Leadership and Strategic Management (p. 813)
- Marketing (p. 813)
- Operations and Supply Chain Management (p. 814)

**Regulations:**
1. Second majors are required to complete a minimum of 24 business units through Olin School.
2. All courses for any business major must be taken for a grade.
3. An overall 2.0 average must be achieved in course work taken as part of the business major.
4. All major courses must be taken in residence. Course work from an approved Washington University study abroad program will be considered as satisfying this residency policy. However, only one course per major may be taken through a study abroad experience.
5. Students may not count one course toward two majors.
6. University College courses will not count toward any business major.
7. AP credit for Math 2200 will not serve as a substitute for our QBA 120 requirement. All second majors must complete QBA 120.
8. Students must declare their second major online through WebSTAC by the end of their junior year. A second major will not be awarded to a student unless proper declaration is made.

**Economics and Strategy majors must take MEC 290 since Econ 1011 will not satisfy the prerequisite requirement for MEC 370.**

Non-BSBA degree students may choose to pursue one major from the areas below:

### The Second Major in Accounting

**Total units required:** 15

**Accounting Core:** 6 units

- ACCT 3610 Intermediate Financial Accounting Theory I
- ACCT 3620 Intermediate Financial Accounting II

**Accounting Elective Choices:** 9 units

    MKT 465  Retail Management  3

Minors

Minors for Non-BSBA Degree Candidates

Non-BSBA degree students are eligible to pursue a minor in one of the specific fields of business listed below:

- Accounting (p. 814)
- Business Economics (p. 814)
- Business of Entertainment (p. 815)*
- Business of Sports (p. 815)*
- Entrepreneurship (p. 815)
- Finance (p. 815)
- General Business (p. 815)
- Health Care Management (p. 816)
- International Business (p. 816)*
- Leadership (p. 816)
- Marketing (p. 816)

- Operations and Supply Chain Management (p. 816)
- Strategy (p. 817)

*Any undergraduate day division student (which includes BSBA students) can earn the business of sports, business of entertainment, or the international business minor as part of their undergraduate degree.

Prerequisites for the Business Minor:

The following prerequisites are required for all minors:

Math 132 Calculus II
Math 2200 Elementary Probability and Statistics or Math 3200 Elementary to Intermediate Statistics and Data Analysis or ESE 326 Probability and Statistics for Engineering or Pol Sci 363 Quantitative Political Methodology or QBA 120 Managerial Statistics I
Econ 1011 Introduction to Microeconomics or MEC 290 Microeconomics**

QBA 121 is also a prerequisite for minors in marketing, finance, and general business.
ACCT 2610 is a prerequisite for the OSCM minor.
*AP Credit for Math 2200 will satisfy this prerequisite. This exemption applies only to non-BSBA students earning a business minor.
**Minors in managerial economics, business of entertainment, general business, and strategy minors must take MEC 290 as Econ 1011 is not a prerequisite for the core course requirements for any of these minors.

The Minor in Accounting

Total units required: 15

Required courses: Five courses including:

ACCT 2610  Principles of Financial Accounting  3
ACCT 2620  Principles of Managerial Accounting  3
ACCT 3610  Intermediate Financial Accounting Theory I  3

Plus two chosen from the following:

ACCT 3620  Intermediate Financial Accounting II  3
ACCT 464  Auditing  3
ACCT 466  Financial Statement Analysis  3
ACCT 467  Income Tax Fundamentals  3
ACCT 4680  Advanced Financial Accounting Problems  3

The Minor in Business Economics

Total units required: 15

Required courses: Five courses including:

MEC 290  Microeconomics  3
MEC 370 Game Theory for Business 3
MEC 400K Research Analysis in Industry 3
MEC 470 Market Competition and Value Appropriation 3
MEC 471 Empirical Techniques for Industry Analysis 3

The Minor in the Business of Entertainment

Total units required: 15

Required courses: Five courses including:

- MEC 290 Microeconomics 3
- MEC 460 Economics of Entertainment 3
- MKT 370 Principles of Marketing 3

Entertainment Group A Electives: (at least 3 units from Group A)

- AMCS 3490 Media Cultures 3
- Film 220 Introduction to Film Studies 3
- Film 423 Histories of Media Convergence 3

Entertainment Group B Electives: (at least 3 units from Group B)

- FIN 448 Advanced Financial Management 3
- MEC 471 Empirical Techniques for Industry Analysis 3
- MGT 301 Legal Environment of Business Management 3
- MKT 378 Marketing Research 3
- MKT 400F Brand Management 3

Non-BSBA students must take a minimum of 12 Olin units to earn the entertainment minor.

BSBA students minoring in the business of entertainment:

- may not double count more than one course (3 units) toward their business major.
- must take QBA 120 since AP credit for Math 2200 is not a substitute for QBA 120.

The Minor in Entrepreneurship

Total units required: 15

Required courses: Five courses including:

- ACCT 2610 Principles of Financial Accounting 3
- MGT 100 Individual in a Managerial Environment 3
- MGT 301 Legal Environment of Business Management 3
- MGT 421 Introduction to Entrepreneurship 3
- MGT 424 Business Planning for New Enterprises (The Hatchery)

The Minor in Finance

Total units required: 15

Required courses: Five courses including:

- ACCT 2610 Principles of Financial Accounting 3
- FIN 340 Capital Markets and Financial Management 3
- FIN 441 Investments 3
- FIN 448 Advanced Financial Management 3

Plus a 3-credit Finance elective.

The Minor in General Business

Total units required: 15

Required courses: Five courses including:

- ACCT 2610 Principles of Financial Accounting 3

Choose one course from the following:

- MEC 380 Competitive Industry Analysis 3
- MGT 380 Business Strategy 3

Choose three courses from the following options:

- MKT 370 Principles of Marketing 3
- FIN 340 Capital Markets and Financial Management 3
- OSCM 356 Operations Management 3
- OB 360 Organization Behavior Within the Firm 3
The Minor in Health Care Management

Total units required: 15

Required courses: Five courses including:

<table>

The Minor in Strategy

Total units required: 15

Required courses: Three courses including:

- MGT 100 Individual in a Managerial Environment 3
- MGT 380 Business Strategy 3
- MEC 380 Competitive Industry Analysis 3

Strategy Electives: at least two courses from the following:

- MGT 450R Business & Government: Understanding and Influencing the Regulatory Environment 1.5
- MGT 460G Critical Thinking and Complex Problem Solving for Business 1.5
- MGT 460H Corporate and Global Strategy 3
- OB 462 Leadership in Organizations 3

Fulfilling the Business Minor

All non-BSBA students pursuing any business minor must:

- declare their minor online through WebSTAC no later than the end of their sixth semester;
- satisfy all prerequisites;
- take all 15 units of required courses at Olin Business School. It is preferred that prerequisites be completed at Washington University. Courses taken in University College or at another university do not satisfy any of the five required courses;
- take all 15 units of required courses for grades, i.e., no pass/fail;
- achieve no less than a 2.0 GPA average in all business minor course work;
- receive permission from their academic adviser and the Olin Business School to declare a second business minor.
- 15 additional units would be required to earn two business minors, as double counting is not allowed.

Courses

Courses include:

- B50 ACCT (Accounting) (p. 817)
- B52, B62 FIN (Finance) (p. 818)
- B56 HRM (Human Resources Management) (p. 819)
- B99 INTL (International Business) (p. 819)
- B53, B63 MGT (Management) (p. 820)
- B54 MEC (Managerial Economics) (p. 824)
- B55 MKT (Marketing) (p. 825)
- B58 OSCM (Operations and Supply Chain Management) (p. 827)
- B66 OB (Organizational Behavior) (p. 827)
- B59 QBA (Quantitative Business Analysis) (p. 828)

Accounting

B50 ACCT 2610 Principles of Financial Accounting

Provides an overview of the financial accounting reporting process, with a primary focus on the analysis of economic events and their effect on the major financial statements (balance sheet, income statement and statement of cash flows). Prerequisite: second semester freshman standing. Credit 3 units.

B50 ACCT 2620 Principles of Managerial Accounting

Emphasis on the accumulation and analysis of data for internal decision makers. Introduces the vocabulary and mechanics of managerial accounting and accounting techniques used by internal managers in planning, directing, controlling and decision-making activities within their organizations. Prerequisite: ACCT 2610. Credit 3 units.

B50 ACCT 3610 Intermediate Financial Accounting Theory I

The first of a two-course sequence in corporate financial reporting. Examines the environment of financial accounting, the standards-setting process and the conceptual framework that underlies financial accounting in the United States. Topics: review accounting basics, events and transactions that impact financial statements, comprehension of corporate financial reports, and examination of political and economic factors influencing accounting policy. Prerequisite: ACCT 2610. Credit 3 units.

B50 ACCT 3620 Intermediate Financial Accounting Theory II

Continuation of ACCT 3610. Focus on the accounting and reporting of various stakeholders’ claims against the corporate entity. Claims of shareholders, long-term creditors, employees and governmental bodies are examined. An in-depth understanding of applicable generally accepted accounting principles is developed by examining the strengths and weaknesses of these principles and alternative accounting practices. Prerequisite: ACCT 3610. Credit 3 units.

B50 ACCT 400C Not-For-Profit Accounting

Students will gain an understanding of the unique facets of not-for-profit accounting, including understanding not-for-profit financial statements, differences in not-for-profit GAAP, and the IRS Form 990. Prerequisite: ACCT 2610. Credit 1.5 units.

B50 ACCT 464 Auditing

This course deals with the professional service industry of auditing. The auditing industry provides the service of objectively obtaining, evaluating, and communicating evidence regarding managerial assertions about economic events. Specifically, auditing ascertains the degree of correspondence between managerial assertions and established criteria. The course is organized around the basic categories of: (1) the economic role of external corporate auditing in securities markets, (2) the composition of the firms in the auditing industry, (3) the
regulatory environment of auditing, (4) litigation issues facing the accounting/auditing industry, and (5) the requirements for conducting audits. Topics included in the last area include a consideration of the scope and application of Generally Accepted Auditing Standards (GAAS) and the general technology of auditing which are some general auditing topics typically covered on the CPA exam. Grading is based on homework, a group-based project, and two exams. Prerequisite: ACCT 3620.
Credit 3 units.

B50 ACCT 466 Financial Statement Analysis
Designed to enhance students' understanding of the process of evaluating financial statement information. Requires a basic familiarity with financial accounting and the assumptions underlying measurements reported in financial statements, an understanding of the economic and regulatory forces underlying corporate disclosure of financial statement information and their effects on financial statement information, and familiarity with data sources and analytical tools to extract and evaluate this data. Objectives are to develop familiarity with this type of analysis and to gain an appreciation for its limitations. Topics: profitability and risk analysis, credit risk models, forecasting and valuation. Prerequisite: ACCT 3610.
Credit 3 units.

B50 ACCT 467 Income Tax Fundamentals
This course provides an introduction to federal income taxation with primary emphasis on the tax implications of business transactions. The objectives of the course are to develop a basic understanding of federal income tax laws and to provide a framework for integrating income tax planning into the decision-making process. The course is of value to all students who need to recognize the important tax consequences of many common business transactions and is not intended solely for accounting majors or those students interested in becoming tax specialists. Prerequisites: ACCT 2610 and junior standing.
Same as B60 ACCT 567
Credit 3 units.

B50 ACCT 4680 Advanced Financial Accounting Problems
Examination of the nature and financial reporting aspects of various business transactions: corporate acquisitions, mergers and the formation of other strategic alliances. Topics: accounting for business combinations and consolidations, joint ventures and foreign currency translation, accounting and financial reporting issues facing government entities. Prerequisite: ACCT 3620.
Credit 3 units.

Finance
Visit https://courses.wustl.edu to view semester offerings for B52 FIN (https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B52&crsLv1=1&4). For B62 FIN (p. 819), please refer to the course listed below.

B52 FIN 340 Capital Markets and Financial Management
Students learn how the decisions of a company affect shareholder value and what decisions can increase it. To understand the perspectives of shareholders, we study basic principles of investing: time value of money, valuation of debt and equity securities, discounted cash flow as a foundation for stock prices, the impact of diversification and leverage on portfolio risk, the relationship between risk and expected return in securities markets, and capital market efficiency. We use these principles to analyze capital investment decisions by estimating cash flows and discounting them at the appropriate cost of capital. We also study how shareholder value is affected by a firm's financing decisions, such as the choice of using debt or equity capital. Prerequisites: Math 132, ACCT 2610, MEC 290 or Econ 1011, and completion or concurrent enrollment in QBA 121.
Credit 3 units. EN: S

B52 FIN 343 Personal Finance
Examines issues underlying decision making regarding personal investments. Topics: present value concepts, financial markets and instruments, portfolio theory, bond and equity valuations, mutual funds, mortgages, taxes and personal financial planning. Intended for nonbusiness students who are not second majors in Finance. Students may not receive credit for both this course and Fin 340. BSBA students may take this course but it will not count toward their degree requirements. Prerequisite: junior standing.
Credit 3 units.

B52 FIN 400I Mergers and Acquisitions
This course focuses on identifying ways to increase firm value through mergers and acquisitions (M&A) and corporate restructurings. We survey the drivers of success (and failure) in M&A transactions and develop skills in the design and evaluation of such transactions. Specific topics we address in the course are the valuation of companies, the motivations underlying mergers, structuring of transactions, deal tactics and strategy, leveraged buyouts, corporate restructuring though divestitures, spin-offs, carve-outs and acquisitions of private firms. We also delve into issues of law, accounting and tax and how they affect the outcome of M&A transactions. Why is M&A an important component of any corporate finance professional toolset? It lays the foundation for effective work in a wide range of fields including corporate development, investment banking, consulting and strategy advising senior management. The presentations, class discussions, case analyses and readings are designed to help students master these important career skills. Prerequisites: FIN 340 and FIN 448.
Credit 1.5 units.

B52 FIN 428 Investments Praxis
Students serve as managers of a portfolio, the Investment Praxis Fund, which is owned by the university. Students analyze investment opportunities in various industries and present recommendations to the class for possible purchases or sales of stocks, consistent with the style and objectives of the fund. Valuation tools, financial statement analysis and investment techniques are emphasized as part of a thorough analysis. The course focus is on developing and implementing investment ideas. Prerequisites: FIN 441 and FIN 448.
Credit 3 units.

B52 FIN 441 Investments
Introduces the theory and practice of investments from the point of view of an investment/portfolio manager. We will begin with a review of asset classes, financial history, and preferences for risk. Next, we will have a brief review of statistics and finance, and we will review matrix algebra. We will then apply these tools to examine the trade-off between risk and return and to
develop and implement Modern Portfolio Theory. The major topics covered will include the Capital Asset Pricing Model (CAPM), Markowitz optimization, performance evaluation, market efficiency, and Arbitrage Pricing Theory (APT). The last portion of the course will be devoted to fixed income securities including interest rates, bond valuation, and bond immunization. Prerequisites: FIN 340, QBA 120, QBA 121, MATH 132, and MEC 290 or Econ 1011. Credit 3 units.

**B52 FIN 443 International Finance**

Provides a framework for making financial decisions in an international context. Topics include: relevant features of financial markets and instruments (such as foreign exchange, currency futures and options, swaps); exchange rates; corporate risk management; international investing and capital budgeting issues. Prerequisites: FIN 340 and FIN 448. Credit 3 units. BU: IS

**B52 FIN 447 Information, Intermediation and Financial Markets**

Examines the organization and function of financial markets from the corporate perspective with an emphasis on investment banking activities. Topics: design, issuance and trading of corporate securities, risk management and corporate control transactions. Develop familiarization with current practices while building a conceptual framework for understanding and anticipating change in the institutions that make up the financial markets. Prerequisites: FIN 340 and FIN 451 are required. FIN 441 and FIN 448 recommended. Credit 1.5 units.

**B52 FIN 448 Advanced Financial Management**

Advanced study of corporate financial management. A major focus is the relationship between the internal decisions of the corporation and the valuation of the firm in the capital market. Topics: capital budgeting systems, capital structure, debt policy, cash and working capital management, short- and long-term financial planning. Prerequisite: FIN 340 and QBA 121. Credit 3 units.

**B52 FIN 451 Options, Futures and Derivative Securities**

Examines the theory and practical application of derivative securities such as futures, options and swaps. Central to the theory of derivative security pricing is arbitrage and payoff replication. In practice, derivative securities provide a principal route to manage and, in particular, hedge financial risk. Futures, options and swaps on different types of underlying assets are examined with emphasis on pricing and application. Prerequisite: FIN 340. Credit 3 units.

**B52 FIN 470A Research Methods in Finance**

The course is designed to prepare students for independent research in finance by exploring methods and techniques in a manner that allows the students to implement them correctly and efficiently. The curriculum emphasizes practical applications of empirical methods used in financial research and how to implement them. Students in the course learn empirical methods in corporate finance and asset pricing; obtain basic knowledge and familiarity of the databases used in common finance research; get exposure to recent research in finance which applies the methods covered; and learn how to implement the methods covered using relevant programming languages. Prerequisites: FIN 340, QBA 120 and QBA 121. Same as B62 FIN 550A. Credit 3 units.

**B62 FIN 549H Special Topics: Real Estate Finance**

This course provides a broad introduction to real estate finance and investments. Topics include both equity and debt. We begin with an overview of real estate markets in the United States. On the equity side students are introduced to the fundamentals of real estate financial analysis, including pro forma analysis and cash flow models, and elements of mortgage financing and taxation. Ownership structures, including individual, corporate, partnerships and REITS also are covered. On the debt side, we examine a number of financing tools in the context of the evolution of the secondary mortgage market, both residential and commercial. Those wishing to pursue more advanced topics in real estate finance could follow this course with Fixed Income and Mortgage-Backed Securities. Prerequisites: FIN 340 and approval of graduate Business programs. Credit 1.5 units.

**Human Resources Management**

**B56 HRM 325A Personnel/Human Resources Management**

Emphasis on development of attitudes and skills of managers and supervisors in solving human problems and in building and maintaining effective employer-employee relations. Major topic areas include: selection and placement, training, and compensation. Other topics include legal aspects of employment policies, labor relations, and other aspects of human resources management. Prerequisite: junior standing. Credit 3 units.

**International Business**

**B99 INTL 300A Planning for International Learning**

A mini-B course required of all students participating in Olin semester abroad programs that focuses on planning, assessment, the theory of global competency, cross-cultural communication skills, the structure of a research paper, and other pre-departure information that enhance the student learning experience while abroad. Prerequisite: permission of instructor. Credit 1 unit.
B99 INTL 300B Applying International Experiences
A mini-B course required of all students who participated in an Olin semester abroad program that includes a research symposium to showcase work from abroad, and which focuses on reentry issues, post-program assessment, how to articulate transferable skills, and other post-departure information that allow returnees to translate their abroad experiences into the working world. Prerequisite: permission of instructor. Credit 0.5 units.

B99 INTL 320 Business, Innovation and Entrepreneurship in Israel
Israel is an innovation and entrepreneurial hub with more listings on the NASDAQ than any country other than the U.S., more patents per capita and more entrepreneurial events occurring in Israel in both the commercial and social arena than anywhere else in the world. Students learn about the Israeli economy, different industries, Israeli culture and politics along with the critical business challenges and opportunities that face Israel. This course includes a required immersion to Israel during spring break and contains an additional lab fee for the immersion. Credit 3 units. EN: S

B99 INTL 420 Business Research Internship
This is the capstone course for overseas internship programs where students learn to apply rigorous statistical and analytical approaches to research questions in business, but not limited to questions relating to marketing, management, finance and economics, operations and policy. Students identify a research topic and present this topic to faculty supervisors for approval. The goal is to capitalize on the practical knowledge gained while interning abroad and apply that to a research question in the area in which a student is interning. Students are required to review the current literature on their topic, formulate their own research questions, identify potential data sources they can use to address these questions, and make recommendations to add to the body of knowledge on their chosen subject. Prerequisite: admission to one of Olin's International Internship Programs. Credit variable, maximum 12 units.

Management

B53 MGT 100 Individual in a Managerial Environment
An introduction to the foundations of business. The course covers four major themes: (1) how markets work; (2) motivating and managing people; (3) business strategy and firm performance; (4) ethics and corporate social responsibility. In the fall semester, MGT 100 is only open to incoming freshmen, and students must be concurrently enrolled in MGT 150A. Spring semester enrollments are open to any freshman and sophomore. Credit 3 units. EN: S

B53 MGT 150A Foundations of Business
Provides first semester business students with an introduction to each of the functional areas of business as well as the entrepreneurial function. As they work to design their own enterprise, students will build skills in teamwork, communication, critical thinking, and an understanding of the complex interplay of business functions. Prerequisites: must be 2020 BSBA degree candidate and concurrently enrolled in MGT 100 in fall semester. Credit 2 units.

B53 MGT 200A Business Fundamentals and Professional Competencies for Non-Business Students
This course is intended to help successfully position arts and sciences, engineering, and design majors for careers in organizations such as nonprofits, entrepreneurial ventures, and corporations, among others. Students learn key technical and professional skills that are valued and often required by employers. Topics addressed include working in teams, data-driven decision making, financial and business analysis, concepts for organizational strategy, professional communication, and career strategies. The course uses a combination of lectures, exercises, projects and cases to introduce participants to these topics. The class is designed for Washington University undergraduates in Arts & Sciences, Engineering, and Design and Visual Arts who are preparing for internships or jobs. Recommended for sophomores and juniors. Business students cannot receive credit. Credit 3 units. EN: S

B53 MGT 200B Global Perspectives
We examine the economic, political, cultural, and social bases of business in Cuba from a global perspective. These bases are explored to understand how business in Cuba is conducted and how it relates to the global economy. We examine these bases in their historical context, current changes in Cuba, and future prospects. Normalization of relations between the United States and Cuba will be studied in terms of its impact on business for United States and Cuban firms. An immersion experience covering the topics of the course occurs on a one-week trip to Cuba during spring break. Limited to 16. Prerequisites: MGT 100 or permission of instructor and application via sa.wustl.edu. Credit 3 units.

B53 MGT 201 Management Communication
Managers who write and speak effectively excel in business leadership. Persuasive and authentic communication is not only useful in advancing a business career; business employers also consider communication skills to be the most important attribute in people they hire. Effective communication involves more than mastering technical writing and presentation skills. Successful communicators use critical thinking to assess business scenarios and the audience who will hear or read a message; they craft communication in order to attain targeted results. This course gives students the opportunity to become more polished communicators as they work toward the following goals: applying rhetorical principles to management communication; using critical thinking to analyze the audience, the organizational environment and problems before choosing communication strategies; implementing principles of plain language and effective design; collaborating with colleagues to create effective group projects; representing a company or product in a "crisis communication" press conference. Priority for enrollment is given to BSBA students. CBTL (http://www.gephardtinstitute.wustl.edu/CBTL/Pages/overview.aspx) course. Credit 3 units.
B53 MGT 301 Legal Environment of Business Management
Surveys the various areas of law that make up the legal environment of business. Develops a basic understanding of law as it relates to business, with traditional emphasis on private law and business transactions. This study of the micro law of business reviews the detailed substantive rules in the areas of contracts, sales, product liability, agency, corporations and partnership. In addition, a summary review of contemporary legal problems such as insider trading, discrimination in employment, sexual harassment and ethics may be discussed, if time permits. Case studies are analyzed in order to give the student an understanding of how various laws apply to actual situations. Prerequisite: sophomore standing. Credit 3 units.

B53 MGT 308 Introduction to International Business
Focus on the aspects of management of a business enterprise that are necessary to compete in the global marketplace. The course begins with a survey of the environmental context in which international companies operate (economic systems and cultural factors). This is followed by a review of International Trade Theory and Economics. This forms a basis for concentration in the second half of the course on strategies and structure for global operations. The course deals with the situations in Europe, Japan, Latin America and China through case studies and discussion of current topics and their relation to the fundamental aspects of global business management. Prerequisite: junior standing or permission of instructor. Credit 3 units. BU: IS

B53 MGT 320 Olin Grand Rounds: The Business and Practice of Medicine
Grand rounds in medical schools are a forum for presenting new and challenging clinical problems and cases. The goal of Olin Grand Rounds is to focus on the challenges and solutions facing the business of medicine. The course therefore provides an introduction to the current issues facing the health care sector that integrates management tools and clinical knowledge. The objective is to provide students new insights into how modern management tools can be combined with scientific and clinical knowledge to manage health care organizations more efficiently and practice medicine more effectively. Credit 3 units. EN: S

B53 MGT 321 Health Economics and Policy
The basic tenets of health economics are covered. This course places a unique emphasis on incorporating materials from three broad source categories: textbook elements, "lay" press and media, and academic journal publications with the aim to foster application of rigorous, critical thought to media presentations of health care economics and policy issues. Credit 3 units. EN: S

B53 MGT 322 Health Care Management
The goal of the course is to develop facility in applying basic tenets of general management to actual situations and dilemmas that might be faced by health care managers, consultants, financiers, investors, innovators or providers in the course of their work. Issues addressed include but are not limited to financial issues, management challenges and conduct of operations. The first phase covers the basic background on the structure and financing of the health care industry to include very brief reviews of critical topics such as insurance and government-provided health care. A few basic frameworks are then developed for students to apply to course topics moving forward, such as cost/benefit analysis and evaluation of risk. The remainder of the course involves critical analyses of health care cases involving varied subjects and management challenges. Sessions emphasize student-led discussions. Credit 3 units. EN: S

B53 MGT 380 Business Strategy
This course adopts the perspective of the general manager — an individual charged with developing and implementing the long-term strategy of a business. The course develops basic tools and concepts in strategy formulation, including competitive advantage, value creation and capture, industry analysis, capability assessment, and competitive positioning. The course is designed to develop students’ skills in both analyzing observed strategies and in formulating and implementing new ones. A key feature of the course is a business simulation in which student teams interactively formulate and execute strategy for a simulated firm. Prerequisite: MEC 290. Credit 3 units. EN: S

B53 MGT 402 Ethical Issues in Managerial Decision Making
Focuses on ethical issues in management and surveys a number of ethical standards or levels by which managers make decisions involving most functional areas of business. Course emphasis on class discussion of cases and problem situations which confront managers and for which ethical dimensions are a significant part of the business choices. Prerequisite: senior standing. Same as B53 MGT 502. Credit 1.5 units.

B53 MGT 405S International Business Environment — Sydney
The aim of this course is to internalize and develop multicultural competency applied within personal, organizational and business contexts. Reaching this goal includes developing personal awareness, understanding of important concepts and developing multicultural skills. The ability to recognize and overcome common pitfalls that prevent people from operating effectively within, and actually benefiting from, multicultural contexts are explored. Prerequisite: admission to the Asia Pacific Internship Program. Credit 3 units.

B53 MGT 405T Australian Study Tour
Individual and team research, writing, presentation and participation in Olin’s Australian Study Tour. Includes required attendance and expected professional contributions to all corporate and government visits and briefings and other required individual and group activities. Prerequisite: admission to the Asia Pacific Internship Program. Credit 1.5 units.

B53 MGT 418 International Business: A Euro Perspective
Examines the economic and institutional setting of Europe from a general business perspective. The economic and political structures of major countries are studied. The role of the European Economic Community examined as well as that of some major international organizations such as GATT and OECD. The primary emphasis is with countries of western Europe. Other topics: theory of customs, unions, monetary and economic integration, and multicountry policy integration. Opportunities for and problems of doing business in Europe
examined from both an overall strategic perspective and from the perspective of the different functional areas. Prerequisite: admission to the London Internship Program.
Credit 3 units. BU: IS

**B53 MGT 420 Research in Health Care Management**
This is the capstone course for the Health Management major where students learn to apply rigorous statistical and analytical approaches to research questions in health services, but not limited to questions relating to management, finance and economics, operations and policy. Faculty identify several available research project options and present those options in class. The goal is to capitalize on the strength of the university medical school and affiliated medical centers, in addition to capitalizing on existing relationships between Olin and health care firms to identify the student research projects. Students also are encouraged to formulate their own research questions and to identify potential data sources they could use to address these questions, if they so desire. Students work in teams of 3-4, using the approach developed for the Practicum and Hatchery courses.
Credit 3 units.

**B53 MGT 421 Introduction to Entrepreneurship**
Through case studies, frequent guest speakers and the professor's own experience, the real world of entrepreneurship is brought into the classroom to provide a context for students to learn the fundamentals of founding, operating and exiting a start-up business. Students learn new perspectives that teach them to think like an entrepreneur. Those who are interested in the general study of entrepreneurship, those who want to be entrepreneurs, and those who would like to leverage entrepreneurial principles in other career paths are all good candidates for the course. Prerequisites: junior or senior standing in any school or college.
Credit 3 units. EN: S

**B53 MGT 424 Business Planning for New Enterprises (The Hatchery)**
In this course, student teams pursue their own business idea or support outside entrepreneurs by researching, writing and pitching business plans for new commercial or social ventures. Enrolled students can recruit a team to work on their own business idea, or they can join a team working on another's idea. Outside entrepreneurs and scientific researchers wishing to recruit student teams must apply in advance to be considered for student selection. Most of the work is done outside the classroom with the support of mentors, advisers and the instructor. Classes are held once per week for the first half of the semester. Workshops and rehearsals are required in the second part of the term. Students make final presentations to a panel of outside judges including venture capitalists, angel investors, entrepreneurs and people involved with early stage ventures. Prerequisites: Introduction to Entrepreneurship (MGT 421 or MGT 521), Social Entrepreneurship (MGT 500T or S50 5060) or permission of the instructor. CBTL (http://www.gephardtinstitute.wustl.edu/CBTL/Pages/overview.aspx) course.
Same as B63 MGT 524
Credit 3 units.

**B53 MGT 440 Sports Management**
This course examines the key business and management topics in the sports industry, including league and franchise administration, team and individual sports, broadcast and digital media, data analytics, and leadership issues facing sports officials today. The course will look, in a practical way, at the strategic and operational challenges in the contemporary industry, while considering those issues in a historical context and discussing the future implications for all participants in the world of sports. The course's practical look at the sports industry will focus on key lessons for corporate management and administration.
Same as B63 MGT 540
Credit 1.5 units.

**B53 MGT 450A Internship in Business**
This is an online course designed to deepen the overall learning students gain from an internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin Business School curriculum, the value of the internship is maximized and increased for both students and employers. Internship in Business is a 1.5-credit Pass/Fail course for business school undergraduates. The course, credit, and pass/fail grading are transcript notations, but the hours earned for MGT 450A do not count toward the 120 hours minimum needed for graduation. Prior to enrolling in this course, the student must consult with and get approval from the Weston Career Center (WCC) to ensure the internship meets certain requirements. Questions? Contact the Weston Career Center at 314-935-5950 or wccbsba@olin.wustl.edu.
Credit 1.5 units.

**B53 MGT 450C Venture Consulting**
Students who complete the course will gain a deep understanding of the issues of both operational management and investment management of start-up firms. Students will learn of the fundamental strategies and tactics employed by private equity and venture capital firms as well as will aid in the development of business strategies for the companies in which they invest. Additionally, students will learn how to take into account the macroeconomic, political, and cultural issues that affect start-up businesses that are both operating internationally and raising capital internationally. Furthermore, students will learn of the subtleties in the complex relationship between the investment firm and the entrepreneur and will understand both their shared and disparate motivations and objectives. Students who complete the course will develop competency in the research and writing of professional consulting reports and will gain a more sophisticated understanding of both venture capital and entrepreneurship management and strategy. Students will better understand the interpersonal dynamics between the relevant stakeholders, will become proficient in the terminology of private equity investing, and will learn how to create structure to unstructured problems thus improving their ability for critical thinking. Participants will be given the opportunity to apply their efforts beyond their basic functional business skills, and toward issues of relationship management and strategy. Required immersive experience to Herzliya, Israel, in January. Prerequisite: MGT 421 recommended and application via sa.wustl.edu is required. Enrollment limited to 12.
Same as B63 MGT 550T
Credit 3 units. EN: S

**B53 MGT 450D Honors Thesis I: Research and Analysis**
The Olin BSBA Honors Thesis challenges motivated students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. Senior BSBA degree
students in good standing with a cumulative grade point average of 3.70 or higher have the opportunity to develop an intensive research project, which extends far beyond the limits of the material in a single course during a single semester. In the two-semester honors thesis sequence, research and analysis are the foci of the first semester and, upon successful progress, the student writes, presents and defends the research in the subsequent semester. Prerequisites: senior standing and faculty permission. Credit 3 units.

B53 MGT 450E Honors Thesis II: Writing and Presentation
The Olin BSBA Honors Thesis challenges motivated students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. Senior BSBA degree students in good standing with a cumulative grade point average of 3.70 or higher have the opportunity to develop an intensive research project, which extends far beyond the limits of the material in a single course during a single semester. In the two-semester honors thesis sequence, research and analysis are the foci of the first semester and, upon successful progress, the student writes, presents and defends the research in the subsequent semester. Prerequisite: MGT 450D. Credit 3 units.

B53 MGT 450G The Business of Sports
This course provides an overview of the major aspects of the sports business industry, including but not limited to (1) the primary revenues and expenditures of pro and college sports, (2) collective bargaining agreements, (3) sports media rights, (4) facility financing, (5) sports sponsorships and athlete endorsements, (6) the role sports commissions play within communities, and (7) current events impacting the growth and evolution of the sports business industry. Credit 3 units.

B53 MGT 450I International Internship in Business
The online course deepens the overall learning a student gains from an international internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin business curriculum, the value of the internship increases markedly — for student and employers. Prerequisite: admission to one of Olin's International Internship Programs. Credit 1.5 units.

B53 MGT 450R Business & Government: Understanding and Influencing the Regulatory Environment
The United States, as well as many of the world's governments, has entered a new episode with respect to the interaction of business and government. Now, more than ever, government regulations are attempting to spur job growth and the economy on one hand, but also are intruding into many aspects of business and the markets on the other hand. These conditions create opportunities for policy entrepreneurship, not only by large businesses but also by small and young ones. Business students must not only understand the shifting business government landscape, but also how to engage government officials and legislators to help shape policies that affect their firms and industries. As an introductory course, student will learn from business and government leaders how to interact with and affect the processes of regulation. The centerpiece of the course is a five day trip to Washington D.C. to work with Brookings Executive Education and be exposed to political, executive branch, and corporate leaders who are principal actors on policy entrepreneurship. Prerequisite: application via sa.wustl.edu. Credit 1.5 units.

B53 MGT 450V Defining Moments: Lessons in Leadership & Character From the Top
Most successful leaders can point to a handful of “defining moments” in their careers — key choice points that defined the trajectory of their character, their career, and/or their company. What are those defining moments and why do they matter? How can aspiring business leaders prepare themselves to face their defining moments with insight and integrity? This course examines these questions by learning from notable leaders who exemplify both business excellence and personal character. Top executives from leading companies will sit down with us to talk about their “defining moments” and to engage with us in considering these questions. These conversations will be supplemented with 2yr MBA students; PMBA and EMBA students: core completed. Prerequisites: senior standing and permission of instructor. Same as B63 MGT 550V. Credit 1.5 units.

B53 MGT 460G Critical Thinking and Complex Problem Solving for Business
The course introduces students to rigorous techniques for critical and strategic thinking, problem formulation and problem solving, advancing their ability to provide valuable advice to organizations and preparing them for management consulting company interviews by exploring methods to engage in case analysis, various cognitive biases that can emerge as a problem is being formulated and analyzed, such as the use of inappropriate analogies, confirmation bias, self-serving bias, correlation and causation, etc. Credit 1.5 units.

B53 MGT 460H Corporate and Global Strategy
Business-level strategy involves a firm's choices regarding how to compete in a particular single industry or market. Corporate strategy, on the other hand, involves choices about which sets of different industries or markets to compete in, and how to do so. It also involves choices about which kinds of activities to undertake
within the firm, and which to organize through contracts or alliances with other firms. Global strategy is a particular type of corporate strategy that involves choices about which geographic regions or national markets to compete in and how. Credit 3 units.

B53 MGT 460I Sports Business Analytics
This course introduces students to business analytics through sports-themed applications, academic research pertaining to sports topics, class readings, and guest lecturers from industry. Objectives for students include: 1) learning estimation and forecasting skills/trends used in sports; and 2) developing critical thinking skills necessary to assist managerial decision making to augment the performance of sports teams, leagues or companies. Prerequisite: MEC 290 or Econ 4011. Credit 1.5 units.

B53 MGT 490 Honors Seminar I
The first of a two-course honors seminar. Students have the opportunity to investigate current issues in business using an interdisciplinary approach to their research. Seminar content varies from year to year. Prerequisites: senior standing and faculty invitation. Credit 3 units.

B53 MGT 491 Honors Seminar II
The second of a two-course honors seminar. Students have the opportunity to investigate current issues in business utilizing an interdisciplinary approach to their research. Seminar content varies from year to year. Prerequisite: MGT 490. Credit 3 units.

B63 MGT 500T Social Entrepreneurship
Registration for this course is done administratively. Students will be put on waitlist and enrollment will be processed once division distribution is determined. The course is designed for students who are interested in understanding the field of social entrepreneurship. It studies the entrepreneurial concepts and practices that are integral to successful innovation. This course emphasizes the social and policy context of venture development and the unique role of evaluation in this growing field. Even if a student is not interested in starting a venture of his or her own, understanding the entrepreneurial process will enhance productivity for other programs and organizations. Prerequisite: permission of instructor. Same as S50 5060 Credit 3 units. EN: S

B63 MGT 501 Management Center Practicum
Students work in four-person teams on consulting projects, applying insights from their course work to real-world business problems under faculty supervision. Each student is expected to spend about 150 hours on the project. Grades are based on the quality of the final written and oral reports, as determined by the faculty supervisor. Students are paid a small gratuity, with the amount dependent on the quality of the work. Students are only eligible to participate in one Practicum Course per semester, if selected. Prerequisites: Students must apply for Practicum projects. Students are notified when projects are available. CBTL (http://www.gephardtinstitute.wustl.edu/CBTL/Pages/overview.aspx) course. Credit 3 units. EN: S

B63 MGT 520 Taylor Community Consulting Project
This course is designed to provide business assistance and expertise to St. Louis area nonprofit agencies. Applications available in the Center for Experiential Learning, Simon Hall, Room 100. Open to MBA students, upper-level BSBA students, and MSW students. CBTL (http://www.gephardtinstitute.wustl.edu/CBTL/Pages/overview.aspx) course. Credit 1.5 units.

B63 MGT 550X CEL Entrepreneur Consulting Team
Early stage companies provide a unique environment for students to make a meaningful impact on the future trajectory of a growing organization. CELect is an experiential learning course that matches teams of Washington University students with St. Louis area start-up ventures to perform defined management consulting projects. In addition to the required day-long orientation and concluding sessions taught at the T-REX incubator downtown, students work directly with the professor and with their client company on a consistent, but variable, schedule depending on the project needs over the course of the semester. In addition to being embedded on a project for an early stage company, students have the opportunity to engage with other entrepreneurship support organizations such as local accelerators, venture capital firms, and incubators. Law Students: Prerequisite/corequisite: Corporations. This course is cross-listed with the Business School, B63-550X, and is co-taught by Profs. Clifford Holekamp and Hillary Sale. Grading for Law Students is modified pass/fail: HP (3.94), P, LP (2.98), F (2.50). Interested students should apply/register by adding their names to the waitlist in WebSTAC, and then sending their resumes to Prof. Sale (c/o Beth Mott, emott@wulaw.wustl.edu). They will be notified soon as to whether they got in or not. Once accepted, students may not drop this class. Enrollment is limited. CBTL (http://www.gephardtinstitute.wustl.edu/CBTL/Pages/overview.aspx) course. Prerequisite: permission of instructor. Credit 3 units.

Managerial Economics

B54 MEC 290 Microeconomics
Provides a rigorous analysis of the behavior of consumers and firms in competitive and monopoly markets; oligopoly markets are introduced. Consumer topics include preferences and utility,
budget constraints, consumer optimal choice and demand curves. Firm topics include technology, cost minimization and profit maximization. The course concludes with price determination in monopoly and competitive markets, and an introduction to oligopoly and game theory. The focus of the course is on microeconomics as a decision making tool for consumers and managers. Prerequisite: Math 131. Credit 3 units. EN: S

B54 MEC 292 Global Economy
Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include: introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; global economic competition and business strategy. Prerequisites: QBA 120; and MEC 290 or Econ 1011. Credit 3 units. BU: IS EN: S

B54 MEC 370 Game Theory for Business
Provides students with a methodological framework to analyze strategic business situations. Building on a background in microeconomics and statistics, this course includes such topics as the following: modeling strategic problems, games with sequential moves, games with simultaneous moves, strategies and the derivation of strategic forms, general classes of games, uncertainty and information, strategy and voting, auctions, bargaining. Prerequisite: MEC 290. Credit 3 units. EN: S

B54 MEC 380 Competitive Industry Analysis
Uses economics and game theory to analyze strategy and industry dynamics. Focus is split between evaluating the competitive environment within industries and developing competitive strategies that are responsive to specific competitive forces facing individual firms. Topics typically covered include models of price and quantity competition, barriers to entry, commitment strategies and credible threats, product differentiation, vertical integration, research and development, and patenting strategies. Prerequisite: MEC 290. Credit 3 units.

B54 MEC 391 Economics of Human Resource Management
Key to a firm's success is whether it can develop a firm organization and a human resource management system that reinforce the firm's strategic position. This course covers topics in managing work forces and organizations that are of fundamental importance to all managers, and teaches how organizational design and human resource policies interact with the firm's market strategy and production environment. We look at how management can motivate executive and employee performance, screen and attract appropriate workers, and improve the way information is processed and decisions are made within organizations. This course combines economic analysis with case discussions to address topics including hiring policy, turnover, training, variable pay, promotions, evaluation, job design, teams, worker empowerment, hierarchy, and organizational structure like centralization and decentralization. Prerequisite: MEC 290. Credit 3 units.

B54 MEC 400K Research Analysis in Industry
Research in Industry Analysis will build on the materials taught in MEC 370 (Game Theory) MEC 470 (Market Competition and Value Appropriate) and MEC 471 (Empirical Techniques in Industry Analysis), integrating them with methods of industry analysis used in practice and applying them to companies. Prerequisites: MEC 370, MEC 470 and MEC 471. Credit 3 units.

B54 MEC 460 Economics of Entertainment
This course focuses on the unusual economics of the entertainment industry and the associated management challenges. The sessions cover the basic economics of entertainment, then focus specifically on the music and movie industries, plus one other that varies from year to year. Classes consist of lecture and discussion, as well as speakers from the relevant industries. The primary student deliverable is a twenty minute documentary-style production in which student teams present findings of their research into specific industries within the broader industries studied in class, e.g., rock, classical or rap within music, blockbusters within music, etc. Prerequisite: MEC 290 or Econ 4011. Credit 3 units.

B54 MEC 470 Market Competition and Value Appropriation
Provides students with frameworks and capabilities for making intelligent decisions in evolving markets. Course begins with general game theory concepts, which form the basis for two main topics: models of competition in markets and value appropriation. Students learn the basic framework and apply it in the context of a detailed industry study. Specific topics may include firm interactions in stable and evolving market environments, industry life cycles, the evolution of new product markets, and strategic decision-making in developing markets. Prerequisite: MEC 370. Credit 3 units.

B54 MEC 471 Empirical Techniques for Industry Analysis
Students will learn how to use data to answer a wide variety of questions regarding the incentives and behavior that generate market activity. We emphasize inference about the strategic decisions of firms and consumers. Students are introduced to new statistical and econometric tools by examining the application of these tools to current research in economics. Among the topics considered are the empirical implications of: strategic bidding in auctions, price discrimination and dispersion, differences across products, and the internal organization of firms. Prerequisites: MEC 290, QBA 120 and QBA 121. Credit 3 units.

Marketing
B55 MKT 370 Principles of Marketing
Marketing is the window to the customer, making the function a critical component of any successful organization. Through a mixture of lectures, case discussions and classroom exercises, this course gives students an overview of the best theories and practices in marketing management today. Specific topics include: how to segment the customer base and choose target markets, how to create perceived value both from an economic and psychological perspective, how to differentiate a product or service from a competitor's offering, how to build and maintain a strong brand, and how to employ different marketing tools such as advertising, pricing, product design, service and location. The class also provides students with some basic tools for evaluating the financial impact of marketing activities. Prerequisites: sophomore standing and MEC 290 or Econ 1011 or MGT 100. Credit 3 units. EN: S

B55 MKT 377 Consumer Behavior
Psychological, sociological and social psychological principles as they apply to consumer response to product offerings, media communications, personal influence and other environmental factors. Consumer buying behavior is analyzed from theoretical, empirical and applied perspectives. Current applications of concepts employed by marketers are discussed in the context of both consumer and industrial marketing situations. Prerequisite: MKT 370. Credit 3 units. EN: S

B55 MKT 378 Marketing Research
The four P's of marketing are product, place, price and promotion. Using these decision variables, firms seek to maximize profits. Making these decisions requires market information. Marketing research is the process of actively collecting, assimilating, and analyzing market information to support management decision making. Teaches the nuts and bolts of market research. Prerequisites: MKT 370, QBA 120 and QBA 121 or concurrent enrollment in QBA 121. Credit 3 units.

B55 MKT 400F Brand Management
A brand is a promise, and this promise is often the most valuable asset of a firm. In this class, students will examine the creation and building of brand equity to create long-term profit for the firm. The class will examine what we know about brand management and brand theory from years of rigorous scientific research in the area. While learning the foundations of brand management, students will develop the skills needed to create a meaningful brand, position a brand, develop brand names and logos, promote a brand, leverage brand equity, extend a brand, and communicate brand meaning via traditional and social media. Students will learn some of the day-to-day skills performed by brand managers and interact with brand managers via guest speakers from top branding firms. Prerequisite: MKT 370 and completion or concurrent enrollment in MKT 378. Credit 3 units.

B55 MKT 400G Digital Marketing and Analytics
The aim of this course is to provide a rigorous and comprehensive introduction to technology and methods of conducting marketing activities online. Specific objectives are to introduce students to: 1) concepts and terminology of digital marketing and its metrics; 2) specifics of online consumer behavior; 3) hands-on experience in creating and running social media marketing campaigns. Prerequisite: MKT 370.

B55 MKT 450F The Luxury Apparel Industry: International Perspective and Immersion
This immersive program, a spring semester 3-credit mini-A course and study-trip to New York City, aims to introduce students to the study of the luxury goods and fashion industries, their structure, economics and dynamics. Enrollment limited to 16. Prerequisites: MKT 370 and application via sa.wustl.edu. Credit 3 units.

B55 MKT 465 Retail Management
Explores the fundamental factors that are critical to the success of most retailers; merchandising, store design and display, personal selling, advertising and promotion, pricing and location. A wide variety of retailers — department stores, specialty stores, wholesale clubs, direct marketers, franchisers, food retailers, discounters and others — are studied. Through case methodology, the role that managers play in problem solving and development of strategies are studied. Topics include: positioning for success; retailing organizations; retail economics; pricing strategy; and entrepreneurial retailing. Prerequisite: MKT 370. Credit 3 units.

B55 MKT 470E Pricing Strategies
This course equips students with the concepts, techniques, and latest thinking on assessing and formulating pricing strategies. Through lectures, in-class discussions, case studies, group project/presentations, and pricing simulation games, students learn to use the fundamental analytical tools, theories and conceptual frameworks to formulate proactive pricing strategies improving the firm's profitability. Topics of discussion include incremental contribution analysis, EVC analysis, segmentation and price customization, competitive pricing strategy, pricing innovative products, price promotion, psychological/behavioral issues in pricing, dynamic pricing, pricing and market making on the internet, and pricing of digital products and services. Prerequisite: MKT 370. Credit 3 units.

B55 MKT 477 International Marketing
Addresses three fundamental decisions confronting a company whose operations extend beyond the domestic market: (1) choosing which foreign markets to penetrate; (2) determining the mode of market entry; and (3) devising the international marketing plan. Topics include: global marketing planning; environmental and cultural influences on international marketing decisions; organizational and control issues in international marketing decisions; global marketing intelligence; foreign risk and feasibility studies; and issues of ethics in other countries. Prerequisite: MKT 370. Credit 3 units. BU: IS EN: S

B55 MKT 477S International Marketing Sydney
This immersive program, a spring semester 3-credit mini-A course and study-trip to New York City, aims to introduce students to the study of the luxury goods and fashion industries, their structure, economics and dynamics. Enrollment limited to 16. Prerequisites: MKT 370 and application via sa.wustl.edu. Credit 3 units.

B55 MKT 477S International Marketing Sydney
Many companies, large and small, prepare a business environmental analysis for each country in which they do business. The analysis assesses the (consumer, industrial or organizational) demand in a particular country for merchandise like the company markets as well as the company's ability and willingness to supply that merchandise to that country. Students prepare a marketing environmental analysis for some merchandise (either a new or existing service or product) of their
choice from a company of their choice in Australia. Prerequisites: MKT 370 and admission to the Sydney Internship Program. Credit 3 units. BU: IS

B55 MKT 478 New Product Management
In a rapidly changing business environment where product life cycles are shortening and competition is intensifying, creating new products has become the most significant and most risky activity within a firm. This course aims to develop an understanding of the "state of the art" strategies, processes and methods used in developing new products. This course focuses on key new product issues including generation and assessment of ideas, value creation in competitive markets, the impact of disruptive technologies on mainstream industries, the diffusion of innovative new products and services, business model innovation, marketing mix (4P's) decisions for new products, concept and market testing, first mover dis/advantage, and expanding the product portfolio. This is a case-based course, where students participate in a dynamic and interactive group environment to develop the capacity to use the information learned to make informed new product decisions. Prerequisite: concurrent enrollment in MKT 378. Credit 3 units.

B55 MKT 480 Marketing Strategy
Successful business plans are dependent on well-defined and carefully crafted marketing strategies. In this course, students explore the interconnections between business strategy and marketing strategy through a series of lectures, case discussions, and participation in an online marketing simulation exercise. The course also places heavy emphasis on the discussion of topical marketing issues faced by companies in the current environment. Students are required to read the relevant business press and bring real world issues into the class for brainstorming and interactive discussion. Through this process, students become astute observers of the strategic trends in marketing across a variety of industries. Prerequisite: MKT 370. Credit 3 units.

Operations and Supply Chain Management

B58 OSCM 356 Operations Management
Introduces a variety of common operations issues that are frequently dealt with in both manufacturing and service industries and that affect other functions of the business. Specific topics include: process design and control; quality; waiting line models; inventory systems; and supply chain management. Prerequisites: ACCT 2610, MEC 290 and completion of OSCM 230 or QBA 200A or concurrent enrollment in QBA 200A. Credit 3 units.

B58 OSCM 400C Analytics for Operational Excellence
This course provides advanced modeling and analytic tools to analyze operational processes, identify key drivers for business performance, and prescribe action plans to improve operational excellence. The emphasis is on modeling tools that are widely used in diverse industries and functional areas, including operations, finance and marketing. Applications include service capacity planning, advertising planning, revenue management, portfolio optimization, corporate risk management, environmental policy modeling, among others. Prerequisite: OSCM 356. Credit 3 units.

B58 OSCM 400D Supply Chain Management
A supply chain is a network of all firms and relationships that get a product to market, including the original acquisition of raw materials, production of the item at a manufacturing facility, distribution to a retailer, sale of the finished item to the customer, and any installation, repair, or service activities that follow the sale. How to effectively manage the supply chain is a central issue for all levels of management, regardless of industry. More demanding customers, the internet and digital technology, growing competitive pressures, and globalization create new opportunities and challenges on how supply chains should be configured and managed. Many innovations and new business models have emerged, arising from application of information technology and reconfiguration of the supply chain network. Prerequisite: OSCM 356. Credit 3 units.

B58 OSCM 458 Operations Planning and Control
Examines the concepts and techniques essential for effective operations planning and control in various manufacturing and service organizations. The course builds on the knowledge and skills acquired in core operations management and quantitative method courses, and covers key topics including inventory management, linear and nonlinear programming, aggregate planning, Markov chain models. The course introduces students to the major trade-offs and issues in operations planning and control, as well as important tools and techniques available for helping operations managers to make analysis and decisions. Prerequisite: OSCM 356. Credit 3 units.

Organizational Behavior

B66 OB 360 Organization Behavior Within the Firm
Provides a toolbox of analytical and interpersonal skills that are necessary to be an effective manager. Learn how these skills can have a significant impact on profitability. Objectives: (1) understanding research conclusions through explaining the dimensions of individual differences and how they impact motivation, job satisfaction and ultimately organizational effectiveness; explaining group dynamics and how they determine effectiveness; identifying organizational implications of research; evaluating organizational structure and job design; evaluating organizational culture and identifying methods of culture management; and identifying the steps and roadblocks in the process of organizational change; (2) developing management skills by writing effective reports to senior management that analyze individual, group and organizational effectiveness in actual organizations; and applying your understanding of individual, group and organizational dynamics to improve your team’s effectiveness on group projects. Prerequisite: MGT 100 or sophomore standing.
Credit 3 units. EN: S

B66 OB 400C Women in Leadership
In this course we take a multifaceted approach to learning about women and leadership to better prepare students to lead in organizations. To do this we learn from notable leaders who share their experiences and advice with the class. These conversations are supplemented with cases and readings of women leaders pulled from a range of organizations as well as a review the current state of empirical evidence about the status of women as leaders. Finally, there is time to engage in deep reflection about what students expect from their careers, as well as a chance to consider the pathways they must take to become effective and inclusive leaders in increasingly diverse organizations.
Credit 1.5 units.

B66 OB 400D Thinking Creatively and Leading Creative Teams
This course is designed for students who want to improve their ability to develop creative solutions to tough business problems and to be able to inspire creativity in others. In a world of rapid change and increasing complexity, existing approaches simply won’t do it anymore — at least not for long. Thus, the ability not only to update and refresh existing products and services but also to generate ideas for new-to-the-world offerings becomes indispensable. Students who have mastered the skills of creative thinking and doing and can foster those skills in others are therefore in a position to add tremendous value to their firms and, ultimately, to society. This course is designed to help students understand and begin to master those skills.
Prerequisite: OB 360.
Credit 1.5 units.

B66 OB 461 Negotiation
Skillful negotiation is an important aspect of management. Designed to improve a student’s skills in analyzing and conducting negotiations in a variety of settings. Topics include two-party bargaining, multiparty bargaining, arbitration and coalition formation.
Prerequisite: OB 360.
Credit 3 units.

B66 OB 462 Leadership in Organizations
This course is designed to fulfill three broad objectives for students. The first is to provide a useful overview of the primary leadership perspectives, focusing on how each framework links individual leadership to organizational outcomes. The second objective involves students in self-assessment of strengths and weaknesses in relation to the abilities and skills that are predictive of leadership effectiveness. Third, the course is designed to enable participants to articulate an effective strategic plan for individual leadership development. Course topics include perspectives on individual leadership effectiveness, leadership and motivation, developing subordinates, leading groups and teams, leading the resolution of conflict, and leading organizational change.
Prerequisite: sophomore standing.
Credit 3 units.

B59 QBA 120 Managerial Statistics I
The first of a two-course sequence in business applications of statistics, focused on descriptive statistics, probability and distributions, inferential statistics, and linear regression. Approximately the first quarter of the course is about descriptive statistics and applications of covariance. The second quarter is devoted to probability: basic rules, conditional probabilities, Bayes’ theorem, expected values, and probability distributions. This work is followed by an introduction to sampling distributions and inferential statistics. Confidence intervals and hypothesis testing are introduced to make inferences about parameters. The last one-fourth of the course focuses on simple linear regression. Throughout the course, functions, data analysis, VBA, and solver features of Excel are introduced. Prerequisite: completion or concurrent enrollment in Math 132.
Credit 3 units.

B59 QBA 121 Managerial Statistics II
The second of a two-course sequence in business applications of statistics, focused on forecasting. The course is devoted to the use of linear regression models in business, and ways to deal with problems of collinearity, outliers, non-linear relationships, and heteroscedasticity. Advanced topics, including time series regression and logistic models, are covered as time permits. There are quizzes and group projects in addition to a midterm and final. Prerequisites: QBA 120 or approved equivalent; Math 132; and MEC 290 or Econ 1011.
Credit 3 units.

B59 QBA 200A Analytics and Modelling for Business Decisions
The primary goal of the course is to help students become effective problem solvers, smart consumers of data and, finally, intelligent business decision makers in various management situations. The course utilizes structured problem solving approaches heavily relying on data for defining the problem, uncovering useful relationships between critical variables and outcomes, defining measures for evaluating alternatives, modeling underlying conceptual relationships and constraining resources, and proposing via rigorous search process of exploration and exploitation “best fitting and robust” solutions for the given environment and its underlying uncertainties. Applications of those analytic tools will be illustrated using examples from various business functional areas, finance, marketing, operations, economics and strategy.
Prerequisites: QBA 120 and completion or concurrent enrollment in QBA 121.
Credit 3 units.

Degree Requirements
BSBA Degree Requirements
The Bachelor of Science in Business Administration degree is awarded to students by recommendation of the faculty. Standards established by the faculty for recommendation are:
1. Satisfactory completion of requirements regarding required and elective courses, accumulation of a minimum of 120 units of course work, and satisfactory fulfillment of other requirements established in accordance with the rules and regulations of the Olin Business School.

2. Completion of the last 30 units in residence at Washington University for entering freshmen. Transfer students must complete a minimum of 60 units in residence at Washington University.

General Requirements (a minimum of 48 units)

Each student must complete a minimum of 48 units outside of the Olin School to include the following specific requirements:

A. College Writing (3 units): Students must demonstrate proficiency in reading and writing the English language by satisfactorily completing CWP 100 with a grade of C- or better.

B. Calculus (3-6 units): Students must complete Math 131–Math 132 or other calculus courses approved by the Olin Business School.

C. Distribution Requirements (18 units): Students must complete 3 units of physical and life sciences, 3 units of humanities, 6 units of international studies, 3 units of behavioral analysis, and 3 units of ethics and values. Approved course selections are available in the university's Course Listings.

D. Advanced Electives (12 units): Students must complete at least 12 graded units of advanced course work. Advanced electives are defined as any course numbered 300 or above that is offered as any day division course. Advanced electives also may satisfy a distribution requirement.

Professional Requirements (a minimum of 60 units)

A. Core Requirements (41 units):

   ACCT 2610 Principles of Financial Accounting 3
   ACCT 2620 Principles of Managerial Accounting 3
   MEC 290 Microeconomics 3
   MEC 292 Global Economy 3
   or Econ 1021 Introduction to Macroeconomics
   MGT 100 Individual in a Managerial Environment * 3
   MGT 150A Foundations of Business 2
   MGT 201 Management Communication 3
   FIN 340 Capital Markets and Financial Management 3
   MKT 370 Principles of Marketing 3
   OB 360 Organization Behavior Within the Firm 3
   OSCM 356 Operations Management 3
   QBA 120 Managerial Statistics I 3
   QBA 121 Managerial Statistics II 3

   QBA 200A Analytics and Modelling for Business Decisions 3

   Total units 41

*Transfer students entering Olin Business School must take one of the following: MGT 100, MGT 380 or MEC 380 to satisfy this requirement.

B. Professional Electives (a minimum of 19 units)

Professional electives are nonrequired business courses offered by the Olin Business School that may or may not lead toward a specific business major. Additional information about the specific requirements for each business major is available on our Majors (p. 809) page.

Electives (units will vary)

Students must take enough electives to earn the minimum of 120 units.

Typical Four-Year Curriculum for a BSBA Student

Typically, students must earn 30 units a year to stay on target with a four-year graduation plan.

120 credits minimum

**Notes:**

*Students may enroll in a higher level of calculus providing their academic preparation suggests a different level of calculus.

**BSBA students are assigned to enroll in their Writing course in either fall or spring semester of their freshman year. Some students may start at a different level of English preparation and may take their Writing course as late as sophomore year.

**Additional Requirements**

**A. Students must complete a minimum of 120 units including 48 units outside of the Olin School and 60 units from the Olin School. Students who substitute a nonbusiness course for a business requirement will still be required to enroll in another business course, as a minimum of 60 credits must be earned in Olin Business School.**

**B. Students must earn a minimum of 2.0 overall grade point average (GPA) and 2.0 GPA in all professional course work taken at Olin Business School.**

**C. Students must earn the final 30 units (60 units for an external transfer) toward the degree at Washington University.**

**D. Students must be recommended by the Olin Business faculty for degree confirmation by the Board of Trustees.**

**Regulations**

**A. A maximum of 15 units of pre-matriculation credit may be counted toward graduation. Pre-matriculation sources include Advanced Placement (AP), International Baccalaureate (IB), British Advanced (A) Levels and college courses taken after the junior year in high school. These units will count toward the 120 credits but will not satisfy any distribution, statistics or advanced education requirements. If a student takes a course in residence in which AP credit has already been awarded, the AP credit will be removed from the student's record.**

**B. BSBA students may earn a maximum of two majors to include two professional majors or one professional major and one major outside of the Olin School.**

**C. BSBA students may earn one or two minors, depending on the number of majors they pursue. The options are two majors and one minor or one major and two minors. Most of our minors are offered outside of Olin Business School.**

**D. Distribution requirements and advanced general electives (12 credits) must be taken for a grade. However, if a student completed a distribution/advanced course on a pass/fail basis prior to transferring to Olin Business School, then this course would count toward that requirement.**

**E. All business courses must be taken for a grade with the exception of MGT 450A.**

**F. BSBA students may enroll in one physical education course per semester.**

**G. BSBA students may enroll in one pass/fail course each semester. These credits will count only as general education electives.**

**H. BSBA students may enroll in one University College course per semester. However, these credits will not count toward the 120 units needed for their BSBA degree. The grade from this course will not be factored into the GPA.**

**I. The Olin School does not accept any online course work for transfer credit.**

**J. BSBA students may transfer up to 6 credits per summer toward their BSBA degree requirements.**

**K. BSBA students must complete 54 of the 60 professional units in residence. Course work taken on an approved Washington University international program will satisfy this residency policy.**

**L. BSBA students must complete all professional courses for each business major in residence. Course work taken on an approved Washington University international program will satisfy this residency policy.**

**M. BSBAs may double count only one course in a business major. For example, if a BSBA student is majoring in both marketing and entrepreneurship, he or she could not count B55 MKT 378 and B55 MKT 465 toward both majors.**

**N. Students are obligated to requirements and policies at the time of matriculation into the BSBA Program. However, faculty has and reserves the right to make changes to degree requirements, policies and procedures, including modifying or adding new requirements, policies and procedures at any time.**

**O. ROTC units numbered 300 or above will count toward the student's 120 units for graduation. These credits may count toward the advanced nonbusiness requirements providing the course is taken for a grade.**

**Academic Honors & Awards**

**Scholars in Business Program:** The Scholars in Business program allows alumni, corporations and friends of Olin Business School to provide scholarship funds to students of high academic promise who require financial support to attend the university. Students are considered for this award when they apply for financial aid in the fall of each year. Donors and students meet each other at the annual Scholars in Business dinner.
Dean's List: Dean's List honors are awarded to undergraduates who have completed a minimum of 14 graded units and achieved a semester grade point average of 3.6 or above. No incomplete or "N" grades may be outstanding as part of the student's semester record.

Beta Gamma Sigma Honor Society: The top 7 percent of the junior class and the top 10 percent of the senior class are eligible for invitation to Beta Gamma Sigma, the national business society. The student must have completed a minimum of 30 units at Washington University to be eligible.

Latin Honors: Graduating seniors in the top 5 percent of the class, based on overall university academic records, graduate summa cum laude. Seniors in the top 6 to 15 percent of the class graduate magna cum laude. These designations are recorded on the official university transcripts. All candidates for the BSBA degree in August, December or May will be considered as one group for purposes of final honors. Honors are determined in May for all graduates.

Honors in Management: The Honors in Management (HIM) Seminar is a two-semester sequence course that gives students the opportunity to work with senior-level faculty in a specialized format. In the fall semester, the HIM course will be team taught with various faculty members. For the spring semester, students will form teams to develop substantial research projects under the direction of one of the participating faculty for the remainder of the academic year. HIM students also must have a total of 126 credits of academic work (including MGT 490 and MGT 491) in order to receive the Honors in Management designation at graduation.

Honors Thesis: The Olin BSBA Honors Thesis challenges students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. The Honors Thesis is a two-semester sequence in which the student engages in research and analysis in the first semester and, upon successful progress, the student writes, presents and defends his or her research in the subsequent semester. Students must apply and be approved to participate in this experience. All applicants must be senior BSBA degree students in good standing with a cumulative GPA of 3.7.

Academic Regulations

Attendance

Olin Business School allows each instructor of a course to decide how many absences the student may have and still pass the course. The Olin Business School expects faculty to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their instructors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

Enrollment

BSBA students must be enrolled in a minimum of 12 units to a maximum number of 21 units each semester. Olin undergraduates will be assessed a full-time tuition charge for their course of study through eight semesters of enrollment.

Units and Grades

A unit is a measure of quantity given for one hour of lecture or recitation course a week for one semester. A grade point is a measure of the quality of work done in the course. The Olin Business School employs the following grading system in evaluating student performance:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Points Per Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
</tr>
<tr>
<td>D-</td>
<td>0.7</td>
</tr>
<tr>
<td>F</td>
<td>0.0</td>
</tr>
</tbody>
</table>

F#    Failing
I     Course work incomplete
W     Withdrawal
R     Repeat
L     Successful audit
Z     Unsuccessful audit
N     No grade submitted

Grade points per course are calculated by multiplying the number of units of a course by the grade points earned. A student may retake a course if a higher grade is required or desired. The initial grade received in the course remains on the student's record, along with an R to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing the student's grade point average.

Auditing a Course

Students may not audit a business course. However, a student may take nonbusiness courses for audit with the approval of the professor. An audited course does not count toward the student's degree requirements. A grade of L indicates satisfactory completion of an audit; unsatisfactory completion...
results in a grade of Z. Fees for auditing a course are assessed at the same rate as for all other courses.

**Incomplete Grades**

A student may be given an I (incomplete) when extenuating circumstances preclude the satisfactory completion of course work during the semester in which a particular course is taken. While an incomplete grade is sometimes appropriate, a student should make every effort to avoid the accumulation of incomplete grades. Incomplete grades are expected to be finished. Failure to finish an incomplete grade by the following semester will result in a failing grade.

**Pass/Fail Option**

A student may take a maximum of one course per semester on a pass/fail basis. A grade of P# (pass) indicates that credit has been awarded, but the work was not subject to finer evaluation. No required or business course work may be taken on a pass/fail option. This option is provided so that a student may take nonbusiness courses in subject areas with which he or she may have little familiarity.

**Minimum and Maximum Course Loads**

In Olin, business students are required to enroll in a minimum of 12 units to a maximum of 21 units each semester at Washington University. A minimum 2.0 grade point average in all course work taken at the university and a 2.0 in all professional course work taken at Olin must be achieved to satisfy BSBA graduation requirements.

**Repeating a Course**

A student may retake a course if a higher grade is required or desired. The initial grade received in the course remains on the student's record, along with an R to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing the student's grade point average.

**Academic Probation and Suspension**

Approximately three weeks following the end of a semester, the Academic Review Committee reviews the record of each enrolled student. Students must attain and maintain a minimum 2.0 grade point average in professional (business) and general courses to be in "good academic standing." Failure to achieve minimum standards may result in the student being placed on academic probation or becoming ineligible for future registration in the Olin Business School. Failure on the part of a student to meet the conditions of probation in the following semester may result in dismissal from the school.

Another cause for probationary action or dismissal is failure on the part of a student to complete professional requirements within a reasonable time period. Students who fall behind in completing requirements should make an appointment to see their primary adviser to work out a plan for making up the work at the earliest possible time. Registration is restricted to a maximum of 15 credits for students on academic probation.

**Leave of Absence Process**

If a student is an undergraduate in good standing at the completion of a term, he or she is eligible to apply to take a leave of absence from the Olin Business School. The student should first contact his or her academic adviser to discuss the situation. Students must submit a request for a Leave of Absence to their four-year academic adviser. A student on an approved leave of absence should submit a Reinstatement Form by March 1 for a fall semester return or October 1 for a spring semester return.

A student wishing to take a medical leave of absence (MLOA) should first talk with a representative from Student Health Services. Then, the student should submit the MLOA petition to his or her business school adviser. A student's request for the MLOA or re-enrollment from an approved MLOA will be reviewed by the BSBA officer once the recommendations from Student Health Services are received. The decision on whether or not to grant the request for a medical leave of absence or re-enrollment will be communicated to the student by the BSBA Programs Office. A student considering a medical leave of absence should first contact Student Health Services to initiate this leave.

In either case, the student must complete the Leave of Absence or the Medical Leave of Absence form and submit it to his or her four-year academic adviser.

Students who leave the university without filing either a Leave of Absence or a Medical Leave of Absence will be considered officially withdrawn from the university. In this instance, a student must re-apply for admission if he or she wishes to return to the university.

**Transfer Credit**

Students who are enrolled at Olin and wish to receive transfer credit for course work subsequently taken at another institution must receive approval from their adviser prior to the time the course is to be taken. General guidelines are as follows:

- The institution must meet accreditation requirements.
- No course work may be taken at a two-year institution after a student has accumulated 60 credit hours of work.
- Credit will not be given for course work taken at another institution during a student's last 30 credit hours.
- A catalog description for each course must be submitted with the petition for review.
• No credit will be granted for course work taken online through another university.
• A maximum of 6 units may be taken during a summer program from another university.
• 54 of the 60 professional units must be taken in residence.
• All business major course work must be taken in residence. While major course work can be taken through an approved study abroad program, only one course will be counted for each business major.
• No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity policy.

The Olin School expects that all business courses be taken at Washington University. Under certain circumstances, permission may be granted for a student to take a business course from another university with accreditation by AACSB–International (Association to Advance Collegiate Schools of Business). In order for consideration to be given, a syllabus showing text used must be submitted. However, a BSBA student must still complete 54 of their 60 business units in residence. Any course counting toward a business major must be taken in residence also.

No transfer credit (including course work taken through a Washington University approved study abroad program) will be accepted with less than a C grade.

University College Courses

BSBA students may enroll in one University College course per semester. However, these units will not count toward the 120 units needed for the BSBA degree nor toward a student’s GPA.

Pre-Matriculation Units

Pre-matriculation units are earned before the student’s enrollment at Washington University as a first-year student. These units would include Advanced Placement (AP) examinations, International Baccalaureate (IB), British Advanced (A) Levels and college credit earned after the student’s junior year in high school. These units will be noted on the student’s transcript. The maximum number of pre-matriculation units awarded is 15. These pre-matriculation credits will transfer as general elective course work and will not satisfy any distribution requirement. All BSBA students and second majors will be required to take QBA 120 Managerial Statistics even when AP credit is earned for Math 2200 Elementary Probability and Statistics.

Majors (directory)

Below is a list of majors offered by the Olin Business School. Visit the Majors section of the Olin Business School page (p. 809) in this Bulletin to view more information about a specific major:

- Accounting
- Economics and Strategy
- Entrepreneurship
- Finance
- Health Care Management
- Leadership and Strategic Management
- Marketing
- Operations and Supply Chain Management

Minors (directory)

Non-BSBA students are eligible to pursue a minor in one of the specific fields of business listed below. Visit the Minors section of the Olin Business School page (p. 814) in this Bulletin to view more information about a specific minor:

- Accounting
- Business Economics
- Business of Entertainment
- Business of Sports
- Entrepreneurship
- Finance
- General Business
- Health Care Management
- International Business
- Leadership
- Marketing
- Operations and Supply Chain Management
- Strategy
Engineering & Applied Science

Mission Statement
The mission of the School of Engineering & Applied Science (SEAS) at Washington University is to serve society as a center for learning in engineering, science and technology. It is our duty to disseminate and create knowledge through teaching, research, publications and the transfer of important ideas and research into the development of new products and technologies. We strive to provide an environment that nurtures critical thinking and the education of innovators and leaders for the future.

Undergraduate Degree Programs
The School of Engineering & Applied Science offers four-year, full-time programs of instruction leading to various professional Bachelor of Science degrees. Bachelor of Science degrees are available in the fields of biomedical engineering, chemical engineering, computer engineering, electrical engineering, mechanical engineering, and systems science and engineering.

If a student is not preparing for a professional engineering career (i.e., one that might one day lead to licensure as a professional engineer [P.E.]), but is interested in an academic program broadly based on the engineering sciences, the School of Engineering & Applied Science offers the Bachelor of Science (BS) Major in Applied Science degree with several options including Chemical Engineering, Electrical Engineering, Mechanical Engineering, Systems Science & Engineering, and Bachelor of Science in Computer Science. These degree options provide more flexibility for students who do not intend to become licensed engineers and want to select their course work according to their personal educational objectives. For example, some students use this flexibility to gain technical background and training while pursuing or preparing for professional training in medicine, business or law. However, although the flexibility exists to do so, it is not necessary to combine an Applied Science degree program with another major or degree. Students also can use this added flexibility to achieve a well-rounded undergraduate education by selecting courses from across the university while pursuing a major in the School of Engineering & Applied Science or to deepen their understanding in their chosen major.

BS in Engineering (Individually Designed Major)
Many of the most interesting and developing areas of engineering and applied science do not fit within a single undergraduate major. Students can create an Individually Designed Major (IDM) under the direction of a faculty adviser. Sample IDM's include biomedical informatics, imaging, energy engineering, robotics, computer graphics and more.

The requirements to be admitted to an IDM are more stringent than those for our other engineering degree programs, and the IDM will not be available to students when they first enter Washington University (so it will not be listed on the admissions application as an option).

Students applying for an IDM should:
- have already completed at least one semester at Washington University.
- apply before the beginning of the junior year.
- have at least a 3.5 cumulative GPA at Washington University and be maintaining good standing in the School of Engineering.
- find an Engineering faculty member who will agree to serve as that student's IDM adviser. The student and adviser will design a plan of study, which lists the courses that must be successfully completed to earn the IDM. That plan must include at least 42 engineering units of credit.
- satisfy all other general engineering degree requirements (p. 930).
- present (with the help of their adviser) the plan to a standing engineering committee (normally, the Engineering Undergraduate Studies Committee), which will then assess the proposed plan and will approve or deny the request.

Combined Majors and/or Multiple Degrees

Multiple Majors in Engineering
All undergraduate divisions at Washington University allow students to pursue majors and degrees in more than one division. The following options are available:

Second Degrees. A student in any undergraduate division of the university may be allowed by another division to pursue a second bachelor's degree. For this, the student must satisfactorily complete all of the degree requirements for both degrees in order to earn two diplomas. These requirements may include a “residency” requirement. For engineering majors, this residency requirement is stated on the Engineering Degree Requirements (p. 930) page. In addition, the College of Arts & Sciences requires any student earning an AB degree and a bachelor's degree from another division to earn a minimum of 150 total units. If the additional residency and units requirement for a second degree are incompatible with a student's plan, then the student should consider a second major as a more convenient and equally viable alternative.

Second Majors. A student pursuing a bachelor's degree in engineering may also pursue second majors offered by other undergraduate divisions. There are three second majors offered by the School of Engineering & Applied Science: computer
Scholarship support given in 35% of tuition for students with a major GPA of 3.0-3.14, 45% of tuition for students with a major GPA of 3.15-3.24, 25% of tuition for students with a major GPA of 3.25-3.34. Award amounts vary and are based upon a student's major GPA that is computed at the end of the student's junior year. The major GPA is found in the online degree audit system.

Minors. Undergraduate students are allowed to pursue minors offered by any undergraduate division of the university. A minor usually requires five to six courses. The minor program's home division sets the requirements for admission and completion of the minor program. Students may declare a minor online via WebSTAC (https://acadinfo.wustl.edu/WebSTAC.asp) up until the time they have filed an Intent to Graduate. An engineering student who completes all of the requirements will have the award of the minor noted on the official transcript; no reference of the minor is noted on the diploma.

Residency Rule for Engineering Minors: No more than 6 units of credit transferred from another institution (outside Washington University) can be used to meet the requirements of any minor offered by the School of Engineering & Applied Science. The remaining units (up to the amount required for the minor) must be applicable units from Washington University. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

Process Control Systems
The Department of Energy, Environmental & Chemical Engineering and the Department of Electrical & Systems Engineering jointly sponsor a double-degree program in process control systems. Undergraduate degrees are earned in both Chemical Engineering and in Systems Science & Engineering. The emphasis in this course of study is on the science and technology of process automation with a solid traditional foundation in the two major disciplines. Graduates of the program can contribute, through automation, to improved product quality, reduced manufacturing costs, greater capital productivity, and improved safety and environmental quality.

Bachelor's/Master's Program in Engineering
This program provides students the opportunity to earn SEAS master's degrees which includes Sever master's degrees. Interested students are encouraged to discuss the program with faculty advisers by the end of their junior year in order to best develop a plan for their master's study. Students must meet the admission requirements and application deadlines stipulated by SEAS and the department of interest. A minimum 3.0 GPA is required for admission, but some programs may have higher GPA requirements. Each SEAS department has the option to participate as well as to decide which master's programs to offer students.

Scholarship support may be offered to students during their master's study. Full-time student status is typically required to be eligible for scholarship support.

SEAS Undergraduates
The Bachelor's/Master's Program for current SEAS undergraduate students normally takes one additional year to complete and requires participants to complete at least 150 total units. When approved by the department, up to 6 units of the 150 total units can be used to satisfy requirements for both degrees. However, at least 150 units must still be completed, and all stipulated degree requirements for all programs must be satisfied.

To satisfy residency for both degrees, all participants must complete a minimum of 84 applicable Washington University units, which includes a combination of at least 60 in-residence units counted for the SEAS undergraduate degree and at least 30 in-residence units counted for the SEAS master's degree, with up to 6 units used to satisfy requirements for both degrees if approved by the department.

The cumulative GPA used to determine undergraduate final Latin honors will include all undergraduate and graduate course work completed up until the time Latin honors are officially determined in May of each year.

Scholarship Support
Scholarship support for the final year of study (the master's year of study) is automatically awarded to students who are admitted into the program. For a student who began as a first-year student at Washington University, this typically would be in the student's fifth year of study. Any scholarship support given is based upon a student's major GPA that is computed at the end of the student's junior year. The major GPA is found in the online degree audit system.

Students may apply during their junior year but before September 1 of their senior year. Admission offers will begin on September 1 of the senior year, and the major GPA at the end of the junior year will be used to determine the amount of scholarship support awarded. Award amounts vary and are granted on a graduated scale as shown below:

<table>
<thead>
<tr>
<th>Major GPA after junior year</th>
<th>Scholarship support given in the final master's year</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.75-4.00</td>
<td>50% of tuition</td>
</tr>
<tr>
<td>3.65-3.74</td>
<td>45% of tuition</td>
</tr>
<tr>
<td>3.55-3.64</td>
<td>40% of tuition</td>
</tr>
<tr>
<td>3.45-3.54</td>
<td>35% of tuition</td>
</tr>
<tr>
<td>3.35-3.44</td>
<td>30% of tuition</td>
</tr>
<tr>
<td>3.25-3.34</td>
<td>25% of tuition</td>
</tr>
</tbody>
</table>
Non-SEAS Undergraduates

Qualified students from other distinct populations listed below are also eligible to participate in the Bachelor's/Master's Program.

- Non-SEAS Washington University undergraduates (i.e., students from other undergraduate divisions of Washington University)
- Students graduating from affiliated Engineering Dual Degree Program schools who did not matriculate as Engineering Dual Degree Program students planning to earn SEAS undergraduate degrees

Students in these populations do not earn SEAS undergraduate degrees but they do earn SEAS master's degrees. These students are eligible to apply during the last semester of their undergraduate study and must complete their undergraduate degrees before they are designated as being primary SEAS master's students. Admitted students might take longer than one year to complete the requirements for a master's degree.

A minimum of 24 units of residency counted for the SEAS master's degree is required for all students. When approved by the department, up to 6 units can be used to satisfy requirements for both the non-SEAS undergraduate degree and the SEAS master's degree.

A reasonable number of required prerequisite courses as defined by the department may be taken while admitted to the master's program, but these courses will not be counted toward the SEAS master's degree if they are courses not normally counted toward its requirement. Prerequisite courses will count in the student's GPA when determining probation/suspension eligibility and Satisfactory Academic Progress (SAP) standards. Poor performance (earning less than B- grades) in these courses can be grounds for removal from the program by the department.

Scholarship support is available to participants who enroll in this program immediately after earning an undergraduate degree and maintain full-time enrollment in this master's program. Depending upon the master's program selected, scholarship support may be awarded for up to four full-time semesters. Part-time graduate enrollment might be possible with prior permission, but students will be required to maintain Satisfactory Academic Progress (SAP) standards connected to financial aid in order to maintain scholarship and financial aid support. Discounts below can be applied to “E” courses taken at Washington University during the summer if those courses count toward fulfilling the requirements of the master's degree. Scholarship support used during a summer session will count as one of the total semesters of scholarship support available to the student.

<table>

Other Bachelor's/Master's Programs

These programs allow engineering undergraduates to earn master's degrees outside of the School of Engineering & Applied Science. Students in these 3/2 programs will pay the standard full-time undergraduate tuition rate for the fourth year, except for the MBA program which charges a premium above the undergraduate tuition rate. Students will receive financial aid for the fourth year based upon their eligibility for undergraduate financial aid awards, including Pell grants.

There is no commitment for undergraduate financial aid beyond the fourth year of study; students in 3/2 programs may apply to the professional programs for graduate student financial aid for study in the professional program beyond the fourth year.

This policy applies to the current 3/2 programs involving bachelor's/master's programs in Engineering, Social Work and Business and to any future Washington University 3/2 programs.

BS/MBA Program

The School of Engineering & Applied Science and the Olin Business School offer a five-year program leading to the Bachelor of Science engineering degree and the Master of Business Administration degree. The purpose of the program is to provide students with the opportunity to develop an educational background particularly in demand by industry.

Students should apply to this joint program by April 1 of their junior year. They must complete the application for admission to the Olin Business School, available through the business school. There is no GPA requirement, but students must take the Graduate Management Admission Test (GMAT). Registration materials for the test may be obtained through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and personal interviews.

The BS/MBA student's fourth-year curriculum is composed largely of business courses. The fifth-year curriculum is divided almost evenly between business and engineering courses. Because merging of the two curricula results in very tight scheduling, it is possible that course overloads may be necessary to complete both programs in 10 semesters. Students
are strongly urged to meet with their advisers to plan the remaining years of the program.

**Dual Degree Program**

The School of Engineering & Applied Science offers a Dual Degree Program with numerous other liberal arts (http://engineering.wustl.edu/prospective-students/dual-degree/Pages/affiliated-schools.aspx) colleges and universities. Qualified students earn both a non-engineering baccalaureate from the first school and a Washington University bachelor's degree in engineering by attending the affiliated institution for three or four years, then completing the program with two years of concentrated engineering study at Washington University.

If students are enrolled at an affiliated institution, they may apply for admission to dual degree study under this program, provided they are recommended by an official representative of their college or university and will receive or have received the non-engineering baccalaureate. For more information, please visit the Dual Degree Program website (http://engineering.wustl.edu/DualDegreeProgram.aspx).

**Engineering Undergraduate Degree (Undergraduate 2-Year Option)**

Students enter as undergraduate students and complete a liberal arts degree (from their current school) and an engineering undergraduate degree (from Washington University). Participants are undergraduate students who commonly follow a 3/2 or a 4/2 schedule, entering Washington University after their junior or senior year. Please note that all students earning an undergraduate engineering degree are required to complete a minimum of 60 course units taken at Washington University.

**Engineering Undergraduate & Graduate Degrees (Graduate 3-Year Option)**

Students enter as graduate students and complete both a liberal arts degree (from their current school) and then an engineering undergraduate degree & engineering master's degree in three years at Washington University. The engineering master's degree and undergraduate degree can be in different areas. Participants commonly follow a 3/3 or 4/3 schedule, entering Washington University after their junior or senior year. Please note that all students earning both an undergraduate and graduate degree are required to complete a minimum of 84 course units at Washington University. The GRE is not required for admission.

**Study Abroad and International Experiences**

Students in the School of Engineering & Applied Science can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience.

These opportunities will help students become global citizens better able to address current issues.

For information about these programs, please visit the SEAS website (http://engineering.wustl.edu/our-school/initiatives/Pages/global-outreach.aspx).

**Cooperative Education and Internships**

The Engineering Cooperative (Co-op) Program is coordinated through the Career Center. It offers students a unique opportunity to gain in-depth engineering experience prior to graduation. Co-op students learn about a field of engineering by working alongside practicing engineers on extensive projects of the sort that are typically undertaken by entry-level engineers. This type of experience gives students a chance to preview a career path and employment options, gain career clarification, improve communication and team project skills, and enhance marketability with future employers. The cooperative education experience is typically completed over the course of a semester and a summer term.

In addition, the Career Center provides resources for students searching for summer internships and/or part-time fall or spring internships with local companies while enrolled in courses.

For more information on co-ops and internships, please visit the Career Center's website (http://careercenter.wustl.edu) or call 314-935-5930.

**Pre-Medical Education**

The School of Engineering & Applied Science makes available, as options within its undergraduate degree programs, curricula that prepare students for entry into medical, dental or veterinary school while they pursue the undergraduate degree. These curricula were formulated in recognition of the increasing importance in medicine of the methods and subject matter of the basic engineering sciences. The student who successfully completes one of the curricula will be well prepared for the study of medicine and will have, in addition, a solid background in engineering. Moreover, the student who decides not to go on to medical school will have an exceptionally wide selection of options, including not only those commonly open to the graduate in engineering, but also those of graduate study in biomedical engineering. In accordance with the recommendations of the school's Pre-Medicine Committee, all curricula include, in addition to the normal degree requirements, the following courses:

- **Biology:** Biol 2960, Biol 2970
- **General Chemistry:** two semesters with lab
- **Organic Chemistry:** two semesters with lab
- **Psychology:** Psych 100B
Sociology: AMCS 226

Many medical schools have other assorted prerequisites, which can be found in the AMCAS Instruction Manual. Students may download the manual from the Association of American Medical Colleges (AAMC) website (http://www.aamc.org).

If students are interested in attending medical or dental school, they must consult and register with the Pre-Medicine Committee before the end of their sophomore year. Engineering students should contact the pre-medical adviser in Engineering Student Services (https://engineering.wustl.edu/current-students/student-services/Pages/premedicine.aspx), Lopata Hall, Room 303.

There is extensive detailed information concerning the Medical College Admission Test, the choice of advanced biology or chemistry courses, and the choice of medical school that should be discussed prior to the beginning of the junior year. Students requesting letters of recommendation from the Pre-Medicine Committee must do so in writing by the end of the fall semester of the senior year. The Pre-Medicine Committee reserves the right not to write letters for students deemed not qualified.

Engineering Summer School

The School of Engineering & Applied Science offers a variety of engineering courses each summer. Class times are varied to accommodate both traditional daytime students and those with full- or part-time employment. The Engineering Summer School calendar comprises one full eight-week evening session as well as several accelerated sessions of shorter duration.

If students are interested in enrolling in an engineering summer course, they can obtain further information, advice and registration materials in Lopata Hall, Room 303, 314-935-6100.

Student Services

Engineering Student Services

Engineering Student Services, located in Lopata Hall, Room 303, has three main areas: Admissions, Advising Support, and Registrar. Our admissions officers work closely with the university Admissions Office to provide current and useful information to students and parents who are learning about our university, our community and the opportunities available in the School of Engineering & Applied Science. The advising staff has a comprehensive knowledge of all campus resources and can help with such items as tutoring, international studies, assistance with the registration process, and general advising. The registrar handles class scheduling, transfer and AP credit, course registration, graduation eligibility, and other student records-related processes. Engineering Student Services (https://engineering.wustl.edu/current-students/student-services/Pages/default.aspx) serves all students, faculty and staff. For an appointment, call 314-935-6100.

Engineering Communication Center

The Engineering Communication Center offers all engineering students, faculty and postdocs free help with their engineering communication needs. The faculty who staff the center work with individuals to define audiences and purposes, develop and organize ideas, create effective graphics and page design, and sharpen self-editing skills. Help is offered for résumés and employment correspondence, proposals, formal reports, lab reports, graduate program application statements, and presentations. For an appointment, call 314-935-4902 or email ecc@seas.wustl.edu.

The Career Center

The Career Center helps engineering students prepare for a lifetime of career management by offering innovative approaches to help prepare them for a successful co-op, internship and job search. The Career Center offers a variety of services and resources for Engineering undergraduate and graduate students.

Whether students are looking for a summer internship, a co-op or a full-time job, the center is here to help. The Career Center offers a breadth of resources including Career Options; an online job, co-op and internship database; the Engineering Mentoring Program; Job and Internship Search Teams; special events; skill-building workshops; career fairs and on-campus interviews; and résumé referrals for job opportunities. The Career Center offers one-on-one career guidance to students at any stage of their career-planning process. Students are encouraged to meet with a career adviser early in their academic career and at least once each year to establish a relationship. To schedule an advising appointment, please contact 314-935-5930 or email careers@wustl.edu or visit the website (http://careercenter.wustl.edu).

Course Descriptions

For administrative purposes, the School of Engineering & Applied Science is subdivided into five academic departments: Biomedical Engineering (E62); Computer Science & Engineering (E81); Electrical & Systems Engineering (E35); Energy, Environmental & Chemical Engineering (E44); and Mechanical Engineering & Materials Science (E37). Each department may offer courses leading to one or more bachelor’s, master’s or doctoral degrees.

The courses of instruction are numbered according to the following system:

- 100 to 199 are primarily for first-year students.
- 200 to 299 are primarily for sophomores.
- 300 to 399 are primarily for juniors.
- 400 to 499 are primarily for juniors and seniors, although certain courses may carry graduate credit.
• 500 or above are offered to graduate students and to juniors and seniors who have met all stated requirements. If there are no stated requirements, juniors and seniors should obtain permission of the instructor.

One unit of credit is given for each hour of lecture, and one unit for each two and one-half hours of laboratory. Each course description shows the course’s credit. A table of all engineering courses and, for each course, the division of its topics units is available and frequently updated on the school’s website (http://www.engineering.wustl.edu).

First-Year Program
This First-Year Program is offered as a starting point for beginning students and their advisers when planning each student's individual course schedule.

A typical first-year course load totals 14 to 16 units for each semester, and it is not wise to enroll for more than 16 units during the first semester. It may be that a load of less than 14 units is desirable. Students should enroll in the following courses:

Calculus: Beginning engineering students with previous calculus course work usually begin with Math 132 Calculus II. Students with a strong mathematics background may be ready for Math 233 Calculus III or even Math 217 Differential Equations.

Physics and/or Chemistry: If biomedical engineering or chemical engineering is a likely major, chemistry and physics should be completed during the first year; for other majors, physics is the recommended choice.

Other Courses: Most first-year engineering students also enroll in one or more humanities/social sciences courses, engineering courses at the 100 level, and perhaps a computer science course. If students have a major or are strongly leaning toward a major, they should follow the recommendations for that major.

English Proficiency: The English proficiency requirement must be completed as soon as possible. Refer to the Engineering Degree Requirements (p. 930) for further details on this requirement.

** required for Biomedical Engineering, Chemical Engineering and Pre-Medicine students

Recommended Courses

The following list recommends course sequences for each engineering major.

Biomedical Engineering: BME 140, first semester; Biol 2960, second semester.

Chemical Engineering: EECE 101, first semester.

Computer Engineering: CSE 131, first semester; CSE 132, second semester.

Computer Science: CSE 131–CSE 132, first and second semester; CSE 240, second semester.

Electrical Engineering: CSE 131 and ESE 103, first semester; ESE 260, second semester.

Mechanical Engineering: MEMS 202, first semester.

Systems Science and Engineering: CSE 131, first semester; Math 309, first or second semester; ESE 205 Introduction to Engineering Design, second semester.

Fields of Study

• Biomedical Engineering (p. 841)
• Computer Science & Engineering (p. 852)
• Electrical & Systems Engineering (p. 871)
• Energy, Environmental & Chemical Engineering (p. 897)
• Mechanical Engineering & Materials Science (p. 911)
• Process Control Systems (p. 928)
• University of Missouri-St. Louis/Washington University Joint Undergraduate Engineering Program (p. 930)
Biomedical Engineering

About Biomedical Engineering

Biomedical engineering is an interdisciplinary field in which the concepts, methods and techniques of engineering are applied to solving problems in biology and medicine. It applies quantitative, analytical and integrative methods from the molecular level to that of the whole organism to further our understanding of basic biological processes and to develop innovative approaches for the prevention, diagnosis and treatment of disease.

A student majoring in biomedical engineering will have the opportunity to participate in the world-class research activities of engineering and medical faculty in biomaterials, imaging, cardiovascular engineering, cell and tissue engineering, molecular cellular and systems engineering, and neural engineering. All students in biomedical engineering are encouraged to join and be active in the Biomedical Engineering Society.

Mission Statement

Our departmental mission is to serve society as a center for learning and knowledge-creation in engineering and science for the purpose of advancing biology and medicine.

Our overall educational objective is to prepare those receiving a bachelor’s degree in biomedical engineering for a variety of career paths. To that end, our undergraduate curriculum is designed to provide technical proficiency as well as communication and other professional skills so that our graduates will be able to:

• Pursue careers in the biomedical engineering industry or related fields.
• Undertake advanced study (e.g., MS, PhD) in biomedical engineering or a related field, in preparation for careers utilizing this further training.
• Complete professional degrees (e.g., in medicine, dentistry, law, business) in preparation for careers utilizing those degrees.

Academic Programs

The Bachelor of Science in Biomedical Engineering (BS–BME) is designed to prepare graduates for the practice of engineering at a professional level and is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

The curriculum is structured around a basic core of 87 credits. In addition, a complementary set of courses totaling at least 33 credits completes the degree requirements.

In order to satisfy ABET (http://www.abet.org) requirements, all professional engineering curricula at the baccalaureate level must include the equivalent of one and one-half years of engineering topics, to include engineering sciences and engineering design appropriate to biomedical engineering. The BS–BME degree at Washington University requires 47 credits of engineering topics. The basic core curriculum includes 35 engineering topics credits. Therefore, students pursuing a BS–BME degree will need 12 to 15 additional engineering topics credits beyond the basic core curriculum. They also may receive up to 6 credits of academic credit for a research or design project by registering for BME 400, BME 400A, BME 400B or BME 400C Independent Study. In addition, their course program must include sufficient laboratory experience to ensure competence in experimental design, data collection and data analysis. For more information regarding engineering topics credit requirements, please refer to the Undergraduate Curriculum webpage (http://bme.wustl.edu/undergraduate/pages/undergraduate-curriculum.aspx).

Bachelor's/Master's (BS/MS) Program in Engineering

This program allows current BME undergraduate students to earn a master’s degree with only one additional year of study. Interested engineering students should discuss the program with their BME academic and Engineering Student Services advisers by the end of their junior year in order to best develop a plan for their senior year leading into their master’s year. With adviser and departmental approval, up to 6 graduate-level credits can be shared between the BS and MS degrees; however, the combined program still requires students to complete a minimum of 150 units in total.

Double Majors

An option available to students majoring in biomedical engineering is the double major, leading to a second professional Bachelor of Science degree in one of the other engineering disciplines in four years. A degree in biomedical engineering combined with a professional degree in one of the traditional engineering disciplines can be expected to enhance employment options in industry. Depending upon the second major chosen, total unit requirements may range from 140 to 148 (or less if the student enters with AP credits). Hence, some summer work may be necessary in order to complete a double major within four academic years. To determine the specific requirements to be satisfied for both degrees, students are urged to consult with an adviser in the second department as early as possible.

Pre-Medical Preparation

Biomedical engineering is also excellent preparation for various professional schools, particularly medical schools. Many students complete their pre-medical requirements while obtaining their BME degrees. Pre-medical preparation is not a major, but rather entails fulfilling the requirements needed for entry to medical school. These generally consist of one year of college-level biology, chemistry, mathematics, English, and one
year of organic chemistry with laboratory. Further information can be obtained by visiting the Pre-Medicine webpage (https://engineering.wustl.edu/current-students/student-services/Pages/premedicine.aspx) and contacting the School of Engineering & Applied Science's Health Professions Advisor, Ron Laue (ron.laue@wustl.edu).

### Cooperative Experience

Cooperative experience is available to upper-level students at numerous life science/technology companies both in the St. Louis area and nationwide. This experience is particularly valuable for students wishing to enter industry. However, since most companies ask that students spend the equivalent of one semester and a summer, it may be difficult to complete the degree requirements in eight semesters, unless students enter with sufficient advanced placement credits and/or take summer courses.

Please visit our website for the most current and up-to-date information.

Phone: 314-935-7208
Website: https://bme.wustl.edu/undergraduate

### Faculty

#### Chair

Steven C. George (https://engineering.wustl.edu/Profiles/Pages/Steven-George.aspx)
Elvera and William Stuckenberg Professor and Chair
MD, University of Missouri
PhD, University of Washington in Seattle
Tissue engineering; microphysiological systems; vascularizing engineered tissues

#### Endowed Professors

Rohit V. Pappu (https://engineering.wustl.edu/Profiles/Pages/Rohit-Pappu.aspx)
Edwin H. Murty Professor of Engineering
PhD, Tufts University
Macromolecular self assembly and function; computational biophysics

Yoram Rudy (https://engineering.wustl.edu/Profiles/Pages/Yoram-Rudy.aspx)
Fred Saigh Distinguished Professor of Engineering
PhD, Case Western Reserve University
Cardiac electrophysiology; modeling of the cardiac system

Lori A. Setton (https://engineering.wustl.edu/Profiles/Pages/Lori-Setton.aspx)
Lucy and Stanley Lopata Distinguished Professor of Biomedical Engineering
PhD, Columbia University
Biomaterials for local drug delivery; tissue regenerations specific to the knee joints and spine

Larry A. Taber (https://engineering.wustl.edu/Profiles/Pages/Larry-Taber.aspx)
Dennis and Barbara Kessler Professor of Biomedical Engineering
PhD, Stanford University
Mechanics of growth and development; cardiac mechanics

Li Hong Wang (https://engineering.wustl.edu/Profiles/Pages/LiHong-Wang.aspx)
Gene K. Beare Distinguished Professor of Biomedical Engineering
PhD, Rice University
Biophotonics and multimodality optical imaging

Frank Yin (https://engineering.wustl.edu/Profiles/Pages/Frank-Yin.aspx)
Stephen F. and Camilla T. Brauer Distinguished Professor of Biomedical Engineering
MD, PhD, University of California, San Diego
Tissue and cell biomechanics; hemodynamics

#### Professors

Mark Anastasio (https://engineering.wustl.edu/Profiles/Pages/Mark-Anastasio.aspx)
PhD, University of Chicago
Imaging sciences; phase-contrast; x-ray imaging

Jianmin Cui (https://engineering.wustl.edu/Profiles/Pages/Jianmin-Cui.aspx)
PhD, State University of New York–Stony Brook
Ion channels; channel structure-function relationship; biophysics

Daniel Moran (https://engineering.wustl.edu/Profiles/Pages/Daniel-Moran.aspx)
PhD, Arizona State University
Motor control; neural engineering; neuroprosthetics; movement biomechanics

Quing Zhu
PhD, University of Pennsylvania
Biophotonics and multimodality ultrasound and optical imaging

#### Associate Professors

Dennis L. Barbour (https://engineering.wustl.edu/Profiles/Pages/Dennis-Barbour.aspx)
MD, PhD, Johns Hopkins University
Auditory physiology; sensory cortex neurocircuitry; novel perceptual diagnostics and therapeutics

Vitaly Klyachko (https://engineering.wustl.edu/Profiles/Pages/Vitaly-Klyachko.aspx)
PhD, University of Wisconsin-Madison
Synaptic function and plasticity; neural circuits; information analysis; neurological disorders
Baranidharan Raman (https://engineering.wustl.edu/Profiles/Pages/Barani-Raman.aspx)
PhD, Texas A&M University
Computational and systems neuroscience; neuromorphic engineering; pattern recognition; sensor-based machine olfaction

Jin-Yu Shao (https://engineering.wustl.edu/Profiles/Pages/Jin-Yu-Shao.aspx)
PhD, Duke University
Cell mechanics; receptor and ligand interactions; molecular biomechanics

Kurt A. Thoroughman (https://engineering.wustl.edu/Profiles/Pages/Kurt-Thoroughman.aspx)
PhD, Johns Hopkins University
Human motor control and motor learning; neural computation

The Basic Core
The Biomedical Engineering Core Curriculum consists of 87 credits, outlined below.

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>

</table>

The BS in Biomedical Engineering requires completion of the courses in the Core Curriculum and four upper-level courses (Tier) beyond the Core, as described below. Students must also meet all School of Engineering & Applied Science (SEAS) and Washington University requirements (including the English Composition requirement; please refer to the Engineering Degree Requirements page (p. 930)) and, to satisfy ABET requirements for a professional degree, must accrue 47 engineering topics units over their course work. A list of Topics Units - Engineering Courses (http://engineering.wustl.edu/current-students/student-services/Pages/default.aspx) is available on the Engineering Student Services website.
### Quantitative Physiology I, II (BME 301A, BME 301B) 8
Bioengineering Thermodynamics (BME 320B) 3
Transport Phenomena in BME (BME 366) 3
Senior Design A, B (BME 401A, BME 401B) 4

</tbody>
</table>

Total, Basic Core 87

Students must complete four upper-level Tier engineering courses, five humanities and social sciences, and two general electives beyond the Core to complete the major and to prepare for particular fields of employment or education beyond the baccalaureate degree. At least two of the four Tier electives need to be drawn from the Tier I course list below. The remaining two can be chosen from either Tier list below.

**Please Note:** 1) Courses above that are marked with (#) are offered every other year or less. 2) The most up-to-date Tier lists can be found on the BME website [http://bme.wustl.edu/undergraduate/Pages/undergraduate-curriculum.aspx].

### Minors

There are no biomedical engineering minors. Please refer to the complete list of minors (p. 937) offered in the School of Engineering & Applied Science.

### Courses

E62 BME 140 Introduction to Biomedical Engineering
An introduction to the vast and diverse field of biomedical engineering (BME), this very challenging course has two main purposes. One is to teach students — via lectures, reading assignments, homework and exams — to think on their own, to solve problems and know how engineering principles are applied to the areas of bioelectricity, biomechanics, biomolecules, biotechnology and bioimaging. The second is to introduce students — via guest lectures by school of medicine and engineering faculty — to some of the fascinating and challenging ongoing research in these areas. The course is challenging because students at this early stage, by and large, lack the knowledge base to understand either the engineering/biological aspects of the topical areas or the research being presented. Nevertheless, because future success depends on such, emphasis throughout is placed on developing self-learning as well as quantitative and analytical problem-solving skills, but at an appropriate level. By the end of the course it is hoped that students have begun to acquire the skills and approaches necessary to succeed in the engineering curriculum as well as a much more in-depth and informed perspective of BME.

Credit 3 units. EN: TU

E62 BME 240 Biomechanics
Principles of static equilibrium and solid mechanics applied to the human anatomy and a variety of biological problems. Statics of rigid bodies with applications to the musculoskeletal system. Mechanics of deformable media (stress, strain; stretching, torsion and bending) with introduction to nonlinear behavior, viscoelasticity and growth in living tissue. Applications to cells, bone, muscle, arteries, the heart and the cochlea. Prerequisites: Physics 117A or 197.
Credit 3 units. EN: TU

E62 BME 240L Biomechanics Laboratory
This course will consist of hands-on laboratory experiments in topics relevant to bioengineering mechanics such as statics of rigid bodies, viscoelasticity, and stress/strain analysis of biological materials. A focus of the course will be extending fundamental mechanical principles to biological applications through experimentation. The course is designed to follow and enhance the material covered in BME 240. Additionally, students will have the opportunity to design their own experiments, explore topics of special interest, and present their findings. Prerequisites: concurrent or completed BME 240.
Credit 1 unit. EN: TU

E62 BME 301A Quantitative Physiology I
A course (lectures, recitation and supervised laboratory sections) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include electrocardiography; heart contractility and molecular bases; cell signaling, pulse wave propagation in arteries; pulmonary function; renal function; imaging and systems biology; Immune system; drug delivery. Prerequisites: BME 140, CSE 131 or 200, ESE 230, ESE 317, Biol 3058, or permission of instructor.
Credit 4 units. EN: TU

E62 BME 301B Quantitative Physiology II
A course (lecture and supervised laboratory sessions) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include electrocardiography; heart contractility and molecular bases; cell signaling, pulse wave propagation in arteries; pulmonary function; renal function; imaging and systems biology; Immune system; drug delivery. Prerequisites: BME 140, CSE 131 or 200, ESE 230, ESE 317, Biol 3058, or permission of instructor.
Credit 4 units. EN: TU

E62 BME 320B Bioengineering Thermodynamics
This course teaches the foundations of thermodynamics with strong emphasis on concepts, problem solving, and applications in bioengineering and biophysics. The course will cover classical thermodynamics as well as statistical mechanics, and the statistical underpinnings of thermodynamic functions will be emphasized. Applications of thermodynamic control in biomolecular and cellular systems will be discussed. The target audience for this course is sophomores or juniors majoring in biomedical engineering. Students have to enroll in recitation section. Recommended prerequisites: Chem 112A, Phys 118A or 198, Math 132, Math 233, Math 217.
Credit 3 units. EN: TU

E62 BME 329 Biothermodynamics in Practice
This course will include hands-on, laboratory experiments in topics relevant to bioengineering thermodynamics, such as heat transfer, relationships involving temperature and pressure, equilibria, mixing, and solution chemistry. A focus of the course will be extending fundamental scientific principles to biological applications. Students will have the opportunity to design their own experiments, explore topics of special interest, and present their findings. Prerequisites: Chem 111A and 151; Phys 117A, 118A or 197, 198.
Credit 3 units. EN: TU

E62 BME 366 Transport Phenomena in Biomedical Engineering
Many processes of importance in biology and medicine involve the transfer of mass, heat or momentum. Through the use of the differential control volume approach, the fundamental transport equations will be derived. Systematic derivation of differential equations appropriate for different types of transport problems will be explored. Solutions of the resulting differential equations for simple chemical/biological systems will then be sought. Macroscopic descriptions of fluid flow will be applied to the design of blood pumps for the heart. Unsteady mass transfer with diffusion, advection and chemical reactions will also be applied to the transport of proteins, metabolites and therapeutics throughout the body. Prerequisites: BME 240, Math 217, ESE 317, BME 320B.
Credit 3 units. EN: TU

E62 BME 400 Independent Study
Independent investigation on topic of special interest. This course has no engineering topics units. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.
Credit variable, maximum 6 units.

E62 BME 400A Independent Study
Independent investigation on a topic of special interest. This course has 1 unit of engineering topics. The student and
E62 BME 400B Independent Study
Independent investigation on a topic of special interest. This course has 2 units of engineering topics. The student and mentor must justify the number of engineering topics being requested, and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee. Credit 2 units. EN: TU

E62 BME 400C Independent Study
Independent investigation on a topic of special interest. This course has 3 units of engineering topics. The student and mentor must justify the number of engineering topics being requested, and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee. Credit 3 units.

E62 BME 401A Senior Capstone Design A
A hands-on design experience to provide students practical application of engineering. Working in small teams, students will either meet with possible clients to discern a biomedical problem, or bring an original idea of their own to the class. The students will work on an original design or redesign of a component or system of biomedical engineering significance. The students will be taught how to craft a project scope with the required design specifications. The design experience will require application of knowledge and skills acquired in earlier course work; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401A will be a descriptive paper design of their solution. Prerequisite: BME senior standing. Credit 2 units.

E62 BME 401B Senior Capstone Design B
A hands-on design experience to provide students practical application of engineering. Working in small teams, students will work toward building a prototype of the student design which was a product of 401A. The students will be expected to design a verification and validation plan to test the prototype built. The design experience will require application of knowledge and skills acquired in earlier course work and lab experiences; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401B will be a prototype, and a descriptive paper describing their solution documenting how the prototype satisfies the design specifications, with the validation and verification results. Prerequisites: BME 401A. Credit 2 units.

E62 BME 410 International Community Service Learning Project
This pass/fail course is a 2-week summer international experience in conjunction with the faculty and students of our partner, The Biomedical Engineering Institute of Hong Kong Polytechnic University. Students first attend an orientation at HKPU to learn about functional electrical stimulation (FES) and treating cerebral palsy with orthotic devices. The entire group then goes to a clinic in mainland China where they put into practice what they have learned. The corequisite experience often isolates the majority of undergraduate courses as "foundational" or "core" rather than applicable to very current, challenging, multidimensional problems. Our department, our school and university, and our societies value the contribution of engineers in solving these problems. Indeed, students very often achieve meaningful impact in real-world problems, but experienced most directly through extracurricular, not curricular, experience. This course provides the framework for students to build substantive ties between their curricular base and extracurricular problems and solutions. Corequisites: junior or senior standing; E62 BME 301A and/or 301B. Prerequisites: Candidate students need to have had previous engagement outside of class (through extracurriculars, volunteering, employment, etc.) with a particular problem in First- or Third-World medicine or health, most broadly construed. At registration students submit a short paragraph identifying the problem and how the student has engaged the problem outside the traditional classroom. This problem serves as the theme for the student's independent engineering analysis in the course. Identification of the problem, through submission of the paragraph, will move students from the waitlist to course registration (up to the seat limit). Credit 2 units.

E62 BME 413 Engineering for First- and Third-World Health
Biomedical engineering, as a discipline, aspires to improve the human condition through the alleviation of suffering in disease; through diagnosis, treatment and prevention; and through the promotion of health. Although BME can address several problems at several levels, one distinction arises in practice, and a second in undergraduate life. The real-world problems and solutions arise in the developed and developing world; these domains share several similarities but also feature real differences that call upon differential engineering approaches. This course examines the engineering principles and practice that best apply to emergent solutions and unmet challenges in First-World and Third-World health. The collegiate experience is the final product. Academic credits are awarded at the end of the fall semester following the summer experience. Prerequisites: completion of junior year, BME 301A. Enrollment: Students must apply by Feb. 1 each spring. Enrollment is restricted to 10 of the applicants. Credit 2 units.

E62 BME 450 Numerical Methods for Computational Modeling in Biomedicine
Advanced computational methods are required for the creation of biological models. Students will be introduced to the process
of model development from beginning to end, which includes model formulation, how to solve and parameterize equations, and how to evaluate model success. To illustrate the potential of these methods, participants will systematically build a model to simulate a "real-life" biological system that is applicable to their research or interest. A mechanistic appreciation of the methods will be gained by programming the methods in a low-level language (C++) in a Linux environment. While extensive programming knowledge is not required, participants are likely to find that some programming background will be helpful. Students enrolled in the 550 graduate class will be required to complete a final project that incorporates the methods taught in class. Prerequisites: Introductory programming course similar to E81 CSE 131.

Credit 3 units. EN: TU

E62 BME 459 Intermediate Biomechanics
This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity, and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle, and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing. Prerequisites: BME 240 and ESE 317 or equivalent, or permission of instructor. Same as E62 BME 559

Credit 3 units. EN: TU

E62 BME 461 Protein Structure and Dynamics
This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity, and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle, and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing. Prerequisites: BME 240 and ESE 317 or equivalent, or permission of instructor. Same as E62 BME 559

Credit 3 units. EN: TU

E62 BME 462 Biological Neural Computation
This course considers the computations performed by the biological nervous system with a particular focus on neural circuits and population-level encoding/decoding. Topics include Hodgkin-Huxley equations, phase-plane analysis, reduction of Hodgkin-Huxley equations, models of neural circuits, plasticity and learning, and pattern recognition and machine learning algorithms for analyzing neural data. Note: Graduate students in psychology or neuroscience who are in the cognitive, computational and systems neuroscience curriculum pathway may register in Biol 5657 for three credits. For non-BME majors, conceptual understanding and selection/application of right neural data analysis technique are stressed. Hence homework assignments/examinations for the two sections are different, however all students are required to participate in a semester-long independent project as part of the course. Credit 3 units. EN: TU

E62 BME 463 Orthopaedic Biomechanics — Cartilage/ Tendon
Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Note: BME 590Z (BME 463/563) Orthopaedic Biomechanics — Bones and Joints is not a prerequisite.

Same as E37 MEMS 5564
Credit 3 units. EN: TU

E62 BME 465 Biosolid Mechanics
Introduction to the mechanical behaviors of biological tissues of musculoskeletal, cardiac and vascular systems. Topics to be covered include static force analysis and nonlinear optimization theory; linearly elastic models for stress-strain analysis and solutions to relevant problems in bioelasticity; models of active structures (e.g., muscles); strain energy methods and nonlinear tissue behaviors; and introductory theory for finite element analysis. Emphasis will be placed on modeling stress-strain relations with relevance to biological tissues. Prerequisites: BME 240 or equivalent and ESE 318 and ESE 319.

Credit 3 units. EN: TU

E62 BME 471 Bioelectric Phenomena
This course is a quantitative introduction to the origins of bioelectricity with an emphasis on neural and cardiac electrophysiology. Topics include electric fields and current flow in volume conductors; cell membrane channels and their role in generating membrane potentials; action potentials and their propagation in myelinated and unmyelinated axons as well as cardiac tissue. Minor topics of discussion include both skeletal muscle and nonhuman (e.g., electric fish) sources of bioelectricity. Prerequisite: ESE 330.

Credit 3 units. EN: TU

E62 BME 472 Biological Neural Computation
This course considers the computations performed by the biological nervous system with a particular focus on neural circuits and population-level encoding/decoding. Topics include Hodgkin-Huxley equations, phase-plane analysis, reduction of Hodgkin-Huxley equations, models of neural circuits, plasticity and learning, and pattern recognition and machine learning algorithms for analyzing neural data. Note: Graduate students in psychology or neuroscience who are in the cognitive, computational and systems neuroscience curriculum pathway may register in Biol 5657 for three credits. For non-BME majors, conceptual understanding and selection/application of right neural data analysis technique are stressed. Hence homework assignments/examinations for the two sections are different, however all students are required to participate in a semester-long independent project as part of the course. Credit 3 units. EN: TU

E62 BME 4902 Cellular Neurophysiology
This course examines the biophysical concepts of synaptic function with the focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information coding, mechanisms of learning and memory, function of synapses in sensory systems, models of synaptic disease states such as Parkinson and Alzheimer’s diseases. Additionally, a set of lectures is devoted to modern electrophysiological and imaging techniques, and modeling approaches to study synapses and neural circuits. Prerequisites: senior or graduate standing.

Same as E62 BME 5902
Credit 3 units. EN: TU
E62 BME 4930 Physical Methods for Biomedical Scientists
The course will introduce the spectrum of biophysical techniques used in biomedical sciences with a focus on advanced fluorescence spectroscopy. The first half of the course (January to spring break) will introduce the concepts behind techniques such as: dynamic light scattering, SPR, analytical ultracentrifugation size-exclusion and affinity chromatography, atomic force microscopy, fluorescence spectroscopy, FTIR, circular dichroism, fluorescence correlation spectroscopy, sub-diffraction microscopy. The second half of the course will be held as six 3 h block lab classes (Fridays 10 a.m.-1 p.m.) in which the students will use these techniques in experiments on protein folding, protein stability and amyloid formation. Prior attendance of BME 461 Protein Structure and Dynamics is encouraged. Because of limited room in the experimental lab, attendance will be limited to nine students. Prerequisite: senior or graduate standing.
Credit 3 units. EN: TU

E62 BME 4904 Interfaces and Attachments in Natural and Engineered Structures
Attachment of dissimilar materials in engineering and surgical practice is a challenge. Bimaterial attachment sites are common locations for injury and mechanical failure. Nature presents several highly effective solutions to the challenge of bimaterial attachment that differ from those found in engineering practice. This course bridges the physiologic, surgical, and engineering approaches to connecting dissimilar materials. Topics in this course are: natural bimaterial attachments; engineering principles underlying attachments; analysis of the biology of attachments in the body; mechanisms by which robust attachments are formed; concepts of attaching dissimilar materials in surgical practice and engineering; and bioengineering approaches to more effectively combine dissimilar materials.
Same as E37 MEMS 5560
Credit 3 units. EN: TU

E62 BME 493 Computational Methods for Inverse Problems
Inverse problems are ubiquitous in science and engineering, and form the basis for modern imaging methods. This course will introduce students to the mathematical formulation of inverse problems and modern computational methods employed to solve them. Specific topics covered will include regularization theory, compressive sampling, and a survey of relevant numerical optimization methods. The application of these methods to tomographic imaging problems will be addressed in detail.
Prerequisites: ESE 318, 319, 326, 351.
Credit 3 units. EN: TU

E62 BME 494 Ultrasound Imaging
Introduce basic principles of ultrasound imaging, diagnostic ultrasound imaging system, clinical applications, and emerging technologies in industry.
Prerequisites: ESE 318, 319, 351.
Credit 3 units. EN: TU

E62 BME 501C BME Doctoral Seminar Series
This is a one-unit credit option for BME students who attend regularly scheduled BME seminars (or approved substitute seminars). A satisfactory grade is obtained by submission of a two-page peer-reviewed paper written by one of the regularly scheduled BME seminar speakers whose seminar the student attended. Papers are to be submitted to the Graduate Student Administrator for review by the Director of Doctoral Studies.
Prerequisites: Students must be current BME students in their second year and beyond in order to register.
Credit 1 unit.

E62 BME 503A Cell and Organ Systems Biology
This 1.5-semester course integrates and extends the basic principles of cell biology and physiology to the functions of the major organ systems of the body, i.e., muscle, cardiovascular, renal, respiratory, gastrointestinal and endocrine. Same as M75 503, offered through the medical school. This course is open to biomedical engineering students only. Permission must be obtained by the chairman in Biomedical Engineering. Starts at same time as Medical School classes and ends the middle of spring semester.
Credit 6 units.

E62 BME 506 Seminar in Imaging Science and Engineering
This seminar course consists of a series of tutorial lectures on Imaging Science and Engineering with emphasis on applications of imaging technology. Students are exposed to a variety of imaging applications that vary depending on the semester, but may include multispectral remote sensing, astronomical imaging, microscopic imaging, ultrasound imaging, and tomographic imaging. Guest lecturers come from several parts of the university. This course is required of all students in the Imaging Science and Engineering program; the only requirement is attendance. This course is graded pass/fail. Prerequisite: Admission to Imaging Science and Engineering program.
Same as E35 ESE 596
Credit 1 unit.

E62 BME 524 Tissue Engineering
This course integrates the principles and methods of engineering and life sciences toward the fundamental understanding of normal and pathological mammalian tissues especially as they relate to the development of biological substitutes to restore, or improve tissue function. Current concepts and strategies including drug delivery, tissue and cell transplantation, and in vivo tissue regeneration are introduced as well as their respective clinical applications. Prerequisites: BME 366; or MEMS 3410, Biol 2960 and 2970; or permission of the instructor.
Credit 3 units. EN: TU

E62 BME 527 Design of Artificial Organs
Medical devices that replace the function of one of the major organs in the body must usually interface with flowing blood. Examples include total artificial hearts, left ventricular assist devices, membrane oxygenators, hemodialysis systems and encapsulated endocrine cells. The design of these devices relies on integration of knowledge from a variety of fields, in particular computational fluid dynamics and blood rheology. We study the process by which a concept for a device eventually leads to a functioning, blood-contacting medical device, with most of the focus on the design of left ventricular assist devices. Students learn to use CAD to design blood pumping devices, test their designs via computational fluid dynamics, and 3-D print and test their pumps with water. Prerequisite: BME 366 or equivalent course in Transport Phenomena (including momentum and mass transfer).
Credit 3 units. EN: TU
E62 BME 528 Translational Regenerative Medicine
This course provides students with an opportunity to connect basic research with applications in translation for several tissues/disease models. Course sessions will alternate between literature on basic mechanisms of development/stem cell biology and applications led by researchers or clinicians working in each area. Areas of focus will include cardiovascular development/congenital heart disease and arrhythmia, lung, endocrinology/diabetes, gut/intestinal disorders, musculoskeletal, neural (peripheral and brain), liver, hematology and eye. Emphasis on how discovery can be translated will be a major focus of the course. Students will be expected to review and present on primary literature in the field. Graduate standing is required. Prerequisites: graduate standing Engineering or DBBS. Credit 3 units.

E62 BME 530A Molecular Cell Biology for Engineers
This course is designed for upper-level undergraduates and first-year graduate students with a background in engineering. This course covers the biology of cells of higher organisms: protein structure and function; cellular membranes and organelles; cell growth and oncogenic transformation; cellular transport, receptors and cell signaling; the cytoskeleton, the extracellular matrix and cell movement. Emphasis is placed on examples relevant to biomedical engineering. The course includes two lectures per week and one discussion section. In the discussion section, the emphasis is on experimental techniques used in cell biology and the critical analysis for primary literature. Note this course does not count for engineering topics credits and is meant to fulfill a life science requirement for engineering or physical sciences graduate students. Prerequisites: Biol 2960 and 2970 or graduate standing. Credit 4 units.

E62 BME 537 Computational Molecular Biology
This course focuses on mathematical and algorithmic issues in systems biology and biological sequence analysis. The essential mathematics is introduced first. Systems biology topics include synthetic biology, dynamical systems modeling, mapping and modeling gene regulatory networks, constraint based approaches to predictive modeling of metabolic networks, and the integration of regulatory and metabolic models. Sequence analysis topics include, Hidden Markov Models, parameter inference, sequence alignment and modeling transcription factor binding sites. This course includes a combination of paper and pencil homework assignments and programming labs. Prerequisites: an introductory course in computer programming or equivalent experience and at least two semesters of calculus. Credit 3 units. EN: TU

E62 BME 538 Cell Signal Transduction
This class covers the elements of cell signal transduction important to human development, homeostasis and disease. Lectures are combined with primary literature review to cover canonical signaling and current topics within the field. Spatial, time and dose-dependent aspects of signaling are of particular focus. Topics include: G protein-coupled receptors, receptor tyrosine kinases, adhesion signaling, the MAPK cascade, lipid signaling, the DNA damage response, and autocrine, paracrine and juxtacrine signaling. Prerequisites: BME 530A or BME 5068. Credit 3 units.

E62 BME 550 Numerical Methods for Computational Modeling in Biomedicine
Advanced computational methods are required for the creation of biological models. Students will be introduced to the process of model development from beginning to end, which includes model formulation, how to solve and parameterize equations, and how to evaluate model success. To illustrate the potential of these methods, participants will systematically build a model to simulate a "real-life" biological system that is applicable to their research or interest. A mechanistic appreciation of the methods will be gained by programming the methods in a low-level language (C++) in a Linux environment. While extensive programming knowledge is not required, participants are likely to find that some programming background will be helpful. Students enrolled in the 550 graduate class will be required to complete a final project that incorporates the methods taught in class. Prerequisites: introductory programming course similar to E81 CSE 131. Same as E62 BME 450 Credit 3 units. EN: TU

E62 BME 5565 Mechanobiology of Cells and Matrices
At the interface of the cell and the extracellular matrix, mechanical forces regulate key cellular and molecular events that profoundly affect aspects of human health and disease. This course offers a detailed review of biomechanical inputs that drive cell behavior in physically diverse matrices. In particular, cytoskeletal force-generation machineries, mechanical roles of cell-cell and cell-matrix adhesions, and regulation of matrix deformations are discussed. Also covered are key methods for mechanical measurements and mathematical modeling of cellular response. Implications of matrix-dependent cell motility, tumor invasion and embryonic development are discussed. Prerequisites: graduate standing or permission of the instructor. Same as E37 MEMS 5565 Credit 3 units. EN: TU

E62 BME 559 Intermediate Biomechanics
This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing. Prerequisites: BME 240 and ESE 317 (or ESE 318 or 319) or equivalent, or permission of instructor. Credit 3 units. EN: TU

E62 BME 5610 Protein Structures and Dynamics
This course covers the concepts and methods involved in the analysis of protein structure, stability, folding and misfolding. Topics include protein structural elements, amyloid structure, intra- and intermolecular forces, folding pathways and intermediates, phi-value analysis, kinetics of protein folding and of amyloid formation, and their application to problems of bioengineering and biophysics. Two-thirds of the course will consist of lectures; the other third will be student seminars, in which each student presents a paper from primary literature and its concept and methodology that is discussed in detail. Prerequisites: BME 320B Bioengineering Thermodynamics or equivalent. Same as E62 BME 461
**E62 BME 562 Mechanics of Growth and Development**

This course applies the fundamental principles of solid mechanics to problems involving growth, remodeling and morphogenesis of cells, tissues and organs. Introduction to developmental biology, nonlinear elasticity, viscoelasticity and active contraction. Particular topics include cellular morphogenetic mechanisms, growth and development of the cardiovascular system, and adaptive remodeling of bone. Prerequisites: BME 240 or MEMS 241 or equivalent. Credit 3 units. EN: TU.

**E62 BME 564 Orthopaedic Biomechanics — Cartilage/ Tendon**

Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisite: BME 240 or equivalent. Note: BME 5902 (BME 463/563) Orthopaedic Biomechanics — Bones and Joints is not a prerequisite. Same as E37 MEMS 5564. Credit 3 units. EN: TU.

**E62 BME 565 Biosolid Mechanics**

Introduction to the mechanical behaviors of biological tissues of musculoskeletal, cardiac and vascular systems. Topics to be covered include static force analysis and nonlinear optimization theory; linearly elastic models for stress-strain analysis and solutions to relevant problems in bioelasticity; models of active structures (e.g., muscles); strain energy methods and nonlinear tissue behaviors; and introductory theory for finite element analysis. Emphasis will be placed on modeling stress-strain relations with relevance to biological tissues. Prerequisites: BME 240 or equivalent and ESE 318 and ESE 319. Same as E62 BME 465. Credit 3 units. EN: TU.

**E62 BME 5702 Application of Advanced Engineering Skills for Biomedical Innovators**

Students will work in small teams to apply core engineering skills covered in BME 5701 such as FEM, CAD, microcontroller programming, circuit design, data informatics, and app development to particular clinical needs or processes chosen by the instructing staff. Prerequisites: BME 5701 or permission of instructor. Credit 3 units.

**E62 BME 5711 Ideation of Biomedical Problems and Solutions**

This course is part one of the year-long master's design sequence for the BME Master of Engineering. The course will begin with a boot camp primer of HIPAA certification, clinical etiquette, medical law, and intellectual property law. This will be followed by a rotation period of guided shadowing of clinicians. Following each rotation, students will review and present their findings, with a view toward problem solving and project generation. Three-fourths of the way through the course, students will form into teams, choose a master's project, and begin intensive study of their chosen problem or process. The final weeks of the course will focus on problem scope and definition, identification of creative alternatives, and consultation with experts in the field. Prerequisite: acceptance into the Master of Engineering program. Credit 3 units.

**E62 BME 5712 Implementation of Biomedical Solutions**

This course is part two of the year-long master's design sequence for the BME Master's of Engineering. Students will work in small groups to begin to design a solution to the problem identified in BME 5711. Options and alternatives will be evaluated and a best-choice solution will be chosen, based on an in-depth study of constraints upon the problem, including engineering materials, economic, safety, social, manufacturing, ethical, sustainability, and other requirements. Core skills such as FEM, CAD, circuit design, microcontroller programming, and 3-D printing will be applied to create first an alpha mockup proof of concept, followed by a full working prototype by the end of the semester. Prerequisites: BME 5711 or permission of instructor. Credit 3 units.

**E62 BME 5713 Translation of Biomedical Solutions to Products**

This course is the third and final part of the year-long master's design course sequence. Through a repeated sequence of iteration, fabrication and verification, design teams will refine and optimize their master's design project, bringing it to completion. Prerequisites: BME 5712 or permission of instructor. Credit 4 units.

**E62 BME 572 Biological Neural Computation**

This course considers the computations performed by the biological nervous system with a particular focus on neural circuits and population-level encoding/decoding. Topics include Hodgkin-Huxley equations; phase-plane analysis; reduction of Hodgkin-Huxley equations; models of neural circuits; plasticity and learning; and pattern recognition and machine learning algorithms for analyzing neural data. Note: Graduate students in psychology or neuroscience who are in the Cognitive, Computational and Systems Neuroscience curriculum pathway may register in Biol 5657 for three credits. For non-BME majors, conceptual understanding, and selection/application of right neural data analysis technique are stressed. Hence homework assignments/examinations for the two sections are different, however all students are required to participate in a semester-long independent project as part of the course. Prerequisites: Calculus, Differential Equations, Basic Probability and Linear Algebra undergraduates need permission of the instructor. Biol 5657 prerequisites: permission from the instructor. Credit 3 units. EN: TU.

**E62 BME 5722 Feasibility Evaluation of Biomedical Products**

TBD. Prerequisites: MEng program. Credit 2 units.

**E62 BME 5731 Business Foundations for Biomedical Innovators**

For medical innovators, a successful translation from product to market will require careful strategy and an understanding of the steps needed to form and fund a biotech business, either as a
new startup or as an extension of the product line of an existing company. This course will provide a first look at the steps in this process, including intellectual property concerns, R&D, clinical strategy, regulatory issues, quality management, reimbursement, marketing strategy, sales and distribution, operating plans, and approaches to funding. Prerequisites: MEng program.

Credit 2 units.

E62 BME 5732 Entrepreneurship for Biomedical Innovators
This course will apply the concepts covered in BME 5731 in an interactive process that will provide practical experience. Topics of intellectual property, R&D, clinical strategy, regulatory issues, quality management, reimbursement, marketing strategy, sales and distribution, operating plans, and approaches to funding will be covered. Along with practical exercises, access to specialists and experts in these topics from the St. Louis entrepreneurial community will be provided as an integral part of the course. Prerequisite: MEng program.

Credit 2 units.

E62 BME 574 Quantitative Bioelectricity and Cardiac Excitation
Action potential generation, action potential propagation, source-field relationships in homogeneous and inhomogeneous media, models of cardiac excitation and arrhythmia, quantitative electrocardiography. Prerequisites: differential equations, Laplace transform, electromagnetic field theory (undergraduate level).

Credit 3 units. EN: TU

E62 BME 575 Molecular Basis of Bioelectrical Excitation
Ion channels are the molecular basis of membrane excitability in all cell types, including neuronal, heart and muscle cells. This course presents the structure and the mechanism of function of ion channels at the molecular level. It introduces the basic principles and methods in the ion channel study as well as the structure-function relation of various types of channels. Examples of channels that have been best studied are discussed to illustrate the current understanding. Prerequisites: knowledge of differential equations, electrical circuits and chemical kinetics.

Credit 3 units.

E62 BME 5771 Biomedical Product Development
Advances in science and technology have opened the health care field to innovation now more than any other time in history. Engineers and inventors can make real and rapid improvements to patient treatments, length of hospital stay, procedure time, cost containment, and accessibility to treatment. However, a successful transition from idea to implementation requires careful market analysis and strategy planning. This course will address the steps in this process, including personal and team strength assessment, medical need validation, brainstorming initial solutions, market analysis, solution evaluation, regulatory, patent and intellectual property concerns, manufacturability, risk assessment and mitigation, and global considerations. Students will be expected to review resource material prior to coming to class in order to facilitate active class discussion and team-based application of the material during class; regular attendance will be key to course success. The course will focus on applying product development techniques to several real unmet medical needs; students will thus perform analysis and create reports and presentations for several different product solutions. Peer and faculty evaluations will provide feedback to improve individual technique. In addition, throughout the semester, local biomedical entrepreneurs will visit to share their expertise and experiences. Prerequisites: graduate or professional student standing or permission of the instructor.

Credit variable, maximum 3 units.

E62 BME 5772 Biomedical Business Development
For medical innovators, a successful translation from product to market will require careful strategy and an understanding of the steps needed to fund a biotech business, either as a new startup or as an extension of the product line of an existing company. This course will address the steps in this process, including intellectual property concerns, R&D, clinical strategy, regulatory issues, quality management, reimbursement, marketing strategy, sales and distribution, operating plans, and approaches to funding. Prerequisites: graduate or professional student standing or permission of the instructor.

Credit 3 units.

E62 BME 5799 Independent Study for Candidates in the Master of Engineering Program
Independent investigation on a topic of special interest. The student and mentor must justify the requested number of units. The MEng Program Director must approve the requested number of units.

Credit variable, maximum 6 units.

E62 BME 589 Biological Imaging Technology
This class develops a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section examines how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure and function, image formation methods and diffraction limited imaging. The math section examines image decomposition using basis functions (e.g., Fourier transforms), synthesis of measurement data, image analysis for feature extraction, reduction of multidimensional imaging datasets, multivariate regression and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology are critiqued.

Same as E35 ESE 589
Credit 3 units. EN: TU

E62 BME 5901 Integrative Cardiac Electrophysiology
Quantitative electrophysiology of the heart, integrating from the molecular level (ion channels, regulatory pathways, cell signaling) to the cardiac cell (action potential and calcium transient), multicellular tissue (cell-cell communication) and the whole heart. Prerequisite: permission of instructor.

Credit 3 units. EN: TU

E62 BME 5902 Cellular Neurophysiology
This course examines the biophysical concepts of synaptic function with the focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information...
coding, mechanisms of learning and memory, function of synapses in sensory systems, models of synaptic disease states such as Parkinson and Alzheimer’s diseases. Additionally, a set of lectures is devoted to modern electrophysiological and imaging techniques, and modeling approaches to study synapses and neural circuits. Prerequisite: senior or graduate standing.
Credit 3 units. EN: TU

E62 BME 5903 Physical Methods for Biomedical Scientists
The course will introduce the spectrum of biophysical techniques used in biomedical sciences with a focus on advanced fluorescence spectroscopy. The first half of the course (January to spring break) will introduce the concepts behind techniques such as: dynamic light scattering, SPR, analytical ultracentrifugation size-exclusion and affinity chromatography, atomic force microscopy, fluorescence spectroscopy, FRET, FTIR, circular dichroism, fluorescence correlation spectroscopy, sub-diffraction microscopy. The second half of the course will be held as six 3 h block lab classes (Fridays 10 a.m.-1 p.m.) in which the students will use these techniques in experiments on protein folding, protein stability and amyloid formation. Prior attendance of BME 461 Protein Structure and Dynamics is encouraged. Because of limited room in the experimental lab, attendance will be limited to nine students. Prerequisite: senior or graduate standing.
Same as E62 BME 4903
Credit 3 units. EN: TU

E62 BME 5911 Cardiovascular Biophysics Journal Club
This journal club is intended for beginning graduate students, advanced undergraduates and MSTP students with a background in the quantitative sciences (engineering, physics, math, chemistry, etc.). The subjects covered are inherently multidisciplinary. We review landmark and recent publications in quantitative cardiovascular physiology, mathematical modeling of physiologic systems and related topics such as chaos theory and nonlinear dynamics of biological systems. Familiarity with calculus, differential equations and basic engineering/thermodynamic principles is assumed. Knowledge of anatomy/physiology is optional.
Credit 1 unit.

E62 BME 5913 Molecular Systems Biology: Computation & Measurements for Understanding Cell Physiology and Disease
Systems-level measurements of molecules in cells and tissues harbor the promise to identify the ways in which tissues develop, maintain, age, and become diseased. This class will introduce the systems-level measurement techniques for capturing molecular information and the mathematical and computational methods for harnessing the information from these measurements to improve our understanding of cell physiology and disease. This is a practical class, which involves implementation of the concepts in MATLAB and will be applied to existing, real data from published journal articles. Molecular topics will include: gene expression, microRNA, proteins, post-translational modifications, drugs, and splicing. Computational/mathematical topics covered will include: statistical inference, dimensionality reduction techniques, unsupervised and supervised machine learning, and graph-based techniques.
Prerequisites: A working knowledge of molecular biology, linear algebra, and statistics is required.
Credit 3 units. EN: TU

E62 BME 593 Computational Methods for Inverse Problems
Inverse problems are ubiquitous in science and engineering, and form the basis for modern imaging methods. This course will introduce students to the mathematical formulation of inverse problems and modern computational methods employed to solve them. Specific topics covered will include regularization theory, compressive sampling, and a survey of relevant numerical optimization methods. The application of these methods to tomographic imaging problems will be addressed in detail.
Prerequisites: ESE 318, 319, 326, 351.
Same as E62 BME 493
Credit 3 units. EN: TU

E62 BME 594 Ultrasound Imaging
Introduce basic principles of ultrasound imaging, diagnostic ultrasound imaging systems, clinical applications, and emerging technologies in industry. Prerequisites: ESE 318, 319, 351.
Same as E62 BME 494
Credit 3 units. EN: TU

E62 BME 599 Master’s Research
Credit variable, maximum 6 units.

Computer Science & Engineering

About Computer Science & Engineering
The field of Computer Science & Engineering studies the design, analysis, implementation and application of computation and computer technology. Computing plays an important role in virtually all fields, including science and medicine, music and art, business, law and human communication; hence the study of Computer Science & Engineering can be interdisciplinary in nature. Whether a student’s goal is to become a computing professional or to take a few courses to develop a basic understanding of computing for application to another field, the Department of Computer Science & Engineering at Washington University is committed to helping students gain the background they need.

People are attracted to the study of computing for a variety of reasons. Consequently, the department offers a wide variety of academic programs, including a five-course minor, a second major, several undergraduate degrees, combined undergraduate and graduate programs, as well as undergraduate research opportunities. Each academic program can be tailored to a student’s individual needs.

The breadth of Computer Science & Engineering may be best understood in terms of the general areas of software systems, hardware, theory and applications.

Software Systems are collections of interacting software components that work together to support the needs of computer
applications. Courses in this area help students gain a solid understanding of how software systems are designed and implemented. Examples include operating systems, which manage computational resources; network protocols, which are responsible for the delivery of information; programming languages, which support the construction of software systems and applications; and compilers, which translate computer programs into executable form.

**Hardware** is the term used to describe the physical and mechanical components of a computer system. Courses in this area provide background in logic circuits, which carry out basic computations; computer architecture, which defines the organization of functional components in a computer system, and peripheral devices such as disks and robot arms that are controlled by the computer system.

**Theory** is the study of the fundamental capabilities and limitations of computer systems. A knowledge of theory helps students choose among competing design alternatives on the basis of their relative efficiency and helps them to verify that their implementations are correct. Theory courses provide background in algorithms, which describe how a computation is to be carried out; data structures, which specify how information is to be organized within the computer; analytical techniques to characterize the time or space requirements of an algorithm or data structure; and verification techniques to prove that solutions are correct.

**Applications** are the ways in which computer technology is applied to solve problems, often in other disciplines. Most applications courses provide background not only in the applications themselves but also in how the applications are designed and implemented. Examples of application areas include artificial intelligence and computer graphics.

A well-rounded study of computing includes training in each of these areas. However, depending on a student’s educational goals, he or she may prefer to concentrate on certain areas for greater depth of knowledge. To help students balance their elective courses, most upper-level departmental courses are classified in one of these categories: S for software systems, M for machines (hardware), T for theory and A for applications. If a student’s interests are concentrated in the first two areas, a Computer Engineering degree might be best. If a student’s interests are concentrated in the second two, a Computer Science degree might be best. Students are encouraged to meet with a faculty adviser in the Department of Computer Science & Engineering to discuss their options and develop a plan consistent with their goals.

**Undergraduate Programs**

Here we introduce the wide variety of undergraduate programs offered by the Department of Computer Science & Engineering to serve as a starting point for students interested in studying computer science or computer engineering. We describe the minor in computer science, the second major, the pre-medical option, the BSCS degree, the BS in Computer Engineering (in Majors (p. 857) and Minors (p. 859)), combined undergraduate and graduate programs, the Undergraduate Research Opportunities Program, and the Cooperative Education Program. Additional information can be found on our website (http://cse.wustl.edu), and our department’s faculty can offer further guidance and information about our programs. Each student in our programs is assigned an adviser, who can help design an individualized program, monitor a student’s progress, and consult about curriculum and career options.

Many nonmajors take CSE courses to broaden their education. CSE 104 Web Development and CSE 131 Computer Science I do not require any computer science background.

**Pre-Medical Option within Computer Science**

Students may pursue a pre-medicine curriculum in conjunction with either the BS degree or second major in computer science programs. Students interested in the pre-medical option should refer to the School of Engineering (p. 835) Bulletin page for details.

**Combined Undergraduate and Graduate Study**

The Department of Computer Science & Engineering offers in-depth graduate study in many areas. Students entering the graduate programs require a background in computer science fundamentals. Washington University undergraduates seeking admission to the graduate degree program to obtain a master’s degree in computer science or computer engineering do not need to take the Graduate Record Examination (GRE). For more information, contact the department office at 314-935-6132 or admissions@cse.wustl.edu.

**The Joint BS/MS**

This five-year program that leads to both the bachelor’s and master’s degrees offers the student an excellent opportunity to combine undergraduate and graduate studies in an integrated curriculum. The combination of the two programs extends the flexibility of the undergraduate curriculum to more advanced studies, thereby enabling students to plan their entire spectrum of computing studies in a more comprehensive educational framework. Consistent with the general requirements (p. 930) defined by the School of Engineering, a minimum of 150 units is required for completion of the BS/MS program. Provided that the 150-unit requirement is satisfied, up to 6 units of course work acceptable for the MS can be counted toward both the BS and MS requirement. Students in the BS/MS program can take advantage of the program’s flexibility by taking graduate courses toward the graduate degree while still completing the undergraduate degree requirements.
The BS/MS program offers early admission to the graduate programs in computer science and computer engineering in the junior year and allows a student to complete the master's degree typically in only one additional year of study (instead of the usual three semesters). Undergraduate financial support is not extended for the additional semesters to complete the master's degree requirements; however, scholarship support based upon a student's major GPA, calculated at the end of the junior year, will be awarded automatically in the student's final year of study. Students are classified as graduate students in their final year of study, and their tuition charges are at the graduate student rate. For information regarding scholarship amounts, please visit the BS/MS Program in Engineering webpage (http://engineering.wustl.edu/current-students/student-services/Pages/BS-MS-program.aspx).

If students plan to apply to this program, it is recommended that they complete at least an undergraduate minor in computer science, three additional computer science courses at the 400 level, and one at the 500 level during their first four years. Students must apply to this program by September 1 of their senior year, and a minimum GPA of 3.0 is required of all applicants.

**BS/MBA Program**

The growing importance of computer-based information systems in the business environment has produced a sustained high demand for graduates with master's degrees in business administration and undergraduate majors in computer science and engineering.

Students should apply to this joint program by February 1 of their junior year. The application for admission to the Olin Business School (p. 798) is available through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and a personal interview.

**Broadening Experiences**

If a student wants to become involved in computer science or computer engineering research or gain experience in industry while he or she is an undergraduate, there are many opportunities to do so. A few of these are listed below.

**Co-op:** The Cooperative Education Program allows a student to get valuable experience working in industry while an undergraduate. A co-op can give students another perspective on their education and may lead to full-time employment.

Numerous companies participate in this program. More information is available from the Engineering Co-op and Internship Program (http://careercenter.wustl.edu/tools/careerdevelopment/Pages/engineeringcoop.aspx) that is part of the Career Center in the Danforth University Center, Suite 110.

**Research:** Participating in an undergraduate research project is a great way to learn more about a specific area. Research projects are available either for pay or for credit through CSE 400E Independent Study. Visit the CSE website (https://cse.wustl.edu/undergraduate/Pages/undergraduate-research.aspx) for details.

**Study Abroad:** Students in the School of Engineering can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience. These opportunities will help students become global citizens better able to address current issues.

The study of computer science and engineering is especially well suited and popular for study abroad. Students from our department routinely study abroad in Europe, the UK, Australia, Israel, and many other places. Our department works closely with students to identify courses suitable for computer science credit.

For more information about these programs, please visit the SEAS website (http://engineering.wustl.edu/our-school/initiatives/Pages/global-outreach.aspx).

**Research Opportunities**

The Department of Computer Science & Engineering actively promotes a culture of strong undergraduate participation in research. Many undergraduates work in research labs with state-of-the-art equipment that provides the opportunity to take part in computer science and computer engineering research. Sensor networks, high-speed routers, specialized FPGA hardware, wireless devices, RF tags, digital cameras, robots, large displays and multiprocessors are just a few of the hardware devices undergraduates often use in their projects.

Opportunities for exploring modern software development techniques and specialized software systems further enrich the range of research options and help undergraduates sharpen their design and programming skills.

**Advanced Placement/Proficiency**

Students receiving a 4 or 5 on the AP Computer Science A exam are awarded credit for CSE 131 Computer Science I. Any student can take the CSE 131 proficiency exam, and a suitable score will waive CSE 131 as a requirement.

Upon request, the computer science department will evaluate a student for proficiency for any of our introductory courses. If a student is determined to be proficient in a given course, that course will be waived (without awarding credit) in the student's degree requirements, and the student will be offered guidance in selecting a more advanced course. Questions should be directed to the associate chair (associatechair@cse.wustl.edu).

**Undergraduate Courses**

Course requirements for the minor and majors may be fulfilled by CSE 131 Computer Science I, CSE 132 Computer Science II, CSE 240 Logic and Discrete Mathematics, CSE 247 Data Structures and Algorithms, and CSE courses with a letter suffix...
in any of the categories: software systems (S), hardware (M), theory (T) and applications (A). In addition, with approval of the instructor, up to 6 units of CSE 400E Independent Study can be used toward the CSE electives of any CSE degree. Other CSE courses provide credit toward graduation but not toward the CSE elective requirements for the second major, BSCS or BSCoE. Undergraduates are encouraged to consider 500-level courses. If a student is interested in taking a course but is not sure if he or she has the needed prerequisites, the student should contact the instructor.

Faculty

Chair
Roch Guérin  
Harold B. and Adelaide G. Welge Professor of Computer Science  
PhD, California Institute of Technology  
Computer networks and communication systems

Endowed Professors
Aaron Bobick  
James M. McKelvey Professor and Dean  
PhD, Massachusetts Institute of Technology  
Computer vision, graphics, human-robot collaboration

Michael R. Brent  
Henry Edwin Sever Professor of Engineering  
PhD, Massachusetts Institute of Technology  
Systems biology, computational and experimental genomics, mathematical modeling, algorithms for computational biology, bioinformatics

Chenyang Lu  
Fullgraf Professor in the Department of Computer Science & Engineering  
PhD, University of Virginia  
Real-time and embedded systems, wireless sensor networks, mobile computing

Professors
Jeremy Buhler  
PhD, Washington University  
Computational biology, genomics, algorithms for comparing and annotating large biosequences

Shantanu Chakrabarty  
PhD, Johns Hopkins University  
Analog computing techniques, self-powered sensors, floating-gate circuits, biosensors and bioelectronics

Roger D. Chamberlain  
DSc, Washington University  
Computer engineering, parallel computation, computer architecture, multiprocessor systems

Yixin Chen  
PhD, University of Illinois at Urbana-Champaign  
Mathematical optimization, artificial intelligence, planning and scheduling, data mining, learning data warehousing, operations research, data security

Patrick Crowley  
PhD, University of Washington  
Computer and network systems, network security

Ron K. Cytron  
PhD, University of Illinois at Urbana-Champaign  
Programming languages, middleware, real-time systems

Christopher D. Gill  
DSc, Washington University  
Distributed real-time embedded systems, middleware, formal models and analysis of concurrency and timing

Raj Jain  
PhD, Harvard University  
Wireless networks, network security, next generation internet, sensor networks, telecommunications networks, performance analysis, traffic management, quality of service

Tao Ju  
PhD, Rice University  
Computer graphics, visualization, mesh processing, medical imaging and modeling

Robert Pless  
PhD, University of Maryland  
Computer vision, medical imaging, sensor network algorithms, citizen science

Weixiong Zhang  
PhD, University of California, Los Angeles  
Computational biology, genomics, machine learning and data mining, and combinatorial optimization
Associate Endowed Professor

Caitlin Kelleher  
Hugo F. & Ina Champ Urbauer Career Development Associate Professor  
PhD, Carnegie Mellon University  
Human-computer interaction, programming environments, and learning environments

Associate Professors

Kunal Agrawal  
PhD, Massachusetts Institute of Technology  
Parallel computing, cyber-physical systems & sensing, theoretical computer science

Sanmay Das  
PhD, Massachusetts Institute of Technology  
Design of algorithms for complex environments, computational social science, machine learning

William D. Richard  
PhD, University of Missouri-Rolla  
Ultrasonic imaging, medical instrumentation, computer engineering

Assistant Professors

Yasutaka Furukawa  
PhD, University of Illinois at Urbana-Champaign  
Computer vision and computer graphics

Roman Garnett  
PhD, University of Oxford  
Active learning (especially with atypical objectives), Bayesian optimization, and Bayesian nonparametric analysis

Brendan Juba  
PhD, Massachusetts Institute of Technology  
Theoretical approaches to artificial intelligence founded on computational complexity theory and theoretical computer science more broadly construed

Angelina Lee  
PhD, Massachusetts Institute of Technology  
Designing linguistics for parallel programming, developing runtime system support for multithreaded software, and building novel mechanisms in operating systems and hardware to efficiently support parallel abstractions

Benjamin Moseley  
PhD, University of Illinois at Urbana-Champaign  
Design and analysis of algorithms, online and approximation algorithms, parallel computing, large data analysis, green computing and algorithmic applications

Alvitta Ottley  
PhD, Tufts University  
Designing personalized and adaptive visualization systems, including information visualization, human-computer interaction, visual analytics, individual differences, personality, user modeling and adaptive interfaces

Professor of the Practice

Dennis Cosgrove  
BS, University of Virginia  
Programming environments and parallel programming

Research Faculty

Sharlee Climer  
PhD, Washington University  
Computational biology, artificial intelligence, mathematical modeling, combinatorial optimization, pattern recognition

Lecturers

Ruth Miller  
PhD, University of Houston  
Data mining, database, bioinformatics

Marion Neumann  
PhD, University of Bonn, Germany  
Machine learning with graphs; solving problems in agriculture and robotics

Jonathan Shidal  
PhD, Washington University  
Computer architecture and memory management

Douglas Shook  
MS, Washington University  
Imaging sensor design, compiler design and optimization

William Siever  
Principal Lecturer  
PhD, Missouri University of Science and Technology

Todd Sproull  
PhD, Washington University  
Computer networking and mobile application development
Senior Professors
Jerome R. Cox Jr.
ScD, Massachusetts Institute of Technology
Computer system design, computer networking, biomedical computing
Mark A. Franklin
Hugo F. and Ina Champ Urbauer Professor of Engineering
PhD, Carnegie Mellon University
Computer architecture, systems analysis and parallel processing, storage systems design
Jonathan S. Turner
PhD, Northwestern University
Design and analysis of internet routers and switching systems, networking and communications, algorithms

Professors Emeriti
Takayuki D. Kimura
PhD, University of Pennsylvania
Communication and computation, visual programming
Seymour V. Pollack
MS, Brooklyn Polytechnic Institute
Intellectual property, information systems

Majors
Please refer to the following sections for information about the Bachelor of Science in Computer Science (p. 857), the Bachelor of Science in Computer Engineering (p. 858), and the second major in computer science (p. 858).

Bachelor of Science in Computer Science
The Bachelor of Science in Computer Science (BSCS) is designed for students planning a career in computing. Students working toward a BSCS degree must meet all requirements for an applied science degree (p. 930) from the School of Engineering & Applied Science. In addition, there are the following departmental course requirements:

- **Computer Science Core Requirements**
  - CSE 131 Computer Science I 3
  - CSE 132 Computer Science II 3
  - CSE 240 Logic and Discrete Mathematics 3
  - or Math 310 Foundations for Higher Mathematics 3
  - CSE 247 Data Structures and Algorithms 3
  - CSE 332S Object-Oriented Software Development Laboratory 3
  - CSE 347 Analysis of Algorithms 3
  - Total units 18

Each of these core courses must be passed with a grade of C- or better.

- **Computer Science Technical Elective Requirements:**
  At least 24 additional units in computer science or computer science-related courses with an S, M, T or A suffix of which at least one must be a systems (S) course and at least one must be a machine (M) or application (A) course. Students may use up to 6 units of approved independent work (CSE 400E, CSE 497-CSE 499) as part of their computer science electives. Such independent work can be classified as S, M, T or A with approval.

There are several technical elective course sequences (https://cse.wustl.edu/undergraduate/programs/Pages/bs-in-computer-science.aspx) described on the department webpage that are recommended for students whose interests are in particular areas of computing.

- **Math Requirements:**
  - Math 131 Calculus I 3
  - Math 132 Calculus II 3
  - Math 233 Calculus III 3
  - Math 309 Matrix Algebra 3
  - or ESE 318 Engineering Mathematics A 3
  - ESE 326 Probability and Statistics for Engineering 3
  - or Math 3200 Elementary to Intermediate Statistics and Data Analysis 3
  - or QBA 120 & QBA 121 Managerial Statistics I and Managerial Statistics II 3
  - or Psych 300 Introduction to Psychological Statistics 3
  - Total units 15

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the department’s back credit policy (http://college.artsci.wustl.edu/policies/placement_credit/backcredit).

- **Additional Departmental Requirements:**
  - CWP 100 College Writing 1 3
  - Engr 310 Technical Writing 3
  - Natural Sciences electives 8
  - Humanities and Social Sciences electives 18

The College Writing and Humanities and Social Sciences requirements are those required of all students in the School of Engineering & Applied Science. The Natural Sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, or Physics. The College Writing and Natural Sciences courses must be completed with a grade of C- or better.
All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/fail basis.

**Bachelor of Science in Computer Engineering**

Computer Engineering encompasses studies of hardware, software and systems issues that arise in the design, development and application of computer systems. Computer Engineering students choose between a more hardware-focused or a more software-focused degree program, each with slightly different requirements.

Students working toward a BSCoE degree must meet all requirements for an engineering degree (p. 930) from the School of Engineering & Applied Science. Required courses, focus area courses, technical electives, and the senior project cannot be taken on a pass/fail basis. In addition, there are the following departmental course requirements:

- **Common Studies Program Requirements:**
  - CSE 132 Computer Science II 3
  - ESE 230 Introduction to Electrical and Electronic Circuits 4
  - ESE 232 Introduction to Electronic Circuits 3
  - CSE 240 Logic and Discrete Mathematics 3
  - CSE 247 Data Structures and Algorithms 3
  - or Math 310 Foundations for Higher Mathematics 3
  - CSE 260M Introduction to Digital Logic and Computer Design 3
  - ESE 326 Probability and Statistics for Engineering 3-6
  - or Math 3200 Elementary to Intermediate Statistics and Data Analysis 3
  - or QBA 120 Managerial Statistics I 3
  - & QBA 121 and Managerial Statistics II 3
  - or Psych 300 Introduction to Psychological Statistics 3
  - CSE 361S Introduction to Systems Software 3
  - CSE 362M Computer Architecture 3
  - Total units 31-34

Each of these core courses must be passed with a grade of C- or better.

- **Computer Engineering Focus Area:**
  - Hardware Focus:
    - Each student must satisfy the requirements of at least one focus area.
  - CSE 462M Computer Systems Design 3
  - and any other two courses CSE 401-597 ending in M 6

- **Software Focus:**
  - CSE 422S Operating Systems Organization 3
  - and any other two courses CSE 401-597 ending in S 6

- **Computer Engineering Technical Electives:**
  - At least 21 units of technical electives, drawn from 300-level or higher CSE (with suffix S, M, T or A) or ESE courses. These units are in addition to the 9 units needed to meet the focus area requirement described above. Up to 6 units of Independent Study (CSE 400E) can count toward technical electives. There is no limit as to how many independent study courses can count toward the general 120 units.

The second major provides an opportunity to combine computer science with another degree program. A second major in computer science can expand a student’s career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major also is well suited for students planning careers in medicine, law, business, architecture.
and fine arts. The requirements are as follows. There are no additional distribution or unit requirements for the second major.

- **Computer Science Core Requirements:**
  - CSE 131 Computer Science I 3
  - CSE 132 Computer Science II 3
  - CSE 240 Logic and Discrete Mathematics 3
  - or Math 310 Foundations for Higher Mathematics
  - CSE 247 Data Structures and Algorithms 3
  - CSE 332S Object-Oriented Software Development Laboratory 3
  - CSE 347 Analysis of Algorithms 3
  - Total units 18

Each of these core courses must be passed with a grade of C- or better.

- **Computer Science Electives:**
  - At least 24 units of computer science electives, selected from any CSE courses with an S, M, T or A suffix.

- **Math Requirement:**
  - Calculus (Math 131) and Probability (ESE 326 or Math 3200, or the sequence QBA 120-QBA 121).

### Minors

Please refer to the following sections for information about the **minor in computer science** (p. 859) and the **minor in bioinformatics** (p. 859).

### The Minor in Computer Science

If a student's goal is a basic foundation in computer science for application to another field, but he or she is not planning a career as a practicing computer scientist, the minor in computer science is a good choice. The minor consists of five CSE courses, including two core courses and three electives. The core courses provide an introduction to computer science concepts and problem-solving techniques. The electives offer flexibility to integrate computer science studies with a major area. Students select the courses that are most important to them, whether their interests are in fine arts, linguistics, psychology, philosophy, law, business, medicine, the natural sciences or anything else.

**Units required:** 15

**Required courses:**

<table>

<td>3</td>
</tr>
<tr>
<td>CSE 247</td>
<td>Data Structures and Algorithms</td>
<td>3</td>
</tr>
<tr>
<td>Total</td>
<td></td>
<td>6</td>
</tr>
</tbody>
</table>

**Elective courses:**

Any three additional CSE courses selected from CSE 132 Computer Science II, CSE 240 Logic and Discrete Mathematics, CSE 347 Analysis of Algorithms, or any CSE course with a T, S, M or A suffix.

### Additional Information

All courses used for the computer science minor must be taken for a grade, and the student must earn a C- or better. Should the student decide to go further in the field, all courses in the computer science minor can be used toward a second major in computer science or a degree in computer science or computer engineering.

### The Minor in Bioinformatics

Mindful of the emerging opportunities at the interface of biology and computer science, the Department of Biology and Department of Computer Science & Engineering have fashioned the minor in bioinformatics that serves students from both departments as well as other students from the natural sciences and engineering with an interest in this field.

**Units required:** 23-24 units as described below

**Core courses:**

### Additional Information

It is anticipated that for those students majoring in biology or CSE, some portion of the introductory sequence will overlap with courses required for the major, and these courses will be applicable to both the major and the minor. Upper-level courses in Biology and CSE used to fulfill the minor may not be used.
to fulfill another major or minor in Arts & Sciences. A minimum grade of C- is required for all courses to count toward the minor.

**Courses**

Visit [https://courses.wustl.edu](https://courses.wustl.edu) to view semester offerings for E81 CSE (https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E81&crsId=1.5).

Prerequisites are advisory in our course listings, but students are cautioned against taking a course without the necessary background. Note that if one course mentions another as its prerequisite, the prerequisites of the latter course are implied to be prerequisites of the former course as well. Students in doubt of possessing the necessary background for a course should correspond with the course's instructor.

---

**E81 CSE 104 Web Development**

This comprehensive course does not assume prior programming background or web design experience. Explores elementary principles that go into designing, creating and publishing an effective website. Topics include the production process, design metaphors, interface/information design, page layout concepts, graphics preparation, color theory, development tools, HTML, style sheets, basic scripting techniques, search engine optimization and site maintenance/marketing strategies.

Credit 3 units. EN: TU

**E81 CSE 131 Computer Science I**

An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation and object-oriented programming. Recursion, iteration and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisite: Comfort with algebra and geometry at the high school level is assumed. Patience, good planning and organization promote success. This course assumes no prior experience with programming.

Credit 3 units. BU: SCI; EN: TU

**E81 CSE 131R Seminar: Computer Science I**

A seminar and discussion session that complements the material studied in CSE 131. Provides background and breadth for the disciplines of computer science and computer engineering. Features guest lectures and highly interactive discussions of diverse computer science topics. Highly recommended for majors and for any student seeking a broader view of computer science or computer engineering. Pass/Fail only.

Credit 1 unit.

**E81 CSE 132 Computer Science II**

CSE 132 introduces students to fundamental concepts in the basic operation of computers, ranging from desktops and servers to microcontrollers and handheld devices. Subjects include digital and analog input/output, sensing the physical world, information representation, basic computer architecture and machine language, time-critical computation, machine-to-machine communication and protocol design. Students will use both desktop systems and handheld microcontrollers for laboratory experiments. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisite: CSE 131.

Credit 3 units. EN: TU

**E81 CSE 141 The Digital Society**

Our modern digital society is both exciting and challenging. As the effectiveness of computing advances, and digital technologies like the internet and algorithmic decision-making affect and penetrate more and more aspects of our lives, we face extraordinary opportunities and equally challenging challenges. Computer driven automation increases our quality of life but eradicates our jobs! The internet and smartphones keep us connected but subject us to growing corporate, government and criminal surveillance. In this course, co-taught by professors from the Schools of Engineering and Law, we will examine the fundamental technical underpinnings of digital society and its consequences. We will discuss "Welcome to the Future," "The Future of Jobs," and "The Future of Humans." All aspects of life are evolving rapidly in our digital society, and we will draw on expert and engaging guest speakers from all seven schools of Washington University and intellectual leaders from beyond our campus to share their perspectives and insights. This course will help students to perceive the modern world in new ways in order to better understand how technological shifts are changing and challenging notions of individual and collective prosperity. Our goal is to give students both the technical understanding of how our new technologies work and the critical skills to evaluate them for themselves as citizens and leaders of our new digital society. Prerequisites: none. Open only to freshmen. Same as I50 InterD 141.

Credit 3 units.

**E81 CSE 220S Software Design and Development Studio**

This is a lab course that provides practical experience in designing, implementing, testing, documenting and supporting a medium-sized software application. Topics covered include application and user interface specification, module and API design, code re-use, code review, software maintenance and support, unit and integration testing, and debugging procedures. Students gain experience in the application of common algorithms, design patterns and data structures to novel problems. Students have a choice of working in Java or C++, and work both individually and in groups. Specific application areas vary by semester. Prerequisites: sophomore standing and CSE 132. CSE 241 is recommended.

Credit 3 units. EN: TU

**E81 CSE 232 Programming Skills Workshop**

This course provides an overview of practical implementation skills. Topics include compilation and linking, memory management, pointers and references, using code libraries, testing and debugging. Prerequisites: CSE 132.

Credit 1 unit.

**E81 CSE 240 Logic and Discrete Mathematics**

Introduces elements of logic and discrete mathematics that allow reasoning about computational structures and processes. Generally, the areas of discrete structures, proof techniques, probability and computational models are covered. Topics
typically include propositional and predicate logic; sets, relations, functions and graphs; proof by contradiction, induction and reduction; finite state machines and regular languages; and introduction to discrete probability, expected value and variance. Prerequisite: CSE 131.
Credit 3 units. EN: TU

E81 CSE 245A Fair Division in Theory and Practice
The concept of fair division is a central tenet in the design of procedures aimed at generating equitable social outcomes and mitigating conflict. At the national level, such procedures include systems of apportionment, voting and legislative districting, to name a few. On a smaller scale, these procedures could govern how assets are divided in a divorce, or how to divide a cake. While "fairness" in theory is indisputably a good thing, in practice the courts, politicians, and even mathematicians have grappled with the question of what it means for a procedure to be fair. This course examines algorithms and applications of procedures that aim to divide or allocate resources fairly. Some of these procedures were developed by mathematicians looking for formulas that satisfy mathematical properties such as envy-freeness and equitability. All of the procedures we consider are examined in terms of the fairness goals they aspire to achieve, the mechanisms they employ to achieve those goals, and the shortcomings of the procedures. Prerequisites: CSE 247 and ESE 326.
Credit 3 units. A&S: SS A&S IQ: SSC EN: S, TU

E81 CSE 247 Data Structures and Algorithms
Study of fundamental algorithms, data structures, and their effective use in a variety of applications. Emphasizes importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Prerequisite: CSE 240.
Credit 3 units. EN: TU

E81 CSE 260M Introduction to Digital Logic and Computer Design
Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisites: CSE 131.
Credit 3 units. EN: TU

E81 CSE 316A Social Network Analysis
This course looks at social networks and markets through the eyes of a computer scientist. We will look at questions including, "Why are acquaintances rather than friends more likely to get us job opportunities?" and, "Why do the rich get richer?" We begin by studying graph theory (allowing us to study the structure) and game theory (allowing us to study the interactions) of social networks and market behavior at the introductory level. Among other topics, we will study auctions, epidemics, and the structure of the internet (including web searches). This course examines the intersection of computer science, economics, sociology, and applied mathematics. Prerequisites: CSE 247 and ESE 326.
Credit 3 units. EN: TU

E81 CSE 320S Software Design and Development Studio
This is a lab course that provides practical experience in designing, implementing, testing, documenting and supporting a medium-sized software application. Topics covered include application and user interface specification, module and API design, code re-use, code review, software maintenance and support, unit and integration testing, and debugging procedures. Students gain experience in the application of common algorithms, design patterns, and data structures to novel problems. Students have a choice of working in Java or C++, and work both individually and in groups. Specific application areas vary by semester. Prerequisites: Sophomore standing and CSE 132. CSE 241 is recommended.
Same as E81 CSE 220S
Credit 3 units. EN: TU

E81 CSE 330S Rapid Prototype Development and Creative Programming
This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a website from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ the AngularJS web framework, and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: After a formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131.
Credit 3 units. EN: TU

E81 CSE 322S Object-Oriented Software Development Laboratory
Intensive focus on practical aspects of designing, implementing and debugging software, using object-oriented, procedural, and generic programming techniques. The course emphasizes familiarity and proficiency with a wide range of C++ language features through hands-on practice completing studio exercises and lab assignments, supplemented with readings and summary presentations for each session. Prerequisites: CSE 247.
Credit 3 units. EN: TU

E81 CSE 341T Parallel and Sequential Algorithms
The course aims to teach how to design, analyze and implement parallel algorithms. The emphasis is on teaching fundamental principles and design techniques that easily transfer over to parallel programming. These techniques include divide and conquer, contraction, the greedy method, etc. Prerequisite: CSE 247.
Credit 3 units. EN: TU

E81 CSE 347 Analysis of Algorithms
Introduces techniques for the mathematical analysis of algorithms, including randomized algorithms and non-worst-case analyses such as amortized and competitive analysis. Introduces the standard paradigms of divide-and-conquer, greedy, and dynamic programming algorithms, as well as reductions.
Also provides an introduction to the study of intractability and techniques to determine when good algorithms cannot be designed. Prerequisite: CSE 247.
Credit 3 units.

**E81 CSE 417T Introduction to Machine Learning**
The field of machine learning is concerned with the question of how to construct computer programs that automatically improve with experience. This course is a broad introduction to machine learning, covering the foundations of supervised learning and important supervised learning algorithms. Topics to be covered are the theory of generalization (including VC-dimension, the bias-variance trade-off, validation and regularization) and linear and nonlinear learning models (including linear and logistic regression, decision trees, ensemble methods, neural networks, nearest-neighbor methods, and support vector machines).
Prerequisites: CSE 347 (can be taken concurrently), ESE 326 (or Math 3200), Math 233, and Math 309 (can be taken concurrently).
Credit 3 units.

**E81 CSE 422S Operating Systems Organization**
Exploration of operating systems as managers of shared resources. Students study algorithms and data structures that support essential operating systems services. Concepts are reinforced through programming exercises and comparative studies. Topics include: proportional sharing and real-time scheduling of processes and threads, I/O facilities, memory management, virtual memory, device management, concurrent programming, and file system organization. Prerequisites: CSE 332S and CSE 361S.
Credit 3 units. EN: TU

**E81 CSE 425S Programming Systems and Languages**
A systematic study of the principles, concepts and mechanisms of computer programming languages: their syntax, semantics and pragmatics; the processing and interpretation of computer programs; programming paradigms; and language design. Illustrative examples are selected from a variety of programming language paradigms. Prerequisites: CSE 332S.
Credit 3 units. EN: TU

**E81 CSE 427S Cloud Computing with Big Data Applications**
This course provides a comprehensive introduction to applied parallel computing using the MapReduce programming model facilitating large scale data management and processing. There will be an emphasis on hands-on experience working with the Hadoop architecture, an open-source software framework written in Java for distributed storage and processing of very large data sets on computer clusters. Further, we will make use of related big data technologies from the Hadoop ecosystem of tools, such as Hive, Impala and Pig in developing analytics and solving problems faced by enterprises today. Prerequisites: CSE 247 and CSE 330 (or basic knowledge in relational databases (RDMS) and SQL).
Credit 3 units. EN: TU

**E81 CSE 431S Translation of Computer Languages**
The theory of language recognition and translation is introduced in support of compiler construction for modern programming languages. Topics include syntactic and semantic analysis, symbol table management, code generation, and runtime libraries. A variety of parsing methods is covered, including top-down and bottom-up. Machine problems culminate in the course project, for which students construct a working compiler.
Prerequisites: CSE 247.
Credit 3 units. EN: TU
E81 CSE 432S Pattern-Oriented Software Design and Development
Intensive focus on design and implementation of software using design patterns. Particular emphasis on successive refinement based on identification of unresolved design forces at each step of the design process, and on application of patterns to guide design refinement. Design implementations are conducted in Java and C++ in a team setting, with weekly presentations and critiques of design and implementation decisions and outcomes throughout the course. Prerequisites: CSE 332S or graduate standing, and proficiency in Java and C++ software development.
Credit 3 units. EN: TU

E81 CSE 437S Software Engineering Workshop
An introduction and exploration of concepts and issues related to large-scale software systems development. Areas of exploration include technical complexities, organization issues, and communication techniques for large-scale development. Students participate through teams emulating industrial development. The projects cover the principal system development life-cycle phases from requirements analysis, to software design, and to final implementation. Issues relating to real-time control systems, human factors, reliability, performance, operating costs, maintainability and others are addressed and resolved in a reasonable manner. Prerequisite: junior or senior standing.
Credit 3 units. EN: TU

E81 CSE 438S Mobile Application Development
Learn how to create iOS apps in the Swift programming language. This course covers a variety of topics in the development of modern mobile applications, with a focus on hands-on projects. Students will create multiple fully-functional apps from scratch. The course emphasizes object-oriented design patterns and real-world development techniques. Time is provided at the end of the course for students to work on a project of their own interest. Prerequisites: CSE 247.
Credit 3 units. EN: TU

E81 CSE 450A Video Game Programming
This course teaches the core aspects of a video game developer's toolkit. Students work in groups and with a large game software engine to create and playtest a full-featured video game. Students will explore topics around the design of games through analysis of current games. Students have the opportunity to explore additional topics including graphics, artificial intelligence, networking, physics, and user interface design through their game project. Prerequisite: CSE 3xxS or 4xxS.
Credit 3 units. EN: TU

E81 CSE 452A Computer Graphics
Introduction to computer graphics. The course covers fundamental concepts, data structures and algorithms related to the construction, display and manipulation of three-dimensional objects. Topics include scan-conversion, basic image processing, transformations, scene graphs, camera projections, local and global rendering, fractals, and parametric curves and surfaces. Students develop interactive graphics programs using C++ language. Prerequisites: CSE 332S and Math 309.

E81 CSE 460T Switching Theory
Advanced topics in switching theory as employed in the synthesis, analysis and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits, and built-in self-test techniques. Prerequisite: CSE 260M.
Credit 3 units. EN: TU

E81 CSE 462M Computer Systems Design
Introduction to modern design practices, including the use of FPGA design methodologies. Students use a commercial CAE/CAD system for VHDL-based design and simulation while designing a selected computation system. Prerequisites: CSE 361S and CSE 362M.
Credit 3 units. EN: TU

E81 CSE 463M Digital Integrated Circuit Design and Architecture
This is a project-oriented course on digital VLSI design. The course material focuses on bottom-up design of digital integrated circuits, starting from CMOS transistors, CMOS inverters, combinational circuits and sequential logic designs. Important design aspects of digital integrated circuits such as propagation delay, noise margins and power dissipation are covered in the class, as well as design challenges in sub-micron technology are addressed. The students design combinational and sequential circuits at various levels of abstraction using state-of-the-art CAD environment provided by Cadence Design Systems. The goal of the class is to design a microprocessor in 0.5 micron technology that will be fabricated by a semiconductor foundry. Prerequisites: CSE 260 and ESE 232.
Credit 3 units. EN: TU

E81 CSE 464M Digital Systems Engineering
Design and characterization of digital circuits, reliable and predictable interconnection of digital devices, and information transfer over busses and other connections. Topics include: review of MOSFET operation; CMOS logic gate electrical characteristics; system and single-point noise margin and noise budgets; figures of merit for noise-margin and power-delay product, and trade-off between noise margin and propagation delay; transmission-line driving including reflection, termination, nonzero transition time, lumped and distributed capacitance loads, nonlinear terminations, and applicable conditions for lumped approximations; coupled transmission lines, forward and backward crosstalk, short line approximations, ground bounce, and simultaneous switching noise; timing, clocking and clock distribution for digital circuits; prediction of metastability error rates and design for acceptable probability of failure. Examples and design exercises using systems and interconnections selected from current Computer Engineering practice such as RAMBUS, PCI bus, GTL, LVDS and others. Prerequisites: ESE 232 and CSE 362M.
Credit 3 units. EN: TU

E81 CSE 465M Digital Systems Laboratory
Hardware/software co-design; processor interfacing; procedures for reliable digital design, both combinational and sequential;
understanding manufacturers’ specifications; use of test equipment. Several single-period laboratory exercises, several design projects, and application of microprocessors in digital design. One lecture and one laboratory period a week. Prerequisites: CSE 260M and CSE 361S. Credit 3 units. EN: TU

**E81 CSE 467S Embedded Computing Systems**
Introduces the issues, challenges and methods for designing embedded computing systems — systems designed to serve a particular application, which incorporate the use of digital processing devices. Examples of embedded systems include PDAs, cellular phones, appliances, game consoles, automobiles and iPod. Emphasis is given to aspects of design that are distinct to embedded systems. The course examines hardware, software and system-level design. Hardware topics include microcontrollers, digital signal processors, memory hierarchy and I/O. Software issues include languages, run-time environments and program analysis. System-level topics include real-time operating systems, scheduling, power management and wireless sensor networks. Students perform a course project on a real wireless sensor network testbed. Prerequisite: CSE 361S. Credit 3 units. EN: TU

**E81 CSE 473S Introduction to Computer Networks**
A broad overview of computer networking. Topics include history, protocols, Hyper Text Transfer Protocol (HTTP), File Transfer Protocol (FTP), Simple Mail Transfer Protocol (SMTP), Domain Name System (DNS), peer-to-peer (P2P), transport layer design issues, transport layer protocols, Transmission Control Protocol (TCP), User Datagram Protocol (UDP), TCP congestion control, network layer, Internet Protocol version 4 (IPv4), Internet Control Message Protocol (ICMP), Internet Protocol version 6 (IPv6), routing algorithms, routing protocols, Open Shortest Path First (OSPF), Routing Information Protocol (RIP), Border Gateway Protocol (BGP), datalink layer and local area networks carrier sense multiple access with collision detection (CSMA/CD), Ethernet, virtual local area networks (VLANs), Point-to-Point Protocol (PPP), Multi-Protocol Label Switching, wireless and mobile networks, multimedia networking, security in computer networks, cryptography, and network management. Prerequisites: CSE 132 and 247. Credit 3 units. EN: TU

**E81 CSE 483M Introduction to Electronic Instrumentation Design**
This course covers the principles underlying the design of electronic instrumentation systems. As a case study we will design and analyze a complete instrumentation amplifier integrated circuit and discuss topics related to signal conditioning, amplification, filtering, biasing, data conversion, interface design, mixed-signal layout and mixed-signal simulation. Students are expected to work with state-of-the-art circuit simulation and layout tools for their homework and project assignments. Prerequisites: CSE 260 and ESE 232. Credit 3 units. EN: TU

**E81 CSE 497 Senior Project I**
Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving exploration and extension of theoretical structures, or may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or community. In either case, the project serves as a focal point for crystallizing the concepts, techniques and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal for approval by the department during the spring semester of the junior year. Prerequisite: senior standing. Credit 3 units.

**E81 CSE 498 Senior Project II**
Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving exploration and extension of theoretical structures, or may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or community. In either case, the project serves as a focal point for crystallizing the concepts, techniques and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal for approval by the department during the spring semester of the junior year. Prerequisite: senior standing. Credit 3 units.

**E81 CSE 499 Undergraduate Honors Thesis**
Working closely with a faculty member, the student investigates an original idea (algorithm, model technique, etc.), including a study of its possible implications, its potential application and its relationship to previous related work reported in the literature. Contributions and results from this investigation are synthesized and compiled into a publication-quality research paper presenting the new idea. Prerequisites: a strong academic record and permission of instructor. Credit 3 units.

**E81 CSE 500 Independent Study**
Credit variable, maximum 3 units.

**E81 CSE 501N Programming Concepts and Practice**
An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data encapsulation, and object-oriented programming. Recursion, iteration, and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: Comfort with algebra and geometry at the high school level is assumed. Patience, good planning, and organization will promote success. This course assumes no prior experience with programming. Same as E81 CSE 131. Credit 3 units. BU: SCI EN: TU

**E81 CSE 503S Rapid Prototype Development and Creative Programming**
This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a website from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ the Angular JS web framework, and to develop modern
web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: After a formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131.
Same as E81 CSE 330S
Credit 3 units. EN: TU

E81 CSE 504N Object-Oriented Software Development Laboratory

Intensive focus on practical aspects of designing, implementing and debugging software, using object-oriented, procedural, and generic programming techniques. The course emphasizes familiarity and proficiency with a wide range of C++ language features through hands-on practice completing studio exercises and lab assignments, supplemented with readings and summary presentations for each session. Prerequisites: CSE 247.
Same as E81 CSE 332S
Credit 3 units. EN: TU

E81 CSE 506M Principle and Methods of Micro- and Nanofabrication

A hands-on introduction to the fundamentals of micro- and nanofabrication processes with emphasis on cleanroom practices. The physical principles of oxidation, optical lithography, thin film deposition, etching and metrology methods will be discussed, demonstrated and practiced. Students will be trained in cleanroom concepts and safety protocols. Sequential microfabrication processes involved in the manufacture of microelectronic and photonic devices will be shown. Training in imaging and characterization of micro- and nanostructures will be provided. Prerequisites: graduate or senior standing or permission of the instructor.
Same as E37 MEMS 5611
Credit 3 units. EN: TU

E81 CSE 507A Technology Entrepreneurship

This is a course for students who plan to be, or work with, entrepreneurs. An entrepreneurial mindset is needed to create or grow economically viable enterprises, be they new companies, new groups within companies, or new university laboratories. This course aims to cultivate an entrepreneurial perspective with particular emphasis on information technology-related activities. The course is jointly offered for business and CSE students, allowing for acculturation between these disciplines. In addition to an introductory treatment of business and technology fundamentals, course topics include: business ethics, opportunity assessment, team formation, financing, intellectual property and university technology transfer. The course features significant participant and guest instruction from experienced practitioners. Prerequisites: none.
Credit 3 units.

E81 CSE 511A Introduction to Artificial Intelligence

The discipline of artificial intelligence (AI) is concerned with building systems that think and act like humans or rationally on some absolute scale. This course is an introduction to the field, with special emphasis on sound modern methods. The topics include knowledge representation, problem solving via search, game playing, logical and probabilistic reasoning, planning, dynamic programming, and reinforcement learning. Programming exercises concretize the key methods. The course targets graduate students and advanced undergraduates. Evaluation is based on written and programming assignments, a midterm exam and a final exam. Prerequisites: CSE 347, ESE 326, Math 233.
Credit 3 units.

E81 CSE 512A Statistical Computing for Scientific Research

Provides students a solid understanding of statistical computing issues that concern empirical researchers in different sciences. Topics covered include: computer architecture, Monte Carlo simulation, bootstrapping and jackknifing, nonparametric smoothing, and Markov chain Monte Carlo methods. Prerequisite: basic statistics or permission of the instructor. Students are assumed to be familiar with: basic calculus, probability, regression, MLE theory and simple programming.
Credit 3 units.

E81 CSE 513T Theory of Artificial Intelligence and Machine Learning

Mathematical foundations for Artificial Intelligence and Machine Learning. An introduction to the PAC-Semantics ("Probably Approximately Correct") as a common semantics for knowledge obtained from learning and declarative sources, and the computational problems underlying the acquisition and processing of such knowledge. We emphasize the design and analysis of efficient algorithms for these problems, and examine for which representations these problems are known or believed to be tractable. Prerequisite: CSE 347.
Credit 3 units. EN: TU

E81 CSE 514A Data Mining

With the vast advancement in science and technology, data acquisition in large quantities is routinely done in many fields. Examples of large data include various types of data on the internet, high-throughput sequencing data in biology and medicine, extraterrestrial data from telescopes in astronomy, and images from surveillance cameras in security. Mining a large amount of data through data mining has become an effective means to extracting knowledge from data. This course introduces the basic concepts and methods for data mining and provides hands-on experience for processing, analyzing and modeling structured and unstructured data. Homework problems, exams and programming assignments will be administrated throughout the course to enhance learning. Prerequisites: CSE 247 and ESE 326 (or Math 320) or their equivalent, or permission of the instructor.
Credit 3 units. EN: TU

E81 CSE 515T Bayesian Methods in Machine Learning

This course will cover machine learning from a Bayesian probabilistic perspective. Bayesian probability allows us to model and reason about all types of uncertainty. The result is a powerful, consistent framework for approaching many problems that arise in machine learning, including parameter estimation, model comparison, and decision making. We will begin with a high-level introduction to Bayesian inference, then proceed to cover more-advanced topics. These will include inference techniques (exact, MAP, sampling methods, the Laplace approximation, etc.), Bayesian decision theory, Bayesian model comparison, Bayesian nonparametrics, and Bayesian optimization. Prerequisites: CSE 417T, ESE 326.
Credit 3 units. EN: TU
E81 CSE 516A Multi-Agent Systems
This course introduces the fundamental techniques and concepts needed to study multi-agent systems, in which multiple autonomous entities with different information sets and goals interact. We will study algorithmic, mathematical, and game-theoretic foundations, and how these foundations can help us understand and design systems ranging from robot teams to online markets to social computing platforms. Topics covered may include game theory, distributed optimization, multi-agent learning and decision-making, preference elicitation and aggregation, mechanism design, and incentives in social computing systems. Prerequisites: CSE 247, ESE 326 and Math 233. Credit 3 units. EN: TU

E81 CSE 517A Machine Learning
This course assumes a basic understanding of machine learning and covers advanced topics at the frontier of the field in-depth. Topics to be covered include kernel methods (support vector machines, Gaussian processes), neural networks (deep learning), and unsupervised learning. Depending on developments in the field, the course will also cover some advanced topics, which may include learning from structured data, active learning, and practical machine learning (feature selection, dimensionality reduction). Prerequisites: CSE 247, CSE 417T, ESE 326, Math 233 and Math 309. The instructor will hold a take-home placement exam (on basic mathematical knowledge) for all students currently enrolled and on the waitlist. The exam will be due on the first day of class. Only students who pass the placement exam will be enrolled in the course. Credit 3 units. EN: TU

E81 CSE 519T Advanced Machine Learning
This course provides a close look at advanced machine learning algorithms — their theoretical guarantees (computational learning theory), and tricks to make them work in practice. In addition, this course focuses on more specialized learning settings, including unsupervised learning, semi-supervised learning, domain adaptation, multi-task learning, structured prediction, metric learning and learning of data representations. Learning approaches may include graphical models, non-parametric Bayesian statistics, and technical topics such as sampling, approximate inference and non-linear function optimization. Mathematical maturity and general familiarity of machine learning is required. Prerequisites: CSE 517A or 511A or 7100. Credit 3 units. EN: TU

E81 CSE 520S Real-Time Systems
This course covers software systems and network technologies for real-time applications such as automobiles, avionics, industrial automation and Internet of Things. Topics include real-time scheduling, real-time operating systems and middleware, Quality of Service, industrial networks and real-time cloud computing. Prerequisite: CSE 422S. Credit 3 units. EN: TU

E81 CSE 521S Wireless Sensor Networks
Dense collections of smart sensors networked to form self-configuring pervasive computing systems provide a basis for a new computing paradigm that challenges many classical approaches to distributed computing. Naming, wireless networking protocols, data management and approaches to dependability, real-time, security and middleware services all fundamentally change when confronted with this new environment. Embedded sensor networks and pervasive computing are among the most exciting research areas with many open research questions. This class studies a large number of research papers that deal with various aspects of wireless sensor networks. Students perform a project on a real wireless sensor network composed of tiny devices each consisting of sensors, a radio transceiver and a microcontroller. Prerequisite: CSE 422S. Credit 3 units. EN: TU

E81 CSE 522S Advanced Operating Systems
This course explores core OS abstractions, mechanisms and policies and how they impact support for general purpose, embedded and real-time operating environments. How to evaluate, modify and optimize the use of kernel-level resources is covered hands-on and in detail, including CPU and I/O scheduling, memory management, and interprocess communication. Prerequisite: CSE 422S. Credit 3 units. EN: TU

E81 CSE 523S Systems Security
This course examines the intersection between computer design and information security. While performance and efficiency in digital systems have improved markedly in recent decades, computer security has worsened overall in this time frame. To understand why, we will explore the role that design choices play in the security characteristics of modern computer and network systems. Students will use and write software to illustrate mastery of the material. Projects will include identifying security vulnerabilities, exploiting vulnerabilities, and detecting and defending against exploits. Prerequisite: CSE 361S. Credit 3 units. EN: TU

E81 CSE 528S Software Project Management
An introduction to the issues and basic methods used in managing software development projects. The course includes factors affecting software projects, lifecycle models, project scheduling, size and staffing, progress tracking, software metrics, managing people, and crisis management. The course includes lectures, hands-on training in selected project management tools, and case studies. In addition, each student plans and manages a simulated software project. The course is designed to familiarize software engineers and computer scientists to the issues and problems involved in managing software projects. Prerequisite: CSE 436S, significant industrial software development, or permission of instructor. Credit 3 units.

E81 CSE 530S Database Management Systems
A study of data models and the database management systems that support these data models. The design theory for databases is developed and various tools are utilized to apply the theory. General query languages are studied and techniques for query optimization are investigated. Integrity and security requirements are studied in the context of concurrent operations on a database, where the database may be distributed over one or more locations. The unique requirements for engineering design databases, image databases, and long transaction systems are analyzed. Prerequisite: CSE 247. Credit 3 units.
E81 CSE 531S Theory of Compiling and Language Translation
Algorithms and intermediate representations for automatic program analysis are examined, with an emphasis on practical methods and efficient engineering of program optimization and transformations. The course includes a thorough treatment of monotone data flow frameworks: a mathematical model in which most optimization problems can be specified and solved. The course primarily covers optimizations that are applicable to any target architecture; however, optimizations specific to parallel, distributed and storage-hierarchical systems also are discussed. Prerequisite: CSE 431S or CSE 425S.
Credit 3 units. EN: TU

E81 CSE 532S Advanced Multiparadigm Software Development
Intensive focus on advanced design and implementation of concurrent and distributed system software in C++. Topics covered include C++11 concurrency and synchronization features and software architecture patterns. Prerequisites: CSE 322S/CSE 504N or graduate standing and strong familiarity with C++; and CSE 422S or CSE 522S.
Credit 3 units. EN: TU

E81 CSE 535T Programming Language Theory
This course presents the theoretical foundations of programming languages, using formal techniques. We study how to define programming languages in a formal way, and how to prove meta-theoretic properties about them. Type theory, including powerful typing constructs like polymorphic and recursive types, receives particular attention. The work for the course includes theoretical exercises as well as a project, where students implement selected aspects of advanced programming languages. Prerequisites: CSE 240 and CSE 247.
Credit 3 units.

E81 CSE 536S Distributed System Design: Models and Languages
Modern computing environments are highly distributed. This has been the result of major advances in networking technology and their rapid assimilation by a society that functions in a highly distributed and decentralized manner. The goal of this course is to familiarize students with basic concepts, models and languages that shaped recent developments in distributed computing. The focus is on exploring new ways of thinking about computing and communication that made the development of distributed software systems possible. Competing concepts and design strategies will be examined both from a theoretical and a practical perspective. Prerequisites: CSE 240 and CSE 247.
Credit 3 units. EN: TU

E81 CSE 539S Concepts in Multicore Computing
Nowadays, the vast majority of computer systems are built using multicore processor chips. This fundamental shift in hardware design impacts all areas of computer science — one must write parallel programs in order to unlock the computational power provided by modern hardware. The goal of this course is to study concepts in multicore computing. We will examine the implications of the multicore hardware design, discuss challenges in writing high performance software, and study emerging technologies relevant to developing software for multicore systems. Topics include memory hierarchy, cache coherence protocol, memory models, scheduling, high-level parallel language models, concurrent programming (synchronization and concurrent data structures), algorithms for debugging parallel software, and performance analysis. Prerequisites: CSE 332S and CSE 361S.
Credit 3 units. EN: TU

E81 CSE 541T Advanced Algorithms
Provides a broad coverage of fundamental algorithm design techniques with the focus on developing efficient algorithms for solving combinatorial and optimization problems. The topics covered include: greedy algorithms, dynamic programming, linear programming, NP-completeness, approximation algorithms, lower bound techniques, and on-line algorithms. Throughout this course there is an emphasis on correctness proofs and the ability to apply the techniques taught to design efficient algorithms for problems from a wide variety of application areas. Prerequisites: CSE 247 and 347.
Credit 3 units. EN: TU

E81 CSE 542T Advanced Data Structures and Algorithms
This course is concerned with the design and analysis of efficient algorithms, focusing principally on algorithms for combinatorial optimization problems. A key element in the course is the role of data structures in algorithm design and the use of amortized complexity analysis to determine how data structures affect performance. The course is organized around a set of core problems and algorithms, including the classical network optimization algorithms, as well as newer and more efficient algorithms. This core is supplemented by algorithms selected from the recent technical literature. Prerequisite: CSE 247.
Credit 3 units.

E81 CSE 543T Algorithms for Nonlinear Optimization
The course will provide an in-depth coverage of modern algorithms for the numerical solution of multidimensional optimization problems. Unconstrained optimization techniques including Gradient methods, Newton’s methods, Quasi-Newton methods, and conjugate methods will be introduced. The emphasis is on constrained optimization techniques: Lagrange theory, Lagrangian methods, penalty methods, sequential quadratic programming, primal-dual methods, duality theory, nondifferentiable dual methods, and decomposition methods. The course will also discuss applications in engineering systems and use of state-of-the-art computer codes. Special topics may include large-scale systems, parallel optimization, and convex optimization. Prerequisites: Calculus I and Math 309.
Credit 3 units.

The course includes a brief review of the necessary probability and mathematical concepts. Prerequisite: ESE 326.
Credit 3 units. EN: TU
E81 CSE 544T Special Topics in Computer Science Theory
Cake-cutting algorithms consider the division of resources among a set of participants such that the recipients believe they have been treated fairly. In some cases, a given resource can be divided without loss of value, while in other cases, dividing a resource may lessen its value, perhaps significantly. Notions of fairness include proportionality, envy-freeness and equitability. This course is organized around a rich set of fair-division problems, studying the correctness, complexity, and applicability of the algorithms for solving such problems. The problems and algorithms studied span millennia and include recent technical literature. Credit 3 units.

E81 CSE 546T Computational Geometry
Computational geometry is the algorithmic study of problems that involve geometric shapes such as points, lines and polygons. Such problems appear in computer graphics, vision, robotics, animation, visualization, molecular biology, and geographic information systems. This course covers data structures that are unique to geometric computing, such as convex hull, Voronoi diagram, Delaunay triangulation, arrangement, range searching, KD-trees, and segment trees. Also covered are algorithms for polygon triangulation, shortest paths, the post office problem, and the art gallery problem. Prerequisite: CSE 247. Credit 3 units.

E81 CSE 547T Introduction to Formal Languages and Automata
An introduction to the theory of computation, with emphasis on the relationship between formal models of computation and the computational problems solvable by those models. Specifically, this course covers finite automata and regular languages; Turing machines and computability; and basic measures of computational complexity and the corresponding complexity classes. Prerequisites: CSE 247. Credit 3 units.

E81 CSE 548T Concurrent Systems: Design and Verification
Formerly CSE 563T. Concurrency presents programmers with unprecedented complexity further exacerbated by our limited ability to reason about concurrent computations. Yet, concurrent algorithms are central to the development of software executing on modern multiprocessors or across computer networks. This course reviews several important classes of concurrent algorithms and presents a formal method for specifying, reasoning about, verifying, and deriving concurrent algorithms. The selected algorithms are judged to have made significant contributions to our understanding of concurrency. Rigorous treatment of the design and programming process is emphasized. Students entering this course must be familiar with predicate calculus and sequential algorithms. Upon completion of this course students will be able to reason completely formally about small concurrent programs and to apply systematically and correctly their formal skills to larger problems. Prerequisite: CSE 247. Credit 3 units.

E81 CSE 549T Theory of Parallel Systems
The course covers various aspects of parallel programming such as algorithms, schedulers and systems from a theoretical perspective. We will cover both classic and recent results in parallel computing. Topics include parallel algorithms and analysis in the work/span model, scheduling algorithms, external memory algorithms and their analysis, cache-coherence protocols, etc. The focus will be on design and analysis. Prerequisite: CSE 247. Credit 3 units. EN: TU

E81 CSE 552A Advanced Computer Graphics
This course covers advanced topics in graphics in the areas of modeling, rendering, volume rendering, image-based rendering and image processing. Topics include, but are not limited to, subdivision surfaces, splines, mesh simplification, implicit or blobby modeling, radiosity, procedural textures, filtering, BRDFs and procedural modeling. The class has several structured programming assignments and an optional final group project. Students are exposed to the wide variety of techniques available in graphics and also pick one area to study in depth. Prerequisites: CSE 332S and CSE 452A. Credit 3 units. EN: TU

E81 CSE 553S Advanced Mobile Robotics
This course covers advanced topics from the theory and practice of mobile robotics. Students read, present and discuss papers from the current research literature. There is a substantial programming project, in which students implement and test ideas from the current research literature on one of the department's research robot platforms. Prerequisites: CSE 550A and strong programming skills (preferably in C++). Credit 3 units. EN: TU

E81 CSE 554A Geometric Computing for Biomedicine
With the advance of imaging technologies deployed in medicine, engineering and science, there is a rapidly increasing amount of spatial data sets (images, volumes, point clouds, etc.) that need to be processed, visualized and analyzed. This course will focus on a number of geometry-related computing problems that are essential in the knowledge discovery process in various spatial-data-driven biomedical applications. These problems include visualization, segmentation, mesh construction and processing, shape representation and analysis. The course consists of lectures that cover theories and algorithms, and a series of hands-on programming projects using real-world data collected by various imaging techniques (CT, MRI, electron cryo-microscopy, etc.). Prerequisites: CSE 247 and CSE 332 or approval by instructor. Credit 3 units. EN: TU

E81 CSE 555A Computational Photography
Computational Photography describes the convergence of computer graphics, computer vision, and the internet with photography. Its goal is to overcome the limitations of traditional photography using computational techniques to enhance the way we capture, manipulate and interact with visual media. In this course we study many interesting, recent image-based algorithms and implement them to the degree that is possible. Topics may include: cameras and image formation, human visual perception, image processing (filtering, pyramids), image blending and compositing, image retargeting, texture synthesis and transfer, image completion/inpainting, super-resolution, deblurring, denoising, image-based lighting and rendering, high dynamic range, depth and defocus, flash/no flash photography, coded aperture photography, single/multiview reconstruction, photo quality assessment, non photorealistic rendering, modeling and synthesis using Internet data, and others. Prerequisites: CSE 452A, CSE 554A, or CSE 559A. Permission of instructor required to enroll.
Credit 3 units. EN: TU

E81 CSE 556A Human-Computer Interaction Methods
An introduction to user centered design processes. The course covers a variety of HCI techniques for use at different stages in the software development cycle, including techniques that can be used with and without users. Students will gain experience using these techniques through in-class exercises and then apply them in greater depth through a semester long interface development project. Students who enroll in this course are expected to be comfortable with building user interfaces in at least one framework and be willing to learn whatever framework is most appropriate for their project. Over the course of the semester, students will be expected to present their interface evaluation results through written reports and in class presentations. Prerequisites: 3xxS or 4xxS.
Credit 3 units. EN: TU

E81 CSE 558A Motion Planning
This course studies the general motion planning problem: computing a sequence of motions that transforms a given (initial) arrangement of physical objects to another (goal) arrangement of those objects. Many motion planning methods were developed in the realm of robotics research. For example, a typical problem might be finding a sequence of motions (called a path) to move a robot from one position to another without colliding with any objects in its workspace. However, the general motion planning problem that will be studied arises in many other application domains as well. For example, assembly planning (e.g., finding a valid order for adding the parts when building an engine), mechanical CAD studies (e.g., can you remove a certain part from an engine without taking the engine apart), artificial life simulations (e.g., moving a herd of animals from one location to another), and medicine (e.g., can a drug molecule reach a protein molecule). Prerequisite: CSE 247.
Credit 3 units. EN: TU

E81 CSE 559A Computer Vision
Computer vision is the process of automatically extracting information from images and video. This course covers imaging geometry (camera calibration, stereo, and panoramic image stitching), and algorithms for video surveillance (motion detection and tracking), segmentation and object recognition. Final projects for the course will explore challenges in analysis of real-world data. Students with non-standard backgrounds (such as video art, or the use of imaging in physics and biology) are encouraged to contact the instructor. Prerequisites: CSE 247 and linear algebra.
Credit 3 units. EN: TU

E81 CSE 560M Computer Systems Architecture I
An exploration of the central issues in computer architecture: instruction set design, addressing and register set design, control unit design, microprogramming, memory hierarchies (cache and main memories, mass storage, virtual memory), pipelining, and bus organization. The course emphasizes understanding the performance implications of design choices, using architecture modeling and evaluation using VHDL and/or instruction set simulation. Prerequisites: CSE 361S and CSE 260M.
Credit 3 units. EN: TU

E81 CSE 561M Computer Systems Architecture II
Advanced techniques in computer system design. Selected topics from: processor and system-on-chip design (multicore organization, system-level integration), run-time systems, memory systems (topics in locality and special-purpose memories), I/O subsystems and devices, systems security, and power considerations. Prerequisite: CSE 560M or permission of instructor.
Credit 3 units. EN: TU

E81 CSE 564M Advanced Digital Systems Engineering
This course focuses on advance sensor design. The class covers various basic analog and digital building blocks that are common in most sensor integrated circuits. The class extensively uses state-of-the-art CAD program Cadence to simulate and analyze various circuit blocks. The first half of the course focuses on analyzing various operational amplifiers, analog filters, analog memory and analog to digital converters. The second half of the course focuses on understanding the basic building blocks of imaging sensors. The class has a final project consisting of designing a smart sensor using Cadence tools. Prerequisites: ESE 232 and CSE 362M.
Credit 3 units. EN: TU

E81 CSE 565M Acceleration of Algorithms in Reconfigurable Logic
Reconfigurable logic, in the form of Field-Programmable Gate Arrays (FPGAs), enables the deployment of custom hardware for individual applications. To exploit this capability, the application developer is required to specify the design at the register-transfer level. This course explores techniques for designing algorithms that are amenable to hardware acceleration as well as provides experience in actual implementation. Example applications are drawn from a variety of fields, such as networking, computational biology, etc. Prerequisites: Basic digital logic (CSE 260M) and some experience with a hardware description language (e.g., VHDL or Verilog).
Credit 3 units. EN: TU

E81 CSE 566S High Performance Computer Systems
Many applications make substantial performance demands upon the computer systems upon which those applications are deployed. In this context, performance is frequently multidimensional, including resource efficiency, power, execution speed (which can be quantified via elapsed run time, data throughput, or latency), etc. Modern computing platforms exploit parallelism and architectural diversity (e.g., co-processors such as graphics engines and/or reconfigurable logic) to achieve the desired performance goals. This course addresses the practical aspects of achieving high performance on modern computing platforms. This includes questions ranging from how the computing platform is designed to how are applications and algorithms expressed to exploit the platform’s properties. Particular attention is given to the role of application development tools. Prerequisite: Familiarity with software development in Linux preferred, graduate standing or permission of instructor.
Credit 3 units. EN: TU

E81 CSE 567M Computer Systems Analysis
A comprehensive course on performance analysis techniques. The topics include common mistakes, selection of techniques and metrics, summarizing measured data, comparing systems using random data, simple linear regression models, other
E81 CSE 568M Imaging Sensors
This course will cover topics on digital imaging sensors including basic operations of silicon photodetectors; CCD and CMOS passive and active sensor operation; temporal and spatial noise in CMOS sensors; spatial resolution and MTF; SNR and dynamic range; high dynamic range architectures and application specific imaging sensors such as polarization imaging and fluorescent imaging sensors. Prerequisites: CSE 260M and ESE 232. Credit 3 units.

E81 CSE 569M Parallel Architectures and Algorithms
A number of contemporary parallel computer architectures are reviewed and compared. The problems of process synchronization and load balancing in parallel systems are studied. Several selected applications problems are investigated and parallel algorithms for their solution are considered. Selected parallel algorithms are implemented in both a shared memory and distributed memory parallel programming environment. Prerequisites: graduate standing and knowledge of the C programming language. Credit 3 units.

E81 CSE 570S Recent Advances in Networking
This course covers the latest advances in networking. The topics include Networking Trends, Data Center Network Topologies, Data Center Ethernet, Carrier IP, Multiprotocol Label Switching (MPLS), Carrier Ethernet, Virtual Bridging, LAN Extension and Virtualization using Layer 3 Protocols, Virtual Routing Protocols, Internet of Things (IoT), O/S to IoT, Link Layer and Management Protocols for IoT, Networking Layer Protocols for IoT, 6LoWPAN, RPL, Messaging Protocols for IoT, MQTT, OpenFlow, Software Defined Networking (SDN), Network Function Virtualization (NFV), Big Data, Networking Issues for Big Data, Network Configuration, and Data Modeling, NETCONF, YIN, YANG, BEEP, and UML. Prerequisite: CSE 473S or equivalent. Credit 3 units.

E81 CSE 571S Network Security

E81 CSE 573S Protocols for Computer Networks
An introduction to the design, performance analysis and implementation of existing and emerging computer network protocols. Protocols include multiple access protocols (e.g., CSMA/CD, token ring), internet, working with the internet protocol (IP), transport protocols (e.g., UDP, TCP), high-speed bulk transfer protocols, and routing protocols (e.g., BGP, OSPF). General topics include error control, flow control, packet switching, mechanisms for reliable, ordered and bounded-time packet delivery, host-network interfacing and protocol implementation models. Substantial programming exercises supplement lecture topics. Prerequisite: CSE 473S or permission of the instructor. Credit 3 units.

E81 CSE 574S Wireless and Mobile Networking
First course in wireless networking providing a comprehensive treatment of wireless data and telecommunication networks. Topics include recent trends in wireless and mobile networking, wireless coding and modulation, wireless signal propagation, IEEE 802.11a/b/g/n/ac wireless local area networks, 60 GHz millimeter wave gigabit wireless networks, vehicular wireless networks, white spaces, IEEE 802.22 regional area networks, Bluetooth and Bluetooth Smart, wireless personal area networks, wireless protocols for Internet of Things, ZigBee, cellular networks: 1G/2G/3G, LTE, LTE-Advanced, and 5G. Prerequisites: CSE 473S or permission of the instructor. Credit 3 units.

E81 CSE 577M Design and Analysis of Switching Systems
Switching is a core technology in a wide variety of communication networks, including the internet, circuit-switched telephone networks and optical fiber transmission networks. The last decade has been a time of rapid development for switching technology in the internet. Backbone routers with 10 Gb/s links and aggregate capacities of hundreds of gigabits per second are becoming common, and advances in technology are now making multi-terabit routers practical. This course is concerned with the design of practical switching systems and evaluation of their performance and complexity. Prerequisites: CSE 247, 473S and ESE 326. Credit 3 units.

E81 CSE 581T Approximation Algorithms
Numerous optimization problems are intractable to solve optimally. The intractability of a problem could come from the problem's computational complexity, for instance the problem is NP-Hard, or other computational barriers. To cope with the inability to find an optimal algorithm, one may desire an algorithm that is guaranteed to return a solution that is comparable to the optimum. Such an algorithm is known as an approximation algorithm. Approximation algorithms are a robust way to cope with intractability, and they are widely used in practice or are used to guide the development of practical heuristics. The area of approximation algorithms has developed a vast theory, revealing the underlying structure of problems as well as their different levels of difficulty. The majority of this course will focus on fundamental results and widely applicable algorithmic and analysis techniques for approximation algorithms. Prerequisite: CSE 347. Credit 3 units.
E81 CSE 582T Complexity Theory
An introduction to the quantitative theory of computation with limited resources. The course examines the relative power of limited amounts of basic computational resources, such as time, memory, circuit size and random bits, as well as parallel, nondeterministic, alternating and interactive machine models. Models that capture special kinds of computational problems, such as counting problems or approximate solutions, will also be introduced and related to the standard models. This examination will emphasize surprising relationships between seemingly disparate resources and kinds of computational problems. The course will also discuss some meta-theory, illuminating the weaknesses of standard mathematical techniques of the field against its notorious open conjectures. Prerequisites: CSE 347 and mathematical maturity. CSE 547T recommended. Credit 3 units. EN: TU

E81 CSE 583A Topics in Computational Molecular Biology
Formerly CSE 543T. In-depth discussion of problems and methods in Computational Molecular biology. Each year three topics are covered and those change yearly. Prerequisite: Biol 5495 or instructor’s consent. Same as L41 Biol 5497 Credit 2 units.

E81 CSE 584A Algorithms for Biosequence Comparison
This course surveys algorithms for comparing and organizing discrete sequential data, especially nucleic acid and protein sequences. Emphasis is on tools to support search in massive biosequence databases and to perform fundamental comparison tasks such as DNA short-read alignment. These techniques are also of interest for more general string processing and for building and mining textual databases. Algorithms are presented rigorously, including proofs of correctness and running time where feasible. Topics include classical string matching, suffix array string indices, space-efficient string indices, rapid inexact matching by filtering (including BLAST and related tools), and multiple alignment. Students complete written assignments and implement advanced comparison algorithms to address problems in bioinformatics. This course does not require a biology background. Prerequisites: CSE 347, graduate standing, or permission of instructor. Credit 3 units. EN: TU

E81 CSE 587A Algorithms for Computational Biology
This course is a survey of algorithms and mathematical methods in biological sequence analysis (with a strong emphasis on probabilistic methods) and systems biology. Sequence analysis topics include introduction to probability, probabilistic inference in missing data problems, hidden Markov models (HMMs), profile HMMs, sequence alignment, and identification of transcription-factor binding sites. Systems biology topics include discovery of gene regulatory networks, quantitative modeling of gene regulatory networks, synthetic biology, and (in some years) quantitative modeling of metabolism. Prerequisites: CSE 131 or CSE 501N. Credit 3 units.

E81 CSE SELE CSE Elective (Grad)
Credit variable, maximum 9 units.

Electrical & Systems Engineering
About Electrical & Systems Engineering
The mission of our undergraduate programs is to instill in students the knowledge and perspective, appropriate both for a professional career and for the pursuit of advanced degrees, in fields that rely on key electrical engineering and systems principles and practices. Such principles and practices include rigorous quantitative reasoning and robust engineering design. This mission is accomplished by ensuring that students achieve both depth and breadth of knowledge in their studies and by maintaining a high degree of flexibility in the curriculum. Our programs also seek to provide good preparation for life, including the ability to communicate in written and oral forms and a desire to continue learning throughout life. In addition, they aim to provide the opportunity and training for students to acquire the skills and attitudes to become leaders.

The department offers courses of study leading to degrees in both electrical engineering and systems science and engineering. Opportunities for study and research currently available in the department include solid-state engineering (semiconductor theory and devices, plasma processing and nonlinear plasma theory, optoelectronics, microwave and magnetic information devices and systems), communication theory and systems, information theory, signal and image processing, linear and nonlinear dynamics and control, scheduling and transportation systems, robotics, automation, identification and estimation, multisensor fusion and navigation, machine vision and control, computational mathematics, finite elements, optimal control, mathematics of large-scale power systems, and intelligent systems. Students are encouraged to participate in research activities as soon as they have received training in the fundamentals appropriate for a given research area.

Electrical engineering is the profession for those intrigued with electrical phenomena and eager to contribute their skills to a society increasingly dependent on electricity and sophisticated electronic devices. It is a profession of broad scope with many specialty careers designed for engineers who seek an endless diversity of career paths on the cutting edge of technology. The Institute of Electrical and Electronics Engineers publishes transactions on about 60 different topics, from aerospace and electronic systems to visualization and computer graphics. This is a breadth so great that no single electrical engineering department can hope to span it. Moreover, those fields themselves encompass still more fascinating specialties. We give the basics; the future is yours to shape.

Systems science and engineering is based on an approach that views an entire system of components as an entity rather
than simply as an assembly of individual parts; each component is designed to fit properly with the other components rather than to function by itself. The engineering and mathematics of systems is a rapidly developing field. It is one of the most modern segments of applied mathematics, as well as an engineering discipline. It is concerned with the identification, modeling, analysis, design and control of systems that are potentially as large and complex as the U.S. economy or as precise and vital as a space voyage. Its interests run from fundamental theoretical questions to the implementation of operational systems. It draws on the most modern and advanced areas of mathematics. A very important characteristic of the systems field is that its practitioners must, of necessity, interact within a wide interdisciplinary environment, not only with various engineers and scientists but also with economists, biologists or sociologists. Such interaction is both emphasized and practiced in the programs.

Our Department of Electrical & Systems Engineering offers a challenging basic curriculum, a broadly qualified faculty, and modern facilities so that students can receive a contemporary preparation for a career in electrical or systems engineering.

**Undergraduate Degree Programs**

The Department of Electrical & Systems Engineering (ESE) offers four undergraduate degree programs: two professional degrees and two applied science degrees. The two professional degrees are the Bachelor of Science in Electrical Engineering (BSEE) and the Bachelor of Science in Systems Science & Engineering (BSSSE). These two programs are accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). The two applied science degrees are the Bachelor of Science in Applied Science (Electrical Engineering) and the Bachelor of Science in Applied Science (Systems Science & Engineering). All programs have flexible curricula as well as specific requirements, and students may elect programs of study tailored to individual interests and professional goals.

In the professional BSEE curriculum, there are required courses in electrical circuits, signals and systems, digital systems and electromagnetic fields, along with laboratory and design courses, which provide students with a common core of experience. Subsequently, one may orient the program toward breadth, so that many disciplines within the profession are spanned or toward a specialty with more emphasis on depth in one or more disciplines. Areas of specialization include modern electronics, applied physics, telecommunications, control systems, and signal and image processing.

Students in the professional BSSSE degree program take required courses in engineering mathematics, signals and systems, operations research, and automatic control systems, along with laboratory and design courses. This program emphasizes the importance of real-world applications of systems theory, and accordingly students are required to take a concentration of courses in one of the traditional areas of engineering or science. There are numerous elective courses in control theory and systems, signal processing, optimization, robotics, probability and stochastic processes, and applied mathematics.

Students enrolled in any of the ESE undergraduate degree programs have a variety of opportunities to augment their educational experience at Washington University. Students may participate in the Pre-Medical Engineering program or in the Cooperative Education program. Some students pursue double majors, in which two sets of degree requirements, either within or outside the ESE department, are satisfied concurrently. The Process Control Systems program is one such double-degree program, involving the degrees Bachelor of Science in Systems Science & Engineering (BSSSE) and Bachelor of Science in Chemical Engineering (BChE). Finally, students may earn both an undergraduate and a graduate degree through the school’s five-year BS–Master's program.

Students who seek a broad undergraduate education in electrical engineering or systems science and engineering but plan on careers outside of engineering, may pursue the applied science degrees: Bachelor of Science in Applied Science (Electrical Engineering) and Bachelor of Science in Applied Science (Systems Science & Engineering). These programs of study are appropriate for students planning to enter medical, law or business school, who desire a more technical undergraduate experience than what otherwise may be available to them.

The ESE department also offers a variety of educational opportunities for students enrolled in other departments. These include the second major in systems science and the second major in electrical engineering science, which are open to students inside as well as outside of the School of Engineering & Applied Science, such as the College of Arts & Sciences and the School of Business. They also include the minor in applied physics & electrical engineering, the minor in electrical engineering, the minor in energy engineering, the minor in mechatronics, the minor in robotics, and the minor in systems science & engineering.

**BS–Master’s Programs in Electrical & Systems Engineering**

Students enrolled in any of the undergraduate degree programs in the School of Engineering & Applied Science may choose to extend their educational experience by enrolling in a five-year BS–Master's program. The Master of Science in Electrical Engineering (MSEE), Master of Science in Systems Science and Mathematics (MSSSM), Master of Control Engineering (MCE), Master of Engineering in Robotics (MER), and Master of Science in Engineering Data Analytics and Statistics (MSDAS) degrees are participating graduate degrees, and these may be combined with any undergraduate degree that provides the appropriate background.
General requirements for the BS–Master's programs include the residency and other applicable requirements of the university and the School of Engineering & Applied Science, which are found elsewhere in this catalog. In summary, students must complete all the degree requirements for both the undergraduate and graduate degrees (at least 120 units plus 30 units; 150 units) but are not required to complete all the undergraduate degree requirements first.

Phone: 314-935-5565  
Website: http://ese.wustl.edu

**Faculty**

**Chair**

Arye Nehorai  
Eugene and Martha Lohman Professor of Electrical Engineering  
PhD, Stanford University  
Signal processing, imaging, biomedicine, communications

**Associate Chair**

Hiroaki Mukai  
Professor  
PhD, University of California, Berkeley  
Theory and computational methods for optimization, optimal control, systems theory, electric power system operations, differential games

**Endowed Professors**

R. Martin Arthur  
Newton R. and Sarah Louisa Glasgow Wilson Professor of Engineering  
PhD, University of Pennsylvania  
Ultrasonic imaging, electrocardiography

Joseph A. O'Sullivan  
Samuel C. Sachs Professor of Electrical Engineering Dean, UMSL/WUSTL Joint Undergraduate Engineering Program  
PhD, Notre Dame University  
Information theory, statistical signal processing, imaging science with applications in medicine and security, and recognition theory and systems

Lan Yang  
Edward H. & Florence G. Skinner Professor of Engineering  
PhD, California Institute of Technology  
Nano/micro photonics, ultra high-quality optical microcavities, ultra-low-threshold microlasers, nano/micro fabrication, optical sensing, single nanoparticle detection, photonic molecules, photonic materials

**Professor**

Heinz Schaettler  
PhD, Rutgers University  
Optimal control, nonlinear systems, mathematical models in biomedicine

**Associate Professors**

Jr-Shin Li  
Das Family Distinguished Career Development Associate Professor  
PhD, Harvard University  
Mathematical control theory, optimization, quantum control, biomedical applications

Robert E. Morley Jr.  
DSc, Washington University  
Computer and communication systems, VLSI design, digital signal processing

**Assistant Professors**

ShiNung Ching  
Das Family Distinguished Career Development Assistant Professor  
PhD, University of Michigan  
Systems and control in neural medicine, nonlinear and constrained control, physiologic network dynamics, stochastic control

Zachary Feinstein  
PhD, Princeton University  
Financial engineering, operations research, variational analysis

Humberto Gonzalez  
PhD, University of California, Berkeley  
Cyber-physical systems, hybrid dynamical systems, optimization, robotics

Matthew D. Lew  
PhD, Stanford University  
Microscopy, biophotonics, computational imaging, nano-optics

Jung-Tsung Shen  
Das Family Distinguished Career Development Assistant Professor  
PhD, Massachusetts Institute of Technology  
Theoretical and numerical investigations on nanophotonics, optoelectronics, plasmonics, metamaterials
Xuan “Silvia” Zhang (https://engineering.wustl.edu/Profiles/Pages/Xuan-%28Silvia%29-Zhang.aspx)
PhD, Cornell University
Robotics, cyber-physical systems, hardware security, ubiquitous computing, embedded systems, computer architecture, VLSI, electronic design automation, control optimization, and biomedical devices and instrumentation

**Senior Professors**

I. Norman Katz
PhD, Massachusetts Institute of Technology
Numerical analysis, differential equations, finite element methods, locational equilibrium problems, algorithms for parallel computations

Paul S. Min
PhD, University of Michigan
Routing and control of telecommunication networks, fault tolerance and reliability, software systems, network management

William F. Pickard
PhD, Harvard University
Biological transport, electrobiology, energy engineering

Daniel L. Rode
PhD, Case Western Reserve University
Optoelectronics and fiber optics, semiconductor materials, light-emitting diodes (LEDs) and lasers, semiconductor processing, electronics

Ervin Y. Rodin
PhD, University of Texas at Austin
Optimization, differential games, artificial intelligence, mathematical modeling

Barbara A. Shrauner
PhD, Harvard University (Radcliffe)
Plasma processing, semiconductor transport, symmetries of nonlinear differential equations

Donald L. Snyder
PhD, Massachusetts Institute of Technology
Communication theory, random process theory, signal processing, biomedical engineering, image processing, radar

Barry E. Spielman
PhD, Syracuse University
High-frequency/high-speed devices, RF & MW integrated circuits, computational electromagnetics

Tzyh Jong Tarn
DSc, Washington University
Quantum mechanical systems, bilinear and nonlinear systems, robotics and automation, life science automation

**Professors of Practice**

Dedric Carter
PhD, Nova Southeastern University
MBA, MIT Sloan School of Management

Dennis Mell
MS, University of Missouri-Rolla

Ed Richter
BSEE, Virginia Tech

**Senior Lecturer**

Martha Hasting
PhD, Saint Louis University

**Lecturers**

Randall Brown
PhD, Washington University

Randall Hoven
MS, Washington University
MSEE, Johns Hopkins University
Sensor/data fusion, Kalman filters, navigation, target tracking

Vladimir Kurenok
PhD, Belarus State University (Minsk, Belarus)

Tsitsi Madziwa-Nussinov
PhD, University of California, Los Angeles

Jason Trobaugh
DSc, Washington University

Jinsong Zhang
PhD, University of Miami
Wireless communication systems, wireless sensor networks, target tracking/data fusion, machine learning/pattern classification

**Research Professor**

Julius Goldstein
PhD, University of Rochester
Auditory system, hearing perception, modeling auditory perception.

**Research Associate Professor**

David Corman
PhD, University of Maryland
Cyber Physical Systems (CPS), security for CPS, unmanned systems, manufacturing

**Research Assistant Professor**

Scott Marrus
MD, PhD, Washington University School of Medicine
Cardiac electrophysiology
Professors Emeriti

William M. Boothby
PhD, University of Michigan
Differential geometry and Lie groups, mathematical system theory

Lloyd R. Brown
DSc, Washington University
Automatic control, electronic instrumentation

David L. Elliott
PhD, University of California, Los Angeles
Mathematical theory of systems, nonlinear difference, differential equations

Marvin J. Fisher
PhD, University of Illinois
Energy conversion, power electronics

Robert O. Gregory
DSc, Washington University
Electronic instrumentation, microwave theory, circuit design

Majors

Please refer to the sections below for information about the BS in Electrical Engineering (p. 875), BS in Systems Science & Engineering (p. 876), BS in Applied Science (Electrical Engineering) (p. 878), BS in Applied Science (Systems Science & Engineering) (p. 878), the second major in electrical engineering science (p. 879), and the second major in systems science (p. 879).

Bachelor of Science in Electrical Engineering

This professional degree program is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

Educational Objectives of the BSEE Degree Program

A. Our graduates will establish themselves as practicing professionals or engage in advanced study in engineering or a related area.

B. Our graduates will demonstrate their ability to work successfully as members of a professional team and function effectively as responsible professionals.

Student Outcomes

Graduates of the BSEE program are expected to know or have:

(a) An ability to apply knowledge of mathematics, science and engineering

(b) An ability to design and conduct experiments, as well as to analyze and interpret data

(c) An ability to design a system, component or process to meet desired needs

(d) An ability to function on multidisciplinary teams

(e) An ability to identify, formulate and solve engineering problems

(f) An understanding of professional and ethical responsibility

(g) An ability to communicate effectively

(h) The broad education necessary to understand the impact of engineering solutions in a global and societal context

(i) A recognition of the need for, and an ability to engage in, lifelong learning

(j) A knowledge of contemporary issues

(k) An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

BSEE Degree Requirements

To obtain the degree Bachelor of Science in Electrical Engineering, students must complete a minimum of 120 units consistent with the residency and other applicable requirements of Washington University and the School of Engineering, and subject to the following program requirements.

1. Common Studies program of the School of Engineering: This includes courses in engineering, mathematics, chemistry, humanities, social sciences and technical writing. The required chemistry sequence is Chem 111A–Chem 151, although Chem 111A–Chem 112A–Chem 151–Chem 152 is recommended.

2. Engr 4501 Engineering Ethics and Sustainability (1 unit).

3. Two of the following three computer science courses: CSE 131 Computer Science I (3 units); CSE 132 Computer Science II (3 units); or CSE 247 Data Structures and Algorithms (3 units).

4. Engineering and science breadth requirements: 9 units in engineering or science outside of electrical engineering. These units must be in the following areas: biomedical engineering; chemical engineering; computer science and engineering; mechanical engineering; systems science and engineering; economics; mathematics; physics; biology; chemistry; earth and planetary sciences; and pre-medicine. These units must be at the 200 level or higher and shall not be used to satisfy the Common Studies requirements (item 1 above) or the CS requirement (item 3). Courses in other fields can be arranged with special departmental approval. Examples of engineering and science courses are MEMS 255 Engineering Mechanics II, EECE 210 Introduction to Environmental Engineering, EECE 203 Thermodynamics I in EECE, EECE 201 Engineering Analysis of Chemical Systems, CSE 247 Data Structures and Algorithms, Engr 324 From Concept to Market: The Business of Engineering, BME 240 Biomechanics,

5. 28 units of required ESE courses:

Total units 28

ESE 498 may be replaced by ESE 499 provided the project is in electrical engineering.

6. Two upper-level laboratory courses (6 units) from the following list: ESE 331, ESE 435, ESE 447, ESE 448, ESE 465, ESE 488. The selection must contain at least one course from ESE 331, ESE 435, ESE 465, ESE 488.

7. 15 units of elective ESE courses in electrical engineering subjects, from the following list: ESE 330–399, ESE 400, ESE 405, ESE 407, ESE 415, ESE 425, ESE 429–499, ESE 503–589.

8. The entire course sequence for the BSEE containing engineering topics of at least 45 units. The numbers of engineering topic units assigned to undergraduate courses in the School of Engineering & Applied Science vary from none (0) to the number of credits given to the course. For the precise number for each course, please refer to the table of Topics Units — Engineering Courses provided by Engineering Student Services (http://engineering.wustl.edu/current-students/student-services/Pages/default.aspx).

9. Limitations. No more than 3 credits of 500-level courses may be applied toward the EE elective requirement (item 7).

10. Limitations. No more than 6 units of the combined units of ESE 400 Independent Study and ESE 497 Undergraduate Research (including ESE 497A and ESE 497B) may be applied toward the EE elective requirement (item 7) of the BSEE degree. The balance of combined units, if there are any left, are allowed as free electives to satisfy the requirement on the total number of units.

11. The courses taken to satisfy the following BSEE degree requirements must be taken for a letter grade and not on a pass/fail basis: Item 5 (required ESE courses), Item 6 (upper-level laboratory courses) and Item 7 (elective ESE courses).

Most students acquire more than 120 credit units. For a typical sequence of subjects for the Bachelor of Science in Electrical Engineering degree, please refer to the following tables:

- Sample Electrical Engineering Curriculum (p. 896)
- Sample Pre-Med Electrical Engineering Curriculum (p. 895)

For more information on BS in Electrical Engineering curriculums, please visit the ESE website (http://ese.wustl.edu).

**Bachelor of Science in Systems Science & Engineering**

This professional degree program is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

**Objectives and requirements**

**Key points:**

- Systems Engineering: how to integrate different components in engineering systems
- Operations Research: mathematical solutions to business problems
- Pre-Financial Engineering: the best preparation for the MS in Financial Engineering
- Applied Mathematics
- Control Engineering: how to control jet airplanes, electric power grids, and the nation’s economy
- Ideal for students strong in math and physics
- Ideal for students interested in engineering and business
- Ideal for students interested in a second degree
- The most mathematical program in the School of Engineering & Applied Science
- The most flexible professional program in the School of Engineering & Applied Science

This program educates students in the engineering and science of systems. Graduates are expected to have mathematical competence and knowledge of systems analysis, control, design methods, numerical methods, differential equations, dynamic systems theory, automatic control theory, system stability, estimation, optimization, modeling, identification, simulation and basic computer programming. Graduates will have an engineering outlook and engineer's competence of their own and be able to interact fully with other engineers. They also will possess sufficient proficiency in computer use to design algorithms for simulation, estimation, control and optimization.

The engineering departments of high-technology industries are staffed by large numbers of engineers with this type of expertise. However, graduates are by no means restricted to
careers in traditional industry or in high-technology industries. Within the outlined framework, a salient feature of the program is its flexibility and interdisciplinary nature. It is possible for students to orient study toward preparation for systems science and engineering work in large complex systems such as transportation or power or communications networks or in societal systems such as the economy, ecology, the cities or biological systems. Students may wish to prepare for work along theoretical or professional lines. There is ample room in the program structure to accommodate all these interests and to make preparation at the BS level ideally suited for a student's future plans and interests.

**Educational Objectives of the BSSSE Degree Program**

A. Our graduates will establish themselves as practicing professionals or engage in advanced study in engineering or a related area.

B. Our graduates will demonstrate their ability to work successfully as members of a professional team and function effectively as responsible professionals.

**Student Outcomes**

Graduates of the BSSSE program are expected to know or have:

(a) An ability to apply knowledge of mathematics, science and engineering

(b) An ability to design and conduct experiments, as well as to analyze and interpret data

(c) An ability to design a system, component, or process to meet desired needs

(d) An ability to function on multidisciplinary teams

(e) An ability to identify, formulate and solve engineering problems

(f) An understanding of professional and ethical responsibility

(g) An ability to communicate effectively

(h) The broad education necessary to understand the impact of engineering solutions in a global and societal context

(i) A recognition of the need for, and an ability to engage in, lifelong learning

(j) A knowledge of contemporary issues

(k) An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

**BSSSE Degree Requirements**

The course sequence designed to achieve the type of education outlined above requires at least 120 units, satisfies the residency and other applicable requirements of Washington University and the School of Engineering & Applied Science, and meets the following program requirements:

1. Common Studies program of the School of Engineering & Applied Science. This includes courses in engineering, mathematics, physics, chemistry, humanities, social sciences and technical writing. The required chemistry sequence is Chem 111A–Chem 151.

2. Engr 4501 Engineering Ethics and Sustainability (1 unit).

3. Required courses in systems science and engineering:
   - ESE 205 Introduction to Engineering Design (3 units);
   - Math 309 Matrix Algebra (3 units);
   - ESE 317 Engineering Mathematics (4 units) or both ESE 318 Engineering Mathematics A (3 units) and ESE 319 Engineering Mathematics B (3 units);
   - ESE 326 Probability and Statistics for Engineering (3 units);
   - ESE 351 Signals and Systems (3 units);
   - ESE 403 Operations Research (3 units);
   - ESE 441 Control Systems (3 units);
   - ESE 448 Systems Engineering Laboratory (3 units); and
   - ESE 499 Systems Design Project (3 units).

4. Two of the following three computer science courses:
   - CSE 131 Computer Science I (3 units);
   - CSE 247 Data Structures and Algorithms (3 units); and
   - CSE 132 Computer Science II (3 units). Students are encouraged to take CSE 131 Computer Science I and CSE 247 Data Structures and Algorithms. The other possible sequence is CSE 131 and CSE 132.

5. One of the following three laboratory courses:
   - ESE 447 Robotics Laboratory (3 units);
   - ESE 449 Digital Process Control Laboratory (3 units); and
   - ESE 488 Signals and Systems Laboratory (3 units). ESE 449 is only recommended to students with a chemical engineering background.

6. 12 units in elective courses in systems science and engineering:
   - ESE 400 through 428;
   - ESE 437; ESE 440 through 459; ESE 470 through 489; ESE 497; ESE 500 through 529; ESE 540 through 559. Up to 3 units of the following business courses may be part of the 12 units of SSE electives:
   - OSCM 356 Operations Management,
   - OSCM 458 Operations Planning and Control,
   - OMM 576 Foundations of Supply Chain Management,
   - OMM 577 Information Technology and Supply Chain Management.

7. 12 units in engineering concentration outside of systems science and engineering. These units must all be taken in one of the following engineering areas: Biomedical Engineering, Chemical Engineering, Computer Science & Engineering, Electrical Engineering (ESE 102; ESE 230 through 239; ESE 260 through 290; ESE 330 through 339; ESE 360 through 390; ESE 429 through 439; ESE 460 through 469; 490 through 496; ESE 498; ESE 530 through 539; ESE 560 through 589), or Mechanical Engineering & Materials Science. Of the 12 units, 9 units must be at the 200 level or higher. Sequences for concentrations in economics, mathematics, physics, pre-medicine and other fields can be arranged with special departmental approval.
to meet a student's specific needs. When a non-engineering discipline is chosen as the outside concentration, the student needs to pay special attention to the next requirement, which is required of all students, and make sure that enough engineering contents are obtained from the other courses. The use of basic required courses to fulfill the requirement for an outside concentration is not permitted.

8. The entire course sequence for the BSSSE, containing engineering topics of at least 45 units. The numbers of engineering topic units assigned to undergraduate courses in the School of Engineering & Applied Science vary from none (0) to the number of credits given to the course. For the precise number for each course, please refer to the table of Topics Units — Engineering Courses provided by Engineering Student Services (http://engineering.wustl.edu/current-students/student-services/Pages/default.aspx).

9. Limitations. No more than 6 units of the combined units of ESE 400 Independent Study and ESE 497 Undergraduate Research (including 497A and 497B) may be applied toward the SSE elective requirement (item 6) of the BSSSE degree. Any remaining combined units are allowed as free electives to satisfy the requirement on the total number of units.

10. The courses taken to satisfy the following BSSSE degree requirements must be taken for a letter grade and not on a pass/fail basis: item 3 (required ESE courses), item 5 (elective laboratory course) and item 6 (elective ESE courses).

The program requirements for the BS in Systems Science & Engineering allow a double major with another department. Changes in the program to accommodate such double majors may be made with departmental approval. For a sample program for the BS in Systems Science & Engineering, please refer to the following tables:

- Sample Systems Science & Engineering Curriculum (p. 897)
- Sample Pre-Med Systems Science & Engineering Curriculum (p. 896)

For more information on BS in Systems Science & Engineering curriculums, please visit the ESE website (http://ese.wustl.edu).

**Bachelor of Science in Applied Science (Electrical Engineering)**

Students who do not plan to pursue a career in electrical engineering but seek a strong foundation in the principles of electrical engineering may choose the Bachelor of Science in Applied Science (Electrical Engineering). The program ensures that the student learns the foundations of electrical engineering through breadth requirements. In addition, there is flexibility in selecting upper-level courses to meet the student's individual objectives. This program also may be attractive for students interested in obtaining multiple degrees because the requirements are less strict than for the BSEE degree.

Historically students have matched a degree in electrical engineering with degrees in other engineering disciplines, in the natural sciences, in music, in history and in business; other combinations are possible. This also may be an attractive option for students planning graduate studies in a variety of disciplines including medicine, law or business. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

The degree requirements include the residency and general requirements of the university and the School of Engineering & Applied Science and:

The program must include at least 48 units at the 300 level or higher.

**Bachelor of Science in Applied Science (Systems Science & Engineering)**

This program provides a student with the opportunity to prepare his or her academic career with maximum flexibility, but with enough organization to assure substantive, consistent training in systems science methodology and outlook. This program is recommended if students wish to pursue a program that does not follow conventional lines. It is an especially advantageous degree for a double major in association with mathematics, physics, economics or another engineering discipline. The program can be planned to provide a desirable background for graduate work in biological, medical or management fields. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).
The degree requirements include the residency and general requirements of the university and the School of Engineering and:

The program must include at least 48 units at the 300 level or higher.

**The Second Major in Electrical Engineering Science**

A second major in electrical engineering science is ideal for students majoring in many areas, such as mathematics, physics, chemistry, and biology. Students in the School of Engineering & Applied Science as well as the other undergraduate divisions at Washington University now have the opportunity to pursue a second major in electrical engineering science. Students are not allowed to add this second major to either the BS in Electrical Engineering or the BS in Applied Science (Electrical Engineering).

The requirements for a second major in electrical engineering science are:

- ESE 230 Introduction to Electrical and Electronic Circuits 4
- ESE 260 Introduction to Digital Logic and Computer Design 3
- ESE 351 Signals and Systems 3

And one of the following:

- ESE 232 Introduction to Electronic Circuits 3
- ESE 318 Engineering Mathematics A 3
- ESE 319 Engineering Mathematics B 3
- ESE 326 Probability and Statistics for Engineering 3
- ESE 330 Engineering Electromagnetics Principles 3

And seven 3-unit ESE courses in the Electrical Engineering area chosen from:

- ESE 330–399
- ESE 400 Independent Study 1-3
- ESE 405 Reliability and Quality Control 3
- ESE 407 Analysis and Simulation of Discrete Event Systems 3
- ESE 425 Random Processes and Kalman Filtering 3
- ESE 429–499
- ESE 503–589

The above program assumes the completion of the following courses:

- Math 132 Calculus II 6
- & Math 233 and Calculus III
- Math 217 Differential Equations 3
- CSE 131 Computer Science I 3
- Physics 117A General Physics I 4
- Physics 118A General Physics II 4

Students may petition to substitute electrical science-oriented courses from other disciplines in Arts & Sciences for up to two of the above 11 courses (for example, certain courses in physics or applied mathematics). When such substitutions are employed, the total number of units for non-Arts & Sciences courses is 31 or 32 units. Within this second major in electrical engineering science, areas of concentration are possible in: applied physics, signal processing, and control systems. The second major in the electrical engineering science program comprises a total of 34 or 35 units. To design a customized program, contact the department chair or the director of the program Professor R. Martin Arthur (rma@wustl.edu).

**The Second Major in Systems Science**

A second major in systems science is ideal for study in many areas such as physics, chemistry, economics, finance, supply chain management, and computational biology. Students in the School of Engineering as well as the other undergraduate divisions at Washington University have the opportunity to pursue a second major in systems science in the Preston M. Green Department of Electrical & Systems Engineering in the School of Engineering & Applied Science. Students are not allowed to add this second major to either the BS in SSE or the BS in Applied Science (SSE).

The requirements for a second major in systems science are:

- ESE 151 Introduction to Systems Science and Engineering 2
- Math 309 Matrix Algebra 3
- ESE 351 Signals and Systems 3
ESE 403  Operations Research  3

One of the following:

ESE 318  Engineering Mathematics A  3
ESE 319  Engineering Mathematics B  3
ESE 326  Probability and Statistics for Engineering  3
ESE 441  Control Systems  3

Eight 3-unit ESE courses in the Systems area chosen from:

ESE 318 through 326
ESE 400 through 428
ESE 437
ESE 440 through 459
ESE 470 through 489
ESE 500 through 529
ESE 540 through 559.

Students may petition to substitute systems-oriented courses from other disciplines in Arts & Sciences for two of these eight courses (for example, courses in computational physics, mathematical economics or computational mathematics). When such substitutions are employed, the total number of units for non-Arts & Sciences courses will be 30 units.

Within this second major in systems science, areas of concentration are possible in: robotics, control systems, and operations research.

This totals 34 to 40 units of systems science, depending on student's use of the substitution option for upper-level electives. To design a customized program, contact the departmental associate chair or the director of the program (Professor Heinz Schaettler (https://engineering.wustl.edu/Profiles/Pages/Heinz-Schaettler.aspx)).

Minors

Please refer to the sections below for information about the minors in applied physics & electrical engineering (p. 880), electrical engineering (p. 881), energy engineering (ESE) (p. 881), mechatronics (ESE) (p. 881), robotics (p. 882), and systems science & engineering (p. 882).

The Minor in Applied Physics & Electrical Engineering

(Program Director: Dr. Jung-Tsung Shen (https://engineering.wustl.edu/Profiles/Pages/Jung-Tsung-Shen.aspx))

Units required: 19

The minor in applied physics & electrical engineering provides students with course work that will enhance their background, knowledge and skills in the topical area of Applied Physics & Electrical Engineering. This program covers classes in several fields of science and engineering, encompassing electronics, solid-state devices, applied electromagnetics, RF and microwave technology, fiber-optic communication, applied optics, nanophotonics, sensors, and medical and biological imaging technology.

This program consists of six courses total: one required course, two core courses and three electives. At least three courses among the six courses must be ESE courses taught by the ESE department and not taught by other departments by means of cross-listing. Students who complete the following requirements in Applied Physics & Electrical Engineering subjects at Washington University as specified below may be awarded a minor in applied physics & engineering.

Target students: Students who are interested in applied physics and electrical engineering applications.

Prerequisite: ESE 318 Engineering Mathematics A, or equivalent, is recommended.

Course requirements:

1. Required course:
   ESE 230 Introduction to Electrical and Electronic Circuits

2. One core lab course from the following list:
   ESE 331 Electronics Laboratory; or Physics 321 Electronics Laboratory
   ESE 435 Electrical Energy Laboratory

3. One core course from the following list:
   ESE 232 Introduction to Electronic Circuits
   ESE 330 Engineering Electromagnetics Principles; or Physics 421 Electricity and Magnetism
   ESE 336 Principles of Electronic Devices
   ESE 337 Electronic Devices and Circuits
   ESE 444 Sensors and Actuators
   Physics 471 Quantum Mechanics

4. Three electives from the following list. These three courses (i) must exclude the course selected in the requirement (3) above, and (ii) must include at least one Physics course:

   ESE 232  Introduction to Electronic Circuits  3
   ESE 330  Engineering Electromagnetics Principles  3
   ESE 332  Power, Energy and Polyphase Circuits  3
   ESE 336  Principles of Electronic Devices  3
   ESE 337  Electronic Devices and Circuits  3
   ESE 433  Radio Frequency and Microwave  3
   Technology for Wireless Systems
   ESE 434  Solid-State Power Circuits and Applications  3
   ESE 438  Applied Optics  3
   ESE 444  Sensors and Actuators  3
   ESE 531  Nano and Micro Photonics  3
   ESE 532  Introduction to Nano-Photonic Devices  3
   ESE 534  Special Topics in Advanced Electrodynamics  3
   ESE 537  Advanced Electromagnetic Theory  3
The Minor in Electrical Engineering

Units required: 16

Required courses:

ESE 330–399
ESE 429–499 with the exception of ESE 431

For more information, contact the director for the minor (Professor R. Martin Arthur (rma@wustl.edu)) or visit the ESE website (http://ese.wustl.edu).

The Minor in Energy Engineering (ESE)

This minor will provide students with course work that will enhance their background, knowledge and skills in the topical area of Energy Engineering. The minor covers classes in several fields of science and engineering, encompassing the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science. A minor in energy engineering requires the completion of 18 units. It is open to undergraduate students pursuing an engineering major, students from the sciences (biology, chemistry, physics) in Arts & Sciences, and students pursuing the environmental studies major. The detailed requirements for the minor can be found on the Energy, Environmental & Chemical Engineering Minors page (p. 901). Questions regarding the minor should be directed to a member of the committee for the energy engineering minor: Professor Pratim Biswas (EECE) (https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswaas.aspx), Professor Hiro Mukai (ESE) (https://engineering.wustl.edu/Profiles/Pages/Hiro-Mukai.aspx) or Professor David Peters (MEMS) (https://engineering.wustl.edu/Profiles/Pages/David-Peters.aspx).

Committee to Oversee Energy Engineering Minor

Pratim Biswas (EECE, Coordinator)
Hiro Mukai (ESE)
David Peters (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program be cohesive.

Visit the ESE website (http://ese.wustl.edu) for more information.

The Minor in Mechatronics (ESE)

(Program Director: Heinz Schaeffler)

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role for “smart” systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

Four required courses:

Two electives from the following:
MEMS 4301 Modeling, Simulation and Control 3
or ESE 441 Control Systems
MEMS 4310 Dynamics and Vibrations 3
MEMS 5101 Analysis and Design of Fluid-Power Systems 3
ESE 336 Principles of Electronic Devices 3
ESE 442 Digital Control Systems 3
ESE 482 Digital Signal Processing 3
CSE 467S Embedded Computing Systems 3

Prerequisite:
Basic programming course: CSE 131 Computer Science I
Visit the ESE website (http://ese.wustl.edu) for more information.

The Minor in Robotics

Robotic systems have wide applications in modern technology and manufacturing. Robots can vary in complexity and use, from microbots for surgical procedures to moderate-size robots common in manufacturing and undersea exploration to macrorobots used for disposal of nuclear wastes and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in design and use of robots.

Prerequisites:
Math 217 Differential Equations 3
Physics 117A General Physics I 4
or Physics 197 Physics I
Physics 118A General Physics II 4
or Physics 198 Physics II
CSE 131 Computer Science I 3

Required courses:
MEMS 255 Engineering Mechanics II 3
ESE 351 Signals and Systems 3
or MEMS 4310 Dynamics and Vibrations
ESE 446 Robotics: Dynamics and Control 3
ESE 447 Robotics Laboratory 3

Total units 12

To find out more about this minor, contact the director (Heinz Schaettler (https://engineering.wustl.edu/Profiles/Pages/Heinz-Schaettler.aspx)) of the program for the minor.

The Minor in Systems Science & Engineering

This minor consists of fundamental courses in control systems and operations research. In the area of control systems, students will be introduced to design techniques for controlling engineering and socioeconomic systems such as airplanes, automobiles, nuclear reactors, ecological systems, communication networks, the nation’s economy, and biological systems. In the area of operations research, students are introduced to techniques for optimally managing business resources and controlling business networks such as supply chains.

Requirements:
Students who complete 15 units of coursework in Systems Science & Engineering at Washington University as specified below may be awarded a minor in systems science & engineering.

The required courses for the minor are:
ESE 151 Introduction to Systems Science and Engineering 2
ESE 351 Signals and Systems 3
ESE 403 Operations Research 3
or ESE 404 Applied Operations Research
ESE 441 Control Systems 3

Students must select one Systems Science & Engineering elective course from the following list: ESE 400 through 425 except 409; ESE 437; ESE 440 through 459 except 449; ESE 470 through 489.

Prerequisites:
A student who has finished engineering common studies courses needs to take only ESE 318 in addition to the above five courses. The student may start taking ESE 151 before taking Math 217 or Math 233.

For more information, contact the director (Heinz Schaettler (https://engineering.wustl.edu/Profiles/Pages/Heinz-Schaettler.aspx)) for the minor.

Courses

E35 ESE 101 Introduction to Engineering Tools: MATLAB and Simulink
MATLAB and Simulink are important tools in quickly analyzing different designs in many engineering disciplines and are also perhaps the most used software in many engineering schools. Gain skills in the basics of the array-based language MATLAB to write programs, including scripts and functions, to calculate and display variables and images. Learn the basics of Simulink to build and simulate models from standard blocks. Discover both MATLAB and Simulink in an environment with supervised practice and hands-on experience. Practice problems are chosen from different engineering fields as well as from a few socio-economic fields so that students can see the software being exploited in real life applications. This is a pass/fail course. Prerequisite: freshman standing. Credit 1 unit. EN: TU

E35 ESE 103 Introduction to Electrical Engineering
A hands-on introduction to electrical engineering to put the FUN into the electrical engineering FUNdamentals. Experiments are designed to be easy to conduct and understand. Some of the technologies explored are used in a variety of applications including the iPod, Ultrasound Imaging, Computed Tomography, Radar, DC Motors and Credit Card Readers. Students work in groups of two in the newly renovated Bryan 316 laboratory. Each station is equipped with a Quad-Core computer and an integrated Data Acquisition system. Using this lab equipment, students design and build solutions to the exercises. The students also learn to program the computer in LabVIEW to control the Data Acquisition system. Also, throughout the semester, presentations are given by the EE faculty about their research. Credit 1 unit. EN: TU

E35 ESE 141 Introductory Robotics
A hands-on introduction to robotics. Project-oriented course where students build and program a robot guided by upper-division students. Friendly competition at the end of semester. Students gain electrical lab experience, programming experience, and a guided introduction into the field of robotics. Recommended to freshmen and sophomores. This is a pass/fail course. Credit 1 unit. EN: TU

E35 ESE 151 Introduction to Systems Science and Engineering
Systems Science and Engineering (SSE) has grown in applicability to many industries. This course will provide an overview of the broad applicability of the analytical methods studied in SSE, as well as introduce many of these analytical methods. Each module of the course will present a domain area (e.g., Energy, Healthcare, etc.) with examples of how one of the SSE analytical methods (e.g. Optimization, Discrete Event Systems, etc.) is used with assistance of one of the many computing tools available for SSE-style projects (e.g., Matlab, SIMUL8, etc.). The course will close with a final, exploratory project and presentation of an analytical method of the students’ choosing and how this is applied to an industry of their choosing. (Not open to seniors or graduate students.) Prerequisite: Math 132, Physics 117A or 197. Credit 2 units. EN: TU

E35 ESE 205 Introduction to Engineering Design
A hands-on course where students, divided in groups of two or three, will creatively solve one problem throughout the semester using tools from electrical and systems engineering. The groups choose their own schedule and work under the supervision of an academic team consisting of faculty and higher-level students. The evaluation considers the completion of objectives set by the students with help of the academic team, as well as the originality, innovation and impact of the project. Prerequisites: CSE 131, Physics 117A or equivalent. Credit 3 units. EN: TU

E35 ESE 230 Introduction to Electrical and Electronic Circuits

E35 ESE 232 Introduction to Electronic Circuits
Analysis and design of linear electronic circuits. Terminal characteristics of active semiconductor devices. Incremental and DC models for diodes, metal-oxide-semiconductor field effect transistors (MOSFETs) and bipolar junction transistors (BJTs). Design and analysis of single- and multistage amplifiers. Volatile and nonvolatile memories. Understanding of common application circuits (e.g., operational amplifier, memories) in integrated circuit chips. Semester-long design project. Prerequisite: ESE 230. Credit 3 units. EN: TU

E35 ESE 233 Electrical and Electronics Laboratory
Lectures and laboratory exercises related to sophomore topics in introductory networks and basic electronics. Prerequisite: ESE 230. Credit 3 units. EN: TU

E35 ESE 260 Introduction to Digital Logic and Computer Design
Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in
simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisite: CSE 131 or comparable programming experience.

Same as E81 CSE 260M

Credit 3 units. EN: TU

E35 ESE 297 Introduction to ESE Undergraduate Research Projects

This course is offered to students at all levels from all departments. The course is designed to give students some hands-on experience by implementing projects that use the lab PCs, the sbRIO robots from National Instruments, acoustic sensors, bio-medical sensors and 3D cameras. These projects are implemented in LabVIEW and Matlab and should prepare the students to work on topics that include the Robotic Sensing Undergraduate Research Projects in subsequent semesters. Note that under ESE 497 Undergraduate Research, students may select the Robotic Sensing Projects as well as other projects. Working in groups, students implement algorithms that run on PCs and our wireless robotic platforms to track a moving audio source. Also, they use an EEG system to implement a Brain Computer Interface (BCI) project and work with the new Kinect camera from Microsoft. Corequisite: CSE 131 or equivalent.

Credit 3 units.

E35 ESE 318 Engineering Mathematics A

Laplace transforms; matrix algebra; vector spaces; eigenvalues and eigenvectors; vector differential calculus and vector integral calculus in three dimensions. Prerequisites: Math 233 and Math 217 or their equivalents.

Credit 3 units.

E35 ESE 319 Engineering Mathematics B

Power series and Frobenius series solutions of differential equations; Legendre's equation; Bessel's equation; Fourier series and Fourier transforms; Sturm-Liouville theory; solutions of partial differential equations; wave and heat equations. Prerequisites: Math 233 and Math 217 or their equivalents.

Credit 3 units.

E35 ESE 326 Probability and Statistics for Engineering

Study of probability and statistics together with engineering applications. Probability and statistics: random variables, distribution functions, density functions, expectations, means, variances, combinatorial probability, geometric probability, normal random variables, joint distribution, independence, correlation, conditional probability, Bayes theorem, the law of large numbers, the central limit theorem. Applications: reliability, quality control, acceptance sampling, linear regression, design and analysis of experiments, estimation, hypothesis testing. Examples are taken from engineering applications. Prerequisites: Math 233 or equivalent.

Credit 3 units. EN: TU

E35 ESE 330 Engineering Electromagnetics Principles

Electromagnetic theory as applied to electrical engineering: vector calculus; electrostatics and magnetostatics; Maxwell's equations, including Poynting's theorem and boundary conditions; uniform plane-wave propagation; transmission lines, TEM modes, including treatment of general lossless lines, and pulse propagation; introduction to guided waves; introduction to radiation and scattering concepts. Prerequisites: Physics 118A or Physics 198 and (1) ESE 317 or (2) ESE 318 and corequisite: ESE 319.

Credit 3 units. EN: TU

E35 ESE 331 Electronics Laboratory

Laboratory exercises provide students with a combination of hands-on experience in working with a variety of real instruments and in working in a simulated "virtual" laboratory setting. A sequence of lab experiments provide hands-on experience with grounding and shielding techniques, signal analysis, realistic operation amplifier (op amp) characterization, op amp based active filters characterization, MOSFET chopper amplifier behavior, measurement of pulses propagating on a transmission line with various terminations, experience with both AM and FM modulation. Students will gain experience in working with: sampling oscilloscopes, various signal generators, frequency counters, digital multimeters, spectrum analyzers, and contemporary connection boards. The course concludes with a hands-on project to design and demonstrate an electronic component. Prerequisites: ESE 230, 232, and 330.

Credit 3 units. EN: TU

E35 ESE 332 Power, Energy and Polyphase Circuits

Fundamental concepts of power and energy; electrical measurements; physical and electrical arrangement of electrical power systems; polyphase circuit theory and calculations; principal elements of electrical systems such as transformers, rotating machines, control and protective devices, their description and characteristics; elements of industrial power system design. Prerequisite: ESE 230.

Credit 3 units. EN: TU

E35 ESE 336 Principles of Electronic Devices

Introduction to the solid-state physics of electronic materials and devices, including semiconductors, metals, insulators, diodes and transistors. Crystal growth technology and fundamental properties of crystals. Electronic properties and band structure of electronic materials, and electron transport in semiconductor materials. Fabrication of PN junction diodes, metal-semiconductor junctions, and transistors and integrated-circuit chips. Fundamental electrical properties of rectifying diodes and light-emitting diodes, bipolar transistors and field-effect transistors. Device physics of diodes and transistors, large-signal electrical behavior and high-frequency properties. Prerequisite: Physics 118A.

Credit 3 units. EN: TU

E35 ESE 337 Electronic Devices and Circuits

Credit 3 units. EN: TU
E35 ESE 351 Signals and Systems
Credit 3 units. EN: TU

E35 ESE 352 Introduction to Signals and Systems Lab
Introduction to physical and computational aspects of signals and systems. Weekly laboratory experiments complement the theoretical treatment in ESE 351 Signals and Systems. Experiments illustrate fundamental concepts of linear systems, including state-space and input-output models, impulse response and convolution, transient and steady-state responses, time- and frequency-domain representations, system frequency response, and sampling, filtering and modulation. MATLAB and/or LabView are used for experiments and analysis of mechanical systems, electrical circuits, signals and communication systems. Corequisite: ESE 351.
Credit 1 unit.

E35 ESE 362 Computer Architecture
Study of interaction and design philosophy of hardware and software for digital computer systems. Processor architecture, Instruction Set Architecture, Assembly Language, Memory hierarchy design, I/O considerations. Comparison of computer architectures. Prerequisite: CSE 260M.
Same as E81 CSE 362M
Credit 3 units. EN: TU

E35 ESE 400 Independent Study
Opportunities to acquire experience outside the classroom setting and to work closely with individual members of the faculty. A final report must be submitted to the department. Not open to first-year or graduate students. Consult adviser. Hours and credit to be arranged.
Credit variable, maximum 3 units.

E35 ESE 401 Fundamentals of Engineering Review
A review and preparation of the most recent NCEES Fundamentals of Engineering (FE) Exam specifications is offered in a classroom setting. Exam strategies will be illustrated using examples. The main topics for the review include: engineering mathematics, statics, dynamics, thermodynamics, heat transfer, mechanical design and analysis, material science and engineering economics. A discussion of the importance and responsibilities of professional engineering licensure along with ethics will be included.
Same as E37 MEMS 4001
Credit 1 unit.

E35 ESE 403 Operations Research
Introduction to the mathematical aspects of various areas of operations research, with additional emphasis on problem formulation. This is a course of broad scope, emphasizing both the fundamental mathematical concepts involved, and also aspects of the translation of real-world problems to an appropriate mathematical model. Subjects covered include linear and integer programming, network problems and dynamic programming. Prerequisites: Math 217 and familiarity with matrix or linear algebra, or permission of instructor.
Credit 3 units. EN: TU

E35 ESE 404 Applied Operations Research
Application of deterministic and stochastic operations research techniques to real-world problems. Emphasis is given to linear programming and simulation. The nature of the problems ranges from logistics and planning to operations management. The systems examined are transportation systems, supply chain systems, medical care delivery systems, urban service systems, management systems, manufacturing systems. Emphasis is placed on the problem formulation of real-world problems, the use of computer software and the analysis of the solutions. Prerequisites: ESE 326 and ESE 318 or equivalent. ESE 403 is not a prerequisite for this course, so it is possible to take this course without ESE 403.
Credit 3 units. EN: TU

E35 ESE 405 Reliability and Quality Control
An integrated analysis of reliability and quality control function in manufacturing. Statistical process control, acceptance sampling, process capability analysis, reliability prediction, design, testing, failure analysis and prevention, maintainability, availability, and safety are discussed and related. Qualitative and quantitative aspects of statistical quality control and reliability are introduced in the context of manufacturing. Prerequisite: ESE 326 or equivalent.
Credit 3 units. EN: TU

E35 ESE 407 Analysis and Simulation of Discrete Event Systems
Study of the dynamic behavior of discrete event systems and techniques for analyzing and optimizing the performance of such systems. Covers both classical and recent approaches. Classical topics include Markov chains, queueing theory, networks of queues, related algorithms and simulation methods. Recent approaches include decomposition and aggregation, approximation, and perturbation analysis of nonclassical systems. Applications are drawn from various areas, including production systems. Prerequisites: Math 217, ESE 326 or equivalent, programming experience such as CSE 131 or CSE 200.
Credit 3 units. EN: TU

E35 ESE 408 A System Dynamics Approach to Designing Sustainable Policies and Programs
Principles and practice of modeling dynamic systems in the sciences, engineering, social sciences and business. Model structure and its relationships to prior knowledge and assumptions, measurable quantities and ultimate use in solving problems in application areas. Problems considered are in the areas of intervention, policy making, business and engineering systems. Model verification. The basic theory and practice of system dynamics. Quantitative methods are emphasized. Senior or graduate standing.
Credit 3 units. EN: TU
E35 ESE 415 Optimization
Optimization problems with and without constraints. The projection theorem. Convexity, separating hyperplane theorems; Lagrange multipliers; Kuhn-Tucker-type conditions, duality; computational procedures. Optimal control of linear dynamic systems; maximum principles. Use of optimization techniques in engineering design. Prerequisites: Math 309 and ESE 317 or ESE 318 or permission of instructor. Credit 3 units. EN: TU

E35 ESE 425 Random Processes and Kalman Filtering
Probability and random variables; random processes; linear dynamic systems and random inputs; autocorrelation; spectral density; the discrete Kalman filter; applications; the extended Kalman filter for nonlinear dynamic systems. Kalman filter design using a computer package, mean square estimation; maximum likelihood; Wiener filtering and special factorization, LQG/LTR control. Prerequisite: ESE 326 and ESE 351 or equivalent. Credit 3 units. EN: TU

E35 ESE 427 Financial Mathematics
This course is a self-contained introduction to financial mathematics at the undergraduate level. Topics to be covered include pricing of the financial instruments such as options, forwards, futures and their derivatives along with basic hedging techniques and portfolio optimization strategies. The emphasis is put on using of discrete, mostly binary models. The general, continuous case including the concepts of Brownian motion, stochastic integral, and stochastic differential equations, is explained from intuitive and practical point of view. Among major results discussed are the Arbitrage Theorem and Black-Scholes differential equations and their solutions. Prerequisites: ESE 318 and ESE 319 or ESE 317 and ESE 326 or the consent of the instructor. Credit 3 units. EN: TU

E35 ESE 429 Basic Principles of Quantum Optics and Quantum Information
This course provides an accessible introduction to quantum optics and quantum engineering for undergraduate students. This course covers the following topics: concept of photons, quantum mechanics for quantum optics, radiative transitions in atoms, lasers, photon statistics (photon counting, Sub-/Super-Poissionian photon statistics, bunching, anti-bunching, theory of photodetection, shot noise), entanglement, squeezed light, atom-photon interactions, cold atoms, atoms in cavities. The course will also provide an overview for quantum information processing; quantum computing, quantum cryptography and teleportation. Prerequisites: Engineering Mathematics 317, 318 or equivalent. Credit 3 units. EN: TU

E35 ESE 433 Radio Frequency and Microwave Technology for Wireless Systems
Focus is on the components and associated techniques employed to implement analog and digital radio frequency (RF) and microwave (MW) transceivers for wireless applications, including: cell phones; pagers; wireless local area networks; global positioning satellite-based devices; and RF identification systems. A brief overview of system-level considerations is provided, including modulation and detection approaches for analog and digital systems; multiple-access techniques and wireless standards; and transceiver architectures. Focus is on RF and MW: transmission lines; filter design; active component modeling; matching and biasing networks; amplifier design; and mixer design. Prerequisite: ESE 330. Credit 3 units. EN: TU

E35 ESE 434 Solid-State Power Circuits and Applications
Study of the strategies and applications power control using solid-state semiconductor devices. Survey of generic power electronic converters. Applications to power supplies, motor drives and consumer electronics. Introduction to power diodes, thyristors and MOSFETs. Prerequisites: ESE 232, ESE 351. Credit 3 units. EN: TU

E35 ESE 435 Electrical Energy Laboratory
Experimental studies of principles important in modern electrical energy systems. Topics include: AC power measurements, electric lighting, photovoltaic cells and arrays, batteries, DC-DC and DC-AC converters, and three-phase circuits. Each experiment requires analysis, simulation with MultiSim, and measurement via LabView and the Elvis II platform. Prerequisites: ESE 230 and ESE 351. Credit 3 units. EN: TU

E35 ESE 436 Advanced Electronic Devices
The physics of state-of-the-art electronic devices. Devices studied include novel diode structures (light-emitting diodes, semiconductor laser diodes), high-power devices (SCRs, TRIACs and power transistors), and high-speed devices. High-speed devices include heterojunction bipolar (HBT), heterojunction field-effect (HFET) and high electron mobility (HEMT) transistors used in high-speed systems (up to 100 GHz). Advanced bipolar transistors (poly-Si), used in high-speed microprocessors, examined; also materials properties, transport mechanisms, band structure and physics of these devices. Prerequisite: ESE 336. Credit 3 units. EN: TU

E35 ESE 437 Sustainable Energy Systems
We survey the field of sustainable energy and explore contributions within electrical and systems engineering. Topics include introductory electric power systems, smart grids, and the roles of heat engines, photovoltaics, wind power and energy storage, as well as analysis and optimization of energy systems. The course consists of lectures, review and discussion of literature, and student projects. Prerequisites: ESE 317 or ESE 318 or ESE 319 and ESE 230 or ESE 351 or permission of instructor. Credit 3 units. EN: TU

E35 ESE 438 Applied Optics
Topics relevant to the engineering and physics of conventional as well as experimental optical systems and applications explored. Items addressed include geometrical optics, Fourier optics such as diffraction and holography, polarization and optical birefringence such as liquid crystals, and nonlinear optical phenomena and devices. Prerequisite: ESE 330 or equivalent. Credit 3 units. EN: TU

E35 ESE 439 Introduction to Quantum Communications
This course covers the following topics: quantum optics, single-mode and two-mode quantum systems, nonlinear optics, and quantum systems theory. Specific topics include the following: Dirac notation quantum mechanics; harmonic
oscillator quantization; number states, coherent states, and squeezed states; direct, homodyne, and heterodyne detection; linear propagation loss; phase insensitive and phase sensitive amplifiers; entanglement and teleportation; field quantization; quantum photodetection; phase-matched interactions; optical parametric amplifiers; generation of squeezed states, photon-twin beams, non-classical fourth-order interference, and polarization entanglement; optimum binary detection; quantum precision measurements; and quantum cryptography. Prerequisites: ESE 330 or Physics 421; Physics 217 or equivalent.

Credit 3 units. EN: TU

E35 ESE 441 Control Systems

Credit 3 units. EN: TU

E35 ESE 442 Digital Control Systems
The control of physical systems with digital computer, microprocessor or special-purpose digital hardware is becoming very common. Course continues ESE 441 to develop models and mathematical tools needed to analyze and design these digital feedback-control systems. Linear, discrete dynamic systems. The Z-transform. Discrete equivalents to continuous transfer functions. Sampled-data control systems. Digital control systems design using transfer and state-space methods. Systems composed of digital and continuous subsystems. Quantization effects. System identification. Multivariable and optimum control. Prerequisites: ESE 351 and ESE 441 (or MEMS 431) or permission of instructor.

Credit 3 units. EN: TU

E35 ESE 444 Sensors and Actuators
The course provides engineering students with basic understanding of two of the main components of any modern electrical or electromechanical system; sensors as inputs and actuators as outputs. The covered topics include transfer functions, frequency responses and feedback control. Component matching and bandwidth issues. Performance specification and analysis. Sensors: analog and digital motion sensors, optical sensors, temperature sensors, magnetic and electromagnetic sensors, acoustic sensors, chemical sensors, radiation sensors, torque, force and tactile sensors. Actuators: stepper motors, DC and AC motors, hydraulic actuators, magnet and electromagnetic actuators, acoustic actuators. Introduction to interfacing methods: bridge circuits, A/D and D/A converters, microcontrollers. This course is useful for those students interested in control engineering, robotics and systems engineering. Prerequisites: one of the following 5 conditions: (1) prerequisite of ESE 230 and corequisite of ESE 351; (2) prerequisites of ESE 230, ESE 317 and MEMS 255 (Mechanics II); (3) prerequisites of ESE 230, ESE 318 and MEMS 255 (Mechanics II); (4) prerequisites of ESE 151 and ESE 351; (5) permission of instructor.

Credit 3 units. EN: TU

E35 ESE 446 Robotics: Dynamics and Control

Credit 3 units. EN: TU

E35 ESE 447 Robotics Laboratory
Introduces the students to various concepts such as modeling, identification, model validation and control of robotic systems. The course focuses on the implementation of identification and control algorithms on a two-link robotic manipulator (the so-called pendubot) that will be used as an experimental testbed. Topics include: introduction to the mathematical modeling of robotic systems; nonlinear model, linearized model; identification of the linearized model: input-output and state-space techniques; introduction to the identification of the nonlinear model: energy-based techniques; model validation and simulation; stabilization using linear control techniques; a closer look at the dynamics; stabilization using nonlinear control techniques. Prerequisite: ESE 351 or MEMS 431. Corequisite or Prerequisite: ESE 441 and 446.

Credit 3 units. EN: TU

E35 ESE 448 Systems Engineering Laboratory
Experimental study of real and simulated systems and their control. Identification, input-output analysis, design and implementation of control systems. Noise effects. Design and implementation of control laws for specific engineering problems. Corequisites: ESE 441 and knowledge of a programming language.

Credit 3 units. EN: TU

E35 ESE 449 Digital Process Control Laboratory
Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics, and process control. Exercises in data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature, and pressure control. Term project. Prerequisite: ESE 441 or EECE 401 or equivalent. (Prior to FL2015, this course was numbered: E63 433.) Same as E44 EECE 424

Credit 3 units. EN: TU

E35 ESE 455 Quantitative Methods for Systems Biology
Application of computational mathematical techniques to problems in contemporary biology. Systems of linear ordinary differential equations in reaction-diffusion systems, hidden Markov models applied to gene discovery in DNA sequence, ordinary differential equation and stochastic models applied to gene regulation networks, negative feedback in transcription
E35 ESE 460 Switching Theory
Advanced topics in switching theory as employed in the synthesis, analysis and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits and built-in self-test techniques. Prerequisite: CSE 260M or equivalent.
Same as E81 CSE 460T
Credit 3 units. EN: TU

E35 ESE 461 Design Automation for Integrated Circuit Systems
Integrated circuit systems provide the core technology that power today's most advanced devices and electronics: smart phones, wearable devices, autonomous robots, and cars, aerospace or medical electronics. These systems often consist of silicon microchips made up by billions of transistors and contain various components such as microprocessors, digital signal processors (DSPs), hardware accelerators, memories and I/O interfaces. Therefore design automation is critical to tackle the design complexity at the system level. The objectives of this course are to 1) provide a general understanding of design automation for very large scale integrated (VLSI) systems; 2) introduce the basic algorithms used in VLSI design and optimization; 3) expose students to the design automation techniques used in the best-known academic and commercial systems, as well as the hot research topics and problems in the field. Topics covered include digital integrated circuit design flow, logic synthesis, physical design, high-level synthesis, circuit simulation and optimization, timing analysis, power delivery network analysis. Assignments include homework, mini-projects, term paper and group project. Prerequisites: ESE 232, ESE 260; recommended prerequisite: ESE 362.
Credit 3 units. EN: TU

E35 ESE 462 Computer Systems Design
Introduction to modern design practices, including the use of CAD/CAD system for VHDL-based design and simulation while designing a selected computation system. Prerequisites: CSE 361S and 362M.
Same as E81 CSE 462M
Credit 3 units. EN: TU

E35 ESE 463 Digital Integrated Circuit Design and Architecture
This is a project oriented course on digital VLSI design. The course material focuses on bottom up design of digital integrated circuits, starting from CMOS transistors, CMOS inverters, combinational circuits and sequential logic designs. Important design aspect of digital integrated circuits such as propagation delay, noise margins and power dissipation are covered in the class, as well as design challenges in submicron technology are addressed. The students design combinational and sequential circuits at various levels of abstraction using state-of-the-art CAD environment provided by Cadence Design Systems. The goal of the class is to design a microprocessor in 0.5 micron technology that can be fabricated by a semiconductor foundry. Prerequisites: CSE 260 and ESE 232.
Same as E81 CSE 463M
Credit 3 units. EN: TU

E35 ESE 464 Digital Systems Engineering
Same as E81 CSE 464M
Credit 3 units. EN: TU

E35 ESE 465 Digital Systems Laboratory
Procedures for reliable digital design, both combinational and sequential; understanding manufacturers specifications; use of special test equipment; characteristics of common SSI, MSI, and LSI devices; assembling, testing, and simulating design; construction procedures; maintaining signal integrity. Several single-period laboratory exercises, several design projects, and application of a microprocessor in digital design. One lecture and one laboratory period a week. Prerequisites: CSE 260M and CSE 361S.
Same as E81 CSE 465M
Credit 3 units. EN: TU

E35 ESE 467 Embedded Computing Systems
Introduces the issues, challenges and methods for designing embedded computing systems — systems designed to serve a particular application, which incorporate the use of digital processing devices. Examples of embedded systems include PDAs, cellular phones, appliances, game consoles, automobiles and iPod. Emphasis is given to aspects of design that are distinct to embedded systems. The course examines hardware, software and system-level design. Hardware topics include microcontrollers, digital signal processors, memory hierarchy and I/O. Software issues include languages, run-time environments and program analysis. System-level topics include real-time operating systems, scheduling, power management and wireless sensor networks. Students perform a course project on a real wireless sensor network testbed. Prerequisite: CSE 361S.
Same as E81 CSE 467S
Credit 3 units. EN: TU

E35 ESE 471 Communications Theory and Systems
Introduction to the concepts of transmission of information via communication channels. Amplitude and angle modulation for the transmission of continuous-time signals. Analog-to-digital conversion and pulse code modulation. Transmission of digital data. Introduction to random signals and noise and their effects on communication. Optimum detection systems in the presence of noise. Elementary information theory. Overview of various communication technologies such as radio, television, telephone networks, data communication, satellites, optical fiber and cellular radio. Prerequisites: ESE 351 and ESE 326.
Credit 3 units. EN: TU

E35 ESE 474 Introduction to Wireless Sensor Networks
This is an introductory course on wireless sensor networks for senior undergraduate students. The course uses a combination of lecturing, reading, and discussion of research papers to help each student to understand the characteristics and operations of various wireless sensor networks. Topics covered include sensor network architecture, communication protocols on Medium Access Control and Routing, sensor network operation systems, sensor data aggregation and dissemination, localization and time synchronization, energy management, and target detection and...
tracking using acoustic sensor networks. Prerequisite: ESE 351 (Signals and Systems).
Credit 3 units. EN: TU

E35 ESE 482 Digital Signal Processing
Credit 3 units. EN: TU

E35 ESE 483 Medical Imaging
Introduction to the mathematical, physical and engineering principles underlying modern medical imaging systems including x-ray computed tomography, ultrasonic imaging and magnetic resonance imaging. Mathematical tools including Fourier analysis and the sampling theorem; the Radon transform and related transforms; reconstitution algorithms for computed tomography; tomographic imaging with diffracting sources; Bloch equations; free induction decay, spin echoes and gradient echoes; one-dimensional Fourier magnetic resonance imaging; three-dimensional magnetic resonance imaging and slice excitation. Prerequisite: ESE 351.
Credit 3 units. EN: TU

E35 ESE 488 Signals and Systems Laboratory
A laboratory course designed to complement the traditional EE course offerings in signal processing, communication theory and automatic control. Signals and systems fundamentals: continuous-time and discrete-time linear time-invariant systems, impulse and step response, frequency response, A/D and D/A conversion. Digital signal processing: FIR and IIR digital filter design, implementation and application of the Fast Fourier Transform. Communication theory: baseband, digital communication, amplitude modulation, frequency modulation, bandpass digital communication. Automatic control: system modeling, feedback control systems, closed-loop transient and frequency response. Laboratory experiments involve analog and digital electronics, and mechanical systems. Computer workstations and modern computational software used extensively for system simulation, real-time signal processing and discrete-time automatic control. Prerequisite: ESE 351.
Credit 3 units. EN: TU

E35 ESE 497 Undergraduate Research
Undergraduate research under the supervision of a faculty member. The scope and depth of the research must be approved by the faculty member prior to enrollment. A written final report and a webpage describing the research are required. Credit variable, maximum 3 units.

E35 ESE 497B Undergraduate Research
Undergraduate research in the summer under the supervision of Dr. Arye Nehorai. Prerequisite: Undergraduate standing. In order to register for this course, please fill out the ESE Research/Independent Study Registration Form. Credit variable, maximum 3 units.

E35 ESE 498 Electrical Engineering Design Projects
Working in teams, students address design tasks assigned by faculty. Each student participates in one or more design projects in a semester. Projects are chosen to emphasize the design process, with the designers choosing one of several paths to a possible result. Collaboration with industry and all divisions of the University is encouraged. A written report, a webpage and an oral presentation are required. In order to gain teamwork experience, students are required to form a team of at least two members. Prerequisite: senior standing.
Credit 3 units. EN: TU

E35 ESE 499 Capstone Project
Term design project supervised by a faculty course adviser. The project must require use of the theory, techniques, engineering, and concepts of the student's major: Electrical Engineering or Systems Science & Engineering. The project must have a client, typically either an engineer or supervisor from local industry or a professor or researcher in university laboratories. Namely, a self-directed project is not allowed. The solution of a real technological or societal problem is carried through completely, starting from the stage of initial specification, proceeding with the application of engineering methods, and terminating with an actual solution. Required documents are a written proposal, a final report, and a webpage on the project. An oral presentation of the project also is required. Prerequisite: ESE senior standing and instructor's consent.
Credit 3 units. EN: TU

E35 ESE 500 Independent Study
Opportunities for graduate students to explore possible areas of interest with individual faculty members. Coordinated study programs dealing with areas not covered by formal course work are possible. Independent study credit can be changed to research credit (ESE 599) any time during the semester if enrollment is appropriate. A final report must be submitted to the department. Credit variable, maximum 3 units.

E35 ESE 501 Mathematics of Modern Engineering I
Vectors and vector spaces, matrix operations, system of linear equations, eigenvalues and eigenvectors, vector fields, line and surface integrals, solutions to ordinary and partial differential equations, series expansions, Fourier series. Prerequisites: ESE 318 and 319 or ESE 317 or equivalent or consent of instructor. This course will not count toward the ESE doctoral program.
Credit 3 units. EN: TU

E35 ESE 502 Mathematics of Modern Engineering II
Techniques of solving ordinary differential equations with constant coefficients, Laplace's Transform, solutions for the heat and wave equations, Laplace's Equation, Legendre and Bessel Function, Introduction to function of a complex variable, conformal mapping, contour integrals. Prerequisites: ESE 318 and ESE 319 or ESE 317 or equivalent, or consent of instructor. This course will not count toward the ESE doctoral program.
Credit 3 units. EN: TU
E35 ESE 503 Operations Research
Introduction to the mathematical aspects of various areas of operations research, with additional emphasis on problem formulation. This is a course of broad scope, emphasizing both the fundamental mathematical concepts involved and also aspects of the translation of real-world problems to an appropriate mathematical model. Subjects covered include linear and integer programming, network problems and dynamic programming. Prerequisites: Math 217 and familiarity with matrix or linear algebra, or permission of instructor. Credit 3 units.

E35 ESE 512 Advanced Numerical Analysis
Special topics chosen from numerical solution of partial differential equations, uniform and least-squares approximation spline approximation, Galerkin methods and finite element approximation, functional analysis applied to numerical mathematics, and other topics of interest. Prerequisite: ESE 511 or consent of instructor. Credit 3 units. EN: TU

E35 ESE 513 Convex Optimization and Duality Theory
Graduate introduction to convex optimization with emphasis on convex analysis and duality theory. Topics include: convex sets, convex functions, convex cones, convex conjugates, Fenchel-Moreau theorem, convex duality and biconjugation, directional derivatives, subgradients and subdifferentials, optimality conditions, ordered vector spaces, Hahn-Banach theorem, extension and separation theorems, minimax theorems, and vector and set optimization. Prerequisites: ESE 415, Math 4111. Credit 3 units. EN: TU

E35 ESE 514 Calculus of Variations
Introduction to the theory and applications of the calculus of variations. Theory of functionals; variational problems for an unknown function; Euler's equation; variable end-point problems; variational problems with subsidiary conditions; sufficient conditions for extrema: applications to optimum control and/or to other fields. A term project is required. Prerequisites: ESE 318 and 319 or ESE 317 or equivalent. Credit 3 units.

E35 ESE 516 Optimization in Function Space

E35 ESE 517 Partial Differential Equations

Integral equations in boundary value problems. Prerequisites: ESE 318 and 319 or equivalent or consent of instructor. Credit 3 units. EN: TU

E35 ESE 518 Optimization Methods in Control
The course is divided in two parts: convex optimization and optimal control. In the first part we cover applications of Linear Matrix Inequalities and Semi-Definite Programming to control and estimation problems. We also cover Multiparametric Linear Programming and its application to the Model Predictive Control and Estimation of linear systems. In the second part we cover numerical methods to solve optimal control and estimation problems. We cover techniques to discretize optimal control problems, numerical methods to solve them, and their optimality conditions. We apply these results to the Model Predictive Control and Estimation of nonlinear systems. Prerequisites: ESE 551, and ESE 415 or equivalent. Credit 3 units. EN: TU

E35 ESE 520 Probability and Stochastic Processes
Review of probability theory; models for random signals and noise; calculus of random processes; noise in linear and nonlinear systems; representation of random signals by sampling and orthonormal expansions. Poisson, Gaussian and Markov processes as models for engineering problems. Prerequisite: ESE 326. Credit 3 units. EN: TU

E35 ESE 521 Random Variables and Stochastic Processes I
Mathematical foundations of probability theory, including constructions of measures, Lebesque-measure, Lebesque-integral, Banach space property of Lp, basic Hilbert-space theory, conditional expectation. Kolmogorov's theorems on existence and sample-path continuity of stochastic processes. An in-depth look at the Wiener process. Filtrations and stopping times. Markov processes and diffusions, including semigroup properties and the Kolmogorov forward and backward equations. Prerequisites: ESE 520 or equivalent, Math 411. Credit 3 units.

E35 ESE 523 Information Theory
Discrete source and channel model, definition of information rate and channel capacity, coding theorems for sources and channels, encoding and decoding of data for transmission over noisy channels. Corequisite: ESE 520. Credit 3 units. EN: TU

E35 ESE 524 Detection and Estimation Theory
Study of detection, estimation and modulation theory; detection of signals in noise; estimation of signal parameters; linear estimation theory. Kalman-Bucy and Wiener filters, nonlinear modulation theory; optimum angle modulation. Prerequisite: ESE 520. Credit 3 units. EN: TU

E35 ESE 525 Random Processes and Kalman Filtering
Review of probability and random variables; random processes; linear dynamic system response to stochastic inputs; mean square estimation; discrete and continuous Kalman filters; extended Kalman filter for nonlinear systems; maximum likelihood; Wiener filtering and special factorization, LOG/LTR control; topics in system identification; particle filters. Control,
estimation (Kalman filter), and system identification problems using MATLAB. Prerequisite: ESE 326 or equivalent. Credit 3 units.

**E35 ESE 529 Special Topics in Information Theory and Applied Probability**
Credit 3 units.

**E35 ESE 531 Nano and Micro Photonics**
This course focuses on theory, design, fabrication and application of photonic materials and micro/nano photonic devices. Interaction of light and matter, propagation of light in waveguide, nonlinear optical effect and optical properties of nano/micro structure, the device principles of silicon-based waveguide, filter, photodetector, modulator and laser devices. Prerequisite: ESE 330. Credit 3 units. EN: TU

**E35 ESE 532 Introduction to Nano-Photonic Devices**
Introduction to photon transport in nano-photonic devices. This course focuses on the following topics: light and photons, statistical properties of photon sources, temporal and spatial correlations, light-matter interactions, optical nonlinearity, atoms and quantum dots, single- and two-phonon devices, optical devices, and applications of nano-photonic devices in quantum and classical computing and communication. Prerequisites: ESE 330 and Physics 217, or permission of instructor. Credit 3 units. EN: TU

**E35 ESE 534 Special Topics in Advanced Electrodynamics**
This course covers advanced topics in electrodynamics. Topics include electromagnetic wave propagation (in free space, confined waveguides, or along engineered surfaces); electromagnetic wave scattering (off nano-particles or molecules); electromagnetic wave generation and detection (antenna and nano-antenna); inverse scattering problems; and numerical and approximate methods. Prerequisites: ESE 330, or Physics 421 and Physics 422. Credit 3 units. EN: TU

**E35 ESE 536 Introduction to Quantum Optics**
This course covers the following topics: quantum mechanics for quantum optics, radiative transitions in atoms, lasers, photon statistics (photon counting, Sub-/Super-Poissonian photon statistics, bunching, anti-bunching, theory of photodetection, shot noise), entanglement, squeezed light, atom-photon interactions, cold atoms, atoms in cavities. If time permits, the following topics are selectively covered: quantum computing, quantum cryptography, and teleportation. Prerequisites: ESE 330 and Physics 217 or Physics 421. Credit 3 units. EN: TU

**E35 ESE 537 Advanced Electromagnetic Theory**
Solution of electromagnetic boundary value problems, applications to engineering analysis and design. First semester: mathematical methods for electrostatics, magnetostatics and electrodynamics, emphasizing Green's function techniques. Second semester: radiation and diffraction; waveguides, antennas and optics. Vector boundary conditions, Green's dyadics, variational techniques. Prerequisite: advanced calculus, ESE 430 or equivalent. Credit 3 units. EN: TU

**E35 ESE 538 Advanced Electromagnetic Engineering**
This course begins with a brief review of prerequisite topics. The following topics are treated for guided-wave systems: solution for and use of mode sets in planar and cylindrical guided-wave systems; use of alternative mode sets for inhomogeneous guided-wave systems; dielectric-based and surface-guided wave systems. Methods for launching waves in systems are studied, including: modal expansions, current-based launchers using electric or magnetic coupling techniques, and aperture excitation. Perturbational and variational methods are studied for representing important characteristics of guided-wave and resonator systems. Modal expansions are related to a one- and two-port microwave network treatment of obstacles and circuit elements and junctions in guide-wave systems. The course then shifts to the study of modern numerical methods for developing frequency- and time-domain solutions for guided-wave and two-dimensional radiation and scattering problems encountered in electromagnetic engineering applications. The methods learned are applied to a project selected and carried out by each student. Prerequisites: equivalent of ESE 330, ESE 430, and ESE 537 or instructor permission. Credit 3 units.

**E35 ESE 539 Advanced Electromagnetics: Radiation and Scattering**
This course starts with a brief review of fundamental concepts including: wave behavior, the generalized source concept, basics of radiation, duality, uniqueness, image theory, the equivalence principle and reciprocity. The focus then turns to important definitions of antenna parameters and qualities. Important antenna types are addressed, including resonant and traveling-wave types. Linear and two-dimensional arrays are treated. Phased-array and active-aperture systems are described. Finally, smart antenna concepts are presented. Prerequisite: ESE 330 or equivalent. Credit 3 units.

**E35 ESE 543 Control Systems Design by State Space Methods**
Advanced design and analysis of control systems by state-space methods: classical control review, Laplace transforms, review of linear algebra (vector space, change of basis, diagonal and Jordan forms), linear dynamic systems (modes, stability, controllability, state feedback, observability, observers, canonical forms, output feedback, separation principle and decoupling), nonlinear dynamic systems (stability, Lyapunov methods). Frequency domain analysis of multivariable control systems. State space control system design methods: state feedback, observer feedback, pole placement, linear optimal control. Design exercises with CAD (computer-aided design) packages for engineering problems. Prerequisite: ESE 351 and ESE 441, or permission of instructor. Credit 3 units. EN: TU

**E35 ESE 544 Optimization and Optimal Control**
Constrained and unconstrained optimization theory. Continuous time as well as discrete-time optimal control theory. Time-optimal control, bang-bang controls and the structure of the reachable set for linear problems. Dynamic programming, the Pontryagin maximum principle, the Hamiltonian-Jacobi-Bellman equation and the Riccati partial differential equation. Existence of classical and viscosity solutions. Application to time optimal control, regulator problems, calculus of variations, optimal filtering and
specific problems of engineering interest. Prerequisites: ESE 551, ESE 552.

Credit 3 units. EN: TU

E35 ESE 545 Stochastic Control

Credit 3 units. EN: TU

E35 ESE 546 Dynamics & Control in Neuroscience & Brain Medicine
This course provides an introduction to systems engineering approaches to modeling, analysis and control of neuronal dynamics at multiple scales. A central motivation is the manipulation of neuronal activity for both scientific and medical applications using emerging neurotechnology and pharmacology. Emphasis is placed on dynamical systems and control theory, including bifurcation and stability analysis of single neuron models and population mean-field models. Synchronization properties of neuronal networks are covered and methods for control of neuronal activity in both oscillatory and non-oscillatory dynamical regimes are developed. Statistical models for neuronal activity are also discussed. An overview of signal processing and data analysis methods for neuronal recording modalities is provided, toward the development of closed-loop neuronal control paradigms. The final evaluation is based on a project or research survey. Prerequisite(s): ESE 553 (or equivalent); ESE 520 (or equivalent); ESE 351 (or equivalent).

Credit 3 units. EN: TU

E35 ESE 547 Robust and Adaptive Control
Graduate-level control system design methods for multi-input multi-output systems. Linear optimal-based methods in robust control, nonlinear model reference adaptive control. These design methods are currently used in most industry control system design problems. These methods are designed, analyzed and simulated using MATLAB. Linear control theory (review), robustness theory (Mu Analysis), optimal control and the robust servomechanism, H-infinity optimal control, robust output feedback controls, Kalman filter theory and design, linear quadratic gaussian with loop transfer recovery, the Loops Transfer Recovery method of Lavretskey, Mu synthesis, Lyapunov theory (review), LaSalle extensions, Barbalat's Lemma, model reference adaptive control, artificial neural networks, online parameter estimation, convergence and persistence of excitation. Prerequisite: ESE 543 or ESE 551 or equivalent.

Credit 3 units. EN: TU

E35 ESE 549 Special Topics in Control
Credit 3 units.

E35 ESE 551 Linear Dynamic Systems I
Input-output and state-space description of linear dynamic systems. Solution of the state equations and the transition matrix. Controllability, observability, realizations, pole-assignment, observers and decoupling of linear dynamic systems. Prerequisite: ESE 351.

Credit 3 units. EN: TU

E35 ESE 552 Linear Dynamic Systems II

Credit 3 units. EN: TU

E35 ESE 553 Nonlinear Dynamic Systems
State space and functional analysis approaches to nonlinear systems. Questions of existence, uniqueness and stability; Lyapunov and frequency-domain criteria; w-limits and invariance, center manifold theory and applications to stability, steady-state response and singular perturbations. Poincare-Bendixson theory, the van der Pol oscillator, and the Hopf Bifurcation theorem. Prerequisite: ESE 551.

Credit 3 units. EN: TU

E35 ESE 554 Advanced Nonlinear Dynamic Systems

Credit 3 units.

E35 ESE 557 Hybrid Dynamic Systems
Theory and analysis of hybrid dynamic systems, which is the class of systems whose state is composed by continuous-valued and discrete-valued variables. Discrete-event systems models and language descriptions. Models for hybrid systems. Conditions for existence and uniqueness. Stability and verification of hybrid systems. Optimal control of hybrid systems. Applications to cyber-physical systems and robotics. Prerequisite: ESE 551.

Credit 3 units. EN: TU

E35 ESE 559 Special Topics in Systems
Credit 3 units.

E35 ESE 560 Computer Systems Architecture I
An exploration of the central issues in computer architecture: instruction set design, addressing and register set design, control unit design, microprogramming, memory hierarchies (cache and main memories, mass storage), virtual memory, pipelining, bus organization, RISC (Reduced Instruction Set Computers), and CISC (Complex Instruction Set Computers). Architecture modeling and evaluation using VHDL and/or instruction set simulation. Prerequisites: CSE 361S and CSE 260M.

Same as E81 CSE 560M

Credit 3 units. EN: TU

E35 ESE 561 Computer Systems Architecture II
Advanced techniques in computer system design. Selected topics from: processor design (multithreading, VLIW, data flow,
chip-multiprocessors, application specific processors, vector units, large MIMD machines), memory systems (topics in locality, prefetching, reconfigurable and special-purpose memories), system specification and validation, and interconnection networks. Prerequisites: CSE 560M or permission of instructor.

Same as E81 CSE 561M
Credit 3 units. EN: TU

E35 ESE 564 Advanced Digital Systems Engineering
This course focuses on advanced sensor design. The class covers various basic analog and digital building blocks that are common in most sensor integrated circuits. The class extensively uses state-of-the-art CAD program Cadence to simulate and analyze various circuit blocks. The first half of the course focuses on analyzing various operational amplifiers, analog filters, analog memory and analog to digital converters. The second half of the course focuses on understanding the basic building blocks of imaging sensors. The class has a final project composed of designing a smart sensor using Cadence tools. Prerequisites: ESE 232 and CSE 362M.
Same as E81 CSE 564M
Credit 3 units. EN: TU

E35 ESE 565 Acceleration of Algorithms in Reconfigurable Logic
Same as E81 CSE 565M
Credit 3 units. EN: TU

E35 ESE 566A Modern System-on-Chip Design
The System-on-Chip (SoCs) technology is at the core of most electronic systems: smart phones, wearable devices, autonomous robots, and cars, aerospace or medical electronics. In these SoCs, billions of transistors can be integrated on a single silicon chip, containing various components such as microprocessors, DSPs, hardware accelerators, memories, and I/O interfaces. Topics include SoC architectures, design tools and methods, as well as system-level tradeoffs between performance, power consumption, energy efficiency, reliability and programmability. Students gain an insight into the early stage of the SoC design process performing the tasks of developing functional specification, partition and map functions onto hardware and/or software, and evaluating and validating system performance. Assignments include hands-on design projects. Open to both graduate and senior undergraduate students. Prerequisite: ESE 260.
Credit 3 units. EN: TU

E35 ESE 567 Computer Systems Analysis
Comparing systems using measurement, simulation and queueing models. Common mistakes and how to avoid them, selection of techniques and metrics, art of data presentation, summarizing measured data, comparing systems using sample data, introduction to experimental design, fractional factorial designs, introduction to simulation, common mistakes in simulations, analysis of simulation results, random number generation, random variate generation, commonly used distributions, introduction to queueing theory, single queues, and queueing networks. The techniques of the course can be used to analyze and compare any type of systems including algorithms, protocols, network or database systems. Students do a project involving application of these techniques to a problem of their interest. Prerequisites: CSE 131 and CSE 260M.
Same as E81 CSE 567M
Credit 3 units. EN: TU

E35 ESE 569 Parallel Architectures and Algorithms
Several contemporary parallel computer architectures are reviewed and compared. The problems of process synchronization and load balancing in parallel systems are studied. Several selected applications problems are investigated and parallel algorithms for their solution are considered. Selected parallel algorithms are implemented in both a shared memory and distributed memory parallel programing environment. Prerequisites: graduate standing and knowledge of the C programming language.
Same as E81 CSE 569M
Credit 3 units. EN: TU

E35 ESE 570 Coding Theory
Credit 3 units. EN: TU

E35 ESE 571 Transmission Systems and Multiplexing
Transmission and multiplexing systems are essential to providing efficient point-to-point communication over distance. This course introduces the principles underlying modern analog and digital transmission and multiplexing systems and covers a variety of system examples.
Credit 3 units. EN: TU

E35 ESE 572 Signaling and Control in Communication Networks
The operation of modern communications networks is highly dependent on sophisticated control mechanisms that direct the flow of information through the network and oversee the allocation of resources to meet the communication demands of end users. This course covers the structure and operation of modern signaling systems and addresses the major design trade-offs that center on the competing demands of performance and service flexibility. Specific topics covered include protocols and algorithms for connection establishment and transformation, routing algorithms, overload and failure recovery and networking dimensioning. Case studies provide concrete examples and reveal the key design issues. Prerequisites: graduate standing and permission of instructor.
Credit 3 units. EN: TU

E35 ESE 574 Digital Communications
Representation of signals by orthonormal expansion, spectral characteristic of digitally modulated signals, channel models, source models, results from information theory, efficient signaling with coded waveforms, intersymbol interference, equalization, optimum demodulation, decoding (including Viterbi decoder), probability of error, carrier and symbol synchronization, spread spectrum methods. Corequisite: ESE 520.
Credit 3 units. EN: TU

E35 ESE 575 Fiber-Optic Communications
Introduction to optical communications via glass-fiber media. Pulse-code modulation and digital transmission methods, coding laws, receivers, bit-error rates. Types and properties of optical fibers: attenuation, dispersion, modes, numerical aperture. Light-emitting diodes and semiconductor laser sources; device
structure, speed, brightness, modes, electrical properties, optical and spectral characteristics. Prerequisites: ESE 330, ESE 336. Credit 3 units. EN: TU

E35 ESE 577 Design and Analysis of Switching Systems
Switching is a core technology in a wide variety of communication networks, including the internet, circuit-switched telephone networks and optical fiber transmission networks. The last decade has been a time of rapid development for switching technology in the internet. Backbone routers with 10 Gb/s links and aggregate capacities of hundreds of gigabits per second are becoming common, and advances in technology are now making multi-terabit routers practical. This course is concerned with the design of practical switching systems and evaluation of their performance and complexity. Prerequisites: CSE 247, 473S and ESE 326. Same as E81 CSE 577M Credit 3 units. EN: TU

E35 ESE 581 Radar Systems

E35 ESE 582 Fundamentals and Applications of Modern Optical Imaging
Analysis, design and application of modern optical imaging systems with emphasis on biological imaging. First part of the course focuses on the physical principles underlying the operation of imaging systems and their mathematical models. Topics include ray optics (speed of light, refractive index, laws of reflection and refraction, plane surfaces, mirrors, lenses, aberrations), wave optics (amplitude and intensity, frequency and wavelength, superposition and interference, interferometry), Fourier optics (space-invariant linear systems, Huygens-Fresnel principle, angular spectrum, Fresnel diffraction, Fraunhofer diffraction, frequency analysis of imaging systems), and light-matter interaction (absorption, scattering, dispersion, fluorescence). Second part of the course compares modern quantitative imaging technologies including, but not limited to, digital holography, computational imaging, and super-resolution microscopy. Students evaluate and critique recent optical imaging literature. Prerequisites: ESE 318 and ESE 319 or their equivalents; ESE 330 or Physics 421 or equivalent. Credit 3 units. EN: TU

E35 ESE 584 Statistical Signal Processing for Sensor Arrays
Methods for signal processing and statistical inference for data acquired by an array of sensors, such as those found in radar, sonar and wireless communications systems. Multivariate statistical theory with emphasis on the complex multivariate normal distribution. Signal estimation and detection in noise with known statistics, signal estimation and detection in noise with unknown statistics, direction finding, spatial spectrum estimation, beam forming, parametric maximum-likelihood techniques. Subspace techniques, including MUSIC and ESPRIT. Performance analysis of various algorithms. Advanced topics may include structured covariance estimation, wide-band array processing, array calibration, array processing with polarization diversity, and space-time adaptive processing (STAP). Prerequisites: ESE 520, ESE 524, linear algebra, computer programming. Credit 3 units. EN: TU

E35 ESE 585 Optical Imaging
A modern introduction to optical imaging. Topics include: propagation of waves, diffraction, scattering theory, multiple scattering and radiative transport, diffuse light, inverse scattering and other inverse problems, near-field optics. Applications to biomedical problems are discussed. Prerequisites: ESE 330 and ESE 351. Credit 3 units. EN: TU

E35 ESE 586 Tomographic Systems

E35 ESE 587 Ultrasonic Imaging
Propagation of ultrasound in homogeneous media, near-field and far-field descriptions, refraction and diffraction, dispersive media models, acoustic wave equation formulations and solutions. Basic elements of transducer, pulser and receiver design. The use of linear versus logarithmic amplifiers. Time-gain compensation, scan conversion and image generation in single-transducer systems. Phased-array imaging systems. Synthetic-aperture acquisition, synthetic-focus image generation. Ellipsoidal back projection using the complete dataset. Design of restoration filters to compensate for diffraction effects of the transducer. Estimation of media properties from images. Prerequisite: ESE 351. Credit 3 units. EN: TU

E35 ESE 588 Quantitative Image Processing
Introduction to the modeling processing and display of images. Two-dimensional linear systems and linear processing of images. Two-dimensional transform methods. Image acquisition and display technology. Psychophysical aspects of vision. Case studies in image processing (examples: tomography, radiology, ultrasonic imaging). Special algorithms for image processing (examples: boundary detection, segmentation, compression, interactive processing and display). Prerequisites: ESE 326, ESE 482. Credit 3 units. EN: TU
E35 ESE 589 Biological Imaging Technology
This class develops a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section examines how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure and function, image formation methods, and diffraction limited imaging. The math section examines image decomposition using basis functions (e.g., Fourier transforms), synthesis of measurement data, image analysis for feature extraction, reduction of multidimensional imaging datasets, multivariate regression, and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology are critiqued.
Credit 3 units. EN: TU

E35 ESE 590 Electrical and Systems Engineering Graduate Seminar
This pass/fail course is required for the MSc, DSc and PhD degrees in Electrical & Systems Engineering. A passing grade is required for each semester of enrollment and is received by attendance at regularly scheduled ESE seminars. MSc students must attend at least three seminars per semester. DSc and PhD students must attend at least five seminars per semester. Part-time students are exempt except during their year of residency. Any student under continuing status is also exempt. Seminars missed in a given semester may be made up during the subsequent semester.

E35 ESE 596 Seminar in Imaging Science and Engineering
This seminar course consists of a series of tutorial lectures on Imaging Science and Engineering with emphasis on applications of imaging technology. Students are exposed to a variety of imaging applications that vary depending on the semester, but may include multispectral remote sensing, astronomical imaging, microscopic imaging, ultrasound imaging and tomographic imaging. Guest lecturers come from several parts of the university. This course is required of all students in the Imaging Science and Engineering program; the only requirement is attendance. This course is graded pass/fail. Prerequisite: admission to Imaging Science and Engineering program. Same as CSE 596 (when offered) and BME 506.
Credit 1 unit.

E35 ESE 597 Practicum in Imaging Science and Engineering
This course provides students in the Imaging Science and Engineering program with opportunities to participate, early in their graduate studies, in projects involving image data. A list of IS&E faculty having potential projects of interest is provided. It is the student's responsibility to interview with such faculty in order to identify a project for themselves to be completed in one semester. A written report documenting the project goals, relevant literature and results obtained is required at the end of the project. To receive credit for completing the practicum, the report must be accepted by the supervisor of the project and a committee of IS&E faculty. This course is graded pass/fail. Prerequisite: admission to Imaging Science and Engineering program.
Credit 1 unit. EN: TU

E35 ESE 599 Master's Research
Credit variable, maximum 3 units.

| Energy, Environmental & Chemical Engineering

About Energy, Environmental & Chemical Engineering

Our department focuses on environmental engineering, energy systems engineering and chemical engineering. We provide integrated and multidisciplinary programs of scientific education. Our mission is accomplished by: instilling a tradition of "lifelong learning"; a curriculum of fundamental education coupled with applications in advanced focal areas and strengthened by our breadth in other disciplinary areas; participation in cutting-edge research with faculty and industrial partners; and access to state-of-the-art facilities and instrumentation. Most undergraduate students in the department pursue the BS in Chemical Engineering degree, accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). Other students pursue the BS in Applied Science degree with a major in chemical engineering. The department offers a minor in environmental engineering science and, in collaboration with other engineering departments, we co-sponsor a minor in energy engineering and a minor in nanoscale science and
Engineering. Graduate degrees (Master of Engineering and Doctor of Philosophy) in Energy, Environmental & Chemical Engineering are offered by the department.

Chemical engineers are involved in the transfer of scientific discoveries to modern technologies and novel products that benefit society and minimize the impact on the environment. They deal with multiscale aspects of generating clean energy, producing novel and superior materials, and utilizing the biological revolution to manufacture new products. They are involved in the development and manufacture of consumer products, as well as in design, operation and control of processes in a variety of industries (e.g., petroleum, petrochemical, chemical, consumer products, food, feed and pharmaceuticals). Their broad training in basic sciences (e.g., chemistry, physics, biology, mathematics) coupled with a strong foundation in chemical engineering principles (e.g., thermodynamics, mass and energy balances, transport phenomena, kinetics, separations, reaction engineering, control, product development and process design) makes them invaluable team members and leaders in any engineering enterprise. It also prepares them well for graduate studies in biochemical, biomedical, chemical, environmental and materials engineering. In addition, the BS degree in Chemical Engineering is a great starting point for pursuing a degree in business, law or medicine.

The curriculum is planned so as to provide students with a strong background in basic chemical engineering concepts, while allowing individual latitude to emphasize study in a specialized area or obtain added breadth both within and outside chemical engineering. A contemporary approach to chemical engineering is focused on the multiscale aspects of the discipline, consistent with modern developments in computer-supported problem solving. Molecular-level understanding is utilized in product development and process design, which in turn are evaluated in terms of their impact on the environment and society according to the principles of green engineering.

Mission Statement

The mission of the department is to teach chemical engineering principles and their application in an inspiring learning environment and to prepare students for engineering careers by developing the skills of critical thinking, analytical abilities and communication proficiency, and by instilling a sense of professional ethics and societal responsibility.

Program Objectives

The Chemical Engineering program Educational Objectives are as follows.

(a) Graduates who are employed in chemical process and related industries will perform tasks related to plant operation, control, engineering decision making, and process and product design. Other graduates who are not employed in chemical process and related industries will be employed in diverse professions including other engineering fields, management, consulting, etc., using their engineering and analytical backgrounds. All will engage in activities that promote professional growth and fulfillment.

(b) Graduates pursuing doctoral studies or other professional degrees will make reasonable progress toward completing the degree requirements and will engage in activities that promote professional development and fulfillment.

Advising

The department takes pride in the mentoring of undergraduate students. Each student who declares chemical engineering as a (potential) major is assigned an academic adviser from the full-time department faculty. Typically, the same adviser follows the student’s academic progress and serves as a mentor from the freshman year through graduation.

Faculty

Chair and Endowed Professor

Pratim Biswas (https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx)  
Lucy and Stanley Lopata Professor  
PhD, California Institute of Technology  
Aerosol science and engineering, air quality and pollution control, nanotechnology, environmentally benign energy production

Endowed Professors

Richard L. Axelbaum (https://engineering.wustl.edu/Profiles/Pages/Richard-Axelbaum.aspx)  
Stifel and Quinette Jens Professor  
PhD, University of California, Davis  
Combustion, advanced energy systems, clean coal, aerosols, nanoparticle synthesis, rechargeable battery materials, thermal science

Milorad P. Dudukovic (https://engineering.wustl.edu/Profiles/Pages/Milorad-Dudukovic.aspx)  
Laura and William Jens Professor  
PhD, Illinois Institute of Technology  
Chemical reaction engineering, multiphase reactors, visualization of multiphase flows, tracer methods, environmentally benign processing

Daniel E. Giammar (https://engineering.wustl.edu/Profiles/Pages/Daniel-Giammar.aspx)  
Walter E. Browne Professor of Environmental Engineering  
PhD, California Institute of Technology  
Aquatic chemistry, environmental engineering, water quality, water treatment
Professors

Palghat A. Ramachandran (https://engineering.wustl.edu/Profiles/Pages/Palghat-Ramachandran.aspx)  
PhD, University of Bombay  
Chemical reaction engineering, applied mathematics, process modeling, waste minimization, environmentally benign processing

Vijay Ramani  
PhD, University of Connecticut, Storrs  
Electrochemical engineering, energy conversion

Associate Professors

John Fortner (https://engineering.wustl.edu/Profiles/Pages/John-Fortner.aspx)  
I-CARES Career Development Assistant Professor  
PhD, Rice University  
Environmental engineering, aquatic processes, water treatment, remediation, and environmental implications and applications of nanomaterials

John T. Gleaves (https://engineering.wustl.edu/Profiles/Pages/John-Gleaves.aspx)  
PhD, University of Illinois  
Heterogeneous catalysis, particle chemistry

Young-Shin Jun (https://engineering.wustl.edu/Profiles/Pages/Young-Shin-Jun.aspx)  
Harold D. Jolley Career Development Associate Professor  
PhD, Harvard University  
Aquatic processes, molecular issues in chemical kinetics, environmental chemistry, surface/physical chemistry, environmental engineering, biogeochemistry, nanotechnology

Yinjie Tang (https://engineering.wustl.edu/Profiles/Pages/Yinjie-Tang.aspx)  
Francis Ahmann Career Development Associate Professor  
PhD, University of Washington, Seattle  
Metabolic engineering, bioremediation

Jay R. Turner (https://engineering.wustl.edu/Profiles/Pages/Jay-Turner.aspx)  
DSc, Washington University  
Air quality planning and management; aerosol science and engineering, green engineering

Brent Williams (https://engineering.wustl.edu/Profiles/Pages/Brent-Williams.aspx)  
Raymond R. Tucker Distinguished I-CARES Career Development Assistant Professor  
PhD, University of California, Berkeley  
Aerosols, global climate issues, atmospheric sciences

Assistant Professors

Rajan Chakrabarty (https://engineering.wustl.edu/Profiles/Pages/Rajan-Chakrabarty.aspx)  
PhD, University of Nevada, Reno  
Characterizing the radiative properties of carbonaceous aerosols in the atmosphere; and researching gas phase aggregation of aerosols in cluster-dense conditions

Marcus Foston (https://engineering.wustl.edu/Profiles/Pages/Marcus-Foston.aspx)  
PhD, Georgia Institute of Technology  
Utilization of biomass resources for fuel and chemical production, renewable synthetic polymers

Cynthia Lo (https://engineering.wustl.edu/Profiles/Pages/Cynthia-Lo.aspx)  
PhD, Massachusetts Institute of Technology  
Solar energy conversion, materials, environmental interfaces, catalysis, computational chemistry and molecular modeling

Tae Seok Moon (https://engineering.wustl.edu/Profiles/Pages/Tae-Seek-Moon.aspx)  
PhD, Massachusetts Institute of Technology  
Metabolic engineering and synthetic biology

Elijah Thimsen (https://engineering.wustl.edu/Profiles/Pages/Elijah-Thimsen.aspx)  
PhD, Washington University  
Gas-phase synthesis of inorganic nanomaterials for energy applications, and novel plasma synthesis approaches

Fuzhong Zhang (https://engineering.wustl.edu/Profiles/Pages/Fuzhong-Zhang.aspx)  
PhD, University of Toronto  
Metabolic engineering, protein engineering, synthetic and chemical biology

Research Associate Professor

Tianxiang Li  
PhD, University of Kentucky  
Combustion and applications in energy, pollutant control, biofuel synthesis, flame synthesis of nano-materials

Research Assistant Professors

Su Huang  
PhD, University of Washington, Seattle  
Photovoltaic materials and devices, nonlinear optical materials for photonic devices

Benjamin Kumfer  
DSc, Washington University  
Advanced coal technologies, biomass combustion, aerosol processes and health effects of combustion-generated particles
Lecturer
Janie Brennan
PhD, Purdue University
Biomaterials, synthetic biology, engineering education

Joint Faculty
Steven George (https://engineering.wustl.edu/Profiles/Pages/Steven-George.aspx)
Elvera and William Stuckenberg Professor
Chair, Department of Biomedical Engineering
PhD, University of Washington, Seattle
Tissue engineering; microphysiological systems; vascularizing engineered tissues

Himadri Pakrasi
PhD, University of Missouri-Columbia
Systems biology, photosynthesis, metal homeostasis

Nathan Ravi (http://ophthalmology.wustl.edu/Faculty/Ravi_N.aspx)
PhD, Virginia Polytechnic Institute
Cataract, ocular biomaterials

Adjunct Faculty
Robert Heider
MME, Washington University
Process control and process design

Timothy Michels
MA, Washington University
Energy economics, building construction and equipment sciences

Nicholas J. Nissing
BS, Washington University
Product development and process design

Research Associate
Raymond Ehrhard
BS, University of Missouri-Rolla
Water and wastewater treatment technologies, process energy management

Professor of Practice
James Harlan
PhD, Harvard University, Kennedy School of Government
Technology development economics and venture finance

Senior Professor
Rudolf B. Husar
PhD, University of Minnesota
Environmental informatics, aerosol science and engineering

Majors

Please refer to the sections below for information about the Bachelor of Science in Chemical Engineering (p. 900), double majors and the pre-medical program (p. 900), and the Bachelor of Science in Applied Science (Chemical Engineering) (p. 901).

Bachelor of Science in Chemical Engineering

The BSChE degree program is designed to provide students with comprehensive training in chemical engineering fundamentals. This degree program is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). Program objectives are stated in the overview (p. 897). The BSChE degree requires satisfactory completion of a minimum of 126 units as indicated in Table 1 (p. 910). From the courses listed in Table 1, the humanities and social sciences courses (except Engr 450X courses) may be taken pass/fail. A sample year-by-year BSChE curriculum is shown in Table 2 (p. 911).

The program of study consists of 26 units of physical and biological sciences (i.e., biology, chemistry and physics); 21 units of mathematics and engineering computing; 40 units of core chemical engineering courses; 21 units of humanities, social sciences and technical writing; and 18 units of chemical engineering electives. The chemical engineering electives permit students to tailor their studies toward specific goals such as obtaining more depth in a chemical engineering subdiscipline (e.g., materials) or increasing breadth by choosing courses from different subdisciplines. Some of these 18 units may be taken in other engineering departments or in the natural sciences or physical sciences. Students in collaboration with their advisers design a course of study (subject to certain requirements) for the chemical engineering electives. Consult the EECE department website (http://eece.wustl.edu/undergraduate/programs/Pages/default.aspx) for more details, including the requirements that must be satisfied by these chemical engineering electives.

Please refer to Table 1: BSChE Requirements. (p. 910)
Please refer to Table 2: Sample BSChE Curriculum. (p. 911)

The curriculum is designed to provide opportunities for students to explore areas of interest within chemical engineering. In addition to the accredited BS degree in Chemical Engineering, another choice is to pursue the course of study leading to the BS degree in Applied Science with a major in chemical engineering.

Double Majors and Pre-Medical Program

Some students may be able to take more than the 126-unit minimum during a four-year program, especially if they have Advanced Placement units. This permits the choice of additional free electives from such areas as biology, computer science, humanities, social sciences or other engineering courses. It also
provides an opportunity to pursue a double major. The rules for combining majors in engineering and multiple majors involving other university divisions are described in the Combined Majors and/or Multiple Degrees section (p. 835) of the School of Engineering & Applied Science. Particularly popular with chemical engineering students is the combined degree program in Process Control Systems.

Traditionally, the undergraduate chemical engineering degrees (both the accredited degree and the applied science option) have been popular with students interested in medicine because the curriculum automatically satisfies many of the pre-medical requirements. Many of the additional needed courses can be taken as electives.

**Bachelor of Science in Applied Science (Chemical Engineering)**

This degree serves students who wish to be exposed to key chemical engineering principles yet seek a more flexible curriculum. The BS in Applied Science (Chemical Engineering) requires 18 units of 300-level or higher chemical engineering core courses. Consult the EECE department website (http://eece.wustl.edu/undergraduateprograms/Pages/default.aspx) for the specific requirements needed to earn this degree.

**Minors**

Please refer to the sections below for information about the minor in environmental engineering science (p. 901), the minor in energy engineering (p. 902), and the minor in nanoscale science & engineering (p. 902).

**The Minor in Environmental Engineering Science**

The EECE department sponsors an undergraduate minor in environmental engineering science. This 21-unit program prepares the student to seek an entry-level position as an environmental engineer, scientist or analyst. The minor also provides a solid foundation for undertaking graduate study in environmental engineering. Visit the EECE department website (http://eece.wustl.edu/Pages/default.aspx) for more information.

**Units required:** 21

**Required courses:**

Select from the following menus:

**Introduction¹ (3 units):**

<table>

</tbody>
</table>

¹Freshmen potentially interested in majoring in chemical engineering should take EECE 101; all other students working toward the minor in environmental engineering science should take EECE 210.

²Students taking both environmental chemistry courses can count one of them toward the environmental engineering electives.

**Committee to Oversee Environmental Engineering Science Minor:**

Daniel Giammar (https://engineering.wustl.edu/Profiles/Pages/Daniel-Giammar.aspx) (EECE, Coordinator); John Fortner (https://engineering.wustl.edu/Profiles/Pages/John-Fortner.aspx) (EECE); Brent Williams (https://engineering.wustl.edu/Profiles/Pages/Brent-Williams.aspx) (EECE)
The Minor in Energy Engineering

Objective: The goal is to provide students a course work experience that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor covers classes in several fields of science and engineering which encompass the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and Department of Mechanical Engineering & Materials Science.

A minor in energy engineering requires the completion of 18 units selected from the following menus. It is open to any undergraduate student pursuing an engineering major, students from the sciences (biology, chemistry, physics) in Arts & Sciences, and the environmental studies major.

Interested departments should expose students to energy and related concepts in their introductory courses.

Basic and Applied Sciences (fundamental content) (two courses):

Committee to Oversee Energy Engineering Minor

Pratim Biswas (https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx) (EECE, Coordinator); Hiro Mukai (https://engineering.wustl.edu/Profiles/Pages/Hiro-Mukai.aspx) (ESE); David Peters (https://engineering.wustl.edu/Profiles/Pages/David-Peters.aspx) (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program be cohesive.

The Minor in Nanoscale Science & Engineering

The minor in nanoscale science & engineering will enhance a student's background, knowledge and skills in the topical area of nanotechnology. This minor covers classes in several fields of science and engineering, encompassing all the departments in the School of Engineering & Applied Science and several in the College of Arts & Sciences. It is open to any undergraduate student pursuing an Engineering or Arts & Sciences (chemistry, physics, biology, environmental studies) major.

The minor in nanoscale science & engineering involves the following components: fundamentals; synthesis and applications; characterization, structures and modeling (CS&M). Two additional requirements are the Cleanroom Lab class entitled “Principles and Methods of Micro and Nanofabrication” and completion of a faculty supervised Independent Study “Project” for at least two semesters.

Units required: 18

**Synthesis & Applications (choose one course):**
- CSE 568M Imaging Sensors 3
- EECE 504 Aerosol Science and Technology 3
- EECE 534 Environmental Nanochemistry 3
- ESE 336 Principles of Electronic Devices 3
- ESE 438 Applied Optics 3
- ESE 532 Introduction to Nano-Photonic Devices 3
- MEMS 463 Nanotechnology Concepts and Applications 3
- MEMS 5609 Electronic Materials Processing 3
- MEMS 5801 Micro-Electro-Mechanical Systems I 3
- MEMS 5802 Micro-Electro-Mechanical Systems II 3

**Characterization, Structure and Modeling (choose one course):**
- BME 461 Protein Structure and Dynamics 3
- Chem 478 Molecular Modeling 3
- Chem 543 Physical Properties of Quantum Nanostructures 3
- Chem 550 Mass Spectrometry 3
- EECE 420 Properties of Materials 3
- EECE 536 Computational Chemistry of Molecular and Nanoscale Systems 3
- MEMS 5602 Non-metals 3
- MEMS 5603 Materials Characterization Techniques I 3
- MEMS 5604 Materials Characterization Techniques II 3

**Nanotechnology Laboratory Class (required):**
- MEMS 5611 Principles and Methods of Micro and Nanofabrication 3
  or CSE 506M, EECE 595

**Independent Study Project (required):**

Students should sign up for at least 2 semesters of Independent Study and work on a project related to nanotechnology under the supervision of a faculty member. A list of projects with potential faculty mentors will be circulated in the spring semester every year. Students will have to be signed up for the nanoscale science and engineering minor and must have completed at least two of the classes from the above categories before doing the Independent Study Project. Students can also come up with their own ideas for projects but need to get approval from the Nanoscale Science and Engineering Minor Committee and a faculty mentor.

*The classes listed above will count for elective credit for all Engineering majors; however, students should check with their major advisers to confirm this.*

**Courses**

---

**E44 EECE 100 Independent Study**

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: freshman standing.

Credit variable, maximum 3 units.

**E44 EECE 101 Introduction to Energy, Environmental and Chemical Engineering**

Key technical issues that face our society and some of the emerging technologies that hold promise for the future are examined and discussed. Relationship to chemical engineering principles is emphasized. (Prior to FL2015, this course was numbered: E63 146A.)

Credit 3 units. EN: TU

**E44 EECE 112 Earth’s Future: Causes and Consequences of Global Climate Change**

Earth’s Future: Causes and Consequences of Global Climate Change examines 1) the physical basis for climate change; 2) how climates are changing and how we know and assess that climates are changing; and 3) the effects of climate change on natural and human systems. The course is team-taught and will involve participation by scholars across the university with expertise in specific subjects. This is a broad, introductory course for first-year students and presumes no special subject matter knowledge on the part of the student. Same as 150 InterD 101

Credit 3 units. A&S: NS A&S IQ: NSM BU: SCI

**E44 EECE 200 Independent Study**

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: sophomore standing.

Credit variable, maximum 3 units.
E44 EECE 201 Engineering Analysis of Chemical Systems
Introduction to the use of mathematics and methods of engineering in analysis of chemical and physical processes. Use of conservation balances and basic rate laws to describe processes with and without chemical reaction in both transient and steady state conditions. Prerequisites: Chem 112A, Math 233. Corequisites: EECE 203, Math 217. (Prior to FL2015, this course was numbered: E63 351.)
Credit 3 units. EN: TU

E44 EECE 202 Computational Modeling in Energy, Environmental and Chemical Engineering
Modeling and numerical methods to solve engineering, design and scientific problems encountered in thermodynamics, transport phenomena, separation processes and reaction kinetics. Use of conservation principles in model building, dimensionless representation of problems, multi-scale modeling and transient modeling. Numerical methods for solution of common problems in linear algebra, regression analysis, non-linear algebraic equations, ordinary and partial differential equations, and boundary value problems. Use of Matlab as a computational tool. Brief introduction to statistical techniques and Monte-Carlo methods. Use of various Matlab toolboxes. Illustrative application examples. Prerequisites: Math 233 and Math 217, or permission of instructor. (Prior to FL2015, this course was numbered: E63 275.)
Credit 3 units. EN: TU

E44 EECE 203 Thermodynamics I in EECE
Classical thermodynamics. First and second laws, properties of pure substances, mixtures, and solutions. Phase equilibria, chemical reaction equilibria. Prerequisites: Chem 111A, Math 132, Physics 117A. (Prior to FL2015, this course was numbered: E63 320.)
Credit 3 units. EN: TU

E44 EECE 204 Thermodynamics II in EECE
Molecular motions, kinetic theory of gases, kinetic theory of dense phases, chemical kinetics. Prerequisite: EECE 203. (Prior to FL2015, this course was numbered: E63 359.)
Credit 3 units. EN: TU

E44 EECE 210 Introduction to Environmental Engineering
The objective of this course is to introduce students to the field of environmental engineering. The course emphasizes basic principles of mass and energy conservation which govern physical, chemical and biological processes. Applications include the estimation of contaminant concentrations and the design of environmental controls. (Prior to FL2015, this course was numbered: E63 282.)
Credit 3 units. EN: TU

E44 EECE 300 Independent Study
Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: junior standing.
Credit variable, maximum 3 units.

E44 EECE 301 Transport Phenomena I: Basics and Fluid Mechanics
Engineering principles involved in the exchange of heat and matter in chemical processes. Laws governing the flow of liquids and gases in laboratory and plant equipment. Prerequisites: EECE 202, EECE 203, Math 217, ESE 317 or ESE 318, or permission of instructor. (Prior to FL2015, this course was numbered: E63 367.)
Credit 3 units. EN: TU

E44 EECE 302 Transport Phenomena II: Mass Transfer
Engineering principles involved in the exchange of heat and matter in chemical processes. Laws governing the flow of liquids and gases in laboratory and plant equipment. Prerequisite: EECE 301 (Prior to FL2015, this course was numbered: E63 368.)
Credit 3 units. EN: TU

E44 EECE 303 Transport Phenomena III: Energy Transfer Processes
Introductory treatment of the principles of heat transfer by conduction, convection or radiation. Mathematical analysis of steady and unsteady conduction along with numerical methods. Analytical and semi-empirical methods of forced and natural convection systems. Boiling and condensation heat transfer. Radiation between black-body and real surfaces. Radiation network analysis. Corequisite: EECE 302 or equivalent. (Prior to FL2015, this course was numbered: E63 369.)
Credit 3 units. EN: TU

E44 EECE 304 Mass Transfer Operations
Stagewise and continuous mass transfer operations, including distillation, gas absorption, humidification, leaching, liquid extraction, and membrane separations. Prerequisites: Math 217, EECE 201 and EECE 203. (Prior to FL2015, this course was numbered: E63 357.)
Credit 3 units. EN: TU

E44 EECE 305 Materials Science
Introduces the chemistry and physics of engineering materials. Emphasis on atomic and molecular interpretation of physical and chemical properties, the relationships between physical and chemical properties, and performance of an engineering material. Prerequisite: Math 217, Chem 111A. (Prior to FL2015, this course was numbered: E63 325.)
Credit 3 units. EN: TU

E44 EECE 311 Green Engineering
Strategies and methods for waste minimization and pollutant emission reduction. Principles of green engineering. Environmental transport and fate modeling. Design of heat and mass exchange networks for energy and waste reduction. Prerequisite: EECE 203 or permission of instructor. (Prior to FL2015, this course was numbered: E63 345.)
Credit 3 units. EN: TU

E44 EECE 313 Engineering Economics, Analytics, and Policy Analysis Tools
Introduction to basic engineering economics, cash flow modeling, and investment or policy analysis tools/frameworks applied to resource allocation problems with significant technical aspects. Tools developed with applications to case study
examples and projects including practical spreadsheet modeling, economic and financial metrics, and basic decision sciences tools. Prerequisite: junior standing or permission of instructor. (Prior to FL2015, this course was numbered: E33 382.) Credit 3 units. EN: TU

E44 EECE 314 Air Quality and Pollution Control
Generation, transport and fate of gaseous and particulate air pollutants. Meteorology and its coupling to air quality. Photochemical smog formation, visibility impairment, pollutant dispersion modeling, and source apportionment. Prerequisite: junior standing or permission of instructor. (Prior to FL2015, this course was numbered: E63 344.) Credit 3 units. EN: TU

E44 EECE 400 Independent Study
Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: senior standing. Credit variable, maximum 6 units.

E44 EECE 401 Chemical Process Dynamics and Control
A state-of-the-art industrial virtual plant is used for the development of dynamic simulations, selection of instrumentation, statistical analysis of variability, and implementation of process control to improve process operation and efficiency. Prerequisites: Math 217 and EECE 201. (Prior to FL2015, this course was numbered: E63 462.) Credit 3 units. EN: TU

E44 EECE 402 ChE Capstone
Application of engineering science and design, fundamentals of process and product development, computational techniques and economic principles to design of chemical and biological processes and procedures. A design project and/or an AIChE national design contest is included. Prerequisites: EECE 203, 301, 302, 304 and 403. (Prior to FL2015, this course was numbered: E63 478A.) Credit 3 units. EN: TU

E44 EECE 403 Chemical Reaction Engineering
Introduction to chemical reaction engineering principles and applications in process and product development. Evaluation of reaction rates from mechanisms and experimental data, quantification of pertinent transport effects and application to reactor and product design. Prerequisites: EECE 201, 203, 204, 301. (Prior to FL2015, this course was numbered: E63 471.) Credit 3 units. EN: TU

E44 EECE 405 Unit Operations Laboratory
Laboratory experiments designed to illustrate the principles of transport (heat, mass and momentum), thermodynamics, kinetics and reaction engineering, and separations that apply to chemical and biological systems. Experiments include traditional chemical engineering unit operations and emerging areas such as biotechnology, bioenergy and materials. One laboratory period and one workshop are alternating once a week. Lecture session(s) on process engineering components and process safety are scheduled every week. Prerequisites: EECE 391, 304. Corequisite: EECE 403. (Prior to FL2015, this course was numbered: E63 473A.) Credit 4 units. EN: TU

E44 EECE 411 International Experience in EECE
This course provides undergraduate students with an international experience related to energy, environmental and/or chemical engineering. The country visited varies from year to year with one or more EECE faculty members developing the program in collaboration with McDonnell Global Energy and Environment Partnership (MAGEEP) universities. Example activities include conducting field or laboratory research, attending short courses taught by MAGEEP university faculty members, and visiting attractions relevant to the course focus (e.g., industrial facilities). Students also gain an understanding of the local culture and history of the country visited. Course content includes a seminar series in the spring semester prior to the international experience, a two-to-three week visit to the location of study, and a follow-up student project and presentations during the fall semester which draw upon the experience. Students enroll in EECE 411 for the fall semester following the trip. (Prior to FL2015, this course was numbered: E33 401.) Credit 3 units. EN: TU

E44 EECE 412 Sustainability Exchange: Community and University Practicums
The Sustainability Exchange will bring together students working in transdisciplinary teams to tackle real-world energy, environmental, and sustainability problems through an experiential form of education. Students will participate in projects with clients and partners on- or off-campus, developed with and guided by faculty advisers drawn from across the university, with the intention of delivering an applicable end-product that explores “wicked” problems requiring innovative methods and solutions. These projects matter to the client or partner. The team-based project will be complemented by a seminar that will explore the field of design and design thinking through problem solving strategies and methodologies drawn from a wide range of creative practices, including design, engineering and science, as well as contemporary topics in energy, environment and sustainability. Students will draw on these topics to influence their projects. This course is open to all undergraduate juniors and seniors. An application is required; students will be accepted off the wait list following the application process. Same as I50 InterD 405 Credit 3 units. A&S IQ: SSC EN: S

E44 EECE 413 Energy Conversion and Storage
This course takes a thermodynamics perspective to analyzing electricity production and distribution systems, which are imperative to modern society. The course contains a hands-on laboratory component. Traditional and advanced heat engine cycles will be discussed. Opportunities and challenges with renewable energy technologies will be covered. Essential to the widespread adoption of renewable electricity sources, and also to increasing energy efficiency, are smart grid and smart building technologies. The goal is to give the student a quantitative overview, while focusing in on the details of a few important technological examples. Prerequisites: E44 EECE 203 or E37 MEMS 301 and E44 EECE 301 or E37 MEMS 3410; or instructor permission. Credit 3 units. EN: TU
E44 EECE 414 New Product and Process Development
An overview of product development, innovative solutions to technical problems, designed experimentation, evaluation of abstract data, product design, and the basics of intellectual property. Prerequisites: Junior standing and Chem 251, EECE 203 or by permission of the instructor. (Prior to FL2015, this course was numbered: E63 450.) Credit 3 units. EN: TU

E44 EECE 416 Industrial Process Safety
Analysis and management of fire and explosion hazards. Control of human exposure to toxic materials. Codes, standards, and regulations. Transportation and disposal of noxious substances. Analysis of drift from clouds, flares, and stacks. Venting of pressure vessels. Hazard evaluation and safety review of processes. Emergency plans for accidents and disasters. Prerequisite: EECE 203 or Chem 421 or permission of instructor. (Prior to FL2015, this course was numbered: E63 479/569.) Credit 3 units. EN: TU

E44 EECE 418 Principles of Surface and Colloid Science
Interfacial phenomena play key roles in such industrial operations as emulsification, catalysis, and detergency. Introduction to principles of surface science. Particular attention to describing the nature of the liquid/gas, liquid/liquid, solid/liquid, and solid/gas interfaces. Specific topics include methods of measuring surface tension, interfacial adsorption, surface area and particle size determinations, dispersion stabilization/flocculation, emulsification, and wetting. Prerequisite: EECE 203 or permission of instructor. (Prior to FL2015, this course was numbered: E63 480.) Credit 3 units. EN: TU

E44 EECE 420 Properties of Materials
A detailed look at the mechanical, chemical and surface properties of materials. Topics include elastic properties; plastic deformation; viscoelastic behavior; chemical resistance; corrosion resistance; and the electromagnetic properties of metal, plastic, ceramic and composite systems. Prerequisite: EECE 305. (Prior to FL2015, this course was numbered: E63 479.) Credit 3 units. EN: TU

E44 EECE 421 Advanced Energy Lab
Laboratory experiments to illustrate the application of engineering fundamentals to the study of advanced energy generation, storage, distribution and delivery systems. Modules include both lecture and laboratory components and explore topics such as fossil fuel combustion, solar PV and solar thermal systems, wind-derived energy, biofuels production, electrochemical energy storage. Extensive metering of energy use in Brauer Hall is used to study systems performance including energy efficiency. Prerequisites: EECE 203 or MEMS 301, and EECE 301 or MEMS 3410; or permission of instructor. (Prior to FL2015, this course was numbered: E33 439.) Credit 3 units. EN: TU

E44 EECE 423 Senior Thesis
Research project to be selected by the student with the permission and recommendation of a faculty supervisor and the approval of the department chair. At conclusion of project, student prepares a report in the form of a senior thesis. (Prior to FL2015, this course was numbered: E63 499.) Credit variable, maximum 6 units.

E44 EECE 424 Digital Process Control Laboratory
Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics, and process control. Exercises in data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature, and pressure control. Term project. Prerequisite: ESE 441 or EECE 401 or equivalent. (Prior to FL2015, this course was numbered: E63 433.) Credit 3 units. EN: TU

E44 EECE 425 Environmental Engineering Laboratory
Laboratory experiments to illustrate the application of engineering fundamentals to environmental systems. Applications of experimental design and data analysis principles. Introduction to relevant analytical instrumentation and laboratory techniques. Laboratory work supported by theoretical analysis and modeling as appropriate. Prerequisite: Consent of instructor. (Prior to FL2015, this course was numbered: E63 408A/508A.) Credit 3 units. EN: TU

E44 EECE 426 ChE Honors Design Project for AIChE
Student Contest Problem
Application of engineering science and design, fundamentals of process and product development, computational techniques and economic principles to design of chemical and biological processes and procedures in solving the AIChE national student contest problem. Up to two single and up to two group (2-3 per group) solutions may be chosen for national competition. Concurrent with EECE 402. Prerequisites: EECE 203, 301, 302, 304 and 403. (Prior to FL2015, this course was numbered: E63 478B.) Credit 1 unit. EN: TU

E44 EECE 500 Independent Study
Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: graduate-level standing. Credit variable, maximum 9 units.

E44 EECE 501 Transport Phenomena in EECE
The aim of the course is for students to develop skills in applying principles of momentum, heat and mass transport in an unified manner to problems encountered in the areas of energy, environmental and chemical processes. A systems approach is followed so that the general principles can be grasped, and the skills to develop mathematical models of seemingly different processes are emphasized. This provides the students with a general tool which they can apply later in their chosen field of research. (Prior to FL2015, this course was numbered: E33 501.) Credit 3 units.
E44 EECE 502 Advanced Thermodynamics in EECE
The objective of this course is to understand classical thermodynamics at a deeper level than is reached during typical undergraduate work. Emphasis is placed on solving problems relevant to chemical engineering materials science. Prerequisite: E63 ChE 320 or E44 203 or equivalent. (Prior to FL2015, this course was numbered: E33 511.)
Credit 3 units.

E44 EECE 503 Mathematical Methods in EECE
The course introduces students to mathematical principles essential for graduate study in any engineering discipline. Applied mathematical concepts are demonstrated by applications to various areas in energy, environmental, biomedical, chemical, mechanical, aerospace, electrical and civil engineering. (Prior to FL2015, this course was numbered: E33 502.)
Credit 3 units.

E44 EECE 504 Aerosol Science and Technology
Fundamental properties of particulate systems — physics of aerosols, size distributions, mechanics and transport of particles: diffusion, inertia, external force fields. Visibility and light scattering. Aerosol dynamics — coagulation, nucleation, condensation. Applications to engineered systems: Nanoparticle synthesis, atmospheric aerosols, combustion aerosols, pharmaceutical aerosols. Prerequisites: EECE 301, ESE 317 or ESE 318 and 319. (Prior to FL2015, this course was numbered: E33 518.)
Credit 3 units. EN: TU

E44 EECE 505 Aquatic Chemistry
Aquatic chemistry governs aspects of the biogeochemical cycling of trace metals and nutrients, contaminant fate and transport, and the performance of water and wastewater treatment processes. This course examines chemical reactions relevant to natural and engineered aquatic systems. A quantitative approach emphasizes the solution of chemical equilibrium and kinetics problems. Topics covered include chemical equilibrium and kinetics, acid-base equilibria and alkalinity, dissolution and precipitation of solids, complexation of metals, oxidation-reduction processes, and reactions on solid surfaces. A primary objective of the course is to be able to formulate and solve chemical equilibrium problems for complex environmental systems. In addition to solving problems manually to develop chemical intuition regarding aquatic systems, software applications for solving chemical equilibrium problems are also introduced. Prerequisite: Chem 112A. (Prior to FL2015, this course was numbered: E33 443/543.)
Credit 3 units. EN: TU

E44 EECE 506 Bioprocess Engineering I: Fundamentals & Applications
The course covers the fundamentals and provides the basic knowledge needed to understand and analyze processes in biotechnology in order to design, develop and operate them efficiently and economically. This knowledge is applied to understand various applications and bioprocesses, such as formation of desirable bio and chemical materials and products, production of bioenergy, food processing and waste treatment. The main objective of the course is to introduce the essential concepts and applications of bioprocessing to students of diverse backgrounds. An additional project is required to obtain graduate credit. Prerequisites: L41 Biol 2960 or equivalent or permission of instructor. (Prior to FL2015, this course was numbered: E63 453/553.)
Credit 3 units. EN: TU

E44 EECE 507 Kinetics and Reaction Engineering Principles
The course is aimed at a modern multiscale treatment of kinetics of chemical and biochemical reactions and application of these fundamentals to analyze and design reactors. Application of reaction engineering principles in the areas related to energy generation, pollution prevention, chemical and biochemical processes are studied and illustrated with case studies and computer models. Description of the role of mass and heat transport in reacting systems is also provided with numerous examples. (Prior to FL2015, this course was numbered: E33 503.)
Credit 3 units.

E44 EECE 508 Research Rotation
First-year doctoral students in EECE should undertake research rotation as a requirement prior to choosing a permanent research adviser. The rotation requires the student to work under the guidance of a faculty member. (Prior to FL2015, this course was numbered: E33 508.)

E44 EECE 509 Seminar in Energy, Environmental, and Chemical Engineering
All graduate students in EECE should attend the Departmental Seminar Series to gain exposure in various diverse fields of research. Students are also expected to participate in journal clubs and other discussion formats to discuss topical research areas. The course is required of all graduate students every semester of residency in the program. (Prior to FL2015, this course was numbered: E33 509.)
Credit 1 unit.

E44 EECE 510 Advanced Topics in Aerosol Science & Engineering
This course is focused on discussion of advanced topics in aerosol science and engineering and its applications in a variety of fields — materials science, chemical engineering, mechanical engineering, and environmental engineering. Prerequisite: EECE 504. (Prior to FL2015, this course was numbered: E63 592A.)
Credit 3 units. EN: TU

E44 EECE 512 Combustion Phenomena
Introduction to fundamental aspects of combustion phenomena including relevant thermochemistry, fluid mechanics, and transport processes. Emphasis is on elucidation of the physicochemical processes, problem formulation, and analytical techniques. Topics covered include ignition, extinction, diffusion flames, particle combustion, deflagrations, and detonations. Prerequisites: Graduate standing or permission of instructor. (Prior to FL2015, this course was numbered: E33 5404.)
Credit 3 units. EN: TU

E44 EECE 513 Topics in Nanotechnology
This course is focused on the discussion of topics in nanotechnology — with a focus on nanoparticles and their applications in a variety of fields — materials science, chemical engineering, mechanical engineering, environmental engineering, medicine. (Prior to FL2015, this course was numbered: E63 526.)
E44 EECE 514 Atmospheric Science and Climate
This course covers current research topics in atmospheric chemistry and climate change. Topics include atmospheric composition, chemistry, transport, dynamics, radiation, greenhouse gases, natural and anthropogenic primary pollution sources and secondary aerosol production, and measurement techniques. Focus is placed on how our atmosphere and climate are altered in a world of changing energy production and land use. Prerequisites: Chemistry 112A, Physics 118 or 198, and junior or higher standing. (Prior to FL2015, this course was numbered: E33 547.) Credit 3 units. EN: TU

E44 EECE 515 Dynamics of Air Pollution
Physicochemical processes governing the dynamics of pollutants from point and non-point sources: generation, transport and decay. Application of fundamental thermodynamics, mass/heat transfer and fluid mechanics principles to environmental systems. Prerequisites: EECE 203, ESE 317 or ESE 318 and 319, and EECE 505, or equivalent, or permission of instructor. (Prior to FL2015, this course was numbered: E63 510.) Credit 3 units. EN: TU

E44 EECE 516 Measurement Techniques for Particle Characterization
The purpose of this course is to introduce students to the principles and techniques of particle measurement and characterization. Practical applications of particle technology include air pollution measurement, clean manufacturing of semiconductors, air filtration, indoor air quality, particulate emission from combustion sources and so on. The course focuses on (1) integral moment measurement techniques, (2) particle sizing and size distribution measuring techniques, and (3) particle composition measurement techniques. The related issues such as particle sampling and transportation, the instrument calibration, and particle standards also are covered. (Prior to FL2015, this course was numbered: E63 563.) Credit 3 units. EN: TU

E44 EECE 518 Sustainable Air Quality
Introduction to sustainability and sustainable air quality. Systems science as an organizing principle for air quality management. Setting of air quality goals. Observing the status and trends. Establishing causal factors: energy use and chemical processing. Natural sources and variability. Corrective actions to reach air quality goals. Process design for emission reductions. Adaptive response to air pollution episodes. A web-based class project is conducted through the semester. (Prior to FL2015, this course was numbered: E63 549.) Credit 3 units. EN: TU

E44 EECE 531 Environmental Organic Chemistry
Fundamental, physical-chemical examination of organic molecules (focused on anthropogenic pollutants) in aquatic (environmental) systems. Students learn to calculate and predict chemical properties that are influencing the partitioning of organic chemicals within air, water, sediments and biological systems. This knowledge is based on understanding intermolecular interactions and thermodynamic principles. Mechanisms of important thermochemical, hydrolytic, redox, and biochemical transformation reactions are also investigated, leading to the development of techniques (such as structure-reactivity relationships) for assessing environmental fate or human exposure potential. Prerequisite: Chem 112A. (Prior to FL2015, this course was numbered: E33 448/548.) Credit 3 units. EN: TU

E44 EECE 533 Physical and Chemical Processes for Water Treatment
Water treatment is examined from the perspective of the physical and chemical unit processes used in treatment. The theory and fundamental principles of treatment processes are covered and are followed by the operation of treatment processes. Processes covered include gas transfer, adsorption, precipitation, oxidation-reduction, flocculation, sedimentation, filtration, and membrane processes. (Prior to FL2015, this course was numbered: E33 588.) Credit 3 units. EN: TU

E44 EECE 534 Environmental Nanochemistry
This course involves the study of nanochemistry at various environmental interfaces, focusing on colloid, nanoparticle, and surface reactions. The course also (1) examines the thermodynamics and kinetics of nanoscale reactions at solid-water interfaces in the presence of inorganic or organic compounds and microorganisms; (2) investigates how nanoscale interfacial reactions affect the fate and transport of contaminants; (3) introduces multidisciplinary techniques for obtaining fundamental information about the structure and reactivity of nanoparticles and thin films, and the speciation or chemical form of environmental pollutants at the molecular scale; (4) explores connections between environmental nanochemistry and environmental kinetic analysis at larger scales. This course helps students attain a better understanding of the relationship between nanoscience/technology and the environment — specifically how nanoscience could potentially lead to better water treatments, more efficient and cost-effective remediation, or new energy alternatives. (Prior to FL2015, this course was numbered: E33 534.) Credit 3 units. EN: TU

E44 EECE 536 Computational Chemistry of Molecular and Nanoscale Systems
This course explores the structure, properties and reactivity of molecular and nanoscale systems in engineering using computational chemistry tools. The science behind density functional theory (DFT) calculations and molecular dynamics (MD) simulations is explained and applied in the context of multiscale modeling. Special emphasis is placed on solid-state materials and aqueous/biological systems found in engineering. Students are encouraged to apply the methods discussed in class to their own research topics. Prerequisites: EECE 203 and 204, or permission of the instructor. (Prior to FL2015, this course was numbered: E33 591.) Credit 3 units. EN: TU

E44 EECE 551 Metabolic Engineering and Synthetic Biology
Synthetic Biology is a transformative view of biology from "observation approach" to "synthesis approach." It is a new "engineering" discipline and aims to make the engineering of new biological function predictable, safe and quick. It will pave a wide range of applications to transform our views on production of sustainable energy and renewable chemicals, environmental problems, and human disease treatments. The field intersects with Metabolic Engineering in areas such as the design of novel
pathways and genetic circuits for product generation and toxic chemical degradation. In this course, the field and its basis are introduced. First, relevant topics in biology, chemistry, physics and engineering are covered. Second, students will participate in brain-storming and discussion on new biology-based systems. Last, students will design and present new synthetic biology systems to solve real-world problems. (Prior to FL2015, this course was numbered: E33 596A.) No prerequisite. Both undergrad and graduate students can take this course. Credit 3 units.

E44 EECE 552 Biomass Energy Systems and Engineering
This course offers background in the organic chemistry, biology and thermodynamics related to understanding the conversion of biomass. In addition, it includes relevant topics relating to biomass feedstock origin, harvest, transportation, storage, processing and pretreatment along with matters concerning thermo- and biochemical conversion technologies required to produce fuels, energy, chemicals and materials. Also, various issues with respect to biomass characterization, economics and environmental impact are discussed. The main objective of the course is to introduce concepts central to a large-scale integrated biomass bioconversion system. (Prior to FL2015, this course was numbered: E33 495D/595D.) Credit 3 units. EN: TU

E44 EECE 554 Molecular Biochemical Engineering
This course is set for junior-level graduate students to bridge the gap between biochemical engineering theory and academic research in bioengineering. It covers common molecular biotechnologies (molecular biology, microbiology, recombinant DNA technology, protein expression, etc.), biochemical models (enzyme catalysis, microbial growth, bioreactor, etc.) and bioengineering methodologies (protein engineering, expression control systems, etc.). These theories and technologies are introduced in a manner closely related to daily academic research or biochemical industry. Areas of application include biofuel and chemical production, drug discovery and biosynthesis, bioremediation, and environmental applications. This course also contains a lab section (20-30%) that requires students to apply the knowledge learned to design experiments, learn basic experimental skills and solve current research problems. Prerequisites: EECE 101, Biol 2960, Biol 4810. (Prior to FL2015, this course was numbered: E33 595C.) Credit 3 units. EN: TU

E44 EECE 556 Bioenergy
A broad overview of the flow of energy, captured from sunlight during photosynthesis, in biological systems, and current approaches to utilize the metabolic potentials of microbes and plants to produce biofuels and other valuable chemical products. An overall emphasis is placed on the use of large-scale genomic, transcriptomic and metabolomic datasets in biochemistry. The topics covered include photosynthesis, central metabolism, structure and degradation of plant lignocellulose, and microbial production of liquid alcohol, biodiesel, hydrogen & other advanced fuels. Course meets during the second half of the spring semester. Prerequisites: Biol 4810 or permission of instructor. (Prior to FL2015, this course was numbered: E33 4830/5830.) Credit 2 units.

E44 EECE 571 Industrial and Environmental Catalysis
Major industrial and environmental catalytic processes. Principal theories of heterogeneous catalysis. Experimental methods and techniques used to develop modern catalytic systems. Examples from the petrochemical industry, automotive exhaust systems and industrial emissions abatement. Prerequisites: Chem 112, 262. (Prior to FL2015, this course was numbered: E63 525.) Credit 3 units. EN: TU

E44 EECE 572 Advanced Transport Phenomena

E44 EECE 576 Chemical Kinetics and Catalysis
This course reflects the fast, contemporary progress being made in decoding kinetic complexity of chemical reactions, in particular heterogeneous catalytic reactions. New approaches to understanding relationships between observed kinetic behavior and reaction mechanism are explained. Present theoretical and methodological knowledge are illustrated by many examples taken from heterogeneous catalysis (complete and partial oxidation), combustion and enzyme processes. Prerequisite: senior or graduate student standing. (Prior to FL2015, this course was numbered: E33 598.) Credit 3 units. EN: TU

E44 EECE 591 Energy and Buildings
There is a $2 trillion U.S. market in energy efficiency with paybacks of 4-5 years. This course is an introduction to energy use in the built environment and means and methods for evaluating and harvesting these financial benefits. It is based on fundamentals of energy usage in building systems. Building sciences for architectural envelope, heating and cooling systems, lighting and controls. Building/weather interaction and utility weather regression analyses. Building dynamics and rates of change in energy usage. Students work in groups to perform an energy audit for a building on campus. Prerequisite: senior or graduate student standing, or permission of instructor. (Prior to FL2015, this course was numbered: E33 495/595.) Credit 3 units.

E44 EECE 593 Energy and Environment
This course sets out to instruct the student on how to understand decision-making regarding energy and the environment, and provides a unique educational experience, wherein the challenges and potential solutions to meeting future energy needs are clearly elucidated via lectures and experiential learning. Topics include: overview of energy and the environment and associated challenges; description of power generation from coal, natural gas, biomass, wind, solar, hydro, geothermal and nuclear; political, environmental and social considerations; regulations, economics, decision-making; students gain experience with software capable of analyzing renewable energy projects worldwide, from backyard to power-plant scale systems. (Prior to FL2015, this course was numbered: E33 500A.) Credit 3 units.
E44 EECE 595 Principles of Methods of Micro and Nanofabrication
A hands-on introduction to the fundamentals of micro- and nanofabrication processes with emphasis on cleanroom practices. The physical principles of oxidation, optical lithography, thin film deposition, etching and metrology methods will be discussed, demonstrated and practiced. Students will be trained in cleanroom concepts and safety protocols. Sequential microfabrication processes involved in the manufacture of microelectronic and photonic devices will be shown. Training in imaging and characterization of micro- and nanostructures will be provided. Prerequisite: graduate or senior standing or permission of the instructor.
Same as E37 MEMS 5611
Credit 3 units. EN: TU

E44 EECE 597 EECE Project Management
An introduction to the theory and practice of engineering project management, with an emphasis on projects related to environmental protection and occupational health and safety. Topics include: project definition and justification; project evaluation and selection; financial analysis and cost estimation; project planning, including scheduling, resourcing and budgeting; project oversight, auditing and reporting; and effective project closure. Students will be introduced to commonly used project management tools and systems, such as work breakdown structures, network diagrams, Gantt charts, and project management software. Topics will also include project management in different organizational structures and philosophies; creating effective project teams; and managing projects in international settings. Prerequisites: enrolled in MEng program; senior or higher standing.
Credit 3 units.

E44 EECE 599 Master’s Research
Credit variable, maximum 9 units.

*Recommended but not required.

**Engr 4501, Engr 4502 and Engr 4503 should be taken in the third year.

Mechanical Engineering & Materials Science

The Department of Mechanical Engineering & Materials Science (MEMS) offers the Bachelor of Science degree in Mechanical Engineering (BSME). In addition, minors in aerospace, robotics, mechatronics, nanoscale science, and energy engineering, and in related scientific and engineering fields, are available to students. The MEMS curriculum emphasizes the core principles of mechanics (the study of forces, materials and motion) that underlie mechanical engineering. The common curriculum during the student's early academic development encourages breadth of understanding, interdisciplinary thinking and creativity. Freshman, sophomore and early junior years are focused on learning fundamental concepts in statics, dynamics, fluid mechanics and thermodynamics. In the junior and senior years, students choose electives that emphasize their specific interests and prepare them for a particular professional or academic career. The undergraduate curriculum for the BSME degree provides Mechanical Engineering & Materials Science students with a strong base in fundamental mathematics, science and engineering; exposes the students to diverse applications of mechanics and materials; and provides the
flexibility to explore creative ideas through undergraduate research and project-based courses.

Mechanical engineering is critical in a variety of important emerging technologies. Mechanical engineers design and develop artificial organs, prosthetic limbs, robotic devices, adaptive materials, efficient propulsion mechanisms, high-performance aerospace structures, and advanced renewable energy systems. The core concepts of mechanics, thermal systems and materials science are at the heart of these technologies.

Mission Statement

The Mechanical Engineering & Materials Science faculty is committed to providing the best possible undergraduate mechanical engineering education possible. We strive to nurture the intellectual, professional and personal development of the students, to continually improve the curriculum, to be professionally current, and to maintain state-of-the-art facilities for teaching and learning.

We seek to prepare students for professional practice with a scientifically grounded foundation in the major topics of mechanical engineering: solid mechanics, mechanical design, dynamics and vibrations, systems control, fluid mechanics, thermal science and materials science.

Bachelor of Science Degree in Mechanical Engineering

The mission of the undergraduate program in mechanical engineering is to prepare students within the broad and evolving field of mechanical engineering. The program instills in students a capacity for creative design through critical and analytical thought. The BSME is the first step toward a career in industry, academia or government; it encourages a commitment to independent, lifelong learning and professional development. In addition to their technical studies, students learn to communicate their ideas clearly and to conduct themselves in an ethical and socially responsible manner.

The curriculum is a four-year program leading to the first professional degree, Bachelor of Science in Mechanical Engineering, which is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). The curriculum prepares the student for professional practice or postgraduate education in a broad spectrum of mechanical and other engineering or professional fields. The curriculum provides critical knowledge in solid mechanics, fluid mechanics, thermodynamics and heat transfer, materials science, dynamics and control, and design. The curriculum has 34 units of mathematics and basic sciences, 58 units of engineering topics, and 28 units of general education for a total degree requirement of 120 units. The general education includes 18 units of social science and humanities.

Core courses must be taken for credit (grade). The social science and humanities courses may be taken pass/fail. The undergraduate program provides the necessary foundations in these areas and the opportunity to specialize in topics of particular interest. Specialization is accomplished by judicious choice of engineering electives taken in 300-, 400- or 500-level courses approved by the student’s adviser. At the end of the four-year program, the student is ready to go on to graduate education, research or professional practice.

Program Educational Objectives

Program educational objectives are broad statements that describe what graduates are expected to attain within a few years of graduation. These objectives are based on the needs of the program’s constituencies.

Within several years from graduation, graduates of the Bachelor of Science in Mechanical Engineering program are expected to:

- Engage in professional practice and/or advanced study
- Further their knowledge and skills through education and/or professional development
- Serve society by using and communicating their knowledge and values

Student Outcomes

Student outcomes describe what students are expected to know and be able to do by the time of graduation. These relate to the skills, knowledge and behaviors that students acquire as they progress through the program.

The Student Outcomes are:

(a) An ability to apply knowledge of mathematics, science and engineering
(b) An ability to design and conduct experiments, as well as to analyze and interpret data
(c) An ability to design a system, component or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability
(d) An ability to function on multidisciplinary teams
(e) An ability to identify, formulate and solve engineering problems
(f) An understanding of professional and ethical responsibility
(g) An ability to communicate effectively
(h) The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental and societal context
(i) A recognition of the need for, and an ability to engage in, lifelong learning
(j) A knowledge of contemporary issues
(k) An ability to use the techniques, skills and modern engineering tools necessary for engineering practice

**Bachelor of Science in Applied Science (Mechanical Engineering)**

The Bachelor of Science in Applied Science (Mechanical Engineering) degree program will offer a degree path for students to gain technical knowledge in mechanical engineering with more course selection flexibility. Students who do not desire to become licensed engineers but seek to acquire analytical engineering thinking skills may choose to pursue this program. The added degree flexibility will allow these students to pursue additional second majors and/or minors and increase their ability to participate in programs such as study abroad.

**Pre-Medical Option**

Research and practice in the biological and medical sciences increasingly involves advanced technology, including mechanical engineering. For those interested in a career in medicine, the pre-medical option in Mechanical Engineering & Materials Science makes it possible to obtain an accredited Bachelor of Science and simultaneously meet the admission requirements of most medical and dental schools. The program also provides a foundation for graduate study and research in biomedical engineering. The essential requirements of the pre-medical option are two semesters of general biology (Biol 2960, Biol 2970), two semesters of general chemistry with a laboratory, and two semesters of organic chemistry with a laboratory (Chem 111A, Chem 151, Chem 112A, Chem 152, Chem 261, Chem 262). One semester of biochemistry (Biol 451), sociology (Soc 120) and psychology (Psych 100B) are highly recommended. One semester of organic chemistry may be counted as an upper-level MEMS elective; the student must take 6 units of other upper-level mechanical engineering electives to complete the 9-unit requirement. The pre-medical option is easier for those who have a high school background in biology or, by reason of advanced placement, have reduced requirements in the Common Studies portion of the curriculum. For additional information on the pre-medical option, please refer to the pre-medical education section located in the introduction to the School of Engineering & Applied Science's Undergraduate Programs (p. 835) or contact the pre-health adviser, Ron Laue (ron.laue@wustl.edu), for additional information.

**Graduate Programs**

The department offers programs for graduate study at both the master's and doctoral levels. All programs are designed to direct advanced study into an area of specialization and original research that includes recent scientific and technological advances.

A graduate degree can provide significant advantages and rewards to a mechanical engineer, including increased income and a wider range of career options. Graduate programs include professional, course-option master's degrees (MS and MEng) and research-based master's (MS) or doctoral (PhD) degrees. The undergraduate curriculum provides an excellent foundation for graduate study, and a careful selection of electives in the third and fourth years can facilitate the transition to graduate work. The master's degrees can be pursued on a part-time or full-time basis, while PhD degrees are typically pursued by full-time students.

PhD, Rensselaer Polytechnic Institute
Biological mechanisms

**Senior Professors**

**Phillip L. Gould**
PhD, Northwestern University
Structural analysis and design, shell analysis and design, biomechanical engineering

**Salvatore P. Sutera**
PhD, California Institute of Technology
Viscous flow, biorheology

**Barna A. Szabo**
PhD, State University of New York–Buffalo
Numerical simulation of mechanical systems, finite-element methods

**Lecturers**

**Emily J. Boyd**
PhD, University of Texas at Austin
Thermo fluids

**H. Shaun Sellers**
PhD, Johns Hopkins University
Mechanics and materials

**Louis G. Woodhams**
BS, University of Missouri-St. Louis
Computer-aided design

**Senior Research Associate**

**Ruth J. Okamoto**
DSc, Washington University
Biomechanics, solid mechanics

**Research Assistant Professor**

**Anupriya Agrawal**
PhD, Ohio State University
Materials science

**Adjunct Instructors**

**Ricardo L. Actis**
DSc, Washington University
Finite element analysis, numerical simulation, aircraft structures

**Robert G. Becnel**
MS, Washington University
FE Review

**John D. Biggs**
MEng, Washington University
Thermal science

**Andrew W. Cary**
PhD, University of Michigan
Computational fluid dynamics

**Dan E. Driemeyer**
PhD, University of Illinois
Thermo science

**Richard S. Dyer**
PhD, Washington University
Propulsion, thermodynamics, fluids

**John M. Griffith**
BS, Washington University
Manufacturing

**Hanford Gross**
BS, Washington University
Engineering project management

**Jason Hawks**
MS, Washington University
Structural analysis

**James P. Howe**
MS, Washington University
Thermo systems design

**Richard R. Janis**
MS, Washington University
Building environmental systems

**Adetunji Onikoyi**
PhD, University of California, Santa Barbara
Thermo sciences

**Rigoberto Perez**
PhD, Purdue University
Fatigue and fracture

**Dale M. Pitt**
DSc, Washington University
Aeroelasticity

**Gary D. Renieri**
PhD, Virginia Polytechnic Institute and State University
Structural applications, composite materials

**Hirosi Tada**
PhD, Lehigh University
Solid mechanics

**Matthew J. Watkins**
MS, Washington University
Finite elements

**Michael C. Wendt**
DSc, Washington University
Mathematical theory and computational methods in biology and engineering
Laboratory and Design Specialist

Mary K. Malast  
DSc, Washington University  
Materials science

Professors Emeriti

Wallace B. Diboll Jr.  
MSME, Rensselaer Polytechnic Institute  
Dynamics, vibrations, engineering design

Paul C. Paris  
PhD, Lehigh University  
Classical mechanics, solid mechanics, dynamics, fracture mechanics, stochastic processes

Majors

Please refer to the sections below for information about the Bachelor of Science in Mechanical Engineering (p. 916) and the Bachelor of Science in Applied Science (Mechanical Engineering) (p. 917).

Bachelor of Science in Mechanical Engineering

The Department of Mechanical Engineering & Materials Science offers a four-year curriculum leading to a professional baccalaureate degree, a Bachelor of Science in Mechanical Engineering (BSME). This degree is designed to prepare students for graduate school, a professional graduate program or industry. The program is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). The BSME curriculum is structured around a basic core of 58 units and a complementary mechanical engineering program of at least 62 units to complete the degree requirement of a total of 120 units.

Basic Core Courses

Humanities, Social Science and Writing

Humanities and social science (refer to SEAS degree requirements for details)  
Engr 310  Technical Writing  
Total units  

Mathematics and Computation

Math 132  Calculus II  
Math 233  Calculus III  
Math 217  Differential Equations  
ESE 318  Engineering Mathematics A  
ESE 319  Engineering Mathematics B  
ESE 326  Probability and Statistics for Engineering  

Total units

CSE 131  Computer Science I  
Total units 21

Physical Sciences

Chem 111A  General Chemistry I  
Chem 151  General Chemistry Laboratory I  
Physics 117A  General Physics I  
or Physics 197  Physics I  
Physics 118A  General Physics II  
or Physics 198  Physics II  
Physical or Life Science (200-level or above natural science in Biology, Chemistry, Physics, Earth and Planetary Science, or Environmental Studies)  

Total units 16

Mechanical Engineering Courses

MEMS 202  Computer-Aided Design  
MEMS 205  Mechanics and Materials Science Laboratory  
MEMS 253  Engineering Mechanics I  
MEMS 255  Engineering Mechanics II  
MEMS 301  Thermodynamics  
MEMS 305  Fluid Mechanics and Heat Transfer Laboratory  
MEMS 3110  Machine Elements  
MEMS 350  Engineering Mechanics III  
MEMS 3410  Fluid Mechanics  
MEMS 3420  Heat Transfer  
MEMS 3610  Materials Science  
MEMS 405  Vibrations and Machine Elements Laboratory  
MEMS 411  Mechanical Engineering Design Project  
MEMS 412  Design of Thermal Systems  
MEMS 4301  Modeling, Simulation and Control  
MEMS 4310  Dynamics and Vibrations  
ESE 230  Introduction to Electrical and Electronic Circuits  
MEMS senior electives  
Other courses  

Total units 62

Optional Courses:

MEMS 1001  Machine Shop Practicum  
MEMS 1003  Mechanical Engineering Design and Build  
MEMS 101  Introduction to Mechanical Engineering and Mechanical Design
Bachelor of Science in Applied Science (Mechanical Engineering)

The Bachelor of Science in Applied Science (Mechanical Engineering) program provides substantive and consistent training in mechanical engineering with maximum flexibility. This program is advantageous if a student wishes to pursue a more flexible program than the accredited BSME degree program. It is especially suitable for a double major in combination with mathematics, physics, chemistry, biology, economics or another engineering discipline. The program can be planned to provide a background for graduate work in biological, medical or management fields. The BS in Applied Science is a nonprofessional degree and is not accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

The degree requirements include the residency and general requirements of the university and the school. The Bachelor of Science in Applied Science (Mechanical Engineering) degree requirements are:

• Complete a total of at least 120 applicable units
• Complete a minimum of 60 units at Washington University
• Complete at least 42 units at the 300 level or higher
• Complete at least 48 units in mathematics, natural science and engineering
• Complete at least 30 units of mechanical engineering (MEMS) courses
• Satisfy the SEAS English composition requirement
• Satisfy the SEAS humanities and social science requirement
• Satisfy the residency requirement of 30 units of 300-level or higher engineering courses
• Earn at least a 2.0 cumulative GPA in applicable courses taken at Washington University
• Earn at least a 2.0 cumulative GPA in mechanical engineering (MEMS) courses

Minors

Please refer to the sections below for information about the minors in aerospace engineering (p. 917), energy engineering (p. 917), environmental engineering science (p. 918), nanoscale science & engineering (p. 918), robotics (p. 918), mechatronics (p. 918), and mechanical engineering (p. 919).

The Minor in Aerospace Engineering

Whether students are intent on a career in aviation, or simply enthusiastic about space and flight, a minor in aerospace engineering can satisfy their scientific curiosity, prepare them for a job, or uncover opportunities for technical contributions. The minor in aerospace engineering is available to all undergraduates but is most attractive to those pursuing a degree in mechanical engineering. The minor in aerospace engineering requires a minimum of 15 units of courses selected from the list below; it is possible to earn the minor without increasing the number of units (120) required for the BSME.

Aerospace engineering deals with the analysis, design and performance of flight vehicles such as transport and military aircraft, helicopters, missiles and launch vehicles, and spacecraft. Students learn about aerospace engineering by taking courses in aerodynamics, aircraft flight dynamics and control, aerospace propulsion, aerospace structures and aerospace vehicle design. Students also may have the opportunity to gain experience in aerospace engineering design through collaborative programs with local companies such as Boeing. Aerospace engineers from industry teach courses as adjunct instructors at Washington University, and many Washington University regular faculty members have extensive aerospace industry experience.

Units required: 15

Required courses:

MEMS 4301 Modeling, Simulation and Control 3
or ESE 441 Control Systems 3
MEMS 5700 Aerodynamics 3
Total units 6

Core courses: (3-6 units)

MEMS 5701 Aerospace Propulsion 3
MEMS 5704 Aircraft Structures 3

Electives: (3-6 units)

Any course from the aerospace MS concentration list (https://mems.wustl.edu/graduate/programs/Pages/MS-In-Aerospace-Engineering.aspx) (found on the MS in Aerospace Engineering webpage) can be used as an aerospace minor elective.

To find out more about this minor, contact the department chair or the adviser for the minor in aerospace engineering or visit the minor webpage (http://mems.wustl.edu/undergraduate/programs/Pages/minors.aspx#aerospace).

The Minor in Energy Engineering

This minor will provide students with course work that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor covers classes in several fields of science and engineering, encompassing the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science. A minor in energy engineering requires the completion of 18 units. It is open to undergraduate students pursuing an engineering major, students from the sciences (biology, chemistry, physics) in Arts & Sciences, and students pursuing the environmental studies major. The detailed requirements for the minor can be
The Minor in Environmental Engineering Science

The minor in environmental engineering science may be earned by students receiving any of the Bachelor of Science degrees offered by the School of Engineering & Applied Science or the Environmental Studies degree or the Earth and Planetary Sciences degree offered by the College of Arts & Sciences. The 21-22 unit program prepares a graduate to seek an entry-level position as an environmental engineer, scientist or analyst. The minor also provides a solid foundation for undertaking graduate study in environmental engineering. The detailed requirements for the minor can be found on the minor in environmental engineering science (p. 901) section of this Bulletin. Questions regarding the minor should be directed to a member of the committee for the environmental engineering minor: Professor Pratim Biswas (https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx) (EECE) or Professor Jay Turner (https://engineering.wustl.edu/Profiles/Pages/Jay-Turner.aspx) (EECE).

The Minor in Nanoscale Science & Engineering

Nanotechnology deals with materials, structures or devices, one of whose dimensions are in the 1 to 100 nm length scale. These entities have properties (physical, chemical or biological) that are very different from their bulk counterparts and can be tuned to obtain novel and desired functionalities. The goal of this minor is to enhance the background, knowledge and skills in the topical area of nanotechnology. The minor covers classes in several fields of science and engineering; encompassing all the departments in the School of Engineering & Applied Science and several in the School of Arts & Sciences. It is open to any undergraduate student pursuing an Engineering or Arts & Sciences (chemistry, physics, biology, environmental studies) major. The Departments of Computer Science & Engineering; Energy, Environmental & Chemical Engineering; and Mechanical Engineering & Materials Science sponsor the minor.

For more information and requirements, contact a member of the Committee to Oversee the Nanoscale Science Minor: Parag Banerjee (https://engineering.wustl.edu/Profiles/Pages/Parag-Banerjee.aspx) (MEMS, Coordinator), Pratim Biswas (https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx) (EECE), or Victor Gruev (https://engineering.wustl.edu/Profiles/Pages/Viktor-Gruev.aspx) (CSE) or visit the minor in nanoscale science (p. 901) section of this Bulletin.

The Minor in Robotics

Robotic systems have wide application in modern technology and manufacturing. Robots can vary in complexity and use, from microrobots for surgical procedures to moderate-size robots common in manufacturing and undersea exploration to macrorobots used for disposal of nuclear wastes or deployed as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in design and use of robots.

The Minor in Mechatronics

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role
for "smart" systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags, and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

The proposed minor program consists of four required courses, two electives and one prerequisite:

**Four required courses:**
- MEMS 255 Engineering Mechanics II 3
- MEMS 411 Mechanical Engineering Design Project 3
- ESE 444 Sensors and Actuators 3
- ESE 446 Robotics: Dynamics and Control 3

**Total units 12**

**Two electives from the following:**
- MEMS 4301 Modeling, Simulation and Control 3
- MEMS 4310 Dynamics and Vibrations 3
- MEMS 5101 Analysis and Design of Fluid-Power Systems 3
- ESE 336 Principles of Electronic Devices 3
- ESE 442 Digital Control Systems 3
- ESE 482 Digital Signal Processing 3
- CSE 467S Embedded Computing Systems 3

**Prerequisite:**
Basic programming course: CSE 131 Computer Science I

To find out more about this minor, contact the department chair or the adviser for the minor in mechatronics or visit the minor webpage (http://mems.wustl.edu/undergraduate/programs/Pages/minors.aspx#mechatronics).

### The Minor in Mechanical Engineering

The minor in mechanical engineering complements studies in a field related to mechanical engineering, such as biomedical engineering, electrical engineering, physics, chemistry or architecture. The minor is intended to provide students with a credential that could enhance their opportunities for employment or graduate study. Completion of the minor demonstrates that the student has pursued a structured program approved by the faculty of the Department of Mechanical Engineering & Materials Science.

Students pursuing the minor in mechanical engineering must complete a total of 18 units of course work as described below. Courses selected for the minor program may count toward program requirements of the student’s major. The subjects selected for a minor in mechanical engineering are expected to constitute a coherent program within the field of mechanical engineering. Courses taken under the pass/fail grading option cannot be used for a minor program.

**Required courses:**
- MEMS 253 Engineering Mechanics I 3
- MEMS 255 Engineering Mechanics II 3
- MEMS 350 Engineering Mechanics III 3

**Total units 9**

**Three electives from the following:**
- MEMS 301 Thermodynamics 3
- MEMS 3410 Fluid Mechanics 3
- MEMS 3610 Materials Science 3
- MEMS 4310 Dynamics and Vibrations 3
- EECE 203 Thermodynamics I in EECE 3

To find out more about this minor, contact the department chair or the adviser for the minor in mechanical engineering or visit the minor webpage (http://mems.wustl.edu/undergraduate/programs/Pages/minors.aspx#mechanical).

### Courses

**E37 MEMS 1001 Machine Shop Practicum**
Operation of basic machine tools including: lathe, drill press, grinder and mill. Machine tool use and safety are covered. Student shop privilege requires completion of this practicum. Credit 1 unit. EN: TU

**E37 MEMS 1003 Mechanical Engineering Design and Build**
The course provides an introduction to design and fabrication. Students formulate designs, build prototypes and compete in engineering exploration-based creative design projects. Emphasis is placed on producing working hardware and
prototypes in response to design needs. Specialized learning modules focus on the knowledge required to complete projects, such as introductory topics in shop skills, machine elements, electronics, design, visualization and communication. Enrollment limited to engineering freshmen.
Credit 1 unit.

E37 MEMS 101 Introduction to Mechanical Engineering and Mechanical Design
Mechanical engineers face new challenges in the areas of energy, materials and systems. This course introduces students to these areas through team-based, hands-on projects that emphasize engineering design, analysis and measurement skills. The course is strongly recommended for mechanical engineering majors. Students from other disciplines are welcome and encouraged to enroll.
Credit 2 units. EN: TU

E37 MEMS 103 Computer-Aided Design — AutoCAD
AutoCAD is the most used two-dimensional drawing software for architectural and engineering production drawings. Introduction to AutoCAD, title blocks, drawing setup, absolute and relative coordinates, drawing entities, layouts, drafting geometry, dimensioning, plotting drawings to scale, sectional and other special views, isometric pictorial views. Class work involves typical drawings from industry.
Credit 1 unit. EN: TU

E37 MEMS 202 Computer-Aided Design
An introduction to computer-aided engineering design in the context of mechanical and structural engineering. Students learn the fundamentals of spatial reasoning and graphical representation. Freehand sketching skills, including pictorial and orthographic views, are applied to the design process. Computer modeling techniques provide accuracy, analysis, and visualization tools necessary for the design of structures, devices and machines. Topics include: detailing design for production, fasteners, dimensioning, tolerancing, creation of part and assembly drawings, computer-aided design, analysis and optimization of parts and assemblies; solid modeling of complex surfaces, assembly modeling, assembly constraints, and interference checking. Prerequisite: MEMS 202 or equivalent.
Credit 3 units. EN: TU

E37 MEMS 203 Advanced CAD
Computer-aided design, analysis and optimization of parts and assemblies; solid modeling of complex surfaces, creation of detail drawings, dimensioning and tolerancing; assembly modeling, assembly constraints, interference checking; motion constraints, force and acceleration analysis, thermal analysis; part optimization for weight, strength and thermal characteristics using SolidWorks software. MEMS 203 is an extension of the basic course, MEMS 202.
Credit 3 units. EN: TU

E37 MEMS 205 Mechanics and Materials Science Laboratory
Laboratory experiments and exercises focusing on mechanical properties of engineering materials; metallography; heat treatment; beam deflection; stress and strain measurement; properties and structure of engineering materials; calibration and use of instrumentation; acquisition, processing and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data. Prerequisite: MEMS 253. Corequisite: MEMS 3610.
Credit 2 units. EN: TU

E37 MEMS 253 Engineering Mechanics I
Principles of statics, solid mechanics, force systems and equilibrium. Equivalent systems of forces and distributed forces. Applications to trusses, frames, machines, beams and cables. Mechanics of deformable solids and indeterminate problems. Stress, strain, deflection, yield and fracture in beams, columns and torsion members. Prerequisite: Physics 197 or 117A.
Corequisite: Math 217.
Credit 3 units. EN: TU

E37 MEMS 255 Engineering Mechanics II
Credit 3 units. EN: TU

E37 MEMS 301 Thermodynamics
This course of classical thermodynamics is oriented toward mechanical engineering applications. It includes properties and states of a substance, processes, cycles, work, heat and energy. Steady-state and transient analyses utilize the First and Second Laws of Thermodynamics for closed systems and control volumes, as well as the concept of exergy. Prerequisites: Chem 111A, Math 132, Physics 197 or 117A.
Credit 3 units. EN: TU

E37 MEMS 305 Fluid Mechanics and Heat Transfer Laboratory
Laboratory experiments and exercises focusing on fluid properties, flow phenomena, thermal science and heat transfer phenomena; calibration and use of instrumentation; acquisition, processing and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data. Prerequisite: MEMS 3410. Corequisite: MEMS 3420.
Credit 2 units. EN: TU

E37 MEMS 3110 Machine Elements
Overview of the steps in the engineering design process and an introduction to several classes of machine elements such as bearings, gears, belts, brakes and springs. Underlying analytical models of the machine elements are presented along with guidelines about designing and choosing such elements for practical applications. A case study of the steps of the design process as well as the rationale for choosing particular machine elements is discussed. Corequisites: MEMS 253 and MEMS 3610.
Credit 3 units. EN: TU

E37 MEMS 3410 Fluid Mechanics
Fundamental concepts of fluids as continua. Topics include: viscosity, flow fields, velocity, vorticity, streamlines, fluid statics, hydrostatic forces, manometers, conservation of mass and momentum, incompressible inviscid flow, dimensional analysis and similitude, flow in pipes and ducts, flow measurement,
Credit 3 units. EN: TU

E37 MEMS 3420 Heat Transfer
Introductory treatment of the principles of heat transfer by conduction, convection or radiation; analysis of steady and unsteady conduction with numerical solution methods; analytical and semi-empirical methods of forced and natural convection; boiling and condensation heat transfer; and radiation heat transfer. Prerequisites: MEMS 3410, ESE 318 and ESE 319.
Credit 3 units. EN: TU

E37 MEMS 350 Engineering Mechanics III
A continuation of MEMS 253 containing selected topics in the mechanics of deformable solids, presented at an intermediate level between introductory strength of materials and advanced continuum mechanics. Lectures discuss elastic and elasto-plastic response, failure criteria, composites, beams and structural stability, as well as an introduction of the tensorial formulation of stress and strain and the governing equations of 3-D linear elasticity. Mathematical methods from calculus, linear algebra and linear differential equations are used. Computer problems form a significant part of the class. MEMS 255 not required. Prerequisite: MEMS 253. Corequisite: ESE 318.
Credit 3 units. EN: TU

E37 MEMS 3601 Materials Engineering
The application of fundamental materials science principles in engineering disciplines. Topics include: design of new materials having unique property combinations, selection of materials for use in specific service environment, prediction of materials performance under service conditions, development of processes to produce materials with improved properties, structural and functional use of metals, polymers, ceramics and composites.
Credit 3 units. EN: TU

E37 MEMS 3610 Materials Science
Introduction to properties, chemistry and physics of engineering materials; conduction, semiconductors, crystalline structures, imperfections, phase diagrams, kinetics, mechanical properties, ceramics, polymers, corrosion, magnetic materials, and thin films; relationship of atomic and molecular structure to physical and chemical properties; selection of materials for engineering applications; relationships between physical properties, chemical properties and performance of engineering materials.
Prerequisite: Chem 111A.
Credit 3 units. EN: TU

E37 MEMS 400 Independent Study
Independent investigation on topic of special interest. Prerequisites: junior or senior standing and permission of department chair. Students must complete the Independent Study Approval form available in the department office. Credit variable, maximum 6 units.

E37 MEMS 4001 Fundamentals of Engineering Review
A review and preparation of the most recent NCEES Fundamentals of Engineering (FE) Exam specifications is offered in a classroom setting. Exam strategies will be illustrated using examples. The main topics for the review include: engineering mathematics, statics, dynamics, thermodynamics, heat transfer, mechanical design and analysis, material science and engineering economics. A discussion of the importance and responsibilities of professional engineering licensure along with ethics will be included.
Credit 1 unit.

E37 MEMS 405 Vibrations and Machine Elements Laboratory
Laboratory experiments and exercises focusing on vibration of mechanical systems; kinematic response, dynamic response and design of mechanisms and machine components; displacements, velocities and accelerations in mechanical systems and components; response to static and dynamic forces; transient and steady state response; design of mechanical components for power transmission; calibration and use of instrumentation; acquisition, processing and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports and presentation of data. Prerequisite: MEMS 3110. Corequisite: MEMS 4310.
Credit 2 units. EN: TU

E37 MEMS 4101 Manufacturing Processes
Manufacturing processes and machinery are explained and described. Topics include: analytical tools of machine science, heat transfer, vibrations and control theory are applied to the solution of manufacturing problems, analytical development and application of engineering theory to manufacturing problems, machine tools and automated production equipment.
Credit 3 units. EN: TU

E37 MEMS 411 Mechanical Engineering Design Project
Simulating an integrated product team (IPT) experience, student teams will complete a conceptual design study, select a design project, procure parts, build a prototype, track cost and schedule, and manage project risk. Projects will have multiple design constraints including cost, codes, standards, environmental, ethical, and societal constraints. SolidWorks CAD and SolidWorks simulation-based engineering analysis will support design and prototype activities. Student teams will publish a project report through WUSTL library's open scholarship repository. Lectures have an active learning format comprised of outside reading assignments, guest speakers, group discussion, and design reviews. Prerequisites: MEMS 3110.
Credit 3 units. EN: TU

E37 MEMS 412 Design of Thermal Systems
Analysis and design of advanced thermo-fluid systems. Student teams participate in the design process, which could involve research, design synthesis, codes, standards, engineering economics, a design project report and formal presentations. Topics include thermo-fluid systems and components such as: power, heating and refrigeration systems; pumps, fans, compressors, combustors, turbines, nozzles, coils, heat exchangers and piping. Prerequisite: MEMS 301 Thermodynamics.
Credit 3 units. EN: TU

E37 MEMS 424 Introduction to Finite Element Methods in Structural Analysis
Application of finite element methods to beams, frames, trusses and other structural components. Modeling techniques for different types of structural engineering problems. Topics in
stress analysis, applied loads, boundary conditions, deflections and internal loads, matrix methods, energy concepts, structural mechanics and the development of finite element modeling methods. Prerequisites: MEMS 253, MEMS 350 and ESE 318. Credit 3 units. EN: TU

E37 MEMS 4301 Modeling, Simulation and Control
Introduction to simulation and control concepts. Topics include: block diagram representation of single- and multiloop systems; control system components; transient and steady-state performance; stability analysis; Nyquist, Bode and root locus diagrams; compensation using lead, lag and lead-lag networks; design synthesis by Bode plots and root-locus diagrams; state-variable techniques; state-transition matrix; state-variable feedback. Prerequisites: MEMS 255, ESE 318 and ESE 319. Credit 3 units. EN: TU

E37 MEMS 4310 Dynamics and Vibrations
Introduction to the analysis of vibrations in single- and multidegree of freedom systems; free and forced vibration of multidegree of freedom and distributed parameter mechanical systems and structures; methods of Laplace transform; complex harmonic balance; matrix formulation; Fourier series; and transient response of continuous systems by partial differential equations. Prerequisites: MEMS 255, ESE 318 and ESE 319. Credit 3 units. EN: TU

E37 MEMS 4401 Combustion and Environment
Introduction to combustion and its application in devices. Topics include: chemical thermodynamics and kinetics; ignition and explosion; deflagration and detonation waves; transport phenomena and the governing equations for heat and mass transfer in chemically reacting flows; laminar and turbulent flame propagation; non-premixed flames; the emission of combustion-generated pollutants and subsequent interaction with the environment; toxic-waste incineration; and practical combustion devices. Prerequisites: MEMS 301, MEMS 342 or equivalent. Credit 3 units. EN: TU

E37 MEMS 463 Nanotechnology Concepts and Applications
The aim of this course is to introduce to students the general meaning, terminology and ideas behind nanotechnology and its potential application in various industries. The topics covered include nanoparticles — properties, synthesis and applications, carbon nanotubes — properties, synthesis and applications, ordered and disordered nanostructured materials and their applications, quantum wells, wires and dots, catalysis and self-assembly, polymers and biological materials, nanoelectronics and nanophotonics, nanomanufacturing and functional nanodevices, health effects and nanotoxicity, etc. Prerequisite: none. Students with a background in general physics, chemistry and biology should be able to comprehend the material. Credit 3 units.

E37 MEMS 500 Independent Study
Independent investigation on topic of special interest. Prerequisites: graduate standing and permission of the department chair. Students must complete the Independent Study Approval Form available in the department office. Credit variable, maximum 6 units.

E37 MEMS 5001 Optimization Methods in Engineering
Analytical methods in design. Topics include: mathematical methods; linear and nonlinear programming; optimality criteria; fully stressed techniques for the design of structures and machine components; topological optimization; search techniques; and genetic algorithms. Prerequisites: calculus and computer programming. Credit 3 units. EN: TU

E37 MEMS 501 Graduate Seminar
This is a required pass/fail course for master's and doctoral degrees. A passing grade is required for each semester of full-time enrollment. A passing grade is received by attendance at the weekly seminars.

E37 MEMS 5101 Analysis and Design of Fluid-Power Systems
Design of hydraulic and pneumatic control and power systems using advanced concepts and analytical tools. Topics include: analysis of fluid flow through orifices and between parallel and inclined planes, theory of spool and flapper valves, feasibility, synthesis, analysis and applications of fluid systems, configuration of pumps, motors, fluid lines and valves, accumulators and storage devices, integration of components into systems, power systems, servo-systems, hydrostatic transmissions, performance diagrams using MATLAB and Simulink, design and analysis of fluid power systems. Credit 3 units. EN: TU

E37 MEMS 5102 Materials Selection in Design
Analysis of the scientific bases of material behavior in the light of research contributions of the past 20 years. Development of a rational approach to the selection of materials to meet a wide range of design requirements for conventional and advanced applications. Although emphasis is placed on mechanical properties, acoustical, optical, thermal and other properties of interest in design are discussed. Credit 3 units. EN: TU

E37 MEMS 5103 Advanced Machine Design
Advanced machine design topics including: stress, strain and strain energy in one dimension; applications to oil-well sucker rods, turbine, compressor and propeller and helicopter blades. Advanced beam theory applied to tie rods; beams on elastic foundation, hooks and curved bars. Helical, spiral and leaf springs. Design of thick cylinders, shrink fits and high-speed rotating disks. Analysis and design of circular and rectangular plates; effect of ribs. Torsion of shafting. Lubrication theory applied to bearings. High-speed ball bearings. Credit 3 units. EN: TU

E37 MEMS 5201 Advanced Topics in Concrete Systems
Analysis and design of prestressed concrete members. Topics include: direct design of composite and noncomposite members for flexure, design of continuous beams, flexural strength, shear strength, and design of anchorage zone. Credit 3 units. EN: TU

E37 MEMS 5202 Advanced Topics for Structural Systems
Advanced topics and current research on plastic design and analysis of space frames; plate and box girders; and torsion in structures. Prerequisite: permission of instructor.
Credit 3 units. EN: TU

E37 MEMS 5301 Nonlinear Vibrations
In this course, students are introduced to concepts in nonlinear dynamics and vibration and application of these concepts to nonlinear engineering problems. Specific topics include: modeling of lumped and continuous nonlinear systems (strings, beams and plates); vibrations of buckle-distributed structures; perturbation and other approximate analytical methods; the use and limitations of local linearization; properties of nonlinear behavior, such as dimension and Lyapunov exponents; stability of limit cycles; bifurcations; chaos and chaotic vibrations; experimental methods and data analysis for nonlinear systems. Concepts are reinforced with a number of examples from recently published research. Applications include aerelastic flutter, impact dynamics, machine-tool vibrations, cardiac arrhythmias and control of chaotic behavior.
Credit 3 units. EN: TU

E37 MEMS 5302 Theory of Vibrations
Analytical methods in vibrations. Topics include: Duhamel's integral, Laplace and Fourier transforms and Fourier series with applications to transient response, forced response and vibration isolation; Lagrange's equations for linear systems, discrete systems, degrees of freedom, reducible coordinates, holonomic constraints and virtual work; matrix methods and state variable approach with applications to frequencies and modes, stability and dynamic response in terms of real and complex modal expansions, dynamic response of continuous systems by theory of partial differential equations, Rayleigh-Ritz and Galerkin energy methods, finite difference and finite element algorithms.
Credit 3 units. EN: TU

E37 MEMS 5401 General Thermodynamics
General foundations of thermodynamics valid for small and large systems, and for equilibrium and nonequilibrium states. Topics include: definitions of state, work, energy, entropy, temperature, heat interaction and energy interaction. Applications to simple systems; phase rule; perfect and semi-perfect gas; bulk-flow systems; combustion, energy and entropy balances; availability analysis for thermo-mechanical power generation; and innovative energy-conversion schemes. Prerequisite: graduate standing or permission of instructor.
Credit 3 units. EN: TU

E37 MEMS 5402 Radiation Heat Transfer
Formulation of the governing equations of radiation heat transfer. Topics include: electromagnetic theory of radiation; properties of ideal and real surfaces; techniques for solutions of heat transfer between gray surfaces; radiation in absorbing, emitting and scattering media.
Credit 3 units. EN: TU

E37 MEMS 5403 Conduction and Convection Heat Transfer
This course examines heat conduction and convection through various fundamental problems that are constructed from the traditional conservation laws for mass, momentum and energy. Problems include the variable-area fin, the unsteady Dirichlet, Robbins and Rayleigh problems, multidimensional steady conduction, the Couette flow problem, duct convection and boundary layer convection. Though some numerics are discussed, emphasis is on mathematical technique and includes the extended power series method, similarity reduction, separation of variables, integral transforms, and approximate integral methods.
Credit 3 units. EN: TU

E37 MEMS 5404 Combustion Phenomena
Introduction to fundamental aspects of combustion phenomena including relevant thermochemistry, fluid mechanics and transport processes. Emphasis is on elucidation of the physico-chemical processes, problem formulation and analytical techniques. Topics covered include: ignition, extinction, diffusion flames, particle combustion, deflagrations and detonations. Prerequisite: graduate standing or permission of instructor.
Credit 3 units. EN: TU

E37 MEMS 5410 Fluid Dynamics I
Formulation of the basic concepts and equations governing a Newtonian, viscous, conducting, compressible fluid. Topics include: transport coefficients and the elements of kinetic theory of gases, vorticity, incompressible potential flow; singular solutions; flow over bodies and lifting surfaces; similarity method; viscous flow, boundary layer, low Reynolds number flows, laminar and turbulent flows.
Credit 3 units. EN: TU

E37 MEMS 5411 Fluid Dynamics II
Governing equations and thermodynamics relations for compressible flow. Topics include: kinetic theory of gases; steady, one-dimensional flows with friction and heat transfer; shock waves; Rankine-Hugoniot relations; oblique shocks; reflections from walls and flow interfaces, expansion waves, Prandtl-Meyer flow, flow in nozzles, diffusers and inlets, two- and three dimensional flows; perturbation methods; similarity rules; compressible laminar and turbulent boundary layers; acoustic phenomena. Emphasis is relevant to air vehicles.
Credit 3 units. EN: TU

E37 MEMS 5412 Computational Fluid Dynamics
Computational fluid dynamics relevant to engineering analysis and design. Topics include: fundamentals of finite-difference, finite-volume and finite-element methods; numerical algorithms for parabolic, elliptic and hyperbolic equations; convergence, stability and consistency of numerical algorithms; application of numerical algorithms to selected model equations relevant to fluid flow, grid-generation techniques and convergence acceleration schemes. Prerequisite: senior or graduate standing or permission of the instructor.
Credit 3 units. EN: TU

E37 MEMS 5413 Advanced Computational Fluid Dynamics
E37 MEMS 5414 Aeroelasticity and Flow-Induced Vibrations
This course deals with the interactions between aerodynamics, dynamics and structures in aerospace systems. Topics covered include unsteady aerodynamics, finite-state aerodynamic models, classical fixed-wing flutter, rotary-wing aeroelasticity and experimental methods in aeroelasticity. Emphasis is given to the prediction of flutter and limit cycles in aeroelastic systems.
Credit 3 units. EN: TU

E37 MEMS 5415 Viscous Fluid Dynamics
Credit 3 units.

E37 MEMS 5416 Turbulence
Credit 3 units. EN: TU

E37 MEMS 5420 HVAC Analysis and Design I
Fundamentals of heating, ventilating, and air conditioning — moist air properties, the psychrometric chart, classic moist air processes, design procedures for heating and cooling systems. Design of HVAC systems for indoor environmental comfort, health, and energy efficiency. Heat transfer processes in buildings. Development and application of techniques for analysis of heating and cooling loads in buildings, including the use of commercial software. Course special topics can include LEED rating and certification, cleanrooms, aviation, aerospace, and naval applications, ventilation loads, animal control facilities, building automation control, and on-site campus tours of state-of-the-art building energy and environmental systems.
Credit 3 units. EN: TU

E37 MEMS 5421 HVAC Analysis and Design II
Energy calculations to estimate the quantity of energy needed to heat and cool building structures. Fundamentals of incompressible flow, basics of centrifugal pump performance, and design procedures to water piping systems. Space air diffuser design to assure that temperatures, humidities and air velocities within occupied spaces are acceptable. Air duct design and fan analysis for optimally distributing air through building air duct systems. Performance analysis of refrigeration systems, including the effects of pressure losses and heat transfer. Direct contact heat and mass transfer.
Credit 3 units. EN: TU

E37 MEMS 5422 Solar Energy Thermal Processes
Extraterrestrial solar radiation, solar radiation on Earth's surface, and weather bureau data. Review of selected topics in heat transfer. Methods of solar energy collection and solar energy storage. Transient and long-term solar system performance. Prerequisite: MEMS 342 or equivalent.
Credit 3 units. EN: TU

E37 MEMS 5423 Sustainable Environmental Building Systems
Sustainable design of building lighting and HVAC systems considering performance, life cycle cost and downstream environmental impact. Criteria, codes and standards for comfort, air quality, noise/vibration and illumination. Life cycle and other investment methods to integrate energy consumption/conservation, utility rates, initial cost, system/component longevity, maintenance cost and building productivity. Direct and secondary contributions to acid rain, global warming and ozone depletion.
Credit 3 units. EN: TU

E37 MEMS 5424 Thermo-Fluid Modeling of Renewable Energy Systems
Overview of sustainable energy systems. Fundamentals of energy conversion. Renewable energy sources and energy conversion from wind, biomass, solar-thermal, geothermal and ocean/waves. Applications to energy storage, fuel cells, green air and ground transportation, energy-efficient buildings. Energy-economics modeling, emissions modeling, global warming and climate change.
Credit 3 units. EN: TU

E37 MEMS 5500 Elasticity
Credit 3 units. EN: TU

E37 MEMS 5501 Mechanics of Continua
A broad survey of the general principles governing the mechanics of continuous media. Topics include: general vector and tensor analysis, rigid body motions, deformation, stress and strain rate, large deformation theory, conservation laws of physics, constitutive relations, principles of continuum mechanics and thermodynamics, two-dimensional continua. Prerequisites: ESE 501–502 or instructor's permission.
Credit 3 units. EN: TU
E37 MEMS 5502 Plates and Shells
Introduction to the linear theory of thin elastic plates and shells. The emphasis is on application and the development of physical intuition. The first part of the course focuses on the analysis of plates under various loading and support conditions. The remainder of the course deals mainly with axisymmetric deformation of shells of revolution. Asymptotic methods are used to solve the governing equations. Applications to pressure vessels, tanks and domes. Prerequisites: BME 240 or MEMS 283; ESE 317 or equivalent. Credit 3 units. EN: TU

E37 MEMS 5503 Structural Stability
Theorems of Equilibrium and Stability. Topics include: classification of instability phenomena, postbuckling behavior and imperfection-sensitivity, systems with multiple degrees of freedom, buckling of columns, beam-columns, and frames using classical and variational methods and stability and nonlinear behavior of plates and shells. Credit 3 units. EN: TU

E37 MEMS 5504 Fracture Mechanics
Classical fracture and fatigue analysis and their limitations. Topics include: Griffith-Irwin, linear-elastic fracture-mechanics analysis, historical aspects, formulation of stability criteria, subcritical crack growth, anisotropic and inhomogeneous effects, fracture-control analysis, with applications to fracture-safety analysis relating to nuclear reactors, aircraft, rotating machinery, elastic-plastic fracture-mechanics analysis and future prospects and applications. Prerequisites: graduate standing or permission of instructor. Credit 3 units. EN: TU

E37 MEMS 5506 Experimental Methods in Solid Mechanics
Current experimental methods to measure mechanical properties of materials are covered. Lectures include theoretical principles, measurement considerations, data acquisition and analysis techniques. Lectures are complemented by laboratory sections using research equipment such as biaxial testing machines, pressure myographs, indentation devices for different scales, and viscometers. Credit 3 units. EN: TU

E37 MEMS 5507 Fatigue and Fracture Analysis
The course objective is to demonstrate practical methods for computing fatigue life of metallic structural components. The course covers the three major phases of metal fatigue progression: fatigue crack initiation, crack propagation and fracture. Topics include: stress vs. fatigue life analysis, cumulative fatigue damage, linear elastic fracture mechanics, stress intensity factors, damage tolerance analysis, fracture toughness, critical crack size computation and load history development. The course focus is on application of this technology to design against metal fatigue and to prevent structural failure. Credit 3 units. EN: TU

E37 MEMS 5510 Finite Element Analysis
Theory and application of the finite element method. Topics include: basic concepts, generalized formulations, construction of finite element spaces, extensions, shape functions, parametric mappings, numerical integration, mass matrices, stiffness matrices and load vectors, boundary conditions, modeling techniques, computation of stresses, stress resultants and natural frequencies, and control of the errors of approximation. Prerequisite: graduate standing or permission of instructor. Credit 3 units. EN: TU

E37 MEMS 5512 Composite Structures
Introduction to composite materials. Topics include: anisotropic elasticity and laminate theory; beams and columns of composite materials; plates and panels; transverse shear deformation effects; twisting and stretching shear coupling; honeycomb core sandwich panels; composite shells; energy methods for statics, stability and dynamics; hygrothermal effects; strength and failure theories. Credit 3 units. EN: TU

E37 MEMS 5513 Computational Structural Mechanics
An introduction to the analysis and design of structures using finite elements. Topics include: elementary theory of elasticity, plate theories and buckling of plate structures, finite element formulation of 2-D elasticity and plate problems. Hands-on use of finite element software is emphasized. A major design project is included. Credit 3 units. EN: TU

E37 MEMS 5515 Numerical Simulation in Solid Mechanics I
Solution of 2-D and 3-D elasticity problems using the finite element method. Topics include: linear elasticity; laminated material; stress concentration; stress intensity factor; solution verification; J integral; energy release rate; residual stress; multi-body contact; nonlinear elasticity; plasticity; and buckling. Prerequisite: graduate standing or permission of instructor. Credit 3 units.

E37 MEMS 5516 Numerical Simulation in Solid Mechanics II
Solution of 2-D and 3-D elasticity problems using the finite element method. Topics include: laminates and composite materials; nonlinear elasticity; plasticity; incremental theory of plasticity; residual stress; geometric nonlinearity; membrane and bending load coupling; multi-body contact; stress intensity factor; interference fit; and buckling analysis. Prerequisite: graduate standing or permission of instructor. Credit 3 units.

E37 MEMS 5520 Advanced Analytical Mechanics
Lagrange's equations and their applications to holonomic and nonholonomic systems. Topics include: reduction of degrees of freedom by first integrals, variational principles, Hamilton-Jacobi theory, general transformation theory of dynamics, applications such as theory of vibrations and stability of motion, and use of mathematical principles to resolve nonlinear problems. Prerequisite: senior or graduate standing or permission of instructor. Credit 3 units. EN: TU

E37 MEMS 5560 Interfaces and Attachments in Natural and Engineered Structures
Attachment of dissimilar materials in engineering and surgical practice is a challenge. Bimaterial attachment sites are common locations for injury and mechanical failure. Nature presents several highly effective solutions to the challenge of bimaterial attachment that differ from those found in engineering...
practice. This course bridges the physiologic, surgical, and engineering approaches to connecting dissimilar materials. Topics in this course are: natural bimaterial attachments; engineering principles underlying attachments; analysis of the biology of attachments in the body; mechanisms by which robust attachments are formed; concepts of attaching dissimilar materials in surgical practice and engineering; and bioengineering approaches to more effectively combine dissimilar materials.
Credit 3 units. EN: TU

E37 MEMS 5561 Mechanics of Cell Motility
A detailed review of biomechanical inputs that drive cell motility in diverse extracellular matrices (ECMs). This class discusses cytoskeletal machines that generate and support forces, mechanical roles of cell-ECM adhesions, and regulation of ECM deformations. Also covered are key methods for cell level mechanical measurements, mathematical modeling of cell motility, and physiological and pathological implications of mechanics-driven cell motility in disease and development.
Credit 3 units.

E37 MEMS 5564 Orthopaedic Biomechanics-Cartilage/
Tendon
Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Note: BME 590Z (463/563) Orthopaedic Biomechanics—Bones and Joints is not a prerequisite.
Credit 3 units. EN: TU

E37 MEMS 5565 Mechanobiology of Cells and Matrices
At the interface of the cell and the extracellular matrix, mechanical forces regulate key cellular and molecular events that profoundly affect aspects of human health and disease. This course offers a detailed review of biomechanical inputs that drive cell behavior in physically diverse matrices. In particular, cytoskeletal force-generation machineries, mechanical roles of cell-cell and cell-matrix adhesions, and regulation of matrix deformations are discussed. Also covered are key methods for mechanical measurements and mathematical modeling of cellular response. Implications of matrix-dependent cell motility in cancer metastasis and embryonic development are discussed. Prerequisite: graduate standing or permission of the instructor
Credit 3 units. EN: TU

E37 MEMS 5601 Mechanical Behavior of Materials
A materials science-based study of mechanical behavior of materials with emphasis on mechanical behavior as affected by processes taking place at the microscopic and/or atomic level. The response of solids to external or internal forces as influenced by interatomic bonding, crystal/molecular structure, crystalline/noncrystalline defects and material microstructure are studied. The similarities and differences in the response of different kinds of materials viz., metals and alloys, ceramics, polymers and composites are discussed. Topics covered include physical basis of elastic, visco elastic and plastic deformation of solids; strengthening of crystalline materials; visco elastic deformation of polymers as influenced by molecular structure and morphology of amorphous, crystalline and fibrous polymers; deformation and fracture of composite materials; mechanisms of creep, fracture and fatigue; high strain-rate deformation of crystalline materials; and deformation of noncrystalline materials.
Credit 3 units. EN: TU

E37 MEMS 5602 Non-metallics
Structure, mechanical and physical properties of ceramics and cermets, with particular emphasis on the use of these materials for space, missile, rocket, high-speed aircraft, nuclear and solid-state applications.
Credit 3 units. EN: TU

E37 MEMS 5603 Materials Characterization Techniques I
An introduction to the basic theory and instrumentation used in transmission electron, scanning electron and optical microscopy. Practical laboratory experience in equipment operations, experimental procedures and material characterization.
Credit 3 units. EN: TU

E37 MEMS 5604 Materials Characterization Techniques II
Introduction to crystallography and elements of X-ray physics. Diffraction theory and application to materials science including following topics: reciprocal lattice concept, crystal-structure analysis, Laue methods, rotating crystal methods, powder method, and laboratory methods of crystal analysis.
Credit 3 units. EN: TU

E37 MEMS 5605 Mechanical Behavior of Composites
Analysis and mechanics of composite materials. Topics include micromechanics, laminated plate theory, hydrothermal behavior, creep, strength, failure modes, fracture toughness, fatigue, structural response, mechanics of processing, nondestructive evaluation, and test methods. Prerequisite: graduate standing or permission of the instructor.
Credit 3 units. EN: TU

E37 MEMS 5606 Soft Nanomaterials
Soft nanomaterials, which range from self-assembled monolayers (SAMs) to complex 3-D polymer structures, are gaining increased attention owing to their broad-range applications. The course introduces the fundamental aspects of nanotechnology pertained to soft matter. Various aspects related to the design, fabrication, characterization and application of soft nanomaterials are discussed. Topics covered include but are not limited to SAMs, polymer brushes, Layer-by-layer assembly, responsive polymers structures (films, capsules), polymer nanocomposites, biomolecules as nanomaterials and soft lithography.
Credit 3 units. EN: TU

E37 MEMS 5607 Introduction to Polymer Blends and Composites
The course covers topics in multicomponent polymer systems (polymer blends and polymer composites) such as: phase separation and miscibility of polymer blends, surfaces and interfaces in composites, microstructure and mechanical behavior, rubber toughened plastics, thermoplastic elastomers, block copolymers, fiber reinforced and laminated composites, techniques of polymer processing with an emphasis on composites processing, melt processing methods such as
injection molding and extrusion, solution processing of thin films, selection of suitable processing methods and materials selection criteria for specific applications. Advanced topics include: nanocomposites such as polymer/CNT composites, bioinspired nanocomposites, and current research challenges. Prerequisite: MEMS 3610 or equivalent or permission of instructor. Credit 3 units. EN: TU

E37 MEMS 5608 Introduction to Polymer Science and Engineering
Topics covered in this course are: the concept of long-chain or macromolecules, polymer chain structure and configuration, microstructure and mechanical (rheological) behavior, polymer phase transitions (glass transition, melting, crystallization), physical chemistry of polymer solutions (Flory-Huggins theory, solubility parameter, thermodynamics of mixing and phase separation), polymer surfaces and interfaces, overview of polymer processing (extrusion, injection molding, film formation, fiber spinning) and modern applications of synthetic and bio-polymers. Credit 3 units. EN: TU

E37 MEMS 5609 Electronic Materials Processing
This course covers “unit processes” for manufacturing semiconductor chips. Topics include: crystal growth and doping of wafers, oxidation and diffusion, ion implantation, deposition, etching, cleaning and lithography. Processes are described with key concepts derived from science and engineering and process integration is covered for devices such as transistors and light emitting diodes. Nanoprocessing concepts are highlighted in the end to provide students with practical and advanced knowledge of semiconductor manufacturing. Prerequisites: undergraduate engineering mathematics, materials science and basic electronics or instructor's permission. Credit 3 units. EN: TU

E37 MEMS 5610 Quantitative Materials Science and Engineering
Quantitative Materials Science and Engineering covers the mathematical foundation of primary concepts in materials science and engineering. Topics covered are: mathematical techniques in materials science and engineering; Fourier series; ordinary and partial differential equations; special functions; matrix algebra; and vector calculus. Each is followed by its application to concepts in: thermodynamics; kinetics and phase transformations; structure and properties of hard and soft matter; and characterization techniques. This course is intended especially for students pursuing graduate study in materials science. Credit 3 units. EN: TU

E37 MEMS 5611 Principles and Methods of Micro and Nanofabrication
A hands-on introduction to the fundamentals of micro- and nanofabrication processes with emphasis on cleanroom practices. The physical principles of oxidation, optical lithography, thin film deposition, etching and metrology methods will be discussed, demonstrated and practiced. Students will be trained in cleanroom concepts and safety protocols. Sequential microfabrication processes involved in the manufacture of microelectronic and photonic devices will be shown. Training in imaging and characterization of micro- and nanostructures will be provided. Prerequisite: graduate or senior standing or permission of the instructor. Credit 3 units. EN: TU

E37 MEMS 5700 Aerodynamics
Fundamental concepts of aerodynamics, equations of compressible flows, irrotational flows and potential flow theory, singularity solutions, circulation and vorticity, Kutta-Joukowski theorem, thin airfoil theory, finite wing theory, slender body theory, subsonic compressible flow and Prandtl-Glauert rule, supersonic thin airfoil theory, introduction to performance, basic concepts of airfoil design. Prerequisite: graduate standing or permission of instructor. Credit 3 units. EN: TU

E37 MEMS 5701 Aerospace Propulsion
Propeller, jet, ramjet and rocket propulsion. Topics include: fundamentals of propulsion systems, gas turbine engines, thermodynamics and compressible flow, one-dimensional gas dynamics, analysis of engine performance, air breathing propulsion system, the analysis and design of engine components, and the fundamentals of ramjet and rocket propulsion. Credit 3 units. EN: TU

E37 MEMS 5703 Analysis of Rotary-Wing Systems
This course introduces the basic physical principles that govern the dynamics and aerodynamics of helicopters, fans and wind turbines. Simplified equations are developed to illustrate these principles, and the student is introduced to the fundamental analysis tools required for their solution. Topics include: harmonic balance, Floquet theory and perturbation methods. Credit 3 units. EN: TU

E37 MEMS 5704 Aircraft Structures
Basic elements of the theory of elasticity; application to torsion of prismatic bars with open and closed thin-wall sections; the membrane analogy; the principle of virtual work applied to 2-D elasticity problems. Bending, shear and torsion of open and closed thin-wall section beams; principles of stressed skin construction, structural idealization for the stress analysis of wings, ribs and fuselage structures. Margin of safety of fastened connections and fittings. Stability of plates, thin-wall section columns and stiffened panels. Application of the finite element method for the analysis of fastened connections, structural fittings and problems of local stability of aircraft structural components. Credit 3 units.

E37 MEMS 5705 Wind Energy Systems
A comprehensive introduction to wind energy systems, a practical means of extracting green and sustainable energy. Topics include: a historical perspective of wind turbines; horizontal axis and vertical axis wind turbines; the basic parameters such as power rating and efficiency; the structural components ranging from blade and hub to nacelle and tower; wind turbine aerodynamics, aeroelasticity and control systems; blade fatigue; statistical wind modeling; unsteady airfoil aerodynamics and downstream wake; and environmental considerations such as noise and aesthetics. Prerequisite: senior or graduate standing in engineering or permission of the instructor. Credit 3 units. EN: TU
E37 MEMS 5801 Micro-Electro-Mechanical Systems I
Introduction to MEMS: Microelectromechanical systems (MEMS) are ubiquitous in chemical, biomedical and industrial (e.g., automotive, aerospace, printing) applications. This course covers important topics in MEMS design, micro-/nanofabrication, and their implementation in real-world devices. The course includes discussion of fabrication and measurement technologies (e.g., physical/chemical deposition, lithography, wet/dry etching, and packaging), as well as application of MEMS theory to design/fabrication of devices in a cleanroom. Lectures cover specific processes and how those processes enable the structures needed for accelerometers, gyros, FR filters, digital mirrors, microfluidics, micro total-analysis systems, biomedical implants, etc. The laboratory component allows students to investigate those processes first-hand by fabricating simple MEMS devices. Credit 3 units. EN: TU

E37 MEMS 5802 Micro-Electro-Mechanical Systems II
A second course in MEMS. Topics include: physical microsystems; pressure sensors; accelerometers; microfluids and micro-scale thermal phenomena: electro-osmotic flows; microvalves; micropumps; optical MEMS; active flow control; system and constraints on microsystem design; compliant mechanisms; microfabricated electrochemical sensors; bio-MEMS; and case studies. Prerequisite: MEMS 5801 or permission of instructor. Credit 3 units. EN: TU

E37 MEMS 5804 Engineering Project Management
Basic fundamentals and advanced concepts of engineering project management applicable to projects and programs, both large and small. Project management skills, techniques, systems, software and application of management science principles are covered and related to research, engineering, architectural and construction projects from initial evaluations through approval, design, procurement, construction and startup. Credit 3 units. EN: TU

E37 MEMS 5912 Biomechanics Journal Club
This journal club is intended for graduate students and advanced undergraduates with an interest in biomechanics. We review landmark and recent publications in areas such as brain, cardiovascular and orthopedic biomechanics, discussing both experimental and modeling approaches. This course meets once weekly at a time to be arranged. Credit 1 unit. EN: TU

E37 MEMS 598 Energy Design Project
Credit variable, maximum 6 units.

E37 MEMS 599 Master's Research
Credit variable, maximum 6 units.

Process Control Systems
A Jointly Sponsored Undergraduate Program
Process Control Systems is a program intended to provide students with a broad background in chemical and systems engineering, with emphasis on the science and technology of process automation. Through a careful selection of courses in chemical engineering and systems engineering, a unified approach is developed to the analysis, design, operation and control of chemical and other manufacturing processes. Electives in systems engineering allow further in-depth specialization in applied mathematics, discrete-event systems, robotics, quality control, optimization and dynamical systems.

In addition to the traditional laboratory work in chemistry, physics and chemical engineering, a laboratory course in digital process control is offered based on computers and advanced commercial distributed-control equipment. Familiarity with computers and with process modeling, data acquisition and control software is an essential component of the training. In the senior year, students can elect to complete a major design project either in chemical processing systems (chemical engineering) or in technological or engineering systems (systems engineering).

Upon successful completion, a student receives both the Bachelor of Science in Chemical Engineering and the Bachelor of Science in Systems Science & Engineering.

The Process Control Systems program satisfies an increasing demand by manufacturing and petrochemical companies for professionals trained in advanced automation to improve product quality, to reduce costs, to improve capital productivity, and to improve safety and environmental quality. This interdisciplinary program provides the background necessary to combine traditional engineering skills with new systems engineering techniques and meet these challenges. The program is staffed by faculty members from both departments and is supervised by a coordinating committee. Students are assigned two advisers, one from each department, who are members of the committee.

Further information about the program can be obtained from the coordinating committee through either of the cooperating departments.

**Pratim Biswas**

Lucy and Stanley Lopata Professor  
PhD, California Institute of Technology  
(Energy, Environmental & Chemical Engineering)

**Hiroaki Mukai**

PhD, University of California, Berkeley  
(Electrical & Systems Engineering)

**Heinz Schaettler**

PhD, Rutgers University  
(Electrical & Systems Engineering)

**Jay R. Turner**

DSc, Washington University  
(Chemical Engineering)

### Majors

To satisfy the core requirements of the School of Engineering & Applied Science, the following courses are required:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 197 &amp; Physics 198</td>
<td>8</td>
</tr>
<tr>
<td>Physics I &amp; Physics II</td>
<td>8</td>
</tr>
<tr>
<td>Chem 111A &amp; Chem 112A</td>
<td>6</td>
</tr>
<tr>
<td>General Chemistry I &amp; General Chemistry II</td>
<td>6</td>
</tr>
<tr>
<td>Chem 151 &amp; Chem 152</td>
<td>4</td>
</tr>
<tr>
<td>General Chemistry Laboratory I &amp; General Chemistry Laboratory II</td>
<td>4</td>
</tr>
<tr>
<td>Math 132 &amp; Math 233</td>
<td>9</td>
</tr>
<tr>
<td>Calculus II &amp; Calculus III</td>
<td>9</td>
</tr>
<tr>
<td>Math 217 &amp; Differential Equations</td>
<td>9</td>
</tr>
</tbody>
</table>
To complete the core requirements of both chemical engineering and systems engineering, the following additional requirements apply:

- Chem 261 Organic Chemistry I with Lab 4
- EECE 305 Materials Science 3
- ESE 326 Probability and Statistics for Engineering 3
- Engr 310 Technical Writing 3
- ESE 318 Engineering Mathematics A 6
- ESE 319 Engineering Mathematics B 6
- Biol 2960 Principles of Biology I 4

Total units 23

The balance of the curriculum is carefully structured to satisfy the combined degree requirements and to meet the objectives of the program. Please refer to the accompanying Process Control Systems program chart (p. 928) for details. The general degree requirements include the residency and other applicable requirements of the university and the School of Engineering & Applied Science.

The curriculum meets the requirements of both degrees and can be completed in four years. The total number of units required is 141. The semester course load exceeds the usual school-wide average of 15 units per semester, so students must be highly motivated to accomplish this objective in eight semesters. The course load in individual semesters may be lightened by attending summer school or by adding an additional semester. A number of courses (e.g., Engr 310, Math 309, ESE 318, ESE 319, ESE 326, ESE 351; and humanities and social sciences courses) usually are offered in the summer as well.

Minors

There is no minor in this area.

Courses

There are no courses specific to this program.

University of Missouri-St. Louis/ Washington University Joint Undergraduate Engineering Program

In 1993, Washington University and the University of Missouri-St. Louis held the first classes in the Joint Undergraduate Engineering Program. This partnership, the first of its kind in the United States, offers University of Missouri-St. Louis students the opportunity to benefit from the engineering program at Washington University and its century-long tradition of excellence. Effective in October 1999, the three bachelor's degrees (civil, electrical and mechanical engineering) offered in our joint program were accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). Besides being the first undergraduate engineering degrees offered in a public/private partnership, they are also the first such degrees to receive ABET accreditation.

The courses are organized for both full-time students and part-time students with daytime commitments who need to attend classes in the evening. Students who enter the program take about half their course work — mathematics, physics, chemistry, humanities and social sciences — on the campus of the University of Missouri-St. Louis. The remaining half of the degree program, consisting of upper-level engineering courses and laboratories, is taken on the Washington University campus. Students may choose civil, electrical or mechanical engineering. Students receive their undergraduate engineering degrees from the University of Missouri.

For information about this program, please contact the University of Missouri-St. Louis Joint Undergraduate Engineering Program at 314-516-6800 or the Washington University School of Engineering at 314-935-6510.

Faculty

Faculty members at University of Missouri-St. Louis:

Dean

Joseph A. O’Sullivan
Samuel C. Sachs Professor of Electrical Engineering
PhD, University of Notre Dame

Associate Dean

Bernard J. Feldman
PhD, Harvard University

Assistant Director of Student Services

Mary E. McManus
MEd, University of Missouri-St. Louis

Degree Requirements

Undergraduate degrees awarded by the School of Engineering & Applied Science are divided into two groups: engineering degrees and applied science degrees. Engineering degrees are named Bachelor of Science in Biomedical Engineering, Chemical Engineering, Computer Engineering, Electrical Engineering,
Mechanical Engineering, and Systems Science & Engineering. Applied science degrees are named Bachelor of Science in Applied Science (Chemical, Electrical, Mechanical, or Systems Science & Engineering) and Bachelor of Science in Computer Science.

Engineering Bachelor of Science Degrees

To earn any of the engineering degrees (i.e., BS in Biomedical Engineering, BS in Chemical Engineering, BS in Computer Engineering, BS in Electrical Engineering, BS in Mechanical Engineering, BS in Systems Science & Engineering), a student must satisfy all of the following general distribution requirements:

1. Complete the engineering Common Studies courses outlined below:
   a. Calculus (Math 131, Math 132, Math 217, Math 233)
   b. Physics I (Physics 117A or Physics 197) and Physics II (Physics 118A or Physics 198)
   c. Chemistry (Chem 111A, Chem 151)
      Note 1: Some programs also require Chem 112A and Chem 152.
      Note 2: Some programs permit alternate science courses to satisfy this requirement.
      Please consult with individual department program requirements.
   d. Technical Writing (Engr 310)

2. Satisfy the specific degree requirements of one of the engineering degree programs, as outlined in other sections of this Bulletin.

3. Satisfy the requirements listed under All Undergraduate Degrees (below).

Applied Science Bachelor of Science Degrees

To earn any of the applied science degrees (i.e., BS in Applied Science [Chemical Engineering], BS in Applied Science [Electrical Engineering], BS in Applied Science [Mechanical Engineering], BS in Applied Science [Systems Science & Engineering], BS in Computer Science), a student must satisfy all of the following general distribution requirements:

1. Complete at least 120 applicable units.
2. Complete at least 48 units of the 120 in mathematics, natural sciences and engineering.
3. Complete at least 42 of the total 120 units at the 300 level or higher.
4. Satisfy the specific degree requirements of one of the applied science degree programs, as outlined in other sections of this Bulletin.
5. Satisfy the requirements outlined under All Undergraduate Degrees.

All Undergraduate Degrees

To earn any undergraduate degree in the School of Engineering & Applied Science, a student must accomplish all the following:

1. Earn at least a C (2.0) cumulative grade point average in all applicable courses taken at Washington University.
2. Earn at least the minimum total number of units specified for the particular degree. All degrees require students to complete at least 120 applicable units.
3. Earn at least a C (2.0) grade point average in the student's major area of study.
4. Satisfy all of the following residency requirements:
   a. Complete a minimum of 30 units of 300-level or higher courses from the school, while matriculated at Washington University in a degree program. An engineering course transferring from an exchange program sanctioned by the School of Engineering & Applied Science may be counted as a school equivalent course for the purpose of satisfying this requirement.
   b. Complete a minimum of 60 units at Washington University, while matriculated at Washington University in a degree program. Exchange program courses sanctioned by the school may be counted toward this requirement.
   c. For students who pursue multiple engineering BS degrees, for each additional BS degree from the school, students must complete an additional 15 resident units of 300-level or higher courses from the school, which are in addition to the 30 units of 300-level or higher engineering courses that are listed in 4a above. No more than two BS degrees from the School of Engineering & Applied Science may be earned by the same student.
5. Complete the English proficiency requirement, and the humanities and social sciences requirement, of the School of Engineering & Applied Science.

English Proficiency Requirement

Every student must demonstrate proficiency in reading and writing the English language. Students are considered proficient if they have earned one of the following scores: a 5 on the Advanced Placement English Examination of the College Board, or a score of 750 or higher on the SAT W examination, or a score of 36 on the ACT English exam, or a score of 7 on the International Baccalaureate examination. Proficiency is most commonly demonstrated by satisfactory performance on the
Freshman English Composition proficiency test administered by the School of Engineering & Applied Science.

Students who do not demonstrate satisfactory proficiency on the test are required to enroll the following semester in the course or sequence of courses specified by the test's administrator. The school's English proficiency requirement is then satisfied only by a grade of C- or better in the university's College Writing 1 course (CWP 100). Courses taken at other institutions to satisfy the school's English proficiency requirement must be preapproved by the school's English proficiency coordinator. If the course is so approved, the student must pass with a grade of C- or better. College Writing 1 does not count toward the humanities and social sciences requirement of the School of Engineering & Applied Science. Waivers of the College Writing 1 requirement via the AP, SAT, ACT, IB or other proficiency exam do not carry degree credit.

The English proficiency requirement must be completed as soon as possible. Undergraduate students who have not yet satisfied this requirement must enroll in College Writing 1 (or an approved alternative course) at the first possible opportunity, commonly their first spring semester. Enrollment in English composition courses for subsequent semesters may be required until the proficiency requirement is satisfied.

Before enrolling in College Writing 1, some students may be required to complete CWP 1001 Fundamentals of Academic Writing or CWP 200 Writing Tutorial or U15 ELP 1511 Critical Reading and Analytical Writing; these courses will not be counted toward the student's degree requirements.

**Humanities and Social Sciences Requirement**

To earn any bachelor's degree from the School of Engineering & Applied Science, students must complete the school's humanities and social sciences requirement:

1. Minimum units: At least 18 units of humanities and social sciences courses must be completed with passing grades. Humanities and social sciences courses, other than transfer courses, may be taken for pass/fail credit.
2. Breadth: At least 6 units of the 18 must be in the humanities and at least 6 units must be in the social sciences.
3. Upper-level: At least 3 units of the 18 units completed must be from one or more courses numbered 300 or higher.

Washington University courses labeled with the EN:H or EN:S attribute in the semester course listings will count respectively toward the humanities or social sciences requirement for engineering degrees. As a convenience, preapproved listings of humanities and social sciences courses are provided for Architecture. (http://registrar.seas.wustl.edu/EVALS/evals.aspx?school=WASHINGTON%20UNIV-DESIGN%20AND%20VISUAL%20ARTS-ARCHITECTURE)

**Engineering Topics Units**

Bachelor's degree programs accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org) require that the program require a minimum of one and one-half years of Engineering Topics.

One and one-half years is defined as 3/8 of the total number of units required for the particular degree, with a maximum of 48 units. The number of engineering topics units assigned to a course is the sum of the course's engineering science units and engineering design units: Engineering Topics Units = Engineering Design Units + Engineering Science Units. A course carrying Engineering Topics Units will be marked in Course Listings (https://courses.wustl.edu/Semester/Listing.aspx) with the "Eng TU" attribute.

**Engineering Topics/Design Component**

Engineering design is the process of devising a system, component or process to meet desired needs. It is a decision-making process (often iterative), in which the basic science and mathematics and engineering sciences are applied to convert resources optimally to meet a stated objective. Among the fundamental elements of the design process are the establishment of objectives and criteria, synthesis, analysis, construction, testing and evaluation. The engineering design component of a curriculum must include most of the following features: development of student creativity, use of open-ended problems, development and use of modern design theory and methodology, formulation of design problem statements and specifications, consideration of alternative solutions, feasibility considerations, production processes, concurrent engineering design and detailed system descriptions. Further, it is essential to include a variety of realistic constraints, such as economic factors, safety, reliability, aesthetics, ethics and social impact.

**Engineering Topics/Science Component**

The engineering sciences have their roots in mathematics and basic sciences but carry knowledge further toward
creative application. These studies provide a bridge between mathematics and basic sciences on the one hand and engineering practice on the other. Such subjects include mechanics, thermodynamics, electrical and electronic circuits, materials science, transport phenomena and computer science (other than computer programming skills), along with other subjects, depending upon the discipline. While it is recognized that some subject areas may be taught from the standpoint of either the basic sciences or engineering sciences, the ultimate determination of the engineering science content is based upon the extent to which there is extension of knowledge toward creative application. In order to promote breadth, the curriculum must include at least one engineering course outside the major disciplinary area.

Applicable Undergraduate Engineering Degree Requirements

Undergraduate engineering students are required to satisfy the engineering degree requirements that are published in the online undergraduate Bulletin (p. 5) in effect at the time they first enroll at the university as degree-seeking undergraduate students.

Undergraduate engineering students must complete all undergraduate degree requirements and graduate within 10 consecutive years of enrolling as degree-seeking undergraduate students at the university.

A student who does not graduate within 10 consecutive years will be required to satisfy the degree requirements that are in the most recently published online undergraduate Bulletin and to retake courses identified by the chair of the department in which the student is seeking the degree.

- When a student wishes to return to complete course work and earn a degree after the 10-year time period has passed, the most recent online undergraduate Bulletin is defined as the catalog in effect when the student re-enrolls in the School of Engineering & Applied Science as an undergraduate student seeking a degree.
- When a student has left the university and wishes to complete course work at another university to transfer back and graduate from the School of Engineering & Applied Science, and more than 10 years have elapsed since the student was first enrolled as an undergraduate engineering degree-seeking student, the most recent online undergraduate Bulletin is defined as the catalog in effect when the student files an intent to graduate for an engineering undergraduate degree. The course work the student intends to complete and transfer back to the School of Engineering & Applied Science must be approved by the Engineering School before the student enrolls in the course work.

Definition of Class Levels

For classification purposes, a student’s undergraduate class level is defined according to the year in which he or she intends to graduate.

Academic Honors & Awards

Dean’s List: The Dean’s List is composed of freshman, sophomore, junior and senior engineering students who, for the preceding semester, have achieved a 3.6 or higher grade point average based on a minimum of 12 units of applicable courses taken for grades (not pass/fail). An appropriate entry is added to their official transcripts.

Latin Honors: The Engineering Curriculum Committee has the responsibility for determining which students will receive the designations cum laude, magna cum laude and summa cum laude. The criterion for making the decision is academic achievement based on cumulative grade point average. Grade point averages are reviewed the week of Commencement, after final grades are submitted, to determine which students are awarded final honors for each graduation year. Latin Honors for August and December graduates are not determined until the subsequent May at which time it will be posted to the students’ records.

Valedictorians: Valedictorians are selected from graduating seniors who entered as freshmen. Candidates must have earned a 4.0 cumulative grade point average at Washington University with no repeated courses.

Washington University Engineering Scholarship Program:
The Engineering Scholarship Program enables a sponsor — an individual, a group of individuals or a company — to provide a named scholarship. The selection of students is made by the dean’s office and is based on academic achievement and potential for professional attainment. There is no application process. The awards are need-based. The total amount of the financial aid package does not change, but the source of the scholarship funds is shifted to funds that have been specifically contributed to the university for that purpose.

Academic Regulations

Attendance

Each professor in the School of Engineering & Applied Science decides how many absences a student may have and still pass the course. Professors are expected to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their professors the reasons for any absences and to discuss with them the possibility of making up missed assignments.
Units and Grades

A credit unit is the equivalent of one recitation or lecture hour a week for one semester, or one laboratory of two and one-half hours a week for one semester. A student’s work is rated in terms of the following system of grades and grade points:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Points per Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
</tr>
<tr>
<td>D-</td>
<td>0.7</td>
</tr>
<tr>
<td>F</td>
<td>0.0</td>
</tr>
<tr>
<td>P#</td>
<td>Pass</td>
</tr>
<tr>
<td>F#</td>
<td>Failing</td>
</tr>
<tr>
<td>I</td>
<td>Course work incomplete</td>
</tr>
<tr>
<td>X</td>
<td>No final exam taken</td>
</tr>
<tr>
<td>W</td>
<td>Withdrawal</td>
</tr>
<tr>
<td>R</td>
<td>Repeat</td>
</tr>
<tr>
<td>L</td>
<td>Successful audit</td>
</tr>
<tr>
<td>Z</td>
<td>Unsuccessful audit</td>
</tr>
<tr>
<td>N</td>
<td>No grade submitted</td>
</tr>
</tbody>
</table>

For students who entered prior to Fall 2010, plus and minus marks to the grades of A, B, C, D and F do not affect the value of the grade points earned by each letter grade.

To graduate, a student must meet the following criteria:

1. at least a C (2.0) cumulative average and
2. at least a C (2.0) cumulative average in the student’s major area of study

Auditing a Course

A student may register for a specific course as an auditor. When a student uses the Audit grading option, the student is expected to attend all course meetings. The criteria for a successful audit are determined by the course instructor, and a student should work with the instructor to ensure that these criteria are understood. Generally speaking, completion of homework and the taking of exams are not required. The grade L signifies a successful audit and the grade Z signifies an unsuccessful audit. Neither grade affects a student’s grade point average, nor do the course’s units contribute to the student’s total cumulative degree-seeking units. Audit courses do not count toward any degree; however, audit units do count toward full-time status determination and tuition. Class attendance is required to earn the grade L; unsatisfactory attendance will result in a grade of Z. Computer science courses do not allow students with auditor status.

Incomplete Grades

The grade I (incomplete) indicates that the work of a student has been generally acceptable but that extenuating circumstances led to certain requirements not having been met. The grade of X is recorded when a student is absent from a midterm or final examination because of illness or other unavoidable reason, provided the work has been otherwise satisfactory.

Grades of X and I must be removed no later than the close of the next full semester a student is in residence. On failure to make up an X or I, the student will not receive credit for the course, and the grade will be changed to F unless the student has been explicitly excused by the associate dean.

Pass/Fail Option

All undergraduate engineering students are eligible to register each semester for up to 6 units on the pass/fail option, up to a maximum of 18 units attempted. Some departments require students to take certain courses pass/fail; credits in these courses do not count toward either the semester limit of 6 units or the cumulative limit of 18 units. Other than these courses, only elective courses may be taken on this option, including courses in other divisions of the university, but still contingent upon and subject to departmental requirements. Humanities, social sciences and some technical electives specifically allowed by individual engineering programs, as well as some engineering courses, both undergraduate and graduate that are not specifically required for the student’s major program, may be taken with the pass/fail option. Some programs do not allow courses, required or elective, to be taken with the pass/fail option. Graduate courses taken on the pass/fail basis cannot be transferred later for credit toward a graduate degree.

Changes from the regular grade basis to pass/fail or vice versa may not be made after the last dates specified in the current Course Listings (https://courses.wustl.edu/Semester/Listing.aspx). The normal regulations for withdrawal or change to auditor status also apply to pass/fail courses.

A final grade of P# (pass) will earn degree credit where applicable. A final grade of F# (fail) will not earn degree credit. Neither P# nor F# will affect the grade point average.

Minimum and Maximum Course Loads

Undergraduate engineering students must take a minimum of 12 units of credit to be considered full-time. Students may not enroll in more than 21 units without special permission and additional per-unit tuition charge.
Repeating a Course

If an Engineering student repeats a course at Washington University, only the second grade is included in the calculation of the grade point average. Both enrollments and grades are shown on the student's official transcript. The symbol R next to the first enrollment's grade indicates that the course was later retaken. Credit toward the degree is allowed for the latest enrollment only.

Academic Probation and Suspension

A student whose work is of unsatisfactory quality is placed on academic probation and is classified as not being in good academic standing. If a student on probation doesn't improve his or her academic record after a reasonable time, probation is followed by dismissal. The regulations governing probation and dismissal are as follows:

1. At the close of each semester, each student's semester grade point average is computed as the total grade points earned during the semester divided by the total credit units attempted. At the same time, the cumulative grade point average is computed as the quotient of the cumulative total of grade points over the cumulative total of credit units attempted. The computations are made on the basis of the grade point scale indicated in the section on grades. Courses taken on a pass/fail basis are not included in these calculations.

2. At the close of each semester, each student's semester and cumulative grade point averages are reviewed. If either is below 2.0, the probation rules stated below apply and the student is notified of any academic probation or dismissal action.

3. At the end of a semester, any student who in the judgment of the associate dean is not making adequate academic progress is required to meet with his or her adviser before enrollment is allowed for the following semester.

4. A student who is dismissed may, if he or she desires to continue, present a written statement setting forth reasons why the student believes the situation should be reconsidered. This statement should be addressed to the Undergraduate Academic Standards Committee and forwarded via the associate dean (Lopata Hall, Room 303).

Probation and Dismissal Rules

Probation follows any semester during which either the semester or cumulative grade point average is less than 2.0, or a student has three I (incomplete) grades at the end of a semester, or a student drops below full-time student status without the approval from his or her academic adviser or the associate dean for students.

A student placed on academic probation may have a “hold” placed on his or her record and must complete the steps below in order to have the hold removed:

1. Within two weeks of receiving a probation notification the student must contact his or her Engineering Student Services (Lopata Hall, Room 303) four-year adviser and schedule a meeting. The scheduled meeting must take place before the end of first week of classes for the upcoming semester.

2. Prepare a written statement with two sections. In the first section, provide a clear explanation of the circumstances that caused the grades received the previous semester. In the second section, describe the student's plan to improve grades in the future. The written statement should be sent to the four-year adviser before the scheduled meeting takes place so that the four-year adviser has an opportunity to review it before the meeting.

3. Meet with the four-year adviser at the scheduled date and time. The meeting is designed for the student to answer the question: “Are you getting appropriate help?” The four-year adviser may recommend that routine meetings take place throughout the semester.

If applicable, the hold will be removed after the student meets with the four-year adviser.

If a student has been on academic probation twice previously, dismissal may follow the next time the student is eligible for probation.

Dismissal may result if a student becomes eligible for probation in two sequential semesters.

Dismissal may result if any course is failed twice.

Dismissal may result if a student was enrolled in credit courses and earns no degree credit at the end of a semester.

First Academic Probation

The first time a student qualifies for probation, he or she is placed on "First Academic Probation." Students placed on First Academic Probation status are sent a letter informing them of this action.

Second Academic Probation

The second time a student qualifies for probation, he or she is placed on "Second Academic Probation." Students placed on Second Academic Probation status are sent a letter informing them of this action.

Special Academic Probation

Special Academic Probation means that a student was eligible for suspension but was not suspended.

Academic Suspension

The third time a student qualifies for probation, or becomes eligible for probation the second semester in a row, or fails the
same course twice, or was enrolled in credit courses and earns no degree credit at the end of a semester, he or she is dismissed from the university. Students placed on academic suspension status are sent a letter informing them of the suspension action. Students who wish to appeal are instructed to prepare a written statement that informs the Academic Standards Committee of the decision to appeal and respond to two questions: explain why the unsatisfactory academic performance occurred, and, if allowed to return, what would be done differently by the student. The student must then attend an appeal hearing. The student’s academic record, written appeal and any other factors the student may wish to discuss are considered by the committee. When the discussion ends, the student leaves the hearing room, and the committee immediately makes a decision regarding the student’s appeal. Engineering Student Services then informs the student of the committee’s decision. The committee’s decision is final (no other appeals are possible). If the appeal is successful, the student is placed on Special Academic Probation and the student is allowed to enroll in classes.

If a student is placed on academic suspension status and chooses not to appeal, or appeals and the appeal is denied, the student is not allowed to enroll in any classes in any division at Washington University. A student placed on academic suspension is classified as not being in good academic standing. If a suspended student would like to return to the university at a future time, the student must apply for reinstatement to the School of Engineering & Applied Science.

Satisfactory Academic Progress and Title IV Financial Aid

Federal regulations require that students receiving federal Title IV financial aid maintain satisfactory academic progress (SAP). SAP is evaluated annually at the end of the spring semester. In order to be considered to be maintaining SAP, and thus be eligible for federal financial aid, a student must maintain minimum requirements for cumulative grade point average (2.0) and pace (credit earned for at least 67 percent of the credits attempted). The degree must also be completed within the maximum time frame allowed for the program (no more than 180 credits). Students who are not maintaining progress will be notified by Engineering Student Services and — barring an approved appeal — are ineligible for aid for future semesters.

Additional information about SAP is available from Student Financial Services (https://sfs.wustl.edu/resources/Pages/Satisfactory-Academic-Progress.aspx).

Full-Time and Part-Time Enrollment

Undergraduate degree programs are full-time programs. Part-time enrollment is not allowed unless serious health problems prevent a student from being enrolled full-time. Part-time enrollment and partial tuition charges are allowed for seniors who must enroll for an extra semester. For students who enroll as freshmen, this status is allowed after their eighth semester. For dual degree students, part-time status is allowed after their fourth semester. (Note: Summer semesters are not counted as an academic semester.) Part-time students take 1 to 11 units and are charged for part-time tuition, along with the standard undergraduate fees. Scholarship support is not normally available for part-time students.

Special Note to senior-level undergraduate students: Senior-level students (those in their eighth semester) will automatically be designated as having full-time enrollment status if taking 6 or more units. All students designated with full-time status will automatically be charged the full-time tuition.

Leaves of Absence

Engineering students may petition to take a leave of absence. On a leave of absence, students in good standing are assured re-enrollment within the next two years. Before returning, the student is to notify the School of Engineering & Applied Science and submit a Reinstatement Form at least six weeks prior to the beginning of the appropriate term. A student wishing to take a medical leave of absence must have a recommendation for the medical leave of absence from Student Health Services submitted to the appropriate dean in the School of Engineering & Applied Science prior to leaving and prior to re-enrollment. The dean will decide whether or not to grant the request for the medical leave of absence and re-enrollment upon reviewing the recommendations from the Student Health Services and the student’s file.

Transfer Credit

A student must get prior approval before taking a course at another university. After completing the course, the student must have an official copy of the transcript sent to the School of Engineering & Applied Science for evaluation. If the credit is accepted, the course will show on the transcript with the units, but not the grade. Only units of credit for courses with a grade of C- or better will transfer. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity policy. The transfer course approval process is outlined on the School of Engineering’s website (http://engineering.wustl.edu/current-students/student-services/Pages/transfer-course-credit.aspx).

University College Courses

Engineering students may only enroll in a limited number of University College courses that have been preapproved by the Engineering Undergraduate Studies Committee. These approved courses listed below taken by students will display on official transcripts, and the course units will count toward engineering degree requirements, but the grade will not be calculated in
grade point averages. Approved courses must be taken for letter grade, and students must earn a minimum grade of C- for the course units to count toward engineering degree requirements.

Current approved courses, which may be needed by students seeking admission into medical school, include:

- U29 Bio 204 Nutrition
- U29 Bio 322 Introduction to Anatomy and Physiology I
- U29 Bio 406 Introduction to Biochemistry
- U29 Bio 4170 Endocrine Physiology
- U29 Bio 4241 Immunology

Students who are required to do so may enroll in the courses listed below; these courses will display on official transcripts but the course units will not count toward engineering degree requirements:

- U15 ELP 1511 Critical Reading and Analytical Writing
- U15 ELP 199 Language Support for English Composition

Undergraduate engineering students in their final year of study may enroll in one University College course (not listed above) each semester. These course units will not count toward graduation requirements.

**Military Training**

Army and Air Force ROTC programs are available at Washington University.

A student in the School of Engineering & Applied Science who takes an ROTC course will have the course name, number, credit units and grade entered on the official transcript. If the course is numbered 100-299, the course’s units and grade will not apply toward the student’s degree requirements; if the course is numbered 300-499 and the grade is D- or better, the course’s units will apply toward the student’s degree requirements (as a free elective) and the grade will be counted in the student’s cumulative and semester grade point average. Credit may be awarded for no more than one course per semester for a maximum of 16 units.

Course descriptions for Air Force ROTC (p. 941) and Army ROTC (p. 941) can be found in the appropriate sections of this Bulletin.

**Physical Education**

Students in the School of Engineering & Applied Science are not required to enroll in physical education courses; however, these courses may be taken for recreation and will count toward the 120 units needed for graduation.

**Administration**

Dean’s Office
314-935-6350

Department of Biomedical Engineering
The remaining units (up to the amount required for the minor) must be applicable units from Washington University. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

Minors

Below is a list of minors offered by the School of Engineering & Applied Science. Visit the following sections of this Bulletin to view more information about a specific minor. Log into WebSTAC (https://acadinfo.wustl.edu/WebSTAC.asp) and select the Major Programs link under Academic Records to declare a minor online.

- Aerospace Engineering (p. 917)
- Applied Physics & Electrical Engineering (p. 880)
- Bioinformatics (p. 859)
- Computer Science (p. 859)
- Electrical Engineering (p. 880)
- Energy Engineering (p. 901)
- Environmental Engineering Science (p. 901)
- Mechanical Engineering (p. 917)
- Mechatronics (p. 917)
- Nanoscale Science & Engineering (p. 901)
- Robotics (p. 917)
- Systems Science & Engineering (p. 880)
Interdisciplinary Opportunities

Washington University offers courses through Interdisciplinary Programs that include studies in a variety of disciplines that cross traditional academic boundaries and support academic areas outside the schools.

- Courses in the Gephardt Institute for Civic and Community Engagement (p. 939) are all cross-listed with specific schools and departments.
- A limited opportunity for some Washington University students to enroll in courses at Saint Louis University and the University of Missouri–St. Louis is available through the Inter-University Exchange Program (p. 940).
- ROTC (p. 941) courses are offered in conjunction with the U.S. Air Force and U.S. Army.
- The Skandalaris Center (p. 944) offers co-curricular programming and practical, hands-on training and funding opportunities to students and faculty in all disciplines and schools.

Gephardt Institute for Civic and Community Engagement

Community-based teaching and learning (CBTL) is embraced by schools and departments across Washington University. Sometimes referred to as service-learning, these courses combine community engagement with academic course work, and integrate classroom theory with practice in the real world.

We have identified over 75 undergraduate- and graduate-level courses for academic year 2016-2017, enhanced by community-based teaching and learning at Washington University. These courses enable students of all disciplines, from business to art, to engage communities in service, projects, and/or observation, while applying their learning in a real life context.

To nurture growth in this area, the Gephardt Institute for Civic and Community Engagement offers technical assistance, community partnership facilitation, and capacity-building grants through the Civic Engagement Fund.

Inter-University Exchange Program

The Inter-University Exchange program between Washington University, Saint Louis University and the University of Missouri-St. Louis began in 1976 as an exchange agreement encouraging greater inter-institutional cooperation at the graduate level. Over time, this program has evolved to include undergraduate education, however, the basic provisions of the original agreement are still in place today and participation continues to be at the discretion of each academic department or unit.

At Washington University, there are several schools that do not participate in this program (i.e., degree-seeking students in these schools are not eligible to participate in the IE program and courses offered in these schools are not open to SLU and UMSL students attending Washington University through the IE program). They are the School of Law, the School of Medicine, University College and the Summer School. The Washington University schools that are open to participation in the Inter-University Exchange program may have specific limitations or requirements on participation; details are available in those offices.

The following provisions apply to all course work taken by Washington University students attending Saint Louis University or the University of Missouri-St. Louis through the Inter-University Exchange program:

- Such courses can be used in the fulfillment of degree or major requirements. (Students should consult with their dean's office for information about how IE course work will count toward GPA, units, and major requirements.)
- Such courses are not regularly offered at Washington University.
- Registration for such courses requires preliminary approval of the student's major/department adviser, the student's division office or dean, and the academic department of the host university.
- Students at the host institution have first claim on course enrollment (i.e., a desired course at SLU or UMSL may be fully subscribed and unable to accept Washington University students).
- Academic credit earned in such courses will be considered as resident credit, not transfer credit.
- Tuition for such courses will be paid to Washington University at the prevailing Washington University rates; there is no additional tuition cost to the student who enrolls in IE course work on another campus. However, students are responsible for any/all fees charged by the host school.
- Library privileges attendant on enrolling in a course on a host campus will be made available in the manner prescribed by the host campus.

Instructions

Washington University students must be enrolled full-time in order to participate in the IE program and have no holds, financial or otherwise, on their academic record at Washington University or at the host institution.

1. The student must complete the Inter-University Exchange application form. Forms are available from the Office of the University Registrar and on its website (link below).
2. The student must provide all information requested in the top portion of the form and indicate the course in which they wish to enroll.
3. The student must obtain the approval signature of the professor teaching the class (or department chair) at SLU or UMSL, preferably in person.
4. The student also must obtain approval signatures of his or her major adviser at Washington University and the appropriate individual in his or her dean's office.
5. Completed forms must be submitted to the Office of the University Registrar in the Women's Building a minimum of one week before the start of the term.
Course enrollment is handled administratively by the registrars of the home and host institutions. Washington University students registered for IE course work will see these courses on their class schedule and academic record at WebSTAC under departments 197 (SLU) and 198 (UMSL). Final grades are recorded when received from the host institution. The student does not need to obtain an official transcript from SLU or UMSL to receive academic credit for IE course work at Washington University.

Reserve Officers Training Corps (ROTC)

- Air Force ROTC — Aerospace Studies (p. 941)
- Army ROTC (p. 943)

Air Force ROTC — Aerospace Studies

Professor
Michael Cook
Lieutenant Colonel, U.S.A.F.

Military Aerospace Science. Our Core Values: Integrity First, Service Before Self, Excellence In All We Do. Air Force operations are currently conducted in the technologically demanding environments of air, space and cyberspace.

AFROTC is a four-year officer development program, producing the leaders of tomorrow’s Air Force. The program’s purpose is to train and develop outstanding college students to earn commissions as U.S. Air Force Officers. Numerous Washington University students have participated in Air Force ROTC and gone on to distinguish themselves as Air Force aviators, engineers, physicans and astronauts.

In AFROTC, Washington University students have the opportunity to be challenged within a unique leadership environment, with the potential to earn a commission as a second lieutenant. Participation in Air Force ROTC is available to freshman and possibly sophomore Washington University students and will not obligate a student to serve in the U.S. Air Force.

Air Force ROTC attracts the very best and brightest college students. The categorization of officer candidates within Air Force ROTC is based upon competitive selection criteria.

For more information, contact the AFROTC Detachment 207 in St. Louis at 314-977-8227 or from our website (http://www.slu.edu/organizations/afrotc); or 888-4-AFROTC or from the AFROTC website (http://www.afrotc.com).

For AFROTC scholarship information, refer to the Scholarship Funds section (p. 30) of this Bulletin.

Army ROTC

Military Science. Army ROTC is a program designed to develop leaders for life. In doing so, it develops leadership, management and training skills regardless of a student’s career plans. Those who successfully complete the program earn a commission as a second lieutenant in the U.S. Army, Army Reserve or Army National Guard.

All students are eligible to participate in Army ROTC courses. Introductory courses are available in which students develop confidence, self-esteem and motivation. The intent is to develop and refine a student’s leadership traits and skills to enable their future success. Instruction also includes the role of the military in national defense strategy. The number of ROTC credits that may be counted toward graduation requirements depends upon the student’s program of study. ROTC students should consult with their academic adviser to determine if or how ROTC course work satisfies graduation requirements. Once a student accepts a scholarship or enters the advanced courses (300 and 400 levels), he or she incurs a military obligation.

For more information, write the Military Science Department, Washington University in St. Louis, 700 Rosedale Ave., Suite 1120, St. Louis, MO 63112, or call 314-935-5521, or visit the Washington University Army ROTC website (http://rotc.wustl.edu), or contact the Army ROTC Scholarships and Enrollment Officer, Mr. Lee Rodriguez (lee.e.rodriguez@wustl.edu).

For Army ROTC scholarship information, refer to the Scholarship Funds section (p. 30) of this Bulletin.

Courses

- Air Force ROTC — Aerospace Studies (p. 941)
- Army ROTC (p. 943)

Air Force ROTC — Aerospace Studies

I02 MAIR 101 Foundations of the United States Air Force I
A survey course designed to introduce students to the U.S. Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officer training, professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and
an introduction to communication skills. Leadership Laboratory is mandatory for AFROTC cadets, and it complements this course by providing students with followership experiences and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the U.S. Air Force and the opportunities available as an officer.

I02 MAIR 102 Foundations of the United States Air Force II
A survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officerhip and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and an introduction to communication skills. Leadership Laboratory is mandatory for Air Force ROTC cadets, and it complements this course by providing students with followership experiences and prepares them for field training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the United States Air Force and the opportunities available as an officer.

I02 MAIR 201 Evolution of USAF Air and Space Power I
A survey course concerned with the beginnings of manned flight and the development of aerospace power in the United States, including the employment of air power in WWI, WWII, Korea, Vietnam, the Gulf War and the peaceful employment of U.S. air power in civic actions, scientific missions and support of space exploration. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing cadets with their first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the United States Air Force and the opportunities available as an officer.

I02 MAIR 202 Evolution of USAF Air and Space Power II
A survey course concerned with the beginnings of manned flight and the development of aerospace power in the United States, including the employment of air power in WWI, WWII, Korea, Vietnam, the Gulf War and the peaceful employment of U.S. air power in civic actions, scientific missions and support of space exploration. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing them with their first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint cadets with the United States Air Force and the opportunities available as an officer.

I02 MAIR 301 Air Force Leadership Studies, Principles of Leadership and Management I
This course is a study in the anatomy of leadership, the need for quality and management leadership, the role of discipline in leadership situations and the variables affecting leadership. Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets study topics that prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.

I02 MAIR 302 Air Force Leadership Studies, Principles of Leadership and Management II
This course continues the study in the anatomy of leadership, the need for quality and management leadership, the role of discipline in leadership situations and the variables affecting leadership. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts. Cadets deal with actual problems and complete projects associated with planning and managing the Leadership Laboratory. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving cadets opportunities to apply leadership and management principles of this course. Classroom activity, three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.

I02 MAIR 401 National Security Studies and Preparation for Active Duty I
Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets study topics that prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.

I02 MAIR 402 National Security Studies and Preparation for Active Duty II
Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets study topics that prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity three hours per week; Leadership Laboratory two hours per week. Aerospace Studies course (MAIR 301 through MAIR
leadership in the context of military operations. Case studies give insight into the importance and practice of teamwork and tactics in real-world scenarios. Enrollment in MILS 202C does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program. Credit 3 units.

I25 MILS 301C Adaptive Team Leadership
This is an academically challenging course where students study, practice, and apply the fundamentals of leadership: Army values and ethics; and small unit tactics using the service learning model in leadership labs and assigned leadership roles. Cadets receive systematic and specific feedback on their leadership attributes and actions. Based on such feedback, as well as their own self-evaluations, cadets continue to develop their leadership and critical thinking abilities as well as their physical fitness and ability to manage stress. At the conclusion of this course students will be capable of planning, coordinating, navigating, motivating and leading a squad in the execution of tactical missions during classroom practical exercises, leadership labs, and during military situational training exercises in field environments. Prerequisite for this course is the successful completion of MILS 101C through 202C, or attendance at the Leader’s Training Course. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program. Credit 3 units.

I25 MILS 302C Applied Team Leadership
Students continue to learn and apply the fundamentals of Army leadership, officership, Army values and ethics as they develop their leadership abilities in a variety of environments including classroom instruction, leadership labs, and assigned leadership roles while utilizing the service learning model. At the conclusion of this course, students will be capable of planning, coordinating, navigating, motivating and leading a platoon in the execution of tactical missions during classroom practical exercises, leadership labs, and during military situational training exercises in field environments. Successful completion of MILS 302C helps prepare students for success at the ROTC Leader Development and Assessment Course (LDAC) which cadets attend during the summer at Fort Knox, Kentucky. Cadets receive systematic and specific feedback on their leadership attributes, values and core leader competencies from instructors, other ROTC cadre and senior cadets. Prerequisite for this course is the successful completion of MILS 301C. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program. Credit 3 units.

I25 MILS 401C Adaptive Leadership
The MILS 401C course transitions the focus of student learning from being trained, mentored and evaluated as a military science 3 cadet to learning how to train, mentor and evaluate underclass cadets. This course focuses on practical application using the service learning model to gain knowledge of adaptive leadership. Students are assigned key battalion leadership roles and are responsible for the daily operation, assessment, and development of the cadet battalion. Throughout the semester, students learn the duties and responsibilities of an Army staff officer, apply the principles of training and management, utilize
the military decision making process, design and employ a comprehensive fitness program, mentor underclass cadets, and use effective verbal and written communication. Students study ethics, the law of war, risk management, counseling, and the Army officer’s role in the Uniform Code of Military Justice. Cadets also learn about the special trust reposed to Army Officers by the U.S. Constitution — a special confidence given to no other civilian profession. Prerequisite for this course is the successful completion of MILS 401C or permission of the Professor of Military Science. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.
Credit 3 units.

I2S MILS 402C Leadership in a Complex World
This course builds on the lessons of MILS 401C. Students continue to use the service learning model to gain leadership experience and knowledge while serving in assigned key battalion leadership roles and are responsible for the daily operation and development of the cadet battalion. MILS 402C explores the dynamics of leading Soldiers in Full-Spectrum Operations in the current operating environment. Students examine military customs and courtesies, military law, principles of war, and rules of engagement in a complex environment against an adaptive enemy. Students also explore aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support. Military science 4 cadets develop and present a battle analysis and participate in a Staff Ride to Pilot Knob an historic military site. The course also places significant emphasis on preparing cadets for their first unit of assignment. It uses case studies and exercise scenarios to prepare cadets to face the complex ethical and practical demands of leading as commissioned officers in the United States Army. Prerequisite for this course is the successful completion of MILS 401C or permission of the Professor of Military Science, Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.
Credit 3 units. EN: S

Our Pursuits
Our initiatives are divided into three parts:
1. Get Connected (p. 944)
2. Get Trained (p. 944)
3. Get Funded (p. 945)

Get Connected
We are building the largest online community of Washington University talent, called ConNEXT (http://skandalaris.wustl.edu/connext). ConNEXT is a networking tool for sharing ideas, exchanging skills, and finding mentors and mentees.

ConNEXT is a resource for those who:
• Need someone else’s help
• Have a skill to offer
• Want to be a mentor
• Want to find a mentor

Join the community via our website (http://skandalaris.wustl.edu/connext) or fill out our connection form (http://wustl-skandalaris.bitbucket.org) to join the newsletter and learn about ways to get involved.

Get Trained
The Skandalaris Center offers co-curricular programs to serve students, alumni, faculty, staff and the community in their entrepreneurial needs. These programs provide real-world, practical training opportunities.

1. Pre-Orientation: Startup (W)U (http://skandalaris.wustl.edu/training/preorientation)
Startup (W)U is the Skandalaris Center's pre-orientation program for incoming first-year students. The program takes place each year on the Sunday-Thursday in August before Orientation and the start of classes. It allows innovative thinkers and students with an idea to be active in entrepreneurship and get to know the Skandalaris Center and St. Louis startup community as soon as they arrive on campus.
Students from all majors are welcome and will experience the journey from idea to venture.

2. Summer Entrepreneurial Internship Program (http://skandalaris.wustl.edu/training/internship)
This 10-week summer program offers undergraduate students in any school the opportunity to experience entrepreneurship in a real-world setting through a paid internship at an early stage startup. Students work at their ventures Monday through Thursday; then on Fridays, they participate in unique activities including site visits to startups, panel discussions, and visits to St. Louis neighborhoods.

3. Student Entrepreneurial Program (STEP) (http://skandalaris.wustl.edu/training/step)

Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship
The Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship (http://skandalaris.wustl.edu) is the place on campus Where Creative Minds Connect.

Mission
At the Skandalaris Center, we provide entrepreneurial resources to those who think differently at Washington University, within St. Louis, and beyond.

Who We Serve
Our initiatives serve all students, alumni, faculty, staff and the community. We call this the SC Network.
STEP provides a unique opportunity for students to own a business on- or off-campus. Student owners can supplement the valuable business and entrepreneurial skills they learn in the classroom while gaining real-world experience as they manage and lead their own businesses.

4. Workshops (http://skandalaris.wustl.edu/training/workshops)
We offer free, noncredit workshops designed to encourage ideation, develop skills and advance ideas. Workshops are held on both campuses, targeted toward various audiences. We recommend, but do not require, that participants attend all sessions, and have found that the workshops help competitors improve their deliverables.

Evidence-Based Entrepreneurship is designed to transform students and faculty from any school into capable innovators and entrepreneurs through seven contiguous sessions.

Washington University Startup Training Lab (WU-STL) is a free, year-long series that serves as a comprehensive introduction to innovation and entrepreneurship. Open to the community.

5. Hatchery (http://skandalaris.wustl.edu/training/hatchery)
Various schools at Washington University offer entrepreneurial training for credit. One such course is The Hatchery (Business Planning for New Enterprises). It is offered by the Olin Business School in both the fall and spring semesters and is open to all students at the university.

Students form teams around a commercial or social venture idea proposed by a student or community entrepreneur. The deliverables for the course include two presentations to a panel of judges and a complete business plan. The deliverables in the course are similar to the deliverables in the Skandalaris Center’s business plan competitions and can be a valuable first step toward competitions and funding for a new venture.

Get Funded

We host several competitions each year that provide funding to social and commercial ventures. Each of these is an annual competition.

The Skandalaris Center Cup (SC Cup) (http://skandalaris.wustl.edu/funding/sc-cup)
- The SC Cup awards student-funded, for-profit ventures.
- Who Can Apply: Washington University students and postdocs
- Award: Up to $5K, six months of mentorship

Social Enterprise and Innovation Competition (SEIC) (http://sites.wustl.edu/seic) • SEIC awards socially focused for-profit and nonprofit ventures. Teams are funded by community donors and foundations.
- Who Can Apply: Anyone (no Washington University affiliation required)
- Award: Award amounts vary

- Translate real, high-level Washington University patents into everyday English, and then apply the technology to an innovative, commercializable use (no licensing options available, strictly educational).
- Who Can Apply: Washington University students and postdocs
- Award: $10K in awards ($5K to undergraduate teams, $5K to graduate and postdoc teams)

Suren G. Dutia and Jas K. Grewal Global Impact Award (GIA) (http://skandalaris.wustl.edu/funding/global-impact-award)
- This awards scalable, impactful, quick-to-market Washington University startups.
- Who Can Apply: Washington University students and recent alumni
- Award: Up to $50K

About This Bulletin ..................................................... 5
About WUSTL .............................................................. 6
Academic Calendar ....................................................... 6
Academic Honors & Awards, Architecture ......................... 67
Academic Honors & Awards, Art ..................................... 117
Academic Honors & Awards, Business ............................ 830
Academic Honors & Awards, College of Arts & Sciences ...... 789
Academic Honors & Awards, Engineering ......................... 933
Academic Regulations, Architecture ................................ 68
Academic Regulations, Art ............................................ 118
Academic Regulations, Business ..................................... 831
Academic Regulations, College of Arts & Sciences .......... 791
Academic Regulations, Engineering ................................ 933
Administration, Architecture, Undergraduate ................. 71
Administration, Art, Undergraduate ................................ 120
Administration, Business ............................................. 833
Administration, College of Arts & Sciences ..................... 794
Administration, Engineering, Undergraduate ................... 937
Admission Procedures, Undergraduate ............................ 18
African and African-American Studies ............................. 129
American Culture Studies ............................................ 148
Anthropology .............................................................. 184
Arabic ...................................................................... 211
Archaeology .............................................................. 215
Architecture .............................................................. 38
Art ........................................................................ 72
Art History and Archaeology ......................................... 223
Arts & Sciences, College of .......................................... 121
Asian-American Studies ............................................... 244
B
Biology ........................................................................ 245
Biomedical Engineering ................................................. 841
BSChE Requirements .................................................. 910
Business School .......................................................... 798
C
Campus Resources ..................................................... 7
ChE Curriculum, Sample ............................................... 911
Chemistry .................................................................... 261
Children’s Studies ....................................................... 269
Chinese ...................................................................... 275
Classics ....................................................................... 282
Comparative Literature ................................................ 290
Computer Science & Engineering ................................... 852
D
Dance ......................................................................... 303
Degree Requirements, Architecture ............................... 65
Degree Requirements, Art ............................................. 116
Degree Requirements, Business .................................... 828
Degree Requirements, College of Arts & Sciences .......... 787
Degree Requirements, Engineering ............................... 930
Development (IAS), Concentration in ............................. 521
Drama ......................................................................... 311
E
Earth and Planetary Sciences ......................................... 324
East Asian Languages and Cultures ............................... 333
East Asian Studies ....................................................... 334
Economics .................................................................... 347
Education ...................................................................... 353
Electrical & Systems Engineering .................................... 871
Electrical Engineering Pre-Med Sample Curriculum ........... 895
Electrical Engineering Sample Curriculum ..................... 896
Energy, Environmental & Chemical Engineering ............. 897
Engineering & Applied Science, School of ..................... 835
English ........................................................................ 368
Environmental Studies ................................................ 388
Eurasian Studies (IAS), Concentration in ......................... 524
European Studies ......................................................... 394
F
Fields of Study, College of Arts & Sciences .................... 128
Fields of Study, Engineering, Undergraduate .................. 840
Film and Media Studies ................................................ 401
Financial Support, Undergraduate ........................................30
Focus .............................................................................412
French ...........................................................................419
G
Gephardt Institute for Civic and Community Engagement ....939
Germanic Languages and Literatures .................................433
Global Cultural Studies (IAS), Concentration in ............527
Greek ...........................................................................440
H
Hebrew ..........................................................................442
Hindi .............................................................................447
History ...........................................................................449
I
Inter-University Exchange Program, Undergraduate ..........940
Interdisciplinary Opportunities, Undergraduate ............939
Interdisciplinary Project in the Humanities .......................484
International Affairs (IAS), Concentration in .............529
International and Area Studies ......................................493
Italian ...........................................................................531
J
Japanese ..........................................................................537
Jewish, Islamic and Near Eastern Languages and Cultures ...542
Jewish, Islamic and Near Eastern Studies .......................544
K
Korean ..........................................................................565
L
Latin ...............................................................................568
Latin American Studies ...................................................570
Legal Studies ................................................................583
Linguistics .......................................................................588
Literature and History .....................................................593
M
Majors (all schools) .............................................................34
Majors (directory), Architecture ......................................71
Majors (directory), Art .....................................................120
Majors (directory), Business .............................................834
Majors (directory), College of Arts & Sciences ...............795
Majors (directory), Engineering .......................................937
Mathematics ...................................................................593
Mechanical Engineering & Materials Science ..................911
Medical Humanities .......................................................911
Medicine and Society .....................................................605
Medieval and Renaissance Studies ..................................607
Mind, Brain and Behavior .................................................608
Minors (all schools) ..........................................................36
Minors (directory), Architecture ....................................71
Minors (directory), Art ....................................................120
Minors (directory), Business ..........................................834
Minors (directory), College of Arts & Sciences ..............796
Minors (directory), Engineering .....................................937
Music ...........................................................................610
P
Pathfinder Program in Environmental Sustainability ..........627
Performing Arts ...............................................................628
Philosophy .....................................................................630
Philosophy-Neuroscience-Psychology ...............................643
Physical Education .............................................................655
Physics ..........................................................................657
Political Science ..............................................................668
Portuguese ......................................................................685
Praxis .............................................................................686
Process Control Systems .................................................928
Psychological & Brain Sciences ......................................689
R
Religion and Politics .........................................................706
Religious Studies ............................................................710
Romance Languages and Literatures ..............................723
ROTC ...........................................................................941
Russian Language and Literature .....................................726
S
Sam Fox School of Design & Visual Arts, Architecture ......63
Sam Fox School of Design & Visual Arts, Art ....................114
Skandalaris Center, Undergraduate ................................944
Sociology .........................................................................729
Spanish ................................................................. 731
Speech and Hearing .................................................. 749
Systems Science & Engineering Pre-Med Sample Curriculum 896
Systems Science & Engineering Sample Curriculum .......... 897

T
Trustees & Administration ........................................... 6
Tuition & Fees, Undergraduate ..................................... 32

U
Undergraduate Study ................................................... 15
University Affiliations ................................................. 13
University of Missouri-St. Louis/Washington University Joint Undergraduate Engineering Program ......................... 930
University Policies ....................................................... 9
Urban Studies ............................................................ 750

W
Women, Gender, and Sexuality Studies ......................... 763
Writing ......................................................................... 782
