## About This Bulletin

The *Undergraduate Bulletin* is the catalog of undergraduate courses and degrees of Washington University in St. Louis. The catalog includes programs, degree requirements, course descriptions, pertinent university policies and faculty for students earning a degree through one of the four undergraduate schools: College of Arts & Sciences; Olin Business School; Sam Fox School of Design & Visual Arts (College of Architecture, College of Art); and School of Engineering & Applied Science.

The *University College Bulletin* is the catalog of University College, the professional and continuing education division of Arts & Sciences at Washington University in St. Louis. The catalog includes programs, degree requirements, course descriptions, and pertinent university policies for students earning a degree through University College.

The *2017-18 Bulletin* is entirely online but may be downloaded in PDF format for printing. Individual pages may be downloaded in PDF format using the "Download This Page as a PDF" option on each page. To download the full PDF, please choose the following:

- Undergraduate Bulletin (PDF: coming soon)
- University College (undergraduate and graduate) (PDF: coming soon)

The degree requirements and policies in the *2017-18 Bulletin* apply to students entering Washington University during the 2017-18 academic year.

Every effort is made to ensure that the information, applicable policies and other materials presented in the *Bulletin* are accurate and correct as of the date of publication (June 29, 2017). Washington University reserves the right to make changes at any time without prior notice. Therefore, the electronic version of the *Bulletin* may change from time to time without notice. The governing document at any given time is the then-current version of the *Bulletin*, as published online, and then-currently applicable policies and information are those contained in that *Bulletin*.

For the most current information about available courses and class scheduling, visit WebSTAC (<https://acadinfo.wustl.edu>). Questions concerning the *Bulletin* may be addressed to [bulletin\\_editor@wustl.edu](mailto:bulletin_editor@wustl.edu).

# About Washington University in St. Louis

## Who We Are Today

Washington University in St. Louis, a medium-sized, independent university, is dedicated to challenging its faculty and students alike to seek new knowledge and greater understanding of an ever-changing, multicultural world. The university is counted among the world's leaders in teaching and research, and draws students from all 50 states, the District of Columbia, Guam, Puerto Rico and the Virgin Islands. Students and faculty come from more than 100 countries around the world.

The university offers more than 90 programs and almost 1,500 courses leading to bachelor's, master's and doctoral degrees in a broad spectrum of traditional and interdisciplinary fields, with additional opportunities for minor concentrations and individualized programs. For more information about the university, please visit the University Facts page (<http://wustl.edu/about/facts>) of our website.

## Enrollment by School

For enrollment information, please visit the University Facts page (<http://wustl.edu/about/facts/#students>) of our website.

## Committed to Our Students: Mission Statement

Washington University's mission is to discover and disseminate knowledge, and protect the freedom of inquiry through research, teaching and learning. Washington University creates an environment to encourage and support an ethos of wide-ranging exploration. Washington University's faculty and staff strive to enhance the lives and livelihoods of students, the people of the greater St. Louis community, the country and the world.

Our goals are:

- to welcome students, faculty and staff from all backgrounds to create an inclusive community that is welcoming, nurturing and intellectually rigorous;
- to foster excellence in our teaching, research, scholarship and service;
- to prepare students with attitudes, skills and habits of lifelong learning and leadership thereby enabling them to be productive members of a global society; and
- to be an institution that excels by its accomplishments in our home community, St. Louis, as well as in the nation and the world.

To this end we intend:

- to judge ourselves by the most exacting standards;
- to attract people of great ability from diverse backgrounds;
- to encourage faculty and students to be bold, independent and creative thinkers;
- to provide an exemplary, respectful and responsive environment for living, teaching, learning and working for present and future generations; and
- to focus on meaningful measurable results for all of our endeavors.

## Trustees & Administration

### Board of Trustees

Please visit the Board of Trustees website (<http://boardoftrustees.wustl.edu>) for more information.

### University Administration

In 1871, Washington University co-founder and then-Chancellor William Greenleaf Eliot sought a gift from Hudson E. Bridge, charter member of the university's Board of Directors, to endow the chancellorship. Soon it was renamed the "Hudson E. Bridge Chancellorship."

Led by the chancellor, the officers of the university administration are detailed on the university website (<http://wustl.edu/about/leadership>).

## Academic Calendar

The academic calendar of Washington University in St. Louis is designed to provide an optimal amount of classroom instruction and examination within a manageable time frame, facilitating our educational mission to promote learning among both students and faculty. Individual schools, particularly our graduate and professional schools, may have varying calendars due to the nature of particular fields of study. Please refer to each school's website for more information.

### Fall Semester 2017

| Date           | Day                | Description         |
|----------------|--------------------|---------------------|
| August 28      | Monday             | Classes begin       |
| September 4    | Monday             | Labor Day holiday   |
| October 14-17  | Saturday-Tuesday   | Fall Break          |
| November 22-26 | Wednesday-Sunday   | Thanksgiving Break  |
| December 8     | Friday             | Last day of classes |
| December 11-13 | Monday-Wednesday   | Reading Days        |
| December 14-20 | Thursday-Wednesday | Final Examinations  |

## Spring Semester 2018

| Date             | Day                | Description                    |
|------------------|--------------------|--------------------------------|
| January 15       | Monday             | Martin Luther King Jr. holiday |
| January 16       | Tuesday            | Classes begin                  |
| March 11-17      | Sunday-Saturday    | Spring Break                   |
| April 27         | Friday             | Last day of classes            |
| April 30 - May 2 | Monday-Wednesday   | Reading Days                   |
| May 3-9          | Thursday-Wednesday | Final Examinations             |
| May 18           | Friday             | Commencement                   |

## Summer Semester 2018

| Date      | Day       | Description                 |
|-----------|-----------|-----------------------------|
| May 21    | Monday    | First Summer Session begins |
| May 28    | Monday    | Memorial Day holiday        |
| July 4    | Wednesday | Independence Day holiday    |
| August 16 | Thursday  | Last Summer Session ends    |

Washington University recognizes the individual student's choice in observing religious holidays that occur during periods when classes are scheduled. Students are encouraged to arrange with their instructors to make up work missed as a result of religious observance, and instructors are asked to make every reasonable effort to accommodate such requests.

## Campus Resources

### Student Support Services

**Cornerstone: The Learning Center.** Located on the first floor of Gregg House on the South 40, Cornerstone is the hub of academic support at Washington University. We provide undergraduate students with help in a variety of forms, including course-specific structured study groups and highly trained academic peer mentors who provide support in locations, at times, and in formats that are convenient for students. Other services include workshops and individual consultations on study skills, time management, and note-taking. Cornerstone also offers fee-based graduate and professional school entrance exam preparation courses. Additionally, Cornerstone administers TRiO, a federally-funded program that offers advising, leadership development, financial assistance, and other support to undergraduate students who are low-income, the first in their family to go to college, and/or have a documented disability. On Sundays and weekday evenings, we offer flexible space where students can study, work on class projects, or relax. Most services are free, and each year, more than 2,000

students participate in one or more of our programs. For more information, visit our website (<http://cornerstone.wustl.edu>) or call 314-935-5970.

**Disability Resources.** Cornerstone is also home to Disability Resources, which assists students with disabilities and students with suspected disabilities by providing guidance and accommodations to ensure equal access to our campus, both physically and academically. Disability Resources serves both undergraduate and graduate students enrolled in the schools on the Danforth Campus. Students enrolled as students in the School of Medicine should contact their program director or their program's Student Affairs staff member. Students enrolled in the Division of Biology & Biomedical Sciences (DBBS) are considered graduate students in Arts & Sciences and are served by Disability Resources. Students may visit our website (<http://disability.wustl.edu>) or call Cornerstone at 314-935-5970 for more information.

**Office for International Students and Scholars.** If a student is joining the university from a country other than the United States, this office can assist that individual through its orientation programs, by issuing certificates of eligibility (visa documents), and by offering special services for non-native English speakers in the English Language Programs. In addition, the office provides personal and cross-cultural counseling and arranges social, cultural and recreational activities that foster international understanding on campus.

The Office for International Students and Scholars is located in the Stix International House at 6470 Forsyth Boulevard and on the Medical School campus in the Mid Campus Center (MCC Building), 4590 Children's Place, Room 2043. For more information, visit our website (<http://oiss.wustl.edu>) or call 314-935-5910.

**Medical Student Support Services.** For information about Medical Student Support Services, please visit the School of Medicine website (<https://medicine.wustl.edu>).

**The Writing Center.** The Writing Center, a free service, offers writing advice to all Washington University undergraduate and graduate students. Tutors will read and discuss any kind of work in progress, including student papers, senior theses, application materials, dissertations, and oral presentations. The Writing Center staff is trained to work with students at any stage of the writing process, including brainstorming, developing and clarifying an argument, organizing evidence, and improving style. Rather than editing or proofreading, tutors will emphasize the process of revision and teach students how to edit their own work. Appointments are preferred and can be made online (<http://writingcenter.wustl.edu>).

The Writing Center is located in Olin Library on level one.

## Student Health Services, Danforth Campus

Student Health Services (SHS) provides medical and mental health care for undergraduate and graduate students. Student Health Services staff members include licensed professionals in Medical Services, Mental Health Services, and Health Promotion Services. Please visit us in Dardick House on the South 40, or visit our website (<http://shs.wustl.edu>) for more information about each of our services and staff members.

### Hours:

Monday, Tuesday and Thursday 8 a.m.-6 p.m.  
Wednesday 10 a.m.-6 p.m.  
Friday 8 a.m.-5 p.m.  
Saturday 9 a.m.-1 p.m.

A nurse answer line is available to answer any medical questions a student may have when SHS is closed. For after-hours care, please call: 314-935-6666.

**Medical Services** staff members provide care for the evaluation and treatment of an illness or injury, preventive health care and health education, and nutrition, physical therapy, travel medicine and women's health services. Student Health Services' providers are considered in-network and are participating members of the Washington University in St. Louis Physician's Network. Any condition requiring specialized medical services will be referred to an appropriate community specialist. Student Health Services accepts most health insurance plans and will be able to bill the plan according to plan benefits when care is accessed at SHS. The student health insurance plan requires a referral any time care is not provided at SHS. Call 314-935-6666 or visit our website (<http://shs.wustl.edu>) to schedule an appointment for medical care, including allergy injections prescribed by your allergist, health consultations, for HIV or other STD testing, or for immunizations.

Appointments also are available for assessment, treatment and referral for students who are struggling with substance abuse.

The SHS pharmacy is available to all Washington University students and their dependents who participate in the student health insurance plan. The pharmacy accepts most prescription insurance plans; please check with the pharmacist to see if your prescription plan is accepted at the pharmacy.

The SHS lab provides full laboratory services. Approximately 20 tests can be performed in the SHS lab. The remainder of all testing that is ordered by SHS is completed by LabCorp. LabCorp serves as our reference lab and is on the student health insurance plan as a preferred provider. The SHS lab can collect any test ordered by our providers.

All incoming students must provide proof of immunization for two measles, mumps, rubella vaccines after the age of one year old. (A titer may be provided in lieu of the immunizations.) Meningococcal vaccine proof is required for all incoming

undergraduate students. A PPD skin test in the past six months is required for students entering the university from certain countries. This list of countries may be found on our website. We suggest all students also have Tetanus Diphtheria immunization within the past five years, Hepatitis A vaccine series, Hepatitis B vaccine series and Varicella vaccine. Medical History Forms are available online (<http://shs.wustl.edu>). Failure to complete the required forms will delay registration and will prevent entrance into housing assignment. Please visit our website (<http://shs.wustl.edu>) for complete information about requirements and deadlines.

**Mental Health Services** staff members work with students to resolve personal and interpersonal difficulties, including conflicts with or worry about friends or family, concerns about eating or drinking patterns, and feelings of anxiety and depression. Although some concerns are more frequent than others, students' experiences are as varied as the students themselves. Staff members help each person figure out their own situation. Services include individual, group and couples counseling; crisis counseling; psychiatric consultation; and referral for off-campus counseling. Call 314-935-6666 or visit our website (<http://shs.wustl.edu>) to schedule an appointment.

**Health Promotion Services** staff members provide information and resources on issues of interest to Washington University students including alcohol and other drugs, weight and body image, sexual health, sleep and stress; customize professional health education programs for groups; and work with groups of students dedicated to educating their peers about healthy decision making. Call 314-935-7139 for more information.

## Important Information About Health Insurance, Danforth Campus

Washington University has a student health fee designed to improve the health and wellness of the entire Washington University community. This fee supports health and wellness services and programs on campus. In addition, all full-time, degree-seeking Washington University students are automatically enrolled in the Student Health Insurance Plan upon completion of registration. Students may opt out of this coverage if there is proof of existing comprehensive insurance coverage. Information concerning opting out of the student health insurance plan can be found online (<http://shs.wustl.edu>) after June 1 of each year. Student Health Services does provide billing services to many of the major insurance companies in the United States. Specific fees and co-pays apply to students using Medical Services and Mental Health Services; these fees may be billable to your insurance plan. More information is available on our website (<http://shs.wustl.edu>).

## Student Health Services, Medical Campus

For information about student health services on the Medical Campus, please visit the Student Health Services page (<http://shs.wustl.edu>).

[bulletin.wustl.edu/medicine/departments/student-health](http://bulletin.wustl.edu/medicine/departments/student-health)) of the medical school *Bulletin*.

## Campus Security

The Washington University campus is among the most attractive in the nation and enjoys a safe, relaxed atmosphere. Your personal safety and the security of your property while on campus is a shared responsibility. Washington University has made safety and security a priority through our commitment to a full-time professional police department, use of closed circuit television, card access, good lighting, shuttle services, emergency telephones, and ongoing educational safety awareness programs. The vast majority of crimes that occur on college campuses are crimes of opportunity, which can be prevented.

The best protection against crime is an informed, alert campus community. Washington University has developed several programs to help make your experience here a safe and secure one. An extensive network of emergency telephones, including more than 200 "blue light" telephones, is connected directly to the University Police Department and can alert the police to your exact location. In addition to the regular shuttle service, an evening walking escort service or mobile Campus Circulator is available on the Danforth Campus.

The Campus2Home shuttle will provide a safe ride home for those living in four designated areas off campus — Skinker-DeBaliviere, Loop South, north of The Loop and just south of the campus — from 7:00 p.m. to 4:00 a.m. seven days a week. The shuttle leaves from both the Mallinckrodt Center and the Brookings Drive steps and takes passengers directly to the front doors of their buildings. Shuttle drivers then will wait and watch to make sure passengers get into their buildings safely.

The University Police Department is a full-service organization staffed by certified police officers who patrol the campus 24 hours a day throughout the entire year. The Police Department offers a variety of crime prevention programs including a high-security bicycle lock program, free personal-safety whistles, computer security tags, personal safety classes for women and men, property inventory services and security surveys. For more information on these programs, check out the Washington University Police Department website (<http://police.wustl.edu>).

In compliance with the Campus Crime Awareness and Security Act of 1990, Washington University publishes online (<http://police.wustl.edu/clerylogsandreports/Pages/default.aspx>) an annual report, *Safety & Security: Guide for Students, Faculty, and Staff & Annual Campus Security and Fire Safety Reports*, which is available to all current and prospective students on the Danforth Campus and university employees on the Danforth, North and West campuses. To request a hard copy, contact the Washington University Police Department, CB 1038, One Brookings Drive, St. Louis, MO 63130-4899, 314-935-9011.

For information regarding protective services at the School of Medicine, please visit the Security page (<https://facilities.med.wustl.edu/security>) of the Washington University Operations & Facility Management Department.

## University Policies

Washington University has various policies and procedures that govern our faculty, staff and students. Highlighted below are several key policies of the university. Web links to key policies and procedures are available on the Office of the University Registrar website (<http://registrar.wustl.edu>) and on the university's Compliance and Policies page (<http://wustl.edu/policies>). Please note that the policies identified on these websites and in this *Bulletin* do not represent an entire repository of university policies, as schools, offices and departments may implement policies that are not listed. In addition, policies may be amended throughout the year.

## Nondiscrimination Statement

Washington University encourages and gives full consideration to all applicants for admission, financial aid and employment. The university does not discriminate in access to, or treatment or employment in, its programs and activities on the basis of race, color, age, religion, sex, sexual orientation, gender identity or expression, national origin, veteran status, disability or genetic information.

## Policy on Discrimination and Harassment

Washington University is committed to having a positive learning and working environment for its students, faculty and staff. University policy prohibits discrimination on the basis of race, color, age, religion, sex, sexual orientation, gender identity or expression, national origin, veteran status, disability or genetic information. Harassment based on any of these classifications is a form of discrimination and violates university policy and will not be tolerated. In some circumstances such discriminatory harassment may also violate federal, state or local law. A copy of the Policy on Discrimination and Harassment (<http://hr.wustl.edu/policies/Pages/DiscriminationAndHarassment.aspx>) is available on the Human Resources website.

## Sexual Harassment

Sexual harassment is a form of discrimination that violates university policy and will not be tolerated. It is also illegal under state and federal law. Title IX of the Education Amendments of 1972 prohibits discrimination based on sex (including sexual harassment and sexual violence) in the university's educational programs and activities. Title IX also prohibits retaliation for asserting claims of sex discrimination. The university has designated the Title IX Coordinator identified below to coordinate its compliance with and response to inquiries concerning Title IX.

For more information or to report a violation under the Policy on Discrimination and Harassment, please contact:

#### **Discrimination and Harassment Response Coordinators**

Apryle Cotton, Asst. Vice Chancellor for Human Resources  
Section 504 Coordinator  
Phone: 314-362-6774  
Email: [apryle.cotton@wustl.edu](mailto:apryle.cotton@wustl.edu)

Leanne Stewart, Employee Relations Manager  
Phone: 314-362-8278  
Email: [leannerstewart@wustl.edu](mailto:leannerstewart@wustl.edu)

#### **Title IX Coordinator**

Jessica Kennedy, Director of Title IX Office  
Title IX Coordinator  
Phone: 314-935-3118  
Email: [jwkennedy@wustl.edu](mailto:jwkennedy@wustl.edu)

You may also submit inquiries or a complaint regarding civil rights to the United States Department of Education's Office of Civil Rights at 400 Maryland Avenue, SW, Washington, DC 20202-1100 or by visiting the U.S. Department of Education website (<http://ed.gov>) or calling 800-421-3481.

## **Student Health**

### **Drug and Alcohol Policy**

Washington University is committed to maintaining a safe and healthful environment for members of the university community by promoting a drug-free environment as well as one free of the abuse of alcohol. Violations of the Washington University Drug and Alcohol Policy (<http://hr.wustl.edu/policies/Pages/DrugandAlcoholPolicy.aspx>) or Alcohol Service Policy (<http://pages.wustl.edu/prograds/alcohol-service-policy>) will be handled according to existing policies and procedures concerning the conduct of faculty, staff and students. This policy is adopted in accordance with the Drug-Free Workplace Act and the Drug-Free Schools and Communities Act.

### **Tobacco-Free Policy**

Washington University is committed to providing a healthy, comfortable and productive work and learning environment for all students, faculty and staff. Research shows that tobacco use in general, including smoking and breathing secondhand smoke, constitutes a significant health hazard. The university strictly prohibits all smoking and other uses of tobacco products within all university buildings and on university property, at all times. A copy of our complete tobacco-free policy (<http://hr.wustl.edu/policies/Pages/tobaccofreepolicy.aspx>) is available on the Human Resources website.

### **Medical Examinations**

Entering students must provide medical information to Student Health Services. This will include completion of a health history

and a record of all current immunizations. The university strongly recommends appropriate vaccination for meningococcal disease.

If students fail to comply with these requirements prior to registration, they will be required to obtain vaccinations for measles, mumps and rubella at Student Health Services, if there is no evidence of immunity. They will be assessed the cost of the vaccinations. Students will be unable to complete registration for classes until all health requirements have been satisfied.

If students are unimmunized, they may be barred from classes and from all university facilities, including housing units, if in the judgment of the university their continued presence would pose a health risk to themselves or to the university community.

Medical and immunization information is to be given via the Student Health Services (<http://shs.wustl.edu>) website. All students who have completed the registration process should access the website and create a student profile by using their WUSTL key. Creating a student profile enables a student to securely access the medical history form. Fill out the form and follow the instructions for transmitting it to Student Health Services. Student information is treated securely and confidentially.

## **Student Conduct**

The University Student Conduct Code sets forth community standards and expectations for Washington University students. These community standards and expectations are intended to foster an environment conducive to learning and inquiry. Freedom of thought and expression is essential to the university's academic mission.

Disciplinary proceedings are meant to be informal, fair and expeditious. Charges of non-serious misconduct are generally heard by the student conduct officer. With limited exceptions, serious or repeated allegations are heard by the campuswide University Student Conduct Board or the University Sexual Assault Investigative Board where applicable.

Complaints against students that include allegations of sexual assault or certain complaints that include allegations of sexual harassment in violation of the University Student Conduct Code are governed by the procedures found in the University Sexual Assault Investigative Board Policy (<https://wustl.edu/about/compliance-policies/governance/usaib-procedures-complaints-sexual-assault-filed-students>), which is available online or in hard copy from the Title IX coordinator or the director of Student Conduct and Community Standards.

Students may be accountable to both governmental authorities and to the university for acts that constitute violations of law and the University Student Conduct Code.

For a complete copy of the University Student Conduct Code (<https://wustl.edu/about/compliance-policies/academic-policies>), visit the university website.

## Undergraduate Student Academic Integrity Policy

Effective learning, teaching and research all depend upon the ability of members of the academic community to trust one another and to trust the integrity of work that is submitted for academic credit or conducted in the wider arena of scholarly research. Such an atmosphere of mutual trust fosters the free exchange of ideas and enables all members of the community to achieve their highest potential.

In all academic work, the ideas and contributions of others must be appropriately acknowledged, and work that is presented as original must be, in fact, original. Faculty, students and administrative staff all share the responsibility of ensuring the honesty and fairness of the intellectual environment at Washington University.

### Scope and Purpose

This statement on academic integrity applies to all undergraduate students at Washington University. Graduate students are governed by policies in each graduate school or division. All students are expected to adhere to the highest standards of behavior.

The purpose of the statement is twofold:

- To clarify the university's expectations with regard to undergraduate students' academic behavior, and
- To provide specific examples of dishonest conduct. The examples are only illustrative, *not* exhaustive.

### Violations of This Policy Include, but Are Not Limited To:

#### 1. Plagiarism

Plagiarism consists of taking someone else's ideas, words or other types of work product and presenting them as one's own. To avoid plagiarism, students are expected to be attentive to proper methods of documentation and acknowledgment. To avoid even the suspicion of plagiarism, a student must always:

- Enclose every quotation in quotation marks and acknowledge its source.
- Cite the source of every summary, paraphrase, abstraction or adaptation of material originally prepared by another person and any factual data that is not considered common knowledge. Include the name of author, title of work, publication information and page reference.
- Acknowledge material obtained from lectures, interviews or other oral communication by citing the source (name of the speaker, the occasion, the place and the date).
- Cite material from the internet as if it were from a traditionally published source. Follow the citation style or requirements of the instructor for whom the work is produced.

#### 2. Cheating on an Examination

A student must not receive or provide any unauthorized assistance on an examination. During an examination a student may use only materials authorized by the faculty.

#### 3. Copying or Collaborating on Assignments without Permission

When a student submits work with their name on it, this is a written statement that credit for the work belongs to that student alone. If the work was a product of collaboration, each student is expected to clearly acknowledge in writing all persons who contributed to its completion.

Unless the instructor explicitly states otherwise, it is dishonest to collaborate with others when completing any assignment or test, performing laboratory experiments, writing and/or documenting computer programs, writing papers or reports, and completing problem sets.

If the instructor allows group work in some circumstances but not others, it is the student's responsibility to understand the degree of acceptable collaboration for each assignment, and to ask for clarification if necessary.

To avoid cheating or unauthorized collaboration, a student should never:

- Use, copy or paraphrase the results of another person's work and represent that work as one's own, regardless of the circumstances.
- Refer to, study from or copy archival files (e.g., old tests, homework, solutions manuals or backfiles) that were not approved by the instructor.
- Copy another's work, or permit another student to copy one's work.
- Submit work as a collaborative effort if they did not contribute a fair share of the effort.

#### 4. Fabrication or Falsification of Data or Records

It is dishonest to fabricate or falsify data in laboratory experiments, research papers or reports or in any other circumstances; to fabricate source material in a bibliography or "works cited" list; or to provide false information on a résumé or other document in connection with academic efforts. It is also dishonest to take data developed by someone else and present them as one's own.

Examples of falsification include:

- Altering information on any exam, problem set or class assignment being submitted for a re-grade.
- Altering, omitting or inventing laboratory data to submit as one's own findings. This includes copying laboratory data from another student to present as one's own; modifying

data in a write-up; and providing data to another student to submit as one's own.

## 5. Other Forms of Deceit, Dishonesty or Inappropriate Conduct

Under no circumstances is it acceptable for a student to:

- Submit the same work, or essentially the same work, for more than one course without explicitly obtaining permission from all instructors. A student must disclose when a paper or project builds on work completed earlier in their academic career.
- Request an academic benefit based on false information or deception. This includes requesting an extension of time, a better grade or a recommendation from an instructor.
- Make any changes (including adding material or erasing material) on any test paper, problem set or class assignment being submitted for a re-grade.
- Willfully damage the efforts or work of other students.
- Steal, deface or damage academic facilities or materials.
- Collaborate with other students planning or engaging in any form of academic misconduct.
- Submit any academic work under someone else's name other than one's own. This includes but is not limited to sitting for another person's exam; both parties will be held responsible.
- Engage in any other form of academic misconduct not covered here.

This list is not intended to be exhaustive. To seek clarification, students should ask the professor or the assistant to the instructor for guidance.

## Reporting Misconduct

### Faculty Responsibility

Faculty and instructors are strongly encouraged to report incidents of student academic misconduct to the academic integrity officer in their school or college in a timely manner so that the incident may be handled fairly and consistently across schools and departments. Assistants to the instructor are expected to report instances of student misconduct to their supervising instructors. Faculty members are expected to respond to student concerns about academic dishonesty in their courses.

### Student Responsibility

If a student observes others violating this policy, the student is strongly encouraged to report the misconduct to the instructor, to seek advice from the academic integrity officer of the school or college that offers the course in question, or to address the student(s) directly.

## Exam Proctor Responsibility

Exam proctors are expected to report incidents of suspected student misconduct to the course instructor and/or the Disability Resource Center, if applicable.

## Procedure

### Jurisdiction

This policy covers all undergraduate students, regardless of their college of enrollment. Cases will be heard by school-specific committees according to the school in which the class is listed, not the school in which the student is enrolled. All violations and sanctions will be reported to the student's college of enrollment.

### Administrative Procedures

Individual undergraduate colleges and schools may design specific procedures to resolve allegations of academic misconduct by students in courses offered by that school, so long as the procedures are consistent with this policy and with the University Student Conduct Code.

## Student Rights and Responsibilities in a Hearing

A student accused of an academic integrity violation, whether by a professor, assistant to instructor, academic integrity officer or student, is entitled to:

- Review the written evidence in support of the charge.
- Ask any questions.
- Offer an explanation as to what occurred.
- Present any material that would cast doubt on the correctness of the charge.
- Determination of the validity of the charge without reference to any past record of misconduct.

When responding to a charge of academic misconduct, a student may:

- Deny the charges and request a hearing in front of the appropriate academic integrity officer or committee.
- Admit the charges and request a hearing to determine sanction(s).
- Admit the charges and accept the imposition of sanctions without a hearing.
- Request a leave of absence from the university. The academic integrity matter must be resolved prior to re-enrollment.
- Request to withdraw permanently from the university with a transcript notation that there is an unresolved academic integrity matter pending.

A student has the following responsibilities in resolving the charge of academic misconduct:

- Admit or deny the charge. This will determine the course of action to be pursued.

- Provide truthful information regarding the charges. It is a University Student Conduct Code violation to provide false information to the university or anyone acting on its behalf.

## Sanctions

### If Found *Not* in Violation of the Academic Integrity Policy

If the charges of academic misconduct are not proven, no record of the allegation will appear on the transcript.

### If Found in Violation of the Academic Integrity Policy

If, after a hearing, a student is found to have acted dishonestly, or if a student has admitted to the charges prior to a hearing, the school's academic integrity officer or committee may impose sanctions, including but not limited to the following:

- Issue a formal written reprimand.
- Impose educational sanctions, such as completing a workshop on plagiarism or academic ethics.
- Recommend to the instructor that the student fail the assignment. (A grade is ultimately the prerogative of the instructor.)
- Recommend to the instructor that the student fail the course.
- Recommend to the instructor that the student receive a course grade penalty less severe than failure of the course.
- Place the student on disciplinary probation for a specified period of time or until defined conditions are met. The probation will be noted on the student's transcript and internal record while it is in force.
- In cases serious enough to warrant suspension or expulsion from the university, refer the matter to the University Student Conduct Board for consideration.

Additional educational sanctions may be imposed. This list is not intended to be exhaustive.

Withdrawing from the course will not prevent the academic integrity officer or hearing panel from adjudicating the case, imposing sanctions or recommending grade penalties, including a failing grade in the course.

A copy of the sanction letter will be placed in the student's academic file.

## Appeals

If a student believes the academic integrity officer or the committee did not conduct a fair hearing, or if a student believes the sanction imposed for misconduct is excessive, they may appeal to the University Student Conduct Board within 14 days of the original decision. Appeals are governed by Section VII C of the University Student Conduct Code.

## Records

### Administrative Record-Keeping Responsibilities

It is the responsibility of the academic integrity officer in each school to keep accurate, confidential records concerning academic integrity violations. When a student has been found to have acted dishonestly, a letter summarizing the allegation, the outcome and the sanction shall be placed in the student's official file in the office of the school or college in which the student is enrolled.

Additionally, each school's academic integrity officer shall make a report of the outcome of every formal accusation of student academic misconduct to the director of Student Conduct and Community Standards, who shall maintain a record of each incident.

### Multiple Offenses

When a student is formally accused of academic misconduct and a hearing is to be held by an academic integrity officer, a committee, or the Office of Student Conduct and Community Standards, the person in charge of administering the hearing shall query the Office of Student Conduct and Community Standards about the student(s) accused of misconduct. The director shall provide any information in the records concerning that student to the integrity officer. Such information will be used in determining sanctions *only* if the student is found to have acted dishonestly in the present case. Evidence of past misconduct may not be used to resolve the issue of whether a student has acted dishonestly in a subsequent case.

### Reports to Faculty and Student Body

School and college academic integrity officers are encouraged to make periodic (at least annual) reports to the students and faculty of their school concerning accusations of academic misconduct and the outcomes, without disclosing specific information that would allow identification of the student(s) involved.

## Graduate Student Academic Integrity Policies

For graduate student academic integrity policies, please refer to each individual graduate school.

### Statement of Intent to Graduate

Students are required to file an Intent to Graduate at WebSTAC (<https://acadinfo.wustl.edu>) prior to the semester in which they intend to graduate. Additional information is available in the dean's offices of each school and in the Office of the University Registrar (<http://registrar.wustl.edu>).

## Student Academic Records and Transcripts

The Family Educational Rights and Privacy Act of 1974 (FERPA) — Title 20 of the United States Code, Section 1232g, as amended — provides current and former students of the university with specific rights of access to and control over their student record information. In compliance with the statute, appropriate federal regulations and guidelines recommended by the American Association of Collegiate Registrars and Admissions Officers, the university has adopted procedures that implement these rights.

A copy of the university policies regarding educational records and the release of student record information is available from the Office of the University Registrar (<http://registrar.wustl.edu>) and the university website (<http://www.wustl.edu>).

Transcript requests may be submitted to the Office of the University Registrar through WebSTAC. Instructions and additional information are available on the University Registrar website (<http://registrar.wustl.edu>).

## University Affiliations

Washington University is accredited by the Higher Learning Commission (<https://www.hlcommission.org>) (800-621-7440). Washington University is a member of the Association of American Universities, the American Council on Education, the College Board, and the Independent Colleges and Universities of Missouri.

The College of Arts & Sciences is a member of the Center for Academic Integrity and the American Association of College Registrars.

The College of Architecture was one of the eight founding members of the Association of Collegiate Schools of Architecture (ACSA) in 1912.

The Graduate School is a founding member of both the Association of Graduate Schools and the Council of Graduate Schools.

The Graduate School of Architecture & Urban Design's Master of Architecture degree is accredited by the National Architectural Accreditation Board (NAAB).

The Sam Fox School of Visual Arts & Design (Art) is a founding member of, and is accredited by, the National Association of Schools of Art and Design (NASAD).

The Olin Business School is a charter member of the Association to Advance Collegiate Schools of Business International (1921) (AACSB).

In the School of Engineering & Applied Science, many of the professional degrees are accredited by the Engineering Accreditation Commission of ABET (<http://abet.org>).

University College is a member of the University Professional and Continuing Education Association, the North American Association of Summer Sessions, the Association of University Summer Sessions and the Center for Academic Integrity. Business-related programs in University College are not accredited by the Association to Advance Collegiate Schools of Business (AACSB International).

The School of Law is accredited by the American Bar Association. The School of Law is a member of the Association of American Law Schools, the American Society of Comparative Law, the Clinical Legal Education Association, the Southeastern Association of Law Schools, the Central Law Schools Association, the Mid-America Law Library Consortium, the American Association of Law Libraries, and the American Society of International Law.

The School of Medicine is a member of the Liaison Committee on Medical Education.

The Brown School at Washington University is accredited by the Council on Social Work Education and the Council on Education for Public Health.

The University Libraries are a member of the Association of Research Libraries.

The Mildred Lane Kemper Art Museum is nationally accredited by the American Alliance of Museums.

# Undergraduate Study

## Class Size

Nearly three-fourths of Washington University's undergraduate classes range from one to 24 students. We believe smaller classes help students learn more through stimulating group discussion. Many classes may be larger at first, but they generally become smaller as students progress in their chosen fields.

Depending on the department, classes may be smaller or larger.

## Average Class Sizes by Level

| Class Size | L-100 | L-200 | L-300 | L-400 |
|------------|-------|-------|-------|-------|
| 1-10       | 74    | 69    | 121   | 137   |
| 11-24      | 168   | 109   | 196   | 133   |
| 25-39      | 30    | 31    | 39    | 35    |
| 40-64      | 27    | 27    | 55    | 29    |
| 65-100     | 8     | 14    | 23    | 12    |
| 101-200    | 19    | 5     | 7     | 7     |
| Over 200   | 11    | 5     | 1     | 0     |
| Total      | 337   | 260   | 442   | 353   |

## Teaching and Learning at Washington University

*Undergraduate Council November 10, 1999,  
Teaching Subcommittee of the Undergraduate Council,  
Walter Chan and Robert E. Hegel, Co-Chairs.*

*Amended by the Teaching Learning Subcommittee of the  
Undergraduate Council on January 27, 2010, and October 30,  
2015.*

*Amended statements endorsed by the Undergraduate Council  
on February 2, 2010, and November 2, 2015.*

### **All members of the Washington University community share responsibility for creating an atmosphere conducive to learning.**

A collaborative learning environment involves the active participation of both instructors and students in the classroom and in activities outside the classroom. This environment requires:

- best efforts on the part of both faculty and students to enhance the learning experience for the benefit of all persons involved;
- recognizing that everyone present plays an important role; all participants in the learning experience deserve respect for what they contribute; and both faculty and students be sensitive to the importance of the others in this process;
- an atmosphere that embraces multiple identities in the classroom by demonstrating mutual respect for all persons

regardless of political, racial, ethnic, religious, gender, sexual orientation, age, disability, socioeconomic or veteran status.

In response to changing classroom dynamics, we, the Undergraduate Council, make the following recommendations:

### **Expectations and responsibilities of the faculty**

The faculty member is involved in several major roles, including those of teacher, scholar-researcher, and citizen in the university. For the unimpeded performance of these functions, the faculty member is guaranteed academic freedom. At the same time, the faculty member has clear responsibilities to the students and to the institution, particularly in the faculty member's role as teacher. Instructors should provide the basic outlines for the learning experience and provide guidance as appropriate, generally in the form of a handout or easily accessible electronic document. Such guidance should normally involve:

- presenting a syllabus that:
  - identifies the goals of the course and its prerequisites, a schedule of major assignments and examinations, explicit criteria for how student work will be evaluated;
  - articulates ground rules for classroom interaction and consequences for infringement (How much active participation is expected of the student? Is attendance required? Is it acceptable to eat during class? What are the guidelines for collaboration inside and outside of the classroom?);
  - establishes behavior expectations for the class, including respecting every member, listening and engaging;
  - makes clear expectations for technology use during class;
  - includes links to information about inclusion and diversity, bias reporting, accommodations based upon sexual assault and mental health;
- reminding students of, and upholding, the university's standards for academic integrity;
- bringing new perspectives and insights to assigned readings and other text materials;
- conducting classroom and one-on-one interactions in keeping with the university's guidelines on diversity and inclusion;
- regularly meeting and punctuality in starting and dismissing class;
- prompt and responsible grading (including midterms), with evaluative comments and opportunities for students to discuss their grades with the faculty member;
- adherence to the announced office hour schedule and offering as many avenues as possible for contact, including by online venue, telephone or email;

- using appropriate, relevant technology both inside and outside of the classroom to enhance communication between faculty and students;
- uploading course materials and sending emails or other notifications in a timely manner;
- overseeing Teaching Assistants (TAs), including the training of TAs, providing definitions of grading expectations as per the University Code of Conduct, providing detailed rubrics for grading evaluations, case studies and projects, and ensuring a faculty review in the event students contest their grade and petition for regrading, especially to ensure grading uniformity;
- regular communication between two professors or more when they share in the teaching process of a one-semester course, including agreement about responsibilities, assignments given to students, and due dates expected;
- facilitation of and reflection on student evaluations of the faculty member's teaching methods and materials, including midsemester evaluations, as a means of creating an atmosphere of shared responsibility within the classroom;
- regular communication with students regarding progress in the course, ways to improve, grading structure;
- avoiding prohibitive costs when ordering textbooks and other course materials; making electronic text available;
- adhering to the published final examination schedule to avoid interfering with students' preparation for other classes;
- showing up to all the classes and giving students the full number of contact hours they deserve each semester.

#### ***Expectations and responsibilities of the students***

Students must take responsibility for their own learning. Students also share with the instructor the responsibility for providing an environment conducive to learning. Students should personally:

- actively engage in learning the material and with the process of education, including meeting with the instructor and/or TA when requested to or when necessary;
  - use the course materials, faculty expertise, and expectations for learning to build their own knowledge and skills;
- attend all classes, both lecture and discussion sessions, and participate in class discussions; leave class only for emergencies; use online resources for augmentation and review, not as a substitute for class;
- be punctual in completing assignments;
- behave in the classroom in a manner that demonstrates respect for all students and faculty and follows university guidelines for diversity and inclusion;
- adhere to instructor's expectation for the use of technology during class, including laptops, tablets and phones;

- share responsibility for the flow of information concerning a course by regularly checking the course webpage, online discussion groups and university email;
- be familiar with, and adhere to, matters of academic integrity as identified by their instructors and their school within the university;
- participate in objective and constructive evaluations of the instructor, course content according to the syllabus, and required textbooks/materials to clarify opportunities and strengths that will help the instructor to improve the course in subsequent semesters;
- conform to the ground rules of the course as defined in the syllabus.

#### ***Learning outside the classroom***

Students and instructors should consult at the beginning of the semester about the content and expectations regarding independent study, supervised internships, supervised research, fieldwork, and international learning.

Students and instructors should familiarize themselves with division/department/program policies regarding independent studies and internship opportunities.

#### ***Special student concerns***

Students should take the initiative to inform the faculty of anticipated absences prior to the scheduled event and discuss special arrangements to compensate for missed instruction. Should the absence be emergent or unanticipated, it is the student's responsibility to inform the faculty in a timely manner to minimize disruption of class progression as a whole. Students should recognize that the collective needs of the faculty and other students in a course may outweigh individual priorities. Faculty should be sensitive to individual student needs for special arrangements:

- to accommodate disabilities, illnesses, family emergencies or academic or professional opportunities that interfere with usual class attendance or performance;
- to provide accommodations when students miss class because of religious holidays.

#### ***Responsibilities of the university administration***

For its part, the university administration must:

- continue to provide facilities and ensure adequate classroom and laboratory space that is stocked with sufficient, appropriate equipment;
- give priority to supporting both faculty and students in teaching and learning;
- provide opportunities for professional, student, and leadership development in both teaching and learning;
- be responsive when normal communications between faculty and students break down by providing for a process for discussion and negotiations;

- facilitate communication among various constituents of the university;
- facilitate the flow of visitors to the classroom by providing faculty ample notice.

**Where to get help**

For instructors: The departmental chair or associate chair, the Teaching Center, colleagues, and the relevant dean's office offer very useful advice on teaching techniques, materials and methods.

For students: The instructor, the Teaching Assistants, and Cornerstone: The Learning Center (<http://cornerstone.wustl.edu>) can be counted on for guidance on best learning techniques and practices. The Writing Center (<http://writingcenter.wustl.edu>) can be a very helpful resource for all levels of written assignments from concept identification and document structuring through final paper editing.

Should a student concern occur, the general process of communication and request for assistance, guidance, and problem resolution is to:

1. Raise the concern with the faculty member;
2. if the resolution has not been achieved, raise the concern with the associate chair or department chair;
3. if resolution has not been achieved, raise the concern with the student's adviser(s).

Concerns and/or disagreements that have not been resolved by this process can be addressed to the ombudsperson.

If the student has a concern related to discrimination or harassment, the University Policy on Discrimination and Harassment (<http://hr.wustl.edu/policies/Pages/DiscriminationAndHarassment.aspx>) provides additional information about resources and options.

10/30/2015\*

*\*This document shall be reviewed every five years.*

# Admission Procedures

## First-Year Admission

The admissions committee reviews and assesses each application personally. Admission to Washington University is both selective and competitive. Students who come to Washington University have challenged themselves academically and personally during their high school years and are required to have earned a high school diploma or equivalent. A student's senior-year transcript should show that they continue to take demanding courses. Most applicants take advantage of honors, advanced placement and international baccalaureate courses, if offered by their high schools.

### Most candidates' transcripts include:

- four years of English
- four years of mathematics (Architecture, Business and Engineering strongly recommend calculus.)
- three to four years of history or social science
- three to four years of laboratory science (Engineering strongly recommends chemistry and physics.)
- at least two years of a foreign language
- both chemistry and physics, as well as the most challenging math programs available, for students who plan to do course work in sciences and/or pre-medicine

### Other important parts of a student's application:

- grades and class rank (if the student's school ranks students)
- counselor and teacher recommendations
- essay
- extracurricular and community activities
- standardized test scores (Either SAT or ACT; writing is not required. SAT Subject Tests are not required. Test results from any of the student's high school years are acceptable, though we encourage senior-year testing. We consider only the highest individual scores, whenever they occurred.)

## Applying for Admission

For a student's application file to be complete, we must receive the following materials by the deadline for the decision plan selected:

- Common Application or Coalition Application including Washington University's brief supplemental questions. There is no supplemental essay.
- non-refundable \$75 fee

- All supporting materials, including the personal essay, a teacher recommendation, school report for first-year admission or dean's report for transfer admission, and official transcript.

## Decision Plans

Washington University offers a binding Early Decision option, with a deadline of November 1 and notification by December 15 each year, and Regular Decision, with a deadline of January 2 and notification by April 1 each year.

If Washington University is the student's first choice, we encourage the student to apply under Early Decision. Applying under Early Decision signifies a binding commitment that the student will attend Washington University if admitted. This option requires the applicant to submit a nonrefundable enrollment deposit within two weeks of receiving a letter of admission. If admitted, the student must withdraw other applications. A student may apply only to one school under a binding Early Decision plan.

## Selecting a Division

We encourage students to think about where their interests may lie at the time they apply, in terms of a major and a degree path to pursue, and to select one of the five divisions (architecture, art, arts & sciences, business, engineering) as the primary point of interest. This allows us to ensure proper preparation and to provide effective academic advising from the start to help students realize their goals. Once admitted to a division, a student must spend one full semester in that division before requesting a change to another undergraduate division at Washington University. Students wishing to switch undergraduate divisions after the first semester do so by meeting with their dean's office.

## If English Is Not the Student's Primary Language

Either TOEFL (Test of English as a Foreign Language) or IELTS (International English Language Testing System) is required of all international students for whom English is a second language and recommended for U.S. citizens whose second language is English. The tests administered in December of each year will be the last ones accepted for the following admission year.

## Portfolios

In addition to the standard application materials mentioned above, applicants for the College of Architecture are encouraged and applicants for the College of Art are required to submit a portfolio of their work. All College of Art students will be considered for the Conway or Proetz Scholarship in art.

Portfolios should be submitted through SlideRoom and should include 12 to 15 pieces of recent work, which may include drawings, two- and three-dimensional pieces, or photographs. (If submitting an architecture portfolio, please do not include

CAD drawings or examples of drafting skills.) The applicant may include additional information such as the title, medium, dimensions, and date completed.

## Deferred Enrollment

Admitted students, who have submitted the enrollment deposit and wish to begin their studies at a later date, may defer enrollment at Washington University for a period of one year with an option to extend for one additional year. Deferred enrollment is designed for students who wish to travel or work between high school and college. Courses taken during the deferred period normally will not be accepted for credit; the final decision on transferability of credit lies with the dean's office. Deferral should be requested in writing from the Office of Undergraduate Admissions. The Committee on Admissions will review the applicant's case and notify the applicant of its decision. The applicant must reapply for financial assistance during the application cycle immediately preceding the date of desired entry.

Please visit the Admissions website (<http://admissions.wustl.edu>).

## Transfer Admission

Transfer admission to Washington University is selective and competitive. The student should apply as a transfer student if they meet all of the following requirements:

1. The applicant has finished secondary school and completed some college study.
2. The applicant would like to be considered for admission with advanced standing at Washington University.
3. The applicant is interested in enrolling full-time in an undergraduate degree program with a specific academic focus.
4. The applicant has never attended any of Washington University's full-time, degree-granting schools.

Washington University accepts applications for transfer admission in the fall semester. For current application deadlines ([https://admissions.wustl.edu/apply\\_site/Pages/Transfer-Application-Calendar.aspx](https://admissions.wustl.edu/apply_site/Pages/Transfer-Application-Calendar.aspx)), please visit the Admissions website. In any given year, any academic division may have from zero to a small handful of slots available. With this small number of transfer spots open, we recommend the strongest candidates for admission present proof of a high school diploma or equivalent and proof of a high level of academic success at their current institution. Successful applicants present *at least* a B+ average from a two-year or four-year college in courses across a broad academic curriculum. Some of our academic divisions require specific grades in specific courses. For example, students with interests in engineering, business, or the physical or biological sciences must present a strong background in science and mathematics including calculus. In addition, applicants must

have left their current institution and all previous institutions in good standing and be eligible to return.

If an applicant has been away from a formal academic setting for more than two years, we require the applicant to complete at least one year (30 hours) of work at another college or university before submitting an application for transfer admission.

Applicants who are in their first year of college must present at least one completed semester of full-time college work with an application for transfer admission and submit a completed Mid-Semester Progress Report.

Applicants must submit their high school transcripts, the application, official transcripts of all previous college work, standardized test scores (SAT or ACT taken during high school), a Transfer Academic Evaluation, a Transfer Registrar Report, and the nonrefundable \$75 application fee to the Office of Undergraduate Admissions. For admissions information, please visit the Admissions website (<http://admissions.wustl.edu>).

Applicants who wish to be considered for financial assistance must file the Financial Aid Profile or Washington University's Family Financial Profile (FFP) on the Student Financial Services website (<https://sfs.wustl.edu/pages/family-financial-profile.aspx>). Detailed information on financial support (p. 30) can be found in this *Bulletin*.

Transfer admission information for individual schools is listed as follows.

## Transferring into Arts & Sciences

Each year a number of students from other colleges and universities transfer into the College of Arts & Sciences. Upon their admission the transfer student adviser reviews and evaluates their previous academic work. Full credit is normally granted for courses taken at accredited institutions provided that the university offers comparable courses and the student has completed the courses with a grade of C or better (**please note: online course work does not transfer**). In addition, transfer credit may be counted where applicable and upon approval toward major or minor requirements. Transfer students must be enrolled for at least four consecutive full-time semesters to satisfy the residency requirement. They must complete a minimum number of units at Washington University, and a minimum number of units in the College of Arts & Sciences, according to the table found under the heading "Transfer Students" on the Arts & Sciences Degree Requirements (p. 886) page of the Arts & Sciences section of this *Bulletin*.

All transfer students are assigned an academic adviser. When they declare a major, they also meet with an adviser in the major department. The full range of curricular opportunities offered through the college is open to transfer students when prerequisites are satisfied. An applicant should direct specific questions about transfer credit and course sequences at Washington University to the College of Arts & Sciences.

## Transferring into Architecture

Places for transfer students are extremely limited and require strong performance in an arts and sciences curriculum, and preferably preparation in the visual arts. Placement into the design studio sequence is determined by portfolio review. To assist in appropriate placement, an interview with the associate dean of students, while not required, is strongly recommended. The applicant should bring a transcript to the meeting. The applicant's previous work should parallel as closely as possible the course work outlined on the Architecture Degree Requirements (p. 70) page.

Transfer applicants to the College of Architecture are **required** to submit a portfolio consisting of 12 to 15 pieces of recent work for review by the faculty through the SlideRoom function of the Common Application. This should include examples of work that indicate the applicant's technical and conceptual level of accomplishment. Some drawing should be from direct observation. If possible, submit examples of work in different media to demonstrate a range of art and design experiences.

## Transferring into Art

The number of studio art credits a transfer applicant has already earned, combined with an evaluation of the applicant's portfolio, determines the level at which the student is admitted. As much as possible, the studio art courses taken at other institutions should correspond to the program at Washington University as outlined on the Art Degree Requirements (p. 131) page. To assist in appropriate placement, an interview with the associate dean of students, while not required, is strongly recommended. The applicant should bring a transcript to the meeting.

Transfer applicants to the College of Art are **required** to submit a portfolio through the SlideRoom function of the Common Application for faculty review. The portfolio should consist of 12 to 15 pieces of recent work, showing a variety of art experiences, including drawings, work utilizing design principles, and some work in color. Include examples of work from basic drawing and design classes that indicate the applicant's technical and conceptual level of accomplishment — some drawing should be from direct observation. If possible, submit examples of work in different media to demonstrate a range of art and design experiences. If applying to the second- or third-year level, some of the work should be in the area of the applicant's intended major.

## Transferring into Business

The Olin Business School offers transfer enrollment in the fall semester. The strongest candidates for admission present a strong academic performance from a two-year or four-year college that mirrors most of our academic requirements for our students at the freshman and sophomore levels. For a sophomore transfer candidate, this would include Calculus II at the college level. For a junior-level transfer candidate, this also would include financial accounting, microeconomics and perhaps

macroeconomics and managerial accounting. All transfers to the Olin School must have completed an equivalent to Calculus II at the college level. Students who are admitted to the Olin Business School should expect a written course evaluation from the transfer student adviser within two weeks of receiving their acceptance letter, indicating which courses will be accepted by the Olin School. A maximum of 60 credits will be accepted toward our undergraduate degree. Students must earn at least a C grade in the course for the units to transfer to Washington University. Courses taken online are not accepted as transfer credit. Grades will not transfer to Washington University.

All transfer students are assigned an academic adviser. Transfer students must be enrolled for at least four consecutive full-time semesters to satisfy the residency requirement.

Please refer to the Degree Requirements (p. 930) for the Bachelor of Science in Business Administration degree.

## Transferring into Engineering

Applicants may apply for admission if they have completed a minimum of one year of college work elsewhere. The transfer applicant must demonstrate academic achievement (grade average of B+ or better) with strength in mathematics (calculus) and science (chemistry/physics). Transfer applicants to the School of Engineering & Applied Science should have completed one semester of an English composition course, two semesters of calculus-based physics, and sufficient calculus (typically three semesters) to be prepared to take differential equations. Applicants interested in biomedical engineering should also have completed at least one semester of chemistry with lab and an introductory biology sequence which includes cellular, molecular and developmental biology and genetics. Applicants interested in chemical engineering should have completed at least one biology course and sufficient chemistry to be ready to take organic chemistry. After completing the application process, an evaluation of the applicant's record will be made to determine the transferability of college credit. Grades earned do not transfer, but the applicant must earn a letter grade of C- or better for the course credit to transfer. Courses taken pass/fail do not transfer.

To be recommended for any bachelor's degree, a transfer applicant must satisfy applicable requirements of the School of Engineering & Applied Science shown under Degree Requirements (p. 1033). Please note that all students earning an undergraduate engineering degree are required to complete a minimum of 60 course units at Washington University.

## Pre-Matriculation Units

Pre-matriculation units of credit are earned before an applicant's enrollment at Washington University as a first-year student, which can be applied toward a Washington University degree. A maximum of 15 units of pre-matriculation credit may be counted toward any undergraduate degree. These units will count toward graduation but will not meet general education requirements.

Sources for pre-matriculation units of credit include Advanced Placement (AP) examinations, International Baccalaureate (IB), British Advanced (A) Levels, course credit earned by proficiency (e.g., back credit), and college credit earned after the student's junior year in high school. Credits earned via the High School Summer Scholars or High School College Access programs through University College are considered to be pre-matriculation units and are subject to the same regulations.

A student in the College of Arts & Sciences may be awarded up to 15 units of credit from all sources — standardized placement tests and college course work — that were completed prior to enrollment as a first-year student at Washington University. The units of credit awarded from these sources do not apply toward the distribution requirements.

A student earning the Bachelor of Science in Business Administration (BSBA) may apply a maximum of 15 pre-matriculation units to the BSBA degree. The units of credit awarded from these sources do not apply toward the distribution requirements. A transcript notation is made of all pre-matriculation units earned before enrollment in Washington University.

A student in the College of Art may apply a maximum of 15 pre-matriculation units to the Bachelor of Fine Arts (BFA) degree. The units of credit awarded from these sources do not apply toward graduation requirements. A transcript notation is made of all pre-matriculation units earned before enrollment in Washington University.

A student should submit official score reports from AP examinations, College Board Achievement and Aptitude Tests, the International Baccalaureate (higher-level scores) and British A-Level examinations. All appropriate test scores will have course equivalents assigned to them and noted on the transcript. However, a maximum of 15 units of credit will be awarded provided credit has not been already designated as the result of college course work having been transferred as well.

Grades for courses taken at another college or university do not transfer. A maximum of 15 units of credit may be awarded for college course work done prior to matriculation provided no other pre-matriculation credits have been awarded. In the College of Arts & Sciences, Olin Business School, and School of Engineering & Applied Science, course work completed at another college or university prior to matriculation must meet the following standards:

1. Enrolled in primarily by matriculated college students
2. Taught by college faculty
3. Taught on a college campus
4. Taken after the junior year in high school
5. The course is not on the high school transcript and did not count toward the high school diploma.

6. The course was taken at a fully accredited college or university.

## Secondary School Course Work

Washington University does not recognize credit for courses taken in high schools and taught by secondary instructors, even when offered under the aegis of a university. The university accepts credit for courses taken at and taught by faculty of a college or university, provided the course has not been credited toward the high school diploma.

The College of Arts & Sciences accepts credit only for college course work taken after the junior year of high school.

## Proficiency and Placement Examinations

Superior results on proficiency and placement examinations allow students to enter advanced courses at the beginning of their college career, to fulfill some requirements for a major or a minor by examination rather than by course work, and to earn credit toward their degree. Students will have all accepted pre-matriculation work noted on their transcript so they may go directly into advanced courses.

Four types of examinations are recognized:

**Washington University Placement Examinations.** These placement examinations are administered by various departments and have different requirements for advanced placement.

**International Baccalaureate.** Students who have earned the International Baccalaureate diploma, or have successfully passed examinations in the program, should consult a dean in their undergraduate division of the university about advanced placement and credit. Scores may be used for placement or granting of degree credit, according to the recommendations of the various departments. Subsidiary-level scores are not recognized.

**British Advanced (A) Levels.** These grades may be used for placement or granting of degree credit, according to the recommendations of the various departments.

**Advanced Placement (AP) Examinations.** These are used for placement, partial fulfillment of major or minor requirements, and the granting of degree credit, according to the recommendations of the various departments. Examinations are given by the College Board in May of each year for secondary school students who have been enrolled in a college-level course in the same subject or subjects of the exam. For the most current policy information, visit the College of Arts & Sciences Advanced Placement webpage ([http://college.artsci.wustl.edu/policies/placement\\_credit/ap](http://college.artsci.wustl.edu/policies/placement_credit/ap)).

Information about these exams may be obtained from the College Board Advanced Placement Examinations, Box 592, Princeton, NJ 08540 or by calling 888-225-5427.

**SAT Subject Tests.** These examinations in modern languages are administered by the College Board. They are required for study in certain languages.

College Level Examination Program (CLEP) scores are not accepted for credit or placement.

## Washington University Placement Examinations (Back Credit)

### East Asian Languages

Credit is typically awarded for completing the following courses with a grade of B- or better. Native speakers are not eligible for back credit, so evidence of secondary or post-secondary study of the language is required.

#### **Chinese**

Chinese 211 = 3 units for Chinese 102D  
Chinese 360 = 3 units for Chinese 102D and 3 units for Chinese 212

#### **Japanese**

Japan 213 = 3 units for Japan 104D  
Japan 412 = 3 units for Japan 104D and 3 units for Japan 214

#### **Korean**

Korean 217 = 3 units for Korean 118D  
Korean 417 = 3 units for Korean 118D and 3 units for Korean 218

### French (L34)

Credit is awarded for the following courses with a grade B or better. Native speakers are not eligible for back credit, so evidence of secondary or post-secondary study of the language is required. No back credit is awarded for 102 or 301.

French 201D = 3 units for French 102D  
French 307D = 3 units for French 201D and 3 units for French 102D  
French 308D = 3 units for French 307D and 3 units for French 201D (credit awarded for placement, completion of the course is not required)

### Germanic Languages and Literatures (L21)

Students receive the following back credit after successfully completing these courses with a grade of B- or better.

German 210D = 3 units for German 102D  
German 301D = 3 units for German 102D and 3 units for German 210D  
German 302D = 3 units for German 102D and 3 units for German 210D

### Greek (L09)

Students may be awarded 6 back credits upon completion of a Greek class at the 300 level or above with a grade of B or better. Placement at the appropriate level is determined by departmental examination.

### Italian (L36)

Credit is awarded for the following courses with a grade B or better. Native speakers are not eligible for back credit, so evidence of secondary or post-secondary study of the language is required. No back credit is awarded for Ital 102 or Ital 301.

Ital 201D = 3 units for Ital 102D  
Ital 307D = 3 units for Ital 201D and 3 units for Ital 102D  
Ital 308D = 3 units for Ital 307D and 3 units for Ital 201D (credit awarded for placement, completion of the course is not required)

### Jewish, Islamic and Near Eastern Languages

Credit is typically awarded for completing the following courses with a grade of B- or better. Native speakers are not eligible for back credit. Evidence of secondary or post-secondary study of the language is required.

#### **Arabic**

Arab 207D = 3 units for Arab 108D  
Arab 307D = 3 units for Arab 108D and 3 units for Arab 208D

#### **Hebrew**

HBRW 213D or HBRW 214D = 3 units for HBRW 106D  
HBRW 320D or 322 = 3 units for HBRW 106D and 3 units for HBRW 214D  
HBRW 384 or 385 = 3 units for HBRW 106D and 3 for HBRW 214D  
HBRW 4010 or HBRW 402 = 3 units for HBRW 214D and 3 units for HBRW 322D

#### **Hindi**

Hindi 201 = 3 units for Hindi 111D  
Hindi 301 = 3 units for Hindi 111D and 3 units for Hindi 201

### Latin (L10)

Students may be awarded 3 units of credit for Latin 101 and 3 units of credit for Latin 102 upon completion of a Latin class at the 300 level or above with a grade of B or better. Placement in the appropriate course is determined by examination.

### Mathematics (L24)

If students complete one of the following courses with a grade of C+ or better at Washington University, then they are eligible for back credit. Credit is not awarded twice for transfer or AP scores.

Math 132 = 3 units for Math 131  
Math 233 = 3 units for Math 131 and 3 units for Math 132  
All Other Courses = no credit

### Russian (L39)

Students can receive back credit for up to 6 credits contingent upon successful completion (B or higher) of the next level.

Russ 404, Russ 405 or Russ 431, Russ 432 = 3 units for Russ 322 and 3 units for Russ 324

Russ 322, 324 = 3 units for Russ 211 and 3 units for Russ 212  
Russ 211, 212 = 3 credits for Russ 102

#### **Spanish (L38)**

Credit is awarded for the following courses with a grade B or better. Native speakers are not eligible for back credit, so evidence of secondary or post-secondary study of the language is required. No back credit is awarded for Span 101 or Span 223.

Span 201E = 3 units for Span 102D

Span 202 = 3 units for Span 201E and 3 units for Span 102D  
Span 307D\* = 3 units for Span 202 and 3 units for Span 201E  
Span 308E = 3 units for Span 307D\* and 3 units for Span 202 (credit awarded for placement, completion of the course is not required)

\*Back credit for Span 307D can only be used for elective credit; it cannot be used toward a Spanish major or minor.

### **International Baccalaureate**

#### **Biology (L41)**

Grade 7, 6: 6 units of credit for Biol 100A (elective credit). Students who plan to major in Biology or who are pre-med normally will enroll in Biol 2960 in the spring of freshman year and Biol 2970 in the fall of sophomore year.

Grade 5, 4, 3, 2, 1: No credit given.

#### **Business/Organization**

No credit given.

#### **Chemistry (L07)**

Those students who receive a 6 or 7 on the IB test in Chemistry will receive 3 units each of Chem 103 and 104. Receipt of these credits has no bearing on fulfillment of chemistry requirements for pre-medicine or any science major and cannot be used to satisfy prerequisites for Organic Chemistry. All students who wish to pursue a major or a pre-professional preparatory curriculum requiring general chemistry must take Chem 111A and Chem 112A and the associated labs, Chem 151 and Chem 152. Students who wish to exempt either the first or second semester of general chemistry, including the labs, must pass a placement exam administered by the Department of Chemistry during the first week of classes in the fall.

Grade 7, 6: 6 units of credit: 3 units each of Chem 103 and 104. These units do not replace Chem 111A or Chem 112A. Chem 112A must be completed prior to registration in Chem 261 or Chem 401 or any advanced courses in Chemistry.

Grade 5, 4, 3, 2, 1: No credit given.

#### **Classical Greek (L09)**

No credit awarded. Placement determined by departmental examination. Students who place into Greek 317C may be awarded 6 back credits upon completion of Greek 317C with a grade of B or better. Placement at the appropriate level is determined by departmental examination.

#### **Computer Science (E81)**

No credit given but a student can take the CSE 131 placement exam. Contact the CSE office at 314-935-6160 for more information.

#### **Economics (L11)**

Grade 7: 3 units of undergraduate general degree credit, contingent upon completion of Econ 4011 with a grade of B or better. The credit will not count toward the economics major/minor. Placement into any economics course is permitted (assuming other prerequisites are met); however, bypassing introductory courses may be disadvantageous, and students are strongly encouraged to consult with the department's academic coordinator. Bypassing Econ 1011 and/or Econ 1021 requires the completion of additional economics elective credit for the major/minor.

Grade 6, 5, 4, 3, 2, 1: No credit given. Not recommended to bypass Econ 1011 or Econ 1021.

#### **English Literature (L14) and Writing (L13)**

Grade 7: 3 units of elective credit (E Comp 0001) contingent upon completing WRIT 100 with a grade of B or better. Please note, no credit is given for Writing or Literature courses.

Grade 6, 5, 4, 3, 2, 1: No credit given.

#### **French (L34)**

No credit awarded. Need to take the departmental placement exam. Students who place into and complete higher-level courses can earn up to 6 units of back credit for preceding courses.

#### **Geography**

No credit awarded.

#### **German A1, German B (Modern Foreign Languages) (L21)**

Students should take the departmental placement exam. Students who place into and complete these courses with a B- or better will receive the following credit:

German 210D = 3 units for German 102D

German 301D = 3 units for German 102D, and 3 units for German 210D

German 302D = 3 units for German 102D, and 3 units for German 210D

#### **Greek (L09)**

Students may be awarded 6 units of back credit upon completion of a Greek L09 course at the 300 level or above with a grade of a B or better. Placement at the appropriate level is determined by departmental examination.

#### **History (L22)**

##### **American History**

No credit awarded.

##### **European History**

No credit awarded.

##### **African History**

No credit awarded.

##### **Islamic World History**

No credit awarded.

##### **South and Southeast Asia History**

No credit awarded.

##### **South Asia and Middle East History**

No credit awarded.

#### **Italian (L36)**

No credit awarded. Need to take the departmental placement exam. Students who place into and complete higher-level courses can earn up to 6 units of back credit for preceding courses.

#### **Latin (L10)**

Students who place into Latin 301 or above may be awarded 6 units of back credit upon completion of the course with a grade of B or better. Placement at the appropriate level is determined by departmental examination.

#### **Mathematics (L24)**

Grade 7, 6: 3 units of credit for Math 131.

Grade 5, 4, 3, 2, 1: No credit awarded.

#### **Music (L27)**

Grade 7, 6: 3 units of elective credit for students who do not major or minor in music.

Grade 5, 4, 3, 2, 1: No credit awarded.

#### **Norwegian**

No credit awarded.

#### **Philosophy (L30)**

Grade 7, 6: 3 units of credit for Phil 125C.

Grade 5, 4, 3, 2, 1: No credit awarded.

#### **Physics (L31)**

Physics HL: Grade 7: 6 units of credit for Physics 113A and 114A.

Grade 6, 5: 3 units of credit for Physics 113A.

Grade 4, 3, 2, 1: No credit awarded.

Physics EE: No credit awarded.

#### **Psychological & Brain Sciences (L33)**

Grade 7, 6: Waives the Psych 100B Introduction to Psychology requirement, but no college credit given.

#### **Social Anthropology (L48)**

Credit is evaluated on an individual basis by the anthropology department.

#### **Spanish (L38)**

No credit awarded. Need to take the departmental placement exam. Students who place into and complete higher-level courses can earn up to 6 units of back credit for preceding courses.

#### **Visual/Studio Arts (F20)**

Grade 7: 3 units of elective credit.

Grade 6, 5, 4, 3, 2, 1: No credit given.

#### **British A-Level**

##### **Accounting (B50)**

Advanced Level grades of A, B, C & D to be awarded 3 units of credit for ACCT 2610.

##### **Arabic (L49)**

Please refer to departmental advanced placement policy (Jewish, Islamic and Near Eastern Languages and Cultures (p. 237)) for more information.

##### **Biology (L41)**

Grades of A or B to be awarded 3 units of credit equivalent to Biol 100A.

##### **Business Studies (B53)**

Advanced Level grades of A, B, C & D to be awarded 3 units of management elective credit (B53 0001).

##### **Chemistry (L07)**

A grade of A to be awarded 3 units each for the following courses: Chem 103 and Chem 104. A grade of B to be awarded 3 units for the following course: Chem 103.

##### **Computer Science (E81)**

No credit given but a student can take the CSE 131 placement exam. Contact the CSE office at 314-935-6160 for more information.

##### **Economics (L11)**

3 units of undergraduate general degree credit for students with a grade (on the A-level exam) of A, contingent upon completion of Econ 4011 with a grade of B or better. The credit will not count toward the economics major/minor. Placement into any economics course is permitted (assuming other prerequisites are met); however, bypassing introductory courses may be disadvantageous, and students are strongly encouraged to consult with the department's academic coordinator. Bypassing Econ 1011 and/or Econ 1021 requires the completion of additional economics elective credit for the major/minor.

#### **French (L34)**

A grade of A to be awarded 3 units for French 102D and 3 units of French 201D, with 3 additional units to be awarded contingent upon successful completion of a 300-level course (other than conversation). A grade of B to be awarded 3 units upon successful completion of a 300-level course.

#### **German (L21)**

Student should take the departmental placement exam. Students who place into and complete these courses with a B- or better will receive the following credit:

German 210D = 3 units for German 102D

German 301D = 3 units for German 102D, and 3 units for German 210D

German 302D = 3 units for German 102D, and 3 units for German 210D

#### **Greek (L09)**

Students may be awarded 6 units of back credit upon completion of a Greek (L09) course at the 300 level or above with the grade of a B or better. Placement at the appropriate level is determined by departmental examination.

#### **History (L22)**

Grades of A or B to be awarded 3 units of elective credit.

#### **Latin (L10)**

Students who place into Latin 301 or above may be awarded 6 units of back credit upon completion of the course with the grade of a B or better. Placement at the appropriate level is determined by departmental examination.

#### **Mathematics (L24)**

Advanced Level grades of A and B will be awarded 3 units of credit for Math 131 automatically. An Advanced Level grade of C will only receive credit for Math 131 upon successful completion of Math 132 with a grade of C+ or better at Washington University.

#### **Mathematics (Further) (L24)**

Advanced Level grades of A and B will be awarded 6 units of credit for Math 131 and Math 132 automatically. An Advanced Level grade of C will only receive credit for Math 131–132 upon

successful completion of Math 233, with a grade of C+ or better at Washington University (or credit for Math 131 will be given for completion of Math 132). This course essentially covers all the material in Math 131–132 together with some extra physics and probability statistics.

#### **Music (L27)**

A grade of A to be awarded 3 units each for the following courses: Music 121C, Music 122C.

#### **Physics (L31)**

A grade of A on the physics A-level exam will earn 3 units of credit for Physics 113A and 3 units of credit for Physics 114A. A grade of B on the physics A-level exam will earn 3 units of credit for Physics 113A.

#### **Psychological & Brain Sciences (L33)**

A grade of A waives the Psych 100B Introduction to Psychology requirement, but no college credit given.

#### **Spanish (L38)**

Credit is awarded for the following courses with a grade of a B or better. Native speakers are not eligible for back credit, or secondary or post-secondary study of the language is required. No back credit is awarded for Spanish 101 or Span 223.

Span 201E = 3 units for Span 102D

Span 202 = 3 units for Span 201E and 3 units for Span 102D

Span 307D = 3 units for Span 202 and 3 units for Span 201E

Span 308E = 3 units for Span 307D\* and 3 units for Span 202 (credit awarded for placement, completion of the course is not required)

\*Back credit for Spanish 307D can only be used for elective credit; it cannot be used toward a Spanish major or minor.

#### **Writing (L13)**

No credit or placement given.

### **Advanced Placement**

#### **Art History (L01) — Test: AHS**

Grade 5, 4: 3 units of elective credit (Art-Arch 0001) contingent upon the completion of a 300- or 400-level Art History course with a grade of B or better. Students in the Sam Fox School must complete Art-Arch 113.

Grade 3, 2, 1: No credit given.

#### **Biology (L41) — Test: BIO**

Grade 5, 4: 6 units of credit for Biol 100A (elective credit). Students who plan to major in Biology or who are

pre-medicine normally will enroll in Biol 2960 in the spring of freshman year and Biol 2970 in the fall of sophomore year.

Grade 3, 2, 1: No credit given.

**Chemistry (L07) — Test: CHE**

Those students who receive a 5 on the AP test in Chemistry will receive 3 units each of Chem 103 and 104. Those students who receive a 4 receive 3 units of Chem 103. Receipt of these credits has no bearing on fulfillment of chemistry requirements for pre-medicine or any science major and cannot be used to satisfy prerequisites for Organic Chemistry. All students who wish to pursue a major or a pre-professional preparatory curriculum requiring general chemistry must take Chem 111A and Chem 112A and the associated labs, Chem 151 and Chem 152. Students who wish to exempt either the first or second semester of general chemistry, including the labs, must pass a placement exam administered by the Department of Chemistry during the first week of classes in the fall.

Grade 5: 6 units of credit: 3 units each of Chem 103 and 104. These units do not replace Chem 111A or 112A. Chem 112A must be completed prior to registration in Chem 261 or Chem 401 or any advanced courses in Chemistry.

Grade 4: 3 units of Chem 103. These units do not replace Chem 111A or 112A.

Grade 3, 2, 1: No credit given.

**Computer Science (E81) — A Test**

Grade 5, 4: 3 units of general elective credit for CSE 131. Students who want to confirm their skills can take the placement exam during Orientation.

Grade 3, 2, 1: No credit or placement given, but a student can take the CSE 131 placement exam and receive "proficiency" credit if a passing score is achieved.

**Computer Science (E81) — AB Test**

Grade 5, 4: 3 units of credit for CSE 131.

Grade 3, 2, 1: No credit or placement given, but a student can take the CSE 131 placement exam and receive "proficiency" credit if a passing score is achieved.

**Economics–Micro (L11) — Test: EMI**

**For students entering Summer 2012 or later:**

Grade 5: 3 units of undergraduate general degree credit, contingent upon completion of Econ 4011 with a grade of B or better. The credit will not count toward the economics major/minor. Placement into any economics course having an Econ 1011 prerequisite is permitted; however, bypassing introductory courses may be disadvantageous, and students are encouraged to consult with the department's academic coordinator. Bypassing Econ 1011 requires the completion of additional economics elective credit for the major/minor.

Grade 4, 3, 2, 1: No credit given. Not recommended to bypass Econ 1011.

**Economics-Macro (L11) — Test: EMA**

Grade 5: 3 units of undergraduate general degree credit, contingent upon completion of Econ 4021 with a grade of B or better. The credit will not count toward the economics major/minor. Placement into any economics course having an Econ 1021 prerequisite is permitted (assuming other prerequisites are met); however, bypassing introductory courses may be disadvantageous, and students are encouraged to consult with the department's academic coordinator. Bypassing Econ 1021 requires the completion of additional economics elective credit for the major/minor.

Grade 4, 3, 2, 1: No credit given. Not recommended to bypass Econ 1021.

**English Literature (L14) and Writing (L13) — Test: ENG**

Grade 5: 3 credits of elective credit (E Comp 0001) contingent upon completing WRIT 100 with a grade of B or better. Please note, no credit is given for writing or literature courses.

Grade 4, 3, 2, 1: No credit given.

**French Language (L34) — Test: LNF**

To receive Advanced Placement credit in French for a score of 3 or 4, the student must complete a 300-level course with a grade of B or better.

Grade 5: 6 units of credit equivalent to French 102D and French 201D. Students may enroll in a 300-level course conducted in the language.

Grade 4: Automatically grants 3 credits for French 102D, and gives another 3 extra credits for French 201D contingent upon satisfactory completion of a 300-level course with a B or better — other than conversation — conducted in the language.

Grade 3: 6 units of credit equivalent to French 102D and French 201D, contingent upon completion of a 300-level course with a grade of B or better — other than conversation — conducted in the language.

Grade 2, 1: No credit given.

**French Literature (L34) — Test: LNF**

To receive Advanced Placement credit in French for a score of 3 or 4, students must complete a 300-level course with a grade of B or better.

Grade 5: 6 units of credit equivalent to French 102D and French 201D. Students may enroll in a 300-level course conducted in the language.

Grade 4: Automatically grants 3 credits for French 102D, and gives another 3 extra credits for French 201D contingent upon satisfactory completion of a 300-level course with a B or better — other than conversation — conducted in the language.

Grade 3: 6 units of credit equivalent to French 102D and French 201D, contingent upon completion of a 300-level course with a grade of B or better — other than conversation — conducted in the language.

Grade 2, 1: No credit given.

**German (L21) — Test: LNG**

Grade 5: 3 units of credit for German 102D and 3 units for German 210D awarded automatically; students may enroll in a 300-level course: German 301D, German 302D, German 313, German 340C (German Literature and the Modern Era and German Tutorial).

Grade 4: 3 units of credit for German 102D awarded automatically; an additional 3 units of credit\* for German 210D awarded upon satisfactory completion of German 301D (B- or better). \*Please note: Students may receive this credit only if they start their language study at the 300 level.

Grade 3: 3 units of credit for German 102D\* and 3 units for German 210D, awarded upon satisfactory completion of German 301D (B- or better). \*Please note: Students may receive this credit only if they start their language study at the 300 level.

Grade 2, 1: No credit given. Should take departmental placement exam.

**History (L22)**

**American History — Test: HSA**

(A grade of 5 on the AP exam can fulfill Introductory course requirements for the history major and minor.) (L22)

Grade 5: 3 units of credit for History 163.

Grade 4: 3 units of elective credit for History 0001.

Grade 3, 2, 1: No credit given.

**European History — Test: HSE** (A grade of 5 on the AP exam can fulfill Introductory course requirements for the history major and minor.) (L22)

Grade 5: 3 units of credit for History 102.

Grade 4: 3 units of elective credit for History 0001.

Grade 3, 2, 1: No credit given.

**World History — Test: HSW** (A grade of 5 on the AP exam can fulfill Introductory course requirements for the history major and minor.) (L22)

Grade 5: 3 units of credit for History 164.

Grade 4: 3 units of elective credit for History 0001.

Grade 3, 2, 1: No credit given.

**Latin (L10) — Test: LNL**

Grade 5, 4: 3 units of credit for Latin 101D and 3 units of credit for Latin 102D upon completion of Latin 301 or higher with

a grade of B or better. Placement at the appropriate level is determined by departmental examination.

Grade 3, 2, 1: No credit or placement given. Placement at the appropriate level is determined by departmental examination.

**Mathematics (L24) — Test: MAB**

The mathematics department gives a placement exam, available online and also during the fall orientation period. We ask that all entering students planning to enroll in a calculus course (except those with an AP score of 4 or 5) take the placement exam. Only an AP score of 5 receives automatic credit.

Grade 5: 3 units of credit for Math 131. The student will be placed into Math 132.

Grade 4: The student will probably be placed into Math 132.

Grade 3: Students with scores of less than 4 should consult with their advisers about placement based on the Math Department Placement Test, SAT scores and high school record. It will be helpful to the adviser if the student brings the title and the author's name of the calculus book used in high school and a photocopy of its table of contents, indicating which chapters were covered.

Grade 2, 1: Students will be placed into Math 131.

**Mathematics (L24) — Test: MBC**

The mathematics department gives a placement exam, available online and also during the fall orientation period. We ask that all entering students planning to enroll in a calculus course (except those with an AP score of 4 or 5) take the placement exam. Only an AP score of 5 receives automatic credit.

Grade 5: 3 units of credit for Math 131 and 3 units of credit for Math 132. The student will be placed into Math 233. \*An AB Subscore of 5 will earn 3 units of credit for Math 131.

Grade 4: The student probably will be placed into Math 233.

Grade 3: Students with scores of less than 4 should consult with their advisers about placement based on the Math Department Placement Test, SAT scores and high school record. It will be helpful to the adviser if the student brings the title and the author's name of the calculus book used in high school and a photocopy of its table of contents, indicating which chapters were covered.

Grade 2, 1: Students will be placed into Math 132.

\*\*Any student entering the Calculus 131–132–233 sequence can receive AP credit for earlier courses in this sequence by successful completion, with a grade of C+ or better at Washington University, of the next course in the sequence. In all cases, this assumes that the student does not already have credit for the preceding courses (for example, by transfer from another college or university).

**Music Literature/Listening (L27) — Test: MUL**

Grade 5: 3 units of elective credit for Music 0001.

Grade 4: 3 units of elective credit for Music 0001.

Grade 3, 2, 1: No credit given.

**Music Theory (L27) — Test: MUT**

Grade 5: 3 units of elective credit for Music 0001.

Grade 4: 3 units of elective credit for Music 0001.

Grade 3, 2, 1: No credit given.

**Physics (L31)**

**Physics 1 Test — Test: P1**

Grade 5: 3 units of elective credit for Physics 113A. This corresponds to the first semester in a two-semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in Physics 117A or Physics 197 in the fall semester.

Grade 4, 3, 2, 1: No credit or placement given.

**Physics 2 Test — Test: P2**

Grade 5: 3 units of elective credit for Physics 114A. This corresponds to the second semester in a two-semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in Physics 118A or Physics 198 in the spring semester.

Grade 4, 3, 2, 1: No credit or placement given.

**C Test (Mechanics) — Test: PCM**

Grade 5: 4 units of credit for Physics 117A. This corresponds to the first semester in a two-semester, calculus-based introductory physics sequence. Students may enroll in Physics 118A, the second semester of this introductory calculus-based physics sequence, in the spring semester. Physics majors and students interested in an advanced treatment of introductory physics should enroll in Physics 197 or Physics 117A in the fall semester, followed by Physics 198 or Physics 118A in the spring semester. Students may not enroll in Physics 198 without first taking Physics 197.

Grade 4: 3 units of elective credit for Physics 113A. This corresponds to the first semester in a two-semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in Physics 117 or Physics 197 in the fall semester.

Grade 3, 2, 1: No credit given.

**C Test (Electricity and Magnetism) — Test: PCE**

Grade 5: 4 units of credit for Physics 118. This corresponds to the second semester in a two-semester, calculus-based introductory physics sequence. Physics majors and students interested in an advanced treatment of introductory physics

should enroll in Physics 197 in the fall semester, followed by Physics 198 in the spring semester.

Grade 4: 3 units of elective credit for Physics 114A. This corresponds to the second semester in a two-semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in Physics 117 or Physics 197 in the fall semester.

Grade 3, 2, 1: No credit given.

**Political Science (L32)**

**American Politics — Test: POA**

Grade 5, 4: 3 units of undergraduate credit, contingent upon completion of an advanced course (300-/400-level) in American Politics with a grade of C or better. The credit will not count toward the political science major/minor, but waives the Pol Sci 101B requirement.

Grade 3, 2, 1: No credit given.

**Comparative Politics — Test: POC**

Grade 5, 4: 3 units of undergraduate credit, contingent upon completion of an advanced course (300-/400-level) in Comparative Politics with a grade of C or better. The credit will not count toward the political science major/minor, but waives the Pol Sci 102B requirement.

Grade 3, 2, 1: No credit given.

**Psychological & Brain Sciences (L33)**

Grade 5: Waives the Psych 100B Introduction to Psychology requirement, but no college credit given.

Grade 4, 3, 2, 1: No credit or placement given.

**Spanish Language (L38) — Test: LNS**

All students wishing to enroll in Spanish must take the online placement exam. Class placement is decided solely on the basis of this exam and not by AP scores.

**Spanish Literature (L38) — Test: LNS**

All students wishing to enroll in Spanish must take the online placement exam. Class placement is decided solely on the basis of this exam and not by AP scores.

**Statistics (L24) — Test: STA**

Grade 5: Students with a 5 on the AP Statistics Exam will receive 3 units of credit for Math 2200.

Grade 4, 3, 2, 1: No credit given.

**Studio 2-D Design (F20) — Test: A2D**

Grade 5: 3 units of elective credit for Fine Arts 0001.

Grade 4, 3, 2, 1: No credit given.

**Studio 3-D Design (F20) — Test: A3D**

Grade 5: 3 units of elective credit for Fine Arts 0001.

Grade 4, 3, 2, 1: No credit given.

**Studio Drawing (F20) — Test: DRW**

Grade 5: 3 units of elective credit for Fine Arts 0001.

Grade 4, 3, 2, 1: No credit given.

# Financial Support

Washington University bases most financial assistance on a careful assessment of financial need. The university also offers a limited number of academic scholarships and fellowships based solely on academic merit. Other financing options and innovative plans, such as the university's Partners in Education with Parents (<https://sfs.wustl.edu/newlyadmitted/Pages/PEP.aspx>) and the Installment Payment Plan (<https://sfs.wustl.edu/newlyadmitted/Pages/TuitionPay.aspx>), the monthly payment plan administered by CASHNet, assist students and parents in financing the university's costs.

Eligible Washington University undergraduate students receive need-based financial assistance, which is offered in combinations of scholarships and grants, federal student loans, and part-time on-campus employment.

Applicants' financial circumstances are considered individually in the financial assistance process. In evaluating the extent of each applicant's need, the university considers many factors besides family income, such as the number of people in their family, the number of children in college at the same time, and special financial circumstances. When students apply for need-based financial assistance, they are considered for all types of assistance — grants, federal student loans and part-time employment.

The university strives to make attendance a financial reality for qualified students, even when financial need is great. Information about application procedures may be obtained from Student Financial Services (<https://sfs.wustl.edu>).

**Veterans.** If applicants are seeking benefits from the Veterans Administration, they should contact the Office of the University Registrar (<http://registrar.wustl.edu>).

## Scholarship Funds

Many generous Washington University donors provide scholarship funds to assist financially needy and deserving students. These scholarships are included in financial assistance awards. In addition, merit scholarship funds are available to undergraduates in any school. For scholarship information, please visit the Admissions website (<https://admissions.wustl.edu/financial-aid/#scholarships>).

## Army ROTC Scholarships

High school seniors can apply for four-year Army Reserve Officers' Training Corps (ROTC) scholarships. Current students can apply for three- and two-year scholarships. Students pursuing a graduate or advanced degree can compete for a two-year scholarship. Army ROTC scholarships are awarded based on merit and cover the full amount of tuition and mandatory fees. Army ROTC scholarships also include support for textbook purchases and a monthly allowance during the period the

student is in school on scholarship status. Some students who receive Army ROTC scholarships also receive stipends from the university for room and board. The source of the student's stipend will be the university; federal or state government; or other scholarships, depending on the student's eligibility for assistance. For more information, write to: Military Science Department, Washington University in St. Louis, 700 Rosedale Ave., Suite 1120, St. Louis, MO 63112, or call 314-935-5521, or visit the Washington University Army ROTC website (<http://rotc.wustl.edu>). The Four-Year Scholarship application may be submitted through the Army ROTC National Headquarters website (<http://www.goarmy.com/rotc>).

## Air Force ROTC Scholarships

High school seniors and current students may compete for two-, three- or four-year AFROTC scholarships, which cover up to full tuition at Washington University, plus a stipend and allowance for books. In College Scholarship Program (ICSP) requirements vary year to year and require at least one semester of AFROTC participation prior to application. Extensive information and the electronic application portal can be found on the AFROTC website (<http://www.afrotc.com>). Informational interviews are required of qualified applicants.

Different types of Air Force ROTC merit-based scholarships are available to students studying at Washington University. However, a scholarship is not required to join ROTC or to successfully earn a commission. For scholarship details, contact AFROTC, Gateway Detachment 207 at 314-977-8332 or [afrotc@slu.edu](mailto:afrotc@slu.edu).

## Corporation Awards to Children of Employees

A number of companies have scholarship programs open to children of their employees. Inquiries about such plans should be made through their parents' employer(s).

## Loans

Washington University participates in federal student and parent loan programs. These loans provide reasonable interest rates and long-term repayment schedules.

## Partners in Education with Parents (PEP)

Partners in Education with Parents (PEP) (<https://sfs.wustl.edu/newlyadmitted/Pages/PEP.aspx>) is an innovative multiple-option program financed and operated by Washington University to help parents pay university charges — tuition, student activity fee, room and board.

PEP continues Washington University's commitment to a partnership with the families of our students. This partnership includes a variety of choices to make parents' contributions as affordable as possible. Parents may choose the Multiyear

Option, Prepayment Option, Combination Option or Annual Option.

The PEP Multiyear Option allows families to borrow one initial amount at the start of the entering year to cover all, or part of, all four years of tuition, student activity fee, room and board charges. This option freezes the charges covered by PEP at the entering-year rate, based on the percentage of costs covered by the PEP (participation rate). Families can benefit from the competitive, fixed interest rate and take up to 10 years to repay. There is no penalty for prepayment.

The PEP program also offers the choice to prepay, without borrowing from Washington University, all or part of the tuition, student activity fee, room and board charges for all four undergraduate years at the entering-year rate. This option, the Prepayment Option, assures families that the prepaid portion of college expenses is covered and will not be subject to later increases in university costs.

Parents can also choose the Combination Option, which allows their family to prepay a portion of the charges and borrow the rest from Washington University. This combination works well for parents who may have saved for a portion or most of their student's college expenses and who want to take advantage of the benefit of increasing their participation rate by using PEP to finance the remaining charges.

If the family prefers to borrow for college costs one year at a time, then the PEP Annual Option might be their best choice. Each year they can borrow an amount up to or equal to that year's tuition, student activity fee, room and board charges and take up to 10 years to repay. There is no penalty for prepayment and they can benefit from the competitive fixed interest rate.

Financing under the Multiyear, Combination or Annual Options requires no security or collateral from participants. A prospective participant must have a good credit rating and provide evidence of being able to meet the required monthly payments to be approved for a loan.

More information about Partners in Education with Parents is available from Student Financial Services, Washington University in St. Louis, Campus Box 1041, One Brookings Drive, St. Louis, MO 63130-4899; 314-935-4139 or 800-468-0569, fax 314-935-4037; email: [financial@wustl.edu](mailto:financial@wustl.edu); or visit the website (<https://sfs.wustl.edu/newlyadmitted/Pages/PEP.aspx>).

## Installment Payment Plan (Monthly Payment Plan)

The monthly payment plan, administered by CASHNet, provides for the payment of total annual university charges — tuition, fees, and room and board — in monthly installments. Information about this plan is provided to all admitted students or may be obtained directly from Student Financial Services. For details, visit the Student Financial Services website (<https://>

[sfs.wustl.edu/newlyadmitted/pages/payment-and-financing-options.aspx](https://sfs.wustl.edu/newlyadmitted/pages/payment-and-financing-options.aspx)).

## Federal Work-Study

If students apply for financial assistance, they are considered for the Federal Work-Study program (FWS). FWS employees work an average of 10 to 12 hours a week on campus and typically earn \$2,500 over the course of the academic year.

# Tuition & Fees

## Tuition

Tuition is the major source of income to support the cost of undergraduate education. Most of the remaining cost is generously funded by gifts from the university's alumni and friends and from income from the university's endowment.

In setting the tuition rate, our emphasis is on being able to hire a high-caliber faculty and to offer extensive extracurricular opportunities.

Tuition for the 2017-18 academic year is \$25,325 per semester for full-time study. Full-time study is considered to be 12 to 18 units. If students enroll in more than 21 units per semester, they will pay additional tuition of \$2,110 for each credit unit beyond the 21.

First-year, first-semester students may register over the summer or after arriving on campus in August. For all subsequent semesters, continuing students have the chance to register in April for the fall semester and in November for the spring semester. Students will be billed for tuition in July for the fall semester and in December for the spring semester. Students must pay tuition by the date specified on the bill or they will incur a late fee.

If a student cannot afford to pay the full tuition bill, they should explore the university's extensive financial assistance opportunities, which are described in the Financial Support (p. 30) section of this *Bulletin*.

Many families prefer to pay educational expenses on a monthly basis. The Installment Payment Plan (<https://sfs.wustl.edu/newlyadmitted/Pages/TuitionPay.aspx>) allows students and families to spread all or part of the academic year's expenses over equal monthly payments. The Washington University Partners in Education with Parents (PEP) (<https://sfs.wustl.edu/newlyadmitted/Pages/PEP.aspx>) plan may provide tax savings for some families and offers monthly payment options over a period as long as 10 years at a competitive, fixed-interest rate. The PEP plan is described in the Financial Support (p. 30) section of this *Bulletin*.

A student's family should begin planning for educational costs as soon as possible following the decision to enroll. It is important to allow sufficient time to complete financial arrangements prior to registration.

## Fees

**Student Activities:** The mandatory student activities fee is 1 percent of tuition; for the 2017-18 academic year, it is \$254 per semester. This special fee may vary from year to year. You may obtain information about the fee from the Department of Campus Life (<http://studentaffairs.wustl.edu>).

**Student Health and Wellness:** Washington University has a student health and wellness fee designed to improve the health and wellness of the entire Washington University community. The fee of \$187.50 is billed to the student tuition statement each semester. In addition, to protect the health of our entire community, the university requires all full-time degree-seeking students to have health insurance. Students either must purchase the Washington University Student Health Insurance Plan or prove that they have adequate coverage through another plan. The cost of the Washington University Student Health Insurance Plan, as well as instructions for obtaining a waiver through proof of adequate coverage, will be provided to enrolled students.

**Late Registration:** Students may register for classes through the end of the second week of the semester. If students register after the second week, they must do so in person in the dean's office, and they may be assessed a late registration fee of \$100 per week. A late payment fee and/or a monthly finance charge may also be assessed by the dean's office if payment in full is not made with late registration.

The late registration fee is not applicable to graduate resident and nonresident candidates. Students in University College programs will incur a flat late fee of \$50.

**Returned Checks:** The university assesses a service charge for handling and processing returned checks.

## Enrollment Deposit

First-year students and transfer students are required to pay a deposit upon admission to Washington University. The \$200 enrollment deposit is not credited toward tuition and will be forfeited if the student does not complete one full semester at Washington University. However, after a student graduates, or if a student withdraws for any reason after the first semester, their deposit will be refunded (minus any unpaid bills, such as parking or library fines).

## Withdrawals from the University and Refunds

The College of Arts & Sciences, the Olin Business School, the Sam Fox School of Design & Visual Arts, and the School of Engineering & Applied Science have similar policies on withdrawals and refunds. During the add/drop period, a student may withdraw from all course work via the online registration system or by notifying the dean's office in writing. After the second week of classes, a written request to be withdrawn from courses must be received by the dean's office.

### Tuition Refund Schedule (as of Fall 2010)

Refunds are calculated based on the date the student notifies the university of withdrawal.

If a medical condition makes attendance for the balance of the semester impossible or medically inadvisable, the

university will make a pro rata tuition refund, as of the date of withdrawal when that date occurs prior to the 12th week and the condition is verified by the Student Health Services or a private physician. The date of withdrawal may correspond to the date of hospitalization or the date on which the medical condition is determined.

If a Federal Title IV aid recipient withdraws from school before the end of the academic semester, Washington University must refund (send loan funds back to the lender) the unearned (amount of time in the academic semester that the student did not attend) amount of Title IV funds. Unearned Title IV funds will be returned to the Title IV program. Students will be responsible for any disbursed but unearned portion of their Title IV funds.

An example of a typical refund calculation can be obtained from Student Financial Services (<https://sfs.wustl.edu>).

### **Changes in Fees**

The university reserves the right to change the fees stated or to establish additional fees at any time without prior written notice. When fee changes or additions are made, they become effective with the next payment due.

### **Nonpayment of Fees**

Nonpayment of tuition or other charges due the university or otherwise affecting the university will prohibit the student from receiving certain services. Students with outstanding financial obligations to the university will not be allowed to register or to obtain transcripts or official verification of enrollment.

## Majors (all schools)

The following is an alphabetical list of all majors from all undergraduate schools.

- Accounting (p. 907)
- African and African-American Studies (p. 145)
- American Culture Studies (p. 165)
- Ancient Studies (p. 309)
- Anthropology (p. 211)
- Anthropology: Global Health and Environment (p. 211)
- Applied Linguistics (p. 386)
- Applied Science (Chemical Engineering) (p. 1001)
- Applied Science (Electrical Engineering) (p. 976)
- Applied Science (Mechanical Engineering) (p. 1017)
- Applied Science (Systems Science & Engineering) (p. 976)
- Arabic (p. 238)
- Archaeology (p. 242)
- Architecture (p. 40)
- Art (p. 79)
- Art (Painting) (p. 79)
- Art (Photography) (p. 79)
- Art (Printmaking) (p. 79)
- Art (Sculpture) (p. 79)
- Art History and Archaeology (p. 251)
- Biology (p. 271)
- Biology: Biochemistry and Molecular Biology (p. 271)
- Biology: Ecology and Evolution (p. 271)
- Biology: Genomics and Computational Biology (p. 271)
- Biology: Neuroscience (p. 271)
- Biomedical Engineering (p. 943)
- Chemical Engineering (p. 1001)
- Chemistry (p. 287)
- Chemistry: Biochemistry (p. 287)
- Chinese Language and Culture (p. 301)
- Classics (p. 309)
- Communication Design (p. 79)
- Comparative Arts (p. 320)
- Comparative Literature (p. 320)
- Computer Engineering (p. 959)
- Computer Science (p. 959)
- Dance (p. 331)
- Development/International Area Studies (p. 594)
- Drama (p. 340)
- Earth and Planetary Sciences: Geochemistry (p. 354)
- Earth and Planetary Sciences: Geology (p. 354)
- Earth and Planetary Sciences: Geophysics (p. 354)
- East Asian Studies (p. 365)
- Economics (p. 379)
- Economics and Strategy (p. 907)
- Educational Studies (p. 386)
- Electrical Engineering (p. 976)
- Elementary Teacher Education (p. 386)
- English Literature (p. 402)
- English Literature: Creative Writing (p. 402)
- Entrepreneurship (p. 907)
- Environmental Biology (p. 271)
- Environmental Earth Sciences (p. 354)
- Environmental Policy (p. 748)
- Environmental Studies (p. 422)
- Eurasian Studies/International and Area Studies (p. 597)
- European Studies/International and Area Studies (p. 429)
- Fashion Design (p. 79)
- Film and Media Studies (p. 445)
- Finance (p. 907)
- French (p. 464)
- Germanic Languages and Literatures (p. 479)
- Global Cultural Studies/International and Area Studies (p. 599)
- Health Care Management (p. 907)
- Hebrew (p. 485)
- History (p. 494)
- Individually Designed Major (BS in Engineering) (p. 936)
- Interdisciplinary Project in the Humanities (p. 530)
- International Affairs/International and Area Studies (p. 602)
- International and Area Studies (p. 540)

Italian (p. 605)

Japanese Language and Culture (p. 610)

Jewish, Islamic and Near Eastern Studies (p. 617)

Korean Language and Culture (p. 639)

Latin American Studies (p. 646)

Leadership and Strategic Management (p. 907)

Linguistics (p. 664)

Marketing (p. 907)

Mathematics (p. 670)

Mechanical Engineering (p. 1017)

Middle School Teacher Education (p. 386)

Music (p. 688)

Operations and Supply Chain Management (p. 907)

Philosophy (p. 709)

Philosophy: Law and Policy (p. 709)

Philosophy: Philosophy of Science (p. 709)

Philosophy: Research (p. 709)

Philosophy-Neuroscience-Psychology: Cognitive Neuroscience (p. 723)

Philosophy-Neuroscience-Psychology: Language, Cognition and Culture (p. 723)

Physics (p. 739)

Political Science (p. 748)

Psychological & Brain Sciences (p. 771)

Psychological & Brain Sciences: Cognitive Neuroscience (p. 771)

Religious Studies (p. 795)

Romance Languages and Literatures (p. 811)

Second Major in Computer Science (p. 959)

Second Major in Electrical Engineering Science (p. 976)

Second Major in Financial Engineering (Business (p. 907) or Engineering (p. 976))

Second Major in Systems Science (p. 976)

Secondary Teacher Education (p. 386)

Spanish (p. 821)

Systems Science & Engineering (p. 976)

Urban Studies (p. 846)

Women, Gender, and Sexuality Studies (p. 861)

## Minors (all schools)

The following is an alphabetical list of all minors from all undergraduate schools.

- Accounting (p. 913)
- Aerospace Engineering (p. 1018)
- African and African-American Studies (p. 146)
- American Culture Studies (p. 166)
- Ancient Studies (p. 310)
- Anthropology (p. 212)
- Anthropology: Global Health and Environment (p. 212)
- Applied Linguistics (p. 390)
- Applied Microeconomics (p. 380)
- Applied Physics & Electrical Engineering (p. 982)
- Arabic (p. 238)
- Archaeology (p. 243)
- Architectural History and Theory (p. 40)
- Architecture (p. 40)
- Art History and Archaeology (p. 252)
- Art (p. 79)
- Asian-American Studies (p. 269)
- Astrophysics and Astroparticle Physics (p. 740)
- Bioinformatics (p. 961)
- Biology (p. 275)
- Biomedical Physics (p. 740)
- Business Economics (p. 913)
- Business of Entertainment (p. 913)
- Business of Sports (p. 913)
- Chemistry (p. 289)
- Children's Studies (p. 294)
- Chinese Language and Culture (p. 301)
- Classics (p. 310)
- Comparative Arts (p. 320)
- Comparative Literature (p. 320)
- Computer Science (p. 961)
- Dance (p. 332)
- Data Science in the Humanities (p. 531)
- Design (p. 79)
- Drama (p. 341)
- Earth and Planetary Sciences (p. 357)
- East Asian Studies (p. 366)
- Educational Studies (p. 390)
- Electrical Engineering (p. 982)
- Energy Engineering (p. 1002)
- English (p. 403)
- Entrepreneurship (p. 913)
- Environmental Earth Sciences (p. 357)
- Environmental Engineering Science (p. 1002)
- Environmental Studies (p. 422)
- Film and Media Studies (p. 445)
- Finance (p. 913)
- French (p. 465)
- General Business (p. 913)
- General Economics (p. 380)
- Germanic Languages and Literatures (p. 479)
- Global Film and Media Studies (p. 445)
- Health Care Management (p. 913)
- Hebrew (p. 485)
- History (p. 495)
- Interdisciplinary Environmental Analysis (p. 422)
- International Business (p. 913)
- Italian (p. 605)
- Japanese Language and Culture (p. 611)
- Jazz Studies (p. 690)
- Jewish, Islamic and Near Eastern Studies (p. 618)
- Korean Language and Culture (p. 639)
- Landscape Architecture (p. 40)
- Latin American Studies (p. 647)
- Leadership (p. 913)
- Legal Studies (p. 658)
- Linguistics (p. 665)
- Marketing (p. 913)
- Materials Science & Engineering (p. 1018)
- Mathematics (p. 673)

Mechanical Engineering (p. 1018)  
Mechatronics (p. 1018)  
Medical Humanities (p. 680)  
Medieval and Renaissance Studies (p. 685)  
Music — General Studies (p. 690)  
Nanoscale Science & Engineering (p. 1002)  
Operations and Supply Chain Management (p. 913)  
Philosophy (p. 712)  
Philosophy of Science (p. 712)  
Philosophy–Neuroscience–Psychology (p. 727)  
Physics (p. 740)  
Political Science (p. 751)  
Psychological & Brain Sciences (p. 776)  
Religion and Politics (p. 787)  
Religious Studies (p. 795)  
Robotics (p. 1018)  
Russian Language and Literature (p. 813)  
Sociology (p. 817)  
South Asian Languages and Cultures (Hindi) (p. 490)  
Spanish (p. 822)  
Speech and Hearing (p. 839)  
Strategy (p. 913)  
Systems Science & Engineering (p. 982)  
Text and Tradition (p. 531)  
Urban Design (p. 40)  
Urban Studies (p. 846)  
Women, Gender, and Sexuality Studies (p. 862)  
World Music, Dance and Theater (p. 707)  
Writing (p. 881)

# Architecture

## Sam Fox School of Design & Visual Arts

The Sam Fox School of Design & Visual Arts (<http://samfoxschool.wustl.edu>) is a unique collaboration in architecture, art and design education, linking professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

The Sam Fox School is composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art, and the Mildred Lane Kemper Art Museum (<http://www.kemperartmuseum.wustl.edu>).

## Architecture

Throughout history, architects have played a leading role in forming the environment and in interpreting the aspirations of societies in all parts of the world. As a practical and useful art, architecture embraces aesthetic, ethical, social and technical responsibilities. Architecture responds to the way people live and, in turn, influences their lives.

Students considering an architectural education and architecture as a potential career express an excitement about design and building, as well as a commitment to the environment. If students plan to study architecture, they should have artistic ability and a good academic base. Personal interests in such areas as drawing, painting, photography, sculpture, building and the environment suggest a possible aptitude for architecture.

Architecture reflects culture; architects must know their culture deeply. To gain an understanding of all aspects of architecture and to develop the attitudes and skills necessary to deal with them, students must have a broad liberal arts education. This base of cultural understanding and critical thinking is combined with a curriculum that focuses intensely on the study of architecture.

Architecture is an absorbing, fascinating profession. Choosing architecture as a professional career requires a major educational commitment at the undergraduate level and to further study in a professional degree program. With a professional degree in architecture, a graduate may choose to work in small or large architectural firms, in academia, in community or governmental organizations, with development teams, and in a variety of related fields.

## Architecture at Washington University

Washington University established the Department of Architecture as part of the School of Engineering and

Architecture in 1902. The School of Architecture became an independent division of the university in 1910.

In 1932, Givens Hall was constructed to house the school as a result of a generous gift in memory of Joseph W. and Kate Abbey Givens. The Art & Architecture Library and the Mildred Lane Kemper Art Museum are in the new Kemper Art Museum building. Steinberg Hall also houses studio and review space.

In 1967, the School of Architecture became one of the first schools in the United States to offer a pioneering six-year joint-degree (Bachelor of Arts and Master of Architecture) program. The 4+2 program now leads to a thorough four-year Bachelor of Science in Architecture degree, followed by two years of graduate study for the accredited professional Master of Architecture degree. In 2005, as part of the formation of the Sam Fox School of Design & Visual Arts, the School of Architecture was reorganized as the College of Architecture and the Graduate School of Architecture & Urban Design.

Equally, the college offers the four-year Bachelor of Design degree with a major in architecture — a strong, flexible undergraduate curriculum that also prepares students for graduate study in architecture, usually for three years. These undergraduate degree programs offer students the opportunity to gradually focus their undergraduate studies within the college and allow them to make an incremental commitment to a career in architecture.

The College of Architecture faculty are nationally and internationally renowned practitioners and researchers who are committed to students' undergraduate experience. As academic advisers, they work with the dean and undergraduate chair to help students build an individualized curriculum, select specific courses, and chart plans for their future careers.

## Faculty

### Endowed Professors

**Kathryn Dean** (<http://samfoxschool.wustl.edu/directory/242>)  
JoAnne Stolaroff Cotsen Professor  
MArch, Oregon School of Architecture & Allied Arts

**Bruce Lindsey, AIA** ([http://samfoxschool.wustl.edu/portfolios/faculty/bruce\\_lindsey](http://samfoxschool.wustl.edu/portfolios/faculty/bruce_lindsey))  
E. Desmond Lee Professor for Community Collaboration  
MFA, University of Utah  
MArch, Harvard University

**Adrian Luchini** (<http://samfoxschool.wustl.edu/directory/479>)  
Raymond E. Maritz Professor of Architecture  
MArch, Harvard University

**Robert McCarter** (<http://samfoxschool.wustl.edu/directory/298>)  
Ruth & Norman Moore Professor  
MArch, Columbia University

**Eric Mumford** (<http://samfoxschool.wustl.edu/directory/487>)  
Rebecca and John Voyles Professor of Architecture  
PhD, Princeton University

## Professors

**Rod Barnett** ([http://samfoxschool.wustl.edu/portfolios/rod\\_barnett](http://samfoxschool.wustl.edu/portfolios/rod_barnett))  
PhD, University of Auckland

**John Hoal** ([http://samfoxschool.wustl.edu/portfolios/faculty/john\\_hoal](http://samfoxschool.wustl.edu/portfolios/faculty/john_hoal))  
PhD, Washington University

**Sung Ho Kim** (<http://samfoxschool.wustl.edu/directory/139>)  
MSci, Massachusetts Institute of Technology

**Stephen P. Leet** (<http://samfoxschool.wustl.edu/directory/473>)  
BArch, University of Kentucky

**Igor Marjanovic** ([http://samfoxschool.wustl.edu/portfolios/faculty/igor\\_marjanovic](http://samfoxschool.wustl.edu/portfolios/faculty/igor_marjanovic))  
PhD, Bartlett School of Architecture, University College of London

**Heather Woofter** ([http://samfoxschool.wustl.edu/portfolios/faculty/heather\\_woofter](http://samfoxschool.wustl.edu/portfolios/faculty/heather_woofter))  
MArch, Harvard University

## Professors of Practice

**Valerie Greer** ([http://www.samfoxschool.wustl.edu/portfolios/valerie\\_greer](http://www.samfoxschool.wustl.edu/portfolios/valerie_greer))  
MArch, Washington University

**Eric R. Hoffman** (<http://samfoxschool.wustl.edu/directory/469>)  
MArch, Washington University

**Philip Holden** (<http://samfoxschool.wustl.edu/directory/471>)  
MArch, Washington University

**Xiaobo Quan**  
PhD, Texas A&M University

## Associate Professors

**Gia Daskalakis** (<http://samfoxschool.wustl.edu/directory/1589>)  
Dipl de Postgrado, Universidad Politecnica de Catalunia

**Robert Hansman** (<http://samfoxschool.wustl.edu/directory/58>)  
BFA, University of Kansas

**Patricia Heyda** (<http://samfoxschool.wustl.edu/directory/59>)  
MArch, Harvard University

**Derek Hoferlin** (<http://samfoxschool.wustl.edu/directory/61>)  
MArch, Tulane University

**Zeuler Lima** (<http://samfoxschool.wustl.edu/directory/474>)  
PhD, Universidade de São Paulo

**Linda C. Samuels** ([http://samfoxschool.wustl.edu/portfolios/linda\\_samuels](http://samfoxschool.wustl.edu/portfolios/linda_samuels))  
PhD, University of California, Los Angeles

**Hongxi Yin**  
PhD, Carnegie Mellon University

## Assistant Professors

**Chandler Ahrens** (<http://samfoxschool.wustl.edu/directory/7147>)  
MArch, University of California, Los Angeles

**Eric Ellingsen** (<http://samfoxschool.wustl.edu/directory/52>)  
MArch, MLA, University of Pennsylvania  
MA, St. John's College

**Catalina Freixas** (<http://samfoxschool.wustl.edu/directory/52>)  
Dipl Arch, Universidad de Buenos Aires

**Constance Vale**  
MArch, Yale University

**Jesse Vogler** ([http://www.samfoxschool.wustl.edu/portfolios/faculty/jesse\\_vogler](http://www.samfoxschool.wustl.edu/portfolios/faculty/jesse_vogler))  
MArch, University of California, Berkeley

## Visiting Professor

**Peter Rose**  
MArch, Yale University

## Visiting Assistant Professor

**Jonathan Stitelman** ([http://samfoxschool.wustl.edu/portfolios/jonathan\\_stitelman](http://samfoxschool.wustl.edu/portfolios/jonathan_stitelman))  
MArch, Washington University  
MUD, Washington University

## Senior Lecturers

**Ryan Abendroth**  
MArch, University of Illinois at Urbana-Champaign

**Michael Allen**  
BA, Union Institute and University

**Don Koster**  
MArch, Washington University

**Doug Ladd**  
MS, Southern Illinois University at Carbondale

**Gay Lorberbaum**  
MArch, Washington University

**Jacqueline Margetts**  
MPhil, University of Auckland (New Zealand)

**Bob Moore**  
PhD, Washington University

**Pablo Moyano** ([http://samfoxschool.wustl.edu/portfolios/faculty/pablo\\_moyano](http://samfoxschool.wustl.edu/portfolios/faculty/pablo_moyano))  
MArch, Washington University

**Phillip Shinn**

BSE, Princeton University

**Lindsey Stouffer**

MFA, Washington University

**Ian Trivers**

PhD, University of Michigan

**Jan Ulmer**

MArch, University of the Arts, Berlin

**Professors Emeriti**

**Paul Donnelly**

**Iain A. Fraser**

**Gerald Gutenschwager**

**James Harris**

**Sheldon S. Helfman**

**Udo Kultermann**

**Leslie J. Laskey**

**Donald Royse**

**Thomas L. Thomson**

**Dean Emeritus**

**Constantine E. Michaelides**

FAIA

**Majors**

**The Major in Architecture**

**Bachelor of Design Degree**

The major requirements for the Bachelor of Design degree, with a major in architecture, are as follows:

| Code                      | Title   | Units |
|---------------------------|---|-------|
| ARCH 311                  | Architectural Design I                            | 6     |
| ARCH 312                  | Architectural Design II                           | 6     |
| ARCH 3284                 | Architectural History II: Architecture Since 1880 | 3     |
| ARCH 333                  | Case Studies in 20th-Century Architecture         | 3     |
| ARCH 445                  | Building Systems                                  | 3     |
| Capstone Course Electives |   | 3     |

For additional information on current requirements, please visit the Degree Requirements (p. 70) page.

**Bachelor of Science in Architecture Degree**

The major requirements for the Bachelor of Science in Architecture degree are as follows:

| Code      | Title   | Units |
|-----------|---|-------|
| ARCH 311  | Architectural Design I                            | 6     |
| ARCH 312  | Architectural Design II                           | 6     |
| ARCH 411  | Architectural Design III                          | 6     |
| ARCH 412  | Architectural Design IV                           | 6     |
| ARCH 3284 | Architectural History II: Architecture Since 1880 | 3     |
| ARCH 333  | Case Studies in 20th-Century Architecture         | 3     |
| ARCH 445  | Building Systems                                  | 3     |
| ARCH 447A | Structures I                                      | 3     |
| ARCH 448A | Structures II                                     | 3     |
| ARCH 438  | Environmental Systems I                           | 3     |

and completion of at least one architectural elective from the following groups:

- Urban Issues Electives group, or
- Architectural History/Theory Electives group.

For additional information on current requirements, please visit the Degree Requirements (p. 70) page.

**Minors**

**The Minor in Architectural History and Theory**

Minor Adviser: Eric Mumford (epm@wustl.edu)

The minor in architectural history and theory is open to all students at Washington University in St. Louis, regardless of major. Students interested in the minor should contact the designated minor adviser.

**Units required:** 18\* including:

9 units of architectural history survey:

| Code      | Title   | Units |
|-----------|---|-------|
| ARCH 3283 | Architectural History I: Premodern Encounters in World Architecture | 3     |
| ARCH 3284 | Architectural History II: Architecture Since 1880                   | 3     |
| ARCH 4288 | Architectural History III: Advanced Theory                          | 3     |

3 units of methodology course work:

| Code     | Title                                     | Units |
|----------|---|-------|
| ARCH 601 | Theories & Methods of Historical Research | 3     |

or  
 Other methodology-based courses approved by the minor adviser 3

6 units of architectural history and theory electives (300-level or above) as approved by the minor adviser

\*12 units must be in the minor only and cannot be double-counted toward another major or minor.

## The Minor in Architecture

Minor Adviser: Derek Hoeflerlin (hoeflerlin@wustl.edu)

The minor in architecture is open to all students at Washington University in St. Louis, regardless of major. Students interested in the minor should contact the minor adviser.

**Units required:** 18

### Required courses:

6 units minimum of introductory design chosen from the following:

| Code     | Title                               | Units |
|----------|-------------------------------------|-------|
| ARCH 111 | Introduction to Design Processes I  | 3     |
| ARCH 112 | Introduction to Design Processes II | 3     |

3 units minimum of history chosen from the following:

| Code      | Title   | Units |
|-----------|---|-------|
| ARCH 3283 | Architectural History I: Premodern Encounters in World Architecture | 3     |
| ARCH 3284 | Architectural History II: Architecture Since 1880                   | 3     |
| ARCH 3823 | Rethinking Renaissance Visual Culture - Florence Summer Program     | 3     |

or  
 Other architectural history courses approved by the minor adviser

**Elective courses:** 9 units chosen from the following:

| Code      | Title                                     | Units |
|-----------|---|-------|
| ARCH 211B | Introduction to Design Processes III      | 4.5   |
| ARCH 212B | Introduction to Design Processes IV       | 4.5   |
| ARCH 209  | Design Process                            | 3     |
| ARCH 333  | Case Studies in 20th-Century Architecture | 3     |

or  
 Other elective courses approved by the minor adviser

## The Minor in Landscape Architecture

Minor Adviser: Jacqueline Margetts  
 (jacqueline.margetts@wustl.edu)

The minor in landscape architecture is for students who will be receiving either a Bachelor of Science or Bachelor of Design with a major in architecture. Interested students should contact the minor adviser.

**Units required:** 18\* including:

6 units of design course work:

| Code        | Title                   | Units |
|-------------|-------------------------|-------|
| ARCH 312    | Architectural Design II | 6     |
| or ARCH 412 | Architectural Design IV |       |

3 units of history course work:

| Code     | Title                                    | Units |
|----------|--|-------|
| LAND 571 | Landscape History II: Prehistory to 1850 | 3     |

or  
 LAND 574A Modern and Contemporary Landscape Architecture 3

or  
 Other history/theory courses as approved by the minor adviser

3 units of ecological systems course work:

| Code      | Title             | Units |
|-----------|-------------------|-------|
| LAND 551A | Landscape Ecology | 3     |

6 units of electives:

| Code      | Title  | Units |
|-----------|--|-------|
| LAND 423D | Videography for Designers  | 3     |
| LAND 483A | Emergence in Landscape Architecture                                  | 3     |
| LAND 524F | Critical Spatial Practice: Art / Architecture / Landscape / Urbanism | 3     |
| LAND 529G | The Unruly City  | 3     |
| LAND 553  | Integrated Planting Design   | 3     |
| LAND 560A | Trees, Soils, & Systems: Introduction to Arboriculture               | 3     |
| LAND 565  | Landscape Technology   | 3     |

or  
 Other elective courses in landscape architecture as approved by the minor adviser

\*12 units must be in the minor only and cannot be double-counted toward another major or minor.

## The Minor in Urban Design

Minor Adviser: Patty Heyda (heyda@wustl.edu)

The minor in urban design is for students who will be receiving either a Bachelor of Science in Architecture degree or a Bachelor of Design with a major in architecture. Interested students should contact the designated minor adviser.

**Units required:** 18\* including:

6 units of foundational course work:

| Code      | Title              | Units |
|-----------|--------------------|-------|
| XCORE 307 | Community Building | 3     |
| ARCH 241  | Community Dynamics | 3     |

6 units of design course work:

ARCH 312/ARCH 412 *Urban Design-Focused Studio* (6 units)

6 units of advanced course work:

| Code   | Title                       | Units |
|--|-----------------------------|-------|
| ARCH 656   | Metropolitan Urbanism       | 3     |
| MUD 658  | Metropolitan Sustainability | 3     |
| or   |                             |       |
| Other MUD-track electives as approved by the adviser |                             | 3     |

\*12 units must be in the minor only and cannot be double-counted toward another major or minor.

### Additional Information

Students declare an architecture minor by using the university's online registration system (WebSTAC (<https://acadinfo.wustl.edu/WSHome/Default.aspx>)).

Students must receive a grade of C- or better to earn minor credit.

Students should check the current course listings (<https://courses.wustl.edu/Semester/Listing.aspx>) carefully to verify their eligibility to enroll in courses that have specific prerequisites.

## Courses

College of Art and College of Architecture majors will have enrollment priority in X10 courses.

**X10 XCORE** (p. 42): Sam Fox foundation and commons courses

**A46 ARCH** (p. 47): Architecture

**A48 LAND** (p. 66): Landscape Architecture

---

## Design & Visual Arts — Core (X10)

Visit online course listings to view semester offerings for X10 XCORE (<https://courses.wustl.edu/CourseInfo.aspx?sch=X&dept=X10&crslvl=1:4>).

---

### X10 XCORE 101 Drawing I

An introductory course which teaches students to recognize and manipulate fundamental elements of composition, line, form, space, modeling and color. Emphasis is placed on working accurately from observation, with an introduction to other methodologies. Students work in a variety of media. Demonstrations and illustrated lectures supplement studio sessions and outside projects. This class counts toward the minor in art or minor in design for non-Sam Fox School students. Credit 3 units. Art: FAAM, FADM

---

### X10 XCORE 102 Drawing II

Continuing as an introductory course which teaches students to recognize and manipulate fundamental elements of composition, line, form, space, modeling and color. This course is an intensive studio course which builds on the perceptual and conceptual skills and experiences developed in Drawing I. A main objective is to develop a higher level of critical and studio practice. Prerequisite: X10 101.

Credit 3 units. Art: FAAM EN: H

---

### X10 XCORE 181 Practices in Architecture + Art + Design

This course offers first-year students in architecture and art an introduction to the subjects, theories and methodologies of the disciplines of art, design, architecture, landscape architecture, and urban studies. Examples, drawn from a range of historical periods as well as contemporary practice, highlight distinct processes of thinking and working in each discipline, as well as areas of intersection and overlap. Part 1 of 2.

Credit 1 unit. EN: H

---

### X10 XCORE 182 Practices in Architecture + Art + Design

This course offers first-year students in architecture and art an introduction to the subjects, theories and methodologies of the disciplines of art, design, architecture, landscape architecture, and urban studies. Examples, drawn from a range of historical periods as well as contemporary practice, highlight distinct processes of thinking and working in each discipline, as well as areas of intersection and overlap. Part 2 of 2.

Credit 1 unit. EN: H

---

### X10 XCORE 301 From Propaganda to Decoration

This is a studio course that is conceptually driven and anchored in the philosophical terrain of the print multiple. The fundamental attributes of the multiple, including its accessibility and repeatability, are from private to public and from political to aesthetic. Given this orientation, we examine the place where the public and private spheres meet. Considering urban communication and social space, reproduction and distribution, gifting and exchange, private practice and public intervention, this course uses the print multiple as a starting point to explore a continuum that runs from propaganda to decoration.

Credit 3 units. EN: H

---

### X10 XCORE 303 Visualizing Information

This project-based studio course brings students from diverse backgrounds in art, architecture and design together to learn to compose information-rich surfaces. The course explores principles of information design on paper initially, and offers the opportunity to extend some applications to the screen. Course topics include content organization, visual structure, hierarchy, typography, color, sequencing, audience and usability. Students have the chance to select subject and media for some of their

projects. Projects are supplemented with readings and lectures about contemporary information design, with some historical references. This course combines the rigor of a disciplinary classroom with the flexibility of a multidisciplinary one. Topics likely to emerge in the interdisciplinary conversation include information in three-dimensional spaces, communicating information with a particular voice or editorial perspective, analytical versus poetic information design, function, audience and programming. All of these are supported, and students develop a set of tools which can be adapted to their own disciplinary work in a meaningful way.

Credit 3 units.

---

### X10 XCORE 304 Data Visualization

In this hybrid lecture/studio course, students learn basic skills to develop data visualizations focusing on clarity, relevance to the user, and visual expression. The course spans several themes within data visualization, including principles of two-dimensional design, storytelling and sequence, and interactivity and user navigation. The course is organized into four units, each with a different content focus and data type, including topics as diverse as urban and rural landscapes, conditions in public health, and literary production. Students apply their own areas of interdisciplinary expertise to the final project. Students need a laptop with Adobe Illustrator and may need to acquire inexpensive or free software. This course is appropriate for sophomores through graduate students with or without visual training who are interested in data, information design, user interface, and computer programming. Course counts in the Interdisciplinary Project in the Humanities (IPH).

Credit 3 units. Art: FADM EN: H

---

### X10 XCORE 305 Topics in Visual Culture: Commercial Modernism in America, 1865-1965

This survey course explores contributions to and expressions of visual modernism within the commercial tradition in the United States. Lectures, readings and screenings engage the intertwined histories of commerce, technology, society and aesthetics. Topics include periodical illustration from *Harper's Weekly* to the *Ladies Home Journal*, the newspaper comic strip and the comic book, animation from vaudeville to television, and science fiction and transportation design. Context provided by the advent of industrial image production; modernist art theory and high cultural disdain for mass markets (with resulting effects on the academy); avant-garde and commercial cross-pollination; the social histories of ethnic depiction (i.e., blackface minstrelsy); consideration of women as consumers and producers of commercial images. Students make use of materials in the collections of the Modern Graphics History Library at Washington University. Attendance required at three animation screenings.

Credit 3 units. Art: FADM EN: H

---

### X10 XCORE 307 Community Building

This course looks at the intersection of the built fabric and the social fabric. Using St. Louis as the starting point, this course takes students out of the classroom and into a variety of neighborhoods — old, new, affluent, poor — to look at the built environment in a variety of contexts and through a variety of lenses. Almost every week for the first half of the semester, students visit a different area (or areas), each trip highlighting some theme or issue related to the built environment (architecture, planning, American history, investment and disinvestment, community character and values, race, transportation, immigrant communities, future visions, etc.).

Running parallel to this, students are involved in an ongoing relationship with one particular struggling neighborhood, in which students attend community meetings and get to know and become involved with the people in the community in a variety of ways. Students learn to look below the surface, beyond the single obvious story, for multiple stories, discovering their complexity, contradictions and paradoxes. They also come to consider the complex ways in which architecture and the built environment can affect or be affected by a host of other disciplines. CET (<https://gephardtinststitute.wustl.edu/cec/sam-fox-school-of-design-and-visual-arts>) course.

Credit 3 units. EN: H

---

### X10 XCORE 307X Community Building

This course looks at the intersection of the built fabric and the social fabric. Using St. Louis as the starting point, this course takes students out of the classroom and into a variety of neighborhoods — old, new, affluent, poor — to look at the built environment in a variety of contexts and through a variety of lenses. Almost every week for the first half of the semester, students visit a different area (or areas), each trip highlighting some theme or issue related to the built environment (architecture, planning, American history, investment and disinvestment, community character and values, race, transportation, immigrant communities, future visions, etc.). Running parallel to this, students are involved in an ongoing relationship with one particular struggling neighborhood, in which students attend community meetings and get to know and become involved with the people in the community in a variety of ways. Students learn to look below the surface, beyond the single obvious story, for multiple stories, discovering their complexity, contradictions and paradoxes. They also come to consider the complex ways in which architecture and the built environment can affect or be affected by a host of other disciplines. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Fulfills Sam Fox Commons requirement.

Credit 3 units. EN: H

---

### X10 XCORE 308 Community Building North

This course addresses the complex economic, political and racial landscape of north St. Louis County focused on Ferguson, Missouri, as the embodiment of problems and conflicts endemic to urban communities across the country. The events following Michael Brown's shooting death on August 9, 2014, have revealed deep divisions in the St. Louis metropolitan area. Our multidisciplinary approach will be evident as we investigate the intersecting, compounding roles of social and economic inequities, racial disparities, white flight, public safety, housing, and economic development as we grapple with legitimate, thoughtful ways of making positive change. We'll learn how to listen to, understand and address conflicting voices. Readings, speakers, site visits, films and other materials will be combined with discussion, writing, and socially conscious engagement as we seek to understand the many faces of Ferguson while following contemporary developments as they occur. Professor Robert Hansman acts as adviser and guide. The interdisciplinary course he developed over many years, Community Building/ Building Community, provides the intellectual, ethical and spiritual bases as co-taught by Raimist and Hansman. This course offers fresh perspectives and provides unique opportunities for community engagement for students who have previously taken Community Building; however, that course is not a prerequisite. Projects develop collaboratively and organically between students, faculty and community partners

working to find common values and beliefs upon which to build concrete, meaningful action.  
Credit 3 units.

#### **X10 XCORE 308X Community Building North**

This course addresses the complex economic, political and racial landscape of north St. Louis County focused on Ferguson, Missouri, as the embodiment of problems and conflicts endemic to urban communities across the country. The events following Michael Brown's shooting death on August 9, 2014, have revealed deep divisions in the St. Louis metropolitan area. Our multidisciplinary approach will be evident as we investigate the intersecting, compounding roles of social and economic inequities, racial disparities, white flight, public safety, housing and economic development as we grapple with legitimate, thoughtful ways of making positive change. We'll learn how to listen to, understand and address conflicting voices. Readings, speakers, site visits, films and other materials will be combined with discussion, writing and socially conscious engagement as we seek to understand the many faces of Ferguson while following contemporary developments as they occur. Professor Robert Hansman acts as adviser and guide. The interdisciplinary course he developed over many years, "Community Building/ Building Community," provides the intellectual, ethical, and spiritual bases as co-taught by Raimist and Hansman. This course offers fresh perspectives and provides unique opportunities for community engagement for students who have previously taken Community Building, however that course is not a prerequisite. Projects develop collaboratively and organically between students, faculty and community partners working to find common values and beliefs upon which to build concrete, meaningful action.  
Credit 3 units.

---

#### **X10 XCORE 309 Convergences: Studies in Art & Architecture**

This interdisciplinary course examines the convergence of artistic and architectural ideas, techniques, and practices through selected historical and contemporary studies. Emphases range from the figure of the artist/architect (Michelangelo and Leonardo, for example, to Le Corbusier and Libeskind), to critical reflections (Vasari, Gennough, Serra) to boundary-crossing practices (Whitread, Webster, Irwin, Kin, Judd, Miss) to collaborations and collaborative works (Ando/Kelly/Serra and the Pulitzer Foundation). The course emphasizes empathy and productive work across artistic disciplines. Field trips to the Pulitzer Foundation for the Arts (St. Louis) and the Chinati Foundation (Marfa, Texas) are planned.  
Credit 3 units.

---

#### **X10 XCORE 311 Materials & Mechanisms: Site Specific Design Installation**

In this course students are guided to explore the nature of materials and simple mechanisms (mechanically driven kinetics) in the making of art and/or utilitarian objects. This course investigates the qualities of materials and how they might be used thoughtfully to develop a conceptual and physical experience for an audience or user. Specific materials are assigned, at times, yet students have the opportunity to self-select materials based on project needs. Throughout the semester, students balance designing with finding — the process of playfully exploring materials and methods without preconception of a final resolution. Looking for possibilities can lead to unexpected discoveries.

Credit 3 units. EN: H

---

#### **X10 XCORE 313A Creative Practice and Natural Systems: An Ecology of Art**

In this studio course, students learn to use basic ecological principles as a lens through which to investigate and evaluate productive, meaningful, and sustainable creative practices. Ecology is community-focused, involving the study of relationships with a given community. It establishes a model by which students can establish a more complete understanding of the inspirations, expectations and ramifications of creative practice. We visit local gardens, parks, farms and neighborhoods while seeking to understand the complexity of our own role in nature and culture. This diverse range of ecological engagement allows for a broad array of creative applications in the studio arts, design and architecture. The class format challenges students with new ways of thinking while allowing them to select materials, specific topics of study, and methods of engagement appropriate to their own developing interests. The course consists of fieldwork, readings and lectures, the content of which is examined through individual and collaborative projects. At midterm, students identify opportunities for focused research and production. The course culminates with the public presentation of this work.

Credit 3 units. EN: H

---

#### **X10 XCORE 315 Cycles**

Students design and build human-powered vehicles from discarded bicycles. The course collaborates with student mechanics involved with Bicycle Works (Bworks). Bworks collaborates in teams with Washington University students to design and build the work.  
Credit 3 units.

---

#### **X10 XCORE 317 Furniture Design**

The seat is an intimate interface between the building and the body. It embodies a complex set of structural conditions, material opportunities and possibilities for expression. Architects, artists, and industrial designers covet opportunities to make the chair. The result is that seemingly infinite perfect solutions exist — and still the seat remains a provocative challenge. In this course students design and build a chair. Emergent technologies are combined with traditional techniques of metal fabrication, woodworking, and plastic forming in the design and making of the work. The course objective is for students to learn how to work directly with machinery and materials in the realization of their design. It is expected that students have basic shop skills addressed in course prerequisites. Advanced techniques will be introduced in this course and students select those most appropriate to their work to build upon. There is a great deal of independent investigation required to excel in this course. Students propose and develop ideas using drawings, models and mock-ups in order to realize the best potential for their design.

Credit 3 units. EN: H

---

#### **X10 XCORE 317X Furniture Design**

This course explores design and fabrication methods for objects of human interaction. Each student will design and build a table, based on a unique concept. To this end, it is up to the individual student to define what the particular table is for, and clearly communicate their intentions and ideas. Contemporary technologies will be combined with traditional techniques of metal fabrication, woodworking and plastic forming in the

design and production. The course objective is for students to learn how to work directly with machinery and materials in the realization of their design. It is expected that students will have basic shop skills addressed in course prerequisites. Advanced techniques will be introduced, and students will select those most appropriate to their work to build upon. A high level of craft and a great deal of independent investigation are required to excel in this course. Students propose and develop ideas using drawings, models and mock-ups in order to realize the maximum potential for their design. College of Architecture and College of Art sophomores, juniors and seniors have priority. Fulfills Sam Fox Commons requirement.

Credit 3 units. EN: H

---

#### **X10 XCORE 319 Digital Fabrications: A Primer Course in the Use of Computer Modeling for Art & Design**

This course focuses on fabrications both real and virtual. The ubiquity of computers in design, studio art, communications, construction and fabrication demand that professionals become comfortable with their use. It is also important in a group of ever-specializing fields that one knows how to translate between different software and output platforms. This comfort and the ability to translate between platforms allow contemporary artists and designers to fabricate with ever-increasing freedom and precision. This course introduces students to 3-D software with a focus on 2-D, 3-D, and physical output. Through a series of projects, students learn to generate work directly from the computer and translate it into different types of output. Starting from first principles, the course covers the basics from interface to output for each platform used. The course also familiarizes students with a range of CNC technology and other digital output for both small- and large-scale fabrication. The course is broken into three projects. In the first, students focus on computer-generated geometry and control systems. In the second, students generate physical output and line drawings. The final project focuses on rendering, context, and cinematic effects. The software covered includes, but is not limited to, Rhinoceros 3D, Maya, Illustrator, and Photoshop. Additionally, students use the 3-D printer, laser cutter and/or other digital output tools.

Credit 3 units. EN: H

---

#### **X10 XCORE 321 Mapping Soft Bodies**

This course develops digital design skills with conceptual understanding of the transformative process of artistic production. Mapping Soft Bodies investigates artificial objects and industrial products as a basis for inspiration. Through digital modeling and scanning the human body, each student develops a transformation process that analyzes the social and cultural conditions of a new emerging design. New body armatures are modeled through CAD/CAM (laser cutting) and Rapid Prototyping (3-D printing) for physical outputs. The course is for students who are interested in emerging technologies and digital production. The course is for students interested in design, sculpture, architecture and digital media by enhancing 3-D technologies and allows each student to develop abstract thinking and making processes.

Credit 3 units. EN: H

---

#### **X10 XCORE 325 Global Discourses in Art & Architecture**

This course examines art, architecture and urbanism from the perspective of global production, dissemination and reception. It focuses on the global exchange of people and ideas as one of the main vehicles of visual culture, both historical and contemporary. Through a series of focused case studies, the

course probes inherent dichotomies within art and architecture driven by their site-specificity, yet also by their constant global displacement across various disciplinary, cultural and geographical boundaries. The course content includes lectures, discussion sessions, readings, and textual and visual projects that examine cross-cultural aspects of art and architecture. The course is offered as part of the universitywide Global Certificate and is open to all students at Washington University regardless of their major field of study.

Credit 3 units.

---

#### **X10 XCORE 327 Color Systems**

This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by culture, and by commerce. The course aims to deepen the understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, a goal is to expand ideas of research and enable students to integrate various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters.

Credit 3 units. Art: FADM EN: H

Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Fulfills Sam Fox Commons requirement. Prerequisite: Drawing I, Communication Design I, or 2-D Design, or permission of instructor.

Credit 3 units. EN: H

---

#### **X10 XCORE 330 Cell Phones, Snapshots and the Social Network**

This course is designed around the cell phone camera as a means of art production using blogs, interactive websites, social networking and mass distribution of digital images and videos. Students explore the art-making potential of the cell phone camera as a snapshot camera of the modern age. Students post daily images/videos on blogs and other social media sites. Readings and discussion topics include the culture and aesthetic of the snapshot, the vernacular image, and the role of social networks in image production and distribution. Students are required to design and maintain at least two social networking sites and to supply a cell phone with the ability to upload images to the internet.

Credit 3 units. EN: H

---

**X10 XCORE 332 Metabolic City: Spaces of Bodily and Environmental Wellness**

Metabolic City probes bodily and environmental wellness as intertwined cultural, social and technological constructs. From the British Archigram Group to the Japanese Metabolists and the Dutch artist Constant, a number of visionary projects in the 1960s reimagined our notion of the body, city and the environment. By means of individual and collective gadgets, tools and spaces, they bridged the scales of the body and the city, weaving together issues of bodily and environmental performance. Through a combination of texts, discussions and projects, the course engages in a delayed conversation with these projects, proposing the concept of "metabolism" both as a bodily function, but also as an environmental mechanism that operates on a global scale. Some of the key concepts discussed in the class include global citizenry, urban imagination, networks, performance, virus, urban protest and insurgence. The course fulfills the architectural history/theory elective requirement and is also open to all Washington University students.  
Credit 3 units.

---

**X10 XCORE 335X Urban Books**

Since the beginning of the 20th century, art, architecture and urbanism together have investigated the production of images that shape the symbolic dimension of our experience of large cities. The main goal of this course is to critically embrace this tradition through the format of the artist's book. St. Louis is the focus for our observations because it is familiar to our everyday lives and also because it provides key situations for understanding contemporary forms of urbanity and how urban space is produced and imagined. The course bridges the curricular structures of art and architecture by enhancing the collaboration between the practical and scholarly work developed in both schools, with additional support from Special Collections at Olin Library. It combines the reading, lecture and discussion format of a seminar with the skill building and creative exploration of a studio. This course is divided into three progressive phases of development: the first consists of weekly readings, discussion, and responses in the form of artist's books. The second phase focuses on the Derive with physical activities and assignments based on interacting directly with the urban environment. The third phase focuses on individual research, documentation, and final book design and production. College of Architecture and College of Art sophomores, juniors and seniors have priority. Fulfills Sam Fox Commons requirement.  
Credit 3 units. Arch: GAUI, UI Art: FADM EN: H

---

**X10 XCORE 336 Urban Books**

Since the beginning of the 20th century, art, architecture and urbanism together have investigated the production of images that shape the symbolic dimension of our experience of large cities. The main goal of this course is to critically embrace this tradition through the format of the artist's book. St. Louis is the focus for our observations because it is familiar to our everyday lives and also because it provides key situations for understanding contemporary forms of urbanity and how urban space is produced and imagined. The course bridges the curricular structures of art and architecture by enhancing the collaboration between the practical and scholarly work developed in both schools, with additional support from Special Collections at Olin Library. It combines the reading, lecture, and discussion format of a seminar with the skill building and creative exploration of a studio. ---

**X10 XCORE 338 Shifting from Lines to Surfaces/Virtual to Empirical**

Digital Media Design: Introduction to Exploring Digital and CAD/CAM Technology. This is a course in computing theory and techniques on 2-dimensional digital software and advanced 3-dimensional modeling software. Weekly demonstrations on software operations and individual projects are developed. This course bridges the gap between 2-D computational tools that define lines and the 3-D tools that develop complex surfaces. These surfaces explore the possibilities of creating and articulating the non-linear geometries manipulated on the digital environment. The final project consists of 2-dimensional drawings, digital models, and physical models produced by advanced CAD/CAM technology. By employing alternative techniques and emerging technologies of manufacturing, new forms of objects and perceptions redefine multiple design processes.  
Credit 3 units. EN: H

---

**X10 XCORE 343 Digital Filmmaking: City Stories**

Digital Filmmaking: City Stories is a cross-university video art course for students interested in making short films through a transdisciplinary and time-based storytelling in both narrative and non-narrative formats. Whether documentary or abstract, individually produced or collaborative, all projects in this course have a required social and urban engagement component. In this course the city becomes a laboratory for experimentation and contribution. Students meaningfully engage St. Louis, and their projects address sites of concern to explore the complex fabric of the city by way of framing and poetic juxtaposition. City Stories merges several arts and humanities disciplines, including experimental cinema and documentary journalism, and creates an opportunity for empathic listening and inquiry as students discover stories built from collective as well as individual memories.  
Credit 3 units.

---

Whether documentary or abstract, individually produced or collaborative, all projects in this course have a required social and urban engagement component. In this course the city becomes a laboratory for experimentation and contribution. Students meaningfully engage St. Louis, and their projects address sites of concern to explore the complex fabric of the city by way of framing and poetic juxtaposition. City Stories merges several arts and humanities disciplines, including experimental cinema and documentary journalism, and creates an opportunity for empathic listening and inquiry as students discover stories built from collective as well as individual memories. College of Architecture and College of Art sophomores, juniors and seniors have priority. Credit 3 units.

---

### **X10 XCORE 345 Shopping**

This seminar examines shopping as a social and cultural construct that operates at several levels in relation to art, architecture and urban planning. Shopping is the fundamental activity of the capitalist marketplace. It is also inextricably linked with major aspects of public and foreign policy, where national consumerism is closely linked to global tourism, and it is at the core of economic development. Shopping is, as well, a common denominator of popular culture, frequently satirized in contemporary art, film and literature. Participants in the seminar read selections from various writings about shopping and the marketplace. We also view several films examining the shopping environment in narratives of power and desire. Open to sophomores and above. Credit 3 units.

---

### **X10 XCORE 347X Furniture Design**

This course explores design and fabrication methods for objects of human interaction. Each student will design and build a table, based on a unique concept. To this end, it is up to the individual student to define what the particular table is for, and clearly communicate their intentions and ideas. Contemporary technologies will be combined with traditional techniques of metal fabrication, woodworking and plastic forming in the design and production. The course objective is for students to learn how to work directly with machinery and materials in the realization of their design. It is expected that students will have basic shop skills addressed in course prerequisites. Advanced techniques will be introduced, and students will select those most appropriate to their work to build upon. A high level of craft and a great deal of independent investigation are required to excel in this course. Students propose and develop ideas using drawings, models and mock-ups in order to realize the maximum potential for their design. College of Architecture and College of Art sophomores, juniors and seniors have priority. Fulfills Sam Fox Commons requirement. Credit 3 units. EN: H

---

### **X10 XCORE 386X Public Practice**

With architecture, art and design students in mind, Public Practice is a design-build course focused on the development, presentation and actualization of commissioned works within the public realm. Through an iterative process of concept development, material exploration and panel reviews, students

will learn how to develop, propose and execute a viable public piece. Individual and/or group proposals will be presented before a selection committee in consideration toward a public art/design commission. Selected projects will be realized within specified sites in the community of University City, MO. Students will have hands-on experiences with construction processes, meeting structural requirements and codes, site development, and project installation which will prepare them for a creative life situated firmly within a discourse of Public Space. Open to MFA, graduate architecture students, BFA and undergraduate architecture students with junior-level standing. Minors and others eligible with consent of instructor. CET (<https://gephardt.institute.wustl.edu/cec/sam-fox-school-of-design-and-visual-arts>) course. Credit 3 units.

---

## **Architecture**

Visit online course listings to view semester offerings for A46 ARCH (<https://courses.wustl.edu/CourseInfo.aspx?sch=A&dept=A46&crslvl=1:4>).

---

### **A46 ARCH 111 Introduction to Design Processes I**

This introductory architectural design studio engages the basic principles of architectural context, composition and experience. Through various fieldwork strategies, students explore architectural context through observation, analysis and invention. The site-specific design processes bridge two-dimensional and three-dimensional work, including drawing, drafting and making. The experiential qualities of architecture are introduced through basic considerations of scale and human interaction. The course work includes studio, work, lectures, presentations by students, readings, writing assignments and field trips. Credit 3 units.

---

### **A46 ARCH 112 Introduction to Design Processes II**

This core design studio engages the basic principles of architectural design through iterative processes of drawing and making, using a variety of tools, media and processes. The course work includes studio work, lectures, student presentations and local field trips. Prerequisite: A grade of C- or better in Arch 111 or co-registration in Arch 111. Credit 3 units.

---

### **A46 ARCH 175 Designing Creativity: Innovation Across Disciplines**

Via a series of lectures from prominent thinkers and practitioners in the areas of medicine, neuroscience, law, engineering, architecture, human-centered design, business, stage design, and the performing arts, Designing Creativity is a course that covers the study and practice of the creative process across many disciplines. From "Ah-ha" epiphanies to slow-developing discoveries, the creative process is employed by innovators and artists in virtually every corner of the globe. In this course, we explore the study of those processes by hearing from creatives in many fields with practice of those techniques via a LAB component that allows students to explore the development of innovative ideas in collaborative teams followed by project presentations to core faculty and classmates. Same as I50 InterD 175. Credit 3 units. A&S IQ: HUM Art: FADM EN: H

---

#### A46 ARCH 209 Design Process

Open to Engineering, Arts & Sciences, Business and Art students at all levels. This studio course engages students in the process of design with an emphasis on creative thinking. Course content relates directly to the interests of engineers as well as arts and science, business and art students who wish to problem solve about positively shaping the texture and quality of the built world. A series of 2-D and 3-D hands-on problem-solving projects introduce students to design concepts as they apply to site (ecosystems and outdoor places), to humanistic place making (personal and small public spaces), to structure and materials (intuitive exploration of structural principles through model building), to environmental issues (effects of climate, light, topography, context and sensible use of natural resources). No technical knowledge or special drawing/model-making skills are required. There are informal group and individual discussions of each person's stages in inquiry. The investigations take the form of study models made of recycled materials. Guest lecturers participate throughout the semester. The concluding project for the semester allows each student to work with their unique academic and personal interests, utilizing the process of lateral thinking. CET (<https://gephardtinstitute.wustl.edu/cec>) course. Credit 3 units. EN: H

---

#### A46 ARCH 211B Introduction to Design Processes III

Introduction to Design Processes III engages design through the lens of perception investigating the relationship between materiality and inhabitable space situated in a natural context. Prerequisites: successful completion of Arch 111 and 112, with a grade of C- or better; or successful completion of Arch 210, with a grade of C- or better. Credit 4.5 units.

---

#### A46 ARCH 212B Introduction to Design Processes IV

Studio which initiates architectural and building issues such as: building analysis, structure, organizational systems and programming. Prerequisites: successful completion of Arch 211B with a grade of C- or better. Credit 4.5 units.

---

#### A46 ARCH 241 Community Dynamics

This course builds on the investigations of X10 XCore 307, Community Building, and concentrates on the connections between place-based economic, political and social dynamics. In order to ground discussions in reality, the class immerses itself in the urban laboratory of St. Louis while relating local issues to broader trends. The course is organized using the Community-Based Teaching and Learning methodology and is centered around the first phase of a multi-year inquiry into the potential of design to improve the reality and perception of public safety through targeted projects. Students assemble relevant research on applicable design techniques, brief project partners in the Mayor's Office of the City of St. Louis, work with representatives of the St. Louis Metropolitan Police Department to define focus areas and assess the applicability of design strategies to specific focus areas. The course is divided into a lecture/discussion session on Thursday and a lab section on Friday. The lab section will be divided between independent research and bi-monthly facilitated meetings with city representatives. Credit 3 units.

---

#### A46 ARCH 243 Design as Export

This course introduces students to the contemporary global characteristics of design in the late 20th and 21st century. The marketing, fabrication, distribution and consumption of design is global, yet the cultural and formal identity of most design products are national and regional. How do traditions of design and quality based on centuries of a national and regional design culture react and adapt to a global market? What is the culture of design? What is design identity? Italian design is the primary focus of this course, followed by Japanese and Asian design and manufacturing. Case studies include examples of industrial design, fashion design, communication design and automobile design. The course also includes presentations by design curators and representatives of various international design companies.

Credit 3 units.

---

#### A46 ARCH 2661 Semester Abroad Program Seminar

This course will prepare students participating in the Sam Fox School's Semester Abroad Programs. The seminar will meet eight times over the course of the semester. Attendance is mandatory for students going abroad. Prerequisite: College of Art and College of Architecture students selected for the Sam Fox School Abroad Programs.

Same as F20 ART 2661

Credit 1 unit. EN: H

---

#### A46 ARCH 275 Service Learning Course: Environmental Issues

This service learning experience allows Washington University students to bring their knowledge and creativity about the many subjects they are studying to students at the Compton-Drew Middle School, adjacent to the Science Center, in the City of St. Louis. This course is for arts and sciences students of differing majors & minors, business, architecture & art students, and engineering students from all engineering departments. The first third of the semester students will: 1) begin learning the creative process of lateral thinking (synthesizing many variables, working in cycles); 2) work with a teammate to experiment with the design of 2-D & 3-D hands-on problem-solving workshops about exciting environmental issues, for small groups of students at Compton-Drew Middle School; 3) devise investigations for the workshops about environmental issues embracing the sciences, the humanities, and the community; 4) each student will work with the professor individually and in their team, as well as seek advice of faculty from a specific discipline, through the semester in the preparation of their evolving curricular plan. During the last two thirds of the semester Washington University students will be on-site during the Compton-Drew school day, once a week on each Monday from 11:00 a.m. to 12:30 p.m., to teach small group workshops for some of the sixth and seventh grade students. This course is open to freshmen, sophomores and juniors.

Credit 2 units.

---

#### A46 ARCH 306M Visualizing Segregation: A History of St. Louis, Chicago and New Orleans

This interdisciplinary course is designed to introduce students to the history of three of America's major cities. We will explore the political, social, and cultural histories of each of these cities while tracing changes in architecture and the built environment. We chose these three cities for their diverse and intersecting histories. In many ways, St. Louis, Chicago and New Orleans represent the major social and political forces that forged the

modern American city. From westward expansion and the growth of the slave system, through mass European immigration and industrialization, the rise of Jim Crow and the decline of American industry, suburbanization, mass incarceration, and gentrification: All are visible in the landscapes of these American cities. Segregation of social groups, so often seen as natural or inevitable, is the result of historical processes, political decisions, public policies and individual actions. The course, in addition, will provide students with the opportunity to use some of the research techniques employed by urban scholars. We will engage in a major research project, tracing the history of St. Louis through a variety of primary sources. Our aim will be to trace the historical processes that generated urban landscapes divided along lines of race, class, ethnicity or religion.  
Same as I50 InterD 306M

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

---

#### A46 ARCH 307X Community Building

This course looks at the intersection of the built fabric and the social fabric. Using St. Louis as the starting point, this course takes students out of the classroom and into a variety of neighborhoods — old, new, affluent, poor — to look at the built environment in a variety of contexts and through a variety of lenses. Almost every week for the first half of the semester, students visit a different area (or areas), each trip highlighting some theme or issue related to the built environment (architecture, planning, American history, investment and disinvestment, community character and values, race, transportation, immigrant communities, future visions, etc.). Running parallel to this, students are involved in an ongoing relationship with one particular struggling neighborhood, in which students attend community meetings and get to know and become involved with the people in the community in a variety of ways. Students learn to look below the surface, beyond the single obvious story, for multiple stories, discovering their complexity, contradictions and paradoxes. They also come to consider the complex ways in which architecture and the built environment can affect or be affected by a host of other disciplines. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Fulfills Sam Fox Commons requirement.

Same as X10 XCORE 307X

Credit 3 units. EN: H

---

#### A46 ARCH 308X Community Building North

This course addresses the complex economic, political and racial landscape of north St. Louis County focused on Ferguson, Missouri, as the embodiment of problems and conflicts endemic to urban communities across the country. The events following Michael Brown's shooting death on August 9, 2014, have revealed deep divisions in the St. Louis metropolitan area. Our multidisciplinary approach will be evident as we investigate the intersecting, compounding roles of social and economic inequities, racial disparities, white flight, public safety, housing, and economic development as we grapple with legitimate, thoughtful ways of making positive change. We'll learn how to listen to, understand, and address conflicting voices. Readings, speakers, site visits, films, and other materials will be combined with discussion, writing, and socially conscious engagement as we seek to understand the many faces of Ferguson while following contemporary developments as they occur. Professor Robert Hansman acts as advisor and guide. The interdisciplinary course he developed over many years, "Community Building/ Building Community," provides the intellectual, ethical, and spiritual bases as co-taught by Raimist and Hansman.

This course offers fresh perspectives and provides unique opportunities for community engagement for students who have previously taken Community Building, however that course is not a prerequisite. Projects develop collaboratively and organically between students, faculty, and community partners working to find common values and beliefs upon which to build concrete, meaningful action. CET (<https://gephardtinsttute.wustl.edu/cec>) course.

Same as X10 XCORE 308X

Credit 3 units.

---

#### A46 ARCH 311 Architectural Design I

This architectural design studio is a final course in the five-semester core studio sequence. It focuses on rigorous design development, from a conceptual exploration of an idea to a detailed building design. Prerequisites: successful completion of the four-semester core design studio sequence, including Arch 212B, with a grade of C- or better. Concurrent registration in Building Systems I required.

Credit 6 units.

---

#### A46 ARCH 312 Architectural Design II

Prerequisite: satisfactory completion of Arch 311.

Credit 6 units.

---

#### A46 ARCH 312A Architectural Design II (Study Abroad)

Prerequisite: satisfactory completion of Arch 311.

Credit 6 units.

---

#### A46 ARCH 317 Architectural Design I (MArch 3)

The first of a three-semester sequence that introduces students to architectural design, focusing on conceptual, theoretical and tectonic principles. First-semester MArch 3 students only.

Credit 6 units.

---

#### A46 ARCH 317X Furniture Design

This course explores design and fabrication methods for objects of human interaction. Each student will design and build a table, based on a unique concept. To this end, it is up to the individual student to define what the particular table is for, and clearly communicate their intentions and ideas. Contemporary technologies will be combined with traditional techniques of metal fabrication, woodworking and plastic forming in the design and production. The course objective is for students to learn how to work directly with machinery and materials in the realization of their design. It is expected that students will have basic shop skills addressed in course prerequisites. Advanced techniques will be introduced, and students will select those most appropriate to their work to build upon. A high level of craft and a great deal of independent investigation are required to excel in this course. Students propose and develop ideas using drawings, models and mock-ups in order to realize the maximum potential for their design. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Fulfills Sam Fox Commons requirement.

Same as X10 XCORE 317X

Credit 3 units. EN: H

---

#### A46 ARCH 318 Architectural Design II (MArch 3)

The second of a three-semester sequence of design studios. Continues examination of issues raised in ARCH 317. Second-semester MArch 3 students only.

Credit 6 units.

---

**A46 ARCH 323A Architectural Representation I (MArch 3)**

This course examines the history/theory and practice of representation, specifically the systems of drawing used in architecture. The objective is to develop the requisite discipline, accuracy, and visual intelligence to conceptualize and generate a relationship between space and form. The course focuses on two concurrent tasks: first to outline and analyze the historical development of representational logics and their impact on architectural ideation, and second to explain the codification and usage of specific geometries, including orthographic and isometric projection, central and parallel perspective, and architectural axonometric. We will see that, rather than a translation of reality, representation operates between perception and cognition as a transcription of reality and is thus a powerful instrument in the design and making of architecture. The relationship between the drawing forms and the tools used to produce them are brought into focus as manual, digital, photographic and physical applications driven by drawing intentions. The course is organized as a lecture/lab with emphasis on practice of manual and photographic applications. Credit 3 units.

---

**A46 ARCH 323B Architectural Representation II (MArch 3)**

The course examines the history/theory and practice of representation, specifically the systems of drawing used in architecture. The objective is to develop the requisite discipline, accuracy and visual intelligence to conceptualize and generate a relationship between space and form. The course focuses on two concurrent tasks: first, to outline and analyze the historical development of representational logics and their impact on architectural ideation, and second, to explain the codification and usage of specific geometries, including orthographic and isometric projection, central and parallel perspective, and architectural axonometric. We see that, rather than a translation of reality, representation operates between perception and cognition as a transcription of reality and is a powerful instrument in the design and making of architecture. The relationship between the drawing forms and the tools used to produce them are brought into focus as manual, digital, photographic and physical applications driven by drawing intentions. This course is organized as a lecture/lab with emphasis on the practice of digital media and physical modeling. Emphasis is on participation and excessive absences are noted. Please note: The second half of the semester focuses on computing, for which each student is required to have a laptop computer. Credit 3 units.

---

**A46 ARCH 326G Digital Fabrications**

This course will focus on fabrications both real and virtual. The ubiquity of computers in design, studio art, communications, construction and fabrication demand that professionals become comfortable with their use. It is also important in a group of ever-specializing fields that one knows how to translate between different software and output platforms. This comfort and the ability to translate between platforms allow contemporary artists and designers to fabricate with ever-increasing freedom and precision. This course will introduce students to 3-D software with a focus on 2-D, 3-D, and physical output. Through a series of projects, students will learn to generate work directly from the computer and translate it into different types of output. Starting from first principles, this course will cover the basics from interface to output for each platform used. This course will also familiarize students with a range of CNC technology and

other digital output for both small- and large-scale fabrication. The course will be broken into three projects. In the first project, students will focus on computer-generated geometry and control systems. In the second part, students will generate physical output and line drawings. The final project will focus on rendering, context and cinematic effects. The software covered in this course includes, but is not limited to: Rhinoceros 3D, Maya, Illustrator, Photoshop. Additionally, students will use the 3-D printer, laser cutter, and/or other digital output tools. Credit 3 units.

---

**A46 ARCH 326J Digital Representations**

Digital Representations introduces students to digital modeling and fabrication, parametric workflow, and various 2-D and physical output techniques. Starting from first principles, this course begins with the basics from interface to output for each platform used, developing skills in digital modeling and physical output and serving as a prerequisite for more advanced courses in design scripting and digital fabrication. Students complete a semester-long project divided into three assignments, beginning with developing a detailed digital model of a formal precedent, which introduces students to basic skills in modeling with nurbs, subdivision surfaces, and meshes. Continuing to develop a clear diagrammatic organization and hierarchy, students expand the characteristics of their original formal precedent using Grasshopper to create a set of dynamic, flexible behaviors. Drawing upon their initial understanding and analysis of organizational systems within their formal object, students transfer their observations into the construction of a spatial parametric model that has potential to serve structure, fabrication methods, and material assembly. Finally, students develop their digital model into a geometrically rationalized material system that draws upon their initial precedent, producing a physical model, renderings, and 2-D drawings presented in the format of a final review. Credit 3 units.

---

**A46 ARCH 326K Digital Evolutions: Parametric Design for a Fabricated Species**

Digital Evolutions will introduce digital modeling, parametric workflow, and fabrication techniques in a variety of two and three-dimensional media to document the imagined development of a hypothetical animal species. As a prerequisite for more advanced courses in design scripting and digital fabrication, this course will introduce each technique at a foundational level giving every student a new arsenal of digital tools with which they can act as evolution's (intelligent) designer. Students will begin with an analysis of drawings by Ernst Haeckel (1843-1919), a German biologist, naturalist, philosopher, and artist who promoted and popularized Charles Darwin's work in Germany, but whose own alternative theories of evolution have subsequently been discredited. Students will use Grasshopper and associated plug-ins to exploit the powerful flexibility of parametric design to iteratively adapt these studies to various imagined environmental conditions. Working in pairs, students will crossbreed their species, synthesizing ideas concerning skin, support systems, pattern, and kinetics, finally modeling this fictitious entity with a geometrically rationalized material system—a fabricated fabrication. Credit 3 units. Art: FADM

---

**A46 ARCH 327X Color Systems**

This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by

culture, and by commerce. The course aims to deepen the understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, a goal is to expand ideas of research and enable students to integrate various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Fulfills Sam Fox Commons requirement. Prerequisite: Drawing I, Communication Design I, or 2-D Design, or permission of instructor. Same as X10 XCORE 327X  
Credit 3 units. EN: H

---

**A46 ARCH 3283 Architectural History I: Premodern Encounters in World Architecture**

This course explores the history of architecture from its origins until the beginnings of the modern period from a global perspective, focusing on patterns of interaction and exchange between and within both elite and vernacular building cultures. Using selected examples from Eurasia, sub-Saharan Africa and the Americas, the course traces the major elements of change and development in the design of the earth's built environment, including technologies and materials, typology, the organization of labor and capital systems to the profession and the public. Course requirements include a midterm, final exam and research paper.  
Credit 3 units. EN: H

---

**A46 ARCH 3284 Architectural History II: Architecture Since 1880**

An introductory survey of the history and theory of architecture and urbanism in the context of the rapidly changing technological and social circumstances of the past 120 years. In addition to tracing the usual history of modern architecture, this course also emphasizes understanding of the formal, philosophical, social, technical and economic background of other important architectural directions in a global context. Topics range from architects' responses to new conditions in the rapidly developing cities of the later 19th century, through early 20th-century theories of perception and social engagement, to recent efforts to find new bases for architectural interventions in the contemporary metropolis.  
Credit 3 units. Arch: HT EN: H

---

**A46 ARCH 333 Case Studies in 20th-Century Architecture**

Through a series of analytical, critical and interpretative studies of singular works of architecture in the 20th century, this course focuses on the manifold processes and contexts of their production. Each work is examined as a physical and cultural artifact with precise formal, intellectual and ideological intentions and meanings. The architectural object, understood as a synthesis of multiple criteria and frameworks, is explored from its conception through its realization based on certain principles (fundamental precepts of the discipline of architecture) and a broad range of concepts (abstract ideas understood as the products of speculative and reflective thought).  
Credit 3 units. Arch: GARW

---

**A46 ARCH 335X Urban Books**

Since the beginning of the 20th century, art, architecture, and urbanism together have investigated the production of images that shape the symbolic dimension of our experience of large cities. The main goal of this course is to critically embrace this tradition through the format of the artist's book. St. Louis is the focus for our observations because it is familiar to our everyday lives and also because it provides key situations for understanding contemporary forms of urbanity and how urban space is produced and imagined. The course bridges the curricular structures of art and architecture by enhancing the collaboration between the practical and scholarly work developed in both schools, with additional support from Special Collections at Olin Library. It combines the reading, lecture, and discussion format of a seminar with the skill building and creative exploration of a studio. This course is divided into three progressive phases of development: the first consists of weekly readings, discussion, and responses in the form of artist's books. The second phase focuses on the Derive with physical activities and assignments based on interacting directly with the urban environment. The third phase focuses on individual research, documentation, and final book design and production. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Fulfills Sam Fox Commons requirement. Same as X10 XCORE 335X  
Credit 3 units. Arch: GAUI, UI Art: FADM EN: H

---

**A46 ARCH 336D Biomimicry: A Biokinetic Approach to Sustain(Able) Design**

There is a conceptual similarity between the way an organism and a building engage their respective environments. A biological system responds to the unique condition of its ecosystem; architecture responds to the unique conditions of the site. Building on this principle are the fields of biomimicry, the study of design and process in nature, and biokinetics, the study of movement within organisms, and their ability to address architectural problems with elegant, technologically advanced, sustainable solutions. Biomimicry: A Biokinetic Approach to Sustain(Able) Design focuses on kinetics as an essential element of biomimicry in the context of architecture and employs the study of the kinetic aspects of biological systems — structure, function and movement — to inform the design and engineering of buildings. A systematic approach to researching and translating the kinetic function of organisms leads to a successful bridging of biological and architectural concepts.  
Credit 3 units.

---

**A46 ARCH 336E Biomimicry, Teleology and Organic Architecture**

This seminar is intended to develop an understanding of the history and evolution of biomimicry as a significant design tool from the emergence of biology as a science in the early 19th century to the present. Biology was the first discipline to confront the problem of teleology, of design in nature. For the past 100 years, biological references and ideas are present in the work of architects and in the writings of architectural theorists. Biomimicry, a term coined by Janine Benyus, has developed into a new discipline that studies well-adapted organisms' designs and processes and then imitates life's genius to design human applications, aiming at a sustainable development. The intent of this seminar is to establish a systematic approach to research and analysis of the history and theory of this biological analogy and its influence on the history of environmental architecture, as seen through the lens of biomimicry. In addition to a historical analysis, students analyze case studies that exemplify the

relationship of architecture to biology, focusing not only on built work, but on the writings and the designer's positions in terms of this relationship. Classes consist of a combination of formal lectures and facilitated discussion periods. In addition, each student chooses a particular architect and, through research and analysis, assesses the influence of biomimicry in their work and presents these results in a paper that includes a critical analysis and a proposal on how to advance the architect's work to the highest level of biomimicry.  
Credit 3 units.

---

#### **A46 ARCH 339 Concepts and Principles of Architecture I**

This weekly seminar course addresses issues of Western architectural thought through a focused series of readings and discussions. The necessity and role of architectural theory in general is examined. Issues of tectonics, historicism, typology, regionalism, modernism, postmodernism and other critical frameworks for the consideration of architecture are thematic subjects of discussion. Selected readings include Vitruvius, Alberti, Laugier, Semper, Ruskin, Le Corbusier, Gropius, Kahn, Rossi, Venturi, Eisenman, Libeskind and Koolhaas. Weekly reading assignments, attendance, participation, one summary and discussion introduction based on a reading topic, final paper. Required for first-semester MArch 3 students. Fulfills history/theory elective for MArch 2 students.  
Credit 3 units.

---

#### **A46 ARCH 343A Design As Export**

This course introduces students to the contemporary global characteristics of design in the late 20th and 21st century. The marketing, fabrication, distribution and consumption of design is global, yet the cultural and formal identity of most design products are national and regional. How do traditions of design and quality based on centuries of a national and regional design culture react and adapt to a global market? What is the culture of design? What is design identity? Italian design is the primary focus of this course, followed by Japanese and Asian design and manufacturing. Case studies include examples of industrial design, fashion design, communication design and automobile design. The course also includes presentations by design curators and representatives of various international design companies.  
Credit 3 units.

---

#### **A46 ARCH 343X Digital Filmmaking: City Stories**

Digital Filmmaking: City Stories is a cross-university video art course for students interested in making short films through a transdisciplinary and time-based storytelling in both narrative and non-narrative formats. Whether documentary or abstract, individually produced or collaborative, all projects in this course have a required social and urban engagement component. In this course the city becomes a laboratory for experimentation and contribution. Students meaningfully engage St. Louis, and their projects address sites of concern to explore the complex fabric of the city by way of framing and poetic juxtaposition. City Stories merge several arts and humanities disciplines, including experimental cinema and documentary journalism and create an opportunity for empathic listening and inquiry as students discover stories built from collective as well as individual memories.  
Same as X10 XCORE 343  
Credit 3 units.

---

#### **A46 ARCH 344X Digital Filmmaking: City Stories**

#### **A46 ARCH 350 Service Learning Course: Environmental Issues**

This service learning experience allows Washington University students to bring their knowledge and creativity about the many subjects they are studying to students at the Compton-Drew Middle School, adjacent to the Science Center, in the City of St. Louis. This course is for arts and sciences students of differing majors and minors, business, architecture and art students, and engineering students from all engineering departments. In the first third of the semester, students will: 1) begin learning the creative process of lateral thinking (synthesizing many variables, working in cycles); 2) work with a teammate to experiment with the design of 2-D and 3-D hands-on problem-solving workshops about exciting environmental issues, for small groups of students at Compton-Drew Middle School; 3) devise investigations for the workshops about environmental issues embracing the sciences, the humanities and the community; 4) work with the professor individually and in their team, as well as seek advice of faculty from a specific discipline throughout the semester in the preparation of their evolving curricular plan. During the last two-thirds of the semester, Washington University students will be on-site during the Compton-Drew

school day, once a week on each Monday from 12:00 to 1:30 p.m. to teach small group workshops for some of the sixth- and seventh-grade students. There will also be a one-hour class meeting on Wednesday at a time to be finalized later. CET (<http://www.gephardtstitute.wustl.edu/cec>) course. Credit 3 units.

---

**A46 ARCH 355 Interdisciplinary Ecosystems Principles Integration**

The mission of this interdisciplinary seminar class is to "advance interrelationships of ecological and human systems toward creating healthy, resilient, and biodiverse urban environments" and will bring together experts and students in ecology, urban design, architecture/landscape architecture, economics, social work, and engineering, drawing from inside and outside the Washington University community.

Credit 1 unit.

---

**A46 ARCH 363 Architectural Photography**

This course offers a technical and theoretical understanding of architectural photography. Basic operation and orientation of digital and analog cameras are covered, as well as best practices for photographing interior and exterior spaces with both natural and artificial lighting. Students learn how to document artwork and architectural models/structures for portfolio presentation purposes, preparing them for working relationships with professional photographers in the industry. This course emphasizes 4x5 view camera skill, use of DSLR and digital input, studio lighting, and development of individual projects. Digital camera required; 4x5 camera provided by photography department.

**A46 ARCH 376 Design Thinking for Science, Engineering, Business and the Liberal Arts**

This introductory course outlines strategies and methodologies drawn from a wide range of creative design practices, including architecture, landscape architecture, urban design, industrial design and others. The course explores how these ideas and techniques are similar to practices in science, engineering, business and the liberal arts and how they might be applicable to multidisciplinary problem solving. Topics include perception, representation, technology, group intelligence, bio-mimicry and context-based learning, among others. Emphasis is given to the intersection of design thinking with environmental problems and the relationship between design thinking and innovation. The course includes lectures, guest lectures with case studies, and design projects. Open to all undergraduate students.

---

**A46 ARCH 3824 The Italian Renaissance in the City of Florence**

This course encompasses the Renaissance from Giotto through the High Renaissance. Students examine first-hand the works they are studying. Included are field trips to Rome and Venice.

Same as F20 ART 3824

Credit 3 units. EN: H

---

**A46 ARCH 3825 Florence as a Cultural Artifact: The History of Architecture as the History of the City**

This course combines seminar and workshop activities aiming at the understanding of the rich urban and architectural history of Florence, the place of students' work and temporary living during the study abroad program. These activities will be in dialogue with the design studio and art history courses. The intellectual framework of the course is informed by Giulio Carlo Argan's seminal work "La storia dell'arte come storia della città" ("The history of art as the history of the city," Einaudi, 1983), presenting the city as a complex time-space phenomenology of cultural artifacts. While Florence is well known for its cultural contribution to Western cultural history during the 1400s and 1500s, little is known about the full span of its millennial history, including its contemporary developments. The seminar activities will cover such aspects through readings and lecture-cum-sketching urban and architectural documentation tours in the first part of the semester, leading to the development of individual artists' book projects to be completed in the second part of the semester for the program's semester exhibition.

Credit 3 units.

---

**A46 ARCH 382S Special Topics: Franco Albini and Carlo Scarpa (Study Abroad)**

A history/theory seminar course examining the works of the Italian architects Franco Albini (b. 1905, Robbiate [Milan] - 1977) and Carlo Scarpa (b. 1906, Venice - 1978), as well as "the school of Florence," a group of modern architects who worked primarily in and around Florence, Italy, including Leonardo Savioli (b. 1917, Florence - 1982), Giovanni Michelucci (b. 1899, Pistoia - 1990) and Leonardo Ricci (b. 1918, Rome - 1994). Introductory lectures by the professors will be followed by student research and case studies of selected buildings and projects. Students will participate in field trips conducted by the professors to buildings and sites in and around Florence (works of Savioli, Ricci, Michelucci and Scarpa). A field trip to Milan in the first half of the semester will include visits to the Franco Albini Foundation with a lecture by the architect Marco Albini, as well as several exhibition installations designed by Albini, and his contemporaries Belgiojoso, Peresutti and Rogers. A field trip to Venice, Vicenza and Verona in the second half of the semester will include visits to projects designed by Scarpa, including the Olivetti Showroom, Querini Stampalia, Correr Museum, Castelvecchio Museum, and the Banca Popolare di Verona. Students will analyze and present buildings and installations employing varying methods of analysis, both graphic and photographic.

Credit 3 units. Arch: HT

---

**A46 ARCH 386X Public Practice**

With architecture, art and design students in mind, Public Practice is a design-build course focused on the development, presentation, and actualization of commissioned works within the public realm. Through an iterative process of concept development, material exploration, and panel reviews, students will learn how to develop, propose and execute a viable public piece. Individual and/or group proposals will be presented before a selection committee in consideration toward a public art/design commission. Selected projects will be realized within specified sites in the community of University City, MO. Students will have hands-on experiences with construction processes, meeting structural requirements and codes, site development, and project installation which will prepare them for a creative life situated firmly within a discourse of Public Space. Open to MFA, graduate architecture students, BFA and undergraduate

architecture students with junior-level standing. Minors and others eligible with consent of instructor.  
Same as X10 XCORE 386X  
Credit 3 units.

---

#### **A46 ARCH 401B Color in Architecture, Design and Art**

This seminar introduces students to aspects of color in architecture, design and art and deals primarily with 19th-, 20th- and 21st-century theories and projects. Student work includes readings and discussions, case studies and experiments in color application. Research includes case study architectural examples by Rietveld, Herzog & De Meuron, Luis Barragan, SANAA and others; readings on color theory by architects Alberti, Fernand Leger, Koolhaas, Le Corbusier; artists Mondrian, Josef Albers, Richard Paul Lohse, Ad Reinhardt, Barnett Newman, Donald Judd; philosophers Goethe, Wittgenstein, Barthes; psychologists Carl Jung; and designers Irma Boom, Ettore Sottsass, Bruno Munari and Konstantin Grcic. Resources will include the collections of the Mildred Lane Kemper Art Museum and the Saint Louis Art Museum.  
Credit 3 units.

---

#### **A46 ARCH 402A Measured Representation**

This course proposes to investigate and create a series of measured drawings. The drawings, as architectural objects, configure architectural knowledge, perception and vision. We will begin by studying precedent drawings in relation to each architect's theoretical framework, project description and technique. The range of works will relate different types of construction (perspectives, axonometrics, diagrams, ideagrams, assemblages, montages, descriptive geometry, and mapping) with integral and symbiotic theoretical agendas. Each student will learn the techniques of representation in their case study and from this example construct an interpretation of a specified site in this language. With a collection of theoretical frameworks and workshops on various techniques, the class will qualify a series of sites through drawing/interpreting the shadows present. Shadows may be thought of as reductions of the real object — in this sense, the drawings will act as abstractions or reductions that promote vision. Instead of simply discussing qualities of space, narratives of metaphor, intangible phenomena, implications of constructed geometry, this architectural research project attempts to propose methods of seeing such that the representation may play a more active role in the shaping of design. This course centers on the creation of imaginative processes of representation.  
Credit 3 units.

---

#### **A46 ARCH 404 Advancing Integrated Sustainability**

Do you want to work differently? Toward more effective outcomes? This course is a call to students from all disciplines with the conviction that it is necessary for us to work together while contributing from our specific fields of study to find solutions to challenges in our built environment. Students apply the knowledge base they acquire in this course to formulating ideas for actual community projects in St. Louis. Students learn to integrate and apply a holistic range of social, economic and technical systems inspired and optimized by models in the natural world. A foundation in natural and biomimetic systems is overlaid with analysis of corporate mission, principles and triple bottom-line thinking in order to learn how to build defensible, value-based arguments for implementation of sustainable systems. With the expressed intent of achieving net positive outcomes in the built environment, the following topics are addressed: brownfield property reuse; storm/wastewater

management; urban heat island management; air quality; potable water issues and opportunities; material cycles and flows including embedded energy, emissions, toxicity, virgin vs. recycled content and waste diversion; energy efficiency and renewable energy opportunities; transportation, accessibility and mobility choices; vernacular and cultural expression; local and healthy food availability; fitness advocacy and other health issues; education; public outreach and transparency; governance; and the economics of these systems. Lectures, case studies, readings and class discussions support application exercises and experimental projects to propose ideas for improving the built environment at multiple scales. Assignments are reviewed often to assist each student's learning and questions. Complementing leading-edge theory with practical outcomes are provided with the intention that students develop valuable skills to be incorporated in their other academic projects. Please visit <http://samfoxschool.wustl.edu> for work samples and student manifestos from previous classes.  
Credit 3 units.

---

#### **A46 ARCH 404C Topics in Architectural Entrepreneurship**

Entrepreneurship has become a very important issue for businesses small and large. What can the profession of architecture learn from these ideas? This course, offered in partnership with the Skandalaris Center for Entrepreneurial Studies, offers students a chance to gain exposure to the entrepreneurial ideas that are innovating the architectural community, and begin to foster a mindset of architectural entrepreneurship that has the potential to be widely beneficial to the profession. Each week the course welcomes a guest speaker who, as the owner of a firm or innovator of a new business proposal in the design field, provides case studies to show students what type of entrepreneurial ideas are shifting the architectural discipline. From sustainability, to urbanization and localism, to emerging global growth engines, and the future structure of the architectural network, each lecturer brings new insight to what it is to be an architectural entrepreneur.  
Credit 3 units.

---

#### **A46 ARCH 404D For Purpose: Art & Design as an Ethics-Based Model of Entrepreneurship**

Working from the premise that art and design have the ability to enrich and transform lives and communities in a tangible way, students redefine social, environmental and cultural problems as opportunities. Students are encouraged to bring ideas that have the potential to address these problems through the creative processes of art and design. Students work in teams to develop a proposal for a project, product or service-based organization with the potential to address a specific issue. Students draw lessons from researching established individuals, companies and not-for-profit organizations that are involved in the production of culturally significant, creative work that also supports a larger social mission, and students apply this research to their own proposal. Each proposal is developed into a business/sustainability plan that demonstrates the value of the proposal and explains the resources required to meet specific goals. This course introduces students to the uncertainty that is inherent in the entrepreneurial process. Students work to develop skills to evaluate ideas in relation to their personal values, the idea's ability to address a specific problem, and the resources required to implement a sustainable solution. The process helps students to navigate the uncertainty and assess the risk associated with implementing their proposal through morphing the idea concept, seeking advice, and building a coalition of stake holders. This

course is open to disciplines outside of architecture. Students in Art, Social Work and Engineering are encouraged to register. Credit 3 units.

---

**A46 ARCH 404E Design: Urban Ecosystem Principles Integration**

In today's world, our discipline has grand challenges whose solutions often lay in other realms. How will students train themselves to leverage the interdisciplinary partnerships required to innovatively solve and evolve in a rapidly changing world? The mission of this interdisciplinary course is to "advance the interrelationships of ecological and human systems toward creating a healthy, resilient, and biodiverse urban environment" and brings together experts and students in ecology, urban design, architecture/landscape architecture, economics, social work and engineering, drawing from inside and outside the Washington University community. Building from our knowledge of ecosystem principles and function, a diverse group of leaders in their fields provides lectures, readings, and student project leadership to understand and test Healthy Urban Ecosystems Principles among human and ecological (nonhuman) systems and the range of sociopolitical processes entailed with their implementation. Class content is developed by Washington University leaders in their disciplines as well as external organizations such as the Missouri Botanical Garden, the Field Museum in Chicago, and others. This course builds upon a 1-unit fall seminar (not a prerequisite) that introduces challenges and solutions to achieving healthy urban ecosystems, and provides students an opportunity to more deeply engage and manipulate the interrelationships of symbiotic urban systems and apply those concepts in multidisciplinary project applications. Projects leverage student-defined challenges in the evolving laboratory of urban St. Louis using Healthy Urban Ecosystems Principles to develop multidisciplinary integrated solutions to challenges encountered in urban areas such as climate change and resilience, security of ecosystem services, social inequity, economic strife, and community vitality. Students present their work in a public forum at semester's end. CET (<http://www.gephardt.institute.wustl.edu/cec>) course. Same as 150 InterD 406

Credit 3 units. A&S IQ: SSC EN: S

---

**A46 ARCH 405D Furniture Design**

The course focuses on the design of tables using wood as the primary material in response to "rational and irrational strategies" (systematic and emotional). Each student designs, develops and builds prototypes of two tables using the same material. One table is the product of a systematic analysis of material qualities, production procedures and other constructivist principles. The other table is the product of more explicitly intuitive, emotional and interpretive responses to the nature of the material and its production. Course limited to 10 students.

Credit 3 units.

---

**A46 ARCH 407A Digital and Analog Fabrication**

Digital and Analog Fabrication (Aperture Systems) explores contemporary fabrication methods for architectural design. We will develop and employ digital and manual fabrication techniques, including casting, thermoforming, 3-D printing, laser-cutting, and CNC milling, for a semester-long design project. Students will have opportunities to work with a variety of tools in the shops and digital laboratories to develop a full-scale kinetic prototype of/for a door/window/portal/aperture system. No previous fabrication experience or expertise is required.

Credit 3 units.

---

**A46 ARCH 408A Digital Visualization Workshop: 2-D Representation**

This workshop is an introduction to basic AutoCAD drawing layout and organization with printing process. The workshop introduces students to importing and exporting into other graphic softwares (Photoshop and Illustrator) allowing a basic understanding of resolution and line types with articulated graphic awareness to develop complex 2-D drawing capabilities. Required for all 317-level MArch 3 students, who are given priority in enrolling. Open to all other architecture students as space allows.

Credit 1 unit.

---

**A46 ARCH 408B Digital Visualization Workshop: Advanced 3-D Modeling**

This course develops digital design skills using the t-spline plug-in for Rhinoceros. As the field of architecture begins to incorporate evermore complex forms and formal strategies, it is necessary for designers to have the ability to work efficiently with advanced modeling software. This allows the development of clean, fluid forms that can be manipulated and transformed as part of the design process, not merely as an output. The course breaks down into four three-hour sessions in which students will have three assignments designed to give a basic understanding of the t-spline plug-in, as well as to show how this type of form manipulation applies to the field of architecture. This course is required for all students in the core graduate program during 318 studio semester.

Credit 1 unit.

---

**A46 ARCH 408C Digital Visualization Workshop: Advanced Rendering**

This workshop is an introduction to complex digital rendering in Rhino 4.0 with plug-ins Flamingo, V-Ray, Maxwell and Fry Rendering Engines. These skills are needed for sophisticated rendering outputs for more hyper-real visualization. The workshop introduces students to material, lighting, camera and global illumination processes. This workshop is required for all MArch students at the 419 level, who are given priority for registration in this course. Open to other upper-level undergraduate and graduate architecture students as space allows.

Credit 1 unit.

---

**A46 ARCH 408D BIM 101 Workshop**

The future of the design and construction industry is going to be driven by the use of technology. The best example emerging today is the use of three-dimensional, intelligent design information, commonly referred to as Building Information Modeling (BIM). BIM is expected to drive the AEC industry toward a "model-based" process and gradually move the industry away from a "2-D-based" process. The BIM 101 workshop is for future designers who recognize that this future is coming and who are looking for a way to begin preparing themselves in order to be ready when it arrives. We will explore how BIM is being used today and learn the basics of one of the leading BIM tools, Autodesk Revit Architecture 2009. This workshop is intended for senior undergraduate students and graduate students at the 500 level and above.

Credit 1 unit.

---

---

#### A46 ARCH 408J Performance Enhancing

The term "performance" has many meanings that are either quantitative, qualitative, or both simultaneously through a range of design professions. The suggested goal of performance is an optimistic enhancement to a designed entity or idea and holds the potential to be highly provocative relative to the method it is deployed when arguing for a particular design procedure or effect. The double entendre suggested by the term performance relates to both how the system technologically improves a functional aspect along with a more theatrical act of performing. Design in both architecture and fashion relies on both interpretations to create a multidimensional discourse necessary to advance conceptual design investigation. The seminar class explores issues of performance of complex surfaces at the scale of the human body. The class consists of lectures, discussions, readings, physical material manipulation, and 3-D digital modeling and digital fabrication. The use of Rhino (with T-splines and/or Grasshopper) or Maya is deployed for the digital design of the skin systems. Material systems are explored initially through manual experimentation and then combined with the digital investigation for the final digital fabrication using tools such as 3-D printing, lasercutting, CNC milling, and thermoforming, resulting in a final garment for the human body. The class is offered to both fashion and architecture students and the investigations occur in teams of two where ideally one from each discipline is represented.

Credit 3 units.

---

#### A46 ARCH 408M Atmospheric Animations

This course explores the capacity of modifying perception, as a way of thinking and making in design process. We recognize the ambient complex environment base on the concept of each element in space as a figure of motion, being sensitive to a specific period of time. Each student begins with selecting a certain way of observing, and developing a method to document and analyze a piece of dynamic perception which is then re-constructed through drawings or models, primarily focusing on one aspect of the experience, such as material performance, light reflections, air flow, etc. Final part of the project is representing the synthetic perception, by creating the atmospheric imagery in motion. Students are introduced to various techniques of recording ocular perceptions with the aid of digital tools, 2-D representation, 3-D modeling and animation rendering throughout the course, both as general workshops and individual project basis.

Credit 3 units.

---

#### A46 ARCH 408N Mapping Complex Spatial Sequences

New methods of spatial practice have changed the way architects and designers work. As designers, we are no longer tied to static, projection-based drawings as a means to develop and represent our ideas. Time-based digital imaging allows us to simultaneously examine the narrative, formal, experiential and spatial aspects of a particular place. Students will map a site through digital photography focusing on a specific spatial sequence much like how a director would set up a scene, moving fluidly from one space to another. During the first half of the semester, this spatial sequence will be used to create a drawing of the entire site as one multilayered composite image with particular attention to the interaction of time, space and movement. The site will then be reconstructed digitally through models or drawings, using the composite drawing as base. Finally, relationships between the drawing and model will be outlined resulting in a more complete experiential spatial sequence.

Credit 3 units.

---

#### A46 ARCH 408P Building Performance for a Solar Powered House

We will study the state of the art of building integrated solar systems, and design such a system for a house and assess its performance using computational tools. Topics include the fundamentals of solar energy systems, energy management, and its implications to design, either passive or active approach. The course involves building performance simulations using Ecotect, Energy+, HERS and other tools. Students will use simulation data to study the relation between design and its performance. The course will consist of lectures, review, and student projects. The course will be parallel with several Engineering courses, including ESE 437: Sustainable Energy Systems, and EECE 428: Sustainability Exchange. Projects will involve teamwork with Engineering students of different backgrounds. The course will contribute to Team WUSTL solar decathlon with the following features: energy efficiency: passive design; high performance enclosure; net-zero energy: renewable energy; heat recovery; sustainability: water recycle; carbon neutral; lean construction; resilience: prefabricated house to mitigate natural disasters; Smartness: advanced sensors network; energy management; data visualization; human-centered living adaptability: flexible space; human comfort and perception controls to operate the house to improve productivity and health; an interdisciplinary effort for renewable energy and sustainable buildings.

Credit 3 units.

---

#### A46 ARCH 408Q Fabricated Drawings

The course will focus on digital fabrication tools, techniques and image theory to uncover new methods of producing physical images. Images are built in a myriad of methods including physical media or from data. Physical images, as defined in the context of this seminar, will transcend a 2-D limitation to develop thickness. The increase to 2.5-D or 3-D opens opportunities to investigate the use of digital fabrication tools to construct images. In particular, the class will focus on the way information technology continues to have a profound effect on the way we perceive our built environment and the way we represent it. The images that surround us are becoming increasingly easy to generate through information technology. Access to technology both in terms of digital design and output affords the opportunity to reconceive the nature of images. Images are developed through analog, digital or hybrid processes. Their generation is a collaborative interaction between intuition and information processes through clearly defined rules. The scientific theoretician, Peter Galison, discusses the tension between intuition and information on the nature of images in the arts and sciences. Images reveal the intricacy of relations and knowledge, but they are simultaneous deceptive because they bypass the mathematics of pure science. The tension in the arts tends to be between the intuitive, interpretive ability of images as representation versus the image as evidence of a computation-based process. Architectural theoretician Mark Linder talks about how images in architecture are moving away from representations of something else toward a more literal and non-idealized result of a procedure. The image is literally the process of making visible the end result of an operation. Therefore, images are the evidence of the process by which they were generated. As such, the class will develop innovative processes for our digital fabrication equipment to construct images. The projects will develop new methods to use the CNC mill, laser cutters, knife plotter and 3-D printer. New tools may need to be developed and built to enable the image fabrication

process. In parallel with technological development is material experimentation. Students will be highly encouraged to test new materials to program their behavior and interaction with technology.

Credit 3 units.

---

**A46 ARCH 409C Watercolor Painting for Architects, Urban Designers and Landscape Architects**

This class will introduce students to different techniques of watercolor painting. The class will focus on teaching students the basics of material selection (paint colors, brushes, various papers), proper paint blending/mixing techniques, creation of unique color palettes, and both smooth wash techniques and painterly brush effects. Students will learn to render site plans of their own project work. There will also be an optional afternoon of pure sketching with paint. One objective is to teach students the methods to create beautiful renderings so that they may choose to apply the techniques to their final studio illustrative work (at the discretion of the student). Grades will be based upon class participation, effort, and final watercolors. Fulfills Analog elective requirement.

Credit 3 units.

---

**A46 ARCH 4102 Lively City: Behavioral Studies & Public Space Design**

During this three-day masterclass in Berlin, Germany, 20 students have the opportunity to learn about behavioral studies and the design of public spaces. Working alone and in small groups, students acquire new perspectives and skills that put people and their needs at the heart of the creative process of re-imagining and transforming cities. Livability, lively cities, public life and other concepts describing inviting, vibrant and stimulating urban environments are frequently communicated in new visions for the future of cities today. This focus on "urban life" is a direct reaction to the urban realities created in the 20th century, where increases in our standards of living and the associated city building processes have created areas in which large and increasing numbers of people have become isolated from each other, socially and geographically. Despite our new awareness for the need to plan for a shared and intensified urban life in sustainable cities, we continue to have difficulties in understanding exactly what this "urban life" is, how much of it we truly want and need, and how we can reconcile the often conflicting and simultaneous needs of people for privacy and social stimulation. Employing the examples of University City and the Gateway Arch/Archgrounds the class studies behavior in accessing and using defined sections of both urban areas as a way of dealing with complex urban design challenges in St. Louis. Through field studies and observations each student explores cost-effective and culturally sensitive solutions that can improve the integration of these important urban assets in the City of St. Louis. Open to all graduate students, with priority given to MUD studio and seminar students. Visas are required to travel to England, depending on the passport country of the student. Preparation for visa applications begins on the first day of classes during the spring semester. There is a minimum enrollment of eight by February 1.

**A46 ARCH 421U Urbanism: Chicago**

This design research seminar focuses on the urban infrastructure and associated buildings of central Chicago, in and around the areas near the Loop. The Chicago metropolitan area is the third largest in the United States, and from 1870 until the 1950s, Chicago was America's "second city," surpassed in size only by New York City. It remains the densest and most "urban" of the cities of the Midwest, with many examples of complex interconnections between rail lines, highways, and various kinds of pedestrian-oriented urban environments. This seminar combines historical and field research on some of the many architectural urban design interventions in Chicago. Students choose among several topic areas to produce detailed drawings and digital models of specific urban interventions. There will likely be a publication of the work. Topic areas for digital documentation include the pedestrian relationships between transit lines and various buildings and urban complexes, including the large Millennium Park interventions by SOM and others over the Illinois Central railway lines adjacent to Lake Michigan, and Wacker Drive, a 1920s underground limited access highway along the Chicago River, and other projects. Fulfills History/Theory and Urban Issues elective requirement.

Credit 3 units.

---

**A46 ARCH 421V Unbuilt Sert**

This design research seminar will focus on the digital simulation of the unbuilt architectural design projects of Josep Lluís Sert (1901-83). This spring we will document and analyze Sert's drawings for St. Botolph's Chapel (1963) designed for the Boston Government Center complex with the goal of virtually "building" it. Sert practiced in Barcelona in the 1930s during the era of the Spanish Republic and later in the U.S. as both architect and planner. He was the President of CIAM (International Congresses of Modern Architecture) from 1947-56, and Dean of the Harvard Graduate School of Design from 1953-69 where he developed urban design as a discipline and academic program. The chapel was an effort to combine elements of Catalan modern architecture with his concept of a modern "New Monumentality" suitable to the postwar world. The seminar will also visit several of Sert's major built projects in the Boston area, and will include presentations by Dean Emeritus Edward Baum, who was job captain on the St. Botolph's chapel project with the Sert, Jackson firm. Students will work in teams to produce detailed digital models of the project to simulate the "built" chapel inside and out. Publication of the work is anticipated.

Credit 3 units. Arch: GACS

---

#### A46 ARCH 422H Urban Topographies

This digital seminar introduces students to the basics of geospatial modeling at both regional and local scales, with an emphasis on the creative application of GIS data toward design thinking, site analysis, and speculative urban design. The course explores the potential for GIS data as more than just for inventory and mapmaking, but also as an invaluable creative design tool. A series of digital workshops will touch on a range of cross-platform workflows, from digital cartography to parametric modeling to 3-D animation. Tying this together will be a speculative urban landscape project that the students will model and visualize utilizing the software introduced. This year's iteration will lean more toward an experimental and explorative use of GIS for design, art and visualization. This course is intended to give students the flexibility to approach the syllabus as an independent study or as a supplement to their studio work. Software that will be covered includes ArcGIS, Autodesk InfraWorks, 3DSMax and Grasshopper.

Credit 3 units.

---

#### A46 ARCH 423 History of Landscape Architecture

This seminar reviews the history of gardening in the Western tradition from the Renaissance to the present and in the Chinese and Japanese traditions. Park-making, neighborhood design, and the rise of landscape architecture as a profession receive attention, including several classes held at notable St. Louis examples. Course requirements include readings, a design or research project, and a final exam. Fulfills History/Theory elective.

Credit 3 units.

---

#### A46 ARCH 423D Videography for Designers

This seminar course examines the practice of capturing, producing and analyzing moving images as a method of inquiry for design. We focus on the analytical and communicative qualities of time-based media (recorded sequences, video, slideshows, animation, simulation, remote sensing, etc.) as a human-landscape intermediary that has the ability to alter understanding and evaluation of the environment. We explore techniques from a range of disciplines — art, design, sociology, anthropology, etc. The course meets weekly for brief lectures/presentations to direct our inquiries, discussion of foundational readings and ideas, media workshops, screenings, local field trips, and/or student presentations of work. Throughout the semester, students generate brief, exploratory work that focuses on methods and techniques, and a larger, final project that engages the themes of the course. Open to all graduate and upper-level undergraduate students, a goal of the course is to blur boundaries between art and design, and to capitalize on their various approaches. No experience with video, animation, or other software is required — only the desire to explore and incorporate time-based methods into individual processes.

Same as A48 LAND 423D

Credit 3 units.

---

#### A46 ARCH 424L The Chinese City in Historical Perspective

This seminar examines the development of urban centers in China through history. The city is approached from formal, territorial, political, and socio-economic perspectives, situated in the broader landscape of cultural and environmental changes. Key themes are continuity and change, citizenship and public life, urban form and structural transformations, and infrastructure and the hinterland. The course begins with archaeological and

textual origins of the earliest cities and ends with the staggering growth and globalization of Chinese cities today.

Credit 3 units.

---

#### A46 ARCH 4280 Architectural History I: Antiquity to Baroque

This lecture course introduces major historical narratives, themes, sites and architects from ancient Greece to the end of the Baroque period. We take an extended look at the dawn of the modern period in the 15th and 16th centuries through a global perspective, turning eastward from Renaissance Europe to the Ottoman, Mughal, Chinese and Japanese empires. The great chronological and geographic span of this course is pulled together around the themes of (1) classicism and its subsequent reinterpretations, and (2) the pursuit of the tectonic ideal. Our aim is to recognize how these ideological pursuits of modern architecture evolved out of longer historical processes. We also pay close attention to major sites of landscape and urban-scale work. Requirements include a mid-term, final exam and a series of short papers.

Credit 3 units.

---

#### A46 ARCH 4284 Architectural History II: Architecture Since 1880

An introductory survey of the history and theory of architecture and urbanism in the context of the rapidly changing technological and social circumstances of the past 120 years. In addition to tracing the usual history of modern architecture, this course emphasizes understanding of the formal, philosophical, social, technical and economic background of other important architectural directions in a global context. Topics range from architects' responses to new conditions in the rapidly developing cities of the later 19th century, through early 20th-century theories of perception and social engagement, to recent efforts to find new bases for architectural interventions in the contemporary metropolis. This course is required for all MArch 3 students.

Credit 3 units.

---

#### A46 ARCH 4288 Architectural History III: Advanced Theory

The third survey class focuses on architectural history and theory after modernism. It examines the rise of architectural theory as a field of inquiry and its links to both critical social theory — including the Frankfurt School — and to contemporary traits of philosophical postmodernity. From the contextual questions of meaning and memory to the examination of post-structuralism, cultural theory and identity politics — including race, gender and ethnicity — the course uses primary textual sources to illuminate drawings, buildings and ideas that defined this seminal moment in architectural history. While the course closely examines this time period of intense search for a new visual language, it also probes contemporary complexities of architecture's continued search for visual and social purpose in an increasingly interconnected world.

Credit 3 units. Arch: GARW, HT

---

#### A46 ARCH 430A Special Topics: Oceanic Grounds: Representing the Deep Sea

The myth and materiality of the deep sea — its darkness, depth, buoyancy — has historically rendered it extra-geographic, placing it outside the realm of representation. Yet today, oceans are being transformed and take on new visibility and currency through their commercialization, politicization and legislation. As the sites of globalized industry and transport, oceanic territories are active spaces of public encounter, shared inhabitation, and

cultural exchange. Despite this, their materiality continues to be regarded as an incidental phenomenon — the blank, flat surface against which named, bounded, and terrestrial bodies emerge. Taking different perspectives from history, activism, geopolitics, cartography and design, the seminar draws from a diverse set of contemporary scholars and travelers to better understand the spatiality of the deep sea. What is the role of the architect in investigating, describing and visualizing this space of alternative imagination? Can ocean territories be configured as ground — a source of livelihood and the space of everyday life? The seminar is organized around three themes: Migration and Refuge, Urbanization and Trade, and Mapping and Representation. A series of readings and discussions lead up to a mapping project, in which students are asked to redraw the complexities and spatial structures of the deep sea. Credit 3 units.

---

**A46 ARCH 430B Special Topics: Reality Capture and Design Process (lasers + drones + perception)**

We are on the very cusp of a revolution that introduced a widespread integration of autonomous robotics in processes that are associated with design and construction. This shift, that despite its various connotations, is not here to render knowledge, skill and experience as obsolete, but to supplement a specific set of tedious and repetitive tasks that are often regarded as the very core of lost productivity or inability to truly capture built environment. Today's design and construction industry is plagued with inefficiencies starting with contractual agreements, interoperability challenges, completeness of documents, procurement practices, resource planning, inefficient use of equipment and energy on construction sites, and fluctuating costs of materials. The acknowledgment of these inefficiencies creates a suitable environment for the introduction of low cost technological solutions that if implemented correctly can alter the existing dynamic of project delivery. Since 2010, we have witnessed a proliferation of UAVs associated with the reduced cost of their accessibility while pioneering design, engineering and construction companies were investigating how to weave them into their existing processes. The not so apparent drawback of this line of reasoning is in its inability to tap into the full potential of robotics and AI, thus concealing the ability of new technology to impact the symbiotic relationship between design thinking and omnipresent sensory experience and analysis. Through the exposure to information obtained via reality capture technology and its associated processes of laser scanning, photogrammetry and multispectral analysis, the students will be confronted with several speculative scenarios. Each of these scenarios will take into account virtual quality of captured environment and its temporal reference, while trying to understand how navigate through the concepts of Big Data and universal connectivity. Manipulation of virtual matter and examination of its properties could lead to the capture of movement through time and juxtaposition of its inherent quality with reimagined material presence of the new design. The journey that starts with something as simple as defining the origin of a new synthetic environment and designers ability to operate required technology. Credit 3 units.

---

**A46 ARCH 430C Special Topics: Architectural Sketching**

An introduction to architectural sketching — a graphic communication skill that architects and designers use to analyze and document their environments, and to visualize design thinking and creative process. Many class sessions will meet on-site, drawing directly from observation. The first part of

the semester will focus on fundamentals of sketching through the study of existing buildings, their contexts and interiors. Students will expand and refine their observation skills as they use the architectural sketch as a mode of research — exploring elements of architecture: form, material, light; and the relationships between building and context, and building and interior. The second part of the semester will expand to include the architectural sketch as language. Students will learn to use the architectural sketch to explore, confront, develop and translate abstract ideas into visual narrative, creating a record of design thinking and creative process. Prerequisite: Drawing I (X10 XCORE 101) or graduate architecture standing. Credit 3 units.

---

**A46 ARCH 430D Special Topics: Making A Net Zero Energy House**

This course will study the state of the art of net zero energy houses of different climates. Topics include introductory the fundamentals of passive and active solar energy systems, day-lighting strategy, energy balance and management for home, and the roles of different types of enclosure, fenestration, solar system, and energy storage, as well as the analysis, integration and optimization of energy systems in a net zero energy house. The course involves climate analysis, building performance simulations based on Design Builder, HERS rating, and carbon footprint assessment. Students will take a large quantity of data analysis to understand the relations between design strategies and performance. The course will consist of lectures, review and discussion of literature, and student projects. The course will contribute to Team WUSTL solar decathlon project, a showcases the integration of reliable cutting-edge and proven technologies in a sustainable way. Credit 3 units. EN: H

---

**A46 ARCH 430M Special Topics in History & Theory: The Embodied Renaissance City**

The architectural and urban history of Renaissance Italy tends to fetishize and objectify buildings and spaces, divorcing them from the identities and lived experiences of the people who historically engaged them, reducing them to idealized forms and systems. Using primary sources in translation as well as recent secondary scholarship, this seminar will place the body at the heart of historical analysis of the urban realm, pursuing multiple lines of inquiry and modes of communication, including individual and corporate identities (for example: age; gender; sexuality; marital status; power; monasticism; religion; nationality; guilds; workshops; confraternal and philanthropic groups, and other institutions); events, activities, and experiences (for example: sight, sound, and smell; time, seasons, day and night; rituals, receptions, processions and ephemera; eating and drinking; walking, riding, floating; shopping; gossiping; building; fighting, dueling, war and other aggressive or criminal acts; conquering and colonizing; plague, illness and death; parenthood; prints and book production); urban theory as a vehicle for analysis; historiographic critique and interdisciplinary research; and diagramming, mapping, modeling; researching; writing. Foundational primary documents will include Renaissance urban representations, especially Buonsignori's 1584/94 view of Florence, de' Barbari's ca. 1500 view of Venice, and Bufalini's 1551 view of Rome. We will also visit SLU to consult the recently published facsimile of Bartolomeo Rustici's description of pilgrimage to the Holy Land, which includes rare 15th-century representations of Florence and its environs. We will consider the visual rhetoric of these (largely depopulated) views and consider how current representational tools and narratives might

allow for deeper analysis of and communication about life in the Renaissance city.

Credit 3 units. Arch: GARW, HT

---

#### **A46 ARCH 435E Furnish It, With Pieces**

Public space is a key constituent that determines the character of a neighborhood and a city. It is embedded in the urban fabric and it can mediate the relationship between people and their particular surrounding landscape. Urban furniture and hardscape can play an important role in offering a wide range of uses for public spaces. The design of such pieces affects the way people live and experience a particular environment. The ultimate goal of this course is to design, fabricate and install a set of repeatable units to equip a vacant urban lot in order to offer opportunities for social interaction. The seminar focuses on the in-depth understanding and development of ideas based on the technical, experiential and aesthetic exploration of one material: concrete, into one specific application: urban furniture. This seminar builds up on the scope of the Creative Activity Research Grant awarded by the Sam Fox School of Design & Visual Arts where five porous concrete pavers were designed for a vacant plot in North St. Louis. The challenges are: to adapt the given pavers to a new site condition and to propose new urban furniture made out of concrete. It involves the construction of pieces able to equip a gathering space as well as sidewalks that can offer local residents the opportunity to interact with others. This provides not only aesthetic appeal to the residents and visitors, but also allows the possibility of implementing an actual project in an abandon plot in Old North. We will enrich the community with a wide range of training opportunities as each step in the process of making the plaza is used for teaching purposes, from making pavers and other pieces, to salvaging, reusing or repurposing recycled material. Students are asked to design and build concrete urban furniture necessary for the gathering area. The pieces can encompass a wide range of uses: chairs and benches, tables, raised beds, planters, litter bins, modular fencing and mobility-related pieces such as bike racks, bollards and car stoppers. This is an opportunity for hands-on experience. These pieces have to consider the limitations of the material in terms of strength, weight, size, etc.; learning about the material itself as well as the act of construction, assemblage and mass production, which includes methods and technology, ranging from tools to molds. The formwork for the concrete pieces will be built through a process of CNC milling and rubber molds or vacuum formed plastic. The challenges are to define environmentally sensitive strategies for problem solving, conceptual development and poetic expression at both levels of the design process, conceptual and real. Sustainable principles such as the use of recycled materials as an aggregate in the concrete mix are an important consideration. Construction is the ultimate goal of this class. We work in collaboration with Anova, a local manufacturing company dedicated to the design and production of site furnishings. Anova provides some materials and brings their expertise to the project. Credit 3 units.

---

#### **A46 ARCH 4362 Advanced Grasshopper**

With a base knowledge of the Rhino+Grasshopper interface, this class will focus on developing an entirely scripted building system. Each student will be given a set of initial parameters (building volume, square footage, percent of transparent/opaque facade, required programmatic elements/size, etc.). They will begin by selecting a formal precedent that will help them determine a structural system. Within this framework, students will develop an algorithmic logic to organize program and then

articulate a responsive skin. The goal of this exercise will be to develop understanding of the potential use of scripting in design. Scripting allows the designer to transform their design dynamically as the parameters change or update. The final output of this class will be detailed, annotated drawings of each student's structural system as well as a 1/4" scale model of a small portion of their design utilizing available tools in the FabLab such as 3-D printing and CNC routing. Students taking this course must have working knowledge of Grasshopper. This class is an advanced class exploring design through generative modeling.

Credit 3 units.

---

#### **A46 ARCH 436A Information Modeling and Technology**

This foundation-level course will introduce students to the digital tools of Geographic Information System (GIS), Building Information Modeling (BIM), and Building Performance Analysis (BPA). Its goal is to equip the student with the ability to gather information, analyze it, and make decisions within the information-rich environment of architectural design and construction. Students will develop an understanding of these three seemingly distinct approaches and their role in preserving the quality and quantity of accumulated information for "upstream" use. The topics addressed in the course will be further developed in more advanced courses during subsequent semesters. The introduction of information-gathering principles within GIS will expose students to the wealth of information, such as maps and census data, that is already available, as well as methods of turning raw data into analytical material for use in their design work. This segment of the course not only provides a foundation to ArcGIS, but also leads toward use of this information within applications like Revit Architecture. Creating and managing an information pool of digital GIS and design and construction data and making it available throughout the lifecycle of a project is commonly referred to as BIM. In the second part of this course, we will explore how BIM is being utilized today and learn the basics of one of the leading BIM-compliant applications, Autodesk Revit Architecture 2010. During the third part of this course, students will be introduced to BPA, a process that embodies a holistic approach toward the integration of sustainability and design. By understanding when and how to apply sets of analytical exercises via applications like Ecotact Analysis within the context of Information Modeling, students will develop an understanding of how design decisions have a profound and lasting impact on the overall building sustainability and performance.

Credit 3 units.

---

#### **A46 ARCH 436B BIM in Practice**

Building Information Modeling (BIM) is a developing method of creating, sharing and managing project data through a visualized 3-D or 4-D model. While it continues to deliver on an initial promise to increase design consistency and efficiency while minimizing errors, the focus of attention is shifting to the use of BIM to facilitate integrated methods of project delivery. The course explores the use of the BIM platform and the development of data exchange methods in architectural design through a case study and subsequent design project. Students are provided instruction in Revit covering the creation, management and extraction of data from a model, but also look at the technology more broadly, discussing the changes advanced by the deployment of BIM processes in practice. Credit 3 units.

**A46 ARCH 436D Advanced BIM in Practice**

While the adoption of BIM continues to grow across the industry, criticism of its effectiveness as a design tool remains. The foundation of BIM, the creation and management of geometric objects with associated non-geometric data, is often at odds with established methodologies of design. Current practice typically manages this schism by separating design from the use of BIM for documentation and construction. The class will seek to develop methods of design within a BIM environment, not through the translation or reshaping of traditional techniques, but through the design of a methodology that seeks to capitalize on what BIM enables: direct, digital collaboration and the facile management of large data sets. This is not an introductory class. Basic knowledge in Revit (or an alternative BIM software) is required. Skill in other parametric and 3-D modeling software as well as a basic knowledge of Grasshopper or other algorithmic processes is strongly preferred. Students will investigate and design digital processes using a short design brief to enable the investigation.

Credit 3 units.

**A46 ARCH 436E Technology + Tectonic**

Beginning with a rigorous study of three-dimensional grid systems, students will work in pairs to develop conceptual proposals for site-specific hanging installation. Students will examine materiality, grid distortions, and spatial qualities, as well as interactions with natural light and human input. The ideas generated in this course have the potential to directly affect an architectural installation the following semester. Students enrolling in the course should have completed at least one digital seminar as a prerequisite.

Credit 3 units.

**A46 ARCH 438 Environmental Systems I**

Environmental Systems I is the foundation course in the architectural technology sequence. This course addresses the relationship between buildings and an expanded idea of context, including ideas of environment, landform, energy, material and space. The class places an emphasis on each student developing their own attitude toward architectural sustainability, its role within the design process, and its relationship to architectural form. The class is organized around the themes of climate, site and energy. The theme of climate addresses macro- and micro-climates, and the roles they have in developing architectural form through "passive" strategies. The theme of site expands the idea of the architectural project to examine landform, position, access and region. The theme of energy looks at architecture as both embodied energy and a consumer of energy, to understand how the architect helps to control and direct these flows at macro and micro levels. Two goals for the class are to provide students with ways of thinking about and of working with issues of sustainability which can inform their design practice, and to equip them with the basic knowledge needed to continue within the technology sequence.

Credit 3 units.

**A46 ARCH 438I Environmental Systems I: Site Planning**

Environmental Systems I, site planning module, addresses the relationship between buildings and an expanded idea of context, including environmental, material and spatial realms. The class places an emphasis on each student developing their own attitude toward architectural sustainability, its role within the design process, and its relationship to architectural form. The theme of site expands the idea of the architectural project

to examine landform, position, foundation, access and region. Two goals for the class are, first, to provide students with ways of thinking about and of working with issues of sustainability, which can inform their design practice, and second to equip students with the basic knowledge needed to continue within the technology sequence. Only students who have received a partial waiver for A46 438 Environmental Systems I may register for this course.

Credit 1 unit.

**A46 ARCH 439 Environmental Systems II**

We as architects have to analyze and address complex issues and relationships, synthesize them, and then make them manifest through clear design strategies. Building systems must reconcile: solar heat gain, glare control, daylight levels, thermal insulation, ventilation, acoustics, air quality, structure and fabrication — all in relation to the scale and comfort of the human body. The development of environmental systems into a clear, comprehensive, and elegant design solution cannot be an afterthought; it must be a synthesized and integral part of the design process, with a clear strategy that operates at multiple scales. Building upon the passive strategies explored in Environmental Systems I, this course will lay the foundation for the integration of active environmental systems with enclosure, space, and the requirements for human occupation. This will be done through the study of climate, air, temperature, water, light, sound and energy. Each topic will be assessed against problems, principles, possibilities and potential. This course focuses on how important it is to consider active systems as part of an integrated design strategy addressing both *form* and *performance* throughout the design process. Prerequisites: Environmental Systems I & Building Systems I.

Credit 3 units.

**A46 ARCH 439I Environmental Systems II: Acoustics**

The Acoustics Workshop is designed for students that have been partially waived from Environmental Systems II with the exception of the acoustics portion. The workshop joins the Environmental Systems II class for only the lectures on the topic of acoustics. The class will cover the design of acoustic environments starting from the physics of sound, the design room acoustics, identifying noises sources, and investigating methods for noise mitigation.

Credit 1 unit.

**A46 ARCH 439H Environmental Systems II (Berlin)**

We as architects have to analyze and address complex issues and relationships, synthesize them, and then make them manifest through clear design strategies. Building systems must reconcile: solar heat gain, glare control, daylight levels, thermal insulation, ventilation, acoustics, air quality, structure and fabrication — all in relation to the scale and comfort of the human body. The development of environmental systems into a clear, comprehensive, and elegant design solution cannot be an afterthought; it must be a synthesized and integral part of the design process, with a clear strategy that operates at multiple scales. Building upon the passive strategies explored in Environmental Systems I, this course will lay the foundation for the integration of active environmental systems with enclosure, space, and the requirements for human occupation. This will be done through the study of climate, air, temperature, water, light, sound and energy. Each topic will be assessed against problems, principles, possibilities and potential. This course focuses on how important it is to consider active systems as part of an integrated design strategy addressing both *form* and

*performance* throughout the design process. Prerequisites:  
Environmental Systems I & Building Systems I.  
Credit 3 units.

---

#### A46 ARCH 445 Building Systems

Building Systems will examine the performance and properties of building materials, both traditional and new, through an analysis of assemblies and related systems. Investigations of wood, masonry, steel and concrete and the integration of relevant building systems will provide the fundamental structure for the course. All systems will be investigated relative to their architectural purpose, impact on the environment, relationship to culture/context, technical principles and will also consider manufacturing, construction, our profession and the society in which we practice. Moreover, the course will also examine the performance characteristics of contemporary enclosure technology and explore the impact these technologies are having on design thinking. Although we will focus primarily on the aforementioned topics, we will also identify and consider the impact of other parameters on design and performance such as: building codes, role of the profession, health and life safety, systems integration, sustainability and industry standards. The course strives to provide students with a sound familiarity and understanding of traditional building systems in wood, steel and concrete; as well as the skills necessary to represent these systems. The course also seeks to expose students to the material and poetic potential of these technologies related to the making of architectural environments.  
Credit 3 units.

---

#### A46 ARCH 447A Structures I

Statics and strength of materials through beam and column theory. Loads are defined and states of stress are identified and analyzed. The context of structural behavior is identified and optimal structural behavior and material efficiency structural design is reviewed. Form-active, bulk-active and vector-active structural options are explored relative to the transference of load along the length of structural members. The course applies structural theory to the analysis and design of structural members — beams, trusses, arches and columns.  
Credit 3 units.

---

#### A46 ARCH 448A Structures II

Continuation of Arch 447A with consideration of the effects of forces on structural members of various materials. Introduction to the design of structural members in steel, reinforced concrete and wood. Prerequisite: Arch 447A.  
Credit 3 units.

---

#### A46 ARCH 452K The Ambiguity of Scale: Japan's Landscape Tradition

Modernist architects in Japan, particularly those associated with the Metabolist Movement, often used the term "niwa," literally gardens, to describe their urban design projects. The city, land, and sea were both the setting and the object of design interventions. This course will examine the Japanese landscape tradition from antiquity to the 21st century. The approach will be inter-disciplinary, using literature, art, religion, economics, and technology to inform us of how earth, water, air, winds, plantings, views, and architecture were seen and imagined in Japan during successive historical periods. We will look at the cyclical reconstruction of Ise Shrine that took place in 2013, canonical Zen gardens from Japan's early modern period, the advent of modernist landscape principles and techniques in the

20th century, as well as the influence of garden aesthetics on the development of architecture and urban design over time. This course is open to qualified undergraduates. It is also offered as a Methods seminar for undergraduates in the Architectural History minor and fulfills the History and Theory requirement for Master of Architecture students. The maximum enrollment for this course will be 12.  
Credit 3 units.

---

#### A46 ARCH 452L The Japanese House

This seminar examines the Japanese house as a modernist idea as it evolved over the course of the 20th century, both within Japan and internationally. The single-family, "tofu-cutter" house came to define Japan's suburban, industrialized landscape in the postwar era, but the type historically emerged out of a certain modernist imagination of Japan's premodern architecture, as architects and critics such as Bruno Taut and Arthur Drexler projected their specific readings of shoin and minka architecture onto a mandate for contemporary practice. The seminar will investigate major strains of domestic architectural design in postwar Japan, paying particular attention to the formalist exercises of Shinohara Kazuo and technology-driven designs of Ikebe Kiyoshi. More contemporary pursuits by SANAA and Atelier Bow-Wow in materiality, transparency, smallness and urban complexities will also be covered. This course satisfies the History/Theory elective requirement.  
Credit 3 units.

---

#### A46 ARCH 453A Aviation & Architecture: Air Terminal Design and Emergence of Airport Cities

As seaports and train stations were once hubs of commerce and trade, airports serve as vital engines to today's economy, linking cities and regions to the globalized economic landscape. Surrounding airports, entire cities are emerging both organically and in planned developments, building upon the business related to air travel with office parks, conference centers, hotels, entertainment districts and retail. This seminar will be structured in three parts. In the first part, we will examine the fundamentals of transportation architecture and the way air terminal design has developed. Starting as simple structures on an airfield in the 1920s, airports were designed as heroic modern structures from the 1940s to 1980s, ubiquitous terminals in the 1980s thru early 2000s, and most recently as regionally expressive terminals in the 21st century. Students will research, analyze and present case studies, mapping an understanding of the basic architectural components of air terminal design. In the second part, we will explore the rise of airport cities. Students will work in teams of two to research and analyze the planning, governance, impact and growth of airport cities. Sites we will study include developments around Singapore's Changi, Amsterdam's Schipol, London's Heathrow, Paris' Charles de Gaulle, and Chicago's O'Hare. The third part of the seminar will allow students to select a topic of special interest that spans the scale of terminal design and airport cities. Students will initiate independent research to deliver a final paper and presentation on the topic of their choice related to aviation, transportation architecture and planning. Seminars will be supplemented with guest lectures and will be highly conversational. We will explore opportunities for site visits to both airports and airport cities.  
Credit 3 units. Arch: GACS, HT

---

#### A46 ARCH 455A Urban Books

Since the beginning of the 20th century, art, architecture, and urbanism together have investigated the production of images

that shape the symbolic dimension of our experience of large cities. The main goal of this course is to critically embrace this tradition through the format of the artist's book. St. Louis is the focus for our observations because it is familiar to our everyday lives and also because it provides key situations for understanding contemporary forms of urbanity and how urban space is produced and imagined. The course bridges the curricular structures of art and architecture by enhancing the collaboration between the practical and scholarly work developed in both schools, with additional support from Special Collections at Olin Library. It combines the reading, lecture, and discussion format of a seminar with the skill building and creative exploration of a studio. This course is divided into three progressive phases of development: The first consists of weekly readings, discussion, and responses in the form of artist's books. The second phase focuses on the Derive with physical activities and assignments based on interacting directly with the urban environment. The third phase focuses on individual research, documentation, and final book design and production. Same as X10 XCORE 336  
Credit 3 units. Arch: GAUI, UI Art: FADM EN: H

---

**A46 ARCH 456B Way Beyond Bigness...or Towards a Watershed Architecture**

2015 marked the 10- and 20-year anniversaries of two seminal events that have challenged architects' relationships to large scale, complex societal issues: 1) the publishing of *S,M,L,XL* in October 1995 that featured Rem Koolhaas' manifesto of "Bigness" and 2) the landfall of Hurricane Katrina just outside of New Orleans in August 2005 that catapulted fields of design into an unprecedented post-disaster context. Students will reconcile these two disciplinary jolts by understanding these seemingly incongruous snapshots of history as jumping off points for new modes for architectural activism and opportunism. Students will design a manifesto, in newspaper format, for a future-based discipline of architecture that sails uncharted realms that are "Way Beyond Bigness." This will require the simultaneous submersion and assertion of architecture within other disciplines; the formulation of alternate modes of representations for emerging practice-based models; the blurring of academic and professional agendas in the urgency of activism; and the integration of multiple scales, interest groups and agendas in ridiculously complex and antagonistic situations. Underpinning Bigness and Hurricane Katrina will be additional case studies, guest lectures and field trips that cover: CIAM and the emergence of urban design; Koolhaas' thesis and OMA's early practice; mega-scale urban renewal projects in St. Louis; contemporary investigations into territorial scales of design; and multiple scales of contemporary, integrated Water-based designs, post-Katrina efforts and beyond. This course fulfills the History/Theory Case Studies elective requirement.  
Credit 3 units. Arch: GACS, GARW, HT

---

**A46 ARCH 457B Segregation by Design: A Historical Analysis of the Impact of Planning and Policy in St. Louis**

This transdisciplinary seminar, bridging humanities and architecture, introduces students to research, theories and debates currently being conducted on issues of segregation, urban policy and sustainability. By placing these debates in a historical and local context students will discover how policy and decisions are entrenched with racial, cultural, physical and socioeconomic segregation, and create the spatial transformation of America's divided cities. Students will learn to evaluate and analyze policy and planning through the framework of Triple Bottom Line Sustainability to understand the physical

manifestation of segregation during growth and decline. CET (<http://www.gephardtinsttute.wustl.edu/cec>) course.  
Credit 3 units. Arch: GACS, HT EN: S

---

**A46 ARCH 462H Information Modeling for Sustainable Design**

This course will focus on the principles of sustainable design as examined through Building Performance Analysis (BPA) and applied Building Information Modeling (BIM) methodology. The foundation for this course will be an introduction to BIM and BPA and the significance of both for the future of sustainable architectural design practice supported by analytical modeling. This emphasis on the suitability of building modeling for analytical purposes and on the interpretation of such data will provide the basic knowledge necessary for the second phase of this course, in which students will use a previous or current studio project for an in-depth study of their building's performance in the context of its chosen site. Exploring the interaction between the simulated environment (climate, isolation) and the virtual building with its physical characteristics (materials, assemblies, passive design strategies, heat transfer, daylighting, embedded energy), we will attempt to confirm and test the principles of sustainable design at the schematic level of project development. The model analyzed by each team will provide sufficient comparative information for a design approach whose desired goal is carbon neutrality in the lifecycle of the building. Students will be encouraged to investigate the suitability of analytical modeling software, in the context of critical design methodology. Prerequisites for this course are a basic understanding of BIM methodology and insight into sustainable design practices. Fulfills Digital elective requirement.  
Credit 3 units.

---

**A46 ARCH 462M Pattern Recognition**

Interrogates a recent history of architecture replete with pattern. Case studies of patterning in contemporary projects are undertaken through the production of analytical, computational models to reveal an underlying logic of performance and construction. In parallel, the course presents a theoretical survey of related issues in art, psychology, computation and ecology. In this context, pattern is understood as a performative expression of an ecological system, distinct from historical issues of ornament and representations. Informed by the analysis, students then digitally produce an original pattern, both graphically operative and spatially materialized.  
Credit 3 units.

---

**A46 ARCH 462N Constructing Ideas**

Constructing Ideas is about creating design concepts and transforming these into built architecture. We will learn how conscious imagination and coherent interventions lead us to ideal realities. This class examines the design and construction process as academic research. We consider the practice of making architecture as a synthesis of analysis, interpretation and transformation. Studies will teach us how a building idea influences its construction and how the knowledge about construction can become the starting-point of an idea. Interrogating design problems and investigating existing typologies as a methodology will lead us to specific answers. We will explore conceptual-artist practices and examine their strategies, learning to lead with intent, play with parameters and question the givens. From there, we will look at examples of Swiss architecture whose early integration of construction in the design process has a long tradition. One could say that

the bearing itself gets designed in Switzerland. We will consider invisible structures and material specificity. Learning this language gives us the ability to transform our ideas into specific architectural expressions and precisely tailored solutions. The form of the seminar is experimental. We consider our meetings to be spatial and contextual interventions, precisely designed like architecture. Sessions will vary, from a lecture to an exhibition, talks, a dinner — the goal is to be very conscious about what we are doing. This process is going to be documented through the whole semester. Each student will create his own design thesis and realize an installation that reflects it. The results will be exhibited and presented to the public.  
Credit 3 units.

---

#### **A46 ARCH 463B Emergent Urbanisms**

This course surveys emergent models of urbanization in globalizing cities that thus far defy categorization or exist peripherally in studies of urban form. The goal of the course is to equip students with the theoretical and historical background, the analytical tactics, and the critical awareness necessary to reposition themselves as designers in these increasingly challenging contexts. Through case study examples and supporting readings, the course deciphers the formal, social and environmental effects of particular processes defining new urban spatial configurations in city-regions around the globe. Most of these processes are driven by discourses of "efficiency," such that urban forms are increasingly inflected by economic operating systems as they are subsequently detached from traditional concerns of livability and public interest. Emerging urban assemblages include: massive manufacturing warehouse landscapes or logistical distribution centers and "aerotropolis" transit hubs as well as those spaces left behind by regional restructuring: de-urbanizing (or deliberately erased) environments that contradictorily "enable growth" in other areas (or over the same areas); and the informal settlements that emerge more spontaneously on the margins of mainstream urban policy. Students use their understanding of these spatial and logistical configurations to project creative models for re-direction or engagement. Sources and analytical tactics are drawn from across fields including design, sociology, geography and history. Fulfills Urban Issues elective requirement, MUD-Track elective requirement.  
Same as A49 MUD 463B  
Credit 3 units.

---

#### **A46 ARCH 463C Invisible Cities**

This graduate and advanced undergraduate seminar takes as a point of departure the famous 1972 Italo Calvino text that reframes a single city (Venice) as multiple cities, told through a sequence of discrete narratives and descriptions. Each of Calvino's invisible "cities" reflect different emotional and physical environments and possibilities — or impossibilities — for their inhabitants, yet are all still connected through an overarching narrative. Invisible Cities, the course, builds on this premise that a city is not a one-size-fits-all experience (nor a monolithic construct with a uniform constituency), but instead is composed of radically different environments all selectively accessed, depending on one's positionality or relationship to urban redevelopment processes. In places like St. Louis — but in fact in all American cities — residents live out different urban realities or imaginaries, with unequal access to the same services, provisions and processes. A highly visible instance of this occurs along Delmar Blvd in St. Louis where two contrasting lived experiences play out in neighborhoods across from each other on the north-south divide. But this class posits that much

less visible instances of the duplicitous city also exist, in spaces not geographically divided, but (more insidiously) overlaid. The course will focus on this conceptualization of inequality where both privileged and underserved populations co-exist in much more intertwined ways. Within any given block, neighbors live according to different opportunities, for education, health access, police services, or routes to property acquisition and financing. These are the invisible, spatially simultaneous cities; the urban realities that are much harder to see — at least to those who do not live those realities on a day-to-day basis. Like in Calvino's world, urban and lived space is endlessly continuous and accessible for some; for others it is fragmented, even disorienting or opaque. This course will examine, frame, collect and document the various manifestations of invisibility together with the political instruments and policies that produce — and reproduce — it. We will use the St. Louis region as our primary focus, with comparisons to other sites. Our studies will involve a close re/reading of many of the mechanisms of daily governance and urban design such as policies, planning tools, legal, financial and real estate protocols and of course design decisions and processes; i.e., the apparatuses of urban redevelopment that exist right before our eyes. The seminar welcomes both graduate students and advanced undergraduate students from across disciplines. Support for Invisible Cities is provided by the Washington University in St. Louis Ferguson Academic Seed Grant Program granted through the Offices of the Chancellor and Provost and the Olin Business School. Fulfills Urban Issues and MUD Track elective requirement.  
Credit 3 units. Arch: GAMUD, GAUI, UI

---

#### **A46 ARCH 464A Architecture and Photography**

Seminar deals with issues raised by use of photography by architects, historians and critics. Seminar confronts the assumption that our knowledge of notable buildings and architectural space is based primarily on the photographic image. Photographs are tacitly accepted as objective facts, and the pervasiveness of photography in magazines, books and exhibits as substitute for direct experiences is rarely questioned. Goal of seminar: to foster a healthy skepticism of photographs, and to investigate the role of photography as a means of record and convey complex spatial conditions by the ordering conventions of the frame. While not technical, the course introduces students to technical aspects of photography that are particularly relevant to architectural photography: parallax, lighting, lens distortion, depth of field, format and grain, cropping, photomontage and point of view. Fulfills history/theory requirement.  
Credit 3 units.

---

#### **A46 ARCH 465C Art, Design and Entrepreneurship: Creative Placemaking Beyond The City**

This course invites students from diverse areas of interest to engage with the cultural landscape of Marion County and Hannibal, Missouri — a region that, through the work of Mark Twain, popularly epitomizes both rural life and the allure of the Mississippi River. While a quarter of a million tourists visit this area each year to follow in Tom Sawyer's footsteps, the work of local artists, designers and entrepreneurs are innovating the narrative of this place and opening up room for consideration of African-American experience, local food systems, and the complex series of social and economic connections within life along the Mississippi. This course puts that spirit of collaboration and imagination in the hands of students, challenging them to think beyond the borders of their disciplines to create projects that present new connections between place, community

and culture to both rural and urban audiences. The National Endowment for the Arts defines creative placemaking as an opportunity when "public, private, not-for-profit, and community sectors partner to strategically shape the physical and social character of a neighborhood, town, tribe, city, or region around arts and cultural activities." Through fieldwork, research and idea-creation, students collaborate with mentors on the ground to create locally-appropriate projects that address questions of culture and design in the region. Occasional off-campus visits are joined in the classroom to a wide range of readings, case studies, and webstreamed conversations with national leaders across fields. The course concludes with small teams designing a specific plan, event, or project that could later be implemented in the community.

Credit 3 units.

---

#### **A46 ARCH 471A Continuity and Transformation**

Throughout history and across cultures, certain ideas, concepts and organizational strategies have persisted in architecture, despite advances in social ideals and technological capabilities. The seminar explores the phenomenon of this continuity with the goal of uncovering the manner in which these ideas and strategies are transformed. Whether classified by use, characteristic form or compositional device, the continuity of these notions is clearly traceable as a body of knowledge waiting to be revealed, understood, assessed and, when valid, built upon. The transformation of ideas and strategies is one of the most fundamental activities of the designer, but relies on careful study. We discover evidence of this phenomenon in vernacular architecture, patterns of settlement and habitation, and in the work on many of our most influential practitioners, such as Le Corbusier, Kahn, Moneo and Zumthor, as well as in the realm of painting and sculpture including Cubism, Suprematism and Expressionism.

Credit 3 units.

---

#### **A46 ARCH 472 Sustainable Development**

This seminar is an introduction to the basics of small- to medium-scale development. It will begin with a series of introductory lectures covering the principles and tools of development, such as creating a project performa, basic tax credits, TIFs, and financial structuring of a project; exploring methods of implementing sustainable practices and designs into development-driven projects through marketability, cost-savings, tax credits and other incentives; and investigating the process of real estate development through the use of sustainable ideas and practices in buildings. It will continue with a series of case studies in which the class will examine models of existing developers in terms of these base elements. Finally, students will be asked to develop a project in order to understand the architect-client relationship and how to stimulate recognition of the value and importance of sustainable design in real estate development.

Credit 3 units.

---

#### **A46 ARCH 475D Landscapes Through Time: The History of St. Louis' Built Environment**

From the Mississippian mound builders to the urban conditions of the present day, this course will investigate the different approaches of various cultures to creating built environments that meet the needs of their time in terms of landscapes and structures. Using the City of St. Louis as an example, the course will examine the layout and infrastructure of the city at various periods, discussing the effects of technological changes in the

creation of structures, improvements to transportation, facilitation of trade and the effects of these forces on the cultural and built landscape of the city. Each class session will discuss the structures and landscapes that defined individual eras in the history of the city, and the ways in which these were successful or unsuccessful. This course fulfills the History/Theory elective requirement.

Credit 3 units. Arch: GACS, HT

---

#### **A46 ARCH 475E History of the Modern Art Museum**

This seminar explores the development of the modern art museum as an architectural type, measured against evolving nature of display objects, curatorial practices, and demands of the viewing public. Since the consolidation of the type in the early 19th century, the art museum has been the primary site where the symbiotic trajectories between artistic and architectural development have played out. Also to be examined is the importation of this program into non-Western countries, which responded with their own canons and classifications of fine art. The course ends with recent case studies where architecture has made new, often aggressive, commentaries on objects it is designed to display. The course is open to graduate students and advanced undergraduate architectural history minors. Fulfills History/Theory elective requirement.

Credit 3 units. Arch: GARW, HT

---

#### **A46 ARCH 484B Notations on Florentine Architecture**

This seminar proposes a historical survey of significant buildings and urban spaces in Florence through the graphic documentation and spatial analysis of selected sites and buildings from antiquity to the Renaissance and to modernism. The general framework of our analysis is to understand the relationship between the historic development of the city and its most symbolic architecture. This approach is based on the work of Italian scholars, such as Giulio Carlo Argan, who define the history of architecture as the history of the city. The course is methodically divided into two blocks of exercises. In the first part of the semester, we focus on readings, site visits, sketches, analytical drawings and photos, as well as the mapping of the urban development of Florence. In the second part of the semester, students focus on the tectonic study of specific buildings through the construction of representational and experimental models. Each student's individual work contributes to a collective 2-D and 3-D final project to be presented as an exhibition in the Florence Studio during the spring and to be shown at the College of Architecture in the fall.

Credit 3 units.

---

#### **A46 ARCH 486A NOMA National Design Competition**

This course allows students to work collaboratively to develop a comprehensive body of work (including presentation boards, physical models, and animated digital graphics) in response to the National Organization of Minority Architects' (NOMA) Barbara G. Laurie Annual Student Design Competition. Students work in pairs to develop thorough schematic-level solutions. After the midterm review, the class selects the strongest overall team project and uses that as a basis to develop highly detailed plans, elevations, sections, details, 3-D views (animation optional), cultural, sustainable, and accessibility design concepts.

Not only does this activity culminate into a final review, but students submit and formally present their design solution at the annual NOMA Conference: <http://www.noma.net/>. CET (<http://www.gephardtinsttute.wustl.edu/cec>) course.

Credit 3 units.

---

**A46 ARCH 488 Architecture Service Learning Practicum**

The Sam Fox School of Design & Visual Arts, College of Architecture, and Graduate School of Architecture & Urban Design give a problem-solving studio workshop about architecture, community and the environment. Fourth- through 10th-grade students from schools in the St. Louis Public School District do 2-D and 3-D hands-on problem-solving projects, use the libraries and computer labs on campus, and are introduced to the field of architecture through lectures and discussions about design projects they undertake. Architecture faculty member Gay Lorberbaum leads the curriculum. Washington University graduate and undergraduate students in architecture participate in the important responsibility of being teaching assistants.

Credit variable, maximum 2 units.

---

**A46 ARCH 490 Architecture Service Learning Practicum**

The Sam Fox School of Design and Visual Arts, College of Architecture and Graduate School of Architecture & Landscape Architecture & Urban Design, give a problem-solving studio workshop about architecture, community and the environment. Fourth through 10th grade students from schools in the St. Louis Public School District do 2-D and 3-D hands-on problem solving projects, use the libraries and computer labs on campus, and are introduced to the field of architecture through lectures and discussions about design projects they undertake. Architecture faculty member Gay Lorberbaum leads the curriculum. Washington University graduate and undergraduate students in architecture participate in the important responsibility of being teaching assistants. CET (<http://www.gephardtstitute.wustl.edu/cec>) course.

Credit 2 units.

---

**A46 ARCH 490A Explore and Contribute: Collaboration between Washington University and Henry Elementary School**

Principal Esperansa Veal of Henry Elementary School is creating a remarkable place for her students who live in the neighborhood of the Cochran Gardens Federal Housing Project in downtown St. Louis. Principal Veal is clear in her conviction to provide each of her students with both literal and academic nourishment, and is working unceasingly to make the Henry School a safe and creative oasis for children ages pre-school through grade six. Her goal is to have the Henry Elementary School students explore sustainable ways to live during the 21st century. To this end we will emphasize ecological sustainability, environmental health, personal responsibility, leadership and a comprehensive, high quality academic program. With an emphasis on the environmental sciences, energy alternatives and conservation, recycling, organic gardening and the food sciences, and the emerging "green" economy, students will focus on developing the math, science, writing, and hands-on skills that will make them successful leaders to make a difference in improving the environment for humanity. This course invites undergraduate and graduate students from different fields of study to apply their discipline to the goal of designing and teaching hands-on problem-solving projects for students at the Henry Elementary St. Louis Public School, located across the street from Cochran Gardens Housing, at 1220 N. 10th Street. Gay Lorberbaum, with advising from Principal Veal, will work individually with each Washington University student to develop the right fit between the creative contribution each Washington University student wants to offer and the vision Principal Veal has for each age

group of students at Henry Elementary School. Students enrolled in this course will work on-site at Henry Elementary School during the scheduled meeting times. There will be an additional meeting on campus for one hour on Wednesdays at a time to be determined later by the enrolled students. CET (<http://www.gephardtstitute.wustl.edu/cec>) course.  
Credit 3 units.

---

**A46 ARCH 499 Senior Capstone in Architecture**

The Senior Capstone in Architecture allows undergraduate students in their final semester of study to pursue individual research projects. All students will participate in shared discussions and presentations, as well as pursue a highly individualized line of research inquiry that potentially starts where a former project left off, supplementing current or previous course work, or investigating a previously unexplored route. The course will culminate in a presentation and defense of a well articulated and developed research project.

Credit 3 units.

---

## Landscape Architecture

Visit online course listings to view semester offerings for A48 LAND (<https://courses.wustl.edu/CourseInfo.aspx?sch=A&dept=A48&crslvl=1:4>).

---

**A48 LAND 401 Landscape Architecture Design Studio I**

This core studio explores design principles common to architecture and landscape architecture as well as their own specificity. A series of problems focuses on the relation of component to space through conceptual, analytical, formal and perceptual investigations.

Credit 6 units.

---

**A48 LAND 402 Landscape Architecture Design Studio II**

In this core studio course, students develop a spatial understanding of landscape architecture through a series of exercises of varying scale and complexity. Building design skills incrementally, students acquire facility with the manipulation of ground plane and the elaboration of vegetation and material strategies at both site and urban scales. The studio fosters an appreciation of landscape architecture as a systemic construct with formal, ecological and social implications.

Credit 6 units.

---

**A48 LAND 421 Landscape Representation I: Hand Drafting, Drawing and Sketching**

The beginning course in the representation sequence introduces students to freehand and mechanical representation as a means for developing and communicating design ideas. Students build a basic understanding of orthographic drawing typologies and traditional drawing materials. Emphasis is placed on development of observational skills, building a design vocabulary, basic drawing skills, and the techniques of landscape architecture and architectural representation.

Credit 3 units.

---

**A48 LAND 423D Videography for Designers**

This seminar course examines the practice of capturing, producing and analyzing moving images as a method of inquiry for design. We focus on the analytical and communicative

qualities of time-based media (recorded sequences, video, slideshows, animation, simulation, remote sensing, etc.) as a human-landscape intermediary that has the ability to alter understanding and evaluation of the environment. We explore techniques from a range of disciplines — art, design, sociology, anthropology, etc. The course meets weekly for brief lectures/presentations to direct our inquiries, discussion of foundational readings and ideas, media workshops, screenings, local field trips, and/or student presentations of work. Throughout the semester, students generate brief, exploratory work that focuses on methods and techniques, and a larger, final project that engages the themes of the course. Open to all graduate and upper-level undergraduate students, a goal of the course is to blur boundaries between art and design, and to capitalize on their various approaches. No experience with video, animation or other software is required — only the desire to explore and incorporate time-based methods into individual processes. Credit 3 units.

---

**A48 LAND 430E Special Topics: Solar Decathlon Landscape Strategy**

A solar decathlon house is currently being designed and constructed by Sam Fox architecture students for entry into the 2017 competition to be held in Denver, Colorado. This summer landscape architecture studio will develop the design and construction drawings for the high-performance landscape system that sustains the house. It will provide energy, light, water and food. Credit 3 units.

---

**A48 LAND 452K The Ambiguity of Scale: Japan's Landscape Tradition**

Modernist architects in Japan, particularly those associated with the Metabolist Movement, often used the term "niwa," literally gardens, to describe their urban design projects. The city, land, and sea were both the setting and the object of design interventions. This course will examine the Japanese landscape tradition from antiquity to the 21st century. The approach will be inter-disciplinary, using literature, art, religion, economics, and technology to inform us of how earth, water, air, winds, plantings, views, and architecture were seen and imagined in Japan during successive historical periods. We will look at the cyclical reconstruction of Ise Shrine that took place in 2013, canonical Zen gardens from Japan's early modern period, the advent of modernist landscape principles and techniques in the 20th century, as well as the influence of garden aesthetics on the development of architecture and urban design over time. This course is open to qualified undergraduates. It is also offered as a Methods seminar for undergraduates in the Architectural History minor and fulfills the History and Theory requirement for Master of Architecture students. The maximum enrollment for this course will be 12. Same as A46 ARCH 452k. Credit 3 units.

---

**A48 LAND 453 Advanced Planting Design**

This course focuses on both the cultural, environmental, scientific and the technical aspects of planting design. The course is taught in three modular sessions: horticulture and the science of plants; typologies and design such as bosque, grove, glade, allée, meadow, wetlands, hedgerow, etc., and their origins in productive landscapes, application to contemporary landscape architecture; and the practical hands-on experience in the field with both design documentation to installation techniques. The

course offers several field trips to experience urban revitalization, various design typologies, sustainable land use, reclamation and restoration. Credit 3 units.

---

**A48 LAND 480B Mapping the Metropolitan Mississippi**

This seminar explores the relationship of city to river through reading, recording and mapping. Students document their research, create proposals and develop simulations and/or prototypes for a site on the St. Louis riverfront. Methods of inquiry combine hand-recording, photography, GIS techniques and DIY devices. The course alternates discussion sessions, field research and lab. Open to all graduate students; undergraduates require the instructor's approval. Credit 3 units.

---

**A48 LAND 483A Emergence in Landscape Architecture**

This course investigates the roles of emergence theory in landscape architectural discourse. For the purposes of the course, emergence is considered as the development of new and/or different conditions as a result of disturbance. Disturbance can take many forms, and the phenomena that are subject to disturbance are many and varied. Landscapes are continually disturbed by social, economic and physical disruptions, but cognitive structures, perceptual frameworks and cultural values are also subject to turbulence that, as with landscape disturbance, often leads to innovation, novelty and resilience. The course explains what emergence theory is, where it comes from, how it relates to environmental design in general, and how it has — or could — change the way we design human and nonhuman inhabitations. Through readings, presentations and discussions, students are able to connect the rise of emergence theory in cultures of contemporary thought to its application in practice. The main theme of the course is the potential for emergence theory to enable us to relate qualitatively different modes of existence (human; nonhuman) to each other and through the connections thus established improve the lifeworlds of all. The structure of the course is based around ten key concepts of emergence, as follows: open systems, situation, initial conditions, assemblage, nature cultures, difference, field theories, disturbance, morphogenesis, formless. Each student investigates one of these concepts and presents their findings to the class. Credit 3 units.

## About Us

The Sam Fox School of Design & Visual Arts (<http://www.samfoxschool.wustl.edu>) is a unique collaboration in architecture, art and design education, linking professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

The Sam Fox School is composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art and the Mildred Lane Kemper Art Museum (<http://www.kemperartmuseum.wustl.edu>).

The **College of Art**, founded in 1879, was the first professional, university-affiliated art school in the United States. In the 1940s, its broad-based core program helped set the standards for the bachelor of fine arts degree. Faculty over the years have included Max Beckmann, Philip Guston and other internationally known artists.

The **College of Architecture**, established in 1910, was one of eight founding members of the Association of Collegiate Schools of Architecture (ACSA). In 1962, Architecture launched one of the nation's first Master of Urban Design programs. Four winners of the Pritzker Prize, considered architecture's highest honor, have taught at the school.

The **Mildred Lane Kemper Art Museum** dates back to 1881, making it the first art museum west of the Mississippi River. The collection has historically focused on contemporary work. Today the Kemper Art Museum holds roughly 3,500 important paintings, sculptures, photographs and installations by 19th-, 20th- and 21st-century American and European artists, along with significant antiquities and a large number of prints and drawings.

Additional collaborative opportunities are provided by the Department of Art History and Archaeology (<http://arthistory.artsci.wustl.edu>) in Arts & Sciences, the Kenneth and Nancy Kranzberg Art & Architecture Library (<https://library.wustl.edu/units/artarch>), and the Douglas B. Dowd Modern Graphic History Library (<https://library.wustl.edu/spec/mghl>).

## Inquiry, Creativity and Synthesis

The Sam Fox School offers rigorous art and architecture education at both the undergraduate and graduate levels, within the unique context of an independent, nationally prominent research university.

The student body is composed of approximately 300 undergraduate and 50 graduate students in Art, as well as 200 undergraduate and 280 graduate students in Architecture. In all, they represent 17 countries, 47 states and the District of Columbia. Roughly 30 percent of undergraduates pursue combined studies within another university area.

Both core and advanced studios integrate contemporary theory and practice. Among the innovative programs are:

- Multidisciplinary courses co-taught by Art, Architecture, and Art History and Archaeology faculty. Recent seminars have explored the history of illustrated entertainment, combined urban theory with book design and production, and crafted a variety of online publications. Courses in exhibition studies

are being offered, and a new program of exhibition studies is under development.

- International studios in Barcelona, Buenos Aires, Florence and Helsinki are taught by Washington University faculty and offer a range of distinctive programs in art and architecture.
- Community projects include the University City Sculpture Series, which funds student-designed public artworks; WashUCity, a mentoring program for local high school artists; and Architecture's Building Community/Community Building, which explores relationships between St. Louis' inner city, nearby municipalities and outlying suburbs.

## Uniting Creativity and Scholarship

The Sam Fox School boasts a unique combination of academic and intellectual resources.

The Architecture faculty includes practicing architects, urban designers and landscape architects as well as eminent architectural theorists and historians and a select number of international visitors. The resident, full-time faculty members have won national and regional awards for design excellence and planning, including more than two dozen from the American Institute of Architects alone.

Art's full-time faculty members include prominent painters, sculptors, printmakers and mixed-media artists as well as leading illustrators, graphic designers, fashion designers and photographers. In the past decade, design faculty have won numerous professional honors while fine art faculty have been featured in more than 100 solo exhibitions and 300 group shows on five continents.

The nationally recognized Kemper Art Museum maintains a vital program of exhibitions, publications and educational events. Major thematic shows are drawn from institutions and private collections around the world, while the Contemporary Projects Series highlights nationally and internationally emerging artists. The acclaimed permanent collection includes key works by modern and contemporary artists from Henri Matisse, Pablo Picasso and Jackson Pollock to Christian Boltanski, Candida Hofer and Olafur Eliasson.

Public events include concerts, film screenings, lectures and discussions with distinguished visitors, and museum tours led by student docents. The museum also provides workspace for faculty- and student-curated exhibitions (usually relating to Sam Fox School curriculum). Courses in Art History and Archaeology further complement the critical and practical study of exhibitions while facilitating student involvement in professional curatorial projects.

## A Comprehensive Campus

The Sam Fox School is housed in a comprehensive, five-building campus for design and the visual arts. Conceived around a central courtyard, it both reflects and updates Washington University's original campus plan, developed in 1895 by

Frederick Law Olmsted, the founder of American landscape architecture.

The architectural centerpiece is prize-winning Japanese architect Fumihiko Maki's new Kemper Art Museum. This elegant, 65,000-square-foot limestone clad structure — a gathering point for scholars and the general public — includes more than 10,000 square feet of exhibition space, art storage facilities, and the Florence Steinberg Weil Sculpture Garden. The museum also houses the new Kranzberg Art & Architecture Library, Art History and Archaeology, and the Newman Money Museum, a state-of-the-art numismatics center.

Adjacent to the Kemper Art Museum is Maki's Earl E. and Myrtle E. Walker Hall. The three-story, 38,000-square-foot building contains painting and sculpture studios and the Nancy Spirtas Kranzberg Studio for the Illustrated Book.

Flanking the new buildings are Bixby and Givens Halls — historic homes to Art and Architecture, respectively — as well as Steinberg Hall, Maki's iconic modernist pavilion. Recent renovations include state-of-the-art computing environments; accessible, light-filled studios; additional workspaces; an auditorium; and a café.

## Visiting Artists and Architects

The Sam Fox School invites distinguished academics and professionals to lecture (<http://www.samfoxschool.wustl.edu/calendar/events/lectures>), attend critiques and visit major studios. Recent visitors include:

## Degree Requirements

### Undergraduate Degree Programs

The College of Architecture offers course work leading to two undergraduate degrees: the Bachelor of Science in Architecture and the Bachelor of Design in Architecture. The requirements for both degrees are the same through the junior year. Students then choose which degree program they wish to pursue.

Further information on the particular requirements and curricular structures of the undergraduate degree programs is listed below.

Students in the College of Architecture select, in consultation with their advisers, a course of study that satisfies the formal degree requirements, addresses their interests, and best meets their overall goals.

Students begin with a Sam Fox School foundation drawing course taken with first-year students in the College of Art and two design courses particular to architecture. They take required courses in the College of Arts & Sciences and electives in architecture and the Sam Fox School.

For the Bachelor of Science degree, students continue to study architecture in depth through the senior year. For those in the Bachelor of Design program, the fourth year offers flexibility in studying outside of architecture or pursuing other electives in architecture and art.

#### Continuing for graduate study years:

Students receiving the Bachelor of Science in Architecture degree can apply to two-year Master of Architecture programs. Students receiving the Bachelor of Design degree with a major in architecture usually apply to three-year Master of Architecture programs (refer to graduate degree programs below).

If a student enters the College of Architecture as a first-year student, they may complete both the bachelor's and the master's programs in a minimum of six years, in a professional degree structure called the 4+2. Using the Bachelor of Science in Architecture degree as the initial basis, the 4+2 curriculum allows a student to spend four years as an undergraduate and two years as a graduate student in the Master of Architecture curriculum (refer to the 4+2 Program (p. 72) information below).

## College of Architecture Requirements

### Students must fulfill the following degree requirements:

#### A. Requirements

1. Writing I: Every student must demonstrate proficiency in reading and writing the English language and must begin to develop mature skills in framing and revising arguments by completing course work as determined by the Department of English with a grade of C- or better. Transfer students must fulfill the Writing 1 requirement by taking CWP 100 College Writing 1 or by review of a writing portfolio. For more information, visit the College Writing Program website (<http://collegewriting.wustl.edu/transfer-student-portfolio>).
2. Math 131 Calculus I (Natural Sciences/Math) with a C- or better
3. Physics 117A General Physics I (Natural Sciences/Math) with a C- or better
4. Humanities (3 units): Humanities courses examine the human condition as it has been documented and expressed in both past and contemporary times. This area includes courses from literature (both in English and other languages), Classics, History, Philosophy, and Religious Studies, as well as some courses in the creative arts such as Dance, Drama, Music and Writing. Courses designated "Art HUM" fulfill a humanities requirement.
5. Social and Behavioral Sciences (3 units): These courses use qualitative and quantitative observation to explore the social environment, relationships with society, and forms of human behavior. This area includes courses from Anthropology, Economics, Education, International and Area Studies, Political Science, Psychological & Brain Sciences, and courses from other areas, including interdisciplinary studies. Courses designated "Art SSC" fulfill the Social and Behavioral Sciences requirement.
6. Art History (Art-Arch 113 History of Western Art, Architecture and Design) with a C- or better
7. Art History (Art-Arch 215 Introduction to Modern Art, Architecture and Design) with a C- or better
8. Courses in Arts & Sciences (18 units)\*
9. Courses in Architecture, Art, Design; Arts & Sciences; Business; or Engineering (9 units)\*

\*This excludes physical education, lessons, independent studies, internships, Advanced Placement, International Baccalaureate or transfer credit.

#### B. Foundation Courses

1. XCORE 101 Drawing I
2. XCORE 181 Practices in Architecture + Art + Design and XCORE 182 Practices in Architecture + Art + Design

#### C. Sam Fox Commons, Architecture, Art or Design Electives

Every student is required to take at least 6 units of Sam Fox Commons (X10 300-level), Architecture, Art or Design interdisciplinary courses.

**D. Major Required Courses: Bachelor of Science in Architecture**

| Code      | Title   | Units     |
|-----------|---|-----------|
| ARCH 111  | Introduction to Design Processes I                                  | 3         |
| ARCH 112  | Introduction to Design Processes II                                 | 3         |
| ARCH 211B | Introduction to Design Processes III                                | 4.5       |
| ARCH 212B | Introduction to Design Processes IV                                 | 4.5       |
| ARCH 311  | Architectural Design I  | 6         |
| ARCH 312  | Architectural Design II   | 6         |
| ARCH 411  | Architectural Design III  | 6         |
| ARCH 412  | Architectural Design IV   | 6         |
| ARCH 3283 | Architectural History I: Premodern Encounters in World Architecture | 3         |
| ARCH 4284 | Architectural History II: Architecture Since 1880                   | 3         |
| ARCH 438  | Environmental Systems I   | 3         |
| ARCH 445  | Building Systems  | 3         |
| ARCH 447A | Structures I  | 3         |
| ARCH 448A | Structures II   | 3         |
|           | One History/Theory or Urban Issues elective                         | 3         |
|           | Electives   | 3         |
|           | <b>Total Units</b>  | <b>63</b> |

**E. Major Required Courses: Bachelor of Design, Major in Architecture**

| Code      | Title   | Units     |
|-----------|---|-----------|
| ARCH 111  | Introduction to Design Processes I                                  | 3         |
| ARCH 112  | Introduction to Design Processes II                                 | 3         |
| ARCH 211B | Introduction to Design Processes III                                | 4.5       |
| ARCH 212B | Introduction to Design Processes IV                                 | 4.5       |
| ARCH 311  | Architectural Design I  | 6         |
| ARCH 312  | Architectural Design II   | 6         |
| ARCH 3283 | Architectural History I: Premodern Encounters in World Architecture | 3         |
| ARCH 3284 | Architectural History II: Architecture Since 1880                   | 3         |
| ARCH 445  | Building Systems  | 3         |
| ARCH 499  | Senior Capstone in Architecture                                     | 3         |
|           | Architecture Elective (300-level or above)                          | 3         |
|           | Electives   | 21        |
|           | <b>Total Units</b>  | <b>63</b> |

**Typical First-Year and Sophomore Programs for Architecture Students**

The following typical programs for the first and sophomore years are based on the requirements of the College of Arts & Sciences and on the prerequisite introductory architecture sequences for the undergraduate degrees in architecture:

*First Year*

| Code                | Title  | Units     |
|---------------------|--|-----------|
| ARCH 111 & ARCH 112 | Introduction to Design Processes I and Introduction to Design Processes II | 6         |
| XCORE 101           | Drawing I  | 3         |
| XCORE 181           | Practices in Architecture + Art + Design                                   | 1         |
| XCORE 182           | Practices in Architecture + Art + Design                                   | 1         |
| Math 131            | Calculus I   | 3         |
| CWP 100             | College Writing 1  | 3         |
| Art-Arch 113        | History of Western Art, Architecture and Design                            | 3         |
| Art-Arch 215        | Introduction to Modern Art, Architecture and Design                        | 3         |
|                     | Academic Requirements/Electives  | 9         |
|                     | <b>Total Units</b>   | <b>32</b> |

*Sophomore Year*

| Code         | Title   | Units     |
|--------------|---|-----------|
| Physics 117A | General Physics I (special lab required: 0 units)                   | 3         |
| ARCH 211B    | Introduction to Design Processes III                                | 4.5       |
| ARCH 212B    | Introduction to Design Processes IV                                 | 4.5       |
| ARCH 3283    | Architectural History I: Premodern Encounters in World Architecture | 3         |
|              | Academic Requirements/Electives                                     | 15        |
|              | <b>Total Units</b>  | <b>30</b> |

If a student plans to enter the architectural design sequence ARCH 311–ARCH 312 in the fall of the junior year, the student must complete 60 units of academic work by the end of the sophomore year.

**Additional Requirements**

Each undergraduate student shall successfully complete 122 units and at least 30 units in advanced courses (numbered 300, 400 or 500). The 30 units in advanced courses may include the minimum number of advanced units required by the major areas of concentration. Courses required for the major (refer to College of Architecture Requirements) must be passed with a grade of C- or better.

Each student shall spend at least three semesters in full-time residence (at least 12 units per semester) at Washington University. Unless excused by the dean of the College of Architecture, the student must earn the last 30 units at Washington University. The dean of the College of Architecture may waive the full-time residence requirement for students who are employed full-time and have completed at least two years of college.

### Regulations

A. Students may take one non-required course on a pass/fail basis each semester.

B. Students may enroll for credit in only one supervised performance course in any semester. Students may earn a maximum of 12 units toward the degree in supervised performance and/or in group and individual performance courses combined.

## The 4+2 Program: Bachelor of Science in Architecture and Master of Architecture

The College of Architecture's Bachelor of Science degree curriculum leads directly into the Graduate School of Architecture & Urban Design's two-year Master of Architecture degree program, providing for the attainment of the accredited professional degree in six years.

Students who have satisfactorily completed, or who are about to complete, the Bachelor of Science requirements can apply to the Graduate School of Architecture & Urban Design's Master of Architecture degree program by submitting an application to the Graduate Admissions Office and by requesting a review of their undergraduate work by the Graduate Admissions Committee. Admission is not automatic, however, and requires approval from the Graduate Admissions Committee. A portfolio is not required for students in the senior year of the Bachelor of Science curriculum at the time of application.

Bachelor of Science in Architecture students thus accepted into the two-year Master of Architecture degree program are required to complete the following courses to fulfill the requirements of the MArch 2 degree:

| Code      | Title  | Units |
|-----------|--|-------|
| ARCH 511  | Architectural Design V                       | 6     |
| ARCH 512  | Architectural Design VI                      | 6     |
| ARCH 538C | Advanced Building Systems                    | 3     |
| ARCH 580  | Design Thinking: Research and Design Methods | 3     |
| ARCH 611  | Architectural Design VII                     | 6     |
| ARCH 616  | Degree Project                               | 6     |

|             |                         |    |
|-------------|-------------------------|----|
| ARCH 646    | Professional Practice I | 3  |
| Total Units |                         | 33 |

Additionally, students entering the two-year Master of Architecture degree program with the college's Bachelor of Science degree must complete course work not addressed during the Bachelor of Science curriculum, as follows:

1. Completion of both ARCH 438 Environmental Systems I and ARCH 439 Environmental Systems II;
2. Completion of at least one elective course in Architectural History and Theory; and
3. Completion of at least one elective course in Urban Issues.

Students in the MArch 2 degree program have 18 units (six courses) of additional elective credits to complete.

### Information

For more information about graduate degree programs and requirements, contact the Director of Graduate Admissions, Graduate School of Architecture & Urban Design, Sam Fox School of Design & Visual Arts, Washington University in St. Louis, Campus Box 1079, One Brookings Drive, St. Louis, MO 63130-4899, or send an email to: samfoxschool@wustl.edu.

### Combined Studies

Washington University offers students the option to study across disciplines and to take advantage of the wide range of courses available. Students may choose to major in architecture and minor in another subject; major in architecture and choose a second major in another area within the College of Arts & Sciences; or major in architecture and choose a second major in an area from a different undergraduate school.

## Academic Honors & Awards

**Dean's List:** In recognition of exceptional scholarship, the Office of the Dean compiles, at the end of each academic year, a list of those students whose work has been particularly worthy of commendation. Students will be eligible for the Dean's List if they:

1. Have earned at least 14 credit hours per semester under the "credit" grade option; this excludes the grade options of "pass/fail" and "audit" and courses in University College, and;
2. Achieve a semester grade point average of 3.5 or higher.

All undergraduate students meeting these criteria are candidates for the Dean's List unless they notify the Office of the Dean in writing that they do not wish to be considered.

**Latin Honors:** Graduating students may be considered for Latin Honors (cum laude, magna cum laude, or summa cum laude) as determined by the dean.

## Special Awards, Medals and Prizes

### Undergraduate

**Betty Lou Custer Award.** The St. Louis Chapter of the American Institute of Architects presents a book award in memory of Betty Lou Custer, longstanding executive director of the chapter, to an outstanding graduate receiving either undergraduate degree. In recognition of Custer's service to the profession of architecture, the prize is awarded to a student who has contributed willing service to the College of Architecture.

**Faculty Award.** The faculty of the College of Architecture offers a book award to an outstanding BDes or BS undergraduate in the college.

**Sophomore Book Prize.** Presented to an outstanding sophomore who has completed the basic design sequence within the college. Given in honor of Leslie J. Laskey, professor emeritus, whose inspired teaching formed the basis of the basic design program and whose influence is carried on in the lives and work of the students who studied with him.

### Graduate

**Alpha Rho Chi Medal.** Alpha Rho Chi, a national social fraternity in architecture, awards a medal to the graduating sixth-year student who has shown an ability for leadership, has performed willing service for the Graduate School of Architecture & Urban Design, and has given promise of real professional merit.

**American Institute of Architects Medal.** Each year, the AIA medal is awarded to a member of the graduating class in recognition of scholastic achievement, character and promise of professional ability. The student so honored receives the engraved medal. The runner-up also may be awarded a certificate, depending on the decision of the faculty. The awards are made in the name of the Henry Adams Fund by the AIA.

### All School

**James Walter Fitzgibbon Prize.** Mrs. James Fitzgibbon and friends of the family established a fund to honor Professor Fitzgibbon's memory and to recall his long and distinguished service on the faculty of Architecture. The annual income from this fund provides for the Fitzgibbon Prize, given to a 300- to 600-level student who has the winning solution to a one-day sketch problem.

**William Tao Prize.** Established by William K.Y. Tao, P.E., alumnus, emeritus trustee and affiliate professor at Washington University, the William Tao Prize provides an annual cash award to students who have demonstrated excellence in the understanding and application of building systems in architecture, including illumination, electrical and mechanical engineering, and energy-efficient design.

**Frederick Widmann Prize in Architecture.** Through a bequest from the late Frederick Widmann, an annual prize of at least \$1,500 is offered to the best architectural student in the university. The selection is made by the faculty of the architecture college.

## Scholarship Funds

### Scholarships with Applications

**St. Louis Chapter American Institute of Architects Scholarship Fund.** For students from the St. Louis metropolitan area who have completed the first two years of their architectural studies. Inquiries should be addressed to the St. Louis Chapter AIA, 911 Washington Ave., #225, St. Louis, Missouri 63101. Separate application is required.

**The James W. Fitzgibbon Scholarship in Architecture.** Awarded to support four years of study leading to either undergraduate architecture degree. The Fitzgibbon Scholar is selected in recognition of outstanding academic performance and promise in the field of architecture. The scholarship is in the amount of full tuition, renewable for a total of four years of undergraduate study. Up to five partial-tuition scholarships are also available. For more information, contact the Office of Undergraduate Admissions (<http://www.samfoxschool.wustl.edu/admissions/undergraduate>). Separate application is required.

### Scholars in Architecture

The Scholars in Architecture program provides named scholarship funds that have been donated to the university by individuals or companies specifically for this purpose. Selection is based on financial need and academic achievement. There is no application process. The total amount of the student's financial assistance package does not change.

## Academic Regulations

Students in the College of Architecture are required to complete a minimum of 39 academic credits in Arts & Sciences. An additional 9 academic credits can be taken in Architecture, Art, Design, Arts & Sciences, Business or Engineering. These 48 credits exclude University College, physical education, lessons, independent studies, internships, Advanced Placement, International Baccalaureate or transfer credit.

No more than 15 units of transfer or pre-matriculation credit from all sources — Advanced Placement (AP) examinations, International Baccalaureate (IB), British Advanced (A) Levels — will be awarded. The units of credit awarded do not apply toward the 48 credits required in Arts & Sciences.

## Academic Integrity

Students and members of the faculty of a university have an obligation to uphold the highest standards of scholarship. Plagiarism or other forms of cheating will not be tolerated. Where a student has violated the integrity of the academic community,

an instructor may recommend that the student be brought before the Committee on Academic Integrity. A list of university policies can be found on the website of the University Registrar (<http://registrar.wustl.edu/university-policy-information>).

## Attendance

Regular attendance at all classes and studio meetings is expected of each student. If, in the opinion of the instructor, any student has accumulated absences to such an extent as to preclude the possibility of satisfying the course requirements, the student's registration in that course will be canceled, subject to the approval of the dean.

## Units and Grades

A unit is the amount of credit given for one hour of lecture or up to three hours of studio work a week for one semester. All students in the College of Architecture may take one nonrequired course on a pass/fail basis each semester. All students in the Graduate School of Architecture & Urban Design may select one of the following two grading options as they register for each semester: (1) grade option or (2) pass/fail option. Under the grade option, a student may take one nonrequired course under pass/fail. Under the pass/fail option, all courses must be taken pass/fail.

Symbols used for both options have the following meanings:

| Grade | Meaning                 | Points per Unit |
|-------|-------------------------|-----------------|
| A     |                         | 4.0             |
| A-    |                         | 3.7             |
| B+    |                         | 3.3             |
| B     |                         | 3.0             |
| B-    |                         | 2.7             |
| C+    |                         | 2.3             |
| C     |                         | 2.0             |
| C-    |                         | 1.7             |
| D+    |                         | 1.3             |
| D     |                         | 1.0             |
| D-    |                         | 0.7             |
| F     |                         | 0.0             |
| P#    | Pass                    |                 |
| F#    | Failing                 |                 |
| I     | Course work incomplete* |                 |
| W     | Withdrawal              |                 |
| R     | Repeat                  |                 |
| L     | Successful audit        |                 |
| Z     | Unsuccessful audit      |                 |
| N     | No grade submitted      |                 |

Pluses and minuses are used. Each grade earned for a course taken for credit receives a specified number of grade points, and these points are affected by plus and minus grades as well.

In addition to grading under either the regular grade option or the pass/fail option, instructors teaching architectural design courses complete an evaluation form for each student; a copy is made available to the student, and the original is filed in the student's folder in the Office of the Dean.

\*This grade signifies that the student has not completed part of the work for a semester (exclusive of examinations), but has satisfactorily completed the rest of the work. A student must remove a grade of I as indicated below.

## Auditing a Course

With prior approval from their academic adviser, students may audit an elective course.

## Pass/Fail Option

Students may take one non-required course on a pass/fail basis each semester.

## Incomplete Grades

Incomplete marks in all architectural design courses (100- to 600-level) must be removed by the first day of classes of the following semester. Failure to remove the incomplete will prevent the student from continuing in another architectural design course.

In all other courses, the grade of I must be removed no later than the last day of classes of the next full semester. On failure to make up an I within the next semester, the student shall automatically receive an F in the course unless explicitly excused by the dean. An F grade, so received, may not be changed. Students will not be allowed to continue in courses requiring prerequisites if the prerequisite has an Incomplete grade. A student who carries more than 9 units of incomplete work may be declared ineligible to re-enroll.

F grades for a semester may be changed only through the last day of classes of the following semester and then only in extraordinary circumstances. The Office of the Dean will approve no changes of F grades after this interval.

## Repeating a Course

When a student retakes a course in which a passing grade has been received, both enrollments will show on the transcript. If the second grade is equivalent to or better than the first grade, the first grade may be changed to R, indicating the re-enrollment upon request of the student and with department approval. If the second grade is lower, both grades will stand. Credit toward the degree will be allowed for only one of the enrollments. When a student retakes a course in which an F has been received, both enrollments for the course will appear on the transcript. If a passing grade is received in the second enrollment, the first

enrollment may be changed to R, indicating the re-enrollment upon request of the student and with the approval of the dean.

## Independent Study

Opportunities for independent study are available to all graduate and undergraduate students. Registration in an independent study course requires sponsorship by an instructor and permission of the dean. A maximum of 5 units (graduate students), 3 units (juniors and seniors), and 1 unit (first-year students and sophomores) may be taken per semester. Independent study courses cannot replace architectural design studios or other required courses. An independent study proposal sheet approved by a faculty sponsor must be submitted to the Office of the Dean at registration time.

## Study Abroad

Students have an opportunity to study in Florence, Italy, for a semester or over the summer term. These programs are based on a directed curriculum of urban and building analysis and appreciation. For more information, visit the Study Abroad Programs (PDF) ([http://samfoxschool.wustl.edu/files/Study%20Abroad%20Policy-SFS%20Programs-9-11-15\\_fin.pdf](http://samfoxschool.wustl.edu/files/Study%20Abroad%20Policy-SFS%20Programs-9-11-15_fin.pdf)) on our website.

Architecture students are eligible to participate in the university's study abroad programs.

## Summer School

The College of Architecture offers a limited number of courses during the summer, primarily ARCH 447A Structures I and ARCH 448A Structures II.

## Minimum and Maximum Loads

First-year and sophomore undergraduates will normally enroll in either 15 or 16 units each semester, although enrollment in up to 18 units is possible. Juniors and seniors in the architecture degree programs are strongly recommended to enroll in no more than 16.5 units each semester in order to maintain focus on the design studio and major requirements. This guideline can only be waived by the dean or undergraduate program chair. The normal load for graduate students is a maximum of 16 units each semester.

An enrollment above 21 units will be charged at the established university rate per hour of the additional credits and must be approved by the dean or undergraduate program chair of the College of Architecture.

Refer to the section of this *Bulletin* that covers tuition and fees (p. 32) for both the annual tuition rate and the per credit hour breakdown applicable to the College of Architecture.

Partial load enrollment is possible when circumstances warrant it and requires the permission of the dean.

Students are expected to proceed at a pace that enables them to finish their degree within the appropriate time limit. For undergraduates, this is usually eight semesters. Exceptions to these minimum standards may be granted only with the written consent of an academic adviser, the associate dean of students, or the dean.

## Academic Warning, Probation, and Suspension

A student whose semester grade point average is below 2.0 (grade of C) or who falls below a pace of 66 2/3 percent (number of credits earned divided by the number of credits attempted) will be placed on academic probation. If, after the following semester, the semester grade point average is still below 2.0 or the pace is below 66 2/3 percent, the student may be ineligible for normal advancement or may be suspended. While the College desires to give all students the opportunity to prove themselves, it is not in the best interest of either the student or the College to permit a student to continue indefinitely in educational programs in which they are not producing satisfactory results.

The probation status serves as a warning that unless the quality of work improves, the student may be subject to dismissal because of academic deficiency. A student dismissed for academic deficiency will not be eligible for readmission until they have demonstrated, under the conditions set for each individual case, their ability to do satisfactory work.

A student will be removed from academic probation when their cumulative grade point average is above 2.0 and they are meeting the "pace" of 66 2/3 percent for Satisfactory Academic Progress.

In support of the student, the Registrar's Office will work with the student to develop a plan for success. In order to succeed, the student must understand the causes of their current situation, identify what needs to change, and implement and review the plan.

A student who receives two or more grades of F in a semester will be placed on academic warning for the following semester. The warning serves as a notice that unless the student passes all courses in the following semester, they will be placed on academic probation.

No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity policy.

## Leave of Absence

A student may request a voluntary leave of absence for one or two semesters when individual circumstances, professional, medical or personal, warrant it. Petitions are reviewed and approved by the Sam Fox School Registrar's Office. Any

requests extending beyond one year will be reviewed on a case-by-case basis. In addition to a written petition, the student requesting a medical leave of absence must submit a letter of verification from Student Health Services.

A student returning from a leave of absence must submit a written letter stating their intention to re-enroll by July 1 (returning in the fall semester) or December 1 (returning in the spring semester). In the case of a medical leave of absence, a letter of clearance is required from Student Health Services before a student will be permitted to re-enroll.

International students requesting a leave of absence must contact their adviser at the Office of International Students and Scholars (OISS) to discuss how the leave might affect their visa status.

A leave of absence assumes that the student will not be taking any academic work at another institution.

## Transfer Credit

Architecture students must complete the required Calculus I and Physics courses at Washington University with a grade of C- or better unless the student has received Advanced Placement (AP) or International Baccalaureate (IB) credit for these courses. Students wishing to transfer credit for other courses completed at another institution should bring a full catalog description of the course(s) to the Sam Fox School Registrar's Office for pre-approval. Upon receipt of an official transcript indicating a grade of C or better, courses will be considered for transfer. Grades for transfer courses will not appear on the student's Washington University record and will not figure into the student's GPA. College courses taken to earn credit for high school graduation will not be considered for transfer. Washington University does not transfer credits for courses taken online. Non-Washington University courses do not count toward the 39 units of academic credit required in Arts & Sciences or the 9 units of academic credit required in Architecture, Art, Design, Arts & Sciences, Business or Engineering. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity policy.

## Intent to Graduate

Every candidate for a degree is required to file an "Intent to Graduate" in WebSTAC in order to participate in Commencement exercises. The deadlines for filing can be found on the University Registrar website (<http://registrar.wustl.edu/student-records/graduation/intent-to-graduate>). A student must have a minimum 2.0 cumulative grade point average to graduate.

## Retention of Student Work

The College of Architecture and Graduate School of Architecture & Urban Design reserve the right to retain any student work

submitted for course credit. Normally this work will be returned to the student at the end of the semester, except that which has been retained for publications, exhibitions or accreditation reviews. It is highly recommended that students photographically reproduce or electronically store their work in order to keep a record of their work.

## Administration

**Heather Woofler** (<http://samfoxschool.wustl.edu/directory/494>)  
Director, College of Architecture and Graduate School of Architecture & Urban Design  
Professor  
MArch, Harvard University

**Igor Marjanovic** (<http://samfoxschool.wustl.edu/directory/486>)  
Chair, Undergraduate Programs  
Professor  
PhD, Bartlett School of Architecture, University College of London

## Majors (directory)

The College of Architecture offers Bachelor of Design in Architecture and Bachelor of Science in Architecture degrees. For more information, visit the following page:

- Architecture (p. 40)

## Minors (directory)

Below is a list of minors offered by the College of Architecture. Visit the Minors section of the College of Architecture (p. 40) in this *Bulletin* to view more information about a specific minor.

- Architectural History and Theory
- Architecture
- Landscape Architecture
- Urban Design

## Art

### Sam Fox School of Design & Visual Arts

The Sam Fox School of Design & Visual Arts (<http://samfoxschool.wustl.edu>) is a unique collaboration in architecture, art and design education, linking professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

The Sam Fox School is composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art, and the Mildred Lane Kemper Art Museum (<http://www.kemperartmuseum.wustl.edu>).

### A Professional Art College Within a University

The College of Art offers students the opportunity to study art or design while taking both required and elective courses through other schools and divisions of the university. The College of Art, which has its own faculty and facilities, has been a degree-conferring division of Washington University since 1879.

Undergraduate students at the College of Art have a wide variety of options from which to choose to meet their individual needs and to satisfy their interests. The Bachelor of Fine Arts (BFA) curriculum has been designed around the philosophy that the study of art has no natural boundaries; all human experience — intellectual, technological and social — can at some point become part of the purposes of an artist or designer. College of Art courses provide a structural base upon which students are able to build.

When students major in art at Washington University, they may choose to study communication design, fashion design, and art with optional concentrations in painting, photography, printmaking or sculpture.

Our diverse student body is composed of young people who have records of high achievement in both art and academic subjects. Because the college provides such a comprehensive learning environment, it is an excellent place for a student to mature as an artist or designer.

### Facilities

The College of Art studios are in William K. Bixby Hall, Earl E. and Myrtle E. Walker Hall, Mark C. Steinberg Hall, and Lewis Center. Bixby Hall, located on the university's Danforth Campus, was built for the College of Art in 1926. Walker Hall was completed in the summer of 2006 as part of the Sam Fox School of Design & Visual Arts. The renovation of Steinberg Hall was completed in fall 2007. Lewis Center, located one mile from

the Danforth Campus, offers 28,000 square feet of space for graduate studios.

Resources at the College of Art include the Whitaker Learning Laboratory, which has computers and software for graphics and design, as well as video equipment, and the Nancy Spirtas Kranzberg Studio for the Illustrated Book, located in Walker Hall.

**William Fett**

**Joan Hall**

Gene R. Hoefel

Peter Marcus

James McGarrell

Hylarie M. McMahon

William Quinn

W. Patrick Schuchard

Stanley Tasker

## Majors

### Bachelor of Fine Arts

First-year students take Drawing I and II, 2-D Design, 3-D Design, and Practices in Architecture + Art + Design I and II.

Second-year studio courses introduce students to the different areas of focus.

A student's last two years include intense study in their chosen focus area and a capstone experience. The capstone studio brings together all seniors in the studio areas and separately in the communication design and fashion areas for critical dialogue beyond disciplinary boundaries to guide preparation for a culminating BFA exhibition.

For specific degree requirements, visit the Degree Requirements (p. 131) page for the College of Art.

### The Major in Art

Majors are offered in:

- Art — with optional concentrations in:
  - Painting (<http://samfoxschool.wustl.edu/node/4155>)
  - Photography (<http://samfoxschool.wustl.edu/node/4153>)
  - Printmaking (<http://samfoxschool.wustl.edu/node/4156>)
  - Sculpture (<http://samfoxschool.wustl.edu/node/4157>)
- Communication Design (<http://samfoxschool.wustl.edu/node/9366>)
- Fashion Design (<http://samfoxschool.wustl.edu/node/9367>)

### The Second Major or Minor

Art students may earn a second major or minor in the College of Arts & Sciences, the Olin Business School, or the School of Engineering & Applied Science (computer science) while completing the requirements for the BFA degree. If students choose to take advantage of these opportunities, they will graduate with a BFA degree with two majors — one in Art and one in another school, or a BFA degree with a major in art and a minor in another school.

Students must successfully complete all of the degree requirements for the BFA and all of the requirements for the second major or minor.

The second major and minor option can be completed within four years if careful planning begins during the first year. If a student is interested in these options, they should consult with the associate dean of students in the College of Art.

### Art Education

Students who wish to teach art at the elementary and secondary levels may obtain Missouri state certification by taking additional credit units of required education courses offered by the university's Department of Education in the College of Arts & Sciences. These courses may be taken as academic electives within the BFA program.

In addition to course work in education, prospective art teachers must complete specific courses in general education (communications, humanities, mathematics, natural sciences and social sciences). For information on general education requirements, students should consult with the associate dean of students (Bixby Hall, Room 1) or the Department of Education (Seigle Hall, Room 107). Missouri state certification normally takes an additional semester of study. Application to enroll in the teacher education program is made through the Department of Education and should be done no later than the beginning of the sophomore year. Part of the application process involves successfully passing College Base, an achievement test focused on general education content. (This test is periodically given on the Washington University campus.) Acceptable scores on the SAT or the ACT also must be submitted. Interested students may also apply for admission to the Master of Education degree program offered by the education department.

### Minors

A minor requires a total of 15 credits from F10, F20 or X10 courses with a grade of C- or better. Visit the Sam Fox School website (<http://samfoxschool.wustl.edu/node/10123>) for specific requirements.

Minors are offered in:

- Art
- Design

The minor in art allows students to select five courses from an approved list. Students are able to take courses from across the Art curriculum or cluster their courses in a single disciplinary area — painting, for example. It becomes the choice of each student to select a narrow or wide-ranging set of courses based on interests and goals.

For students in the College of Art, the minor in art is available only to students majoring in communication design or fashion design. Students are able to select from Material and Culture, Art Practice, and Art elective courses. Communication design majors may not count a Material and Culture or Art Practice course toward the minor if using the course to complete major requirements.

Students in the College of Architecture may take any of the courses above plus 2-D Design, 3-D Design, and Drawing II if the course is not being counted toward Architecture degree requirements, as space permits and prerequisites are met.

Students outside the Sam Fox School may take any of the above courses, plus Drawing I, as space permits and prerequisites are met. Art Practice and Special Topics courses may be repeated if the courses are focused on different topics/themes.

The minor in design allows students to take approved courses from across Communication Design, Fashion Design, and the Illustrated Book Studio, mixing and matching courses to suit interests and schedules. Students majoring in art may pursue a minor in design.

Students in other undergraduate degree programs at Washington University may pursue a minor in either art or design.

Students may consult with the associate dean of students or the assistant dean/registrar (Bixby Hall, Room 1). Students declare a minor in WebSTAC.

## Courses

**X10 XCORE** (p. 80): Sam Fox foundation and commons courses

**F10 Art** (p. 85): Art foundation and major studio courses

**F20 Art** (p. 105): Art elective courses

College of Art majors have enrollment priority in F10 and F20 courses. College of Art and College of Architecture majors have enrollment priority in X10 courses. Elective (F20) courses may be offered at the 100-400 levels; students must enroll as applicable — 100-level courses are for first-year students, 200-level for sophomores, 300-level for juniors and 400-level for seniors.

---

## Design & Visual Arts — Core (X10)

Visit online course listings to view semester offerings for X10 XCORE (<https://courses.wustl.edu/CourseInfo.aspx?sch=X&dept=X10&crslvl=1:4>).

---

### X10 XCORE 101 Drawing I

An introductory course which teaches students to recognize and manipulate fundamental elements of composition, line, form, space, modeling and color. Emphasis is placed on working accurately from observation, with an introduction to other methodologies. Students work in a variety of media. Demonstrations and illustrated lectures supplement studio sessions and outside projects. This class counts toward the minor in art or minor in design for non-Sam Fox School students. Credit 3 units. Art: FAAM, FADM

---

### X10 XCORE 102 Drawing II

Continuing as an introductory course which teaches students to recognize and manipulate fundamental elements of composition,

line, form, space, modeling and color. This course is an intensive studio course which builds on the perceptual and conceptual skills and experiences developed in Drawing I. A main objective is to develop a higher level of critical and studio practice.

Prerequisite: X10 101.

Credit 3 units. Art: FAAM EN: H

---

### X10 XCORE 181 Practices in Architecture + Art + Design

This course offers first-year students in architecture and art an introduction to the subjects, theories and methodologies of the disciplines of art, design, architecture, landscape architecture, and urban studies. Examples, drawn from a range of historical periods as well as contemporary practice, highlight distinct processes of thinking and working in each discipline, as well as areas of intersection and overlap. Part 1 of 2.

Credit 1 unit. EN: H

---

### X10 XCORE 182 Practices in Architecture + Art + Design

This course offers first-year students in architecture and art an introduction to the subjects, theories and methodologies of the disciplines of art, design, architecture, landscape architecture, and urban studies. Examples, drawn from a range of historical periods as well as contemporary practice, highlight distinct processes of thinking and working in each discipline, as well as areas of intersection and overlap. Part 2 of 2.

Credit 1 unit. EN: H

---

### X10 XCORE 301 From Propaganda to Decoration

This is a studio course that is conceptually driven and anchored in the philosophical terrain of the print multiple. The fundamental attributes of the multiple, including its accessibility and repeatability, are from private to public and from political to aesthetic. Given this orientation, we examine the place where the public and private spheres meet. Considering urban communication and social space, reproduction and distribution, gifting and exchange, private practice and public intervention, this course uses the print multiple as a starting point to explore a continuum that runs from propaganda to decoration.

Credit 3 units. EN: H

---

### X10 XCORE 303 Visualizing Information

This project-based studio course brings students from diverse backgrounds in art, architecture and design together to learn to compose information-rich surfaces. The course explores principles of information design on paper initially, and offers the opportunity to extend some applications to the screen. Course topics include content organization, visual structure, hierarchy, typography, color, sequencing, audience and usability. Students have the chance to select subject and media for some of their projects. Projects are supplemented with readings and lectures about contemporary information design, with some historical references. This course combines the rigor of a disciplinary classroom with the flexibility of a multidisciplinary one. Topics likely to emerge in the interdisciplinary conversation include information in three-dimensional spaces, communicating information with a particular voice or editorial perspective, analytical versus poetic information design, function, audience and programming. All of these are supported, and students develop a set of tools which can be adapted to their own disciplinary work in a meaningful way.

Credit 3 units.

---

### X10 XCORE 304 Data Visualization

In this hybrid lecture/studio course, students learn basic skills to develop data visualizations focusing on clarity, relevance to the user, and visual expression. The course spans several themes within data visualization, including principles of two-dimensional design, storytelling and sequence, and interactivity and user navigation. The course is organized into four units, each with a different content focus and data type, including topics as diverse as urban and rural landscapes, conditions in public health, and literary production. Students apply their own areas of interdisciplinary expertise to the final project. Students need a laptop with Adobe Illustrator and may need to acquire inexpensive or free software. This course is appropriate for sophomores through graduate students with or without visual training who are interested in data, information design, user interface, and computer programming. Course counts in the Interdisciplinary Project in the Humanities (IPH).

Credit 3 units. Art: FADM EN: H

---

### X10 XCORE 305 Topics in Visual Culture: Commercial Modernism in America, 1865-1965

This survey course explores contributions to and expressions of visual modernism within the commercial tradition in the United States. Lectures, readings and screenings engage the intertwined histories of commerce, technology, society and aesthetics. Topics include periodical illustration from *Harper's Weekly* to the *Ladies Home Journal*, the newspaper comic strip and the comic book, animation from vaudeville to television, and science fiction and transportation design. Context provided by the advent of industrial image production; modernist art theory and high cultural disdain for mass markets (with resulting effects on the academy); avant-garde and commercial cross-pollination; the social histories of ethnic depiction (i.e., blackface minstrelsy); consideration of women as consumers and producers of commercial images. Students make use of materials in the collections of the Modern Graphics History Library at Washington University. Attendance required at three animation screenings.

Credit 3 units. Art: FADM EN: H

---

### X10 XCORE 307 Community Building

This course looks at the intersection of the built fabric and the social fabric. Using St. Louis as the starting point, this course takes students out of the classroom and into a variety of neighborhoods — old, new, affluent, poor — to look at the built environment in a variety of contexts and through a variety of lenses. Almost every week for the first half of the semester, students visit a different area (or areas), each trip highlighting some theme or issue related to the built environment (architecture, planning, American history, investment and disinvestment, community character and values, race, transportation, immigrant communities, future visions, etc.). Running parallel to this, students are involved in an ongoing relationship with one particular struggling neighborhood, in which students attend community meetings and get to know and become involved with the people in the community in a variety of ways. Students learn to look below the surface, beyond the single obvious story, for multiple stories, discovering their complexity, contradictions and paradoxes. They also come to consider the complex ways in which architecture and the built environment can affect or be affected by a host of other disciplines. CET (<https://gephardt.institute.wustl.edu/cec/sam-fox-school-of-design-and-visual-arts>) course.

---

### X10 XCORE 308 Community Building North

This course addresses the complex economic, political and racial landscape of north St. Louis County focused on Ferguson, Missouri, as the embodiment of problems and conflicts endemic to urban communities across the country. The events following Michael Brown's shooting death on August 9, 2014, have revealed deep divisions in the St. Louis metropolitan area. Our multidisciplinary approach will be evident as we investigate the intersecting, compounding roles of social and economic inequities, racial disparities, white flight, public safety, housing, and economic development as we grapple with legitimate, thoughtful ways of making positive change. We'll learn how to listen to, understand and address conflicting voices. Readings, speakers, site visits, films and other materials will be combined with discussion, writing, and socially conscious engagement as we seek to understand the many faces of Ferguson while following contemporary developments as they occur. Professor Robert Hansman acts as adviser and guide. The interdisciplinary course he developed over many years, Community Building/ Building Community, provides the intellectual, ethical and spiritual bases as co-taught by Raimist and Hansman. This course offers fresh perspectives and provides unique opportunities for community engagement for students who have previously taken Community Building; however, that course is not a prerequisite. Projects develop collaboratively and organically between students, faculty and community partners working to find common values and beliefs upon which to build concrete, meaningful action.

Credit 3 units.

---

#### **X10 XCORE 309 Convergences: Studies in Art & Architecture**

This interdisciplinary course examines the convergence of artistic and architectural ideas, techniques, and practices through selected historical and contemporary studies. Emphases range from the figure of the artist/architect (Michelangelo and Leonardo, for example, to Le Corbusier and Libeskind), to critical reflections (Vasari, Gennough, Serra) to boundary-crossing practices (Whiteread, Webster, Irwin, Kin, Judd, Miss) to collaborations and collaborative works (Ando/Kelly/Serra and the Pulitzer Foundation). The course emphasizes empathy and productive work across artistic disciplines. Field trips to the Pulitzer Foundation for the Arts (St. Louis) and the Chinati Foundation (Marfa, Texas) are planned.  
Credit 3 units.

---

#### **X10 XCORE 311 Materials & Mechanisms: Site Specific Design Installation**

In this course students are guided to explore the nature of materials and simple mechanisms (mechanically driven kinetics) in the making of art and/or utilitarian objects. This course investigates the qualities of materials and how they might be used thoughtfully to develop a conceptual and physical experience for an audience or user. Specific materials are assigned, at times, yet students have the opportunity to self-select materials based on project needs. Throughout the semester, students balance designing with finding — the process of playfully exploring materials and methods without preconception of a final resolution. Looking for possibilities can lead to unexpected discoveries.  
Credit 3 units. EN: H

---

#### **X10 XCORE 313A Creative Practice and Natural Systems: An Ecology of Art**

In this studio course, students learn to use basic ecological principles as a lens through which to investigate and evaluate productive, meaningful, and sustainable creative practices. Ecology is community-focused, involving the study of relationships with a given community. It establishes a model by which students can establish a more complete understanding of the inspirations, expectations and ramifications of creative practice. We visit local gardens, parks, farms and neighborhoods while seeking to understand the complexity of our own role in

nature and culture. This diverse range of ecological engagement allows for a broad array of creative applications in the studio arts, design and architecture. The class format challenges students with new ways of thinking while allowing them to select materials, specific topics of study, and methods of engagement appropriate to their own developing interests. The course consists of fieldwork, readings and lectures, the content of which is examined through individual and collaborative projects. At midterm, students identify opportunities for focused research and production. The course culminates with the public presentation of this work.

Credit 3 units. EN: H

---

#### **X10 XCORE 315 Cycles**

Students design and build human-powered vehicles from discarded bicycles. The course collaborates with student mechanics involved with Bicycle Works (Bworks). Bworks collaborates in teams with Washington University students to design and build the work.  
Credit 3 units.

---

#### **X10 XCORE 317 Furniture Design**

The seat is an intimate interface between the building and the body. It embodies a complex set of structural conditions, material opportunities and possibilities for expression. Architects, artists, and industrial designers covet opportunities to make the chair. The result is that seemingly infinite perfect solutions exist — and still the seat remains a provocative challenge. In this course students design and build a chair. Emergent technologies are combined with traditional techniques of metal fabrication, woodworking, and plastic forming in the design and making of the work. The course objective is for students to learn how to work directly with machinery and materials in the realization of their design. It is expected that students have basic shop skills addressed in course prerequisites. Advanced techniques will be introduced in this course and students select those most appropriate to their work to build upon. There is a great deal of independent investigation required to excel in this course. Students propose and develop ideas using drawings, models and mock-ups in order to realize the best potential for their design.  
Credit 3 units. EN: H

---

#### **X10 XCORE 317X Furniture Design**

This course explores design and fabrication methods for objects of human interaction. Each student will design and build a table, based on a unique concept. To this end, it is up to the individual student to define what the particular table is for, and clearly communicate their intentions and ideas. Contemporary technologies will be combined with traditional techniques of metal fabrication, woodworking and plastic forming in the design and production. The course objective is for students to learn how to work directly with machinery and materials in the realization of their design. It is expected that students will have basic shop skills addressed in course prerequisites. Advanced techniques will be introduced, and students will select those most appropriate to their work to build upon. A high level of craft and a great deal of independent investigation are required to excel in this course. Students propose and develop ideas using drawings, models and mock-ups in order to realize the maximum potential for their design. College of Architecture and College of Art sophomores, juniors and seniors have priority. Fulfills Sam Fox Commons requirement.  
Credit 3 units. EN: H

---

**X10 XCORE 319 Digital Fabrications: A Primer Course in the Use of Computer Modeling for Art & Design**

This course focuses on fabrications both real and virtual. The ubiquity of computers in design, studio art, communications, construction and fabrication demand that professionals become comfortable with their use. It is also important in a group of ever-specializing fields that one knows how to translate between different software and output platforms. This comfort and the ability to translate between platforms allow contemporary artists and designers to fabricate with ever-increasing freedom and precision. This course introduces students to 3-D software with a focus on 2-D, 3-D, and physical output. Through a series of projects, students learn to generate work directly from the computer and translate it into different types of output. Starting from first principles, the course covers the basics from interface to output for each platform used. The course also familiarizes students with a range of CNC technology and other digital output for both small- and large-scale fabrication. The course is broken into three projects. In the first, students focus on computer-generated geometry and control systems. In the second, students generate physical output and line drawings. The final project focuses on rendering, context, and cinematic effects. The software covered includes, but is not limited to, Rhinoceros 3D, Maya, Illustrator, and Photoshop. Additionally, students use the 3-D printer, laser cutter and/or other digital output tools. Credit 3 units. EN: H

---

**X10 XCORE 321 Mapping Soft Bodies**

This course develops digital design skills with conceptual understanding of the transformative process of artistic production. Mapping Soft Bodies investigates artificial objects and industrial products as a basis for inspiration. Through digital modeling and scanning the human body, each student develops a transformation process that analyzes the social and cultural conditions of a new emerging design. New body armatures are modeled through CAD/CAM (laser cutting) and Rapid Prototyping (3-D printing) for physical outputs. The course is for students who are interested in emerging technologies and digital production. The course is for students interested in design, sculpture, architecture and digital media by enhancing 3-D technologies and allows each student to develop abstract thinking and making processes. Credit 3 units. EN: H

---

**X10 XCORE 325 Global Discourses in Art & Architecture**

This course examines art, architecture and urbanism from the perspective of global production, dissemination and reception. It focuses on the global exchange of people and ideas as one of the main vehicles of visual culture, both historical and contemporary. Through a series of focused case studies, the course probes inherent dichotomies within art and architecture driven by their site-specificity, yet also by their constant global displacement across various disciplinary, cultural and geographical boundaries. The course content includes lectures, discussion sessions, readings, and textual and visual projects that examine cross-cultural aspects of art and architecture. The course is offered as part of the universitywide Global Certificate and is open to all students at Washington University regardless of their major field of study. Credit 3 units.

---

**X10 XCORE 327 Color Systems**

This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by culture, and by commerce. The course aims to deepen the understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, a goal is to expand ideas of research and enable students to integrate various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters. Credit 3 units. Art: FADM EN: H

**X10 XCORE 327X Color Systems**

This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by culture, and by commerce. The course aims to deepen the understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, a goal is to expand ideas of research and enable students to integrate various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Fulfills Sam Fox Commons requirement. Prerequisite: Drawing I, Communication Design I, or 2-D Design, or permission of instructor. Credit 3 units. EN: H

---

**X10 XCORE 330 Cell Phones, Snapshots and the Social Network**

This course is designed around the cell phone camera as a means of art production using blogs, interactive websites, social networking and mass distribution of digital images and videos. Students explore the art-making potential of the cell phone camera as a snapshot camera of the modern age. Students post daily images/videos on blogs and other social media sites. Readings and discussion topics include the culture and aesthetic of the snapshot, the vernacular image, and the role of social networks in image production and distribution. Students are required to design and maintain at least two social networking sites and to supply a cell phone with the ability to upload images to the internet. Credit 3 units. EN: H

---

**X10 XCORE 332 Metabolic City: Spaces of Bodily and Environmental Wellness**

Metabolic City probes bodily and environmental wellness as intertwined cultural, social and technological constructs. From the British Archigram Group to the Japanese Metabolists and the Dutch artist Constant, a number of visionary projects in the 1960s reimagined our notion of the body, city and the environment. By means of individual and collective gadgets, tools and spaces, they bridged the scales of the body and the city, weaving together issues of bodily and environmental

performance. Through a combination of texts, discussions and projects, the course engages in a delayed conversation with these projects, proposing the concept of "metabolism" both as a bodily function, but also as an environmental mechanism that operates on a global scale. Some of the key concepts discussed in the class include global citizenry, urban imagination, networks, performance, virus, urban protest and insurgency. The course fulfills the architectural history/theory elective requirement and is also open to all Washington University students.  
Credit 3 units.

---

#### **X10 XCORE 335X Urban Books**

Since the beginning of the 20th century, art, architecture and urbanism together have investigated the production of images that shape the symbolic dimension of our experience of large cities. The main goal of this course is to critically embrace this tradition through the format of the artist's book. St. Louis is the focus for our observations because it is familiar to our everyday lives and also because it provides key situations for understanding contemporary forms of urbanity and how urban space is produced and imagined. The course bridges the curricular structures of art and architecture by enhancing the collaboration between the practical and scholarly work developed in both schools, with additional support from Special Collections at Olin Library. It combines the reading, lecture and discussion format of a seminar with the skill building and creative exploration of a studio. This course is divided into three progressive phases of development: the first consists of weekly readings, discussion, and responses in the form of artist's books. The second phase focuses on the Derive with physical activities and assignments based on interacting directly with the urban environment. The third phase focuses on individual research, documentation, and final book design and production. College of Architecture and College of Art sophomores, juniors and seniors have priority. Fulfills Sam Fox Commons requirement.  
Credit 3 units. Arch: GAUI, UI Art: FADM EN: H

---

#### **X10 XCORE 338 Shifting from Lines to Surfaces/Virtual to Empirical**

Digital Media Design: Introduction to Exploring Digital and CAD/CAM Technology. This is a course in computing theory and techniques on 2-dimensional digital software and advanced 3-dimensional modeling software. Weekly demonstrations on software operations and individual projects are developed. This course bridges the gap between 2-D computational tools that define lines and the 3-D tools that develop complex surfaces. These surfaces explore the possibilities of creating and articulating the non-linear geometries manipulated on the digital environment. The final project consists of 2-dimensional drawings, digital models, and physical models produced by advanced CAD/CAM technology. By employing alternative techniques and emerging technologies of manufacturing, new forms of objects and perceptions redefine multiple design processes.  
Credit 3 units. EN: H

---

#### **X10 XCORE 343 Digital Filmmaking: City Stories**

Digital Filmmaking: City Stories is a cross-university video art course for students interested in making short films through a transdisciplinary and time-based storytelling in both narrative and non-narrative formats. Whether documentary or abstract, individually produced or collaborative, all projects in this course have a required social and urban engagement component. In this course the city becomes a laboratory for experimentation and contribution. Students meaningfully engage St. Louis, and their projects address sites of concern to explore the complex fabric of the city by way of framing and poetic juxtaposition. City Stories merges several arts and humanities disciplines, including experimental cinema and documentary journalism, and creates an opportunity for empathic listening and inquiry as students discover stories built from collective as well as individual memories.  
Credit 3 units.

---

---

#### **X10 XCORE 345 Shopping**

This seminar examines shopping as a social and cultural construct that operates at several levels in relation to art, architecture and urban planning. Shopping is the fundamental activity of the capitalist marketplace. It is also inextricably linked with major aspects of public and foreign policy, where national consumerism is closely linked to global tourism, and it is at the core of economic development. Shopping is, as well, a common denominator of popular culture, frequently satirized in contemporary art, film and literature. Participants in the seminar read selections from various writings about shopping and the marketplace. We also view several films examining the shopping environment in narratives of power and desire. Open to sophomores and above. Credit 3 units.

---

#### **X10 XCORE 347X Furniture Design**

This course explores design and fabrication methods for objects of human interaction. Each student will design and build a table, based on a unique concept. To this end, it is up to the individual student to define what the particular table is for, and clearly communicate their intentions and ideas. Contemporary technologies will be combined with traditional techniques of metal fabrication, woodworking and plastic forming in the design and production. The course objective is for students to learn how to work directly with machinery and materials in the realization of their design. It is expected that students will have basic shop skills addressed in course prerequisites. Advanced techniques will be introduced, and students will select those most appropriate to their work to build upon. A high level of craft and a great deal of independent investigation are required to excel in this course. Students propose and develop ideas using drawings, models and mock-ups in order to realize the maximum potential for their design. College of Architecture and College of Art sophomores, juniors and seniors have priority. Fulfills Sam Fox Commons requirement. Credit 3 units. EN: H

---

#### **X10 XCORE 386X Public Practice**

With architecture, art and design students in mind, Public Practice is a design-build course focused on the development, presentation and actualization of commissioned works within the public realm. Through an iterative process of concept development, material exploration and panel reviews, students will learn how to develop, propose and execute a viable public piece. Individual and/or group proposals will be presented before a selection committee in consideration toward a public art/design commission. Selected projects will be realized within specified sites in the community of University City, MO. Students will have hands-on experiences with construction processes, meeting structural requirements and codes, site development, and project installation which will prepare them for a creative life situated firmly within a discourse of Public Space. Open to MFA, graduate architecture students, BFA

and undergraduate architecture students with junior-level standing. Minors and others eligible with consent of instructor. CET (<https://gephardt.institute.wustl.edu/cec/sam-fox-school-of-design-and-visual-arts>) course. Credit 3 units.

---

### **F10 Art**

---

#### **F10 ART 105 2-D Design**

An introduction to basic design principles and their application on a 2-dimensional surface. Investigation of the functions and properties of the formal elements and their organization through the use of relational schemes. Includes an introduction to color and basic color theory. Problems stress systematic approach to visual communication. Credit 3 units. Art: FAAM, FADM EN: H

---

#### **F10 ART 106 2-D Design**

An introduction to basic design principles and their application on a 2-dimensional surface. Investigation of the functions and properties of the formal elements and their organization through the use of relational schemes. Includes an introduction to color and basic color theory. Problems stress systematic approach to visual communication. Credit 3 units. Art: FAAM, FADM EN: H

---

#### **F10 ART 107 3-D Design**

An introduction to basic design principles and their application to 3-dimensional form and real space and time. The design vocabulary is broadened through exercises that deal with mass, volume, weight, gravity and movement. Students learn to use hand and power tools. Credit 3 units. Art: FAAM EN: H

---

#### **F10 ART 108 3-D Design**

An introduction to basic design principles and their application to 3-dimensional form and real space and time. The design vocabulary is broadened through exercises that deal with mass, volume, weight, gravity and movement. Students learn to use hand and power tools. Credit 3 units. Art: FAAM EN: H

---

#### **F10 ART 213A Sculpture Studio: Material and Culture**

Explores contemporary sculptural concepts and processes in various media, including latex, plaster, plastics, metal and wood fabrication, with emphasis on development of technical skills at whatever level of advancement is suited to the experience of the student. Credit 3 units. Art: FAAM EN: H

---

#### **F10 ART 214A Sculpture Studio: Material and Culture**

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in sculpture and is open to others as space permits. It introduces students to the materials, processes, and concepts specific to sculpture. Students develop an understanding of, and dexterity with, multiple materials and modes of production ranging from additive, assembled,

molded, modeled, to subtractive or carved. This course promotes independent working and problem solving in regard to content and intention. Students engage in discourse about their work through critical analysis and explorations of historical and cultural precedent. This course involves lectures, material and process demonstrations, and assigned readings along with creative and technical explorations. Required for a concentration in sculpture. Students pursuing the sculpture concentration must complete either F10 213A (fall) or 214A (spring). Prerequisites: X10 101 and 102, F10 105 or 106, F10 107 or 108 or permission of instructor.

Credit 3 units. Art: FAAM EN: H

---

**F10 ART 215A Printmaking Studio: Material and Culture**

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in printmaking and is open to others as space permits. It introduces printmaking as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Relief, intaglio, digital, and planographic processes are introduced alongside theoretical frameworks that help guide students through directed and self-determined projects. The resulting work will generate critical evaluations of form, content and intention. In addition to studio production, this course includes lectures, readings and discussions. Students pursuing the printmaking concentration must complete either F10 ART 215A (fall) or ART 216A (spring). Prerequisites: X10 ART 101 and ART 102, F10 ART 105 or ART 106, F10 ART 107 or ART 108 or permission of instructor.

Credit 3 units. Art: FAAM EN: H

---

**F10 ART 216A Printmaking Studio: Material and Culture**

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in printmaking and is open to others as space permits. It introduces printmaking as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Relief, intaglio, digital, and planographic processes are introduced alongside theoretical frameworks that help guide students through directed and self-determined projects. The resulting work will generate critical evaluations of form, content and intention. In addition to studio production, this course includes lectures, readings and discussions. Required for a concentration in printmaking. Students pursuing the printmaking concentration must complete either F10 215A (fall) or 216A (spring). Prerequisites: X10 101 and 102, F10 105 or 106, F10 107 or 108 or permission of instructor.

Credit 3 units. Art: FAAM EN: H

---

**F10 ART 217B Photography Studio: Material and Culture**

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in photography and is open to others as space permits. It introduces photography as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Students gain full manual control of the digital camera apparatus, learn how to import and edit raw images, and print according to fine art professional standards. The resulting work will foster critical evaluations of form, content and intention. In addition to studio production, this course includes lectures, readings and discussions. Student must provide a fully manual digital camera capable of capturing RAW images. Students pursuing the photography concentration must complete either F10 217B (fall) or 218B (spring). Prerequisites: X10 101 and 102, F10 105 or 106, F10 107 or 108 or permission of instructor.

Credit 3 units. Art: FAAM EN: H

---

**F10 ART 218B Photography Studio: Material and Culture**

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in photography and is open to others as space permits. It introduces photography as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Students gain full manual control of the digital camera apparatus, learn how to import and edit raw images, and print according to fine art professional standards. The resulting work will foster critical evaluations of form, content and intention. In addition to studio production, this course includes lectures, readings and discussions. Student must provide a fully manual digital camera capable of capturing RAW images. Required for a concentration in photography. Students pursuing the photography concentration must complete either F10 217B (fall) or 218B (spring). Prerequisites: X10 101 and 102, F10 105 or 106, F10 107 or 108 or permission of instructor.

Credit 3 units. Art: FAAM EN: H

---

**F10 ART 221A Painting Studio: Material and Culture**

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in painting and is open to others as space permits. It introduces painting as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Students employ a variety of oil and water-based media in this concept-driven approach to new and established methodologies. The resulting work will generate critical evaluations of form, content and intention. In addition to studio production, this course includes lectures, readings and discussions. Students pursuing the painting concentration must complete either F10 ART 221A (fall) or ART 222A (spring). Prerequisites: X10 ART 101 and ART 102, F10 ART 105 or ART 106, F10 ART 107 or ART 108 or permission of instructor.

Credit 3 units. Art: FAAM EN: H

---

**F10 ART 222A Painting Studio: Material and Culture**

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in painting and is open to others as space permits. It introduces painting as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Students employ a variety of oil and water-based media in this concept-driven approach to new and established methodologies. The resulting work will generate critical evaluations of form, content and intention. In addition to studio production, this course includes lectures, readings and discussions. Required for a concentration in painting. Students pursuing the painting concentration must complete either F10 221A (fall) or 222A (spring). Prerequisites: X10 101 and 102, F10 105 or 106, F10 107 or 108 or permission of instructor.

Credit 3 units. Art: FAAM EN: H

---

**F10 ART 231 Introduction to Fashion Design: Materials, Volume & the Body**

A structured discourse on fashion designers of the 20th and 21st centuries for study of the body as site and inspiration for apparel design. Class discussions and projects engage concept, materials and process. Through exploration of shapes, forms and their role in the development of 3-dimensional ideas, the student learns the fundamentals of fashion design. Students in the classes of 2015 and later must complete either F10 ART 231 or ART 232 as an introduction to the fashion design major. This course is open to nonmajors and minors as space permits.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 234 Fashion Illustration: Visualizing Apparel**

A foundation experience in basic strategies for communication garment design ideas and information. Recognition and practice of conventions for presenting the figure in design will be the focus of the course. Additionally, simple garment silhouettes and textile types will be explored for illustration practice. Digital media as it is used in style presentation and technical communication of design will be introduced and implemented through a variety of exercises. Final presentation will be a design presentation that is supported by spectrum of material covered in course. Laptop computer with Adobe Illustrator and Photoshop required. No prerequisites. Open to sophomore through graduate-level students across the university. Required for sophomore majors in fashion.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 236 Textile Design**

A survey of all types of materials used as 21st-century textiles, Textile Design introduces the student to the ways that textiles function as a basic building material. Students will study, test and manipulate textiles to gain understanding of appropriate and viable choices for end use. Class activities include field trips, application of a variety of textile techniques for surface design, manipulation and finishing of various fabrics. Students may draw upon design problems from their specific area of study to realize a final project. No prerequisites. Open to sophomore through graduate-level students across the university. Required for sophomore majors in fashion.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 238B Word and Image I**

This course centers on the creation of word-image relationships. It focuses on intensive visual methodology and clear communication. Students make illustrations, explore typography and bring visual elements together into a unified whole. Projects take the form of posters, image sets, books, icons, maps, labels, infographics, etc. As the course progresses, the student works to narrow their focus within the field of visual communications by selecting particular projects from a suite of offerings. Required for the communication design major. Prerequisite: Digital Studio (F10 ART 241 or ART 242) or Digital Design (F10 ART 243 or ART 244). The course is open to nonmajors and minors as space permits.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 238C Typography I**

This course introduces the language and standards of typography. Through a series of exercises and projects, students explore type as a vehicle for conveying information and as an expressive and interpretive tool. Required for the communication design major. Prerequisite: Digital Studio (F10 ART 241 or ART 242) or Digital Design (F10 ART 243 or ART 244). The course is open to nonmajors and minors as space permits.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 241 Digital Studio**

This course introduces students to basic digital tools to aid in conceptual and technical development of artwork. Students become familiar with pixel, vector, and moving-image software within a context of visual thinking and artmaking. Students must complete either Digital Studio (F10 ART 241 or ART

242) or Digital Design (F10 ART 243). This course is strongly recommended for BFA in Art majors and students anticipating concentrations in painting, printmaking and sculpture.

Credit 3 units. Art: FAAM, FADM EN: H

---

**F10 ART 242 Digital Studio**

This course introduces students to basic digital tools to aid in conceptual and technical development of artwork. Students become familiar with pixel, vector, and moving-image software within a context of visual thinking and art-making. Students in the classes of 2015 and later must complete either Digital Studio (F10 241 or 242) or Digital Design (F10 243). This course is strongly recommended for painting, printmaking and sculpture majors.

Credit 3 units. Art: FAAM, FADM EN: H

---

**F10 ART 243 Digital Design**

Students are introduced to digital tools in the context of applied design thinking for graphic design, surface design, and image-making. Students pursue projects using Adobe Photoshop, Adobe Illustrator, and Adobe InDesign. This course engages software learning in the service of design thinking. Students in the classes of 2015 and later must complete either Digital Studio (F10 241 or 242) or Digital Design (F10 243). This course is strongly recommended for communication design, fashion design, and photography majors.

Credit 3 units. Art: FAAM, FADM EN: H

---

**F10 ART 283 Typography and Letterform: The Design of Language**

As an investigation of the formal qualities of familiar objects, letters, this is an introductory-level course in design thinking using families of letterforms as our focus. Students explore design strategies required to make individual forms into a family of types through exercises in tracing, drawing, letterpress printing and collage. Particular emphasis is devoted to the concept of modularity, including an assignment to design and print a modular typeface. Students in the class of 2015 and later must complete either F10 ART 295, ART 296, ART 283 or ART 284 or other F10 200-level introductory studio as an introduction to the communication design major. Prerequisites: X10 XCORE 101, X10 XCORE 102, F10 ART 105 or F10 ART 106, and F10 ART 107 or F10 ART 108, or permission of instructor. This course is open to nonmajors and minors as space permits.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 295 Pictures for Communication**

Students investigate the realm of functional pictures through pictograms, comic strips, diagrammatic maps, visual metaphors and narratives. Each project focuses on a particular aspect of conceptual and formal clarity. Significant attention is paid to aesthetics. Students use a variety of media and are introduced to Adobe Illustrator. Students in the class of 2015 and later must complete either F10 ART 295, ART 296, ART 283 or ART 284 or other F10 200-level introductory studio as an introduction to the communication design major. Prerequisites: X10 XCORE 101, X10 XCORE 102, F10 ART 105 or F10 ART 106, and F10 ART 107 or F10 ART 108, or permission of instructor. This course is open to nonmajors and minors as space permits.

Credit 3 units. Art: FADM EN: H

### F10 ART 301A Drawing: Art Practice

**Conceptual Methods in Drawing:** Drawing is a communicative device; it is a primary means of conceptual strategy leading to effective visual exploration and expression, from thought to form. This studio course looks at the practice of drawing in the context of language, scientific paradigms, complementary and alternative art forms, socio-political theory and history as they relate to visual culture and invention. Lectures, critical readings, and analysis of historical and contemporary modes of drawing support students in their course work. Projects in this course may consider mapping, language systems, formulaic constructions, material essentialism, physiologic/kinesthetic approaches, and performative aspects of drawing. Prerequisites: Drawing I, Drawing II and junior standing. Open to BFA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor. **Figure Structure Context:** This rigorous drawing course explores new representations of the figure through its structure and contemporary contexts. Initial research involving presentations and extensive sketchbook activities provides a vehicle for discovering the figure's architecture, mechanics and proportions. Students access visual data from a variety of sources — model sessions, the internet, schematic/diagrammatic drawings, photography, sculpture and memory — with the goal of developing expressive qualities in material, process and pictorial construction. Lectures, films, critical readings and the analysis of historical and contemporary modes of representation support students in their investigations, which culminate in an independent series of works. Prerequisites: Drawing I, Drawing II and junior standing. Open to BFA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor.  
Credit 3 units. Art: FAAM EN: H

---

### F10 ART 302D Drawing: Art Practice (Collage: History and Practice in Contemporary Art)

This course will examine the role of collage in contemporary studio practice. Students will be required to assemble an archive of images from various sources, found and self-generated, to produce a body of work based on a specific theme. Readings and discussion related to the course will examine the evolution of collage and its present status and application within contemporary studio practice. Prerequisite: Drawing I, Drawing II, junior standing. Open to BFA students who have taken the prerequisites, and others, including minors, with consent of instructor.  
Credit 3 units. Art: FAAM

---

### F10 ART 311D Painting: Art Practice

**Special Topics: Narrative Systems: The Frame, The Grid, The Screen:** This studio course focuses on various narrative strategies in relation to painting's mythology and its function in contemporary culture. Topics to include narrativity, the politics of lens and screen, invented fictions, social vs. virtual spaces, and site specificity. Instruction will encompass technical, conceptual and creative skills for taking an individually conceived project from idea to fruition. Students will be encouraged to consider traditional and alternative forms of painting as well as digital imaging, installation, net art, etc. Lectures, critical essays, and analysis of historical precedents and contemporary practitioners will support students in their course work. Required for a concentration in painting. Prerequisite: Painting Studio: Material and Culture (F10 221A or 222A). Open to BFA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor. **Body Image:** This is

a rigorous painting/drawing studio course investigating various methods of pictorial construction (historical, contemporary) and the role of figuration in contemporary art practice. Students will be required to produce an independent body of work based on a theme and generated from a variety of references (imagination, life, photography, painting, film, etc.). Discussions to include contemporary notions of identity structures, social and gender politics. Lectures, critical readings and the analysis of historical and contemporary modes of figural representation will support students in their investigations. Prerequisite: Painting Studio: Material and Culture (F10 221A or F10 222A). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor.  
Credit 3 units. Art: FAAM EN: H

---

### F10 ART 311G Painting: Art Practice (Place and Space)

This course examines ideas of place and space — both observed and invented — established through the surface and materiality of paintings. Students develop a unique body of work through shared exploration of painting processes and materials, along with independent research. Critical assessment of work is complemented by faculty and peer discussions, readings, written critical analysis and field study. Required for a concentration in painting. Prerequisite: Introduction to Painting. Open to BFA students who have taken the prerequisite, and others, including minors with consent of instructor. College of Art students pursuing the BFA in Art will have priority. This class counts toward the minor in art.  
Credit 3 units.

---

### F10 ART 312E Painting: Art Practice

**Place and Space:** This course examines ideas of place and space — both observed and invented — established through the surface and materiality of paintings. Students develop a unique body of work through shared exploration of painting processes and materials, along with independent research. Critical assessment of work is complemented by faculty and peer discussions, readings, written critical analysis and field study. Required for a concentration in painting. Prerequisite: Painting Studio: Material and Culture (F10 221A or F10 222A). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor. **Body Image:** This is a rigorous painting/drawing studio course investigating various methods of pictorial construction (historical, contemporary) and the role of figuration in contemporary art practice. Students will be required to produce an independent body of work based on a theme and generated from a variety of references (imagination, life, photography, painting, film, etc.). Discussions to include contemporary notions of identity structures, social and gender politics. Lectures, critical readings and the analysis of historical and contemporary modes of figural representation will support students in their investigations. Prerequisite: Painting Studio: Material and Culture (F10 221A or F10 222A). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor.  
Credit 3 units. Art: FAAM EN: H

---

### F10 ART 312F Painting: Art Practice (Language of Abstraction)

This course examines strategies of abstraction and non-objective image-making that originate in the painting studio, including those that are driven by concept, material, space and/or process. Readings and discussion will examine the evolution and history of abstraction and its present applications within a

contemporary studio practice. The course will engage students in both assigned and self-directed work that will enable them to experiment with a broad visual vocabulary while understanding the relationship between form and content. Required for a concentration in painting. Prerequisite: Painting Studio: Material and Culture (F10 221A or F10 222A). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor.

Credit 3 units. Art: FAAM

---

#### F10 ART 313D Sculpture: Art Practice

**Special Topics: The Book as Object and Artifact:** When we read a book, it is always the physical volume in our hands — or in some substitute for hands — that is being read. That reading is a hands-on experience we well understand, but what is to be said about artists taking hands to the book as object, transmogrifying it and separating it from readability? Participants in this studio will work with some of the great range of possibilities for using the book as a sculptural object to bring forth other orders of its meaning. Prerequisite: Sculpture Studio: Material and Culture (F10 213A or 214A). Open to BFA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor.

**Symbiosis:** This course explores numerous scenarios that create different levels of sculptural interactivity from low to high tech. Students construct devices ranging from simple mechanisms to large-scale installations fostering physical, analogue or digital interaction between the viewer and the sculptural environment. Viewer-activated systems create multiple interactive platforms, initiating a responsive relationship between the sculpture and the viewer. Lectures, demonstrations and readings devise a broad understanding of the histories and potentials of symbiotic relationships between a work of art and its audience. Prerequisite: Sculpture Studio: Material and Culture (F10 213A or 214A). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor. **Matter in Hand:** This course focuses on an array of moldable and castable materials and processes that have played a key role in the history of artistic expression. In-depth demonstrations supported by critiques, discussions, lectures and historical readings provide opportunities to re-evaluate the meanings these primal materials bring to contemporary practice. Students explore these concepts through artistic and architectonic lenses and are encouraged to experiment with these processes in their work. Required for a concentration in sculpture. Prerequisite: Sculpture Studio: Material and Culture (F10 213A or 214A). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor.

Credit 3 units. Art: FAAM EN: H

---

#### F10 ART 313M Sculpture: Art Practice (Sculptural Bodies)

This course investigates the sociopolitical issues of the body, the figure and their potential in contemporary art practice. The term "body" is used as an organism, in an expansive way, to investigate the metaphorical, physical, emotional, cultural, and spiritual bodies. A variety of media and methods are explored with an emphasis on three-dimensional work and object-based performance. Lectures, demonstrations and readings contextualize the potential of sculptural systems to constitute the meaning of a contemporary body. Prerequisite: Sculpture Studio: Material and Culture. Open to BFA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor.

Credit 3 units. Art: FAAM

---

#### F10 ART 314J Sculpture: Art Practice

**Material as Metaphor:** All materials carry meaning. This course familiarizes students with histories and fabrication processes intrinsic to sculpture. This course uses demonstrations and hands-on experiences, primarily but not exclusively with metal and woodworking processes to show how such materials inform a studio practice. Lectures and techniques contextualize an understanding of preformed and found material as a formal and conceptual component resulting in the final work of art. In a critical environment, students formulate their own material language and defend their art practice and creative decisions. Prerequisite: Sculpture Studio: Material and Culture. Open to BFA students who have taken the prerequisite, and others, including minors students, with consent of instructor. **Sculptural Bodies:** This course investigates the sociopolitical issues of the body, the figure and their potential in contemporary art practice. The term "body" is used as an organism, in an expansive way, to investigate the metaphorical, physical, emotional, cultural and spiritual bodies. A variety of media and methods are explored with an emphasis on 3-dimensional work and object-based performance. Lectures, demonstrations and readings contextualize the potential of sculptural systems to constitute the meaning of a contemporary body. Prerequisite: Sculpture Studio: Material and Culture. Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor.

Credit 3 units. EN: H

---

#### F10 ART 314K Sculpture: Art Practice (Symbiosis)

This course explores numerous scenarios that create different levels of sculptural interactivity from low to high tech. Students construct devices ranging from simple mechanisms to large-scale installations fostering physical, analogue or digital interaction between the viewer and the sculptural environment. Viewer-activated systems create multiple interactive platforms, initiating a responsive relationship between the sculpture and the viewer. Lectures, demonstrations and readings devise a broad understanding of the histories and potentials of symbiotic relationships between a work of art and its audience. Required for a concentration in sculpture. Prerequisite: Sculpture Studio: Material and Culture (F10 213A or 214A). Open to BFA students who have taken the prerequisite.

Credit 3 units. Art: FAAM

---

#### F10 ART 315B Printmaking: Art Practice

**Propaganda to Decoration:** This course uses the print multiple as a starting point to explore a continuum that runs from propaganda to decoration. The fundamental attributes of the multiple, including its accessibility and repeatability, arc from private to public and from political to aesthetic. Reproduction, distribution, urban communication, social space, intervention and site specificity are explored through course lectures, readings and discussions. Collaboration, exchange, and relational practices provide frameworks for self-directed projects using traditional and alternative techniques in print media including lithography, screen-printing, stencils and photocopy. Prerequisite: Printmaking Studio: Material and Culture (F10 215A or 216A). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor. **Feedback Loop: Process and Print:** This course focuses on variability, mutability, repeatability and play within the process of printmaking, using etching, collagraph, monotype and digital methods. The course explores practices and contexts in printmaking as a contemporary art form and promotes advanced

conceptual and technical development through creative practice, readings, discussions and critiques. Projects are self-directed and based on course topics that engage different approaches to process-based work, ranging from the improvisational to the systematic. Emphasis is placed on the shift from object to process, from the single manifestation to the series, from fixed to flux and back again. Prerequisite: Printmaking Studio: Material and Culture (F10 215A or 216A). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor. CET (<https://gephardt.institute.wustl.edu/cec/sam-fox-school-of-design-and-visual-arts>) course. Credit 3 units. Art: FAAM EN: H

---

**F10 ART 315H Printmaking: Art Practice (Feedback Loop: Process and Print)**

This course focuses on variability, mutability, repeatability and play within the process of printmaking, using etching, collagraph, monotype and digital methods. The course explores practices and contexts in printmaking as a contemporary art form and promotes advanced conceptual and technical development through creative practice, readings, discussions and critiques. Projects are self-directed and based on course topics that engage different approaches to process-based work, ranging from the improvisational to the systematic. Emphasis is placed on the shift from object to process, from the single manifestation to the series, from fixed to flux and back again. Required for a concentration in printmaking. Prerequisite: Printmaking Studio: Material Culture (F10 215A or 216A). Open to BFA students who have taken the prerequisite and others, including minors, with consent of instructor. Credit 3 units. Art: FAAM

---

**F10 ART 316F Printmaking: Art Practice**

**The Printed Image:** This course explores the printed image as storyteller, educator, political tool, and narrative. Historical precedents and contemporary examples of political prints, graphic novels, posters, and narrative suites are examined as possible models for self-directed projects. Readings and discussions include strategies for drawing and appropriating imagery. Students will have the opportunity to produce a thematically unified body of work while gaining technical expertise in woodcut, etching, and lithography. Prerequisite: Printmaking Studio: Material and Culture (F10 215A or 216A). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor. Credit 3 units. EN: H

---

**F10 ART 316G Printmaking: Art Practice (Extra Dimensional Printmaking)**

Pushing the boundaries of printmaking, prints move beyond the wall and into sculpture, installation, and time-based work. Relief, silkscreen, and intaglio processes are explored with an emphasis on print as theatre, object, and immersive environment. Through readings and discussions, students will engage with historical precedents and contemporary principles that support the creation of self-directed work that is extra-dimensional in physical and conceptual scope. Required for a concentration in printmaking. Prerequisite: Printmaking Studio: Material and Culture (F10 215A or 216A). Open to senior BFA students who have taken the prerequisite. Credit 3 units. Art: FAAM

---

**F10 ART 317H Photography: Art Practice (Methods of Distribution)**

One of the most effective aspects of the photographic image today is its speed. The way that physical and virtual images are presented and distributed has changed significantly since the initial branding of photography as the medium of reproducibility. This class focuses on photography-based uses of the image through various distribution formats like the book, the poster, the newspaper, television, web, design, film, apparel, architecture, music, etc. The students make, read, look, listen, and experience 20th- and 21st-century photography practitioners who engage a range of disciplines and methods of distribution as they try to synthesize methods/models of their own. Rigorous student project critiques are complemented with discussions, writing assignments, and readings on media theory and contemporary uses of photography outside of the traditional exhibition-based contexts. Prerequisite: Photography Studio: Material and Culture (F10 217B or 218B). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor. Credit 3 units. Art: FAAM EN: H

---

**F10 ART 317L Photography: Art Practice (Constellations, Sequences, Series)**

Series are the prevalent method for exhibiting photographic images. Through assignment-based and self-generated projects, students discover how photographic series are conceptualized, structured and sequenced. Special attention is given to the material meaning embedded in print size, order and spatial placement. The course provides in-depth coverage of image capture through medium-format analog and full-frame digital systems as well as intermediate digital editing and printing techniques. Students also explore various documentary and set-up strategies through narrative and non-narrative photographic approaches. Through a rigorous critique structure, course readings and critical writing, students engage the historical discourse surrounding the series as a tool for artistic expression. Required for a concentration in photography. Prerequisite: Photography Studio: Material and Culture (F10 217B or 218B). Open to BFA students who have taken the prerequisite and others, including minors, with consent of instructor. Credit 3 units. Art: FAAM

---

**F10 ART 318J Photography: Art Practice**

**Slow Image: Large Format Photography:** This course provides an in-depth study of the large format analog camera and its unique formal position. Using the 4"x5" format, students examine this slow, high fidelity photographic medium both technically and conceptually. Students employ a comprehensive photographic process, including loading sheet film, applying the zone system, scanning large format film, editing digital images, and creating large format digital inkjet prints. Class activities include rigorous student project critiques, as well as reading and discussion elements focusing on the history of large format and its contemporary descendants in the Dusseldorf School, abstract photography and installation art contexts. Class participants investigate the role of high fidelity images. Assignments may address portraiture, still life, interior and exterior architecture, landscape, and abstract photography. Large format 4"x5" cameras will be available for use. Prerequisite: Photography Studio: Material and Culture. Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor. Credit 3 units. Art: FAAM EN: H

---

**F10 ART 318K Photography: Art Practice (Documentary Photography & Social Practice)**

This course focuses on the various philosophical, aesthetic and technical approaches to photographing the contemporary, human-altered landscape and the communities we live in. Through slide lectures, field trips, in-depth critique and supervised lab work, students are expected to increase their awareness of how their own personal responses relate to those of other photographers with the same contemporary issues of documentary photography. A project-based seminar focusing on objectivity of the photographic document. Material and camera format open. Required for a concentration in photography. Prerequisite: Photography Studio: Material and Culture. Open to senior BFA students who have taken the prerequisite. Credit 3 units. Art: FAAM

---

**F10 ART 323A Three-Dimensional Fashion Design Foundation**

Study of fundamental apparel design issues. Students begin with basic draping methods and explore evolution and craft, decoration and adornment for apparel. Research for class exercises is based upon the most elementary forms of historical and contemporary dress. Credit 3 units. Art: FADM EN: H

---

**F10 ART 323B Two-Dimensional Fashion Design Foundation**

Review and practice of applicable material from Fashion Illustration: Visualizing Apparel (F10 ART 234) course for presenting the figure in garment design. Students explore a variety of media for expressive fashion communication and learn to combine page elements with compelling design strategies. Research and study of landmark and innovative illustrators are conducted as well as application of their ideas in practice. Additionally, the course covers incorporation of technical drawings, text and textile swatches with illustration style to convey design vision for fashion presentation. Credit 3 units. Art: FADM EN: H

---

**F10 ART 323C Digital Fashion and Textile Design**

Review of practice of introductory material from Fashion Illustration: Visualizing Apparel (F10 ART 234). In depth exploration of vector-based illustration for garment and textile schematics. Establishment of strategies for designing apparel, wovens, knits, prints and patterns using universal and industry software. Credit 3 units. Art: FADM EN: H

---

**F10 ART 323D Sustainable Textile and Fashion Design**

Typically textile design and garment production occur in a collaborative setting and often across a global span of locales. In this course students learn essential information about sustainable textiles and fashion, engage in research, and collaborate to design and promote sustainable products or services. Required for junior fashion majors, open to sophomore-senior nonmajors. Credit 3 units.

---

**F10 ART 323E Fashion History and Research**

This seminar studies the cultural and social influences to comprehend how these impact the evolution of fashion and are expressed in clothing at various junctures in history. Review of

general academic research methods will be covered as well as research methods and strategies of particular significance to fashion design. Course work will focus on using research as an avenue to original and effective design concepts. Required for junior fashion majors, open to sophomore-senior nonmajors. Credit 3 units.

---

**F10 ART 323H Fibers in Art (Florence)**

This course is designed to guide the students through a range of approaches to textile and fiber-based practices. The course embraces technological and antiquated techniques both within and beyond the field of art and engages artisan-inspired practices as content that fosters the questioning of socially assigned gender roles, craft and art distinctions and the exploration of functionality. Basic weaving, knitting, braiding and sewing are explored against the backdrop of fiber's history as art. Prerequisite: none. Credit 3 units.

---

**F10 ART 323I Patternmaking (Florence)**

In this patternmaking course, students will start with basic patterns, including darts and princess line variations, and learn how to manipulate them in relation to the fundamental rules of patternmaking. Patternmaking allows the designer to manipulate already existing patterns efficiently and create new configurations with custom measurements. There will be two basic projects during the semester: the skirt, with variations such as A-shape, gathered, with yoke, and the bodice, working with darts and princess line variations, and in the last half of the course students will learn about collars, sleeves and pants. By understanding pattern construction students will be able to gain a wider understanding of the possibilities and limits of a fashion designer. Credit 3 units.

---

**F10 ART 323J Special Topics in Fashion Design: Fiber Manipulation**

Exploration of fiber techniques and their application in design and art. Students will study a spectrum of fiber and textile treatments such as surface design, shibori, wax resist, digital design, needle applications, heat applications and a variety of three-dimensional structuring strategies. Projects will integrate techniques into appropriate design strategy for the fine arts or design. This class is part of the BFA in Fashion, and is open to non-BFA students across the university. No prerequisites. Counts toward design minor. Credit 3 units. Art: FADM

---

**F10 ART 324A Patternmaking and Production**

An introduction to flat pattern drafting. Principles will be applied to various components of garment creation. Construction techniques and industrial methods explored within specific structural design problems. Students will undertake realization of garment from sketch to pattern draft and finally construction of muslin (toile). This course is to be taught using the Imperial measurement system. Open to sophomore through graduate-level students across the university. Required for sophomore and junior majors in fashion. Credit 3 units. EN: H

---

**F10 ART 324J Two-Dimensional Fashion Design-Foundation**

Review and practice of applicable material from Visualizing Apparel course for presenting the figure in garment design.

Students will explore a variety of media for expressive fashion communication and learn to combine page elements with compelling design strategies. Research and study of landmark and innovative illustrators will be conducted as well as application of their ideas in practice. Additionally, the course will cover incorporation of technical drawings, text, and textile swatches with illustration style to convey design vision for fashion presentation. Prerequisites: Introduction to Fashion: Materials, Volume and the Body; Fashion Illustration: Visualizing Apparel; Fashion History and Research; Textile Design; Patternmaking and Production. Required of junior majors in fashion. Required equipment: Mac Computer, CS5 or newer, Wacom Tablet and pen.  
Credit 3 units. Art: FADM

---

**F10 ART 324K Three-Dimensional Fashion Design-Foundation**

Study of fundamental apparel design issues. Students will begin with basic draping methods and explore evolution and craft, decoration, and adornment for apparel. Research for class exercises will be based upon the most elementary forms of historical and contemporary dress. Prerequisites: Introduction to Fashion: Materials, Volume and the Body; Fashion Illustration: Visualizing Apparel; Fashion History and Research; Textile Design; Patternmaking and Production. Required of junior majors in fashion.  
Credit 3 units. Art: FADM

---

**F10 ART 324L Digital Fashion and Textile Design**

Review and practice of material from Visualizing Apparel. In-depth exploration of vector based illustration for garment and textile schematics. Establishment of strategies for designing apparel, wovens, knits, prints and patterns using universal and industry software. Prerequisites: Introduction to Fashion: Materials, Volume and the Body; Fashion Illustration: Visualizing Apparel; Fashion History and Research; Textile Design; Patternmaking and Production. Required of junior majors in fashion. Required equipment: Mac computer, CS5 or newer, Wacom tablet and pen.  
Credit 3 units. Art: FADM

---

**F10 ART 326D Special Topics: Relational, Conditional, and Process-Oriented Design**

This course encourages students to explore the spatial and experiential potential of designing frameworks to navigate complex archives of online content. In addition to expanding their code-based skills, students will push the boundary of traditional online activity to create immersive and experimental experiences in the browser. Through a series of informational and spatial challenges, students will conduct research into contemporary theory and practice of designing interactive platforms and develop dynamic solutions for online frameworks which exploit and challenge traditional user expectations. Projects, experiments and research will be supplemented by group readings, class discussions, and individual artist/designer case studies. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326D; seniors for F10 Art 426D. Counts toward design minor if space is available. Prerequisite: Interaction Foundations (F10 337) or demonstrably comparable HTML/CSS skills.  
Credit 3 units. Art: FADM

---

**F10 ART 326E Special Topics: Research Methods in Human-Centered Design**

In this course, students will design an experience based on learnings about peoples' needs and perspectives. Working in groups, we will follow a human-centered design process, beginning with planning and conducting in-context interviews, observations and co-creation activities, learning how to uncover latent knowledge. We will synthesize insights in order to inspire design ideas. We'll prototype these ideas in order to answer specific questions and lead to new iterations. Along the way, we will discuss the broader landscape of design research, including ethnography, participatory and speculative design, and evaluative methods, examining critiques and benefits of different approaches. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326E; seniors for F10 Art 426E. Counts toward design minor if space is available. Prerequisite: Word + Image II or Typography II.  
Credit 3 units. Art: FADM

---

**F10 ART 326F Special Topics: Transition Design/Service Design**

Services design is an emerging interdisciplinary approach for creating useful, usable and desirable experiences between providers and customers such as emergency health or disaster preparedness. Through complex applied projects we visualize systems and strategic opportunities using journey maps and personas to understand experiences at various scales. Case study examples, lectures, readings, discussion, and hands-on exercises and projects provide the foundation to then design artifacts at key touch points using a variety of media type such as print, screen or environmental design. We take on two applied projects, one individually and one in teams with a local partner. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326F; seniors for F10 Art 426F. Counts toward design minor if space is available. Prerequisite: Word + Image II or Typography II.  
Credit 3 units. Art: FADM

---

**F10 ART 326G Special Topics: Illustration as Practice**

This class will focus on the professional practice of conceptual illustration while cultivating an individual voice. We will practice the methodology of creating visual metaphors, visualizing concise ideas and working under short deadlines. The projects will cover the range of image making in the professional world today including editorial, portraiture, lettering, packaging, working with text/layouts and op-ed assignments. Students will continue to develop their portfolio in the context of these projects. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326G; seniors for F10 Art 426G. Counts toward design minor if space is available. Prerequisite: Word + Image II or Type II.  
Credit 3 units. Art: FADM

---

**F10 ART 326H Special Topics: Interaction Design: Layout Systems**

Learn and apply techniques and tools for creating advanced HTML/CSS layouts. Explore responsive design (layouts that adapt to available screen width), grid systems, layout frameworks, and templating systems. Refine HTML and CSS skills, and learn best practices for common layout challenges. Become familiar with potential pitfalls designers face when planning for screens and variable content. Develop strategies for communicating design decisions for dynamic layouts. Expect to create mockups, wireframes, and finished HTML layouts that

are portfolio-ready. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326H; seniors for F10 Art 426H. Counts toward design minor if space is available. Prerequisite: Interaction Foundations (F10 337) or demonstrably comparable HTML/CSS skills.  
Credit 3 units. Art: FADM

---

#### **F10 ART 328D Illustrating for Licensed Products**

In this studio course, students will research, concept and create images that are appropriate for application to products in the licensing field. Students will work toward developing icons/motifs, a mainstay in licensing, through deepening their skill sets in shape based illustration, design elements of composition and hierarchy and thoughtfully considered color. Class content will include the development of collections and images, patterns, and exploration of the visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be drawn from the gift and home decor markets, fabric design and stationery products. This course is appropriate for juniors and seniors in the communication design major.  
Credit 3 units. EN: H

---

#### **F10 ART 328E Illustration Concepts & Media**

Advanced projects in applied illustration and the first step in development of a professional portfolio. The class will explore creating images with smart and concise ideas across a spectrum of media. Students will be instructed on a range of illustration media to create visual solutions under rigorous deadlines. The projects will cover the range of editorial and conceptual image-making in the professional world today including portraiture, multiple images, responding to text and specific time and media restrictions. Prerequisite: Word and Image II. This course is open to juniors and seniors in the communication design major.  
Credit 3 units.

---

#### **F10 ART 328F Storytelling Across Multiple Media**

This interdisciplinary course addresses how the elements of a single visual and textual narrative are distributed across multiple traditional and digital media platforms to form a unified and cohesive entertainment or branding experience. Assignments will challenge students to examine the specific attributes of each medium to determine its role in the greater experience. Students will work in small teams to coordinate and execute media integration per their individual disciplines, skill sets and areas of interest. Students will learn how storytelling across multiple media can expand the market for an intellectual property, provide various points of entry for different audience segments, and heighten audience participation, interaction, understanding and engagement in the content. This course is open to juniors and seniors in the communication design major. Counts toward design minor if room available. Prerequisites: Word + Image II or Type II.  
Credit 3 units.

---

#### **F10 ART 328G Branding & Identity**

Students will learn about brands as: 1) an identity; a shorthand for a company or product, 2) an image; where an individual perceives a brand as representing a particular reality, and 3) a relationship; where an individual reflects an experience through a product or service. To learn from their research, students will concept, design, and implement a brand, challenging them to realize the full breadth of a brand's reach. This course is open to juniors and seniors in the communication design major. Prerequisites: Word + Image II or Type II.

Credit 3 units.

---

#### **F10 ART 329C Time-Based Media: Art Practice**

**Mediated Performance:** This course explores the body as a time-based medium and a vehicle of expression that interacts with cinematic and sound technologies, undergoing gradual semantic, virtual and visceral transformations. Students create performance-based video and sound works that are mediated with electronic/digital technology and performed or screened in public. Collaborative, individual political and poetic actions and happenings are encouraged. Students focus on the production of conceptually rigorous and technically convincing work that embodies their performative, experimental and individually designed ideas. Projects are informed by readings in media theory, writing assignments, and active participation in critiques of works by contemporary media artists. Prerequisite: Digital Design (F10 243) or Digital Studio (F10 242). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor. **Expanded Cinema:** Focusing on experimental approaches to digital filmmaking this course offers opportunities for independent producers arising from hybrid media interests. Expanded Cinema encourages and supports a variety of cinematic concepts, from non-narrative to documentary and activist approaches. Instruction will encompass technical, conceptual and creative skills for taking an individually conceived project from idea to fruition. Students will acquire basic understanding of independent video production and collaboration, as well as time-based composition, camera operation, editing software and presentation strategies. Active participation in discussions of contemporary experimental cinema and video art will be part of this course. Prerequisite: Digital Design (F10 243) or Digital Studio (F10 242). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor. **Sonic Space:** **Sound Art I:** Sonic Space: Sound Art I explores sound and musical composition in digital format as a sculptural, spatial and architectural intervention. The course offers an introduction to current Sound Art practices in the context of fine arts and examines how such practices are capable of altering our sense of space and time. The course necessarily touches upon experimental music and installation art as closely related to sound art. The course introduces students to basic methods of recording and editing sound technologies with a goal of composing sound works for space and for headphones. No prior musical or electronic education is necessary; however, basic computer literacy is highly recommended.  
Credit 3 units. Art: FAAM EN: H

---

#### **F10 ART 329L Time-Based Media: Art Practice (Special Topics: The Language of Moving Images)**

This course will examine the language of filmic images as they relate to various visual art forms, which includes, among other elements, shot construction, sequencing, pace, duration, sound integration, scale, and situational contexts. Through screenings, readings, lectures, discussions and critiques, students will develop the analytical skills required to interpret moving images and to think deeply about their productions, which may utilize forms other than video or film and include installation components. Not focused heavily on technical approaches, creative work will be driven predominantly by individual concerns and may be accompanied by written analysis. Prerequisite: Digital Design or Digital Studio. Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor.  
Credit 3 units.

---

**F10 ART 330I Time-Based Media: Art Practice (New Media in Art)**

Exploring the intersection of art and technology, the course focuses on the phenomenon of time as an artistic medium and as the subject of work. Through the production of time-based works in a virtual realm, students learn about compositional choices, narrative and non-narrative strategies, and ethical and political responsibilities that artists and artist collectives face in the 21st century. Students gain exposure to selected software as it pertains to their individually designed projects. Readings, writing assignments and an active participation in critiques of works by contemporary new media artists will be part of this seminar. Prerequisite: Digital Design or Digital Studio. Open to BFA students who have taken the prerequisite, and others, including minors with consent of instructor.

Credit 3 units. Art: FAAM

---

**F10 ART 336M Special Topics in Communication Design: Illustration for Creative Practice**

This course is about transforming creative impulse into a controlled professional practice. In the first half of the course, students will investigate current illustration trends and their applications in the marketplace. We will apply these findings to assignments while considering experimentation, relevance and form. The second half of the course will consist of iterative drawing assignments. Students will focus on cohesion within large bodies of work as well as the ability to bring images to finish with varying time constraints. This course is open to juniors and seniors in the communication design major.

Credit 3 units. EN: H

---

**F10 ART 336N Special Topics in Communication Design: Environmental Design**

This course offers an introduction to the process and problem-solving methods required to conceptualize and develop an environmental graphics project. Students will gain an understanding of the relationship between a concept on screen and that idea realized at full scale and its impact in the built environment. Scale drawing, architectural documents, fabrication methods and materials will all be explored. Projects will include wayfinding and ADA signage, exhibit design and architectural graphics. Students will communicate their concepts through sketches, computer drawings, models and mock-ups.

Credit 3 units.

---

**F10 ART 337E Communication Design: Word and Image II**

This course continues Communication Design: Word and Image I (F10 ART 238B), presenting design and illustration projects simultaneously. It focuses on methodologies for a range of problems. It emphasizes the development of content, illustration, typography, sequential narrative and information design. Students are expected to become self-directed about their synthesis of word and image and select an area of emphasis within design and illustration for deeper study. Prerequisite: Word and Image I. Required for communication design majors; open to Sam Fox School students as space permits.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 337F Communication Design: Typography II**

This course builds on the typographic principles introduced in Typography I (F10 ART 238C). Students generate typographic systems and expressions relevant to professional practice.

Prerequisite: Typography I. Required for communication design majors; open to Sam Fox School students as space permits.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 337I Communication Design: Interaction Foundations**

This course is a hands-on application of interaction design for digital media (primarily browser-based). Participants learn and apply the fundamentals of HTML and CSS, explore how user-interaction adds bidirectionality to communication, examine the intricacies of seemingly-simple digital interactions, and become familiar with the attributes of digital device as "canvas." Students work both independently and collaboratively to design interactive solutions for a selection of communication challenges. Prerequisite: Digital Design (F10 243) or Digital Studio (F10 242) or permission of instructor. Required for communication design majors; open to students outside the communication design major as space permits.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 337M Comm. Design: Voice**

Propaganda and persuasion use different means to influence our perception of causes or positions. This course explores the strategies and tactics used by visual communicators to create work that convinces viewers to buy, believe, act, etc. These messages profoundly influence our culture and society. With this in mind, course reading and class discussion provide a platform for debate and discussion of the role the designer plays and the attendant responsibility. Students create work that integrates research, writing and design. All projects present a specific point of view on topics that are relevant to them. Prerequisites: completion of Type II and Word and Image II. Communication design major elective; senior standing.

Credit 3 units.

---

**F10 ART 338H Comm. Design: Interaction Design II**

The class will explore designing usable, useful, and desirable relationships and interactions between people and the digital products and services they use. Students are introduced to human-centered research methods in the context of designing screen-based experiences. Small ethnographic field projects build to inform the basis for idea generation and prototyping concepts. Students then synthesize insights to design a digital solution. The class has a series of smaller exercises that build to two larger design projects with an overarching theme of public health or sustainability. Graphic design and typographic fundamentals will be addressed throughout in the context of interaction. Class time will be mixture of lectures, in class exercises, and studio based work. Students will need a laptop with Adobe Illustrator, InDesign and Photoshop and moderate experience with these programs. Prerequisite: Interaction Design I or Interaction Design workshops or permission of instructor. Please email Enrique Von Rohr, VonRohr@samfox.wustl.edu, with questions. This course is appropriate for sophomores through graduate students with or without visual training who are interested in the principles and methods of interaction design.

Credit 3 units. EN: H

---

**F10 ART 338J Comm. Design: Illustration Projects**

In Illustration Projects, students will confront three substantial projects of complex visual research and problem-solving, and communicate their results through beautifully made images. Each project will begin with provided story data, ranging from business-oriented to literary to mechanical, then move through

rigorous stages of editing, storytelling, style development, execution and refinement. Early projects will emphasize traditional techniques of image-making; later projects will involve more digital manipulation. Students will need a laptop with Adobe Creative Suite installed as well as traditional art-making supplies along the way. Prerequisite: Word and Image II. This course is open to juniors in the communication design major. Credit 3 units. EN: H

---

#### **F10 ART 338L Comm. Design: Experimental Typography**

In this studio course, students will learn to challenge typography's role as a tool for communication through alternative methods in mark-making and redefining what or how it is communicated. The course will introduce material exploration, emerging software/technology, and sensory/spatial considerations while challenging the purpose of type. It will be organized into multiple units, each with a different opportunity for the student to explore new methods. Students will apply their own areas of disciplinary expertise to the final project. Students will need a laptop and may need to acquire inexpensive or free software. This course is appropriate for juniors through graduate students with or without visual training who are interested in typography, communication, visual expression, and computer programming. Prerequisite: Type 2. This course is appropriate for juniors in the communication design major. Credit 3 units. EN: H

---

#### **F10 ART 338M Voice**

Propaganda and persuasion use different means to influence our perception of causes or positions. This course explores the strategies and tactics used by visual communicators to create work that convinces viewers to buy, believe, act, etc. These messages profoundly influence our culture and society. With this in mind, course reading and class discussion provide a platform for debate and discussion of the role the designer plays and the attendant responsibility. Students create work that integrates research, writing and design. All projects present a specific point of view on topics that are relevant to them. Prerequisite: Type 2. This course is appropriate for juniors in the communication design major. Credit 3 units. EN: H

---

#### **F10 ART 371A Book Arts: Art Practice**

This course investigates various forms of visuality as primary content in the book format, with a focus on the construction of non-textual narratives. Through lectures and demonstrations, students explore topics such as page format, book design, serial and sequential structures and approaches toward binding. The primary project is the production of a printed book. Students work with letterpress and intaglio printing, bookbinding and photopolymer plate making. Prerequisite: Introduction to Printmaking (F10 ART 215 or F10 ART 216) or Introduction to Letterpress or Introduction to Book Binding. Open to BFA students who have taken the prerequisite and others, including minors and MFA students, with consent of instructor. Credit 3 units. Art: FAAM, FADM EN: H

---

#### **F10 ART 372B Content to Cover: the Design of Books**

This studio course considers the design of books in their totality, from the smallest typographic details of text pages, to designing the page grid, and the selection of images, type, materials and color of the binding and cover. Students will produce two books from texts assigned to them. The first will be a text-based book of prose; the second, larger project, will

include body text, images, captions, footnotes. Beginning with a thorough discussion of the landscape of the two-page spread, students will complete a short research project based upon a complex illustrated book in the library. Discussion of print production and binding options in industry will be enhanced by a visit to a local offset printer and to Olin Library Special Collections. Students will deepen their skill base in typographic applications, the use of InDesign as a multipage document tool, a range of imaging techniques offered in the Book Studio, and bookbinding technique, as well as building their design criticism vocabulary. This course is appropriate for juniors and seniors in the communication design major. CET (<https://gephardtinstitute.wustl.edu/cec/sam-fox-school-of-design-and-visual-arts>) course. Credit 3 units. EN: H

---

#### **F10 ART 3822 Art Practices: Present/Past/Past/Present (Florence)**

The city of Florence today serves as a living, breathing museum that offers a glimpse into the materials and methods of its past, while offering a fertile ground for contemporary art practices that focus on critical investigation. In this course students will engage a diverse set of art practices that operate between past and present, between the technical and conceptual, exploring the relationship between the Renaissance's reinterpretation of classicism and its revolutionary spirit that sparked innovation in the arts, sciences and society in general. Six hundred plus years later, students will examine artistic/visual conventions of the Renaissance and re-contextualize them to 21st-century ideas and issues. The course will make use of these myriad opportunities through field trips or site visits, lectures, technical demonstrations and readings that will supplement these investigations. This course may be applicable toward an area discipline art concentration with approval and final portfolio review by faculty in the discipline of concentration. Credit 3 units. EN: H

---

#### **F10 ART 3824 Methods and Context II (Florence)**

Required for BFA in Art majors. This team-taught course expands on methodologies encountered in Methods and Contexts I and related courses. Students are encouraged to take charge of their artistic process through faculty-supported and self-directed creative investigation. Through lectures, class discussions and critiques, students critically engage the evolving manner in which visual culture is produced and distributed. Students learn how to best present their work and incorporate discourse inherent to and generated by their practice. The goal of this course is to ensure a strong Capstone experience by helping students develop their artistic position within the public realm and contemporary contexts. Credit 3 units. EN: H

---

#### **F10 ART 3825 Art Studio (Florence)**

Art Practice and Methods & Contexts are linked pedagogically and conceptually in the Sam Fox curriculum. In Florence, the two courses will be merged into a broader 6-credit art studio course. The city of Florence today serves as a living, breathing museum that offers a glimpse into the materials and methods of its past, while offering a fertile ground for contemporary art practices that focus on critical investigation. In this course, students will engage a diverse set of art practices that operate between past and present, between the technical and conceptual, exploring the relationship between the Renaissance's reinterpretation of classicism and its revolutionary spirit that sparked innovation

in the arts, sciences and society in general. Six hundred plus years later, students will examine artistic/visual conventions of the Renaissance and re-contextualize them to 21st-century ideas and issues. Students will also integrate and synthesize knowledge resulting from "Art Practice." Supported by lectures, discussions and critiques, the course will foster a creative environment and critical discourse surrounding artistic practices. Students are guided through the art-making process, from conceptualization to resolution, emphasizing experimentation with various methods of production and distribution. Students will be challenged to contextualize their own artistic interests within the contemporary art field by promoting critical analysis skills necessary for initiating, interpreting and evaluating artistic production. The course will make use of these myriad opportunities through field trips or site visits, lectures, technical demonstrations and readings that will supplement these investigations.

Credit 6 units.

---

**F10 ART 3830 Strategies: Working on Site (Florence)**

Sketchbook in hand, how does one respond to the overwhelming complexity of a specific environment? There are multiple correct answers to this question. Many possible answers will be explored through specific exercises and open-ended assignments. Much of the studio's class time will be spent on location, exploring interior and exterior environments, and the transitional spaces between them. A specific sketchbook, purchased in Florence, will be required. Students will be able to work in a wide variety of media, including photography and digital.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 3832 Comm. Design: Mapping the Unfamiliar (Florence)**

This studio course with lectures will focus on creating both informational and narrative-driven explorations of place through the form of the map. The first half of the semester will introduce the map as an instrument for way-finding and data visualization. Students will learn to negotiate various levels of information in two-dimensional design while crafting clear and compelling stories involving location, points-of-interest, and time. Students will also begin documenting their own experience navigating Italy as a means of incorporating personal perspective into more psychogeographic-based mapping studies that traverse the idea of familiarity. The second half of the semester will further develop students' potential to interpret their surroundings through the exploration of nonlinear storytelling and pictorial representation of cartographic data-points. Prerequisite: Word and Image II. This course is appropriate for juniors in the communication design major.

Credit 3 units. EN: H

---

**F10 ART 3834 Making Meaning (Florence)**

As students transition into a new culture and environment, there lies an opportunity to acutely examine shifts in behavior, emotion, expectation and perspective — both within themselves as well as amongst their classmates. This shared (yet diverse) experience makes for a great opportunity to flex their empathy muscles. To better understand this, each student will be "the designer" as well as "the audience," investigating ways to help each other live in a new culture.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 3836 Methods: Verbal to Visual (Florence)**

Do different types of text and their meanings require different approaches for image making? Maybe. A variety of different texts will be assigned, each accompanied by a different image-making methodology. There will also be a variety of applications for the resulting images. Students will be able to explore a wide range of media and image making. The goal is to assist students in understanding and developing their own approaches to this complex process.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 3838 Experimental Typography (Florence)**

In this studio course, students will learn to challenge typography's role as a tool for communication through alternative methods in mark-marking and redefining what or how it is communicating. In addition, students will learn to develop a process that leads them to thoughtful typographic solutions applicable to all areas of design.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 3840 Branding & Identity (Florence)**

Students will learn about brands as: 1) an identity; a shorthand for a company or product, 2) an image; where an individual perceives a brand as representing a particular reality, and 3) a relationship; where an individual reflects an experience through a product or service. To learn from their research, students will concept, design and implement a brand, challenging them to realize the full breadth of a brand's reach.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 3842 Patternmaking and Production**

An introduction to flat pattern drafting. Principles will be applied to various components of garment creation. Construction techniques and industrial methods explored within specific structural design problems. Students will undertake realization of garment from sketch to pattern draft and finally construction of muslin (toile). This course is to be taught using the Imperial measurement system. This course will be offered in Florence, Italy.

Credit 3 units. EN: H

---

**F10 ART 3844 Fashion History & Research**

The study of cultural and social influences to comprehend how these influence the evolution of fashion and are expressed in clothing at various junctures in history. Review of general academic research methods will be covered as well as research methods and strategies of particular significance to fashion design. Course work will focus on using research as an avenue to original and effective design concepts. This course will be offered in Florence, Italy.

Credit 3 units. EN: H

---

**F10 ART 3845 Sustainable Fashion and Ethical Clothing**

This course focuses on the study and understanding of sustainable clothing and its influence in today's fashion industry and modern life. Ethical fashion refers to the use of fabrics derived from eco-friendly resources, and the study of how these fabrics are made. Being "green" in fashion today means reducing the amount of clothing discarded to landfills, and decreasing the environmental impact of agro-chemicals in producing conventional fiber. Special emphasis will be placed on the vintage phenomenon and on recycling as fundamental parts of this complex subject. The course will analyze the impact of

the reduction of raw materials and virgin resources, as it relates to fitting in the context of a more powerful globalized fashion industry as these two worlds often collide. The course will also look at how sustainability in the clothing industry can provide a new market for additional job opportunities. This course will be taught in Florence, open to fashion majors.

Credit 3 units.

---

#### **F10 ART 385A Public Practice: Art Practice**

Students examine, critically explore and execute work in the public sphere. Readings, discussions and presentations generate a framework for understanding historical, theoretical and practical considerations for creating artwork in relation to the material/social conditions of public space. Projects may respond to any number of approaches in the contemporary field, including public sculpture, participatory art and ephemeral art practices. Students learn the discipline of proposal development and present final projects that are adjudicated by an outside jury. Students whose work is selected by the jury must enroll in the spring semester course "From Design to Realization." It is highly recommended that students who wish to concentrate in sculpture enroll in this course. Open to BFA students with junior-level standing and others, including minors, with consent of instructor. Credit 3 units. EN: H

---

#### **F10 ART 386A Public Practice: Art Practice (Realized Actions)**

This studio course focuses on the realization of art projects in the public sphere. The class is a forum for students to explore self-generated public art projects as well as public art challenges and opportunities brought to the class from outside sources. Students will have the opportunity to work with local community and civic organizations to use artwork as a means of social engagement. Projects may respond to any number of approaches in the contemporary field, including public sculpture, participatory art and ephemeral art practices. Faculty and student generated readings, discussions and presentations will be the platform for creating actionable projects that operate within the material/social conditions of public space. This course is required for those students awarded a commission in Fall Art Practice: Public Practice as part of the University City Community Visuals Public Sculpture Series. Open to BFA students with junior-level standing, and others, including minors and MFA students, with consent of instructor. Credit 3 units. EN: H

---

#### **F10 ART 391 Methods and Contexts I**

Required for those pursuing the Bachelor of Fine Arts in Art majors. This team-taught course integrates and synthesizes knowledge resulting from Theory and Practice and related courses. Supported by lectures, class discussions and student critiques, this course fosters a creative environment and critical discourse surrounding artistic practices. Students are guided through the art-making process, from conceptualization to resolution, emphasizing experimentation with various methods of production and distribution. The goal of this course is to help students contextualize their own artistic interests within the contemporary art field by promoting critical analysis skills necessary for initiating, interpreting and evaluating artistic production.

Credit 3 units. EN: H

---

#### **F10 ART 392 Methods and Contexts II**

Required for BFA in Art majors. This team-taught course expands on methodologies encountered in Methods and Contexts I and related courses. Students are encouraged to take charge of their artistic process through faculty-supported and self-directed creative investigation. Through lectures, class discussions and critiques, students critically engage the evolving manner in which visual culture is produced and distributed. Students learn how to best present their work and incorporate discourse inherent to and generated by their practice. The goal of this course is to ensure a strong Capstone experience by helping students develop their artistic position within the public realm and contemporary contexts.

Credit 3 units. Art: FAAM EN: H

---

#### **F10 ART 401A Drawing: Art Practice**

**Conceptual Methods in Drawing:** Drawing is a communicative device; it is a primary means of conceptual strategy leading to effective visual exploration and expression, from thought to form. This studio course looks at the practice of drawing in the context of language, scientific paradigms, complementary and alternative art forms, sociopolitical theory and history as they relate to visual culture and invention. Lectures, critical readings, and analysis of historical and contemporary modes of drawing support students in their course work. Projects in this course may consider mapping, language systems, formulaic constructions, material essentialism, physiologic/kinesthetic approaches, and performative aspects of drawing. Prerequisites: Drawing I (X10 101), Drawing II (X10 102), and senior standing. **Figure Structure Context:** This rigorous drawing course explores new representations of the figure through its structure and contemporary contexts. Initial research involving presentations and extensive sketchbook activities provides a vehicle for discovering the figure's architecture, mechanics and proportions. Students access visual data from a variety of sources — model sessions, the internet, schematic/diagrammatic drawings, photography, sculpture and memory — with the goal of developing expressive qualities in material, process and pictorial construction. Lectures, films, critical readings and the analysis of historical and contemporary modes of representation support students in their investigations, which culminate in an independent series of works. Prerequisites: Drawing I (X10 101), Drawing II (X10 102), and senior standing. Credit 3 units. EN: H

---

#### **F10 ART 402D Drawing: Art Practice (Collage: History and Practice in Contemporary Art)**

This course will examine the role of collage in contemporary studio practice. Students will be required to assemble an archive of images from various sources, found and self-generated, to produce a body of work based on a specific theme. Readings and discussion related to the course will examine the evolution of collage and its present status and application within contemporary studio practice. Prerequisite: Drawing I, Drawing II, junior standing. Open to BFA students who have taken the prerequisites, and others, including minors, with consent of instructor.

Credit 3 units. Art: FAAM

---

#### **F10 ART 411D Painting: Art Practice**

**Special Topics: Narrative Systems: The Frame, The Grid, The Screen:** This studio course focuses on various narrative strategies in relation to painting's mythology and its function in contemporary culture. Topics to include narrativity, the

politics of lens and screen, invented fictions, social vs. virtual spaces, and site specificity. Instruction will encompass technical, conceptual and creative skills for taking an individually conceived project from idea to fruition. Students will be encouraged to consider traditional and alternative forms of painting as well as digital imaging, installation, net art, etc. Lectures, critical essays, and analysis of historical precedents and contemporary practitioners will support students in their course work. Required for a concentration in painting. Prerequisite: Painting Studio: Material and Culture (F10 221A or 222A). Open to senior BFA students who have taken the prerequisite. **Body Image:** This is a rigorous painting/drawing studio course investigating various methods of pictorial construction (historical, contemporary) and the role of figuration in contemporary art practice. Students will be required to produce an independent body of work based on a theme and generated from a variety of references (imagination, life, photography, painting, film, etc.). Discussions to include contemporary notions of identity structures, social and gender politics. Lectures, critical readings and the analysis of historical and contemporary modes of figural representation will support students in their investigations. Prerequisite: Painting Studio: Material and Culture (F10 221A or F10 222A). Open to senior BFA students who have taken the prerequisite. Credit 3 units. EN: H

---

**F10 ART 411G Painting: Art Practice (Place and Space)**

This course examines ideas of place and space — both observed and invented — established through the surface and materiality of paintings. Students develop a unique body of work through shared exploration of painting processes and materials, along with independent research. Critical assessment of work is complemented by faculty and peer discussions, readings, written critical analysis and field study. Required for a concentration in painting. Prerequisite: Introduction to Painting. Open to BFA students who have taken the prerequisite, and others, including minors with consent of instructor. College of Art students pursuing the BFA in Art will have priority. This class counts toward the minor in art. Credit 3 units.

---

**F10 ART 412E Painting: Art Practice**

**Place and Space:** This course examines ideas of place and space — both observed and invented — established through the surface and materiality of paintings. Students develop a unique body of work through shared exploration of painting processes and materials, along with independent research. Critical assessment of work is complemented by faculty and peer discussions, readings, written critical analysis and field study. Required for a concentration in painting. Prerequisite: Painting Studio: Material and Culture (F10 221A or F10 222A). Open to senior BFA students who have taken the prerequisite. **Body Image:** This is a rigorous painting/drawing studio course investigating various methods of pictorial construction (historical, contemporary) and the role of figuration in contemporary art practice. Students will be required to produce an independent body of work based on a theme and generated from a variety of references (imagination, life, photography, painting, film, etc.). Discussions to include contemporary notions of identity structures, social and gender politics. Lectures, critical readings and the analysis of historical and contemporary modes of figural representation will support students in their investigations. Prerequisite: Painting Studio: Material and Culture (F10 221A or F10 222A). Open to BFA senior students who have taken the prerequisite. Credit 3 units. EN: H

---

**F10 ART 412F Painting: Art Practice (Language of Abstraction)**

This course examines strategies of abstraction and non-objective image-making that originate in the painting studio, including those that are driven by concept, material, space and/or process. Readings and discussion will examine the evolution and history of abstraction and its present applications within a contemporary studio practice. The course will engage students in both assigned and self-directed work that will enable them to experiment with a broad visual vocabulary while understanding the relationship between form and content. Required for a concentration in painting. Prerequisite: Painting Studio: Material and Culture (F10 221A or F10 222A). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor. Credit 3 units. Art: FAAM

---

**F10 ART 413D Sculpture: Art Practice**

**Special Topics: The Book as Object and Artifact:** When we read a book, it is always the physical volume in our hands — or in some substitute for hands — that is being read. That reading is a hands-on experience we well understand, but what is to be said about artists taking hands to the book as object, transmogrifying it and separating it from readability? Participants in this studio will work with some of the great range of possibilities for using the book as a sculptural object to bring forth other orders of its meaning. Prerequisite: Sculpture Studio: Material and Culture (F10 213A or 214A). Open to senior BFA students who have taken the prerequisite. **Symbiosis:** This course explores numerous scenarios that create different levels of sculptural interactivity from low to high tech. Students construct devices ranging from simple mechanisms to large-scale installations fostering physical, analogue or digital interaction between the viewer and the sculptural environment. Viewer-activated systems create multiple interactive platforms, initiating a responsive relationship between the sculpture and the viewer. Lectures, demonstrations and readings devise a broad understanding of the histories and potentials of symbiotic relationships between a work of art and its audience. Prerequisite: Sculpture Studio: Material and Culture (F10 213A or 214A). Open to BFA students who have taken the prerequisite. **Matter in Hand:** This course focuses on an array of moldable and castable materials and processes that have played a key role in the history of artistic expression. In-depth demonstrations supported by critiques, discussions, lectures and historical readings provide opportunities to re-evaluate the meanings these primal materials bring to contemporary practice. Students explore these concepts through artistic and architectonic lenses and are encouraged to experiment with these processes in their work. Required for a concentration in sculpture. Prerequisite: Sculpture Studio: Material and Culture (F10 213A or 214A). Open to senior BFA students who have taken the prerequisite. Credit 3 units. EN: H

---

**F10 ART 413M Sculpture: Art Practice (Sculptural Bodies)**

This course investigates the sociopolitical issues of the body, the figure and their potential in contemporary art practice. The term "body" is used as an organism, in an expansive way, to investigate the metaphorical, physical, emotional, cultural, and spiritual bodies. A variety of media and methods are explored with an emphasis on three-dimensional work and object-based performance. Lectures, demonstrations and readings contextualize the potential of sculptural systems to constitute the

meaning of a contemporary body. Prerequisite: Sculpture Studio: Material and Culture. Open to BFA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor.

Credit 3 units.

---

#### **F10 ART 414J Sculpture: Art Practice**

**Material as Metaphor:** All materials carry meaning. This course familiarizes students with histories and fabrication processes intrinsic to sculpture. This course uses demonstrations and hands-on experiences, primarily but not exclusively with metal and woodworking processes to show how such materials inform a studio practice. Lectures and techniques contextualize an understanding of preformed and found material as a formal and conceptual component resulting in the final work of art. In a critical environment, students formulate their own material language and defend their art practice and creative decisions. Prerequisite: Sculpture Studio: Material and Culture. Open to senior BFA students who have taken the prerequisite.

**Sculptural Bodies:** This course investigates the sociopolitical issues of the body, the figure and their potential in contemporary art practice. The term "body" is used as an organism, in an expansive way, to investigate the metaphorical, physical, emotional, cultural and spiritual bodies. A variety of media and methods are explored with an emphasis on 3-dimensional work and object-based performance. Lectures, demonstrations and readings contextualize the potential of sculptural systems to constitute the meaning of a contemporary body. Prerequisite: Sculpture Studio: Material and Culture. Open to senior BFA students who have taken the prerequisite.

Credit 3 units.

---

#### **F10 ART 414K Sculpture: Art Practice (Symbiosis)**

This course explores numerous scenarios that create different levels of sculptural interactivity from low to high tech. Students construct devices ranging from simple mechanisms to large-scale installations fostering physical, analogue or digital interaction between the viewer and the sculptural environment. Viewer-activated systems create multiple interactive platforms, initiating a responsive relationship between the sculpture and the viewer. Lectures, demonstrations and readings devise a broad understanding of the histories and potentials of symbiotic relationships between a work of art and its audience. Required for a concentration in sculpture. Prerequisite: Sculpture Studio: Material and Culture (F10 213A or 214A). Open to BFA students who have taken the prerequisite.

Credit 3 units. Art: FAAM

---

#### **F10 ART 415B Printmaking: Art Practice**

**Propaganda to Decoration:** This course uses the print multiple as a starting point to explore a continuum that runs from propaganda to decoration. The fundamental attributes of the multiple, including its accessibility and repeatability, arc from private to public and from political to aesthetic. Reproduction, distribution, urban communication, social space, intervention and site specificity are explored through course lectures, readings and discussions. Collaboration, exchange, and relational practices provide frameworks for self-directed projects using traditional and alternative techniques in print media including lithography, screen-printing, stencils and photocopy. Prerequisite: Printmaking Studio: Material and Culture (F10 215A or 216A). Open to senior BFA students who have taken the prerequisite.

Credit 3 units. EN: H

---

#### **F10 ART 415H Printmaking: Art Practice (Feedback Loop: Process and Print)**

This course focuses on variability, mutability, repeatability and play within the process of printmaking, using etching, collagraph, monotype and digital methods. The course explores practices and contexts in printmaking as a contemporary art form and promotes advanced conceptual and technical development through creative practice, readings, discussions and critiques. Projects are self-directed and based on course topics that engage different approaches to process-based work, ranging from the improvisational to the systematic. Emphasis is placed on the shift from object to process, from the single manifestation to the series, from fixed to flux and back again. Required for a concentration in printmaking. Prerequisite: Printmaking Studio: Material Culture (F10 215A or 216A). Open to BFA students who have taken the prerequisite and others, including minors, with consent of instructor.

Credit 3 units.

---

#### **F10 ART 416F Printmaking: Art Practice**

**The Printed Image:** This course explores the printed image as storyteller, educator, political tool, and narrative. Historical precedents and contemporary examples of political prints, graphic novels, posters, and narrative suites are examined as possible models for self-directed projects. Readings and discussions include strategies for drawing and appropriating imagery. Students will have the opportunity to produce a thematically unified body of work while gaining technical expertise in woodcut, etching and lithography. Prerequisite: Printmaking Studio: Material and Culture (F10 215A or 216A). Open to senior BFA students who have taken the prerequisite.

Credit 3 units. EN: H

---

#### **F10 ART 416G Printmaking: Art Practice (Extra-Dimensional Printmaking)**

Pushing the boundaries of printmaking, prints move beyond the wall and into sculpture, installation, and time-based work. Relief, silkscreen, and intaglio processes are explored with an emphasis on print as theatre, object, and immersive environment. Through readings and discussions, students will engage with historical precedents and contemporary principles that support the creation of self-directed work that is extra-dimensional in physical and conceptual scope. Required for a concentration in printmaking. Prerequisite: Printmaking Studio: Material and Culture (F10 215A or 216A). Open to BFA students who have taken the prerequisite.

Credit 3 units. Art: FAAM

---

#### **F10 ART 417H Photography: Art Practice**

**Methods of Distribution:** One of the most effective aspects of the photographic image today is its speed. The way that physical and virtual images are presented and distributed has changed significantly since the initial branding of photography as the medium of reproducibility. This class focuses on photography-based uses of the image through various distribution formats like the book, the poster, the newspaper, television, web, design, film, apparel, architecture, music, etc. The students make, read, look, listen, and experience 20th and 21st century photography practitioners who engage a range of disciplines and methods of distribution as they try to synthesize methods/models of their own. Rigorous student project critiques are complemented with discussions, writing assignments, and readings on media theory and contemporary uses of photography outside of the traditional

exhibition-based contexts. Prerequisite: Photography Studio: Material and Culture (F10 217B or 218B). Open to senior BFA students who have taken the prerequisite. **Constellations, Sequences, Series:** Series are the prevalent method for exhibiting photographic images. Through assignment-based and self-generated projects, students discover how photographic series are conceptualized, structured and sequenced. Special attention is given to the material meaning embedded in print size, order and spatial placement. The course provides in-depth coverage of image capture through medium-format analog and full-frame digital systems as well as intermediate digital editing and printing techniques. Students also explore various documentary and set-up strategies through narrative and non-narrative photographic approaches. Through a rigorous critique structure, course readings and critical writing, students engage the historical discourse surrounding the series as a tool for artistic expression. Prerequisite: Photography Studio: Material and Culture (F10 217B or 218B). Open to senior BFA students who have taken the prerequisite. Credit 3 units. EN: H

---

**F10 ART 417L Photography: Art Practice (Constellations, Sequences, Series)**

Series are the prevalent method for exhibiting photographic images. Through assignment-based and self-generated projects, students discover how photographic series are conceptualized, structured and sequenced. Special attention is given to the material meaning embedded in print size, order and spatial placement. The course provides in-depth coverage of image capture through medium-format analog and full-frame digital systems as well as intermediate digital editing and printing techniques. Students also explore various documentary and set-up strategies through narrative and non-narrative photographic approaches. Through a rigorous critique structure, course readings and critical writing, students engage the historical discourse surrounding the series as a tool for artistic expression. Required for a concentration in photography. Prereq: Photography Studio: Material and Culture (F10 217B or 218B). Open to BFA students who have taken the prerequisite and others, including minors, with consent of instructor. Credit 3 units.

---

**F10 ART 418J Photography: Art Practice**

**Slow Image: Large Format Photography:** This course provides an in-depth study of the large format analog camera and its unique formal position. Using the 4"x5" format, students examine this slow, high fidelity photographic medium both technically and conceptually. Students employ a comprehensive photographic process, including loading sheet film, applying the zone system, scanning large format film, editing digital images, and creating large format digital inkjet prints. Class activities include rigorous student project critiques, as well as reading and discussion elements focusing on the history of large format and its contemporary descendants in the Dusseldorf School, abstract photography and installation art contexts. Class participants investigate the role of high fidelity images. Assignments may address portraiture, still life, interior and exterior architecture, landscape, and abstract photography. Large format 4"x5" cameras will be available for use. Prerequisite: Photography Studio: Material and Culture. Open to senior BFA students who have taken the prerequisite. Credit 3 units. EN: H

---

---

**F10 ART 418K Photography: Art Practice (Documentary Photography & Social Practice)**

This course focuses on the various philosophical, aesthetic and technical approaches to photographing the contemporary, human-altered landscape and the communities we live in. Through slide lectures, field trips, in-depth critique and supervised lab work, students are expected to increase their awareness of how their own personal responses relate to those of other photographers with the same contemporary issues of documentary photography. A project-based seminar focusing on objectivity of the photographic document. Material and camera format open. Required for a concentration in photography. Prerequisite: Photography Studio: Material and Culture. Open to senior BFA students who have taken the prerequisite. Credit 3 units. Art: FAAM

---

**F10 ART 423A Capstone 1: Fashion Design (Pre-Collection Studio)**

Same as ART 123A, ART 223A, ART 323A. Seniors only register of ART 423A. Introductory study of textiles, beginning with study of the basic fibers used in textile production, through weaving, knitting, dyeing, printing and finishing. Class format includes lectures, field trips, garment study and a variety of creative projects that replicate current textile production techniques such as weaving, silkscreen, dyeing and printing. Credit 3 units. EN: H

---

**F10 ART 423B Apparel Strategy**

The study and analysis of the apparel collection and its functional components in an effort to merchandise ideas for groups, seasonal deliveries, and lines. Thoughtful synthesis of the spectrum of knowledge and skills acquired through prior fashion design course work. Development of design and marketing strategies for specific customer profiles and specialty markets. Open to senior fashion design majors only. Credit 3 units. EN: H

---

**F10 ART 423D Fashion Design 2-D**

Designed to familiarize students with techniques and materials used in drawing flats, floats, croquis, specs and illustrations for fashion design. Design problems associated with designing groups, collections and lines of apparel for popular and selected consumption are included. Credit 1.5 units.

---

**F10 ART 423E Patternmaking Lab**

This lab is offered concurrent with the preliminary study for the creation of both 3-D and 2-D culminating work by senior majors. Resolution of patternmaking problems are addressed, and patternmaking skills are enhanced as appropriate. Open to senior fashion design majors only. Credit 1.5 units.

---

**F10 ART 424A Capstone Studio 2 (Collection Studio)**

In conjunction with Fashion Studio B, students create the culminating work of their study in fashion through realization of signature collection and portfolio documentation of collection. This studio will be undertaken with tutorials and guidance on tailoring, dressmaking, presentation and documentation. Prerequisite: completion of junior year in fashion major. Enrollment required of and limited to senior fashion design majors.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 424B Professional Practices: Portfolio**

**Development**

Students work toward establishment of necessary construction, crafts skills, and signature illustration style required for completion of capstone project. Each student draws together and organizes evidence of vision and skill into a coherent presentation representative of their abilities as an emerging design professional. Work from this course is submitted for outside professional review. Prerequisite: completion of junior year in fashion major. Enrollment required of and limited to senior fashion design majors.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 424E Patternmaking Lab**

This lab is offered concurrent with the preliminary study for the creation of both 3-D and 2-D culminating work by senior majors. Resolution of patternmaking problems are addressed, and patternmaking skills are enhanced as appropriate. Open to senior fashion design majors only.

Credit 1.5 units.

---

**F10 ART 424M Digital Lab**

This lab, offered concurrent with preliminary study for creation of both 3-D and 2-D culminating work by senior majors. Resolution of technical drawing and digital illustration problems addressed. Additionally, patternmaking and digital skills enhanced as appropriate. Only seniors in the fashion major may enroll.

Credit 1.5 units. Art: FADM

---

**F10 ART 426D Special Topics: Relational, Conditional, and Process-Oriented Design**

This course encourages students to explore the spatial and experiential potential of designing frameworks to navigate complex archives of online content. In addition to expanding their code-based skills, students will push the boundary of traditional online activity to create immersive and experimental experiences in the browser. Through a series of informational and spatial challenges, students will conduct research into contemporary theory and practice of designing interactive platforms and develop dynamic solutions for online frameworks which exploit and challenge traditional user expectations. Projects, experiments and research will be supplemented by group readings, class discussions, and individual artist/designer case studies. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326D; seniors for F10 Art 426D. Counts toward design minor if space is available. Prerequisite: Interaction Foundations (F10 337) or demonstrably comparable HTML/CSS skills.

Same as F10 ART 326D

Credit 3 units. Art: FADM

---

**F10 ART 426E Special Topics: Research Methods in Human-Centered Design**

In this course, students will design an experience based on learnings about peoples' needs and perspectives. Working in groups, we will follow a human-centered design process, beginning with planning and conducting in-context interviews, observations and co-creation activities, learning how to uncover latent knowledge. We will synthesize insights in order to inspire design ideas. We'll prototype these ideas in order to answer specific questions and lead to new iterations. Along the way,

we will discuss the broader landscape of design research, including ethnography, participatory and speculative design, and evaluative methods, examining critiques and benefits of different approaches. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326E; seniors for F10 Art 426E. Counts toward design minor if space is available. Prerequisite: Word + Image II or Typography II.

Same as F10 ART 326E

Credit 3 units. Art: FADM

---

**F10 ART 426F Special Topics: Transition Design/Service Design**

Services design is an emerging interdisciplinary approach for creating useful, usable and desirable experiences between providers and customers such as emergency health or disaster preparedness. Through complex applied projects we visualize systems and strategic opportunities using journey maps and personas to understand experiences at various scales. Case study examples, lectures, readings, discussion, and hands-on exercises and projects provide the foundation to then design artifacts at key touch points using a variety of media type such as print, screen or environmental design. We take on two applied projects, one individually and one in teams with a local partner. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326F; seniors for F10 Art 426F. Counts toward design minor if space is available. Prerequisite: Word + Image II or Typography II.

Same as F10 ART 326F

Credit 3 units. Art: FADM

---

**F10 ART 426G Special Topics: Illustration as Practice**

This class will focus on the professional practice of conceptual illustration while cultivating an individual voice. We will practice the methodology of creating visual metaphors, visualizing concise ideas and working under short deadlines. The projects will cover the range of image making in the professional world today including editorial, portraiture, lettering, packaging, working with text/layouts and op-ed assignments. Students will continue to develop their portfolio in the context of these projects. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326G; seniors for F10 Art 426G. Counts toward design minor if space is available. Prerequisite: Word + Image II or Type II.

Same as F10 ART 326G

Credit 3 units. Art: FADM

---

**F10 ART 426H Special Topics: Interaction Design: Layout Systems**

Learn and apply techniques and tools for creating advanced HTML/CSS layouts. Explore responsive design (layouts that adapt to available screen width), grid systems, layout frameworks, and templating systems. Refine HTML and CSS skills, and learn best practices for common layout challenges. Become familiar with potential pitfalls designers face when planning for screens and variable content. Develop strategies for communicating design decisions for dynamic layouts. Expect to create mockups, wireframes, and finished HTML layouts that are portfolio-ready. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326H; seniors for F10 Art 426H. Counts toward design minor if space is available. Prerequisite: Interaction Foundations (F10 337) or demonstrably comparable HTML/CSS skills.

Same as F10 ART 326H

Credit 3 units. Art: FADM

---

**F10 ART 428E Illustration Concepts & Media**

Advanced projects in applied illustration and the first step in development of a professional portfolio. The class will explore creating images with smart and concise ideas across a spectrum of media. Students will be instructed on a range of illustration media to create visual solutions under rigorous deadlines. The projects will cover the range of editorial and conceptual image making in the professional world today including portraiture, multiple images, responding to text and specific time and media restrictions. Prerequisite: Word and Image II. This course is open to juniors and seniors in the communication design major. Same as F10 ART 328E  
Credit 3 units.

---

**F10 ART 428F Storytelling Across Multiple Media**

This interdisciplinary course addresses how the elements of a single visual and textual narrative are distributed across multiple traditional and digital media platforms to form a unified and cohesive entertainment or branding experience. Assignments will challenge students to examine the specific attributes of each medium to determine its role in the greater experience. Students will work in small teams to coordinate and execute media integration per their individual disciplines, skill sets and areas of interest. Students will learn how storytelling across multiple media can expand the market for an intellectual property, provide various points of entry for different audience segments, and heighten audience participation, interaction, understanding and engagement in the content. This course is open to juniors and seniors in the communication design major. Counts toward design minor if room available. Prerequisites: Word + Image II or Type II.  
Same as F10 ART 328F  
Credit 3 units.

---

**F10 ART 428G Branding & Identity**

Students will learn about brands as: 1) an identity; a shorthand for a company or product, 2) an image; where an individual perceives a brand as representing a particular reality, and 3) a relationship; where an individual reflects an experience through a product or service. To learn from their research, students will concept, design and implement a brand, challenging them to realize the full breadth of a brand's reach. This course is open to juniors and seniors in the communication design major. Prerequisites: Word + Image II or Type II.  
Same as F10 ART 328G  
Credit 3 units.

---

**F10 ART 429C Time-Based Media: Art Practice**

**Mediated Performance:** This course explores the body as a time-based medium and a vehicle of expression that interacts with cinematic and sound technologies, undergoing gradual semantic, virtual and visceral transformations. Students create performance-based video and sound works that are mediated with electronic/digital technology and performed or screened in public. Collaborative, individual political and poetic actions and happenings are encouraged. Students focus on the production of conceptually rigorous and technically convincing work that embodies their performative, experimental and individually designed ideas. Projects are informed by readings in media theory, writing assignments, and active participation in critiques of works by contemporary media artists. Prerequisite: Digital Design (F10 243) or Digital Studio (F10 242). Open to BFA students who have taken the prerequisite, and others, including

minors and MFA students, with consent of instructor. **Expanded Cinema:** Focusing on experimental approaches to digital filmmaking this course offers opportunities for independent producers arising from hybrid media interests. Expanded Cinema encourages and supports a variety of cinematic concepts, from non-narrative to documentary and activist approaches. Instruction will encompass technical, conceptual and creative skills for taking an individually conceived project from idea to fruition. Students will acquire basic understanding of independent video production and collaboration, as well as time-based composition, camera operation, editing software and presentation strategies. Active participation in discussions of contemporary experimental cinema and video art will be part of this course. Prerequisite: Digital Design (F10 243) or Digital Studio (F10 242). Open to BFA students who have taken the prerequisite, and others, including minors, with consent of instructor. **Sonic Space: Sound Art I:** Sonic Space: Sound Art I explores sound and musical composition in digital format as a sculptural, spatial and architectural intervention. The course offers an introduction to current Sound Art practices in the context of fine arts and examines how such practices are capable of altering our sense of space and time. The course necessarily touches upon experimental music and installation art as closely related to sound art. The course introduces students to basic methods of recording and editing sound technologies with a goal of composing sound works for space and for headphones. No prior musical or electronic education is necessary; however, basic computer literacy is highly recommended.  
Credit 3 units. EN: H

---

**F10 ART 429L Time-Based Media: Art Practice (Special Topics: The Language of Moving Images)**

This course will examine the language of filmic images as they relate to various visual art forms, which includes, among other elements, shot construction, sequencing, pace, duration, sound integration, scale, and situational contexts. Through screenings, readings, lectures, discussions and critiques, students will develop the analytical skills required to interpret moving images and to think deeply about their productions, which may utilize forms other than video or film and include installation components. Not focused heavily on technical approaches, creative work will be driven predominantly by individual concerns and may be accompanied by written analysis. Prerequisite: Digital Design or Digital Studio. Open to BFA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor.  
Credit 3 units.

---

**F10 ART 430I Time-Based Media: Art Practice (New Media in Art)**

Exploring the intersection of art and technology, the course focuses on the phenomenon of time as an artistic medium and as the subject of work. Through the production of time-based works in a virtual realm, students learn about compositional choices, narrative and non-narrative strategies, and ethical and political responsibilities that artists and artist collectives face in the 21st century. Students gain exposure to selected software as it pertains to their individually designed projects. Readings, writing assignments and an active participation in critiques of works by contemporary new media artists will be part of this seminar. Prerequisite: Digital Design or Digital Studio. Open to BFA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor.  
Credit 3 units. Art: FAAM

---

**F10 ART 432A Interaction Design: User Centered**

**Applications**

This course is a hands-on application of interaction design for digital media (primarily browser-based). We will explore how user-interaction adds bidirectionality to communication, examine the intricacies of seemingly-simple digital interactions, and familiarize ourselves with the attributes of digital device as "canvas." We will work both independently and collaboratively to design interactive solutions for a selection of communication challenges. Our focus will be to learn by doing: first-hand experience gained while undertaking real-world projects will provide the context and framework for discussion and instruction. Project work will likely be (but not required to be) accomplished with tools available in the Adobe Creative Suite: Adobe Dreamweaver, Adobe Illustrator, and Adobe Photoshop. Web browsers on both desktop computers and mobile devices will also be used extensively. No prerequisites. This course is appropriate for seniors in the communication design major.

Credit 3 units. EN: H

---

**F10 ART 432B Advertising Processes**

This studio course explores the strategic and conceptual processes that lead to execution of innovative advertising campaigns across mass and alternative media. A concise historical overview of advertising and its role in American society and culture creates a context for three applied assignments in key product, service and public service categories. Emphasis is placed on the processes of strategic development and documentation followed by an exploration of a range of solutions to marketing and branding problems and opportunities. Students develop skills in persuasive messaging that include art and creative direction, copywriting, creative team building, and visual and oral presentation of concepts. The course culminates with the execution of selected concepts in printed, electronic and/or audio forms. This course is open to juniors and seniors in the communication design major.

Credit 3 units. EN: H

---

**F10 ART 433C Capstone in Design 1: Research Methods (Form and Function)**

This course explores the development of compelling and refined visual vocabularies to respond to a wide variety of narrative and interactive contexts. Students hone their methods for brainstorming and visual iteration with emphasis on composition, type, color, and word and image relationships. An expansive approach-making to visual work is then linked to a set of ideas about design function and user response, ultimately providing students with tools to develop wide-ranging design artifacts that perform specific kinds of "work." Some projects are done in collaborative groups; all projects have components that students create individually. Artifacts may include books, maps, apps and presentations. Permission of instructor. Senior standing; College of Art majors only.

Credit 3 units. EN: H

---

**F10 ART 433D Capstone in Design 1: Research Methods (Form and Interaction)**

This course helps students to develop and refine methodologies for making strong and varied visual work in the context of interactive products. Specific deliverables may include apps, websites, presentations, and user research studies. Permission of instructor. Senior standing; College of Art majors only.

Credit 3 units. EN: H

---

**F10 ART 433E Capstone in Illustration 1: Research Methods Image and Story**

Required for senior majors in communication design with an emphasis in illustration. An advanced course in image-making for functional contexts. Students develop projects which isolate issues of approach, production, distribution and market in the landscape of illustration and cartooning today. Targeted research questions are posed in response to individual student work. Successful completion of the course requires the development of and commitment to an aesthetic and creative position within the fields of illustration and cartooning. Readings address the history and culture of illustration, comics and animation. The course anticipates the work of Capstone Studio 2.

Credit 3 units. EN: H

---

**F10 ART 433J Interaction Design: Advanced Applications**

This course allows students to hone and apply visual skills to interaction projects, with some emphasis on technical development. Specific deliverables may include websites across platforms, apps and other digital applications. Permission of instructor. Senior standing; College of Art majors only.

Credit 3 units.

---

**F10 ART 433K The Illustrator's Sketchbook**

The sketchbook has long been seen as the artist's personal playground. In this course, students are making images that explore concepts and visual narratives — but the raw materials for these illustrations come from exploration inside the pages of their sketchbooks. This course develops a discipline of daily drawing. In addition to sketchbook work, project assignments include both conceptual and applied projects like illustrated book jackets and short stories. Significant time is spent in media exploration, development of technique, and professional practices. Senior standing, College of Art majors only.

Credit 3 units. EN: H

---

**F10 ART 434A Senior Design Capstone: Narrative Design**

Students will select a subject and create a narrative book, magazine, zine, or screen-based work. Students will conduct subject research, develop content, write copy, pursue visual investigation, sequence audience interaction, and take the project to final execution. The course will emphasize coherent organization, clear communication, typographic refinement, and the successful integration of word and image. Semester culminates in formal presentation and professional project review. This course is appropriate for seniors in the communication design major.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 434B Senior Illustration Capstone: Visual Stories**

Students will spend the semester creating a long-form visual story. The source material for this story should be an existing story, song, legend, myth, historical event, book or other documented text. Using both nonfiction and fiction source materials, students will produce a single narrative in the form of an illustrated book, graphic novel/mini-comic or digital experience. The project will be expansive and cover a large range of professional practices, from visual conceptual development to final execution. Prerequisite: Image & Story or Editorial Illustration. This course is appropriate for seniors in the communication design major.

Credit 3 units. Art: FADM EN: H

---

**F10 ART 435M Special Topics in Communication Design:  
Design for Social Impact**

Designers are capable of creating transformative social change by engaging in socially conscious design practices. Throughout this course, consequently, students learn how to utilize appropriate design research methods and tools to prioritize the needs of the end users and their local contexts. Students conduct design research, analyze data, and discover innovative solutions to issues in the community while also working collaboratively. Senior standing, College of Art majors only. CET (<https://gephardtinsttute.wustl.edu/cec/sam-fox-school-of-design-and-visual-arts>) course.

Credit 3 units.

---

**F10 ART 436A Visual Journalism and Reportage Drawing**

This course combines studio practice, work in the field, subject reporting and nonfiction writing to explore a rich tradition that dates to the mid-19th century. The "special artists" who reported on the American Civil War, the urban observers of the Ashcan School, and the "New Journalism" illustrators of the 1950s, '60s and '70s brought vision and force to their work as reporters. Today, the reportage tradition is being reinvigorated in online outlets and periodicals. Students produce a series of works documenting observations of contemporary people, sites and events, culminating in a zine designed for print and/or a digital slideshow with supporting text. This course provides plentiful drawing experience. Supplemented by historical material in the collections of the Modern Graphic History Library. This course is appropriate for juniors in the communication design major. (Students with an interest in visual journalism grounded in street photography and visually engaged writers may be admitted to the course by permission of instructor.) CET (<https://gephardtinsttute.wustl.edu/cec/sam-fox-school-of-design-and-visual-arts>) course.

Credit 3 units. EN: H

---

**F10 ART 436N Special Topics in Communication Design:  
Environmental Design**

This course offers an introduction to the process and problem-solving methods required to conceptualize and develop an environmental graphics project. Students will gain an understanding of the relationship between a concept on screen and that idea realized at full scale and its impact in the built environment. Scale drawing, architectural documents, fabrication methods and materials will all be explored. Projects will include wayfinding and ADA signage, exhibit design and architectural graphics. Students will communicate their concepts through sketches, computer drawings, models and mock-ups.

Credit 3 units.

---

**F10 ART 461 Capstone Studio I**

Required for majors in painting, photography, printmaking and sculpture, beginning with the class of 2015. This is an advanced course in studio art conceptualization and production. Students develop creative concepts, objects and gestures; successful completion of the course entails the development of, and commitment to, an artistic position, evidenced by studio production, presentation and writing. Responsibilities include preparation of drawings, models, maquettes and other documentation. This course anticipates the work of Capstone Studio II, which culminates in a senior exhibition. This course includes practice, critique and occasional museum/gallery visits.

Corequisite: must be taken concurrently with F10 ART 411A, ART 413D, or ART 415B.

Credit 3 units. EN: H

---

**F10 ART 462 Capstone Studio II**

Continuation of Capstone Studio I. Required for majors in painting, photography, printmaking and sculpture, beginning with the class of 2015. Course participants design, prepare and complete a body of materially and conceptually resolved work for the spring Capstone exhibition. The course fosters an intellectual dialogue among seniors making the transition from studio to artist. Completion of a body of work is accompanied by intensive critical analysis of the ideas and methods from which it arises. Course includes practice, critique and occasional museum/gallery visits. Corequisite: must be taken concurrently with F10 ART 412A, ART 4143D, ART 416B or ART 418G.

Credit 3 units. Art: FAAM EN: H

---

**F10 ART 472B Content to Cover: the Design of Books**

This studio course considers the design of books in their totality, from the smallest typographic details of text pages, to designing the page grid, and the selection of images, type, materials and color of the binding and cover. Students will produce two books from texts assigned to them. The first will be a text-based book of prose; the second, larger project, will include body text, images, captions, footnotes. Beginning with a thorough discussion of the landscape of the two-page spread, students will complete a short research project based upon a complex illustrated book in the library. Discussion of print production and binding options in industry will be enhanced by a visit to a local offset printer and to Olin Library Special Collections. Students will deepen their skill base in typographic applications, the use of InDesign as a multipage document tool, a range of imaging techniques offered in the Book Studio, and bookbinding technique, as well as building their design criticism vocabulary. This course is appropriate for juniors and seniors in the communication design major.

Credit 3 units.

---

**F10 ART 485A Public Practice: Art Practice**

Students examine, critically explore and execute work in the public sphere. Readings, discussions and presentations generate a framework for understanding historical, theoretical and practical considerations for creating artwork in relation to the material/social conditions of public space. Projects may respond to any number of approaches in the contemporary field, including public sculpture, participatory art and ephemeral art practices. Students learn the discipline of proposal development and present final projects that are adjudicated by an outside jury. Students whose work is selected by the jury must enroll in the spring semester course "From Design to Realization." It is highly recommended that students who wish to concentrate in sculpture enroll in this course. Open to BFA students with senior-level standing and others, including minors, with consent of instructor.

Credit 3 units. EN: H

---

**F10 ART 486A Public Practice: Art Practice (Realized  
Actions)**

This studio course focuses on the realization of art projects in the public sphere. The class is a forum for students to explore self-generated public art projects as well as public art challenges and opportunities brought to the class from outside sources. Students will have the opportunity to work with local community and civic organizations to use artwork as a means of social engagement.

Projects may respond to any number of approaches in the contemporary field, including public sculpture, participatory art and ephemeral art practices. Faculty and student generated readings, discussions, and presentations will be the platform for creating actionable projects that operate within the material/social conditions of public space. This course is required for those students awarded a commission in Fall Art Practice: Public Practice as part of the University City Community Visuals Public Sculpture Series. Open to BFA students with junior-level standing, and others, including minors and MFA students, with consent of instructor.  
Credit 3 units. EN: H

---

### F20 ART 111 Painting

Same as F20 211, 311, 411. First-year students (only) register for F20 111. Introduction to painting processes and materials. While there is emphasis on oil painting, students are also introduced to watercolor and acrylic paints and a wide variety of painting surfaces. Subject matter is varied, beginning with still-life material and ending with direct painting from the model. Technical skills and content are dealt with at the individual student's level.  
Credit 3 units. Art: FAAM EN: H

---

### F20 ART 112 Painting

Same as F20 212, 312, 412. First-year students (only) register for F20 112. This course is an introduction to oil painting with an emphasis on the principles of color, construction and paint handling. Students will explore the possibilities of representational painting as applied to still-life, interiors, landscape and the human figure. The course is designed especially for beginning painters but can accommodate painters at all levels of proficiency.  
Credit 3 units. Art: FAAM EN: H

---

### F20 ART 113F Sculpture: Foundry

Same as F20 213F, F20 313F, F20 413F. First-year students (only) register for F20 113F Art. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. In addition to metal casting, students will use other materials such as plaster, resin, steel, wood, rubber, plastic and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required. School of Art majors and non-art students pursuing an art minor will have priority. Prerequisite: freshman standing or departmental approval.  
Credit 3 units. Art: FAAM EN: H

---

### F20 ART 113G Sculpture: Wood

Same as F20 213G, F20 313G, F20 413G. First-year students (only) register for F20 113G Art. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making. School of Art majors and non-

art students pursuing an art minor will have priority. Prerequisite: freshman standing or departmental approval.  
Credit 3 units. Art: FAAM EN: H

---

### F20 ART 113H Sculpture: Blacksmithing

This course is an introduction to blacksmithing materials, tools and techniques. Students explore the fundamental techniques of hand-forged metal. Metal can be manipulated as a plastic material and offers enormous possibilities for 3-dimensional form. In this class we explore these possibilities and expand our sculptural vocabulary.  
Credit 3 units. Art: FAAM EN: H

---

### F20 ART 113I Sculpture: Metal Fabrication

Metal is the backbone of our modern world and a viable medium for self-expression. It can be employed as structure or as surface, it can be deformed plastically to create compound shapes, or it can be connected to most any other material. Students explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines and learn the safe operation of drilling, grinding and finishing tools.  
Credit 3 units. Art: FAAM EN: H

---

### F20 ART 114F Sculpture: Foundry

Same as F20 214F, F20 314F, F20 414F. First-year students (only) register for F20 114F Art. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. In addition to metal casting, students will use other materials such as plaster, resin, steel, wood, rubber, plastic and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required. Prerequisite: freshman standing or departmental approval.  
Credit 3 units. Art: FAAM EN: H

---

### F20 ART 114G Sculpture: Wood

Same as F20 214G, F20 314G, F20 414G. First-year students (only) register for F20 114G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making. Prerequisite: freshman standing or departmental approval.  
Credit 3 units. EN: H

---

### F20 ART 114I Sculpture: Metal Fabrication

Metal is the backbone of our modern world and a viable medium for self-expression. It can be employed as structure or as surface, it can be deformed plastically to create compound shapes, or it can be connected to most any other material. Students explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines and learn the safe operation of drilling, grinding and finishing tools.  
Credit 3 units. EN: H

---

### F20 ART 115 Printmaking

Same as F20 215, 315, 415. First-year students (only) register for F20 115. Survey of printmaking covering basic processes in intaglio, lithography, relief, and monotype. Emphasis on mixed media and experimentation with a foundation in traditional,

historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 116 Printmaking**

Same as F20 216, 316, 416. First-year students (only) register for F20 116. Survey of printmaking covering basic processes in intaglio, lithography, relief and monotype. Emphasis on mixed media and experimentation with a foundation in traditional, historical and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 1183 Digital Photography**

Only undergraduates register for F20 1183. Graduate students register for F20 4183. This introductory level course will explore digital technology for capturing, enhancing and producing still lens-based images. The course will address basic digital camera operations, the visual language of camera-generated images, computer workflow and the connoisseurship of digital image output. The course assumes no prior knowledge or experience with digital imaging technologies or materials. Students must provide a digital camera.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 1184 Digital Photo II/Digital Imaging**

This course addresses the use of technology and pixel-based software for generating, manipulating and compositing still digital images. The course examines the visual language and poetics of additive lens-based images while providing students with knowledge of software tools, input devices, production techniques, color management strategies and output devices.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 1185 Kinetic Image/Digital Video**

This introductory-level course addresses the use of digital technology and software for capturing, editing and producing moving images. The course examines the visual language and poetics of moving images while providing students with foundation knowledge of camera operations, production storyboarding, software tools and presentation strategies. The course assumes no prior knowledge or experience with kinetic imaging technologies or software.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 1186 Black-and-White Photography**

Introduction to the fundamentals of black-and-white photography. Emphasis on control of film, paper and black-and-white photographic processes in the classical fine arts tradition. Topics may include portrait, landscape, street photography, the figure and contemporary issues in photography.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 1187 Black-and-White Photography II**

Same as 4187. Only undergraduates register for F20 1187. Graduate students register for F20 4187. Course adds to the experience of F20 1186 Black-and-White Photography. Students investigate phenomena relative to the camera and photography. Students develop the vision necessary to take intelligent and articulate photographs, as well as establish the notion of high craft in terms of the negative and the print. Topics may include

portrait, landscape, street photography, the figure, and the photo story.

Credit 3 units. Art: FAAM

---

#### **F20 ART 119 Ceramics**

An introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of the wheel, coil and slab construction. While the emphasis is on high-fired stoneware, students are introduced to Raku and soda firing. Content and advanced processes and skills are encouraged according to the individual's level.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 120 Ceramics**

Same as F20 220, 320, 420. First-year students (only) register for F20 120. An introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of the wheel, coil and slab construction. While the emphasis is on high-fired stoneware, students will be introduced to Raku and soda firing. Content and advanced processes and skills are encouraged according to the individual's level.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 127A History of Photography**

Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influences on the medium.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 128A History of Photography**

Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 133 Basic Illustration**

An introduction to concepts, media techniques and problem-solving approaches within contemporary illustration. Emphasis on individual solutions to the problems presented.

Credit 3 units. Art: FADM EN: H

---

#### **F20 ART 134 Basic Illustration**

Same as F20 234, 334, 434. First-year students (only) register for F20 134. An introduction to the concepts, media and problem-solving methods of contemporary illustration. Projects involve image development for applications such as book illustration, iconic/logo illustration, product development and information graphics. Students can work by hand or on the computer. Traditional drawing skills not required. Ideal course for College of Art students whose work focuses on images, communication design minors, students outside the College of Art interested in the aesthetics of images, and business students. No prerequisites. This course is appropriate for any student in the university. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 135G The Licensed Image: Development and Distribution**

An introduction to the concept of image development, design, market distribution and methodology for creating licensed products. Projects involve product idea development, market and the development of image-driven products using images, design and writing. Traditional drawing skills not required. Students may work by hand or on the computer. Ideal course for College of Art students whose work focuses on images, design minors, and students outside the College of Art interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 135I Communication Design I**

An introduction to the field of communication design, combining principles from the fields of graphic design, advertising and illustration/image construction. Through studio exercises and lectures, students are exposed to the broad range of conceptual, aesthetic and strategic issues inherent to the field. Additionally, the similarities, differences and points of overlap within the three areas are discussed. Strongly recommended for students considering the communication design major. An excellent introduction to the subject as a tool for business and marketing.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 135J Introduction to Animating in Three Dimensions**

This course addresses the fundamental principles of designing and constructing the 3-dimensional modeled world for film and video. Students progress from an overview of the 3-D animation process to defining and implementing filmic ideas using their own modeled creations. Sketches are imported into modeling software (Maya), which is used to build and animate characters, create environments and produce effects. Three-dimensional animation is created in its own virtual space and is navigated by cameras much like a traditional film studio or sound stage. Therefore, cinematic shot design and camera navigation within the virtual world are examined in depth. An animated 3-D short is produced to convey a simple story in a model environment.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 135O Drawing as Thinking**

Same as F20 235O, 335O, 435O. First-year students (only) register for F20 135O. This studio course explores symbolic drawing as a practical tool for learning and communication, used as it has been for millennia for the acquisition and transmission of knowledge, for idea generation and formation, and for visual storytelling. Students will observe and describe phenomena, conceive systems, construct diagrams, design processes, and convey instructions, all using drawing as an aid to discovery, thought and communication. Tools and media may include pencils, brushes, wooden sticks, markers, painter's tape, laser pointers, and amateur surveying software, etc. In some cases, digital tools will be used to produce and present student projects. The course will include relevant readings and discussions. Throughout we will distinguish between symbolic uses of drawing and illusionistic ones, focusing on the former.

Credit 3 units.

---

**F20 ART 1361 Advertising 1**

Same as F20 2361, F20 3361, F20 4361. First-year students (only) register for F20 1361. This hybrid studio/lecture course introduces students to the field of advertising by defining its

role in American culture and economy and engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting. Experience in copywriting and design is not necessary.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 1362 Advertising I**

Same as F20 2362, 3362, 4362. First-year students (only) register for F20 1362. This studio course introduces students to the field of advertising by defining its role in American culture and economy and engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting. No prerequisites. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 1363 Advertising in the Digital Age**

Same as F20 2363, 3363, 4363. First-year students (only) register for F20 1363. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior — including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally, we'll speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 1364 Advertising in the Digital Age**

Same as F20 2364, 3364, 4364. First-year students (only) register for F20 1364. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior — including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally we'll speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 1365 History of Advertising**

Same as F20 2365, F20 3365, F20 4365. First-year students (only) register for F20 1365. The historical, cultural and technological development of advertising in America from the colonial period to the present. This course examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them,

and changes in our culture that advertising both influences and reflects.

Credit 3 units. Art: FADM

---

**F20 ART 1366 History of Advertising**

Same as F20 2366, F20 3366, F20 4366. First-year students (only) register for F20 1366. The historical, cultural and technological development of advertising in America from the colonial period to the present. This lecture course examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them, and changes in our culture that advertising both influences and reflects. Grading is based on midterm and final exams as well as optional, extra-credit five page essays. No prerequisites. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 136G The Licensed Image: Development and Distribution**

Same as F20 236G, 336G, 436G. First-year students (only) register for F20 136G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market, and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for College of Art students whose work focuses on images, Communication design minors and students outside the College of Art interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 136I Communication Design I**

Same as F20 236I, 336I, 436I. First-year students (only) register for F20 136I. Students are introduced to the fundamentals of communication design. Through studio exercises and lectures, students are exposed to a broad range of conceptual, aesthetic and strategic issues in the field. The course explores principles of two dimensional design, typography, and the relationship of text and image in order to persuade and inform. It helps students to learn a design methodology for illuminating and solving problems and provides baseline training in the Adobe Suite. Upon completion of this course, students will be able to design basic projects and have criteria to provide an informed evaluation of the effectiveness of a given design. It provides an introduction to design as a tool for business and marketing. No prerequisites. This course is appropriate for any student in the university. Counts toward Design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 136J Introduction to Animating in Three Dimensions**

This course explores 3-D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag and character-driven content. Cinematic shot design, timing, character design and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3-D animation program as the basis to model and animate characters, create settings and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise.

Prerequisite: F10 Art 101 Drawing or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 136K Communication Design II**

Same as F20 236K, 336K, 436K. First-year students (only) register for F20 136K. Building on the fundamentals of CDEs I, this course will offer students the opportunity to solve more complex visual communication problems. Information design (explanatory graphs and charts), multipage sequences (book/magazine design) and persuasion (advertising/propaganda) will be some of the topics covered. Various methodologies for defining problems, generating ideas, exploring possible visual solutions and evaluating work-in-progress and finished designs from the previous course, will be reinforced. This course will introduce students to a range of media, including digital and alternative forms. Emphasis will be placed on finding visually compelling solutions, no matter the media. The computer will be used as a tool to assemble and refine. Students will be encouraged to use online tutorials to augment in-class instruction. Prerequisite: Communication Design I. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 138J Advanced Animation**

Same as F20 238J, 338J, 438J. First-year students (only) register for F20 138J. This course focuses on completing a short animated film as a group project utilizing a workflow similar to that used in the animated feature film industry. The class will first develop a story. Individuals will then be assigned tasks according to strong areas of interest to create a storyboard and animatic. Key moments will be identified to be animated first. Once agreed on, students will be able to choose to work in various parts of the pipeline including Character Design; Layout and Set Design; 3-D modeling; Rigging; Animation; Textures; Special Effects; Sound; Rendering and Editing. Finally, it is all put together as a short. This is an advanced course that assumes some experience in Maya or similar 3-D program, or for those who have already developed skills in any form of animation. Prerequisite: Introduction to Animating in Three Dimensions or permission from the instructor. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 143B Fiber Manipulation**

Same as F20 243B, 343B and 443B. First-year students (only) register for F20 143B. Exploration of fiber techniques and their application in design and art. Students will study a spectrum of fiber and textile treatments such as surface design, shibouri, wax resist, digital design, needle applications, heat applications and a variety of three-dimensional structuring strategies. Projects will integrate techniques into appropriate design strategy for the fine arts or design. Open to first-year through senior-level students.

Credit 3 units. Art: FADM

---

**F20 ART 1481 The Illustrated Book: Design and Production**

An investigation of text, image, design and production within the broad realm of illustrated books. A series of exploratory exercises in the beginning of the semester yields to a single sustained project proposed and developed by the student. Project emphases may include visual narrative, textual interpretation, creative writing, typography, structure and sequencing, and material investigation. Production methods may include relief and letterpress; engraving and intaglio; offset

lithography; and digital, "virtual" media. Certain projects may require a second semester of study to complete.  
Credit 3 units. EN: H

---

**F20 ART 1482 The Illustrated Book: Design and Production**

An investigation of text, image, design and production within the broad realm of illustrated books. A series of exploratory exercises in the beginning of the semester yields to a single sustained project proposed and developed by the student. Project emphases may include visual narrative, textual interpretation, creative writing, typography, structure and sequencing, and material investigation. Production methods may include relief and letterpress, engraving and intaglio, offset lithography and digital ("virtual") media. Certain projects may require a second semester of study to complete.  
Credit 3 units. EN: H

---

**F20 ART 171 Introduction to Letterpress Printing**

This class serves as an introduction to printing with the Vandercook handpress. Through a series of assignments students learn a systematic approach to planning, arranging and printing type on a page. The students receive a basic introduction to typography, history of letterforms and history of the book. The mechanics of relief printing with the cylinder proof press, ink composition and resolution of the typographic image also are explored. As an exploration of the publishing process, students produce a chapbook of a short literary work. The class primarily focuses on typographic composition, but one assignment employs a combination of word and image.  
Credit 3 units. Art: FAAM EN: H

---

**F20 ART 1713 Introduction to Book Binding**

Same as F20 2713, F20 3713, F20 4713. First-year students (only) register for F20 1713. This class will serve as an introduction to the book as artifact of material culture. A variety of traditional and non-traditional book structures will be explored. Students will learn from historical approaches to constructing the codex form including the single signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and will produce a variety of decorated papers to be used in their bindings.  
Credit 3 units. Art: FADM EN: H

---

**F20 ART 1714 Introduction to Book Binding**

Same as F20 2714, F20 3714, F20 4714. First-year students (only) register for F20 1714. This class will serve as an introduction to the book as artifact of material culture. A variety of traditional and non-traditional book structures will be explored. Students will learn from historical approaches to constructing the codex form including the single signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and will produce a variety of decorated papers to be used in their bindings. Prerequisite: None.  
Credit 3 units. Art: FADM EN: H

---

**F20 ART 180 Special Topics: Haute Photography**

Same as F20 280, 380 and 480. First-year students (only) register for F20 180. This photography course delves into the ever-changing fashion industry and investigates how fashion affects our sense of reality and self. Informed by architecture, cinema, design and music, this class invites students to reconsider their relationship with the highly coded world of mass-media representation in fashion from the street to the runway. Students will be steeped in both studio and location lighting. Discourse also includes, through engaging dialog as well as practice, how post-production (Photoshop) impacts the industry and world market. Students are required to have some form of image capture device. No prerequisites.  
Credit 3 units.

---

**F20 ART 211 Painting**

Same as F20 111, 311, 411. Sophomores (only) register for F20 211. Introduction to painting processes and materials. While there is emphasis on oil painting, students are also introduced to watercolor and acrylic paints and a wide variety of painting surfaces. Subject matter is varied, beginning with still-life material and ending with direct painting from the model. Technical skills and content are dealt with at the individual student's level.  
Credit 3 units. Art: FAAM EN: H

---

**F20 ART 212 Painting**

Same as F20 112, 312, 412. Sophomores (only) register for F20 212. This course is an introduction to oil painting with an emphasis on the principles of color, construction and paint handling. Students will explore the possibilities of representational painting as applied to still-life, interiors, landscape and the human figure. The course is designed especially for beginning painters but can accommodate painters at all levels of proficiency.  
Credit 3 units. Art: FAAM EN: H

---

**F20 ART 213F Sculpture: Foundry**

Same as F20 ART 113F, F20 ART 313F, F20 ART 413F. Sophomores (only) register for F20 ART 213F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students learn mold making, direct organic burnout, ceramic shell investment, metal chasing and patination in order to create finished sculpture. In addition to metal casting, students use other materials such as plaster, resin, steel, wood, rubber, plastic and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required. College of Art majors and non-art students pursuing an art minor have priority. Prerequisite: sophomore standing or departmental approval.  
Credit 3 units. Art: FAAM EN: H

---

**F20 ART 213G Sculpture: Wood**

Same as F20 ART 113G, F20 ART 313G, F20 ART 413G. Sophomores (only) register for F20 ART 213G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making. College of Art majors and non-art students pursuing an art minor have priority. Prerequisite: sophomore standing or departmental approval.  
Credit 3 units. Art: FAAM EN: H

---

---

**F20 ART 213H Sculpture: Blacksmithing**

This course is an introduction to blacksmithing materials, tools and techniques. Students explore the fundamental techniques of hand-forged metal. Metal can be manipulated as a plastic material and offers enormous possibilities for three-dimensional form. In this class we explore these possibilities and expand our sculptural vocabulary.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 213I Sculpture: Metal Fabrication**

Metal is the backbone of our modern world and a viable medium for self-expression. It can be employed as structure or as surface, it can be deformed plastically to create compound shapes, or it can be connected to most any other material. Students explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines and learn the safe operation of drilling, grinding and finishing tools.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 214F Sculpture: Foundry**

Same as F20 ART 114F, F20 ART 314F, F20 ART 414F. Sophomores (only) register for F20 ART 214F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students learn mold making, direct organic burnout, ceramic shell investment, metal chasing and patination in order to create finished sculpture. In addition to metal casting, students use other materials such as plaster, resin, steel, wood, rubber, plastic and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required. Prerequisite: sophomore standing or departmental approval.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 214G Sculpture: Wood**

Same as F20 ART 114G, F20 ART 314G, F20 ART 414G. Sophomores (only) register for F20 ART 214G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making. Prerequisite: sophomore standing or departmental approval.

Credit 3 units. EN: H

---

**F20 ART 214I Sculpture: Metal Fabrication**

Metal is the backbone of our modern world and a viable medium for self-expression. It can be employed as structure or as surface, it can be deformed plastically to create compound shapes, or it can be connected to most any other material. Students explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines and learn the safe operation of drilling, grinding and finishing tools.

Credit 3 units. EN: H

---

**F20 ART 215 Printmaking**

Same as F20 115, 315, 415. Sophomores (only) register for F20 215. Survey of printmaking covering basic processes in intaglio, lithography, relief, and monotype. Emphasis on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Credit 3 units. Art: FAAM EN: H

---

---

**F20 ART 216 Printmaking**

Same as F20 116, 316, 416. Sophomores (only) register for F20 216. Survey of printmaking covering basic processes in intaglio, lithography, relief and monotype. Emphasis on mixed media and experimentation with a foundation in traditional, historical and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 219 Ceramics**

An introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of the wheel, coil and slab construction. While the emphasis is on high-fired stoneware, students are introduced to Raku and soda firing. Content and advanced processes and skills are encouraged according to the individual's level.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 220 Ceramics**

Same as F20 120, 320, 420. Sophomores (only) register for F20 220. An introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of the wheel, coil and slab construction. While the emphasis is on high-fired stoneware, students will be introduced to Raku and soda firing. Content and advanced processes and skills are encouraged according to the individual's level.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 223F Special Topics in Fashion Design (Fashion Design: Collaboration Studio)**

University collaboration course with Fashion Design, Occupational Therapy, Mechanical Engineering and Business to develop design proposals and prototypes for specific customer profiles. Teams of students from different majors will design for various community and industry partners. They will work to solve an apparel or accessory design problem with innovative new concepts. The team will consider the person's lifestyle, occupation, and environmental factors that influence a design's functionality. A client-centered approach is used. Students will be evaluated on how well the design proposal meets the expressed aesthetic and functional needs of the client. Prerequisite: Introduction to Fashion Design.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 223L Special Topics in Fashion Design: Fashion and Race**

Is the fashion industry racist? This seminar course unpacks this contemporary inquiry by decentralizing fashion history to take a critical look at how racial identities are formed and performed, how historical stereotypes are perpetuated, and how theories of representation can be situated within the system of fashion. Students will use theoretical texts on race and representation to read contemporary media surrounding fashion and race (editorials, articles, social media), as well as gain an introduction to recently published research by scholars engaging fashion and race. Not only will students walk away with a richer understanding of how to critically think through race in fashion, but also how doing so gives us a new approach to think through race within a larger system. Prerequisites: none. Counts toward design minor.

Credit 3 units. Art: FADM

---

### **F20 ART 227A History of Photography**

Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium.

Credit 3 units. Art: FAAM EN: H

---

### **F20 ART 228A History of Photography**

Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium.

### **F20 ART 229F Tale of Two Cities: Documenting Our Divides**

The metropolitan St. Louis area has become the nation's symbol of modern segregation erupting into urban unrest and violence foiled against nonviolent direct-action interventions, youth-driven social protests and grassroots revitalization. With the assistance of a faculty seed grant from the Divided City Initiative, in partnership with the Center for the Humanities in Arts & Sciences and the Mellon Foundation, Tale of Two Cities: Documenting Our Divides will bring together students working in transdisciplinary teams to create documentary videos of street events, meetings and interviews that capture the immediacy of this historical moment. Students will partner and engage with a local nonprofit organization, grassroots movement or religious institution. Topics can include personal and/or institutional issues of a "divided city" that are exacerbated by race, gender, economic status, sexual orientation or geography. Successful completion of this course involves researching and creating a short video with a distinctive perspective and point of view that will draw upon the team's collaborative voices from history, performing arts, economics, law, social work, African-American studies, architecture and art. Skills will be developed in the fundamentals of story development, video and audio-capture in the field, editing with Adobe Premier and archival preservation. No prerequisites.

Same as I50 InterD 329F

Credit 3 units.

---

### **F20 ART 233 Basic Illustration**

An introduction to concepts, media techniques and problem-solving approaches within contemporary illustration. Emphasis on individual solutions to the problems presented.

Credit 3 units. Art: FADM EN: H

---

### **F20 ART 234 Basic Illustration**

Same as F20 134, 334, 434. Sophomores (only) register for F20 234. An introduction to the concepts, media, and problem-solving methods of contemporary illustration. Projects involve image development for applications such as book illustration, iconic/logo illustration, product development and information graphics. Students can work by hand or on the computer. Traditional drawing skills not required. Ideal course for College of Art students whose work focuses on images, communication design minors, students outside the College of Art interested in the aesthetics of images, and business students. No prerequisites. This course is appropriate for any student in the university. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

### **F20 ART 235A Interaction Design: Applications for Public Health**

Through a blend of presentations from practitioners, classroom lectures, readings, discussion and hands-on exercises, this class engages principles and methods of interaction design within the context of health challenges. Broadly defined, interaction design is the practice of designing products, environments, systems, and services with a focus on behavior and user experience. We take on an in-depth challenge in an area such as transportation or community health resources and work in cross-disciplinary design teams with an external partner organization. Students gain experience in planning and executing a human-centered design process featuring research, ideation, synthesis, concept development, prototypes and a final presentation, which may include visual design, animation, and sound. Students work in teams to develop several intermediate project deliverables, such as prototypes and sketches. No prior course work is necessary, though experience with Adobe Photoshop, Illustrator and InDesign are helpful. No prerequisites. Open to sophomores through graduate-level students across the university.

Credit 3 units. EN: H

---

### **F20 ART 235G The Licensed Image: Development and Distribution**

Same as F20 135G, F20 335G, F20 435G. Sophomores (only) register for F20 235G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for College of Art students whose work focuses on images, communication design minors and students outside the College of Art interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

---

### **F20 ART 235I Communication Design I**

An introduction to the field of communication design, combining principles from the fields of graphic design, advertising and illustration/image construction. Through studio exercises and lectures, students are exposed to the broad range of conceptual, aesthetic and strategic issues inherent to the field. Additionally, the similarities, differences and points of overlap within the three areas are discussed. Strongly recommended for students considering the communication design major. An excellent introduction to the subject as a tool for business and marketing.

Credit 3 units. Art: FADM EN: H

---

### **F20 ART 235J Introduction to Animating in Three Dimensions**

This course explores 3-D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag and character-driven content. Cinematic shot design, timing, character design and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3-D animation program as the basis to model and animate characters, create settings and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisite: F10 ART 101 Drawing or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 2350 Drawing as Thinking**

Same as F20 135O, F20 335O, F20 435O. Sophomores (only) register for F20 235O. This studio course explores symbolic drawing as a practical tool for learning and communication, used as it has been for millennia for the acquisition and transmission of knowledge, for idea generation and formation, and for visual storytelling. Students will observe and describe phenomena, conceive systems, construct diagrams, design processes, and convey instructions, all using drawing as an aid to discovery, thought and communication. Tools and media may include pencils, brushes, wooden sticks, markers, painter's tape, laser pointers, and amateur surveying software, etc. In some cases, digital tools will be used to produce and present student projects. The course will include relevant readings and discussions. Throughout we will distinguish between symbolic uses of drawing and illusionistic ones, focusing on the former. Credit 3 units.

---

**F20 ART 2361 Advertising 1**

Same as F20 ART 1361, F20 ART 3361, F20 ART 4361. Sophomores (only) register for F20 ART 2361. This hybrid studio/lecture course introduces students to the field of advertising by defining its role in American culture and economy and engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting. Experience in copywriting and design is not necessary. Credit 3 units. Art: FADM EN: H

---

**F20 ART 2362 Advertising I**

Same as F20 1362, 3362, 4362. Sophomores (only) register for F20 2362. This studio course introduces students to the field of advertising by defining its role in American culture and economy and engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting. No prerequisites. This course counts in the communication design minor. Credit 3 units. Art: FADM EN: H

---

**F20 ART 2363 Advertising in the Digital Age**

Same as F20 ART 1363, ART 3363, ART 4363. Sophomores (only) register for F20 ART 2363. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior — including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally, we speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one. Credit 3 units. Art: FADM EN: H

---

**F20 ART 2364 Advertising in the Digital Age**

Same as F20 1364, 3364, 4364. Sophomores (only) register for F20 2364. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior — including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally we'll speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 2365 History of Advertising**

Same as F20 1365, F20 3365, F20 4365. Sophomores (only) register for F20 2365. The historical, cultural and technological development of advertising in America from the colonial period to the present. This lecture course examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them and changes in our culture that advertising both influences and reflects. Grading is based on midterm and final exams as well as optional, extra-credit five page essays. No prerequisites. This course counts in the communication design minor. Credit 3 units. Art: FADM

---

**F20 ART 2366 History of Advertising**

Same as F20 1366, 3366, 4366. Sophomores (only) register for F20 2366. The historical, cultural and technological development of advertising in America from the colonial period to the present. This lecture course examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them, and changes in our culture that advertising both influences and reflects. Grading is based on midterm and final exams as well as optional, extra-credit five page essays. No prerequisites. This course counts in the communication design minor. Credit 3 units. Art: FADM EN: H

---

**F20 ART 236A Interaction Design: Understanding Health and Well-Being**

Same as F20 336A, F20 436A. Sophomores (only) register for F20 236A. Through a blend of presentations from practitioners, classroom lectures, readings, discussion and hands-on exercises, this class will engage principles and methods of interaction design within the context of health challenges. Broadly defined, interaction design is the practice of designing products, environments, systems and services with a focus on behavior and user experience. We will take on an in-depth challenge in the area of health and well-being and work in cross-disciplinary design teams with an external partner organization. Students will gain experience in planning and executing a human-centered design process featuring research, ideation, synthesis, concept development, prototypes and a final presentation, which may include visual design, animation and sound. Students will work in teams to develop several intermediate project deliverables, such as prototypes and sketches. No prior course work is necessary though experience with Adobe Photoshop, Illustrator and InDesign are helpful.

No prerequisites. Open to sophomore through graduate-level students across the university.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 236G The Licensed Image: Development and Distribution**

Same as F20 136G, 336G, 436G. Sophomores (only) register for F20 236G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market, and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for College of Art students whose work focuses on images, communication design minors and students outside the College of Art interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 236I Communication Design I**

Same as F20 136I, 336I, 436I. Sophomores (only) register for F20 236I. Students are introduced to the fundamentals of communication design. Through studio exercises and lectures, students are exposed to a broad range of conceptual, aesthetic and strategic issues in the field. The course explores principles of two dimensional design, typography, and the relationship of text and image in order to persuade and inform. It helps students to learn a design methodology for illuminating and solving problems and provides baseline training in the Adobe Suite. Upon completion of this course, students will be able to design basic projects and have criteria to provide an informed evaluation of the effectiveness of a given design. It provides an introduction to design as a tool for business and marketing. No prerequisites. This course is appropriate for any student in the university. Counts toward Design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 236J Introduction to Animating in Three Dimensions**

This course explores 3-D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag and character-driven content. Cinematic shot design, timing, character design and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3-D animation program as the basis to model and animate characters, create settings, and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisite: F10 ART 101 Drawing or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 236K Communication Design II**

Same as F20 136K, 336K, 436K. Sophomores (only) register for F20 236K. Building on the fundamentals of CDes I, this course will offer students the opportunity to solve more complex visual communication problems. Information design (explanatory graphs and charts), multipage sequences (book/magazine design) and persuasion (advertising/propaganda) will be some of the topics covered. Various methodologies for defining problems, generating ideas, exploring possible visual solutions and evaluating work-in-progress and finished designs from the previous course, will be reinforced. This course will

introduce students to a range of media, including digital and alternative forms. Emphasis will be placed on finding visually compelling solutions, no matter the media. The computer will be used as a tool to assemble and refine. Students will be encouraged to use online tutorials to augment in-class instruction. Prerequisite: Communication Design I. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 2385 The Art of Advertising**

The Art of Advertising elective will introduce students to the field by defining the role of advertising in American culture and economy. It will begin by exploring the evolving and devolving aspects of American advertising and the forces that both compel and repel consumer audiences. The class will explain the processes and criteria that, when properly utilized, elevate advertising and validate it as an art form. The course will consist of lectures and visiting instructors, brief essay quizzes and a series of exercises designed to acquaint each student with administrative and creative processes and various disciplines within the advertising field. Major emphasis will be placed upon the creative disciplines.

Credit 3 units. EN: H

---

**F20 ART 238J Advanced Animation**

Same as F20 138J, 338J, 438J. Sophomores (only) register for F20 238J. This course focuses on completing a short animated film as a group project utilizing a workflow similar to that used in the animated feature film industry. The class will first develop a story. Individuals will then be assigned tasks according to strong areas of interest to create a storyboard and animatic. Key moments will be identified to be animated first. Once agreed on, students will be able to choose to work in various parts of the pipeline including Character Design; Layout and Set Design; 3-D modeling; Rigging; Animation; Textures; Special Effects; Sound; Rendering and Editing. Finally, it is all put together as a short. This is an advanced course that assumes some experience in Maya or similar 3-D program, or for those who have already developed skills in any form of animation. Prerequisite: Introduction to Animating in Three Dimensions or permission from the instructor. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 239I Radical Design: Making Civic Experiences**

Same as F20 339I, 439I. Sophomores (only) register for F20 239I. As we innovate rapidly in technology and communication, the economic and political structures that govern us have become largely assumed and unchallenged. This course explores the daily objects, interactions and spaces that make up these large systems (like a police ticket or the layout of a courtroom), and experiments with how redesigning these elements can help us question the status quo. Building on diverse political mindsets and current trends, we will imagine fictional worlds, and craft the objects, procedures and interactions that inhabit them. Along the way, we'll discuss the value of designing for fundamental change alongside more incremental reform. Counts toward design minor.

Credit 3 units. Art: FADM

---

**F20 ART 2481 The Illustrated Book: Design and Production**

An investigation of text, image, design and production within the broad realm of illustrated books. A series of exploratory exercises in the beginning of the semester yields to a single

sustained project proposed and developed by the student. Project emphases may include visual narrative, textual interpretation, creative writing, typography, structure and sequencing, and material investigation. Production methods may include relief and letterpress; engraving and intaglio; offset lithography; and digital, "virtual" media. Certain projects may require a second semester of study to complete.  
Credit 3 units. EN: H

---

**F20 ART 2482 The Illustrated Book: Design and Production**

An investigation of text, image, design and production within the broad realm of illustrated books. **F20 ART 2648 Italian Language**

This course, taught entirely in Italian, covers Italian grammar and conversation for study abroad students in Florence. There is an emphasis on class participation accompanied by readings and writings. The student develops facility speaking the language on an everyday basis.  
Credit 3 units. EN: H

---

**F20 ART 2661 Semester Abroad Program Seminar**

This course prepares students participating in the Sam Fox School's Semester Abroad Programs. The seminar meets eight times over the course of the semester. Attendance is mandatory for students going abroad. Prerequisite: College of Art and College of Architecture students selected for the Sam Fox School Abroad Programs.  
Credit 1 unit. EN: H

---

**F20 ART 2662 Semester Abroad Program Seminar**

This course prepares students participating in the College of Art's Semester Abroad Program in Florence, Italy. The seminar meets eight times over the course of the semester. Attendance is required. Prerequisite: students selected for the Semester Abroad Program only.  
Credit 1 unit. EN: H

---

**F20 ART 271 Introduction to Letterpress Printing**

This class will serve as an introduction to printing with the Vandercook handpress. Through a series of assignments students will learn a systematic approach to planning, arranging and printing type on a page. The students will receive a basic introduction to typography, history of letterforms, and history of the book. The mechanics of relief printing with the cylinder proof press, ink composition, and resolution of the typographic image will also be explored. As an exploration of the publishing process students will produce a chapbook of a short literary work. The class will primarily focus on typographic composition, but one assignment will employ a combination of work and image.  
Credit 3 units. Art: FADM EN: H

---

**F20 ART 2713 Introduction to Book Binding**

Same as F20 1713, F20 3713, F20 4713. Sophomores (only) register for F20 2713. This class will serve as an introduction to the book as artifact of material culture. A variety of traditional and nontraditional book structures will be explored. Students will learn from historical approaches to constructing the codex form including the single signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and will produce a variety of decorated papers to be used in their bindings.  
Credit 3 units. Art: FADM EN: H

---

**F20 ART 2714 Introduction to Book Binding**

Same as F20 1714, F20 3714, F20 4714. Sophomores (only) register for F20 2714. This class will serve as an introduction to the book as artifact of material culture. A variety of traditional and nontraditional book structures will be explored. Students will learn from historical approaches to constructing the codex form including the single signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and will produce a variety of decorated papers to be used in their bindings.  
Credit 3 units. Art: FADM EN: H

---

**F20 ART 2783 Special Topics in Visual Culture: Introduction to Illustration Studies**

How have knowledge, opinion and feeling been communicated visually from the advent of automated printing presses to the invention of the internet, and to what effect? Using concepts in visual studies and communication studies, this course explores the histories of primarily American visual-verbal texts to investigate how minds and hands conceived, produced, distributed and consumed illustrated print media in the 19th and 20th centuries. Beginning with the neurological basis of vision, we will examine ways culture affects perception, how print technologies shape content, how word and image rhetorically shape beliefs, how power relations imbue images and publishing, and the ways counterculture forms such as caricature and posters can be used to intervene socially. Students will conduct original research using University Libraries Special Collections to hone their ability to write convincingly and professionally about imagery. No prerequisites; 200 level open to students across the university. Counts toward design minor.  
Credit 3 units. Art: FADM

---

**F20 ART 280 Special Topics: Haute Photography**

Same as F20 180, 380 and 480. Sophomores (only) register for F20 280. This photography course delves into the ever-changing fashion industry and investigates how fashion affects our sense of reality and self. Informed by architecture, cinema, design and music, this class invites students to reconsider our relationship with the highly coded world of mass-media representation in fashion from the street to the runway. Students will be steeped in both studio and location lighting. Discourse also includes, through engaging dialog as well as practice, how post-production (Photoshop) impacts the industry and world market. Students

are required to have some form of image capture device. No prerequisites.  
Credit 3 units.

---

**F20 ART 283 Special Topics: Eco-Art**

Same as F20 383 and 483. Sophomores (only) register for F20 283. Eco-art explores the intersection of art, ecology and ethics. Though the movement is broad and growing, eco-art re-envisioning our relationship with the natural world by informing, challenging, inventing and reclaiming. The practice can include "green" methodologies, repurposed objects, land art, ecoventions, social sculpture and community activism. This studio-based course explores various artistic practices and working methodologies related to environmental art. The course is organized around contemporary and art historical precedents, including discussion of eco-design and sustainable architecture. Projects are open to multidimensional solutions in a wide variety of media.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 307X Community Building**

This course looks at the intersection of the built fabric and the social fabric. Using St. Louis as the starting point, this course takes students out of the classroom and into a variety of neighborhoods — old, new, affluent, poor — to look at the built environment in a variety of contexts and through a variety of lenses. Almost every week for the first half of the semester, students visit a different area (or areas), each trip highlighting some theme or issue related to the built environment (architecture, planning, American history, investment and disinvestment, community character and values, race, transportation, immigrant communities, future visions, etc.). Running parallel to this, students are involved in an ongoing relationship with one particular struggling neighborhood, in which students attend community meetings and get to know and become involved with the people in the community in a variety of ways. Students learn to look below the surface, beyond the single obvious story, for multiple stories, discovering their complexity, contradictions and paradoxes. They also come to consider the complex ways in which architecture and the built environment can affect or be affected by a host of other disciplines. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Fulfills Sam Fox Commons requirement.

Same as X10 XCORE 307X  
Credit 3 units. EN: H

---

**F20 ART 308X Community Building North**

This course addresses the complex economic, political and racial landscape of north St. Louis County focused on Ferguson, Missouri, as the embodiment of problems and conflicts endemic to urban communities across the country. The events following Michael Brown's shooting death on August 9, 2014, have revealed deep divisions in the St. Louis metropolitan area. Our multidisciplinary approach will be evident as we investigate the intersecting, compounding roles of social and economic inequities, racial disparities, white flight, public safety, housing and economic development as we grapple with legitimate, thoughtful ways of making positive change. We'll learn how to listen to, understand and address conflicting voices. Readings, speakers, site visits, films and other materials will be combined with discussion, writing and socially conscious engagement as we seek to understand the many faces of Ferguson while following contemporary developments as they occur. Professor Robert Hansman acts as adviser and guide. The interdisciplinary

course he developed over many years, "Community Building/ Building Community," provides the intellectual, ethical, and spiritual bases as co-taught by Raimist and Hansman. This course offers fresh perspectives and provides unique opportunities for community engagement for students who have previously taken Community Building, however that course is not a prerequisite. Projects develop collaboratively and organically between students, faculty and community partners working to find common values and beliefs upon which to build concrete, meaningful action.

Same as X10 XCORE 308X  
Credit 3 units.

---

**F20 ART 311 Painting**

Same as F20 111, 211, 411. Juniors (only) register for F20 311. Introduction to painting processes and materials. While there is emphasis on oil painting, students are also introduced to watercolor and acrylic paints and a wide variety of painting surfaces. Subject matter is varied, beginning with still-life material and ending with direct painting from the model. Technical skills and content are dealt with at the individual student's level.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 312 Painting**

Same as F20 112, 212, 412. Juniors (only) register for F20 312. This course is an introduction to oil painting with an emphasis on the principles of color, construction and paint handling. Students will explore the possibilities of representational painting as applied to still-life, interiors, landscape and the human figure. The course is designed especially for beginning painters but can accommodate painters at all levels of proficiency.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 313F Sculpture: Foundry**

Same as F20 113F, F20 213F, F20 413F. Juniors (only) register for F20 313F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. In addition to metal casting, students will use other materials such as plaster, resin, steel, wood, rubber, plastic and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required. School of Art majors and non-art students pursuing an art minor will have priority. Prerequisite: junior standing or departmental approval.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 313G Sculpture: Wood**

Same as F20 113G, F20 213G, F20 413G. Juniors (only) register for F20 313G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making. School of Art majors and non-art students pursuing an art minor will have priority. Prerequisite: junior standing or departmental approval.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 313H Sculpture: Blacksmithing**

This course is an introduction to Blacksmithing materials, tools and techniques. Students explore the fundamental techniques of hand-forged metal. Metal can be manipulated as a plastic

material and offers enormous possibilities for 3-dimensional form. In this class we explore these possibilities and expand our sculptural vocabulary.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 313I Sculpture: Metal Fabrication**

Metal is the backbone of our modern world and a viable medium for self-expression. It can be employed as structure or as surface, it can be deformed plastically to create compound shapes, or it can be connected to most any other material. Students explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines and learn the safe operation of drilling, grinding and finishing tools.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 314F Sculpture: Foundry**

Same as F20 ART 114F, F20 ART 214F, F20 ART 414F. Juniors (only) register for F20 ART 314F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students learn mold making, direct organic burnout, ceramic shell investment, metal chasing and patination in order to create finished sculpture. In addition to metal casting, students use other materials such as plaster, resin, steel, wood, rubber, plastic and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required. Prerequisite: junior standing or departmental approval.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 314G Sculpture: Wood**

Same as F20 ART 114G, F20 ART 214G, F20 ART 413G. Juniors (only) register for F20 ART 314G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making. Prerequisite: junior standing or departmental approval.

Credit 3 units. EN: H

---

#### **F20 ART 314I Sculpture: Metal Fabrication**

Metal is the backbone of our modern world and a viable medium for self-expression. It can be employed as structure or as surface, it can be deformed plastically to create compound shapes, or it can be connected to most any other material. Students explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines and learn the safe operation of drilling, grinding and finishing tools.

Credit 3 units. EN: H

---

#### **F20 ART 315 Printmaking**

Same as F20 115, 215, 415. Juniors (only) register for F20 315. Survey of printmaking covering basic processes in intaglio, lithography, relief, and monotype. Emphasis on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 316 Printmaking**

Same as F20 116, 216, 416. Juniors (only) register for F20 316. Survey of printmaking covering basic processes in intaglio,

lithography, relief and monotype. Emphasis on mixed media and experimentation with a foundation in traditional, historical and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Credit 3 units. Art: FAAM EN: H

---

#### **F20 ART 317X Furniture Design**

This course explores design and fabrication methods for objects of human interaction. Each student will design and build a table, based on a unique concept. To this end, it is up to the individual student to define what the particular table is for, and clearly communicate their intentions and ideas. Contemporary technologies will be combined with traditional techniques of metal fabrication, woodworking and plastic forming in the design and production. The course objective is for students to learn how to work directly with machinery and materials in the realization of their design. It is expected that students will have basic shop skills addressed in course prerequisites. Advanced techniques will be introduced, and students will select those most appropriate to their work to build upon. A high level of craft and a great deal of independent investigation are required to excel in this course. Students propose and develop ideas using drawings, models and mock-ups in order to realize the maximum potential for their design. College of Architecture and College of Art sophomores, juniors and seniors have priority. Fulfills Sam Fox Commons requirement.

Same as X10 XCORE 317X

Credit 3 units. EN: H

---

#### **F20 ART 3183 Photography III**

This class is designed for the student who is seeking to explore advanced issues in photography using a broad range of photographic practices and media. In addition to further mastering of technique and craft, students, through readings and class discussion, place their work within a context of contemporary issues in photographic image making, theory and criticism.

Credit 3 units. EN: H

---

#### **F20 ART 3184 Photography III**

This class is designed for the student who is seeking to explore advanced issues in photography using a broad range of photographic practices and media. In addition to further mastering of technique and craft, students, through readings and class discussion, place their work within a context of contemporary issues in photographic image making, theory and criticism.

Credit 3 units. EN: H

---

#### **F20 ART 319 Ceramics**

Advanced ceramics/glass study focuses on the student acquiring working knowledge of a variety of available materials and technologies to develop a personal direction and pursue self-determined goals. Experimentation is encouraged in both glass and clay. This may involve working in traditional or contemporary, vessel or sculptural concepts. Available to students is a variety of materials, equipment and technical information. Ceramics, porcelain, stoneware, terra-cotta and low-temperature clays are used in conjunction with extensive study of glazing and firing technology. Students explore and develop skills in Raku, low-temperature, oxidation, reduction, electric, high-temperature and pit firings.

Credit 3 units. Art: FAAM EN: H

---

### F20 ART 320 Ceramics

Same as F20 120, 220, 420. Juniors (only) register for F20 320. An introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of the wheel, coil and slab construction. While the emphasis is on high-fired stoneware, students will be introduced to Raku and soda firing. Content and advanced processes and skills are encouraged according to the individual's level. Credit 3 units. Art: FAAM EN: H

---

### F20 ART 323F Special Topics in Fashion Design (Fashion Design: Collaboration Studio)

University collaboration course with Fashion Design, Occupational Therapy, Mechanical Engineering and Business to develop design proposals and prototypes for specific customer profiles. Teams of students from different majors will design for various community and industry partners. They will work to solve an apparel or accessory design problem with innovative new concepts. The team will consider the person's lifestyle, occupation, and environmental factors that influence a design's functionality. A client-centered approach is used. Students will be evaluated on how well the design proposal meets the expressed aesthetic and functional needs of the client. Prerequisite: Introduction to Fashion Design. CET (<https://gephardt.institute.wustl.edu/cec/sam-fox-school-of-design-and-visual-arts>) course. Credit 3 units. Art: FADM EN: H

---

### F20 ART 323L Special Topics in Fashion Design: Fashion and Race

Is the fashion industry racist? This seminar course unpacks this contemporary inquiry by decentralizing fashion history to take a critical look at how racial identities are formed and performed, how historical stereotypes are perpetuated, and how theories of representation can be situated within the system of fashion. Students will use theoretical texts on race and representation to read contemporary media surrounding fashion and race (editorials, articles, social media), as well as gain an introduction to recently published research by scholars engaging fashion and race. Not only will students walk away with a richer understanding of how to critically think through race in fashion, but also how doing so gives us a new approach to think through race within a larger system. Prerequisites: none. Counts toward design minor. Credit 3 units. Art: FADM

---

### F20 ART 327A History of Photography

Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium. Credit 3 units. Art: FAAM EN: H

---

### F20 ART 327X Color Systems

This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by culture, and by commerce. The course aims to deepen the understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, a goal is to expand ideas of research and enable students to integrate

various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters. College of Architecture and College of Art sophomores, juniors and seniors have priority. Fulfills Sam Fox Commons requirement. Prerequisite: Drawing I, Communication Design I, or 2-D Design, or permission of instructor. Same as X10 XCORE 327X. Credit 3 units. EN: H

---

### F20 ART 3285 The Italian Renaissance in the City of Florence

This course encompasses the Renaissance from Giotto through the High Renaissance. Students will be able to examine first-hand the works they are studying. Included are field trips to Rome and Venice. Prerequisite: College of Architecture and College of Art juniors in the study abroad program in Florence, Italy. Credit 3 units.

---

### F20 ART 328A History of Photography

Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium. Credit 3 units. Art: FAAM EN: H

---

### F20 ART 329F Tale of Two Cities: Documenting Our Divides

The metropolitan St. Louis area has become the nation's symbol of modern segregation erupting into urban unrest and violence foiled against nonviolent direct-action interventions, youth-driven social protests and grassroots revitalization. With the assistance of a faculty seed grant from the Divided City Initiative, in partnership with the Center for the Humanities in Arts & Sciences and the Mellon Foundation, Tale of Two Cities: Documenting Our Divides will bring together students working in transdisciplinary teams to create documentary videos of street events, meetings and interviews that capture the immediacy of this historical moment. Students will partner and engage with a local nonprofit organization, grassroots movement or religious institution. Topics can include personal and/or institutional issues of a "divided city" that are exacerbated by race, gender, economic status, sexual orientation or geography. Successful completion of this course involves researching and creating a short video with a distinctive perspective and point of view that will draw upon the team's collaborative voices from history, performing arts, economics, law, social work, African-American studies, architecture and art. Skills will be developed in the fundamentals of story development, video and audio-capture in the field, editing with Adobe Premier and archival preservation. No prerequisites. Same as I50 InterD 329F. Credit 3 units.

---

### F20 ART 333 Basic Illustration

An introduction to concepts, media techniques, and problem-solving approaches within contemporary illustration. Emphasis on individual solutions to the problems presented. Credit 3 units. Art: FADM EN: H

---

---

**F20 ART 334 Basic Illustration**

Same as F20 134, 234, 434. Juniors (only) register for F20 334. An introduction to the concepts, media, and problem-solving methods of contemporary illustration. Projects involve image development for applications such as book illustration, iconic/logo illustration, product development and information graphics. Students can work by hand or on the computer. Traditional drawing skills not required. Ideal course for College of Art students whose work focuses on images, communication design minors, students outside the College of Art interested in the aesthetics of images, and business students. No prerequisites. This course is appropriate for any student in the university. This course counts in the communication design minor. Credit 3 units. Art: FADM EN: H

---

**F20 ART 335A Interaction Design: Applications for Public Health**

Through a blend of presentations from practitioners, classroom lectures, readings, discussion and hands-on exercises, this class engages principles and methods of interaction design within the context of health challenges. Broadly defined, interaction design is the practice of designing products, environments, systems and services with a focus on behavior and user experience. We take on an in-depth challenge in an area such as transportation or community health resources and work in cross-disciplinary design teams with an external partner organization. Students gain experience in planning and executing a human-centered design process featuring research, ideation, synthesis, concept development, prototypes and a final presentation, which may include visual design, animation and sound. Students work in teams to develop several intermediate project deliverables, such as prototypes and sketches. No prior course work is necessary, though experience with Adobe Photoshop, Illustrator and InDesign are helpful. No prerequisites. Open to sophomores through graduate-level students across the university. Credit 3 units. EN: H

---

**F20 ART 335G The Licensed Image: Development and Distribution**

Same as F20 135G, F20 235G, F20 435G. Juniors (only) register for F20 335G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for College of Art students whose work focuses on images, communication design minors and students outside the College of Art interested in developing visual products, including business students. Credit 3 units. Art: FADM EN: H

---

**F20 ART 335I Communication Design I**

An introduction to the field of communication design, combining principles from the fields of graphic design, advertising and illustration/image construction. Through studio exercises and lectures, students are exposed to the broad range of conceptual, aesthetic and strategic issues inherent to the field. Additionally, the similarities, differences and points of overlap within the three areas are discussed. Strongly recommended for students considering the communication design major. An excellent introduction to the subject as a tool for business and marketing. Credit 3 units. Art: FADM EN: H

---

**F20 ART 335J Introduction to Animating in Three****Dimensions**

This course explores 3-D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag and character-driven content. Cinematic shot design, timing, character design and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3-D animation program as the basis to model and animate characters, create settings and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisite: F10 ART 101 Drawing or equivalent or permission of instructor. Credit 3 units. Art: FADM EN: H

---

**F20 ART 335O Drawing as Thinking**

Same as F20 235O, 435O. Juniors (only) register for F20 335O. This studio course explores symbolic drawing as a practical tool for learning and communication, used as it has been for millennia for the acquisition and transmission of knowledge, for idea generation and formation, and for visual storytelling. Students will observe and describe phenomena, conceive systems, construct diagrams, design processes, and convey instructions, all using drawing as an aid to discovery, thought and communication. Tools and media may include pencils, brushes, wooden sticks, markers, painter's tape, laser pointers, and amateur surveying software, etc. In some cases, digital tools will be used to produce and present student projects. The course will include relevant readings and discussions. Throughout we will distinguish between symbolic uses of drawing and illusionistic ones, focusing on the former. Credit 3 units.

---

**F20 ART 335P Structuring Data for Effective Visualization**

A primer on techniques for acquiring and structuring data in preparation for visualization. We will discuss common data formats (CSV, XML and JSON) and how to access and translate from one format to another. Students will gain familiarity with the R language via the RStudio environment, as well as d3.js for interactive web-based visualizations. Students will develop concrete skills in preparing data for exploratory data analysis, as well as documenting workflows for reproducibility. Prerequisites: none. Sam Fox elective credit for BFA students; counts toward design minor. Credit 1 unit. Art: FADM

---

**F20 ART 335X Urban Books**

Since the beginning of the 20th century, art, architecture and urbanism together have investigated the production of images that shape the symbolic dimension of our experience of large cities. The main goal of this course is to critically embrace this tradition through the format of the artist's book. St. Louis is the focus for our observations because it is familiar to our everyday lives and also because it provides key situations for understanding contemporary forms of urbanity and how urban space is produced and imagined. The course bridges the curricular structures of art and architecture by enhancing the collaboration between the practical and scholarly work developed in both schools, with additional support from Special Collections at Olin Library. It combines the reading, lecture and discussion format of a seminar with the skill building and creative exploration of a studio. This course is divided into three progressive phases of development: the first consists of weekly

readings, discussion, and responses in the form of artist's books. The second phase focuses on the Derive with physical activities and assignments based on interacting directly with the urban environment. The third phase focuses on individual research, documentation, and final book design and production. College of Architecture and College of Art sophomores, juniors and seniors have priority. Fulfills Sam Fox Commons requirement. Same as X10 XCORE 335X  
Credit 3 units. Arch: GAUI, UI Art: FADM EN: H

---

#### **F20 ART 3361 Advertising 1**

Same as F20 ART 1361, F20 ART 2361, F20 ART 4361. Juniors (only) register for F20 ART 3361. This hybrid studio/lecture course introduces students to the field of advertising by defining its role in American culture and economy and engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting. Experience in copywriting and design is not necessary.  
Credit 3 units. Art: FADM EN: H

---

#### **F20 ART 3362 Advertising I**

Same as F20 1362, 2362, 4362. Juniors (only) register for F20 3362. This studio course introduces students to the field of advertising by defining its role in American culture and economy and engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting. No prerequisites. This course counts in the Communication Design minor.  
Credit 3 units. Art: FADM EN: H

---

#### **F20 ART 3363 Advertising in the Digital Age**

Same as F20 ART 1363, ART 2363, ART 4363. Juniors (only) register for F20 ART 3363. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior-including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally, we speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.  
Credit 3 units. Art: FADM EN: H

---

#### **F20 ART 3364 Advertising in the Digital Age**

Same as F20 1364, 2364, 4364. Juniors (only) register for F20 3364. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior — including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally we'll speculate on the future of advertising in an era

of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.

Credit 3 units. Art: FADM EN: H

---

#### **F20 ART 3365 History of Advertising**

Same as F20 1365, F20 2365, F20 4365. Juniors (only) register for F20 3365. The historical, cultural and technological development of advertising in America from the colonial period to the present. This lecture course examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them and changes in our culture that advertising both influences and reflects. Grading is based on mid-term and final exams as well as optional, extra-credit five page essays. No prerequisites. This course counts in the communication design minor.  
Credit 3 units. Art: FADM

---

#### **F20 ART 3366 History of Advertising**

Same as F20 1366, 2366, 4366. Juniors (only) register for F20 3366. The historical, cultural and technological development of advertising in America from the colonial period to the present. This lecture course examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them, and changes in our culture that advertising both influences and reflects. Grading is based on midterm and final exams as well as optional, extra-credit five page essays. No prerequisites. This course counts in the communication design minor.  
Credit 3 units. Art: FADM EN: H

---

#### **F20 ART 336A Interaction Design: Understanding Health and Well-Being**

Same as F20 236A, F20 436A. Juniors (only) register for F20 336A. Through a blend of presentations from practitioners, classroom lectures, readings, discussion and hands-on exercises, this class will engage principles and methods of interaction design within the context of health challenges. Broadly defined, interaction design is the practice of designing products, environments, systems and services with a focus on behavior and user experience. We will take on an in-depth challenge in the area of health and well-being and work in cross-disciplinary design teams with an external partner organization. Students will gain experience in planning and executing a human-centered design process featuring research, ideation, synthesis, concept development, prototypes and a final presentation, which may include visual design, animation and sound. Students will work in teams to develop several intermediate project deliverables, such as prototypes and sketches. No prior course work is necessary though experience with Adobe Photoshop, Illustrator and InDesign are helpful. No prerequisites. Open to sophomore through graduate-level students across the university.  
Credit 3 units. Art: FADM EN: H

---

#### **F20 ART 336G The Licensed Image: Development and Distribution**

Same as F20 136G, 236G, 436G. Juniors (only) register for F20 336G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market, and the development of image-driven products using images and design. Traditional drawing skills

not required. Students can work by hand or on the computer. Ideal course for College of Art students whose work focuses on images, communication design minors and students outside the College of Art interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 336I Communication Design I**

Same as F20 136I, 236I, 436I. Juniors (only) register for F20 336I. Students are introduced to the fundamentals of communication design. Through studio exercises and lectures, students are exposed to a broad range of conceptual, aesthetic and strategic issues in the field. The course explores principles of two-dimensional design, typography, and the relationship of text and image in order to persuade and inform. It helps students to learn a design methodology for illuminating and solving problems and provides baseline training in the Adobe Suite. Upon completion of this course, students will be able to design basic projects and have criteria to provide an informed evaluation of the effectiveness of a given design. It provides an introduction to design as a tool for business and marketing. No prerequisites. This course is appropriate for any student in the university. Counts toward design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 336J Introduction to Animating in Three Dimensions**

This course explores 3-D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag and character-driven content. Cinematic shot design, timing, character design and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3-D animation program as the basis to model and animate characters, create settings, and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisite: F10 Art 101 Drawing or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 336K Communication Design II**

Same as F20 136K, 236K, 436K. Juniors (only) register for F20 336K. Building on the fundamentals of CDes I, this course will offer students the opportunity to solve more complex visual communication problems. Information design (explanatory graphs and charts), multipage sequences (book/magazine design) and persuasion (advertising/propaganda) will be some of the topics covered. Various methodologies for defining problems, generating ideas, exploring possible visual solutions and evaluating work-in-progress and finished designs from the previous course, will be reinforced. This course will introduce students to a range of media, including digital and alternative forms. Emphasis will be placed on finding visually compelling solutions, no matter the media. The computer will be used as a tool to assemble and refine. Students will be encouraged to use online tutorials to augment in-class instruction. Prerequisite: Communication Design I. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 3386 The Art of Advertising**

This course introduces students to the field by defining the role of advertising in American culture and economy. It will

begin by exploring the evolving and devolving aspects of American advertising and the forces that both compel and repel consumer audiences. The class will explain the processes and criteria that, when properly utilized, elevate advertising and validate it as an art form. The course will consist of lectures and visiting instructors, brief essay quizzes and a series of exercises designed to acquaint each student with administrative and creative processes and various disciplines within the advertising field. Major emphasis will be placed upon the creative disciplines.

Credit 3 units. EN: H

---

**F20 ART 338J Advanced Animation**

Same as F20 138J, 238J, 438J. Juniors (only) register for F20 338J. This course focuses on completing a short animated film as a group project utilizing a workflow similar to that used in the animated feature film industry. The class will first develop a story. Individuals will then be assigned tasks according to strong areas of interest to create a storyboard and animatic. Key moments will be identified to be animated first. Once agreed on, students will be able to choose to work in various parts of the pipeline including Character Design; Layout and Set Design; 3-D modeling; Rigging; Animation; Textures; Special Effects; Sound; Rendering and Editing. Finally, it is all put together as a short. This is an advanced course that assumes some experience in Maya or similar 3-D program, or for those who have already developed skills in any form of animation. Prerequisite: Introduction to Animating in Three Dimensions or permission from the instructor. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 339A History of Communication Design**

Historical development of communication design based on a survey of significant artists and designers and the ideas, styles, movements, forces and individuals who influenced their work. This course is a component of the communication design major.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 339I Radical Design: Making Civic Experiences**

Same as F20 239I, 439I. Juniors (only) register for F20 339I. As we innovate rapidly in technology and communication, the economic and political structures that govern us have become largely assumed and unchallenged. This course explores the daily objects, interactions and spaces that make up these large systems (like a police ticket or the layout of a courtroom), and experiments with how redesigning these elements can help us question the status quo. Building on diverse political mindsets and current trends, we will imagine fictional worlds, and craft the objects, procedures and interactions that inhabit them. Along the way, we'll discuss the value of designing for fundamental change alongside more incremental reform. Counts toward design minor. CET (<https://gephardtstitute.wustl.edu/cec/sam-fox-school-of-design-and-visual-arts>) course.

Credit 3 units. Art: FADM

---

**F20 ART 340A History of Communication Design**

Same as F20 440A. Juniors (only) register for F20 340A. Historical development of communication design based on a survey of significant artists and designers and the ideas, styles, movements, forces and individuals who influenced their work.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 343X Digital Filmmaking: City Stories**

Digital Filmmaking: City Stories is a cross-university video art course for students interested in making short films through a transdisciplinary and time-based storytelling in both narrative and non-narrative formats. Whether documentary or abstract, individually produced or collaborative, all projects in this course have a required social and urban engagement component. In this course the city becomes a laboratory for experimentation and contribution. Students meaningfully engage St. Louis, and their projects address sites of concern to explore the complex fabric of the city by way of framing and poetic juxtaposition. City Stories merges several arts and humanities disciplines, including experimental cinema and documentary journalism, and create an opportunity for empathic listening and inquiry as students discover stories built from collective as well as individual memories.

**F20 ART 347X Furniture Design**

This course explores design and fabrication methods for objects of human interaction. Each student will design and build a table, based on a unique concept. To this end, it is up to the individual student to define what the particular table is for, and clearly communicate their intentions and ideas. Contemporary technologies will be combined with traditional techniques of metal fabrication, woodworking and plastic forming in the design and production. The course objective is for students to learn how to work directly with machinery and materials in the realization of their design. It is expected that students will have basic shop skills addressed in course prerequisites. Advanced techniques will be introduced, and students will select those most appropriate to their work to build upon. A high level of craft and a great deal of independent investigation are required to excel in this course. Students propose and develop ideas using drawings, models and mock-ups in order to realize the maximum potential for their design. College of Architecture and College of Art sophomores, juniors and seniors have priority. Fulfills Sam Fox Commons requirement.

Same as X10 XCORE 347X

---

**F20 ART 3481 The Illustrated Book: Design and Production**

An investigation of text, image, design and production within the broad realm of illustrated books. A series of exploratory exercises in the beginning of the semester yields to a single sustained project proposed and developed by the student. Project emphases may include visual narrative, textual interpretation, creative writing, typography, structure and sequencing, and material investigation. Production methods may include relief and letterpress; engraving and intaglio; offset lithography; and digital, "virtual" media. Certain projects may require a second semester of study to complete.

**F20 ART 354A Special Topics in Visual Culture: The Illustrated Periodical**

This seminar course will engage the tradition of illustrated magazines in the United States, beginning with a categorical survey of the first half of the 20th century: slicks, pulps and downmarket rags. We will analyze editorial and advertising content, and confront the periodical as highly visual social text, animated by an implicit contract between publisher and reader. Attention devoted to communities of production and reception, including editors, art directors, illustrators, cartoonists and readers. Students will develop research projects which focus on particular publications, features and people, drawing on the considerable resources of the Modern Graphic History Library. Outside readings and screenings will stimulate and supplement class discussion. Open to students across the university with sophomore to senior standing. Note: counts toward degree as Art History/Visual Culture elective and design minor.

Credit 3 units.

---

**F20 ART 354B Special Topics in Visual Culture: Studies in Modern Design from Print to Pixel**

This course traces the history of graphic design during the Modern period as a reflection of, and lens onto, cultural shifts and technological innovation. Open to students across the university with sophomore to senior standing. Note: counts toward degree as Art History/Visual Culture elective and design minor.

Credit 3 units.

---

**F20 ART 363 Architectural Photography**

This course offers a technical and theoretical understanding of architectural photography. Basic operation and orientation of digital and analog cameras are covered, as well as best practices for photographing interior and exterior spaces with both natural and artificial lighting. Students learn how to document artwork and architectural models/structures for portfolio presentation purposes, preparing them for working relationships

with professional photographers in the industry. This course emphasizes 4x5 view camera skill, use of DSLR and digital input, studio lighting, and development of individual projects. Digital camera required; 4x5 camera provided by photography department.

---

**F20 ART 371 Introduction to Letterpress Printing**

This class will serve as an introduction to printing with the Vandercook handpress. Through a series of assignments, students will learn a systematic approach to planning, arranging and printing type on a page. The students will receive a basic introduction to typography, history of letterforms, and history of the book. The mechanics of relief printing with the cylinder proof press, ink composition, and resolution of the typographic image will also be explored. As an exploration of the publishing process, students will produce a chapbook of a short literary work. The class will primarily focus on typographic composition, but one assignment will employ a combination of word and image.

**F20 ART 3713 Introduction to Book Binding**

Same as F20 1713, 2713, 4713. Juniors (only) register for F20 3713. This class will serve as an introduction to the book as artifact of material culture. A variety of traditional and nontraditional book structures will be explored. Students will learn from historical approaches to constructing the codex form including the single signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and will produce a variety of decorated papers to be used in their bindings.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 3714 Introduction to Book Binding**

Same as F20 1714, F20 2714, F20 4714. Juniors (only) register for F20 3714. This class will serve as an introduction to the book as artifact of material culture. A variety of traditional and nontraditional book structures will be explored. Students will learn from historical approaches to constructing the codex form including the single signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion and the carousel. **F20 ART 3783 Special Topics in Visual Culture: Introduction to Illustration Studies**

How have knowledge, opinion and feeling been communicated visually from the advent of automated printing presses to the invention of the internet, and to what effect? Using concepts in visual studies and communication studies, this course explores the histories of primarily American visual-verbal texts to investigate how minds and hands conceived, produced, distributed and consumed illustrated print media in the 19th and 20th centuries. Beginning with the neurological basis

of vision, we will examine ways culture affects perception, how print technologies shape content, how word and image rhetorically shape beliefs, how power relations imbue images and publishing, and the ways counterculture forms, such as caricature and posters, can be used to intervene socially. Students will conduct original research using University Libraries Special Collections to hone their ability to write convincingly and professionally about imagery. No prerequisites; 200 level open to students across the university. Counts toward design minor. Credit 3 units. Art: FADM

---

**F20 ART 3823 The Italian Renaissance in the City of Florence**

The Early Renaissance - also known as the quattrocento - usually denotes the period from circa 1400 to circa 1500. In Italy those 100 years, particularly in Florence, witnessed an extraordinary coming together of artistic talent, a passionate interest in the art and culture of Greek and Roman antiquity, a fierce sense of civic pride and an optimistic belief in the classical concept of "Man as the measure of all things." This course examines the principal artists who contributed to this cultural revolution. In order to take full advantage of the special experience of studying the renaissance in the very city of its birth, the stress is mainly, although not exclusively, on Florentine artists who include: sculptors such as Donatello, Verrocchio, and Michelangelo, painters such as Giotto, Masaccio, Uccello, Botticelli, Leonardo, and Raphael; architects such as Brunelleschi and Alberti up to Sangalo.

Credit 3 units. Arch: HT EN: H

---

**F20 ART 3824 The Italian Renaissance in the City of Florence**

This course encompasses the Renaissance from Giotto through the High Renaissance. Students will be able to examine first-hand the works they are studying. Included are field trips to Rome and Venice.

Credit 3 units. EN: H

---

**F20 ART 3827 Performance Art (Florence)**

The course is open to all students, ready to get involved in shared creative experience, to discover new expression, which means — neither dance nor theatre talents nor athletic attitudes are required, but the availability to use body in warming up sessions will be necessary. This studio art course is dedicated to the aesthetics and the practice of performance. Although a studio course, there will be a strong theoretical aspect which aims to outline a historical and cultural framework that shows how performance art was born and traces how we comprehend the practice today. The aim of which is to better understand how this special, all-embracing art language will be understood in the future. Physical activities, along with actions involving individual exploration of public space, are fundamental to the creative process. Performance art needs bodies, it needs space, it needs action, it needs an audience. Students will come away from this course with a strong knowledge of these fundamental ideas.

Credit 3 units.

---

**F20 ART 383 Special Topics: Eco-Art**

Same as F20 283 and 483. Juniors (only) register for F20 383. Eco-art explores the intersection of art, ecology and ethics. Though the movement is broad and growing, eco-art re-envisioning our relationship with the natural world by informing, challenging, inventing and reclaiming. The practice can include "green" methodologies, repurposed objects, land

art, ecoventions, social sculpture and community activism. This studio-based course explores various artistic practices and working methodologies related to environmental art. The course is organized around contemporary and art historical precedents, including discussion of eco-design and sustainable architecture. Projects are open to multidimensional solutions in a wide variety of media.

### **F20 ART 3843 Filming the Black Freedom Struggle in St. Louis**

This interdisciplinary course is designed to introduce students to the history of the black freedom struggle in St. Louis and to the complex and multiple ways historic narratives are constructed. We will explore the political, economic and cultural history of black St. Louisans who challenged racial segregation in housing and work, fought white mobs in city streets, and battled the destruction of black communities by the federal urban renewal and public housing policies. This course will provide students with the opportunity to write history through visual sources, in order to construct a historical narrative on film. Students will be introduced to the technical skills involved in making a documentary film, and to the archival research and oral history skills required to document the past. This course brings together documentary filmmaking and history research to draw attention to the multiple narratives of African-American and urban history. CET (<https://gephardtinststitute.wustl.edu/cec/sam-fox-school-of-design-and-visual-arts>) course.

### **F20 ART 386X Public Practice**

With architecture, art and design students in mind, Public Practice is a design-build course focused on the development, presentation and actualization of commissioned works within the public realm. Through an iterative process of concept development, material exploration and panel reviews, students will learn how to develop, propose and execute a viable public piece. Individual and/or group proposals will be presented before a selection committee in consideration toward a public art/design commission. Selected projects will be realized within specified sites in the community of University City, MO. Students will have hands-on experiences with construction processes, meeting structural requirements and codes, site development, and project installation which will prepare them for a creative life situated firmly within a discourse of Public Space. Open to MFA, graduate architecture students, BFA and undergraduate architecture students with junior-level standing. Minors and others eligible with consent of instructor.

Same as X10 XCORE 386X

Credit 3 units.

---

### **F20 ART 4080 Art/Architecture and Social Practice**

This seminar brings together several different disciplines and methodologies to look at the practice of the arts in the context of community. The seminar combines hands-on work and observation, theoretical analysis and reflection, and specific proposals. For our case studies, we concentrate on several programs and places currently existing or developing in the St. Louis region. We discuss both ends and means, and systems of evaluation that draw on, among other things, art, architecture, social work, and community development.

Same as A46 ARCH 5080

Credit 3 units.

### **F20 ART 411 Painting**

Same as F20 111, 211, 311. Seniors (only) register for F20 411. Introduction to painting processes and materials. While there is emphasis on oil painting, students are also introduced to watercolor and acrylic paints and a wide variety of painting surfaces. Subject matter is varied, beginning with still-life material and ending with direct painting from the model. Technical skills and content are dealt with at the individual student's level.

Credit 3 units. Art: FAAM EN: H

---

### **F20 ART 412 Painting**

Same as F20 112, 212, 312. Seniors (only) register for F20 412. This course is an introduction to oil painting with an emphasis on the principles of color, construction and paint handling. Students will explore the possibilities of representational painting as applied to still-life, interiors, landscape and the human figure. The course is designed especially for beginning painters but can accommodate painters at all levels of proficiency.

Credit 3 units. Art: FAAM EN: H

---

### **F20 ART 413F Sculpture: Foundry**

The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students learn mold making, direct organic burnout, ceramic shell investment, metal chasing and patination in order to create finished sculpture. In addition to metal casting, students use other materials such as plaster, resin, steel, wood, rubber, plastic and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required.

Credit 3 units. Art: FAAM EN: H

---

### **F20 ART 413G Sculpture: Wood**

Same as F20 ART 113G, F20 ART 213G, F20 ART 313G. Seniors (only) register for F20 ART 413G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making. College of Art majors and non-art students pursuing an art minor have priority. Prerequisite: senior standing or departmental approval.

Credit 3 units. Art: FAAM EN: H

---

### **F20 ART 413H Sculpture: Blacksmithing**

This course is an introduction to blacksmithing materials, tools and techniques. Students explore the fundamental techniques of hand-forged metal. Metal can be manipulated as a plastic material and offers enormous possibilities for 3-dimensional form. In this class we explore these possibilities and expand our sculptural vocabulary.

Credit 3 units. Art: FAAM EN: H

---

### **F20 ART 413I Sculpture: Metal Fabrication**

Metal is the backbone of our modern world and a viable medium for self-expression. It can be employed as structure or as surface, it can be deformed plastically to create compound shapes, or it can be connected to most any other material. Students explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines and learn the safe operation of drilling, grinding and finishing tools.

Credit 3 units. EN: H

---

**F20 ART 414F Sculpture: Foundry**

Same as F20 ART 114F, F20 ART 214F, F20 ART 314F. Seniors (only) register for F20 ART 414F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students learn mold making, direct organic burnout, ceramic shell investment, metal chasing and patination in order to create finished sculpture. In addition to metal casting, students use other materials such as plaster, resin, steel, wood, rubber, plastic and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required. Prerequisite: senior standing or departmental approval.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 415 Printmaking**

Same as F20 115, 215, 315. Seniors (only) register for F20 415. Survey of printmaking covering basic processes in intaglio, lithography, relief, and monotype. Emphasis on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.  
Credit 3 units. Art: FAAM EN: H

---

**F20 ART 416 Printmaking**

Same as F20 116, 216, 316. Seniors (only) register for F20 416. Survey of printmaking covering basic processes in intaglio, lithography, relief and monotype. Emphasis on mixed media and experimentation with a foundation in traditional, historical and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.  
Credit 3 units. Art: FAAM EN: H

---

**F20 ART 419 Ceramics**

Continuation of F10 ART 319-ART 320. Advanced ceramics/glass study focuses on the student acquiring working knowledge of a variety of available materials and technologies to develop a personal direction and pursue self-determined goals. Experimentation is encouraged in both glass and clay. This may involve working in traditional or contemporary, vessel or sculptural concepts. Available to students in a variety of

materials, equipment and technical information. Ceramics, porcelain, stoneware, terra-cotta and low-temperature clays are used in conjunction with extensive study of glazing and firing technology. Students explore and develop skills in Raku, low-temperature, oxidation, reduction, electric, high-temperature and pit firings.

Credit 3 units. Art: FAAM EN: H

---

**F20 ART 420 Ceramics**

Same as F20 120, 220, 320. Seniors (only) register for F20 420. An introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of the wheel, coil and slab construction. While the emphasis is on high-fired stoneware, students will be introduced to Raku and soda firing. Content and advanced processes and skills are encouraged according to the individual's level.  
Credit 3 units. Art: FAAM EN: H

---

**F20 ART 423F Special Topics in Fashion Design: (Fashion Design: Collaboration Studio)**

University collaboration course with Fashion Design, Occupational Therapy, Mechanical Engineering and Business to develop design proposals and prototypes for specific customer profiles. Teams of students from different majors will design for various community and industry partners. They will work to solve an apparel or accessory design problem with innovative new concepts. The team will consider the person's lifestyle, occupation, and environmental factors that influence a design's functionality. A client-centered approach is used. Students will be evaluated on how well the design proposal meets the expressed aesthetic and functional needs of the client. Prerequisite: Introduction to Fashion Design.  
Credit 3 units. Art: FADM EN: H

---

**F20 ART 423L Special Topics in Fashion Design: Fashion and Race**

Is the fashion industry racist? This seminar course unpacks this contemporary inquiry by decentralizing fashion history to take a critical look at how racial identities are formed and performed, how historical stereotypes are perpetuated, and how theories of representation can be situated within the system of fashion. Students will use theoretical texts on race and representation to read contemporary media surrounding fashion and race (editorials, articles, social media), as well as gain an introduction to recently published research by scholars engaging fashion and race. Not only will students walk away with a richer understanding of how to critically think through race in fashion, but also how doing so gives us a new approach to think through race within a larger system. Prerequisites: none. Counts toward design minor.  
Credit 3 units. Art: FADM

---

**F20 ART 427A History of Photography**

Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium.  
Credit 3 units. Art: FAAM EN: H

---

**F20 ART 428A History of Photography**

Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social

and technological developments examined in terms of their influence on the medium.

**F20 ART 429F Tale of Two Cities: Documenting Our Divides**

The metropolitan St. Louis area has become the nation's symbol of modern segregation erupting into urban unrest and violence foiled against nonviolent direct-action interventions, youth-driven social protests and grassroots revitalization. With the assistance of a faculty seed grant from the Divided City Initiative, in partnership with the Center for the Humanities in Arts & Sciences and the Mellon Foundation, Tale of Two Cities: Documenting Our Divides will bring together students working in transdisciplinary teams to create documentary videos of street events, meetings and interviews that capture the immediacy of this historical moment. Students will partner and engage with a local nonprofit organization, grassroots movement or religious institution. Topics can include personal and/or institutional issues of a "divided city" that are exacerbated by race, gender, economic status, sexual orientation or geography. Successful completion of this course involves researching and creating a short video with a distinctive perspective and point of view that will draw upon the team's collaborative voices from history, performing arts, economics, law, social work, African-American studies, architecture and art. Skills will be developed in the fundamentals of story development, video and audio-capture in the field, editing with Adobe Premier and archival preservation. No prerequisites.

Same as I50 InterD 329F

Credit 3 units.

---

**F20 ART 433 Basic Illustration**

Same as F20 133, 233, 333. Seniors (only) register for F20 433. An introduction to the concepts, media and problem-solving methods of contemporary illustration. Projects involve image development for applications such as book illustration, iconic/logo illustration, product development and information graphics. Students can work by hand or on the computer. Traditional drawing skills not required. Ideal course for College of Art students whose work focuses on images, communication design minors, students outside the College of Art interested in the aesthetics of images, and business students. No prerequisites. This course is appropriate for any student in the university. Credit 3 units. Art: FADM EN: H

---

**F20 ART 434 Basic Illustration**

Same as F20 134, 234, 334. Seniors (only) register for F20 434. An introduction to the concepts, media and problem-solving methods of contemporary illustration. Projects involve image development for applications such as book illustration, iconic/logo illustration, product development and information graphics. Students can work by hand or on the computer. Traditional drawing skills not required. Ideal course for College of Art students whose work focuses on images, communication design minors, students outside the College of Art interested in the aesthetics of images, and business students. No prerequisites. This course is appropriate for any student in the university. This course counts in the communication design minor. Credit 3 units. Art: FADM EN: H

---

**F20 ART 435A Interaction Design Workshop: Introduction to Research About People**

A deep understanding of people with an emphasis on behavior is central to contemporary design, as IDEO's Tim Brown explained

in the *Harvard Business Journal* in 2008. This workshop introduces students from all disciplines across the university to ethnography data communication and synthesis as a way to begin the process of designing effective and innovative interactive tools.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 435G The Licensed Image: Development and Distribution**

Same as F20 135G, 235G, 335G. Seniors (only) register for F20 435G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for College of Art students whose work focuses on images, communication design minors and students outside the College of Art interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 435I Communication Design I**

An introduction to the field of communication design, combining principles from the fields of graphic design, advertising and illustration/image construction. Through studio exercises and lectures, students are exposed to the broad range of conceptual, aesthetic and strategic issues inherent to the field. Additionally, the similarities, differences and points of overlap within the three areas are discussed. Strongly recommended for students considering the communication design major. An excellent introduction to the subject as a tool for business and marketing. Credit 3 units. EN: H

---

**F20 ART 435J Introduction to Animating in Three Dimensions**

This course explores 3-D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag and character-driven content. Cinematic shot design, timing, character design and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3-D animation program as the basis to model and animate characters, create settings and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisite: F10 Art 101 Drawing or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 435O Drawing as Thinking**

Same as F20 135O, F20 235O, F20 335O. Seniors (only) register for F20 435O. This studio course explores symbolic drawing as a practical tool for learning and communication, used as it has been for millennia for the acquisition and transmission of knowledge, for idea generation and formation, and for visual storytelling. Students will observe and describe phenomena, conceive systems, construct diagrams, design processes, and convey instructions, all using drawing as an aid to discovery, thought and communication. Tools and media may include pencils, brushes, wooden sticks, markers, painter's tape, laser pointers, and amateur surveying software, etc. In some cases, digital tools will be used to produce and present student projects. The course will include relevant readings and discussions.

Throughout we will distinguish between symbolic uses of drawing and illusionistic ones, focusing on the former.  
Credit 3 units.

---

**F20 ART 435P Structuring Data for Effective Visualization**

A primer on techniques for acquiring and structuring data in preparation for visualization. We will discuss common data formats (CSV, XML and JSON) and how to access and translate from one format to another. Students will gain familiarity with the R language via the RStudio environment, as well as d3.js for interactive web-based visualizations. Students will develop concrete skills in preparing data for exploratory data analysis, as well as documenting workflows for reproducibility. Prerequisites: none. Sam Fox elective credit for BFA students; counts toward design minor.  
Credit 1 unit. Art: FADM

---

**F20 ART 4361 Advertising 1**

Same as F20 ART 1361, F20 ART 2361, F20 ART 3361. Seniors (only) register for F20 ART 4361. This hybrid studio/lecture course introduces students to the field of advertising by defining its role in American culture and economy and engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting. Experience in copywriting and design is not necessary.  
Credit 3 units. Art: FADM EN: H

---

**F20 ART 4362 Advertising I**

Same as F20 1362, 2362, 3362. Seniors (only) register for F20 4362. This studio course introduces students to the field of advertising by defining its role in American culture and economy and engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting. No prerequisites. This course counts in the communication design minor.  
Credit 3 units. Art: FADM EN: H

---

**F20 ART 4363 Advertising in the Digital Age**

Same as F20 ART 1363, ART 2363, ART 3363. Seniors (only) register for F20 ART 4363. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior-including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally, we speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.  
Credit 3 units. Art: FADM EN: H

---

**F20 ART 4364 Advertising in the Digital Age**

Same as F20 1364, 2364, 3364. Seniors (only) register for F20 4364. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior — including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally we'll speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.

---

**F20 ART 4365 History of Advertising**

Same as F20 1365, F20 2365, F20 3365. Seniors (only) register for F20 4365. The historical, cultural and technological development of advertising in America from the colonial period to the present. This lecture course examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them and changes in our culture that advertising both influences and reflects. Grading is based on mid-term and final exams as well as optional, extra-credit five page essays. No prerequisites. This course counts in the communication design minor.

Credit 3 units. Art: FADM

---

**F20 ART 4366 History of Advertising**

Same as F20 1366, 2366, 3366. Seniors (only) register for F20 4366. The historical, cultural and technological development of advertising in America from the colonial period to the present. This lecture course examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them, and changes in our culture that advertising both influences and reflects. Grading is based on midterm and final exams as well as optional, extra-credit five page essays. No prerequisites. This course counts in the communication design minor.

---

**F20 ART 436A Interaction Design: Understanding Health and Well-Being**

Same as F20 236A, F20 336A. Seniors (only) register for F20 436A. Through a blend of presentations from practitioners, classroom lectures, readings, discussion and hands-on exercises, this class will engage principles and methods of interaction design within the context of health challenges. Broadly defined, interaction design is the practice of designing products, environments, systems and services with a focus on behavior and user experience. We will take on an in-depth challenge in the area of health and well-being and work in cross-disciplinary design teams with an external partner organization. Students will gain experience in planning and executing a human-centered design process featuring research, ideation, synthesis, concept development, prototypes and a final presentation, which may include visual design, animation and sound. Students will work in teams to develop several intermediate project deliverables, such as prototypes and sketches. No prior course work is necessary though experience with Adobe Photoshop, Illustrator and InDesign are helpful. No prerequisites. Open to sophomore through graduate-level students across the university. CET (<https://>

gephardt@wustl.edu/cec/sam-fox-school-of-design-and-visual-arts) course.

---

**F20 ART 436G The Licensed Image: Development and Distribution**

Same as F20 136G, 236G, 336G. Seniors (only) register for F20 436G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market, and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for College of Art students whose work focuses on images, communication design minors and students outside the College of Art interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 436I Communication Design I**

Same as F20 136I, 236I, 336I. Seniors (only) register for F20 436I. Students are introduced to the fundamentals of communication design. Through studio exercises and lectures, students are exposed to a broad range of conceptual, aesthetic and strategic issues in the field. The course explores principles of two-dimensional design, typography, and the relationship of text and image in order to persuade and inform. It helps students to learn a design methodology for illuminating and solving problems and provides baseline training in the Adobe Suite. Upon completion of this course, students will be able to design basic projects and have criteria to provide an informed evaluation of the effectiveness of a given design. It provides an introduction to design as a tool for business and marketing. No prerequisites. This course is appropriate for any student in the university. Counts toward design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 436J Introduction to Animating in Three Dimensions**

This course explores 3-D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag and character-driven content. Cinematic shot design, timing, character design and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3-D animation program as the basis to model and animate characters, create settings and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisite: F10 Art 101 Drawing or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 436K Communication Design II**

Same as F20 136K, 236K, 336K. Seniors (only) register for F20 436K. Building on the fundamentals of CDes I, this course will offer students the opportunity to solve more complex visual communication problems. Information design (explanatory graphs and charts), multipage sequences (book/magazine design) and persuasion (advertising/propaganda) will be some of the topics covered. Various methodologies for defining problems, generating ideas, exploring possible visual solutions and evaluating work-in-progress and finished designs from the previous course, will be reinforced. This course will

introduce students to a range of media, including digital and alternative forms. Emphasis will be placed on finding visually compelling solutions, no matter the media. The computer will be used as a tool to assemble and refine. Students will be encouraged to use online tutorials to augment in-class instruction. Prerequisite: Communication Design I. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 438J Advanced Animation**

Same as F20 138J, 238J, 338J. Seniors (only) register for F20 438J. This course focuses on completing a short animated film as a group project utilizing a workflow similar to that used in the animated feature film industry. The class will first develop a story. Individuals will then be assigned tasks according to strong areas of interest to create a storyboard and animatic. Key moments will be identified to be animated first. Once agreed on, students will be able to choose to work in various parts of the pipeline including Character Design; Layout and Set Design; 3-D modeling; Rigging; Animation; Textures; Special Effects; Sound; Rendering and Editing. Finally, it is all put together as a short. This is an advanced course that assumes some experience in Maya or similar 3-D program, or for those who have already developed skills in any form of animation. Prerequisite: Introduction to Animating in Three Dimensions or permission from the instructor. This course counts in the communication design minor.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 439A History of Communication Design**

Historical development of communication design based on a survey of significant artists and designers and the ideas, styles, movements, forces and individuals who influenced their work. This course is a component of the communication design major.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 439I Radical Design: Making Civic Experiences**

Same as F20 239I, 339I. Seniors (only) register for F20 439I. As we innovate rapidly in technology and communication, the economic and political structures that govern us have become largely assumed and unchallenged. This course explores the daily objects, interactions and spaces that make up these large systems (like a police ticket or the layout of a courtroom), and experiments with how redesigning these elements can help us question the status quo. Building on diverse political mindsets and current trends, we will imagine fictional worlds, and craft the objects, procedures and interactions that inhabit them. Along the way, we'll discuss the value of designing for fundamental change alongside more incremental reform. Counts toward design minor.

Credit 3 units. Art: FADM

---

**F20 ART 440A History of Communication Design**

Same as F20 340A. Seniors (only) register for F20 440A. Historical development of communication design based on a survey of significant artists and designers and the ideas, styles, movements, forces and individuals who influenced their work.

Credit 3 units. Art: FADM EN: H

---

**F20 ART 445 Topics in the History of Book Illustration: The Book as Subject**

Within the past half-century, the book has moved from periphery to center, becoming the subject of an expanding body of work by writers and artists. Its formal qualities and physical processes,

its habitual means of organizing, its strengths, its limitations, and the meanings we attach to them, have become the subject of seemingly self-conscious, inward-looking books. Postmodern as if by definition, playfulness and irony attend these works, and their complexities and subtleties often prove elusiveness a virtue. They command a reshaping of our sense of how books, texts and illustrations react to and interact with one another, and how a reader/viewer experiences and makes sense of them. We look at work by Vladimir Nabokov, Julio Cortazar, Italo Calvino, William H. Gass, Samuel Beckett, Jasper Johns, Tom Phillips, Anselm Kiefer, Susan Baron, Peter Greenaway and others. This seminar explores aspects of the history of image and text conjoined in the Western book, at once an object and a concept, a thing experienced and a conduit, a means of transmission. Utilizing a variety of analytical and critical approaches — psychoanalytical, deconstructive, New Historicist — we examine the ways in which texts and images make and unmake meanings. Students are asked to write two papers, one brief (six to eight pages), the other more extended (12 to 20 pages), and to give one in-class presentation. Special topics rotate from semester to semester.

Credit 3 units. EN: H

---

**F20 ART 4472 Topics in the Illustrated Book: Advanced Topics in the Book**

This class is intended for students who have taken "Special Topics in the Illustrated Book: Design and Production" and desire to do advanced work. This course is a further examination of the book structure and relationship of content to form. Special attention is paid to integration of text and image and to a variety of compositional techniques with image as well as text. Students are expected to begin the semester with a concept for an advanced book project and spend the semester in consultation with the instructor and in intensive investigation of the book form. Demonstrations of advanced techniques accompany lectures. Primary modes of production include letterpress and computer applications, among others.

Credit 3 units. EN: H

---

**F20 ART 4481 The Illustrated Book: Design and Production**

An investigation of text, image, design and production within the broad realm of illustrated books. A series of exploratory exercises in the beginning of the semester yields to a single sustained project proposed and developed by the student. Project emphases may include visual narrative, textual interpretation, creative writing, typography, structure and sequencing, and material investigation. Production methods may include relief and letterpress; engraving and intaglio; offset lithography; and digital, "virtual" media. Certain projects may require a second semester of study to complete.

Credit 3 units. EN: H

---

**F20 ART 4482 The Illustrated Book: Design and Production**

An investigation of text, image, design and production within the broad realm of illustrated books. A series of exploratory exercises in the beginning of the semester yields to a single sustained project proposed and developed by the student. Project emphases may include visual narrative, textual interpretation, creative writing, typography, structure and sequencing, and material investigation. Production methods may include relief and letterpress; engraving and intaglio; offset lithography; and digital, "virtual" media. Certain projects may require a second semester of study to complete.

---

**F20 ART 454A Special Topics in Visual Culture: The Illustrated Periodical**

This seminar course will engage the tradition of illustrated magazines in the United States, beginning with a categorical survey of the first half of the 20th century: slicks, pulps and downmarket rags. We will analyze editorial and advertising content, and confront the periodical as highly visual social text, animated by an implicit contract between publisher and reader. Attention devoted to communities of production and reception, including editors, art directors, illustrators, cartoonists and readers. Students will develop research projects which focus on particular publications, features and people, drawing on the considerable resources of the Modern Graphic History Library. Outside readings and screenings will stimulate and supplement class discussion. Open to students across the university with sophomore to senior standing. Note: counts toward degree as Art History/Visual Culture elective and design minor.

Same as F20 ART 354A

Credit 3 units.

---

**F20 ART 454B Special Topics in Visual Culture: Studies in Modern Design from Print to Pixel**

This course traces the history of graphic design during the Modern period as a reflection of, and lens onto, cultural shifts and technological innovation. Open to students across the university with sophomore to senior standing. Note: counts toward degree as Art History/Visual Culture elective and design minor.

Same as F20 ART 354B

Credit 3 units.

---

**F20 ART 455A Urban Books: Imag(en)ing St. Louis**

Since the beginning of the 20th century, art, architecture and urbanism together have investigated the production of images that shape the symbolic dimension of our experience of large cities. The main goal of this course is to critically embrace this tradition through the format of the artist's book. St. Louis is the focus for our observations because it is familiar to our everyday lives and also because it provides key situations for understanding contemporary forms of urbanity and how urban space is produced and imagined. The course bridges the curricular structures of art and architecture by enhancing the collaboration between the practical and scholarly work developed in both schools, with additional support from Special Collections at Olin Library. It combines the reading, lecture, and discussion format of a seminar with the skill building and creative exploration of a studio. This course is divided into three progressive phases of development: The first consists of weekly readings, discussion, and responses in the form of artist's books. The second phase focuses on the Derive with physical activities and assignments based on interacting directly with the urban environment. The third phase focuses on individual research, documentation, and final book design and production.

Same as X10 XCORE 336

**F20 ART 471 Introduction to Letterpress Printing**

This class serves as an introduction to printing with the Vandercook handpress. Through a series of assignments students learn a systematic approach to planning, arranging and printing type on a page. The students receive a basic introduction to typography, history of letterforms and history of the book. The mechanics of relief printing with the cylinder

proof press, ink composition and resolution of the typographic image also are explored. As an exploration of the publishing process, students produce a chapbook of a short literary work. The class primarily focuses on typographic composition, but one assignment employs a combination of word and image.  
Credit 3 units. Art: FADM EN: H

---

#### **F20 ART 4713 Introduction to Book Binding**

Same as F20 1713, F20 2713, F20 3713. Seniors (only) register for F20 4713. This class will serve as an introduction to the book as artifact of material culture. A variety of traditional and nontraditional book structures will be explored. Students will learn from historical approaches to constructing the codex form including the single signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and will produce a variety of decorated papers to be used in their bindings.

Credit 3 units. Art: FADM EN: H

---

#### **F20 ART 4714 Introduction to Book Binding**

Same as F20 1714, F20 2714, F20 3714. Seniors (only) register for F20 4714. This class will serve as an introduction to the book as artifact of material culture. A variety of traditional and nontraditional book structures will be explored. Students will learn from historical approaches to constructing the codex form including the single signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and will produce a variety of decorated papers to be used in their bindings.

Credit 3 units. Art: FADM EN: H

---

#### **F20 ART 4783 Special Topics in Visual Culture: Introduction to Illustration Studies**

How have knowledge, opinion and feeling been communicated visually from the advent of automated printing presses to the invention of the internet, and to what effect? Using concepts in visual studies and communication studies, this course explores the histories of primarily American visual-verbal texts to investigate how minds and hands conceived, produced, distributed and consumed illustrated print media in the 19th and 20th centuries. Beginning with the neurological basis of vision, we will examine ways culture affects perception, how print technologies shape content, how word and image rhetorically shape beliefs, how power relations imbue images and publishing, and the ways counterculture forms such as caricature and posters can be used to intervene socially. Students will conduct original research using University Libraries Special Collections to hone their ability to write convincingly and professionally about imagery. No prerequisites; 200 level open to students across the university. Counts toward design minor.  
Credit 3 units. Art: FADM

---

#### **F20 ART 483 Special Topics: Eco-Art**

Same as F20 283 and 383. Seniors (only) register for F20 483. Eco-art explores the intersection of art, ecology and ethics. Though the movement is broad and growing, eco-

art re-envisions our relationship with the natural world by informing, challenging, inventing and reclaiming. The practice can include "green" methodologies, repurposed objects, land art, ecoventions, social sculpture and community activism. This studio-based course explores various artistic practices and working methodologies related to environmental art. The course is organized around contemporary and art historical precedents, including discussion of eco-design and sustainable architecture. Projects are open to multidimensional solutions in a wide variety of media.

## About Us

The Sam Fox School of Design & Visual Arts (<http://www.samfoxschool.wustl.edu>) is a unique collaboration in architecture, art and design education, linking professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

The Sam Fox School is composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art and the Mildred Lane Kemper Art Museum (<http://www.kemperartmuseum.wustl.edu>).

The **College of Art**, founded in 1879, was the first professional, university-affiliated art school in the United States. In the 1940s, its broad-based core program helped set the standards for the bachelor of fine arts degree. Faculty over the years have included Max Beckmann, Philip Guston and other internationally known artists.

The **College of Architecture**, established in 1910, was one of eight founding members of the Association of Collegiate Schools of Architecture (ACSA). In 1962, Architecture launched one of the nation's first Master of Urban Design programs. Four winners of the Pritzker Prize, considered architecture's highest honor, have taught at the school.

The **Mildred Lane Kemper Art Museum** dates back to 1881, making it the first art museum west of the Mississippi River. The collection has historically focused on contemporary work. Today the Kemper Art Museum holds roughly 3,500 important paintings, sculptures, photographs and installations by 19th-, 20th- and 21st-century American and European artists, along

with significant antiquities and a large number of prints and drawings.

Additional collaborative opportunities are provided by the Department of Art History and Archaeology (<http://arthistory.artsci.wustl.edu>) in Arts & Sciences, the Kenneth and Nancy Kranzberg Art & Architecture Library (<https://library.wustl.edu/units/artarch>), and the Douglas B. Dowd Modern Graphic History Library (<https://library.wustl.edu/spec/mghl>).

## Inquiry, Creativity and Synthesis

The Sam Fox School offers rigorous art and architecture education at both the undergraduate and graduate levels, within the unique context of an independent, nationally prominent research university.

The student body is composed of approximately 300 undergraduate and 50 graduate students in Art, as well as 200 undergraduate and 280 graduate students in Architecture. In all, they represent 17 countries, 47 states and the District of Columbia. Roughly 30 percent of undergraduates pursue combined studies within another university area.

Both core and advanced studios integrate contemporary theory and practice. Among the innovative programs are:

- Multidisciplinary courses co-taught by Art, Architecture, and Art History and Archaeology faculty. Recent seminars have explored the history of illustrated entertainment, combined urban theory with book design and production, and crafted a variety of online publications. Courses in exhibition studies are being offered, and a new program of exhibition studies is under development.
- International studios in Barcelona, Buenos Aires, Florence and Helsinki are taught by Washington University faculty and offer a range of distinctive programs in art and architecture.
- Community projects include the University City Sculpture Series, which funds student-designed public artworks; WashUCity, a mentoring program for local high school artists; and Architecture's Building Community/Community Building, which explores relationships between St. Louis' inner city, nearby municipalities and outlying suburbs.

## Uniting Creativity and Scholarship

The Sam Fox School boasts a unique combination of academic and intellectual resources.

The Architecture faculty includes practicing architects, urban designers and landscape architects as well as eminent architectural theorists and historians and a select number of international visitors. The resident, full-time faculty members have won national and regional awards for design excellence and planning, including more than two dozen from the American Institute of Architects alone.

Art's full-time faculty members include prominent painters, sculptors, printmakers and mixed-media artists as well as leading illustrators, graphic designers, fashion designers and photographers. In the past decade, design faculty have won numerous professional honors while fine art faculty have been featured in more than 100 solo exhibitions and 300 group shows on five continents.

The nationally recognized Kemper Art Museum maintains a vital program of exhibitions, publications and educational events. Major thematic shows are drawn from institutions and private collections around the world, while the Contemporary Projects Series highlights nationally and internationally emerging artists. The acclaimed permanent collection includes key works by modern and contemporary artists from Henri Matisse, Pablo Picasso and Jackson Pollock to Christian Boltanski, Candida Hofer and Olafur Eliasson.

Public events include concerts, film screenings, lectures and discussions with distinguished visitors, and museum tours led by student docents. The museum also provides workspace for faculty- and student-curated exhibitions (usually relating to Sam Fox School curriculum). Courses in Art History and Archaeology further complement the critical and practical study of exhibitions while facilitating student involvement in professional curatorial projects.

## A Comprehensive Campus

The Sam Fox School is housed in a comprehensive, five-building campus for design and the visual arts. Conceived around a central courtyard, it both reflects and updates Washington University's original campus plan, developed in 1895 by Frederick Law Olmsted, the founder of American landscape architecture.

The architectural centerpiece is prize-winning Japanese architect Fumihiko Maki's new Kemper Art Museum. This elegant, 65,000-square-foot limestone clad structure — a gathering point for scholars and the general public — includes more than 10,000 square feet of exhibition space, art storage facilities, and the Florence Steinberg Weil Sculpture Garden. The museum also houses the new Kranzberg Art & Architecture Library, Art History and Archaeology, and the Newman Money Museum, a state-of-the-art numismatics center.

Adjacent to the Kemper Art Museum is Maki's Earl E. and Myrtle E. Walker Hall. The three-story, 38,000-square-foot building contains painting and sculpture studios and the Nancy Spirtas Kranzberg Studio for the Illustrated Book.

Flanking the new buildings are Bixby and Givens Halls — historic homes to Art and Architecture, respectively — as well as Steinberg Hall, Maki's iconic modernist pavilion. Recent renovations include state-of-the-art computing environments; accessible, light-filled studios; additional workspaces; an auditorium; and a café.

## Visiting Artists and Architects

The Sam Fox School invites distinguished academics and professionals to lecture (<http://www.samfoxschool.wustl.edu/calendar/events/lectures>), attend critiques and visit major studios. Recent visitors include:

## Degree Requirements

To receive the Bachelor of Fine Arts degree, a student must meet the requirements of the College of Art and take academic courses with other undergraduates. Work in art can be combined with studies in architecture, business, humanities, natural and social sciences, and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests.

The specified number of credit units in courses (<https://courses.wustl.edu/Semester/Listing.aspx>) in the areas listed below are required for the BFA, in addition to the Studio Art and additional art elective requirements. (Specific courses that meet

these requirements are listed in the College of Arts & Sciences section.)

**Writing:** (C- or better) is required in the first year. Transfer students must fulfill the Writing 1 requirement by taking CWP 100 College Writing 1 or by review of a writing portfolio. For more information, visit the College Writing Program website (<http://collegewriting.wustl.edu/transfer-student-portfolio>).

**Humanities:** Humanities courses examine the human condition as it has been documented and expressed in both past and contemporary times. This area includes courses from literature (both in English and other languages), Classics, History, Philosophy, and Religious Studies, as well as some courses in the creative arts such as Dance, Drama, Music and Writing. Courses designated "Art HUM" fulfill a humanities requirement.

**Natural Sciences or Mathematics:** These courses seek to understand the natural and physical world, using objective and empirical observation and controlled experimentation. This area includes courses from Biology, Chemistry, Environmental Biology or Policy, Earth and Planetary Sciences, Math and Physics as well as some courses from departments such as Anthropology and Psychological & Brain Sciences. Courses designated "Art NSM" fulfill a natural sciences or mathematics requirement.

**Social and Behavioral Sciences:** These courses use qualitative and quantitative observation to explore the social environment, relationships with society, and forms of human behavior. This area includes courses from Anthropology, Economics, Education, International and Area Studies, Political Science, Psychological & Brain Sciences, and courses from other areas, including interdisciplinary studies. Courses designated "Art SSC" fulfill the social and behavioral sciences requirement.

**Art History and Visual Culture:** Two one-semester introductory courses (Art-Arch 113 and Art-Arch 215) and three additional courses (or related courses with permission of the associate dean of students). Courses designated "Art AH" fulfill an art history requirement.

Students must fulfill the following degree requirements:

| Required  | Units |
|---|-------|
| Writing I   | 3     |
| Humanities  | 3     |
| Natural sciences or mathematics   | 3     |
| Social and behavioral sciences  | 3     |

\*Courses in Architecture, Art, Design; Arts & Sciences; Business; and Engineering except physical education, lessons, independent study, internships, Advanced Placement, International Baccalaureate or transfer credit.

\*\*Courses in Architecture, Art, Design; Arts & Sciences; Business; and Engineering including physical education, lessons, independent study, internships, Advanced Placement, International Baccalaureate or transfer credit.

This curriculum includes the Sam Fox Foundation Sequence and the Capstone studio for all seniors in the College of Art. The Capstone studio brings together all seniors in the studio areas and separately in the Communication Design and Fashion areas for critical dialogue beyond disciplinary boundaries and to guide preparation for each area's culminating BFA exhibition.

## Academic Honors & Awards

**Dean's List:** In recognition of exceptional scholarship, first-year, sophomore, junior and senior art students who have completed at least 14 credit hours (excludes courses taken P/F or Audit) with a semester grade point average of 3.5 or higher during a semester will be cited on the Dean's List.

**Latin Honors:** A student may be considered for the Bachelor of Fine Arts degree cum laude, magna cum laude or summa cum laude as determined by the dean.

## Prizes and Awards

The Scholars in Art Program provides named scholarship funds that have been donated to the university by individuals or companies specifically for this purpose. Selection is based on financial need and academic achievement. There is no application process.

## Academic Scholarships

The College of Art offers one full-tuition and up to five partial-tuition scholarships each year solely on the basis of merit. Applicants for this award may also qualify for scholarship aid based on need and will be considered for this as well. The full-tuition Conway or Proetz Scholarship is awarded to an entering first-year student whose artistic and academic potential is judged outstanding by a faculty selection committee. The scholarship is supported by two endowed funds. The Fred Conway Scholarship was established in memory of a distinguished professor of painting in the College of Art. The Arthur and Esther Proetz Scholarship was established to honor the commitment and dedication to the arts of these two individuals.

Competition is national in scope, with finalists invited each year to visit the College of Art at the college's expense. At this time, one student is chosen to receive the full-tuition scholarship, and the other finalists are awarded partial scholarships. These are renewable for each year of undergraduate study, assuming continued academic and artistic excellence.

To be eligible, an applicant must be a high school senior who meets the following criteria:

1. Ranks high in the senior class.
2. Has SAT or ACT scores in the upper range.

To enter the competition, the applicant must follow the usual admission application procedures by completing a Washington University first-year application and sending a digital portfolio of art work. Portfolios should be submitted through the Slideroom function of the Common Application.

## Awards and Prizes

Several awards are made each year to art students who are selected by the faculty. These awards and prizes include the following:

*The Paul Edward Birdsall Award in Visual Communications*

*The Susan Sanders Block Silver Ripper Award in Fashion Design*

*The Belle Cramer Award in Printmaking*

*The Eda L. and Clarence C. Cushing Memorial Prize in Painting*

*The Anne Fuller Dillon Prize in Graphic Communications*

*The Mary Cowan Harford Award in Watercolor*

*The Marsha Hertzman Blasingame Award in Printmaking*

*The Morris M. Horwitz Award in Photography*

*The Hazel H. Huntsinger Memorial Prize in Painting*

*The Caroline Risque Janis Prize in Sculpture*

*The Nancy Spirtas Kranzberg Illustrated Book Award*

*The John J. and Marjory B. Lewin Photography Prize*

*The Peter Marcus Prize in Printmaking*

*The Dominic Michael Silver Scissors Designer of the Year Award*

*The John T. Milliken Foreign Travel Award*

*The Al Parker Award for Excellence in Illustration*

*The Jayne Ball Rousseau Memorial Prize in Graphic Communications*

*The Margo Trump Memorial Award*

*The Jack Unruh Award in Illustration*

*The Jeffrey Frank Wacks Scholarship Award*

*The Lillie Willemsen Prize*

## Academic Regulations

To receive the Bachelor of Fine Arts degree, students must meet the requirements of the College of Art and take academic courses with other undergraduates. Work in art can be combined with studies in architecture, business, humanities, natural and social sciences, and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests. Courses in University College do not count toward degree requirements.

No more than 15 units of pre-matriculation or transfer credit from all sources — Advanced Placement (AP) examinations, International Baccalaureate (IB), British Advanced (A) Levels — will be awarded.

Students wishing to transfer credit for course work completed at another institution must bring a full catalog description of the course(s) to the Sam Fox School Registrar's Office for pre-approval. Only with pre-approval, and upon receipt of an official transcript indicating a grade of C or better, courses will be considered for transfer. Grades for transfer courses will not appear on the student's Washington University record and will not figure into the student's GPA. College courses taken to earn credit for high school graduation will not be considered for transfer. Washington University does not transfer credits for courses taken online. Non-Washington University courses do not count toward the 48 units of academic credit required for the degree. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for

violations of the University Student Judicial Code or Academic Integrity policy.

## Attendance

The College of Art allows the professor of each course to decide how many absences a student may have and still pass the course. Professors are expected to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their professors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

## Units and Grades

In the College of Art, one semester unit of credit is assigned for every two hours of work completed in class and one hour of work completed outside of class per week for one semester. A student's undergraduate grade point average is determined by dividing the number of grade points earned by the number of semester units for which grades of A, B, C, D or F have been recorded. Grades of P# and F# received for courses taken on the pass/fail option are not figured into the grade point average. A grade of C- or better must be received in major classes during the second, third and fourth year to count toward degree requirements. Students must maintain a minimum 2.0 cumulative grade point average to graduate.

A grade point is a measure of quality assigned to units according to the following system:

| Grade | Meaning                | Points per Unit |
|-------|------------------------|-----------------|
| A+    |                        | 4.0             |
| A     |                        | 4.0             |
| A-    |                        | 3.7             |
| B+    |                        | 3.3             |
| B     |                        | 3.0             |
| B-    |                        | 2.7             |
| C+    |                        | 2.3             |
| C     |                        | 2.0             |
| C-    |                        | 1.7             |
| D+    |                        | 1.3             |
| D     |                        | 1.0             |
| D-    |                        | 0.7             |
| F     |                        | 0.0             |
| P#    | Pass (P/F option)      |                 |
| F#    | Failing (P/F option)   |                 |
| I     | Course work incomplete |                 |
| W     | Withdrawal             |                 |
| R     | Repeat                 |                 |
| L     | Successful audit       |                 |

|   |                       |
|---|-----------------------|
| Z | Unsuccessful audit    |
| N | No grade submitted    |
| X | Examination not taken |

Grades of I, X and N will become grades of F if the deficiency is not made up within the next two semesters of residence. For a course repeated, students earn credit and grade points based on the second grade received.

## Incomplete Grades

If, following the last day for withdrawal from courses, a student experiences medical or personal problems that make satisfactory completion of course work unlikely, they may request a grade of I (incomplete) from one or more instructors and should take the following steps:

1. Discuss the request with the instructor before the final critique or portfolio review.
2. With the instructor's consent, complete an Incomplete Grade Petition signed by both the instructor and the student.
3. Return the signed petition to the associate dean of students for final approval.

## Pass/Fail Option

A student may take one non-art course per semester on a pass/fail basis (exclusive of courses that must be taken pass/fail). Any additional courses taken pass/fail in a given semester will not be counted toward the degree. All courses with an F10, F20 and X10 department number must be taken for credit, unless otherwise noted. CWP 100 College Writing 1 also must be taken for credit.

## Repeating a Course

If a student retakes a course, both registrations will show on the transcript. The symbol R will appear next to the grade for the first enrollment; the grade and units in the second enrollment will be used to calculate the GPA. No student may use the retake option to replace a grade received as a sanction for the violation of the Academic Integrity Policy. A retaken course must be taken for the same grade option as the original course. Courses completed at institutions other than Washington University are not applicable under this policy.

## Academic Probation and Suspension

Students are expected to proceed at a pace which enables them to finish their degree within the appropriate time limit. For the Bachelor of Fine Arts, this is usually eight semesters.

A student whose semester grade point average is below 2.0 (grade of C) or who falls below a "pace" of 66 2/3 percent (number of credits earned divided by the number of credits attempted) will be placed on academic probation. If, after the following semester, the semester grade point average

is still below 2.0, or if the pace is below 66 2/3 percent, the student may be ineligible for normal advancement or may be suspended. While the College of Art desires to give all students the opportunity to prove themselves, it is not in the best interest of either the students or the college to permit students to continue indefinitely in educational programs in which they are not producing satisfactory results.

## Major Declaration and Transfer

A student declares a major simply by registering for one using the university's online registration system (WebSTAC). A student must declare a major no later than the beginning of the spring semester of the sophomore year. Once the student has selected and registered for a major in the College of Art, they must obtain written permission to change to another major within the College. Students requesting to change their major must be in good academic standing. Credit transfers between majors are at the discretion of the accepting major faculty.

## Study Abroad

The Sam Fox School and Washington University offer many undergraduate study abroad programs. For more information, visit our website (<http://samfoxschool.wustl.edu/node/4133>).

## Leave of Absence

A student may request a leave of absence from the college for one semester at a time, up to one year. If this is granted, the student may re-enroll at the end of that time without going through further admission or readmission procedures. A Request for Leave of Absence form, available in Bixby Hall, Room 1, must be completed before a leave of absence will be granted. In the case of a medical leave of absence, a letter of clearance is required from Student Health Services before the student will be permitted to re-enroll.

## Digital Technologies

Technology plays a critical role in the educational experience. The College of Art is committed to the integration of relevant technology into the curriculum. Students entering the sophomore year are required to have a specified computer and software. Supplemental purchases (monitors, scanners, tablets, etc.) may be necessary as students advance and declare a major. Information is available on our website (<http://samfoxschool.wustl.edu/node/6747>).

## Retention of Student Work

The College of Art reserves the right to hold a student's work(s) for exhibition purposes and holds reproduction rights of any work(s) executed in fulfillment of course requirements.

## Administration

### College of Art

**Heather Corcoran** (<http://samfoxschool.wustl.edu/directory/222>)  
Director, College and Graduate School of Art  
Jane Reuter Hitzeman and Herbert F. Hitzeman Jr. Professor of Art  
MFA, Yale University

**Arny Nadler** ([http://samfoxschool.wustl.edu/portfolios/faculty/arny\\_nadler](http://samfoxschool.wustl.edu/portfolios/faculty/arny_nadler))  
Chair, Undergraduate Art  
Associate Professor  
MFA, Cranbrook Academy of Art

**John Hendrix** (<http://samfoxschool.wustl.edu/directory/511>)  
Chair, Undergraduate Design  
Associate Professor  
MFA, School of Visual Arts

### Majors (directory)

Below is a list of majors offered by the College of Art. Visit the Majors section of the College of Art (p. 79) in this *Bulletin* to view more information about a specific major.

- Art — with optional concentrations in:
  - Painting
  - Photography
  - Printmaking
  - Sculpture
- Communication Design
- Fashion Design

### Minors (directory)

Below is a list of minors offered by the College of Art. Visit the Minors section of the College of Art (p. 79) in this *Bulletin* to view more information about a specific minor.

- Art
- Design

Visit the Sam Fox School (<http://samfoxschool.wustl.edu/node/10123>) website for specific requirements.

## Arts & Sciences

The College of Arts & Sciences is the largest undergraduate program at Washington University, offering students the most diverse range of courses in more than 50 different fields, ranging from anthropology and biochemistry to mathematics and performing arts.

The college draws on the rich and varied resources that this distinguished university has to offer — a creative and internationally recognized faculty, a diverse and able student body, a superior library, and excellent opportunities for advanced study. As the center of intellectual life on the campus, the College of Arts & Sciences benefits from and contributes to the studies of architecture, art, business, engineering, law, medicine and social work.

Of central importance to the life of the college is the quality of teaching. Undergraduate students have the opportunity to learn from and work beside stimulating teacher-scholars who are leaders in their fields. Our nationally recognized faculty, which numbers more than 600, is made up of artists, biologists, chemists, economists, historians, philosophers and poets, all of whom bring the excitement and diversity of new ideas into the classroom.

### Governance

The College of Arts & Sciences is bound by the charter of the university and is ultimately responsible to the University Board of Trustees, which delegates to the chancellor the administration of the university. In turn, the chancellor delegates to the deans and faculty of the College of Arts & Sciences responsibility for its internal governance.

Because the college is continually reassessing its objectives and policies, faculty and students alike may take the initiative in proposing changes in curriculum and policies. New programs or proposed modifications are reviewed by committees whose members represent the diverse points of view of the academic community.

By action of the Faculty of Arts & Sciences in January 1969, revised in May 1971, the ArtSci Council shares joint responsibility with the faculty for collegewide degree requirements, the grading system, and those policies that directly affect the lives of students. The ArtSci Council appoints representatives to various standing and ad hoc college committees.

### The Curriculum

The College of Arts & Sciences fosters in its students the quintessential qualities of a liberal arts education: a heightened spirit of inquiry, an ability to organize and synthesize information, skills in written and oral expression, and a familiarity with the ways in which thoughtful men and women discover

those commitments and values that make life worthwhile. By incorporating the college's manifold intellectual resources — people, libraries, laboratories, studios — Arts & Sciences students "learn how to learn," developing both the flexibility and the habits of thought necessary to the ever-evolving worlds of work and global citizenship.

The college's academic program has two principal objectives. First, it provides students with an understanding of the range of human knowledge and attainment by developing an appreciation of the characteristic problems, achievements and limitations of the various fields of human endeavor. The curriculum works to ensure this understanding by requiring a minimum amount of study (9 units/three courses) in each of three broad areas of study — the Humanities; Natural Sciences & Mathematics; and Social & Behavioral Sciences — and three to four courses (9-12 units) in a fourth area, Language & Cultural Diversity. Collectively, these area requirements make up approximately one-third of the units needed to graduate.

Second, the college's academic program gives students the opportunity to study a subject or area in a sustained, intensive way. After a period of initial investigation (typically two to three semesters) during which students explore the richness inherent in the various fields of study, a student declares an area of concentration, the major. The college offers more than 30 traditional subject majors, such as chemistry, English and music, and more than 20 interdisciplinary majors, such as American culture studies; international and area studies; and women, gender, and sexuality studies. Students also may develop an individualized special major.

In all departments, students are encouraged to proceed as their strengths and interests lead them. Placement examinations are used in many departments to enroll undergraduates in courses at the levels their previous training warrants; in other departments, proficiency examinations are available (visit the Proficiency and Placement Examinations (p. 18) section of this *Bulletin*, or the college's placement webpages ([http://college.artsci.wustl.edu/policies/placement\\_credit](http://college.artsci.wustl.edu/policies/placement_credit))).

The degree requirements and policies in the *2017-18 Bulletin* apply to students entering Washington University during the 2017-18 academic year. To consult catalogs from prior years, refer to our Prior Bulletins (<http://bulletin.wustl.edu/prior>).

### Academic Advising

To assist students with their undergraduate planning, the college provides a closely coordinated academic advising program. Matriculating students have a specially selected four-year academic adviser with whom they will meet regularly during the first year to help with the transition into the university and to help select courses for the fall and spring semesters. After the first year, students meet each semester with their four-year academic advisers prior to registration to discuss interests, goals and academic course work. Students are encouraged to consult with

their four-year academic advisers any time they need assistance throughout the school year.

Upon declaring a major, students are also assigned a major adviser in the department of their principal area of study. The extent of the adviser's assistance depends on a student's individual needs and wishes. Consultation with a major adviser, in addition to the four-year academic adviser, is required each time a student prepares to register for courses.

Students with problems or questions related to academic issues are invited to visit the College Office at any time. One of the deans is available every day on a walk-in basis to answer questions or to provide references to an appropriate source of help. Important among these sources are individual faculty members with particular specialties who may be able to answer the student's questions. In addition, the Writing Center, Career Center, Student Health Services, and Cornerstone: The Learning Center provide a wide range of services, including individual and group instruction, interest tests and advice, individual sessions with trained counselors about educational and personal problems, and the improvement of learning skills.

## Pre-Matriculation Credit

Students may earn pre-matriculation credit for college-level courses completed before enrollment at Washington University as a first-year student. Sources for pre-matriculation credit include Advanced Placement (AP) examinations, International Baccalaureate (IB), British Advanced (A) Levels, course credit earned by proficiency (e.g., back credit), and college credit earned after the junior year of high school that was not applied to high school graduation. (Credits earned via the High School Summer Scholars or High School College Access programs through University College are considered to be pre-matriculation units and are subject to the same regulations.) Although all accepted pre-matriculation work is noted on the transcript so that the student may go directly into advanced courses, the maximum number of pre-matriculation units of credit awarded is 15. Pre-matriculation course work does not fulfill distribution requirements, but it may fulfill requirements for majors and minors. If a student enrolls in and completes a course equivalent to that for which pre-matriculation credit has been granted, the pre-matriculation units for the course in question will be removed from the student's record. For more information, please refer to the section titled "Pre-Matriculation Units" on the Admissions Procedures (p. 18) page of this *Bulletin*.

## Academic Programs for Entering Students

First-year students may choose one of the following programs that provides a basic structure for their course selection. Each option provides an effective means of discovering personal and intellectual interests.

## Focus Program

Focus (p. 457) is a one-year program of linked seminars designed to bring students with similar intellectual interests into a close mentoring relationship with members of the faculty. A number of Focus programs are offered every year, each built around a seminar topic reflecting the professor's particular area of expertise. Students in each Focus program also may attend a "companion" course chosen to encourage exploration of the seminar topic from varying perspectives. The Focus program provides a coherent, group-oriented learning experience, while still allowing time for electives.

## Biotech Explorers Pathway

A two-year program exploring the science of technology and the realization of discovery, Biotech Explorers is an interdisciplinary program drawing on biology, chemistry, engineering, physics, computer science, management, public policy and law. The Biotech Explorers Pathway (BEP) introduces students to the fundamental science behind biotechnology and what it takes to move discoveries from the laboratory into the real world. The BEP aims to build connections between sciences, business, technology and engineering at the start of undergraduate studies; to highlight how scientific discoveries lead to useful applications; and to engage curiosity through team-based inquiry that guides students from examples toward idea generation and project development. The first-year courses are a portal to the second-year project development and transition to capstone fellowships for the summer between the sophomore and junior years.

## Global Citizenship Program

Through this year-long program, selected first-year students acquire fundamental skills relevant to International and Area Studies (IAS). The program consists of two courses, one taught each semester, and a weekly, one-credit workshop that runs the entire academic year. The Global Citizenship program examines what it means to be a citizen of the world while challenging its participants to engage both demanding texts and real-life scenarios. The fall semester seminar provides students with a useful theoretical framework for their second semester practicum. The practicum may consist of case studies, proposals and field research. Students work together and with recognized experts in a variety of professions to produce substantive case proposals and action-based documents. As part of the weekly workshop, students collaborate with their peers to produce well-researched and nuanced events geared toward the Washington University community, greater St. Louis, and internet publication.

## The Mind, Brain and Behavior Program

The Mind, Brain and Behavior (p. 686) program is a two-year program that introduces students to the key ideas about the mind-brain interaction by examining attention, memory and language — three central mental abilities that are primary areas of research in cognitive science. Professor-led discussion groups

explore questions such as: What is the relationship between attention and consciousness? Why do we misremember past experience? When the brain is damaged, why are only certain functions lost? In the second year, students engage in hands-on research under the guidance of a faculty mentor.

## Medicine and Society

The Medicine and Society (p. 683) program is an exciting opportunity for undergraduate students in Arts & Sciences to address the important social and cultural foundations of health and illness in human societies, with a specific emphasis on service and research opportunities in health-related sites in St. Louis. Students who are accepted into the Medicine and Society program are enrolled in a year-long freshman seminar on culture, health and society in the Department of Anthropology. This seminar provides the academic foundation for future community health work in St. Louis.

Beginning in the sophomore year, students identify and select a local community health site for their internship. Internship sites may include the St. Louis city and county health departments, various nongovernmental health aid agencies, sites for delivery of clinical care and research, and health-related philanthropic foundations.

The final requirement for the Medicine and Society program is the Rivers Project, a fourth-year paper, thesis or other project designed to demonstrate the student's mastery of essential concepts and ideas in health and wellness. This experience provides an excellent foundation for future study in medicine and public health, as well as any of the allied health professions.

## Text and Tradition Program

This two-year program explores many of the fundamental texts and concepts of Western history, which have served as both foundations and obstacles for the development of some of the most significant cultural, moral and political institutions of modern society. Through close reading, critical analysis and frequent writing, two seminars each term explore texts by such writers as Homer, Plato, Machiavelli, Cervantes, Locke and Marx. The discovery of the self, the origin of ideas such as liberty and property, and the impact of the scientific revolution are some of the themes examined. The program's professors serve as participating students' academic advisers. Text and Tradition courses serve as introductory courses for many of the humanities departments and programs in Arts & Sciences; they also provide a foundation for students interested in pursuing an interdisciplinary major in the humanities under the auspices of the Interdisciplinary Project in the Humanities (p. 528).

## Standard Program

Although encouraged, Focus and multiyear programs are not required. Students who have already made a firm commitment to a particular discipline in the humanities, natural sciences and social sciences, or who are uncertain about what they would like

to pursue, also have a rich array of academic choices throughout their college careers. The course schedule can be either widely exploratory or oriented toward a particular objective such as pre-health studies. Such students are strongly encouraged to consider enrolling in a freshman seminar when selecting courses in consultation with their four-year academic advisers.

## Major Fields of Study

At a minimum, a major consists of 18 advanced (300-level and above) units, all letter-graded and completed with at least a C-. Individual departments may specify additional units or stricter minimum-grade requirements. Students should refer to the department program pages in this *Bulletin* for program-specific requirements.

A student graduating with a Bachelor of Arts may receive no more than a total of two majors and a minor or one major and two minors.

Major declaration is initiated online through WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>). The relevant department or interdisciplinary committee will receive notification of the student's request to declare the major. The declaration of major will not be processed until the student completes any action required by the department as indicated in the WebSTAC application. When the declaration of major is complete, the new major will appear in the Current Programs section of the student's Major Programs page in WebSTAC, and an adviser for the new major will be assigned by the department.

## Second Majors

Students may complete more than one major, including a second major in the Olin Business School or in the School of Engineering & Applied Science. A second major is not required to earn the degree.

*For students matriculating pre-2015:* If a student has two majors, each major must have 18 upper-level units of credit independent of the other. Individual academic departments may enforce a stricter rule regarding double-counting of courses between majors, second majors and minors.

*For students matriculating 2015 and beyond:* If a student has two majors, only introductory (100- and 200-level) courses may be counted, when relevant, toward the requirements of both majors. All advanced (300- and 400-level) courses must be unique to each major; i.e., no advanced course may "double-count" for the course work needed to fulfill the minimal requirements for either major. Should both major programs require the same course, a departmentally sanctioned elective must be chosen to replace the course in one of the programs.

Students in business, engineering, architecture or art may choose to pursue a second major in the College of Arts & Sciences. These students will receive one degree, a BS or BFA,

with two majors — one in the professional school and one in the College of Arts & Sciences.

## Minor Fields of Study

Students developing a significant interest in one or more fields of study beyond the major may choose to pursue a minor in those fields. A minor is not required to earn the degree. Minors may be fulfilled in an area closely related to the major or, to add more breadth to the student's educational program, in a very different area of study. A minor typically comprises 15 to 21 units of credit, all letter-graded and completed with a grade of C- or better. At least 9 of these units of credit must be at the 300 level or above and at least half of the courses must be completed in residence at Washington University. Specific course requirements for a minor are determined by each department or program and are detailed in the department program pages in this *Bulletin*.

*For students matriculating pre-2015:* If a student has a major and a minor, the major must have 18 upper-level units independent of the minor. The minor must have 12 units independent of the major. If a student has two minors, each minor must have 12 units independent of the other.

*For students matriculating 2015 and beyond:* If a student has a major and a minor or has two minors, only introductory (100- and 200-level) courses may be counted, when relevant, toward the requirements of both programs. All advanced (300- and 400-level) courses must be unique to each program; i.e., no advanced course may "double-count" for the course work needed to fulfill either program's minimal requirements. Should a student's major/minor programs require the same course, a departmentally sanctioned elective must be chosen to replace the course in one of the programs.

In addition to pursuing the broad array of minor programs offered through the college, students may undertake minors in architectural studies, art and business as well as computer science, electrical engineering and systems engineering in the School of Engineering & Applied Science.

Minor declaration is initiated online through WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>). The relevant department or interdisciplinary committee will receive notification of the student's request to declare the minor. The declaration of minor will not be processed until the student completes any action required by the department as indicated in the WebSTAC application. When the declaration of minor is complete, the new minor will appear in the Current Programs section of the student's Major Programs page in WebSTAC.

## The Special Major and Special Minor

On some occasions, a student's interests may fall in the intersection of two or more formally organized major programs, in which case a student may propose a special major that brings

the related course work together. Students who propose a special major should be prepared to undertake honors-level work, as all special majors must complete a capstone project of 3 to 6 units the senior year.

Students interested in creating a special major or minor must confer with the dean charged with coordinating this program. After consultation, students must submit to the coordinator a formal proposal consisting of: (1) a description of the program of study, including an explanation of the program's integrating idea; (2) a list of courses to be taken; (3) a letter of support from the proposed academic adviser; and (4) a letter of support from a faculty member in a second, related department who has approved the proposal.

A proposal for a special major or minor must be submitted no later than the fifth semester of undergraduate enrollment. The Committee on the Special Major and Minor is responsible for final action on proposals.

## Special Academic Options

### Overseas Study Programs

The guiding principle of international study through the College of Arts & Sciences is to encourage students to acquire the broad cultural knowledge, the languages and the practical skills to enable them to participate fully in a global society.

For information about the 100-plus study abroad programs offered in more than 50 countries, visit the Overseas Programs website (<http://overseas.wustl.edu>) or the webpages of specific departments and programs.

### Individual and Group Performance

Opportunities for individual and group performance include participation in various musical organizations sponsored by the Department of Music (such as symphony orchestra, wind ensemble and mixed choir) and in courses offered in physical education. To encourage students to pursue such physical, social and creative activities, the college allows up to 12 units of credit toward the bachelor's degree for successful completion of enrollment in individual and group performance. Exceptions to the minimums can be made for students majoring in departments requiring a large number of performance courses, such as dance, drama and music.

### Internships

Students participating in internships that contribute to their academic or professional development may earn credit for unpaid internships. Registration in an internship for credit shall be conditional on satisfactory completion of the Internship Learning Agreement form provided by the College Office and the approval of this completed form by the College Office, faculty sponsor and internship sponsor.

Credit awarded for an internship shall correspond to the time spent in work activities. The student is expected to work 45

hours of internship experience over a period of six to eight weeks for each unit of credit. Registration for 1 to 3 units of credit is possible.

Students may complete the work for an internship over the summer and receive credit during the subsequent semester. Any internship completed this way, however, must satisfy all requirements stated here. The learning agreement must be submitted and approved prior to beginning work at the internship site; therefore, credit cannot be awarded retroactively.

Internship courses shall be offered for credit/no credit grades only and therefore count toward the maximum of 24 credit/no credit units that may be applied toward graduation requirements. Internships do not count toward the advanced units requirement and may count toward the major only with departmental approval. Students may not receive more than 3 units of internship credit in any semester and may count no more than 6 units of internship credit toward the 120 units required for graduation. (These regulations, along with all others governing the AB degree, are detailed on the Arts & Sciences Academic Regulations page (p. 890).)

### Part-Time Study: Nontraditional Students

The university recognizes that for certain students with high educational goals, full-time study may not be feasible or appropriate. Employment in demanding positions, extensive family responsibilities or other obligations may prevent an otherwise serious and competent student from completing the bachelor's degree at a rate of 15 units a semester. With their varied experiences outside the university, such students make valuable contributions to the classroom environment as they pursue programs of study suitable to their special circumstances. Please contact University College (<http://bulletin.wustl.edu/undergrad/ucollege>) at 314-935-6700 for more information about part-time study.

### Tuition Reduction

Students who have completed eight full-time semesters in the College of Arts & Sciences and paid full tuition for eight semesters may seek reduced tuition for a ninth or subsequent semester, provided that they have fewer than 12 units to complete. Students must petition the Dean's Office (<http://college.artsci.wustl.edu/contact>), College of Arts & Sciences, Cupples II Hall, Room 104. Students who successfully petition for tuition adjustment for the ninth or subsequent semester will pay only for the units of credit that they attempt (proportionate to the full-time standard for tuition).

### Army ROTC and Air Force ROTC

Students have the opportunity to participate in either the Air Force ROTC Military Aerospace Science Studies (p. 1043) program or the Army ROTC Military Science (p. 1044) program. Scholarship information for both programs can be found in the

Scholarship Funds section (p. 30) of this *Bulletin*. For information on counting ROTC course work toward the degree, refer to the Academic Regulations section (p. 890) of this *Bulletin*.

### Combined Undergraduate Degree Opportunities

Students may work toward the Bachelor of Arts degree in the College of Arts & Sciences while simultaneously earning another undergraduate degree in business, engineering, architecture or art. Students undertaking this "dual degree" program must earn 150 units, 90 of which must be in the College of Arts & Sciences; fulfill the requirements for a major in each of the two schools; and complete the distribution requirements for both schools. Interested students should contact both a dean in the college and the designated dean in the appropriate professional school as early as possible in the undergraduate career.

### Majors Across Schools

Students may earn an AB degree with a first major in the College of Arts & Sciences and a second major in business or engineering by fulfilling all the distribution requirements for the AB degree and completing the requirements both for the first major in Arts & Sciences and for the second major in business or engineering. With careful planning, this can be accomplished within the 120 units required for the AB degree although students should keep careful count to ensure that they complete at least 90 units of credit in the College of Arts & Sciences. For further information on second majors in business, visit the Olin Business School website (<http://olin.wustl.edu>), and for further information on the second major in engineering, visit the School of Engineering & Applied Science website (<http://engineering.wustl.edu>).

### The Accelerated AB/AM Program

Exceptional students who bring to the university a definite commitment to a field of study in the College of Arts & Sciences and a demonstrated capacity for intensive work may be able to complete a Master of Arts (AM) degree in a one-year accelerated program after completing the AB degree. This accelerated program, which begins each year in the fall semester, is open exclusively to students graduating in the immediately preceding December, May or August. Applications may be submitted anytime during the senior year through August 1, and Graduate Record Examination (GRE) scores are not required. The application for admission must be made to the department, which forwards the application and recommendation for admission to the Graduate School. Application forms are available on the Graduate School's website (<http://graduateschool.wustl.edu/accelerated-AB-AM-program>).

Some departments may not participate in this program, and some departments that do not otherwise offer a master's degree may provide this opportunity to Washington University

undergraduates. Contact the relevant department for more specific information about its admission policies and requirements. Students admitted to the program will be regular, full-time graduate students enrolled in the Graduate School at Washington University.

Most AM degrees in Arts & Sciences require 36 credits. The accelerated program allows Washington University undergraduates to complete a master's degree in one academic year by applying up to five 3-credit courses or four 4-credit courses (a maximum of 16 units), taken as an undergraduate at the 400 level or above, toward the master's degree requirements. For master's programs requiring fewer than 36 units, three courses at the 400 level or above (9-12 units) may be applied toward the AM degree. These undergraduate courses must be in an appropriate discipline, approved by the department, and completed with a grade of B or higher.

## The AB and Master's Degrees in the Professional Schools

The College of Arts & Sciences, in conjunction with the Olin Business School, the School of Engineering & Applied Science, and the Brown School, offers joint (3-2) degree programs. If accepted into a 3-2 degree program, a student may work toward the AB degree during the initial three years at Washington University and the professional degree during the fourth and fifth years. A student electing to do a 3-2 program must complete a combined 150 academic units to earn both the AB degree and the professional degree.

Prior to entry into a 3-2 program, a student in the College of Arts & Sciences must complete:

1. At least 90 academic units of course work offered in the College of Arts & Sciences;
2. All distribution requirements;
3. All requirements for an Arts & Sciences major; and
4. At least 18 of the 30 required units in upper-level course work.
5. A transfer student who seeks the AB degree under this plan must also complete at least four semesters in full-time residence in the College of Arts & Sciences at Washington University.

Thirty units of graduate academic credit taken during the fourth year will complete the 120 academic units required for the AB degree. The professional degree is earned when 150 combined academic units and all degree requirements for the professional school are completed. A student must be recommended by the faculty of the professional school to the dean of the College of Arts & Sciences in order to receive the combined degree.

Students interested in a joint 3-2 degree program should: (1) discuss degree options with a dean in the College of Arts & Sciences and with a dean in the professional school; (2) request the Eligibility Certification Form in the College of Arts &

Sciences; and (3) submit the completed Eligibility Certification Form with the application for the 3-2 program to the professional school early in the spring semester of the junior year.

AB joint master's degree students are formally admitted into the graduate program of the professional school as a joint program for the fourth year. Students accepted into 3-2 joint programs will be prime in their undergraduate division for the fourth year; the professional school program will not become prime until after the eighth semester of study as an undergraduate (or after early graduation with a bachelor's degree). In the fifth year, the professional program will become prime.

Students in 3-2 programs will pay the standard full-time undergraduate tuition rate for the fourth year except for the MBA program which charges a premium above the undergraduate tuition rate. Students will receive financial aid for the fourth year based upon their eligibility for undergraduate financial aid awards, including Pell grants.

There is no commitment for undergraduate financial aid beyond the fourth year of study; students in 3-2 programs may apply to the professional programs (Social Work, MBA) for graduate student financial aid for study in the professional program beyond the fourth year.

This policy applies to all undergraduates enrolled in Washington University day school bachelor's programs who have completed less than the equivalent of eight semesters of academic work toward their bachelor's degree. If these students enroll in any Washington University graduate or post-baccalaureate degree program to begin course work toward a graduate degree in their fourth year, before being awarded a Washington University bachelor's degree or completion of the equivalent of eight semesters of undergraduate enrollment, they are covered by this policy.

This policy applies to current 3-2 programs involving Washington University bachelor's and master's programs and to any future 3-2 programs.

## Olin Business School

A five-year program combining an undergraduate degree and a master's degree is available to a select number of students. (More information on the Olin Business School 3+2 Program is available on our website.)

## School of Engineering & Applied Science

The combined AB/Master's Program is designed to enable students in the College of Arts & Sciences to pursue a coordinated five-year study leading to an AB degree in the College of Arts & Sciences and a master's degree in the School of Engineering & Applied Science.

## Social Work

This 3-2 program (<http://msw.wustl.edu/3-2>) leads to an AB degree from the College of Arts & Sciences and an MSW degree

from the Brown School. Interested students should apply to the Brown School during the first semester of the junior year. Students from all academic disciplines with an interest in social work are encouraged to apply. For further information, visit our website.

## Public Health

This 3-2 program (<http://mph.wustl.edu/3-2>) leads to an AB degree from the College of Arts & Sciences and an MPH degree from the Brown School. Interested students should apply to the Brown School during the first semester of the junior year. Students from all academic disciplines with an interest in public health are encouraged to apply. For further information, visit our website.

## Undergraduate Pre-Professional Preparation

Students planning to pursue pre-professional studies should refer to the general recommendations given below. For more specific recommendations, visit the appropriate webpages.

## Architecture

Please refer to the College of Architecture (p. 38) section in this *Bulletin*.

## Business Administration

Students in the College of Arts & Sciences are welcome to consult with the associate dean for the undergraduate program in the Olin Business School concerning any aspect of preparation for careers in business. For more information, visit the Olin Business School's website (<http://olin.wustl.edu>).

## Law

The two most significant factors law schools use in determining whom to admit for legal study are the undergraduate GPA (taking into consideration the difficulty of courses attempted and the breadth of study) and the score on the Law School Admission Test (LSAT). Admission to law school requires a bachelor's degree.

There is no required set of courses for pre-law study at the undergraduate level. Many law school applicants have majors in economics, English, history, philosophy and political science, but law schools also seek students with undergraduate majors in science, business, engineering and other disciplines. Whatever area(s) pre-law students choose to emphasize in their undergraduate studies, they should take courses that require significant amounts of writing, that develop analytic thinking skills, that encourage application of principles or theories to new situations, and that require original writing and revision of written work in response to comment and critique. It is also important to learn to read and analyze complex written material and to develop sound research skills.

Economics, history, philosophy and political science courses can help to develop an understanding of the traditions behind and the development of the U.S. legal system. Logic, statistics and accounting courses also provide valuable background for legal study and the practice of law.

The pre-law advisers in the College of Arts & Sciences are available to help plan a course of study and prepare a strategy for applying for admission to law school. For more information, visit the pre-law website ([http://college.artsci.wustl.edu/pre\\_law](http://college.artsci.wustl.edu/pre_law)).

## Medicine

Pre-medical students in the College of Arts & Sciences of Washington University complete the bachelor's degree before admission to a medical school. In addition to fulfilling the requirements for the AB, pre-medical students must fulfill the entrance requirements of the medical schools to which they plan to apply. Specific requirements, which may vary, are summarized in the *Medical College Admission Requirements* handbook, published annually online by the Association of American Medical Colleges.

Pre-medical students must demonstrate high academic achievement and must possess the character, responsibility and level of commitment suitable for a career in medicine. While requirements for specific medical schools are increasingly varied, most schools have traditionally required at least one year each of English, general biology, inorganic chemistry, organic chemistry and physics, with laboratory components traditionally required for all of the core science courses; additionally, students preparing to take the Medical College Admissions Test (MCAT) should take one semester each of biochemistry, psychology and sociology. Medical schools also encourage applicants to develop a broad intellectual background that includes the humanities, the social and behavioral sciences, and a demonstrated understanding of and appreciation for social and cultural diversity.

Students interested in the health professions may choose a major in any field — the humanities, the social sciences or the natural sciences — as long as they complete the pre-medical requirements. Any student planning to apply to MD–PhD programs is strongly advised to major in one of the natural sciences and to begin gaining bench research experience no later than the beginning of the sophomore year. Research opportunities are available both on the Danforth Campus and at the School of Medicine and are open to both science and nonscience majors. Health-related volunteer opportunities are also widely available.

Students entering the university planning to apply to medical school should, with the aid of their advisers, structure their course of study to include the medical school requirements. There is no one right or best sequence of courses: There are numerous pathways to medical school. Because each student's pathway is different, students interested in a career in the health professions are encouraged to consult the pre-health deans in

the college in addition to their academic advisers. Additional information can be found at the pre-health website (<http://prehealth.wustl.edu/Pages/default.aspx>).

## Physical Therapy

Students interested in pursuing a career in physical therapy must complete a bachelor's degree before entering the Doctor of Physical Therapy (DPT) program.

Prerequisites for the DPT vary from school to school but generally include the following course work:

- 8 units in general biology
- 8 units in chemistry with laboratories
- 8 units in physics with laboratories
- 3 units in anatomy (human, vertebrate, comparative or anatomical kinesiology)
- 3 units in physiology (human physiology preferred)
- 3 units in trigonometry (calculus is acceptable)
- 3 units in statistics
- 6 units in psychology (to include abnormal psychology)
- 6 units in English (to include English composition or an upper-level writing course)
- 6 units in social sciences or the humanities

DPT programs also require applicants to take the Graduate Record Examination (GRE) and to demonstrate competence in medical terminology. Admission factors include grade point average, GRE scores, letters of recommendation and written essays.

Interested students will find additional information about Washington University School of Medicine's Program in Physical Therapy (<http://physicaltherapy.wustl.edu>) on our website.

## Fields of Study

African and African-American Studies (p. 144)

American Culture Studies (p. 165)

## African and African-American Studies

The program in African and African-American Studies offers opportunities for students to explore the social, political and intellectual history as well as the literature, culture and artistic life of various peoples in the world who are African or of African descent.

The program examines a wide spectrum of experiences and issues and is both multidisciplinary and interdisciplinary in its approach. Courses are offered in the humanities, the social sciences and the performing arts. Main areas of concentration are East, West and Central Africa; the United States; and the Caribbean.

Students who major in the program are encouraged to design a course of study that focuses on either a particular area of interest or a more comprehensive examination of black culture and life. Students also have opportunities to do research with faculty or to take internships with organizations such as the Missouri Historical Society. Our summer programs in Kenya and Senegal, as well as study abroad in other African countries, can further enrich the student experience.

Courses in the program are numbered to assist students to progress from introductory courses (100-/200-level) to intermediate courses (300-level or higher) to advanced courses (400-level). The program also regularly sponsors lectures on topics of interest in all areas of the black experience. In many

cases, lecturers participate in classes by giving special lectures within the classroom setting.

**Departmental Prizes:** The program also sponsors writing competitions that include monetary awards. They include the **Undergraduate Essay Prize** for the best essay on any subject related to the culture and life of Africans or African-descended people anywhere in the diaspora; the **Graduate Essay Prize** for the best essay on any subject related to the culture and life of Africans or African-descended people anywhere in the diaspora by a graduate student; and the prize for the best **Student Essay in a Foreign Language** that honors the best student writing related to Africa or to African-descended people anywhere in the diaspora that is written in a language other than English.

## Majors

### The Major in African and African-American Studies

**Total units required:** 27 credits

#### Required courses:

| Code     | Title                            | Units |
|----------|----------------------------------|-------|
| AFAS 255 | Introduction to Africana Studies | 3     |
| AFAS 401 | Senior Seminar                   | 3     |

**Elective courses:** 21 units at the 300 level or above. Courses should be selected in consultation with the adviser.

## Additional Information

**Co-Curricular Requirements for Majors:** The program regularly sponsors lectures and events, such as plays, film festivals, exhibits, field trips, and panels and speakers, which focus on contemporary or perennial topics of interest in all areas of the black experience. In many cases, guest lecturers and artists visit classes and interact directly with students. These program-sponsored events are, in part, designed to foster a vibrant social and intellectual community within the program and to give majors and minors a sense of identity of what it means to be part of the African and African-American Studies community. Majors must attend a minimum of six (and at least two per year) and minors must attend a minimum of three (and at least one per year) such African and African-American Studies-sponsored events to fulfill the program's co-curricular requirement. (African and African-American Studies subsidizes events that require admission fees.)

**Senior Honors:** If a student maintains an overall grade point average of at least 3.65 and a major grade point average of 3.50 by the second semester of their junior year, they may be eligible to conduct a Latin Honors thesis with a core faculty member in the program in African and African-American Studies. Completed application forms for Honors should be submitted to the honors

program director as early as possible, preferably before May 1 of the junior year.

## Minors

### The Minor in African and African-American Studies

**Units required:** 18

**Required courses:**

| Code     | Title                            | Units |
|----------|----------------------------------|-------|
| AFAS 255 | Introduction to Africana Studies | 3     |

**Elective courses:** 15 units at the 300 level or above. Courses should be selected in consultation with the adviser.

### Additional Information

**Co-Curricular Requirements for Minors:** The program regularly sponsors lectures and events, such as plays, film festivals, exhibits, field trips, and panels and speakers, which focus on contemporary or perennial topics of interest in all areas of the black experience. In many cases, guest lecturers and artists visit classes and interact directly with students. These program-sponsored events are, in part, designed to foster a vibrant social and intellectual community within the program and to give majors and minors a sense of identity of what it means to be part of the African and African-American Studies community. Majors must attend a minimum of six (and at least two per year) and minors must attend a minimum of three (and at least one per year) such African and African-American Studies-sponsored events to fulfill the program's co-curricular requirement. (African and African-American Studies subsidizes events that require admission fees.)

## Courses

Visit online course listings to view semester offerings for L90 AFAS (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L90&crslvl=1:4>).

---

#### L90 AFAS 1002 Foundations in African and African-American Studies

Designed to introduce the student to issues in African and African-American Studies and how students with AFAS degrees utilize their knowledge in graduate and professional programs or the working world. Particular attention is paid to the discipline of African and African-American studies, which engages with the artistic, cultural, historical, literary and theoretical expressions of the peoples and cultures of Africa and the African diaspora. Faculty members as well as St. Louis professionals give one-hour lectures on their particular disciplinary approach, their research or their professional lives. Students are required to attend three outside lectures or performances. May be taken before declaring major, and may be taken by non-majors. Credit 1 unit. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

---

#### L90 AFAS 103D Beginning Swahili I

A beginning language course emphasizing acquisition of reading, writing and conversational skills in Swahili language. Through video and other multimedia presentations, students also are introduced to the culture of Swahili-speaking communities living in more than a dozen African countries. Five hours a week including culture and language laboratory hours. This course is strongly recommended for students participating in the Summer in Kenya Program. CET (<https://gephardtinsttute.wustl.edu/cec/college-of-arts-sciences>) course. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM

#### L90 AFAS 1045 Wolof Language and Culture

This course introduces students to Wolof language and culture. Wolof is a West African language spoken in Senegal and the Gambia. It is also spoken on a smaller scale in Mauritania, Mali, French Guinea and in the migrant communities in the United States and France. This is the first course of a beginning-level of a Wolof program. In order to acquire a basic proficiency, students practice speaking, reading, writing and listening. Each module begins with a thematic and practical dialogue from which we can study vocabulary, aspects of grammar as well as a cultural lesson. Interactive material, including texts, images, videos, films and audio, are provided. Its aim is to provide students with knowledge of the basic structures of the language and the ability to communicate. Students also learn important aspects of life and culture of the Wolof. Credit 3 units. A&S: LA A&S IQ: LCD BU: HUM EN: H

---

#### L90 AFAS 1046 Wolof Language and Culture II

This course continues the introductory study of Wolof language and culture. Wolof is a West African language spoken in Senegal and the Gambia. It is also spoken on a smaller scale in Mauritania, Mali, French Guinea and in the migrant communities in the United States and France. In this second course of a beginning level of a Wolof program, students practice speaking, reading, writing and listening. Each module begins with a thematic and practical dialogue from which we can study vocabulary, aspects of grammar as well as a cultural lesson. Interactive material, including texts, images, videos, films and audio, are provided. The course's aim is to provide students with knowledge of the more advanced structures of the language and the ability to communicate. Students learn important aspects of life and culture of the Wolof. Credit 3 units. A&S: LA A&S IQ: LCD BU: HUM EN: H

---

#### L90 AFAS 104D Beginning Swahili II

Second-semester Swahili language course emphasizing conversational competence and knowledge of Swahili-speaking cultures of East Africa. In addition to learning grammar and vocabulary sufficient to allow a student to perform basic survival tasks (asking for directions, buying a ticket for travel, checking into a hostel, ordering food) in Swahili, students also are introduced to authentic Swahili texts including plays, short stories and newspapers. Students have an opportunity to practice their acquired language skills by interacting with Swahili-speakers in the St. Louis region. Prerequisite: AFAS 103D. CET (<https://gephardtinsttute.wustl.edu/cec/college-of-arts-sciences>) course. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM, IS EN: H

---

#### L90 AFAS 1096 Ragtime

A history of ragtime music: survey of composers and performers. Emphasis on St. Louis and the music of Scott Joplin. University College students should register for U24 109 Section 02.

Same as L27 Music 109  
Credit 2 units. A&S: LA A&S IQ: HUM BU: HUM

---

**L90 AFAS 111 Freshman Seminar: Race and Ethnicity on American Television**

This course presents a historical overview of the forms that racial and ethnic representations have taken in American television. The course charts changes in public perception of racial and ethnic difference in the context of sweeping cultural and social transformations. The course examines notions of medium and ponders the implications for these identities of the contemporary practice of "narrowcasting." Required screening.

Same as L53 Film 110  
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD Art: HUM BU: BA EN: H

---

**L90 AFAS 1181 Freshman Seminar: Beats and Rhymes — Hip-Hop in American Culture**

On its surface, hip-hop is fundamentally about making music: a creative combination of beats, flow, samples and rhymes. And yet, beneath the surface lies so much more. Although hip-hop culture writ large (lyrics, fashion, dance and lifestyle) influences many on a global level, this class explores the meaning of hip-hop primarily from African-American informed social and political perspectives. In what ways does hip-hop intersect with American culture, specifically on the fields of race, ethnicity, class, gender and sexuality? Without a doubt, it does so in intriguing, contested and often problematic ways.

---

**L90 AFAS 1201 Freshman Seminar: Race and Performance**

What does it mean to "act black"? What about "acting Jewish"? This course looks at performances of racial and ethnic identity, mostly in the United States, mostly in the 20th century. We examine novels (such as Nella Larsen's *Passing*), plays (such as Anna Deavere Smith's *Fires in the Mirror*), and performances of everyday life (such as "Cowboys and Indians") to investigate the performance of race in public. Once we begin to explore the social and cultural performance of race, will it all turn out to be "only" an act?

---

**L90 AFAS 136 Freshman Seminar: The Concept of Race in Black Thought**

Although many people now believe that the idea of biologically distinct human races is a socially constructed fiction, the color of one's skin can play a major role in determining such aspects of life as where one lives, the quality of one's education, and one's access to health care. Clearly, perceptions of race still hold a great deal of power, whether or not they are based upon scientifically sound reasoning. Therefore, we must attempt to understand how notions of race emerged and where they seem to be headed. In this course, we examine the role of race in American life, past and present.

---

**L90 AFAS 162 Freshman Seminar: Contextualizing Problems in Contemporary Africa**

Africa is typically presented in the United States and international media as a continent in constant turmoil. This freshman seminar challenges this simplistic and common myth by exploring the historical and global roots of key issues facing contemporary Africa. Case studies include the 1994 genocide in Rwanda; post-Apartheid violence in South Africa; HIV/AIDS in Africa; oil and corruption in Nigeria; the legacy of colonialism; the quest for modernity; refugees and forced migration; and commercial sex work. In each of these cases students explore how the issue emerged within a specific historical, social and global context. We investigate the implications of various forms of inequalities (e.g., between the global north and global south, within Africa, and among generations and genders) in shaping each topic and how differently situated people within Africa understand, respond to and cope with everyday realities. Readings include anthropological and historical analysis, African literature, journalist's accounts and popular articles. By the end of the course, students should be able to critically assess the value of using a contextual analysis in understanding problems in contemporary Africa. This class is a discussion-based seminar and students are expected to actively participate. Students are graded on a series of analytical essays, a final project and in-class participation.

---

**L90 AFAS 178 Imagining and Creating Africa: Youth, Culture, and Change**

The goal of this course is to provide a glimpse into how youth reshape African society. Whether in North Africa with the Arab Spring, in West Africa with university strikes, or in East Africa through a linguistic full bloom, youth have been shaping social responses to societies for a long period. In this course, we study social structures, including churches, NGOs, and developmental agencies as well as learn about examples of Muslim youth movements and the global civil society. The course explores how youth impact cultural movements in Africa and how they influence the world. In particular, we examine hip-hop movements, sports, and global youth culture developments that center on fashion, dress, dance, and new technologies. By the end of the course, students will have enriched ideas about youth in Africa and ways to provide more realistic comparisons to their counterparts in the United States.

---

**L90 AFAS 188 Freshman Seminar: Self and Identity in African-American Literature**

For whom should the black author write? In this seminar we consider how African-American literature examines the meaning of African-American identity, the individual's relationship with the community, and the often vexed relationship of the black author to the American mainstream. We read classic authors as well as some less familiar ones. W.E.B. Du Bois, Nella Larsen, James Baldwin and Octavia Butler are just some of the possibilities. Class participation and regular reading logs are required. Freshmen only.

---

**L90 AFAS 195C Introduction to African-American Images in Film: A Freshman Seminar**

This seminar for freshmen introduces students to an array of films depicting African Americans at different points in the history of filmmaking, as well as the relevance of these films to the advancement of civil rights in America and, by extension, the world. Students are introduced to elementary documentary film production in collaboration with Washington University library staff and hands-on utilization of the Henry Hampton Archive. The course provides a balanced introduction to various civil rights topics that are relevant to African Americans, their depiction in film, and knowledge of how documentary film production can be used to overcome past discrimination.

---

**L90 AFAS 196C Images of Africa in Literature and Art, ca. 1800 to Present Day**

This course examines representations of Africa, African peoples and African cultures from the early 19th century to the present day. Drawing on a wide variety of African and colonial source materials — including novels, photographs, art, advertising and movies — we critically explore the ways in which historical developments and cultural products helped to shape conceptions of African identities and ethnicities. Among other issues, we address the legacy of the slave trade; gender and the construction of cultural "traditions"; colonial society, nationalist resistance and the rise of pan-Africanism; and South African Apartheid. Emphasis is placed on critical engagement with the source materials through written assignments and participation in class discussion. Freshmen only.

---

**L90 AFAS 210 The Linguistic Legacy of the African Slave Trade in Interdisciplinary Perspective**

This course explores the linguistic consequences of the African slave trade, and in so doing introduces students to basic concepts in linguistic science that are relevant to human language development and controversial educational theories that are based on race. Anthropological, linguistic and psychological dimensions of African-American culture are embedded within complementary evaluations of educational controversies surrounding the teaching of (standard) English to African slave descendants, including the Ebonics controversy and its relevance to larger questions of social efficacy, and the affirmative action debate that has consumed the nation. Students work individually or in groups to produce a major intellectual artifact (e.g., a term paper, a scholarly webpage or a project) pertaining to the linguistic plight of citizens within this African diaspora. Students are introduced to foundational African-American studies in anthropology, education, English, linguistics and psychology.

Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

---

**L90 AFAS 2155 Introduction to Comparative Practice**

This course permits the close examination of a particular theme or question studied comparatively, that is, with a cross-cultural focus involving at least two national literatures. Topics are often interdisciplinary; they explore questions pertinent to literary study that also engage history, philosophy and/or the visual arts. Although the majority of works studied are texts, the course frequently pursues comparisons of texts and images (painting, photography, film). Requirements may include frequent short papers, response papers and/or exams.

**L90 AFAS 220A Whose St. Louis? Religion, Race, and Power in the Gateway City**

Through the city's history, St. Louis residents and their leaders have established laws, policies, and practices that have privileged certain groups at the expense of others. Race has often been part of that equation. This course examines moments of social crisis in St. Louis history — up to the present day — when residents have mobilized, resisted, or ignored efforts to address race-based inequalities. We consider how St. Louis' religious communities in particular have understood the city's racial codes and how they have positioned themselves in relation to movements for social change. Along the way we explore slavery, property and housing restrictions, interstate construction, hiring practices, and gun violence. In addition to course reading assignments and film screenings, students will visit three religious sites to encounter and analyze the intersections of race, religion, and power in present-day St. Louis.

---

**L90 AFAS 2230 The African Diaspora: Black Internationalism Across Time and Space**

This course is an introduction to the history of the African diaspora. It engages the following questions: What constitutes a diaspora and what is the African diaspora in particular? Where is it? What were the conditions that led to the dispersal of Africans throughout the world? How have Africans in the diaspora constructed cultural and political identities across time and space? What were the circumstances that led to the dispersal of Africans? When the dispersal resulted from conditions of inequality, as was the case when the transatlantic slave trade led to the forced migration of Africans to the "new world," what were the legacies of that inequality? How has the African presence transformed the societies in question? Though the course focuses on readings from the United States, the Caribbean and South America, students also are exposed to the African diaspora as a series of dispersals, with a view to placing the African diaspora in the "new world" within the historic context of a longer history of African dispersal.

**L90 AFAS 2250 Freshman Seminar: African-American Women's History: Sexuality, Violence and the Love of Hip-Hop**

Black women, much like their male counterparts, have shaped the contours of African-American history and culture. Still, close study of African-American women's history has burgeoned only within the past few decades as scholars continue to uncover the multifaceted lives of black women. This course explores the lived experiences of black women in North America through a significant focus on the critical themes of violence and sexuality. We examine African-American women as the perpetrators and the victims of violence and as the objects of sexual surveillance and we explore a range of contemporary debates concerning the intersections of race, class and gender, particularly within the evolving hip-hop movement. We take an interdisciplinary approach through historical narratives, literature, biographies, films and documentaries.

**L90 AFAS 230A Black-Jewish Relations in the United States**

The relationship of blacks and Jews in the United States is at once intimate and strained, mutually beneficial and antagonistic. This course examines this uneasy alliance from a number of perspectives including anthropology, politics and identity

politics, history, religion and class. Beginning with American anthropology's Jewish founding father, Franz Boas, challenging the concept of race, the course traces the relations of blacks and Jews throughout the 20th century and in our contemporary moment. We will pay particular attention to the civil rights era, which is commonly upheld as the golden age of black-Jewish relations, as well as to this alliance's unraveling in the post-civil rights era. The course then moves to a unit focused on more recent ruptures and collaborations including the 1991 Crown Heights race riots, during which Orthodox Jews clashed with their black neighbors, and Jewish involvement in the Black Lives Matter movement. The course concludes with a unit on identity and identity politics focused on the complexity and fluidity of the categories "white," "black," and "Jewish."

---

#### L90 AFAS 251 Topics: The Ebonics Controversy

This course examines the controversy regarding the status of Ebonics and its role in education. Ebonics is the term often used to describe the distinct speech of 85 percent of the African-American population. The controversy reached the national limelight in 1996 and 1997 due to a resolution by the Oakland (California) School Board, which identified Ebonics as a legitimate form of speech that should be respected. The arguments about Ebonics are multifaceted and highlight significant linguistic as well as educational and political issues. There is the basic question of just what is Ebonics: Is it a separate language, a dialect, slang, bad grammar, broken English or really not a distinct entity? There are issues related to the term Ebonics as evidenced by the various names that academicians have used for the speech of African Americans, i.e., African-American (vernacular) English and African-American Language. Its origins and history also have been debated: Is it a variant of Southern English or are its origins traceable to the language systems of Africa? Further, there is a fundamental, practical question of how to approach the education of African-American children whose home speech is Ebonics: Should a goal in the education of these children be the purging of Ebonics so that it does not interfere with the mastery of Standard English, or should Ebonics be used as a vehicle for learning Standard English? This course examines these and other issues, such as the portrayal of Ebonics in the popular media as well as its use within African-American communities, through readings, films, small and large group discussions, writing assignments and lectures.

#### L90 AFAS 255 Introduction to Africana Studies

The course provides an overview of the field Africana Studies and provides analysis of the lives and thoughts of people of African ancestry on the African continent and throughout the world. In this course we will also examine the contributions of Africana Studies to other disciplines. The course takes an interdisciplinary approach drawing from history, philosophy, sociology, political studies, literature, and performance studies and will draw examples from Africa, the United States, the Caribbean, Europe and South America. When possible, we will explore diaspora relationships and explore how the African presence has transformed societies throughout the world. This class will focus on both classic texts and modern works that provide an introduction to the dynamics of African-American and African diaspora thought and practice.

#### L90 AFAS 2674 Sophomore Seminar: Slavery and Memory in American Popular Culture

Sophomores receive priority registration. The history of slavery has long created a sense of unease within the consciousness of many Americans. Recognizing this continued reality, this seminar examines how slavery is both remembered and silenced within contemporary popular culture. Although slavery scholarship continues to expand, how do everyday Americans gain access to the history of bondage? Taking an interdisciplinary approach to these intriguing queries, we will examine a range of sources: literature, public history, art/poetry, visual culture, movies and documentaries, as well as contemporary music including reggae and hip-hop. The centerpiece of this course covers North American society, however, in order to offer a critical point of contrast, students will be challenged to explore the varied ways slavery is commemorated in others parts of the African diaspora.

---

#### L90 AFAS 280 Imaging Blackness: Race and Visual Culture in the African Diaspora

In 1903 W.E.B. Du Bois wrote that the "biggest problem of the 20th Century is the problem of the color line." By this stage, cinema and photography were already well established technologies that were being used to produce and justify differences between black and white subjects. Collectively through historical and theoretical readings, film screenings, and by engaging with a variety of visual arts practices, in this seminar we will first examine the relationship between early visual technologies and modern understandings of race. Since the development of photography and cinema, scientists, anthropologists, and the state have mobilized such visual technologies to inscribe racialized difference onto black/African/native bodies. Central to our analysis is the manner in which visual technologies have produced the black/African body as not just racially different but also deviant in terms of gender and sexuality. After establishing the historical context, we will shift our focus to consider how contemporary artists from the Africa diaspora use visual culture and aesthetics to actively challenge and critique overdetermined stereotypes of blackness. Throughout the semester we will study the manner in which class, gender, and sexuality are central to the production of the black body, and we will engage with various representations of blackness that consider these intersecting social formations.

#### L90 AFAS 3002 Feminist Fire!: Radical Black Women in the 20th Century

Black women have been at the forefront of the black radical tradition since its inception. Often marginalized in both the scholarship and popular memory, there exists a long unbroken chain of women who have organized around the principles of anti-sexism, anti-racism, and anti-capitalism. Frequently critical of heterosexist projects as well, these women have been the primary force driving the segment of the black radical tradition

that is commonly referred to as Black Feminism. Remaining cognizant of the fact that Black Feminist thought has also flourished as an academic enterprise — complete with its own theoretical interventions (i.e., standpoint theory, intersectionality, dissemblance, etc.) and competing scholarly agendas — this course thinks through the project of Black Feminism as a social movement driven by activism and vigorous political action for social change. Focusing on grassroots efforts at organizing, movement building, consciousness raising, policy reform, and political mobilization, Feminist Fire centers Black Feminists who explicitly embraced a critical posture toward capitalism as an untenable social order. We prioritize the life and thought of 20th-century women like Claudia Jones, Queen Mother Audley Moore, Frances Beal, Barbara Smith, Audre Lorde, Angela Davis, and organizations like the Combahee River Collective, Chicago's Black Women's Committee, and the Third World Women's Alliance. At its core, the course aims to bring the social movement history back into the discourse around Black Feminism.

#### L90 AFAS 3010 The Politics of Kanye West: Black Genius and Sonic Aesthetics

As a hip-hop artist Kanye West has had unprecedented impact on the sonic force of music, fashion, politics and videography. Coupling his controversial moments with his corpus of musical texts with special focus on sonic production, this course illuminates "Mr. West" as a case study for interrogating the interplay between fame, gender, sexuality and race. Mostly, we explore how racialized ways of doing iconography, complex ways of seeing, create a distorted or reductive frame through which we see the black and famous. Nonetheless, the course oscillates with entertaining these nuances, while being entertained by the decade-long catalogue of music and visual imagery. Together, we extract the "Politics of Mr. West" in his music and life, while also illuminating the importance of a politics of genius-making in the larger arc of black pop culture tradition. Credit 3 units. A&S IQ: HUM, SD BU: BA EN: H

---

#### L90 AFAS 3015 Speaking Truth to Power: The Black Prophetic Voice in America

To comprehend the origins and development of the black prophetic voice, one must first understand the religious history of African Americans. As such, this course investigates how African Americans have historically employed Christianity as a vessel of protest and empowerment. To illustrate how African Americans' practiced faith has ultimately become a platform for speaking out against their oppression, students engage some of the following questions: What makes Black Christianity so distinct, if at all? What is the so-called "prophetic voice"? And how have African

Americans used this prophetic voice to bring attention to various issues of social, political and economic concern? Ultimately students decide for themselves what black prophetic voice is and if it is still a viable part of the American fabric.

#### L90 AFAS 3061 Literacy Education in the Contexts of Human Rights and Social Justice

Literacy is a fundamental human right. In this course, we will explore the current and historical relationships between literacy and human rights. This will include an analysis of the ways in which literacy education is fundamentally linked to issues of global justice including political engagement and voting rights, environmental sustainability, gender and racial equality, and participation in the globalized economy. We will investigate how literacy education has played a role in social struggles at local, national, and international levels such as the creation of the Freedom Schools in St. Louis, the Native American boarding school movement, the Civil Rights movement in the United States including the creation of the Citizenship schools, the Ebonics debate in Oakland, California, the Nicaraguan Literacy Campaign, and the current No Child Left Behind federal educational policy. Students will explore how literacy education has been used, in each of these cases, as a tool of empowerment and a tool of oppression.

#### L90 AFAS 3062 Islam, Culture and Society in West Africa

This course explores the introduction of Islam into West Africa beginning in the 10th Century and explores its expansion and

development in the region, placing emphasis on the 19th century to present day. It focuses on the development of West African Muslim cultural, social, religious and political life, to understand not only how the religion affected societies, but also how West African local societies shaped Islam. The course also aims to introduce students to a critical understanding of Islamic writing in West Africa. It also examines the organization of Muslim Sufi orders in West Africa through time and space. The course is organized around a series of lectures and readings, as well as print and visual media.

### L90 AFAS 3071 Caribbean Literature in English

Rum! Fun! Beaches! Sun! This is the image of the Caribbean in America today. This course surveys literature and culture from these islands, looking both at and beyond this tourists' paradise. It aims to introduce students to the region's unmistakably vibrant tradition of multicultural mixture, while keeping an eye on the long history of slavery and rebellion out of which the islands' contemporary situation formed. Along the way we encounter a wide variety of texts, from the earliest writing focused on life in urban slums, to the first novel ever to have a Rastafarian as its hero, to more contemporary considerations of the region's uncertain place in a U.S.-dominated world. Toward the end of the course, we also look at important films like *The Harder They Come* as well as discussing the most globally famous cultural product of the contemporary Caribbean: reggae music. The course involves readings from multiple genres and covers authors such as C.L.R. James, Derek Walcott, Jean Rhys, V.S. Naipaul, Jamaica Kincaid, and Caryl Phillips.

### L90 AFAS 3080 Imaging Blackness: Race and Visual Culture in Africa and the African Diasporas

This course examines the relationship between race, nation, and visual culture by interrogating the ways in which citizenship in Western nations is racially defined. Through the semester, we focus specifically on South Africa and African diaspora communities in the U.S., Britain, Canada, Germany, and the Caribbean. People from Africa and the African diaspora have historically been excluded from the national imaginary and have sought other forms of belonging that challenge the limitations of the nation-state. First, this course examines the role of visual culture in reifying the relationship between race and nation. Collectively through readings, film screenings, and by engaging with other visual arts practices (photography and fine art), we interrogate the following questions: What is the relationship between early cinema and photography and how have these visual technologies contributed to contemporary understandings of race, particularly blackness and Africanness? What is the relationship between early cinema, race, and nation? How has cinema been used by black communities to signal the

emergence of modern black life? How does Africa figure in the African diasporic imaginary through visual art? After establishing the long history of the intimate relationship between race, nation, and visual culture we then interrogate the manner in which artists of the African diaspora and South Africa have employed the visual technologies of cinema and photography to contest dominant representations (stereotypes) of blackness. We engage with the manner in which these artists have and continue to challenge, critique, and offer new ways to think through the relationship between race, nation, and visual culture. Throughout the course we examine how other vectors of power like class, gender, and sexuality are central to formations of race and nation. By engaging with contemporary visual artists of South African and the African diaspora we examine how cultural production, for example, can and does serve as one means through which people imagine their lives, often resisting and revising forms of oppression to create alternative community and cultural formations.

### L90 AFAS 3091 Poverty and Social Reform in American History

This course explores the history of dominant ideas about the causes of and solutions to poverty in American society from the early republic to the end of the 20th century. We will investigate changing economic, cultural, and political conditions that gave rise to new populations of impoverished Americans, and to the expansion or contraction of poverty rates at various times in American history. We will, however, focus primarily on how various social commentators, political activists and reformers defined poverty, explained its causes, and struggled to ameliorate its effects. The course aims to highlight changes in theories and ideas about the relationship between dependence and independence, personal responsibility and social obligation, and the state and the citizen.

### L90 AFAS 3095 African Art in Context: Patronage, Globalisms, and Inventiveness

This course offers an introduction to principal visual arts from Africa, prehistoric to contemporary. It explores traditions-based and contemporary arts made by African artists from across the continent in conjunction with their various contexts of creation, use, understanding and social history. Theoretical perspectives on the collection, appropriation and exhibition of African arts in Europe and North America will be examined. Course work will be complemented by visits as a group or independent assignments at the Saint Louis Museum, the Pulitzer Arts Foundation, and possibly a local private collection.

### L90 AFAS 3101 "Give Up the Mic": Black Feminism in the United States

It is a mistaken, but widely held, assumption that black feminism in the United States emerged from the second-wave women's movement of the 1960s. This course offers a different view: the black feminist movement has a long history with roots in the slavery era. This course charts the historical evolution of black feminist theory and praxis from the 19th century to the present through reading texts from a variety of black feminists including

abolitionists, anti-lynching advocates, clubwomen, blues artists, unionists, communists, civil rights and black power movement activists, poets, leaders of formal feminist organizations, and hip-hop feminists. We examine essays and books that articulate the complexity of black American women's demand for social, economic and political equality as well as the desire for a vision of liberation based on historical and ongoing struggles against race and gender oppression. We identify the central concerns of black feminist thought, salient theoretical models such as the intersection of race, gender, sexuality and class, and how the movement changed over time.

### L90 AFAS 311 Modern Dance and the African-American Legacy

This course examines the works of several African-American choreographers and their contributions to the field of modern dance in America. These works, considered modern day classics, depict important historical events and reveal cultural influences that people of African descent have impressed upon our society. Through the medium of dance aided by discussions, video and class reading assignments, the choreographers' works are analyzed for form, content and social relevance. Studio work includes technique to support learning the repertory. Prerequisite: one to two years training in modern, jazz or ballet. Same as L29 Dance 311

### L90 AFAS 3113 Culture, Politics, and Society in Francophone Africa

France and Africa have a long historical relationship, dating back to the early Euro-Mediterranean empires, the first explorers, long-distance traders, Christian missionaries, colonialists, and today's French West and North African communities. In this course, we delve into this long process of interaction between France and its colonies of Africa. During the first half of the semester, we explore these historical relationships and examine the scientific constructs of race in the 19th and early 20th century. We touch on themes that defined the colonial encounter, including the development of the Four Communes in Senegal, the Negritude movement, and French Islamic policies in Africa. The curriculum for this course includes articles, films, and monographs, to explore these themes and includes writers and social activists living in France and the African diaspora. The second half of the course examines Francophone Africa after independence. Here the course explores the political and cultural (inter) dependence between France and its Francophone African partners. In addition, we examine the challenges of many African states to respond to their citizen's needs, as well as France's changing immigration policies in the 1980s, followed by the devaluation of the West and Central African Franc (CFA).

---

### L90 AFAS 3140 Urban Inequality: Racism, Segregation, & Ghettoization in the American City

The academic study of urban inequality proceeds from the understanding that: 1) cities are deeply unequal, especially when considered in terms of race and class; 2) rather than being random or natural, urban inequality is the product of human ideas, policies and practices; and 3) urban inequality has substantial and enduring impacts on city life and life chances, especially for racial minorities and the poor. Echoing these

general themes, this course closely examines the causes, development, and consequences of urban inequality in the U.S. context. In order to explore U.S. urban inequality most clearly, the course focuses on the African-American urban experience and what has variously been called the "black belt," the inner city, and, most importantly, the ghetto. The scope is still national, though, with analyses of New York, Philadelphia, Baltimore, D.C., Detroit, Chicago, New Orleans, Oakland and St. Louis, among other cities. The course primarily draws from sociology and history but also includes insights from anthropology, political science, criminology and law, among other disciplines.

**L90 AFAS 3242 Introduction to African-American  
Psychology**

This course provides an introduction to the experiences of African Americans from a psychological perspective. Throughout the course, we will consider a range of theoretical and methodological approaches that scholars have developed to conceptualize the thoughts, styles and behaviors of African Americans. The course begins with an overview of these theories, methodologies and frameworks. The second part of the course is devoted to exploring psychological research around pertinent topics in the field such as racism and discrimination, gender, achievement and schooling, kinship and family, racial identity, religion and spirituality, and mental health. Finally, we conclude the course with discussions of current topics, controversies, and recent advances in African-American psychology. Prerequisite: Intro to Africana Studies.

**L90 AFAS 3254 African Americans and Children's Literature**

This course explores two distinct themes: how African-descended people have been depicted in American and British children's literature and how African Americans have established a tradition in writing for children and young adults. It also examines two related questions: How has African-American childhood been constructed in children's literature and how have African-American writers constructed childhood in children's literature? We look at such classic white writers for children like Helen Bannerman, Annie Fellows Johnston, and Mark Twain as well as efforts by blacks like the *Brownies Book*, published by the NAACP, and children's works by black writers including Langston Hughes, Ann Petry, Shirley Graham Du Bois, Arna Bontemps, Virginia Hamilton, Walter Dean Myers, Mildred Taylor, Floyd and Patrick McKissack, Julius Lester, Rosa Guy, Sharon Bell Mathis, bell hooks, and others.

**L90 AFAS 326 Literature of the Color Line**

In 1903's *The Souls of Black Folk*, W.E.B. DuBois wrote "for the problem of the 20th century is the problem of the color-line." This literature course includes texts written by African-American authors to examine the ways African Americans came to be portrayed in American literature and culture by writers of color, paying special attention to the changing concept of race and African-American citizenship as influenced by American political thought at a time when many of the gains made by African Americans during the period of Reconstruction were repealed. We read fiction, poetry, essays and pamphlets by African-American writers writing through the late 19th and early 20th century, including but not limited to Charles Chesnutt, W.E.B. DuBois, Booker T. Washington, Ida B. Wells-Barnett, Pauline Hopkins, Frances E.W. Harper, Paul Laurence Dunbar. In addition to the texts, students are asked to briefly examine portrayals of African Americans in other forms of media, such as visual culture and film.

---

**L90 AFAS 330 Topics in Linguistics: The American  
Languages**

Our perceptions about language are shaped by our linguistic backgrounds and practices as well as our social and political ideologies. This course examines the history of American languages in the U.S. and explores the social, educational, and political issues that surround them. Four types of languages are studied: Native American, colonial, immigrant, and new languages (e.g., Hawaiian Pidgin and American Sign Language). We also take a special look at the history and structure of African-American Language which challenges linguistic categorizations as well as language policy and education. Among the major questions discussed in this course are: what

makes American languages distinct in terms of their history and social status; what do they all have in common beyond the simple geographic classification of being "American." In addressing these questions we also study the politics of language, the history of language policy and education in the U.S., as well as issues of current debate, such as indigenous language reclamation, the "Ebonics controversy," bilingual education, and the official English movement.

**L90 AFAS 3405 For Freedom's Sake: The Civil Rights Movement in America**

This course provides an introduction to the period of struggle in American history known as the Civil Rights Movement. Our primary task is to survey the major historical figures, organizations, locations, strategies and ideas that coalesce to make the history of the movement. The course broadly covers the years of the Black Freedom Struggle between 1945 and 1971, with a sharper focus on the pivotal years of 1954-1965. By placing the movement within a broader context, the course seeks to identify the historical developments and social realities that made the movement necessary and possible. The class also looks at the years following the movement, and the general transition from Civil Rights to Black Power.

---

**L90 AFAS 343 Capitalism, Exchange and Inequality in Africa**

This course explores issues of power and inequality related to exchange and the emergence of market economies in Africa.

Case studies include examinations of cattle and bride wealth among pastoralists in Sudan, welfare policies in contemporary South Africa, and sex work in West Africa. In each of these cases there is a complex balance between the value placed on maintaining social relationships and accumulating private property. We investigate the implications of this balance for the production of local and international forms of inequality. The course also introduces students to key ideas in economic anthropology such as the formalist-substantivist debate, rational choice theory and neo-Marxist approaches to power and stratification. By the end of the course, students should be able to critically assess the value of these theories in understanding day-to-day economic activities in Africa. This class is a discussion-based seminar and in-class participation is highly encouraged. Students are graded on a series of analytical essays, a final paper and in-class participation.

**L90 AFAS 3447 Visualizing Blackness: Histories of the African Diaspora Through Film**

The African diaspora and, more importantly, variations of blackness, black bodies, and black culture have long captured the imagination of audiences across the globe. Taking a cue from exciting trends in popular culture, this course bridges the world of history, film and culture to explore where and how historical themes specific to African-descended peoples are generated on screen (film and television). Fusing the film world with digital media (i.e., online series and "webisodes") this class allows students to critically engage diasporic narratives of blackness that emerge in popular and independent films not only from the United States but other important locales including Australia, Brazil, Britain and Canada. Moving across time and space, class discussions center on an array of fascinating yet critical themes including racial/ethnic stereotyping, gender, violence, sexuality, spirituality/conjuring and education. Students should be either of junior- or senior-level and have taken at least one AFAS course. Permission of the instructor is required for enrollment.

**L90 AFAS 352A The Black Athlete in American Literature**

The black athlete is a central figure in American entertainment, and has been since Frederick Douglass decried Christmastime

slave games in his Narrative. This course will examine literary depictions of black athletes — in novels, memoirs, essays and poems — in order to better understand the cultural significance of sportsmen and women in the African-American struggle for equality, from abolitionism to the "Black Lives Matter" movement. We will read works by Douglass, Ralph Ellison, Maya Angelou, and John Edgar Wideman, among others, and examine the lives and athletic pursuits of prominent athletes such as Jackie Robinson, Muhammad Ali, Wilma Rudolph, Michael Jordan, and LeBron James. Popular perceptions of gender and sexuality, in addition to race and racism, will factor into our readings, especially as students incorporate secondary sources into their own research.

**L90 AFAS 359 (Re)Writing Slavery**

This special topics course considers black-authored texts ranging from the 18th to the 21st century to examine the ways slavery has been discussed in American literature and culture. We pay attention to the role of slavery in creating the African diaspora, the contribution of slave narratives to the Abolitionist movement, and how the structures of American slavery did not disappear after the Civil War. We look at the ways Civil Rights-era and contemporary African-American writers such as Margaret Walker, Toni Morrison, and Charles Johnson have appropriated the slave narrative to engage and critique present day concerns. Their works are read against 19th-century slave narratives by ex-slaves such as Frederick Douglass and Harriet Jacobs. In addition to the texts, students are asked to consider how slavery and its aftereffects have been portrayed in film and other forms of media.

**L90 AFAS 355M Hands on the Past: History, Murder and the Archive**

The future depends on the past. This course taps into that understanding by offering an alternative hands-on methods class to encourage undergraduate student engagement with history and archives, both on- and offline. In this particular class, students will be nurtured to more deeply interact with the historical past by exploring gender, race, violence and sexuality through three central questions explored throughout the course: What and how is African-American history conducted? How do we best document the past with students fully at the intellectual table of production and preservation? How do we make history with history? These exciting and diverse interests will be pursued through in-class discussions and course assigned readings, but especially by taking a spring break research project trip across Missouri to various local repositories and the state archives, to activate and fuel the idea of putting hands on the past.

**L90 AFAS 360A Religion and the Modern Civil Rights Movement, 1954-1968**

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century. Same as L57 RelPol 360

**L90 AFAS 363 Mapping the World of "Black Criminality"**

Ideas concerning the evolution of violence, crime and criminal behavior have been framed around many different groups. Yet, what does a typical criminal look like? How does race — more specifically blackness — alter these conversations, inscribing greater fears about criminal behaviors? This course taps into this reality, examining the varied ways people of African descent have been and continue to be particularly imagined as a distinctly criminal population. Taking a dual approach, students consider the historical roots of the policing of black bodies alongside the social history of black crime while also foregrounding where and how black females fit into these critical conversations of crime and vice. Employing a panoramic approach, students examine historical narratives, movies and documentaries, literature, popular culture through poetry and contemporary music, as well as the prison industrial complex system. Prerequisite: AFAS 3880 (Terror and Violence in the Black Atlantic) and/or permission from the instructor, which is determined based on a student's past experience in courses that explore factors of race and identity. Enrollment limit: 20.

**L90 AFAS 3651 Black Women Writers**

When someone says "black woman writer," you may well think of Nobel Prize winner Toni Morrison. But not long ago, to be a black woman writer meant to be considered an aberration. When Thomas Jefferson wrote that Phillis Wheatley's poems were "beneath the dignity of criticism," he could hardly have imagined entire Modern Language Association sessions built around her verse, but such is now the case. In this class we survey the range of Anglophone African-American women authors. Writers likely to be covered include Phillis Wheatley, Harriet Wilson, Nella Larsen, Lorraine Hansberry, Octavia Butler and Rita Dove, among others. Be prepared to read, explore, discuss and debate the specific impact of race and gender on American literature. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Arch: HUM Art: HUM BU: HUM EN: H

---

**L90 AFAS 3652 The New Republic: The United States, 1776-1850**

"Go get yourself some democracy!" Americans have so often preached to other nations. But just how did Americans themselves go about creating the world's largest and most successful democratic republic? And how democratic was this

violent new nation that reeled from one crisis to another, and ultimately to the brink of collapse in its first 75 years? This survey of American history from the creation of the Republic to the eve of the Civil War explores the Revolution and its ambiguous legacies, the starkly paradoxical "marriage" of slavery and freedom, and the creation of much of the America that we know; mass political parties; a powerful Presidency; sustained capitalist growth; individualistic creeds; formalized and folkloric racism; heteronormative patriarchal family life; technological innovation; literary experimentation; distinctively American legal, scientific and religious cultures; and the modern movements of labor, feminism, and African-American empowerment.

---

**L90 AFAS 3662 Experts, Administrators and Soldiers: Governance and Development in Post-Colonial Africa**

Between 1957 and 1975, one African territory after another made the transition from European colony to independent nation-state. Widespread optimism that these "transfers of power" would bring a new era of prosperity and dignity dissipated quickly as the new nations struggled with political instability, military coups, social unrest, and persistent poverty. Consequently many western observers and development specialists are certain that they have become "failed states" requiring foreign assistance to develop properly. This course challenges these assumptions by tracing the origins of African governance and economic development from their imperial origins into the independence era. By exploring nation building, economic planning, and public administration from the perspective of political elites, foreign experts, and ordinary people, the class takes an intimate look at how colonies became nation-states. These new perspectives offer students a historical grounding in international public administration and development by exploring how imperial ideas and concepts continue to influence contemporary social planning and development policy in both Africa and the wider world. **L90 AFAS 3670 The Civil Rights Movement**

The Civil Rights Movement is known as a southern movement, led by church leaders and college students, fought through sit-ins and marches, dealing primarily with non-economic objectives, framed by a black and white paradigm, and limited to a single tumultuous decade. This course seeks to broaden our understanding of the movement geographically, chronologically, and thematically. It pays special attention to struggles fought in the North, West and Southwest; it seeks to question binaries constructed around "confrontational" and "accommodationist" leaders; it reveals how Latinos, Native Americans, and Asian Americans impacted and were impacted by the movement; and it seeks to link the public memory of this movement with contemporary racial politics.

**L90 AFAS 3672 Medicine, Healing and Experimentation in the Contours of Black History**

Conversations regarding the history of medicine continue to undergo considerable transformation within academia and the general public. The infamous Tuskegee syphilis experiment serves as a marker in the historical consciousness regarding African Americans and the medical profession. This course taps

into this particular evolution, prompting students to broaden their gaze to explore the often delicate relationship of people of African descent within the realm of medicine and healing. Tracing the social nature of these medical interactions from the period of enslavement through the 20th century, we examine the changing patterns of disease and illness, social responses to physical and psychological ailments, and the experimental and exploitative use of black bodies in the field of medicine. As a history course, the focus extends toward the underpinnings of race and gender in the medical treatment allocated across time and space — the U.S., Caribbean and Latin America — to give further insight into the roots of contemporary practice of medicine.

#### **L90 AFAS 370 Youth, Generation and Age in Africa**

It is estimated that children and youth constitute more than 60 percent of the population in Africa. In a context of economic decline associated with neoliberal policies of structural adjustment, many of these young people will face extreme difficulty in finding work, supporting families, and taking on the social responsibilities of adults. In recent years, disaffected African youth have been increasingly blamed for political and social instability. This course examines the condition of youth in contemporary Africa. The course begins with classic anthropological texts on generation, youth, and the life cycle in Africa. Readings address the implications of colonialism, education, wage labor, and urbanization for relations between generations. The second half of the course examines recent research concerning the position of African youth in a context of economic and cultural globalization.

#### **L90 AFAS 3800 Black Cinema: An Introduction**

This course introduces students to the films and filmmaking practices from West Africa, South Africa, and Black Britain. Central to the pedagogical goals of this class is to introduce students to the diverse societies, cultures, and perspective of people from Africa and the diaspora through cinema. Students will immerse themselves in the types of social critiques the films engage in as they tackle topics such as gender politics, race, polygamy, migration, corruption, human rights, homosexuality, economic crisis, apartheid, and Westernization. Through critical analysis of films, academic readings, and participating in the annual African Film Festival hosted at Washington University this course will fulfill the requirements set out above. Even though four weeks of the course focuses on Black British Cinema and the social, political, and economic condition of black British

citizens, students will engage with the complexities of the African diaspora experience, particularly in relationship to migration, diaspora, race relations, and gender and sexuality. Given that the course as a whole focuses on filmmaking practices, aesthetics and the politics of African and African diasporic cinemas, students will definitely be exposed to a totally different world experience and the diversity of people, cultures, and aesthetics in Africa and the diaspora. Students in this class will also be required to actively participate in the annual African Film Festival hosted by Washington University and will have the unique opportunity to interact with visiting filmmakers. Required screenings.

---

#### **L90 AFAS 3838 African-American Poetry From 1950-Present**

Beginning with the year in which Gwendolyn Brooks became the first African American to win the Pulitzer Prize, we examine the tradition of African-American poetry and the ways in which that tradition is constantly revising itself and being revised from the outside. We focus in particular on the pressures of expectation — in terms of such identity markers as race, gender and sexuality — and how those pressures uniquely and increasingly affect African-American poetry today.

#### **L90 AFAS 3880 Terror and Violence in the Black Atlantic**

From the period of bondage through the 21st century, terror and racialized violence have consistently been used as a form of social control. This course is constructed to explore the historical foundations of extreme threats of violence inflicted among populations of African descent. The fabric of American culture has given birth to its own unique brand of terrorism, of which this class spends considerable time interrogating. Yet, in recognizing that these practices are commonly found in other parts of the Black Atlantic, students are encouraged to take a comparative view to better tease out the wider strands of violence operative in places like England, the Caribbean and Latin America. Within this course, we explore the varied ways in which music, films, newspapers and historical narratives shed light on these often life-altering stories of the past. Some of the themes touched upon include: the use of punishment/exploitation during the era of slavery, lynching, sexual violence, race riots, police brutality, motherhood, black power and community activism.

---

#### **L90 AFAS 388C African-American Literature: African-American Writers Since the Harlem Renaissance**

African-American literature in the 20th century moves from a renaissance into an institution. Guggenheim, Pulitzer and Nobel prize winners; Communist and Conservative Party sympathizers; Black Power advocates, inaugural poets, Broadway playwrights, Book-of-the-Month Club novelists, along with writers whose allusive and elliptical pages may never win them legions of fans, are among the many whose works we discover together. Written assignments may include two papers and two exams.

Prerequisites: none, but related classes such as E Lit 215

and/or AFAS 208 are suggested. Satisfies the American literature requirement in English, and/or one 300-level elective requirement in AFAS.

Credit 3 units. A&S: TH, SD Arch: HUM Art: HUM EN: H

---

**L90 AFAS 392 Blacks, Latinos and Afro-Latinos:  
Constructing Difference and Identity: Writing-Intensive  
Seminar**

Dominant discourses on Black-Latino relations focus on job competition, while a few others celebrate the future of an America led by "people of color." What is at stake in these narratives? How did we come to understand what is "black" and "Latino?" Students taking this course examine the history of African Americans' and Latinos' racialization under British, Spanish, and American empires, paying attention to both the construction of the racial "Other" by European elites, the re-claiming of identities by the racially marginalized through the Black and Brown liberation movements of the 1960s and 1970s, and the movements' impacts on black-Latino electoral and grassroots coalitions, mass incarceration of youth, and Afro-diasporic productions of hip-hop.

**L90 AFAS 4001 Interrogating Health, Race and Inequalities:  
Public Health, Medical Anthropology and History**

Interrogating Health, Race and Inequalities is intended for graduate students in the School of Social Work and in Arts & Sciences as well as advanced undergraduates in Arts & Sciences who have previous course work in medical anthropology, public health or urban policy. The fundamental goal of the course is to demonstrate that health is not merely a medical or biological phenomenon but more importantly the product of social, economic, political and environmental factors. To meet this goal the course is designed to examine the intersection of race/ethnicity and health from multiple analytic approaches and methodologies. Course readings draw from the fields of public health, anthropology, history and policy analysis. Teaching activities include lectures, group projects and presentations, videos, and discussions led by the course instructors. These in-class activities are supplemented with field trips and field-based projects. By the end of the course, students are expected to have a strong understanding of race as a historically produced social construct as well as how race interacts with other axes of diversity and social determinants to produce particular health outcomes. Students gain an understanding of the health disparity literature and a solid understanding of multiple and intersecting causes of these disparities.

Credit 3 units.

---

**L90 AFAS 4002 Urban Education in Multiracial Societies**

This course offers students an analysis of the historical development and contemporary contexts of urban education in English-speaking, multiracial societies. It examines legal decisions, relevant policy decisions and salient economic determinants that inform urban systems of education in Western societies including, but not limited to, the United States, Canada, Great Britain and South Africa. The course draws on quantitative, qualitative and comparative data as an empirical foundation to provide a basis for a cross-cultural understanding of the formalized and uniform system of public schooling characteristic of education in urban settings. Given the social and material exigencies that shape urban school systems in contemporary societies, special attention is given in this course to the roles of migration, immigration urbanization, criminal justice, industrialism, de-industrialism and globalization in shaping educational outcomes for diverse students in the aforementioned settings. Prerequisite: junior standing or permission of instructor.

---

**L90 AFAS 4005 Video Microanalysis: Methods and Tools**

The purpose of this course is to explore video microanalysis as a methodological tool for studying and valuing unconscious aspects of culturally diverse settings. Utilizing social cultural theoretical lens, this type of analysis reveals fleeting actions, subtle movements, peripheral events, and nonverbal communication that are not easily identified in real time viewing. Specifically we may look at facial expressions, direction of gaze, hand movements, body position, and use of material resources as micro techniques to expand our capacity to explore minute aspects and alternative interpretations of social interactions.

**L90 AFAS 4041 Beginning Graduate-Level Swahili**

A beginning language course for graduate students emphasizing acquisition of reading, writing and conversational skills in Swahili language. Through video and other multimedia presentations, students also are introduced to the culture of Swahili-speaking communities living in more than a dozen African countries. Credit 3 units. A&S: LA A&S IQ: LCD, LS EN: H

---

**L90 AFAS 4042 Beginning Graduate-Level Swahili II**

Second-semester graduate-level Swahili language course emphasizing conversational competence and knowledge of Swahili-speaking cultures of East Africa. Introduction to elementary-level Kenyan and Tanzanian Swahili texts, grade school readers, newspapers and government educational material. Prerequisite: AFAS 4041. Credit 3 units. A&S: LA A&S IQ: LCD, LS EN: H

---

**L90 AFAS 4043 Intermediate Graduate-Level Swahili III**

Enhanced acquisition of language fundamentals acquired in first-year graduate-level Swahili through performance, reading and writing. Students gain skills performing role-plays such as asking for directions, booking a bus ticket, ordering food in a restaurant, etc. Students read more authentic Swahili texts including plays, short stories, newspapers and poems. Prerequisite: AFAS 4041, 4042 or permission of instructor. Credit 3 units. A&S: LA A&S IQ: LCD, LS EN: H

---

**L90 AFAS 406 Sexual Health and the City: A Community-Based Learning Course**

In this community-based learning course, students partner with a St. Louis AIDS service organization (ASO) or sexual health agency to explore how the interrelationships among gender, class, race/ethnicity and sexual identity shape sexual health decisions, outcomes and access to services. Students also examine the complex relationship between men's and women's life goals and constraints, on the one hand, and the public health management of sexual health, on the other. In collaboration with their community partner and its clients, students develop a project that addresses an identified need of the organization and the community it serves. Course readings draw from the fields of anthropology, public health, feminist studies and policy making. Prerequisite: PHealth 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics or permission from the instructor, which is determined based on past student's experience in the fields of medical anthropology or sexual/reproductive health.

**L90 AFAS 4121 Rainbow Radicalisms!: Ethnic**

**Nationalism(s), the 1960s and the Politics of the New Left**

The Black Panther Party remains one of the most iconic groups of the 1960s and 1970s. Perhaps one of the most understudied aspects of the Panthers' legacy is their radical influence upon other American racial and ethnic groups, including Asian Americans, Mexican Americans, Puerto Ricans and American Indians, among others. This seminar considers the emergence of ethnic and racial nationalism among these various groups, as a result of their contact and relationship(s) with the Black Panther Party. Considering the politics of groups like the Red Guard, the Brown Berets, the Young Lords and the American Indian Movement, this course charts the rise and fall of rainbow radicalism as a general offspring of the Black Power Movement and part and parcel of what is commonly referred to as "the New Left." It also considers these groups in relation to the state by probing the dynamic push and pull between repression and democracy. Ultimately, this course grants insight into the contemporary racial domain and current political landscape of America as we discuss how these groups helped to shape modern identity formations, discourses on multiculturalism and definitions of "minority," "diversity" and "equality."

---

**L90 AFAS 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics**

In the year 2000, HIV became the world's leading infectious cause of adult death, and over the next 10 years, AIDS killed more people than all wars of the 20th century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not knowledge or resources, but global inequalities and the conceptual frameworks with which we understand health, human interaction and sexuality. This course emphasizes the ethnographic approach for cultural analysis of responses to HIV/AIDS. Students explore the relationship between local communities and wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power and culture. Other topics include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates, ethics and responsibilities, drug testing and marketing, the making of the AIDS industry and "risk" categories, prevention and education strategies, interaction between bio-medicine and alternative healing systems, and medical advances and hopes.

**L90 AFAS 417 Topics in African History: Middle Passages:  
African Americans and South Africa**

This upper-division seminar explores the fascinating transnational relationship between African Americans and black South Africans during the 20th century. These two populations became intimately familiar with each other as African-American missionaries, sailors, musicians, educators and adventurers regularly entered South Africa while black South African students, religious personnel, political figures, writers and entertainers found their way to America. This course details why these two populations gravitated toward each other, how they assisted each other in their respective struggles against racial segregation and apartheid, and how these shared histories influence their relationship today. Readings for this course draw from key books, articles and primary documents within this exciting new field of intellectual inquiry.

**L90 AFAS 4213 Sufism and Islamic Brotherhoods in Africa**

Muslim societies are prevalent in Africa — from the Horn, the North, the East to the West, with smaller conclaves in Central and South Africa. Islam has played an influential role in these diverse societies, particularly through its Sufi form. Even though Sufism originated in the Arabian Peninsula, it has fit well with African beliefs and cultures. This course aims to explore Sufi beliefs, values and practices in Africa. It reconsiders the academic constructions of "African Islam" by exploring education, intellectual life, economics, gender roles, social inequalities and politics. The goal is to show that Africa is a dynamic part of the Muslim world and not a peripheral one, as it is most often portrayed by the international media or historically, through travelers and colonial accounts. African Muslim brotherhoods have served as political mediators between countries and people (i.e., the role of the Tijaniyya in the diplomatic rivalry between Morocco and Algeria, or its role in reconciliation of clan rivalries in Sudan). In addition, the course pays attention to hierarchy in particular tariqa. Finally, the course examines how African Sufi orders have shaped their teachings to fit transnational demands over the 20th and 21st century. We explore these issues through readings, current media, lectures and special guest speakers.

**L90 AFAS 421A From Mammy to the Welfare Queen:  
African-American Women Theorize Identity**

How do representations of identity affect how we see ourselves and the world sees us? African-American women have been particularly concerned with this question, as the stories and pictures circulated about black female identity have had a profound impact on their understandings of themselves and political discourse. In this course we look at how black feminist theorists from a variety of intellectual traditions have explored the impact of theories of identity on our world. We look at their discussions of slavery, colonialism, sexuality, motherhood, citizenship, and what it means to be human.

**L90 AFAS 424B Broadcasting Equality: Radio, Television,  
and Social Change in Postwar America**

The period between World War II and the 1970s was one of profound cultural, political, and demographic shifts that brought the problems of ethno-religious and racial prejudice to the forefront of U.S. national consciousness. Religious leaders, secular social activists, media industry professionals, and African-American civil rights leaders often worked together to combat intolerance, bigotry and inequality. What did these activists achieve in their attempts to deploy U.S. broadcast media in what they sometimes referred to as "propaganda against prejudice"? How did this activism relate to the institutions of broadcast media, including governmental agencies, national networks and local broadcasters? What was television and radio's impact on the Civil Rights Movement of the 1950s and 1960s? In addressing these questions, we will consider a wide range of media: public service programming as well as commercially produced series, specials, network news and documentaries produced between the 1940s and the 1970s. Programs considered will include *New World A-Coming*, *Amos 'n' Andy*, *American Bandstand*, *NBC White Papers: Sit In*, *Sanford and Son*, *Eyes on the Prize*, and *Soul Train*, among many others. Required screenings.

---

**L90 AFAS 441 Black Sexual Politics**

Borrowing from Patricia Hill Collins' perspective in *Black Sexual Politics*, this seminar examines the historic and popular understandings of black sexuality and how they maintain color line, as well as threaten to spread what Hill Collins refers to as a "new brand of racism." Particularly, this course engages questions about sexuality that have only begun to be discussed with African-American Studies and the larger public sphere. Taking the intersections of identities very seriously, this course interrogates the ways in which these constructions have affected black women, while also being attentive to how "others" are implicated within discourses of black sexuality. Similarly, we will also engage the various distortions of black men — depictions of the black and masculine as almost always violent, sexually and socially irresponsible, brutish, questionable and unfaithful. Together we will use various critical texts and media to better understand the impact and the importance of visual and material images in the interplay of race, sex and politics in contemporary America.

**L90 AFAS 4433 Who's Afraid of Post-Blackness?: The Spectrum and Specter of Blackness in Post-Racial America**

In 2001, Thelma Golden, the director and chief curator of the Studio Museum in Harlem, boldly claimed that a new generation of African Diasporic artists had officially heralded a new day in "post-Black art." Six years later a young presidential candidate, born of a white mother from Kansas and a Kenyan father, motivated a black writer for *Time* magazine to ask, "Is Obama Black enough?" Since 2001, and in the wake of America's first black president, both public and scholarly discourse on Blackness has virtually exploded. New terms and ideas about the "end of Blackness" — as conservative Debra Dickerson put it — seem to enter the popular and scholarly lexicon every day. It is now quite common to hear the phrases "disintegration," "post-racial," "biracial," "post-Blackness," and even "the end of Black politics." This course explores this expanding discourse and attempt to pinpoint what scholars, pundits and cultural critics mean when they employ these terms. It also unpacks the socio-historical context that has given birth to these terms, asking "Why now?" Has the social and political landscape of

America changed so much that we are indeed living in a "post-racial society"? Or does the specter of "Blackness" still loom large, haunting American politics, popular culture, sexuality, media discourse, punitive measures, political economy and our understanding of "Africa" in "African-American" and "African diaspora"? Through the use of fictional texts, history, cultural essays and films this course explores the intraracial spectrum that characterizes Black America, while paying particular attention to issues of class, sexuality, ethnicity, ancestry, diaspora formation and global migration.

---

**L90 AFAS 448 Race Politics in 19th- and 20th-Century America**

This course explores the efforts of black Americans to use the political processes to claim civil rights and economic improvements in the 19th and 20th centuries. It tracks the aims, ideals and organizing strategies of African-American leaders and of grass-roots organizers. Readings and research highlight the ways African Americans debated agendas, fought over strategies and worked to mobilize voters. We study the ways various groups of people — in rural and urban America — argued over priorities, set agendas for their communities, produced a political language, came together with neighbors to fight for civil rights and economic necessities, and, in short, established a dynamic and conflicted political culture.

---

**L90 AFAS 4483 Race and Politics**

From the moment enslaved Africans were brought to American shores, race and racism has been central to the American political project. In this class we will examine how notions of race and racism inform conceptions of citizenship, the allocation of state resources, the development of political parties, and political participation. We will also examine the way that race and racism influence public opinion.

Credit 3 units. A&S: SS

---

**L90 AFAS 4489 Black Political Thought**

Newscasters, pundits, pollsters, analysts and even politicians often think of African Americans as a monolithic population, held together by a uniform set of beliefs that run steady across the entire community. However, this simply is not the case. When it comes to politics and political thought, African Americans, and those who make up the black population in the United States, exhibit a broad range of intra-racial diversity. Manifested along the fault lines of class, gender, age, ideology, and a number of other factors, the complexity of black political thought is built upon the structure of both African-American communities and the larger American political landscape. This course will explore the contours of black political thought in the United States, while paying close attention to various ideologies, pivotal historical moments and major debates shaping the course of African-American political life.

---

**L90 AFAS 4511 Race, Ethnicity and Culture: Qualitative Inquiries into Urban Education I**

Drawing on traditional and recent advances in the field of qualitative studies, this course is the first in a series to examine ethnographic research at the interlocking domains of race,

ethnicity, class, gender and culture. The emphasis in this course is on how these concepts are constructed in urban educational institutions. The course includes a field component that involves local elementary and/or middle schools.

---

**L90 AFAS 4601 Topics in African-American Studies: Health in the Black Community: A Social Science Perspective**

Health matters for every facet of social life. In this course, we use a critical sociological perspective to explore the dynamic nature of health and health care experiences among blacks in the United States. We draw upon core concepts in Sociology, the Sociology of Health, Illness, and Care as well as Critical Race Theory and Social Epidemiology to guide our discussions throughout the semester. Using contemporary, real-world examples, we examine the causes and consequences of racial health disparities that too often situate blacks in positions of disadvantage. We use the work of scholars such as Patricia Hill Collins, David Williams, and Dorothy Roberts to explore topics ranging from racism in the health care system to the black immigrant health advantage to health and hip-hop. We consider how poor health and health care outcomes among blacks in the United States matter on a global scale. Throughout the course, we consider practical policy and programmatic interventions that can be implemented to eliminate poor health in black communities.

---

**L90 AFAS 4608 Education of Black Children and Youth in the United States**

This course provides an overview of the education of black children and youth in the United States. Covering both pre- and post-Brown eras, this course applies a deep reading to the classic works of DuBois and Anderson as well as the more recent works of Kozol, Delpit and Foster. The social, political and historical contexts of education, as essential aspects of American and African-American culture and life, are placed in the foreground of course inquiries.

---

**L90 AFAS 461B Construction and Experience of Black Adolescence**

This course examines the construct of black adolescence from the general perspectives of anthropology, sociology

and psychology. It begins by studying the construct of black adolescence as an "invention" of the social and behavioral sciences. The course then draws upon narrative data, autobiography, literature and multimedia sources authored by black youth to recast black adolescence as a complex social, psychological, cultural and political phenomenon. This course focuses on the meaning-making experiences of urban-dwelling black adolescents and highlights these relations within the contexts of class, gender, sexuality and education.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

**L90 AFAS 4755 Queering Sexual Cultures in Africa and the Diaspora**

This course examines gender and sexuality in contemporary Africa and the diaspora. We will focus specifically on queerness as a category of analysis and will examine queer identities, practices, communities and cultures in Africa and the African diaspora. In recent years, many African countries have adopted harsh anti-homosexuality laws and much of the political and popular discourse frames expressions of same-sex desire as "un-African." However, there is a long history of non-normative sexualities in Africa, challenging the manner in which the continent is constructed as heterosexual by both local and global forces. Similarly, black communities across the African diaspora have relied on the regulation of gender and sexuality to demarcate the boundaries of blackness, and have traditionally sought belongingness to the nation through compulsory heterosexuality. Many scholars, artists and activists in the African diaspora continue to critique parochial definitions of Africanness and Blackness that rely on the exclusion of queer subjects. By drawing on historical, theoretical and visual texts, we will examine the debates concerning sexuality, citizenship and human rights on the African continent and the diaspora as well as their relationship to global issues around sexual citizenship and human rights. By focusing on the lived experiences of LGBTQ subjects in the African diaspora, we will interrogate the contested relationship between sexuality and politics. This reading-intensive, interdisciplinary course will familiarize students with the debates and issues of Queer African Studies, Black Queer Studies, and Black and African Feminist Thought.

Credit 3 units. A&S IQ: HUM, LCD, SD EN: H

---

**L90 AFAS 4851 Prisons, Politics and Activism**

Prison reformers argue that de-criminalizing nonviolent offenses will be enough to reduce mass incarceration, while prison abolitionists argue that we need to dismantle the entire carceral state in the U.S., which is maintained by a racially stratified system of public schooling, housing, employment and health care. What is at stake in these debates? Are we seeking to promote basic humanity, racial and gender equality or utopian visions of rehabilitation? This course seeks to historically contextualize prison reform and abolitionism from the 13th Amendment's re-articulation of slavery to current resistance to mass incarceration. Special attention will be paid to the intersections between the prisoner's rights movement and the Black & Brown Power, feminist, queer and disability movements. Same as L22 History 4851

Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM

---

**L90 AFAS 4881 Advanced Seminar: Mad: Mental Illness, Power and Resistance in Africa and the Caribbean**

This seminar explores the history of mental illness in Africa and the Caribbean during the colonial and postcolonial periods. We will be guided by the following questions: What is mental illness? How do social, cultural and political realities affect how mental illness is defined? Should mental illness always be analyzed within a specific cultural context? How did psychiatry factor into the efforts of European colonizers to maintain social order in their colonies? How have colonized people resisted colonial notions of madness? What is the place of religion in these histories? How did mental institutions change after the end of colonial rule and how was postcolonial Caribbean and African psychiatry harnessed in service of decolonization? The course will pay special attention to how European colonial powers employed similar understandings of blackness across regions as they formulated ideas concerning the black populations they deemed "mad" across Africa and the Caribbean.

Same as L22 History 4881

---

**L90 AFAS 4930 Advanced Seminar: Slavery in America: The Politics of Knowledge Production**

This course focuses on the long history of black chattel slavery in America, from origins to emancipation. The course foregrounds the struggles over power, life and death, that were at the heart of slavery's traumatic and grotesquely violent 250-year career in North America, with attention to hemispheric context. At the same time, it highlights the fiercely contested historical battleground where scholars have argued about how to define American slavery — as a system or site of labor, reproduction, law, property and dispossession, racial and gender domination, sexual abuse and usurpation, psychological terror and interdependency, containment and marooning, selfhood and nationality, agency, revolutionary liberation and millennial redemption.

**L90 AFAS 4984 The Problem of Freedom: The Age of Democratic Revolutions in the Americas, 1760-1888**

Ever since the improbable alliance of the English pirate and slave trader Sir Francis Drake and the fugitive slave Cimarrons on the Atlantic coast of Panama many centuries ago, the history of freedom in the New World has unfolded in unlikely fits and starts. The course will explore two related conjectures: first, that maroon politics (the often short-lived alliances between slaves, quasi-free blacks and white allies), slave rebellion, provincial secession and civil war were the widespread and normative conditions of post-colonial regimes throughout the New World; and second, that the problem of freedom was especially challenging in a New World environment in which freedom was fleeting and tended to decompose. Special attention will be given to antislavery insurgencies, interracial politics and alliances in the United States and the perspectives on freedom they produced, but the readings will also include materials on debates over freedom in the Caribbean and South America over the course of the long age of democratic revolution, 1760-1888.

**L90 AFAS 49TP Advanced Seminar: Whose Nairobi?:**

**Opportunity and Inequality in a 20th-Century African City**

Visitors to East Africa often hear the cautionary refrain, "Nairobi is not Kenya." But over the past century, Kenya's largest city has meant distinctly different things to distinctly different people. Starting as a simple railway camp in the late 19th century, and shaped by decades of colonial racial and ethnic segregation, it has grown into a global "mega-city," where Kenyans from every background and every corner of the country interact with an equally diverse cast of foreigners. Focusing on the realities of the day-to-day, this research seminar deploys a wide variety of historical evidence to better understand how ordinary people experienced, and were shaped by, Nairobi during the long

and turbulent 20th century. This seminar's centerpiece is an extensive and original research paper that offers students the opportunity to work a wide variety of primary sources including archives, city planning reports, maps, images of the built environment, music, material culture, memoirs and narrative fiction.

## American Culture Studies

American Culture Studies (AMCS) is a multidisciplinary program that provides both a broader context for study in different fields and a deeper understanding of American culture in all of its complexities. AMCS students explore culture-related topics and issues that demand multiple perspectives and methodologies. They also consider the mutual relevance of various disciplines to any single object of study in American culture — a place, an event, a work of art, a political institution and so on — while developing the knowledge and skills necessary to study a wide array of cultural objects.

The program offers a major and a minor, coordinating offerings across the disciplines so that students from any field or school can explore an array of ideas and approaches as they complete their course work. Pairing the major with a second major in a complementary discipline is an enriching model of cultural study, and AMCS will work closely with students to ensure that double-majoring works well.

The program offers especially attentive advising, helping students to have a cohesive experience and to pursue their specific interests within a diverse curriculum.

**Contact:** Máire Murphy, Academic Coordinator  
**Phone:** 314-935-7262  
**Email:** maire.murphy@wustl.edu  
**Website:** <http://amcs.wustl.edu>

## Faculty

The American Culture Studies program is enriched by its diverse community of faculty, lecturers, students and staff. Please visit our AMCS Directory page (<http://amcs.wustl.edu/directory>) for a description and list of our teaching and affiliated faculty and other important members of our community.

## Majors

### The Major in American Culture Studies

**Total units required:** 30 credits, 24 of which must be 300-level or above. In addition to completing the required units, students are expected to take three courses (9 credits) with heavy methodological content (refer to "Disciplinary Foundations Course Work" below).

Visit our Course Listings webpage (<http://amcs.wustl.edu/listing.php>) for a complete list of courses, by semester, that count toward the AMCS major. For more information about the major, including past examples of projects, leadership opportunities, and an FAQ, please visit our AMCS undergraduate webpage (<http://amcs.wustl.edu/academics/undergraduate.php>).

#### Requirements:

- **Introductory Course** (3 credits) as designated by American Culture Studies, which recently have included AMCS 220 Topics in American Culture Studies: Introduction to American Culture Studies, AMCS 206 "Reading" Culture, and AMCS 202 The Immigrant Experience. Visit our Course Listings webpage (<http://amcs.wustl.edu/listing.php>) for additional offerings by semester.
- AMCS 375A American Culture: Methods & Visions (3 credits)
- **Fieldwork Experience** (3 credits) (FW): Enrollment in an approved fieldwork course such as AMCS 479: On Location: Exploring America (<http://amcs.wustl.edu/academics/onlocation.php>) or completion of a field-based independent project under the guidance of AMCS faculty (in most cases under the course number L98 AMCS 298 Directed Fieldwork in American Culture Studies).
- **General Americanist Course Work** (18 credits): Six courses taken in the following groupings:
  - **Prime Concentration Area Course Work** (9 credits): Three courses in a single concentration. At least two of these courses must be at the 300-level or higher. Refer to the list below of established Concentration Areas.
  - **Distribution Course Work —or— a Second Concentration Area** (9 credits): Courses taken in three different disciplines or fields ("Distribution") **or** three courses in a second concentration area. At least two of these courses must be at the 300-level or higher.
- **Senior Capstone Project** (3 credits): A multidisciplinary project culminating the course work and past fieldwork study. Proposed during the spring of the junior year, this 3-credit project is granted academic credit through either AMCS 4011 Capstone Workshop in the fall semester or through AMCS 4004/AMCS 4005 if the Senior Honors Thesis option is approved. In some cases, the capstone project may be fulfilled within the context of an approved, upper-level seminar course. For more information on the capstone project and proposal process, including important dates, please visit our website (<http://amcs.wustl.edu/academics/undergraduate.php?sec=curriculum&sub=capstone>).
- At least **two multidisciplinary (MD) courses**, taken as part of the above major requirements and designated by AMCS (this does not usually require additional course work). Students are encouraged to take MD courses that connect to the subjects or issues in their concentration area.

AMCS 375A and the course taken to fulfill FW may not also count toward the MD requirement.

**Disciplinary Foundations Course Work:** In addition to completing the above requirements, students are expected to take three courses (9 credits) with heavy methodological content and approved by the student's adviser/the program, at least two (2) of which must be in a single discipline and two (2) of which must be at the 300 level or higher. A suitable second program of study may be used to fulfill this expectation.

## Additional Information

### Established Concentration Areas

These areas reflect areas of longstanding student interest. Majors are welcome to propose new concentrations or to tailor an established one to suit their interests. AMCS currently has nine established Concentration Areas:

- 20th-Century America
- Early America
- The Construction of Race and Ethnicity in American Life
- Policy-Making in American Society
- Popular Culture
- A Sense of Place: Community, Region & Landscape
- Social Thought and Social Problems
- Visual, Material and Digital Cultures in the United States
- War and Peace

AMCS gives majors considerable freedom in defining their course of study, allowing them to learn how cultural study is done in multiple fields and periods even as they define concentration areas in ways that suit their specific interests. Pairing the AMCS major with a second major in a complementary discipline is an especially enriching model of cultural study, and AMCS will work closely with students to ensure that double-majoring works well.

**Study Abroad:** Majors intending to study abroad should consult with the AMCS Study Abroad Advisor well in advance to plan a course of study and discuss its impact on their work in the major (including their fieldwork and capstone projects). For further information, please visit the Frequently Asked Questions (<http://amcs.wustl.edu/academics/undergraduate.php?sec=faq>) on our undergraduate page or review the AMCS approved programs on the Study Abroad webpage (<https://overseas.wustl.edu/study-abroad>), searching for "American Culture Studies" as the approved department under the "Search for a Program" option.

**Senior Honors:** Writing an AMCS honors thesis is one way to fulfill the Capstone Project requirement. It allows students to complete an extended study of a cultural topic with the input of faculty from more than one discipline, and it provides both a support system and an audience of peers for that study. For more information on the honors thesis and capstone project process, including important dates and criteria, please visit

our Senior Honors Thesis webpage (<http://amcs.wustl.edu/academics/undergraduate.php?sec=curriculum&sub=thesis>).

## Minors

### The Minor in American Culture Studies

**Units required:** 15 credits, at least 9 of which must be 300-level or above.

#### Requirements:

- **Introductory Course** (3 credits): Courses designated as such by American Culture Studies have recently included AMCS 220 Topics in American Culture Studies: Introduction to American Culture Studies, AMCS 206 "Reading" Culture, and AMCS 202 The Immigrant Experience. Visit our Course Listings webpage (<http://amcs.wustl.edu/listing.php>) for the full listing by semester.
- **Distribution Course Work** (9 credits): At least three courses on American subjects (two of which must be upper-level) either in a single established Concentration Area (<http://amcs.wustl.edu/academics/undergraduate.php?sec=curriculum&sub=concentrations>) (refer to the list of established concentrations below, or students may propose their own) — **or** — in three distinct disciplines outside the student's major.
- One additional AMCS course (3 credits)
- At least **two multidisciplinary (MD) courses**, taken as part of the above minor courses and designated by AMCS. Minors who opt to do a concentration are encouraged to take at least one MD course that connects to the subjects or issues in the chosen concentration area. AMCS 375A American Culture: Methods & Visions (a junior-level methods seminar) also is encouraged and may count as an MD course. Visit our Course Listings webpage (<http://amcs.wustl.edu/listing.php>) for a complete list of general and MD courses that count toward the AMCS major.
- Only one of the courses taken to complete the minor requirements may be home-based in the same discipline as the student's major(s) (effective for the Class of 2019 and beyond).

## Additional Information

### Established Concentration Areas

These reflect areas of longstanding student interest. Minors are welcome to propose new concentrations or to tailor an established one to suit their interests. AMCS currently has nine established Concentration Areas:

- 20th-Century America
- Early America
- The Construction of Race and Ethnicity in American Life
- Policy-Making in American Society

- Popular Culture
- A Sense of Place: Community, Region & Landscape
- Social Thought and Social Problems
- Visual, Material and Digital Cultures in the United States
- War and Peace

Visit our undergraduate webpage (<http://amcs.wustl.edu/academics/undergraduate.php>) for more information about the minor requirements and concentration areas, as well as other resources and announcements for AMCS students.

### L98 AMCS 1012 Introduction to Urban Studies

This course provides a survey of the field of Urban Studies, utilizing the city of St. Louis as a field site. The major purpose of the course is to gradually reveal how a city operates internally, and how it operates externally with its sister cities, surrounding metropolitan areas and neighboring states, amidst competing and often contradictory interests. Utilizing historical analysis as a guide, the course will briefly revisit the experiences of previous waves of ethnic groups to the St. Louis metropolitan area, as a lens for understanding the current social, political and economic dilemmas which many urban dwellers in St. Louis now face. The course will reveal to students the intricacies of social welfare issues and policies among high density populations, in St. Louis, that are homogeneous and heterogeneous, at the same time. Visits and discussions with various governmental and nongovernmental agencies, and how such agencies function or dysfunction for various constituencies allow students to ask crucial questions regarding equality of opportunity in a democratic society. Students will also encounter diverse communities and neighborhoods and the intended and unintended consequences of social welfare policies designed to ameliorate urban dilemmas such as poverty and inequality, homelessness, educational underachievement, gentrification, migration and immigration, development, health care, fiscal issues, the informal economy, and issues concerned with crime and social justice, among others. Readings are reinforced and challenged through visits, interactions and observations with broad constituencies and institutions, ranging from city officials to community residents. As such, this course offers a survey discussion of the rich interdisciplinary field of Urban Studies for those who may be interested in pursuing a stand alone major in the field of Urban Studies.

### L98 AMCS 101B American Politics

This course provides an overview of the politics of the American system of government. Among the topics to be covered are the historical developments of American politics, federalism, political participation (voting, interest groups, parties), institutions (congress, the courts, the president), and public opinion. A theme underlying our examination of these and other topics is the fact that political actors are purposive in their strategic pursuit of various objectives. We explore the many ways in

which this aspect of political behavior impacts institutions and the interactions between political actors throughout the American political system.

### L98 AMCS 112 Freshman Seminar: Race and Ethnicity in American Cinema

From the early documentary roots of cinema through the Civil Rights movement and to the recent democratization of the means of media production, questions of race and ethnicity have proved crucial both to the content of American films and also to the perspective from which they are made. This class looks at the representation of historical moments from the Civil War to Hurricane Katrina, the production of cinematic stereotypes as well as their appropriation for subversive purposes, and the gradual evolution of multiculturalism as a central factor in the stories told and the telling of stories on the American screen. Students use film texts to develop a critical understanding of one of the most important issues in American history. Required screenings.

### L98 AMCS 115 Freshman Seminar: The Presidency 101: From Washington to Obama

Is this your first presidential election? Or are you a policy wonk? Regardless of your political experience, this course provides an opportunity for students to learn about the American Presidency as a contemporary political institution with deep roots in American history. This freshman seminar introduces undergraduates to the presidency by considering the institution in its political and cultural contexts. Using the selection of a new president and the departure of Barack Obama as a point

of departure, this course will explore how the current president as well as the aspiring candidates of 2016 reveal broader trends in American political culture. In addition to introducing students to the study of the presidency, this course will also introduce students to diverse means of studying culture, with assignments that range from political speeches to policy documents to popular media.

Credit 3 units. A&S: SS BU: BA EN: S

---

**L98 AMCS 116 Freshman Seminar: Cult TV: Critical Approaches to Fans and Fictions**

What do such disparate television series as *Dr. Who*, *Star Trek*, *The Avengers*, *Monty Python's Flying Circus*, *The X-Files*, *Buffy the Vampire Slayer*, *Xena: Warrior Princess* and *Sealab 2021* have in common? They all attract loyal audiences, stimulate "subcultural" sensibilities, lend themselves to "textual poaching," and thus qualify as examples of "Cult TV," a term that has become increasingly salient within critical studies of the medium. In this course we explore the subject of cult television from a variety of social, cultural and thematic perspectives, so that by the end of the semester students have gained a deeper understanding of its historical importance as a barometer of both popular and oppositional tastes. We examine how these and other examples of genre-based network and cable programming complicate distinctions between lowbrow and highbrow tastes while sustaining worldwide "interpretative communities" years after their original air dates. Students also examine the importance of syndication, home video technologies, ancillary markets, publishing and the internet in the construction of fan cultures. Required screenings.

---

**L98 AMCS 1181 Freshman Seminar: Beats and Rhymes — Hip-Hop in American Culture**

On its surface, hip-hop is fundamentally about making music: a creative combination of beats, flow, samples and rhymes. And yet, beneath the surface lies so much more. Although hip-hop culture writ large (lyrics, fashion, dance and lifestyle) influences many on a global level, this class explores the meaning of hip-hop primarily from African-American informed social and political perspectives. In what ways does hip-hop intersect with American culture, specifically on the fields of race, ethnicity, class, gender and sexuality? Without a doubt, it does so in intriguing, contested and often problematic ways.

**L98 AMCS 1201 Freshman Seminar: Race and Performance**

What does it mean to "act black"? What about "acting Jewish"? This course looks at performances of racial and ethnic identity, mostly in the United States, mostly in the 20th century. We examine novels (such as Nella Larsen's *Passing*), plays (such as Anna Deavere Smith's *Fires in the Mirror*), and performances of everyday life (such as "Cowboys and Indians") to investigate the performance of race in public. Once we begin to explore the social and cultural performance of race, will it all turn out to be "only" an act?

**L98 AMCS 1210 Freshman Seminar: Youth Culture and Visual Media**

Since the advent of cinema through the recent development of online social networking, visual media in the United States and around the world have been identified with a market of youthful consumers and producers. This course will look at the development of youth culture in the United States and its unique relationship to visual media, including film, television, comic books, video games, and the internet, in the 20th and 21st centuries. We will examine youth culture as a social phenomenon generated by the young, a means of representing the experience of being youthful, and as part of the ongoing debates over the effects of media on the young. As alternately mass culture, popular culture, counter culture, and participatory culture, youth culture holds a privileged place in the history of American visual media and continues to influence production and innovation within the media marketplace.

**L98 AMCS 130 The Ritual Landscape of Cahokia: Perspectives on the Politics of Religion & Chiefly Power**

The purpose of this class is to engage and challenge freshman students in an open discussion about the prehistoric Mississippian community of Cahokia. The focus of this course is two-fold. The first is to study the way in which the archaeological evidence has been interpreted. The second is to examine other perspectives on Cahokia, especially from the Native American descendants who consecrated this landscape nearly a millennium ago. An underlying tenet of this seminar in understanding Cahokia can also be achieved through the traditions and literature of Native Americans. In the end we want to understand the basis for Cahokia's organization as a prehistoric Native American community, and the role that ritual and religion played in the rather dramatic and dynamic history of this community and the surrounding region.

**L98 AMCS 135 Freshman Seminar - Chinatown: Migration, Identity, and Space**

"Chinatown," as a cultural symbol and a spatial entity, links various topics and studies in this course. Our survey starts with a historical and geographical glimpse of five Chinatowns in the U.S. through the real-life stories of their residents. This is followed by an in-depth study of Chinese restaurants and food all over the world using texts, images and films that reveal how Chinese cuisine is inherited in and adapted to each local culture and society. The seminar culminates in a discussion of Chinese migration and settlement, the representations of identity, and the cultural and spatial constructions in particular historical and social contexts. The assignments include field trips to Chinese businesses, and a debate on whether or not Olive Boulevard constitutes a Chinatown in St. Louis.

**L98 AMCS 2011 The Roots of Ferguson: Understanding Racial Inequality in the Contemporary U.S.**

Overview of sociological understandings of race, with a particular focus on race relations in the contemporary United States.

We begin by investigating how sociologists understand racial distinctions, asking: What comprises a racial group? What constitutes a "group" in the social sense? We then shift our attention to patterns of racial inequality in the U.S., investigating the intersection of economic, political, and racial stratification.

After analyzing national trends in racial stratification, we narrow the focus to particular regions and metropolitan areas, including St. Louis, to shed light on pressing public concerns such as the interrelationships between race and the criminal justice system. The course ends by looking beyond U.S. borders to

compare the way that race is understood in other countries. Are there common patterns of racial classification shared by many societies? What makes the U.S. system of racial stratification distinctive? No prerequisites.

**L98 AMCS 2033 Introduction to Education: Contradictions and Controversies in School Choice**

This course is a broad look at the diverse issues surrounding education not only in the United States but around the world. Students examine schooling in areas such as the Pacific Rim, Middle East, Europe and America. We also take a look at educating when working with children with special needs. In addition, students explore some of the ideas and issues unique to the experience of teaching and learning in the U.S. Students work in small groups throughout the semester in projects designed to deepen their understanding of Education in the 21st Century. Throughout the semester, students participate in the Each One Teach One program as tutors. (This course is recommended for freshmen and sophomores only.)

**L98 AMCS 2055 Forever War: American Literature and Culture from Vietnam to Afghanistan**

You have now lived more of your life since 9/11 than before it. How does your personal and generational experience help us to define and interact with such an impenetrable concept as war, let alone the "forever" war of contemporary memory? The term itself is relatively recent. Indeed, if you search "forever war" in the library catalog, you will get two hits: a 1974 sci-fi novel *The Forever War* written by veteran Joe Haldeman that fictionalizes his experiences with the endless futility of the Vietnam War (but in outer space); and a 2008 nonfiction book *The Forever War* by Pulitzer Prize-winning journalist Dexter Filkins that chronicles Iraq, Afghanistan, and the long history of the War on Terror.

In line with Haldeman's and Filkins' fatigue over modern war's interminability, this course studies the literature and culture of contemporary American war from Vietnam to Afghanistan. Because this is an introductory course to American Culture Studies, we pay particular attention to how our strategies for interpreting the culture of contemporary warfare connects with our understanding of contemporary culture more broadly.

**L98 AMCS 209B Scriptures and Cultural Traditions:  
America's Bible**

When we think of the word "scripture" in antiquity, we might think of the texts that have been compiled in the different holy books that we currently have today. Yet the function of "scriptures" within a community, and the status given to different texts treated as "scriptural," has changed in different times and places. In this course, we will consider texts that would eventually come to be part of the Hebrew Bible, New Testament, and the Qu'ran as well as several of the exegetes and reading communities that shaped their various interpretations. We will explore how non-canonical sources played a role in the formation of the various canons we have today, comparing the authoritative status given to these texts to that given to other works from antiquity, such as the epics of Homer. Special attention will be played to the role of the receiving community in the development of "scripture," and the variety of the contexts in which scripture can function in the construction of and opposition to religious authority.

**L98 AMCS 2101 The Linguistic Legacy of the African Slave Trade in Interdisciplinary Perspective**

This course explores the linguistic consequences of the African slave trade, and in so doing introduces students to basic concepts in linguistic science that are relevant to human language development and controversial educational theories that are based on race. Anthropological, linguistic, and psychological dimensions of African-American culture are embedded within complementary evaluations of educational controversies surrounding the teaching of (standard) English to American slave descendants, including the Ebonics controversy and its relevance to larger questions of social efficacy, and the affirmative action debate that has consumed the nation. Students work individually or in groups to produce a major intellectual artifact (e.g., a term paper, a scholarly webpage, or a project pertaining to the linguistic plight of citizens within this African diaspora). Students are introduced to foundational African-American studies in anthropology, education, English, linguistics and psychology.

**L98 AMCS 220S Social Inquiry: An Introduction to Sociology**

Sociologists possess a secret knowledge that allows them to dissect subjects ranging from how class, race, gender and sexual orientation affect educational outcomes, family life and crime to apparently trivial issues such as why people cross-dress, are attracted to cults, or become pot smokers. Sociology illuminates the connection between private concerns and public issues. Inspired by this approach, the mission of this course is to first understand what is sociology — its methods and its theories, and then use this foundation to explore issues of class, inequality, race, gender, culture, power, social engagement and activism. Required readings consist of three(ish) articles or chapters per class. Grades are based on three in-class short-answer exams, three workshop and applied assignments, and enthusiastic participation.

**L98 AMCS 2250 Freshman Seminar: African-American Women's History: Sexuality, Violence and the Love of Hip-Hop**

Black women, much like their male counterparts, have shaped the contours of African-American history and culture. Still, close study of African-American women's history has burgeoned only within the past few decades as scholars continue to uncover the multifaceted lives of Black women. This course explores the lived experiences of Black women in North America through a significant focus on the critical themes of violence and sexuality. We examine African-American women as the perpetrators and the victims of violence, as the objects of sexual surveillance, as well as explore a range of contemporary debates concerning the intersections of race, class and gender, particularly within the evolving hip-hop movement. We take an interdisciplinary approach through historical narratives, literature, biographies, films and documentaries.

**L98 AMCS 225A Religion and Politics in American Society**

The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic. These competing visions of the nation have created conflict throughout American history and have made the relationship between religion and politics quite contentious. This course surveys the complex entanglements of religion and public life from the colonial era through the contemporary landscape. Topics covered include: religious liberty and toleration, secularization, the rise of African-American churches, the Civil War, national identity and the Protestant establishment, the religious politics of women's rights, religion and the presidency, the Cold War, the religious left and right, and debates over church-state separation.

**L98 AMCS 230 Topics in Urban America**

This course foregrounds the interpretive and analytical approaches used in the study of American cities. The city is a crucial frame for understanding the nation's cultural, economic, social, political and ecological concerns and evolution. Employing multiple perspectives, we interpret urban space as a product of culture, explore the city's importance in shaping American society, and investigate the ongoing evolution of the built environment. This course lays the basis for interdisciplinary thinking and research in American culture studies. The topic varies by semester. Please refer to Course Listings for a description of the current offering. The course is ideal for AMCS majors and minors, but others are welcome. This course fulfills the introductory course requirement for AMCS students.

**L98 AMCS 236 Cultural History of the American Teenager**

This course explores the recent history of the teenager in the United States, from the rise of teen culture in the 1950s to the current state of adolescence in the new century. Why have so many novels and films memorialized adolescence? How has the period of development been portrayed in books and film? How have depictions and attitudes toward teen culture changed over the past 60 years? In our consideration of teen culture, we take a multidisciplinary approach when tackling a variety of materials — including historical readings, literary fiction, Young

Adult fiction, comic books, popular films, and popular music — in an attempt to come to a better understanding of how the notion of the American teenager has evolved over the past 60 years. We begin with J.D. Salinger's classic novel of adolescence alienation, *The Catcher in the Rye*, a book that in many ways helped initiate the rise of the youth movement in the 1950s and '60s. Our readings focus on the middle decades of the 20th century, when teen culture moved to the forefront of American life, but we end the semester by considering how teen life has recently been imagined in such novels as *The Hunger Games*. Our class also discusses a few films, such as *Rebel Without a Cause* and *American Graffiti*, which have helped shape our conception of the American teenager. Ultimately, we question what these depictions of teen culture can tell us about larger trends and concerns in American life. As this course serves as an introduction to American Culture Studies, we focus on the different methods that we can employ when attempting to interpret and analyze American culture.

#### L98 AMCS 239 Performance and Culture

What are Lady Gaga & Beyonce doing? How do young men and women in poverty use performance for survival? Why do we create performance and for whom? In this class we apply the vocabulary and concepts of Performance Studies to social and theatrical worlds, understanding performance broadly: from popular culture to everyday life to theatre. To understand performance, we will look closely at ethnographies, plays and literature. Subjects span a range of topics: racial impersonation, drag/house balls, celebrity culture, reality television, black-Latino theatre, and slam poetry. Key course questions: How does performance inform everyday culture? How does culture inform popular culture and theatrical performance? This course takes seriously the "doing" and the "undoing" of things — as culture shifts, transforms, and adjusts as bodies engage in the art of performance.

#### L98 AMCS 244 War, Rebellion and the Formation of American Identity, 1754-1865

This course surveys the United States' experiences with rebellion and organized armed conflict from the origins of the American Revolution until the Civil War. Though the class deals with war, its focus is not on military tactics or the outcome of battles - indeed several of the conflicts it considers were entirely bloodless. Rather, the course utilizes war and rebellion as a prism through which to view the ways in which Americans conceived of themselves. Students address a number of questions: How and why did people in North America conceive of themselves as distinct from Europeans? Did war lead to more inclusive or exclusive views of who was considered "American"? How did people of different backgrounds view violent conflict? Why did some wars become central to American myth and others largely forgotten? Did war and rebellion promote a newly formed nationalism or did they help lead to sectionalism and the Civil War? Readings consist of secondary materials from a range of disciplines and primary documents that include novels, speeches, newspaper articles, letters, memoirs, editorial cartoons, and paintings.

#### L98 AMCS 245 Images of Disability: Portrayal in Film and Literature

This course critically examines the portrayal of persons with disabilities in literature and film, exploring how those images either shape or mimic general public impressions. We discuss the implications of messages from the media on American responses to people with disabilities, as well as formulating strategies for promoting positive, inclusive messages. Perspectives from social science, health care, communications and other fields provide frameworks for analysis. Literature includes fiction, biography and autobiography in books, essays, drama, poetry and short stories. Selections from fictional, educational and documentary films are reviewed during the semester. We also investigate images in newspapers, magazines and advertising.

#### L98 AMCS 248 Latino/a Experiences in the United States

Identity is a term that begins to give humans a sense of understanding who we are. In terms of the Latino/a diaspora in the United States, issues of ethnicity, gender, nation, class, sexuality and race are key theoretical categories that aid us in theoretical and practical understandings of identity. In this course we analyze and discuss the concept of order to understand the constructions and varied meanings of the term. There is a special emphasis placed on anthropological, historical and social science literatures of the Caribbean, Latin America and the United States as they pertain to deeper understandings of identity. Prerequisite: membership in the Annika Rodriguez Program.

#### L98 AMCS 251 Topics in AFAS: The Ebonics Controversy

This course examines the controversy regarding the status of Ebonics and its role in education. Ebonics is the term often used to describe the distinct speech of 85 percent of the African-American population. The controversy reached the national limelight in 1996 and 1997 due to a resolution by the Oakland (California) School Board, which identified Ebonics as a legitimate form of speech that should be respected. The arguments about Ebonics are multifaceted and highlight

significant linguistic as well as educational and political issues. There is the basic question of just what is Ebonics: Is it a separate language, a dialect, slang, bad grammar, broken English or really not a distinct entity? There are issues related to the term Ebonics as evidenced by the various names that academicians have used for the speech of African Americans, i.e., African-American (vernacular) English and African-American Language. Its origins and history also have been debated: Is it a variant of Southern English or are its origins traceable to the language systems of Africa? Further, there is a fundamental, practical question of how to approach the education of African-American children whose home speech is Ebonics: Should a goal in the education of these children be the purging of Ebonics so that it does not interfere with the mastery of Standard English, or should Ebonics be used as a vehicle for learning Standard English? This course examines these and other issues, such as the portrayal of Ebonics in the popular media as well as its use within African-American communities, through readings, films, small and large group discussions, writing assignments and lectures.

#### **L98 AMCS 252 Introduction to Latino/a Studies: Exploring Memory**

The course is an interdisciplinary introduction to Latino Studies, a discipline that studies the experiences and conditions of U.S. Latinos drawing from both the Social Sciences and Humanities. The course presents and analyzes works that include methodological strategies and analytical approaches to learning about U.S. Latinos. We analyze the social, political, and cultural forces that have affected the experiences of Latinos/as with particular attention to the ways in which historical, collective, family, and personal memories have shaped and continue to shape these experiences. We explore the intersections of history, place, and identity through a selection of works, including literary and media studies, in order to understand the principle questions and concerns in the major fields of interest to U.S. Latino Studies.

#### **L98 AMCS 2590 Freshman Seminar: From the "City on a Hill" to 9/11: Religion and Social Justice in America**

From the Puritans' search to build the "city on a hill," to the growing conflation of Islam with terrorism, Americans have long nurtured a self-identity as "God's chosen people," an idea

that has helped them justify and normalize a theology of both conquest and suffering. This course will analyze how religion served to both buttress and contest notions of social domination, punishment, reform and revolution in the U.S. from the colonial era to the present. Topics will include the American Jeremiad, abolitionism, slave rebellions, Native American Catholicism, Fundamentalism, the Catholic Worker Movement, Pacifism, the Black Freedom Struggle, the Moral Majority, and Post-9/11 military and gender interventions with the Islamic world.

#### **L98 AMCS 261 The Cultural Lives of Things: An Introduction to American Material Culture**

American culture is so often defined by its obsessive attachment to material things — the iPhones, coffee cups, favorite t-shirts and Harley-Davidson motorcycles that fill our everyday lives. This course will explore our contradictory relationship to such objects — the possessions that serve practical functions and give us a sense of identity, meaning and power, but just as often come to possess or control us. How do things take hold of us? What gives them potency, value, and cultural significance? What psychological, social, economic and political purposes do they serve? Do Americans have a distinct relationship (or a dysfunctional attachment) to their possessions? In answering such questions, we will consider objects of all kinds, from the mundane and utilitarian to the strange, rare and often-fetishized. We will explore their histories, their participation in regimes of commodification and power, their everyday and symbolic functions — in short, the twists and turns of their rich cultural lives. The course will introduce different strategies for interpreting objects as cultural evidence, drawing upon work in anthropology, art history, sociology, literature and museum studies, as well as theorists (Marx, Freud, Baudrillard and others) who have influenced modern conceptions of material life. Students should also look forward to some in-the-field analysis of

different historic, museum, and personal objects around St. Louis (field trips!).

#### **L98 AMCS 2651 Urban America**

The city is a crucial frame for understanding the nation's cultural, economic, social, political and ecological concerns. This course discusses its importance in shaping American society and considers urban environments as living, breathing, contracting and expanding regions in the landscape. Questions of race, class and gender will be explored in an attempt to understand the current configuration of American cities, and to allow students to engage meaningfully with the continual transformation of urban space. Attention will be paid to the role played by popular imagination in the formation of public policy, civic spatial arrangement, suburban development and urban historical geography.

#### **L98 AMCS 2674 Sophomore Seminar: Slavery and Memory in American Popular Culture**

Sophomores receive priority registration. The history of slavery has long created a sense of unease within the consciousness of many Americans. Recognizing this continued reality, this seminar examines how slavery is both remembered and silenced within contemporary popular culture. Although slavery scholarship continues to expand, how do everyday Americans gain access to the history of bondage? Taking an interdisciplinary approach to these intriguing queries, we will examine a range of sources: literature, public history, art/poetry, visual culture, movies and documentaries, as well as contemporary music including reggae and hip-hop. The centerpiece of this course covers North American society, however, in order to offer a critical point of contrast, students will be challenged to explore the varied ways slavery is commemorated in others parts of the African diaspora.

#### **L98 AMCS 280 Exploring Inequality: The Social and Structural Analysis of Modern American Life**

What would it mean to engage in effective social and structural analysis of the complex problems of modern American life that are so often reduced by policymakers to matters of personal responsibility and individual choice? This is an urgent question at a historical moment when American "society" is becoming more diverse and more divided. This course explores four areas of inequality: poverty, racism and sexism, the crisis in health care, and the perils of globalization. We will pay particular attention to how intersections of minority statuses as defined by race, social class, gender and sexuality conspire to script social and political outcomes. Our investigations will allow us to consider multiple academic and applied models. In an original research project that closely engages real world cases and draws upon multiple disciplinary perspectives, students will gain an understanding of the complexity of social problems, and what productive intellectual and policy responses entail. Guests from local social, educational and political agencies will share their perspectives with the class. Above all, students will emerge from the course with a set of critical skills that will empower them to decipher contemporary policy debates and develop their own social analyses.

#### **L98 AMCS 297 Undergraduate Internship in American Culture Studies**

Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement which the student obtains from the Career Center and which must be filled out and signed by the Career Center and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., 8-10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours. Students may not receive credit for work done for pay but are encouraged to obtain written evaluations about such work for the student's academic adviser and career placement file. Permission of department required before enrollment. Only AMCS majors and minors may enroll for L98 297.

Credit variable, maximum 3 units.

#### **L98 AMCS 299 The Study of Cities and Metropolitan America**

This course serves as the introductory course analyzing the forces shaping America's cities and surrounding metropolitan areas. It examines, as well, strategies for dealing with many of the profound social issues affecting urban/metropolitan America. Emanating from an historical perspective, it examines the ways in which industrialization and deindustrialization shaped Northern American cities and the consequences of deindustrialization on urban citizenry. It further surveys the demographic and spatial transformation of American cities, examining the consequences of urban transformation on federal, state and local politics, on society and on her institutions. Similarly, the course focuses on the origin and societal changes and emerging goals of urban development, gentrification and evolving patterns of metropolitanism and the necessity for central city as well as neighborhood reconstruction. The dynamics of racial residential segregation, crime and punishment, issues of academic achievement and under-achievement, the social cleavages of urban marginalized communities, family structure, urban homelessness, urban sprawl, and health care, among others, are viewed from the perspective of social justice by exploring social, political, economic, racial and ethnic factors that impact on access, equity and care. Various theoretical perspectives and philosophies are introduced that have dominated the discourse on race and urban poverty. A field-based component complements the course work, and is designed to build interest, awareness and skills in preparation for outreach to urban communities. Prerequisite: sophomore standing.

**L98 AMCS 300B Feminist Fire!: Radical Black Women in the 20th Century**

Black women have been at the forefront of the black radical tradition since its inception. Often marginalized in both the scholarship and popular memory, there exist a long unbroken chain of women who have organized around the principles of anti-sexism, anti-racism and anti-capitalism. Frequently critical of heterosexist projects as well, these women have been the primary force driving the segment of the black radical tradition that is commonly referred to as Black Feminism. Remaining cognizant of the fact that Black Feminist thought has also flourished as an academic enterprise — complete with its own theoretical interventions (i.e., standpoint theory, intersectionality, dissemblance, etc.) and competing scholarly agendas — this course will think through the project of Black Feminism as a social movement driven by activism and vigorous political action for social change. Focusing on grassroots efforts at organizing, movement building, consciousness raising, policy reform, and political mobilization, Feminist Fire will center Black Feminists who explicitly embraced a critical posture toward capitalism as an untenable social order. We will prioritize the life and thought of 20th-century women like Claudia Jones, Queen Mother Audley Moore, Frances Beal, Barbara Smith, Audre Lorde, Angela Davis and organizations like the Combahee River Collective, Chicago's Black Women's Committee, and the Third World Women's Alliance. At its core, the course aims to bring the social movement history back into the discourse around Black Feminism.

**L98 AMCS 3014 American Popular Music and Media**

This course considers the history of American popular music as delivered by successive mass media platforms in the industrial and post-industrial eras: from mass-produced sheet music in the mid-19th century to digital music and video on the internet. Historical contextualization and in depth analysis of musical scores and various kinds of audio recordings and audiovisual texts are at the center of the course. Topics considered include: the history of sound recording technologies and formats; the role of electronic mass media structures (radio, film, television, the

internet); urbanization, national commercial music centers (New York, Hollywood, Nashville), and the importance of regional sounds in a national context; the formation and transformation of select genres (rock, country, various black musics); legal frameworks relating to music as a commodity (copyright, sampling); the impact of visual media on music dissemination, performance and meanings; and how recorded media of all kinds have transformed the act of listening. Issues of race, gender, sexuality, personal, and national identity are considered across the course. Prerequisites: Music 121C and 122C (Theory I and II) or Music 121J and 122J (Jazz Theory I and II).

**L98 AMCS 3015 Topics in Popular Culture: End of the Century: American Culture during the 1990s**

Starting with Allan Bloom's *The Closing of the American Mind*, a book that helped re-ignite the Culture Wars, this course considers the debates and problems that pervaded American culture during the 1990s. From the end of the Cold War to the sexual scandals that rocked Bill Clinton's presidency, from the emergence of the internet to the rise of grunge and rap, the 1990s were a time of vast change in American culture. It was a period when we, as a nation, reconsidered the legacy of the 1960s, the Reagan revolution, and the end of the Cold War, a time of economic expansion and cultural tension. In our consideration of the 1990s, we consider a variety of materials — ranging from news reports and political essays, literary fiction (Philip Roth's *The Human Stain* and Jonathan Franzen's *The Corrections*) and popular films (Spike Lee's *Do the Right Thing* and The Cohen brothers' *The Big Lebowski*), to the music of Nirvana and Public Enemy — in an attempt to come to a better understanding of our recent history. By examining a wide variety of texts, we not only explore the cultural and political questions that Americans faced in the years between the fall of the Berlin Wall and the terrorist attacks of September 11, 2001, but also come to a better understanding of how cultural studies can be performed.

**L98 AMCS 3016 The Politics of Kanye West: Black Genius and Sonic Aesthetics**

As a hip-hop artist Kanye West has had unprecedented impact on the sonic force of music, fashion, politics and videography. Coupling his controversial moments with his corpus of musical texts with special focus on sonic production, this course illuminates "Mr. West" as a case study for interrogating the interplay between fame, gender, sexuality and race. Mostly, we explore how racialized ways of doing iconography, complex ways of seeing, create a distorted or reductive frame through which we see the black and famous. Nonetheless, the course oscillates with entertaining these nuances, while being entertained by the decade-long catalogue of music and visual imagery. Together, we extract the "Politics of Mr. West" in his music and life, while also illuminating the importance of a politics of genius-making in the larger arc of black pop culture tradition.

#### **L98 AMCS 301T Technology and American Culture**

This topics course prepares students to critically engage the complex relationship between technology and American culture, and to read technology as expressive of broader cultural tensions and social, political, and social problems. Such inquiry requires historical and theoretical frameworks for conceptualizing what, exactly, comprises the "technologic" American imagination, from the early era of the colonies through to the contemporary moment. Building on these frameworks, students will study various forms and incarnations of technology at different moments throughout the history of the U.S., drawing upon multiple disciplinary practices in order to do so. They will also learn how the material characteristics of technology (whether hardware or software, industrial manufacture or DIY) give expression to ideas of national identity and issues of power, politics, race, class and gender that have emerged in different historical moments. This work will serve as an introduction to the research and study of technology and material culture in America. Topics vary by semester. Please refer to course listings for the current offering.

#### **L98 AMCS 3026 Home, Bittersweet Home: Histories of Housing and Homeownership in America since 1850**

The idea of owning one's own home has been central to realizations of the American dream or the "good life." By 1931, Herbert Hoover called the idea "a sentiment deep in the heart of our race and of American life." While the dream continues, the reality of homeownership has been elusive or fraught with struggle and sacrifice for many Americans. If home ownership is such a central part of American identity, why have so many generations of Americans struggled to achieve it? In this course, we explore the histories of different versions of home and homeownership by touching down in different locations at pivotal moments in order to investigate the varied meanings of housing and homeownership in the context of a particular place and time in American history. Using a case-study approach, the course travels across time and space to explore diverse forms of housing, including the following: the big house and slave house in the south under slavery, the immigrant tenement in New York City, the company town in south Chicago, the Midwest homestead, the planned postwar suburban neighborhood, high rise public housing and gated communities. This format exposes students to the important role of federal and local policies as well as themes of housing including: homes as private and domestic realms; housing as a commodity and the largest form of American debt; housing as an icon and encoder of social status; housing as exclusionary and inclusionary; housing as racial or socio-economic discrimination; the suburbs and their discontents; and the recent housing crisis.

#### **L98 AMCS 3028 Music of the 1960s**

The music of the 1960s played a significant and widely noted role in an era of global political and social upheaval. This course surveys a broad range of music produced during the decade, spanning the world but with emphasis on Anglo-American popular music. While a music course traditionally deals with a single genre such as "world music," classical or jazz, this course analyzes several genres together to show how each influenced the others and how all were informed by broader social and cultural concerns. The course thus both familiarizes students with diverse musical traditions and introduces them to a new way of thinking about music and culture. Topics discussed include the transnational music industry; the contested concept of "folk" and "traditional" music; music and political protest; music and migration; and music's relation to ethnic and class identity.

#### **L98 AMCS 3042 Making Sex and Gender: Understanding the History of the Body**

This course provides an overview of the history of the body from antiquity to modern times using an interdisciplinary approach. By exploring selections from medical texts, literature, fashion, art, accounts of "new world" exploration, legal records, self-help books and contemporary media representations of human bodies, we consider the changing historical perception of the body. The intersection of gender, race and class factor significantly in our discussions of how the body has been construed historically and how it is currently being constructed in contemporary American culture. This course also provides an introduction to feminist/gender methodologies that apply to understanding the history of the body. This course is not open to students who have taken WGSS 204. Prerequisite: any 100- or 200-level Women, Gender, and Sexuality Studies course or permission of instructor.

#### **L98 AMCS 3061 Literacy Education in the Context of Human Rights and Global Justice**

Literacy is a fundamental human right. In this course, we explore the current and historical relationships between literacy and human rights. This includes an analysis of the ways in

which literacy education is fundamentally linked to issues of global justice, including political engagement and voting rights, environmental sustainability, gender and racial equality, and participation in the globalized economy. We investigate how literacy education has played a role in social struggles at local, national and international levels such as the creation of the Freedom Schools in St. Louis; the Native American boarding school movement; the Civil Rights movement in the United States including the creation of the Citizenship schools; the Ebonics debate in Oakland, California; the Nicaraguan Literacy Campaign; and the current No Child Left Behind federal educational policy. Students explore how literacy education has been used, in each of these cases, as a tool of empowerment and a tool of oppression.

#### **L98 AMCS 306M Visualizing Segregation**

This interdisciplinary course is designed to introduce students to the history of three of America's major cities. We will explore the political, social, and cultural histories of each of these cities while tracing changes in architecture and the built environment. We chose these three cities for their diverse and intersecting histories. In many ways, St. Louis, Chicago and New Orleans represent the major social and political forces that forged the modern American city. From westward expansion and the growth of the slave system, through mass European immigration and industrialization, the rise of Jim Crow and the decline of American industry, suburbanization, mass incarceration, and gentrification: All are visible in the landscapes of these American cities. Segregation of social groups, so often seen as natural or inevitable, is the result of historical processes, political decisions, public policies and individual actions. The course, in addition, will provide students with the opportunity to use some of the research techniques employed by urban scholars. We will engage in a major research project, tracing the history of St. Louis through a variety of primary sources. Our aim will be to trace the historical processes that generated urban landscapes divided along lines of race, class, ethnicity or religion.

#### **L98 AMCS 3070 Politics and Policymaking in the American States**

The American federal system is often overlooked in discussions about politics in the United States; however, state governments unquestionably touch the lives of Americans everyday. As such, an education in American politics is not complete without serious examination of state governments and their political institutions.

This course illuminates the importance of the American states in U.S. politics and policy making by critically examining topics such as: intergovernmental relations; the historical evolution of American federalism; the organization and processes associated with state legislative, executive and judicial branches; state elections; political parties; interest groups; and specific state policy areas including budgeting, welfare, education and the environment. Prerequisite: Pol Sci 101B.

#### L98 AMCS 3075 The American Radical Novel: Literature Versus Inequality

Intended to help students reckon knowledgeably, imaginatively and articulately with our era of escalating social inequality, this class is a writing-intensive study of representative American radical novels stretching from the 19th-century abolitionism of Harriet Beecher Stowe's *Uncle Tom's Cabin* to the 21st-century dystopianism of Gary Shteyngart's *Super Sad True Love Story*. Its main goals are two: (1) to introduce students to the long history and current significance of efforts to pit American literature against American inequality; and (2) to improve the quality of advanced student writing in the related fields of American Culture Studies and English literature. The first goal is pursued through close analysis of both radical novels and the contemporary political documents that inform them, juxtaposing such texts as Upton Sinclair's *The Jungle* and Karl Marx's *Communist Manifesto*, Alice Walker's *Meridian* and Martin Luther King Jr.'s "Nonviolence and Racial Justice." The second goal is pursued through hands-on analysis of successful rhetorical strategies sampled from *The Hodges Harbrace Handbook* and, more importantly, from the scholarly writing of students themselves.

#### L98 AMCS 3081 City on a Hill: The Concept and Culture of American Exceptionalism

This course examines the concept, history and culture of American exceptionalism: the idea that America has been specially chosen or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture — a thesis our class reassesses with the help of modern critics. In the second part of this class, we broaden our discussion to consider the wider (and newer) meanings of American exceptionalism, theorizing the concept while looking at the way it has been revitalized, redefined and redeployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan to the current day. In the end, students gain a firm grasp of the long history and continuing significance — the pervasive impact — of this concept in American culture.

#### L98 AMCS 3091 Poverty and Social Reform in American History

This course explores the history of dominant ideas about the causes of and solutions to poverty in American society from the early republic to the end of the 20th century. We will investigate changing economic, cultural, and political conditions that gave rise to new populations of impoverished Americans, and to the expansion or contraction of poverty rates at various times in American history. We will, however, focus primarily on how various social commentators, political activists and reformers defined poverty, explained its causes, and struggled to ameliorate its effects. The course aims to highlight changes in theories and ideas about the relationship between dependence and independence, personal responsibility and social obligation, and the state and the citizen.

**L98 AMCS 312A Introduction to Digital Humanities**

It is a truism that computers have changed our lives and the way we think and interact. But in fact systematic efforts to apply current technologies to the study of history and culture have been rare. This course will enable students to consider how these technologies might transform the humanities. We will explore the various ways in which ideas and data in the humanities can be represented, analyzed and communicated. We will also reflect on how the expansion of information technology has transformed and is continuing to transform the humanities, both with regard to their role in the university and in society at large. Readings and classwork will be supplemented by class presentations and a small assigned group project.

**L98 AMCS 312W Topics in English and American Literature: End of the Century: American Culture During the 1990s**

This course explores the theme of consolation in medieval poetry. We read narratives that represent the consolation of a variety of melancholy figures — philosophers in exile, lovers in mourning, citizens in plague-ridden cities, and women disturbed by misogynous writing. We examine the connection between representations of consolation and the act of reading, and think about literature itself (along with other art forms) as a contested site of entertainment, moral guidance, self-fashioning and redemption. Authors may include Boccaccio, Boethius, Chaucer,

Christine de Pizan, Abelard and Heloise, and the Pearl-poet.

As a writing-intensive class, we spend time writing and talking about writing in the classroom. We read our literary texts as "arguments" about literature in addition to other topics, and we read secondary articles as examples of scholarly writing that we may or may not want to adopt as models.

**L98 AMCS 3131 Topics in English and American Literature**

Called the "Age of Revolution," the Romantic Age of British literature, 1770-1830, witnessed the birth of new lyric forms, the effacement of traditional strictures on style and taste, and produced through poetic voice (and its quaverings and multiplications) what might be called, over simply, the modern subject. Within a developing discourse of human rights and personal freedom, this growing assertion through poetry of individual expressivity allowed William Blake to construct in a single work a visual and verbal "Jerusalem." It encouraged William Wordsworth to write a pathbreaking investigation of the sources of his own creativity that challenged conventional restraints on what topics can, and cannot, be confessed in poetry. Beginning with these two poets, we consider the historical contexts, and the sometimes competing histories of ideas, that shaped the five major British Romantic poets: Blake, Wordsworth, Samuel Taylor Coleridge, Lord Byron, and John Keats. We follow an anthology for much of the poetry, including the poems and prose of influential contemporaries (female as well as male) who included the political philosopher Edmund Burke and Mary Wollstonecraft. Texts also assigned include Mary Shelley's *Frankenstein* and Byron's *Don Juan*.

**L98 AMCS 316F Rediscovering the Child: Interdisciplinary Workshops in an Urban Middle School**

It is said that at this time in history the entire country must make a commitment to improve the positive possibilities of education. We must work to lift people who are underserved; we must expand the range of abilities for those who are caught in only one kind of training; and we must each learn to be creative thinkers contributing our abilities to many sectors of our society. In this course, we expand our views about learning by experimenting with the creative process of lateral thinking. In the first six weeks of the semester, we learn about learning by meeting with exceptional people with many scholarly, professional, and civic engagement accomplishments. We also learn by working in teams to develop an exciting set of 2-D/3-D, hands-on, problem-solving workshops for middle-schoolers from economically disadvantaged urban families; the workshop curriculum will be based upon your knowledge and passion as well as your interests. During the last eight weeks, we deliver these workshops once a week to students at Compton-Drew Middle School (adjacent to the Science Center in the city of St. Louis). In this course we celebrate the choices of studies we each pursue, and expand our experience by learning from each other's knowledge bases and creativity. The course is open to students from all disciplines, schools, freshmen through seniors, and meets the multidisciplinary Fieldwork requirement for AMCS majors. **L98 AMCS 3173 Queer Histories**

Queer history is a profoundly political project. Scholars and activists use queer histories to assert theories of identity formation, build communities, and advance a vision of the meanings of sexuality in modern life and the place of queer people in national communities. This history of alternative sexual identities is narrated in a variety of settings — the internet as well as the academy, art and film as well as the streets — and draws upon numerous disciplines, including anthropology, geography, sociology, oral history, fiction and memoir, as well as history. This discussion-based course examines the sites and genres of queer history, with particular attention to moments of contestation and debate about its contours and meanings.

**L98 AMCS 317S Service Learning: Documenting the Queer Past in St. Louis**

Around the U.S. and the world, grassroots LGBTQ history projects investigate the queer past as a means of honoring the courage of those who have come before, creating a sense of community today, and understanding the exclusions and divisions that shaped their communities and continue to limit them. In this course, we participate in this national project of history-making by helping to excavate the queer past in the greater St. Louis region. Course readings will focus on the ways that sexual identities and communities in the United States have been shaped by urban settings since the late 19th century, with particular attention to the ways that race, class and gender have structured queer spaces and communities. In their community service project, students will work with the grassroots St. Louis LGBT History Project to research St. Louis' queer past, including conducting oral histories with local LGBTQ elders. Important Note: This is a service-learning class, which means it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which will necessitate an additional 3-4 hours a week. Before beginning community service, students must complete required training. Prerequisite: Introduction to Women, Gender, and Sexuality Studies or Introduction to Queer Studies, or permission of instructor.

**L98 AMCS 3202 Civic Scholars Program Semester One: Self Awareness, Civic Life, and Citizenship**

This is the first-semester foundation course for students in the Civic Scholars Program of the Gephardt Institute for Civic and Community Engagement. This course provides students with a context for examining civic engagement and developing civic leadership skills. Through lectures, guest speakers, readings, excursions, and class discussion, students 1) explore the history and current status of civic engagement; and 2) prepare for the implementation of a civic project the summer between their junior and senior years. Students meet in a structured class to discuss concepts, engage in critical reflection, and develop leadership

skills. In addition, students will critically reflect on course content to enrich their learning. Prerequisite: acceptance into the Civic Scholars Program. CET (<https://gephardtinsttute.wustl.edu/cec/college-of-arts-sciences>) course.

**L98 AMCS 321B American Religion and the Politics of Gender and Sexuality**

Religious beliefs about gender and sexuality have long played a vital role in American politics, vividly evident in debates over such issues as birth control, censorship, pornography, funding for AIDS research, abortion, contraceptive access, abstinence-only sex education, sexual harassment, same-sex marriage, and more. Educated citizens need to understand the impact of these religiously inflected debates on our political culture. This course explores the centrality of sex to religion and politics in the U.S., emphasizing Christianity (both Protestant and Catholic forms) and its weighty social and political role regulating the behavior of

women and men, children and teens, as well as its uses in legal and judicial decisions. Alongside scholarly readings in gender and sexuality, we will discuss popular devotional texts — on chastity, marriage, and homosexuality — with a political bent. Students will leave the course able to analyze how religious beliefs about sex shape specific gender norms central to U.S. politics.

**L98 AMCS 3262 Literature of the Color Line**

In 1903's *The Souls of Black Folk*, W.E.B. DuBois wrote "for the problem of the 20th century is the problem of the color-line." This literature course includes texts written by African-American authors to examine the ways African Americans came to be portrayed in American literature and culture by writers of color, paying special attention to the changing concept of race and African-American citizenship as influenced by American political thought at a time when many of the gains made by African Americans during the period of Reconstruction were repealed. We read fiction, poetry, essays and pamphlets by African-American writers writing through the late 19th and early 20th century, including but not limited to Charles Chesnut, W.E.B. DuBois, Booker T. Washington, Ida B. Wells-Barnett, Pauline Hopkins, Frances E.W. Harper, Paul Laurence Dunbar. In addition to the texts, students are asked to briefly examine portrayals of African Americans in other forms of media, such as visual culture and film.

---

**L98 AMCS 3263 Introduction to Research Design**

The purpose of this course is to introduce students to a range of research designs found in the social sciences. We work on ways to ask and operationalize research questions as well as examine appropriate research designs and strategies. We begin the course with the problem of developing informed research questions, the accompanying hypotheses and developing them around a so-called scientific method. We concern ourselves with understanding the role and importance of literature reviews and then examine sources of data and four types of research strategy through cases that use them: ethnomethodology, an historical methodology, a quantitative approach, and a hybrid of quantitative and qualitative approaches.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L98 AMCS 327 Public Opinion and American Democracy**

This course is about the salience of public opinion and its influence on American Politics. Topics covered include many of the theories developed to explain how public opinion is formed, if and why it changes, and the relationship between public opinion and the political behavior of citizens and elites. Therefore, the course describes and analyzes many of the factors that influence the formation, structure and variation in public opinion: information processing, education, core values, racial attitudes, political orientation (ideology and party identification), political elites, social groups, the media and religion. Additional topics include presidential approval, congressional approval, and the relationship between public opinion and public policy. The course also trains students in several concepts of statistical analysis (assuming no prior knowledge) so that students can use these tools as part of their own research projects. Prerequisites: previous course work in American politics or communications.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

---

**L98 AMCS 3270 Comics, Graphic Novels and Sequential Art**

This course traces the evolution of comics in the America from the "comic cuts" of the newspapers, through the development of the daily and Sunday strips, into the comic book format, and the emergence of literary graphic novels. While not a uniquely American medium, comics have a specifically American context that intersects with issues of race, class, gender, nationalism,

popular culture, consumerism and American identity. Comics have repeatedly been a site of struggle in American culture; examining these struggles illuminates the way Americans have constructed and expressed their view of themselves. The way comics have developed as a medium and art form in this country has specific characteristics that can be studied profitably through the lens of American Culture Studies.

---

**L98 AMCS 3272 The Superhero in American Culture**

The superhero is an American cultural figure that enjoys great metaphoric resonance in contemporary America and about contemporary America, much as the Western did during the Cold War. But this metaphoric resonance has existed since the genre came into being with Superman in 1938 as part of the nation's response to modernity, and predates the creation of the genre through the hero figures that contributed tropes to the superhero genre. Through a cultural historical and transmedia approach, this course examines the superhero and the superhero genre as a myth medium and contested site for portraying and shaping ideas about American identity, masculinity, modernism, race, class, gender and humanity. The prehistory of the superhero is examined in 19th- and early 20th-century frontier stories, science fiction and pulp fiction. The definition of the superhero and the genre's evolution in comics, film, television, and fan-produced works are examined, with a focus on how the genre has served and mediated the conflicting needs of creators and audiences.

**L98 AMCS 3295 Beautiful Losers: The French in North America, 1500-1850**

Adventurous fur-traders, fun-loving carnival-goers, magnanimous noblemen, simple but goodhearted Catholic peasants: the portrait of the French in the Americas rarely goes beyond these time-honored stereotypes. The French have usually

been treated as quaint remnants of a bygone age, vanquished first by the British army, and then by the march of modernity. This class seeks to rescue these historical actors from the typecasting to which we often condemn them. Through this examination of the French presence in the Americas, we will rethink and revisit the familiar stories of British North America, stories of slavery, commerce, property, piety and migration. The contrasted differences will also allow us to reflect on the nature of colonialism and question some ready-made understandings about colonial British America and the Early Republic. Same as L22 History 3293

**L98 AMCS 329F Tale of Two Cities: Documenting Our Divides**

The metropolitan St. Louis area has become the nation's symbol of modern segregation erupting into urban unrest and violence foiled against nonviolent direct-action interventions, youth-driven social protests and grassroots revitalization. With the assistance of a faculty seed grant from the Divided City Initiative, in partnership with the Center for the Humanities in Arts & Sciences and the Mellon Foundation, Tale of Two Cities: Documenting Our Divides will bring together students working in transdisciplinary teams to create documentary videos of street events, meetings and interviews that capture the immediacy of this historical moment. Students will partner and engage with a local nonprofit organization, grassroots movement or religious institution. Topics can include personal and/or institutional issues of a "divided city" that are exacerbated by race, gender, economic status, sexual orientation or geography. Successful completion of this course involves researching and creating a short video with a distinctive perspective and point of view that will draw upon the team's collaborative voices from history, performing arts, economics, law, social work, African-American studies, architecture and art. Skills will be developed in the fundamentals of story development, video and audio-capture in the field, editing with Adobe Premier and archival preservation. No prerequisites.

**L98 AMCS 3303 Politics and Policies of Immigration in the United States**

This class examines the history and politics of American immigration from colonial times to the present. It begins with an overview of the colonial period, then discusses the immigration waves of the 19th and early 20th centuries, and concludes with an examination of current topics and debates about immigration. Issues include racial, ethnic and class relations among groups; changes in immigration policies over time; comparative group experiences; transnational issues in immigration; and the impact of immigration on other American social and political processes and events. This class is a writing-intensive and modified version of Pol Sci 226/AMCS 202. Students who have taken that course should *not* take this course. Because this is a writing-intensive class, we also spend time studying research paper design and writing.

**L98 AMCS 330A Native American/Euro-American Encounters: Confrontation of Bodies and Beliefs**

This course surveys the history and historiography of how Native Americans, Europeans and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter — through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

**L98 AMCS 3312 Gender and American Politics**

This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we will examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category, and the relationship between gender, race, ethnicity and power. Second, we will study gender-based social movements, including the suffrage and woman's rights movements, women's participation in the civil rights movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement. Third, we will examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we will examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights. ---

**L98 AMCS 3330 Topics in Linguistics: The American Languages**

Our perceptions about language are shaped by our linguistic backgrounds and practices as well as our social and political ideologies. This course examines the history of American languages in the U.S. and explores the social, educational, and political issues that surround them. Four types of languages are studied: Native American, colonial, immigrant, and new languages (e.g., Hawaiian Pidgin and American Sign Language). We also take a special look at the history and structure of African-American Language which challenges linguistic categorizations as well as language policy and education. Among the major questions discussed in this course are: what makes American languages distinct in terms of their history and social status; what do they all have in common beyond the simple geographic classification of being "American."

In addressing these questions we also study the politics of language, the history of language policy and education in the U.S., as well as issues of current debate, such as indigenous language reclamation, the "Ebonics controversy," bilingual education, and the official English movement.

**L98 AMCS 336C The Cultural History of the American Teenager**

This course explores the recent history of the teenager in the United States, from the rise of teen culture in the 1950s to the current state of adolescence in the new century. Why have so many novels and films memorialized adolescence? How has the period of development been portrayed in books and film? How have depictions and attitudes toward teen culture changed over the past fifty years? We begin with J.D. Salinger's classic novel of adolescence alienation, *The Catcher in the Rye*, a book that in many ways helped initiate the rise of the youth movement in the 1950s and '60s. From there, we read a series of novels and historical studies that trace the changes in teen culture that have occurred over the past half century. Our class also considers a few films, such as *Rebel Without a Cause* and *Dazed and Confused*, which have helped shape our conception of the American teenager. Ultimately, we question what these depictions of teen culture can tell us about larger trends and concerns in American life. Readings include Judy Blume's *Forever*, Stephanie Meyer's *Twilight*, and Colson Whitehead's *Sag Harbor*.

**L98 AMCS 3370 Music and Performance**

In his 1998 book, *Musicking*, Christopher Small asserts that music is not a thing but an activity — something that people do. Starting from this premise, this course explores musical

performance as a live event, one in which additional aspects of performance — dramatic enactments, costume, choreography, and stage design — also come into play. While recorded music plays an important role in our investigations, we focus on musical events that take place before and with live audiences. Exploring the choices of performers and the expectations of audience members in settings from gospel churches to Radio City Music Hall, this course moves through a wide variety of musical genres, including cabaret, blues, opera, protest song, musical theater and rock. We examine artists whose work blurs the line between "music" and "theater," including George Clinton, Taylor Mac, and Gertrude Stein, as well as everyday people, such as the singers of the Civil Rights Movement, who used the power of live musical performance to change the course of human history. We also attend performances around St. Louis, guided by the interests of the class. Students with an interest in music, theater, dance, cultural history, American studies, and African-American studies are especially welcome.

**L98 AMCS 341 Understanding the Evidence: Provocative Topics of Contemporary Women's Health and Reproduction**

Contemporary topics of women's health and reproduction are used as vehicles to introduce the student to the world of evidence-based data acquisition. Selected topics span and cross a multitude of contemporary boundaries. Issues evoke moral, ethical, religious, cultural, political and medical foundations of thought. The student is provided introductory detail to each topic and subsequently embarks on an independent critical review of current data and opinion to formulate their own said notions. Examples of targeted topics for the upcoming semester include, but are not limited to: Abortion, Human Cloning, Genetics, Elective Cesarean Section, Fetal Surgery, Hormone Replacement, Refusal of Medical Care, Medical Reimbursement, Liability Crisis and Gender Bias of Medical Care.

**L98 AMCS 3415 Jewish-Gentile Relations in the United States, 1830-1970**

Throughout their history Jews faced non-Jewish majorities, and America was no different. Yet unlike Europe, the United States has been, overall, a very hospitable place for Jews, and many of them came to see their new country as "the Promised Land." The course focuses on the relations between Jews and their non-Jewish neighbors from the beginning of a significant Jewish immigration to the United States in the 1830s. The course ends in the 1970s in order to analyze what most historians interpret as a rightward and inward turn of American Jewry (especially after 1967) and link it to the larger wave of ethnic revival in America. As a whole, the course looks at the interethnic and interreligious dimensions of American Jewish life and relates them to the larger American context. How did American Jews view their fellow countrymen and how did these opinions, in turn, affect Jewish integration into the larger society? How did the gamut of relations with other groups, which ran from animosity to coalition building and amity, change the country's political and cultural landscape? How did political and class differences within Jewish communities influence the character of interaction with other communities? Can we learn from the Jewish case about more general patterns of majority-minority relations in America?

**L98 AMCS 341A Gender in Society**

Introduction to the sociological study of gender. The primary focus is U.S. society, but we will also discuss gender in an international context. From the moment of birth, boys and girls are treated differently. Gender structures the experiences of people in all major social institutions, including the family, the workplace and schools. We will explore how gender impacts lives and life chances. The central themes of the course are historical changes in gender beliefs and practices; socialization practices that reproduce gender identities; how race/ethnicity, class and sexuality shape the experience of gender; and the

relationship between gender, power and social inequality.

**L98 AMCS 3422 Americans and Their Presidents**

How have Americans understood what it means to be President of the United States? This seminar uses that question as a point of departure for a multidisciplinary cultural approach to the presidency in the United States, examining the shifting roles of the chief executive from George Washington through Barack Obama. In addition to a consideration of the president's political and policymaking roles, this course examines how the lived experiences of presidents have informed the ways Americans have conceived of public and private life within a broader political culture. In the process, this course uses the presidency as a means to explore topics ranging from electioneering to gender, foreign policy to popular media. Readings are drawn from a broad range of fields.

**L98 AMCS 3450 Sexual Politics in Film Noir and Hardboiled Literature**

Emerging in American films most forcefully during the 1940s, film noir is a cycle of films associated with a distinctive visual style and a cynical worldview. In this course, we explore the sexual politics of film noir as a distinctive vision of American sexual relations every bit as identifiable as the form's stylized lighting and circuitous storytelling. We explore how and why sexual paranoia and perversion seem to animate this genre and why these movies continue to influence "neo-noir" filmmaking into the 21st century, even as film noir's representation of gender and sexuality is inseparable from its literary antecedents, most notably, the so-called "hard-boiled" school of writing. We read examples from this literature by Dashiell Hammett, James Cain, Raymond Chandler and Cornell Woolrich, and discuss these novels and short stories in the context of other artistic and cultural influences on gendered power relations and film noir. We also explore the relationship of these films to censorship and to changing post-World War II cultural values. Films to be screened in complete prints or in excerpts include many of the following: *The Maltese Falcon*, *Double Indemnity*, *Murder My Sweet*, *Phantom Lady*, *Strangers on a Train*, *The Big Sleep*, *The Killers*, *Mildred Pierce*, *The High Wall*, *Sudden Fear*, *The Big Combo*, *Laura*, *The Glass Key*, *The Big Heat*, *Kiss Me Deadly*, *The Crimson Kimono*, *Touch of Evil*, *Alphaville*, *Chinatown*, *Taxi Driver*, *Devil in a Blue Dress*, *The Bad Lieutenant*, and *Memento*. **L98 AMCS 3470 Gender and Citizenship**

In this writing-intensive course we examine how ideas about gender have shaped the ways Americans understand what it means to be a citizen. We focus on a variety of cases in the past and present to explore the means by which women and men have claimed the rights and responsibilities of citizenship. The types of questions that we ask include: What rights or duties devolve from the status of citizen? Who qualifies for citizenship and what qualifies them? What distinct models of citizenship have been available to Americans? How have individuals used notions of gender identity to make claims to political subjectivity? And finally, how do gendered claims to citizenship intersect or conflict with claims based on race, class, ethnicity or humanity? Prerequisite: previous course work in Women, Gender, and Sexuality Studies or permission of the instructor. Not open to students who have taken WGSS 210.

**L98 AMCS 347A Global Energy and the American Dream**

This lecture course explores the historical, cultural and political relationship between America and global energy, focusing on oil, coal, natural gas, biofuels and alternatives. Through case studies at home and abroad, we examine how cultural, environmental, economic and geopolitical processes are entangled with changing patterns of energy-related resource extraction, production, distribution and use. America's changing position as

global consumer and dreamer is linked to increasingly violent contests over energy abroad while our fuel-dependent dreams of boundless (oil) power give way to uncertainties and new possibilities of nation, nature, and the future. Assuming that technology and markets alone will not save us, what might a culturally, politically and socially-minded inquiry contribute to understanding the past and future of global energy and the American dream?

### L98 AMCS 3482 Rethinking the "Second Wave": The History of U.S. Feminisms, 1960-1990

The U.S. women's movement has been called "the 20th century's most influential movement," but until recently assessments of its origins, characteristics and impact have been largely impressionistic and subjective, left to movement participants and popular culture. Building on a recent explosion of historical studies of American feminism, this course examines the history of the so-called "second wave" of the women's movement from its origins in the early 1960s to its alleged demise in the late 1980s. Topics to be covered include the origins of feminist activism; the traditional history of the women's movement and recent revisions; how race and class shaped the feminist movement; how feminist ideas and organizing transformed American society; feminism and individual experience; and responses to the women's movement. In this discussion-based course, we read scholarly analyses of the women's movement as well as memoirs, popular essays, and many primary documents from the period.

### L98 AMCS 3504 The Making of American Conservatism Since 1932, From Herbert Hoover to Trump

Beginning with Hayek's *The Road to Serfdom* and Buckley's *God and Man at Yale*, this course examines some of the major conservative writers and thinkers in the United States since World War II. The course includes readings by Russell Kirk, Richard Weaver, Barry Goldwater, Phyllis Schlafly, Irving Kristol, Newt Gingrich, and Pat Buchanan as well younger conservatives like Mark Steyn, Jonah Goldberg, Ramesh Ponnuru, S.E. Cupp, and Kevin Williamson. Several classes are devoted to black conservatives including Thomas Sowell, Shelby Steele, and Walter Williams. We try to answer the questions: What is conservatism and who are its adherents? Can we speak of conservatism in the singular or are there several types of conservatism? Are the various forms of conservatism politically and intellectually compatible? How has conservatism changed since Reagan and the 1980s? What inroads has conservatism made in the cultural and political life of the United States? Is the United States essentially a conservative nation? Time permitting, we may also watch a few Hollywood movies by conservative filmmakers.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

### L98 AMCS 3507 Legal Conflict in Modern American Society

Thousands of lawsuits are filed daily in the state and federal courts of the United States. The disputes underlying those lawsuits are as messy and complex as the human, commercial, cultural and political dynamics that trigger them, and the legal processes for resolving those disputes are expensive, time-consuming and, for most citizens, seemingly impenetrable. At the same time, law and legal conflict permeate public discourse in the United States to a degree that is unique in the world, even among the community of long-established democracies. The overarching objective of the course is to prepare our undergraduate students to participate constructively in that discourse by providing them with a conceptual framework for understanding both the conduct and resolution of legal conflict by American legal institutions, and the evolution of — and values underlying — the substantive law American courts apply to those conflicts. This is, at core, a course in the kind of legal or litigation "literacy" that should be expected of the graduates of first-tier American universities. Some of the legal controversies that are used to help develop that "literacy" include those surrounding the permissible use of lethal force in self-defense, the constitutionality of affirmative action in university admissions, contracts that are unconscionably one-sided, sexual harassment in the workplace, the duty of landlords to prevent criminal assaults on their tenants, groundwater pollution alleged to cause pediatric cancers, and warrantless searches of cellphone locator data by police.

### L98 AMCS 351 History of Electronic Media

This course traces the history of electronic media as they have become the dominant source for entertainment and information in contemporary culture, starting with over-the-air broadcasting of radio and television through to cable and the "narrowcasting" achieved by digital technologies. While some attention is paid to other national industries, the chief focus of the course is on electronic media in the United States to determine, in part, the

transformative role they have played in the cultural life of the nation. The course explores the relationship of the electronic media industries to the American film industry, determining how their interactions with the film industry helped mutually shape the productions of both film and electronic media. Required screenings.

**L98 AMCS 352A The Black Athlete in American Literature: Frederick Douglass to LeBron James**

The black athlete is a central figure in American entertainment, and has been since Frederick Douglass decried Christmastime slave games in his *Narrative*. This course will examine literary depictions of black athletes — in novels, memoirs, essays and poems — in order to better understand the cultural significance of sportsmen and women in the African-American struggle for equality, from abolitionism to the "Black Lives Matter" movement. We will read works by Douglass, Ralph Ellison, Maya Angelou, and John Edgar Wideman, among others, and examine the lives and athletic pursuits of prominent athletes such as Jackie Robinson, Muhammad Ali, Wilma Rudolph, Michael Jordan, and LeBron James. Popular perceptions of gender and sexuality, in addition to race and racism, will factor into our readings, especially as students incorporate secondary sources into their own research.

**L98 AMCS 3551 The Welfare State and Social Policy in America**

How can we understand the recent debate about fundamental health care reform? Should social security be partially or wholly privatized? Was the 1996 welfare reform a success? Contemporary political questions frequently focus on the American welfare state and the social policies that comprise it. The first half of this course describes the American welfare state broadly construed, places it in a comparative context, and elucidates major political science explanations for the size and scope of American social policy. We touch on several areas of social policy while constructing the generalized lenses through which particular political outcomes can be understood. The second part of the course then focuses on three major aspects of the American welfare state: health care, old age pensions, and policies related to work, poverty and inequality.

---

**L98 AMCS 3561 Women and the Law**

This course (formerly called "Women and the Law") explores how social constructions of gender, race, class and sexuality have shaped traditional legal reasoning and American legal concepts, including women's legal rights. We will begin by placing our current legal framework, and its gender, race, sexuality, and other societal assumptions, in an historical and Constitutional context. We will then examine many of the questions raised by feminist theory, feminist jurisprudence, and other critical perspectives. For example, is the legal subject gendered male, and, if so, how can advocates (or women and men) use the law to gain greater equality? What paradoxes have emerged in areas such as employment discrimination, family law, or reproductive rights, as women and others have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? How do intersectionality and various schools of feminist thought affect our concepts of discrimination, equality and justice? The course is thematic, but we will spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women. Over the years, this course has attracted WGSS students and pre-law students. This course is taught by law students under the supervision of a member of the School of Law faculty. In Spring 2017, Jesse Doggendorf, Sapna Khatri, Rebecca Swarm, and Sarah Watson will be teaching this course under the supervision of Professor Susan Appleton. *Students who have taken L77 3561 Women and the Law can not take this class.*

**L98 AMCS 3563 Television Culture and Cult TV: Critical Approaches to Fandom**

Why do television series inspire passionate involvement on the part of some viewers? What are the differences among being a viewer, an audience member, and a fan? How can we make scholarly sense of cultural practices such as learning to speak Klingon or building a "repli-car" of the General Lee? Studies of fandom have attempted to answer such questions and continue to explore issues that are crucial to understanding contemporary television culture. The phenomenon of "Cult TV" offers fertile ground for examining the complex dynamics at play among

fans, popular culture, the institutions of American media, and individual programs. In its exploration of cult television and fans, this course engages with key issues in contemporary media such as the proliferation of new media technologies and the repurposing of existing media forms, the permeable boundaries between high and low or mass and oppositional culture, and the fragmentation and concentration of media markets. The class combines close textual analysis with studies of fan practices to examine a variety of television programs, from canonical cult texts such as *Star Trek* and *Doctor Who* to "quality" fan favorites such as *Designing Women* and *Cagney & Lacey* to contemporary cult/quality hybrids such as *Lost* and *Heroes*. In mapping out this cultural territory, we develop a set of critical perspectives on audience identities and activities and examine the continuing and conflicted imagination of fans by media producers, distributors, regulators and critics. Required screenings. Prerequisite: Film 220 or Film 350, or consent of instructor.

#### L98 AMCS 3570 Quality Television and the "Primetime Novel"

Over the past four decades, the cultural status of television in the United States has been reconfigured and complicated with changes in industrial structures, audience formations, regulatory presumptions, and production techniques and strategies. This course examines these interrelated forces, particularly as they have fostered a set of programs and practices often hailed as Quality Television. The class surveys the institutional paradigms that gave rise to particular generations of programming celebrated as "quality" and analyze the systems of distinction and cultural value that make the label socially and industrially salient. We critically investigate the role of audiences and the conceptions of viewer choice at play in these developments. In addition, the course analyzes the textual features that have come to signify narrative complexity and aesthetic sophistication. We examine foundational historical examples of this phenomenon from *The Mary Tyler Moore Show* to *Hill Street Blues*, and *Cagney & Lacey* to *Northern Exposure*, as well as more contemporary broadcast and cable fiction such as *LOST*, *The Wire*, and *Mad Men*. In addition, students are expected to watch a complete series, chosen in consultation with the instructor, as part of their final research project. Required screening. Prerequisite: Film Studies 220 or Film Studies 350 or consent of instructor.

#### L98 AMCS 3575 US Foreign Policy: Theory and Practice

In this class we focus on the procedures and institutions that shape U.S. foreign policy decisions. This is neither a course on international relations theory nor a history of U.S. foreign policy. Rather, this course examines the domestic politics surrounding U.S. foreign policy decisions. How do public opinion, electoral politics, and interest groups shape foreign policy? Which branch controls foreign policy — the president, Congress, the courts? Or is it ultimately the foreign affairs bureaucracy that pulls the strings? We examine these topics through reading and writing assignments, class discussion, and simulations to promote deeper understanding and build practical skills.

#### L98 AMCS 3581 Scribbling Women: 19th-Century American Women Writers

In 1855, Nathaniel Hawthorne wrote to his publisher, William Tichnor, that "America is now wholly given over to a damned mob of scribbling women and I should have no chance of success while the public taste is occupied with their trash." In this class, we examine works of those scribbling women of the 19th century. We read one of the best-selling novels of the century, one that created a scandal and ruined the author's literary reputation, along with others that have garnered more attention in our time than their own. In addition to focusing on these women writers, we also explore questions about the canon and American literature: What makes literature "good"? What constitutes American literature? How does an author get in the canon and stay there? Finally, in this writing intensive course, there are frequent writing assignments and a strong emphasis on the essential writing process of drafting and revising.

#### L98 AMCS 3590 The American Musical Film

Film musicals were crucial to the success of the American film industry from the dawn of sound film in the late 1920s to the demise of the studio system in the late 1950s. This course examines the American film musical from a variety of aesthetic, critical and historical perspectives, with particular attention to how the genre interacted with popular music and dance and the major political and social trends of the 1930s, '40s and '50s. Required screenings.

#### L98 AMCS 359A (Re)Writing Slavery

This special topics course considers black-authored texts ranging from the 18th to the 21st century to examine the ways slavery has been discussed in American literature and culture. We pay attention to the role of slavery in creating the African diaspora, the contribution of slave narratives to the Abolitionist movement, and how the structures of American slavery did not disappear after the Civil War. We look at the ways Civil

Rights-era and contemporary African-American writers such as Margaret Walker, Toni Morrison, and Charles Johnson have appropriated the slave narrative to engage and critique present day concerns. Their works are read against 19th-century slave narratives by ex-slaves such as Frederick Douglass and Harriet Jacobs. In addition to the texts, students are asked to consider how slavery and its aftereffects have been portrayed in film and other forms of media.

**L98 AMCS 360A Religion and the Modern Civil Rights Movement, 1954-1968**

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.

**L98 AMCS 3611 Legislative Politics**

This course is an introduction to the politics of the U.S. Congress and the federal lawmaking process. We focus on the behavior of individual legislators and the role they play in crafting federal legislation in policy areas such as health care, civil rights and the environment. In general we examine questions such as: Why do legislators behave as they do? Whose interests are being represented?

**L98 AMCS 361A Women and Social Movements: Gender and Sexuality in U.S. Social Movements**

This course examines the history of grassroots activism and political engagement of women in the U.S. Looking at social movements organized by women or around issues of gender and sexuality, class texts interrogate women's participation in, and exclusion from, political life. Key movements organizing the course units include, among others: the Temperance Movement, Abolitionist Movements, the Women's Suffrage Movements, Women's Labor Movements, Women's Global Peace Movements, and Recent Immigration Movements. Readings and discussion pay particular attention to the movements of women of color, as well as the critiques of women of color of dominant women's movements. Course materials analyze how methods of organizing reflect traditional forms of "doing politics," but also strategies and tactics for defining problems and posing solutions particular to women. Prerequisites: any 100- or 200-level Women, Gender, and Sexuality Studies course or permission from the instructor.

**L98 AMCS 3632 Mapping the World of "Black Criminality"**

Ideas concerning the evolution of violence, crime and criminal behavior have been framed around many different groups. Yet, what does a typical criminal look like? How does race — more specifically blackness — alter these conversations, inscribing greater fears about criminal behaviors? This course taps into this reality examining the varied ways people of African descent have been and continue to be particularly imagined as a distinctly criminal population. Taking a dual approach, students consider the historical roots of the policing of black bodies alongside the social history of black crime while also foregrounding where and how black females fit into these critical conversations of crime and vice. Employing a panoramic approach, students examine historical narratives, movies and documentaries, literature, popular culture through poetry and contemporary music, as well as the prison industrial complex system. The prerequisite for the course is AFAS 3880 (Terror and Violence in the Black Atlantic) and/or permission from the instructor, which will be determined based on a student's past experience in courses that explore factors of race and identity. Enrollment limit: 20.

**L98 AMCS 3651 Black Women Writers**

When someone says "black woman writer," you may well think of Nobel Prize winner Toni Morrison. But not long ago, to be a black woman writer meant to be considered an aberration. When Thomas Jefferson wrote that Phillis Wheatley's poems were "beneath the dignity of criticism," he could hardly have imagined entire Modern Language Association sessions built around her verse, but such is now the case. In this class we survey the range of Anglophone African-American women authors. Writers likely to be covered include Phillis Wheatley, Harriet Wilson, Nella Larsen, Lorraine Hansberry, Octavia Butler and Rita Dove, among others. Be prepared to read, explore, discuss and debate the specific impact of race and gender on American literature.

---

**L98 AMCS 3660 Women and Film**

The aim of this course is primarily to familiarize students with the work of prominent women directors over the course of the 20th century, from commercial blockbusters to the radical avant-garde. Approaching the films in chronological order, we consider the specific historical and cultural context of each filmmaker's work. In addition we discuss the films in relation to specific gender and feminist issues such as the status of women's film

genres, representations of men and women on screen, and the gender politics of film production. Required screenings.

**L98 AMCS 367 Modern America, 1877-1929**

This course explores dramatic changes in American society during the half-century from the Civil War to the end of WWI. We discuss industrialization; mass immigration from Europe, Asia and Latin America; the vast movement of rural people to cities; the fall of Reconstruction and rise of Jim Crow; the expansion of organized labor; birth of American Socialism; and the rise of the American empire in the Caribbean and the Philippines. The course, in addition, analyzes the many and varied social reform efforts of the turn of the 20th century, from women's suffrage to anti-lynching campaigns; from trust-busting and anti-immigrant crusades to the settlement house movement.

---

**L98 AMCS 3671 The Long Civil Rights Movement**

The Civil Rights Movement is known as a southern movement, led by church leaders and college students, fought through sit-ins and marches, dealing primarily with non-economic objectives, framed by a black and white paradigm, and limited to a single tumultuous decade. This course seeks to broaden our understanding of the movement geographically, chronologically, and thematically. It pays special attention to struggles fought in the North, West and Southwest; it seeks to question binaries constructed around "confrontational" and "accommodationist" leaders; it reveals how Latinos, Native Americans, and Asian Americans impacted and were impacted by the movement; and it seeks to link the public memory of this movement with contemporary racial politics.

**L98 AMCS 367H Medicine, Healing and Experimentation in the Contours of Black History**

Conversations regarding the history of medicine continue to undergo considerable transformation within academia and the general public. The infamous Tuskegee syphilis experiment serves as a marker in the historical consciousness regarding African Americans and the medical profession. This course taps into this particular evolution, prompting students to broaden their gaze to explore the often delicate relationship of people of African descent within the realm of medicine and healing. Tracing the social nature of these medical interactions from the period of enslavement through the 20th century, this course examines the changing patterns of disease and illness, social responses to physical and psychological ailments, and the experimental and exploitative use of black bodies in the field of medicine. As a history course, the focus is extended toward the underpinnings of race and gender in the medical treatment allocated across time and space — the United States, Caribbean and Latin America — to give further insight into the roots of contemporary practice of medicine.

**L98 AMCS 369 American Horrors**

Horror movies. Fright films. Scream marathons. Blood and gore fests. Why should we want to look at movies that aim to frighten us? What is the attraction of repulsion? Is there an aesthetics of ugliness? Except for some early prestige literary adaptations like *Dr. Jekyll and Mr. Hyde*, the horror film began as a low class genre, a notch above exploitation movies. In the 1970s-1980s, it became the dominant commercial genre by offering increasingly graphic images of violence and mayhem. The horror film had arrived: lavish budgets, big stars, and dazzling special effects in mainstream major studio films competed with low-budget, no frills productions that helped establish artistically ambitious and quirky filmmakers like George Romero and David Cronenberg. By a chronological survey of the American horror film, this course explores how differing notions of what is terrifying reflect changing cultural values and norms. Throughout, we consider the difficult questions raised by horror's simple aim of scaring its audience. In addition to weekly screenings, work for the course includes analytical and theoretical essays on the horror film. Written analyses of films with a close attention to visual style are required. Prerequisite: Film 220. Required screenings.

**L98 AMCS 371A Sociology of Immigration**

A review of theoretical and empirical research on how and why people migrate across international borders, and the consequences of international migration for immigrants and natives in the United States. While immigration is one of the most controversial issues in the contemporary United States, these contentious debates are not new. Americans once voiced the same concerns about the economic and social impact of Southern and Eastern European immigrants that today are aimed at immigrants from Latin America, Asia, Africa and the Caribbean. In this course we will compare historical (1880-1920) and contemporary (1965-present) waves of immigration to the United States. We will explore why and how people migrate, immigrant integration, the impact of immigration on native-born Americans, and how government policies — at the national, state, and local level — shape immigrant assimilation and what it means to be considered truly "American" in a social as well as a legal sense. Prerequisite: completion of an introductory sociology course or consent of the instructor.

**L98 AMCS 373 Making War**

This course examines the cinematic representation of war. Using World War II as a case study, students examine a series of combat pictures, documentaries, and "home front" films from the 1940s to the present. Several key questions guide the class discussion: How do war films respond to and shape the political worlds in which they are produced? How do these films confront the aftermath of war and the soldier's homecoming? Where is the line between the home front and the front line? More broadly, what does it mean to portray the violence and suffering that war inevitably brings? At the close of the semester, students partake in an in-class symposium presenting their research on the cinematic treatment of other conflicts, from the Civil War to the "War on Terror." Films include: *The Boat*, *Saving Private Ryan*, *The Thin Red Line*, *Why We Fight*, and *Mrs. Miniver*. Readings include works by Susan Sontag, Kaja Silverman, and W.G. Sebald. Required screenings.

**L98 AMCS 3742 Social Landscapes in a Global View**

From the beginning of the human campaign, societies have socialized the spaces and places where they live. This socialization comes in many forms, including the generation of sacred natural places (e.g., Mt. Fuji) to the construction of planned urban settings where culture is writ large in overt and subtle contexts. Over the past two decades or so, anthropologists, archaeologists and geographers have developed a wide body of research concerning these socially constructed and perceived settings — commonly known as "landscapes." This course takes a tour through time and across the globe to trace the formation of diverse social landscapes,

starting in prehistoric times and ending in modern times. We cover various urban landscapes, rural landscapes, nomadic landscapes (and others) and the intersection of the natural environment, the built environments and the symbolism that weaves them together. Chronologically, we range from 3000 BCE to 2009 CE and we cover all the continents. This course also traces the intellectual history of the study of landscape as a social phenomenon and investigates the current methods used to recover and describe social landscapes around the world and through time. Join in situating your own social map alongside the most famous and the most obscure landscapes of the world and trace the global currents of your social landscape!

**L98 AMCS 3755 Disability, Quality of Life and Community Responsibility**

The increasing prevalence of disability presents major challenges for American society. Social participation can be a challenge for people with disabilities, while resources to address these needs tend to be limited. This course begins by critically analyzing concepts of disability, quality of life, health and social participation. We construct a framework for examining social participation and community resources across the lifespan. Public health, educational and environmental theories and methods are applied to programs and services that aim to enhance quality of life with disabilities. We analyze ecological approaches to enhancing social participation. Upon completion of this course, students are equipped to analyze challenges and prioritize resources for individual and population health.

**L98 AMCS 3778 Another Country: Land, Diaspora, and the Vernacular Beyond the Cities**

The history of aesthetic and cultural modes of modernity is often told with an urban inflection, omitting a narrative of mobility, artistic experimentation, and social change found in the space beyond the 20th-century city. This course applies a broad interdisciplinary perspective to consider the historical contexts of these diverse rural cultures, their intersections with technology and global economies, and the ways in which these communities and their modes of expression commute between the rural and the urban — writing, speaking, and singing in a vernacular that documents and dramatizes their modern condition. From Mississippi hill country blues to the agricultural essays of Wendell Berry, from emerging forms of American landscape design to Sherman Alexie's postmodern Indian reservation, the American rural emerges as neither a pastoral nor a wasteland, but as a richly complex and diverse patchwork. These cross-cultural narratives are connected through a number of mediums: field recordings, online archives, poems, fiction, critical essays, film, and interdisciplinary fieldwork. The confluence of these artistic and scholarly practices guide robust classroom discussion and inform inventive research projects that conclude the semester's work.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L98 AMCS 3785 Photography in America**

This course considers the practice and use of photography in America from its invention up to the present, offering various ways of thinking about the medium and its relation to society and culture. Students come to understand the ways photographic practices shape public perceptions of national identity, ethnicity and gender, nature, democratic selves, and a host of other concerns. We discuss famous practitioners such as Matthew Brady, Jacob Riis, Lewis Hine, Walker Evans, and Robert Frank. We consider not only the social and public uses of the medium through such episodes as the New Deal/FSA and photojournalism, but also the private explorations of "fine art" photographers, and the everyday practices of the snapshot. Prerequisites: Intro to Western (Art-Arch 112) or Intro to Modern (211), or one course in American History, American Cultural Studies, or permission of the instructor.

**L98 AMCS 3789 Building St. Louis Oral History: 1945-Present**

This course aims to provide a national and local understanding of how Americans and St. Louisans dealt with the problems of racism, poverty and sexism from 1945 to the present. While history courses traditionally require that students analyze the credibility and subjectivity of each historical source, this course further challenges students to use the methods of oral history to compare evidence from oral historical memory with written texts. By comparing St. Louis history with that of the rest of the nation,

students analyze regional differences and understand the unique historical conditions that shaped this city.

#### L98 AMCS 379 Banned Books

Why would anyone want to burn a book? Under what circumstances would you support censorship? Several years ago a Russian student was exiled to Siberia for possessing a copy of Emerson's *Essays*; today, school boards in the United States regularly call for the removal of *Huckleberry Finn* and *The Catcher in the Rye* from classrooms and library shelves. Actions like these dramatize the complex interconnections of literature and society, and they raise questions about what we read and the way we read. The course explores these issues by looking closely at several American and translated European texts that have been challenged on moral, sociopolitical or religious grounds to determine what some readers have found so threatening about these works. Possible authors: Goethe, Voltaire, Rousseau, Defoe, Hawthorne, Flaubert, Twain, Chopin, Brecht, Salinger, Aldous Huxley, Ray Bradbury. Brief daily writing assignments.

#### L98 AMCS 3840 Gender & Consumer Culture in U.S. Fiction of the Late 19th and Early 20th Century

The decades between the end of the Civil War and the 1930s saw the rise of a mass consumer culture that would dramatically reshape America. The fiction writers of this period, keen to capture the spirit of the age, helped to create the enduring idea that consumerism and an orientation toward material acquisition are at the heart of gendered concepts of American identity. Their stories documented, and sometimes celebrated, the emergence of recognizable "types" of American womanhood and manhood — such as self-made millionaires, ambitious "working girls," bargain-hunting middle-class housewives, and the commercially minded women and men of the social and intellectual elite. At the same time, their stories articulated anxieties about U.S. consumer culture and its impact on the world. Students in this course will read, discuss and write about novels and short stories by writers such as Henry James, Mary Wilkins Freeman, Kate Chopin, Theodore Dreiser, Edith Wharton, Nella Larsen, Langston Hughes and F. Scott Fitzgerald. Students in the course will also examine primary materials such as magazine advertisements, and will read and respond to relevant scholarship on the period. Writing Intensive course.

#### L98 AMCS 3843 Filming the Black Freedom Struggle in St. Louis

This interdisciplinary course is designed to introduce students to the history of the black freedom struggle in St. Louis and to the complex and multiple ways historic narratives are constructed. We will explore the political, economic and cultural history of black St. Louisians who challenged racial segregation in housing and work, fought white mobs in city streets, and battled the destruction of black communities by the federal urban renewal and public housing policies. This course will provide students with the opportunity to write history through visual sources, in order to construct a historical narrative on film. Students will be introduced to the technical skills involved in making a

documentary film, and to the archival research and oral history skills required to document the past. This course brings together documentary filmmaking and history research to draw attention to the multiple narratives of African-American and urban history. Same as L22 History 3843

#### L98 AMCS 3876 Dada and Surrealism in Europe and the United States

In this multimedia, interdisciplinary course, we will consider the history, theory and practice of Dada and Surrealism, from its Symbolist and Expressionist roots at the end of the 19th and the beginning of the 20th centuries through its late expressions in Beat culture and Pop art of the 1950s and 1960s. Dada's emergence in Zürich and New York in the midst of the First World War set the tone for its stress on irrationality as an oppositional strategy. Surrealist research into the domain of the unconscious continued this extreme challenge to dominant culture, but in a revolutionary spirit that proposed new possibilities for personal and collective liberation. The international character of the movements, with substantial cross-transmission between Europe and the United States, will be emphasized. Prerequisites: Intro to Western Art (L01 112) or Intro to Modern Art (L01 211) or permission of instructor. Same as L01 Art-Arch 3875

#### L98 AMCS 3880 Terror and Violence in the Black Atlantic

From the period of bondage through the 21st century, terror and racialized violence have consistently been used as a form of social control. This course is constructed to explore the historical foundations of extreme threats of violence inflicted among populations of African descent. The fabric of American culture has given birth to its own unique brand of terrorism, of which this class spends considerable time interrogating. Yet, in recognizing that these practices are commonly found in other parts of the Black Atlantic, students are encouraged to take a comparative view to better tease out the wider strands of violence operative in places like England, the Caribbean and Latin America. Within

this course, we explore the varied ways in which music, films, newspapers and historical narratives shed light on these often life altering stories of the past. Some of the themes touched upon include: the use of punishment/exploitation during the era of slavery, lynching, sexual violence, race riots, police brutality, motherhood, black power and community activism.

### L98 AMCS 3882 Psychological Anthropology

The objective of this course is to introduce students to the central topics and methods of psychological anthropology. Psychological anthropology is concerned with the interplay of psychology and culture on both the individual and group levels. We look cross-culturally at such topics as child and adolescent development, religious experience, illness and healing, self and identity, gender and sexuality, reasoning and symbolism, and psychopathology. This class draws upon a range of sources, including ethnographies, psychoanalytic theory, contemporary critical theory, and cross-cultural materials.

### L98 AMCS 3884 Modern Design and Modern Culture

This course explores key issues of modernity (industrialization, consumerism, mass culture, nationalism, etc.) through the study of material culture. Focusing primarily on modern design in Europe and North America from William Morris to Charles Eames and Aleksander Rodchenko to Bruce Mau, we examine major developments in design thinking and practice as both reactive to and generative of broader political, economic and social concerns. The course is organized around important and influential exhibitions, from World's Fairs to storefront shows, where design professionals, institutions and publics came together to reflect on topics of urgency, identify alternatives, and imagine the implications of design on everyday life. Wherever possible, class discussions/lectures and assignments make use of objects and archives in area collections. Prerequisites: Intro to Western Art (L01 Art-Arch 113) or Intro to Modern Art (L01 Art-Arch 215) or permission of instructor.

### L98 AMCS 38B9 Understanding Lincoln: Writing-Intensive Seminar

This course explores the life, art (political and literary) and historical significance of Abraham Lincoln. It focuses first on how he understood himself and foregrounds his inspired conception of his own world-historical role in the Civil War. The course also traces how the larger world furnished the contexts of Lincoln's career, how his consciousness, speeches and writings, and presidential decisions can be understood against the backdrop of the revolutionary national democratic upheavals of the 19th century. Finally the course investigates how the 16th president, so controversial in his day, has remained a site of cultural contestation, with historians, novelists, poets, cartoonists, filmmakers, advertisers and politicians struggling over his memory and meaning, to the present.

### L98 AMCS 3900 Mormonism and the American Experience

The focus of this seminar is Mormonism, meaning, primarily, the Church of Jesus Christ of Latter-day Saints (or LDS Church), which is the largest Mormon body. Mormons in the United States have gone from being one of the most intensely persecuted religious groups in the country's history to the fourth largest religious body in the U.S. (by one count), with a reputation for patriotism and conservative family values. In addition to introducing who the Mormons are, their beliefs and religious practices, this seminar will explore issues raised by Mormonism's move toward the religious mainstream alongside its continuing distinctiveness. These issues include: What is the religious "mainstream" in the U.S.? How did conflicts over Mormonism during the 19th century, especially the conflict over polygamy, help define the limits of religious tolerance in this country? How have LDS teachings about gender and race, or controversies about whether or not Mormons are Christian, positioned and repositioned Mormons within U.S. society?

### L98 AMCS 391 Gender Violence

This course explores the issue of violence against women within families, by strangers in the workplace, and within the context of international and domestic political activity. In each area, issues of race, class, culture and sexuality are examined as well as legal, medical and sociological responses. Readings cover current statistical data, research and theory as well as information on the history of the battered women's movement, the rape crisis center movement, violent repression of women's political expressions internationally, and the effect of violence on immigrant and indigenous women in the United States and abroad. Not open to students who have taken U92 (UCollege) WGSS 363.

### L98 AMCS 394 Urban Development and the Global Economy

This course is designed to familiarize students with the urban effects of economic globalization and to provide students with tools that enable them to engage in scholarly and practical debates on economic growth and the city. Students are exposed to a variety of theoretical statements comparative studies, and case-specific research focusing on cities and the global economy. Topics include: industrial reorganization and its connection to the urban form, the ability of "dead" cities to adapt to economic change; how economic innovation is encouraged or suppressed within cities; growth coalitions and urban politics; networks and culture in relation to capitalist commitment to urban space; and the role of the arts and entertainment in new development versus production-based paradigms.

---

### L98 AMCS 395 American Indians and American Empire

Through readings of historical and contemporary texts drawn from American Indian testimonial, scholarship and literature; anthropology; and history, we explore past struggles for cultural and political survival and contemporary politics of self-determination of indigenous peoples. We consider these issues alongside American "Empire": the past and present politics of nation-building, expansion and rule that characterize the United States. Topics include race, anthropology and 19th-

century imperialism; education, the Indian and American democracy; sovereignty and tribal self-determination; Indian political movements; and the contemporary politics of energy, resources and Indian lands.

**L98 AMCS 3975 Wolves of Wall Street: American Business  
and Popular Culture**

America's perceptions about Big Business and the Free Enterprise system have evolved and changed over time from the 1920s to the present. During the 1980s, for example, Oliver Stone's *Wall Street* seemed to endorse the notion that "greed is good." Today, however, the topic of rising income inequality has been connected with the collapse of prestigious Wall Street firms, the "housing bubble," a declining middle class, and widespread fear about the future of "The American Dream." This course examines a variety of artistic, ethical and historical perceptions about American Business as depicted in popular culture and the arts over the past hundred years. How have America's foremost artists (among them F. Scott Fitzgerald, Eugene O'Neill, Arthur Miller, Martin Scorsese), dealt with questions of conspicuous consumption, the acquisition of capital for its own sake, and the disparity between rich and poor? We survey several artistic genres and artistic forms, including American tragic works like *The Great Gatsby* and *Death of a Salesman*, to popular musicals such as *How to Succeed in Business without Really Trying* and *The Producers*.

**L98 AMCS 39SL Blacks, Latinos and Afro-Latinos:  
Constructing Difference and Identity: Writing-Intensive  
Seminar**

Dominant discourses on Black-Latino relations focus on job competition, while a few others celebrate the future of an America led by "people of color." What is at stake in these narratives? How did we come to understand what is "black" and "Latino"? Students taking this course examine the history of African Americans' and Latinos' racialization under British, Spanish, and American empires, paying attention to both the construction of the racial "Other" by European elites, the reclaiming of identities by the racially marginalized through the Black and Brown liberation movements of the 1960s and 1970s, and the movements' impacts on black-Latino electoral and grassroots coalitions, mass incarceration of youth, and Afro-diasporic productions of hip-hop.

**L98 AMCS 400 Urban Education in Multiracial Societies**

This course offers students an analysis of the historical development and contemporary contexts of urban education in English-speaking, multiracial societies. It examines legal decisions, relevant policy decisions, and salient economic determinants that inform urban systems of education in Western societies including, but not limited to, the United States, Canada, Great Britain, and South Africa. The course draws on quantitative, qualitative, and comparative data as an empirical foundation to provide a basis for a cross-cultural understanding of the formalized and uniform system of public schooling characteristic of education in urban settings. Given the social and material exigencies that shape urban school systems in contemporary societies, special attention is given in this course to the roles of migration, immigration urbanization, criminal justice, industrialism, de-industrialism, and globalization in shaping educational outcomes for diverse students in the aforementioned settings. Prerequisite: junior standing or permission of instructor.

**L98 AMCS 401 Race, Sex and Sexuality: Concepts of Identity**

This course examines changes in the meanings of three concepts of identity — race, sex and sexuality — from the early modern period to the present. The course begins by looking at early modern constructions of these concepts in Western Europe. We then focus on changes occurring during the course of the 18th and 19th centuries in Europe and the United States and at how such changes were similar and different among these three concepts. We then examine 20th-century challenges to 19th-century constructions. The course concludes by studying the relationship between these challenges and 20th-century identity political movements organized around these concepts. Prerequisite: completion of at least one WGSS course or permission of the instructor.

**L98 AMCS 4010 Pluralism, Liberalism and Education**

How should liberal democratic states respond to religious and cultural pluralism? In what ways is pluralism different from mere disagreement, and what normative implications does pluralism have for public policy? How can liberal states justify using their coercive power against a background of pluralism and in ways that systematically disadvantage certain religious and cultural groups in society? In particular, what is to be done when religious parents and the liberal state make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? Readings are taken from contemporary political philosophy. Prerequisites: Pol Sci 106, Pol Sci 107, Phil 340 or permission of instructor.

**L98 AMCS 4012 Research Seminar: The Capstone Project**

This course is required for students seeking to earn additional credit for the completion of their Capstone Project. The scope and depth of the project, which the student began in L98 4011, must merit a two-semester time frame for completion and credit; in addition to the credits earned in L98 4011, students may earn an additional 1-3 credits in L98 4012. L98 4012 builds on L98 4011 and involves meetings and workshops during the final stages of their project preparation. Prerequisites: satisfactory standing as a candidate for a two-semester Capstone Project and permission of AMCS directors. Course will meet every other week, time/date to be determined based on participants' schedules.

Credit variable, maximum 3 units.

---

**L98 AMCS 4020 The Legal Landscape in a Changing American Society**

This course is designed to examine the qualitative relationship between transformations in law in America and the structure of American values and behavioral patterns and in the institutions and culture of American law. The materials cover the structural aspects of the legal system and its place in American society and not the law's doctrinal features (i.e., the specific substantive areas of the law). Rather the course examines how the organization and functioning of the law incorporates the values and changes in the American society. To achieve this, the course topics include: (a) Americans' perceptions of their legal institutions and agents; (b) changing links between law and the mass media; (c) concerns about the jury system; (d) the use (and abuse?) of litigation and its alternatives (ADR); (e) inequalities in access to the legal system; and (f) the transformations within the legal profession, both in law firms and in the careers of attorneys.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L98 AMCS 4023 Models of Social Science**

What distinguishes the social sciences from the natural sciences? What goals and assumptions do they share? Does studying "humans" with free will pose any problems for applying the methods of the natural sciences to the study of society? How do various social sciences — in particular anthropology, economics and political science — differ from one another? And where did the social sciences (both the disciplines and the conceptual issues) come from historically? These are the animating questions of this course. This class explores these questions in historical and contemporary perspective, as they relate to the rise of the social sciences as a set of academic disciplines. We set out the theoretical structure of the scientific method, paying particularly close attention to the relationships between theory and evidence, inference and hypotheses. Next we consider four problems and methods of the social sciences. These include questions of i) treating human beings as a rational actors; ii) attributing causal forces other than a person's own will to human behavior; iii) empirical observations and inference; and iv) the role of interpretation. In all four cases, we are interested in asking: Toward what solutions have these problems lead social scientists, and what other sets of difficulties do their solutions raise? We also pay particularly close attention to the role that concepts play in social analysis.

---

**L98 AMCS 4030 Political Theory of Education**

This course explores issues of authority, legitimacy, citizenship, freedom, and equality through contemporary readings in the political theory of education. What is to be done when parents, citizens, and educational experts make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? How should public schools aim to equip their students for the responsibilities of citizenship in a diverse liberal democratic state? What do the concepts of equality and equality of opportunity mean in the context of education, and (how) should governments pursue these values through education policy? We shall explore these issues through contemporary works of political theory as well as through considering a number of important U.S. court cases, including those dealing with the schooling of children from minority religious and cultural groups, affirmative action in university admissions, and school desegregation plans. Prerequisite: one previous course in political theory or political philosophy.

Credit 3 units. A&S: SS A&S IQ: SSC BU: ETH EN: S

---

**L98 AMCS 4036 Children of Immigrants: Identity and Acculturation**

This seminar examines two sub-groups: child immigrants and the native-born children of immigrants. It interrogates cultural/ethnic identity, cultural adaptation, bilingualism and biculturalism, and challenges and achievements of this young generation through ethnography, literature, and sociological accounts. We aim to scrutinize the studies of the "1.5" generation and the second generation, and theories such as "segmented assimilation," across a wide range of ethnic groups, from people of East Asian origins to those with Latin American ancestries, by mainly focusing on their experiences in the United States.

**L98 AMCS 4060 Sexual Health and the City: A Community-Based Learning Course**

In this community-based learning course, students partner with a St. Louis AIDS service organization (ASO) or sexual health agency to explore how the interrelationships among gender, class, race/ethnicity and sexual identity shape sexual health decisions, outcomes and access to services. Students also examine the complex relationship between men's and women's life goals and constraints, on the one hand, and the public health management of sexual health, on the other. In collaboration with their community partner and its clients, students develop a project that addresses an identified need of the organization and the community it serves. Course readings draw from the fields of anthropology, public health, feminist studies and policy making. Prerequisite: PHealth 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics or permission from the instructor, which is determined based on past student's experience in the fields of medical anthropology or sexual/reproductive health.

---

**L98 AMCS 407 Democracy and the Rhetorical Society**

The growth of democracy around the world has placed renewed focus on the practice of democracy and the conditions under which democracy can work effectively as a method of cooperation and decision-making. In this seminar we step back and reflect on what it means to communicate, interact and govern together in a democratic society. With special emphasis on the role of rhetoric in democratic practice, we study a variety of classic and contemporary texts to see what is at stake in making democracy work in the 20th century.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

---

**L98 AMCS 4090 The Modernist Revolution in the Arts**

What is/was Modernism? How did this worldwide phenomenon impact the arts in every genre and medium from the turn of the 20th century to the present? Do we still live in the age of Modernism, or should we consider ours a new, Postmodern age? This course examines these and other questions as they relate to the theater, prose, poetry and the visual arts. Our investigation focuses on most of the major literary and artistic movements, including Naturalism, Impressionism, Symbolism, Surrealism and Expressionism. We examine literary manifestoes that help to illuminate the periods under discussion, as well as look at individual works themselves. Central to our approach in the course is an interdisciplinary perspective. Among the luminaries whose work is considered are Ibsen, Strindberg, Chekhov, Hemingway, Dali, Picasso, Stravinsky, Artaud, Kafka and Beckett.

Same as L15 Drama 409

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM

---

**L98 AMCS 4101 Metropolitan Finance**

This course is an interdisciplinary examination of fiscal policies in metropolitan regions and the related public policies that can make them better or worse places for living and working. A particular focus is on the financial structures and arrangements — both public and private — that support or hinder quality of life in urban spaces. Core topics of study include the potential impact of decentralized governments on metropolitan economic development, determination of optimal arrangements for sharing fiscal responsibilities among levels of government,

evaluation of local revenue and expenditure decisions, and assessment of prospects and options for intergovernmental fiscal reform. The course is consistent in its approach to policy. Drawing on literature in sociology, education, public finance, community development, political economy and other related fields, the course readings and experiences explore how fiscal policies can and do affect urban dwellers and their well-being. This is a departure from many public finance courses. Such an approach leads to very different questions: How do liquor zoning regulations influence minority and nonminority children in schools? Should whites be paid to move into minority neighborhoods or vice versa? This approach to the study of metropolitan finance puts an emphasis on topics such as child care, public transportation, minimum wage, housing codes, street behavior, homelessness, incarceration, alcohol, sports stadiums, illicit drugs, tax abatements, water service, garbage collection, schools, higher education, sprawl and technological change, with consideration given to political, institutional and cultural factors. Students are required to attend hearings, meetings and other relevant functions associated with the development of public financial policy. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L98 AMCS 4120 Rainbow Radicalisms!: Ethnic Nationalism(s), the 1960s and the Politics of the New Left**  
The Black Panther Party remains one of the most iconic groups of the 1960s and 1970s. Perhaps one of the most understudied aspects of the Panther's legacy is their radical influence upon other American racial and ethnic groups, including Asian Americans, Mexican Americans, Puerto Ricans and American Indians, among others. This seminar considers the emergence of ethnic and racial nationalism among these various groups, as a result of their contact and relationship(s) with the Black Panther Party. Considering the politics of groups such as the Red Guard, the Brown Berets, the Young Lords and the American Indian Movement, this course charts the rise and fall of rainbow radicalism as a general offspring of the Black Power Movement and part and parcel of what is commonly referred to as "the New Left." It also considers these groups in relation to the State by probing the dynamic push and pull between repression and democracy. Ultimately, this course grants insight into the contemporary racial domain and current political landscape of America as we discuss how these groups helped to shape modern identity formations, discourses on multiculturalism and definitions of "minority," "diversity" and "equality."

---

**L98 AMCS 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics**  
In the year 2000, HIV became the world's leading infectious cause of adult death, and in the next 10 years, AIDS is expected to kill more people than all wars of the 20th century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not knowledge or resources, but global inequalities and the conceptual frameworks with which we understand health, human interaction and sexuality. This course emphasizes the ethnographic approach for cultural analysis of responses to HIV/AIDS. Students explore the relationship between local communities and wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power and

culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates, ethics and responsibilities, drug testing and marketing, the making of the AIDS industry and "risk" categories, prevention and education strategies, interaction between bio-medicine and alternative healing systems, and medical advances and hopes.

**L98 AMCS 4135 Tobacco: History, Culture, Science, and Policy**  
Tobacco is the most important public health and medical problem of our time, the leading cause of cancer and other chronic diseases. This course examines tobacco's important role in shaping the modern world and global health over the course of the last five centuries, from indigenous uses of tobacco to plantation slavery to the cigarette boom to the politics of health and smoking in the 21st century. Through in-depth historical and anthropological case studies, tobacco provides a window into trends in government and law, medicine and public health, business and economics, society and culture, including changing social meanings of gender, race, class, sexuality, advertising, consumerism, risk, responsibility and health in the United States and worldwide. This course also introduces students to public health approaches to noncommunicable disease prevention, environmental health, and healthy lifestyle promotion. No background in anthropology or public health is required.

**L98 AMCS 4203 Civic Scholars Program Semester Four: Civic Engagement across the Lifespan**  
This is the fourth-semester course for students in the Civic Scholars Program of the Gephardt Institute for Civic and

Community Engagement. This culminating course provides students with the opportunity to integrate the Civic Scholars experience, explore civic engagement opportunities post-college, and discuss ethics and civic engagement. Through group discussions, readings, lectures and guest speakers, students: 1) understand civic engagement over the life course; 2) discuss ethics and civic engagement; and 3) develop a one-, five-, 10-, and 20-year civic vision. This 1-credit course meets weekly for one hour during the spring semester. Students are expected to take an active role in their learning through sharing their experiences, engaging with reading material, and participating in reflection exercises. Prerequisites: L98 3202, L98 3203 and L98 4202. CET (<https://gephardtinstitute.wustl.edu/cec/college-of-arts-sciences>) course.

**L98 AMCS 4209 New Media Literacy and Popular Culture in Education**

At the closing of the 20th century, the "digital turn" began to shape how individuals learn, communicate and interact with one another. Current and emerging media technologies have continued to change how individuals (youth and adults alike) gather information; consume, produce and disseminate texts; and participate in both local and global communities through print- and screen-based platforms such as email, blog, podcast and mash-ups, among others. In this course, we explore what we mean by technology, the various types and uses of technology and the relationship of technology to literacy and education. We begin with characteristics of "new media" and consequences of the digital revolution. Then, we examine conceptualizations of literacy in a historical context — from literacy as reading and writing to literacy as multimodality, convergence and participation. Finally, we shift our inquiry to investigate how new media literacies and technologies are shaping (and are shaped by) different forms of popular culture in U.S. and international contexts, including parts of Asia, Australia, Europe, Africa, and North and South American. We make explicit the connections to education and explore possible directions for research and practice, including copyright and fair use issues present in educational settings. Readings, discussions and activities online and in actual communities culminate in individual- and class-based new media productions. Prerequisite: at least junior standing or permission of the instructor.

**L98 AMCS 4214 From Mammy to the Welfare Queen: African-American Women Theorize Identity**

How do representations of identity affect how we see ourselves and the world sees us? African-American women have been particularly concerned with this question, as the stories and pictures circulated about black female identity have had a profound impact on their understandings of themselves and political discourse. In this course we look at how black feminist theorists from a variety of intellectual traditions have explored the impact of theories of identity on our world. We look at their discussions of slavery, colonialism, sexuality, motherhood, citizenship, and what it means to be human.

**L98 AMCS 4224 The 1904 St. Louis World's Fair: German and Austrian Art Exhibited**

The St. Louis World's Fair of 1904 (The Louisiana Purchase Exposition) was one of the greatest events of its time. At the beginning we will deal with the historical development that lead to the purchase of the Louisiana Territory in 1803, will review the developments of World's Fairs since 1851 and will have a look at the grand dimension of the 1904 World's Fair (connected with the Olympic Games). Of central importance are the Art Exhibits from Germany and Austria with their cultural-political implications. The German Emperor had a hand in selecting the German paintings to be sent to St. Louis, and his opposition against modern movements like Impressionism caused opposition in Germany. Austria was different: In their Art Nouveau Pavillion they included secessionists (Hagenbund). The Wiener Werkstaetten (Vienna's Workshops) attracted a lot of attention. Different from the paintings, German Arts and Crafts represented avant-garde movements. We will visit libraries, archives, and museums in St. Louis that have World's Fair holdings. The seminar is for advanced undergraduate students but beginning graduate students can take it with permission of the instructor. Course conducted in English. May not be taken for German major or minor credit.

**L98 AMCS 4225 European Utopian Settlements in the American Midwest (1814-1864): Diversity and Antislavery**

During the first part of the 19th century, a number of utopian visionaries from Europe (Germany, France and England) tried to establish communities in the American Midwest. These colonies were based either on religious or philosophical/social ideals which could be traced back to interpretations of the Old and the New Testament or to Enlightenment principles of freedom and equality that had been propagated during the revolutions in Europe of 1789, 1830 and 1848 which in turn had been influenced by the American war of independence. These groups showed strong antislavery convictions. The Midwest was chosen since the areas in the vicinity of the confluence of the Mississippi and the Missouri were seen as open to new social experiments. Part of the seminar are field trips to the St. Louis-based Missouri History Library as well as to the St. Louis Public Library and one-day excursions to New Harmony in Indiana, Nauvoo in Illinois, and to small towns in Warren County, Missouri.

**L98 AMCS 422A Film Stardom, Performance, and Fan Culture**

This course focuses on the Hollywood star system. We will explore stars in relation to celebrity and consumerism, especially how "stardom" is created by a system that seeks to create effects in film viewers whether conceived as audiences, fans or spectators. We will examine the performance element of stardom and its relationship to genre, style, and changing film technology. Also of concern will be how stars and the discursive construction of stardom intersect with gender representation, race, ideology, sexuality, age, disability, nationality, and other points of theoretical interest to and historical inquiry in contemporary film studies. While emphasis will be placed on mainstream commercial U.S. cinema, students are encouraged to pursue questions beyond this framework within their own research. Required screenings.

**L98 AMCS 4241 Topics in American Literature II**

This course offers an advanced introduction to both the literature and the concept of Modernism, the "ism" used to mark the experimental verve of early 20th-century writing and to grasp its ties to modernity, or the modern social world. As the course title suggests, we devote most of our time to the career of modernism in the United States, a place imagined as both the modernist nation par excellence and the desert modernism escaped to be born. Three groups of primary texts — early modernist experiments, 1920s modernist landmarks and Great Depression revisions — illuminate the grand ambitions of eccentric literary forms and sequestered avant-garde movements; the public disputes and buried alliances between "high" expatriate and Harlem Renaissance modernisms; and the influential Depression-era reinterpretation of modernism as reactionary self-indulgence. The syllabus features fiction, poetry and drama by old and new literary celebrities: Djuna Barnes, John Dos Passos, T.S. Eliot, F. Scott Fitzgerald, Mike Gold, Ernest Hemingway, Nella Larsen, Meridel LeSueur, Claude McKay, Clifford Odets, Tillie Olsen, Ezra Pound, Jean Toomer and Richard Wright. A shorter list of critical essays highlight Modernism's tendency to theorize itself while introducing 21st-century perspectives from the "New Modernist Studies." Satisfies the American requirement. For undergraduates, junior or senior standing is required.

**L98 AMCS 4243 The Plundered Past: Archaeology's Challenges in the Modern World**

The public imagination thrills at the fantastic adventures of Indiana Jones and Laura Croft, Tomb Raider; but the reality of modern archaeology is more complex, ethically challenging and interesting than a simple treasure hunt. In the U.S. and Canada, our science museums and museums of anthropology still display artifacts that are regarded as sacred and culturally definitive by Indian nations, although such holdings are now subject to negotiation and repatriation. Art museums in Europe and the U.S. are still stocked with looted ancient masterpieces that are revered as vital heritage by the nations from which they were stolen. We display looted art alongside a much smaller number of legitimately excavated artifacts of masterpiece quality, so it is no surprise that our popular images of archaeologists as avid and undiscerning collectors raise little concern. But modern archaeologists are not extractors of art or even of scientific information, from places as passive and inert as the museums' objects ultimately occupy. Archaeologists work with living people inhabiting societies and states that care deeply about their pasts and the relics of it. They are active agents engaged with many other people in the production of knowledge about the past. In our rapidly shrinking world, educated sensitivity to the many ancient cultural legacies that shape the values of modern global society is more than a moral imperative; it is a basic form of collaboration in the common project of survival. Archaeologists

are ethically charged to advance that project through education about the complex contemporary arena of artifacts, sites, and information they occupy.

**L98 AMCS 424A Broadcasting Equality: Radio, Television and Social Change in Postwar America**

The period between World War II and the 1970s was one of profound cultural, political, and demographic shifts that brought the problems of ethno-religious and racial prejudice to the forefront of U.S. national consciousness. Religious leaders, secular social activists, media industry professionals, and African-American civil rights leaders often worked together to combat intolerance, bigotry and inequality. What did these activists achieve in their attempts to deploy U.S. broadcast media in what they sometimes referred to as "propaganda against prejudice"? How did this activism relate to the institutions of broadcast media, including governmental agencies, national networks and local broadcasters? What was television and radio's impact on the Civil Rights Movement of the 1950s and 1960s? In addressing these questions, we will consider a wide range of media: public service programming as well as commercially produced series, specials, network news and documentaries produced between the 1940s and the 1970s. Programs considered will include *New World A-Coming*, *Amos 'n' Andy*, *American Bandstand*, *NBC White Papers: Sit In*, *Sanford and Son*, *Eyes on the Prize*, and *Soul Train*, among many others. Required screenings.

**L98 AMCS 425A Law, Religion, and Politics**

What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.

**L98 AMCS 4280 History of Urban Schooling in the United States**

This reading colloquium examines the history of urban schooling and school policy in the United States. Readings focus on the growing literature in the history of urban schooling and on primary source material. We explore urban schooling in general

and we examine particular primary source material as well as particular cities and their school districts. Such districts may include New York, Boston, Chicago, Detroit, St. Louis, Los Angeles, San Francisco, Atlanta and others. The course has two goals: to develop a strong contextual understanding of the conditions of urban schooling, the history of urban school reform, and the debates over the purposes of urban schools; and to examine the ways historians have explored urban schooling in the U.S. Students should expect to read a book a week as well as primary source materials and occasional articles.

#### L98 AMCS 4288 Higher Education in American Culture

Colleges and universities in the United States have been the sites of both cultural conservation and political and cultural subversion from their founding in the 17th and 18th centuries. They have been integral to national and regional cultural and economic development. In addition, they have functioned as one component of an increasingly diversified and complex system of education. This course, a reading colloquium, surveys higher education in American history, including the ideas that have contributed to shaping that history, beginning with its origins in European institutional models. We use primary and secondary readings to examine critically its conflict-ridden institutional transformation from exclusively serving the elite to increasingly serving the masses. We explore the cultural sources of ideas as well as the growth and diversification of institutions, generations of students and faculty as they changed over time, and curricular evolutions and revolutions in relation to the larger social and cultural contexts of institutional expansion.

#### L98 AMCS 4289 Neighborhoods, Schools and Social Inequality

A major purpose of the course is to study the research and policy literature related to neighborhoods, schools and the corresponding opportunity structure in urban America. The course is informed by theoretical models drawn from economics, political science, sociology, anthropology, education and law. A major focus is to gain greater understanding of the experiences and opportunity structure(s) of urban dwellers, in general, and urban youth, in particular. While major emphasis is placed on data derived from the interface of urban environments and the corresponding institutions within them, the generational experiences of various ethnic groups complement the course foci.

#### L98 AMCS 428A The "Crossover" Tradition in Anglo-American Music Theater

The musical stage in the United States and Britain has remained a vital artistic and commercial arena over the past 100 years despite the emergence of mass media formats such as film and television. Audiences continue to clamor for stage stories where actors sing or singers act, and composers, writers, producers and directors have created a stunning variety of musical theater styles to meet the demand. This course surveys important English-language operas, operettas and singer-centered musicals from the turn of the 20th century to the start of the 21st with an emphasis on "crossover" works that blur the lines between opera and the commercial musical stage. All the works

included in the course continue to be performed today, forming a core repertory of music theater works in English that emphasize singers and singing. The overlapping, ever-changing spheres of the opera house and Broadway and West End theaters provide the geography of the course, which is peopled by performers, creators and audiences. In-class analysis of 14 works focuses on how the singing voice has been used as an expressive vehicle and how theater singers have adapted to an age of amplification and recording. Works studied include *Carousel*, *Sweeney Todd*, *The Phantom of the Opera*, *Show Boat*, *Candide*, *Street Scene*, *The Pirates of Penzance*, *The Light in the Piazza*, *My Fair Lady*, *Albert Herring*, *Porgy and Bess*, *The Most Happy Fella*, *Margaret Garner* and *The Student Prince*. In-class singing is encouraged as a means to get inside the musical and dramatic values of these works. Prerequisites: ability to read music, and graduate or upper-division standing.

**L98 AMCS 436A Black Sexual Politics**

Borrowing from Patricia Hill Collins' perspective in *Black Sexual Politics*, this seminar examines the historic and popular understandings of black sexuality and how they maintain color line, as well as threaten to spread what Hill Collins refers to as a "new brand of racism." Particularly, this course engages questions about sexuality that have only begun to be discussed with African-American Studies and the larger public sphere. Taking the intersections of identities very seriously, this course interrogates the ways in which these constructions have affected black women, while also being attentive to how "others" are implicated within discourses of black sexuality. Similarly, we will also engage the various distortions of black men — depictions of the black and masculine as almost always violent, sexually and socially irresponsible, brutish, questionable and unfaithful. Together we will use various critical texts and media to better understand the impact and the importance of visual and material images in the interplay of race, sex and politics in contemporary America.

---

**L98 AMCS 4370 Music and Performance**

In his 1998 book, *Musicking*, Christopher Small asserts that music is not a thing but an activity — something that people do. Starting from this premise, this course explores musical performance as a live event, one in which additional aspects of performance — dramatic enactments, costume, choreography, and stage design — also come into play. While recorded music plays an important role in our investigations, we focus on musical events that take place before and with live audiences. Exploring the choices of performers and the expectations of audience members in settings from gospel churches to Radio City Music Hall, this course moves through a wide variety of musical genres, including cabaret, blues, opera, protest song, musical theater, and rock. We examine artists whose work blurs the line between "music" and "theater," including George Clinton, Taylor Mac, and Gertrude Stein, as well as everyday people, such as the singers of the Civil Rights Movement, who used the power of live musical performance to change the course of human history. We also attend performances around St. Louis, guided by the interests of the class. Students with an interest in music, theater, dance, cultural history, American studies, and African-American studies are especially welcome.

**L98 AMCS 4392 Capitalism and Culture: New Perspectives in Economic Anthropology**

Capitalism is perhaps the most important historical and social phenomenon in the modern world. In tribal settings and major cities alike its complex impacts are evident. Through rich case studies of how capitalism touches down in diverse cultures, this course provides an introduction to anthropological perspectives on the economy and economic development. Themes covered include the history of capitalism and globalization, the cultural meanings of class and taste, the relationship between capitalism and popular culture, major artistic responses to capitalism, social movements such as environmentalism, and the field of international development. No background in anthropology or economics is required.

---

**L98 AMCS 441 In the Field: Ethnographic and Qualitative Methods**

This course provides an introduction to ethnographic and qualitative research. Ethnography is the study of culture and social organization primarily through participant observation and interviewing. Ethnographic research provides descriptive and interpretative analyses of the routine practices of everyday life. Ethnographic accounts represent different ways people live and make sense of their experiences and describe the types of social organization (for example, gender relations, class systems, racial divisions or cultural contexts) that, in part, serve to structure or pattern social behavior. Students conduct a small-scale qualitative research project, and in the process they gain skills in various qualitative research methods. This course is suitable for both undergraduate and graduate students. One purpose of the course is to help students plan for subsequent thesis research, independent study projects, or dissertation research.  
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L98 AMCS 442 Oil Wars: America and the Cultural Politics of Global Energy**

This seminar explores the historical, cultural and political relationship between America and global energy, focusing specifically on oil and natural gas. Our central objective is to examine how oil and natural gas shape our own lives and entangle us in the cultural, political and economic lives of the rest of the world. We ask what anthropological and social science approaches might contribute to our understanding of a situation that has become, in most popular terms, a national "crisis" of global dimensions.

**L98 AMCS 4510 American Television Genres**

Questions of genre are central to any exploration of television's texts, whether they are being analyzed as craft, commerce, or cultural phenomenon. Genre has been used by critics and historians to ascribe "social functions" to groups of programs and to diagnose cultural preoccupations, while genre has been used industrially to manage expectations among audiences, advertisers, programmers, producers, and creative professionals. Investigating genres ranging from the soap opera to the western, workplace situation comedies to sports, and game shows to cop shows, this course explores the role of genre in the production, distribution and reception of

American television. Students gain a critical understanding of genre theory and key arguments about the form and function of television texts and develop a set of tools for analysis of televisual narrative and style, the social uses and meanings of genre, the institutional practices and presumptions of the American television industry, and the persistence of textual forms and audience formations in the face of structural changes such as deregulation, media convergence, and globalization. Required screenings.

**L98 AMCS 4523 Teaching Adults in Community Settings**

Communities possess a vast and varied choice of learning opportunities for the citizens, whose participation as volunteers, communicators, facilitators, mentors, leaders and instructors can enhance their own lives as well as the life of the community. This course helps students acquire the knowledge, skill sets, habits of mind, and learning strategies necessary for understanding the adult learner and the effective design of learning for personal and professional growth by adults in a variety of community settings. We inventory the class members' interests in specific community contexts so that we can work with those settings in mind throughout the semester. Discussion of learners' needs and peer practice of appropriate, effective instructional and learning strategies provide experience, new perspectives and opportunities for reflection. Course work serves as preparation for the final project, which is to create an instructional plan for adult learners that addresses a specific community learning need or situation.

**L98 AMCS 4540 American Film Melodrama and the Gothic**

American film melodrama has been considered both the genre of suffering protagonists, incredible coincidences, and weeping spectators as well as a mode of action, suspense, and in-the-nick-of-time rescues. In this course, we examine American film

melodrama as a dialectic of sentiment and sensation which draws heavily on Gothic tropes of terror, live burial, and haunted internal states. We trace the origins of film melodrama and the cinematic Gothic to their literary antecedents, the horrors of the French Revolution, and classical and sensational stage melodramas of the 19th century. In addition to the 1940s Gothic woman's film cycle, we excavate the Gothic in the maternal melodrama, the suspense thriller, film noir, domestic melodrama, the slasher film, and the supernatural horror film. Required screenings.

---

**L98 AMCS 4551 Seminar in Political Economy**

This research seminar will introduce the student to recent work on the political economy of democracy. We shall start with a historical account of the development of democratic institutions in Britain and the United States, and then continue with recent work on modeling elections. We shall compare elections in countries that make use of proportional electoral systems, such as Israel, with those like the United States and Britain that are highly majoritarian. Finally, we shall discuss the forces of democratization and globalization. The required work for the seminar is a research paper approximately 20 pages (double-spaced) in length.

---

**L98 AMCS 456 Topics in American Politics: Supreme Court**

This seminar has two purposes: to introduce students to the state of the art in studies of the Supreme Court and to cover a series of particular topics with emphasis on the major controversies within the field of law and the courts.  
Same as L32 Pol Sci 451  
Credit 3 units. A&S: SS

---

**L98 AMCS 457 American Film Genres**

By close examination of three or four specific types of film narratives, this course will explore how genre has functioned in the Hollywood mode of production. Students will gain an understanding of genre both as a critical construct as well as a form created by practical economic concerns, a means of creating extratextual communication between film artist/producers and audience/consumers. Genres for study will be chosen from the western, the gangster film, the horror movie, the musical, screwball comedy, science fiction, the family melodrama, the woman's film, and others. In addition to film showings, there will be readings in genre theory as well as genre analyses of individual films. Required screenings Tuesdays at 4 p.m.

**L98 AMCS 4608 The Education of Black Children and Youth in the United States**

This course provides an overview of the education of Black children and youth in the United States. Covering both pre- and post-Brown eras, this course applies a deep reading to the classic works of DuBois and Anderson as well as the more recent works of Kozol, Delpit, and Foster. The social, political, and historical contexts of education, as essential aspects of American and African-American culture and life, are placed in the foreground of course inquiries.

---

**L98 AMCS 461B The Construction and Experience of Black Adolescence**

This course examines the construct of black adolescence from the general perspectives of anthropology, sociology and psychology. It begins by studying the construct of black adolescence as an "invention" of the social and behavioral sciences. The course then draws upon narrative data, autobiography, literature and multimedia sources authored by black youth to recast black adolescence as a complex social, psychological, cultural and political phenomenon. This course focuses on the meaning-making experiences of urban-dwelling black adolescents and highlights these relations within the contexts of class, gender, sexuality and education.

**L98 AMCS 4621 The Political Economy of Urban Education**

Defining a political economy of urban education involves the examination of power and wealth and the manner in which they operate in urban settings. It requires analysis of the larger urban social and economic context and consideration of historical forces that have brought the schools to their present state. In this course, we consider various political and economic factors that have influenced and shaped urban education in the United States, drawing upon the extant literature on urban education and related social science disciplines to characterize and discuss them. A particular focus of this course will be on the dynamic interrelationships among the political economy, urban education, and social stratification.

---

**L98 AMCS 470 American Intellectual History Since 1865**

This course concentrates on social, cultural, philosophical and political thought since the end of the Civil War, and investigates how American thinkers have responded to the challenge of modernity. After an examination of the end of the old religious order and the revolt against Victorianism, it analyzes the subsequent rise of pragmatism, progressivism, literary modernism, radical liberalism, political realism, protest movements and the New Left, neo-conservatism and the New Right, and the current state of intellectuals in post-911 America.

---

**L98 AMCS 472 American Art and Culture, 1945-1960**

The rise and "triumph" of Abstract Expressionism has long dominated the story of American art following World War II. This seminar puts Abstract Expressionism into context with parallel developments in the arts, photography and film. Among the topics we consider: the conversation between émigré artists and American culture during and after the war; the emergence of a "noir" aesthetic in film and literature; the early work of Jasper Johns and Robert Rauschenberg and the so-called "aesthetic of indifference" in relation to Abstract Expressionism; artistic collaborations at Black Mountain College; New York school photography and photojournalism; and the cultural impact of the A-bomb. Prerequisites: a 300-level course on 20th-century art, photography or history, or permission of the instructor.

---

**L98 AMCS 474 Americans and Their Presidents**

How have Americans understood what it means to be President of the United States? This seminar uses that question as a point of departure for a multidisciplinary cultural approach to the presidency in the United States, examining the shifting roles of the chief executive from George Washington through Barack Obama. In addition to a consideration of the president's political

and policy-making roles, this course examines how the lived experiences of presidents have informed the ways Americans have conceived of public and private life within a broader political culture. In the process, this course uses the presidency as a means to explore topics ranging from electioneering to gender, foreign policy to popular media. Readings are drawn from a broad range of fields.

---

**L98 AMCS 4744 TransAmerica: The US and Mexico between the Wars**

Many areas of 20th century U.S. culture between World Wars I and II were inspired by post-revolutionary Mexico. The Mexican Revolution (1910-1917) profoundly reoriented modern Mexico, introducing new cultural and aesthetic forms and historical themes over subsequent decades. Mexican artists contributed to a new national consciousness drawing on indigenous Mexico and on the new politics of workers and peasants, given monumental expression in mural painting. The bidirectional exchange between U.S. and Mexican artists was of great importance for the cultural revitalization of the New Deal and after in the U.S. Among artists, writers, anthropologists and tourists, the vogue for things Mexican was fed by many sources, including increasing travel, diplomatic exchange, and a yearning for alternatives to U.S. modernity. The seminar supports travel to Mexico City, funded by the art history and archaeology department. Must be a graduate student, or an undergraduate major or minor in art history and archaeology. Recommended courses: one 300- or 400-level course in 20th-century U.S. art or history; or one relevant course in Latin American Studies program.

---

**L98 AMCS 476 The City in American Arts and Popular Culture**

Using visual media — painting; prints and illustration; film and animation — along with studies of vaudeville and other forms of popular and mass entertainment, this seminar analyzes the presence of the city as a theme that registers a range of cultural attitudes toward the modern. Through close readings of visual and verbal texts, we consider such issues as the relationship between work and leisure, and between high culture and popular arts. We look at critiques and celebrations as well as at how the popular arts help the ordinary man and woman to negotiate the challenges of the new mechanized and overscaled urban environment. Prerequisites: 300-level course in American 20th-century cultural history, American art, literature, or permission of instructor.

Same as L01 Art-Arch 475

---

**L98 AMCS 485A Advanced Seminar: Prisons, Politics and Activism**

Prison reformers argue that de-criminalizing nonviolent offenses will be enough to reduce mass incarceration, while prison abolitionists argue that we need to dismantle the entire carceral state in the U.S., which is maintained by a racially stratified system of public schooling, housing, employment and health care. What is at stake in these debates? Are we seeking to promote basic humanity, racial and gender equality or utopian visions of rehabilitation? This course seeks to historically contextualize prison reform and abolitionism from the 13th Amendment's re-articulation of slavery to current resistance to mass incarceration. Special attention will be paid to the intersections between the prisoner's rights movement and the Black & Brown Power, feminist, queer and disability movements. Same as L22 History 4851

Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM

---

**L98 AMCS 487 Topics in American History**

This course explores the racial construction of the use of legal and illegal substances in American history from the mid-19th century to the present. We will spend time engaging in a historical analysis of the social, economic, and racial dynamics that defined drug addiction in popular imagination, and examine how these factors contributed to discussions about legality, access to substances, one's ability to be rehabilitated, and criminal status. Regarding criminality we will particularly explore sociological and theoretical perspectives of labeling, habitual and occasional offenders, and moral panic in order to understand how racial minority groups were targeted for different rhetorical, legislative, and economic purposes. One major goal of the course will be to outline the early 20th century beginnings of

the war on drugs and connect it to the century long growth of a militarized police system and prison industrial complex. We will secondly work to understand the role of local and national political actors, law enforcement, and the media in manufacturing and maintaining connections between race, crime and drugs. Ultimately, we will use our study of drugs to contextualize 21st-century issues of police violence, increases in homicide in minority communities, mass incarceration, poverty, segregation, and mass movements of protest.

---

**L98 AMCS 4878 Cold War Cultures, U.S. and Europe, ca. 1945-1955**

This seminar examines the art worlds that emerged in France and Germany after the end of World War II, and the ensuing dialogue with the United States, newly established as the most influential center for art and culture. We consider the social and political conditions of the postwar years, along with the aesthetic, cultural, and philosophical reactions to the devastating consequences brought about by World War II. We pay particular attention to the intellectual and ideological debates that would — by 1949 — give rise to the extreme polarities between East and West, democracy and communism — in short, the confrontations that distinguish the Cold War. Artists such as Jackson Pollock and Willem de Kooning in the United States, Hans Hartung and K.O. Götz in Germany, and Jean Fautrier and Alberto Giacometti in France will be examined, as well as the broader artistic movements that are known under such labels as Abstract Expressionism, Informel, Tachisme, or Un art autre. Prerequisites: L01 Art-Arch 112 Intro to Western Art, L01 Art-Arch 211 Intro to Modern Art, or L01 Art-Arch 215 Intro to Modern Art, Architecture and Design; one 300-level course in Art History preferred; or permission of instructor.

**L98 AMCS 4982 Public Art: History, Practice, Theory**

The course will consider the history and functions of public art, with special attention to public art in St. Louis. We survey not only the obvious forms of public art in urban sculpture and mural painting, but also less traditional intersections of art and public in such sites as the internet. We will also examine the operations of institutions — national and local arts agencies, international exhibitions, nonprofit centers and the like — that foster a public engagement with contemporary art. Finally, we will consider new priorities and projects in public art, especially socially oriented and environmentally sustainable initiatives. Prerequisites: L01 Art-Arch 112 Introduction to Western Art or L01 Art-Arch 211 Introduction to Modern Art; one 300-level course in art history preferred, or permission of instructor.

---

**L98 AMCS 4984 The Problem of New World Freedom: The Age of Democratic Revolution in the United States and the Americas**

Ever since the improbable alliance of the English pirate and slave trader Sir Francis Drake and the fugitive slave Cimarrons on the Atlantic coast of Panama many centuries ago, the history of freedom in the New World has unfolded in unlikely fits and starts. The course will explore two related conjectures: first, that maroon politics (the often short-lived alliances between slaves, quasi-free blacks and white allies), slave rebellion, provincial secession and civil war were the widespread and normative conditions of post-colonial regimes throughout the New World; and second, that the problem of freedom was especially challenging in a New World environment in which freedom was fleeting and tended to decompose. Special attention will be given to antislavery insurgencies, interracial politics and alliances in the United States and the perspectives on freedom they produced, but the readings will also include materials on debates over freedom in the Caribbean and South America over the course of the long age of democratic revolution, 1760-1888.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

---

**L98 AMCS 4992 The Business of Us All: In/equality in Theory and Practice**

This course uses a transdisciplinary approach to discuss in/equality and its interrelated topics of inequality, inequity and social justice. While the focus is on the U.S. predominantly, lessons learned from our global partners are important components of our discussions. The course will emphasize the implications of our findings for other ethnic/racial minorities around the world. Equality speaks to issues of priority, fairness and impartiality. On the other hand, inequality is defined as marked difference among individuals or groups of individuals in the distribution of social goods. Inequity, which considers bias, discrimination and injustice in distributive systems, pushes the discussion further. As the various forms of social, political and economic inequalities are mutually reinforced, we examine economic inequality, residential segregation and housing quality; dis/investment in neighborhoods and communities; resource allocation to low income, city and predominantly ethnic minority schools; academic underachievement of minority youth; access to and provision of appropriate health care; curtailment of social welfare programs; the presentation of stereotypical images of persons of color in the media and school curricula; morbidity, mortality, and longevity rates for persons of color; environmental hazards; the surge in incarceration related to substance abuse and escalating criminal prosecution, as well as discriminatory behavior of police and judges. All of the foregoing is made worse by race and gender status variables. Such factors cannot be considered inconsequential to social im/mobility and equality in the larger society. The collateral damage borne by the intergenerational transfer of social im/mobility and in/equality to future generations are integral to course discussions.

### L98 AMCS 49PK The Founding Fathers' Government in an Electronic Age

This is a research seminar that examines how Americans sought to translate their notions of government into a realistic set of priorities and a functioning set of public institutions. Extending from 1789 through the 1820s, this course investigates how the federal government came into being, what it did, and who populated the civilian and military rank of American officialdom. This is also a course in digital history. Students create new knowledge through their own contributions to an ongoing digital project that seeks to reconstitute the early federal workforce. In the process, students learn a variety of digital techniques, ranging from encoding languages to electronic systems to software packages.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

### L98 AMCS 49SA Advanced Seminar: Slavery in America: The Politics of Knowledge Production

This course focuses on the long history of black chattel slavery in America, from origins to emancipation. The course foregrounds the struggles over power, life and death, that were at the heart of slavery's traumatic and grotesquely violent 250-year career in North America, with attention to hemispheric context. At the same time, it highlights the fiercely contested historical battleground where scholars have argued about how to define American slavery — as a system or site of labor, reproduction, law, property and dispossession, racial and gender domination, sexual abuse and usurpation, psychological terror and interdependency, containment and marooning, selfhood and nationality, agency, revolutionary liberation and millennial redemption.

### L98 AMCS 479 On Location: Exploring America

Every summer, AMCS travels to a new location to explore fundamental questions of national identity and meaning through the study of the interdependent relationship between culture and place. By visiting landmarks, historic sites, museums, memorials, etc. — sites best understood through direct engagement with consideration of their rich material, historical, political, and social meanings — students become in-the-field observers and learn from local experts and faculty. Past On Location destinations have included: California, Hawaii, New York City, Washington D.C., the "Industrial Southwest," and American Indian landmarks. For more information and a description of past travel sites, please visit our website (<http://amcs.wustl.edu/academics/onlocation.php?sec=about>).

## Anthropology

Anthropology offers the opportunity to study human existence in the present and the past and to explore how and why humans vary in their behaviors, cultures and biology. Students choose to study anthropology because they want to understand some of the most intriguing and troubling issues faced by modern society: the origin and meaning of ethnic and gender differences; the role of institutions in social, political and economic life; learned vs. innate behavior; the similarities and differences among human societies; and the meaning of religion, community and family.

The Department of Anthropology offers courses in the four subfields of anthropology: archaeology, biological anthropology, sociocultural anthropology and linguistics.

The faculty in the anthropology department are active in research around the world and bring a diversity of experiences to their teaching.

- Faculty research expertise in archaeology includes the origins of food production; the cultures of prehistoric North, Central and South America; African and Central Asian prehistory; environmental archaeology; geographic information systems (GIS).
- Biological anthropology faculty focus on the evolution of humans and on the ecology, behavior and evolution of nonhuman primates.
- Sociocultural faculty conduct research on a wide range of topics, including states, societies and beliefs; political ecology, demography, fertility and population; sociolinguistics; medical anthropology and public health; bodies, gender and sexuality; science and technology, mind and cognition; and religion and politics.

## Majors

### The Major in Anthropology

- Students should register under the L48 code for any courses that will count toward the major or minor.

- Courses taken pass/fail and courses in which a student earned less than a C- do not fulfill the major or minor requirements.
- Anthropology courses taken in University College (U69) can be counted toward the major or minor. Required courses and courses listed as electives for the Global Health and Environment (GHE) track that are offered in University College can be counted toward the GHE track major or minor. Online courses through University College do not count toward the major or minor.

**Total units required:** 34 units

- Required courses:** 10 units

| Code        | Title   | Units |
|-------------|---|-------|
| Anthro 150A | Introduction to Human Evolution                 | 3     |
| Anthro 160B | Introduction to Cultural Anthropology           | 3     |
| Anthro 190B | Introduction to Archaeology                     | 3     |
| Anthro 397  | Proseminar: Issues and Research in Anthropology | 1     |
| Total Units |   | 10    |

- Elective courses:** 24 advanced units (300-level or higher) of which 9 units must be at the 400 level.

### Optional Anthropology Major Track: Global Health and Environment

Anthropology majors may choose an optional track within the major called Global Health and Environment if the students' interests lie primarily within this area of anthropology. The Global Health and Environment major track provides strong training for professional and graduate study. Students enrolled in the Global Health and Environment track must complete the anthropology major required courses and the Global Health and Environment required and elective courses as outlined below.

**Total units required:** 34 units

- Required courses:** 16 units

**Departmental requirements:** 10 units

| Code        | Title   | Units |
|-------------|---|-------|
| Anthro 150A | Introduction to Human Evolution                 | 3     |
| Anthro 160B | Introduction to Cultural Anthropology           | 3     |
| Anthro 190B | Introduction to Archaeology                     | 3     |
| Anthro 397  | Proseminar: Issues and Research in Anthropology | 1     |
| Total Units |   | 10    |

**Global Health and Environment Track requirements:** 6 units

| Code        | Title                         | Units |
|-------------|-------------------------------|-------|
| Anthro 3283 | Introduction to Global Health | 3     |

Anthro 361 Culture and Environment 3

- **Elective courses:** 18 advanced units (300-level or higher) of which 9 units must be at the 400 level — taken from the approved list of GHE electives (available on our website (<http://anthropology.artsci.wustl.edu/global-health-and-environment-track>)).

Students may petition to have up to 6 study abroad credits count toward the electives in the GHE major track. Students should contact Alyse Kuhlman ([kjacobsen@wustl.edu](mailto:kjacobsen@wustl.edu)), study abroad coordinator for the anthropology department, to discuss the requirements for study abroad credit.

Students also must petition to count a thesis course (either Anthro 4951 or Anthro 4961), independent study course (either Anthro 490 or Anthro 491), or internship (Anthro 300) toward the major. Please contact Kirsten Jacobsen ([kjacobsen@wustl.edu](mailto:kjacobsen@wustl.edu)) for a petition form.

### Additional Information

**Internships:** Anthropology majors can gain pre-professional experience by taking part in supervised internships in businesses, cultural institutions and community agencies. Students must have department approval for an internship and must work with an anthropology faculty sponsor during the fall or spring semesters.

**Research:** Many anthropology courses include research components and final projects. Majors also can take part in research and gain credit through approved independent study with faculty who have ongoing research projects. Research opportunities in anthropology labs include projects in archaeology, paleoethnobotany, geoarchaeology, zooarchaeology, genetic studies, GIS, human osteology, human ecology and primate studies.

**Senior Honors:** Students who wish to conduct a research project for Latin Honors and who have the minimum GPA of 3.65 and the approval of a faculty adviser may be enrolled in the honors program. Latin Honors involves both demonstration of acquired knowledge (based in part on GPA) and a report on an original research project. Two courses, Anthro 4951 and Anthro 4961, are available to allow students to receive credit for the extra research involved in the honors thesis. Students may count one of these courses toward their 400-level course requirement for the major.

**Study Abroad:** The department recognizes and accepts courses from a number of semester or year abroad programs. Specific information on study abroad (<http://anthropology.artsci.wustl.edu/undergraduate/major/global-education>) policies is available on the anthropology department website or by consultation with the study abroad coordinator.

**Transfer Credit:** Students who wish to transfer credits from other institutions, including those abroad, must have approval from the curriculum coordinator.

## Minors

### The Minor in Anthropology

- Students should register under the L48 code for any courses that will count toward the major or minor.
- Courses taken pass/fail and courses in which a student earned less than a C- do not fulfill the major or minor requirements.
- Anthropology courses taken in University College (U69) can be counted toward the major or minor. Required courses and courses listed as electives for the Global Health and Environment (GHE) track that are offered in University College can be counted toward the GHE track major or minor. Online courses through University College do not count toward the major or minor.

**Total units required:** 18 units

- **Required courses:** 6 units

Minimally, two of the following three courses; recommended that all three be taken:

| Code        | Title                                 | Units |
|-------------|---------------------------------------|-------|
| Anthro 150A | Introduction to Human Evolution       | 3     |
| Anthro 160B | Introduction to Cultural Anthropology | 3     |
| Anthro 190B | Introduction to Archaeology           | 3     |

- **Elective courses:** 12 additional units, at least 9 of which must be at the 300 level or higher.

### Optional Anthropology Minor Track: Global Health and Environment

Anthropology minors may choose an optional track called Global Health and Environment if the student's interests lie primarily within this area of anthropology. The Global Health and Environment minor track provides a solid foundation for those who might be interested in professional and graduate study but who do not choose to major in anthropology. Students enrolled in the Global Health and Environment minor track must complete the anthropology minor requirements listed below as well as elective courses as outlined.

**Total units required:** 18 units

- **Required courses:** 9 units

**Departmental requirement:** 3 units

Any 100-level introductory anthropology course from the following list:

| Code        | Title                                 | Units |
|-------------|---------------------------------------|-------|
| Anthro 150A | Introduction to Human Evolution       | 3     |
| Anthro 160B | Introduction to Cultural Anthropology | 3     |
| Anthro 190B | Introduction to Archaeology           | 3     |

**Global Health and Environment Track requirement:** 6 units

| Code        | Title                         | Units |
|-------------|-------------------------------|-------|
| Anthro 3283 | Introduction to Global Health | 3     |
| Anthro 361  | Culture and Environment       | 3     |

- **Elective courses:** 9 units taken from the approved list of GHE electives (available on our website (<http://anthropology.artsci.wustl.edu/minor-requirements-ghe-track>)).

## Courses

Visit online course listings to view semester offerings for L48 Anthro (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L48&crslvl=1.4>).

### L48 Anthro 130 Freshman Seminar: The Ritual Landscape of Cahokia: Perspectives on the Politics of Religion and Chiefly Power

The purpose of this class is to engage and challenge freshman students in an open discussion about the prehistoric Mississippian community of Cahokia. The focus of this course is two-fold. The first is to study the way in which the archaeological evidence has been interpreted. The second is to examine other perspectives on Cahokia, especially from the Native American descendants who consecrated this landscape nearly a millennium ago. An underlying tenet of this seminar in understanding Cahokia also can be achieved through the traditions and literature of Native Americans. In the end we want to understand the basis for Cahokia's organization as a prehistoric Native American community, and the role that ritual and religion played in the rather dramatic and dynamic history of this community and the surrounding region.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: HUM

### L48 Anthro 132 Freshman Seminar: Past Tense, Future Imperfect: The Rise and Fall of Societies and Global Civilization

The past history of humanity is littered with the stories of societies whose peoples experienced prosperity and fluorescence followed by decline and catastrophe. In the present, an age of information and rapid change, public intellectuals offer broad and detailed visions of what took place in the past, what is happening now, and what the trends suggest for the future. This course looks at the efforts of two prominent public intellectuals, economist Lester Brown and geographer Jared Diamond. In this course we look at Brown's work in its latest incarnation, Plan B 4.0. We discuss this in light of current events. We then look at Jared Diamond's book *Collapse, How Societies Choose to Fail or Succeed* and critical response to that book by experts. The professor includes a personal perspective as an archaeologist working with the ancient Maya civilization. The Maya are famous for the ninth-century AD collapse of their Classic civilization. The readings provide the basis for discussion of the challenges we face in understanding the life histories of societies and discerning what we can conclude about the future from their experiences.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

### L48 Anthro 141 Medicine and Society

This course provides the basic foundation in medical anthropology and cultural anthropology for students enrolled in the Medicine and Society Program. The purpose of the course is to introduce students to the central themes and theoretical approaches employed by medical anthropologists to study health and illness in cross-cultural perspective. Topical areas include analyses of disease, illness and sickness at micro and macro levels; impact of personal and interpersonal factors on health; health effects of social, political and economic factors; relationship of anthropology to biological and social science approaches; ecology of health and development; and cross-cultural health studies of language, gender and race/ethnicity. Note: Content for this course overlaps with and replaces Anthro 160 for students enrolled in the Medicine and Society Program. Open only to students enrolled in the Medicine and Society Program. CET (<https://gephardt.institute.wustl.edu/cec/college-of-arts-sciences>) course.

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

### L48 Anthro 142 Medicine and Society

This course is the required second-semester sequence of the introduction to medical anthropology and cultural anthropology for students enrolled in the Medicine and Society Program. The course builds upon material introduced in Anthro 141 and provides greater ethnographic context for the cross-cultural study of health and illness. Topical areas include analyses of disease, illness and sickness at micro and macro levels; impact of personal and interpersonal factors on health; health effects of social, political and economic factors; relationship of anthropology to biological and social sciences approaches; ecology of health and development; and cross-cultural health studies of language, gender and race/ethnicity. CET (<https://gephardt.institute.wustl.edu/cec/college-of-arts-sciences>) course.

Credit 3 units. A&S: SS, CD, SD A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

### L48 Anthro 150A Introduction to Human Evolution

A survey of the fossil evidence for human evolution. The course includes discussion of the genetics of human variation and evolution, the study of living non-human primates, and the fossil record and its interpretation. An evolutionary perspective is used in an attempt to understand modern humans from the naturalistic point of view.

### L48 Anthro 160B Introduction to Cultural Anthropology

Credit 3 units. A&S: SS, CD, SD A&S IQ: LCD, SSC, SD Arch: SSC Art: SSC BU: BA, HUM EN: S UColl: NW

### L48 Anthro 161 Gender, Youth, and Global Health

Through in-depth case studies, this course provides an introduction to gender-specific issues in the context of childhood and adolescence, poverty, and global health. Students will learn to identify how gender and gender differences affect conditions of life in the areas of reproductive health, nutrition, conflict, access to health care, and the social determinants of health,

especially for young people. Students will learn to analyze health conditions and disparities in relation to both the micro dynamics of local worlds and the macro dynamics of large-scale social forces in the postcolonial global field. Additionally, they will come to understand the current challenges that global health practitioners and institutions confront in achieving gender equity and the current efforts toward closing the gap. These learning objectives will be achieved using lectures, but also discussions-based sessions and Skype-based interactions with NGOs and experts who are currently working in the field.

---

#### L48 Anthro 170D Introduction to Linguistics

Language is one of the fundamental capacities of the human species, and there are many interesting and meaningful ways in which it can be studied. This course explores the core components of linguistic theory: speech sounds (phonetics and phonology), word formation (morphology), sentence structure (syntax), and meaning (semantics). It also provides an overview of interdisciplinary ideas and research on how language is acquired and processed, its relation to the mind-brain and to society, and the question of whether the essential properties of language can be replicated outside the human mind (specifically, in chimpanzees or computer programs).

---

#### L48 Anthro 174 Medicine East and West: Comparing Health Care in the U.S. and China

This course provides a foundational introduction to comparative health studies by examining the health care systems of the United States and China. Using the tools and interpretive frameworks of the field of medical anthropology, students in this course are exposed to a broad range of topics dealing with health and health care in Eastern and Western contexts. These include the study of medical pluralism, meaning of illness, health care financing, preventive care, political-economic perspectives, and sociobehavioral perspectives on health and wellness. Students taking this class are prepared to understand and address ongoing health care concerns affecting U.S. and Chinese society.

---

#### L48 Anthro 190B Introduction to Archaeology

Archaeology plays a critical and unique role in understanding the human past. Through study of the methods and theories of archaeology, and a survey of important firsts in the human past, this course introduces students to the way archaeologists use material culture to reconstruct and understand human behavior. Chronologically ordered case studies from around the globe are used to look at social, ecological and cultural issues facing humans from the earliest times to the present. Students gain practice reconstructing the past through hands-on participation in two one-hour labs focusing on lithics and animal bones. By the end of the course, students are expected to be able to think critically about how the past is presented and why, and the importance of the past as it relates to the present and future.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

---

#### L48 Anthro 212 Archaeological Fantasies and Hoaxes

American popular culture is saturated with pseudoscientific and fictionalized accounts of archaeological discoveries and interpretations. How can students of the past distinguish between fraud, fantasy, hype and valid archaeological research? What potential merit do films, TV-oriented documentaries and historical fiction offer? What role has racism played in attempts to deny indigenous peoples credit for their past achievements? This course looks at the popular culture of archaeology, providing tools for critical evaluation as well as lifetime enjoyment of the field as it is frequently sold to both the informed and the unwary public. Anthropology majors and nonmajors are all welcome, as are sophomores and motivated first-year students who have not yet declared majors.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

---

#### L48 Anthro 2151 Language, Culture and Society

This course explores the relationships between linguistic practice and other social and cultural processes. Among the topics discussed are language and social identity, language and thought, language and gender, multilingualism and language shift as well as the connections between language and the identity of ethnically or nationally defined communities. The course format alternates between "classic" theoretical readings and ethnographic case studies on the interplay between linguistic practice and ideology as well as cultural and social processes.

#### L48 Anthro 260 Topics in Health and Community

A survey of current topics in community health and medicine, with an emphasis upon social science approaches to issues affecting medicine and medical care in contemporary U.S. society. Issues include ethical debates in health care delivery, social stratification and health, access to health services, and factors affecting community wellness at local, national, and global levels. Presented as a weekly series of topical presentations by community health experts from the St. Louis area. Required for students enrolled in the Medicine and Society Program, and also open to other interested students.

Credit 1 unit.

---

#### L48 Anthro 261 Migrations in Past and Present: an Introduction to Migration Studies

The course, grounded in a multidisciplinary approach, provides an introduction to the study of migration, featuring significant mass movements in the past 150 years and crucial concepts of historical and theoretical analyses of the movement of people. Course units explore continuities, trends and shifts in human migration and migration policy and how they affect individual immigrants' lives. A variety of sources, such as oral history, films, novels, legal documents and scholarly secondary analysis help students to consider different perspectives on internal

and international migrations, from the individual migrant to civil society, from political regulation to economic consideration. Throughout the course, students deepen their understanding of migration as a result of social transformation, force or individual choice. We study concepts of the nation-state and citizenship, the political economy of migration, gender, sexuality and migration, and notions of identity and social inclusion more generally to build a sound critique of contemporary discourses on immigration.

---

**L48 Anthro 2653 Health Care Challenges in Modern China**

As the most populous country in the world, China has many challenges regarding medicine, health and health care delivery. In this course several major health care challenges facing China are explored. Students have the opportunity to learn not just from published research and class discussion but also from the perspectives of those who spend their lives studying the social, political, and cultural dynamics of these issues as well as those who devote their careers to the practice of health care in China. Must be enrolled in the study abroad program at Fudan University in Shanghai, China.

Credit 1 unit. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: IS EN: S

---

**L48 Anthro 290 Independent Study**

Designed to give undergraduates research experience in the various subdisciplines of Anthropology. May be taken more than once for credit. Prerequisite: consent of the faculty member under whom the research will be done.

Credit variable, maximum 3 units. Art: SSC

---

**L48 Anthro 300 Internships in Anthropology**

Anthropology majors may acquire professional experience outside the classroom by participating in a faculty-sponsored internship. Before work begins, the student and faculty sponsor must agree on a final written project, which is then approved by the Anthropology Academic Coordinator. Students are evaluated by the faculty sponsor on the basis of the written project and input from the internship supervisor. Course may be taken only one time. Prerequisites: 9 hours of anthropology and permission of department.

Credit 3 units.

---

**L48 Anthro 302B Peoples and Cultures of the Middle East**

This course introduces the cultural diversity and unity of the peoples of the Middle East. The emphasis is on historical and ethnological relationships, social and political structure, religious pluralism and contemporary youth issues. We explore the lived experiences of the peoples in the modern nation-states of Egypt, Lebanon, Syria, Jordan, Israel, the Palestinian Territories, Turkey, Saudi Arabia and the countries of the Arabian Peninsula, Iraq and Iran. We access this material through short stories, poetry, biographies, essays, videos, blogs and political and anthropological reports.

---

**L48 Anthro 3036 Migration and Modernity: Human Mobility, Identity and State Formation — Russian/Soviet/post-Soviet Context**

This class introduces students to a broad history of 19th- and 20th-century Russia and the Soviet Union alongside problems of migration. In this class, students will be introduced to the historical, social, and political dimensions of migration within, to, and from the Russian Empire, the Soviet Union, and its successor states. We will look at the intersection of the movement of people with long-term economic, social and political transformations, but also pay attention to crucial events and phenomena of Soviet history that set large-scale migrations in motion. Course materials will, for instance, address mass movements related to modernization and internal colonization, analyze the role of revolutionary change and warfare for forced displacement, and study the implications of geopolitical changes in the aftermath of the breakdown of the USSR for human rights discourses. Alongside the historically grounded overview, the class explores concepts of citizenship, diaspora, nationality policy, gender specific experiences of migration, and the ethics and political economy of migration politics, thereby highlighting how current trends in Russian society are indicative of broader discourses on difference and social transformation.

Same as L97 IAS 384

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD EN: H

---

**L48 Anthro 305 Anthropology of India**

An introduction to the societies and cultures of India through its social margins. Our approach will leverage scholarship from many fields, highlighting the strengths and limitations of singular-discipline analyses and universalized histories. Ethnographic narratives will be woven into historical accounts of major cultural shifts. Students will learn to evaluate and apply multivocal perspectives on larger global issues that have transformed India since the end of colonization, including demographic, economic, social, cultural, political, and religious change. Topics will include population and life expectancy, civil society, social-moral relationships, caste and communalism, youth and consumerism, the new urban middle class, environment and health, tourism, public and religious cultures, social activism, politics and law.

Credit 3 units. A&S IQ: LCD, SSC BU: IS EN: S

---

**L48 Anthro 3051 Anthropology of Tibet and the Himalayas**

This course is an anthropological and historical examination of Tibetan societies inhabiting the Tibetan Plateau and the highlands of Nepal. In addition to providing basic ethnographic descriptions of Tibetan societies, the course explores the changing nature of relations between Tibet and China, and between Tibet and the West. Guiding concepts include adaptation (both social and ecological), the politics of ethnicity and identity, and processes of culture change.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: IS EN: S

---

**L48 Anthro 3055 Contemporary Chinese Culture and Society**

This course provides an introduction to emerging trends in Chinese culture and society. We explore processes of change and continuity in the People's Republic, examining the complexity of social issues and the dynamics of cultural unity and diversity. While we focus on the post-Mao reform era (1978 to the present), we consider how contemporary developments draw upon the legacies of the Maoist revolution as well as the pre-socialist past. The course provides an overview of anthropological approaches to the study of contemporary

China, introducing students to key concepts, theories and frameworks integral to the analysis of Chinese culture and society. Readings, lectures and discussions highlight not only macro-level processes of social change and continuity but also the everyday experiences of individuals involved in these processes. We pay particular attention to issues of family life, institutional culture, migration, religion, ethnicity, gender, consumption and globalization.

---

#### L48 Anthro 3056 Material Culture in Modern China

In this course, we will explore change and continuity from late imperial to postsocialist China through an analysis of everyday material culture. Drawing upon material objects, historical texts, ethnographic studies and films, we will investigate values, beliefs and attitudes toward the material world in modern Chinese life. Readings, lectures and discussions will focus on how political, ethnic, regional, religious, and gender identities have been constructed and shaped by the use and production of material artifacts ranging from household goods and tomb objects to built forms and bodily dispositions. Case studies include foot-binding, opium use, fashion, tea culture, fast food consumption, sports and nation building, contemporary art markets, the privatization of housing, and worker discipline in transnational factories.

#### L48 Anthro 3092 Indigenous Peoples and Movements in Latin America

This course focuses on the contemporary lives and political struggles of Indigenous Peoples in Latin America, with specific focus on Ecuador, Peru and Bolivia. Through course lectures, ethnographic texts, and four in-depth case studies, we explore how the politics of Indigeneity articulate with political and economic processes including (neo)colonialism, global capitalism, state transformation and social movement struggle. Themes include: demands for territory and autonomy; environmentalism and natural resource exploitation; gender and economic inequality; race, racism and political violence; language and education; and the complexities of building multicultural or "plurinational" democracies.

#### L48 Anthro 3095 The Incas and Their Ancestors: The Archaeology of the Ancient Andes

From the hyper-arid desert of the Pacific Coast to the high-mountain plateaus of the Andes more than 12,000 feet above sea level to the lush forested Amazonian lowlands, Western South America presents one of the most diverse natural and cultural environments in the world and one of the few places where social complexity first developed. Beginning with the earliest human occupations in the region more than 12,000 years ago, this course examines how domestication, urbanization, the rise of early states, and major technological inventions changed life in the Andes from small village societies to the largest territorial polity of the Americas — the Inca Empire. Students will become familiar with the major debates in the field of Andean archaeology. Together, we will examine archaeological evidence (architecture, art, ceramics, metals, textiles, plant and animal remains, etc.) from context of everyday life (households, food production, craft production) to the rituals and ceremonies (offerings, tombs) that took place in domestic and public spaces. We will also touch on the role of Andean archaeology in the context of national politics and heritage sustainability.

---

#### L48 Anthro 310C Ancient Civilizations of the New World

An examination of the Inca empire in Peru, and the Maya and Aztec empires in Mexico, through the inquiry into the roots, development, form and evolutionary history of pre-Colombian civilization in each region from its earliest times to the rise of the classic kingdoms. Examples of respective artistic accomplishments are presented and discussed.

#### L48 Anthro 3122 From Country to Heavy Metal: Ancient Civilizations of the Old World

This course will explore the archaeology of Europe, the Near East and Central Asia from approximately 10,000 years ago to classical times (ending before Ancient Greece). This prehistoric epoch saw major developments among various civilizations of the Old World, such as the introduction of agriculture, animal domestication, the growth of cities, and technological developments such as pottery, metallurgy and horse-riding. A major focus will be the trajectory of cultural innovations of regional populations through time, and the complexity of their social, political and ritual practices. We will also investigate the variation in human adaptive strategies to various environmental and social contexts, from hunter/gatherers to early Neolithic farmers, to the interactions between nomadic populations and larger scale, urban societies in the Bronze and Iron Ages.

**L48 Anthro 3154 Indian Barbie, Asian Tigers and IT Dreams: Politics of Globalization and Development in South Asia**

This course will explore how South Asia is at the heart of current debates about globalization, development, empire, gender, sexuality and ethnic identity. We'll raise questions like: What has led to sex trafficking in Nepal? Can information technology solve India's social problems and unemployment? What is biopiracy, and how are South Asian activists challenging the global corporatization of world food and water supplies? Readings, films and discussions will take us to countries like Bangladesh, Nepal, Pakistan, Sri Lanka and India.

**L48 Anthro 3158 South Asian Religious Traditions**

The Indian subcontinent is home to Hindu, Islamic, Buddhist, Jain, and Sikh traditions, among others. In this course we explore several traditions that are vital to life in India, Pakistan and beyond. We first encounter each tradition through narrative, with the support of visual media. We then explore how contemporary adherents make these traditions meaningful for themselves — in their everyday lives, in their struggles for social change, and in their political statements and contestations. Students will have the opportunity for creative projects or individual research.

**L48 Anthro 3182 Ancient Africa: Social Mosaics and Environmental Challenges**

This class introduces students to the basics of the archaeological record of humans in Africa from 3.6 million years ago to 1000 years ago. The first third of the course focuses on early humans, the origins of meat eating, expansion of diet and cuisine, technical and cultural responses to changing environments. The second section of the course emphasizes African rock art, socioeconomic variability among hunter-gatherers, the origins of African pastoralism, mobile responses to climate change and African contributions to world food supply including domestication of sorghum, also coffee. The last third of the

course is devoted to the complex urban societies of ancient Africa, Egypt, Axum, Great Zimbabwe and Jenne Jenne. Course format is lecture and discussion. There are two mid-terms and students are expected to participate in interactive stone tool use, rock art creation and discussion of ethnographic and archaeological data on pastoral decision-making in times of drought and war and of issues surrounding the purchase of African antiquities and conservation of cultural heritage.

---

**L48 Anthro 3201 Gender, Culture and Madness**

This course explores the relationships among gender constructs, cultural values and definitions of mental health and illness. Understandings of the proper roles, sensibilities, emotions and dispositions of women and men are often culturally and morally loaded as indicators of the "proper" selves permitted in a given context. Across cultures, then, gender often becomes an expressive idiom for the relative health of the self. Gender identities or presentations that run counter to these conventions are frequently identified as disordered and in need of fixing. In this course, we take up these issues through three fundamental themes: the social and cultural (re)production of gendered bodies and dispositions; the normalization of these productions and the subsequent location of "madness" in divergent or dissonant experiences of embodiment; and the situation of discourses of "madness" within debates of resistance and conformity, selfhood and agency.

ETH EN: S

---

**L48 Anthro 3202 Anthropological Perspectives on Women's Health**

The principle goal of this course is to explore the health issues/risks women face around the world. In order to achieve this goal, we will take a life cycle approach beginning with the birth of female babies through adolescence, adulthood, and finally through the aging process. Our perspective will be biocultural, defined as the synergistic interaction between biology and culture. By comparing a diversity of health experiences across cultures, we can carefully examine the ways in which culture constructs perceptions of health and effective delivery of health care. Students will finish the term with a clearer understanding of the biology of life cycle changes, how health inequalities are generated and perpetuated, and how to make more informed decisions about their own health choices. Prerequisite: Anthro 160 or permission of instructor.

SSC BU: BA EN: S

---

**L48 Anthro 3206 Global Gender Issues**

This course compares the life experiences of women and men in societies throughout the world. We discuss the evidence regarding the universal subordination of women, and examine explanations that propose to situate women's and men's personality attributes, roles and responsibilities in the biological or cultural domains. In general, through readings, films and lectures, the class provides a cross-cultural perspective on ideas regarding gender and how gendered meanings, practices and performances serve as structuring principles in society.

BA, IS EN: S

---

**L48 Anthro 3215 Food, Culture, and Power**

What should I eat today? This seemingly simple question transects the fields of health, environmental studies, economics, history, anthropology, religion, and many others. The foods we eat, the way we get them, the way we produce them, and the way in which we eat them speak volumes about our beliefs, our technology, our understanding of how the world works, and our ability to function within it. That is, food is an excellent way to explore culture. No actions are more deserving of critical attention than those that we do regularly, without much critical thought, and most of us eat at least two or three times a day. In this class we explore how this food came to be here, why we like it, and what that says about us. This class is reading and discussion heavy, with a midterm paper based on the readings and a final paper based on a topic of the students' choosing. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

---

**L48 Anthro 3255 Urban Anthropology**

This course examines the many ways that people around the world make urban life meaningful. We will focus on the intersections among anthropology, urban studies, social theory and human geography to explore the theoretical, social, and methodological approaches to understanding the culture(s) created in cities. Drawing on ethnographic case studies from cities around the world, we will explore issues pertaining to race and ethnicity, gender, youth, poverty, diversity and "super-diversity," gentrification, urbanization, and illusions and realities of modernity. Credit 3 units. A&S IQ: SSC BU: BA EN: S

---

**L48 Anthro 3261 Inequality, Hierarchy and Difference**

This course examines systems of inequality in a variety of world regions and includes analysis of their causes and effects. Economic class, gender, ethnicity and race are among the types of social stratification discussed. Topics might include environmental racism, occupational segregation, political movements, and debates over the differential impact of new technologies such as biotechnology and reproductive technologies on minority populations. ---

**L48 Anthro 3271 Becoming Human: Archaeology of Human Origins**

Humanity, before the advent of agriculture and cities, evolved a series of behaviors that enabled them to survive as hunter-gatherers in diverse environments with complex cultural systems. These behaviors included hunting, control of fire, shelters and clothing, elaborate tools of diverse materials, burials, jewelry and representational art. These characteristics emerged over more than 2 million years of the Pleistocene across several species of humans, to coalesce into what we would recognize as modern human foragers 30,000 years ago. This course traces that emergence of what it means to be human, through the Paleolithic archeological record in its context of past environments and past human forms. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L48 Anthro 3283 Introduction to Global Health**

This course provides a general introduction to the field of public health. It examines the philosophy, history, organization, functions, activities and results of public health research and practice. Case studies include infectious and chronic diseases,

mental health, maternal and reproductive health, food safety and nutrition, environmental health, and global public health. Students are encouraged to look at health issues from a systemic and population level perspective, and to think critically about health systems and problems, especially health disparities and health care delivery to diverse populations. No background in anthropology or public health is required.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: IS EN: S

---

**L48 Anthro 3284 Public Health Research and Practice**

In-depth exploration of current theory and methods involved in public health research and practical applications. Emphasis on fundamentals of epidemiology, which forms the scientific rationale for public health assessment, assurance and policy development. Survey of current public health practice and research areas including biological foundations of public health, social and behavioral interventions, maternal-child health and environmental health. Relationships among public health, medicine, nursing, social work and related disciplines.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

---

**L48 Anthro 3293 Religion and Society**

We take a broad and practice-oriented view of "religion," including uttering spells, sacrificing to a god, healing through spirit possession, as well as praying and reciting scripture. We consider religious practices in small-scale societies as well as those characteristic of forms of Judaism, Islam, Christianity and other broadly based religions. We give special attention to the ways religions shape politics, law, war, as well as everyday life in modern societies.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: ETH EN: S

---

**L48 Anthro 3295 Secular and Religious: A Global History**

Recent years have seen a dramatic rethinking of the past in nearly every corner of the world as scholars revisit fundamental questions about the importance of religion for individuals, societies and politics. Is religion as a personal orientation in decline? Is Europe becoming more secular? Is secularism a European invention? Many scholars now argue that "religion" is a European term that doesn't apply in Asian societies. This course brings together cutting-edge historical scholarship on Europe and Asia in pursuit of a truly global understanding. Countries covered vary but may include Britain, France, Turkey, China, Japan, India and Pakistan.

---

**L48 Anthro 330 Experimental Archaeology**

Experiments are an extremely important part of the scientific process. Although archaeology is often treated as an historical science, the nature of the material record does provide an opportunity to use experimentation as an important way of interpreting what we excavate. The class works with the most tangible materials recovered from archaeological contexts, that is, stone and pottery. After reviewing the history of experimentation in archaeological investigations, we turn to the material record. This is followed in our initial weeks of setting up the experiments and how they are used to compare with available data sets derived from archaeological contexts. As part of the class we take several field trips to areas where materials exist in a natural setting. Each class member selects a specific material for the focus of their experiments. In the end students

produce several experiments using different materials, document their experiments in written reports, and finally present their results to the class for discussion and evaluation.

Credit 3 units. Art: SSC

---

**L48 Anthro 3304 Bones to Behavior: Undergraduate Research in the Lab and at the Zoo**

We undertake zooarchaeological study of equid skeletons in the zooarchaeology laboratory at Washington University, and in collaboration with the Saint Louis Zoo, participate in a behavioral study of the courtship and breeding behavior of the ancestor of the domestic donkey — the African wild ass. The research questions that we focus on are how the biology and behavior of the African wild ass influenced the domestication of the donkey by prehistoric African herders or ancient Egyptians and how the behavior of the African wild ass continues to affect prospects for conservation of this highly endangered animal. During the first half of the semester, we meet once a week for 2.5 hours in the zooarchaeology laboratory. In the second half of the semester, we no longer meet in the lab, and each student spends two mornings of their choice per week at the Saint Louis Zoo conducting observations of the wild ass. Students may choose two days that fit their schedule. Saturdays and Sundays are included as choices of days. Permission of instructor is required.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

---

**L48 Anthro 3305 Bones to Behavior II**

In this class, students undertake zooarchaeological research on skeletal material in the zooarchaeology laboratory at Washington University and/or preparation of animal skeletons for comparative study and, in collaboration with the Saint Louis Zoo, participate in behavioral studies of the ancestor of the donkey — the African wild ass. Collections housed in the zooarchaeological laboratory for study include ancient food-remains from African sites. These collections bear on questions regarding cultural and climate change in the Horn of Africa 2,000 to 12,000 years ago and include animals ranging from African antelopes to domestic camels. During the first half of the semester, students meet once a week for 2.5 hours in the zooarchaeological laboratory. In the second half of the semester, we meet twice a week in the laboratory or at the zoo. Location depends on projects selected for study. Permission of instructor is required. May be repeated for credit.

---

**L48 Anthro 3309 Anthropological Perspectives on Care**

This course aims to provide an introductory survey of topics and approaches to the anthropology of care. It does so by drawing on a range of ethnographic, theoretical, and cross-disciplinary materials. This will allow us to think through and engage with care in its myriad forms, its presence and absence, its bureaucratization and management, its relation to kinship, relatedness, labor and government. In the first part of the course, we will explore theories of care as moral practice with a feminist lens. In the second part, we will engage this lens with ethnographic materials about care in diverse settings that also shed light on the political, economic, and lived realities of care. These ethnographic and sociological works include explorations of the circulation of care in moral economies and its monetization as paid labor, the politics and "antipolitics" of health care in institutional settings, and the role of care in kinship, household formations, and life course regimes across cultures.

---

**L48 Anthro 333 Culture and Health**

This course explores culture and health, with a focus on global health. Assigned readings explore cross-cultural perspectives on health, healing, and the body, as well as important concepts in medical anthropology. Through class discussions and close examination of ethnographies of health and illness, students develop an understanding of how cultural and political-economic forces articulate with the emerging field of global health.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: BA

---

**L48 Anthro 3331 Anthropology of Clothing and Fashion**

This course takes clothing as a starting point for examining broad themes in anthropology, including gender and sexuality, race and the body, history and colonialism. We look at the ritual significance of clothing and other practices of bodily adornment in traditional societies and the role of style in constituting contemporary social movements and identity categories. We investigate the globalization of the apparel industry, from production and circulation to marketing and branding, in order to understand the relationship between citizenship and consumption, labor and power in the global economy. The course encourages students to reflect on their relationship to the wider society and economy as producers and consumers of material culture through the lens of clothing and fashion. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

---

**L48 Anthro 3351 The Ancient Maya: Archaeology and History**

This course focuses on the ancient Maya civilization because there are many exciting new breakthroughs in the study of the Maya. The Olmec civilization and the civilization of Teotihuacan in the Valley of Mexico are considered as they related to the rise and development of the Maya civilization. The ancient Maya were the only Pre-Columbian civilization to leave us a written record that we can use to understand their politics, religion and history. This course is about Maya ancient history and Maya glyphic texts, combined with the images of Maya life from their many forms of art. The combination of glyphic texts, art and archaeology now can provide a uniquely detailed reconstruction of ancient history in a New World civilization. Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC BU: IS EN: S

---

**L48 Anthro 3354 Ancient Mesoamerica**

Mesoamerica encompasses the Pre-Columbian complex societies of Mexico and upper Central America, including Guatemala, Belize, and parts of Honduras and El Salvador. It was an agrarian world of great and enduring cities, far-flung trade networks, transcendent religions, kingdoms and empires. This survey lecture course begins with the pioneering hunters and gatherers, reviews the establishment of farming communities and the first Olmec Formative states, the flowering of highland Mexican Classic Period Teotihuacan and other great cities like Tajin in Veracruz, the dynasties of the lowland Maya and summarizes with the Aztec Empire and the period of the Spanish Conquest. The course touches on the many and diverse other cultures that contributed to this vibrant world. Credit 3 units. A&S: SS A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

---

**L48 Anthro 336B Culture and Identity**

Culture and diversity; cultural relativism and its contradictions; custom and habits; the construction and maintenance of norms; communication, symbol, sign and intersubjectivity; symbolic interaction; rhetoric and the definition of social situations; societal means of fabricating distinctions (e.g., race, tribe, ethnic group, nationality, sect group). Credit 3 units. A&S: SS, CD, SD A&S IQ: LCD, SSC Art: SSC BU: BA, ETH EN: S

---

---

**L48 Anthro 3373 Law and Culture**

We live in an age when social policy is increasingly displaced into the realm of law, when justice and equality are matters of courtroom debate rather than public discussion. Legal language has become a key resource in all kinds of struggles over livelihood and ways of life. In this course, we study the cultural dimensions of law and law's changing relationship to state power, the global economy, social movements and everyday life. We approach law as a system of rules, obligations and procedures, but also a cultural practice, moral regime and disciplinary technique. How are relationships between legal, political and economic realms structured and with what consequences? How does law provide tools for both social struggle and social control? What does anthropology contribute to research on these issues? In exploring these questions, we combine readings from classical legal anthropology with recent ethnographic work from around the globe. Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S

---

**L48 Anthro 3386 Language, Culture and Society**

Although this is an introductory course, students who have taken Linguistics 170D Introduction to Linguistics benefit from knowledge of phonology, morphology, syntax and semantics. The primary content of this course explores the relationship between linguistic practice and other social and cultural processes. Anthropological linguistics, including alternative approaches to fieldwork and data collection are introduced, along with various studies of language usage in social and cultural contexts that consider language and thought, language and identity, language and gender, as well as multilingualism and other forms of language contact. The ethnography of speaking and communication are central to this course, as is conversation analyses, which introduces a combination of qualitative and quantitative linguistic research methods. Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC BU: BA EN: S

---

**L48 Anthro 3391 Economies as Cultural Systems**

Many contemporary approaches to economics downplay or bracket the importance of culture in the workings of economic systems. In this class we focus on approaches to distribution and exchange in which culture and social institutions figure prominently, if not pre-eminently. We sample a diverse array of economies, from gift exchange to the ceremonial destruction of wealth, from Melanesia to Wall Street, in order to evaluate some of the assumptions that undergird market capitalism. These assumptions include the perception of market actors exclusively as calculative, maximizing individuals. Topics covered include the Industrial Revolution; utilitarianism; economic anthropology; the formal vs. substantivist debates; ethnography of finance; and Marxist sociology. Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S

---

**L48 Anthro 3414 Topics in Social Research at Fudan**

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L48 Anthro 3432 Topics in Africa: Capitalism, Exchange and Inequality in Africa**

This course explores issues of power and inequality related to exchange and the emergence of market economies in Africa. Case studies include examinations of cattle and bride wealth

among pastoralists in Sudan, welfare policies in contemporary South Africa, and sex work in West Africa. In each of these cases there is a complex balance between the value placed on maintaining social relationships and accumulating private property. We investigate the implications of this balance for the production of local and international forms of inequality. The course also introduces students to key ideas in economic anthropology such as the formalist-substantivist debate, rational choice theory and neo-Marxist approaches to power and stratification. By the end of the course, students should be able to critically assess the value of these theories in understanding day-to-day economic activities in Africa. This class is a discussion-based seminar and in-class participation is highly encouraged. Students are graded on a series of analytical essays, a final paper and in-class participation.

---

**L48 Anthro 3472 Global Energy and the American Dream**

This lecture course explores the historical, cultural and political relationship between America and global energy, focusing on oil, coal, natural gas, biofuels and alternatives. Through case studies at home and abroad, we examine how cultural, environmental, economic and geopolitical processes are entangled with changing patterns of energy-related resource extraction, production, distribution and use. America's changing position as global consumer and dreamer is linked to increasingly violent contests over energy abroad while our fuel-dependent dreams of boundless (oil) power give way to uncertainties and new possibilities of nation, nature and the future. Assuming that technology and markets alone will not save us, what might a culturally, politically and socially minded inquiry contribute to understanding the past and future of global energy and the American dream?

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: ETH, IS EN: S

---

**L48 Anthro 3476 Archaeologies of Graffiti from Antiquity to the Present**

The modern story of graffiti — revolving around social, economic, and political contexts such as bathroom stalls, subways and alleys steeped with urine and trash, decrepit buildings and train cars situated in less reputable areas of cities and towns — lead people to associate it with antisocial behaviors, dissent, and the vandalism of public and private property. However, some people consider graffiti as a legitimate form of art, communication, and a somewhat anonymous expression of current social climates. The disparity between these two perspectives has provided a great deal to study for social scientists. However, a consideration of graffiti's simple

definition — words or drawings etched or painted on some surface in a public place — lead us to recognize that feats of graffiti originate way before the inner-city movements of the 1970s. In this class we will draw upon a range of studies from archaeology, anthropology, sociology, art, and history to broadly explore the creation and meaning of graffiti from antiquity to the present. Our goal is to learn how to examine the form, function, and context of graffiti across cultures and through time, with regard to the circumstances of its creation. In doing so, we aspire to better understand what lies behind the human urge to leave a mark. Prerequisite: Introduction to Archaeology.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

---

**L48 Anthro 347B Ancient Mound Builders of the Mississippi Valley**

Study of the peoples in North America who built mounds and other earthen structures beginning more than 4000 years ago; why they erected earthworks; what the structures were used for; how they varied through time and across space; and what significance they had to members of society.

Credit 3 units. A&S: SS, CD Art: SSC BU: BA

---

**L48 Anthro 3541 Anthropological and Sociological Study of Muslim Societies**

This course introduces students to anthropological and sociological scholarship on Muslim societies. Attention will be given to the broad theoretical and methodological issues which orient such scholarship. These issues include the nature of Muslim religious and cultural traditions, the nature of modernization and rationalization in Muslim societies, and the nature of sociopolitical relations between "Islam" and the "West." The course explores the preceding issues through a series of ethnographic and historical case studies, with a special focus on Muslim communities in the Middle East, Southeast Asia, and Europe. Case studies address a range of specific topics, including religious knowledge and authority, capitalism and economic modernization, religion and politics, gender and sexuality, as well as migration and globalization.

Same as L75 JINE 354

Credit 3 units. A&S IQ: LCD, SSC BU: IS EN: S

---

**L48 Anthro 3542 Anthropology of Change: Practicing Applied and Public Anthropology**

In this course, students will learn how to use anthropology and ethnographic methods as tools for provoking change. The legitimacy of this "fifth-field" of anthropology has been in contention amongst anthropologists throughout generations. But in the contemporary era of neoliberalism and big-data, social scientists are increasingly examining their ethical duty to their informants — specifically, concerns about maintaining neutrality versus leveraging ethnographic data to improve lives or to make a profit. We will begin with the history of this ethical debate and move into contemporary issues in anthropology for social change and in business anthropology. Topics will include multidisciplinary teamwork, practitioner capacity building, community action programming, policy development and ethical design. This course is designed for upper-level anthropology students but will be particularly useful for those considering combining anthropology as a double-major or minor in a range of applied fields (business, engineering, social work, law, health and medicine). It will prepare students for the practical use of anthropology in consulting firms, research institutes, corporations, NGOs, and federal, state, and local government agencies.

Credit 3 units. A&S IQ: SSC BU: ETH EN: S

---

**L48 Anthro 3582 Anthropology of the Human Face**

A survey of the human face, including both an evolutionary perspective on why our faces changed to look the way they do today and a theoretical perspective on how we create and maintain self-image through body modification. Comparative and cross-cultural approaches are used to understand modern human craniofacial and cultural diversity. The course includes discussions of how perceptions of biological variation inform social interactions and of how sociocultural norms pattern body modification, both presently and historically. Most importantly, students learn how information obtained with archaeological, sociocultural, and biological methods is integrated to address anthropological questions.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

---

**L48 Anthro 361 Culture and Environment**

An introduction to the ecology of human culture, especially how "traditional" cultural ecosystems are organized and how they change with population density. Topics include foragers, extensive and intensive farming, industrial agriculture, the ecology of conflict, and problems in sustainability.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: ETH

---

**L48 Anthro 3612 Population and Society**

This review of population processes and their social ramifications begins with an introduction to the basic terminology, concepts and methods of population studies, followed by a survey of human population trends through history. The course then investigates biological and social dimensions of marriage and childbearing, critically examines family planning policies, deals with the social impacts of epidemics and population aging, and looks at connections between population movements and sociocultural changes. The overall objective of the course is to understand how population processes are not just biological in nature, but are closely related to social, cultural, political and economic factors.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: IS EN: S

---

**L48 Anthro 3616 From Deep Ecology to Indigenous Ecological Identity: Environmental Social Movements and Anthropology**

This course provides a survey of environmental social movements around the world and over time, in the process challenging commonly held perceptions about environmentalism and environmental movements. Specifically, it demonstrates that environmental social movements are often as much or more about people, identity and human rights than they are about protecting the environment. In addition to juxtaposing dominant traditions of American environmentalism with environmental movements in other parts of the world, the course focuses in on new and emerging social movements that are often transnational in scope but local in scale. These new movements offer holistic reinterpretations of human-environment relationships, identities and political and economic organization in their attempts to transcend socio-environmental inequalities. Throughout, the course draws on social scientists' (especially anthropologists') descriptive interpretations and critical theoretical analyses of various environmental social movements and the differences that constitute them.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

---

**L48 Anthro 3617 Past and Present Cultural Environments**

Human societies are situated within and interact with their ecological and environmental systems. Even social relationships within and between groups imply spatial relationships and geographic orientation, advantages, influence and limitations. Beyond subsistence, environment and the "natural world" play an integral role in how humans pattern the landscape, structure society, develop their world view, and, in turn, alter and adapt the world in which they live. This upper-division undergraduate and graduate seminar course introduces students to anthropological conceptions of human-environmental relationships, past and present. Topics include environmental and landscape archaeology; historical, political, and human behavioral ecology; world view and conceptualizations of nature; human adaptation, resilience theory, and niche construction; anthropological case studies; the intersections of humans, animals and the environment; and end with environmental politics.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L48 Anthro 3618 Urban Ecological Anthropology**

Anthropology's long history of studying human-environment interactions makes it well-suited to examine the complexities of urban environmental issues. Through ethnographies and other readings, this class introduces students to the ways social structures, power and knowledge contour people's experiences and understandings of nature in an urban environment. Of particular interest are environmental justice issues involving pollution and disasters; the creation of community gardens and other public space; cars and bicycles; and conservation or commercial uses of natural resources nestled in or on the edge of cities. Class discussion includes environmental issues in the St. Louis metropolitan area. No background in anthropology or environmental studies is required.

Credit 3 units. A&S IQ: LCD, SSC BU: BA EN: S

---

**L48 Anthro 362 The Biological Basis of Human Behavior**

Infidelity, marriage customs, inner-city violence, infanticide, intelligence. Are the behavioral patterns we see genetically fixed and racially variable? What is the evolutionary and biological basis of human behavior? This course offers a critical evaluation of these from an anthropological perspective.

Credit 3 units. A&S: NS, CD, SD A&S IQ: LCD, NSM, SD Arch: NSM Art: NSM BU: BA

---

**L48 Anthro 3620 Anthropological Perspectives on the Fetus**

Where do we come from? How do we get here? When does "life" begin? Is the fetus a "person" or something else? How could we decide? This course integrates biological, medical, philosophical and cross-cultural perspectives to examine how various societies (including our own) understand the nature of the human fetus. The course examines basic human embryology, beliefs about conception and fetal development, ideas about the moral status of the fetus, controversies surrounding prenatal care and antenatal diagnostic testing (including sex selection and genetic screening tests), current controversies about fetal medicine and surgery, and the problem of abortion in cross-cultural perspective.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Arch: SSP Art: SSC BU: BA EN: S

---

**L48 Anthro 3621 Anthropology of Human Birth**

This course examines the interaction between human biology and culture in relation to childbirth. Emphasis is placed on

understanding the cultural challenges posed by the physiology of human reproduction, the ways various cultures have attempted to meet those challenges, and the resultant consequences that this has had for women's lives. The course draws on material from human anatomy and embryology, paleoanthropology, clinical obstetrics, public health, social anthropology, the history of medicine and contemporary bioethics.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S

---

**L48 Anthro 3626 Adventures in Nosology: The Nature and Meaning of Disease**

What is a "disease" and how do you diagnose one? What are "medicines" and how, when, and for what purpose should they be used? These questions reflect universal human concerns, but the answers given to these questions have varied enormously in different times and places. The course considers the nature of health, illness, disease and its treatment, beginning with a detailed examination of the traditional ethnomedical system of the Hausa people of northern Nigeria. Using this West African medical system as a baseline for comparison, the course then explores the nature of "nosology" (the classification of diseases) and the underlying logic of different therapeutic systems in different times and cultures, including our own. The course draws on ethnography, the history of medicine, bioethics and human biology to understand how these questions are asked and answered in different societies, times and places.

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: SCI EN: S

---

**L48 Anthro 3628 The Anthropology of Health Disparities**

This course approaches the subjects of race, ethnicity, gender, sexuality and class-related health disparity epidemiologically and anthropologically. Students in this course explore these cultural categories both as factors that contribute to systematic differences in health status and outcomes and as dynamic frameworks through which those systematic differences can be examined and understood. The grounding assumptions of this course are 1) that race, ethnicity, gender, sexuality and class are cultural constructs employed by humans in an effort to account for observed physical, dispositional and behavioral group-level diversity; 2) that disparity, and particularly health disparity, is meaningfully associated with diversity but is not caused by it; and 3) that because humans are the product of two dynamic, complex systems (biology and culture), health disparities are most usefully engaged as conditions of process and interconnectedness.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L48 Anthro 365 Human Growth and Development**

This course focuses on the life-history of humans from birth to death. Through a series of lectures we consider how humans grow and change both biologically and psychologically over the course of our lives. Topics include: human growth curves, sex-differences, adolescence and puberty, nutrition, environment, growth disorders, death, and the evolution of human growth.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

---

**L48 Anthro 3656 Behavioral Ecology of the Great Apes**

This course introduces undergraduate students to the behavioral ecology of great apes. Lectures and readings provide an overview of the distribution, feeding ecology, social system and behavior of African and Asian apes. The main objective

of this class is to examine variation in behavioral ecology with and between ape species. The comparative content within each lecture gradually increases throughout the course, and students are asked to synthesize this material in their final exam. Readings mainly consist of book chapter assignments from three recent texts on the ecology, behavior and geographic variation observed in great apes.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

---

**L48 Anthro 3661 Primate Biology**

This course takes a multifaceted introductory approach to the primates, the closest relatives of human beings, by investigating anatomy, growth and development, reproduction, behavioral adaptations, ecology, geographic distribution, taxonomy and evolution. Emphasis is placed not only on the apes and monkeys, but also on the lesser-known lemurs, lorises, bushbabies, tarsiers and many others. The importance of primate biology to the discipline of anthropology is discussed. Intended for students who have already taken Anthro 150A and recommended for students who wish to take the more advanced 400-level courses on primates. Prerequisite: Anthro 150A or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L48 Anthro 3662 Primate Conservation Biology**

This class focuses on the ecological diversity of primates and how these and other traits are related to their present day abundance and distribution. In addition, the biological, abiotic and anthropogenic factors related to extinction risk are examined. It also reviews the endangered species of primates; case histories of conservation programs; and management practices in Asia, Africa, South America and Madagascar.

Prerequisite: Anthro 150 or Biol 2970, or permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L48 Anthro 3665 Observing Animal Behavior at the St. Louis Zoo**

This course is an introduction to methods for the collection of behavioral data in studies of animal behavior. Students are trained in the design of research projects and the analysis and interpretation of behavioral data. Students learn how different methods are used to answer specific questions in animal behavior research. Research is conducted at the Saint Louis Zoo.

Credit 3 units. A&S: NS Art: NSM

---

**L48 Anthro 3666 Comparative Primate Socioecology**

This course focuses on the interface between the behavior and ecology of nonhuman primates and its applications to primate conservation. We examine how the basic principles of animal ecology can help us understand primate behavior. We look at a wide range of primates from a comparative perspective as we explore primate habitats, diets, life histories and communities, social relationships, and much more. Because most primate species are threatened, endangered or even facing extinction, we also focus on how various aspects of ecology are used in the conservation of primates. We draw heavily on field studies and particular research projects of primates and emphasize their behavior in natural environmental and social settings. The objectives of the course are: 1) to gain an understanding of principles of animal behavior by using primates as a model, 2) to understand variation in behavior and how ecology influences this variation in living primates, 3) to use the comparative approach to better understand why primate societies differ, and

4) to understand how we address and answer questions about primate behavior through field research  
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

#### L48 Anthro 367 Paleoanthropology

The prehistoric Pliocene and Pleistocene evidence for human emergence and evolution. The emphasis is on the human fossil record and its interpretation in functional and behavioral terms. This is placed in the context of the Paleolithic archaeological record and issues regarding the biological relationships between various human groups. Prerequisite: Anthro 150 or equivalent.  
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L48 Anthro 3693 Anthropology of Death, Mourning and Burial

This course offers anthropological analysis of death, mourning and burial. It draws on data and theoretical explanations from different sub-disciplines of anthropology (archaeology, cultural anthropology and physical anthropology). In addition to theoretical conceptualization of mortuary practices, specific case studies are used to address a wide range of topics. The course covers cross-cultural comparison of burial among hunter-gatherers, pastoralists and complex societies. Mortuary practices also is conceptualized based on religion and secularity, social organization and biological approaches (eg. paleodiet, paleodemography, disease). Ethical and legal issues of using human remains worldwide also are addressed. This course helps train and stimulate academic enquiry into ancient and modern societal treatment of death around the globe. The time covered in this course ranges from the Lower Palaeolithic to the contemporary world.  
Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC EN: S

---

#### L48 Anthro 372 Geoarchaeology

Geoarchaeology involves the application of analytical techniques, concepts and field methods from the earth sciences to help solve archaeological problems. Issues explored in this course include human and environmental processes involved in archaeological site formation; the sedimentary context of archaeological remains, soils and sediments relevant to archaeology; and the relationship between past settlement and landscape evolution, paleoclimatic reconstruction, human impacts on the environment, geological sourcing of artifact proveniences, and remote sensing of the physical environment. Several field trips to local archaeological/geological sites provide an opportunity to understand how geoarchaeology is applied to specific research problems.  
Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC EN: S

---

#### L48 Anthro 373 Introduction to GIS for Anthropologists

Use of GIS is rapidly becoming standard practice in anthropological research. This course introduces students to the basic theories and techniques of GIS. Topics include the application of GIS in archaeological survey and ethnographic research, as well as marketing, transportation, demographics and urban and regional planning. This course enables students to become familiar not only with GIS software such as ArcGIS but also the methodologies and tools used to collect and analyze spatial data.  
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

#### L48 Anthro 374 Social Landscapes in Global View

From the beginning of the human campaign, societies have socialized the spaces and places where they live. This socialization comes in many forms, including the generation of sacred natural places (e.g., Mt. Fuji) to the construction of planned urban settings where culture is writ large in overt and subtle contexts. Over the past two decades or so, anthropologists, archaeologists and geographers have developed a wide body of research concerning these socially constructed and perceived settings — commonly known as "landscapes." This course takes a tour through time and across the globe to trace the formation of diverse social landscapes, starting in prehistoric times and ending in modern times. We cover various urban landscapes, rural landscapes, nomadic landscapes (and others), and the intersection of the natural environment, the built environments and the symbolism that weaves them together. Chronologically, we range from 3000 BCE to 2009 CE and we cover all the continents. This course also traces the intellectual history of the study of landscape as a social phenomenon, and investigates the current methods used to recover and describe social landscapes around the world and through time. Join in situating your own social map alongside the most famous and the most obscure landscapes of the world, and trace the global currents of your social landscape.

---

#### L48 Anthro 376 Warriors, Merchants, Monks and Courtesans: Ancient Narratives of Globalization in Google Earth

This introductory seminar-style course examines the history of globalization through the narrative accounts of those who lived along some of the great trade routes of the Old World. Through a combination of in-class discussion and hands-on tutorials and projects in Google Earth, we examine how day-to-day local interactions and the experiences of individuals contributed to broader cultural exchanges and the shaping of ancient cosmopolitan centers. We use a bottom-up approach to understand the process of globalization, and why it is not only a phenomenon of the modern world. This course covers a large geographic and temporal span, but it is not about memorizing lists of dates and places or putting dots on a map — it is about learning how to interpret multiple strands of knowledge and put them together into a cohesive narrative of history. The course covers four broad anthropological themes related to Old World history and globalization in conjunction with weekly lessons in Google Earth; there are no prerequisites for either. The knowledge and skills gained in the course lead to a final independent research project consisting of a short paper and an interactive digital map that can be shared online through the Google Earth community.  
Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC EN: S

---

#### L48 Anthro 3773 Culture and Society in East Asia

This course presents an overview of cultures and contemporary social/political changes in East Asia. In Western society, East Asia often has been viewed as a place of enduring cultural identities, but it also has been a region of one of the world's most dynamic and rapid transformations. In this course, we examine both the continuity and change of cultural and social patterns in this region. Students compare anthropological and ethnographic studies of the Peoples' Republic of China, Taiwan, South Korea and Japan, supplemented by selected research from sociology, history and political science. The course focuses on specific

areas of cultural and social change in each society, including kinship and family; gender; ethnicity; economic and political development; and health and social policy.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

#### **L48 Anthro 3775 Ancient Eurasia and the New Silk Roads**

This course explores the rise of civilization in the broad region of Eurasia, spanning from the eastern edges of Europe to the western edges of China. The focus of the course is the unique trajectory of civilization that is made evident in the region of Central Eurasia from roughly 6000 BC to the historical era (ca. AD 250). In addition to this ancient focus, the course aims to relate many of the most historically durable characteristics of the region to contemporary developments of the past two or three centuries. Fundamentally, this course asks us to reconceptualize the notion of "civilization" from the perspective of societies whose dominant forms of organization defied typical classifications such as "states" and "empires" and, instead, shaped a wholly different social order over the past 5,000 years or more. This class provides a well-rounded experience of the geography, social organization and social interconnections of one of the most essential and pivotal regions in world history and contemporary political discourse.

Credit 3 units. A&S: SS, CD, SD A&S IQ: LCD, SSC, SD Art: SSC BU: IS EN: S

---

#### **L48 Anthro 380 Applications in GIS**

This introductory course in Geographic Information Systems (GIS) is designed to provide basic knowledge of GIS theory and applications using the existing state-of-the-art GIS software. The course is taught using a combination of lectures, demonstrations and hands-on, interactive tutorials in the classroom. The first weeks of the course provide a broad view of how you can display and query spatial data and produce map products. The remainder of the course focus on applying spatial analytical tools to address questions and solve problems. As the semester develops, more tools are added to your GIS toolbox so that you can complete a final independent project that integrates material learned during the course. Students are encouraged to design individualized final projects using their own or other available data; however, some already prepared final projects also are available.

---

#### **L48 Anthro 3832 Music and Healing**

In this course, we broadly consider issues of music and healing, drawing from the fields of medical ethnomusicology, medical anthropology, music therapy, and psychology. Our case studies are multi-sited, as we interrogate musical healings and healing music from diverse global and historical perspectives. We approach our study of musical practices with the understanding that the social, cultural and political contexts where "music" and "healing" are themselves created inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We read a variety of academic literature and use media texts and listening examples to develop interdisciplinary and cross-cultural analyses of music and healing. Issues of national consciousness, post/colonialism, gender, sexuality, race, ethnicity, class, religion, dis/ability and the role of history/memory remain central to our explorations of music and healing.

---

#### **L48 Anthro 3833 Performance and Healing: The Politics of Health Representation**

The purpose of this course is to bridge the disciplines of medical anthropology, global public health, and medical humanities through deep consideration of how variegated knowledge about health, healing and illness is produced and performed in a variety of public forums. Students explore the ways in which knowledge is produced about particular global health topics through representation in text, image, sound, film/television, and live performance art. Using interdisciplinary theory and methods, this course answers the following questions: Why are these representation modalities important, and how do we analyze them in practice? Drawing on the fields of medical anthropology, media studies, global public health, and performance studies, this course elucidates the relationships between knowledge production, representation, discourse, health and power through three case studies. Case study topics include: HIV/AIDS, Heroin Injection Use, and Domestic and Sexual Violence. Although the course provides an interdisciplinary perspective for understanding and analyzing different ways of representing illness and healing, it is also deeply grounded within the political-economy of health framework of critical medical anthropology. The following topics are central to our analyses in this class: gender, sexuality, the body, class, ethnicity and language.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

---

#### **L48 Anthro 3851 History and Theory of Anthropology**

This course examines the history of anthropology and the major theoretical frameworks of the field to the present. Key theorists discussed in this class include Geertz, Foucault, Marx, Mead and Weber, as well as the deep roots of anthropology in strands of philosophy and social thought running back centuries. Ethnographic case studies from around the world are read in order to keep the theories palpable and grounded. Key themes discussed in the class include the concept of culture, how and why societies change and evolve, ways that meanings and identities are made, the role of history in the present, diverse forms of power and experience, and issues of diversity amid contemporary global life.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

#### **L48 Anthro 3874 International Public Health**

This course explores current topics in international public health using a case-study-based approach, emphasizing public health issues affecting low- and middle-income countries; introduction to the tools and methods of international public health research and programs; in-depth examination and critique of the roles of local and national governments, international agencies and third-party donors in international public health work; and the contributions of anthropology to the international public health agenda.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC EN: S

---

#### **L48 Anthro 3875 Pharmaceutical Personhood**

This course examines sociocultural dimensions of pharmaceutical production and consumption in the contemporary world. Pharmaceuticals have brought remarkable promises. Their consumption also reflects various social inequalities and substantial transformations in human experience that demand critical attention. We examine the history and global reach of the pharmaceutical industry, the content of pharmaceutical advertising, and pharmaceutical use in the treatment of various kinds of illness, including common mental

disorders, post-traumatic experience, chronic illness, eating disorders and lifestyle disorders. Case studies are drawn from diverse societies. We also explore various angles of public criticism about the pharmaceutical industry. No background in anthropology is required.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

---

#### **L48 Anthro 3882 Psychological Anthropology**

The objective of this course is to introduce students to the central topics and methods of psychological anthropology. Psychological anthropology is concerned with the interplay of psychology and culture on both the individual and group levels. We look cross-culturally at such topics as child and adolescent development; religious experience; illness and healing; self and identity, gender and sexuality; reasoning and symbolism; and psychopathology. This class draws upon a range of sources, including ethnographies, psychoanalytic theory, contemporary critical theory and cross-cultural materials.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

---

#### **L48 Anthro 3884 Regulating Reproduction: Morality, Politics and (In)justice**

This course centers on the burgeoning corpus of anthropological scholarship on reproduction, with special attention to the regulation of reproductive behaviors and population management in cross-cultural perspective. Anthropologists and feminist scholars have shown how reproduction — which links individual bodies to the body politic — is a privileged site for processes of governance. Scholars have also shown how seemingly personal reproductive choices made in the micro units of families are always bound up with broader, if obscured, economic, national and political projects. In this course, we will cover how diverse entities, including the state, the Church, NGOs and feminist groups, seek to manage reproductive behaviors and politics across the world. We will discuss population control campaigns (such as China's notorious one-child policy) and pronatalist population policies (like those seen in Israel) in order to underscore how the management of fertility becomes a crucial site for nationalist and state-building projects. In this course we examine processes of "reproductive governance" around topics including pregnancy and birth, family planning, abortion and adoption. We also examine how the global proliferation of Assisted Reproductive Technologies (such as in vitro, sonogram, abortifacient pills, amniocentesis) intersects with efforts to govern reproduction. Crucially, we take class and race as key axes through which reproduction is experienced and stratified in diverse contexts. At the end of this course students should have a solid grasp of key topics and themes in the anthropology of reproductive governance, as well as more in-depth knowledge of a particular controversial reproductive issue that they choose to focus on for their final research paper.

Credit 3 units. A&S IQ: SSC EN: S

---

#### **L48 Anthro 3900 Intermediate Directed Research**

This course level is typically taken by juniors or seniors during their first semester in the lab, or by advanced freshmen and sophomores. The expectations of a 300-level directed research project will be greater than those of a 200-level directed research. Student participation in research activities should include higher-level participation, including completing literature reviews, running complex assays, or similar work. The student is expected to be proficient in the appropriate research techniques

of a lab, familiar with relevant literatures surrounding the project, and capable of working with minimal supervision. There should be some form of final evaluation or project, but an independent research project is not necessary. May be taken for 1-3 credit hours, 1-2 recommended. Students must enroll in a specific section with a faculty member and receive approval from the department.

Credit variable, maximum 3 units.

---

#### **L48 Anthro 397 Proseminar: Issues and Research in Anthropology**

Designed to introduce the student to current issues in Anthropology and to research being carried out by faculty. Topics vary each year. Each departmental member addresses issues in their particular specialty. Required of all majors; may be taken before declaring major, and may be taken by nonmajors.

Credit 1 unit. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

#### **L48 Anthro 399 Undergraduate Teaching Assistant**

Open to advanced undergraduates only. Usual duties of teaching assistant in laboratory or other selected courses. Prerequisite: permission of instructor.

Credit 3 units.

---

#### **L48 Anthro 3999 Class Mentor**

Classroom instructional assistance through mentoring activities assigned by instructor. Limited to advanced undergraduates only. Permission of instructor required.

Credit variable, maximum 3 units.

---

#### **L48 Anthro 4002 Internship in Interrogating Health, Race and Inequalities**

Internship in Interrogating Health, Race and Inequalities is intended for advanced undergraduates who are enrolled in the course Anthro 4003 (Interrogating Health, Race and Inequalities) and who have previous course work in (medical) anthropology, public health, urban policy, or African and African-American Studies. The internship experience is designed to facilitate students' familiarity with research and evaluation strategies that *both* address structural factors shaping health outcomes and are sensitive to community needs and sociocultural contexts. The internship experience contributes to students' in-class understanding of the ways that race as a historically produced social construct interacts with other axes of diversity and social determinants to produce particular health outcomes. Prerequisite: permission of the instructor. Corequisite: Anthro 4003.

Same as I50 InterD 4002

Credit 1 unit.

---

#### **L48 Anthro 4003 Interrogating Health, Race and Inequalities: Public Health, Medical Anthropology and History**

Interrogating Health, Race and Inequalities is intended for graduate students in the School of Social Work and in Arts & Sciences as well as advanced undergraduates in Arts & Sciences who have previous course work in medical anthropology, public health or urban policy. The fundamental goal of the course is to demonstrate that health is not merely a medical or biological phenomenon but more importantly the product of social, economic, political and environmental factors. To meet this goal the course is designed to examine the intersection of race/ethnicity and health from multiple analytic approaches and methodologies. Course readings draw from

the fields of public health, anthropology, history and policy analysis. Teaching activities include lectures, group projects and presentations, videos, and discussions led by the course instructors. These in-class activities are supplemented with field trips and field-based projects. By the end of the course students are expected to have a strong understanding of race as a historically produced social construct as well as how race interacts with other axes of diversity and social determinants to produce particular health outcomes. Students gain an understanding of the health disparity literature and a solid understanding of multiple and intersecting causes of these disparities.

Same as IS0 InterD 4001  
 Credit 3 units.

**L48 Anthro 401 Evolution of Nonhuman Primates**

Discussion and analysis of primate evolution with emphasis on comparative and functional anatomy and primate paleontology. Prerequisite: permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L48 Anthro 4011 Popular Culture and Consumption in Modern China**

This writing-intensive seminar explores transformations in popular culture and everyday life in Chinese society since 1949 through an analytical focus on political economy and material culture. Drawing upon ethnographic texts, films and material artifacts, we investigate how the forces of state control and global capitalism converge to shape consumer desires and everyday habits in contemporary China. Case studies include eating habits, fashion standards, housing trends, entertainment, sports and counterfeit goods. Prerequisite: previous course in China studies (anthropology, economics, history, literature, philosophy or political science) required. Enrollment by instructor approval only.

Credit 3 units. A&S: SS, CD, WI A&S IQ: LCD, SSC Art: SSC EN: S

---

**L48 Anthro 4022 Transnational Reproductive Health Issues: Meanings, Technologies, Practices**

This course covers recent scholarship on gender and reproductive health, including such issues as reproduction and the disciplinary power of the state, contested reproductive relations within families and communities, and the implications of global flows of biotechnology, population and information for reproductive strategies at the local level. We also explore how transnational migration and globalization have shaped reproductive health, the diverse meanings associated with reproductive processes, and decisions concerning reproduction. Reproduction serves as a focus to illuminate the cultural politics of gender, power and sexuality.

Credit 3 units. A&S: SS, CD, SD A&S IQ: LCD, SSC, SD Art: SSC BU: BA EN: S

---

**L48 Anthro 403 Archaeology and Early Ethnography of the Southwest**

This course integrates archaeological, historical and early ethnographic dimensions of American Indian societies in the southwestern United States and northwest Mexico, a region famous for its challenging environment, cultural diversity and the contributions made by its Native inhabitants. Emphasis is placed on the development of sophisticated desert agriculture and on the rise of regionally integrated cultures including Chaco Canyon

and Mesa Verde. The impact of Spanish, Mexican and American colonization are explored. Ethnographies of Tohono O'odham (Papago), Hopi, Zuni, Rio Grande Pueblo and Navajo societies are discussed.

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC EN: S

---

**L48 Anthro 4033 Culture, Illness and Healing in Asia**

This course examines the place of health, illness and healing in Asian societies. We explore how people experience, narrate and respond to illness and other forms of suffering — including political violence, extreme poverty and health inequalities. In lectures and discussions we discuss major changes that medicine and public health are undergoing and how those changes affect the training of practitioners, health care policy, clinical practice and ethics. The course familiarizes students with key concepts and approaches in medical anthropology by considering case studies from a number of social settings including China, India, Indonesia, Japan, Korea, Taiwan, Tibet, Thailand, Vietnam and Asian immigrants in the United States. We also investigate the sociocultural dimensions of illness and the medicalization of social problems in Asia, examining how gender, ethnicity, socioeconomic status, disability and other forms of social difference affect medical knowledge and disease outcomes. This course is intended for anthropology majors, students considering careers in medicine and public health, and others interested in learning how anthropology can help us understand human suffering and formulate more effective interventions.

**L48 Anthro 4041 Islam and Politics**

Blending history and ethnography, this course covers politics in the Islamic world in historical and contemporary times. Topics include history of Islam, uniformity and diversity in belief and practice (global patterns, local realities), revolution and social change, women and veiling, and the international dimensions of resurgent Islam. Geographical focus extends from Morocco to Indonesia; discussion of other Muslim communities is included (Bosnia, Chechnya, sub-Saharan Africa, U.S.).

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC BU: IS

---

**L48 Anthro 4042 Islam Across Cultures**

In this seminar, we examine the variety of historical and contemporary ways of interpreting and practicing Islam, with special attention to issues of ritual, law and the state, and gender. Cases are drawn from Asia, Europe, Africa and the Middle East, and students engage in fieldwork or library research projects.

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC

---

**L48 Anthro 406 Primate Ecology and Social Structure**

Survey of the ecology and individual and social behavior, adaptations and interactions of the major groups of primates. Emphasis on studies designed to examine the relationships among ecology, morphophysiology and behavior. Methods used in collecting data on primates in the field. Prerequisite: Anthro 150A or one 100-level biology course.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L48 Anthro 4062 The Art of Borrowing: The "West" in Japanese Life**

This course aims to examine Western influences in Japan and Japan's reconceptualizing the "West" in various aspects

of popular culture, including cuisine, sports, music, language, advertising, entertainment and domesticity. It is primarily an anthropological survey with historical references on Japan's turn to Western civilization in the modern era. The course explores Japanese perceptions of the "West," and how Japanese consume the "West" by attaching meanings to "Western" symbols and practices, and making them part of Japanese culture and life. Rather than explicating Japan's relationship with the West, the course scrutinizes the "West" constructed within Japanese discourse, as both a racial/ethnic other and a cultural fantasy. Course assignments include a round table discussion on specific topics relating to cultural integration and internationalization, and globalization and localization. Same as L97 IAS 4062

#### L48 Anthro 4082 Origin of Evolutionary Thought

This course provides an in-depth introduction to classic works in evolutionary biology and evolutionary anthropology. Students will read primary as well as some secondary sources and be expected to discuss those materials each week in class. Students should expect a very heavy reading load, and should plan on reading the assignments throughout the week.

Credit 3 units. A&S IQ: NSM

---

#### L48 Anthro 4091 Sexuality, Gender and Change in Africa

This course considers histories and social constructions of gender and sexuality in sub-Saharan Africa during the colonial and contemporary periods. We will examine gender and sexuality both as sets of identities and practices and as part of wider questions of work, domesticity, social control, resistance, and meaning. Course materials include ethnographic and historical materials and African novels and films. Prerequisite: graduate students or undergraduates with previous AFAS or upper-level anthropology course.

Same as L90 AFAS 409

#### L48 Anthro 4100 Topics in Anthropology: Ethnographic Perspectives on Mental Health in Africa

In this course we will draw on ethnographic case studies from Africa in order to assess changing understandings of mental health and illness and look at institutions and therapeutic practices which have been developed at different times and in different sociocultural contexts to foster mental health and treat mental illness. The first part of the course has a historical focus and traces the development of "western" psychiatry during colonial times and its various "entanglements" with "traditional" ways of healing and dealing with mental illness. The second part of the course focuses on contemporary mental health regimes and the ongoing challenges of medical pluralism. By drawing on recent ethnographic research, we will discuss current diagnostic categories and phenomena — for instance, depression, schizophrenia, suicide or PTSD — and the ways these are dealt with from a critical, anthropological perspective.

#### L48 Anthro 4102 Latin America and the Rise of the Global South

The rise of the global south — and the reordering of global geopolitics, economics and cultural imaginaries — is characterized by progressive change and intense conflict.

Economic growth coincides with the impacts of global warming, the assault on natural resources, the rise of new consumers and the entrenchment of deep inequalities. We also see the emergence of cultural and political formations that range from the horrific to the inspiring. Latin America is a central node of the new global south. Here history takes unpredictable turns in the face of declining U.S. hegemony, the economic growth of Brazil, legacies of militarism and political violence, a feverish attack on nature, resurgent economic nationalism, and defiant "anti-globalization" movements. Through close reading of contemporary ethnographies of Latin America we explore emergent cultural and political-economic processes in the region; we consider south-south articulations (theoretical, cultural, political-economic) between Latin America, China, Africa and India; and we reflect on the changing role, meaning and relationships of the United States in the region.

---

#### L48 Anthro 4112 Body and Flesh: Theorizing Embodiment

This seminar explores a wide range of readings on "the body" as a site of theoretical analysis in social scientific and humanistic inquiry. Issues include: How do we think about the body as simultaneously material (flesh and bone) and constructed in and through social and political discourse? How do we think about the relationship between these contingent bodies and subjective experiences of "self" in various contexts? The course focuses upon the different ways in which these questions have been posed and engaged, and the implications of these formulations for the theorizing of human experience. Prerequisite: Anthro 3201 or permission of instructor.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

#### L48 Anthro 4113 Advanced Psychological Anthropology

This seminar examines the intersection of psychological and anthropological theories and methods and their utility in the study of culture and human experience. This course is an in-depth exploration of some of the key theorists and theoretical domains that have defined the field of psychological anthropology and beyond, including Bakhtin, Bateson, Chodorow, D'Andrade, Ewing, Freud, Goffman, Hallowell, Holland, Irigaray, Kleinman, Kohut, Lacan, Lutz, Rosaldo, Strauss, Sapir, Schepher-Hughes and Vygotsky, among others. By the end of the course, students have a solid grounding in linguistic, psychoanalytic, cognitive, symbolic, developmental, interactionist and critical approaches within psychological anthropology. Prerequisites: at least one of the following: Anthro 3201, Anthro 3882, graduate standing or permission of instructor.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

#### L48 Anthro 4114 Anthropology and Existentialism

This course examines what it means to be human. Drawing on existentialist philosophy and ethnography, this course is about appreciating the richness, the deep emotional tone, and also the dangers of human experience. Case studies look at profound aspects of existence, such as suffering, healing, mercy and hope, across diverse cultures. Specific themes covered include the ordinary life, how we perceive the world around us, the feeling of being at home and senses of place, how we experience pain, what makes our bodies powerful or vulnerable, why things really matter, and how communities cope with trauma and violence. This course is especially relevant for students interested in medical anthropology and social dimensions of health and illness. No background in anthropology or philosophy is required.

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC BU:  
ETH EN: S

---

#### L48 Anthro 4115 Anthropology of Deviance

This course provides an anthropological perspective on notions of "deviance" as social, psychological, moral and medical mechanisms of control and regulation. Students learn to critically engage and evaluate dominant etiological theories of deviance, local and global contexts of deviance, and social responses to deviance as cultural processes through which communities make (and unmake) meaningful human relationships. Through academic texts, ethnographic accounts, clinical case materials and firsthand accounts, students explore multiple dimensions of what it means to be "deviant" or "normal" in a given social or cultural context. Sample topics include: historical trajectories of deviance, deviance and criminology, social class and inequality, prison cultures, deviance and resistance, deviant personalities, forensic psychiatry, deviant vs. socially sanctioned violence, and stigma.

Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Art: SSC EN: S

---

#### L48 Anthro 4116 Anthropology and Experiment

In recent years, many cultural anthropologists have described their work as "experimental." On the surface, the notion of experimentation leads something of a double life. On the one hand, in its ideal form, it stands for rigidly held methodological tenets aimed at answering questions in rigorous ways. This kind of experimentation is the hallmark of "scientific" inquiry. On the other hand, experimentation implies something of openness, of tentative and flexible exploration. Through an examination of works on experiments, as well as purportedly experimental ethnographies, we pursue the question: What is an experimental mode of inquiry in cultural anthropology, and how does it square with the two idealized meanings of experimentation? We examine the links and resonances between different notions of what experiments do, what they describe in terms of both form and method, how they begin and end, how they are assessed as successes or failures, and what sort of knowledge they produce. This course involves reading across cultural anthropology, science studies and the philosophy of science to better understand different approaches to experiments across domains of research and writing. Can we learn something about what anthropologists do in experimental works from the wealth of thoughtful scholarship on experiments in other fields? Is there something common to experimentation in cultural anthropology and experimentation elsewhere in the social sciences and beyond?

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

#### L48 Anthro 4117 Nature/Culture

What do we mean by "nature" or by designating something as "natural"? How do we distinguish nature from culture and where does such a distinction break down, become political or controversial? Is the distinction between nature and culture itself universal, or does it emerge from a particular history and reflect particular preconceptions and understandings? And how do new technologies reconfigure this distinction? In this course, we explore such questions, paying special attention to the ways anthropology, as a discipline, has relied on, reinforced, and legitimated this great divide.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

#### L48 Anthro 4118 The Good Cause: Psychological Anthropology of Moral Crusades

Why do people join moral crusades? These are social movements based on powerful moral institutions, ranging from the abolitionist and suffragette movements to witch hunts, insurgency and ethnic riots. Such movements are extremely diverse, yet their unfolding and the dynamics of recruitment show remarkably common properties. We will examine a series of empirical cases, including recent events, and assess the relevance of models based on individual psychological dynamics, intuitive moral capacities, and human motivation for participation in collective action.

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

#### L48 Anthro 411W Anthropology and Existentialism — Writing-Intensive Seminar

This course examines what it means to be human. Drawing on existentialist philosophy and ethnography, this course is about appreciating the richness, the deep emotional tone, and also the dangers of human experience. Case studies look at profound aspects of existence, such as suffering, healing, mercy and hope, across diverse cultures. Specific themes covered include the ordinary life, how we perceive the world around us, the feeling of being at home and senses of place, how we experience pain, what makes our bodies powerful or vulnerable, why things really matter, and how communities cope with trauma and violence. This course is especially relevant for students interested in medical anthropology and social dimensions of health and illness. No background in anthropology or philosophy is required. This is the writing-intensive version of Anthro 4114.

Credit 3 units. A&S: SS, CD, WI Art: SSC EN: S

---

#### L48 Anthro 4123 Argumentation Through Ethnography

Ethnography is the traditional mainstay of anthropological academic writing. Through ethnography, anthropologists do more than simply describe a culture or a group of people; rather, they organize and present their field materials in particular ways in order to make intellectual, theoretical, and sometimes even political arguments. This seminar will explore the different ways anthropologists have used ethnography to make intellectual claims and frame theoretical or practical arguments. The aim of the course is to help students develop critical reading skills for engaging ethnographic materials as well as to explore the ways in which ethnography, when done well, can be a persuasive and engaging means of academic argumentation. This course is intended as a sequel to Anthro 472. Prerequisite: Anthro 472 or permission of instructor.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

#### L48 Anthro 4124 Language and Politics

Language is a constitutive part of political processes. While many agree that language is used to symbolize or express political action, the main focus of this course is on how linguistic practice and ideology contributes to the creation of political stances, events and spheres. Topics addressed include political rhetoric and ritual, the emergence of public spheres, discrimination, as well as ethnic conflict, nationalism and colonialism.

**L48 Anthro 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics**

In the year 2000, HIV became the world's leading infectious cause of adult death, and in the next 10 years, AIDS was expected to kill more people than all wars of the 20th century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not lack of knowledge or resources, but global inequalities and the conceptual frameworks with which we understand health, human interaction and sexuality. This course emphasizes the ethnographic approach for cultural analysis of responses to HIV/AIDS. Students explore the relationship between local communities and wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power and culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates; ethics and responsibilities; drug testing and marketing; the making of the AIDS industry and "risk" categories; prevention and education strategies; interaction between biomedicine and alternative healing systems; and medical advances and hopes.

---

**L48 Anthro 4135 Tobacco: History, Culture, Science, and Policy**

Tobacco is the most important public health and medical problem of our time, the leading cause of cancer and other chronic diseases. This course examines tobacco's important role in shaping the modern world and global health over the course of the last five centuries, from indigenous uses of tobacco to plantation slavery to the cigarette boom to the politics of health and smoking in the 21st century. Through in-depth historical and anthropological case studies, tobacco provides a window into trends in government and law, medicine and public health, business and economics, society and culture, including changing social meanings of gender, race, class, sexuality, advertising, consumerism, risk, responsibility and health in the United States and worldwide. This course also introduces students to public health approaches to noncommunicable disease prevention, environmental health, and healthy lifestyle promotion. No background in anthropology or public health is required.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: ETH EN: S

---

**L48 Anthro 4136 Sexual Health and the City: A Community-Based Learning Course**

In this community-based learning course, students partner with a St. Louis AIDS service organization (ASO) or sexual health agency to explore how the interrelationships among gender, class, race/ethnicity and sexual identity shape sexual health decisions, outcomes and access to services. Students also examine the complex relationship between men's and women's life goals and constraints, on the one hand, and the public health management of sexual health, on the other. In collaboration with their community partner and its clients, students develop a project that addresses an identified need of the organization and the community it serves. Course readings draw from the fields of anthropology, public health, feminist studies and policy making. Prerequisite: PHealth 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics or permission from the instructor, which is determined based on past student's experience in the fields of medical anthropology or sexual/reproductive health.

Same as L90 AFAS 406

---

**L48 Anthro 419 Primate Behavior**

Discussion and analysis of recent research on the social behavior of nonhuman primates. Data from both field and laboratory study. Prerequisite: Anthro 406 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L48 Anthro 4191 Primate Cognition**

This course investigates historical and current views regarding the cognitive capacities of nonhuman primates, and the extent to which these abilities are shared with humans. Topics for this class include: social cognition, problem-solving, tool use, culture, communication, theory of mind, deception, self-recognition, imitation and numerical cognition. The classes involve discussion and critical evaluation of theory and methods in this challenging and exciting area of primate cognitive research.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L48 Anthro 4202 Anthropological Genetics**

This course examines the principles of evolutionary genetics as applied to complex characters such as morphology, behavior, life history and disease. Mathematical models of quantitative inheritance and evolution are discussed. Special topics include kin selection, sexual dimorphism and conservation genetics. Prerequisite: Anthro 150A or introductory biology.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L48 Anthro 4211 Paleoethnobotany and Ethnobotany**

Interrelationships between plants and people, especially in past societies. Recovery and analysis of plant remains from archaeological sites; interpreting subsistence and vegetation changes; medicinal, ritual and technological uses of plants; plant domestication and agricultural intensification. Modern efforts to understand and preserve threatened traditional ethnobotanical practices. Prerequisite: Anthro 190BP or an introductory botany course, or permission of instructor.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI Art: SSC

---

**L48 Anthro 4212 Advanced Methods in Paleoethnobotany**

Advanced analytical techniques for the study of archaeological plant remains. Tools and methods for micromorphological recognition, including electron microscopy. Photomicroscopy at low magnification, management, tabulation and reporting of data. Prerequisite: Anthro 4211 or permission of instructor.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

**L48 Anthro 4214 The Archaeology of Food and Drink**

Studies of past human diets have moved beyond analyses of animal bones and seeds to encompass new theoretical goals and innovative analytical techniques. In this seminar-style course, students explore methods of understanding food-related social interactions such as evidence including residues, ancient DNA, isotopes and trace elements, along with more traditional artifacts and archaeobotanical and zooarchaeological remains. By examining case studies from around the world, we evaluate the current state of research attempting to integrate the biological and cultural aspects of eating and drinking.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC EN: S

---

**L48 Anthro 4215 Anthropology of Food**

The rising interest in food research crosscuts various academic disciplines. This seminar focuses on aspects of food of particular interest in anthropology. The first two-thirds of the course is reading-intensive and discussion-intensive. Each student writes short review/response papers for major readings. For the final third, we still are reading and discussing, but the reading load is lighter (and we have a field trip) as students devote more time to their research papers. The research paper is a major effort on a topic discussed with and approved by the professor. In most cases it has to deal with cultural and historical aspects of a food, set of foods, form of consumption or aspect of food production. Papers are critiqued, assigned a provisional grade, revised and resubmitted.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC EN: S

---

**L48 Anthro 4240 The Plundered Past: Archaeology's Challenges in the Modern World**

The public imagination thrills at the fantastic adventures of Indiana Jones and Laura Croft, Tomb Raider, but the reality of modern archaeology is more complex, ethically challenging and interesting than a simple treasure hunt. In the United States and Canada, our science museums and museums of anthropology still display artifacts that are regarded as sacred and culturally definitive by Indian nations, although such holdings are now subject to negotiation and repatriation. Art museums in Europe and the U.S. still are stocked with looted ancient masterpieces that are revered as vital heritage by the nations from which they were stolen. We display looted art alongside a much smaller number of legitimately excavated artifacts of masterpiece quality, so it is no surprise that our popular images of archaeologists as avid and undiscerning collectors raise little concern. But modern archaeologists are not extractors of art or even of scientific information, from places as passive and inert as the museums' objects ultimately occupy. Archaeologists work with living people inhabiting societies and states that care deeply about their pasts and the relics of it. They are active agents engaged with many other people in the production of knowledge about the past. In our rapidly shrinking world, educated sensitivity to the many ancient cultural legacies that shape the values of modern global society is more than a moral imperative; it is a basic form of collaboration in the common project of survival. Archaeologists are ethically charged to advance that project through education about the complex contemporary arena of artifacts, sites and information they occupy.

---

**L48 Anthro 4253 Researching Fertility, Mortality and Migration**

Students undertake research projects centering on the most fundamental demographic processes — fertility, mortality and migration. The first section covers basic demographic methodology so that students understand how population data is generated and demographic statistics analyzed. Then, course readings include seminal theoretical insights by anthropologists on demographic processes. Meanwhile, students work toward the completion of a term paper in which they are expected to undertake some original research on a topic of their choice (e.g., new reproductive technologies; cross-cultural adoption; ethnicity and migration). Each assignment in this course is a component of the final term paper. Prerequisite: Anthro 3612 Population and Society or permission of instructor.

Credit 3 units. A&S: SS, WI A&S IQ: LCD, SSC, WI Art: SSC EN: S

---

**L48 Anthro 4254 The Anthropology of Maternal Death**

No other commonly recorded health indicator shows such great disparities between rich and poor nations as does maternal mortality. More than 500,000 women die each year around the world from complications of pregnancy and childbirth, but 99 percent of these deaths occur in impoverished, non-industrialized countries. This course examines the reasons for this stunning discrepancy, looking at the biological, social, political and economic factors involved in maternal death. The course is conducted as a seminar based on detailed readings of relevant journal articles, group discussion, case studies and class presentations. Prerequisite: Anthro 3621.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L48 Anthro 4264 The Myth of Race**

This course describes the history of the myth of race and racism from the Spanish Inquisition to modern times. Since race is not a biological term but a cultural term, it is important for students to understand the origins and connections of ideas of race and racism from its beginnings in western thought to its current usage. The historical and literature connections can be seen throughout the writings and behavior of the Spanish Inquisition, to the Renaissance, though colonization and slavery, to the reconstruction, to the late 19th century, to the early 20th century, to modern times. In fact, the early history of anthropology can be traced through racist history.

Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD EN: S

---

**L48 Anthro 427 Social and Cultural Change**

Analysis of political, economic, and social transformations among societies in the developing and developed world. Examples are drawn from many societies throughout the globe.

Credit 3 units. A&S: SS, SD A&S IQ: LCD, SSC BU: IS EN: S

---

**L48 Anthro 4282 Political Ecology**

An exploration of how the interactions between culture and environment are mediated by local, national and global politics. Topics include "overpopulation," agricultural intensification, Green Revolution, biotechnology, corporate agriculture, green movements and organic farming. Each student prepares an in-depth research paper that may be presented to the class. Prerequisites: graduate standing, Anthro 361 or permission of instructor.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L48 Anthro 4286 Original Research in Environmental Anthropology**

In this course, we will focus our ethnographic lens on environmental issues in St. Louis. Through readings and original research, this advanced course in anthropology closely engages discussion and debates about methods, ethics and representation in qualitative environmental studies. Students will identify and undertake qualitative, ethnographic research regarding a local environmental issue. The central goal of this class is to provide a forum for students to grapple with the practical and ethical considerations of anthropological research. The class will be segmented into the following three units: ethics in research, data gathering and analysis, and continuing conversations

Credit 3 units. A&S IQ: SSC EN: S

---

**L48 Anthro 4287 Anthropology of Water**

This course examines one of the world's largest risks and grandest challenges: water security. By exploring water flows between cultures and landscapes, students will think critically about the challenges faced in different regions and societies of the world which can exacerbate or ameliorate issues of social justice and equity. Topics include cultural notions and values of water, technologies of water purification and conservation, big dam controversies, water as a "right" or water as a "commodity," and how epistemologies of water can drastically impact people and ecosystems. Texts will mainly be anthropological but will also draw from history, political ecology, geography and development economics. These will underscore the importance of multiple contexts (social, religious, economic, political, cultural) to the understanding of the scale and scope of this major problem.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: HUM, SSC EN: S

---

**L48 Anthro 4288 Being Human: The Food-Energy-Ecosystem-Water Nexus**

This course examines a trilogy of resources that are essential to producing human life: food, water and energy. These resources are inextricably linked not only to the most common and necessary of our day-to-day activities, but impact each other in profound ways. Until recently, the study of these resources was fragmented in separate sectors, ultimately leading to lack of institutional coordination, infrastructural lock-in and incomplete modeling systems. These incomplete systems overlook the complex overlaps of natural systems and render sustainability planning more tenuous than it could be. In response, these core resources are being studied together as a "nexus" to enhance synergies and prevent trade-offs across sectors. However, this nexus further requires astute attention to the all too "human" questions of resource use, waste and justice. If water, energy and food security are to be simultaneously achieved, social scientists must be at the forefront, contributing holistic research that brings the human back into socio-natural systems.

---

**L48 Anthro 4311 Biocultural Perspectives on Obesity and Nutrition**

From pink slime to red wine, causes and treatments for obesity are constantly in the headlines. With more than 35 percent of Americans currently obese, this is a tremendous biological and social issue in the United States. Obesity rates also are increasing globally despite billions of dollars spent on diets and public health interventions. Why is this happening and what can be done to change this? Why are humans fat and prone to obesity? How do we interpret appropriate body size? These are some of the questions we investigate in this class, specifically looking at the important physiological functions of adipose tissue and how both biological and cultural factors shape our perceptions of body image, health and the obesity epidemic.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L48 Anthro 4321 History of Physical Anthropology**

The history of physical (or biological) anthropology are traced from Darwin's time to the present. Factors that influenced major theories and subfields of physical anthropology are discussed along with current directions.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

**L48 Anthro 434 Behavioral Research at the St. Louis Zoo**

Students conduct research at the St. Louis Zoo. Training in designing of projects and analysis and interpretation of data. May be repeated for credit. Prerequisite: permission of instructor. Credit variable, maximum 6 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM BU: BA

---

**L48 Anthro 4361 Culture, Power and the State**

This seminar surveys anthropological theory and ethnography of the nation-state. We will discuss how culture and power are interrelated in the formation of state institutions and ideologies, governance and violence, social and spatial inequalities, and citizen identities, daily lives, and movements for change. We'll read key theoretical works (Weber, Marx, Foucault, Gramsci, liberal political theory, feminism, and post-structuralism, among others) and contemporary ethnographies of the state. Anthropology's place in public debates on "culture" and violent crises of the state — from Iraq to the U.S. heartland — will be addressed at the end of the semester.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L48 Anthro 4367 Culture, Power, Knowledge**

We often think of knowledge as universal and objective. But anthropologists have long studied ways in which knowledge varies in different cultural settings. In this course, we ask: What is knowledge, how does it arise, and what does it do? Is there such a thing as universal validity or is knowledge always tied to specific cultural practices? What happens when knowledge travels and how does knowledge figure in relations of power? We approach these questions through works in anthropology, philosophy and science studies.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: ETH EN: S

---

**L48 Anthro 4392 Capitalism and Culture**

Capitalism is perhaps the most important historical and social phenomenon in the modern world. In tribal settings and major cities alike, its complex impacts are evident. Through rich case studies of how capitalism touches down in diverse cultures, this course provides an introduction to anthropological perspectives on the economy and economic development. Themes covered include the history of capitalism and globalization, the cultural meanings of class and taste, the relationship between capitalism and popular culture, major artistic responses to capitalism, social movements such as environmentalism, and the field of international development. No background in anthropology or economics is required.

Credit 3 units. A&S: SS, SD A&S IQ: LCD, SSC, SD Art: SSC EN: S

---

**L48 Anthro 4393 The Archaeology of Trade and Exchange**

Studies of trade and exchange are fundamental to our past, as cultures in contact result in new imaginings of self, communities, and place in the world. This course engages in archaeological and anthropological discussions about the interconnectedness that results from trade. This seminar concentrates on the discourse of material trade and the mechanisms for exchange, redistribution, dependency and resistance. It also examines the immaterial exchange of ideas, perceptions and values that alter concepts of identity, space and time. Globalization, political economies, and power are also addressed, along with ideas about territory, value, and social and political consequences of trade.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC EN: S

---

---

**L48 Anthro 4408 Trauma and Memory**

A thorough investigation of the effects of trauma on memory in both individuals and collective groups. Topics include flashback memories, forgetting and repression, post-traumatic stress and memory, and effects of trauma on individual and group identity. Prerequisites: Psych 100B + 6 units of advanced-level Psychology or Anthropology course work.

Same as L33 Psych 4408

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L48 Anthro 4452 In the Field: Ethnographic and Qualitative Methods**

This course provides an introduction to ethnographic and qualitative research. Ethnography is the study of culture and social organization primarily through participant observation and interviewing. Ethnographic research provides descriptive and interpretative analyses of the routine practices of everyday life. Ethnographic accounts represent different ways people live and make sense of their experiences and describe the types of social organization (for example, gender relations, class systems, racial divisions, or cultural contexts) that, in part, serve to structure or pattern social behavior. Students conduct a small-scale qualitative research project, and in the process they gain skills in various qualitative research methods. This course is suitable for both undergraduate and graduate students. One purpose of the course is to help students plan for subsequent thesis research, independent study projects, or dissertation research.

Same as L98 AMCS 441

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L48 Anthro 4453 Studying the City: Approaches to Social Research**

In this course we will explore social science/social scientific research methods. The course is designed primarily for students majoring in urban studies. However, the research skills that students will acquire can be applied to any substantive topic in the social sciences. The main goal of this course is that students develop the skills to independently design and execute high quality social research, regardless of their substantive interests. To develop these skills we will read about methods, assess published research from a methodological perspective, and complete original research projects.

Same as L18 URST 418

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L48 Anthro 4454 Cultures of Science and Technology**

This seminar explores questions of theory, method and ethics in the anthropology of science and technology. How is biomedicine changing what it is to be human? How can technologies and scientific practices be studied ethnographically? How are the politics of difference linked to the production of scientific knowledge? Through close reading of ethnographic texts and fieldwork experience both on- and offline, we investigate how scientific practice and technological innovation reorganize various aspects of human life on both global and local scales. Topics include the social construction of knowledge, the reproduction of racial categories in genomics, the cultures of cyberspace, the commodification of bodies in medical science, and the ways in which various technoscientific projects reshape natural and political orders in diverse locales.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI Art: SSC EN: S

---

**L48 Anthro 4455 Ethnographic Fieldwork: The Politics of Schooling**

This is a practice-based course in ethnographic fieldwork. Using a local case study (the cultural politics of schooling), we examine ethnographic fieldwork as an academic instrument and public social action. The course prepares students for independent research in academic or professional fields developing skills in critical thought, thesis and question development, background and internet research, perspective and empathy, social and political-economic analysis, observation, interviewing, oral histories, note-taking, data analysis, cultural interpretation, and writing. Student work contributes to the ongoing "St. Louis Schools' Ethnographic Documentation Project."

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L48 Anthro 4456 Ethnographic Fieldwork: Energy Politics**

This is a practice-based course in ethnographic fieldwork that will focus on the politics of fossil fuels and the renewable energy transition in St. Louis and Missouri. We will situate ourselves as anthropologists with an interest in understanding relationships between global warming, the socio-technical arrangements of energy production, circulation, and use in the city and region, public knowledge, health, and social and cultural practices, and the roles and activities of businesses, political institutions, and elected officials. Through case studies we will work to produce critical knowledge aimed at pushing institutions, the city, and the region toward the transition to renewable energy. Our efforts will produce empirical documentation, case studies, and proposals and may include field trips to resource extraction sites and government offices

Credit 3 units. Arch: SSP Art: SSP

---

**L48 Anthro 4481 Writing Culture**

Different ways of writing about people, culture and society in past and present times. Readings include anthropological works as well as works of fiction that represent people and the times, places and circumstances in which they live. Students conduct and write about their own ethnographical observations.

Credit 3 units. A&S: SS, WI A&S IQ: LCD, SSC, WI Art: SSC EN: S

---

**L48 Anthro 4517 Anthropology and Development**

What is "development"? Economic progress for all? A slow and gradual "improvement" in the human condition? Helping people with "projects"? Westernization? Modernization? The sorting out of bodies that are useful and can be put to work from those less useful bodies that must be contained, imprisoned or killed? The militarized accumulation of capital? The commodification of labor? The exhaustion of nature? In this advanced seminar we will consider how anthropologists — as writers, analysts, and theorists — have engaged the theories, meanings, practices and consequences of (sometimes externally directed) economic and political change. We focus on issues of the contemporary moment: oil; urban poverty and inequality (sex work, migration, water, debt, and cash transfer programs); and cultures of militarism. The course is designed to provide a graduate-level introduction to theory and ethnography based on intensive reading, discussion, critique and writing, with revision. It is open to advanced undergraduates and fulfills writing-intensive (WI) requirements, as well as capstone requirements for some majors.

Credit 3 units. A&S: SS, WI A&S IQ: LCD, SSC, WI Arch: SSC Art: SSC BU: ETH EN: S

---

---

**L48 Anthro 4561 Ceramic Analysis**

Method, techniques and models for analyzing prehistoric ceramics. Students conduct hands-on analyses of collections from Cahokia Mounds and the St. Louis region. Prerequisite: Anthro 314, graduate standing or permission of instructor. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

**L48 Anthro 4562 Artifact Analysis: Mississippian Cultures**

The purpose of this course is to provide students with an introductory, hands-on experience of the methods employed in the analysis of archaeological materials common to the Mississippian culture. Students conduct class projects based on collections from Cahokia Mounds and the St. Louis region. Prerequisite: Anthro 314 or equivalent, or graduate standing, or permission of instructor. Credit 3 units. A&S: SS A&S IQ: LCD, SSC Arch: SSC Art: SSC

---

**L48 Anthro 4564 Archaeobotanical Analysis**

Advanced laboratory and analytical techniques. Prerequisite: Anthro 4211 or permission of instructor. Credit 3 units. A&S: SS EN: S

---

**L48 Anthro 4565 Biomolecular Archaeology: Are You What You Eat?**

A revolution is underway in archaeology. Working at the cutting edge of isotopic and genetic technologies, researchers have been probing the building blocks of ancient proteins, life-DNA, fats and microfossils to rewrite our understanding of the past. Their discoveries and analyses have helped revise the human genealogical tree and answer such questions as: Are you what you eat? How different are we from the Neanderthals? Who first domesticated plants and animals? What was life like for our ancestors? In this class, we address those fundamental issues to understanding human nature. Here is science at its most engaging. Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

**L48 Anthro 4581 Principles of Human Anatomy and Development**

This course is designed for both undergraduate and graduate students in the anthropological, biological, and/or pre-medical sciences who wish to learn about human anatomy from various evolutionary, functional, developmental, and clinical perspectives. Lectures will emphasize the organizational and developmental principles of various organ systems of the human body. The course will also make use of our extensive anatomy museum of labeled dissected human specimens as well as our cast collections of numerous specimens from the human fossil record where appropriate. Frequent use of X-rays, CT, and MRI scans will also be used to help students visualize human anatomy from a number of different imaging modalities. Prerequisites: Undergraduate or graduate students in the anthropological, biological, and/or pre-medical sciences who have had at least one course in physical anthropology and/or biology, or consent of instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L48 Anthro 4582 Human Life History Theory**

Life history theory postulates that organisms must allocate finite time and finite resources between growth, maintenance and reproductive effort. This balance necessitates trade-offs in

specific traits related to body size and energy allocation between competing functions across the life of the organism. In this class, we start from this broad theory and look at the specific application of life history theory within anthropology. Humans, in particular, present unique and unusual life history characteristics, which we discuss in depth.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L48 Anthro 459 Human Osteology**

Analysis of skeletal material recovered in human paleontological and archaeological excavations. The development of bone and major diseases that affect skeletal structure. Prerequisite: permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L48 Anthro 4591 Human Functional Morphology**

A detailed consideration of the biological basis for variation in recent and past human skeletal anatomy as a framework for the interpretation of prehistoric human skeletal and fossil remains. Emphasis is placed on the structure, development and degeneration of bones and joints, the soft tissues which impinge upon individual bones; and the biomechanical patterns relating to bone and joint structures. Prerequisite: Anthro 3661, Anthro 459 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L48 Anthro 4595 Developmental Plasticity and Human Health**

A look at how early life — gestation plus infancy and childhood — contributes to the establishment of long-term physiology, variation and individual health from an anthropological perspective. The course includes current disease models of developmental origins, combined with evolutionary and adaptive perspectives on developmental plasticity and the construction of human health.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L48 Anthro 4597 The Archaeology of Life and Death**

The study of human remains in archaeological contexts offers us a rich perspective on human life and society in the past. Our bodies are shaped by genetics, environmental factors, subsistence, disease, and physical activities over the life course. At the same time, social organization, inequality and ideologies also shape the human experience; they often become reflected in the built environments of tombs and cemeteries, the grave offerings, and interment styles that surround human remains in archaeological contexts. This course offers an introduction to bioarchaeology and mortuary archaeology as complementary approaches to the study of life in the past. The goal of the course is to understand how activities, norms and beliefs, and environments shaped bodies in life and death, and the different ways in which archaeologists can gain insight into the past through the study of human remains and burials. Course lectures and discussions focus on recent advances in research and ongoing debates in the two fields with examples from prehistory and history around the world, from North and South America, to Europe, Asia and Africa. Although this course will provide a basic overview of human skeletal anatomy, it is strongly recommended that students have taken an introductory course on the subject prior to enrolling in the class.

Credit 3 units. A&S IQ: LCD, SSC EN: S

**L48 Anthro 4601 Topics in African-American Studies: Health in the Black Community: A Social Science Perspective**

Health matters for every facet of social life. In this course, we use a critical sociological perspective to explore the dynamic nature of health and health care experiences among blacks in the United States. We draw upon core concepts in Sociology, the Sociology of Health, Illness, and Care as well as Critical Race Theory and Social Epidemiology to guide our discussions throughout the semester. Using contemporary, real-world examples, we examine the causes and consequences of racial health disparities that too often situate blacks in positions of disadvantage. We use the work of scholars such as Patricia Hill Collins, David Williams, and Dorothy Roberts to explore topics ranging from racism in the health care system to the black immigrant health advantage to health and hip-hop. We consider how poor health and health care outcomes among blacks in the United States matter on a global scale. Throughout the course, we consider practical policy and programmatic interventions that can be implemented to eliminate poor health in black communities.

Same as L90 AFAS 4601

Credit 3 units. A&S: SS, SD A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

**L48 Anthro 4611 Seminar in Selected Topics in Learning & Memory: Collective Memory**

This course provides an overview and analysis of phenomena of people remembering as part of a group — one's country, one's state, one's university, one's family. Collective memories are critical for one's identity, for knowing who we are and how to interpret the world around us. We will consider narcissistic tendencies of group memories in specific contexts (e.g., the Russian vs. American interpretation of world events; views of Trump supporters vs. Clinton supporters on events in the U.S.). The course will range from humanistic, anthropological, psychological, and sociological perspectives on memory. Prerequisites: Psych 100B and a course on human memory or permission of the instructor.

Same as L33 Psych 461

Credit 3 units.

**L48 Anthro 4623 Art and Science of Inferential Statistics**

This course examines the historical roots, the scholarly development and the current applications of inferential statistics in a research context. The emphasis is on how social and natural variables are distributed, framing testable research questions, and choosing appropriate statistical tests. This course covers the testing of univariate, bivariate and multivariate hypotheses using parametric, non-parametric and re-sampling methods. Requires students to undertake statistical analyses of their own on real data sets. Familiarity with descriptive statistics is assumed. Designed for graduate students and advanced undergraduates. Permission of instructor is required for undergraduate enrollment.

Credit 3 units. A&S: SS, QA A&S IQ: SSC, AN Art: NSM EN: S

**L48 Anthro 4655 New Advances in Archaeology**

Archaeological research is moving at an increasingly rapid pace, with advances in archaeological methods and theory propelling new interpretations and understandings of archaeological findings. In this course we focus on contemporary developments in archaeology, with an emphasis on current trends in theory, method and discovery. The objectives of the course are to place emerging trends in archaeological research in a historical

context, to understand new methods and to explore how various theoretical approaches influence the conduct of archaeological research around the globe.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

**L48 Anthro 4661 Historical Archaeology**

This course focuses upon the methods and techniques employed in historical archaeology. We include methods of integration of written records through contextual studies, discussion of specific artifact type identification techniques, and seminar-type treatments of other aspects of the field. The class includes some hands-on lab work, working primarily with materials from the first American fort west of the Mississippi (Fort Belle Fontaine) and two Civil War period mansions. Prerequisite: 3 credits of archaeology or permission of instructor.

Credit 3 units. A&S: TH, CD, WI A&S IQ: HUM, LCD, WI Art:

HUM

**L48 Anthro 4682 Ethnoarchaeology**

Theories, methods and techniques applied by archaeologists to contemporary societies and materials to aid their understanding of extinct societies. Analysis of ethnographic research in both the Old and New Worlds. Participation with Professors Watson, Browman and Fritz is included in relevant topics. Prerequisites: Anthro 160B or 190BP, and permission of instructor.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM EN: H

**L48 Anthro 472 Social Theory and Anthropology**

A seminar on social theory and its ethnographic implications. Course combines major works of modern social theory, including Marx, Weber and Durkheim, with current work by contemporary anthropologists, such as Clifford Geertz, Eric Wolf, Marshall Sahlins and Fredrik Barth, and ethnographers from related disciplines, such as Pierre Bourdieu and Paul Willis. Prerequisite: previous anthropology course work or permission of instructor.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

**L48 Anthro 474 National Narratives and Collective Memory**

This course examines how national narratives shape the ideas of nation-states about themselves and others. It considers cultural, psychological and political aspects of narratives used to interpret the past and understand the present. In addition to reviewing conceptual foundations from the humanities and social sciences, particular national narratives are considered as case studies.

Same as L97 IAS 474

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

**L48 Anthro 4761 The Pleistocene Peopling of Eurasia**

The paleolithic archaeology, human paleobiology and paleoecology of the geographical expansions and adaptations of Eurasian humans through the Pleistocene. Prerequisite: Anthro 150A or 190B.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC

**L48 Anthro 4771 Out of the Wild: Domestication and Socioeconomic Diversity in Africa**

The reason for the beginnings and spread of food production during the early Holocene in so many parts of the world is one of the most interesting questions in archaeology. It now seems likely that there are many different pathways to domestication. In Africa, there is a record of up to several million years of human

existence as hunter-gatherers before some human populations adopted food production. Domestication of plants and animals about 10,000 years ago resulted in fundamental changes in human societies. It provided the basis for the increase in settlement densities, specialization and social stratification, and general decrease in mobility and dietary diversity characteristic of non-hunter-gatherer societies in the modern world. In this seminar, the class explores the phenomenon of domestication and the spread of food production, surveying the evidence for manipulation and domestication of plant and animal species by prehistoric peoples in Africa. We focus on how and why domestication occurred and factors that influenced its spread; interactions between late hunter-gatherers and early pastoralists; and intersections with complex societies of the Nile. We also look at the contributions of Africa to understanding pathways to food production world wide.

Credit 3 units. A&S: SS, WI A&S IQ: LCD, SSC, WI Art: SSC EN: S

---

**L48 Anthro 4792 The Many Paths Leading Toward the Creation of the Ancient City**

The purpose of this class is to examine the emergence of the Ancient City across the globe. We want to begin with the concepts of urbanism, city and metropolis. These are words whose derivation are to be found in the classical languages of the Mediterranean. Is there any means to reach an understanding of how other civilizations and societies characterized these special places on the landscape? In the past, many scholars have argued that market economies and state-level societies are essential to their existence. Such arguments reflect issues of sustainability in terms of the economy and the effective control of large populations through state-level institutions. While we want to understand the role of the economy and the level(s) of political integration involved in the process of urbanism, are there other cultural institutions such as religion that play a much larger and more significant role? Do these places reflect the "citizens" perception of the cosmos?

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC EN: S

---

**L48 Anthro 4803 Advanced GIS Modeling and Landscape Analysis**

The aim of this course is to learn to analyze archaeological data in terms of its spatial layout, geography, ecology, and temporal dynamics, using Geographic Information Systems and associated computer modeling techniques. A focus is placed on the relationship between natural environments, cultural geography, and the mapping of archaeological landscapes, and on the archaeologist's ability to accurately recover, reconstruct and analyze this relationship in a virtual environment.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L48 Anthro 481 Zooarchaeology**

Methods and techniques of analysis of faunal remains recovered in archaeological context, including aging, sexing, and the study of cultural modification of archaeological faunas.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L48 Anthro 4851 Topics in Jewish Studies: Critical Issues in the Study of Popular Music**

Consult Course Listings for current topic. Prerequisite: permission of instructor.

Same as L75 JINE 485

Credit 3 units. A&S: TH EN: H

---

**L48 Anthro 4881 Medicine and Anthropology**

Explores the fundamental relationship of anthropology to the art and science of medicine. Emphasis on the impact of anthropology on current modes of biomedical research; alternative systems of health and healing; role of anthropologist in biomedicine and public health; critical medical anthropology; anthropology and epidemiology. Prerequisite: junior standing.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

**L48 Anthro 4882 Anthropology and Public Health**

Anthropological approaches to public health practice and research; role of anthropology in public health systems; cross-cultural public health research; community vs. institutional bases of public health advocacy.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: ETH

---

**L48 Anthro 4883 The Political Economy of Health**

This course reviews social science contributions to understanding health as a function of political and economic influences. Considers the ways in which personal health is affected by macrosocial processes. Examines effects of globalization, international development and political instability on the health of individuals. Examples drawn from the U.S. and international contexts. Prerequisite: junior standing or above.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

**L48 Anthro 4885 Senior Seminar: Medicine and Society**

This course provides a forum for graduating seniors in the Medicine and Society Program to reconvene for a semester of facilitated discussion about issues related to illness, healing and culture. Prerequisites: Students must be seniors in good standing in the Medicine and Society Program.

Credit 1 unit. A&S IQ: SSC EN: S

---

**L48 Anthro 489 Seminar: Pathways to Domestication**

Survey of the evidence of the domestication of plants and animals, focusing on processes leading to domestication, and on the recognition of pristine features of domestication in the archaeological record. Prerequisite: one 300- or 400-level course in archaeology.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

**L48 Anthro 4892 Hunter-Gatherer Socioeconomic Variation**

This class explores the nature and extent of variation in hunter-gatherer socioeconomic systems as documented in the literature on recent hunter-gatherers, and in the archaeological record of the past 20,000 years. We discuss Woodburn's concept of delayed return hunter-gatherers, Testart's writing on hunter-gatherer socioeconomic organization, and archaeological concepts of simple and complex hunter-gatherers. We examine case studies of both delayed and immediate return hunter-gatherers from the Americas, Asia, Africa and Australia and emphasize understanding underlying reasons for differences between groups, and implications of differences for patterns of cultural change, including the adoption of food production.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC

---

**L48 Anthro 489W Seminar: Pathways to Domestication**

The origins of agriculture led to one of the most important transitions in human history, continuing to fascinate anthropologists and all who depend on farmers for food.

We examine evidence for the development and spread of settled and mobile farming systems in diverse regions of the world. We discuss old and new theoretical approaches and apply increasingly sophisticated methods for recovering and interpreting the evidence. Recent research puts us in a better position than ever before to understand the preconditions, processes, and possibly the causes of domestication and the spread of food production. This course is the WI version of Anthro 489 Seminar: Pathways to Domestication.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

---

#### L48 Anthro 490 Anthropological Research

Designed to give undergraduates research experience in various subdisciplines of Anthropology. May be taken more than once for credit. Prerequisite: Permission of faculty member under whom the research will be done.

Credit variable, maximum 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

#### L48 Anthro 491 Advanced Anthropological Research

Limited to those students who have successfully completed L48-490 and have a qualifying continuing research project. Prerequisite: Anthro 490 and permission of the faculty member who will supervise the continuing research project.

Credit variable, maximum 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

#### L48 Anthro 4911 Methods in Molecular Anthropology

We learn techniques used in molecular genetics and their application to studying the evolution and adaptation of human and nonhuman primates. This course covers DNA extraction from biological materials (e.g., buccal cells from cheek swabs, potentially also fecal samples from the primates at the zoo), primer design and polymerase chain reaction (PCR) to amplify a region of interest (student lead, with guidance) from isolated DNA. Use of gel electrophoresis to visualize and purify PCR products and sequencing reactions to view nucleic acid structure also are conducted. We also have a lecture on introductory bioinformatics. Throughout the course, we discuss the mechanisms underlying these techniques, why they work and how to troubleshoot problems. Students are expected to submit lab reports and to engage in peer review of others' lab reports. Finally, we discuss how molecular methods inform anthropological research. Students are also expected to take online safety training modules through EH&S.

Credit 3 units. A&S: NS A&S IQ: NSM

---

#### L48 Anthro 4951 Senior Honors Research

Limited to students who have qualified for the Anthropology honors program and who are conducting research for an honors thesis. Prerequisites: permission of the Anthropology faculty member supervising the honors research, and concurrent filing of notification with the Anthropology senior honors coordinator.

Credit variable, maximum 3 units.

---

#### L48 Anthro 4961 Senior Honors Thesis

Limited to students who have qualified for the Anthropology honors program and who are actively engaged in writing a senior honors thesis. Prerequisite: permission of the Anthropology senior honors coordinator.

Credit variable, maximum 3 units.

---

#### L48 Anthro 4975 Collecting Cultures: Taste, Passion and the Making of Art Histories

This seminar examines the theory and the cultural history of the collecting of art objects and artifacts from a range of cultures and periods, considering how and why both individuals and institutions create collections. What social and psychological factors drive this passion? What are the various cultural, political and aesthetic priorities that have driven this practice historically? How is cultural patrimony defined, and how do law, the art market and cross-cultural ethics impact the placement, study and display of a culture's material heritage? We build the seminar around the history of collecting in America, with a focus on Midwestern examples, and particularly, important case studies in St. Louis. We, for example, consider the significant local collections built by Joseph and Emily Rauh Pulitzer (modern art), and Morton May (modern and oceanic art), as well as the histories of both modern and non-Western collections now owned by the St. Louis area museums. This course is complemented by various local field trips (SLAM, Pulitzer, Kemper and Cahokia). Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211 or Art-Arch 215; one 300-level course in art history preferred; or permission of instructor.

Same as L01 Art-Arch 4975

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

#### L48 Anthro 4999 Capstone Experience

The Department of Anthropology offers several options for completing a capstone experience, which is recommended by the College of Arts & Sciences. One option is for students in any 400-level course in the department to secure permission of the instructor to simultaneously enroll in Anthro 4999. The instructor and student develop an individualized plan for expanding the normal content of the selected 400-level course into a capstone experience. Prerequisite: junior or senior standing. Enrollment requires permission of the department and the instructor.

Credit 1 unit.

---

## Arabic

The Department of Jewish, Islamic and Near Eastern Languages and Cultures offers a major and a minor in Arabic. As majors in Arabic, students can expect to gain proficiency in the language, study the area's literary and cultural landmarks, and gain familiarity with Near Eastern history and civilizations.

**Language Placement:** Placement tests are required for all students entering our language programs. Students may be eligible for up to 6 units of back credit based on advanced placement and successful completion of the recommended course. Native speakers are not eligible for back credit; evidence of secondary or post-secondary study of the language is required. Any units received from back credit cannot be counted toward the major or minor.

**Phone:** 314-935-5110 or 314-935-8567

**Email:** [artsci-jinelc@wustl.edu](mailto:artsci-jinelc@wustl.edu)

**Website:** <http://jinelc.wustl.edu>

## Faculty

For a list of affiliated faculty, please visit the Department of Jewish, Islamic and Near Eastern Languages and Cultures (p. 616) faculty page.

## Majors

### The Major in Arabic

#### Prerequisites

1. Two years language (Arabic) by course work or by placement
2. JINE 210C Introduction to Islamic Civilization and JINE 208F History, Text and Identity: Introduction to Jewish Civilization
  - Students with substantial prior course work may substitute an additional upper-level course with permission of adviser and the director of undergraduate studies (DUS).

#### Requirements

24 upper-level (3xx or 4xx) credits, including:

- 3 credits in departmental capstone course to be taken senior year. (Students may take it junior year with permission of adviser **and** DUS.)

and

- 21 credits as follows:
  - 12 credits of upper-level language (3xx or 4xx) courses
  - 6 credits in literature, society, history, culture, religion
  - 3 credits in another culture (for Arabic – Jewish Studies, Hebrew, South Asian Studies or Hindi)

### Additional Information

- Students are encouraged to take courses distributed in each of the following areas: literature and culture, history, and religion.
- Senior thesis writers should sign up for an appropriate 3-credit course in the fall and in the spring. (The 6 credits can be applied to the primary area of study.)
- Students enrolled in Washington University study abroad programs during the regular academic semester can earn a maximum of 9 credits subject to review by their adviser and the DUS. Summer programs and transfer courses can be granted as many as 6 credits subject to review by their adviser and the DUS. A limit of 9 credits in total can be applied to the major, whether the credits are earned in study abroad, summer programs, or transfer credit. For more information on preapproved study abroad programs, please visit the Overseas Programs website (<http://overseas.wustl.edu/study-abroad>).
- No credit will be given for courses taken outside the department other than those which are cross-listed.

- To be eligible to write a senior thesis, a student must maintain a GPA of 3.65 through the sixth semester.
- Students must maintain an average of B in all courses for the major. A grade of B- must be earned in each language course in order to advance to the next level.
- No course taken pass/fail can count toward either the prerequisites or the major.

## Minors

### The Minor in Arabic

#### Prerequisites

- Beginning Arabic I (JINE 107D), Beginning Arabic II (JINE 108D) — whether by course work or placement

#### Required courses (18 units)

- Introduction to Islamic Civilization (JINE 210C)
- 9 units from 200-, 300-, or 400-level courses in Arabic language
- 6 units from 300- or 400-level courses in Islamic studies and Arabic literature and culture

### Additional Information

#### Regulations for all language and culture minors

- Two semesters of the language must be taken at Washington University.
  - No more than 12 credit units can be from language courses.
  - Note that 300- or 400-level courses that include the study of texts in the original language may be considered courses about history, literature or religious studies rather than language courses.
- Preapproved Washington University study abroad programs during the regular academic semester, summer programs, and transfer courses can earn a maximum of 3 credits subject to review by adviser and DUS.
- Back credit granted for language courses does not count for the minor.
- No credits will be given for courses taken outside the department other than those which are cross-listed.
- A minimum of 18 credits is required for the minor.
- Double counting courses: A maximum of 3 credits used for the minor can be counted for another major or minor.
- Students have to maintain an average of B for the minor. A grade of B- must be earned in each language course in order to advance to the next language course.
- No pass/fail course can count toward either prerequisites or the minor.

## Courses

Visit online course listings to view semester offerings for L49 Arab (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L49&crslvl=1:4>).

---

### L49 Arab 107D Beginning Arabic I

Introduction to modern Arabic; concentrates on rapidly developing basic skills in reading, writing, speaking and understanding. Five class hours, including one culture hour and additional drill or laboratory hours. Students with previous Arabic language background must take a placement examination. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

### L49 Arab 108D Beginning Arabic II

Continuation of Arab 107D. Emphasis on enhancing skills in reading, writing, speaking and aural comprehension of modern Arabic. Prerequisite: grade of B- or better in Arab 107DQ or placement by examination. Five class hours a week with additional drill or laboratory hours arranged by instructor. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

### L49 Arab 207D Intermediate Arabic I

Study of grammar of literary Arabic and reading of annotated classical and modern prose texts; elementary composition; practice in speaking and comprehending modern Arabic. Prerequisite: grade of B- or better in Arab 108DQ or placement by examination. Five class hours a week with additional drill or laboratory hours set by instructor. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

### L49 Arab 208D Intermediate Arabic II

Continuation of Arab 207D. Study of grammar of literary Arabic and reading of annotated classical and modern prose texts; elementary composition; practice in speaking and comprehending modern Arabic. Prerequisite: grade of B- or better in Arab 207D or placement by examination. Five class hours a week with additional drill or laboratory hours arranged by instructor. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

### L49 Arab 210F Introduction to Islamic Civilization

A historical survey of Islamic civilization in global perspective. Chronological coverage of social, political, economic and cultural history are balanced with focused attention to special topics, which include: aspects of Islam as religion; science, medicine and technology in Islamic societies; art and architecture; philosophy and theology; interaction between Islamdom and Christendom; Islamic history in the Middle East, South Asia, Southeast Asia, and Central Asia as well as Africa; European colonialism; globalization of Islam and contemporary Islam. Same as L75 JINE 210C  
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: ETH, IS

---

### L49 Arab 3062 Islam, Culture and Society in West Africa

This course explores the introduction of Islam into West Africa beginning in the 10th Century and explores its expansion and development in the region, placing emphasis on the 19th century to present day. It focuses on the development of West African Muslim cultural, social, religious and political life, to understand

not only how the religion affected societies, but also how West African local societies shaped Islam. The course also aims to introduce students to a critical understanding of Islamic writing in West Africa. It also examines the organization of Muslim Sufi orders in West Africa through time and space. The course is organized around a series of lectures, readings, as well as print and visual media.

Same as L90 AFAS 3062

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S UColl: NW

---

### L49 Arab 307D Advanced Arabic I

Continuation of Arab 208D. Competence in reading, writing, speaking, listening and culture is developed through intensive exposure to classical and modern standard Arabic in its written and audiovisual forms. Prerequisite: grade of B- or better in Arab 208D or placement by examination. Three class hours a week with one additional laboratory hour as assigned by instructor. Credit 4 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

### L49 Arab 308D Advanced Arabic II

A continuation of Arab 307D. Continued integration of language development through reading, writing, speaking and listening activities centered on advanced authentic material. This semester proves critical for making the transition from Modern Arabic to Classical Arabic, including Qur'anic Arabic. Continued development of colloquial Arabic. Prerequisite: Arab 307D or equivalent. Credit 4 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

### L49 Arab 313C Islamic History: 600-1200

The cultural, intellectual, and political history of the Islamic Middle East, beginning with the prophetic mission of Muhammad and concluding with the Mongol conquests. Topics covered include: the life of Muhammad; the early Muslim conquests; the institution of the caliphate; the translation movement from Greek into Arabic and the emergence of Arabic as a language of learning and artistic expression; the development of new educational, legal and pietistic institutions; changes in agriculture, crafts, commerce and the growth of urban culture; multiculturalism and inter-confessional interaction; and large-scale movements of nomadic peoples.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: IS

---

### L49 Arab 3149 The Late Ottoman Middle East

This course surveys the Middle East in the late Ottoman period (essentially the 18th and 19th centuries, up to the First World War). It examines the central Ottoman state and the Ottoman provinces as they were incorporated into the world economy, and how they responded to their peripheralization in that process. Students focus on how everyday people's lived experiences were affected by the increased monetarization of social and economic relations; changes in patterns of land tenure and agriculture; the rise of colonialism; state efforts at modernization and reform; shifts in gender relations; and debates over the relationship of religion to community and political identity.

Same as L22 History 3149

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

---

**L49 Arab 325 Introduction to Arabic Literature**

A survey of the major genres and themes in Arabic literature from the pre-Islamic era to the modern period. Texts include pre-Islamic, classical and Sufi poetry, as well as popular tales and critical prose from the Umayyad and Abbasid empires and Andalusia. The modern sections of the course interrogate political commitment in Arabic literature and introduce students to feminist and magical realist novels from North Africa and the Levant. All readings are in English translation.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

---

**L49 Arab 329C Middle Eastern Islamic Literatures in Translation**

This course studies, in English translation, several great works of Islamic literature that still influence or reflect the ways in which we perceive Islamic culture today. We critically consider great and disparate literary works, originally written in a variety of languages including Arabic, Turkish and Persian and stretched from Spain to India, that share the common backdrop of an urban and educated milieu in which they were produced, widely read and circulated. The course aims at exploring the literary cultures in their historical and social context. Possible themes include court literature, politics, Sufi literature, history, theology and literature of romance. All readings are in English.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

---

**L49 Arab 352 Iraqi Literature**

This course introduces students to major works in Iraqi literature in the 20th and 21st centuries, with a focus on the post-World War Two period up to the present day.

Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

---

**L49 Arab 355C The Flowering of Islamic Literature, 500-1200**

Exploration of the multilingual (Arabic, Persian, Turkish) literary cultures of a civilization that stretched from Spain to India. Themes and genres include early court patronage, bedouin odes, wine poetry, social satire, mystical poetry, national epic, and the literature of love and romance. Comparisons to contemporaneous Hebrew and ancient and medieval Western literatures. Readings in English.

Same as L16 Comp Lit 355C

Credit 3 units. A&S: TH, CD Art: HUM BU: HUM

---

**L49 Arab 361 City of Peace: Baghdad in Medieval Times (ca. 762-1250)**

The subject of this course is an exploration of the city of Baghdad in medieval times from its foundation in the eighth century to its sack by the Mongols in the 13th. Starting from the background history of its location in Mesopotamia, we study the reasons of its foundation in that location and examine its topography, city planning and layout, institutions, citizens, neighborhoods, markets, libraries and workshops to discuss life in the city. Because Baghdad was the seat of the Abbasid caliphate at the time, we examine its role as the hub of the empire (in politics, administration, economy and literature), and its links to and rivalries with other provincial cities.

Same as L75 JINE 361

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L49 Arab 396 Islamic Philosophy, Mysticism, and Theology**

How does an individual achieve access to knowledge and access to God? To what extent is such access dependent upon scripture? To what extent is such access dependent upon reason? Are there forms of truth and experience that only reveal themselves through mysticism? Questions of this sort are central to the interrelated disciplines of Islamic philosophy, Islamic theology, and Islamic mysticism (i.e., Sufism). This course examines the preceding three disciplines, with a focus on the premodern period. Students will be introduced to major figures within these disciplines, including al-Ghazali, Ibn Sina, Ibn al-'Arabi, Ibn Taymiyya, and Rumi. Moreover, students will also examine how these disciplines have shaped various aspects of social life within premodern Muslim communities. Although the course addresses a range of issues, special attention will be given to the following topics: (1) the relationship between Islamic scripture/law and Islamic philosophy, mysticism and theology; (2) the relationship between Islamic religious teachings and the forms of both "high" and "popular" culture found in premodern Muslim societies; (3) free thought, scientific inquiry, heterodoxy, skepticism and blasphemy in premodern Muslim societies; (4) Muslim institutions and social movements dedicated to promoting philosophy, mysticism and theology; (5) the aesthetic significance of philosophical, mystical, and theological teachings, and the expression of such teachings in Islamic ritual, poetry, literature, music, dance, painting and architecture.

Same as L23 Re St 396

---

**L49 Arab 4041 Islam and Politics**

Blending history and ethnography, this course covers politics in the Islamic world in historical and contemporary times. Topics include history of Islam, uniformity and diversity in belief and practice (global patterns, local realities), revolution and social change, women and veiling, and the international dimensions of resurgent Islam. Geographical focus extends from Morocco to Indonesia; discussion of other Muslim communities is included (Bosnia, Chechnya, sub-Saharan Africa, U.S.).

Same as L48 Anthro 4041

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC BU: IS

---

**L49 Arab 405 Colloquial Arabic**

The aim of this course is to introduce the students to colloquial Arabic through their knowledge of Modern Standard Arabic (MSA). We focus on the main differences between colloquial and MSA so that the students can use the colloquial form for practical purposes in everyday life. Prerequisite: Arab 208D or instructor's permission.

Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

---

**L49 Arab 407 Fourth-Level Arabic I**

Focused reading and discussion of classical and modern texts centered on selected topics in Arabic literature, poetry and media. Continued development of oral, aural and writing skills. Students' interests are taken into consideration before finalizing the selection of texts. Practice in writing and grammar.

Prerequisite: grade of B- or better in Arab 308D or placement by examination.

Credit 3 units. A&S: LA A&S IQ: LCD, LS Art: HUM BU: IS EN: H

---

**L49 Arab 408 Fourth-Level Arabic II**

Readings and discussion in Arabic of selected classical texts. Students' interests are taken into consideration before finalizing the selection of texts. Practice in writing and grammar. Continued development of colloquial Arabic.

Credit 3 units. A&S: LA A&S IQ: LCD, LS Art: HUM BU: HUM, IS EN: H

---

**L49 Arab 450 Topics in Classical Arabic Literature and Culture**

Exploration of medieval Arabic Belles-Lettres (Adab). All texts read in Arabic. Prerequisite: senior standing.

Credit 3 units. A&S: TH Arch: HUM Art: HUM BU: H

---

**L49 Arab 451 Topics in Modern Arabic Literature and Culture**

## Archaeology

Archaeology provides the opportunity to investigate the material remains of past societies and cultures and the methods by which they are recovered, analyzed, interpreted and reconstructed.

Archaeologists investigate the entire human past from the first evidence of tool use 3 million years ago to historical studies as recent as the 20th century. To provide a comprehensive understanding of archaeology, the department emphasizes two approaches: the humanistic, which is represented by classical archaeology, and the social scientific, which is represented by anthropological archaeology.

Archaeology students will encounter a range of specialties within the field, from topical studies, such as prehistoric pastoralism, hunter-and-gatherer societies, Mayan archaeology, or Greek and Roman archaeology, to methodological approaches such as historical archaeology, ethnoarchaeology, zooarchaeology, paleoethnobotany, geoarchaeology, geographic information systems (GIS) and trace element analysis. A strength of this institution in anthropological archaeology is the focus upon biologically based studies (paleoethnobotany, zooarchaeology and GIS) to investigate such questions as the origins of food production or complex societies. The strength of the classical archaeological program capitalizes on ancient documents in investigating the more recent Eurasian human past.

While acquiring basic training in archaeology, students may choose to concentrate on a specific region, such as the Eastern Woodlands of the United States, the Andes, Mesoamerica, Africa, Central Asia, China or the Mediterranean world. Ancient and/or modern languages, as well as history and art, are essential for some areas of study. Students, in conjunction with their advisers, can identify a specialized set of courses that meet their goals.

Washington University archaeology faculty members are involved in research projects in many regions, such as Central Asia, Northern Africa, China, Greece, the Andes, the Mayan area, New Mexico and the Mississippi River valley. With a degree in archaeology, a graduate can work in academia, private consulting firms, government conservation and compliance agencies, and museums. Academic and museum positions generally require graduate-level training.

## Majors

### The Major in Archaeology

**Total units required:** 27

**Required courses:**

| Code     | Title  | Units |
|----------|--|-------|
| ARC 190B | Introduction to Archaeology                        | 3     |
| ARC 200C | World Archaeology: Global Perspectives on the Past | 3     |

**Elective courses:**

The major requires 21 advanced (300-/3000- or 400-/4000-level) units in addition to the two introductory courses. These

21 advanced units should be distributed from the offerings in anthropological and classical archaeology. All majors must complete a supervised archaeological field school of six weeks or the equivalent, approved by the departmental director.

## Additional Information

**Internships/Research:** The hands-on experience of archaeological fieldwork is particularly attractive to many students. Undergraduate majors in archaeology will complete at least one supervised field project, which is selected to best meet the student's long-term goals. Most field research projects are small, which allows students to work closely with faculty and staff. Recently, students have worked at excavations in such diverse areas as Ireland, France, Kazakhstan, Greece, Israel, China, Japan, Guatemala, Bolivia, the U.S. Southwest, and Cahokia, Illinois. Students focusing on North American archaeology often take an internship at one of the local private firms to gain experience in contract archaeology. Undergraduate participation in research is encouraged particularly for students working on Senior Honors theses.

**Senior Honors:** Archaeology majors are encouraged to work for Senior Honors, for which students may apply in the junior or senior year. Acceptance into the program is based on previous academic performance, a proposal accepted by an archaeology faculty member who agrees to supervise the honors research, and approval of the Archaeology program director. The Honors thesis will be evaluated by a three-member faculty committee.

**Study Abroad:** In addition to field schools in the summer, many students also opt to take a semester abroad, particularly those focusing in classical archaeology.

## Minors

### The Minor in Archaeology

**Units required:** 15

**Required courses:** The minor in the interdisciplinary program in Archaeology requires completion of 15 course credits. The minor should include one of the two introductory courses (ARC 190B Introduction to Archaeology or ARC 200C World Archaeology: Global Perspectives on the Past) and at least 12 advanced units from 300- and 400-level courses.

## Additional Information

The archaeology minor is usually fulfilled by a concentration in either the humanistic or in the social science areas. Thus, the minor will satisfy the Textual and Historical Studies distribution area or the Social Sciences distribution area, depending on which courses the minor includes.

## Courses

Visit online course listings to view semester offerings for L52 ARC (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L52&crslvl=1:4>).

### L52 ARC 130 Freshman Seminar: The Ritual Landscape of Cahokia: Perspectives on the Politics of Religion and Chiefly Power

The purpose of this class is to engage and challenge freshman students in an open discussion about the prehistoric Mississippian community of Cahokia. The focus of this course is two-fold. The first is to study the way in which the archaeological evidence has been interpreted. The second is to examine other perspectives on Cahokia, especially from the Native American descendants who consecrated this landscape nearly a millennium ago. An underlying tenet of this seminar in understanding Cahokia can also be achieved through the traditions and literature of Native Americans. In the end we want to understand the basis for Cahokia's organization as a prehistoric Native American community, and the role that ritual and religion played in the rather dramatic and dynamic history of this community and the surrounding region.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: HUM

---

### L52 ARC 190B Introduction to Archaeology

Archaeology plays a critical and unique role in understanding the human past. Through study of the methods and theories of archaeology, and a survey of important firsts in the human past, this course introduces students to the way archaeologists use material culture to reconstruct and understand human behavior. Chronologically ordered case studies from around the globe are used to look at social, ecological and cultural issues facing humans from the earliest times to the present. Students gain practice reconstructing the past through hands-on participation in two one-hour labs focusing on lithics and animal bones. By the end of the course, students are expected to be able to think critically about how the past is presented, and why, and the importance of the past as it relates to the present and future.

---

### L52 ARC 200C World Archaeology: Global Perspectives on the Past

If we carefully peer beneath the earth's surface, we will discover a hidden world that is being rediscovered by archaeologists. A considerable amount of excitement is generated by the discovery of lost civilizations and societies. Archaeologists from every corner of the earth come to Washington University to share their experiences as they use the most sophisticated technology to rediscover those forgotten and sometimes embarrassing aspects of our human past.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Arch: SSC BU: HUM

---

**L52 ARC 3122 From Country to Heavy Metal: Ancient Civilizations of the Old World**

This course will explore the archaeology of Europe, the Near East and Central Asia from approximately 10,000 years ago to classical times (ending before Ancient Greece). This prehistoric epoch saw major developments among various civilizations of the Old World, such as the introduction of agriculture, animal domestication, the growth of cities, and technological developments such as pottery, metallurgy and horse-riding. A major focus will be the trajectory of cultural innovations of regional populations through time, and the complexity of their social, political and ritual practices. We will also investigate the variation in human adaptive strategies to various environmental and social contexts, from hunter/gatherers to early Neolithic farmers, to the interactions between nomadic populations and larger scale, urban societies in the Bronze and Iron Ages.

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC BU: BA EN: S

---

**L52 ARC 3182 Ancient Africa: Social Mosaics and Environmental Challenges**

This class introduces students to the basics of the archaeological record of humans in Africa from 3.6 M.Y. to 1000 years ago. The first third of the course focuses on early humans, the origins of meat eating, expansion of diet and cuisine, technical and cultural responses to changing environments. The second section of the course emphasizes African rock art, socioeconomic variability among hunter-gatherers, the origins of African pastoralism, mobile responses to climate change and African contributions to world food supply including domestication of sorghum, also coffee. The last third of the course is devoted to the complex urban societies of ancient Africa, Egypt, Axum, Great Zimbabwe, and Jenne Jenne. Course format is lecture and discussion. There are two midterms and students are expected to participate in interactive stone tool use, rock art creation, and discussion of ethnographic and archaeological data on pastoral decision-making in times of drought and war and of issues surrounding

the purchase of African antiquities and conservation of cultural heritage.

Same as L48 Anthro 3182

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC BU: IS EN: S

---

**L52 ARC 330 Experimental Archaeology**

Experiments are an extremely important part of the scientific process. Although archaeology is often treated as an historical science, the nature of the material record does provide an opportunity to use experimentation as an important way of interpreting what we excavate. The class will be working with the most tangible materials recovered from archaeological contexts, that is stone and pottery. After reviewing the history of experimentation in archaeological investigations we will turn to the material record. This will be followed in our initial weeks of setting up the experiments and how they will be used to compare with available data sets derived from archaeological contexts. As part of the class we will take several field trips to areas where materials exist in a natural setting. Each class member will select a specific material for the focus of their experiments. In the end students will produce several experiments using different materials, document their experiments in written reports, and finally present their results to the class for discussion and evaluation.

Same as L48 Anthro 330

---

**L52 ARC 3304 Bones to Behavior: Undergraduate Research in the Lab and at the Zoo**

We undertake zooarchaeological study of equid skeletons in the zooarchaeology laboratory at Washington University, and in collaboration with the Saint Louis Zoo, participate in a behavioral study of the courtship and breeding behavior of the ancestor of the domestic donkey — the African wild ass. The research questions that we focus on are how the biology and behavior of the African wild ass influenced the domestication of the donkey by prehistoric African herders or ancient Egyptians and how the behavior of the African wild ass continues to affect prospects for conservation of this highly endangered animal. During the first half of the semester, we meet once a week for 2.5 hours in the zooarchaeology laboratory. In the second half of the semester, we no longer meet in the lab, and each student spends two mornings of their choice per week at the Saint Louis Zoo conducting observations of the wild ass. Students may choose two days that fit their schedule. Saturdays and Sundays are included as choices of days. Permission of instructor is required.

Same as L48 Anthro 3304

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

---

**L52 ARC 3305 Bones to Behavior II**

In this class, students undertake zooarchaeological research on skeletal material in the zooarchaeology laboratory at Washington University and/or preparation of animal skeletons for comparative study and, in collaboration with the Saint Louis Zoo, participate in behavioral studies of the ancestor of the donkey — the African wild ass. Collections housed in the zooarchaeological laboratory for study include ancient food-remains from African sites. These collections bear on questions regarding cultural and climate change in the Horn of Africa 2,000 to 12,000 years ago and include animals ranging from African antelopes to domestic camels. During the first half of the semester, students meet once a week for 2.5 hours in the zooarchaeological laboratory. In

the second half of the semester, we meet twice a week in the laboratory or at the zoo. Location depends on projects selected for study. Permission of instructor is required. May be repeated for credit.

#### L52 ARC 3351 The Ancient Maya: Archaeology and History

This course focuses on the ancient Maya civilization because there are many exciting new breakthroughs in the study of the Maya. The Olmec civilization and the civilization of Teotihuacan in the Valley of Mexico are considered as they related to the rise and development of the Maya civilization. The ancient Maya were the only Pre-Columbian civilization to leave us a written record that we can use to understand their politics, religion and history. This course is about Maya ancient history and Maya glyphic texts, combined with the images of Maya life from their many forms of art. The combination of glyphic texts, art and archaeology now can provide a uniquely detailed reconstruction of ancient history in a New World civilization.

#### L52 ARC 347B Ancient Mound Builders of the Mississippi Valley

Study of the peoples in North America who built mounds and other earthen structures beginning more than 4000 years ago; why they erected earthworks; what the structures were used for; how they varied through time and across space; and what significance they had to members of society.

Same as L48 Anthro 347B

Credit 3 units. A&S: SS, CD Art: SSC BU: BA

---

#### L52 ARC 3617 Past and Present Cultural Environments

Human societies are situated within and interact with their ecological and environmental systems. Even social relationships within and between groups imply spatial relationships and geographic orientation, advantages, influence and limitations. Beyond subsistence, environment and the "natural world" play an integral role in how humans pattern the landscape, structure society, develop their world view, and, in turn, alter and adapt the world in which they live. This upper-division undergraduate and graduate seminar course introduces students to anthropological conceptions of human-environmental relationships, past and present. Topics include environmental and landscape archaeology; historical, political, and human behavioral ecology; world view and conceptualizations of nature; human adaptation, resilience theory, and niche construction; anthropological case studies; the intersections of humans, animals and the environment; and end with environmental politics.

#### L52 ARC 3693 Anthropology of Death, Mourning and Burial

This course offers anthropological analysis of death, mourning and burial. It draws on data and theoretical explanations from different sub-disciplines of anthropology (archaeology, cultural anthropology, and physical anthropology). In addition to theoretical conceptualization of mortuary practices, specific case studies are used to address a wide range of topics. The course covers cross-cultural comparison of burial among hunter-gatherers, pastoralists and complex societies. Mortuary practices also are conceptualized based on religion and secularity, social organization and biological approaches (e.g., paleodiet, paleodemography, disease). Ethical and legal issues of using human remains worldwide also are addressed. This course helps train and stimulate academic enquiry into ancient and modern societal treatment of death around the globe. The time covered in this course ranges from the Lower Palaeolithic to the contemporary world.

---

#### L52 ARC 372 Geoarchaeology

Geoarchaeology involves the application of analytical techniques, concepts, and field methods from the earth sciences to help solve archaeological problems. Issues explored in this course include human and environmental processes involved in archaeological site formation, the sedimentary context of archaeological remains, soils and sediments relevant to

archaeology, the relationship between past settlement and landscape evolution, paleoclimatic reconstruction, human impacts on the environment, geological sourcing of artifact proveniences, and remote sensing of the physical environment. Several field trips to local archaeological/geological sites provide an opportunity to understand how geoarchaeology is applied to specific research problems.

#### **L52 ARC 374 Social Landscapes in Global View**

From the beginning of the human campaign, societies have socialized the spaces and places where they live. This socialization comes in many forms, including the generation of sacred natural places (e.g., Mt. Fuji) to the construction of planned urban settings where culture is writ large in overt and subtle contexts. Over the past two decades or so, anthropologists, archaeologists and geographers have developed a wide body of research concerning these socially constructed and perceived settings — commonly known as "landscapes." This course takes a tour through time and across the globe to trace the formation of diverse social landscapes, starting in prehistoric times and ending in modern times. We cover various urban landscapes, rural landscapes, nomadic landscapes (and others) and the intersection of the natural environment, the built environments and the symbolism that weaves them together. Chronologically, we range from 3000 BCE to 2009 CE and we cover all the continents. This course also traces the intellectual history of the study of landscape as a social phenomenon, and investigates the current methods used to recover and describe social landscapes around the world and through time. Join in situating your own social map alongside the most famous and the most obscure landscapes of the world and trace the global currents of your social landscape!

#### **L52 ARC 376 Warriors, Merchants, Monks and Courtesans: Ancient Narratives of Globalization in Google Earth**

This introductory seminar-style course examines the history of globalization through the narrative accounts of those who lived along some of the great trade routes of the Old World. Through a combination of in-class discussion and hands-on tutorials and projects in Google Earth, we examine how day-to-day local interactions and the experiences of individuals contributed to broader cultural exchanges and the shaping of ancient cosmopolitan centers. We use a bottom-up approach to understand the process of globalization, and why it is not only a phenomenon of the modern world. This course covers a large geographic and temporal span, but it is not about memorizing

lists of dates and places or putting dots on a map — it is about learning how to interpret multiple strands of knowledge and put them together into a cohesive narrative of history. The course covers four broad anthropological themes related to Old World history and globalization in conjunction with weekly lessons in Google Earth; there are no prerequisites for either. The knowledge and skills gained in the course lead to a final independent research project consisting of a short paper and an interactive digital map that can be shared online through the Google Earth community.

#### **L52 ARC 3775 Ancient Eurasia and the New Silk Roads**

This course explores the rise of civilization in the broad region of Eurasia, spanning from the eastern edges of Europe to the western edges of China. The focus of the course is the unique trajectory of civilization that is made evident in the region of Central Eurasia from roughly 6000 BC to the historical era (ca. AD 250). In addition to this ancient focus, the course aims to relate many of the most historically durable characteristics of the region to contemporary developments of the past two or three centuries. Fundamentally, this course asks us to reconceptualize the notion of "civilization" from the perspective of societies whose dominant forms of organization defied typical classifications such as "states" or "empires" and, instead, shaped a wholly different social order over the past 5000 years or more. This class provides a well-rounded experience of the geography, social organization, and social interconnections of one of the most essential and pivotal regions in world history and contemporary political discourse.

### **L52 ARC 420 Plundered Past: Archaeology's Challenges in the Modern World**

The public imagination thrills at the fantastic adventures of Indiana Jones and Laura Croft, Tomb Raider; but the reality of modern archaeology is more complex, ethically challenging and interesting than a simple treasure hunt. In the U.S. and Canada, our science museums and museums of anthropology still display artifacts that are regarded as sacred and culturally definitive by Indian nations, although such holdings are now subject to negotiation and repatriation. Art museums in Europe and the U.S. are still stocked with looted ancient masterpieces that are revered as vital heritage by the nations from which they were stolen. We display looted art alongside a much smaller number of legitimately excavated artifacts of masterpiece quality, so it is no surprise that our popular images of archaeologists as avid and undiscerning collectors raise little concern. But modern archaeologists are not extractors of art or even of scientific information, from places as passive and inert as the museums' objects ultimately occupy. Archaeologists work with living people inhabiting societies and states that care deeply about their pasts and the relics of it. They are active agents engaged with many other people in the production of knowledge about the past. In our rapidly shrinking world, educated sensitivity to the many ancient cultural legacies that shape the values of modern global society is more than a moral imperative; it is a basic form of collaboration in the common project of survival. Archaeologists are ethically charged to advance that project through education about the complex contemporary arena of artifacts, sites, and information they occupy.

### **L52 ARC 4214 The Archaeology of Food and Drink**

Studies of past human diets have moved beyond analyses of animal bones and seeds to encompass new theoretical goals and innovative analytical techniques. In this seminar-style course, students will explore methods of understanding food-related social interactions such as evidence including residues, ancient DNA, isotopes and trace elements, along with more traditional artifacts and archaeobotanical and zooarchaeological remains. By examining case studies from around the world, we evaluate the current state of research attempting to integrate the biological and cultural aspects of eating and drinking.

Same as L48 Anthro 4214

---

### **L52 ARC 426 Ancient Athens**

Athens was one of the great cities of antiquity. From lavishly decorated marble temples on the Acropolis, to public office buildings and inscriptions in the Agora (civic center), to the houses of the living and the monuments for the dead, the city has left a rich record of her material culture. These buildings and objects, together with an exceptionally large number of literary and historical texts, make it possible to paint a vivid picture of the ancient city. The course concentrates on the physical setting and monuments of Athens, as revealed by both archaeology and texts, and how they functioned within the context of Athenian civic and religious life. Prerequisite: Classics 345C, Classics 350 or permissions of instructor.

Same as L08 Classics 426

Credit 3 units. A&S: TH Art: AH

---

### **L52 ARC 4375 Ancient Greek Sculpture in Context**

Sculpture counts among one of the greatest artistic achievements of ancient Greece, and one that has had the greatest impact on the art of later periods. This course focuses on original works of art of the Archaic and Classical periods (600–300 BCE), placing emphasis on how study of their contexts — the places in which they were produced, displayed and found — contributes to our understanding of their place in the ancient world. Background material, which is covered at the beginning of the semester, includes the origins of monumental Greek sculpture at the beginning of the Archaic period (late 7th to early 6th century BCE), and the stylistic development of the Archaic and Classical periods. We then proceed to discussion of various types of sculpture (architectural, cult statue, votive, commemorative, funerary) and how these works functioned within the context of the Panhellenic sanctuary, the city sanctuary, the secular center of the city, and the necropolis. In a different view of context, we also consider sculpture recovered from ancient shipwrecks, looted art on its way to the ancient Roman art market. Prerequisite: Art-Arch 331 or permission of the instructor.

Same as L01 Art-Arch 4375

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L52 ARC 4393 The Archaeology of Trade and Exchange**

Studies of trade and exchange are fundamental to our past, as cultures in contact result in new imaginings of self, communities, and place in the world. This course engages in archaeological and anthropological discussions about the interconnectedness that results from trade. This seminar concentrates on the discourse of material trade and the mechanisms for exchange, redistribution, dependency and resistance. It also examines the immaterial exchange of ideas, perceptions and values that alter concepts of identity, space and time. Globalization, political economies, and power are also addressed, along with ideas about territory, value, and social and political consequences of trade.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC

---

**L52 ARC 4771 Out of the Wild: Domestication and Socioeconomic Diversity in Africa**

The reason for the beginnings and spread of food production during the early Holocene in so many parts of the world is one of the most interesting questions in archaeology. It now seems likely that there are many different pathways to domestication. In Africa, there is a record of up to several million years of human existence as hunter-gatherers before some human populations adopted food production. Domestication of plants and animals about 10,000 years ago resulted in fundamental changes in human societies. It provided the basis for the increase in settlement densities, specialization and social stratification, and general decrease in mobility and dietary diversity, characteristic of non-hunter-gatherer societies in the modern world. In this seminar, the class explores the phenomenon of domestication, and the spread of food production, surveying the evidence for manipulation and domestication of plant and animal species by prehistoric peoples in Africa. We focus on how and why domestication occurred, and factors that influenced its spread, and interactions between late hunter-gatherers and early pastoralists, and intersections with complex societies of the Nile. We also look at the contributions of Africa to understanding pathways to food production world wide.

**L52 ARC 4792 The Many Paths Leading Toward the Creation of the Ancient City**

The purpose of this class is to examine the emergence of the Ancient City across the globe. We want to begin with the concepts of urbanism, city and metropolis. These are words whose derivation are to be found in the classical languages of the Mediterranean. Is there any means to reach an understanding of how other civilizations and societies characterized these special places on the landscape? In the past, many scholars have argued that market economies and state-level societies are essential to their existence. Such arguments reflect issues of sustainability in terms of the economy and the effective control of large populations through state-level institutions. While we want to understand the role of

the economy and the level(s) of political integration involved in the process of urbanism, are there other cultural institutions such as religion that play a much larger and more significant role? Do these places reflect the "citizens" perception of the cosmos?  
Same as L48 Anthro 4792  
Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC EN: S

---

**L52 ARC 4803 Advanced GIS Modeling and Landscape Analysis**

The aim of this course is to learn to analyze archaeological data in terms of its spatial layout, geography, ecology, and temporal dynamics, using Geographic Information Systems and associated computer modeling techniques. A focus is placed on the relationship between natural environments, cultural geography, and the mapping of archaeological landscapes, and on the archaeologist's ability to accurately recover, reconstruct and analyze this relationship in a virtual environment.  
Same as L48 Anthro 4803

---

**L52 ARC 4892 Hunter-Gatherer Socioeconomic Variation**

This class will explore the nature and extent of variation in hunter-gatherer socioeconomic systems as documented in the literature on recent hunter-gatherers, and in the archaeological record of the last 20,000 years. We will discuss Woodburn's concept of delayed return hunter-gatherers, Testart's writing on hunter-gatherer socioeconomic organization, and archaeological concepts of simple and complex hunter-gatherers. We will examine case studies of both delayed and immediate return hunter-gatherers from the Americas, Asia, Africa and Australia, and emphasize understanding underlying reasons for differences between groups, and implications of differences for patterns of cultural change, including the adoption of food production.  
Same as L48 Anthro 4892  
Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC

---

**L52 ARC 489W Seminar: Pathways to Domestication**

The origins of agriculture led to one of the most important transitions in human history, continuing to fascinate anthropologists and all who depend on farmers for food. We examine evidence for the development and spread of settled and mobile farming systems in diverse regions of the

world. We discuss old and new theoretical approaches and apply increasingly sophisticated methods for recovering and interpreting the evidence. Recent research puts us in a better position than ever before to understand the preconditions, processes, and possibly the causes of domestication and the spread of food production. This course is the WI version of Anthro 489 Seminar: Pathways to Domestication.

---

**L52 ARC 497 Senior Project**

Designed for majors in Archaeology who have not satisfied their college capstone experience in another manner, or who are not satisfying this requirement through ARC 493 Honors Thesis. This course involves a structured research assignment, internship, fieldwork or independent project under the supervision of one of the department's faculty. Limited to students in the junior level and above. Permission of instructor who will supervise the work is required.  
Credit variable, maximum 3 units. A&S: SS EN: S

---

**L52 ARC 4975 Collecting Cultures: Taste, Passion and the Making of Art Histories**

This seminar examines the theory and the cultural history of the collecting of art objects and artifacts from a range of cultures and periods, considering how and why both individuals and institutions create collections. What social and psychological factors drive this passion? What are the various cultural, political and aesthetic priorities that have driven this practice historically? How is cultural patrimony defined, and how do law, the art market and cross-cultural ethics impact the placement, study and display of a culture's material heritage? We build the seminar around the history of collecting in America, with a focus on Midwestern examples, and particularly, important case studies in St. Louis. We, for example, consider the significant local collections built by Joseph and Emily Rauh Pulitzer (modern art), and Morton May (modern and oceanic art), as well as the histories of both modern and non-Western collections now owned by the St. Louis area museums. This course is complemented by various local field trips (SLAM, Pulitzer, Kemper and Cahokia). Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211 or Art-Arch 215; one 300-level course in art history preferred; or permission of instructor.  
Same as L01 Art-Arch 4975

---

### L52 ARC 498 Intensive Writing Course: Archaeology

Designed for majors who have not satisfied their college writing requirement in another fashion. This course ordinarily is taken in tandem with another 300- or 400-level course in Archaeology, with the required permission to enroll granted by the instructor in that course. The student prepares a portfolio of papers, which undergo revision and rewriting, as assigned by that course instructor. In some cases, this writing-intensive course may be taken as an independent study course with one of the Archaeology professors. This latter option requires permission of both the department and the instructor. When the course is integrated with another 300- or 400-level course, credit is limited to 1 unit. If taken as an independent study course, credit is no more than 3 units. Permission of instructor required; limited to juniors and seniors.

Credit variable, maximum 3 units. A&S: SS, WI A&S IQ: SSC, WI Art: SSC EN: S

---

## Art History and Archaeology

Art history provides the opportunity to explore the fine arts, architecture and visual culture, as well as the social, aesthetic and personal values that help shape it.

Students are introduced to the study of art history and archaeology through general introductory courses that focus on European, Asian and American art, as well as world archaeology. In more advanced courses, students enjoy studying original works of art owned by the Washington University Mildred Lane Kemper Art Museum, the Saint Louis Art Museum, the Pulitzer Foundation, and local private collectors. Students also are invited on annual field trips organized by the faculty to visit cities with major museum collections.

A variety of career paths are available to majors in art history and archaeology. Many graduates earn advanced degrees in both related and unrelated fields and work in museums or academia or for art publishers, commercial art galleries, auction houses, nonprofit organizations, and other arts-related organizations.

Director  
MA, Williams College

## Majors

### The Major in Art History and Archaeology

**Total units required:** 30 (33 for those students undertaking Senior Honors)

#### Required courses:

| Code         | Title  | Units |
|--------------|--|-------|
| Art-Arch 111 | Introduction to Asian Art (spring)                     | 3     |
| Art-Arch 113 | History of Western Art, Architecture and Design (fall) | 3     |
| Total Units  |  | 6     |

\*A score of 4 or 5 on the AP Art History exam may be substituted for Art-Arch 113. To substitute a 4 or 5 on the AP Art History exam, a student must earn at least a B in a related upper-division departmental course.

#### Elective credits:

24 upper-level (300-level or above) art history credits. (Students may substitute one 200-level course for one upper-division course). One course at the 300-level or above is required in *three of the five* distribution areas: Ancient/Medieval, Renaissance/Baroque, European and American Modern, non-Western, and Architecture. Majors are required to take two 400-level seminars (in any field as long as they are home-based in the department), which are considered the Art History "Capstone Experience." Students may substitute one studio course of 3 or more credits (taken at any level in the Sam Fox School, or at another institution with prior permission) for a 300-level course. Students undertaking honors complete 3 additional credits of independent study in the second semester of their senior year. All courses for the major must be taken for a letter grade.

Majors are encouraged to acquire a good reading knowledge of French, Italian or German. For a concentration in ancient Mediterranean art and archaeology or Medieval art, either Greek, Latin or both will be useful. Similarly, Chinese, Japanese, Hindi or Arabic, for example, will be useful for a concentration in non-Western art. Majors also are encouraged to take studio courses in art and/or architecture in the Sam Fox School of Design & Visual Arts.

**Prerequisites:** Students should have the proper prerequisites before enrolling in 300- or 400-level courses. Courses in other departments (including courses in the Sam Fox School of Design & Visual Arts) do not count for the major unless they are cross-listed as Art History and Archaeology courses.

### Additional Information

**Internships:** Internships in the curatorial and education departments of local museums, arts organizations or commercial galleries are available to undergraduate art history and archaeology majors. Students may enroll in up to 6 credit hours of a voluntary internship, or secure a paid internship for no credit. Such internships provide invaluable experience and may help lead to employment opportunities after graduation. Internship credit may not be applied to the major but does count toward graduation.

**Study Abroad:** Students are encouraged to participate in a variety of international programs available in a number of overseas locations. Although students are strongly encouraged to acquire and use foreign languages, programs based in English also are available in most countries. Students may work with the department's Study Abroad adviser to find the program that best meets the student's particular interests and needs.

**Senior Honors:** Exceptional students who hold a 3.65 grade point average or better in advanced courses (300-level or higher) and an overall GPA of 3.65 may apply to work toward honors in the department. Honors are awarded to students for maintaining their GPA during their senior year and writing an honors thesis (enrolling in Art-Arch 499 each semester of the senior year), which is defended before at least two full-time faculty members, who are both usually from the department. Students completing the thesis accrue 33 (rather than the usual 30) course credits in the major.

## Minors

### The Minor in Art History and Archaeology

**Units required:** 18

**Required courses:**

| Code         | Title                              | Units |
|--------------|------------------------------------|-------|
| Art-Arch 111 | Introduction to Asian Art (spring) | 3     |

|              |  |   |
|--------------|--|---|
| Art-Arch 113 | History of Western Art, Architecture and Design (fall) | 3 |
|--------------|--|---|

Total Units 6

\*A score of 4 or 5 on the AP Art History exam may be substituted for Art-Arch 113. To substitute a 4 or 5 on the AP Art History exam, a student must earn at least a B in a related upper-division departmental course.

#### Elective courses:

Four courses at the 300 level or above must be from at least two of the following areas:

1. AM: Ancient Mediterranean and Medieval Art and Archaeology
2. RB: European Renaissance and Baroque Art
3. MEA: Modern European and American Art
4. NW: Non-Western Art and Archaeology (such as Asian, Islamic, Oceanic or African)
5. A: Architecture

Each of these upper-level courses must be taken for a letter grade.

### Additional Information

One L01 (Art History and Archaeology) course at the 200-level counts toward the minor. Courses in the colleges of Architecture or Art *do not count for the minor*. Students should have the proper prerequisites before enrolling in 300- or 400-level courses. Courses in other Arts & Sciences departments do not count for the minor unless they are cross-listed as L01 (Art History and Archaeology) courses at the 300 level or above. At least two of the 300-level courses must be completed in residence at Washington University. Space in 400-level seminars is limited, and majors will be given priority over minors, even from wait lists. Internship credit may not be applied to the minor but does count toward graduation.

## Courses

Visit online course listings to view semester offerings for L01 Art-Arch (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L01&crslvl=1:4>).

#### L01 Art-Arch 106 Freshman Seminar: Van Gogh and the Avant-Garde

This freshman seminar focuses on the art and career of Vincent Van Gogh, and his relationship to artists of the 1880s in France. We explore his art in connection to the movements of Impressionism, Japonism and Symbolism. We examine the avant-garde world of Paris, and Van Gogh's relationship to such figures as Gauguin, Bernard and Toulouse-Lautrec. The larger current of fin-de-siècle nostalgia for the countryside informs our study of his work in the south of France. Van Gogh's life and the critical reception of his art offer an excellent opportunity to study how the legends of modern art are formed. Visits to the St. Louis Art Museum complement our study. Readings include the

artist's letters, critical studies and biographies of Van Gogh and key figures in his circle. No prerequisite, but either Art-Arch 112 or co-enrollment with Art-Arch 211 is recommended.

Credit 3 units. A&S: LA Art: AH BU: HUM

---

**L01 Art-Arch 107 Freshman Seminar: Public Art/Art and Its Publics in St. Louis**

The course considers the history and functions of public art, with special attention to public art in St. Louis. Part of our investigation is to inquire into the conditions that seem to be necessary for visual art to be considered public. So we consider not only the obvious forms of public art in urban sculpture and murals, but also less traditional intersections of art and public in such sites as video and the internet. We also examine the operations of institutions — national and local arts agencies, international exhibitions, nonprofit centers and the like — that foster a public engagement with contemporary art. After studying aspects of the history of public art, we proceed to selected case studies today, many of them in St. Louis, including projects for Arts in Transit (the MetroLink), the Regional Arts Commission, Grand Center, and Missouri SOS (Save Outdoor Sculpture). This leads us, finally, to theorize the function of public art in a variety of contemporary forms. Local field trips to study important public art; visiting speakers from arts agencies; student projects proposing a work of public art in St. Louis, which acquaint students with procedures in arts administration.

Credit 3 units. A&S: TH Art: AH BU: HUM EN: H

---

**L01 Art-Arch 1075 Freshman Seminar: What's New? Contemporary Art in St. Louis and Beyond**

Freshman Seminar. This course introduces a broad range of practices within the field of contemporary art (art of the last two to three decades), paying particular attention to museum collections and exhibitions in St. Louis (Kemper Art Museum, St. Louis Art Museum, Contemporary Art Museum, the Pulitzer Foundation for the Arts, and the Museum of Contemporary Religious Art). Works in both new and traditional media are discussed (ranging from photography and sculpture to installation, performance, film and mixed media). Readings include artists' statements, theoretical texts, art criticism, and art historical essays. Students with little or no background in art history are encouraged to register. Class meetings are complemented by local field trips and some visits to artists' studios. No prerequisite.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH BU: HUM EN: H

---

**L01 Art-Arch 1076 A Big Beautiful Wall: Contemporary Art of the U.S.-Mexico Border and Beyond**

Over the course of the last U.S. election cycle, the nation's border with Mexico proved to be a galvanizing issue. The exhortation to build a "big, beautiful wall," however, is nothing new in the history of U.S.-Mexican international relations. Since its establishment by the 1853 Gadsden Purchase, the border has loomed large in both the U.S. and Mexican cultural imaginaries, and in the post-Chicano period, spurring the production of politically engaged art. This course considers the U.S.-Mexico border and its artistic production in-depth, as well as the art of other border regions around the world.

---

**L01 Art-Arch 1095 Freshman Seminar: Art in the Golden Age of Venice**

The art and architecture of Venice are inextricably linked to the city's distinct sociopolitical structure, cultural past and geography. This freshman seminar will consider the arts in Renaissance Venice within the city's unique context. Exploring the influence of the "Myth of Venice," we will examine the styles of painting, sculpture and architecture that were specific to Venice — and very different from contemporaneous developments in Rome or Florence. We will also study the unique physical characteristics of Venice, its economy and society, its political and religious life and cultural culture. We'll also learn about its food and music while we study the magnificent works of its most celebrated artists, Titian, Tintoretto and Veronese, to name a few. The course will address issues such as the family workshop, the introduction of oil paint, the role of antiquity in a city without ancient ruins, domesticity and the ceiling painting. From the private patronage of its confraternities, or scuole, to public programs sponsored by the Great Council, the course will examine the reflections of the "ideal state" in the art and architecture of the Serenissima, the most serene Republic.

Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: IS EN: H

---

**L01 Art-Arch 111 Introduction to Asian Art**

Beginning with the birth of the Buddha and continuing through the present, this course introduces the most influential art and architecture from all across Asia. Each class covers both historic and modern works to emphasize the continuing dialogue between past and present in Asian art today. Classroom lectures; smaller, bi-weekly discussion sections. No prerequisite.

Credit 3 units. A&S: LA, CD A&S IQ: HUM, LCD Art: AH BU: HUM EN: H UColl: NW

---

**L01 Art-Arch 113 History of Western Art, Architecture and Design**

A history of the visual arts, including architecture, sculpture, painting and design, from the ancient world to the present with emphasis on the relationship of art to society and to political and cultural events.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH BU: HUM EN: H

---

**L01 Art-Arch 1135 Freshman Seminar: The World of Cleopatra**

Cleopatra — the last queen of ancient Egypt — captivated her contemporaries and has fascinated the Western world ever since her famous suicide by asp in 31 BCE. She was a woman of contrasts: Pharaoh of Egypt and Greco-Macedonian queen; seductive woman and shrewd political strategist; a ruthless monarch using every means available to consolidate her position in the face of the encroaching power of the Roman Empire. Through texts and material culture, the seminar seeks to understand Cleopatra in the context both of her native Egypt and of the wider Mediterranean world. We thus examine the traditions of Pharaonic Egypt; the historical events that brought Egypt under the control of the Macedonian Ptolemies (Cleopatra's dynasty); the wider stage of East-West tension and conquest in which Cleopatra struggled to maintain her power; her relationships (political and personal) with famous men of her day (Caesar, Herod, Mark Antony); her capital city of Alexandria, the largest metropolis of its day; Cleopatra's brilliant court and its luxury arts; and finally the many Cleopatras that have populated art and literature of later times. We emerge with a sense of

Cleopatra, both as a unique individual and as a product of her time.

---

**L01 Art-Arch 116 Pompeii: Uncovering the Past**

This course examines the Roman city of Pompeii from archaeological, art historical and literary perspectives. Topics include the city's public spaces and religious sanctuaries, its grand mansions and common houses, its political systems and leisure activities. Class discussions probe the problems inherent in the interpretation of a city captured in a moment of crisis, and how ancient literary tropes have affected our understanding of the archaeological remains. Students also investigate modern interpretations of the site in the form of novels, exhibitions and documentaries. Freshmen and sophomores only. No prerequisites.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 119 From Hercules to Harry Potter: Picturing Heroes in Ancient Greece, Rome, and Beyond**

Societal celebration of influential people, mythical or real, raises them above others in public esteem and endows them with a high degree of fame, honor, and symbolic significance. Such heroic figures are often elevated and admired not only for their individual accomplishments, but also for the moral and ethical values and virtues that they embody as examples to others. Yet, the functions of heroes (and anti-heroes) may be controversial and their meanings contested. An exploration of the role of images and other forms of visual culture in the conception of heroism, and by extension virtue (character traits that are in some deep or fundamental way connected with being a morally good or admirable person), will present the opportunity to examine, among others, the following questions: What is the role of the visual arts in establishing and sustaining heroic status through which societies define and articulate their values? How do images shape an understanding of heroic significance? What are some of the religious and political uses of heroic images? What is the relationship between the historical person (if there is one) and the imaginative construction of the hero, or put another way, the relationship between history and memory? How do images of heroes shape the narratives of communal identity of which they are a part? Together we will first explore objects and texts from ancient Greece and Rome that address these questions from a variety of thematic and methodological perspectives. We will then examine the survival and transformation of ancient conceptions of the hero in representations of America's founding fathers, American frontiersmen, comic book superheroes, and the characters of the Harry Potter Series.

Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM EN: H

---

**L01 Art-Arch 120 Majors' Colloquium**

This one-credit course provides students the chance to explore opportunities available to majors in the history of art and archaeology both during their time at Washington University and post-graduation. It was developed in response to the suggestion of past graduating seniors, who requested more formal guidance in professional development. Topics discussed include, among others: securing internship and fieldwork experience; preparing for an honors thesis; applying to graduate school in art history and archaeology; preparing for careers in museum, gallery and academic fields; and transferring the undergraduate degree to graduate programs in business, law

and medicine. Guest speakers from the university and from the St. Louis community attend various sessions to provide current professional perspective on relevant topics. Prerequisite: a declared major in the Art History and Archaeology. Other students with a strong interest in Art History and Archaeology are admitted at the discretion of the instructor.

Credit 1 unit. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 146 Freshman Seminar: Beijing and the Forbidden City**

The Forbidden City has been the heart of Beijing for nearly six hundred years, and continues to influence both China and its capital today. Through art, architecture and urban design, this seminar examines the intertwined relationship of the palace and its surrounding city: their origins and constructions, the coded symbolism of their plans, their most influential characters, their modern identities as the backdrops to major political events, and their roles in contemporary art and the Olympics. This discussion-based seminar also aims to help students develop their skills in writing and critical analysis as a foundation for future classes. No previous experience with art history or Asian studies required.

---

**L01 Art-Arch 190B Introduction to Archaeology**

Archaeology plays a critical and unique role in understanding the human past. Through study of the methods and theories of archaeology, and a survey of important firsts in the human past, this course introduces students to the way archaeologists use material culture to reconstruct and understand human behavior. Chronologically ordered case studies from around the globe are used to look at social, ecological and cultural issues facing humans from the earliest times to the present. Students gain practice reconstructing the past through hands-on participation in two one-hour labs focusing on lithics and animal bones. By the end of the course, students are expected to be able to think critically about how the past is presented, and why, and the importance of the past as it relates to the present and future.

---

**L01 Art-Arch 215 Introduction to Modern Art, Architecture and Design**

An introduction to major developments in modern art, architecture and design in Europe, the Americas and across the globe from the mid-19th century to the present. Focus is on the history and theories of modernism and its international legacies, and the relationship of the visual arts, architecture and visual culture more generally to the social, cultural and political contexts of the modern era. While the precise topics covered may vary from one instructor to another, foundational movements and trends discussed typically include Beaux-Arts style, the Arts and Crafts Movement, Impressionism, Symbolism, Art Nouveau, Cubism, Dada, Surrealism, Purism, Art Deco, the Bauhaus, the International Style, Abstract Expressionism, Pop Art, Minimalism and Postmodernism. Cross-currents in various media are emphasized as we seek to understand the origins and complexity of modern visual forms in relation to political and cultural history and to critical theory. Students engage a wide range of readings in historical sources, theories composed by artists, architects and designers, critical responses to the arts, and secondary critical literature.

---

**L01 Art-Arch 307 Northern Renaissance Art**

A survey of the major artistic developments in Northern Europe, ca. 1400–1575. The course looks at the production of painting, sculpture, printmaking, drawing, manuscript illumination and architecture in social, political and religious contexts. The major artists covered include Jan van Eyck, Rogier van der Weyden, Albrecht Durer, Hans Holbein, Hieronymus Bosch and Pieter Bruegel the Elder.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH BU: HUM EN: H

---

**L01 Art-Arch 3090 African Art in Context: Patronage, Globalisms, and Inventiveness**

This course offers an introduction to principal visual arts from Africa, prehistoric to contemporary. It explores traditions-based and contemporary arts made by African artists from across the continent in conjunction with their various contexts of creation, use, understanding and social history. Theoretical perspectives on the collection, appropriation and exhibition of African arts in Europe and North America will be examined. Course work will be complemented by visits as a group or independent assignments at the Saint Louis Museum, the Pulitzer Arts Foundation, and possibly a local private collection.

**L01 Art-Arch 331 Greek Art and Archaeology**

A survey of the artistic achievements and material culture of the Greeks in the first millennium BCE (Iron Age through the Hellenistic period). Development of architecture, sculpture, and painting, as well as minor arts and utilitarian objects, with emphasis on the insights they offer into Greek society and interactions with the wider Mediterranean world.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH BU: HUM EN: H

---

**L01 Art-Arch 3330 Greek and Roman Painting**

This course provides a survey of the major achievements of ancient Greek and Roman painting, broadly understood and encompassing wall painting, panel painting, painted pottery, and mosaic. We study monuments ranging over a millennium in time and located throughout the ancient Mediterranean. Particular attention is paid to the social, political, and religious aspects of ancient Greco-Roman painting, and to questions of innovation in artistic practice. Special emphasis is placed on students' cultivation of the tools of art-historical analysis, and of the presentation of that analysis in written form. Readings appear in the course textbook or are supplied as PDFs; extracts of primary sources are occasionally distributed as photocopies in class.

Prerequisites: Intro to Western Art (L01 Art-Arch 113) or Intro to Modern Art (L01 Art-Arch 215) or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH EN: H

---

**L01 Art-Arch 334 Roman Art and Archaeology**

The art and archaeology of the Romans, with emphasis on the late Republic and the Imperial period. Major monuments of sculpture and architecture, as well as town planning, domestic architecture and the minor arts are used as evidence for reconstructing ancient life.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH BU: HUM

---

**L01 Art-Arch 3412 Japanese Art**

Surveying the arts of Japan from prehistory to present, this course focuses especially on early modern, modern, and contemporary art. Emphasizing painting, sculpture, architecture and print culture, the course also explores the tea ceremony, fashion, calligraphy, garden design and ceramics. Major course themes include collectors and collecting, relationships between artists and patrons, the role of political and military culture or art, contact with China, artistic responses to the West, and the effects of gender and social status on art.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: AH, GFAH BU: IS EN: H

---

**L01 Art-Arch 3415 Early Chinese Art: From Human Sacrifice to the Silk Road**

This course examines Chinese art and material culture from the prehistoric period through the end of the medieval Tang dynasty, when the Chinese capital boasted a cosmopolitan population of more than 1 million people. Topics covered include Neolithic ceramics and jades, the bronzecasting tradition, funerary art and architecture, the Terracotta Army, the origins of Chinese brush arts, Buddhist painting and sculpture, and the varied exotica of the Silk Road. Each class teaches recent works together with the ancient to demonstrate how the origins of Chinese art and architecture continue to influence contemporary works. Prerequisite: Art-Arch 111 Introduction to Asian Art or permission of instructor.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: AH, GFAH, HUM BU: IS EN: H

---

**L01 Art-Arch 3425 Classical to Contemporary Chinese Art**

Surveying Chinese art and architecture from the 10th century through today, this course examines classical and imperial works as the foundation for modern and contemporary art. Engaging with the theoretical issues in art history, we also pay particular attention to questions of gender, social identity, cultural politics and government control of art. No prerequisites.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: AH, GFAH BU: IS EN: H

---

**L01 Art-Arch 3442 Chinese Painting, Then and Now**

Tracing the unbroken history of Chinese painting from the first through 21st centuries, we explore the full evolution of its traditions and innovations through representative works, artists, genres and critical issues. From its ancient origins to its current practice, we will cover topics such as classical landscapes by scholar painters, the effects of Western contact on modern painting, the contemporary iconography of power and dissent, and theoretical issues such as authenticity, gender, and global art history. Prerequisites: Intro to Asian Art (L01 111) or one course in East Asian Studies recommended.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: AH, GFAH EN: H

---

**L01 Art-Arch 3482 The Floating World of Japanese Prints**

The relationship between Japanese printmaking and popular culture from 1600 to 1900. Woodblock and copperplate printmaking techniques, key masters, kabuki drama, pleasure quarters, fiction, travel, modernization will be explored. Prerequisite: Art-Arch 111EQ, or background in printmaking or Japanese culture.

---

**L01 Art-Arch 3545 The Art and Architecture of Ancient Mesoamerica: Objects of Ritual, Places of Power**

This course examines the artistic and architectural achievements of the civilizations of ancient Mesoamerica, a cultural region covering most of modern-day Mexico, Guatemala, Belize and Honduras. From the emergence of complex societies in the second millennium BC through the rise of the spectacular cities of the Maya and ending with the violent fall of the Aztec Empire in the 16th century AD, rulers of ancient Mesoamerica relied on a consistent set of themes, images and media to proclaim their religious and political authority. This class explores how artists,

farmers, priests, elites, kings and other community members created a vast array of images and objects that expressed cultural ideals, political and religious narratives, and distinct ethnic and civic identities. Prerequisites: Art-Arch 112, ARCH 200, Anthro 335 or permission of the instructor.

**L01 Art-Arch 360 Renaissance Architecture**

The modern concept of the architect as creator and genius began with Filippo Brunelleschi, the great innovator of 15th-century Florentine art. The course explores the spread of architecture and architectural theory as it begins in the hands of the innovator and is expressed and changed by other men of genius such as Leon Battista Alberti, Donato Bramante, Michelangelo Buonarroti and Andrea Palladio.

Credit 3 units. A&S: TH Art: AH, GFAH BU: HUM

---

**L01 Art-Arch 3602 Italian Renaissance and Baroque Architecture**

This course will survey the development of architecture in Italy from 1400 to 1700. From long-established medieval models we will explore the reintroduction and reinterpretation of Antiquity from the late 14th-century onward. The course will then explore how these foundational Renaissance ideals evolved to become Mannerism and found their ultimate expression in Bernini's Baroque. Following a chronological progression, the course will address the structures and theories of the period through its leading architects, Brunelleschi, Alberti, Michelangelo, Palladio and Bernini, among others. The course will explore a wide range of architectural types, from the centralized church to private palaces and villas. Further themes to be considered will include: the development of the architect as a professional, regional styles and their relationship with antiquity, patterns of patronage, and the interior. Prerequisites: L01 113 Intro to Western Art, Architecture and Design.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

---

**L01 Art-Arch 361 Art of Early Italian Renaissance**

A survey of Italian Renaissance art from its origins to the end of the 15th century, examining artists such as Giotto, Masaccio, Donatello, Botticelli, and Leonardo da Vinci. Prerequisite: Art-Arch 1113.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH BU: HUM

---

**L01 Art-Arch 362 High Renaissance Art**

A general survey focusing on such outstanding figures of the period as Leonardo da Vinci, Michelangelo and Raphael. Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211, or Art-Arch 215, or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH BU: HUM

---

**L01 Art-Arch 3620 Mannerism in Italy**

This course surveys the various embodiments of Mannerism, "maniera," or what has been called the "stylish style," in Italian art following in the wake of the High Renaissance. The nature of this self-conscious response to the achievements of the Raphael, Michelangelo and the revival of the antique has resisted easy classification both in contemporary writings and modern scholarship. The works of the "maniera" have been framed both in terms of decadence and refinement. The period was also a time of great social and religious upheaval, leading some to define Mannerism as a style of crisis. On the other hand, the deliberate elegance and grace that characterizes so

many works responded to the tastes of court society. The course addresses the conflicting definitions of Mannerism by analyzing the works of art themselves and placing them in their social and cultural contexts.

Credit 3 units. A&S: TH Art: AH, GFAH BU: HUM

---

#### L01 Art-Arch 365 Baroque Art

A survey of the development of painting and sculpture in 17th-century Europe. Emphasis on the works of Caravaggio, Bernini, Poussin, Rubens, Rembrandt and Velazquez. Prerequisite: Art-Arch 112 or permission of the department.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH BU: HUM

---

#### L01 Art-Arch 3671 Michelangelo: Painter, Sculptor, Architect

An examination of his life, his work and his time. A consideration of the artist's painting, sculpture and architecture in relation to his contemporaries and to the broad historical, political and artistic currents of his day. Prerequisite: Art-Arch 112.

Credit 3 units. A&S: TH Art: AH BU: HUM

---

#### L01 Art-Arch 370 The American West: The Image In History

Examines representations of the American West and of the frontier encounter between Euro-American and Native American cultures, from the early 19th to the early 20th centuries. We consider travel accounts, fiction painting, ledger drawings, photography and film in order to analyze the ways in which historical circumstances have shaped artistic and literary representations. At the same time, we look at how images and texts have shaped formative myths about the West that in turn leave their impact on history.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: AH BU: HUM

---

#### L01 Art-Arch 371 American Art to 1900

A survey of broad social, cultural and nationalist themes in the visual arts from European contact with the New World to 1900. Topics include the encounter of New World cultures with European colonizers and the ongoing relationship between America and Europe; the changing image of the artist; the role of art in the formation of national identity. Prerequisite: Art-Arch 113 or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH BU: BA EN: H

---

#### L01 Art-Arch 3712 Art and Culture in America's Gilded Age

Developments in American culture from the end of the Civil War to the turn of the century: novels, buildings, images, public and private spaces of this transitional period — a time of new class formation, of unparalleled social diversity, and of new urban forms. The connections between art, literature and social experience. Representative figures include Henry James, Henry Adams, Louis Sullivan, Stanford White, Thomas Eakins, Louis Tiffany.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH BU: BA

---

#### L01 Art-Arch 372 American Art to 1980

From the beginnings of modernism in the visual arts of the United States, around 1900, to Abstract Expressionism and the Beat aesthetic. Focus on the cultural reception and spread of modernism, native currents of modernist expression, from organicism to machine imagery, the mural movement and the art of the WPA, the creation of a usable past, abstraction and

figuration, regionalism and internationalism, photography and advertising.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH BU: HUM EN: H

---

#### L01 Art-Arch 376 American Modernism, 1900–1940

American modernism: What is it? What is the nature of its encounter with mass culture? What happened to modernism as it migrated from its "high" European origins to its "middlebrow" version in America between the turn of the century and the eve of World War II? What was the rhetoric of modernism in everyday life — its impact on design, photography, advertising? In addition to the fine arts, we look at popular media, film and photography. Lecture/discussion. Prerequisite: Art-Arch 211 Introduction to Modern Art or permission of the instructor.

Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI Art: AH BU: ETH

---

#### L01 Art-Arch 3762 American Modernisms, 1900–1940

American modernism: What is it? What is the nature of its encounter with mass culture? What happened to modernism as it migrated from its "high" European origins to its "middlebrow" version in America between the turn of the century and the eve of World War II? What was the rhetoric of modernism in everyday life — its impact on design, photography, advertising? In addition to the fine arts, we look at popular media, film and photography. Lecture/discussion. ---

#### L01 Art-Arch 3782 Modern Art 1905–1960

This course investigates topics in European painting, sculpture, architecture, photography and film. Lectures and readings address major artistic developments, including Cubism, De Stijl, Futurism, Expressionism, Dadaism, Constructivism, Surrealism, the Bauhaus and Art Brut. Prerequisite: Art-Arch 211 or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH BU: HUM

---

#### L01 Art-Arch 3783 The Modernist Project: Art in Europe and the United States, 1905–1980

The course surveys major tendencies in painting and sculpture from Fauvism in France and Expressionism in Germany to the beginnings of Postmodernism in photo-based work in the U.S. About two-thirds of the course treats European art, about one-third treats American art. Photography, architecture and work in other forms are considered selectively when pertinent to the individual class topics. Within the lecture topics, emphasis is on avant-garde innovation; the tension in modernist art between idealism and critique; reaction by artists to current events; relationship between art and linguistics, philosophy, literature, economics and science; the role of geopolitics in art production; intersections of art and society; the role of mass culture; issues of race and gender in the production and reception of art; the challenge to the concept of authorship and creativity posed by Postmodernism at the end of this period. Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211 or Art-Arch 215; one 300-level course in art history preferred; or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

#### L01 Art-Arch 3785 Photography in America

This course considers the practice and use of photography in America from its invention up to the present, offering various ways of thinking about the medium and its relation to society and

culture. Students come to understand the ways photographic practices shape public perceptions of national identity, ethnicity and gender, nature, democratic selves, and a host of other concerns. We discuss famous practitioners such as Matthew Brady, Jacob Riis, Lewis Hine, Walker Evans, and Robert Frank. We consider not only the social and public uses of the medium through such episodes as the New Deal/FSA and photojournalism, but also the private explorations of "fine art" photographers, and the everyday practices of the snapshot. Prerequisites: Art-Arch 112 Introduction to Western Art or Art-Arch 211 Introduction to Modern Art or one course in American History, American Cultural Studies, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH BU: HUM EN: H

---

**L01 Art-Arch 3815 Rococo to Revolution: Art in 18th-Century Europe**

The Long 18th Century serves as a bridge between two fundamentally different times. The Europe of 1700 was dominated by absolutism and the ancien régime. The Europe of 1800 was in an age of revolution. This course will explore the dramatic shift in artistic representation and individual self-conception that occurred throughout the century to usher in our modern age. Important topics to be considered include: the rise of the Academy; the Enlightenment and the Encyclopédie; the Grand Tour; Art and Science; and the French Revolution. Focusing on the development of artistic trends, the course will address transformations in painting, sculpture and architecture throughout Europe.

Credit 3 units. A&S: TH A&S IQ: HUM BU: IS EN: H

---

**L01 Art-Arch 3822 City and Country in Late Impressionism 1880–1905**

This course considers the relationship between the Parisian art world and the avant-garde painters who retreated to the countryside between 1880 and 1900 to paint rural landscapes, provincial life and exotic locales. We consider the artistic dialectic of city and country through examining the art and careers of Van Gogh in Provence, Gauguin in Brittany and Tahiti, Cézanne in Aix and Monet in Giverny, among others. We consider such themes as artist colonies, the market for landscape, rural escape as a critique of bourgeois urbanism; and the connections between tourism and the nostalgia for the provincial and the exotic.

Credit 1 unit. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 3831 Art in the Age of Revolution: 1789–1848**

European painting, sculpture and printmaking from the French Revolution to the mid-19th century; French, English, German and Spanish artists discussed in social and aesthetic context, with a focus on links between art and ideology in times of political turmoil. The styles of classicism and romanticism, the rise of history painting, and the development of realism in both landscape and genre painting. Prerequisite: Art-Arch 112 or permission of the instructor.

Credit 3 units. A&S: TH Art: AH BU: HUM

---

**L01 Art-Arch 3833 Realism and Impressionism**

An examination of the development of European art from approximately 1848 to the mid-1880s, with a focus on the development of Realism and Impressionism in England and France. Issues explored include the breakdown of academic

art, the rise of landscape and naturalist themes, the emergence of alternative exhibition spaces and new dealer systems, and the relationship between gender and avant-garde practice.

Prerequisite: Art-Arch 112 or Art-Arch 211 or permission of instructor.

Credit 3 units. A&S: TH Art: AH BU: HUM

---

**L01 Art-Arch 3835 The Art Museum: History, Theory and Design**

The course studies the conceptual basis of the institution of the art museum in the United States and Europe, including its history, theoretical foundations, design and cultural function. We begin with the origins of the modern museum in the 18th century and earlier; trace the development in the 19th century of the earliest national art museums in the U.S. and Europe; consider the opportunities and problems of museums of modern and contemporary art in the 20th century; address the question of appropriate architectural strategies for art museums of the past and the present; and consider a variety of developments in the art museum today. Prerequisite: Art-Arch 211 Introduction to Modern Art or ARCH 2284/ARCH 4284 Architectural History II or permission of instructor. Students in the College of Architecture may register for this course under the assigned College of Architecture course number.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH BU: HUM EN: H

---

**L01 Art-Arch 3838 Modern Art in Fin-de-Siècle Europe, 1880–1907**

This course examines artistic production at the turn of the century in France, Belgium, England and Scandinavia. Beginning with the re-evaluation of impressionism and naturalism in France, we examine Neo-Impressionism (Seurat and Signac) and Symbolism (Moreau, Van Gogh, Gauguin, the Nabis, Rodin, Munch), as well as later careers of Impressionists (Cassatt, Monet, Degas, Renoir). Considers cross-national currents of Symbolism in Belgium and Scandinavia; the Aesthetic Movement in Britain; the rise of expressionist painting in French art (particularly with the Fauvism of Matisse and Derain), and the juncture of modernist primitivism and abstraction in early Cubism (Picasso). Prerequisite: Art-Arch 112 or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH BU: HUM

---

**L01 Art-Arch 3862 The Mediterranean and French Modernism**

This course surveys the development of the Mediterranean region as an important site of modernist artistic practice. Among the artists considered are Pierre-Auguste Renoir, Henri Matisse, Pablo Picasso, Marc Chagall and Yves Klein. Excursions to museums and other artistic sites.

Credit 1 unit. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 3875 Rejecting Reason: Dada and Surrealism in Europe and the United States**

In this multimedia, interdisciplinary course, we consider the history, theory and practice of Dada and Surrealism, from its Symbolist and Expressionist roots at the end of the 19th and the beginning of the 20th centuries through its late expressions in Beat culture and Pop art of the 1950s and 1960s. Dada's emergence in Zurich and New York in the midst of the First World War set the tone for its stress on irrationality as an oppositional strategy. Surrealist research into the domain of the unconscious continued this extreme challenge to

dominant culture, but in a revolutionary spirit that proposed new possibilities for personal and collective liberation. The international character of the movements, with substantial cross-transmission between Europe and the United States, are emphasized. Prerequisite: Art-Arch 112 Intro to Western Art or Art-Arch 211 Intro to Modern Art or permission of instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: AH BU: HUM EN: H

---

#### L01 Art-Arch 3877 Cubism and Its Global Legacies

During the early 20th century, Cubism marked a radical break in the European representation of three-dimensional space in painting through a bold reconsideration of atmospheric and linear perspective. Early Cubists such as Pablo Picasso achieved this formal breakthrough in part through studying African and Oceanic art. Between the summer of 1908, when Braque and Picasso developed the style collaboratively in France, and the advent of WWI in summer 1914, Cubism became the most influential style in the international art world. This course examines the development of Cubism in France, and analyzes how artists throughout Europe and the world adapted Cubism for their own purposes. Of particular interest is how artists from outside Europe and the U.S. have responded to Cubism's appropriation of non-Western art. Class format is lecture and discussion. Prerequisites: L01 Art-Arch 113 Introduction to Western Art or L01 Art-Arch 215 Introduction to Modern Art, or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

---

#### L01 Art-Arch 388 Contemporary Art

A survey of global contemporary art from 1970 to the present. Topics: happenings, minimalism, body art and neo-expressionism, placed in their social and political contexts. Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211, or Art-Arch 215, or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH BU: IS

---

#### L01 Art-Arch 3884 Modern Design and Modern Culture

This course explores key issues of modernity (industrialization, consumerism, mass culture, nationalism, etc.) through the study of material culture. Focusing primarily on modern design in Europe and North America from William Morris to Charles Eames and Aleksander Rodchenko to Bruce Mau, we examine major developments in design thinking and practice as both reactive to and generative of broader political, economic, and social concerns. The course is organized around important and influential exhibitions, from World's Fairs to storefront shows, where design professionals, institutions, and publics came together to reflect on topics of urgency, identify alternatives, and imagine the implications of design on everyday life. Wherever possible, class discussions/lectures and assignments make use of objects and archives in area collections. Prerequisites: Intro to Western Art (L01 Art-Arch 113) or Intro to Modern Art (L01 Art-Arch 215) or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

#### L01 Art-Arch 3888 Museum Theory and Practice

This course explores the history of fine art museums and related debates on the nature of collecting and modes of display. Using historical and theoretical texts as well as select case studies, we focus on how the evolving structure and mission of the museum impact our understanding of art. Topics include the Renaissance "cabinet of curiosities," the Salon controlled by the French Academy, the rise of the modern art museum, and the proliferation of contemporary curatorial strategies in

today's global art world. In addition to the study of the history of exhibitions and the role of the museum, the course also investigates the various jobs and responsibilities that people hold within museums. Guest speakers include members of the curatorial, publications, registration, education and installation staff at the Mildred Lane Kemper Art Museum. We also take advantage of the distinct art institutions in St. Louis, exploring exhibitions and permanent collection displays at the Kemper Art Museum, Saint Louis Art Museum, the Pulitzer Foundation for the Arts, and the Contemporary Art Museum. Prerequisite: Art-Arch 112 Introduction to Western Art or Art-Arch 211 Introduction to Modern Art or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH EN: H

---

#### L01 Art-Arch 3892 Modern Sculpture: Canova to Koons

This course surveys sculpture in Europe and the United States from about 1800 to the present, with an emphasis on the period 1890–1980. A rapid traverse of Neoclassicism, Realism and the rage for statuary in the later 19th century take us to the work of Rodin and a more systematic exploration of developments in sculpture of the 20th century. Particular emphasis also is given to the work of Brancusi, Picasso, Matisse, Duchamp, Giacometti, Oppenheim, David Smith, Serra, Morris, Judd, Hesse and Bourgeois. An important theme running through the course as a whole, from an age of nationalism and manufacturing to our own time of networks and information, is the changing definition of sculpture itself within its social and political context. We also explore various new artistic practices — video, performance, installations and body art, for instance — and interrogate their relationship to sculptural tradition and innovation. Prerequisite: Art-Arch 112 Intro to Western Art or Art-Arch 211 Intro to Modern Art, or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

#### L01 Art-Arch 3972 Alterna-Art

Can contemporary art be truly alternative? What does the term even mean, when the channels for distributing art are available to all? This course presents a survey of art created outside of institutions and official channels. Students are exposed to a variety of different media, from graffiti and muralism to performance and internet art. The course also deals with questions of agency, "authenticity," and co-optation of street art by commercial means. Classes consist of a hybrid lecture/discussion format with weekly readings. Prerequisites: Intro to Western, Intro to Modern or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

#### L01 Art-Arch 3973 New Media, New Technologies

In summer of 2013, Random International's *Rain Room* was installed at the Museum of Modern Art in New York. Lines to experience the sensation of being rained on without getting wet ranged up to seven hours at times. This merging of new technology with the gallery space proved irresistible, but also raises questions as to the uses of technology in contemporary art, and whether or not this could be much more than a gimmick. As one Yelp reviewer put it, "The *Rain Room* is definitely an experience. Let's be honest... I'm mostly upset that I didn't get a cool, new Facebook profile pic out of it." This course considers technological developments in modern and contemporary art, from photography, video and new media, digital and internet art, as well as forays into new technology that blur the lines between art and science. Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211, or Art-Arch 215; or permission of the instructor.

Credit 3 units. BU: HUM

---

**L01 Art-Arch 3975 Art and Activism**

This course examines political and social activism in art and visual culture, focusing on the role that visual representation has played in social movements and how artists/activists have employed visual media to challenge and resist dominant visual representations and political formations. We explore key theoretical developments in activist discourse, as well as the role of art practices and aesthetic commitments in these developments. This course seeks to represent the development of the relation of art and activism in its broadest intellectual and cultural context within the 20th century and encourage an appreciation of the complex array of disciplinary perspectives that are implicated in this development. Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211 or Art-Arch 215, or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 4000 Topics in Art History and Archaeology**

Prerequisites: L01 113, L01 215; one 300-level course in Art History preferred; or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 4002 The Decorative Aesthetic in Modernism, 1860–1960**

In the criticism of modern art, decoration and decorative have often been used as pejorative terms, designating art that has no intellectual basis but is merely pleasing, intended to fill space and delight the eye. But in the late 19th century, these terms carried important cultural value, and opened the door to significant experiments in abstraction. Moreover, the decoration of a public space or surface may have political implications. This course investigates decoration and theories of "the decorative" in modern art in Europe and the United States, with special attention to the evolution of ideas of modernism in both 2-dimensional and 3-dimensional environments. We also consider some of the political meanings that may be borne by both public mural painting and domestic decoration, as well as easel painting that aspires to conditions of the decorative. Key figures include Puvis de Chavannes, Morris, the Nabis, Van de Velde, Monet, Matisse, the Mexican muralists, Pollock and Shapiro. Prerequisite: Art-Arch 211 Introduction to Modern Art, or any 300-level course in art history, or permission of instructor.

Credit 3 units. A&S: TH Art: AH

---

**L01 Art-Arch 4015 Theories of Modern Art and Architecture**

The course presents theories of art and architecture from the 19th to the 21st century in their historical contexts through a set of in-depth investigations of selected topics. Some knowledge of history and theory is integral to contemporary understandings of the disciplines of art, art history and architecture. To foster a historical understanding of theories of modern art and architecture, we discuss a selection of key texts, divided into three sections: theoretical sources of modern art and architectural history in the 19th century; theories of modernism, from the formalist to the Marxist; postmodern critiques of modernism, in such areas as feminist theory and poststructuralism. Class visits to Sullivan and Adler's Wainwright Building (1890–91), Saarinen's Arch at the Jefferson National Expansion Memorial (completed 1964), Ando's Pulitzer Foundation for the Arts (2001), and Maki's Kemper Museum of Art (2006) are integral to the work of the course. Prerequisite: Either Art-Arch 112 Introduction to Western Art or Art-Arch

211 Introduction to Modern Art and any 300-level course in art history; or permission of instructors.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 4045 Beyond Painting: Innovation in Prints and Sculpture in Early Modern Europe**

Prints and sculpture are frequently overlooked in the study of early modern European art, yet the issues they raise are critical to our understanding of the period. Both categories, too often seen as secondary to painting, entail frequently complex technical and intellectual innovations that were fundamental to their time. This course will focus on these two important media in order to offer a fuller and richer picture of how artists of the Renaissance and baroque periods reinterpreted and expanded their visual vocabularies in response to, and in participation with, changing technologies and ideologies. Beyond Painting is based on direct interaction with works of art with the aim of facilitating enhanced looking and evaluation skills essential to the study of art history. Held at the Saint Louis Art Museum, each session will focus on the Museum's collection as well as the objects in the exhibition "Learning to See: Renaissance and Baroque Masterworks from the Phoebe Dent Weil and Mark S. Weil Collection." Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215); one 300-level course in Art History preferred; or permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, GFAH, HUM EN: H

---

**L01 Art-Arch 4240 The Plundered Past**

The public imagination thrills at the fantastic adventures of Indiana Jones and Laura Croft, Tomb Raider; but the reality of modern archaeology is more complex, ethically challenging and interesting than a simple treasure hunt. In the U.S. and Canada, our science museums and museums of anthropology still display artifacts that are regarded as sacred and culturally definitive by Indian nations, although such holdings are now subject to negotiation and repatriation. Art museums in Europe and the U.S. are still stocked with looted ancient masterpieces that are revered as vital heritage by the nations from which they were stolen. We display looted art alongside a much smaller number of legitimately excavated artifacts of masterpiece quality, so it is no surprise that our popular images of archaeologists as avid and undiscerning collectors raise little concern. But modern archaeologists are not extractors of art or even of scientific information, from places as passive and inert as the museums' objects ultimately occupy. Archaeologists work with living people inhabiting societies and states that care deeply about their pasts and the relics of it. They are active agents engaged with many other people in the production of knowledge about the past. In our rapidly shrinking world, educated sensitivity to the many ancient cultural legacies that shape the values of modern global society is more than a moral imperative; it is a basic form of collaboration in the common project of survival. Archaeologists are ethically charged to advance that project through education about the complex contemporary arena of artifacts, sites, and information they occupy.

Same as L48 Anthro 4240

**L01 Art-Arch 428 The Invention of the Image: From Classical Art History to Modern Visual Studies**

The scholarly field of Image or Visual Studies has developed in response to the widespread proliferation of images, both still and moving, in contemporary life. It distinguishes itself from

traditional art history by examining visual representations of all types, not only works of high art, and by concentrating on the role those representations play in the formation of culture. Though most of the scholarship produced in this field focuses on the modern world, it depends upon ideas first developed in Mediterranean antiquity. This course has two primary goals. We conduct an historical examination of practices and theories of image making from Near Eastern antiquity to modernity. In so doing, we also carry out an historiographical survey of the major works in Image/Visual Studies, thereby gaining an appreciation for the wide range of methods of inquiry employed in this important field of research. Prerequisites: Intro to Western Art (L01 Art-Arch 113) or Intro to Modern Art (L01 Art-Arch 215); one 300-level course in art history preferred; or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

#### **L01 Art-Arch 429 Art and Death in Ancient Rome**

Perhaps more than any other phenomenon, death spurred the creation of art in the ancient Roman world. The practice of materially commemorating the deceased, of perpetuating the memory of the dead through the creation of funerary monuments designed to appeal to both intimate familial relations and the public at large, stretched across Roman social boundaries and endured for many centuries. But death also frequently provided the subject matter of art even outside the confines of the funerary realm. The goal of this course will be to explore the complex relationship between art and death in the Roman world. It will range from early Rome to the end of the empire and the changes brought about by widespread conversion to Christianity. In conjunction with historical readings, the course will also engage with theoretical texts in the anthropology and philosophy of death. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215); one 300-level course in Art History preferred; or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

Credit 3 units. A&S: TH Art: AH

---

#### **L01 Art-Arch 4321 Ancient Coins**

The seminar is designed to research the rich world of Greek and Roman coinage by using the university's own resource, the J.M. Wulff collection of coins. Emphasis on coin typology, works of art or buildings illustrated on our coins, and the history of coinage. We use actual coins in the gallery. Due to the delicate nature of the material, the course is by permission of the instructor only.

Credit 3 units. A&S: TH Art: AH

---

#### **L01 Art-Arch 4375 Ancient Greek Sculpture in Context**

Sculpture counts among one of the greatest artistic achievements of ancient Greece, and one that has had the greatest impact on the art of later periods. This course focuses on original works of art of the Archaic and Classical periods (600–300 BCE), placing emphasis on how study of their contexts — the places in which they were produced, displayed and found — contributes to our understanding of their place in the ancient world. Background material, which is covered at the beginning of the semester, includes the origins of monumental Greek sculpture at the beginning of the Archaic period (late 7th to early 6th century BCE), and the stylistic development of the Archaic and Classical periods. We then proceed to discussion of various types of sculpture (architectural, cult statue, votive,

commemorative, funerary) and how these works functioned within the context of the Panhellenic sanctuary, the city sanctuary, the secular center of the city, and the necropolis. In a different view of context, we also consider sculpture recovered from ancient shipwrecks, looted art on its way to the ancient Roman art market. Prerequisite: Art-Arch 331 or permission of the instructor.

#### **L01 Art-Arch 4376 Pictorial Illusion in the Ancient Mediterranean**

Among the many accomplishments in the history of Greco-Roman art, ancient writers especially valued the development of pictorial illusion. Pictorial illusion refers to the techniques of reproducing or approximating aspects of the visual perception of the material world on a two-dimensional surface. These include foreshortening, the application of highlights, and the indication of multiple points of depth in space relative to the picture plane. The purpose of the course is to explore the material, stylistic and technical history of illusionistic painting practices in the ancient Mediterranean world from Classical Greece to Late Antique Rome and to seek to understand the cultural and social significance of those practices. In addition to examining specific historical questions in the development of ancient painting, the course investigates trans-historical connections between vision, visuality and methods of representation. Prerequisites: one of Art-Arch 112, Art-Arch 113, Art-Arch 211, or Art-Arch 215; one 300-level course in art history preferred; or permission of instructor.

Credit 3 units.

---

#### **L01 Art-Arch 439 Greek Art in Rome: Discourse, Dedication and Reflection**

Throughout the modern period, Ancient Greek art has been perceived of as a genuinely original and creative tradition, in which both individual artists and regional schools made some of the most significant advances in the long development of European art. Roman art, by contrast, has been seen as derivative and secondary; Johann Joachim Wincklemann, the founder of modern art history, classified it among the "style of the imitators." But this traditional dichotomy rests in large part on the Romans' own reactions to their encounters with the arts of Greece. Through the analysis of textual sources, architecture, statuary and painting, this course investigates the status and influence of Greek art in the city of Rome from the third-century BCE until the late Imperial period, and seeks to understand how Roman responses to and uses of Greek art have come to shape the modern perception of both traditions. Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211, or Art-Arch 215; one 300-level course in art history preferred; or permission of instructor.

#### **L01 Art-Arch 444 The Forbidden City**

Home to 24 emperors of the Ming and Qing dynasties (1368–1911), the Forbidden City today occupies the heart of Beijing and comprises the largest ensembles of premodern architecture in China. This seminar examines the origins of the palace, its construction in early Ming, the coded symbolisms of its plan and decoration, the rituals of court, and the lives of its denizens, from emperors (including Pu Yi, the "last emperor") to concubines, from Jesuit missionaries to eunuchs. The course also considers the 20th-century identity of the site as a public museum and the backdrop to major political events, as well as its role in the urban design and contemporary art of 21st century Beijing.

Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211 or Art-Arch 215; one 300-level course in art history preferred; or permission of instructor.

**L01 Art-Arch 4489 The Three Emperors: Redefining Chinese Art in the Golden Age**

Ruling imperial China during its last Golden Age, the Qing emperors Kangxi, Yongzheng and Qianlong patronized the arts during an unprecedented period of prosperity and international exchange. Many of the works they commissioned are now icons of Chinese culture, but in their time these three Manchus redefined Chinese art with ideas and styles from Baroque Europe, Tibet, Mongolia and even Islamic Central Asia. This seminar focuses on the ethnically and culturally diverse art, architecture and material culture patronized by these three emperors to examine how they and their multi-ethnic empire changed the definition of Chinese art during the long 18th century. Prerequisites: Art-Arch 111 Introduction to Asian Art; or one 300-level course in Asian art history, history or literature; or permission of instructor.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

---

**L01 Art-Arch 4490 Art, Vision, and Science in China**

After China and Europe began sustained contact, the introduction of Western science, math and technology often affected Chinese art more than anything else. New optical devices and ways of visually understanding the world produced a range of positive and negative responses. Often expressed in art, these works demonstrate how new ideas affected Chinese conceptions of vision, looking, cognition and visuality. Covering the 17th through mid-20th centuries, this course discovers how Chinese art became entwined with vision and modern science, covering prints, paintings, objects and photographs across medicine, astronomy, cartography, optics and mathematics. Prerequisite: L01-111, one course in Art History or Asian Studies, or permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD Arch: HT Art: AH

---

**L01 Art-Arch 4494 East, Meet West: Cross-Cultural Aesthetics in Chinese and Japanese Art**

This seminar grounded in cross-cultural aesthetics examines East Asian visual responses to European art and science from the 16th through 19th centuries. First introduced by Jesuit missionaries, continued by merchants, and culminating with colonial enterprises, the same Western ideas and works left very different impressions on China and Japan. An introduction to cross-cultural aesthetics from both Western and East Asian perspectives lays the theoretical foundation to engage these works of art, before proceeding thematically through time to cover painting, cartography, woodblock prints, ceramics and photography within transregional and transcultural contexts. Prerequisites: at least one course in Asian art or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 4615 Caricature: The Culture and Politics of Satire**

This course examines the golden age of caricature. Beginning with the prints of William Hogarth, we look at the caricatural traditions in France and England from the late 18th-century through the early 20th century. Special emphasis is placed on visual satire as a vehicle for social and political critique, on theories of humor (particularly Baudelaire and Bakhtin), and the development of a mass market for this imagery. Other figures discussed include Rowlandson, Cruikshank, Daumier, Gavarni, Philipon, and Gil. We take advantage of a major collection of French caricature in the Mildred Lane Kemper Art Museum at Washington University, as well as collections available for study in Olin Library and at the St. Louis Art Museum. Prerequisites: Art-Arch 112 or Art-Arch 211, or a 300-level course in modern European history or literature, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 4621 Leonardo da Vinci**

Leonardo da Vinci is universally recognized to be one of the greatest artists of all time. But who was Leonardo? Artist or scientist? Master, magus or myth? This seminar explores the reality and fiction of a fascinating, yet enigmatic genius, as well as placing this unique individual in the contexts of Renaissance Italy and the modern imagination.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH

---

**L01 Art-Arch 4624 Michelangelo**

An examination of the life and works of Michelangelo. The most important developments in his architecture, painting and sculpture; with special attention to his assistants, friends, family and contemporaries. Prerequisite: permission of instructor.

---

**L01 Art-Arch 4625 Venice**

A seminar focusing on the art of Venice, in particular on Bellini, Giorgione and Titian. Special attention to the international reputations of these three artists and to problems of patronage, connoisseurship and interpretation. Prerequisite: Art-Arch 361 or 362, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH

---

**L01 Art-Arch 4629 Carravaggio: Master and Murderer**

Michelangelo Merisi (Michael Angelo Merigi or Amerighi) da Caravaggio (29 September 1571 - 18 July 1610) was one of the most important and influential painters of the 17th century, in Italy and throughout Europe. He was active in Rome, Naples, Malta and Sicily between ~1592 and 1610. But who was Caravaggio? What do we really know about his tempestuous life and how it factors in the art he created? Caravaggio was a powerful, brilliant, brutish, and hugely influential artist; a belligerent personality, brawler and murderer. He was a man of contradictions: a devout Christian and bisexual sodomite; a Knight of Malta and a fugitive from the law. This seminar explores the reality and fiction of this fascinating and influential genius, and places him in his historical, social and artistic contexts — from Baroque Italy to the modern imagination. Prerequisites: L01 113; one 300-level course in Art History; and permission of instructor.

Credit 3 units. A&S IQ: HUM Arch: HT Art: AH

---

**L01 Art-Arch 4662 Michelangelo the Architect**

When, why and how did the great Renaissance sculptor, painter and poet Michelangelo Buonarroti become an architect? This seminar surveys Michelangelo's built and unbuilt architecture, his methods and extant drawings, and the process and influence of his creations.

**L01 Art-Arch 4678 Bosch and Bruegel**

Humor, monstrosity, violence, and vernacular culture pervade the oeuvres of Hieronymus Bosch and Pieter Bruegel the Elder, two of the most seminal artists of the Northern Renaissance. This course addresses the complexity of their oeuvres and the methodological problems raised in the interpretation of their enigmatic imagery, with a particular focus on the dissemination of their artistic personas in print. Prerequisites: L01 113 or L01 215; one 300-level course in Art History preferred; or permission of instructor.

Credit 3 units. A&S: LA A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 4721 Hydrogen Jukebox: American Art and Culture, 1945-1960**

The rise and "triumph" of Abstract Expressionism has long dominated the story of American art following World War II. This new seminar puts Abstract Expressionism into context with parallel developments in the arts, photography and film. Among the topics we consider: the conversation between émigré artists and American culture during and after the war; the emergence of a "noir" aesthetic in film and literature; the early work of Jasper Johns and Robert Rauschenberg and the so-called "aesthetic of indifference" in relation to Abstract Expressionism; artistic collaborations at Black Mountain College; New York school photography and photojournalism; and the cultural impact of the A bomb. Prerequisite: a 300-level course on 20th-century art, photography or history; or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 473 Art and Culture in Fin-de-Siècle America**

The particular climate of the fin-de-siècle and its expression in art, architecture and letters. Concurrent development in Vienna, Paris and London as basis for comparison. Themes include new theories of mind and perception, the fate of rationalism, the "crisis in bourgeois values," and redefinitions of gender. Prerequisite: permission of instructor.

Credit 3 units. A&S: TH Art: AH

---

**L01 Art-Arch 4743 Imagining the West**

The historical, visual, literary and scientific encounter of Europeans and European-Americans with the North American frontier. Examines how the West as myth and reality was assimilated into, and imaginatively colonized by, both Europe and America from the pre-discovery period through the end of the 19th century. Images of the first encounter, cultural dynamics of the colonization process, cultural resistance of native Americans. Field trips, guest lectures. Prerequisite: 100-, 200- or 300-level courses in art history; or 300-level courses in European or American 19th-century comparative literature, history; or permission of instructors.

Credit 3 units. A&S: TH Art: AH

---

**L01 Art-Arch 4744 TransAmerica: The US and Mexico between the Wars**

Many areas of 20th century U.S. culture between World Wars I and II were inspired by post-revolutionary Mexico. The Mexican Revolution (1910–1917) profoundly reoriented modern Mexico, introducing new cultural and aesthetic forms and historical themes over subsequent decades. Mexican artists contributed to a new national consciousness drawing on indigenous Mexico and on the new politics of workers and peasants, given monumental expression in mural painting. The bidirectional exchange between U.S. and Mexican artists was of great importance for the cultural revitalization of the New Deal and after in the U.S. Among artists, writers, anthropologists and tourists, the vogue for things Mexican was fed by many sources, including increasing travel, diplomatic exchange, and a yearning for alternatives to U.S. modernity. The seminar supports travel to Mexico City, funded by the Art History and Archaeology department. Must be a graduate student, or an undergraduate major or minor in Art History and Archaeology. Recommended courses: one 300- or 400-level course in 20th century U.S. art or history; or one relevant course in Latin American Studies program.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

---

**L01 Art-Arch 475 The City in American Arts and Popular Culture, 1910–1940**

Using visual media—painting; prints and illustration; film and animation — along with studies of vaudeville, and other forms of popular and mass entertainment — this seminar analyzes the presence of the city as a theme that registers a range of cultural attitudes toward the modern. Through close readings of visual and verbal texts, we consider such issues as the relationship between work and leisure, and between high culture and popular arts. We look at critiques and celebrations as well as at how the popular arts help the ordinary man and women to negotiate the challenges of the new mechanized and overscaled urban environment. Prerequisites: 300-level course in American 20th-century cultural history, or American art or literature; or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH

---

**L01 Art-Arch 4770 Cosmopolitan and Native Modernisms: The U.S. and Europe between the Wars**

This seminar focuses on two contrasting currents within American and European modernism between the two world wars: native and cosmopolitan. Alternating between the United States and France, it begins in the years before World War I and concludes with the rise of virulent forms of cultural nationalism in the late 1930s. We consider the subjects, personalities, aesthetic strategies, and political and social investments associated with these alternative modernisms, linked to a search for roots, on the one hand, and on the other, to a desire for forms of spatial and social mobility. Comparing "homegrown" and expatriate experience, we consider divergent attitudes toward identity, gender, nation, time and nature, analyzing these two fundamental responses to modernity in relation to one another. Prerequisites: Art-Arch 112 Introduction to Western Art or Art-Arch 211 Introduction to Modern Art; one 300-level course in art history preferred; or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 4774 The Age of Gatsby: American Art and Culture from World War I to the Great Crash**

Mass consumption and the expansion of mass culture; mechanization; and the birth of a new visual culture that turned on animation, advertising, photography and film. Taking our cues from the cultural contradictions and historical tensions embedded in F. Scott Fitzgerald's great novel of 1925, and the 2013 film inspired by it, this seminar will trace what many at the time called the "Rediscovery of America" and its tribulations. American artists, writers, and cultural theorists embraced the possibilities and pitfalls of American modernity, the nation's mythic promise and its historical dilemmas in the face of growing commercialization and standardization. This seminar is an interdisciplinary look at the art, visual culture, music, literature, and cultural essays of the 1920s through the lens of nation, race, region, and cultural identity(-ies). Prerequisite: 300-level 20th-century American art, history, or literature course, or permission of instructor.

Credit 3 units. A&S: TH Art: AH

---

**L01 Art-Arch 4776 The Arts of Cultural Democracy: America in the 1930s**

What does democratic access to the arts look like? Over the past decade the question of distributive justice has taken on new urgency in our nation. This seminar will look at an earlier period in the nation's history — the 1930s, from the stock market crash of 1929 to the beginning of World War II — when the ideal of cultural democracy was put into practice on a variety of fronts, from dance to the fine arts to public murals and the collecting and inventorying of the nation's material and cultural legacies. We will also consider the possibilities and limits of political art, the impact of John Dewey on future generations of artists and culture-makers; the relationship between leftist politics and modernism; regionalism and internationalism; debates over the nature of documentary photography, and efforts to create a "useable past." Prerequisite: 300-level course in European or American 20th-century art or cultural history, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH

---

**L01 Art-Arch 4785 Art and Culture in 1920s America**

This interdisciplinary seminar examines the relationship between art and 1920s culture in the United States: how artists and critics thought about the nature of our cultural heritage — its rich possibilities and its limitations; the potential of technology and urbanization as well as the threats they pose to older cultural values; the nature of a multicultural society and the contributions of minority traditions to the evolution of American culture; the lure of the Southwest; early criticism of popular media; and the conversation between popular culture and high art. Prerequisite: Art-Arch 112 or permission of instructor.

Credit 3 units. A&S: TH Art: AH

---

**L01 Art-Arch 481 Topics in Modern Art**

The sources, styles, influences and content of the art of such artists as Gauguin and Cézanne examined in the context of contemporary movements in art and literature. Prerequisite: art history major or permission of instructor.

Credit 3 units. A&S: TH Art: AH

---

**L01 Art-Arch 4816 Art and Culture in Fin-de-Siècle Europe**

An examination of painting, photography and the decorative arts in France during the period between the two World's Fairs of 1889 and 1900. Artistic movements include Symbolism (Van Gogh, Gauguin, Redon), later Impressionism (Monet and Morisot), Neo-Impressionism (Seurat and Signac) and Art Nouveau. Thematics include urban leisure and cafe culture; the agrarian ideal; the promises and threats of science and technology; the lure of the primitive; and the impact of nationalism and feminism on the arts. Prerequisites: Art-Arch 211; any 300-level course in 19th-century art, literature or history; or permission of instructor.

Credit 3 units. A&S: TH Art: AH

---

**L01 Art-Arch 4817 Paris ca. 1900: Art, Leisure and Spectacle**

Paris at the turn of the 20th century was a vibrant international center for the development of the visual arts, including painting, photography, film, and the graphic arts, particularly in the exploding domains of posters and illustrated journals. In this seminar, we study the period 1880 to 1910, and examine how diverse modes of urban visibility were at the heart of the development of French modern art. The place of graphic arts in promoting popular entertainments such as ballet, opera, and café concerts, is considered. Another focus is the powerful role of Parisian satirical journals and caricature in debating matters of class, race and national identity. We examine diverse modes of displaying and selling the visual arts, particularly in the spheres of World's Fairs, annual salons, and in the avant-garde spaces of gallery and café exhibitions. Artists of central concern include Lautrec, Chéret, Mucha, Degas, Pissarro, the Nabis, Vallotton, and early filmmakers such as the Lumière brothers and Méliès. Special focus will be given to works on view in an exhibition on the subject to be held at The Kemper Art Museum in spring 2017. Prerequisites: L01 Art-Arch 215 or permission of instructor; one 300-level course in modern art history, or a course in modern French history or literature preferred. French language reading skills not required.

Credit 3 units. A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 4818 Matisse and Modernisms**

Certain artists generate enormous interest during their lifetimes and long after. Over time the work of such artists is subjected to a variety of interpretive approaches in light of changing trends in art criticism and art history; the influence of contemporary art; the ebb and flow of interest in different aspects of the artist's production; changes in the political landscape; and the changing sense of how the artist's work intersects with contemporary cultural developments. This set of intersecting concerns is especially fluid in the modern period, when there is no single dominant idea of the role of art in society. The variety of interpretive strategies developed from and applied to the work of Henri Matisse demands a critical reading of the extensive literature on the artist, as well as an understanding of the variety of modernisms through which to assess his artistic project. Students gain a thorough familiarity with the work of one of the most influential artists of the 20th century; engage aspects of the historiography of 20th-century art through a survey of developments in the Matisse literature; and develop a specific topic in Matisse's art, or the writing about his art, into a class presentation and research paper. Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211 or Art-Arch 215; one 300-level course in art history preferred; or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

**L01 Art-Arch 4819 The Century of Picasso**

The art of Pablo Picasso (1881-1973) spanned three-quarters of the 20th century, and posthumous critical response to his work shows no sign of abating. Picasso was a leading figure in the European primitivist trends at the beginning of the last century, and with Georges Braque, he developed the aesthetic system of Cubism, which rewrote the rulebook of artistic representation. Although he was not an activist, his art routinely engaged momentous political events. Toward the end of his career, he strove to shape his legacy through artistic dialogues with artists of the past by appropriating their styles or subjects, and making them his own. Such eclectic activity, coupled with his creativity and prolific output, has ensured his place among the most influential artists of his century. Prerequisites: one 300-level course in modern art or permission of instructor; junior, senior or graduate standing.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

**L01 Art-Arch 4850 Romanticism to Realism: French Art 1830-1871**

This course traces the flourishing of romanticism and the emergence of various forms of Realism in 19th-century French modernism, opening with the Revolution of 1830. Artistic tendencies ranging from the official and the academic to emergent romantic and avant-garde alternatives are addressed, as well as the unresolved social and aesthetic tensions that support the demand for an art that addresses modern times. The political idealism and the rhetoric of Republicanism in the Second Republic (1848 to 1852) intertwine with the emergence of a critical modernism that seeks truth in form, in materiality, and in political philosophy. Under the authoritarian regime of the Second Empire (1852-1870), the mandates of realism and idealism continue to vie in a period that sees both the flourishing of the academic system and the art dealer system, and the emergence of a critical avant-garde. The course closes with the emergence of Impressionism and the crisis of the Franco-Prussian war. Artists to be discussed include Delacroix, Ingres, Millet, Daumier, Courbet, Corot, Manet, Bonheur, Bayre, Clesinger, and the early careers of Bazille, Degas, Monet, Renoir, Pissarro, Degas, Morisot and Cassatt. Prerequisites: limited to graduate students in Art History; advanced undergrads only with permission of instructor. Some prior knowledge of French modernism required; some facility with French language useful but not required.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

**L01 Art-Arch 4854 Gauguin in Polynesia: The Late Career**

This seminar focuses on the late career of Paul Gauguin, in Tahiti and the Marquesas. This course examines closely the colonial context of fin-de-siècle French Polynesia, Gauguin's response to indigenous culture, his ongoing interests in European currents of theosophy and anarchism, the development of his primitivist style in response to the French avant-garde, and Gauguin's legacy to modern art and culture in the early 20th century. Readings range from primary texts (literature and journals read by the artist, his letters, his satirical articles and caricatures produced for a Tahitian newspaper, his treatises on religion), to postcolonial theory and recent critiques of primitivism. French reading skills are useful, but not required for the course. We visit the Saint Louis Art Museum to view both the Oceanic collection, and prints and paintings by Gauguin. Prerequisite: at least one upper-level course in modern art history, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

**L01 Art-Arch 4856 French Art and Politics in the Belle Epoque**

This interdisciplinary seminar addresses the rich intersection of politics, fine arts and visual culture in modern France from the Franco-Prussian War (1870) to the First World War (1914). We will study the political trends, historical events, and cultural conditions of the era, and their direct influence on the production and reception of a wide range of visual arts, ranging from official paintings and monuments to popular culture such as tourist and documentary photography, commercial posters and political caricature. We also examine the question of what it meant in the Belle Epoque to be an avant-garde artist, and how such artists expressed political sentiment in their work. Prerequisites: permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

**L01 Art-Arch 4859 Visualizing Orientalism: Art, Cinema and the Imaginary East 1850-2000**

This seminar examines film and modern art within the framework of "Orientalism." Reading foundational texts by Said, and incorporating theory and historical discourse concerned with race, nationalism and colonialism, we explore artistic practice in European photography, painting and decorative arts from 1850 to recent times, and European and Hollywood film. We study how power and desire have been inscribed in western visual culture across the bodies of nations and peoples through conventions such as the harem, the odalisque, the desert, and the mysteries of ancient Egypt. To that end, we look at artists such as Delacroix, Ingres, Gérôme, Beardsley, and Matisse and screen films such as *The Sheik*, *The Mummy*, *Salome*, *Cleopatra*, *Pepe le Moko*, *Naked Lunch*, *Shanghai Gesture*, *Thief of Bagdad*, *Princess Tam Tam* and *The Sheltering Sky*. Subjects include the representation of gender, sexuality, desire, race and identity as well as the cultural impact of stereotype and "exotic" spectacle. Students study methods of visual analysis in film studies and art history. All students must attend film screenings.

Same as L53 Film 485

**L01 Art-Arch 4861 Paul Gauguin in Context**

An examination of the art and career of Paul Gauguin (1848-1903) and the artistic, social, and political milieu in which he worked in France and Polynesia. Readings will include the artist's writings, studies of avant-garde culture and primitivism in fin-de-siècle France, and postcolonial theory. Special emphasis will be given to the relationship of the artist and his work to indigenous Polynesian and French colonial cultures of the 1890s. Prerequisite: Art-Arch 211, or any 300-level course in art history, or permission of instructor. Reading knowledge of French useful, but not required.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

**L01 Art-Arch 4863 The Photographic Muse: The Modern Artist and the Camera**

An examination of the interplay of photography with painting and sculpture in European art from 1850 to World War I, with an emphasis on the fin-de-siècle. Readings address the history of the medium; the critical debates (starting with Baudelaire) over photography as a tool of science or of art; the rise of ethnographic photography; the Symbolist ambivalence toward technology; and the development of Pictorialism at the turn of the century. Artists studied include Nadar, Moreau, Degas, Rodin,

Steichen, Gauguin, Munch, the Nabis, Brancusi and Picasso.  
Prerequisite: graduate standing.  
Credit 3 units. A&S: TH Art: AH

---

**L01 Art-Arch 4864 Exoticism and Primitivism in Modern Art**

An interdisciplinary investigation of the development of exoticism and primitivism in European and American art from the Enlightenment to World War II. Topics include exoticist representations of non-Western cultures; the links between colonialism and orientalism; the intersection of discourses on race and gender with exoticism; and the anti-modernist impulse of fin-de-siècle primitivism. Sample artists and authors include Delacroix, Flaubert, Gauguin, LaFarge, Picasso and Matisse. Prerequisites: any 300-level course in art history and permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 4867 The Impressionist Landscape: Style, Place and Global Legacies 1870–1920**

We will consider Impressionism as a dominant style of the Parisian art world, first undertaken as an extension of Barbizon naturalism, but soon expanded into an avant-garde style that objectified sensation and emotion in the name of truth in representation. We will examine the place of individual perception, the physiology of sight, and theories of the natural in the development of the Impressionist landscape, through the consideration of style, genre, artistic theory, and these artists' investment in particular sites. Furthermore, the social, commercial and critical networks that supported the movement will be analyzed. Particular attention will be given to Monet, and a special exhibition of his water lily paintings on view at the Saint Louis Art Museum. Other key artists include Degas, Morisot, Renoir and Cassatt. We will also discuss the relationship of the Impressionist landscape to the development of modernist abstraction, and the aesthetic and nationalist motivations for its appropriation across the globe. Prerequisite: Introduction to Western Art; Introduction to Modern Art, or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: AH EN: H

---

**L01 Art-Arch 4868 Impressionism and the Nation in France and Beyond: Painting and Photography 1860-1920**

We consider Impressionism as a dominant style of the Parisian art world, first undertaken as an extension of Barbizon naturalism, but expanded into an avant-garde style that objectified sensation and emotion in the name of truth in representation. Our central question is the relationship of individual perception, the physiology of sight, and theories of the natural in relation to the importance of place — both region and nation — in the political imagination of the era. We also address the relationship of the Impressionist landscape to the development of modernist abstraction, and the aesthetic and nationalist motivations of its adaptation as a modernist style around the globe. Particular attention is focused around an exhibition "Impressionist France: Visions of Nation" at the St. Louis Art Museum. This seminar has a required travel component to see related works of art in Kansas City and on the east coast; students' expenses are covered. Prerequisite: senior major in art history, or graduate student standing and permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L01 Art-Arch 4877 Critical Studies in Portraiture, Ancient to Contemporary**

To study portraiture is to confront the complexity of human identity. The central theoretical question of this course is how identity can be expressed in a portrait. Following consideration of theories of portraiture, identity and artistic representation, we treat specific historical and cultural instances of portrait-making, from ancient Greece to the present. Non-Western cultural examples broaden the scope beyond the conventional conceptions of portraiture. We conclude by trying to understand the continuing allure of the portrait today as digital media challenge our conventional ideas of visibility, and perhaps even the urgency of portraiture in the post-human age.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 4879 Marking History: Painting and Sculpture After World War II in the U.S., France, and Germany**

This seminar focuses on the aesthetic, cultural and philosophical reactions to the devastating events surrounding World War II and its later reception. We consider artistic developments within a network of international exchange — biennials, gallery and museum exhibitions — in which France, Germany, and the U.S. participated equally within a field of visually similar aesthetic responses to a seismic shift in historical consciousness. What distinctive artistic languages emerged after the war to express transformations in historical consciousness, and in older ideas about an unfettered subjectivity? In what ways did concepts of trauma with which we live today reshape collective memory and leave their trace on painting and sculpture? Looking at abstraction and semi-abstract works in painting and sculpture, we analyze the works of Jackson Pollock, Willem de Kooning, Alberto Giacometti and Jean Dubuffet, Wols, K.O. Götz, Emil Schuhmacher and Hans Hartung. Student research for this seminar will contribute to an exhibition being organized by the Kemper Museum of Art. Students with reading skills in German or French are encouraged. Prerequisites: L01 215 Intro to Modern Art, Architecture and Design or permission of the instructor.

Credit 3 units. A&S IQ: HUM EN: H

---

**L01 Art-Arch 4900 Independent Study and Research**

Credit variable, maximum 3 units.

---

**L01 Art-Arch 4905 Greenberg Curatorial Study**

The Arthur Greenberg program offers students the experience of curating an exhibition. A small team (of two or three) are selected through a competitive application process the year before they enroll in the course. Students sign up for 3 credits in the fall semester, and one credit in the spring. Under the supervision of a faculty mentor in the Art History & Archaeology Department and a curator in the Mildred Lane Kemper Art Museum, students plan and curate an exhibition for the museum's Teaching Gallery. They also research and write a short brochure, prepare educational materials, and offer related programs for the exhibition which usually opens in April. Fall three-unit course fulfills a departmental capstone requirement for the major.

Credit variable, maximum 4 units. A&S: TH A&S IQ: HUM EN: H

---

**L01 Art-Arch 4918 Obscene as Cancer: Modern War in Art**

Art and war have always been intertwined, whether in glory or revulsion. But modern art and modern war are qualitatively different from their counterparts in the past in ways that ensured

that their relationship would become more problematic and oppositional. The challenge of finding new artistic languages to express the new conditions of mechanized combat led many artists to explore abstraction, fragmentation, absurdity or arbitrariness to convey the energy, impersonality and nihilism of modern war. When the British soldier and poet Wilfred Owen (1893-1918) wrote of the human devastation of World War I as "obscene as cancer, bitter as the cud," he strained for metaphoric language appropriate to its magnitude. We will consider the same challenge to visual artists throughout the modern period. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215); one 300-level course in Art History preferred; or permission of instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM EN: H

---

**L01 Art-Arch 4921 Theory for Art History: Modernism/Modernity/Postmodernism**

This course introduces key modern theories. Considering diverse thinkers, this seminar focuses on concepts that have framed and re-framed the study and interpretation of aesthetic modernism and postmodernism over the past century. We read and discuss primary theories and probe their application through close visual readings of individual works of art. Discussions seek a better understanding of the role and meaning of the aesthetic object within a variety of theoretical contexts, extending from an investment in the universalist modern artistic subject, to the shifting role of the contingent viewer within modernity to an expansion of the traditional boundaries of the discipline of art history into visual studies. Prerequisites: advanced undergraduate standing, permission of the Instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

**L01 Art-Arch 4922 From the Death of the Author to the Birth of YouTube: Identity in Contemporary Art**

What constitutes an artist today, when anyone can upload his or her musings to the entire world? Is the question even relevant? This course introduces students to the construction of artistic identity in contemporary art. Students consider major themes governing the production of contemporary art. We cover such topics as the death of the author and the end of art, identity politics and "authenticity," and the effects of new media on the construction of artistic persona. This course assumes a basic familiarity with the methods of art history, as well as general knowledge of art history before 1960. Prerequisites: Introduction to Western Art or Introduction to Modern Art and one 300-level course in art history, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L01 Art-Arch 4923 Globalization and Contemporary Art**

What does globalization mean for contemporary art? And what do we even mean when we use the term? This upper-level seminar course considers recent art (1985–present) in the context of theories of development, postcolonialism and globalization. We focus on the tensions between the global and the local, as well what it means for an artist to be national or international. We also consider the impact of neoliberal economic policies on art production and the art market, as well as the role museums play in this international context. Finally, we consider the internet and social networks as globalizing influences that affect the production and distribution of contemporary art. Prerequisites: Introduction to Western Art or Introduction to Modern Art and one 300-level course in art history, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, HUM EN: H

---

**L01 Art-Arch 4924 1968 and its Legacy**

The events of 1968, including the May riots in Paris, the Tucuman Arde exhibition in Argentina, the Tlatelolco Massacre in Mexico City, and the Prague Spring (and Russian winter) in the Czech Republic, just to name a few, ushered in a new political and social imperative for artists. This class starts with 1968 and traces its legacy to the social and cultural movements of the 1980s, 1990s and early 2000s. We seek to understand the historical underpinnings of contemporary activist art and determine the roles of socially-motivated art in the current political and intellectual climate. Art-Arch 112, Art-Arch 113, Art-Arch 211, or Art-Arch 215; one 300-level course in art history preferred; or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L01 Art-Arch 4925 The Persona of the Artist: Contemporary Visual Artists and their Writings**

An art movement is located as much in the writing that "surrounds" it as in the body of objects that apparently "comprise" it. In the art world today, it is generally accepted that artists are also artist-writers. This course explores this phenomenon by examining the writings of late 20th- and early 21st-century visual artists. In addition to studying social and political contexts, we analyze the various modes of writing that artists employ, look for specific points of intersection between their art and writing, consider the circumstances and venues of the writings' publication, study how the writings figure into the contemporary reception of the artists' visual practices, and evaluate art historians' uses of artists' writings. In exploring a range of case studies, we contemplate the motivations and critical function of writing versus or in combination with art-making as well as the role that the practice of writing plays in forming the identity of the contemporary artist-subject. Prerequisites: Intro to Western Art (L01 Art-Arch 113) or Intro to Modern Art (L01 Art-Arch 215); one 300-level course in art history preferred; or permission of instructor.

Credit 3 units. A&S IQ: HUM EN: H

---

**L01 Art-Arch 4975 Collecting Cultures: Taste, Passion and the Making of Art Histories**

This seminar examines the theory and the cultural history of the collecting of art objects and artifacts from a range of cultures and periods, considering how and why both individuals and institutions create collections. What social and psychological factors drive this passion? What are the various cultural, political and aesthetic priorities that have driven this practice historically? How is cultural patrimony defined, and how do law, the art market and cross-cultural ethics impact the placement, study and display of a culture's material heritage? We build the seminar around the history of collecting in America, with a focus on Midwestern examples, and particularly, important case studies in St. Louis. We, for example, consider the significant local collections built by Joseph and Emily Rauh Pulitzer (modern art), and Morton May (modern and oceanic art), as well as the histories of both modern and non-Western collections now owned by the St. Louis area museums. This course is complemented by various local field trips (SLAM, Pulitzer, Kemper and Cahokia). Prerequisites: Art-Arch 112, Art-Arch 113, Art-Arch 211 or Art-Arch 215; one 300-level course in art history preferred; or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

### L01 Art-Arch 4982 Public Art: History, Practice, Theory

The course will consider the history and functions of public art, with special attention to public art in St. Louis. We survey not only the obvious forms of public art in urban sculpture and mural painting, but also less traditional intersections of art and public in such sites as the internet. We will also examine the operations of institutions — national and local arts agencies, international exhibitions, nonprofit centers and the like — that foster a public engagement with contemporary art. Finally, we will consider new priorities and projects in public art, especially socially oriented and environmentally sustainable initiatives. Prerequisites: L01 Art-Arch 112 Introduction to Western Art or L01 Art-Arch 211 Introduction to Modern Art; one 300-level course in art history preferred, or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

### L01 Art-Arch 499 Honors Art History and Archaeology

A major research paper acceptable to the department. Prerequisite: permission of the department. Max. 6 units. Credit 3 units. A&S: TH EN: H

## Asian-American Studies

The minor in Asian-American studies is designed to enrich critical understanding about both individual experiences and collective histories of Asian Americans in regional, national and transnational contexts. As an inter- and multidisciplinary program, it underlines transnational contexts and comparative perspectives for the study of Asian-American experiences. Through promoting knowledge and understanding of a wide range of Asian-American individuals and groups in teaching and research, the minor provides new classroom opportunities for undergraduate students to explore Asian-American experiences; enhances communication and collaboration among various cultural, ethnic and racial groups; and facilitates intellectual exchanges and broadens academic inquiries on the subjects of migration, ethnicity and race across different disciplines and programs at Washington University, including American Culture Studies; East Asian Studies and South Asian Studies; African and African-American Studies; Women, Gender, and Sexuality Studies; and American Indian Studies.

The minor in Asian-American studies can nicely complement a major in American culture studies; East Asian studies/East Asian languages and cultures; English; history; international and area studies; sociology and other fields. Because the questions that animate Asian-American studies span disciplinary boundaries, the minor will inspire students to draw on the methods and insights of multiple disciplines to engage complex, real-world problems that necessitate interdisciplinary thinking. Situated in the larger context of the university's commitment to diversity and inclusion, the minor in Asian-American studies is an integral part of diversity and inclusion initiatives at Washington University for nurturing a culturally inclusive and academically stimulating environment.

An independent minor, Asian-American studies is administered by International and Area Studies.

## Majors

There is no major in Asian-American studies.

## Minors

### The Minor in Asian-American Studies

**Total units required:** 18 (at least 12 units must be at the 300 level or above)

**Requirements:**

- 3 credits of Introductory course work
- 3 credits of Asian-American Focus course work
- 6 credits of Multiethnic and Transnational Focus course work
- 6 credits of Context course work

**Regulations:**

- In general, students should complete one introductory course prior to pursuing Asian-American Focus courses and Multiethnic and Transnational courses.
- All advanced units must be unique to the Asian-American studies minor (i.e., not counted toward any other major or minor).

### Introductory courses

**Choose one from this list; 3 credits, any level:**

- Freedom, Citizenship and the Making of American Life (History 163) (annually)
- Freshman Seminar — Chinatown: Migration, Identity and Space (IAS 135) (annually)

### Asian-American Focus courses

**Choose one from this list; 3 credits, any level:**

- Asian and Pacific Island America: Identity, Diversity, and Social Change (AMCS 250) (annually)
- Topics in American Literature: Imagining Multi-Racial Coalitions (E Lit 423) (every 1 or 2 years)
- "Model Minority": The Asian-American Experience (IAS 3512) (annually)

### Multiethnic and Transnational Focus courses

**Choose any two from these two lists; 6 credits, any level:**

**(1) Asian Americans in a Multiethnic/Multiracial Perspective**

- Topics in English Literature: Growing Up "Different": The Bildungsroman in a Diversifying America (E Lit 317) (annually)
- Children of Immigrants: Identity and Acculturation (IAS 4036) (annually)

**(2) Asian Diasporas in a Transnational Perspective**

- Writing from the Periphery: The Question of Chineseness (Comp Lit 449) (unpredictable)

- Topics in Comparative Literature I: The Trope of "China" in the Imagination of the Chinese Diaspora (East Asia 3751) (unpredictable)
- The Chinese Diaspora to 1949 (History 3165) (every 2 years)

### Context courses

**Choose one from each category; 6 credits total, any level:**

**(1) Immigration, Race and Ethnicity**

- Rainbow Radicalisms!: Ethnic Nationalism(s), the 1960s and the Politics of the New Left (AFAS 401) (unpredictable)
- The Immigrant Experience (AMCS 202) (every 1 to 2 years)
- Race & Ethnic Relations in the United States (AMCS 3296) (annually)
- Visualizing Segregation: A History of St. Louis, Chicago and New Orleans (L22 History 306M, I50 InterD 306M) (unpredictable)
- The Long Civil Rights Movement (History 3670) (annually)
- Immigration Law (W74 Law 630) (every 1 to 2 years)
- Race and Ethnicity in American Politics (Pol Sci 3031) (unpredictable)
- The Roots of Ferguson: Understanding Racial Inequality in the Contemporary U.S. (SOC 2010) (every 1 to 2 years)
- Social Inequality in America (SOC 2110) (unpredictable)
- The Social Construction of Race (SOC 3212) (unpredictable)
- Sociology of Immigration (SOC 3710) (unpredictable)

**(2) East Asian Studies and South Asian Studies**

- Contemporary Chinese Culture and Society (Anthro 3055) (unpredictable)
- Modern and Contemporary Chinese Literature (Chinese 342) (annually)
- Topics in East Asian Studies: Sino-American Relations since 1949 (East Asia 3263) (every 2 years)
- Freshman Seminar: The Meaning of Pakistan: History, Culture, Art (History 2157) (every 1 or 2 years)
- Early Modern China: 1350-1800 (History 3162) (every 1 or 2 years)
- 19th-Century China: Violence and Transformation (History 331) (every 2 years)
- Modern China: 1890s to the Present (L22 History 316C, U16 Hist 3100) (annually)
- Modern South Asia (History 3192) (every 2 years)
- Japan Since 1868 (History 320C) (every 1 or 2 years)
- Globalization and its Discontents (History 270) (unpredictable)
- From McDonald's to K-Pop: New Movements in East Asia (IAS 3822) (annually)

- The Modern Voice in Japanese Literature (Japan 333C) (annually)
- Topics in Politics: Modern South Asian Politics (Pol Sci 3292) (unpredictable)

### \*Discontinued courses

The following courses offered in 2015 were discontinued. Their credits are equivalent to Introductory courses.

- Ocean, Island, Ghetto, Globe: The Routes and Horizons of Asian-American Literature (L14 E Lit 461)
- Introduction to Asian-American History (L22 History 3059)

## Courses

Please refer to the Minors section of this page.

## Biology

Biology is an exciting, diverse field ranging from the molecular biology of individual cells to interactions among entire populations of organisms. Members of the biology faculty are recognized internationally for their research and bring a variety of strengths and teaching styles into the classroom. The major program in biology provides a thorough education in the history of scientific discovery in biology, the logical and statistical procedures used to formulate and to test biological hypotheses, and technical skills needed for conducting contemporary biological research.

The biology major program emphasizes the hierarchical nature of biological complexity and the major structures and functions that emerge at the molecular, cellular, organismal, populational and ecosystem levels. Each student masters at least one dimension of contemporary research in sufficient detail to describe the major hypotheses currently being tested and to demonstrate techniques used to test those hypotheses. Mastery of this material is evident in a student's ability to critique published data, identifying ambiguities and uncertainties in conclusions drawn from those data, and to evaluate the societal importance of the research. Biology majors are prepared to make creative contributions to biology.

The biology major program provides a wide range of research opportunities. Because more than 400 faculty members conduct research in biology and biomedical sciences at Washington University, it is easy to find a project that suits a student's main interests. Many students complete their research projects at the Washington University School of Medicine, one of the top-ranked medical schools in the country. Summer research fellowship programs are available, funded by sources including the Howard Hughes Medical Institute, Children's Discovery Institute, National Science Foundation, and the Washington University Office of Undergraduate Research. Detailed information on finding a research mentor is available online (<http://www.nslc.wustl.edu/courses/Bio500/bio500.html>).

PhD, Harvard University

## Majors

Please refer to the following sections for more information about:

- The Major in Biology (p. 272)
  - Ecology and Evolution Track (p. 273)
  - Genomics and Computational Biology Track (p. 273)
  - Microbiology Track (p. 273)
  - Molecular Biology and Biochemistry Track (p. 273)
  - Neuroscience Track (p. 273)
- The Major in Environmental Biology (p. 273)

## The Major in Biology

Total units required: 58-67

### Required courses:

| Code           | Title   | Units |
|----------------|---|-------|
| Biol 2960      | Principles of Biology I                                 | 4     |
| Biol 2970      | Principles of Biology II                                | 4     |
| Chem 111A      | General Chemistry I                                     | 3     |
| Chem 112A      | General Chemistry II                                    | 3     |
| Chem 151       | General Chemistry Laboratory I                          | 2     |
| Chem 152       | General Chemistry Laboratory II                         | 2     |
| Chem 261       | Organic Chemistry I with Lab                            | 4     |
| Chem 262       | Organic Chemistry II with Lab                           | 4     |
| Math 132       | Calculus II   | 3     |
| Math 2200      | Elementary Probability and Statistics                   | 3     |
| or Math 233    | Calculus III  |       |
| or Math 3200   | Elementary to Intermediate Statistics and Data Analysis |       |
| Physics 117A   | General Physics I                                       | 4     |
| or Physics 197 | Physics I   |       |
| Physics 118A   | General Physics II                                      | 4     |
| or Physics 198 | Physics II  |       |
| Total Units    |   | 40    |

Students may substitute Chem 401 Physical Chemistry I for Chem 262 Organic Chemistry II with Lab. Students who plan to take physical chemistry must take Math 233 Calculus III. Math 2200 Elementary Probability and Statistics, required for tracks in ecology and evolution and in genomics and computational biology, and Math 322 Biostatistics are valuable, particularly for students interested in research. Students who have taken Math 233 may take Math 3200 Elementary to Intermediate Statistics and Data Analysis rather than Math 2200 Elementary Probability and Statistics for a more advanced treatment of statistics.

At least 18 units in advanced biology courses (numbered 300 or above) are required. These 18 units may not include Biol 303A, Biol 307A, Biol 374, Biol 387, Biol 388, Biol 393, Biol 429, Biol 487, Biol 488; cross-listed courses originating in other departments (except Biol 360, Biol 4580, Biol 4810 and Biol 4820, which count as biology major credit despite external origins); courses in University College; or more than 3 units of history-of-science courses. Majors are required to take at least one course from each of these three areas:

### Area A: Cellular and Molecular Biology

| Code      | Title                                 | Units |
|-----------|---------------------------------------|-------|
| Biol 3041 | Plant Biology and Genetic Engineering | 4     |
| Biol 334  | Cell Biology                          | 3     |

|           |   |   |
|-----------|---|---|
| Biol 3371 | Eukaryotic Genomes                                      | 4 |
| Biol 349  | Microbiology  | 4 |
| Biol 424  | Immunology  | 4 |
| Biol 4492 | Infectious Diseases: History, Pathology, and Prevention | 3 |
| Biol 451  | General Biochemistry                                    | 4 |
| Biol 4810 | General Biochemistry I                                  | 3 |
| Biol 4820 | General Biochemistry II                                 | 3 |

### Area B: Organismal Biology

| Code      | Title  | Units |
|-----------|--|-------|
| Biol 3151 | Endocrinology                                      | 3     |
| Biol 328  | Principles in Human Physiology                     | 4     |
| Biol 3411 | Principles of the Nervous System                   | 3     |
| Biol 3421 | Introduction to Neuroethology                      | 3     |
| Biol 3422 | Genes, Brains and Behavior                         | 3     |
| Biol 4023 | How Plants Work: Physiology, Growth and Metabolism | 3     |
| Biol 4030 | Biological Clocks                                  | 3     |
| Biol 4071 | Developmental Biology                              | 3     |
| Biol 4580 | Principles of Human Anatomy and Development        | 3     |

### Area C: Evolution, Ecology and Population Biology

| Code      | Title                                    | Units |
|-----------|--|-------|
| Biol 3501 | Evolution                                | 4     |
| Biol 381  | Introduction to Ecology                  | 3     |
| Biol 4181 | Population Genetics (and Microevolution) | 3     |
| Biol 4182 | Macroevolution                           | 3     |
| Biol 4183 | Molecular Evolution                      | 3     |
| Biol 419  | Community Ecology                        | 4     |
| Biol 4202 | Evolutionary Genetics                    | 3     |
| Biol 472  | Behavioral Ecology                       | 4     |

Majors also must take an advanced laboratory course from the following list:

| Code      | Title   | Units |
|-----------|---|-------|
| Biol 3110 | Vertebrate Structure Laboratory                 | 4     |
| Biol 3491 | Microbiology Laboratory                         | 3     |
| Biol 3492 | Laboratory Experiments with Eukaryotic Microbes | 3     |
| Biol 3493 | Bacterial Bioprospecting and Biotechnology      | 3     |
| Biol 360  | Biophysics Laboratory                           | 3     |
| Biol 373  | Laboratory on the Evolution of Animal Behavior  | 3     |
| Biol 404  | Laboratory of Neurophysiology                   | 4     |

|           |  |   |
|-----------|--|---|
| Biol 4193 | Experimental Ecology Laboratory                                  | 4 |
| Biol 4241 | Immunology Laboratory  | 3 |
| Biol 4342 | Research Explorations in Genomics                                | 4 |
| Biol 434W | Research Explorations in Genomics (Writing-Intensive)            | 4 |
| Biol 437  | Laboratory on DNA Manipulation                                   | 4 |
| Biol 4520 | Protein Function in Model Cellular Systems                       | 3 |
| Biol 4522 | Laboratory in Protein Analysis, Proteomics and Protein Structure | 3 |
| Biol 4523 | Mutagenesis and Enzyme Analysis                                  | 4 |
| Biol 4524 | Structural Bioinformatics of Proteins                            | 4 |

All courses to be counted toward a major in biology must be taken for a letter grade if a letter grade is offered. A grade of C- or better must be earned in all of these courses.

In special cases, students may earn credit for graduate courses offered by the Division of Biology and Biomedical Sciences.

### Optional Biology Major Tracks

A student majoring in biology may choose one of four optional tracks within the major if the student's interests lie primarily within one of these subfields of biology. A track provides strong training for graduate study in its subfield. *All tracks require completion of the biology major requirements as stated above* but provide concentrated study in one of the four subfields.

#### The Major in Biology: *Ecology and Evolution Track*

Additional requirements include Math 2200 or Math 3200. Students whose main interest is ecology must take at least two ecology electives and one evolution elective; students whose main interest is evolution must take at least two evolution electives and one ecology elective (evolution electives: Biol 3501, Biol 4181, Biol 4182, Biol 4183, Biol 4202; ecology electives: Biol 381, Biol 419, Biol 472). Also required are one elective in analytical methodology (CSE 131, CSE 424 or Math 322) and one elective in earth and planetary sciences (EPSc 201, EPSc 323 or EPSc 418). The course used to fulfill the advanced laboratory requirement for the major must be Biol 373, Biol 4193, Biol 437, Biol 4342 or Biol 434W.

#### The Major in Biology: *Genomics and Computational Biology Track*

Additional requirements include Biol 3371 (or Biol 4183 or Biol 548), Math 2200 or Math 3200, and three outside electives (CSE 131, CSE 240, CSE 247). The course used to fulfill the advanced laboratory requirement for the major must be Biol 3492, Biol 4342, Biol 434W, Biol 437, or Biol 4524. Biology courses recommended for students in this track include Biol 334, Biol 3422, Biol 349, Biol 4030, Biol 4181, Biol 4183 and

Biol 4810. Recommended electives outside biology include CSE 447T, Math 217 and Math 309.

#### The Major in Biology: *Microbiology Track*

Additional requirements include Biol 349, which should be taken spring of sophomore year, and either Biol 451 or the pair of courses Biol 4810 and Biol 4820. The advanced laboratory course used to fulfill major requirements must be one of the following: Biol 3491, Biol 3492, Biol 3493, Biol 437 and Biol 4520. At least one of the following must be taken as an advanced microbiology elective: the pair of courses Biol 4331 and Biol 4830, Biol 4492, Biol 4832, and Biol 5426. At least one of the following must be taken as an allied elective: the pair of courses Biol 191 and Biol 192, Biol 424, Chem 453 and EPSc 323. Biol 3501 is highly recommended as the course used to fulfill biology major area C. The total upper-level credits earned in major-track biology courses and allied electives must be at least 24.

#### The Major in Biology: *Molecular Biology and Biochemistry Track*

Additional requirements include both Biol 4810 and Biol 4820; and either Biol 334, Biol 3371 or Biol 349. The advanced laboratory course used to fulfill major requirements must be one of the following: Biol 3491, Biol 3492, Biol 3493, Biol 4241, Biol 4342/Biol 434W, Biol 437, Biol 4520, Biol 4522, Biol 4523, and Biol 4524. Additional biology courses recommended for students in this track include Biol 3041, Biol 4023, Biol 4071, Biol 4183, Biol 4832 and Biol 5312.

#### The Major in Biology: *Neuroscience Track*

Biology major requirements must be met with the following courses: Biol 3058, area A (Biol 334, Biol 451, Biol 4810 or Biol 4820), area B (Biol 3411), any course in area C, and advanced laboratory (Biol 360 or Biol 404). Students must select at least one biology elective (Biol 3110, Biol 3151, Biol 328, Biol 3371, Biol 3421, Biol 3422, Biol 4030, Biol 437, or Biol 4580) and one outside elective either in physics (Physics 350, Physics 352, Physics 355 or Physics 360) or in psychology (Psych 330, Psych 360, Psych 3604 or Psych 4604). Math 2200 (or Math 3200) is recommended.

Related majors can be found in the biomedical engineering (p. 943), philosophy-neuroscience-psychology (PNP) (p. 723) and philosophy of science (p. 709) pages of this *Bulletin*.

### The Major in Environmental Biology

Students interested in environmental biology typically take Biol 2950 Introduction to Environmental Biology during fall of the freshman year, although it may be taken later. A 400-level class to be required for Latin honors in environmental biology will be introduced. All other courses required for the environmental biology major are currently listed.

**Required courses:**

| Code                        | Title  | Units |
|-----------------------------|--|-------|
| Biol 2950                   | Introduction to Environmental Biology                                      | 3     |
| Biol 2960                   | Principles of Biology I (lecture and lab)                                  | 4     |
| Biol 2970                   | Principles of Biology II (lecture and lab)                                 | 4     |
| Biol 381                    | Introduction to Ecology  | 3     |
| Chem 111A & Chem 151        | General Chemistry I and General Chemistry Laboratory I (lecture and lab)   | 5     |
| Chem 112A & Chem 152        | General Chemistry II and General Chemistry Laboratory II (lecture and lab) | 5     |
| EPSc 201                    | Earth and the Environment (lecture and lab)                                | 4     |
| Math 131                    | Calculus I   | 3     |
| Math 132                    | Calculus II  | 3     |
| Physics 117A or Physics 197 | General Physics I<br>Physics I   | 4     |
| Total Units                 |  | 38    |

**One of the following chemistry courses:**

| Code     | Title                        | Units |
|----------|------------------------------|-------|
| Chem 261 | Organic Chemistry I with Lab | 4     |
| EPSc 323 | Biogeochemistry              | 3     |

**One of the following courses in statistics, GIS:**

| Code      | Title   | Units |
|-----------|---|-------|
| Math 2200 | Elementary Probability and Statistics                   | 3     |
| Math 3200 | Elementary to Intermediate Statistics and Data Analysis | 3     |
| EnSt 380  | Applications in GIS                                     | 3     |

**One upper-level biology lab course:**

Any course that fulfills the advanced laboratory requirement of the biology major is acceptable; we recommend: Biol 4193 Experimental Ecology Laboratory (4 credits, writing intensive).

**One of the following Biol 300+ courses (Area A and B in Biology):**

| Code      | Title                                 | Units |
|-----------|---------------------------------------|-------|
| Biol 3041 | Plant Biology and Genetic Engineering | 4     |
| Biol 334  | Cell Biology                          | 3     |
| Biol 349  | Microbiology                          | 4     |
| Biol 3151 | Endocrinology                         | 3     |
| Biol 328  | Principles in Human Physiology        | 4     |

|           |  |   |
|-----------|--|---|
| Biol 3411 | Principles of the Nervous System                   | 3 |
| Biol 3421 | Introduction to Neuroethology                      | 3 |
| Biol 3422 | Genes, Brains and Behavior                         | 3 |
| Biol 4023 | How Plants Work: Physiology, Growth and Metabolism | 3 |
| Biol 4030 | Biological Clocks                                  | 3 |
| Biol 451  | General Biochemistry                               | 4 |
| Biol 4810 | General Biochemistry I                             | 3 |

**One of the following Biol 300+ courses (Area C in Biology):**

| Code      | Title               | Units |
|-----------|---------------------|-------|
| Biol 3501 | Evolution           | 4     |
| Biol 4181 | Population Genetics | 3     |
| Biol 4182 | Macroevolution      | 3     |
| Biol 419  | Community Ecology   | 4     |
| Biol 472  | Behavioral Ecology  | 4     |

**One additional Biol 300+ major-track course (may include Biol 500):**

- Please refer to the Biology Course Listings (p. 276) in this *Bulletin*.

**One of the following EPSc 300+ courses:**

| Code     | Title   | Units |
|----------|---|-------|
| EPSc 323 | Biogeochemistry (only if not already taken for chemistry requirement) | 3     |
| EPSc 352 | Earth Materials   | 5     |
| EPSc 353 | Earth Forces  | 4     |
| EPSc 385 | Earth History   | 3     |
| EPSc 408 | Earth's Atmosphere and Global Climate                                 | 3     |
| EPSc 409 | Surface Processes   | 4     |
| EPSc 413 | Introduction to Soil Science  | 3     |
| EPSc 422 | Sedimentary Geology   | 4     |
| EPSc 428 | Hydrology   | 3     |
| EPSc 443 | Methods in Biogeochemistry  | 3     |
| EPSc 444 | Environmental Geochemistry  | 3     |

**Additional Information**

**Research:** Research opportunities are available in the student's first or second year through Biol 200; such opportunities are available in the third and fourth years through Biol 500. A research emphasis in the major requires at least 6 credits (two semesters) of Biol 500 research and an approved senior thesis on this research. The research emphasis is acknowledged on the degree either by Latin honors or by a research milestone (for students who do not meet the GPA requirements for Latin honors as described below).

**Senior Honors:** Biology majors are encouraged to work for senior honors, which requires a 3.30 grade point average in biology, a 3.30 average in nonbiological sciences (mathematics, chemistry and physics courses) and a 3.65 overall grade point average at the time of graduation. Also required are 6 units of Biol 500 research and an approved thesis from this work. Students interested in senior honors should begin Biol 500 no later than spring of the junior year.

The biology department awards the Marian Smith Spector Prize to an undergraduate who has an excellent academic record and submits an outstanding honors thesis. It also awards the Harrison D. Stalker Prize to a graduating senior whose college career is distinguished by scholarship, service and breadth of interest.

## Minors

### The Minor in Biology

**Units required:** 18 units of biology and 14 units of chemistry

#### Required courses:

| Code                 | Title  | Units |
|----------------------|--|-------|
| Biol 2960            | Principles of Biology I (prerequisite Chem 111A)         | 4     |
| Biol 2970            | Principles of Biology II (prerequisite Chem 112A)        | 4     |
| Chem 111A & Chem 151 | General Chemistry I and General Chemistry Laboratory I   | 5     |
| Chem 112A & Chem 152 | General Chemistry II and General Chemistry Laboratory II | 5     |
| Chem 261             | Organic Chemistry I with Lab                             | 4     |
| Total Units          |  | 22    |

#### Elective courses:

The minor requires 10 advanced units in biology selected from the following:

| Code      | Title                                 | Units |
|-----------|---------------------------------------|-------|
| Biol 3041 | Plant Biology and Genetic Engineering | 4     |
| Biol 3058 | Physiological Control Systems         | 2     |
| Biol 3100 | R Workshop in Biology                 | 1     |
| Biol 3110 | Vertebrate Structure Laboratory       | 4     |
| Biol 3151 | Endocrinology                         | 3     |
| Biol 328  | Principles in Human Physiology        | 4     |
| Biol 334  | Cell Biology                          | 3     |
| Biol 3371 | Eukaryotic Genomes                    | 4     |
| Biol 3411 | Principles of the Nervous System      | 3     |
| Biol 3421 | Introduction to Neuroethology         | 3     |
| Biol 3422 | Genes, Brains and Behavior            | 3     |
| Biol 349  | Microbiology                          | 4     |

|           |  |   |
|-----------|--|---|
| Biol 3491 | Microbiology Laboratory  | 3 |
| Biol 3492 | Laboratory Experiments with Eukaryotic Microbes                  | 3 |
| Biol 3493 | Bacterial Bioprospecting and Biotechnology                       | 3 |
| Biol 3501 | Evolution  | 4 |
| Biol 360  | Biophysics Laboratory  | 3 |
| Biol 373  | Laboratory on the Evolution of Animal Behavior                   | 3 |
| Biol 381  | Introduction to Ecology  | 3 |
| Biol 4023 | How Plants Work: Physiology, Growth and Metabolism               | 3 |
| Biol 4030 | Biological Clocks  | 3 |
| Biol 404  | Laboratory of Neurophysiology                                    | 4 |
| Biol 4071 | Developmental Biology  | 3 |
| Biol 4181 | Population Genetics  | 3 |
| Biol 4182 | Macroevolution   | 3 |
| Biol 4183 | Molecular Evolution  | 3 |
| Biol 419  | Community Ecology  | 4 |
| Biol 4193 | Experimental Ecology Laboratory                                  | 4 |
| Biol 424  | Immunology   | 4 |
| Biol 4241 | Immunology Laboratory  | 3 |
| Biol 427  | Problem-Based Learning in Biomedical Sciences                    | 3 |
| Biol 4331 | Algae: Cell Biology and Molecular Evolution                      | 2 |
| Biol 4342 | Research Explorations in Genomics                                | 4 |
| Biol 434W | Research Explorations in Genomics (Writing-Intensive)            | 4 |
| Biol 437  | Laboratory on DNA Manipulation                                   | 4 |
| Biol 4492 | Infectious Diseases: History, Pathology, and Prevention          | 3 |
| Biol 451  | General Biochemistry   | 4 |
| Biol 4520 | Protein Function in Model Cellular Systems                       | 3 |
| Biol 4522 | Laboratory in Protein Analysis, Proteomics and Protein Structure | 3 |

### L41 Biol 112 Introduction to Problem-Based Learning in Biology

Small groups of students take responsibility for their own active learning in their team with guidance from an instructor. Each group in rotation considers four problems of biological importance such as rainforest destruction, coral reefs, laboratory diagnoses, sleep, high altitude, deafness, infertility, modern epidemics, clinical cases, genetic engineering and cloned animals. Students find the background information by library searches and integrate this knowledge in group discussions. Enrollment limited. Intended for but not limited to prospective biology majors. Prerequisite: high school biology, preferably an AP class. For freshmen only.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

### L41 Biol 1260 The Secret Lives of Plants

This course is designed to familiarize undergraduate students with the fascinating lives of plants, their evolution, their remarkable structural and morphological diversity, how they grow, and how they have been modified to feed the planet. Topics include: how plants can survive with just water, minerals and light, how they transport water astonishing distances, their unusual sex lives, why they make seeds, how they can grow nearly forever, how plants survive extreme environments without running to hide, why they synthesize caffeine, nicotine, THC and opiates, how they defend themselves from pathogens without an immune system, how they sense their environment without dedicated sensory organs, how plants have been modified by humans to provide food, fiber and fuel, and how genetically modified (GMO) crops are made and their implications to the environment and society. Overall goals are to enhance an understanding and appreciation of the plant kingdom, to help young scientists understand the primary scientific literature, and as a starting point for possible careers in plant biology. Where appropriate, the class will also emphasize key differences between plants and animals. This course is primarily for freshmen interested in majoring in biology, with a possible emphasis on plants. This course is also for those that want to know more about where their food comes from, how these amazing creatures survive and flourish, and how GMO crops are engineered. Upper-level students with an interest in food and sustainable agriculture but not necessarily focusing on plants will also be welcome. Course will be lecture/discussion/hands-on format for two of the three hours per week. Students will present 30-minute papers discussing topics relevant to their interests for the remaining one hour (two students per week). Prerequisites: Students must have taken both biology and chemistry in high school and at least one at the AP or IP levels; or have taken Biol 2960 or Chem 111/112. This course can be taken by both

freshmen and upper-level undergraduates with a preference given to freshmen.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

### L41 Biol 171 Neuroscience Futures 1: How do we learn about the brain?

In this seminar course for first-year students, students learn about how neurobiologists conduct and communicate research. We focus our discussion on primary research papers written by Washington University neurobiologists, who visit the class to present their work. Discussion then focuses on the formulation of scientific questions, evaluation of evidence and interpreting data within the context of a broader field. Students meet neuroscience colleagues in two joint class periods with participants in a neurobiology seminar for second-, third- and fourth-year students. May be repeated for credit; preference given to students who have not previously taken the course.

Credit 1 unit. Arch: NSM Art: NSM

---

### L41 Biol 1770 Genetics and Behavior of Dog Breeds

This freshman seminar uses the topic of dog behavior and genetics to teach fundamental scientific tools and to engage students in contributing to the building of an online public resource that summarizes the scientific literature on breeds. Our first task is learning to read and dissect primary scientific literature. We parse out the difference between scientific questions, hypotheses and predictions through a guided case-study exercise. We then apply the experience to outlining primary research articles, identifying the key components of the author's arguments, and summarizing the results and implications. The second half of the semester is spent searching the scientific literature, sorting information into the new dog breed resource, and presenting results to peers around the seminar table.

Credit 2 units.

---

### L41 Biol 181 Freshman Seminar in Biology

A lecture course intended for first-year students that focuses on the practice and culture of biomedical research. Active researchers describe the biological context of their research, the specific questions formulated, the means by which they pursue the answers, and their data and conclusions. The focus is on process: how biologists pursue their profession in a research setting. Additional topics of clinical and contemporary interest are often included. Students are expected to attend all lectures. Must be taken credit/no credit.

Credit 1 unit. A&S: NS A&S IQ: NSM Art: NSM

---

### L41 Biol 191 Phage Hunters

A research-based laboratory class for freshmen. Students join a national experiment organized by HHMI, with the goal of isolating and characterizing bacteriophage viruses found in the soil in the St. Louis area. Laboratory work includes isolation and purification of the student's own phage, DNA isolation and restriction mapping, and EM characterization of student's phage. Several WUSTL phage are selected for genome sequencing over winter break, and are annotated in the spring in Biol 192, Phage Bioinformatics. Students who successfully isolate and annotate a phage may become co-authors on a scientific paper. Prerequisites: high school courses in biology and chemistry, at least one at the AP or International Baccalaureate level; permission of the instructor. Limited to 40 students. One hour lecture, one hour discussion, and three hours lab per week. Same as L61 Focus 1910

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

#### L41 Biol 192 Focus: Phage Bioinformatics

A research-based laboratory class for freshmen. Students join a national experiment organized by HHMI, with the goal of genomic characterization of a local phage. Laboratory work focuses on learning computer-based tools for genome analysis followed by annotation and comparative analysis of the genome of a phage (bacterial virus) that was isolated fall semester at Washington University and sequenced over winter break. Prerequisites: high school courses in biology, chemistry and physics, at least one at the AP or International Baccalaureate level; permission of the instructor. Limited to 40 students; preference given to those completing Biol 191 Phage Hunters. One hour lecture, one hour discussion and three hours lab per week.

Same as L61 Focus 1920

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

#### L41 Biol 200 Introduction to Research

An introduction to laboratory and field research in biology for first- and second-year students. Students work under the supervision of a sponsor in a setting of established, ongoing research. Prerequisite: permission of sponsor and the department. For online enrollment instructions visit: <http://nslc.wustl.edu/courses/Bio500/bio500.html>. Students are registered by the department after approval is granted. Registration may not appear in WebSTAC until midsemester. Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 2010 The Science of Biotechnology

Biotechnology is truly interdisciplinary with a myriad of pieces from biology, chemistry, engineering, physics, computer sciences, management, public policy and law that apply the scientific process to societal challenges. This course introduces topics for science and engineering majors with an interest in biotech and teaches scientific concepts to business students considering careers in biotech management and entrepreneurship. Students completing Biol 2010 understand key science concepts, how discoveries lead to applications addressing global challenges, effectively use a variety of resources to explore connections between science and biotech business, synthesize information from different fields, exhibit strong teamwork skills, and communicate information in written and oral forms. This course also provides a gateway for students interested in the two-year Biotech Explorers Program (BEP). The first two weeks of the course introduce students to the history of biotechnology, the BEP, and the use of case studies. The remainder of the course uses a series of four 3-week units that combine lecture material, in-class group assignments, and readings to introduce the science and scope of biotechnology. For each unit, student teams also develop short case studies of St. Louis biotech companies and present their findings to the class. A series of site-visits introduces students to the vibrant St. Louis biotech community. Limited to 20 students. Credit 3 units. A&S: NS A&S IQ: NSM

---

#### L41 Biol 2020 Biotechnology Entrepreneurs Seminar

Although the biotech industry is science-based, the risks of product and technology development, legal issues, and market

pressures make the landscape full of uncertainty. Lectures and textbooks fall short of delivering true insight about the process and challenges of bringing ideas to real-world products. This second semester freshman seminar course is designed to develop an appreciation of how biotech companies achieve their goals by engaging students through interactions with experienced executives and entrepreneurs, whose shared knowledge and stories add depth and context to the learning process. This 1-credit seminar course introduces students to the basics of innovation and entrepreneurship as a framework for marketable discoveries, builds an appreciation of how biotech companies start, obtain funding, and navigate intellectual property, provides an overview of career options in biotech, and insight on the hiring process. Prerequisites: Students need to have completed Biol 2010: The Science of Biotechnology for enrollment in this course and be currently enrolled in Biol 2960: Principles of Biology I. Limited to 20 students. Credit 1 unit.

---

#### L41 Biol 2342 Wilderness First Aid

The National Outdoor Leadership School (NOLS) has developed a comprehensive curriculum to instruct individuals in backcountry first aid. This curriculum is the main content taught in the course. After successfully completing this detailed 18 hour NOLS Wilderness First Aid course, students are required to write-up a full assessment and treatment plan (5-7 page minimum) for one of the wilderness casualties described in Peter Stark's *Last Breath*. Students meet for a half-day seminar during which each presents their case, assessment, underlying physiology, and treatment plan to the group. They receive feedback from one another, and from the instructor, about their assessment, explanation of the relevant physiology, and action of their proposed intervention.

Credit 1 unit. A&S: NS A&S IQ: NSM

---

#### L41 Biol 2431 Focus: Missouri's Natural Heritage, part 1

Missouri's Natural Heritage is a multidisciplinary two-semester Freshman Focus course. The first semester of the sequence focuses on Missouri geology, climate, archaeology, and native megafauna. This provides a foundation on which to examine the ecology, restoration and management of our diverse habitats (prairie, forest, glade and stream) and the biology of our diverse plant and animal wildlife (arthropods, mollusks, fish, salamanders, lizards, birds and mammals) in the second semester. We also introduce basic concepts in biodiversity and resource management with attention to resolution of conflicts of interest. In addition to weekly lecture and discussion, students in this class visit sites across the state during three weekend camping trips and a longer camping trip during winter break. Attendance on field trips is an essential component of the course and grade. Lab fee covers transportation and meals for all field trips.

Same as L61 Focus 2431

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

#### L41 Biol 265 Experience in the Life Sciences

Earn credit for nonclassroom learning in the life sciences in a variety of activities: accompany a physician on rounds and prepare a paper on an organ system or disease; participate in a clinical or applied ecological study and report on it; participate in science outreach teaching, etc. Participants must meet regularly with a supervisor and commit at least 140 hours over two semesters. A work plan is approved prior to registration. A progress report is due after one semester and a final paper after two semesters. Does not count toward the major. Credit:

1.5 units per semester, contingent upon completion of two semesters. Visit <http://nslc.wustl.edu/research.html>. Credit/no credit only.

Credit 1.5 units. Art: NSM

---

#### **L41 Biol 2651 MedPrep I-The Lecture Series**

MedPrep I is a unique lecture series taught by a physician, medical school Course Master and member of the Committee on Admissions for the School of Medicine. Through a weekly two-hour lecture, this course gives students accurate, honest and detailed information regarding every step of the application and admissions process to medical school and the educational process and life of a physician. MedPrep I is particularly useful for freshmen and sophomores in that it reviews the common pitfalls encountered by unsuccessful applicants to medical school. There is no outside course work and no exam. Attendance at all classes is required. Registration for Biol 2651 is done through the MedPrep website at <http://medprep.wustl.edu>. Registration is *not* done through WebSTAC. Credit 1 unit.

---

#### **L41 Biol 2652 Pediatric Emergency Medicine Research Associates Program: Experiences in Life Sciences**

The Pediatric Emergency Medicine Research Associates Program (PEMRAP) offers undergraduate pre-medical students an opportunity to participate in clinical, patient-oriented research projects in a hospital setting. Students have the opportunity to work in the St. Louis Children's Hospital Emergency Department, a nationally recognized pediatric emergency medicine and trauma care facility. A number of research projects are currently underway in various areas of pediatric emergency medicine. Credit/No Credit. Research Associates are expected to work two four-hour shifts per week in the St. Louis Children's Hospital Emergency Department and to attend a weekly two-hour lecture on Tuesdays in conference room 10A of the Northwest Tower Building (across from Children's Hospital) from 1:30-3:30 p.m. Weekly meetings include lectures given by Emergency Department faculty members. This program offers students the unique opportunity to be a vital part of the ED research team. In addition, the RA's experience in the ED may help them determine if medicine is truly the career path they wish to choose. May not be taken concurrently with Biol 2654: MedPrep II.

Credit 3 units.

---

#### **L41 Biol 2654 MedPrep II-The Shadowing Experience**

MedPrep II offers students a real world, behind-the-scenes experience of a life in medicine. For three hours every other week, students shadow physicians in the Charles F. Knight Emergency and Trauma Center of Barnes-Jewish Hospital, the main teaching hospital of the Washington University School of Medicine. A weekly one-hour class is also held on the Danforth Campus for group discussion regarding the clinical experiences of the students. There is no outside course work and no exam. Attendance at all classes is required. Because of the orientation material covered, students must be present at the first class to take this course. Registration for Biol 2651 is done through the new MedPrep website at <http://medprep.wustl.edu>, not through WebSTAC. Prerequisite: Successful completion of Biol 2651 is required to take Biol 2654. Credit 1 unit.

---

#### **L41 Biol 2656 Introduction to Health Professions:**

##### **Occupational Therapy, Physical Therapy and Audiology**

This course provides students interested in health professions with an overview of occupational therapy, physical therapy and audiology. Students gain a better understanding of the scope of practice, markets and skills required to succeed in these professions. Students learn about graduate and professional education options and how to build a competitive application for these programs. Finally, students are introduced to field experiences in each area and culminate their study with an inter-professional education session illustrating the role of each of the professions in a single case. Students finish the course with a better understanding of whether a career in health professions is right for them.

Credit 1 unit.

---

#### **L41 Biol 2658 Pediatric Emergency Medicine Research Associates Program - Experiences in Life Sciences (PEMRAP II)**

PEMRAP II is a continuation of Bio 2652, Pediatric Emergency Medicine Research Associates Program - Experiences in Life Sciences. Returning PEMRAP Research Associates (RAs) actively participate in new and ongoing research projects in various areas of pediatric emergency medicine. RAs assist during the active period of patient enrollment through screening of ED patients for study eligibility, reading information about the studies to the patients, collecting data regarding patient history and certain physical examination findings, and generally facilitating the study enrollment process. PEMRAP Returning RAs are vital members of the Emergency Department research team in the St. Louis Children's Hospital Emergency Department. Returning RAs assist in training and mentoring incoming PEMRAP students (Biol 2652) in ED protocol, work approximately one four-hour shift per week in the ED, record shift activities and hours worked on a daily Shift Log form, and participate in the physician shadowing program (as offered). Returning RAs are responsible to meet hospital non-appointee requirements and stay current with new study protocols by attending or viewing new study presentations for PEMRAP students. These lectures are given by pediatric department faculty members introducing the basics of the clinical research process, specific studies, as well as pediatric illness. The RA position carries with it important responsibility requiring maturity, initiative, diligence and excellent interpersonal skills. There is no outside course work and no exams. Full participation is required. 45 shift hours = 1 credit. Students may repeat this course for a maximum of 6 credits. Course may not be taken concurrently with Biol 2652, 2651, or 2654. Prerequisite: Biol 2652 (PEMRAP I). Pass/Fail.

Credit 1 unit. Arch: NSM Art: NSM

---

#### **L41 Biol 2950 Introduction to Environmental Biology**

This course introduces students to our major environmental problems, and gives examples about how research in biology, chemistry, physics and math is necessary to solve these problems.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### **L41 Biol 2960 Principles of Biology I**

The course provides an introduction to cellular, molecular and developmental biology. An understanding of cellular architecture and the properties of biological macromolecules is integrated with discussion of the flow of genetic information within cells. The final section of the course covers investigation and manipulation

of genetic information by molecular genetic technologies, as well as developmental strategies employed by multicellular eukaryotes. Weekly labs reinforce concepts from lectures and explore common laboratory techniques and computer-based resources. Prerequisites: Chem 111 and Chem 112 (concurrently). Three hours of lecture and two hours of lab per week.

Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 2961 Collaborative Phage Bioinformatics

A research-based laboratory for those enrolled in Biol 2960, this class provides an opportunity to join a research team with the goal of genomic characterization of a locally isolated phage (a virus that infects a bacterial host). Similar to Biol 192, but using a condensed format and a larger team to tackle each phage. Lab work focuses on learning computer-based tools for genome analysis, followed by careful annotation of several genes from your phage, and in-depth investigation of one gene. Requires concurrent enrollment in Biol 2960 Principles of Biology I; not open to students enrolled in Biol 192. One 2-hour pre-class online review/preparation session, nine 2-hour laboratory sessions, and a final poster presentation. (Lab does not meet in weeks with a scheduled Biol 2960 midterm.) May be taken for a letter grade or Credit/No Credit.

Credit 1 unit. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

#### L41 Biol 2962 Biomolecules in the Third Dimension

A computer-based laboratory for students enrolled in Biol 2960. This class gives students the opportunity to learn biology in a new way. Students are exposed to experimental data and software visualization tools currently used in cutting-edge research. Each week, biomolecules presented in Biol 2960 lecture will be downloaded, viewed and manipulated in 3-D using the molecular viewer PyMOL. Students will be able to study molecular interactions in greater depth than is possible in lecture. Ultimately, the laboratory is designed to help students develop their visuospatial thinking skills and to gain a deeper understanding of the macromolecules discussed in lecture. The class is highly recommended to students who identify themselves as visual/interactive learners. Topics include: protein and nucleic acid structure, signal transduction, energy transfer, replication, transcription and translation. Requires concurrent enrollment in Biol 2960 Principles of Biology I. Lab does not meet in weeks with a biology exam. Class taken for Credit/No Credit.

Credit 1 unit. A&S: NS A&S IQ: NSM

---

#### L41 Biol 2970 Principles of Biology II

A broad overview of genetics, including Mendelian assortment, linkage, chromosomal aberrations, variations in chromosome number, mutation, developmental genetics, quantitative genetics, population genetics, mechanisms of evolution, and phylogenetics. Three lectures and one laboratory period each week. Does not fulfill the laboratory requirement of the biology major. Students must sign up for a lab during preregistration. Prerequisite: Biol 2960 or permission of instructor. Examination schedule: tests, at which attendance is required, are to be announced.

Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 3010 Biotechnology Project

This second-year Biotech Explorers Pathway (BEP) course introduces students to the process used to generate project ideas, write proposals, and evaluate concepts, with peer

evaluation applied at all steps of the process. Students completing Biol 3010 will gain experience in science proposal writing with peer review, public speaking, team building, and leadership training. The first four weeks of the course will focus on individual pre-proposal brainstorming, writing and pitching, while the remainder of the course will be dedicated to the development of full proposals by teams of students. This 3-credit project development course complements introductory courses by making connections between fields and building teams of students with experience in the process that nurtures ideas to products. Prerequisites: Students need to have completed Biol 2010: The Science of Biotechnology and Biol 2020: Biotech Entrepreneurs Seminar for enrollment in this course. Limited to 20 students.

Credit 3 units. A&S IQ: NSM, WI

---

#### L41 Biol 303A Human Biology

How did Elvis, Socrates and Babe Ruth die? How did David Letterman and Dick Cheney survive? In this course we work toward understanding the biology behind human health and disease. We examine cases from the news, literature and history. We work like detectives to understand how and why the characters were affected and healed or died. This course is designed for students who do not plan to major in science, and no prior science background is expected. Prerequisite: sophomore standing or permission of instructor. A student may not receive credit for both Biol 303A and Biol 100A, 2960, 2970, or UCollege B320, B3201, B321, B3211.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 3041 Plant Biology and Genetic Engineering

A 4-credit lecture course that provides an introduction to plant development, genetics, physiology and biochemistry with emphasis on processes that can be manipulated or better understood through genetic engineering. The course is divided into three sections. The first section of the course discusses basic plant biology, development and genetics. The second part emphasizes gene structure, expression and cloning as well as methods for introducing foreign DNA into plant cells and regenerating fertile plants in tissue culture. During the third part of the course we discuss a variety of examples of genetically engineered traits, including: herbicide resistance; fruit ripening; pathogen and/or insect resistance; and the use of plants for production of industrial and pharmaceutical compounds. Friday discussion sections focus on critical reading of the primary literature related to the material covered in lecture. Prerequisites: Biol 2960 and Biol 2970.

Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 3058 Physiological Control Systems

Systems physiology with emphasis on human physiology. Prerequisites: Biol 2960 and Chem 112A.

Credit 2 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 307A Human Variation

A survey of human biological diversity, considering its adaptive and taxonomic significance from the perspective of origins and distribution of traits and adaptation. Prerequisite: Anthro 150A or introductory biology.

Same as L48 Anthro 307A

Credit 3 units. A&S: NS, SD, QA A&S IQ: NSM, AN, SD Arch: NSM Art: NSM BU: SCI

---

#### L41 Biol 3100 R Workshop in Biology

Biologists in all areas increasingly find that they have the need and opportunity to work with large data sets. The goal of this 1-credit course is to provide students with an opportunity to gain skills in data analysis and presentation using R, a free software environment for statistical computing and graphics (<http://www.r-project.org>). Topics include an introduction to basic programming in R, data types and manipulation, graphics, hypothesis testing and statistics, and applications to various fields of biology ranging from ecology to genomics. The course consists of ten 2-hour workshops that include a brief introduction to key concepts in R and applications in biology, followed by interactive, hands-on tutorials. Prerequisites: concurrent or prior course in statistics (Math 2200 or Math 3200 recommended) or permission of instructor.

Credit 1 unit. A&S: NS

---

#### L41 Biol 3110 Vertebrate Structure Laboratory

A lecture/laboratory course designed to provide an integrative framework for how vertebrate form and function evolved. Weekly lectures emphasize development and the relationship between the structural and functional design of organ systems, the importance of these relationships in maintaining homeostasis while providing opportunity for adaptation, and examples of how vertebrate organ systems communicate to accomplish functional and physiological integration. 1.5 hour lecture and 5 hours lab each week. Prerequisite: Biol 2970.

Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 3151 Endocrinology

An overview of mammalian endocrine systems with an emphasis on human physiology and development. The interplay between systemic, local cell and tissue interactions as well as the cell and molecular events associated with hormone action are discussed. Examples of endocrine evolution and pathological conditions related to endocrine imbalances also are included. Prerequisite: Biol 2970.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 328 Principles in Human Physiology

This course is designed to provide students with an understanding of the function, regulation and integration of the major organ systems of the body. Course content includes neural and hormonal homeostatic mechanisms, and study of the circulatory, respiratory, digestive, urinary, musculoskeletal, nervous, endocrine, immune and reproductive organ systems. Mechanisms of exercise physiology are integrated throughout the course. Prerequisite: Biol 3058 or equivalent.

Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 334 Cell Biology

Eukaryotic cell structure and function viewed from the perspective of modern cell biology. Lectures cover such topics as membrane transport; endocytosis and secretion; intracellular trafficking; hormones and signal transduction; extracellular matrix and tissue formation; cytoskeleton and motility; and cell cycle, apoptosis and the cellular basis of disease. Prerequisite: Biol 2970.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 3371 Eukaryotic Genomes

An advanced exploration of the structure and function of DNA within the eukaryotic nucleus. Lecture and discussion cover

topics of chromatin and chromosome structure, control of gene transcription, RNA processing, and DNA replication and repair. The relevance of these topics to the genetic basis of human disease is discussed. Throughout, the experimental data that shape our current understanding are emphasized. Course grades based on exams, problem sets and short papers. Lecture three hours per week plus required discussion section meeting every other week. Prerequisites: Biol 2970, Chem 251 (may be taken concurrently). Offered every other fall in even-numbered years.

Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 3411 Principles of the Nervous System

The basic anatomical, physiological and chemical organization of the nervous system; how nerve cells communicate with each other, the ionic basis of nerve signals, the function and properties of chemical agents in the nervous system, the development of neural circuitry, and how neurons interact to produce behavior. Prerequisite: Biol 2960, Biol 2970 recommended, Biol 3058 recommended or Psych 3401 and permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 3421 Introduction to Neuroethology

The neural mechanisms of animal behavior from an evolutionary and ecological perspective. Topics include: contributions of model systems to understanding fundamental properties of nervous system structure and function; electrical signals of sensory cells, neurons and muscle; neural processing of sensory input; neural control of behavioral output; anatomy and physiology of sensory and motor systems; learning and memory; evolution of neural circuits. Prerequisite: one of the following courses: Biol 3058, Biol 3411 or Psych 3401.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 3422 Genes, Brains and Behavior

Genetic studies of physiological systems underlying animal behavior, including the genetic basis for normal and abnormal behaviors in animals and humans. Topics include: history of behavioral genetics; the ongoing debate about "nature vs. nurture"; contributions of genetic model systems including the nematode *Caenorhabditis elegans*, the fruit fly *Drosophila melanogaster*, zebrafish, the mouse *Mus musculus* and other animal models; molecular mechanisms underlying the evolution of behavioral phenotypes; the emerging role of epigenetics in regulating nervous-system functions and behavior; the use of genetic and genomic analyses in studies of human behavior and psychiatric disorders. Prerequisite: Biol 2970.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 349 Microbiology

This 4-credit lecture course focuses on the molecular biology of bacteria, archaea and viruses. Topics include: the bacterial cell cycle, gene regulation, stress response, cell-cell communication, viral and bacterial pathogenesis, microbial ecology, and metabolic diversity. Friday tutorials stress analysis of the primary literature with an emphasis on current research related to material covered in lecture. Prerequisites: Biol 2960 and 2970, or permission of instructor.

Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L41 Biol 3491 Microbiology Laboratory**

After introducing students to the basics of bacterial growth and maintenance, this laboratory class employs genetics, cell biology and genomics to explore various aspects of bacterial physiology, identification, gene structure and mutational analysis of physiological pathways. Prerequisite: Biol 349 required; may be taken concurrently. One-hour lecture and five hours of laboratory per week. Fulfills the upper-level laboratory requirement for the biology major.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

**L41 Biol 3492 Laboratory Experiments with Eukaryotic Microbes**

This research-intensive course provides an introduction to diverse molecular and cell biology techniques used in model experimental organisms to explore fundamental biological questions. Experiments are performed using selected fungi and protozoans commonly used in major research efforts. Emphasis is placed on choosing the appropriate organism for the question posed using the most current technologies. Each semester, one cellular process is studied in detail and original research is carried out. Prerequisites: Biol 2960 and 2970 and permission of instructor — contact early to ensure enrollment. One hour of lecture and six hours of laboratory a week. Fulfills the upper-level laboratory requirement for the biology major. Enrollment limited to 12.

Credit 3 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM BU: SCI

**L41 Biol 3493 Bacterial Bioprospecting and Biotechnology**

Many bacteria are essential in food industry (fermentation of meats, cheeses and beverages), agriculture (crop protection against weeds, pathogenic bacteria, and fungi), biotechnology (producing fine chemicals, cofactors, amino acids, and industrial enzymes) and the pharmaceutical industry (producing clinical antibiotics, anticancer, antiviral, veterinary, and immunomodulatory drugs). This laboratory course examines how basic biological understanding can lead to discovery of bacterial products, enzymes and activities useful to humankind. We combine core concepts from biochemistry, bacterial genetics, bioinformatics, chemistry and enzymology to study bacteria from the genus *Streptomyces* and close relatives. Lines of inquiry include environmental isolations, molecular toolbox and host development, plus bioinformatic and laboratory-based analyses of secreted proteins and antibiotics. Prerequisites: Biol 2960 and 2970. One hour of lecture and six hours of laboratory per week. This course fulfills the laboratory requirement for the biology major. Enrollment limited to 16.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

**L41 Biol 3501 Evolution**

A general survey of organic evolution covering both micro and macroevolution. Topics include natural selection, adaptation, evolution of pathogens, formation of species and phylogeny. Prerequisite: Biol 2970.

Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

**L41 Biol 360 Biophysics Laboratory**

This laboratory course consists of "table-top" experiments in biological physics that are designed to introduce the student to concepts, methods and biological model systems in biophysics. Most experiments combine experimentation with computer simulations. The list of available experiments

includes electrophysiology, human bioelectricity, optical tweezers, ultrasonic imaging, mass spectrometer, and viscosity measurements. Prerequisites: prior completion of Physics 117A-118A, Physics 197-198 or permission of instructor.

Same as L31 Physics 360

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM

**L41 Biol 373 Laboratory on the Evolution of Animal Behavior**

This course explores the costs, benefits and constraints that drive the evolution of animal behavior. It is divided into four modules: a brief overview of basic statistics, a lab on agonistic behavior, a lab on animal communication, and a lab on sexual selection by female choice. Laboratory modules are hands-on and student driven. They begin with an overview of relevant literature and a discussion of key questions that have been addressed experimentally in that field. Students are then encouraged to apply these concepts into the design, execution and analysis of a research project aimed at answering a question of their own choosing through the use of house crickets as a study system. A majority of class time is devoted to active learning through the collection and analysis of data (each lab module lasts four weeks). In addition, the course includes weekly presentations by the instructor and class discussions on topics that help place the students' work into the broader context of evolutionary theory. Prerequisites: Biol 2970 and Psych 100B or permission of instructor

Credit 3 units. A&S: NS A&S IQ: NSM BU: SCI

**L41 Biol 374 Drugs, Brain and Behavior**

This course reviews information pertaining both to medications used to treat psychiatric disorders and to psychoactive drugs of abuse. By learning principles of pharmacology and mechanisms of action of these agents, students develop an enhanced knowledge of the brain mechanisms underlying abnormal human behavior. Prerequisites: Psych 100B and one of the following: Psych 354 or 3401 or 344.

Same as L33 Psych 374

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

**L41 Biol 381 Introduction to Ecology**

This course explores the science of ecology, including factors that control the distribution and population dynamics of organisms, the structure and function of biological communities, how energy and nutrients flow across ecosystems, and what principles govern ecological responses to global climatic and other environmental changes. The class format includes lectures, discussions and small group exercises. Assignments include quantitative data analysis, ecological modeling and scientific writing.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

**L41 Biol 387 Undergraduate Teaching**

Exceptional undergraduates serve as teaching assistants for laboratory and/or discussion sections in departmental courses. Normally 2 or 3 units are given per semester, subject to the approval of the instructor and the department. Credit may not be counted toward fulfilling the biology major; application form in Department of Biology Student Affairs office. Prerequisite: permission of instructor. Credit/no credit only.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 388 Undergraduate Teaching

Exceptional undergraduates serve as teaching assistants for laboratory and/or discussion sections in departmental courses. Normally 2 or 3 units are given per semester, subject to the approval of the instructor and the department. Credit may not be counted toward fulfilling the biology major; application form in Department of Biology Student Affairs office. Prerequisite: permission of instructor. Credit/No Credit only. Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 4023 How Plants Work: Physiology, Growth and Metabolism

This course introduces students to the fundamentals of how plants grow, metabolize and respond to their environment. Topics covered include the conversion of light energy into chemical energy through photosynthesis and carbon fixation, nitrogen assimilation, water and mineral uptake and transport, source-sink relationships and long-distance transport of carbon and nitrogen, cell growth and expansion, hormone physiology and physiological responses to a changing environment. Prerequisite: Biol 2970 or permission of instructors. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 4030 Biological Clocks

Biological clocks are the endogenous oscillators that coordinate physiological and behavioral rhythms in nearly all organisms. This course examines how these rhythms are generated and regulated. The material includes molecular, cellular and systems physiology and the relevance of biological timing to ecology and health in everything from protozoans to plants to people. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 404 Laboratory of Neurophysiology

Neurophysiology is the study of living neurons. Students record electrical activity of cells to learn principles of the nervous system including sensory transduction and coding, intercellular communication and motor control. The course meets for 9 hours each week. Students may leave the lab for up to 2 hours. Prerequisites: Biol 3411 or Psych 4411 and permission of Student Coordinator, Erin Gerrity. Biol 3411 may be taken concurrently. Credit 4 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

---

#### L41 Biol 4071 Developmental Biology

An introduction to the molecular and cell biology and biomechanics of animal development. The course is divided into thirds, which cover (1) an introduction to the major cell-cell signaling systems used during development and their study in model organisms, (2) molecular studies of early vertebrate development, and (3) application of the principles of solid mechanics to understanding events in tissue and organ morphogenesis including gastrulation, cardiac looping and brain folding. Prerequisites: Biol 2970 Principles of Biology II and Math 132 Calculus II. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 4181 Population Genetics

An introduction to the basic principles of population and ecological genetics. Mechanisms of microevolutionary processes; integrated ecological and genetic approach to study the adaptive nature of the evolutionary process. Prerequisite: Biol 2970.

---

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 4182 Macroevolution

An advanced introduction to the study of macroevolutionary patterns and processes with emphasis on the systematic methodology employed. Topics: theories of classification, phylogenetic reconstruction, testing of historical hypotheses, hierarchy theory, adaptation, extinction, speciation, developmental mechanisms of organismal evolution, biogeography. Prerequisite: permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 4183 Molecular Evolution

A rigorous introduction to the study of evolution at the molecular level. Topics include the origin, amount, distribution and significance of molecular genetic variation within species, and use of molecular data in systematics and in testing macroevolutionary hypotheses. Prerequisite: Biol 2970 or permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 419 Community Ecology

Basic principles of community ecology, including species interactions, spatial and temporal patterns of biodiversity, and ecosystem functioning. Analytical theory, statistical patterns and experimental approaches are emphasized. Intended for students wanting a rigorous overview of ecological principles. Prerequisites: at least one of the following courses: Biol 3501, Biol 372, Biol 381, Biol 4170, Biol 4193, EnSt 370 or permission of instructor. Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 4193 Experimental Ecology Laboratory

Design and interpretation of ecological experiments, with an emphasis on hypothesis testing, sampling methodology and data analyses. Sessions address fundamental ecological questions and include field, greenhouse and laboratory (microcosm) studies on a variety of taxa and ecosystems. Generally work is done before dark (5 to 6 p.m.), although occasionally goes as late as 7 p.m. Includes occasional required Saturday field trips to local sites (e.g., forests, wetlands, prairies, streams) for in-depth study. Assignments are primarily several written assignments, including final projects and in-class participation. Fulfills the upper-level laboratory requirement for the biology major. One hour of lecture and four hours of laboratory per week. Prerequisites: permission of instructor and at least one of the following: Biol 381 Introduction to Ecology, Biol 372 Behavioral Ecology, EnSt 370 Biological Conservation, Biol 4170 Population Ecology, Biol 419 Community Ecology or Biol 3501 Evolution. Credit is not awarded for both Biol 4191 and 4193. Enrollment is limited to 15 students. Credit 4 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

---

#### L41 Biol 4202 Evolutionary Genetics

This course examines the principles of evolutionary genetics as applied to complex characters such as morphology, behavior, life history and disease. Mathematical models of quantitative inheritance and evolution are discussed. Special topics include kin selection, sexual dimorphism and conservation genetics. Prerequisite: Anthro 150A or introductory biology. Same as L48 Anthro 4202. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

---

#### L41 Biol 424 Immunology

Basic molecular and cellular aspects of the vertebrate immune system with emphasis upon the interrelationships of nonspecific and specific host defense against disease, the nature of immunological specificity and its underlying molecular biology. Includes complement systems, immunochemistry and immunoassay, systems, the nature of cellular activation and effector generation, immunodeficiency, tolerance, tissue transplantation, hypersensitivity, immune regulation and specific diseases illustrative of the successes and failures of the immune system. Prerequisites: Biol 2970 and Chem 252. Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 4241 Immunology Laboratory

The Immunology Laboratory introduces students to a variety of common, broadly useful immunological techniques and then allow each student to employ most of the learned techniques in addressing a current research question. Experiments employ mouse cells in vitro and emphasize quantitative analysis of the data. Prerequisites: Biol 424 and permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

#### L41 Biol 427 Problem-Based Learning in Biomedical Sciences

Groups of five to eight students are presented with medical case studies that are then researched and discussed under faculty guidance. Students take major responsibility for their own learning within their team. Enrollment limited to 30 students. Prerequisites: Biol 3050 and some experience in molecular biology. A biology or science background is required. Credit 3 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

---

#### L41 Biol 429 Cellular Transformations

Cellular Transformations is a course developed for students interested in using emerging technologies and cross-disciplinary approaches in design production and implementation. This course allows each student to develop abstract thinking and learn modern design and fabrication processes including digital media and 3-D technologies. In this course, students learn the basic principles underlying biological architecture, with a particular emphasis on structures and processes responsible for complex architectures within cells. Students then use biological design principles as inspiration for their individual projects. Through digital modeling and scanning of biological structures, each student develops a transformation process that analyzes the performative aspects of a new emerging design. These designs are modeled through CAD/CAM (laser cutting) and Rapid Prototyping (3-D Printing) for physical outputs. Prerequisites: Biol 2970 or Biol 334. Credit 3 units. A&S: NS A&S IQ: NSM BU: SCI

---

#### L41 Biol 4331 Algae: Cell Biology and Molecular Evolution

Algae are ubiquitous and highly diverse photosynthetic organisms: They are prokaryotic (cyanobacteria) and eukaryotic, unicellular and multicellular, and central to soil, fresh water, and marine ecosystems. This course considers their molecular taxonomy and evolution, specific lineage adaptations (e.g., silicon in diatoms), life cycles, cell cycle and cell-division mechanisms, light and nutrient acquisition, storage products, cell and cell-wall organization, ecological habitats and symbioses (e.g., lichens), and commercial applications (e.g., carotene, omega-3 fatty acids and other nutraceuticals; biodiesel). A course for upper-level biology and bioengineering undergraduates and graduate students. Tu/Th 3:30-5:30 until

spring break, where a second course, Biol 4830, is highly recommended as a sequel. Assigned readings of research literature pertaining to each lecture topic; final take-home exam covering lecture and reading material. Prerequisite: Biol 334 or Biol 4810 or instructor's permission. Credit 2 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 4342 Research Explorations in Genomics

A collaborative laboratory investigation of a problem in comparative genomics, utilizing a variety of bioinformatics tools to manage and investigate large data sets (currently including genomic sequences, gene predictions, sequence conservation, gene expression). In spring '17 the research problem involves improving the sequence of a region of the *Drosophila biarmipes* or *Drosophila elegans* genome, and working with one of these sequences to examine patterns of genome organization, gene structure and gene regulation. Class will meet at the WU Genome Institute during the first third of the semester, and in the biology department the remainder of the semester. Prerequisites: Biol 2970, Chemistry 111/112, 151/152. While Biol 3371 or Biol 437, and some familiarity with computers would be advantageous, this is *not* required. Permission of Dr. Sarah Elgin is required. Fulfills the upper-level laboratory requirement for the biology major. Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 434W Research Explorations in Genomics (Writing-Intensive)

Content equivalent to Biol 4342. Students electing the writing option are required to revise each of three papers (on finishing of their fosmid; gene finding in a human/chip comparison; and annotating their fosmid) at least once. Credit 4 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

---

#### L41 Biol 437 Laboratory on DNA Manipulation

This course provides investigation-driven research on experimental manipulation of DNA and RNA molecules. This includes the construction, isolation and analysis of plasmids, RNA, PCR products and DNA sequencing. Molecular cloning (genetic engineering), gene knockouts (mutants), RNA isolation, RT-PCR and microarray projects are performed. Prerequisites: Biol 2960 and Biol 2970. One hour of lecture and eight hours of laboratory each week. This course fulfills the upper-level laboratory requirement for the biology major. Enrollment is limited to 12. A laboratory fee is required for students who are not full-time Washington University undergraduates. Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L41 Biol 4492 Infectious Diseases: History, Pathology, and Prevention

Leveraging the primary research literature, this course examines the history and pathology of infectious disease, the development of antibiotics and vaccines, the rise of antibiotic resistance, and the emergence and reemergence of diseases including Zika virus, Ebola and Tuberculosis. In addition to gaining insights into the underlying causes and treatment of infectious disease, students will hone their ability to identify important biological questions, develop testable hypotheses, design experiments tailored to particular questions, and evaluate results. Through a series of written and oral assignments, students develop the skills to communicate about science effectively to both the research community and the general public. Prerequisites: Biol 2960, 2970; Chem 261, 262, and Biol 500 or permission of the instructor. Area A.

Credit 3 units. A&S IQ: NSM BU: SCI

---

**L41 Biol 451 General Biochemistry**

A study of structure-function relationships as applied to carbohydrates, proteins and lipids; intermediary metabolism of principal cellular components; and general aspects of regulation. Prerequisites: Biol 2970 and Chem 252 and permission of department. Recommended for students who have achieved grades of B or better in the prerequisites. Students may not receive credit for both Biol 4801 and Biol 451. Small class. Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L41 Biol 4520 Protein Function in Model Cellular Systems**

The goal of this 3-credit laboratory course is to train students in the scientific method. Throughout this course, they study a protein involved in a cellular process. Students, working in small groups, use bioinformatics to identify this protein in a number of species, then use this information to hypothesize which residues of the protein are important for its function. Over the course of the semester, students test their hypotheses in two model systems for studying cellular function — the unicellular eukaryote *Saccharomyces cerevisiae* and the multicellular eukaryote *Physcomitrella patens*. The weekly lecture gives students the background necessary to understand and perform their experiments, including information on a variety of bioinformatics tools, phylogeny, protein structure, molecular techniques, cell biology, and microscopy. In addition, students use primary literature to understand the role their assigned protein plays in their cellular process. Prerequisites: Biol 2960 and Biol 2970. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L41 Biol 4522 Laboratory in Protein Analysis, Proteomics and Protein Structure**

In this laboratory course, students learn principles and methods of protein quantitation, protein purification, assessment of purity using SDS-polyacrylamide gel electrophoresis, separation of complex protein mixtures by 2-dimensional gel electrophoresis, definition of units of enzymatic activity, and identification of proteins using antibodies and/or mass spectrometry. The final part of the course introduces students to concepts of structural biology including protein crystallization, X-ray crystallography and computer modeling of protein structures. Fulfills the upper-level laboratory requirement for the biology major. Prerequisites: Chem 252 and either Biol 451 or Biol 4501/Chem 456. Permission of instructor required. Limit: eight students. Eight hours of laboratory/lecture per week. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L41 Biol 4523 Mutagenesis and Enzyme Analysis**

Molecular Methods in Enzyme Analysis. Understanding enzyme structure and function is essential in many important drug design projects. This course focuses on common methods used to investigate enzyme active sites to elucidate binding interactions between small molecules and enzymes. Students use 3-D protein viewing software to design and model modifications to an enzyme active site, then perform those modifications using recombinant DNA technology and site-directed mutagenesis. This course also introduces other commonly used methods to assay active-site metals, characterize inhibitors, over-express and purify proteins, and use UV spectroscopy to analyze enzyme activity. This is an investigative course in which students perform collaborative research projects in small groups. Fulfills the upper-level laboratory requirement for the generic biology major and the biochemistry track; intended for students who have no other

courses that fulfill these requirements. Prerequisite: Biol 2970. Limit 12.

Credit 4 units. A&S: NS A&S IQ: NSM Arch: NSM BU: SCI

---

**L41 Biol 4524 Structural Bioinformatics of Proteins**

Students have access to high-quality, experimentally determined, three-dimensional structures of proteins provided by the Seattle Structural Genomics Center for Infectious Disease and contribute to this ongoing project by using cutting-edge structural bioinformatics tools and methods to analyze and to interpret these structures. Students who provide outstanding analyses are eligible to co-author a scientific paper. Topics include: structural quality assurance and validation, protein-structure prediction, domain and motif recognition, secondary structure prediction, protein and structure-based sequence analyses, inferring protein function from structure, electrostatic interactions, threading and homology modeling. One hour of lecture and six hours of computer laboratory per week. Fulfills upper-level laboratory requirement for the biology major. Credit 4 units. A&S IQ: NSM BU: SCI

---

**L41 Biol 4580 Principles of Human Anatomy and Development**

This course is designed for both undergraduate and graduate students in the anthropological, biological, and/or pre-medical sciences who wish to learn about human anatomy from various evolutionary, functional, developmental, and clinical perspectives. Lectures will emphasize the organizational and developmental principles of various organ systems of the human body. The course will also make use of our extensive anatomy museum of labeled dissected human specimens as well as our cast collections of numerous specimens from the human fossil record where appropriate. Frequent use of X-rays, CT, and MRI scans will also be used to help students visualize human anatomy from a number of different imaging modalities. Prerequisites: Undergraduate or graduate students in the anthropological, biological, and/or pre-medical sciences who have had at least one course in physical anthropology and/or biology, or consent of instructor. Same as L48 Anthro 4581

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L41 Biol 472 Behavioral Ecology**

This course examines animal behavior from an evolutionary perspective and explores the relationships between animal behavior, ecology and evolution. Topics include mating systems, sexual selection, parental care, kin selection, and cooperation. There is a strong active learning component. Prerequisite: Biol 2970 or permission of instructor.

Credit 4 units. A&S: NS A&S IQ: NSM

---

**L41 Biol 4810 General Biochemistry I**

Topics include the properties and structures of biomolecules, including amino acids, nucleotides, lipids, carbohydrates, proteins and nucleic acids. Additional topics include enzyme kinetics and mechanisms, membrane structure and properties, protein folding, an introduction to metabolism, oxidative phosphorylation and photosynthesis. This course is the first semester of an integrated two-semester sequence. The second course is Chem 482. Prerequisites: Biol 2970, Chem 262. Same as L07 Chem 481

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

**L41 Biol 4820 General Biochemistry II**

Continuation of General Biochemistry I. Topics include carbohydrate, lipid and amino acid metabolism, signal transduction, transport across membranes, DNA replication and repair, transcription and translation, molecular motors, mechanisms of drug action and natural products biosynthesis. Prerequisite: Chem 481 or Biol 481. Same as L07 Chem 482. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L41 Biol 4830 Bioenergy**

A broad overview of the flow of energy, captured from sunlight during photosynthesis, in biological systems and current approaches to utilize the metabolic potentials of microbes and plants to produce biofuels and other valuable chemical products. An overall emphasis is placed on the use of large-scale genomic, transcriptomic and metabolomic datasets in biochemistry. The topics covered include photosynthesis; central metabolism; structure and degradation of plant lignocellulose; and microbial production of liquid alcohol, biodiesel, hydrogen and other advanced fuels. Course meets during the second half of the spring semester. Prerequisite: Biol 4810 or permission of instructor. Credit 2 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L41 Biol 4832 Molecular Mechanisms of Photosynthesis and Respiration**

Photosynthesis is a biological process whereby the Sun's energy is captured and stored by a series of events that convert the pure energy of light into the free energy needed to power life. Respiration is a biological process that extracts energy in a usable form from high-energy compounds produced by photosynthesis. This course examines these essential biological processes at the molecular level in both bacterial and eukaryotic organisms. Emphasis is on chemiosmotic principles as well as the structure and mechanism of action of the protein complexes that carry out photosynthesis and respiration. Additional topics include the assembly and regulation of these protein complexes and the origin and evolution of these processes. Prerequisite: Chem 482, Biol 4820 or Biol 451 or permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM

---

**L41 Biol 487 Undergraduate Teaching**

Exceptional undergraduates serve as teaching assistants for laboratory and/or discussion sections in departmental courses. Normally 2 or 3 units are given per semester, subject to the approval of the instructor and the department. Credit may not be counted toward fulfilling the biology major; application form in Department of Biology Student Affairs office. Prerequisite: permission of instructor. Credit/no credit only. Credit variable, maximum 3 units. A&S: NS Art: NSM

---

**L41 Biol 488 Undergraduate Teaching**

Exceptional undergraduates serve as teaching assistants for laboratory and/or discussion sections in departmental courses. Normally 2 or 3 units are given per semester, subject to the approval of the instructor and the department. Credit may not be counted toward fulfilling the biology major; application form in Department of Biology Student Affairs office. Prerequisite: permission of instructor. Credit/No Credit only. Credit variable, maximum 3 units. A&S: NS

---

**L41 Biol 493 Seminar in Advanced Biology**

In special cases, credit may be given for individual study. Topics of study and credit must be arranged with a faculty sponsor and approved by the department. Credit variable, maximum 4 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L41 Biol 4933 Molecular Biology on the Cutting Edge**

Recent biomedical discoveries have been greatly advanced through the development of innovative, state-of-the-art techniques. For example, Nuclear Magnetic Resonance (NMR) has proved to be an invaluable tool in both efforts to determine the atomic structure of proteins and small molecules, as well as in clinical settings, as MRI to identify tumors that would otherwise go unnoticed. This course introduces students to a variety of cutting-edge laboratory techniques, and discusses the impact of these techniques on biology and medicine. Students have the unique opportunity to learn from graduate students employing these approaches in their doctoral studies. Topics to be covered include: high-throughput sequencing of genetic disorders, x-ray crystallography, and single molecule force spectroscopy by AFM. Weekly classes consist of a 30-45 minute presentation on a particular technique, followed by a 60-minute discussion of the assigned readings. Prerequisites: Biol 2960 and 2970 and at least one semester of Biol 500 or equivalent research experience approved by the course master. Credit 2 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

**L41 Biol 4934 Neuroscience Futures 2**

Students in this course engage with the neuroscience community both at Washington University and beyond by attending, summarizing and discussing neuroscience seminars on campus throughout the semester. Specifically, students are expected to attend three neuroscience seminars over the course of the semester and submit summaries of each seminar. Students meet twice during the semester, in week 5 and week 11, for guided discussion of the science in the seminars they attended. Additionally, students in this seminar attend two combined classes with Neuroscience Futures 1 during the first and last weeks of the semester. In both meetings, students have an opportunity to give brief presentations on their own research. The last class combines short student presentations with a keynote address from an invited speaker from within or outside the Washington University neuroscience community. Credit 1 unit. BU: SCI

---

**L41 Biol 4935 Undergraduate Research Perspectives**

The purpose of this course is for undergraduates to acquire a broad perspective on their hands-on research. What are your big questions? How will you communicate your discoveries? How do your results fit with what has gone before? Each semester will have a focus, which might be science communication, statistics or critical reading, for example. Required activities may include weekly writing, participation in the undergraduate poster session, research, presentations and attendance. Enrollment is by permission only from Joan Strassmann. This course is required for undergraduates conducting research in the Queller/Strassmann laboratories and is open to other students involved in research. Joan Strassmann, David Queller, and selected postdoctoral fellows. Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM BU: SCI

---

#### L41 Biol 500 Independent Research

Research under the supervision of a faculty sponsor. Prerequisites: junior or senior standing and permission of sponsor and the department. Credit/No Credit or Audit grade options; credit to be determined in each case, usually 3 units/semester and not to exceed 3 units/semester; may be repeated for credit. Because this course has a large number of sections, some sections are listed and enrolled as Biol 500A. If work is to be submitted for Latin honors, refer to the Department of Biology *Handbook for Majors*, "Latin Honors Through a Biology Major Program." The handbook can be found online (PDF) (<http://nslc.wustl.edu/handbook/handbook.pdf>). Arrangements for registration should be completed during the preregistration period through the Biol 500 course website. Credit variable, maximum 3 units.

## Chemistry

For students interested in discovering insights into nature and exploring new ways to meet the needs of our technological society and new methods for creating novel compounds and useful materials, chemistry is an excellent major to pursue.

Chemistry is a multifaceted science that extends into biology, medicine, physics, mathematics, business and commerce. Studying chemistry provides the opportunity to explore the structure and constitution of the microworlds of atoms and molecules, the chemical and physical transformations that occur, and the principles that govern these changes.

Our program provides a strong foundation in the core areas of chemistry: organic, physical, inorganic, nuclear, theoretical. Special emphases in the department include such emerging interdisciplinary fields as organometallic, bioorganic, biophysical, macromolecular, polymer, environmental and materials chemistry. The department has close research ties with the departments of Physics; Earth and Planetary Sciences; Biology; Biomedical Engineering; Energy, Environmental & Chemical Engineering; Mechanical Engineering & Materials Science; and with departments at the Washington University School of Medicine.

Undergraduate majors in chemistry study chemistry with renowned scientists who are teacher-scholars dedicated to the students' learning experience. The department is small, and it has world-class instruments and facilities, which allows students to receive individualized instruction and to participate in cutting-edge science. Each student works closely with a faculty member to design and carry out an original research project. Students may participate in interdisciplinary research at the School of Medicine or the School of Engineering & Applied Science. Research internships at local companies also can be arranged.

A variety of creative and productive careers are available to graduates with a degree in chemistry. Graduates may pursue a career in chemistry or such related professions as biochemistry, medicine and chemical engineering. Most students continue in graduate or medical school, and some go on to business or law

school. Positions in government, industry and education are also available.

**Richard W. Gross** (<http://www.chemistry.wustl.edu/faculty/rgross>)  
PhD, Washington University  
(Internal Medicine)

## Majors

### The Major in Chemistry

**Total units required:** 53-62

**Required courses:** To prepare for a major in chemistry, students will take:

| Code           | Title                           | Units |
|----------------|---------------------------------|-------|
| Chem 111A      | General Chemistry I             | 3     |
| Chem 112A      | General Chemistry II            | 3     |
| Chem 151       | General Chemistry Laboratory I  | 2     |
| Chem 152       | General Chemistry Laboratory II | 2     |
| Chem 261       | Organic Chemistry I with Lab    | 4     |
| Chem 262       | Organic Chemistry II with Lab   | 4     |
| Physics 117A   | General Physics I               | 4     |
| or Physics 197 | Physics I                       |       |
| Physics 118A   | General Physics II              | 4     |
| or Physics 198 | Physics II                      |       |
| Math 131       | Calculus I                      | 3     |
| Math 132       | Calculus II                     | 3     |
| Math 233       | Calculus III                    | 3     |
| Total Units    |                                 | 35    |

Majors in chemistry must take a minimum of 18 units in advanced courses in chemistry or biochemistry, among which must be included:

| Code        | Title                 | Units |
|-------------|-----------------------|-------|
| Chem 401    | Physical Chemistry I  | 3     |
| Chem 402    | Physical Chemistry II | 3     |
| Chem 461    | Inorganic Chemistry   | 3     |
| Total Units |                       | 9     |

plus 9 units in chemistry at the 300 level or above (not including Chem 490 Introduction to Research or Chem 495 Advanced Undergraduate Research in Chemistry). Biol 451 General Biochemistry may be used to complete 3 of the required 9 units.

At least 3 of these 9 advanced units must be in a laboratory course, chosen from:

| Code     | Title                                    | Units |
|----------|--|-------|
| Chem 358 | Organic Chemistry Laboratory II          | 4     |
| Chem 435 | Nuclear and Radiochemistry Lab           | 3     |
| Chem 445 | Instrumental Methods: Physical Chemistry | 3     |
| Chem 470 | Inorganic Chemistry Laboratory           | 3     |

Also, Physics 217 Introduction to Quantum Physics and additional mathematics courses are recommended. Chem 181 Freshman Seminar in Chemistry, a seminar to introduce first-year students to research activities in the department, is optional. A working knowledge of computer programming and a foreign language, such as German or Russian, is encouraged but not required.

Students have the advantage of planning their course program with their adviser in accordance with personal interests. Some graduate courses also are available to seniors.

All chemistry course work must be taken in residence at Washington University to be eligible to earn a chemistry major. A minimum grade of C- must be earned in each course to count toward the chemistry major.

Note: Per the College of Arts & Sciences guidelines, if a student has a major and a minor or has two minors, only introductory (100- and 200-level) courses may be counted, when relevant, toward the requirements of both programs. All advanced (300- and 400-level) courses must be unique to each program, i.e., no advanced course may "double-count" for the course work needed to fulfill either program's minimal requirements. Should a student's major/minor programs require the same course, a departmentally-sanctioned elective must be chosen to replace the course in one of the programs.

## The Major with Concentration in Biochemistry

Chemistry majors with a concentration in biochemistry should add Biol 2960 Principles of Biology I and Biol 2970 Principles of Biology II as prerequisites to the major and specify a minimum of 18 units in advanced courses in biology and chemistry, among which must be included:

| Code        | Title                   | Units |
|-------------|-------------------------|-------|
| Chem 481    | General Biochemistry I  | 3     |
| Chem 482    | General Biochemistry II | 3     |
| Chem 401    | Physical Chemistry I    | 3     |
| Chem 402    | Physical Chemistry II   | 3     |
| Chem 461    | Inorganic Chemistry     | 3     |
| Total Units |                         | 15    |

and at least one advanced lab chosen from:

| Code     | Title                           | Units |
|----------|---------------------------------|-------|
| Chem 358 | Organic Chemistry Laboratory II | 4     |

|           |  |   |
|-----------|--|---|
| Chem 435  | Nuclear and Radiochemistry Lab                                   | 3 |
| Chem 445  | Instrumental Methods: Physical Chemistry                         | 3 |
| Chem 470  | Inorganic Chemistry Laboratory                                   | 3 |
| Biol 437  | Laboratory on DNA Manipulation                                   | 4 |
| Biol 4522 | Laboratory in Protein Analysis, Proteomics and Protein Structure | 3 |

All chemistry course work must be taken in residence at Washington University to be eligible to earn a chemistry major. A minimum grade of C- must be earned in each course to count toward the chemistry major.

Note: Per the College of Arts & Sciences guidelines, if a student has a major and a minor or has two minors, only introductory (100- and 200-level) courses may be counted, when relevant, toward the requirements of both programs. All advanced (300- and 400-level) courses must be unique to each program, i.e., no advanced course may "double-count" for the course work needed to fulfill either program's minimal requirements. Should a student's major/minor programs require the same course, a departmentally-sanctioned elective must be chosen to replace the course in one of the programs.

## Additional Information

**Latin Honors for the Major in Chemistry:** To qualify for Latin Honors, students must complete a minimum of 21 units in advanced courses in chemistry or biochemistry, among which must be included:

| Code     | Title                 | Units |
|----------|-----------------------|-------|
| Chem 401 | Physical Chemistry I  | 3     |
| Chem 402 | Physical Chemistry II | 3     |
| Chem 461 | Inorganic Chemistry   | 3     |

and two additional advanced courses in chemistry.

Students must also complete **two** additional laboratories. Students must choose one synthetic laboratory:

| Code     | Title                           | Units |
|----------|---------------------------------|-------|
| Chem 358 | Organic Chemistry Laboratory II | 4     |
| Chem 470 | Inorganic Chemistry Laboratory  | 3     |

and one physical laboratory:

| Code     | Title                                    | Units |
|----------|--|-------|
| Chem 435 | Nuclear and Radiochemistry Lab           | 3     |
| Chem 445 | Instrumental Methods: Physical Chemistry | 3     |

Neither Chem 490 Introduction to Research nor Chem 495 Advanced Undergraduate Research in Chemistry can be used to satisfy the advanced laboratory requirements, but Chem 495 can be used to satisfy an elective.

**Latin Honors for the Major in Chemistry with Concentration in Biochemistry:** To qualify for Latin Honors, students must complete a minimum of 21 units in advanced courses, including **either** one of the following five courses:

| Code     | Title                  | Units |
|----------|------------------------|-------|
| Biol 334 | Cell Biology           | 3     |
| Biol 349 | Microbiology           | 4     |
| Chem 453 | Bioorganic Chemistry   | 3     |
| Chem 464 | Inorganic Biochemistry | 3     |
| Chem 485 | Nucleic Acids          | 3     |

or a second laboratory course in advanced chemistry or biology chosen from:

| Code      | Title  | Units |
|-----------|--|-------|
| Chem 358  | Organic Chemistry Laboratory II                                  | 4     |
| Chem 435  | Nuclear and Radiochemistry Lab                                   | 3     |
| Chem 445  | Instrumental Methods: Physical Chemistry                         | 3     |
| Chem 470  | Inorganic Chemistry Laboratory                                   | 3     |
| Biol 437  | Laboratory on DNA Manipulation                                   | 4     |
| Biol 4522 | Laboratory in Protein Analysis, Proteomics and Protein Structure | 3     |
| Biol 4520 | Protein Function in Model Cellular Systems                       | 3     |

**Departmental Honors for the Majors in Chemistry and Chemistry with a Concentration in Biochemistry:** To graduate "with distinction," a student must maintain a Chemistry GPA of 3.5 and complete at least one semester of Chem 490 research. To graduate "with high distinction," a student must maintain a Chemistry GPA of 3.65 and complete at least two semesters of chemistry research, one of which must be Chem 495. To graduate "with highest distinction," a student must maintain a Chemistry GPA of 3.8 and complete at least two semesters of chemistry research, one of which must be Chem 495. Chemistry research is defined as a research project performed under the direction of a Chemistry faculty member, or a research project approved by the Chemistry Department Undergraduate Work Committee. A Chemistry GPA is calculated from the grades received in chemistry courses and chemistry prerequisites. The level of Departmental Honors a student achieves will appear on the student's final transcript.

## Minors

### The Minor in Chemistry

**Units required:** 27 in chemistry; 17 in math and physics

**Required courses:**

| Code      | Title                | Units |
|-----------|----------------------|-------|
| Chem 111A | General Chemistry I  | 3     |
| Chem 112A | General Chemistry II | 3     |

|                    |                                 |           |
|--------------------|---------------------------------|-----------|
| Chem 151           | General Chemistry Laboratory I  | 2         |
| Chem 152           | General Chemistry Laboratory II | 2         |
| Chem 261           | Organic Chemistry I with Lab    | 4         |
| Chem 262           | Organic Chemistry II with Lab   | 4         |
| Math 131           | Calculus I                      | 3         |
| Math 132           | Calculus II                     | 3         |
| Math 233           | Calculus III                    | 3         |
| Physics 117A       | General Physics I               | 4         |
| or Physics 197     | Physics I                       |           |
| Physics 118A       | General Physics II              | 4         |
| or Physics 198     | Physics II                      |           |
| <b>Total Units</b> |                                 | <b>35</b> |

#### Elective courses:

9 units of chemistry encompassing three courses in at least two subdisciplines. Biol 451 General Biochemistry may be used to satisfy one course of the three required. Courses must be 300-level or above, but Chem 490 Introduction to Research is specifically excluded.

All chemistry course work must be taken in residence at Washington University to be eligible to earn a chemistry minor. A minimum grade of C- must be earned in each course to count toward the chemistry minor.

Note: Per the College of Arts & Sciences guidelines, if a student has a major and a minor or has two minors, only introductory (100- and 200-level) courses may be counted, when relevant, toward the requirements of both programs. All advanced (300- and 400-level) courses must be unique to each program, i.e., no advanced course may "double-count" for the course work needed to fulfill either program's minimal requirements. Should a student's major/minor programs require the same course, a departmentally-sanctioned elective must be chosen to replace the course in one of the programs.

## Courses

Visit online course listings to view semester offerings for L07 Chem (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L07&crslvl=1:4>).

#### L07 Chem 111A General Chemistry I

Systematic treatment of fundamental chemical principles and their applications. Particular reference to the concept of energy and its uses, gas laws, kinetic molecular theory, atomic and molecular structure, chemical bonding, and the periodic classification of the elements. Prerequisites: two years of high school algebra and one of high school chemistry, or permission of instructor.

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

---

### L07 Chem 112A General Chemistry II

Introduction to the principles of chemical equilibrium and to ionic solutions. Topics: ionic equilibria, galvanic cells, elementary chemical thermodynamics and kinetics, and molecular structure of coordination compounds. Three lecture hours and a problem-solving subsection hour. Sign-up for subsections is conducted during the first two weeks of the semester. Prerequisite: Chem 111A or permission of instructor.

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

---

### L07 Chem 151 General Chemistry Laboratory I

This course provides an introduction into basic laboratory techniques, the experimental method, and the presentation of scientific data, as well as direct experience with chemical principles and the properties and reactions of substances. The course is designed to be taken concurrently with the first semester of the general chemistry lecture series (Chem 111A). Students attend a lab lecture every Monday and perform experiments during their scheduled lab section every week. Consult course listings for more information. Prerequisite: concurrent enrollment in Chem 111A or permission of the instructor.

Credit 2 units. A&S: NS A&S IQ: NSM Art: NSM

---

### L07 Chem 152 General Chemistry Laboratory II

This course provides an introduction to basic laboratory techniques, the experimental method, and the presentation of scientific data as well as direct experience with chemical principles and the properties and reactions of substances. The topics and experiments in this course complement the material covered in the Chem 112A lecture course. Students attend one four-hour laboratory session and one one-hour laboratory lecture every other week. Prerequisite: concurrent enrollment in Chem 112A or permission of the instructor.

Credit 2 units. A&S: NS A&S IQ: NSM Art: NSM

---

### L07 Chem 181 Freshman Seminar in Chemistry

A weekly lecture by a chemistry faculty member or other scientist from academia or industry on the lecturer's current research activities. The goal is to provide students with a sampling of current research activities dealing with fundamental and applied problems in science and society that are being approached from a chemical point of view. Students see how fundamental chemical principles can be obtained from experiment and theory and used to both better understand and make better the world we live in. Each week a different scientist presents a lecture or offers an additional activity. Intended primarily for freshman who anticipate majoring in science, but interested upperclass students also should find the lectures interesting and stimulating. Students are expected to attend all lectures and associated activities during the semester. Enrollment is limited. Credit/no credit only.

Credit 1 unit. A&S: NS A&S IQ: NSM Art: NSM

---

### L07 Chem 182 Chemistry for Concerned Citizens: Topics in Energy, the Environment, and More

This course is designed to provide an overview of chemistry as it relates to problems in environmental science, energy and related topics. It is constructed such that all students, irrespective of their major area of study, can learn about chemistry in these contexts. The course is intended to be highly interdisciplinary;

therefore, it covers subjects including chemistry, physics, engineering, geology, biology, environmental policy and others. Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

---

### L07 Chem 261 Organic Chemistry I with Lab

The first part of a two-semester survey of organic chemistry. The course includes an introduction to organic structures, reactions and reaction mechanisms. The laboratory meets on alternate weeks and include an introduction to laboratory methods in organic chemistry, including separation and methods of purification of organic compounds. Prerequisites: Chem 112A, Chem 152.

Credit 4 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

### L07 Chem 262 Organic Chemistry II with Lab

A course covering certain areas of organic chemistry in more detail than the prerequisite course, with special emphasis on the mechanisms and the synthetic applications of organic reactions and on the organic chemistry of biological compounds. The laboratory meets eight times and includes organic synthesis and spectroscopic techniques. Required course for chemistry majors. Prerequisite: Chem 261.

Credit 4 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 290 Freshman and Sophomore Research

Introduction to laboratory research for first- and second-year students. Students work under supervision of a faculty sponsor. Prerequisite: permission of the sponsor and the Department of Chemistry. Credit/no credit only.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 299 Chemical Laboratory Safety

An overview of current laboratory safety, regulatory and compliance practices. Safety and compliance issues that impact chemical, biological and materials research is covered through a series of lectures, demonstrations, activities and laboratory exercises.

Credit 0.5 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

### L07 Chem 358 Organic Chemistry Laboratory II

Initially, problem solving in organic chemistry is emphasized through an introduction to the methods of qualitative organic analysis, including the use of chromatographic and spectroscopic techniques. Each student then selects an independent synthetic project to perform. Prerequisite: Chem 262. Six laboratory hours per week. Lectures held three hours a week for the first half of the semester.

Credit 4 units. A&S: NS, WI A&S IQ: NSM, WI Arch: NSM Art: NSM

---

### L07 Chem 400 Physical Science in 12 Problems

Exercises related to general chemistry, classical mechanics, quantum mechanics, statistical mechanics, thermodynamics and kinetics, are solved with numerical software. Each exercise is accompanied by a lecture, a software template solving a problem and a related take-home problem. The software allows us to focus on, and treat in a transparent fashion, physical problems without the unworldly idealizations and contrivances found in textbooks. Prerequisites: Chem 111A Chemistry I, concurrent

enrollment with Chem 401 and prior or concurrent enrollment in Physics 117A Physics I.

Credit 1 unit. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

**L07 Chem 401 Physical Chemistry I**

Introduction to quantum chemistry (with applications to elementary spectroscopy) and kinetics. Prerequisites: Chem 111A-Chem 112A, Math 233; prior completion of Physics 117A and Physics 118A is strongly encouraged (but concurrent enrollment in Physics 117A is accepted); or permission of instructor. Required course for all Chemistry majors.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

**L07 Chem 402 Physical Chemistry II**

Introduction to chemical thermodynamics, statistical mechanics and transport phenomena. Required course for all Chemistry majors. Prerequisites: Chem 111A–Chem 112A, Chem 401, Math 233, prior completion of Physics 117 and 118 is strongly encouraged (but prior completion of Physics 117 and concurrent enrollment in Physics 118 are accepted); or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

**L07 Chem 403 Chemical Kinetics**

This lecture course provide an introduction to the kinetics of chemical reactions for graduate and upper-level undergraduate science and engineering students. Bulk and molecular level considerations are discussed and provide a foundation for the understanding of chemical reaction mechanisms and the techniques used for their study. Students gain an understanding of the importance and significance of the rate laws of reactions and in particular the reaction rate constant. Details of how the environment in which reactions occur (e.g., gas phase, solution phase and surface reactions) and molecular structure are reflected in the rate constant are discussed. Examples such as catalytic loss cycles in the atmosphere, enzyme catalysis, combustion systems, chain reactions and explosions are presented in detail to illustrate how the fundamental principles of chemical kinetics can be applied to predict reaction rates, chemical reactivity and the outcomes of particular processes.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

**L07 Chem 426 Inorganic Electrochemistry and Photochemistry**

An understanding of electrochemical processes is critical in describing the behavior of batteries, photovoltaics, solar fuel systems, and other important devices used in energy conversion and environmental remediation. This course will cover modern inorganic electrochemistry, photochemistry, and photoelectrochemistry from a microscopic perspective of solid-electrolyte interfaces. The course material will start with the thermodynamics of solid-electrolyte interfaces and the kinetics of electron transfer across these interfaces. Electroanalytical techniques, such as cyclic voltammetry and potential step methods, will be described to understand the mechanism of various electrochemical and photochemical reactions.

The second half of the course will cover several applications of electrochemical cells, including batteries, fuel cells, and photoelectrochemical cells. Prerequisites: Chem 461 or Chem 465 or consent of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

**L07 Chem 430 Simulation in Chemistry and Biochemistry**

This course explores a wide range molecular modeling techniques and applications of computational chemistry to problems in chemistry and biochemistry. Topics include ab initio quantum mechanics, semi-empirical MO theory, molecular mechanics, molecular dynamics simulation, coarse-grained models, electrostatic methods and biomolecular structure prediction. A major component of the course is weekly laboratory sessions using common software programs in the field, including Spartan, Q-Chem, Gaussian, VMD, TINKER, APBS, AutoDock, SDA7 and others. Many of the lab exercises target proteins, nucleic acids and other biological structures. As a final lab experience, students complete an independent project using tools covered in the course.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

**L07 Chem 435 Nuclear and Radiochemistry Lab**

Application of radiochemical techniques to problems in chemistry, physics and nuclear medicine. Prerequisites: 3 units of physical chemistry and permission of instructor. One lecture hour and five hours of laboratory a week.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

**L07 Chem 436 Radioactivity and Its Applications**

Introduction to the production and decay of radioactive nuclides, the structure and properties of nuclei, and the applications of nuclear and radiochemical techniques to current scientific problems. Prerequisites: one year each of chemistry, mathematics and physics.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

**L07 Chem 437 Radioactivity and Radiation Safety**

The following topics are discussed: (a) general properties of nuclei; (b) laws of radioactive decay; (c) interaction of radiation with matter; (d) radiation detectors; (e) radiation dosimetry; (f) biological effects of radiation exposure; (g) radiation safety, safety test, regulations; (h) basics of radioisotope production.

Credit 1 unit. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

**L07 Chem 445 Instrumental Methods: Physical Chemistry**

A course providing direct hands-on experience with the principles of physical chemistry (thermodynamics, quantum, kinetics) and associated experimental methods and instrumentation, including optical, infrared, and nuclear and electron spin resonance, electrochemistry, calorimetry, laser kinetics, and basic electronics. Prerequisite: Chem 401 or concurrent enrollment in Chem 402.

Credit 3 units. A&S: NS, WI A&S IQ: NSM, WI Arch: NSM Art: NSM

---

**L07 Chem 450 Mechanistic Organic Chemistry**

The first half of a sequence of two semesters, followed by Chem 554 in the spring, encompassing important topics in physical organic chemistry. The first semester is devoted to the fundamental concepts of mechanistic organic chemistry. The major classes of organic reactions are surveyed from a mechanistic perspective. Prerequisite: Chem 262 or permission of the instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 451 Organic Chemistry III

A lecture course that builds on the material in Chem 261 and Chem 262, covering in more detail certain topics in those courses while also introducing new topics. A transition to graduate-level study in organic chemistry; recommended for chemistry, biochemistry and biology majors. Prerequisite: Chem 262.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 453 Bioorganic Chemistry

The focus of this course is an overview of modern medicinal chemistry from the selection of a therapeutic target through the FDA-approval process. Each aspect is exemplified by examples of drugs currently in clinical use or in late-stage development. One aspect of particular interest to synthetic chemists is the underlying development chemistry that often determines the competitive success of a product. Topics covered include peptidomimetic HIV protease inhibitors, topoisomerase inhibitors, HMGCoA-reductase inhibitors (Lipitor, etc.), receptor tyrosine-kinase inhibitors (Gleevec, etc.), a synthetic mimetic of superoxide dismutase, and several others depending on the interests of the participants. Students are responsible for presenting to the class the synthetic routes developed for the discovery and commercialization of these drugs focusing on development chemistry. Prerequisite: Chem 262.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 458 Chemical Reaction Mechanism Journal Club

This seminar meets for one hour each week. During the meetings, student participants are responsible for presenting topics from the current literature. The format of the presentation varies from informal talks to student-authored problem sets. Attendance at meetings is strongly recommended for all students who are currently taking the organic cumulative examinations. Prerequisite: Chem 262.

Credit 1 unit. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 459 Organometallic Chemistry

Survey of organometallic compounds with discussion of their synthesis, structure, spectroscopy and reactivity. Prerequisite: Chem 252.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 461 Inorganic Chemistry

Introduction to modern inorganic chemistry; emphasis on relation of structure and bonding to the chemical and physical properties of compounds. Prerequisite: Chem 401 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 464 Inorganic Biochemistry

A class in biological chemistry that emphasizes the role of metals in electron transfer and enzymatic catalysis. After a brief survey of essential concepts from biology, coordination chemistry and spectroscopy, topics include: electron transfer systems; oxygen transport and activation; metal ion acquisition, transport and homeostasis; enzymes catalyzing atom transfer reactions and radical-mediated processes. Prerequisites: Chem 252; Chem 461 recommended but not required.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 465 Solid-State and Materials Chemistry

The course begins with basic crystallography and common inorganic structure types. With the aid of computer modeling, students learn to analyze, index and refine X-ray powder-diffraction data. Students are then taught to use phase diagrams to assess the compositions and microstructures of materials produced by various synthetic or processing methods. Crystal nucleation and growth, defects, and ion-conduction mechanisms also are introduced. The course concludes with an analysis of the mechanical properties of materials from a chemistry perspective. What makes some materials strong, stiff and resistant to fracture? Prerequisites: Chem 111A-Chem 112A.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 470 Inorganic Chemistry Laboratory

A laboratory course emphasizing both the synthesis of inorganic compounds and the study of their physical properties. Laboratory exercises will introduce novel synthetic techniques such as high-temperature synthesis and vacuum line manipulations. Compounds will be spectroscopically characterized by UV-visible, gas-phase infrared, and multinuclear and dynamic NMR spectroscopy. Measurements of electrochemical behavior, magnetic susceptibility, and electrical conductivity will be performed. Prerequisite: Chem 461 or consent of the instructor. A Writing Intensive option is available with the permission of the instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 470W Inorganic Chemistry Laboratory — Writing Intensive

A laboratory course emphasizing both the synthesis of inorganic compounds and the study of their physical properties. Laboratory exercises introduce novel synthetic techniques such as high-temperature synthesis and vacuum line manipulations. Compounds are spectroscopically characterized by UV-visible, gas-phase infrared, and multinuclear and dynamic NMR spectroscopy. Measurements of electrochemical behavior, magnetic susceptibility and electrical conductivity are performed. Prerequisite: Chem 461 or consent of the instructor. This course satisfies the writing-intensive requirement.

Credit 3 units. A&S: NS, WI A&S IQ: NSM, WI Arch: NSM Art: NSM

---

### L07 Chem 475 Chemical Biology

This course is a survey of modern chemical biology focusing on the application of a broad array of chemical tools to biological problems. The course is roughly divided into four sections; biopolymers; computational methods and bioinformatics; tools for chemical biology; and applications of chemical biology. A mandatory discussion section accompanies the course and is used to review current and classical literature in the field. Prerequisites: Chem 262 and Biol 2970, or permission of the instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L07 Chem 477 Modern Medicinal Chemistry

The focus of this course is an overview of Modern Medicinal Chemistry from the selection of a therapeutic target through the FDA-approval process. Each aspect is exemplified by examples of drugs currently in clinical use, or in late-stage development. One aspect of particular interest to synthetic chemists is the underlying development chemistry that often determines the competitive success of a product. Topics covered

include peptidomimetic HIV protease inhibitors, topoisomerase inhibitors, HMGCoA-reductase inhibitors (Lipitor, etc.), receptor tyrosine-kinase inhibitors (Gleevec, etc.), a synthetic mimetic of superoxide dismutase, and several others depending on the interests of the participants. Students are responsible for presenting to the class the synthetic routes developed for the discovery and commercialization of these drugs focusing on development chemistry. Prerequisite: Chem 262 or permission of the instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

#### L07 Chem 478 Molecular Modeling

A survey of a wide range of techniques and applications in molecular modeling and computational chemistry, including "ab initio" quantum mechanics, semi-empirical MO theory, molecular mechanics, molecular dynamics simulation, coarse-grained models, electrostatic methods and biomolecular structure prediction. In addition to traditional lectures, students gain hands-on experience with a variety of computer modeling programs, and are expected to complete an individual project in their particular area of interest. Prerequisites: previous course experience in physical chemistry at the level of Chem 401–Chem 402, or permission of the instructor. Some familiarity with computer basics (text editing, simple scripting and using the "command line" in either Linux, Windows or Mac OS X) is recommended.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

#### L07 Chem 479 Computational Chemistry and Molecular Modeling

Lectures cover the background, practice and applications of computational chemistry to the modeling of the structures and chemical reactions of organic molecules. Different levels of calculation are presented, from molecular mechanics calculations and Hückel molecular orbital theory, through semi-empirical and ab initio self-consistent field calculations with correlation energy corrections, and density functional theory. Hands-on experience performing calculations is an important element in this course.

Credit 3 units. A&S: NS, WI A&S IQ: NSM, WI Arch: NSM Art: NSM

---

#### L07 Chem 481 General Biochemistry I

Topics include the properties and structures of biomolecules, including amino acids, nucleotides, lipids, carbohydrates, proteins and nucleic acids. Additional topics include enzyme kinetics and mechanisms, membrane structure and properties, protein folding, an introduction to metabolism, oxidative phosphorylation, and photosynthesis. This course is the first semester of an integrated two-semester sequence. The second course is Chem 482. Prerequisites: Biol 2970, Chem 262.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

#### L07 Chem 482 General Biochemistry II

Continuation of General Biochemistry I. Topics include carbohydrate, lipid and amino acid metabolism, signal transduction, transport across membranes, DNA replication and repair, transcription and translation, molecular motors, mechanisms of drug action and natural products biosynthesis. Prerequisite: Chem 481 or Biol 481.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L07 Chem 485 Nucleic Acids

Structure, synthesis, properties, and interactions of nucleic acids, and the design and synthesis of nucleic acid-based and/or targeted drugs, probes and tools. Topics: primary, secondary and tertiary structure; topological and thermodynamic properties; biological and chemical synthesis; DNA chips; PCR; site-directed natural and unnatural mutagenesis; chemical evolution (SELEX); ribozymes; phage display; carcinogen, drug and protein interactions; affinity cleaving; ultraviolet light and ionizing radiation damage, DNA repair of mutagenesis; design and synthesis of anti-sense and anti-gene probes and drugs. Extensive use is also made of molecular modeling and the protein databank of nucleic acid structures. Prerequisites: Chem 251 and Chem 252 or equivalent.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

#### L07 Chem 488 Modern Spectroscopy

This course focuses on the fundamental principles and methodologies associated with numerous optical spectroscopy techniques that are commonly utilized in physical and life sciences research laboratories. In order to develop a solid understanding of the material as well as best practices, and the strengths and limitations of the techniques, this course combines lectures with laboratory experiments. Students also learn how to analyze and interpret data and succinctly describe their results. During one lecture each week the underlying principles of a specific type of spectroscopy are presented. The second lecture each week is spent covering the general details of the instrumentation and methods for acquiring spectra on different types of samples. The students then acquire spectra using the spectroscopic methods presented during the laboratory session. The students independently analyze the data and write brief reports of their findings. During the last two weeks of class, pairs of students are given an unknown, and they need to identify and characterize the sample. Students then write and submit a final report describing this independent research and their findings.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

#### L07 Chem 490 Introduction to Research

Advanced laboratory work on a selected topic in chemistry. Prerequisite: permission of the department. Credit/no credit only. If this course is to be submitted for Honors, the student must file the Honors form available at the chemistry department office before the end of junior year. Arrangements for registration should be completed during the preregistration period.

Credit variable, maximum 6 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L07 Chem 495 Advanced Undergraduate Research in Chemistry

The student conducts research supervised by a chemistry department faculty member. At the end of the semester, the chemistry supervisor chairs a faculty committee to evaluate an oral public presentation and/or a concise written report, and a letter grade is assigned. The committee members and completion requirements must be approved by the supervisor prior to registration. This course may provide a Capstone Experience but does not fulfill the Writing-Intensive requirement. The units earned may be applied as elective advanced credits toward a chemistry major with Latin honors eligibility. Course may be taken only once for credit. Prerequisite: Chem 490 and/or other advanced electives or research experience specified by the supervisor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

## Children's Studies

In the children's studies minor, students learn about children and childhood while drawing on the expertise of departments and programs from across Arts & Sciences, especially Education, English, and Psychological & Brain Sciences. Children's studies minors will develop a sophisticated interdisciplinary understanding of childhood and the issues surrounding the treatment and status of children throughout history. The minor combines social science courses that measure and analyze how children mature and how institutions have affected children with courses in the humanities that examine how children are portrayed and constructed in art, literature and film. Thus, a minor in children's studies will supplement students' majors while exposing them to an interconnected set of ideas about children as objects and subjects in a variety of essential disciplines. The minor in children's studies is housed in the Washington University Center for the Humanities.

## Majors

Children's studies is an interdepartmental minor; Washington University does not offer a separate major in children's studies.

## Minors

### The Minor in Children's Studies

*Minor requirements for students entering Washington University in fall 2014 and after:*

**Units required: 16**

**Required courses (4 units):**

| Code     | Title  | Units |
|----------|--|-------|
| ChSt 300 | Interdisciplinary Introduction to Children's Studies | 3     |
| ChSt 499 | Senior Seminar in Children's Studies                 | 1     |

**Core courses (6 units from the following):**

| Code      | Title  | Units |
|-----------|--|-------|
| ChSt 313B | Education, Childhood, and Society  | 3     |
| ChSt 318  | The Cultural History of the American Teenager (previously offered as ChSt 236 & 336) | 3     |
| ChSt 321  | Developmental Psychology   | 3     |

|          |  |   |
|----------|--|---|
| ChSt 334 | A History of the Golden Age of Children's Literature | 3 |
|----------|--|---|

6 additional units from either the core list or from elective courses, including but not limited to:

| Code      | Title   | Units |
|-----------|---|-------|
| ChSt 178  | Imagining and Creating Africa: Youth, Culture, and Social Change                | 3     |
| ChSt 301C | The American School   | 3     |
| ChSt 304  | Educational Psychology  | 3     |
| ChSt 3132 | Service Learning: Girls' Studies  | 4     |
| ChSt 314  | Children's Literature Since World War II: From E.B. White to J.K. Rowling       | 3     |
| ChSt 316F | Rediscovering the Child: Interdisciplinary Workshops in an Urban Middle School  | 3     |
| ChSt 316W | Girls' Fiction From Little Goody Two-Shoes to Nancy Drew                        | 3     |
| ChSt 3195 | Abnormal Child Psychology   | 3     |
| ChSt 325  | Psychology of Adolescence   | 3     |
| ChSt 3254 | African Americans and Children's Literature                                     | 3     |
| ChSt 3270 | Comics, Graphic Novels, and Sequential Art                                      | 3     |
| ChSt 331  | Topics in Holocaust Studies: Children in the Shadow of the Swastika             | 3     |
| ChSt 337  | Play and Development  | 3     |
| ChSt 341  | Children and Childhood in World Religions                                       | 3     |
| ChSt 342  | Childhood, Culture, and Religion in Medieval Europe and the Mediterranean World | 3     |
| ChSt 3620 | Anthropological Perspectives on the Fetus                                       | 3     |
| ChSt 381  | Banned Books  | 3     |
| ChSt 385  | Narratives of Childhood   | 3     |
| ChSt 400  | Independent Work in Children's Studies  | -3    |
| ChSt 4036 | Children of Immigrants: Identity and Acculturation                              | 3     |
| ChSt 4046 | Developmental Neuropsychology   | 3     |
| ChSt 4280 | History of Urban Schooling in the United States                                 | 3     |
| ChSt 4289 | Neighborhoods, Schools, and Social Inequality                                   | 3     |
| ChSt 453B | Sociology of Education  | 3     |
| ChSt 4591 | The Development of Social Cognition   | 3     |
| ChSt 4608 | The Education of Black Children and Youth in the United States                  | 3     |

|           |  |   |
|-----------|--|---|
| ChSt 461B | The Construction and Experience of Black Adolescence | 3 |
|-----------|--|---|

|          |  |   |
|----------|--|---|
| ChSt 471 | Topics in Japanese Culture: Reminiscences of Childhood and Youth | 3 |
|----------|--|---|

## Additional Information

The most up-to-date list of approved electives is located on the Children's Studies Minor website (<http://cenhum.artsci.wustl.edu/academics/minor>). Courses not on that list may be used to fulfill the requirements of the minor only if they have been approved by the student's minor adviser and/or by the academic coordinator.

A maximum of 3 units of course work completed at another university, whether in the United States or abroad, may be applied toward the children's studies minor. Credit will be awarded only to those courses that have been approved by the student's minor adviser and/or by the academic coordinator.

## Courses

Visit online course listings to view semester offerings for L66 ChSt (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L66&crslvl=1:5>).

### L66 ChSt 178 Imagining and Creating Africa: Youth, Culture, and Social Change

The goal of this course is to provide a glimpse into how youth reshape African society. Whether in North Africa with the Arab Spring, in West Africa with university strikes, or in East Africa through a linguistic full bloom, youth have been shaping social responses to societies for a long period. In this course, we will study social structures, including churches, NGOs, developmental agencies as well as learn about examples of Muslim youth movements, and the global civil society. The course will also explore how youth impact cultural movements in Africa and how they influence the world. In particular, we will examine hip-hop movements, sports, and global youth culture developments that center on fashion, dress, dance, and new technologies. By the end of the course, students will have enriched ideas about youth in Africa and ways to provide more realistic comparisons to their counterparts in the United States. Same as L90 AFAS 178

Credit 3 units. A&S: CD A&S IQ: LCD Arch: HUM Art: HUM BU: IS EN: H

### L66 ChSt 236 Cultural History of the American Teenager

This course explores the recent history of the teenager in the United States, from the rise of teen culture in the 1950s to the current state of adolescence in the new century. Why have so many novels and films memorialized adolescence? How has the period of development been portrayed in books and film? How have depictions and attitudes toward teen culture changed over the past 60 years? In our consideration of teen culture, we take a multidisciplinary approach when tackling a variety of materials — including historical readings, literary fiction, Young Adult fiction, comic books, popular films, and popular music — in an attempt to come to a better understanding of how the notion of the American teenager has evolved over the past 60 years.

We begin with J.D. Salinger's classic novel of adolescence alienation, *The Catcher in the Rye*, a book that in many ways helped initiate the rise of the youth movement in the 1950s and '60s. Our readings focus on the middle decades of the 20th century, when teen culture moved to the forefront of American life, but we end the semester by considering how teen life has recently been imagined in such novels as *The Hunger Games*. Our class also discusses a few films, such as *Rebel Without a Cause* and *American Graffiti*, which have helped shape our conception of the American teenager. Ultimately, we question what these depictions of teen culture can tell us about larger trends and concerns in American life. As this course serves as an introduction to American Culture Studies, we focus on the different methods that we can employ when attempting to interpret and analyze American culture.

---

#### L66 ChSt 299 Internship in Children's Studies

This course offers up to three hours of academic credit (on a pass/fail basis) for an unpaid internship with an outside organization in some area of Children's Studies. Enrollment is restricted to children's studies minors and will require completion of a final written project as well as coordination with a site supervisor. For more information, please contact Dr. Wendy Anderson at andersonw@wustl.edu or 314-935-9523. Credit variable, maximum 3 units.

---

#### L66 ChSt 300 Interdisciplinary Introduction to Children's Studies

What is childhood? Is it supposed to be happy? And what can children's books, toys, and memoirs tell us about the experience of childhood in a certain time and place? This course is designed to introduce students to the field of children's studies, including readings in the history and literature of global childhood, excerpts from children's films and TV, visits from Washington University faculty studying children across various disciplines, and field trips to a children's museum and a juvenile detention facility. The course is intended to give students a richly detailed picture of how children and childhood are dealt with as subjects throughout the curriculum and the impact these approaches have had on how the greater society thinks about children. Freshmen are welcome to enroll. This course fulfills the Social Differentiation requirement in Arts & Sciences.

Credit 3 units. A&S: SS, SD A&S IQ: HUM, SD Arch: HUM Art: HUM BU: HUM EN: H

---

#### L66 ChSt 301C The American School

An analysis of the development of American schooling within the context of American social history. Focus on three general themes: differing conceptions of schooling held by leading American educational thinkers; changing relationships among schools and such other educational institutions as the church and the family; and policy issues that have shaped the development of schooling in America. Prerequisite: sophomore standing.

Same as L12 Educ 301C

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: BA, ETH, HUM EN: H

---

#### L66 ChSt 304 Educational Psychology

A course in psychological concepts relevant to education. Organized around four basic issues: how humans think and

learn; how children, adolescents, and adults differ in their cognitive and moral development; the sense in which motivation and intention explain why people act as they do; how such key human characteristics as intelligence, motivation, and academic achievement can be measured. Prerequisite: sophomore standing. Offered fall and spring semester.

Same as L12 Educ 304

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

---

#### L66 ChSt 3132 Service Learning: Girls' Studies

2012 marked the 100th anniversary of Girl Scouts of America, an organization that has played a significant role in defining what it means to be a girl in American culture. This class will look back at girlhood over the last hundred years to today by exploring topics that include literature for girls, the education of girls, sports and girlhood, marketing to girls, girls' health and sexuality, and, of course, the history of organizations for girls in the U.S. and abroad. This course introduces students to the emerging field of Girl Studies within the field of Feminist/Gender Studies research. Because the course builds upon basic knowledge of women's movements in the United States and builds upon an understanding of core women and gender studies readings, students must take Introduction to Women and Gender Studies or Introduction to Sexuality Studies before enrolling in this course. This course includes a fieldwork component in addition to regular course meetings. Prerequisite: any 100-level Women, Gender, and Sexuality Studies course.

Same as L77 WGSS 3132

Credit 4 units. A&S: TH A&S IQ: HUM BU: BA EN: H

---

#### L66 ChSt 313B Education, Childhood, and Society

An examination of childhood, child development and education from different perspectives. Observation of children in a variety of settings, including classrooms. Through historical, sociological, psychological and political readings, students will clarify current ideas about children, investigate the nature of childhood, and begin to understand how and why childhood is constructed as it is. Prerequisite: sophomore standing. Limited to 45 students.

Same as L12 Educ 313B

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

#### L66 ChSt 316F Rediscovering the Child: Interdisciplinary Workshops in an Urban Middle School

It is said that at this time in history the entire country must make a commitment to improve the positive possibilities of education. We must work to lift people who are underserved; we must expand the range of abilities for those who are caught in only one kind of training; and we must each learn to be creative thinkers contributing our abilities to many sectors of our society. In this course, we expand our views about learning by experimenting with the creative process of lateral thinking. In the first six weeks of the semester, we learn about learning by meeting with exceptional people with many scholarly, professional, and civic engagement accomplishments. We also learn by working in teams to develop an exciting set of 2-D/3-D, hands-on, problem-solving workshops for middle-schoolers from economically disadvantaged urban families; the workshop curriculum is based upon students' knowledge and passion as

well as their interests. During the last eight weeks, we deliver these workshops once a week to students at Compton-Drew Middle School (adjacent to the Science Center in the city of St. Louis). In this course we celebrate the choices of studies we each pursue, and expand our experience by learning from each other's knowledge bases and creativity. The course is open to students from all disciplines and schools, freshmen through seniors, and meets the multidisciplinary fieldwork requirement for AMCS majors.

Same as L98 AMCS 316F

Same as L14 E Lit 318

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

---

**L66 ChSt 3195 Abnormal Child Psychology**

This course will familiarize students with current perspectives on the nature, causes, assessment, treatment and prevention of child psychiatric disorders and related family dysfunction. Theoretical perspectives and research findings will be discussed pertaining to anxiety, depression, conduct disorder, attention-deficit/hyperactivity disorder, autism, learning impairments, and parent-child conflict. Prerequisite: Psych 100B.

Same as L33 Psych 3195

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

**L66 ChSt 321 Developmental Psychology**

This course concentrates on the cognitive and social development of the person from conception to adolescence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior. Prerequisite: Psych 100B.

Same as L33 Psych 321

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

---

**L66 ChSt 323 Children and War**

This course considers 20th-century representations of war in American children's literature. Our scope will stretch from the run-up to World War II in the 1930s through the current conflicts in Iraq and Afghanistan. This period produced texts that debated not only the role of war in childhood development but also the role of the child in war's development. Genres will include picture and comic books, career and adventure fiction, science fiction, and childhood memoir.

Credit 3 units.

**L66 ChSt 3254 African Americans and Children's Literature**

This course explores two distinct themes: how African-descended people have been depicted in American and British children's literature, and how African Americans have established a tradition in writing for children and young adults. It will also examine two related questions: How has African-American childhood been constructed in children's literature, and how have African-American writers constructed childhood in children's literature? We will look at such classic white writers for children like Helen Bannerman, Annie Fellows Johnston, and Mark Twain as well as efforts by blacks like *The Brownies' Book*, published by the NAACP, and children's works by black writers including Langston Hughes, Ann Petry, Shirley Graham Du Bois, Arna Bontemps, Virginia Hamilton, Walter Dean Myers, Mildred Taylor, Floyd and Patrick McKissack, Julius Lester, Rosa Guy, Sharon Bell Mathis, bell hooks, and others.

---

**L66 ChSt 3270 Comics, Graphic Novels, and Sequential Art**

This course traces the evolution of comics in America from the "comic cuts" of the newspapers, through the development of the daily and Sunday strips, into the comic book format, and the emergence of literary graphic novels. While not a uniquely American medium, comics have a specifically American context that intersects with issues of race, class, gender, nationalism, popular culture, consumerism, and American identity. Comics have repeatedly been a site of struggle in American culture; examining these struggles illuminates the way Americans have constructed and expressed their view of themselves. The way comics have developed as a medium and art form in this country has specific characteristics that can be studied profitably through the lens of American Culture Studies.

**L66 ChSt 330 Children and Censorship: What We Permit Children to Read and Why**

The books that raise the issue of censorship most intensely are those written for children, not adults. Today, when parents seem more concerned than ever about what their children are exposed to, what children should read has become a burning issue, but an issue that often divides communities rather than uniting them. What is appropriate for children to read? Has this changed over time? Who determines what is appropriate reading material? And how have the issues of gender and race affected these determinations? In this course we will read and discuss many controversial children's books and comics, starting with Mark Twain's *The Adventures of Huckleberry Finn* and Helen Bannerman's *Little Black Sambo*, and work our way through to such modern children's authors as Sherman Alexie, Judy Blume, Maurice Sendak, Walter Dean Myers, and J.K. Rowling as well as R. Crumb's controversial and sexually explicit underground comics.

Credit 3 units.

---

**L66 ChSt 331 Topics in Holocaust Studies: Children in the Shadow of the Swastika**

This course will approach the history, culture and literature of Nazism, World War II and the Holocaust by focusing on one particular aspect of the period—the experience of children. Children as a whole were drastically affected by the policies of the Nazi regime and the war it conducted in Europe, yet different groups of children experienced the period in radically different ways, depending on who they were and where they lived. By reading key texts written for and about children, we will first take a look at how the Nazis made children—both those they considered "Aryan" and those they designated "enemies" of the German people, such as Jewish children—an important focus of their politics. We will then examine literary texts and films that depict different aspects of the experience of European children during this period: daily life in the Nazi state, the trials of war and bombardment in Germany and the experience of expulsion from the East and defeat, the increasingly restrictive sphere in which Jewish children were allowed to live, the particular difficulties children faced in the Holocaust, and the experience of children in the immediate postwar period. Readings include texts by Ruth Klüger, Harry Mulisch, Imre Kertész, Miriam Katin, David Grossman and others. Course conducted entirely in English. OPEN TO FRESHMEN. STUDENTS MUST ENROLL IN BOTH MAIN SECTION AND ONE DISCUSSION SECTION.

---

**L66 ChSt 336 The Cultural History of the American Teenager**

This course will explore the recent history of the teenager in the United States, from the rise of teen culture in the 1950s to the current state of adolescence in the new century. Why have so many novels and films memorialized adolescence? How has the period of development been portrayed in books and film? How have depictions and attitudes toward teen culture changed over the past 50 years? We will begin with J.D. Salinger's classic novel of adolescence alienation, *The Catcher in the Rye*, a book that in many ways helped initiate the rise of the youth movement in the 1950s and 60s. From there, we will read a series of novels and historical studies that will trace the changes in teen culture that have occurred over the past half century. Our class will also consider a few films, such as *Rebel Without a Cause* and *Dazed and Confused*, which have helped shape our conception of the American teenager. Ultimately, we will question what these depictions of teen culture can tell us about larger trends and concerns in American life. Readings will include Judy Blume's *Forever*, Stephanie Meyer's *Twilight*, and Colson Whitehead's *Sag Harbor*.

Credit 3 units.

---

**L66 ChSt 337 Play and Development**

An examination of current research and theory in play, in development and education, from infancy through the early school years. Topics include play and the development of language, social skills, creativity, and cognitive abilities. We will also examine the uses of play in educational contexts, focusing

on preschool and the early primary grades. Prerequisite: Psych 321 (Developmental Psychology) or Educ 304 (Educational Psychology).

**L66 ChSt 341 Children and Childhood in World Religions**

This course will investigate the roles children play in some of the world's major religious traditions and how those traditions construct their concepts of childhood. From child disciples to child martyrs, from the miraculous childhoods of religious founders to the rites marking childhood's end, and from divine commandments involving fertility to those mandating celibacy, we will explore a wide range of different religions' teachings about children and childhood. We will combine primary and secondary sources including written texts, movies/video, and web-based content in order to learn more about the complex relationships between children and the religious traditions of Judaism, Christianity, Islam, Hinduism, Buddhism, and Confucianism.

---

**L66 ChSt 342 Childhood, Culture, and Religion in Medieval Europe and the Mediterranean World**

From child saints to child scholars and from child crusaders to child casualties, the experience of childhood varied widely throughout the European Middle Ages. This course will explore how medieval Jews, Christians, and Muslims developed some parallel and some very much divergent concepts of childhood, childrearing, and the proper cultural roles for children in their respective societies. Our readings will combine primary and secondary sources from multiple perspectives and multiple regions of Europe and the Mediterranean World, including a few weeks on the history and cultural legacy of the so-called Children's Crusade of 1312. We will conclude with a brief survey of medieval childhood and its stereotypes as seen through contemporary children's books and TV shows. This course fulfills the Language & Cultural Diversity requirement for Arts & Sciences.

**L66 ChSt 3620 Anthropological Perspectives on the Fetus**

Where do we come from? How do we get here? When does "life" begin? Is the fetus a "person" or something else? How could we decide? This course will integrate biological, medical, philosophical, and cross-cultural perspectives to examine how various societies (including our own) understand the nature of the human fetus. The course will examine basic human embryology, beliefs about conception and fetal development, ideas about the moral status of the fetus, controversies surrounding prenatal care and antenatal diagnostic testing (including sex-selection and genetic screening tests), current controversies about fetal medicine and surgery, and the problem of abortion in cross-cultural perspective.

---

**L66 ChSt 381 Banned Books**

Why would anyone want to burn a book? Under what circumstances would you support censorship? Several years ago a Russian student was exiled to Siberia for possessing a copy of Emerson's *Essays*; today, school boards in the United States regularly call for the removal of *Huckleberry Finn* and *The Catcher in the Rye* from classrooms and library shelves. Actions like these dramatize the complex interconnections of literature and society, and they raise questions about what we read and the way we read. The course explores these issues by looking closely at several American and translated European texts that have been challenged on moral, sociopolitical or religious grounds to determine what some readers have found so threatening about these works. Possible authors: Goethe, Voltaire, Rousseau, Defoe, Hawthorne, Flaubert, Twain, Chopin, Brecht, Salinger, Aldous Huxley, Ray Bradbury. Brief daily writing assignments.

---

**L66 ChSt 407 Topics in Youth Studies: Media Arts and Culture**

This course is designed as a special topics on youth studies. The focus examines youth as a cultural group in the U.S. and global context. It takes an interdisciplinary approach to explore youth, media arts, and culture and draws on education, sociology, cultural studies and literature. Such topics as youth development, youth engagement, and youth empowerment provide entry points for understanding youth as learners, consumers, producers, and active members of society. Central to the course are youth's very own textual productions, including but are not limited to poems, performances, visual art, short documentaries, music videos, web blogs and podcasts, among others. Readings, discussions and other activities will culminate in an inquiry-based multimedia project about youth or a specific youth group/organization.

Credit 3 units.

---

**L66 ChSt 4280 History of Urban Schooling in the United States**

This reading colloquium examines the history of urban schooling and school policy in the United States. Readings focus on the growing literature in the history of urban schooling and on primary source material. We explore urban schooling in general, and we examine particular primary source material as well as particular cities and their school districts. Such districts may include New York, Boston, Chicago, Detroit, St. Louis, Los Angeles, San Francisco, Atlanta and others. The course has two goals: to develop a strong contextual understanding of the conditions of urban schooling, the history of urban school reform, and the debates over the purposes of urban schools; and to examine the ways historians have explored urban schooling in the U.S. Students should expect to read a book a week as well as primary source materials and occasional articles.

Same as L12 Educ 4280

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L66 ChSt 4289 Neighborhoods, Schools, and Social Inequality**

A major purpose of the course is to study the research and policy literature related to neighborhoods, schools and the corresponding opportunity structure in urban America. The course will be informed by theoretical models drawn from economics, political science, sociology, anthropology, education and law. A major focus is to gain greater understanding of the experiences and opportunity structure(s) of urban dwellers, in general, and urban youth, in particular. While major emphasis will be placed on data derived from the interface of urban environments and the corresponding institutions within them, the generational experiences of various ethnic groups will complement the course foci.

---

#### L66 ChSt 4591 The Development of Social Cognition

This course will explore what is known about the development of social cognition. Our starting point will be infants' capacity to navigate the social world, for instance, detecting agents, identifying social partners, and learning from those around us. We will consider what happens when the human ability to reason about others breaks down (as with autism), and what this can teach us about typical development. Each week we will cover one topic and a related set of readings. Class meetings will be devoted to active discussion and debate about the content of the readings. Students are required to write a weekly reaction paper to the readings to promote class discussion, and will give an in-class presentation on a novel research topic at the end of the semester. Graduate students may have additional course requirements. Prerequisites: Psych 100B and one of the following: Psych 315 or 321 or 360.

Same as L33 Psych 4591

#### L66 ChSt 4608 The Education of Black Children and Youth in the United States

This course provides an overview of the education of black children and youth in the United States. Covering both pre- and post-Brown eras, this course applies a deep reading to the classic works of DuBois and Anderson as well as the more recent works of Kozol, Delpit, and Foster. The social, political, and historical contexts of education, as essential aspects of American and African-American culture and life, will be placed in the foreground of course inquiries.

---

#### L66 ChSt 461B The Construction and Experience of Black Adolescence

This course examines the construct of black adolescence from the general perspectives of anthropology, sociology and psychology. It begins by studying the construct of black adolescence as an "invention" of the social and behavioral sciences. The course then draws upon narrative data, autobiography, literature and multimedia sources authored by black youth to recast black adolescence as a complex social, psychological, cultural and political phenomenon. This course focuses on the meaning-making experiences of urban-dwelling black adolescents and highlights these relations within the contexts of class, gender, sexuality and education.

## Chinese

The Department of East Asian Languages and Cultures (EALC) offers a major and a minor in Chinese language and culture.

As a major in Chinese, a student can expect to gain some proficiency in the language and acquire a foundation in Chinese literature, history and culture from earliest times to the present.

All students majoring in Chinese must complete first- and second-level Chinese or its equivalent. They also must complete a prerequisite 200-level Civilization course and the two-semester literature survey, as well as additional advanced-level courses (300- and 400-level). In addition, all prime majors must complete the required EALC Capstone Experience.

The department strongly encourages overseas study of Chinese language and culture. All majors and minors are expected to maintain at least a B- average in all departmental courses.

**Language Placement:** Placement tests are required for all students entering our language programs, with the exception of those students who have had no previous exposure to the language and wish to enroll in the first semester of the first year of instruction. Students who test into second-year Chinese and satisfactorily complete (with a grade of B- or better) at least one semester of language study may petition for 3 units of retroactive credit; students who test into third year or above and satisfactorily complete (with a grade of B- or better) at least one semester of language study may petition for 6 units of retroactive credit. Credit is limited to 3 units for testing into second year and 6 units for testing into third year or above. Please note that students with native language proficiency as determined by the Chinese language section, as well as students who enroll in courses below their placement level, are ineligible for retroactive credit units. Students who misrepresent their language proficiency so as to gain entrance into a course at the elementary or intermediate level will be dropped from that course.

**Phone:** 314-935-4448

**Email:** ealc@wustl.edu

**Website:** http://ealc.wustl.edu

## Faculty

For a list of affiliated faculty, please visit the Department of East Asian Languages and Cultures faculty (p. 363) page.

## Majors

### The Major in Chinese Language and Culture

**Units required:** 24 upper-level (300-level or above) units

**Prerequisites:**

1. First- and second-level Modern Chinese or the equivalent
2. Chinese 227C Chinese Civilization

**Requirements:**

24 advanced (300-level) and above units to include:

1. Chinese 341 Early and Imperial Chinese Literature
2. Chinese 342 Literature of Modern and Contemporary China
3. 400-level Capstone course (prime majors)
  - Chinese prime majors may satisfy their capstone requirement in one of two ways, both of which require a presentation at the EALC Senior Symposium in the spring.
    - a) Successful completion of a senior honors thesis. This option, which also entitles the student to Latin Honors, requires a minimum of a 3.65 GPA. The thesis is researched and written over two semesters, for a total of 6 units, which are *in addition* to the 24 upper-level units required for the major.
    - b) Successful completion of an approved 400-level seminar course, to be taken in the senior year. (This course may be *included* among the 24 advanced units for the major.)

### Additional Information

1. With adviser approval, students may include one course in a related area offered outside the department among the 24 advanced units. (For example, a student with focus on China/Chinese may take one course in Film and Media Studies or Art History that focuses on China.) With adviser approval, students may count one course from another area within the department among the 24 advanced units. (For example, a student with focus on China/Chinese may take one course in either Korean or Japanese.)
2. Students must earn at least a B- in language courses in order to continue to the next level. They must also maintain at least a B- average in all required courses for the major. Students who do not meet this requirement may either repeat the course(s) in question or earn at least a B- in an approved equivalent course or courses (either during the summer or in a study abroad program).

3. Courses for the major may not be taken Credit/No Credit.
4. Core courses (Chinese 227C, 341, 342) should be taken in residence.
5. No more than 6 units of transfer or study abroad non-language courses may be applied to the major.
6. No more than 3 units of Independent Study may be counted toward the required upper-level 24 units.
7. EALC awards Departmental Honors to majors as an acknowledgment of exemplary work in the major.

## Minors

### The Minor in Chinese Language and Culture

**Units required:** 18 units

**Requirements:**

- Two semesters of Chinese language
- At least 9 units must be 300-level or above
- And the following three courses:

| Code         | Title                                       | Units |
|--------------|---|-------|
| Chinese 227C | Chinese Civilization                        | 3     |
| Chinese 341  | Early and Imperial Chinese Literature       | 3     |
| Chinese 342  | Literature of Modern and Contemporary China | 3     |

### Additional Information

- Students must earn at least a B- in their language courses in order to continue to the next level. They must also maintain at least a B- average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course(s) in question or successfully complete an approved equivalent course or courses (either during the summer or in a study abroad program).
- Courses for the minor may not be taken Credit/No Credit.
- Core courses (Chinese 227C, 341, 342) should be taken in residence.
- No more than 3 units of transfer or study abroad non-language courses may be applied to the minor.

---

#### L04 Chinese 101D First-Level Modern Chinese I

Introduction to the modern spoken and written national language of China. Five regular hours and additional drill or laboratory sessions as assigned by instructor. Students with some previous Chinese language background must take placement examination.

Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

**L04 Chinese 102D First-Level Modern Chinese II**

Continuation of 101D. Prerequisite: grade of B- or better in 101D, or placement by examination. Five regular hours and additional drill or laboratory sessions as assigned by instructor.

Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

**L04 Chinese 106 Beginning Chinese for Heritage Speakers I**

This course is designed for students who have basic speaking and listening skills and some background in writing or reading.

Three class hours plus one additional hour are required.

Prerequisite: placement by examination.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

**L04 Chinese 107 Beginning Chinese for Heritage Speakers II**

Continuation of 106. Emphasis on improving basic reading and writing skills. Three class hours plus one additional hour are required. Prerequisite: grade of B- or better in Chinese 106 or placement by examination.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

**L04 Chinese 126 Chinese for Medical Purposes**

This course is the continuation of Beginning Chinese taught in the fall at the Shanghai Fudan program. The spring course is targeted specifically to pre-medicine and/ or health care students who have studied at the Shanghai Fudan program in the fall. Students without the Fudan experience can also enroll after language evaluation. Prerequisites: L04 101D, L04 117F or the equivalent.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

**L04 Chinese 130 Basic Chinese I**

Basic Chinese I is the first half of the beginning-level Chinese and is designed to meet the practical needs of students who are interested in learning Chinese but do not have time for a full-load study. This course is scheduled to move at half the pace of regular Chinese 101. Students will learn slowly but surely the same basic knowledge of Mandarin phonetics, standard grammar, and 300 to 350 vocabulary items. This basic course emphasizes listening comprehension and conversational skills through aural-oral practices. The reading and writing of basic Chinese are strongly encouraged as secondary skills. After completing the spring course I, followed by the fall course II, interested students can then go on to regular Chinese 102.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

---

**L04 Chinese 131 Basic Chinese II**

This is the continuation of Basic Chinese I (L04 130). It is designed to meet the practical needs of students who are interested in learning Chinese but do not have time for a full-load study. This course will move at half the pace of Chinese 101D and will present the second half of the 101D curriculum. Students will learn basic knowledge of Mandarin phonetics, standard grammar, and approximately 350 new lexical items. This course emphasizes listening comprehension and conversational skills through aural-oral practice, with reading and writing Chinese as complementary skills. After completing this course, students can continue with Chinese 102D. Prerequisite: Grade of B- or better in 130, or placement by examination.

Credit 3 units. A&S IQ: LCD EN: H

---

**L04 Chinese 206 Intermediate Chinese for Heritage**

**Speakers I**

Designed for students who have either completed Chinese 107 or who have basic speaking and listening skills and mastery of at least 300 written characters. Three class hours plus one additional drill hour. Prerequisite: grade of B- or better in Chinese 107, or placement by examination.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

**L04 Chinese 207 Intermediate Chinese for Heritage**

**Speakers II**

Designed for students who have either completed Chinese 206 or who have basic speaking and listening skills and mastery of at least 800 written characters. Four class hours a week. Prerequisite: grade of B- or better in Chinese 206, or placement by examination.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

**L04 Chinese 211 Second-Level Modern Chinese I**

The standard second-year level of instruction in modern Chinese. Students learn both long and short forms of characters. Prerequisite: grade of B- or better in Chinese 102D or placement by examination. Five hours a week, plus drill and laboratory sessions as required by instructor.

Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

**L04 Chinese 212 Second-Level Modern Chinese II**

The standard second-year level of instruction in modern Chinese. Students learn both long and short forms of characters. Prerequisite: grade of B- or better in Chinese 211 or placement by examination. Five hours a week, plus drill and laboratory sessions as required by instructor.

Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

**L04 Chinese 227C Chinese Civilization**

An introduction to Chinese culture through selected topics that link various periods in China's past with the present. Ongoing concerns are social stratification, political organization, the arts, gender relationships and the rationales for individual behavior, and the conceptions through which Chinese have identified their cultural heritage. Our readings include literary, philosophical and historical documents as well as cultural histories. Regular short writing assignments; take-home final. No prerequisites.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM BU: BA, IS EN: H

---

**L04 Chinese 260 Love and Murder in 17th-Century China**

In this course we will read tales of sex and murder, of love and redemption, of ghosts and monsters, and of life and death. As such, it is a vivid depiction of life and society in all its ugliness and beauty during the last decades of the Ming dynasty. These tales are largely drawn from an English translation of the 17th-century collection of short, vernacular fiction known as *Gujin xiaoshuo* (Stories Old and New) as well as selections from subsequent collections. The course is discussion based, with periodic short writing assignments. Previous experience with Chinese literature and history is useful but not required. Topics of discussion will be wide-ranging but will include late Ming education, the literary representation of sex and gender, and the generic conventions of short vernacular fiction in the 17th century. Students new to Chinese literature are very welcome. Taught in English.

Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

---

#### L04 Chinese 303 The Taoist Tradition

This course offers an introduction to the history, practices and worldviews that define the Daoist traditions. Through both secondary scholarship and primary texts, we consider the history of Daoism in reference to the continuities and discontinuities of formative concepts, social norms, and religious practices. Our inquiry into this history centers on consideration of the social forces that have driven the development of Daoism from the second century to the modern day. Special consideration is given to specific Daoist groups and their textual and practical traditions: the Celestial Masters (Tianshi), Great Clarity (Taiqing), Upper Clarity (Shangqing), Numinous Treasure (Lingbao), and Complete Perfection (Quanzhen). Throughout the semester we also reflect on certain topics and themes concerning Daoist traditions. These include constructions of identity and community, material culture, the construction of sacred space, and cultivation techniques.

#### L04 Chinese 3055 Contemporary Chinese Culture and Society

This course provides an introduction to emerging trends in Chinese culture and society. We will explore processes of change and continuity in the People's Republic, examining the complexity of social issues and the dynamics of cultural unity and diversity. While we will focus on the post-Mao reform era (1978 to the present), we will consider how contemporary developments draw upon the legacies of the Maoist revolution as well as the pre-socialist past. The course provides an overview of anthropological approaches to the study of contemporary China, introducing students to key concepts, theories, and frameworks integral to the analysis of Chinese culture and society. Readings, lectures, and discussions will highlight not only macro-level processes of social change and continuity but also the everyday experiences of individuals involved in these processes. We will pay particular attention to issues of family life, institutional culture, migration, religion, ethnicity, gender, consumption, and globalization.

#### L04 Chinese 3091 Confucian Thought

This course is designed to introduce students to the history and teachings of one of the world's major religious traditions: Confucianism. We will examine how Confucianism developed in ancient China and afterwards spread throughout East Asia and beyond. In particular, we will pay attention to the issue of ritual and how Confucians attempted to ritualize social

interactions and the world at large. In order to do so, we will engage in the writings of Confucius, Mengzi, and Xunzi, three early Chinese writers whose basic ideas about ritual heavily informed myriad cultural practices that are formative for large portions of East Asia today. Hence, this course on ancient thinkers not only introduces thoughts and practices prevalent throughout premodern China, Japan and Korea. It also functions as a catalyst that helps us understand some of the reasons and motivations behind these communities' recent efforts to renegotiate and question "the colonialist flavor" of human rights and democracy.

#### L04 Chinese 3162 Early Modern China

This course examines political, socioeconomic and intellectual-cultural developments in Chinese society from the middle of the 14th century to 1800. This chronological focus largely corresponds to the last two imperial dynasties, the Ming (1368-1644) and Qing (1644-1911). Thematically, the course emphasizes such early modern indigenous developments as increasing commercialization, social mobility and questioning of received cultural values.

#### L04 Chinese 3163 Historical Landscape and National Identity in Modern China

This course attempts to ground the history of modern China in physical space such as imperial palaces, monuments and memorials, campus, homes and residential neighborhoods, recreational facilities, streets, prisons, factories, gardens and churches. Using methods of historical and cultural anthropological analysis, the course invests the places where we see with historical meaning. Through exploring the ritual, political and historical significance of historical landmarks, the course investigates the forces that have transformed physical spaces into symbols of national, local and personal identity. The historical events and processes we examine along the way through the sites include the changing notion of rulership, national identity, state-building, colonialism and imperialism, global capitalism and international tourism. Acknowledging and understanding the fact that these meanings and significances are fluid, multiple, contradictory, and changing over time are an important concern of this course.

**L04 Chinese 3310 19th-Century China: Violence and Transformation**

This course traces the history of China over the course of the 19th century, with an emphasis on social and cultural history. This was one of the most tumultuous centuries in Chinese history, during which China faced threats from abroad in the form of Western and Japanese imperialism, and from within, in the form of environmental degradation and rebellions resulting in an unprecedented loss of human life. The 19th century has thus often been portrayed as a period of sharp decline for China. At the same time, we explore the ways in which the origins of the dynamic society and economy found in China today, as well as the worldwide influence of overseas Chinese, can be traced to this century of turmoil.

**L04 Chinese 3352 China's Urban Experience: Shanghai and Beyond**

The course studies the history of Chinese cities from the mid-19th century to the late 20th century. It situates the investigation of urban transformation in two contexts: the domestic context of modern China's reform and revolution; and the global context of the international flow of people, products, capitals and ideas. It chooses a local narrative approach and situates the investigation in one of China's largest, complex, and most dynamic and globalized cities — Shanghai. The experience of the city and its people reveals the creative and controversial ways people redefined, reconfigured and reshaped forces such as imperialism, nationalism, consumerism, authoritarianism, liberalism, communism and capitalism. The course also seeks to go beyond the "Shanghai model" by comparing Shanghai with other Chinese cities. It presents a range of the urban experience in modern China.

**L04 Chinese 3415 Early Chinese Art: From Human Sacrifice to the Silk Road**

This course examines Chinese art and material culture from the prehistoric period through the end of the medieval Tang dynasty, when the Chinese capital boasted a cosmopolitan population of more than one million people. Topics covered include Neolithic ceramics and jades, the bronzecasting tradition, funerary art and architecture, the Terracotta Army, the origins of Chinese brush arts, Buddhist painting and sculpture, and the varied exotica of the Silk Road. Each class teaches recent works together with the ancient to demonstrate how the origins of Chinese art and architecture continue to influence contemporary works. Prerequisites: Intro to Asian Art (L01 111) or permission of instructor.

**L04 Chinese 3582 Chinese Screen Romance**

Romance is a popular theme in cinema. Since the early silent "Laborer's Love," Chinese filmmakers have created love stories on the silver screen through a variety of film genres, styles, and cultural perspectives. The "romantic" film lens not only follows popular narratives in general but also intervenes modern

Chinese culture in significant historical moments. This course surveys the history of Chinese-language cinema through the diverse representation of romantic film plots from the 1920s to the contemporary. During the semester, we will explore the romantic trope in early cinema, leftist cinema of the Republican era, postwar musicals, popular genres in the 1970s and 1980s, new wave cinema in Taiwan, Hong Kong, and the PRC, cinema dealt with historical legacies, and some transnationally coproduced films. By visiting a rich history of screen romance, we will learn how love, sexuality and emotion in Chinese cinema represent individual aesthetics and aspiring cultural critiques. All lectures and assignments will be in English. Film materials will be provided with English subtitles.

**L04 Chinese 3702 The Dream of the Red Chamber**

Considered by many to be the pinnacle of Chinese vernacular fiction, the sprawling novel *The Dream of the Red Chamber* (Honglou meng) follows the fortunes of a peculiar young man, Jia Baoyu, as his once elite family crumbles around him. This beloved novel, published in 1791 and known also as *The Story of the Stone*, has had an outsized impact on Chinese culture for well over two centuries, inspiring TV and movie adaptations, and even amusement parks. The course is largely discussion based, with periodic short writing assignments. Topics of discussion will be wide-ranging but will include Qing dynasty society, the literary representation of sex and gender, the distinction between fiction and nonfiction, and the generic conventions of the late imperial vernacular novel. Previous experience with Chinese literature and history is recommended but not required. Taught in English.

Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

---

**L04 Chinese 3750 Revolution and the Modern Nation in Chinese Literature and Culture**

This course is an introduction to modern China through literature, critical thought, and analysis during the first half of the 20th century. In this semester we read the important examples of fiction, essays and criticism, against their historical and cultural background. Beginning with reform-minded Confucian scholars around the turn of the century, modern Chinese literature and culture has had an overriding concern with the fate of China itself. As a result, close readings of literature, popular culture, and criticism from the late Qing Dynasty to the Cultural Revolution give us insight into many of the fundamental issues facing the Chinese people through decades of revolution, foreign invasion, civil war and modernization. During the first half of the century, Chinese literature and culture saw the great achievements of canonical modern writers, such as Lu Xun, Shen Congwen, and Ding Ling. After the founding of the People's Republic of China in 1949, a singular revolutionary

culture ensued, in which literature and the arts were put in the service of political consciousness-molding and Cultural Revolution. During this time, an alternative Chinese literary culture developed in Taiwan, resulting in work that featured various strains of modernism and its resistance. All readings are in English.

**L04 Chinese 4011 Popular Culture and Consumption in Modern China**

This writing-intensive seminar explores transformations in popular culture and everyday life in Chinese society since 1949 through an analytical focus on political economy and material culture. Drawing upon ethnographic texts, films and material artifacts, we investigate how the forces of state control and global capitalism converge to shape consumer desires and everyday habits in contemporary China. Case studies include eating habits, fashion standards, housing trends, entertainment, sports and counterfeit goods. Prerequisite: previous course in China studies (anthropology, economics, history, literature, philosophy or political science) required. Enrollment by instructor approval only.

**L04 Chinese 414 Readings in Classical Chinese Philosophy**

In this course we study Chinese philosophical texts from the classical period (ca. sixth through third centuries BCE). We

read selections from the Analects, the Mengzi, the Xunzi, the Zhuangzi, the Daodejing, and the Hanfeizi, in addition to commentaries on these primary texts. The readings are in classical Chinese with occasional supplemental readings in English and modern Chinese. The aim of the course is to familiarize students with the language and grammar of Chinese philosophical texts, introduce students to the tradition of scholarly commentary, and explore a set of influential Chinese texts in the original language. Prerequisite: Chinese 411 or instructor's permission.

Credit 3 units. A&S: TH, CD EN: H

---

**L04 Chinese 418 Gender and Sexuality in East Asian Religions**

In this course we explore the role of women in the indigenous religious traditions of China, Japan and Korea (Confucianism, Daoism, Shamanism and Shinto), as well as Buddhism, Christianity and Islam. We begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses; shamans and mediums; hermits and recluses; and ordinary laywomen — both historically and in more recent times. Class materials include: literary and religious texts; historical and ethnological studies; biographies and memoirs; and occasional videos and films. Prerequisites: This class is conducted as a seminar, with minimal lectures; substantial reading and writing; and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, need to obtain the instructor's permission before enrolling. **L04 Chinese 419 Of Zombies, Ghosts, and Ancestors: Interactions of the Living and the Dead in Chinese Religions**

This course introduces a basic aspect of the multifaceted history of Chinese religions, culture and civilization by centering on the practice of taking care of the dead. In particular, we will observe how various religious texts, short stories, and plays from China's earliest times until the 16th century depicted the interactions of the living and the dead. Despite the distinct genres, time periods and topics, one important aspect will regularly appear: Apparently people perceived the boundaries between the living and the dead to be quite porous in premodern China. In other words, the dead seemed to have played as much of a role in society and everyday life as living family members, friends and government officials.

---

**L04 Chinese 4242 Culture and Politics in the People's Republic of China: New Approaches**

This course inquires into the political, ideological and social frameworks that shaped the cultural production and consumption in the People's Republic of China (PRC). In the realm of literature, film, architecture, and material culture and everyday life, this course pays a close attention to the contestation and negotiation between policy makers, cultural producers, censors and consumers. Understanding the specific contour of how this process unfolded in China allows us to trace the interplay between culture and politics in the formative years of

revolutionary China (1949-1966), high socialism (1966-1978), the reform era (1978-1992), and post-socialist China (1992 to present). The course examines new scholarship in fields of social and cultural history, literary studies, and gender studies; and it explores the ways in which new empirical sources, theoretical frameworks, and research methods reinvestigate and challenge conventional knowledge of the PRC that have been shaped by the rise and fall of Cold War politics, the development of area studies in the U.S., and the evolving U.S.-China relations. Prerequisites: Advanced undergraduate students must have taken no fewer than two China-related courses at the 300 level or higher. Graduate students should be proficient in scholarly Chinese, as they are expected to read scholarly publications and primary materials in Chinese. Same as L03 East Asia 4242

**L04 Chinese 4290 Madness in Modern Chinese Literature and Visual Culture**

Madness is an important theme in literature and visual culture. Since Lu Xun's "The Diary of a Madman," modern Chinese writers and artists in the 20th century have created a diversity of mad characters, narratives, and worlds in their works. Madness in these works might be a means of social critique, a negotiation with the traumatic past, an experiment in the styles of storytelling, or some other alternatives that disrupt the normal orders. Through a close reading of selected cultural texts from China and transnational Chinese communities, this course surveys the representations of madness in modern Chinese literature, cinema and visual arts. All lectures, discussions and assignments will be in English. Prerequisite: permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD EN: H

**L04 Chinese 4489 The Three Emperors: Redefining Chinese Art in the Golden Age**

Ruling imperial China during its last Golden Age, the Qing emperors Kangxi, Yongzheng and Qianlong patronized the arts during an unprecedented period of prosperity and international exchange. Many of the works they commissioned are now icons of Chinese culture, but in their time these three Manchus redefined Chinese art with ideas and styles from Baroque Europe, Tibet, Mongolia, and even Islamic Central Asia. This seminar focuses on the ethnically and culturally diverse art, architecture, and material culture patronized by these three emperors to examine how they and their multi-ethnic empire changed the definition of Chinese art during the long 18th century. Prerequisites: Intro to Asian Art (L01 111); or one

300-level course in Asian Art History, History or Literature; or permission of instructor.

**L04 Chinese 4510 Urban Culture in Modern China**

The narrative of rural crisis and peasant revolution has dominated China's modern history for decades. But there has been a growing interest in China's urban past and present with the increased prominence of cities in China's breathtaking economic development and the opening of municipal archives in post-Mao era. The course aims to introduce students to "conventional wisdoms," new directions, and major debates in the urban history field. Topics include: the urban political economy, the cultural dynamics of modernity, the reconstruction of traditions in the making of modernity, the cultural production and consumption, colonialism and imperialism in the urban setting, nationalism, and reform and revolution. Acknowledging and understanding the nuance and difference in views and interpretations in historical writings (historiography) are essential. The course seeks to develop students' research and analytical skills, such as locating secondary sources, incorporating scholarly interpretations, and developing and sustaining a thesis based on secondary and primary sources in student research. Prerequisites: This is an interdisciplinary seminar designed for advanced undergraduates and graduate students. Advanced undergraduate students must have taken at least one China-related course at the 300-level or higher.

A topics course on Chinese literature and history; topics vary by semester. Prerequisite: permission of the department.

Credit variable, maximum 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM EN: H

---

**L04 Chinese 498 Guided Readings in Chinese**

Prerequisites: graduate standing and permission of the instructor and the graduate adviser. Course normally taken after successful completion of Chinese 428. May be repeated once for credit.

Credit variable, maximum 3 units. A&S: LA

---

## Classics

Classics is the study of all aspects of the rich cultures handed down by the ancient Greeks and Romans: their language, history, literature, thought and material culture, as well as their important influence on later societies, including our own. The Department of Classics offers two options for students interested in studying Greek and Roman antiquity: the classics major and the ancient studies major. The major in classics focuses on study of the Latin and/or ancient Greek languages. The major in ancient studies is for students who want to explore the whole spectrum of the classical world with little or no work in the ancient languages. Resources on campus supporting the study of classics include a substantial library collection of materials related to the ancient world, collections of Greek papyri and art, and the Wulfling Coin Collection, one of the largest collections of ancient coins owned by an American university.

**Contact:** Cathy Marler  
**Phone:** 314-935-5123  
**Email:** [classics@wustl.edu](mailto:classics@wustl.edu)  
**Website:** <http://classics.artsci.wustl.edu>

## Faculty

### Endowed Professor

**Timothy Moore** (<https://classics.artsci.wustl.edu/moore>)

John and Penelope Biggs Distinguished Professor of Classics; Department Chair

PhD, University of North Carolina

Professor Moore's work concentrates on several areas of classical antiquity, including the comic theatre of Greece and Rome, Greek and Roman music, and Roman historiography. Current projects include a book on music in ancient theater, articles on the history and performance of Roman comedy, and work on Greek tragedy in the modern world. He also has interests in the history of theatre, especially American musical theatre and Japanese Kyogen comedy.

## Professor and Chair

**Catherine Keane** (<https://classics.artsci.wustl.edu/keane>)

Director of Graduate Studies

PhD, University of Pennsylvania

Professor Keane's interests range broadly over Greek and Roman literature and culture, but her research centers on the comic genres and their engagement with moral, social, and literary problems, particularly the Roman verse satirists Lucilius, Horace, Persius, and Juvenal and the epigrammatist Martial.

## Associate Professors

**William Bubelis** (<https://classics.artsci.wustl.edu/bubelis>)

Director of Undergraduate Studies; Curator of the Wulfing Coin Collection

PhD, University of Chicago

Professor Bubelis' research in Greek history focuses on the intersection of economy, religion, and public institutions. His work utilizes the evidence of inscriptions (epigraphy), coins (numismatics), and other material remains alongside the literary texts of ancient historians, poets, orators, and the like. While most of his scholarship has engaged with classical Athens, Bubelis avidly explores the societies of the eastern Mediterranean across antiquity, including Iron Age Cyprus and the Achaemenid Persian Empire to Hellenistic Egypt. He is currently working on several projects, including a multi-year project investigating and mapping how various Greek coinages circulated in the northern Aegean.

**Zoe Stamatopoulou** (<http://classics.artsci.wustl.edu/zoe-stamatopoulou>)

PhD, University of Virginia

Professor Stamatopoulou's research and teaching encompass several aspects of ancient Greek literature and culture, but her work focuses primarily on archaic and classical poetry (Homer, Hesiod, lyric poetry, drama). She is also interested in the symposium, in ancient biographies of poets, and in the reception of archaic Greece in Imperial Greek literature (esp. Plutarch).

## Assistant Professors

**Karen Acton** (<https://classics.artsci.wustl.edu/karen-acton>)

PhD, University of Michigan

Professor Acton's research focuses on the history of Rome, especially in the late Republic and early Empire, Roman historiography, and Roman numismatics.

**Thomas Keeline** (<https://classics.artsci.wustl.edu/tom-keeline>)

PhD, Harvard University

Professor Keeline works primarily on Latin literature, the history of classical scholarship and education from antiquity to the present, rhetoric, textual criticism, lexicography and metrics.

**Luis Alejandro Salas** (<https://classics.artsci.wustl.edu/luis-salas>)

PhD, University of Texas

Professor Salas specializes in Greek and Roman medicine, philosophy, and intellectual history. He is also interested in Aristotelian psychology. His research focuses on medical and philosophical sectarianism, especially in the work of Galen of Pergamum.

## Lecturers

**Kristin Mann** (<http://classics.artsci.wustl.edu/kristin-mann>)

PhD, University of California, Los Angeles

Professor Mann's main research interests are the Greek and Latin fable collections, the literature and culture of the early Roman Empire, and the ancient Greek novel. Her dissertation, *The Fabulist in the Fable Book*, examines how the presence of the fabulist in the fable book — his biography, his self-characterizations, and his statements of purpose — combine to form a hermeneutic frame through which the fables may be interpreted.

**Kathryn Wilson** (<http://classics.artsci.wustl.edu/kathryn-wilson>)

PhD, University of Pennsylvania

Professor Wilson's research interests focus on the intersection of poetry and science. She is especially interested in Hellenistic literature, and the relationship between different intellectual enterprises occurring during that time. She is also interested in the evolution of the genre of didactic poetry.

## Professors Emeriti

**Carl W. Conrad** (<http://classics.artsci.wustl.edu/conrad>)

PhD, Harvard University

**Robert D. Lambertson** (<http://classics.artsci.wustl.edu/lamberton>)

PhD, Yale University

**George M. Pepe** (<http://classics.artsci.wustl.edu/pepe>)

PhD, Princeton University

**Susan I. Rotroff** (<http://classics.artsci.wustl.edu/rotroff>)

Jarvis Thurston & Mona Van Duyn Professor Emerita  
PhD, Princeton University

## Majors

### The Major in Classics

**Total units required:** 24

**Required courses:**

A minimum of 24 credits, with at least 18 credits in advanced courses. The specific program will be determined by the student and the adviser, according to the student's interests. Courses may be chosen from among Greek, Latin and Classics offerings, but all majors **must** include in their programs a minimum of 12 advanced credits in Greek or Latin, **at least 6 of them at the 400 level**. Those who are able to enter the program at the

advanced level because of previous language study will normally take 15 or more advanced credits in language. Competence in both ancient languages, though strongly encouraged and necessary for those planning to go on to graduate study in classics, is not required. Majors, especially those planning graduate work, should enter the Honors Program if time permits.

Please consult the sections below regarding the required capstone experience and additional information.

## The Major in Ancient Studies

**Total units required:** 24

### Required courses:

24 units drawn from courses in the Department of Classics and those in related departments. Of these, 18 units must be at the advanced level, including 6 units at the 400 level. Greek 102D and Latin 102D and above may be substituted for a 200-level course in translation. In this major, students are encouraged to develop a certain depth in one special field of interest (e.g., literature, art, history or philosophy). Therefore, at least 9 of the 18 advanced units of the major should be taken in one such specific area.

Please consult the sections below regarding the required capstone experience and additional information.

### Required Capstone Experience

All classics and ancient studies majors are required to have a capstone experience of some kind: an experience in which they can pull together everything that they have learned in their Classics courses. Except in unusual cases, the capstone experience should occur during the students' senior year. Among the most common capstone experiences are the following:

- A senior honors thesis (two semesters of research and writing concluding in a long paper).
- A one-semester research project.
- A Classics study abroad experience.
- Special work within a 400-level seminar.

Students should consult with their adviser to see what kind of capstone experience will work best for them.

### Additional Information

Certain courses in related departments may be used in partial fulfillment of the requirements for a major in classics or ancient studies, including:

| Code         | Title                     | Units |
|--------------|---------------------------|-------|
| Art-Arch 331 | Greek Art and Archaeology | 3     |
| Art-Arch 334 | Roman Art and Archaeology | 3     |
| Phil 451     | Plato                     | 3     |
| Phil 452     | Aristotle                 | 3     |

**Study Abroad:** Study abroad for a semester in Rome or Athens is an option many classics majors select. Washington University is a member of the Intercollegiate Center for Classical Studies (ICCS) consortium, and many majors attend the one-semester ICCS program in Rome. Students interested in studying at the Intercollegiate Center in Rome should consult Professor Tim Moore (<http://classics.artsci.wustl.edu/moore>). Many classics students also study for one semester through the College Year in Athens (CYA) program. Students interested in this program should consult Professor William Bubelis (<http://classics.artsci.wustl.edu/bubelis>).

**Senior Honors:** Students who are planning to pursue graduate work should enter the honors program. To apply, a student must have junior standing, an average of A- or better in courses numbered 300 or above in Greek and/or Latin (for classics majors) or in Classics (for ancient studies majors), an overall GPA of 3.65 or above, and permission of the chair. A formal application should be submitted in May of the junior year. A thesis of substantial nature and length is prepared and written under the direction of a member of the department, beginning in the fall semester of the senior year. A final draft is submitted to the director no later than February 1, a final copy to the full thesis committee before March break. Credit of 6 units is awarded upon presentation of an acceptable thesis. These will be in addition to the 24 credits of the major; those who complete senior honors will therefore graduate with a total of 30 credits in the major.

## Minors

### The Minor in Classics

**Units required:** 15

#### Required courses:

| Code                       | Title  | Units |
|----------------------------|--|-------|
| Greek 317C<br>& Greek 318C | Introduction to Greek Literature<br>and Introduction to Greek Literature                     | 6     |
| or                         |  |       |
| Latin 3171<br>& Latin 3181 | Survey of Latin Literature: The<br>Republic<br>and Survey of Latin Literature: The<br>Empire | 6     |

#### Elective courses:

Three other adviser-approved courses (9 units) in Greek, Latin or Classics. These must include at least one Greek or Latin course at the 300 or 400 level. No more than one course may be at the 200 level, and Classics 225D may not be counted.

### The Minor in Ancient Studies

**Units required:** 15

#### Required courses:

At least two of the following:

| Code          | Title                                | Units |
|---------------|--------------------------------------|-------|
| Classics 341C | Ancient History: The Roman Republic  | 3     |
| Classics 342C | Ancient History: The Roman Empire    | 3     |
| Classics 345C | Greek History: The Dawn of Democracy | 3     |
| Classics 346C | Greek History: The Age of Alexander  | 3     |

#### Elective courses:

Students need three other courses in the culture of Greece and Rome, the selection to be mutually agreeable to the department adviser and to the student. No more than two courses may be at the 200 level. Classics 225D may not be counted.

---

#### L08 Classics 1135 Freshman Seminar: The World of Cleopatra

Cleopatra, the last queen of ancient Egypt, captivated her contemporaries and has fascinated the Western world ever since her famous suicide by asp in 31 BCE. She was a woman of contrasts: Pharaoh of Egypt and Greco-Macedonian queen; seductive woman and shrewd political strategist; a ruthless monarch using every means available to consolidate her position in the face of the encroaching power of the Roman Empire. Through texts and material culture, the seminar seeks to understand Cleopatra in the context both of her native Egypt and of the wider Mediterranean world. We thus examine the traditions of Pharaonic Egypt; the historical events that brought Egypt under the control of the Macedonian Ptolemies (Cleopatra's dynasty); the wider stage of East-West tension and conquest in which Cleopatra struggled to maintain her power; her relationships (political and personal) with famous men of her day (Caesar, Herod, Mark Antony); her capital city of Alexandria, the largest metropolis of its day; Cleopatra's brilliant court and its luxury arts; and finally the many Cleopatras that have populated art and literature of later times. We emerge with a sense of Cleopatra, both as a unique individual and as a product of her time.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

---

#### L08 Classics 1137 Freshman Seminar: Wining and Dining in the Classical World

The focus of this course is food culture in Greek and Roman societies from the Archaic to the late Roman period. However, foodways from adjacent contemporary cultures also are briefly examined. Sources include textual evidence, as well as ethnographic studies of ancient people, iconographic and archaeological evidence, specifically osteological and botanical remains from archaeological sites. Experimental studies are conducted in class to augment the learning experience of students.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

---

#### L08 Classics 114 Freshman Seminar: Eros through the Ages: Love and Lust in the Greco-Roman World

From a cosmic god of love to a complex emotion, eros is a seminal concept shaping a range of mythological, literary and artistic works of antiquity. Sappho described eros as "sweet-bitter," neatly capturing its paradoxical position at the intersection of pleasure and pain, love and hate. In this seminar, we unpack the varied ways eros played out across poetry, philosophy, politics and art in the ancient Greek and Roman world and how these ancient definitions of love still inform our own modern understanding of the term.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

---

#### L08 Classics 116 Freshman Seminar: Magicians and Witches in Greco-Roman Literature

This course examines the representation of "magicians" and "witches" in ancient Greek and Roman literature. The starting point is Apuleius' *Metamorphoses* (or *The Golden Ass* as St. Augustine dubbed it), written in the second century CE. This work of narrative prose collects several tales of witches, magical transformations and religious revelation. From there, we examine other tales of magicians and witches, paying particular attention to the role of gender in these representations and the conflict between magic and religion. The goal is to understand how these representations function within their particular society, what anxieties they reveal, and how they relate to the archaeological evidence we have for these practices.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

---

#### L08 Classics 1165 Freshman Seminar: Pompeii: Uncovering the Past

This course examines the Roman city of Pompeii from archaeological, art historical and literary perspectives. Topics include the city's public spaces and religious sanctuaries, its grand mansions and common houses, its political systems and leisure activities. Class discussions probe the problems inherent in the interpretation of a city captured in a moment of crisis, and how ancient literary tropes have affected our understanding of the archaeological remains. Students also investigate modern interpretations of the site in the form of novels, exhibitions and documentaries. Freshmen and sophomores only. No prerequisites.

Same as L01 Art-Arch 116

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

#### L08 Classics 137 Freshman Seminar: The Emperor Nero: Prince, Monster, Artist

The destructive, scandal-ridden career of the Roman emperor Nero (mid-first century CE) almost defies belief. From his assumption of power as a teenager to his suicide after a military revolt, Nero flouted political and cultural conventions left and right. His inspiring debut notwithstanding, he killed off his family and mentor, held wild parties, poured money into extravagant projects, and neglected state business to pursue a career on stage. He came to be labeled one of the "Bad Emperors," and seen as a symbol of the decline of Rome itself — especially by sympathizers of the Christians he persecuted. Yet Nero as an emperor and a literary character was also a creation of his time. The figure of Nero is examined in his context. The central text is the *Life of Nero* by Suetonius (second century CE), a dense and colorful text read first in its entirety and then more carefully

in pieces. Supplementary readings are from the abundant other sources on and interpretations of Nero, both ancient and modern. Discussions and writing assignments are varied and designed to develop analytical and writing skills.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM EN: H

---

**L08 Classics 176 Freshman Seminar: Aesop and His Fables: Comedy and Social Criticism**

*Aesop's Fables*, a collection of stories featuring talking animals, is still popular today, and it has its roots in ancient Greece. Many stories about Aesop were circulated in Greco-Roman antiquity, stories that could be complex, politically charged, and sometimes quite crude. In this course, we will read *The Life of Aesop*, a popular ancient novel about the fabulist's life and exploits. We will also consider how Aesop and his fables are treated in the larger tradition: in other fable collections, in comedy and philosophy, and in the visual tradition. As we will see, Aesop is a highly mutable figure: sometimes comic, sometimes serious, often critical of power imbalances and injustices, and always ready to mask what he really means behind a clever animal fable.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

---

**L08 Classics 180 Freshman Seminar: Sexuality in Early Christianity**

This course is for freshmen only. The topic varies from semester to semester. Recent topics include Sexuality in Early Christianity; Miracles; and The Self in Chinese Thought.

Same as L23 Re St 180

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH EN: H

---

**L08 Classics 2011 Classical to Renaissance Literature: Text and Tradition**

Students enrolled in this course engage in close and sustained reading of a set of texts that are indispensable for an understanding of the European literary tradition, texts that continue to offer invaluable insights into humanity and the world around us. Homer's *Iliad* is the foundation of our class. We then go on to trace ways in which later poets and dramatists engage the work of predecessors who inspire and challenge them.

Readings move from translations of Greek, Latin and Italian, to poetry and drama composed in English. In addition to Homer, we will read works of Sappho, a Greek tragedian, Plato, Vergil, Ovid, Petrarch, and Shakespeare.

Same as L93 IPH 201C

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: HUM

---

**L08 Classics 225D Latin and Greek in Current English**

An astonishingly large number of English words, especially in areas such as medicine, science and law, are derived from Latin and Greek. This course will provide a study of the impact of Latin and Greek on the English language through study of the Latin and Greek roots, prefixes and suffixes that are most commonly found in English technical and nontechnical vocabulary and the linguistic principles through which these elements have entered the English language.

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

**L08 Classics 228 Theater Culture Studies I: Antiquity to Medieval**

Required of the drama major. An examination of ancient, medieval, and Renaissance theater and performance. Close reading of dramatic texts written by such authors as Aeschylus, Sophocles, Euripides, Aristophanes, Plautus, Marlowe, Shakespeare, and Jonson, with attention also given to the collaborative theaters of the medieval period (the Corpus Christi play) and the Italian Renaissance. In tandem with the close study of dramatic literature, we study theater history (playing spaces, costumes, actors, etc.) and performance (ritual, performances of everyday life, etc.) from antiquity to the Renaissance.

Same as L15 Drama 228C

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

---

**L08 Classics 235C The Greek Imagination**

An introduction to Greek culture with emphasis on Archaic and Classical ideas about man, the gods and the cosmos. Considerable attention also is given to the Athenian democracy, its institutions, festivals and arts. The course is designed to offer a broad and interdisciplinary view of the most memorable Greek achievements in literature, the visual arts, and social thought and practice.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

---

**L08 Classics 236C The Roman World**

An introduction to the society and culture of the ancient Roman Republic and Empire. The "Roman World" began as a small settlement by the Tiber River and became a huge and diverse empire extending into three continents, with a cultural legacy that has lasted to this day. The course will cover key events over a millennium of Roman political history, but much of our time will be given to study and analysis of Roman concepts of national identity, moral and political thought, social hierarchies and dynamics, family, religion and entertainment. To this end, we will examine a diverse combination of primary sources — literary, documentary and material.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM

---

**L08 Classics 240 Not Members of This Club: Women and Slaves in the Greco-Roman World**

Both the Athenian Democracy and the Roman Senatorial Oligarchy were societies in which political power was the exclusive property of free, citizen males. With very few exceptions, the astounding accomplishments of those societies were also the creations of free, citizen males. This course examines the lives of two disparate but comparable groups of outsiders within Greek and Roman society. The status, rights and accomplishments of Athenian and Roman women are explored and placed in the context of other premodern societies. Likewise, the institution of slavery in Greece and Rome is explored and compared with other slave-holding societies, ancient and modern.

Credit 3 units. A&S: SS, CD, SD A&S IQ: LCD, SSC, SD Art: SSC BU: BA EN: S

---

**L08 Classics 251 Projecting the Past: Ancient Greece and Rome in Modern Film**

Since the earliest days of film, screenwriters and directors have mined the rich history of Ancient Greece and Rome to captivate

audiences with tales of heroes and slaves, soldiers and lovers. This course will examine such cinematic representations across a variety of American and European films from the 20th and 21st century. Drawing upon translated selections from ancient Greek and Roman authors, secondary readings and weekly screenings, students will reflect upon the ways in which film adaptations of antiquity both tell us much about Ancient Greece and Rome and reveal as much about our present as they do the past.  
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM

---

### L08 Classics 300 Independent Study

Credit variable, maximum 3 units.

---

### L08 Classics 3003 Writing Intensive in Ancient Studies

Study of selected topics in Classics. This is a Writing Intensive course.

Credit 3 units. A&S: TH, WI A&S IQ: HUM, LCD, WI EN: H

---

### L08 Classics 301C Greek Mythology

The myths of ancient Greece are not only inherently interesting, but they are an incomparable starting point for the study of the ancient world, and they have offered numerous images and paradigms to poets, artists and theorists. This course provides an introduction to the major Greek myths, their role in literature and art, their historical and social background, and ancient and modern approaches to their interpretation. Student work will include discussing course material in sections and online, taking two exams covering both the myths themselves and the ancient authors who represent our richest sources, and writing several essays interpreting or comparing ancient literary treatments.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

---

### L08 Classics 3152 Sex and Gender in Greco-Roman Antiquity

Ideas about sex and gender have not remained stable over time. The ancient Greeks and Romans had their own ideas — ideas that strike us today as both deeply alien and strikingly familiar. This course will consider questions such as: What constituted "normal" sex for the Greeks and for the Romans? What sex acts did they consider to be problematic or illicit, and why? What traits did the Greeks and Romans associate with masculinity? With femininity? How did society treat those who did not quite fit into those categories? How did peoples of the ancient world respond to same-sex and other-sex relationships, and was there an ancient concept of "sexuality"? How did issues of class, ethnicity and age interact with and shape these concepts? How does an understanding of these issues change the way we think about sex and gender today? We will read an array of ancient texts in translation, consider various theoretical viewpoints, and move toward an understanding of what sex and gender meant in the ancient world.

Credit 3 units. A&S IQ: HUM, LCD, SD BU: BA EN: H

---

### L08 Classics 3231 Jews and Christians in the Premodern World

In modern times, it is common to think of Judaism and Christianity as two distinct, if historically connected, "religions." Increasingly, however, historians of ancient religions have thought more deeply about the implications of taking Christianity and Judaism in antiquity as more fluid and porous than we tend to think of them. In this upper-division course, we will explore the ways in which the boundaries that early Christians

attempted to draw between Christianity and Judaism remained unstable and incomplete. While the various efforts to establish early Christian identity led to the production of a variety of hermeneutical representations of the Jewish people, these literary representations nevertheless often reflected, to various degrees, engagement with actual historical Jews/Judeans, who shared political, economic, and intellectual worlds with Christians. We will consider how early Christian discourse about Jews and Judaism informed and was informed by intra-Christian disputes and their negotiations of their relationships with the wider Greco-Roman culture. We will explore how Christian efforts to establish both continuity and difference between Judaism played a role in the construction of "orthodoxy" and "heresy," as well as the way in which Christians re-appropriated Jewish texts, rituals and ideas in their efforts to construct a Christian identity. We will also explore how this continued dynamic of difference and continuity continued into the Middle Ages.

Same as L23 Re St 323

Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H

---

### L08 Classics 3330 Greek and Roman Painting

This course provides a survey of the major achievements of ancient Greek and Roman painting, broadly understood and encompassing wall painting, panel painting, painted pottery and mosaic. We study monuments ranging over a millennium in time and located throughout the ancient Mediterranean. Particular attention is paid to the social, political and religious aspects of ancient Greco-Roman painting, and to questions of innovation in artistic practice. Special emphasis is placed on students' cultivation of the tools of art-historical analysis, and of the presentation of that analysis in written form. Readings appear in the course textbook or are supplied as PDFs; extracts of primary sources occasionally are distributed as photocopies in class.

Prerequisites: Intro to Western Art (L01 Art-Arch 113) or Intro to Modern Art (L01 Art-Arch 215) or permission of instructor.

Same as L01 Art-Arch 3330

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH EN: H

---

### L08 Classics 334 Roman Art and Archaeology

The art and archaeology of the Romans, with emphasis on the late Republic and the Imperial period. Major monuments of sculpture and architecture, as well as town planning, domestic architecture, and the minor arts are used as evidence for reconstructing ancient life.

Same as L01 Art-Arch 334

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH BU: HUM

---

### L08 Classics 341C Ancient History: The Roman Republic

Rome from its legendary foundation until the assassination of Julius Caesar. Topics include: the establishment, development and collapse of Rome's Republican government; imperial expansion; Roman culture in a Mediterranean context; and the dramatic political and military events associated with figures like the Carthaginian general Hannibal, the Thracian rebel Spartacus, and the Roman statesman Cicero.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: HUM

---

### L08 Classics 342C Ancient History: The Roman Empire

An introduction to the political, military, and social history of Rome from the first emperor Augustus to the time of Constantine. Topics include: Rome's place as the center of a vast and diverse empire; religious movements, such as Jewish revolts and the rise of Christianity; and the stability of the state

in the face of economic crises, military coups, and scandals and intrigues among Rome's imperial elite.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM, SSC BU: HUM, IS EN: H

---

**L08 Classics 345C Greek History: The Dawn of Democracy**

From the so-called Dark Ages to the death of Socrates, a survey of the political, social, economic and military development of early Greece, with emphasis upon citizenship and political structure, religion and culture, and the complex relationships between Greeks and neighboring peoples.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

---

**L08 Classics 346C Greek History: The Age of Alexander**

From the death of Socrates until the foundation of the Roman Empire, Greece and the Ancient Near East underwent profound changes that still resonate today. This course surveys the political, social, economic and military developments of this period, especially Alexander the Great's legacy.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

---

**L08 Classics 347C Ancient Philosophy**

An examination of the high-water marks of philosophy in ancient Greece and Rome, focusing primarily on Plato and Aristotle. A wide range of philosophical problems are discussed, including the nature of the good life, the justification of knowledge, and the ultimate nature of mind and world. Attention is paid to how these problems unfolded in their historical context and to how the ancient treatments of them compare to contemporary efforts. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor.

Same as L30 Phil 347C

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: ETH

---

**L08 Classics 350 Greek Art and Archaeology**

A survey of the artistic achievements and material culture of the Greeks in the first millennium BCE (Iron Age through the Hellenistic period). Development of architecture, sculpture and painting, as well as minor arts and utilitarian objects, with emphasis on the insights they offer into Greek society and interactions with the wider Mediterranean world.

Same as L01 Art-Arch 331

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH, GFAH BU: HUM EN: H

---

**L08 Classics 3563 Ancient Sport and Spectacle**

Ancient sport and spectacle seem both familiar and foreign to us today. We share the Greek obsession with athletic success, and we have revived their Olympic games — and yet the Greeks competed nude and covered in oil and included in their celebration a sacrifice of 100 oxen to Zeus. So too do we recognize the familiar form of the Roman arena, but recoil from the bloody spectacles that it housed. In this class we will examine the world of ancient Greco-Roman sport and spectacle, seeking to better understand both ancient culture and our own. We will consider Greek athletic competition, Roman gladiatorial combat, chariot racing, and other public performances. We will set these competitions in their social and historical context, considering both their evolution and their remarkable staying power.

**L08 Classics 3582 Ancient Rome in Film and Fiction**

Examines a group of novels starting with *The Last Days of Pompeii* (1834) and a group of films beginning with *The Sign of the Cross* (1936) to see how writers and filmmakers have conjured up an image of Roman excess and exoticism in line with their own artistic and cultural viewpoints. We read both popular successes such as *Ben-Hur* and "high art" such as *Marius the Epicurean* and see such commercial successes as *The Robe* and art house films such as Fellini's *Satyricon*.

**L08 Classics 3801 Ancient Greek and Roman Medicine**

This course introduces the student to the practice and theory of medicine in the ancient Mediterranean, beginning in Egypt and continuing through Greece and Rome. In the end, we will find ourselves in the Middle Ages. Our focus will be on Greco-Roman medicine: how disease was understood; how disease was treated surgically, pharmacologically, and through diet; the intellectual origins of Greek medicine; the related close relationship between Greco-Roman medicine and philosophy; and the social status of medical practitioners. We will also discuss how medicine was written and in what terms its practitioners conceived it.

**L08 Classics 3831 Magicians, Healers and Holy Men**

Magic is perhaps not one of the first words one associates with Greco-Roman antiquity. Yet for most individuals living in the ancient Mediterranean, including philosophers, businessmen and politicians, magic was a part of everyday life. Casting spells, fashioning voodoo dolls, wearing amulets, ingesting potions, and reading the stars are just some of the activities performed by individuals at every level of society. This course examines Greco-Roman, early Christian and Judaic "magical" practices. Students read spell-books which teach how to read the stars, make people fall in love, bring harm to enemies, lock up success in business, and win fame and the respect of peers. Students also look at what is said, both in antiquity and in contemporary scholarship, about magic and the people who practiced it, which helps illuminate the fascinating relationship between magic, medicine and religion.

HUM EN: H

---

**L08 Classics 386 Old Jokes: Laughter in the Greco-Roman World**

An exploration of the theory and practice of comedy in the Greco-Roman world. Readings include examples of iambic (mocking) poetry, comic theater, satiric verse and prose fiction, as well as philosophical discussions of the relationship of humor and laughter to human behavior and values. As comedy in all contexts engages and shapes cultural values just as much as "serious" literature does, its history and reception raise major social and aesthetic issues. Critical topics include: how ancient thinkers imagined comedy's historical "birth," how public comic performances may have encouraged either social cohesion or disruption, how communities defined "beneficial" and "offensive" humor, and how ancient elite writers and readers felt about the often lowbrow and obscene content of "classic" comic literature. Combination of lectures and discussions.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

---

**L08 Classics 389C The Ancient Novel**

Many modern readers are familiar with the mythological and dramatic literature of Greco-Roman antiquity, but fewer are aware that the same cultures developed a tradition of prose fiction concerned with romance, human psychology and sexuality, exotic travel and adventure, and religious experience. The European tradition of extended fictional narrative begins with the Greeks, and their novels, along with Apuleius' *Golden Ass* and Petronius' *Satyricon*, had a formative influence on later narrative traditions. Students read and analyze all the surviving examples of the Greco-Roman novel, including some fragmentary works, with the goal of throwing light on the history and conventions of the genre, its appeal and its influence.

**L08 Classics 426 Ancient Athens**

Athens was one of the great cities of antiquity. From lavishly decorated marble temples on the Acropolis, to public office buildings and inscriptions in the Agora (civic center), to the houses of the living and the monuments for the dead, the city has left a rich record of her material culture. These buildings and objects, together with an exceptionally large number of literary and historical texts, make it possible to paint a vivid picture of the ancient city. The course concentrates on the physical setting and monuments of Athens, as revealed by both archaeology and texts, and how they functioned within the context of Athenian civic and religious life. Prerequisite: Classics 345C, Classics 350 or permission of instructor.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: HUM

---

**L08 Classics 428 The Invention of the Image: From Classical Art History to Modern Visual Studies**

The scholarly field of Image or Visual Studies has developed in response to the widespread proliferation of images, both still and moving, in contemporary life. It distinguishes itself from traditional art history by examining visual representations of all types, not only works of high art, and by concentrating on the role those representations play in the formation of culture. Though most of the scholarship produced in this field focuses on the modern world, it depends upon ideas first developed in Mediterranean antiquity. This course has two primary goals. We conduct an historical examination of practices and theories of image making from Near Eastern antiquity to modernity. In so doing, we also carry out an historiographical survey of the major works in Image/Visual Studies, thereby gaining an appreciation for the wide range of methods of inquiry employed in this important field of research. Prerequisites: Intro to Western Art (L01 Art-Arch 113) or Intro to Modern Art (L01 Art-Arch 215); one 300-level course in Art History preferred; or permission of instructor.

---

**L08 Classics 429 Art and Death in Ancient Rome**

Perhaps more than any other phenomenon, death spurred the creation of art in the ancient Roman world. The practice of materially commemorating the deceased, of perpetuating the memory of the dead through the creation of funerary monuments designed to appeal to both intimate familial relations and the

public at large, stretched across Roman social boundaries and endured for many centuries. But death also frequently provided the subject matter of art even outside the confines of the funerary realm. The goal of this course will be to explore the complex relationship between art and death in the Roman world. It will range from early Rome to the end of the empire and the changes brought about by widespread conversion to Christianity. In conjunction with historical readings, the course will also engage with theoretical texts in the anthropology and philosophy of death. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215); one 300-level course in Art History preferred; or permission of instructor.

---

#### L08 Classics 4350 Hellenistic Philosophy

The Hellenistic Age, traditionally dated from the death of Alexander and his (Macedonian) Empire at 323 BCE to the birth of Augustus' (Roman) Empire in 31 BCE, gave the West three of its most innovative and influential schools of philosophy: Epicureanism, Skepticism, and Stoicism. This course investigates the central features of their thought. Special attention is paid to the still-relevant debates between the Stoics and Skeptics about the possibility of knowledge, to the disagreements among all three schools about the issues of freedom, responsibility, and determinism, and to their ethical theories. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Same as L30 Phil 4530

---

#### L08 Classics 4375 Ancient Greek Sculpture in Context

Sculpture counts among one of the greatest artistic achievements of ancient Greece, and one that has had the greatest impact on the art of later periods. This course focuses on original works of art of the Archaic and Classical periods (600–300 BCE), placing emphasis on how study of their contexts — the places in which they were produced, displayed and found — contributes to our understanding of their place in the ancient world. Background material, which is covered at the beginning of the semester, includes the origins of monumental Greek sculpture at the beginning of the Archaic period (late 7th to early 6th century BCE), and the stylistic development of the Archaic and Classical periods. We then proceed to discussion of various types of sculpture (architectural, cult statue, votive, commemorative, funerary) and how these works functioned within the context of the Panhellenic sanctuary, the city

sanctuary, the secular center of the city, and the necropolis. In a different view of context, we also consider sculpture recovered from ancient shipwrecks, looted art on its way to the ancient Roman art market. Prerequisite: Art-Arch 331 or permission of the instructor.

Same as L01 Art-Arch 4375

Credit 3 units. A&S: TH A&S IQ: HUM Art: AH EN: H

---

#### L08 Classics 4376 Pictorial Illusion in the Ancient Mediterranean

Among the many accomplishments in the history of Greco-Roman art, ancient writers especially valued the development of pictorial illusion. Pictorial illusion refers to the techniques of reproducing or approximating aspects of the visual perception of the material world on a two-dimensional surface. These include foreshortening, the application of highlights, and the indication of multiple points of depth in space relative to the picture plane. The purpose of the course is to explore the material, stylistic and technical history of illusionistic painting practices in the ancient Mediterranean world from Classical Greece to Late Antique Rome and to seek to understand the cultural and social significance of those practices. In addition to examining specific historical questions in the development of ancient painting, the course investigates trans-historical connections between vision, visuality and methods of representation. Prerequisites: one of L01 Art-Arch 112, L01 Art-Arch 113, L01 Art-Arch 211, or L01 Art-Arch 215; one 300-level course in Art History preferred; or permission of instructor.

#### L08 Classics 442 The Later Roman Empire: From Constantine to Justinian

Covers the period from ca. 300 through the reign of Justinian. Focus on legal developments and codification of law, social changes, rise of Christianity and fall of the Roman Empire in the west. Prerequisite: Classics 342C or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

#### L08 Classics 443 The Age of Nero: Writing, Performance and Politics at the End of a Dynasty

This course examines the reign of Nero (54–68 CE) as a distinct and remarkable period of literary and artistic production in ancient Rome and its empire. We study the career of the emperor himself, learning about imperial politics and policies during his reign, his own artistic career (his "fiddling while Rome burned," literary endeavors and notorious stage tour), and the violent end of his rule and dynasty. We examine the literature, philosophy, satire and other writings of the period, both those that take the emperor himself as their subject and those that treat other aspects of history, myth and culture from a "Neronian" perspective. We also examine art (both public and private), public entertainment (the amphitheater, the circus and the stage), and other cultural achievements and issues associated with the last Julio-Claudian emperor.

Credit 3 units. A&S: TH EN: H

---

#### L08 Classics 450 Topics in Classics

The topic for this seminar differs every year. Previous topics have included Pilgrimage and Sacred Space in Antiquity, Religion in a Global Context, and Engendering Religion. The seminar is offered every spring semester and is required of all religious studies majors, with the exception of those writing an

Honors thesis. The class is also open, with the permission of the instructor, to other advanced undergraduates with previous course work in Religious Studies.  
Credit 3 units. EN: H

---

#### L08 Classics 450W Topics in Classics

Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI EN: H

---

#### L08 Classics 451 Plato

An examination of some of Plato's most important dialogues, typically including the *Gorgias*, *Phaedo*, and *Republic*, with the aim of grasping the development of Plato's most influential thoughts in ethics and in metaphysics and epistemology. In order to provide both historical understanding and philosophical evaluation, attention is paid to the context and structure of the dialogues and to the best of recent secondary literature. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.  
Same as L30 Phil 451  
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

#### L08 Classics 452 Aristotle

This course offers a maximally full and detailed introduction to the works of Aristotle. His logic, natural philosophy, psychology, metaphysics, ethics, and political philosophy are discussed, and stress is laid on the interpretive problems facing contemporary philosophers seeking to understand Aristotle's achievement. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.  
Same as L30 Phil 452  
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

#### L08 Classics 462 Ancient Greek and Roman Music

Music played a vital role in Ancient Greece and Rome. New resources and perspectives now allow us to appreciate the ancients' music better than ever before. This course addresses the nature of ancient music (instruments, melody and rhythm, modes), ancient attitudes toward music, and its contribution to public and private life. The focus throughout is on our ancient sources, both literary and archaeological.  
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

---

#### L08 Classics 4647 Ancient Madness

In this course we will ask what madness meant in Greek and Roman culture. We will find reading strategies that are sensitive both to ancient evidence and to the ethical demands of talking about, evaluating and categorizing people treated as mad. While we will concentrate on literary (particularly tragic and epic), philosophical and medical texts, we will also look at visual representations and evidence from ritual and cult. An important part of our project will involve tracing the afterlife of classical ideas: The history of melancholia will ground this aspect of the course. Finally, we will consider how antiquity informs psychoanalysis (Oedipus, Antigone, Narcissus), and how ancient madness might partake in a critique of contemporary understandings of mental illness.  
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

---

#### L08 Classics 465 Topics in the History of Philosophy

Study of individual philosophers or themes from the ancient, medieval, and/or modern periods. Examples: Spinoza, St. Thomas Aquinas, neo-Platonism, universals in ancient and medieval thought, ancient and modern theories of space and time. Prerequisite: 6 units in philosophy or permission of instructor.  
Same as L30 Phil 465  
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

#### L08 Classics 476 Money, Exchange, and Power: Economy and Society in the Ancient Mediterranean World

From seaborne trade and banking to slavery and the impact of new technology, the economy of the ancient Mediterranean world constitutes a particularly dynamic field of study. To examine a society's underlying economics is to gain critical insight into those historical phenomena that are themselves the product of multiple, overlapping dimensions of human action and thought. This course engages directly with a fascinating array of primary evidence for economic behaviors, beliefs, structures and institutions among the Romans, Greeks, and their neighbors. We will also explore the methodological challenges and implications of that evidence as well as a variety of modern theoretical approaches. This year our focus is mainly upon developments among the Greeks, ranging from the transformative invention of coinage to the rise of commercial networks centered around religious sanctuaries like Delos. Prerequisites: Classics 341C or 342C or 345C or 346C or permission of instructor.  
Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

#### L08 Classics 4763 Olympian Shadows: Macedon and its Neighbors in Antiquity

The home of both Alexander the Great and Aristotle, Macedon was pivotal to the course of ancient Greek and Roman history and yet stood apart as a culturally and politically distinct region. Macedonian dynasts dominated the Hellenistic world and deeply shaped Roman reception of Greek culture, while others profoundly affected the intellectual life of antiquity. We will explore topics ranging from ethnicity, religion, and the nature of kingship to urbanization and Macedon's emergence as a great power until its subsequent transformation at the hands of the conquering Romans. We will pay special attention to Macedon's neighbors, especially Thrace and Illyria, as well as to Macedon's relationships with the Persian Empire and the Greek coastal colonies. Prerequisites: at least one semester of Classics 341C, 342C, 345C, or 346C, or instructor's permission.  
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM

---

#### L08 Classics 493 Senior Project

For Classics or Ancient Studies majors who wish to fulfill their capstone requirement in Classics through a one-semester research project. A structured research assignment or independent project under the supervision of one of the department's faculty is required. Prerequisites: senior standing and permission of the chair of the department.  
Credit 3 units.

## Latin

For Latin courses, please refer to the Latin (p. 642) page of this *Bulletin*.

## Comparative Literature

Comparative Literature examines literature across national, cultural and linguistic boundaries. The broad perspective of Comparative Literature generates sustained critical thinking about what literature is and does; how literature relates to other fields, including other art forms and kinds of writing; how literary texts and their translations produce meaning; and the ethical valence of literature in a globalized world. Advanced knowledge of at least one foreign language is essential for understanding and appreciating a given literature and culture. Therefore, all comparative literature and comparative arts majors study a foreign language and literature at an advanced level, and they are strongly encouraged to pursue a study abroad experience. Moreover, the study of works in translation, especially those originally written in non-European languages, facilitates cross-cultural comparisons and helps prepare students for a multilingual, pluralistic and global world. Comparison of literature to other arts, media and other modes of writing develops one's understanding of literature and culture, as well as of technologies and aesthetic forms of mediation and transmission of world views, values and critiques.

Comparative Literature and Comparative Arts offer students:

- A high degree of flexibility and individualization in their chosen program.
- A rich array of courses spanning national, temporal or medial boundaries organized by genre (e.g., postmodern narrative, comedy, the novel, lyric poetry); cultural issues (e.g., exile, diaspora, cross-cultural encounters); themes (e.g., memory, obsession in the novel, mysticism in poetry); period (Romanticism, the Renaissance); and transnational region (e.g., Middle Eastern literature, African literature).
- Courses that instruct the student in the central practices, approaches and theories of the discipline: entry-

level courses titled "World Literature," "Introduction to Comparative Arts," and courses on literature, literary theory and translation.

- Preparation for life in a global, multicultural and pluralistic world, including critical and analytical thinking skills and cross-cultural understanding.
- With the help of our major and the semester or year of study abroad that we encourage, some graduates have pursued careers in international affairs, teaching English as a second language abroad, and international humanitarian programs such as the Peace Corps. Other recent graduates have found employment in such areas as the arts, business, media and technologies, and in writing, editing and publishing. Additionally, our graduates are well prepared for the rigors of graduate or professional education in a variety of fields.

### Comparative Literature and the Arts & Sciences Curriculum

Comparative Literature offers freshman seminars, writing-intensive courses, community-based learning opportunities and various capstone experiences, including directed research, creative projects and internships appropriate to a student's field.

## Majors

### The Major in Comparative Literature

**Units required:** 27

**Required courses:**

- 27 units of Comparative Literature courses, which include:
  - Comp Lit 211 World Literature (3 units)
  - Comp Lit 3050 Literary Modernities: Text and Tradition (3 units)
  - Seven additional courses in Comparative Literature at both the 300 and 400 levels (21 units). With permission of the director of undergraduate studies, the student may substitute up to 6 units of appropriate foreign literature courses at the 300 or 400 level.
- The major also requires completion of a capstone experience. Students who are double majoring may elect to complete their capstone in the other major.
- Students in Comparative Literature are also expected to have had substantial college-level experience of foreign language study as demonstrated by completion of either one 400-level foreign language course or two 300-level courses.

### The Major in Comparative Arts

**Units required:** 27

**Required courses:**

- 21 units in Comparative Literature courses, which include:
  - Comp Lit 211 World Literature (3 units)
  - Comp Lit 313E Introduction to Comparative Arts (3 units)
  - Five additional courses at both the 300 and 400 levels (15 units) including one course on interrelations between literature and other art forms. With permission of the director of undergraduate studies, the student may substitute up to 6 units of appropriate foreign literature courses at the 300 and 400 levels.
- 6 units advanced study (300-level or above) in theoretical or historical courses in aesthetics, art history, dance, drama,

film or music. (Students with minors or majors in one of these fields may elect to substitute 6 units in Comparative Literature).

- The major also requires completion of a capstone experience. Students who are double majoring may elect to complete their capstone in the other major.
- Students of Comparative Arts are also expected to have had substantial college-level experience of foreign language study as demonstrated by the completion of either one 400-level foreign language course or two 300-level courses. They are also expected to pursue work in an applied art form — music, fine arts, drama, dance or creative writing — for four semesters. This course work need not be conducted at the 300 or 400 level.

*\*Students should be aware that courses satisfying the major requirements in another department cannot also be counted in satisfaction of the major requirements in Comparative Literature or Comparative Arts.*

### Additional Information

**Senior Honors:** To be considered for honors, a student must have a 3.7 GPA by the end of the sixth semester and must be approved by either the director of Comparative Literature or the director of undergraduate studies to write a Senior Honors thesis. Honors courses (Comp Lit 497 Independent Work for Senior Honors and Comp Lit 498 Independent Work for Senior Honors) supplement the major and do not satisfy any of the above requirements.

## Minors

### The Minor in Comparative Literature

**Units required:** 15

**Required courses:** 15 units of study distributed as follows:

- Comp Lit 211 World Literature (3 units)
- Comp Lit 3050 Literary Modernities: Text and Tradition (3 units)
- Three additional Comparative Literature courses at the 300 or 400 level

Minors in comparative literature are also expected to have had substantial college-level experience of foreign language study as demonstrated by completion of either one 400-level foreign language course or two 300-level foreign language courses.

### The Minor in Comparative Arts

**Units required:** 15

**Required courses:** 15 units of study, distributed as follows:

- 6 units in Comparative Literature, which include:
  - Comp Lit 211 World Literature (3 units)

- Comp Lit 313E Introduction to Comparative Arts (3 units)
- One more Comparative Literature course at the 300 or 400 level
- 6 units of advanced study (300-level or above) in theoretical or historical courses in music, art history, drama, dance, film or aesthetics. (Students with majors or minors in one of these fields may elect to substitute 6 units in Comparative Literature.)
- Minors in comparative arts are also expected to have had substantial college-level experience of foreign language study as demonstrated by completion of either one 400-level foreign language course or two 300-level foreign language courses.

### L16 Comp Lit 1024 Mozart: The Humor, Science, and Politics of Music

Wolfgang Amadeus Mozart is one of the most recognized composers of "classical" music. A child prodigy of astonishing precocity, he has come to symbolize genius for Western culture — a composer whose music embodies superhuman, even Utopian beauty and perfection. In this course, we'll learn that there was more to Mozart. Mozart was a lover of codes and puzzles who delighted in the science of music, a sampler of non-Western music, and a musical humorist whose comedies make provocative statements — ranging from cynical to poignant — about politics, gender and morality. Our focus works will include Mozart's symphonies, piano music, string quartets, and such comedies as *The Magic Flute* and *The Marriage of Figaro*. We'll also explore Mozart's afterlife — how his music has figured in film, literature, and popular culture. This course is open to all undergraduates — no previous musical course work or experience is required.

---

### L16 Comp Lit 137A Freshman Seminar

The destructive, scandal-ridden career of the Roman emperor Nero (mid-first century CE) almost defies belief. From his assumption of power as a teenager to his suicide after a military revolt, Nero flouted political and cultural conventions left and right. His inspiring debut notwithstanding, he killed off his family and mentor, held wild parties, poured money into extravagant projects, and neglected state business to pursue a career on stage. He came to be labeled one of the "Bad Emperors," and seen as a symbol of the decline of Rome itself — especially by sympathizers of the Christians he persecuted. Yet Nero as an

emperor and a literary character was also a creation of his time. The figure of Nero is examined in his context. The central text is the *Life of Nero* by Suetonius (second century CE), a dense and colorful text read first in its entirety and then more carefully in pieces. Supplementary readings are from the abundant other sources on and interpretations of Nero, both ancient and modern. Discussions and writing assignments are varied and designed to develop analytical and writing skills.

### L16 Comp Lit 1511 The Birth of Venus

This course examine the art, politics and history of Renaissance Florence, Venice, Ferrara and Rome. We study how love, beauty, religion and politics were intertwined in these cities. We consider how the flourishing of the arts occurred along with the oppressive rule of the Church; why, for one out of two women in upper-class families, the choice was the convent rather than marriage; the rise of courtesan culture and pornography; conspicuous consumption; healing as a matter of faith and a matter of science. Professor Wallace presents the great artists who worked in these cities, including works by Donatello, Masaccio, Brunelleschi, Botticelli, Michelangelo, Leonardo and Vasari. Professor Stone examines Sarah Dunant's trilogy of best-selling historical novels: *The Birth of Venus*, set in Florence; *In the Company of the Courtesan*, set in Venice; and *Sacred Hearts*, set in Ferrara. Ms. Dunant, who is a visitor to the University during part of the semester, introduces the class to historical documents that she used in creating her novels. Guest lecturer Professor Monson (Music Department) explores connections between nuns who make both music and magic. Open to freshmen and sophomores only.

**L16 Comp Lit 176C Freshman Seminar: Aesop and His Fables: Comedy and Social Criticism**

*Aesop's Fables*, a collection of stories featuring talking animals, is still popular today, and it has its roots in ancient Greece. Many stories about Aesop were circulated in Greco-Roman antiquity, stories that could be complex, politically charged, and sometimes quite crude. In this course, we will read *The Life of Aesop*, a popular ancient novel about the fabulist's life and exploits. We will also consider how Aesop and his fables are treated in the larger tradition: in other fable collections, in comedy and philosophy, and in the visual tradition. As we will see, Aesop is a highly mutable figure: sometimes comic, sometimes serious, often critical of power imbalances and injustices, and always ready to mask what he really means behind a clever animal fable.

**L16 Comp Lit 201A Classical to Renaissance Literature: Text and Tradition**

Students enrolled in this course engage in close and sustained reading of a set of texts that are indispensable for an understanding of the European literary tradition, texts that continue to offer invaluable insights into humanity and the world around us. Homer's *Iliad* is the foundation of our class. We then go on to trace ways in which later poets and dramatists engage the work of predecessors who inspire and challenge them. Readings move from translations of Greek, Latin, and Italian, to poetry and drama composed in English. In addition to Homer, we will read works of Sappho, a Greek tragedian, Plato, Vergil, Ovid, Petrarch, and Shakespeare.

**L16 Comp Lit 204 Crossing Borders: An Introduction to Comparative Literature**

An introduction to some of the ideas and practices of literary studies at the beginning of the 21st century. This course is designed for majors and prospective majors in comparative literature and comparative arts — and other students interested in reading literature from many parts of the world and exploring issues in literary studies including questions of epistemology and representation, the cultural biases of readers, semiotics, translation theory and Orientalism. Plays, novels and poems by writers including Euripides, Vergil, Racine, Rilke, Henry James, Borges, Mellah and Murakami, and closely related short excerpts by theorists from Aristotle to Bhabha. Prerequisite: sophomore standing or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

---

**L16 Comp Lit 209 Scriptures and Cultural Traditions**

When we think of the word "scripture" in antiquity, we might think of the texts that have been compiled in the different holy books that we currently have today. Yet the function of "scriptures" within a community, and the status given to different texts treated as "scriptural," has changed in different times and places. In this course, we will consider texts that would eventually come to be part of the Hebrew Bible, New Testament, and the Qu'ran as well as several of the exegetes and reading communities that shaped their various interpretations. We will explore how non-canonical sources played a role in the formation of the various canons we have today, comparing the authoritative status given to these texts to that given to other works from antiquity, such as

the epics of Homer. Special attention will be played to the role of the receiving community in the development of "scripture," and the variety of the contexts in which scripture can function in the construction of and opposition to religious authority.

**L16 Comp Lit 3040 Introduction to Digital Humanities**

It is a truism that computers have changed our lives and the way we think and interact. But in fact, systematic efforts to apply current technologies to the study of history and culture have been rare. This course will enable students to consider how these technologies might transform the humanities. We will explore the various ways in which ideas and data in the humanities can be represented, analyzed and communicated. We will also reflect on how the expansion of information technology has transformed and is continuing to transform the humanities, both with regard to their role in the university and in society at large. Readings and classwork will be supplemented by class presentations and a small assigned group project.

---

**L16 Comp Lit 3050 Literary Modernities: Text and Tradition**

The course examines the various facets of modernity in major works of European, Eurasian and, sometimes, American literature from the early 17th century to the 1920s, starting with *Don Quixote*. We explore, among other things, the eruption of the novel, the secularization of autobiography, the literary discovery of the city, the rise of literary and aesthetic criticism that takes literature and art seriously as political and social institutions. In addition to literary works, the course engages with two or three important models of critical practice, e.g., Wollstonecraft's *Vindication of the Rights of Women*, Marx's *German Ideology*, Freud's *The Interpretation of Dreams*, T.S. Eliot's *Tradition and the Individual Talent*, or perhaps that great work of fictionalized literary criticism, Borges' "Pierre Menard, Author of the Quixote."

**L16 Comp Lit 3071 Caribbean Literature**

Rum! Fun! Beaches! Sun! This is the image of the Caribbean in America today. This course surveys literature and culture from these islands, looking both at and beyond this tourists' paradise.

It aims to introduce students to the region's unmistakably vibrant tradition of multicultural mixture, while keeping an eye on the long history of slavery and rebellion out of which the islands' contemporary situation formed. Along the way we encounter a wide variety of texts, from the earliest writing focused on life in urban slums, to the first novel ever to have a Rastafarian as its hero, to more contemporary considerations of the region's uncertain place in a U.S.-dominated world. Toward the end of the course, we also look at important films like *The Harder They Come* as well as discussing the most globally famous cultural product of the contemporary Caribbean: reggae music. The course involves readings from multiple genres and covers authors such as C.L.R. James, Derek Walcott, Jean Rhys, V.S. Naipaul, Jamaica Kincaid, and Caryl Phillips.

**L16 Comp Lit 307A The Writing of the Indian Subcontinent**

The Indian subcontinent has in recent years yielded a number of writers, expatriate or otherwise, whose works articulate the postcolonial experience in the "foreign" English tongue. This course is designed to be an introductory survey of such writing, drawing on select subcontinental writers. Covering both fiction and nonfiction by several authors including R.K. Narayan, Salman Rushdie, Anita Desai, Amitav Ghosh, Sara Suleri, Micheal Ondaatje and Romesh Gunesequera, we discuss such issues as the nature of the colonial legacy, the status of the English language, problems of translation (linguistic and cultural), the politics of religion, the expatriate identity and the constraints of gender roles.

---

**L16 Comp Lit 312C The Literature of Obsession**

This course will explore the theme of consolation in medieval poetry. We will read narratives that represent the consolation of a variety of melancholy figures — philosophers in exile, lovers in mourning, citizens in plague-ridden cities, and women disturbed by misogynous writing. We will examine the connection between representations of consolation and the act of reading, and think about literature itself (along with other art forms) as a contested site of entertainment, moral guidance, self-fashioning, and redemption. Authors may include Boccaccio, Boethius, Chaucer, Christine de Pizan, Abelard and Heloise, and the Pearl-poet. As a writing-intensive class, we will spend time writing and talking

about writing in the classroom. We will read our literary texts as "arguments" about literature in addition to other topics, and we will read secondary articles as examples of scholarly writing that we may or may not want to adopt as models.

**L16 Comp Lit 3132 Romantic Revolutions in European Music and Culture**

The early 19th century in Europe witnessed sweeping changes in social, political, and cultural life, but some of the most fascinating happened in music. This course considers intersections between Romantic thinking about music — which inspired an idealistic vision of the art form as a source of quasi-spiritual experience — and other contemporary "revolutions." To what extent was Romantic music a "holy art" that offered a refuge from the world? In what ways was it a worldly participant in larger currents in society and culture? By exploring these questions and more, students develop the skills and framework needed to incorporate works of music into their investigation of enduring issues in history and the humanities. Although this course requires listening and viewing of musical works, it is designed for students with intellectual curiosity but without prior musical background. We also require weekly readings, occasional presentations, three short papers, and spirited class discussion.

**L16 Comp Lit 331A Topics in Holocaust Studies**

This course will approach the history, culture and literature of Nazism, World War II and the Holocaust by focusing on one particular aspect of the period — the experience of children. Children as a whole were drastically affected by the policies of the Nazi regime and the war it conducted in Europe, yet different groups of children experienced the period in radically different ways, depending on who they were and where they lived. By reading key texts written for and about children, we will first take a look at how the Nazis made children — both those they considered "Aryan" and those they designated "enemies" of the German people, such as Jewish children — an important focus of their politics. We will then examine literary texts and films that depict different aspects of the experience of European children during this period: daily life in the Nazi state, the trials of war and bombardment in Germany and the experience of expulsion from the East and defeat, the increasingly restrictive sphere in which Jewish children were allowed to live, the particular difficulties children faced in the Holocaust, and the experience of children in the immediate postwar period. Readings include texts by Ruth Klüger, Harry Mulisch, Imre Kertész, Miriam Katin, David Grossman and others. Course conducted entirely in English. Open to freshmen. Students must enroll in both main section and one discussion section.

**L16 Comp Lit 332C Comedy**

This comparative course examines and enjoys the substances and forms of humor and comedy in different times and places. Some attention to jokes, gags and comics precedes a wide-ranging examination of literary comedy. A study of various plays and comic texts illuminates different forms of comedy, such as farce, satire, romantic comedy, comedy of manners, absurdist comedy and contemporary political comedy. Authors include Aristophanes, Plautus, Rabelais, Shakespeare, Molière, Fielding, Gogol, Wilde, Stoppard and Dario Fo.

Credit 3 units. A&S: TH Art: HUM BU: HUM

---

**L16 Comp Lit 334 Love in the Novel/Love of the Novel**

Our focus is our own pleasure in reading. How do we assure that this pleasure survives into the next century now that the visual, the sound bite, the video clip permeate our lives? We attempt to answer this question by rediscovering one of the great love stories of all times, Leo Tolstoy's *Anna Karenina*. Daniel Pennac's *Reads Like A Novel*, a recent work about the pleasures of reading for pleasure, guides us as we isolate elements of Tolstoy's story that compel us, that teach us about our own needs and desires as readers. The class considers novels whose love stories are molded by the characters' own reading: Austen's *Northanger Abbey*, Flaubert's *Madame Bovary* (1856), Proust's *Swann In Love*, Skarmet's *Burning Patience*, Bernhard Schlink's *The Reader*. Far from being immune to or eclipsed by history and politics, the pleasure of reading is shown to reflect the reader's appreciation of the larger fabric of society, where passion is set against war, prostitution, mental illness, adultery and prejudice.

**L16 Comp Lit 349A Yiddishkayt**

This course traces the emergence, development, flourish and near-decline of Yiddish literature, beginning with some of the earliest writings to appear in Yiddish in the late middle ages and early modern period, continuing with 19th-century attempts to establish a modern Yiddish literature and the 20th-century emergence of both a classical canon and a literary avant-garde, and ending with post-Holocaust attempts to retain a Yiddish literary culture in the near absence of Yiddish-speaking communities. Focusing on the role of Yiddish as the "national" language of Ashkenaz, the course examines the ways in which Yiddish literature has responded to the social conditions of European Jewish life, exploring among others the relationship between Yiddish and the non-Jewish cultures in which it existed, the tensions between secular trends versus religious tradition, life in the shtetl and in the metropolis, immigration from the old world to the new, and Yiddish literary responses to the Holocaust.

**L16 Comp Lit 3520 Introduction to Postcolonial Literature and Theory**

At its zenith, the British Empire encompassed almost a quarter of the globe, allowing the diminutive island nation unprecedented economic, military, and political influence upon the rest of the world. This course will introduce some of the foundational responses to this dominance, both literary and theoretical, by the colonized and their descendants. We will examine important critiques of colonialism by theorists such as Frantz Fanon, Aimé Césaire, Edward Said, Homi Bhabha, and Gayatri Spivak, as well as literary works that reflect a postcolonial critique by authors such as V.S. Naipaul, George Lamming, Doris Lessing, and N'gugi wa Thiong'o. The course will interrogate how literature could be said to help consolidate Empire as well as ways in which it might function as rebellion against imperial power, with a view toward teasing out the problematics of race, gender, language, nationalism and identity that postcolonial texts so urgently confront.

**L16 Comp Lit 355C The Flowering of Islamic Literature 500-1200**

Exploration of the multilingual (Arabic, Persian, Turkish) literary cultures of a civilization that stretched from Spain to India. Themes and genres include early court patronage, Bedouin odes, wine poetry, social satire, mystical poetry, national epic and the literature of love and romance. Comparisons to contemporaneous Hebrew and ancient and medieval Western literatures. Readings in English.

Credit 3 units. A&S: TH, CD Art: HUM BU: HUM

---

**L16 Comp Lit 360A Women and Contemporary European Cinema**

What binds society together? One of the most influential answers to this question was offered by French anthropologist Claude Lévi-Strauss. He argued that the fabric of a society is formed by a network of exchanges among kinship groups, which circulate three kinds of objects: economic goods, linguistic signs and women. In this course, we inquire into the place of women in this argument. We trace rudiments of the traditional marriage system (a father figure still "gives away" the bride in the marriage ceremony), its range of displacements in a global economy (transnational wives, nannies and domestic servants), the role of new media in the formation of new systems of trafficking (internet brides), and the place of the debate on gay marriage within the larger conversation. We read texts by Friedrich Engels, Sigmund Freud, Marcel Mauss, Claude Lévi-Strauss, Gayle Rubin, Luce Irigaray, Judith Butler, Barbara Ehrenreich and Arlie Russell Hochschild; and we watch a number of films that dramatize the traffic in women in the context of contemporary Europe: Coline Serreau's *Chaos*, Lukas Moodisson's *Lilja 4-ever*, Cristian Mungiu's *Occident*, Nilita Vachani's *When Mother Comes Home for Christmas*, Fatih Akin's *Head-on*, Jean-Pierre and Luc Dardenne's *The Silence of Lorna*.

---

**L16 Comp Lit 3631 Russian Literature and Opera: Transpositions and Transgressions**

This interdisciplinary course surveys the intersections between Russian literature and opera from the 19th century to the present. Literary works in a variety of genres (short stories, narrative poems, plays and novels) by Russian authors (with Pushkin as a clear favorite) have inspired generations of leading Russian composers, resulting in significant operatic adaptations, including Tchaikovsky's *Eugene Onegin*, based on Pushkin, Prokofiev's *The Gambler*, based on Dostoevsky, and Shostakovich's *The Nose*, based on Gogol. For each pairing of author and composer, we read and discuss the literary text before considering the ways in which the original was refined, trimmed and generally transformed for the operatic stage. We frequently view opera productions and consider issues of staging, embodiment and fidelity to the original. The broader goal of the class is to consider the possibilities and limits of artistic media, specifically the points of agreement or dissonance between literature and music.

**L16 Comp Lit 386 The Literary 1960s: Years of Hope/Days of Rage**

Taking its subtitle from the one used by Todd Gitlin for his monumental sociological study of the 1960s, this course focuses on the diverse and exciting literature of this often chaotic, always fascinating period. Readings include popular and influential books by Peter Weiss, Robbe-Grillet, Ken Kesey, Tom Wolfe, Germaine Greer, Eldridge Cleaver and Joan Didion. Attention is paid not only to important new artistic, political and social movements, as seen by these writers, but also to films and music of the time.

**L16 Comp Lit 394 Worldwide Translation: Language, Culture, Technology**

This course considers the crucial role played by translation across the world today: from new technologies and digital media, to the global demands of professionals working in fields as diverse as literature, law, business, anthropology and health care. We begin our exploration of the concept of translation as a key mechanism of transmission between different languages by looking at works of literature and film. Students then examine how different cultures have historically required translation in their encounter with each other, studying how translation constitutes a necessary transcultural bridge both from a colonial and postcolonial point of view. The course also analyzes from practical and real-world perspectives whether concepts such as war, human rights, democracy or various deadly illnesses have the same meaning in different societies by considering the diverse frames of reference used by linguists, lawyers, anthropologists and medical doctors across the world. Finally, we focus on translation from a technological perspective by examining various modes of transfer of information required for the functioning of digital media such as Google Translate, Twitter or various iPhone applications. Readings include works by Jorge Luis Borges, Talal Asad, Lawrence Venuti, Michael Cronin, Emily Apter and Gayatri Spivak, among others. This course offers students an optional CET (<https://gephardtinststitute.wustl.edu/cec/college-of-arts-sciences>) (Community-Engaged Teaching) component in collaboration with a St. Louis-based community partner. Prerequisite: none.

Credit 3 units. A&S: LA A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

**L16 Comp Lit 396 Lyric Poetry**

A study of the sounds, forms, devices, voices and pleasures of lyric poetry from international and comparative points of view. Attention to theories of lyric, formal devices and problems of translation. The study of various lyric forms such as the ode, the elegy and the sonnet, generates comparisons across time and space.

Credit 3 units. A&S: TH, WI Art: HUM

**L16 Comp Lit 402 Introduction to Comparative Literature**

An introduction to the discipline and practice of Comparative Literature, this course explores the concepts most frequently discussed and the methods most successfully practiced. We study what texts reveal when they are examined cross-culturally. Students consider the various differences that emerge between texts when themes and genres are followed across more than one national literature. The course includes a short history of the discipline and recent debates about the nature and scope of the field. Topics discussed include genres and forms, influence and intertextuality, translation, world literature, exile and cross-cultural encounter.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

**L16 Comp Lit 405A Theory and Methods in the Humanities**

Does humanity make progress? What does it mean to be part of a society, a culture, or an economy? And how do human beings find hope in the face of violence, loneliness, inequality, and the prospect of their own mortality? These fundamental questions about the human condition are the province of social theory, a way of thinking that intersects with philosophy, politics, economics, religion, anthropology, and sociology. This seminar will examine an array of classic texts in this field, including works

from Karl Marx, Friedrich Nietzsche, Sigmund Freud, Theodor Adorno, Hannah Arendt, and Michel Foucault.

Same as L93 IPH 405

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

**L16 Comp Lit 406 Translation**

This course looks at the practice and theory of literary translation. While the main focus is on the literary and linguistic processes involved in translating a text from one language to another, we spend much time exploring the cultural significance of translation in an increasingly interconnected world. Translation is one of the best ways to make the world accessible to us. Successful translation requires in-depth knowledge of the social and cultural conditions in which the original text is produced. It is equally important to be aware of the expectations of the readers who read the translated version. To balance these theoretical discussions with practical matters, we invite translators to the class to speak about their published works. The requirements include translation projects to add experience to the analysis carried out in class. Prerequisite: fluency in a language other than/in addition to English.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

**L16 Comp Lit 4080 Africanist Travel Writing: Texts, Contexts, Theory**

This course will examine the art, politics and history of Renaissance Florence, Venice, Ferrara and Rome. We will study how love, beauty, religion and politics were intertwined in these cities. We will consider how the flourishing of the arts occurred along with the oppressive rule of the Church; why, for one out of two women in upperclass families, the choice was the convent rather than marriage; the rise of courtesan culture and pornography; conspicuous consumption; healing as a matter of faith and a matter of science. Prof. Wallace will present the great artists who worked in these cities, including works by Donatello, Masaccio, Brunelleschi, Botticelli, Michelangelo, Leonardo, and Vasari. Prof. Stone will examine Sarah Dunant's trilogy of best-selling historical novels: *The Birth of Venus*, set in Florence; *In the Company of the Courtesan*, set in Venice; and *Sacred Hearts*, set in Ferrara. Ms. Dunant, who will be a visitor to the university during part of the semester, will introduce the class to historical documents that she used in creating her novels. Guest lecturer Prof. Monson (music dept.) will explore connections between nuns who make both music and magic. Open to freshmen and sophomores only.

Same as L16 Comp Lit 1511

**L16 Comp Lit 409 Correlation Between East and West**

Extensive comparative study of a period, topic, theme or genre in Chinese or Japanese literature with a body of texts from one or more European languages that serve to illuminate the literary similarities and cultural differences between the two. Texts vary, depending upon the interests of the instructor(s). All texts available in English translations as well as in the original languages.

Credit 3 units. A&S: TH Art: HUM

**L16 Comp Lit 409C Beyond Geography: The Meaning of Place in the Middle East**

This course considers the importance of place in the Middle East with particular reference to Jewish and Islamic traditions. Topics covered include the creation of holy sites, the concept of sacred space, the practice of pilgrimages, and the tropes of

exile and return. Texts range from analytical essays to novels, memoirs and films by authors such as Edward Said, Naguib Mahfouz, Taher Ben Jelloun, Elif Shafak, A.B. Yehoshua, Shulamit Hareven, and Hanan Al-Shaykh. Requirements include participation, short assignments, and a seminar paper. This course fulfills the capstone requirement for students majoring in Jewish, Islamic and Near Eastern Languages and Cultures, but is open to advanced undergraduates and graduate students. Prerequisites: course work in JINES and senior standing or permission of instructor.

---

**L16 Comp Lit 4111 Pastoral Literature**

This course will open with a survey of the classical tradition in pastoral/bucolic. We will consider questions of genre, intertextuality and ideology, and we will ask how "the lives and loves of herders" became favored ground for literary meditation on issues of surface and depth, reality and illusion, artifice and sincerity. This portion will involve intensive reading in translation of Theocritus, Vergil and Longus. In the second half of the semester, we will consider the survival, adaptation and deformation of ancient pastoral themes, forms and modes of thought in British and American writing from the 19th and 20th centuries. We will read works of Mark Twain, Kenneth Grahame, Thomas Hardy and Tom Stoppard.

---

**L16 Comp Lit 419 Feminist Literary and Cultural Theory**

This course is intended to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. Note: This course is in the core curriculum for the Women, Gender and Sexuality Studies graduate certificate. Prerequisites: advanced course work in WGSS or in literary theory (300-level and above) or permission of the instructor required.  
Same as L77 WGSS 419  
Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM

---

**L16 Comp Lit 4204 Film Theory**

This course is an introduction to both classical and contemporary film theory. Beginning with the earliest attempts to treat cinema as a new and unique art form, the course initially reviews the various ways in which film theory attempted to define cinema in terms of its most essential properties. The course then examines more contemporary developments within film theory, more specifically its attempt to incorporate the insights of other critical and analytical paradigms, such as semiotics, psychoanalysis, feminism, queer theory and postmodernism. Throughout the

course, we consider questions regarding the ontology of cinema, its relation to spectators, and the various ways in which its formal properties create meaning. Readings for the course include the major works of Sergei Eisenstein, Andre Bazin, Christian Metz, Laura Mulvey and Fredric Jameson. Required screenings.  
Same as L53 Film 420  
Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI Art: HUM

---

**L16 Comp Lit 4224 The 1904 St. Louis World's Fair: German and Austrian Art Exhibited**

The St. Louis World's Fair of 1904 (The Louisiana Purchase Exposition) was one of the greatest events of its time. At the beginning we will deal with the historical development that led to the purchase of the Louisiana Territory in 1803, will review the developments of World's Fairs since 1851, and will have a look at the grand dimension of the 1904 World's Fair (connected with the Olympic Games). Of central importance are the Art Exhibits from Germany and Austria with their cultural-political implications. The German Emperor had a hand in selecting the German paintings to be sent to St. Louis, and his opposition against modern movements like Impressionism caused opposition in Germany. Austria was different: In their Art Nouveau Pavilion they included secessionists (Hagenbund). The Wiener Werkstaetten (Vienna's Workshops) attracted a lot of attention. Different from the paintings, German Arts and Crafts represented avant-garde movements. We will visit libraries, archives and museums in St. Louis that have World's Fair holdings. The seminar is for advanced undergraduate students but beginning graduate students can take it with permission of the instructor. Course conducted in English. May not be taken for German major or minor credit.  
Same as L97 IAS 4224  
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

---

**L16 Comp Lit 4225 European Utopian Settlements in the American Midwest (1814-1864): Diversity and Antislavery**

During the first part of the 19th century a number of utopian visionaries from Europe (Germany, France and England) tried to establish communities in the American Midwest. These colonies were based either on religious or philosophical/social ideals which could be traced back to interpretations of the Old and the New Testament or to Enlightenment principles of freedom and equality that had been propagated during the revolutions in Europe of 1789, 1830 and 1848 which in turn had been influenced by the American war of independence. These groups showed strong antislavery convictions. The Midwest was chosen since the areas in the vicinity of the confluence of the Mississippi and the Missouri were seen as open to new social experiments. Part of the seminar are field trips to the St. Louis-based Missouri History Library as well as to the St. Louis Public Library and one-day excursions to New Harmony in Indiana, Nauvoo in Illinois, and to small towns in Warren County, Missouri.

#### L16 Comp Lit 425A Humanities by the Numbers

Every time Google guesses the next word we are about to type, Amazon recommends books we might like to read, or the iPhone's "Siri" answers a question, they draw on the massive advances that have been made in the application of computational techniques to language over the last few years. However, can such technologies help us to read literary texts in new ways? If literature can be thought of as unusual and distinctive uses of language, to what extent can computational techniques that draw on statistical patterns and quantification assist us in literary analysis? This course juxtaposes the typically human scale of the close reading to the "inhuman" and massive scales at which computers can count, quantify and categorize texts. How can we translate what we as human readers care about in these literary works — the things that make them valuable, rather than things that are easy to count? What nuance is lost in this translation between "close" and "distant" readings and what insights are gained? While this class introduces students to basic statistical and computational techniques, no prior experience with technology is required.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

---

#### L16 Comp Lit 4300 Data Manipulation for the Humanities

The course will present basic data modeling concepts and will focus on their application to data clean-up and organization (text markup, Excel and SQL). Aiming to give humanities students the tools they will need to assemble and manage large data sets relevant to their research, the course will teach fundamental skills in programming relevant to data management (using Python); it will also teach database design and querying (SQL). The course will cover a number of "basics": the difference between word processing files, plain text files, and structured XML; best practices for version control and software "hygiene"; methods for cleaning up data; regular expressions (and similar tools built into most word processors). It will proceed to data modeling: lists (Excel, Python); identifiers/keys and values (Excel, Python, SQL); tables/relations (SQL and/or data frames); joins (problem in Excel, solution in SQL, or data frames); hierarchies (problem in SQL/databases, solution in XML); and network graph structures (nodes and edges in CSV). It will entail basic scripting in Python, concentrating on using scripts to get data from the web, and the mastery of string handling.

Same as L93 IPH 430

Credit 1 unit.

---

#### L16 Comp Lit 4310 Statistics for Humanities Scholars

A survey of statistical ideas and principles. The course will expose students to tools and techniques useful for quantitative research in the humanities, many of which will be addressed more extensively in other courses: tools for text-processing and information extraction, natural language processing techniques, clustering & classification, and graphics. The course will consider how to use qualitative data and media as input for modeling and will address the use of statistics and data visualization in academic and public discourse. By the end of the course students should be able to evaluate statistical

arguments and visualizations in the humanities with appropriate appreciation and skepticism. Details. Core topics include: sampling, experimentation, chance phenomena, distributions, exploration of data, measures of central tendency and variability, and methods of statistical testing and inference. In the early weeks, students will develop some facility in the use of Excel; thereafter, students will learn how to use Python or R for statistical analyses.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

---

#### L16 Comp Lit 436 Seminar in Dramatic Theory

The course begins with Plato's critique of mimesis and Aristotle's defense, as we read *The Poetics* as a response to Plato. We take some of Aristotle's basic concepts, such as mimesis, plot, character and thought, and attempt to apply them to drama up to the present day. We also consider fundamental elements of both the dramatic text and the dramatic production, such as space, time, dialogue, narrative devices and perspective. Brecht's theory of "epic drama" forms the other conceptual pole in the course, opposing Aristotle. Besides these two theorists, other figures include Ben Jonson, Corneille, Dryden, Diderot, Schiller, Hegel, Zola, Artaud and Grotowski. The course, then, has both chronological and thematic axes. Three papers and one oral presentation.

Credit 3 units. A&S: TH Art: HUM

---

#### L16 Comp Lit 438 Aesthetics

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

---

#### L16 Comp Lit 444C Psychoanalysis and Its Literary Cultures

This course examines interactions between texts from the domains of literature and psychoanalysis. We read theory and literature side by side, in order to ask the following questions: Does the relationship between literary text and theory necessarily entail the subjection of literature to analysis, or can one, as Pierre Bayard asks, apply literature to psychoanalysis? What can psychoanalytic readings tell us more broadly about the act of reading? How can psychoanalysis enrich our sense of the ethical import of reading and writing, and how can literature challenge psychoanalytic goals and values? In terms of psychoanalytic authors, we focus on Freud, Lacan, Klein, Winnicott and Bayard. In terms of literature, we range widely from Sophocles to Henry James.

**L16 Comp Lit 4647 Ancient Madness**

In this course we will ask what madness meant in Greek and Roman culture. We will find reading strategies that are sensitive both to ancient evidence and to the ethical demands of talking about, evaluating, and categorizing people treated as mad. While we will concentrate on literary (particularly tragic and epic), philosophical, and medical texts, we will also look at visual representations and evidence from ritual and cult. An important part of our project will involve tracing the afterlife of classical ideas: The history of melancholia will ground this aspect of the course. Finally, we will consider how antiquity informs psychoanalysis (Oedipus, Antigone, Narcissus), and how ancient madness might partake in a critique of contemporary understandings of mental illness.

## Dance

Students may select dance as a major through the Performing Arts Department. (p. 705) This Bachelor of Arts course of study combines intensive studio work in technique and theory of modern dance, ballet and composition with seminars examining dance as a global phenomenon with forms reflecting culturally specific historical, aesthetic and anthropological features. The major also includes a broad range of courses such as stagecraft, music resources, improvisation, anatomy for dancers, pedagogy, dance therapy, musical theater dance, world dance forms, jazz and tap. Students also may choose to minor in modern dance; ballet; or world music, dance and theater. The interdisciplinary minor in world music, dance and theater encourages students already interested in the performing arts to explore those outside Euro-American traditions. A certificate program in somatic studies is offered through the University College division of Arts & Sciences.

Students who study dance at Washington University learn from faculty members who have both professional experience and academic degrees. Students also have the opportunity to study with guest artists in residence who teach master classes and set choreography.

The department also offers many opportunities for students to perform and present their work. Washington University Dance Theatre holds annual auditions, and selected students will appear in faculty- and guest artist-choreographed concerts in Edison Theatre. Additionally, students may audition for the student repertory company Washington University Dance Collective. Every spring, student choreographers can audition their work for Young Choreographers Showcase (a department sponsored event) or for Student Dance Showcase, directed and produced by Washington University Dance students. Students also have the annual opportunity to attend the regional American College Dance Conference to perform and take master classes. Students may also participate in departmental drama productions as well as student productions of choreography and theater.

| Drama 361   | Stage Management   | 3 |
| Drama 421   | Costume Construction and Design                                | 3 |
| Anthro 160B | Introduction to Cultural Anthropology                          | 3 |
| Anthro 3833 | Performance and Healing: The Politics of Health Representation | 3 |

**Additional electives available in University College (U31):**

| Code       | Title                                     | Units |
|------------|---|-------|
| Dance 305  | Structured Improvisation for Dance        | 1     |
| Dance 328  | Dance of West Africa: Intermediate        | 2     |
| Dance 335  | Bharata Natyam as Movement Narrative      | 1     |
| Dance 363  | Dunham Dance Technique II                 | 2     |
| Dance 385  | Special Studies in Somatics               | max 3 |
| Dance 411  | Teaching Creative Movement to Children    | 2     |
| Dance 423  | Topics in Dance: Dance Movement Therapy   | 2     |
| Dance 430  | Applied Anatomy for the Performing Artist | 2     |
| Dance 440  | Curriculum and Instruction in Dance       | 3     |
| Dance 4541 | Seminar in Arts Management                | 3     |

The dance major must take at least one upper-level course in both ballet and modern dance technique and theory. Course work in at least one of the following is strongly recommended: West African Dance, Classical Indian Dance, Dunham Technique, Musical Theater Dance, Jazz Dance.

**Additional Information**

**Study Abroad:** Washington University students can pursue dance studies abroad during the academic year at the University of Auckland, New Zealand; University of Ghana, Legon; and Roehampton University, London. With approval from the Dance program, courses at these institutions may fulfill dance major and minor requirements. Courses in other disciplines taught at these institutions may also be accepted by Washington University.

**Minors**

The dance minor listed here pertains only to the Class of 2019 and after. Students in the Class of 2018 and before may instead complete either the minor in ballet or the

minor in modern dance, both listed on the Performing Arts Department website (<http://pad.artsci.wustl.edu/dance-minors>).

**The Minor in Dance**

**Total units required:** 17-18

**Studio-based/technique courses:** 9 units. At least 6 of these units must be at the 300 level or above. Select from:

| Code                               | Title   | Units |
|------------------------------------|---|-------|
| <b>Ballet</b>                      |   |       |
| Dance 222                          | Fundamentals of Classical Ballet                                      | 2     |
| Dance 321                          | Classical Ballet: Intermediate I                                      | 2     |
| Dance 3221                         | Classical Ballet: Intermediate II                                     | 2     |
| Dance 3224                         | Intermediate Pointe Technique   | 1     |
| Dance 415                          | High Intermediate Ballet I  | 2     |

## The Minor in World Music, Dance and Theater

For the world music, dance and theater minor, visit the Performing Arts (p. 707) page.

### Courses

Visit online course listings to view semester offerings for L29 Dance (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L29&crslvl=1:4>).

#### L29 Dance 104 Body Conditioning

A complete body conditioning program designed to increase strength and flexibility. Uses some floor barre and Pilates-related floor exercises.

Credit variable, maximum 2 units.

#### L29 Dance 106E Introduction to Dance as a Contemporary Art Form

Introduction to dance as a creative art form. Through practical work in the studio, students gain an understanding of the human body as an instrument of expression and of motion as the medium of dance. Technique, analysis and creative work. Not open to majors. May be repeated once for credit.

Credit 2 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

#### L29 Dance 111 Contemporary Dance for the Male Dancer

For men who may have athletic or other physical and kinesthetic skills, but little to no formal dance training. This course is designed to meet the specific needs of the male body in its capacity for dynamic, aesthetic, expressive movement.

Introduction to dance as a creative art form using the body as the instrument of expression and motion as the medium of dance. Technique, analysis and creative work.

Credit 2 units. A&S: LA

#### L29 Dance 120 Yoga and Relaxation Techniques

Systematic introduction to the methods and theory of yoga as a means of stretching, strengthening, energizing and relaxing the body. Incorporates meditation, massage and other release techniques to help sharpen both body and mind. Students should wear comfortable clothing permitting freedom of movement and bring a mat or towel. Related readings assigned.

Credit variable, maximum 2 units.

#### L29 Dance 200 Tutorial

Supplementary work at the low intermediate level in ballet and modern dance at times to be determined. Prerequisites: sophomore standing and permission of the Coordinator of the Dance Division. Credit to be determined in each case.

Credit variable, maximum 6 units. A&S: LA A&S IQ: HUM

#### L29 Dance 201E Theory and Technique of Modern Dance I

Fundamental theory and techniques of American modern dance. Studio work investigating the expressive potential of human movement and developing individual rhythmic and kinesthetic awareness, coordination, and breadth of movement vocabulary. Related reading and video expand on theory embodied in the class work and give an historical overview of modern dance in the U.S. Attendance at two to three performances required. Prerequisite: some previous dance training or permission of instructor.

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

#### L29 Dance 202 Theory and Technique of Modern Dance II

A course for students familiar with the basic concepts and technique of modern dance. Emphasis on expanding individual movement versatility with increasing difficulty of choreographic phrase materials. Related readings and videos, some focused on American postmodern dance. Attendance at two to three performances required. Prerequisite: Dance 201 or permission of the instructor.

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

**L29 Dance 203 Composition I**

Finding personal movement and transforming it into dance. Through a series of class projects the formal elements of composition are introduced. Prerequisite: Dance 201 or permission of the instructor; concurrent registration in a technique class required.

Credit variable, maximum 3 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

**L29 Dance 208 Composition and Technique**

Introduction to dance composition supported by two modern or ballet technique classes each week at the level appropriate to the individual student. Work on composition assignments outside of class is expected. Prerequisite: Dance 201E or permission of instructor.

Credit 4 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

**L29 Dance 211 Yoga and Relaxation Techniques II**

A more vigorous yoga discipline incorporating flow series and held postures. This class concentrates on the movement and distribution of energy throughout the body. Prior yoga experience recommended.

Credit 2 units. A&S: LA A&S IQ: HUM Art: HUM EN: H

---

**L29 Dance 212E Introduction to Theater Production**

An introductory study of the major elements involved with mounting a theatrical production. Utilizing guest speakers in both theater arts and theater studies, the course addresses such topics as scenic, costume, lighting and sound design; production management and procedures; and the history and culture of theatrical space and design. Students are required to serve as a crew member on one departmental production and attend productions of the Edison Theatre Ovations series and the Performing Arts Department.

Same as L15 Drama 212E

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

**L29 Dance 213 Improvisation I**

This course explores the process and art form of creative, expressive, spontaneous dance making. Students learn to move and respond simultaneously in the moment, developing skills of communication, observation, performance and composition in the language of movement. Open to dancers of all levels. Light reading; in class and out-of-class projects.

Credit 1 unit. A&S: LA Art: HUM BU: HUM

---

**L29 Dance 221 Fundamentals of Classical Ballet**

Designed for dancers with no previous training or knowledge of the development of ballet in America, a systematic introduction to the ballet technique, including traditional terminology, and introductory readings on American Ballet Theatre as a repository for classical and modern ballet repertoire of both American and European choreographers. Attention to basic anatomical concerns and body alignment as well as to the classical movement vocabulary. Prerequisite: none.

Credit 2 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

**L29 Dance 222 Fundamentals of Classical Ballet**

Designed for dancers with no previous training or knowledge of the development of ballet in America, a systematic introduction to the ballet technique, including traditional terminology, and introductory readings on New York City Ballet as a repository for the choreography of George Balanchine. Attention to basic anatomical concerns and body alignment as well as to the classical movement vocabulary.

Credit 2 units. A&S: LA A&S IQ: HUM BU: HUM

---

**L29 Dance 226 Tap Dance: Beginning**

Instruction in basic tap steps and rhythms. Development of varied tap dance styles. Primarily a studio course with some assigned reading. No prerequisite dance training required.

Credit 2 units. A&S: LA A&S IQ: HUM Art: HUM EN: H

---

**L29 Dance 2340 Classical Dances of India**

An introduction to the classical dance of South India in its cultural context. Students learn to appreciate the Bharata Natyam style and to perform its basic movements. May be repeated once for credit.

Credit 2 units. A&S: LA A&S IQ: HUM Art: HUM EN: H

---

**L29 Dance 257 Dance Theater Production**

Experience in technical production. Required stage work includes two studio dance productions supervised by faculty. Prerequisite: Dance 212E.

Credit 1 unit. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

**L29 Dance 272 Introduction to American Musical Theater**

Students will be taught basic interpretation of musical theater repertoire. The student will learn to analyze and perform songs with regard to melody and musical form. Acting techniques will be developed through lyric interpretation. Students will also be introduced to basic audition practice and etiquette.

Same as L15 Drama 272

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

---

**L29 Dance 280 Hip-Hop Jazz**

Hip-hop jazz and music video dance combine in this exciting, high-energy course. Students learn elements from each of these dance styles and focus on how they have been adapted into pop culture choreography. This course is designed for students with at least one year of dance training. It is expected that by the end of the course, students have a greater knowledge of dance and dance terminology and an increased ability to perform set choreography. Primarily a studio course; some related reading assigned.

Credit 2 units. Art: HUM

---

**L29 Dance 296 Internship**

Students may receive up to 3 units of credit for an approved internship with an organization where the primary objective is to obtain professional experience outside the classroom. Students must file a Learning Agreement with the Career Center, a faculty sponsor and the site supervisor. This must be approved by all three constituencies before proceeding. A final written project is agreed upon between the student and faculty sponsor before work begins, and is evaluated by the faculty sponsor at the end of the internship.

Credit variable, maximum 3 units. A&S: LA A&S IQ: HUM Art: HUM EN: H

---

**L29 Dance 297 Fundamentals of Jazz Dance**

This course introduces the basic principles and vocabulary of traditional jazz dance as influenced by American social dances and its relationship to the rise in popularity of jazz music. Both are unique to America and are rooted in African-American and European-American culture. Prerequisite: one year of training in ballet technique or modern dance.

Credit 2 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM EN: H

---

**L29 Dance 300 Jazz Dance II**

Intermediate to high intermediate work in jazz dance technique, including choreographic phrases emphasizing stylistic clarity and more complex rhythmic structure. Variable content; may be repeated once for credit in a subsequent semester. Preference given to students registering for the first time. Prerequisite: Dance 297 or permission of instructor.

Credit 2 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

**L29 Dance 301 Theory and Technique of Modern Dance III**

Technique and related concepts for the intermediate-level student. Greater emphasis on the ability to accurately replicate or individually interpret choreographic material. Related reading and video assignments on contemporary dance developments and attendance at two to three performances required. Variable content; may be repeated for credit in a subsequent semester. Prerequisites: Dance 202 and recommendation of the student's previous WU instructor and permission of the course instructor.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

---

**L29 Dance 3021 Theory and Technique of Modern Dance IV**

Continuation of Dance 301. Variable content; may be repeated for credit in a subsequent semester. Prerequisites: Dance 301 and recommendation of the student's previous WU instructor and permission of the course instructor.

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

**L29 Dance 303 Composition II**

A workshop for students with experience in choreography. Study of approaches to dance composition with related improvisation problems. Work outside of studio hours expected. Prerequisites: Dance 203 or 208 and permission of the instructor; concurrent registration in a technique course required.

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

**L29 Dance 305Z Music Resources for Dance**

Analysis of Western (Europe, America), world (Africa, India, Indonesia) and global popular musics. Emphasis on rhythm/form, style/genre, instrumentation and function/context. Basic music theory: notation, time signatures, subdivisions and polyrhythms. Major composers for dance (Lully, Tchaikovsky, Debussy, Ravel, Stravinsky, Cage, etc.). Introduction to percussion techniques for dance accompaniment using hand drums, drumset and hand-held instruments. Introduction to basic studio techniques including microphones, recording and editing equipment, and the use of synthesizer and drum machines. Prerequisites: for dance students at the intermediate or advanced level.

Credit 2 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

**L29 Dance 3071 19th- and 20th-Century Costume Design and History II**

Basic presentation of costume design from initial conception through final renderings. Development of drawing and painting techniques on design projects taken from plays set in the 19th and 20th centuries. History of costume and fashion silhouette will be illuminated through slide and video presentation of primary and secondary source materials.

Same as L15 Drama 3071

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

---

**L29 Dance 307A Stage Costumes: Prehistoric to 1800**

Basic presentation of costume design from conception through final renderings, development of drawing and painting techniques for the costume plate, and the history of stage costume in the principal periods and styles of drama from prehistoric periods through 1800.

Same as L15 Drama 307

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM

---

**L29 Dance 308 Dance Composition Projects**

Choreography juried by dance faculty or supervised choreography on themes assigned by the instructor or formulated by the student and approved by the instructor. Prerequisite: minimum of one semester course work in composition or permission of the instructor.

Credit variable, maximum 3 units. A&S: LA A&S IQ: HUM

---

**L29 Dance 309 Composition and Technique II**

Continuing work in dance composition supported by two technique classes each week at the level appropriate to the individual student. Work on composition assignments outside of class are expected. Prerequisite: Dance 201, Dance 203 or permission of instructor.

Credit 4 units. A&S: LA A&S IQ: HUM BU: HUM

---

**L29 Dance 310 Dance Improvisation II**

Continuation of Dance 213. Prerequisites: Dance 213 or permission of instructor; concurrent registration in a dance technique course at the 300 level or higher is required. May be repeated once for credit.

Credit 1 unit. A&S: LA A&S IQ: HUM BU: HUM

---

**L29 Dance 3101 Dance Improvisation: Spontaneous Composition & Performance Techniques**

Dance improvisation is a cumulative, integrative practice, applying every skill the performer can bring to the spontaneous present in which creative process and performance is simultaneously one and the same. In this course, students learn and create processes for improvising dance/performance art, with an aim toward developing integrated skill in: dance technique, intuitive movement invention, partnered dancing, collaborative process, performance presence/expressivity, and compositional form. Applications include improvising compositions for theatrical stage, site-specific venues, and for camera-based artistic mediums. Meets requirement for dance major. Prerequisite: Students must be qualified at 300 level in any genre of dance technique, or obtain special permission of instructor. This course is optimal for students who have previously taken Dance Composition (L29 203/208/303/309), and/or Contact Improvisation (U31 212), though they are not prerequisites. May be repeated once for credit.

Credit 1 unit. A&S: LA A&S IQ: HUM EN: H

---

**L29 Dance 311 Modern Dance and the African-American Legacy**

This course examines the works of several African-American choreographers and their contributions to the field of modern dance in America. These works, considered modern-day classics, depict important historical events and reveal cultural influences that people of African descent have impressed upon our society. Through the medium of dance aided by discussions, video and class reading assignments, the choreographers' works are analyzed for form, content and social relevance. Studio work includes technique to support learning the repertory. Prerequisite: one to two years training in modern, jazz or ballet. Credit 2 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM EN: H

---

**L29 Dance 312 Accompaniment Techniques for Dance**

A wide variety of percussion instruments and techniques are studied to determine what makes effective dance accompaniment. The course includes: examples and discussion of dance musics from Western and non-Western cultures; basic notation of rhythm and form; demonstrations of musical styles and discussion of social contexts. Students have opportunities to assist in accompanying modern dance classes. Minimum of two to three hours a week of individual practice and/or listening to recordings expected.

Credit 2 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM EN: H

---

**L29 Dance 315 Dance Spectrum**

Introductory consideration of dance as a human activity with culturally specific forms and functions. The course material is multicultural and organized both thematically and chronologically. Topics include: dance as ritual and art, dance and politics, dance as reflection and subversion of gender norms, classical Asian dance forms, and a brief overview of the development of Euro-American theatrical dancing, especially ballet and modern dance. Seminar format with emphasis on discussion based on reading and extensive video materials. Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: HUM

---

**L29 Dance 316E From Romantic to Postmodern Dance**

An overview of European and American theatre dance from the early nineteenth century to the present. Topics include: Isadora Duncan's work as transition and revolution, Orientalism in early modern dance and the Diaghilev Ballets Russes, the "reconstruction" of the dancer's body, gender issues in movement vocabulary, choreographic content and professional working conditions, the emergence of modernism and postmodernism in dance. Seminar format emphasizing discussion of reading and dance videos.

Credit 3 units. A&S: TH A&S IQ: HUM

---

**L29 Dance 319 Stage Lighting**

This course will place an emphasis in the aesthetic practice of lighting design through the understanding of technology as it relates to time and space. Early on the student will learn how to properly use and apply designer's tools and then through reading, research and experimentation explore the limitless boundaries of color and texture. This will culminate in a stage design in collaboration with directing or dance class. Upon completion of the course, the student will be able to speak eloquently on design theory and be able to move on to further design study in Advanced Lighting Design: L15 410.

Same as L15 Drama 310

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM EN: H

---

**L29 Dance 320 Alexander Technique**

Students of the Alexander Technique learn to recognize and change counter-productive habits. This skill enables dancers to take correction more effectively and to overcome stumbling blocks in technique and performance. Learning to allow natural postural reflexes to work improves length, balance and flexibility, providing a strong basis for dance technique. The result is the relief of excess tension, enhanced range of expression and the ability to have more choices about how one moves.

Credit 2 units.

---

**L29 Dance 321 Classical Ballet: Intermediate I**

A course designed for those with a solid foundation in the fundamentals of ballet technique. Related reading and video assignments; attendance at one to two ballet performances. Variable content; may be repeated in a subsequent semester. Prerequisites: permission of the instructor and B+ or better in Dance 221 and 222.

Credit 2 units. A&S: LA A&S IQ: HUM

---

**L29 Dance 3221 Classical Ballet: Intermediate II**

Special emphasis on the development of adagio, allegro and turn sequences. Variable content; may be repeated in a subsequent semester. Prerequisites: permission of instructor and B+ or better in Dance 221 and 222.

Credit 2 units. A&S: LA A&S IQ: HUM EN: H

---

**L29 Dance 3224 Intermediate Pointe Technique**

This course is designed for dancers with a basic foundation and understanding of pointe technique. The focus of the course is the strengthening of the overall presentation of the pointe technique while additionally developing the performance quality of the dancer. Variable content: may be repeated for credit in a subsequent semester. Corequisite registration in Dance 3221, 416 or 4291, and permission of the instructor.

Credit 1 unit. A&S: TH A&S IQ: HUM EN: H

---

**L29 Dance 323 Topics in Theater**

Explores a variety of special interest topics in theater. Consult the Course Listings.

Same as L15 Drama 321

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

**L29 Dance 328 Contemporary Dance and the Michio Ito Method**

Primarily a technique course based on the structure of the Michio Ito class. Work includes contemporary modern dance technique, some balletic barre work, improvisation, and elements of the Michio Ito method. The course explores similarities and contrasts between practice and concepts in contemporary modern dance training and the Ito method, which emphasizes development of musicality, coordination and performing presence. Short readings and video material and one final project with both written and movement components. Prerequisite: upper-level placement in modern dance, ballet, or jazz.

Credit 2 units. A&S: LA A&S IQ: HUM EN: H

**L29 Dance 331 Movement and Meaning: Dance in a Global Context**

This course introduces students to various approaches to studying dance in a humanities context. We will explore how people create meaning through dance and how dance, in turn, influences social norms, political institutions, aesthetic ideals and cultural practices. As we compare dance forms across the globe, we will also examine issues of race, gender, sexuality and ethnicity, analyzing how dance literally embodies identity. At the same time, we will discover how contemporary unequal power hierarchies bear on our designation of some dance forms as "Western" and others as "world" or "ethnic." Tensions around assessment of authenticity/creativity, adaptation/appropriation, agency/resistance, and cultural hierarchies such as vernacular/modern, shift with social and political hegemony and with the individual's position as insider or outsider relative to ethnic self-identification and traditional forms of expression. The first part of the course introduces the student to different methodological approaches to studying dance. Throughout the semester, the usual process of the course will be discussion of assigned reading and viewing and analyzing together dance videos shown in class. A few dance workshops will be included (for which no previous dance training is necessary). Required work includes a few short assignments, a take-home midterm exam, a project on a topic of student's choice but related to course focus, a 20-minute presentation of student's project/paper, and a final take-home exam.

Credit 3 units. A&S IQ: HUM

**L29 Dance 332 Mind-Body: Integral Practices**

The mind and the body are not only connected, they are a fundamental unity, always functioning in a coordinated state. Whether or not we coordinate them well or badly is a choice we make, whether we are conscious of choosing or not. Many so-called "physical" exercises, activities and arts suffer from a lack of adequate skills of sensation, attention, perception and conscious control. Conversely, many so-called "mental" activities lack adequate awareness of the bodily underpinnings of thought. Like a person learning to play a musical instrument, one's ability to coordinate the mental and physical aspects of Self toward one's best personal potential is a skill requiring study of strategies and techniques for good practice in "being well." Such ideas and methods are not "new age," but can be traced back through more than a century in the work of investigators such as F.M. Alexander, progressive educator John Dewey, anthropologist Raymond Dart, and many others. Through direct experience and related readings, this class introduces students to "somatic," or "integral" practices — activities that are inherently more effective at developing the aspects of Self in a coordinated and authentically holistic manner. We then learn to apply our understanding to all kinds of activities, both mental and physical, from chores to exercise, from arts to sports, from hobbies to vocations. Some kind of prior movement training (e.g., athletics, martial arts, dance, etc.) is preferable but not required.

Credit 2 units. A&S: LA A&S IQ: HUM EN: H

**L29 Dance 340 Ballet as Ethnic Dance and Classical Art**

This course examines the origins and major developments in ballet theory, technique and production practice, emphasizing their relationship to concepts of ethnicity and classicism. Issues considered include: the influence of classic Greco-Roman theater on the themes, aesthetic ideals and theorization of ballet; analysis of ethnic content not only in thematic material but in ballet movement vocabulary and training process; the

conscious reformulation in the United States of European ballet as an equally American art form; the expansion of Euro-American "classical ballet" in the work of Balanchine and Tudor; the appropriation of ballet by non-Western countries (such as China and Japan) and its impact on native dance genres; typical construction of the ballet dancer's body and movement, including gender definition, in relationship to a specific ethnic community context. Seminar format with lectures, discussion and video materials. Three five- to seven-page papers and final. No prerequisites.

Credit 3 units. A&S: TH, SD, WI A&S IQ: HUM, SD, WI BU: HUM

**L29 Dance 342 Critical Thinking in Western Theatrical Dance: Questioning Meets Creative Thinking and Collaboration**

This is a course designed to introduce the student to the intersections of creative, collaboration and critical thinking in Western Theatrical Dance. This course begins with a review of the literature on creativity, creative collaboration, the process of creating Western Theatrical Dance, and critical thinking. The course continues as an overview of these issues while presenting the intersection and interaction of these elements, which form the creative collaboration of Western Theatrical Dance. The students read from both texts and articles on creativity, creative collaboration, the process of creating Western Theatrical Dance in the 20th and 21st centuries, and critical thinking.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

**L29 Dance 343 West African Music and Dance in Context**

A West African dance course specifically focused on the Ivorian dance traditions of the Baule, Bete Dan, Lobi, Makinke, and Senufo peoples. The course addresses the relationship between music and dance as well as their social and cultural significance. Study of myths, art, costumes and masks as they relate to various dances and music is also included. A studio course with related reading material.

Credit 2 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM EN: H

**L29 Dance 372 Advanced American Musical Theatre**

This course will focus on developing the acting, singing and dancing techniques required for performing in musical theater. The student will develop group pieces and will participate in scenes that explore character within a musical theater context. The class will culminate in a workshop performance. Prerequisite: Drama 221 and permission of instructor, by audition. Repeatable 1 time for credit.

Same as L15 Drama 372

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

**L29 Dance 400 Dance Production Projects**

Students may receive credit for work on special dance-related production projects conceived by students and supervised by faculty. Contracts must be signed by the student, faculty supervisor, and the coordinator of Dance 400 before work on the project commences. Students should register for this course after work is completed. Prerequisite: permission of the dance faculty.

Credit variable, maximum 3 units. A&S: LA A&S IQ: HUM EN: H

---

**L29 Dance 401 Theory and Technique of Modern Dance V**

Emphasis on versatility in movement vocabulary and on more complex and intensive technical work with discussion of theory inherent in the studio work. Related reading and projects. Variable content; may be repeated for credit in a subsequent semester. Prerequisite: Dance 302 with recommendation of the student's previous 302 instructor and permission of the 401 instructor. Students with class conflicts may, with the permission of the instructor, enroll for 2 rather than 3 units. Credit variable, maximum 3 units. A&S: LA A&S IQ: HUM

---

**L29 Dance 4021 Theory and Technique of Modern Dance VI**

Continuation of Dance 401 with emphasis on more complex and intensive technical work. Variable content; may be repeated for credit in a subsequent semester. Prerequisite: Dance 401 with recommendation of the student's previous 401 instructor and permission of the 4021 instructor. Students with class conflicts may, with the permission of the instructor, enroll for 2 rather than 3 units. Credit variable, maximum 3 units. A&S: LA A&S IQ: HUM EN: H

---

**L29 Dance 403 Jazz III**

Jazz III is primarily a studio course based on traditional jazz with strong elements of ballet technique, hip-hop, Broadway and street jazz. The main focus of the class will be on increased technical proficiency and development as an expressive performer. The studio work will introduce exercises and movement phrases that challenge the dancer's skill level, and encourage a personal exploration that further enhances the dancer's individual expression and style. Studio work will be supported by individual research on the field of jazz dance. Prerequisites: High-Intermediate training in jazz dance technique and permission of the instructor. Credit 2 units. A&S: LA A&S IQ: HUM EN: H

---

**L29 Dance 404 Composition IV**

The exploration of choreographic problems in small and large ensembles. Prerequisite: completion of Dance 303, senior standing or permission of instructor. Previous or concurrent registration in Dance 401 or 4021 recommended. Credit variable, maximum 3 units.

---

**L29 Dance 4041 Composition III**

The exploration of choreographic problems for small and large ensembles. Prerequisite: senior standing or permission of instructor. Previous or concurrent registration in Dance 401 or 4021 recommended. Credit variable, maximum 3 units. A&S: LA A&S IQ: HUM

---

**L29 Dance 407 Topics in Dance Techniques**

Explores a variety of special interest topics in dance techniques. Consult the course listings for the semester topic. Credit variable, maximum 3 units. A&S IQ: HUM EN: H

---

**L29 Dance 413 Modern Dance and the African American Legacy II**

This course focuses on works by 2-3 renowned African-American choreographers. The selected choreographers are chosen for their contributions to the field of American modern dance based primarily on their explorations regarding the process and dynamics of building community — the sense of community as experienced through the lens of African-American

cultural values and aesthetics as it pertains to the creative process. Therefore, the course focuses on viewing the body as a site for the exchange of ideas concerning humanity. Students investigate these choreographers through learning excerpts of their choreography and choreographing personal responses, as well as through related readings, videos and independent research.

Credit 2 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

**L29 Dance 414 Advanced Stage Lighting**

An advanced-level continuation of Drama 310. Emphasis is placed on design aesthetics and their application in a laboratory setting. Students explore color theory, lightboard programming and design analyses as well as execute a variety of finished projects. These projects cover a wide range of production styles and performance venues. Prerequisite: permission of instructor. Same as L15 Drama 410

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

**L29 Dance 415 High Intermediate Ballet I**

A course designed as preparation for the advanced level. Emphasis on vocabulary review and individual technique assessment, including placement, movement quality and musicality. Related readings and video assignments; attendance at and critical analysis of one to two ballet performances. Variable content; may be repeated in a subsequent semester. Prerequisites: B+ or better in Dance 221, 222, 321, 322 and/or permission of instructor.

Credit 2 units. A&S: LA A&S IQ: HUM EN: H

---

**L29 Dance 416 High Intermediate Ballet II**

A course designed for the high intermediate dancer in preparation for Dance 4281/429. Emphasis on placement, movement quality and musicality. Related readings and projects supplement the classical vocabulary. Prerequisites: B+ or better in Dance 221, 222, 321, 322 and/or permission of instructor. Credit 2 units. A&S: LA A&S IQ: HUM

---

**L29 Dance 418 Variations in the Ballet**

Introduces classical choreography within various ballets. Prerequisites: Dance 321 or Dance 4281 with some pointe training, and permission of instructor. Credit 1 unit. A&S: LA A&S IQ: HUM

---

**L29 Dance 423 Pointe Technique**

Designed for dancers with a basic foundation in pointe work. Variable content; may be repeated for credit in a subsequent semester. Prerequisites: concurrent registration in Dance 321 or 4281 and B+ or better in Dance 221, 222, 321, 322 and/or permission of instructor. Credit 1 unit. A&S: LA A&S IQ: HUM

---

**L29 Dance 4234 Performing Knowledge: Arts Integration Pedagogy in Theory and Practice**

This course invites students interested in the performing arts to apply their talents to the K-12 classroom through a service-learning component that allows them to develop and implement an arts-integrated curriculum grounded in current research in the cognitive sciences. Divided into four units, the course begins with a survey of recent research in cognitive science that traces the effects of arts-related activities on brain development. The second unit builds upon that theoretical grounding, focusing

on a model of arts-integrated pedagogy developed through Harvard University's "Project Zero." The third and fourth units are practice-based, with students developing a lesson plan in a core subject area that incorporates the performing arts. Then — in consultation and collaboration with an Interchange artist-in-residence and a master teacher in the St. Louis or Normandy Public Schools — students implement their curriculum in a K-12 classroom, testing its efficacy as well as the theoretical assumptions upon which it is based. This course is open to all students across campus who have a strong interest and/or background in the arts, and who wish to explore opportunities in service learning.

Same as L15 Drama 4234

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

#### L29 Dance 424 Pointe Technique

Designed for dancers with a basic foundation in pointe work. Concurrent registration in Dance 322 or 4291 and permission of instructor.

Credit 1 unit. A&S: LA A&S IQ: HUM

---

#### L29 Dance 426 Performing the Political in American Dance

This course is an exploration of the politics of performance and the performance of politics through the lens of American dance in the 20th and 21st centuries. Through readings, screenings and discussion, we will examine the ways in which American dance developed against and alongside political movements in the United States, particularly ones concerning nationalism, race, gender and human rights. We will also investigate how the lens of dance and choreography offers an expansive means to conceptualize political questions of citizenship and social protest, broadening our understanding of embodied performance. Guided by several key philosophical texts, our class will focus on concepts necessary to examining the convergence of performance and politics (such as representation, ritual, spectacle, body, mimesis, propaganda, etc.) while also paying special attention to the politics of funding and censorship that has governed the creation and presentation of dance in the United States. No dance experience is necessary.

Credit 3 units. A&S IQ: HUM, LCD, WI EN: H

---

#### L29 Dance 4281 Classical Ballet III

Designed for dancers with a solid foundation in beginning and intermediate ballet technique. Related reading, research paper/discussion, video assignments; attendance at one to two ballet performances. Variable content; may be repeated for credit in a subsequent semester. Prerequisites: permission of instructor and B+ or better in Dance 3221 and Dance 415 or Dance 416.

Credit 2 units. A&S: LA A&S IQ: HUM

---

#### L29 Dance 4291 Classical Ballet IV

A course designed for dancers with a solid foundation in beginning and intermediate ballet technique. Variable content; may be repeated for credit in a subsequent semester. Prerequisite: permission of instructor, and B+ or better in 3221 and 415 or 416.

Credit 2 units. A&S: LA A&S IQ: HUM EN: H

---

#### L29 Dance 446 The Japanese Theatre

An investigation, using English materials, of the major developments and forms of the Japanese theater, from Noh and its antecedents to the rise of a modern drama. In this course we are less concerned with the performative aspects of theatrical

arts (though these will be introduced via videos) than with the ways in which dramatic texts influenced and borrowed from the literary tradition. Readings from major theatrical texts, secondary studies on Japanese theater, and literary sources. Prerequisite: junior standing or permission of instructor.

Same as L05 Japan 446

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Art: HUM

---

#### L29 Dance 457 Dance Repertory

Under the direction of an experienced choreographer, students rehearse and perfect repertory concert dances. All students perform or understudy the choreographies. May be repeated for credit. Enrollment by audition. Prerequisite: concurrent registration in a technique class required.

Credit 1 unit. A&S: LA A&S IQ: HUM

---

#### L29 Dance 458 Dance Repertory

Under the direction of an experienced choreographer, students rehearse and perfect repertory concert dances. May be repeated once for credit. Enrollment by audition. Concurrent registration in a technique class is required.

Credit 1 unit. A&S: LA A&S IQ: HUM

---

#### L29 Dance 478 The Eye of the Mask: A Multicultural History of the Theater through Mask Making and Design

An exploration of the history of masks used in the theater. Topics will include drama of ancient Greece, the ancient No theater of Japan, the Italian theater of commedia dell'arte, the dance drama of Bali, the Venetian and Mardi Gras Carnival celebrations, and ritual and ceremonial masks of other cultures — Africa, Latin America and Asia — using the instructor's extensive collection of masks as primary research subjects. Projects include: an in-class presentation and research paper with 3-5 fully realized mask designs to be constructed within class and at an additional lab time to be discussed on the first day.

Same as L15 Drama 478

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

---

#### L29 Dance 479 Fundamentals of Sound Design

Encompassing both creative and technical aspects of sound in the performing arts, the course gives theoretical knowledge of, and practical experience in the following areas: fundamental rules of physics and electronics related to sound, use of standard digital recording studio equipment, "training" of the ear and basic techniques of sound montage. Students are expected to participate in a variety of conceptual and research oriented exercises as well as complete several lab projects. Sound-related work on Performing Arts Department productions may be required. Prerequisite: Drama 212 and permission of instructor.

Same as L15 Drama 479

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

#### L29 Dance 493 Senior Project

Specialized project in a selected area in dance. The student works individually under the supervision of a faculty member. Prerequisite: permission of the coordinator of the Dance Division. Credit variable, maximum 3 units.

### L29 Dance 499 Study for Honors

An honors thesis or performance and thesis project designed by the student, and supervised and assessed by a faculty committee. Prerequisites: senior standing, grade point of 3.65, and 3.65 in dance classes, and permission of the coordinator of the dance division.

Credit variable, maximum 6 units.

### L29 Dance 4990 Independent Work

Prerequisite: senior standing and permission of the coordinator of the dance division.

Credit variable, maximum 10 units.

## Drama

Students may select drama as a major through the Performing Arts Department (p. 705). This major combines the historical, cultural, theoretical and literary study of theater and performance with a full array of theater production courses, including acting, directing, performance art, design (set, costume, lighting, sound) and playwriting. The Performing Arts Department strongly believes in the mutually beneficial relationship between the study and the practice of theater. A major in drama provides an academically rigorous course of study — with a strong grounding in theater history, dramatic literature, performance studies and dramatic theory — that also develops students' knowledge of theater by means of practice.

The rigorous three-semester Theater Culture Studies sequence provides a solid background in history, literature and performance, and students take an additional three courses in theater and performance studies. Within theater arts, students choose courses in acting, directing, playwriting or design. Our theater arts courses, regularly drawing from playwrights such as Shakespeare, Chekhov and Beckett, are based on a liberal arts, rather than a conservatory, model.

We also offer a special study abroad program that can be credited toward the major. Since 1991, we have been holding a national summer program at Shakespeare's Globe in London, which consists of a 3-unit course on acting Shakespeare and a 3-unit course on Shakespeare studies, in addition to several master classes taught by Globe personnel.

**Website:** http://pad.artsci.wustl.edu

## Faculty

For a list of affiliated faculty, please visit the Performing Arts faculty (p. 706) page.

## Majors

### The Major in Drama

**Total units required:** 36

Total number of courses required: 12

These requirements apply to students matriculating in 2016 and later. Requirements for students who matriculated before 2016 can be found on the Prior Bulletins (<http://bulletin.wustl.edu/prior>) page.

### Theater Arts (TA) Requirements

**Five courses overall**

| Code   | Title                              | Units |
|--|------------------------------------|-------|
| Drama 212E   | Introduction to Theater Production | 3     |
| Drama 240E   | Acting I: Fundamentals of Acting   | 3     |
| Drama 343  | Fundamentals of Directing          | 3     |
| One additional upper-level course, 300-level or above, in Theater Arts |                                    |       |

- Plus one of the following:

| Code  | Title       | Units |
|---|-------------|-------|
| Drama 227   | Playwriting | 3     |
| or an introductory design course (as approved by department adviser or DUS) |             |       |

### Theater and Performance Studies (TPS) Requirements

**Five courses overall**

- Three courses in the Theater Culture Studies sequence. It is strongly recommended that these courses be taken in order:

| Code       | Title   | Units |
|------------|---|-------|
| Drama 228C | Theater Culture Studies I: Antiquity to Renaissance         | 3     |
| Drama 229C | Theater Culture Studies II: From Renaissance to Romanticism | 3     |
| Drama 365C | Theater Culture Studies III: Melodrama to Modernism         | 3     |

- Two upper-level electives, 300-level or above. It is strongly recommended that one of these two courses be a writing-intensive course taken in the junior year.

### Two Additional Courses

- One upper-level course (300 or above) in either TA or TPS
- The senior drama capstone, team-taught by one TA and one TPS faculty member, taken in the fall semester of the senior year: Drama 4452

## Minors

### The Minor in Drama

Units required: 18

#### Required courses:

| Code       | Title                              | Units |
|------------|------------------------------------|-------|
| Drama 212E | Introduction to Theater Production | 3     |

6 units from the Theater Culture Studies Sequence:

| Code       | Title   | Units |
|------------|---|-------|
| Drama 228C | Theater Culture Studies I: Antiquity to Renaissance         | 3     |
| Drama 229C | Theater Culture Studies II: From Renaissance to Romanticism | 3     |
| Drama 365C | Theater Culture Studies III: Melodrama to Modernism         | 3     |

#### Elective courses:

At least 9 credit units at the 300 level or above. No more than 3 units may be production credits.

### The Minor in World Music, Dance and Theater

For the world music, dance and theater minor, visit the Performing Arts (p. 707) page.

## Courses

Visit online course listings to view semester offerings for L15 Drama (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L15&crslvl=1:4>).

#### L15 Drama 115 Freshman Seminar: What is Art?

Great works of literature, cinema, painting, drama, music and dance provide us with new, provocative, and sometimes completely unexpected methods of perceiving reality. In this Freshman Seminar, we examine the meanings of art by looking at works which have radically altered or challenged the ways in which people saw the world around them — along with works which are doing the same today. In addition to analyzing texts in a classroom setting, this course also incorporates meetings with artists and directors practicing their crafts, and attendance at theatrical performances and museums both on and off campus. From Sophocles and Shakespeare to the most challenging avant-garde performances of today, "What is Art?" forces us to both question and understand how art makes us human — and how it complicates and enriches our understanding of the world. Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

#### L15 Drama 120 Freshman Seminar: Race and Performance

What does it mean to "act black"? What about "acting Jewish"? This course looks at performances of racial and ethnic identity, mostly in the United States, mostly in the 20th century. We examine novels (such as Nella Larsen's *Passing*), plays (such

as Anna Deavere Smith's *Fires in the Mirror*), and performances of everyday life (such as "Cowboys and Indians") to investigate the performance of race in public. Once we begin to explore the social and cultural performance of race, will it all turn out to be "only" an act?

#### L15 Drama 135 Freshman Seminar Ideation: Idea Generation

Ideation exists at all phases of a creative process: brainstorming, idea generation, innovation, prototyping, development and actualization. But Ideation is less like a line and more like a loop from observing to reflecting to making — and back again. It is a rarely understood but essential part of any creative or design process. Through collaboration and conversations with classmates, readings on the topic and group exercises, Ideation is a course that strives to define and demystify what we mean by "creativity," help students identify their creative strengths and weaknesses, encourage artistic experimentation of new ideas, establish methods of design thinking and make it clear that collaboration among varied backgrounds and disciplines is the key to coming up with creative solutions for complex problems. Successful companies such as IDEO led by visionaries in the form of Tim Brown and David Kelley have pioneered the notion of Design Thinking. "Design thinking" is defined as "the ability to combine empathy for the context of a problem, creativity in the generation of insights and solutions, and rationality to analyze and fit solutions to the context." This course encourages students to explore their collaborative talents in new ways that they find apply to virtually any discipline and career path: from A to Z.

#### L15 Drama 175 Designing Creativity: Innovation Across Disciplines

Via a series of lectures from prominent thinkers and practitioners in the areas of medicine, neuroscience, law, engineering, architecture, human-centered design, business, stage design, and the performing arts, Designing Creativity is a course that covers the study and practice of the creative process across many disciplines. From "Ah-ha" epiphanies to slow-developing discoveries, the creative process is employed by innovators and artists in virtually every corner of the globe. In this course, we explore the study of those processes by hearing from creatives in many fields with practice of those techniques via a lab component that allows students to explore the development of innovative ideas in collaborative teams followed by project presentations to core faculty and classmates.
