The course considers the construction of specific orthonormal bases for the Hilbert spaces  $L^2(\mathbb{R}^n)$ . We look at the Fourier series bases in  $L^2([0,1])$ , which are then used for the construction of two types of orthonormal bases in the more general setting of  $\mathbb{R}^n$ : wavelets and Gabor bases. Some aspects of extensions to other Hilbert spaces are considered. In general, these bases are used to analyze "signals" or functions on  $\mathbb{R}^n$  having either real or complex values, and they should be "efficient" in some sense. We look at the types of efficiency that are most useful in several types of application in sciences and engineering. Prerequisites: Math 233, 309, and 310, or permission of instructor. In particular, students are expected to understand derivatives and Riemann integration; topics related to the more general Lebesgue integral are discussed as needed. Credit 3 units. A&S: NS A&S IQ: NSM

---

**L24 Math 407 An Introduction to Differential Geometry**

A study of properties of curves and surfaces in 3-dimensional Euclidean space. The course is essentially a modern recounting of a seminal paper of Gauss. Prerequisites: Math 233 and Math 309.

Credit 3 units. A&S: NS

---

**L24 Math 408 Nonparametric Statistics**

Statistical methods that make few or no assumptions about the data distribution. Permutation tests of different types; nonparametric confidence intervals and correlation coefficients; jackknife and bootstrap resampling; nonparametric regressions. If there is time, topics chosen from density estimation and kernel regression. Short computer programs will be written in a language like R or C. Prerequisites: CSE 131 or 200, Math 3200 and Math 493, or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L24 Math 410 Introduction to Fourier Series and Integrals**

The basic theory of Fourier series and Fourier integrals including different types of convergence. Applications to certain differential equations. Prerequisites: Math 233 and Math 309.

Credit 3 units. A&S: NS A&S IQ: NSM

---

**L24 Math 4111 Introduction to Analysis**

The real number system and the least upper-bound property; metric spaces (completeness, compactness and connectedness); continuous functions (in  $\mathbb{R}^n$ ; on

compact spaces; on connected spaces);  $C(X)$  (pointwise and uniform convergence; Weierstrass approximation theorem); differentiation (mean value theorem; Taylor's theorem); the contraction mapping theorem; the inverse and implicit function theorems. Prerequisite: Math 310 or permission of instructor. Credit 3 units. A&S: NS, QA A&S IQ: NSM

---

**L24 Math 4121 Introduction to Lebesgue Integration**

Riemann integration; measurable functions; measures; Lebesgue measure; the Lebesgue integral; integrable functions;  $L^p$  spaces; modes of convergence; decomposition of measures; product measures. Prerequisite: Math 4111 or permission of the instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

**L24 Math 415 Partial Differential Equations**

Introduction to the theory of PDE's with applications to selected classical problems in physics and engineering. Linear and quasilinear first-order equations, derivation of some of the classical PDE's of physics, and standard solution techniques for boundary and initial value problems. Preliminary topics such as orthogonal functions, Fourier series and variational methods introduced as needed. Prerequisites: Math 217 and Math 309, or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L24 Math 416 Complex Variables**

Analytic functions, elementary functions and their properties, line integrals, the Cauchy integral formula, power series, residues, poles, conformal mapping and applications. Prerequisites: Math 318, Math 308 or ESE 317, or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L24 Math 4171 Topology I**

An introduction to the most important ideas of topology. Course includes necessary ideas from set theory, topological spaces, subspaces, products and quotients, compactness and connectedness. Some time is also devoted to the particular case of metric spaces (including topics such as separability, completeness, completions, the Baire Category Theorem, and equivalents of compactness in metric spaces). Prerequisite: Math 4111 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM

---

**L24 Math 418 Introduction to Topology and Modern Analysis II**

Continuation of Math 417. May include some algebraic topology (depending on material covered in 417). Prerequisite: Math 417.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L24 Math 4181 Topology II**

A continuation of Math 4171 featuring more advanced topics in topology. The content may vary with each offering. Prerequisite: Math 4171, or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM

---

**L24 Math 420 Experimental Design**

A first course in the design and analysis of experiments, from the point of view of regression. Factorial, randomized block, split-plot, Latin square, and similar design. Prerequisite: CSE 131 or 200, Math 3200, or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

---

**L24 Math 429 Linear Algebra**

Introduction to the linear algebra of finite-dimensional vector spaces. Includes systems of equations, matrices, determinants, inner product spaces, spectral theory. Prerequisite: Math 310 or permission of instructor. Math 309 is not an explicit prerequisite but students already should be familiar with such basic topics from matrix theory as matrix operations, linear systems, row reduction and Gaussian elimination. Material on these topics in early chapters of the text are covered very quickly.

Credit 3 units. A&S: NS, QA A&S IQ: NSM Art: NSM

---

**L24 Math 430 Modern Algebra**

Introduction to groups, rings and fields. Includes permutation groups, group and ring homomorphisms, field extensions, connections with linear algebra. Prerequisite: Math 429 or permission of the instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L24 Math 434 Survival Analysis**

Life table analysis and testing, mortality and failure rates, Kaplan-Meier or product-limit estimators, hypothesis testing and estimation in the presence of random arrivals and departures, and the Cox proportional hazards model. Techniques of survival analysis are used in medical research, industrial planning and the insurance industry. Prerequisites: CSE 131 or 200, Math 309 and 3200, or permission of the instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L24 Math 4351 Number Theory and Cryptography**

The course covers many of the basics of elementary number theory, providing a base from which to approach modern algebra, algebraic number theory and analytic number theory. It also introduces one of the most important real-world applications of mathematics, namely the use of number theory and algebraic geometry in public key cryptography. Topics from number theory involve divisibility (Euclidean algorithm, primes, Fundamental Theorem of Arithmetic), congruences (modular arithmetic, Chinese Remainder Theorem, primality testing and factorization). Topics from cryptography include RSA encryption, Diffie-Hellman key exchange and elliptic curve cryptography. Topics about algebraic numbers may be included if time permits. Prerequisites: Math 233, 309 and 310 (or permission of instructor).

Credit 3 units. A&S: NS A&S IQ: NSM

---

**L24 Math 436 Algebraic Geometry**

Introduction to affine and projective algebraic varieties; the Zariski topology; regular and rational mappings; simple and singular points; divisors and differential forms; genus; the Riemann-Roch theorem. Prerequisites: Math 318, Math 429 and Math 430, or permission of the instructor.

Credit 3 units. A&S: NS Art: NSM

---

**L24 Math 439 Linear Statistical Models**

Theory and practice of linear regression, analysis of variance (ANOVA) and their extensions, including testing, estimation, confidence interval procedures, modeling, regression diagnostics and plots, polynomial regression, collinearity and confounding, model selection, geometry of least squares, etc. The theory will be approached mainly from the frequentist perspective, and use of the computer (mostly R) to analyze data will be emphasized.

Prerequisite: CSE 131 or 200, Math 3200 and a course in linear algebra (such as Math 309 or 429), or permission of instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L24 Math 4392 Advanced Linear Statistical Models**

Review of basic linear models relevant for the course; generalized linear models including logistic and Poisson regression (heterogeneous variance structure, quasiliikelihood); linear mixed-effects models (estimation of variance components, maximum likelihood estimation, restricted maximum likelihood, generalized estimating equations), generalized linear mixed-effects models for discrete data, models for longitudinal data, optional multivariate models as time permits. The computer software R is used for examples and homework problems. Implementation in SAS is mentioned for several specialized models. Prerequisites: Math 439 and a course in linear algebra (such as Math 309 or Math 429), or consent of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

**L24 Math 449 Numerical Applied Mathematics**

Computer arithmetic, error propagation, condition number and stability; mathematical modeling, approximation and convergence; roots of functions; calculus of finite differences; implicit and explicit methods for initial value and boundary value problems; numerical integration; numerical solution of linear systems, matrix equations and eigensystems; Fourier transforms; optimization. Various software packages may be introduced and used. Prerequisites: CSE 200 or CSE 131 (or other computer background with permission of the instructor); Math 217 and Math 309.

Credit 3 units. A&S: NS A&S IQ: NSM

---

**L24 Math 450 Topics in Applied Mathematics**

Topic may vary with each offering of the course. Prerequisites: CSE 131 (or 200) and Math 449, or permission of the instructor. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L24 Math 456 Topics in Financial Mathematics**

An introduction to the principles and methods of financial mathematics, with a focus on discrete-time stochastic models. Topics include no-arbitrage pricing of financial derivatives, risk-neutral probability measures, the Cox-Ross-Rubenstein and Black-Scholes-Merton options pricing models, and implied volatility. Prerequisites: Math 233 and Math 3200 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM

---

**L24 Math 459 Bayesian Statistics**

Introduces the Bayesian approach to statistical inference for data analysis in a variety of applications. Topics include: comparison of Bayesian and frequentist methods, Bayesian model specification, choice of priors, computational methods such as rejection sampling, and stochastic simulation (Markov chain Monte Carlo), empirical Bayes method, hands-on Bayesian data analysis using appropriate software. Prerequisites: Math 493 and either Math 3200 or 494; or permission of the instructor. Some programming experience such as CSE 131 is also helpful (consult with the instructor).

Credit 3 units. A&S: NS A&S IQ: NSM

---

**L24 Math 460 Multivariate Statistical Analysis**

Review of basic random vectors and linear algebra relevant for the course; sample mean, variance and correlation as matrix

operations and their geometric interpretation; multivariate normal distributions; sampling distributions and properties of sample mean and variance; Hotelling's  $T^2$  and likelihood ratio tests; one-way MANOVA; two-way MANOVA; multivariate regression models; principal components analysis; factor analysis; discrimination and classification; clustering and grouping. The computer software R will be used for examples and homework problems. Implementation in SAS will be mentioned for several specialized analyses. Prerequisites: CSE 131 or 200, Math 493, Math 439, and a course in linear algebra (e.g., Math 309 or 429), or consent of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM

---

#### L24 Math 461 Time Series Analysis

Time series data types; autocorrelation; stationarity and nonstationarity; autoregressive moving average models; model selection methods; bootstrap confidence intervals; trend and seasonality; forecasting; nonlinear time series; filtering and smoothing; autoregressive conditional heteroscedasticity models; multivariate time series; vector autoregression; frequency domain; spectral density; state-space models; Kalman filter. Emphasis on real-world applications and data analysis using statistical software. Prerequisites: Math 493 and either Math 3200 or 494; or permission of the instructor. Some programming experience may also be helpful (consult with the instructor).

Credit 3 units. A&S IQ: NSM

---

#### L24 Math 469 Linear Algebra in Combinatorics

Many problems in combinatorics can be solved in surprising ways using linear algebra. The course will consider several types of problems to which linear algebra methods can be applied, reviewing some requisite ideas from linear algebra (and perhaps learning some new ones) along the way. Prerequisites: Math 310 and Math 429, or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM

---

#### L24 Math 470 Graph Theory

Graph theory entails aspects of counting theory, combinatorics, algebra, geometry and even some analysis. This course presents many of the most basic concepts and then develops several modern applications. Topics include fundamental results and uses of graphs, Euler's theorem, the adjacency matrix, eigenvalues and the Laplacian, isoperimetric problems, paths and flows, randomness in graphs, symmetric graphs, subgraphs, Harnack inequalities, Sobolev inequalities. Prerequisites: Math 310 and Math 318 (or equivalent background with permission of the instructor).

Credit 3 units. A&S: NS A&S IQ: NSM

---

#### L24 Math 475 Statistical Computation

An introduction to programming in SAS (Statistical Analysis System) and applied statistics using SAS: contingency tables and Mantel-Haenszel tests; general linear models and matrix operations; simple, multilinear, and stepwise regressions; ANOVAs with nested and crossed interactions; ANOVAs and regressions with vector-valued data (MANOVAs). Topics chosen from discriminant analysis, principal components analysis, logistic regression, survival analysis, and generalized linear models. Prior acquaintance with SAS at the level introduced in Math 3200 is assumed. Prerequisites: CSE 131 or 200, Math 3200 and 493 (or 493 concurrently), or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L24 Math 481 Group Representations

Ideas and techniques in representation theory of finite groups and Lie groups.

Credit 3 units. A&S: NS

---

#### L24 Math 493 Probability

Mathematical theory and application of probability at the advanced undergraduate level; a calculus-based introduction to probability theory. Topics include the computational basics of probability theory, combinatorial methods, conditional probability including Bayes' theorem, random variables and distributions, expectations and moments, the classical distributions, and the central limit theorem. Prerequisites: Math 318 or Math 308 and permission of the instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L24 Math 494 Mathematical Statistics

Theory of estimation, minimum variance and unbiased estimators, maximum likelihood theory, Bayesian estimation, prior and posterior distributions, confidence intervals for general estimators, standard estimators and distributions such as the Student-t and F-distribution from a more advanced viewpoint, hypothesis testing, the Neymann-Pearson Lemma (about best possible tests), linear models, and other topics as time permits. Prerequisites: CSE 131 or 200, Math 3200 and 493, or permission of the instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L24 Math 495 Stochastic Processes

Content varies with each offering of the course. Past offerings have included such topics as random walks, Markov chains, Gaussian processes, empirical processes, Markov jump processes and a short introduction to martingales, Brownian motion and stochastic integrals. Prerequisites: Math 318 and Math 493, or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L24 Math 496 Topics in Statistics

Topic varies with each offering.

Credit 3 units. A&S: NS Art: NSM

---

#### L24 Math 496A Topics in Algebra

Topic varies with each offering.

Credit 3 units. A&S: NS A&S IQ: NSM

---

#### L24 Math 497 Topics in Mathematics

Selected topics in undergraduate mathematics.

Credit 1 unit. A&S: NS Art: NSM

---

#### L24 Math 499 Study for Honors

Prerequisites: junior or senior standing, eligibility for honors work in mathematics and permission of the department's director of undergraduate studies.

Credit 3 units. Art: NSM

---

## Medical Humanities

The minor in medical humanities draws on courses from a variety of departments and programs including art history, classics, history, languages and literature, music,

philosophy, and gender and sexuality studies. It is available to undergraduates beginning with the Class of 2018; prospective minors are invited to apply ([http://cenhum.artsci.wustl.edu/undergraduate/medical\\_humanities/application](http://cenhum.artsci.wustl.edu/undergraduate/medical_humanities/application)) toward the end of each fall and spring semester. The minor is housed in the Washington University Center for the Humanities.

The minor approaches health, disease and medical care as culturally embedded human experiences that vary across time and place. In addition to exploring health, disease and medical care as core human experiences, the program of study is designed to provide a solid grounding in the textual-historical approach essential to all humanities scholarship. The minor combines disciplinary diversity with thematic unity to engage students with a set of tightly related "big" topics and issues. These include the contested meanings of health and disease; the ethical dimensions of medicine; illness narratives; debates over health and development; the role of medicine in war, empire and nation building; the relationship between religion and medicine; exchange and friction between biomedicine and other healing traditions; and the burden of disease as it relates to gender, race and class.

Medical Humanities aspires to instill values shared by all humanities disciplines: to appreciate multiple worlds and viewpoints, to communicate clearly and gracefully, and to read and think critically. Students will emerge from the minor able to apply the insights and critical methods of literature, philosophy, history and the arts to subjects often left solely to the natural and social sciences. Its goal is to demonstrate the enduring relevance of humanistic inquiry to understanding a basic realm of human experience.

(History)

## Majors

Medical humanities is an interdepartmental minor; Washington University does not offer an independent major in medical humanities.

## Minors

### The Minor in Medical Humanities

Units required: 18

At least one gateway course (3 units) is required for the minor. These include:

| Code         | Title                               | Units |
|--------------|-------------------------------------|-------|
| MedH 130     | The Art of Medicine                 | 3     |
| History 1640 | Health and Disease in World History | 3     |
| MedH 233F    | Biomedical Ethics                   | 3     |

An additional 15 units of Medical Humanities courses are required to complete the minor: at least 12 of these units must be core courses, designated by the "CFH MH" attribute, while the remaining three credits can come from either the core or affiliate lists (below). At least 9 units of core courses must be at the 300 level or above. Core courses include the gateway courses, as well as:

| Code         | Title  | Units |
|--------------|--|-------|
| MedH 126     | Chinese for Medical Purposes   | 3     |
| Hist 2216    | Books and Bodies (U16)   | 1     |
| Phil 3001    | Philosophy of Medicine   | 3     |
| History 301R | Historical Methods — European History (when offered as The Black Death and the Plague in Europe) | 3     |
| MedH 3031    | Music and Healing  | 3     |
| WGSS 3041    | Making Sex and Gender: Understanding the History of the Body                                     | 3     |
| MedH 3044    | Humors, Pox, and Plague: Medieval and Early Modern Medicine                                      | 3     |
| History 3067 | Current Topics in the History of Medicine  | 3     |
| MedH 310     | From Hysteria to Hysterectomy: Women's Health Care in America                                    | 3     |
| MedH 3112    | Exposition: Writing and Medicine   | 3     |

|               |  |   |
|---------------|--|---|
| IS 326        | The Doctor Is In: Anton Chekhov and Narrative Medicine (U43)                               | 3 |
| MedH 353      | Medical Spanish  | 3 |
| MedH 360      | Trans Studies  | 3 |
| Phil 366      | Art and the Mind-Brain   | 3 |
| History 3672  | Medicine, Healing and Experimentation in the Contours of Black History                     | 3 |
| ELit 370      | The Writing and Representation of Pain (U65)   | 3 |
| MedH 3801     | Ancient Greek and Roman Medicine   | 3 |
| MedH 391      | Literature and Medicine  | 3 |
| MedH 4033     | Culture, Illness, and Healing in Asia  | 3 |
| MedH 418      | Sexuality and Gender in East Asia  | 3 |
| Classics 4361 | Topics in Ancient Studies (when offered as Science and Medicine in Ancient Greek and Rome) | 3 |
| French 447    | The Medieval Literary Arts (when offered as Body & Disability in Medieval Literature)      | 3 |
| Drama 456     | A Madman in the Theater: The History of Insanity on Stage from Sophocles to Shaffer        | 3 |
| Classics 4647 | Ancient Madness  | 3 |
| MedH 4885     | Advanced Seminar: Medicine, Disease, and Empire  | 3 |
| MedH 4990     | Advanced Seminar: History of the Body  | 3 |
| History 49CJ  | Advanced Seminar: Medicine on the Frontiers  | 3 |

**Please note:** The 9 credits of advanced medical humanities core courses (at the 300 level or above) must also come from at least **two** of six different disciplinary categories: Classics & Art History; History; Languages/Literature/Culture; Performing Arts & Music; Philosophy; and Women, Gender, and Sexuality Studies. Core courses may also require additional prerequisites within their home departments or programs.

**Up to 3 units of affiliate courses from complementary disciplines** in the sciences and social sciences (designated by the "CFH MHA" attribute) may be applied to the minor. These include:

| Code        | Title  | Units |
|-------------|--|-------|
| AMCS 226    | Sociological Approaches to American Health                       | 3     |
| Anthro 3201 | Gender, Culture and Madness                                      | 3     |
| Anthro 3283 | Introduction to Global Health                                    | 3     |
| Anthro 3310 | Health, Healing and Ethics: Introduction to Medical Anthropology | 3     |

|             |  |   |
|-------------|--|---|
| Anthro 3620 | Anthropological Perspectives on the Fetus  | 3 |
| Anthro 3626 | Adventures in Nosology: The Nature and Meaning of Disease                            | 3 |
| Psych 399   | Living, Dying and Death: A Biopsychosocial Approach to Understanding the End of Life | 3 |

## Additional Information

The medical humanities minor may be declared beginning with the Class of 2018. Students are invited to apply ([http://cenhum.artsci.wustl.edu/undergraduate/medical\\_humanities/application](http://cenhum.artsci.wustl.edu/undergraduate/medical_humanities/application)) at the end of spring semester of their freshman year or any time thereafter. Application deadlines typically fall several weeks before the end of the fall and spring semesters (i.e., mid- to late November and April). Brief, informal interviews with prospective minors will be held at the end of each semester, usually during reading period.

The most up-to-date list of medical humanities courses and medical humanities affiliate courses can be found by searching Washington University Course Listings for the "CFH MH" and "CFH MHA" attributes, or by consulting the lists online ([http://cenhum.artsci.wustl.edu/undergraduate/medical\\_humanities/requirements](http://cenhum.artsci.wustl.edu/undergraduate/medical_humanities/requirements)).

## Courses

Medical Humanities began listing courses under the L85 MedH designation in spring 2017; we are adding new courses to that designation as they are offered, but many of our core courses are not yet represented in the list below. For a more complete list of Medical Humanities courses, please consult the Minors section of this page or search Course Listings (<https://acadinfo.wustl.edu/Courselistings/Semester/Search.aspx>) for the CFH MH (Medical Humanities) and CFH MHA (Medical Humanities: Affiliate) attributes.

### L85 MedH 126 Chinese for Medical Purposes

This course is the continuation of Beginning Chinese taught in the fall at the Shanghai Fudan program. The spring course is targeted specifically to pre-medicine and/ or health care students who have studied at the Shanghai Fudan program in the fall. Students without the Fudan experience can also enroll after language evaluation. Prerequisites: L04 101D, L04 117F or the equivalent.

Same as L04 Chinese 126

### L85 MedH 130 The Art of Medicine

This interdisciplinary, cross-school course at the intersection of the humanities and medicine offers students a singular encounter with the changing art and craft of medicine from ancient times to the present day. The course highlights transformational moments in the chronological history of medicine. It engages a variety of texts, including primary works and scholarship in the history of medicine as well as artworks and literary and dramatic narratives that represent the body,

disease and healing care. A principal aim is for students to learn to see medicine as a social practice deeply implicated in the beliefs and struggles of particular cultural and historical contexts. Collaborating faculty come from the School of Engineering, the Washington University School of Medicine, the Sam Fox School of Design & Visual Arts and the School of Arts & Sciences. This course is for freshmen only.

### L85 MedH 233F Biomedical Ethics

A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.

### L85 MedH 3031 Music and Healing

In this course, we broadly consider issues of music and healing, drawing from the fields of medical ethnomusicology, medical anthropology, music therapy, and psychology. Our case studies are multi-sited, as we interrogate musical healings and healing music from diverse global and historical perspectives. We approach our study of musical practices with the understanding that the social, cultural and political contexts where "music" and "healing" are themselves created inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We read a variety of academic literature and use media texts and listening examples to develop interdisciplinary and cross-cultural analyses of music and healing. Issues of national consciousness, postcolonialism, gender, sexuality, race, ethnicity, class, religion, dis/ability and the role of history/memory remain central to our explorations of music and healing.

### L85 MedH 3044 Humors, Pox, and Plague: Medieval and Early Modern Medicine

This course examines how people thought about, experienced and managed disease in the medieval and early modern periods. Students will consider developments in learned medicine alongside the activities of a diverse range of practitioners — e.g., surgeons, empirics, quacks, midwives, saints, and local healers — involved in the business of curing a wide range of ailments. Significant attention will be paid to the experiences of patients and the social and cultural significance of disease. Major topics include: the rise and fall of humoral medicine; religious explanations of illness; diseases such as leprosy, syphilis and plague; the rise of anatomy; herbs and pharmaceuticals; the experience of childbirth; and the emergence of identifiably "modern" institutions such as hospitals, the medical profession, and public health. The focus will be on Western Europe but we'll also consider developments in the Islamic world and the Americas.

---

**L85 MedH 310 From Hysteria to Hysterectomy: Women's Health Care in America**

This course examines issues surrounding women's health care in America. While the scope is broad, the major emphasis will be on the 19th and 20th centuries. Through an examination of popular writing, scientific/medical writing, letters, diaries and fiction, we will look at the changing perceptions and conceptions of women's bodies and health in America.

---

**L85 MedH 312 Exposition: Writing and Medicine**

For students who have a particular interest in health, illness and medical care. Exposition is a course that considers style in relationship to audience and purpose, asking the writer to engage more consciously with writing conventions, and to explore strategies appropriate to various writing situations, from the more experimental and performative to the more formal and scholarly. The course involves frequent practice in analyzing and critiquing, with special attention to techniques of organization, argument and emphasis. Students in this special section of Exposition read essays, journalism and personal narratives about the experience of physicians and patients in the modern health care system. Students use expository writing to think critically and personally about their own experiences with illness and disease. Pre-medical students might use this opportunity to write and think about the anticipated rewards and challenges of the profession they hope to join.

---

**L85 MedH 353 Medical Spanish**

Designed for future medical professionals, this course will provide students with a complete vocabulary and cultural sensitivity necessary for treating Spanish-speaking patients. While the main focus is oral/aural, written exams, varied reading and some research are required. Volunteer work recommended for enrolled students. Advanced students will be given priority. Prerequisite: Span 307D.

**L85 MedH 360 Trans Studies**

Trans\* Studies is an interdisciplinary course that was previously named Transgender Studies. The new course title represents the development of the field and the identity in U.S. culture. In this course students engage with the following questions: When and why did the category gender emerge? What is the relationship between sex, sexuality and gender? How have the fields of medicine and psychology dealt with gender? How have approaches to "gender dysphoria" changed over time? Why is LGBT grouped together as a social movement? What are the advantages and disadvantages of this grouping? What are the legal obstacles faced by people who resist normative gender categories? What legal obstacles are faced by people who transition from one sex to another? To what extent do U.S. citizens have autonomy over defining their gender or sex? How are trans people represented in fiction? What does it mean to apply transgender theory to interpret fictional accounts of trans? Any of the following are suitable (but not required) courses to take before enrolling in this class: WGSS 100B, WGSS 105, WGSS 205 or WGSS 3091.

**L85 MedH 3801 Ancient Greek and Roman Medicine**

This course introduces the student to the practice and theory of medicine in the ancient Mediterranean, beginning in Egypt and continuing through Greece and Rome. In the end, we will find ourselves in the Middle Ages. Our focus will be on Greco-Roman medicine: how disease was understood; how disease was treated surgically, pharmacologically, and through diet; the intellectual origins of Greek medicine; the related close relationship between Greco-Roman medicine and philosophy; and the social status of medical practitioners. We will also discuss how medicine was written and in what terms its practitioners conceived it.

---

**L85 MedH 4033 Culture, Illness, and Healing in Asia**

This course examines the place of health, illness and healing in Asian societies. We explore how people experience, narrate and respond to illness and other forms of suffering — including political violence, extreme poverty and health inequalities. In lectures and discussions we discuss major changes that medicine and public health are undergoing and how those changes affect the training of practitioners, health care policy, clinical practice and ethics. The course familiarizes students with key concepts and approaches in medical anthropology by considering case studies from a number of social settings including China, India, Indonesia, Japan, Korea, Taiwan, Tibet, Thailand, Vietnam and Asian immigrants in the United States. We also investigate the sociocultural dimensions of illness and the medicalization of social problems in Asia, examining how gender, ethnicity, socioeconomic status, disability and other forms of social difference affect medical knowledge and disease outcomes. This course is intended for anthropology majors, students considering careers in medicine and public health, and others interested in learning how anthropology can help us understand human suffering and formulate more effective interventions.

Same as L48 Anthro 4033

---

**L85 MedH 418 Sexuality and Gender in East Asia**

In this course we explore the role of women in the indigenous religious traditions of China, Japan and Korea (Confucianism, Daoism, Shamanism and Shinto), as well as Buddhism, Christianity and Islam. We begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses; shamans and mediums; hermits and recluses; and ordinary laywomen — both historically and in more recent times. Class materials include: literary and religious texts; historical and ethnological studies; biographies and memoirs; and occasional videos and

---

films. Prerequisites: This class is conducted as a seminar, with minimal lectures; substantial reading and writing; and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, need to obtain the instructor's permission before enrolling.

### L85 MedH 4885 Advanced Seminar: Medicine, Disease, and Empire

This course examines the history of medicine in connection to the politics of colonialism and empire-building, spanning the 16th century through the 20th century. Topics covered include: epidemic disease outbreaks (e.g., smallpox, cholera, malaria); the role of science and medicine in endorsing the "civilizing missions" of empires; tropical climates and tropical diseases as western constructs; tensions between western medicine and indigenous healing practices and beliefs; ideas of race and racism in science and medicine; modern advancements in sanitation and public health and their implementation overseas; and the historical roots of the modern global health movement.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM

---

### L85 MedH 4990 Advanced Seminar: History of the Body

Do bodies have a history? Recent research suggests that they do. Historians have tapped a wide variety of sources — including vital statistics, paintings and photographs, hospital records, and sex manuals — to reconstruct changes in how humans have conceptualized and experienced their own bodies. We pay particular attention to the intersection of European cultural history and history of medicine since 1500.

## Medicine and Society

The Medicine and Society Program is an exciting opportunity for undergraduate students in Arts & Sciences who are interested in exploring the interface of culture, behavior and health from a social science perspective. The program addresses the important social and cultural foundations of health and illness in human societies, with a specific emphasis upon service and research opportunities. The program is supported by a grant from the Danforth Foundation and administered through the Department of Anthropology.

### Eligibility

The Medicine and Society Program is a four-year program designed for matriculating first-year students. Upon acceptance to Washington University in the spring, students may apply online for admission to the program by indicating their interest in Medicine and Society. A description of the program and how to apply online is in *Getting Started*, a brochure sent to students in mid-May.

Admission to this program is highly competitive. Academic credentials, aptitude and interest in a health-related career, and personal statements all will be considered in selecting 20 participants to join the entering cohort. The program will particularly appeal to students with a long-term commitment to careers in the health professions and related areas.

## Curriculum

Medicine and Society has its intellectual and programmatic roots in the field of medical anthropology, which is broadly defined as the study of human health and illness across culture, time and space. Medical anthropologists examine the role of culture and society in shaping illness experiences. Foci of inquiry may include such issues as traditional health beliefs and practices; cultural clashes between traditional medicine and biomedicine; political and economic foundations of health disparities; alternative and complementary medicine; social and behavioral factors affecting disease rates; and public health responses to emerging health problems. These topics all share a focus on community as a primary area of inquiry and population as a primary unit of analysis.

## The Program

### Requirements for the Medicine and Society Program

Once admitted to the program, students must complete the following:

- First-Year Medicine and Society Seminar
- Community Health Internship
- Anthro 260 Topics in Health and Community
- A major or minor in anthropology or the global health and environment track of anthropology
- Senior Capstone or Honors Thesis

Students who are accepted into the Medicine and Society Program are enrolled in a year-long First-Year Seminar on culture, health and society in the Department of Anthropology. This seminar provides the academic foundation for future community health work in St. Louis. Beginning as early as the sophomore year, students identify and select a community health site for internship placement. The internship opportunity provides students with a location for focusing their interest and involvement in community health and allows students to participate in the work of the host organization. During the junior and senior years, students have the opportunity to intensify their academic and service activities at the internship site, which may culminate in a Senior Honors thesis or Capstone project based upon original research and investigation. Students in the Medicine and Society Program are encouraged to graduate with honors, based upon their independent research and academic achievement.

This course of study provides an excellent foundation for future graduate work in medicine, public health or any of the allied health professions such as nursing or physical and occupational therapy. Students who complete the program also will be highly competitive for admission to other professional schools such as law, business or social work.

## Personnel

Medicine and Society is directed by Bradley Stoner, a medical anthropologist and infectious disease physician at Washington University. Dr. Stoner has extensive experience as a physician and public health researcher and holds a joint appointment in the Department of Internal Medicine at Washington University School of Medicine. He oversees student training in medical anthropology and placement in the community internship sites. Students also have full access to other faculty in anthropology and related disciplines who offer courses of relevance and interest.

## Majors

The Medicine and Society Program is not a major/minor program; it is a four-year program that is available by application only.

Current students who are interested in the Medicine and Society curriculum are advised to investigate a major (p. 211) or minor in anthropology (p. 212) with a focus on medical anthropology or the optional global health and environment track (p. 211) of the anthropology major or minor.

## Minors

The Medicine and Society Program is not a major/minor program; it is a four-year program that is available by application only.

Current students who are interested in the Medicine and Society curriculum are advised to investigate a major (p. 211) or minor in anthropology (p. 212) with a focus on medical anthropology or the optional global health and environment track (p. 211) of the anthropology major or minor.

## Courses

Please refer to the requirements in the Medicine and Society Overview section where required courses are listed. Please visit the Anthropology (p. 213) page for specific course information.

## Medieval and Renaissance Studies

Interested students may pursue a minor in Medieval and Renaissance studies or a major in Renaissance studies under the auspices of the Interdisciplinary Project in the Humanities (IPH). The major offers students the opportunity to gain a broad understanding of the early modern world, the seedbed of modern Western civilization, through the integrated study of Renaissance literature, history, philosophy, art history and music. (A full description of the requirements for completing the Renaissance

studies track in the Interdisciplinary Project in the Humanities may be found in the general listing for the IPH (p. 528.)

Courses are drawn from a wide range of departments. This allows students to develop their own course of study, to select areas of concentration that are of particular personal interest, and to work closely with faculty from different areas. Students study the themes and social issues of the period through art, history, literature and popular culture. Topics examined include the rise of urban life, the flowering of vernacular languages and new literary genres, the growing emphasis on education, the reconception of pictorial representation and architectural space, the expression and subversion of power in politics and culture, and the transformation of religious doctrines and institutions.

**Contact:** Amy Lehman  
**Phone:** 314-935-4200  
**Email:** iph@wustl.edu

Avis Blewett Professor of Music  
PhD, University of Maryland  
(Music)

**Jessica A. Rosenfeld** ([http://english.artsci.wustl.edu/Jessica\\_Rosenfeld](http://english.artsci.wustl.edu/Jessica_Rosenfeld))  
Associate Professor  
PhD, University of Pennsylvania  
(English)

**Michael Sherberg** (<http://rl.wustl.edu/people/sherberg>)  
Professor of Italian  
PhD, University of California, Los Angeles  
(Romance Languages and Literatures)

## Majors

Students seeking a major concentration in Medieval or Renaissance studies are advised to pursue it under the aegis of either the Interdisciplinary Project in the Humanities (p. 528) or in one of the other departments or programs in the humanities. They should achieve foreign language competency in French, Spanish, German, Italian, Latin, Arabic or Greek, and are strongly urged to pursue their studies across several departments and programs.

## Minors

### The Minor in Medieval and Renaissance Studies

The minor in Western Medieval studies and the minor in Renaissance studies have the same structure. Students must complete two years of college-level language study in Spanish, French, Italian, Latin, German, Arabic or Greek and are encouraged to continue their foreign language study

further. They are expected to take six additional courses; three should come from the following list:

| Code         | Title   | Units |
|--------------|---|-------|
| Art-Arch 113 | History of Western Art, Architecture and Design         | 3     |
| History 101C | Western Civilization                                    | 3     |
| IPH 201C     | Classical to Renaissance Literature: Text and Tradition | 3     |
| IPH 203C     | Early Political Thought: Text and Tradition             | 3     |
| IPH 209      | Scriptures and Cultural Traditions                      | 3     |

**Units required:** 18

Students interested in pursuing the minor in Medieval and Renaissance studies should contact the offices of the Interdisciplinary Project in the Humanities (p. 528).

### Additional Information

In addition, students must take three courses in either Medieval or Renaissance studies (depending on the concentration chosen) from at least two different departments or programs. Students will select these three courses in consultation with their minor adviser: Michael Sherberg (<http://rll.wustl.edu/people/sherberg>) for Western Medieval studies and Joseph Loewenstein ([http://english.artsci.wustl.edu/Joe\\_Loewenstein](http://english.artsci.wustl.edu/Joe_Loewenstein)) for Renaissance studies.

### Courses

Please visit the Interdisciplinary Project in the Humanities (p. 528).

## Mind, Brain and Behavior

How do we think? What is human consciousness? What is the relationship between the mind, the brain and behavior? During the past few decades, an explosive growth of knowledge in the cognitive sciences has begun to yield answers to fundamental mysteries about the nature of human thought. Students in this two-year program investigate new theories and problems emerging from this interdisciplinary area of study.

The Mind, Brain and Behavior (MBB) program, which is open to incoming first-year students in the College of Arts & Sciences, is a two-year program that engages students with the research culture of the university. The program builds upon areas of research strength and increasing faculty collaboration within the university. It brings together faculty from several departments and students who share an interest in an area of study to create a lively intellectual and social community; to foster a culture of inquiry; and to enable students, early in their undergraduate career, to participate in research. For more information on the application process, visit the first-year programs webpage (<http://college.artsci.wustl.edu/firstyearprograms>).

First-year students take two core courses that provide an introduction to the interdisciplinary study of the mind-brain (MBB 120A Introduction to Study of the Mind-Brain: Psychological, Biological and Philosophical Perspectives; and MBB 122 Introduction to the Study of the Mind Brain II). These courses are taught collaboratively by faculty members from different disciplines. In the sophomore year, students are able to undertake research under the supervision of a faculty member who serves as a research mentor for the MBB program (MBB 300 Research in Mind, Brain and Behavior). Sophomores may choose among several research options, each combining independent work with opportunities to work collaboratively.

Participation in Mind, Brain and Behavior is fully compatible with all majors and pre-professional programs. Enrollment in Mind, Brain and Behavior is limited to 45 students each year.

---

### L96 MBB 120A Introduction to Study of the Mind-Brain: Psychological, Biological and Philosophical Perspectives

A consideration of three primary areas of research in cognitive science: attention, memory and language. These topics are used to illustrate the techniques by which mental abilities are investigated and explained in psychology and neuroscience: the focus, in particular, is on the use of reaction time studies, brain imaging and cell recordings to isolate the basic components that make up complex functions. In addition to the central concepts and theories in each area, the course addresses philosophical implications of this research concerning how the mind and brain are related, how the mind-brain encodes or represents information, and the nature of consciousness. And there is an emphasis on applying these findings to important problems, such as Alzheimer's disease and deficits due to brain damage. The class is taught by three members of the faculty from different disciplines and combines a whole-group lecture with small discussion classes. The goal is to give students a good understanding of the interdisciplinary nature of cognitive science and to help them develop the ability to think and write critically about scientific research into the mind-brain. Prerequisite: admission to the Mind, Brain and Behavior program. Credit 3 units. A&S: NS A&S IQ: NSM BU: SCI

---

### L96 MBB 122 Introduction to the Study of the Mind Brain II

In this course, participants in the Mind, Brain and Behavior program continue their exploration of cognitive science. We explore different frameworks for thinking about how the different branches of cognitive science relate to each other. The course contains an introduction to relevant topics in the philosophy of science and the philosophy of mind. Prerequisite: MBB/PNP 120. Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

### L96 MBB 300 Research in Mind, Brain and Behavior

An introduction to research for students in the Mind, Brain and Behavior program. Students work under the supervision of a mentor. Prerequisite: admission to the Mind, Brain and Behavior program, completion of MBB/PNP 122, and permission of the mentor.

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

## Music

The Department of Music offers a music program of exceptional quality and diversity. In this varied course of study, where music is approached as a liberal and fine art, rather than as an isolated,

separate subject, students may pursue practical and creative music making or study musical traditions and individual works. Music courses are open to all students in the university.

We offer students the opportunity to develop performance skills in voice or instruments through private instruction or through participation in small or large ensembles. Private music lessons with our prominent faculty, including members of the St. Louis Symphony, are available in voice, piano, organ, guitar, and all orchestral and jazz instruments.

Music majors can explore critical issues of tradition, individual composers, compositional craft, aesthetic interpretation, and music's social and cultural significance through a wide range of courses from introductory classes to highly specialized seminars. Instruction is available in jazz, popular music, world musics, the history and literature of Western music, ethnomusicology, music theory and analysis, musical composition, and electronic music. All performance, creative and academic endeavors in music are supported by a thorough grounding in musicianship and keyboard skills.

Music majors may take advantage of study abroad programs in music in Italy, England and France. Summer research projects under faculty direction also are available.

Several options are available for students interested in music: the Bachelor of Arts degree with a major in music, the Bachelor of Music degree, a minor in music, and a minor in jazz studies. Students may take the AB degree in combination with a major in another field or as their primary major in a broad liberal arts education. Majoring in music can prepare students well for graduate work and for a variety of musical careers and other professions.

## Performance Opportunities

**Ensembles:** The department sponsors numerous performing ensembles that draw members from the university and the surrounding community. Students must audition for admission to the ensembles. All ensembles are available for graded credit, for credit/no credit, or off roster. Ensembles give one or more public performance each semester. Students who are enrolled for credit in one of the department's ensembles may be entitled to a scholarship that covers a portion of the fee for applied music lessons.

*Vocal Ensembles:* Concert Choir, Chamber Choir

*Instrumental Ensembles:* Flute Choir, Jazz Band, Chamber String Ensembles, Symphony Orchestra, Wind Ensemble, Jazz Combos

**Applied Music:** Students may take lessons in voice, piano, organ, guitar, and all orchestral and jazz instruments in the appropriate course sequences. A separate fee is charged for private instruction. Music majors and minors receive an applied music scholarship to cover all or a portion of the fee, respectively. If students enroll for credit in one of the

department's ensembles, they are entitled to a scholarship for a portion of the applied music fee each semester they are enrolled. In addition, the department has a limited number of partial scholarships based on need and merit.

### Postdoctoral Research Associate

**Richard Deja**  
PhD, University of Illinois at Urbana-Champaign

### Professors Emeriti

**Hugh Macdonald**  
PhD, Cambridge University

**Craig Monson**  
PhD, University of California, Berkeley

**Robert Wykes**  
DMA, University of Illinois

## Majors

**Becoming a Music Major:** Students who plan to declare a major in music should consult with the department as early as possible. Students interested in pursuing a music major should begin the appropriate course sequences in music theory, music history, keyboard skills and musicianship. All music majors must complete a senior capstone, which could take the form of a thesis, recital, lecture-demonstration, composition portfolio or 400-level course.

## The Bachelor of Arts in Music Major

Total units required: 45

| Code  | Title  | Units |
|---|--|-------|
| Music 121C<br>& Music 122C<br>or Music 121J<br>& Music 122J | Classical Theory I<br>and Classical Theory II<br>Jazz Theory I<br>and Jazz Theory II | 6     |
| Music 221C  | Classical Theory III   | 3     |
| Music 2231  | Musicianship I (should be taken<br>concurrently with Music 221C)                     | 1     |

|  |  |    |

| Lower-level elective units (courses, applied music or ensembles)             |  | 11 |
| Upper-level elective units (courses, applied music or ensembles)             |  | 3  |

## The Bachelor of Music Major

**Total units required:** 74-78

Declaration of this major must be approved by the department before the end of a student's sophomore year. In addition to the required courses, majors must complete a minimum of 12 to 30 units in advanced courses, depending on the area of concentration. Students may earn the BMus degree with concentration in performance, composition, music theory, or music history and culture, or they may pursue a general program combining two or more areas.

Each concentration requires a major senior capstone, such as a thesis, recital, lecture-demonstration or composition portfolio. All majors also must pass a keyboard proficiency examination.

### Required courses:

| Code  | Title  | Units |
|---|--|-------|
| Music 121C<br>& Music 122C<br>or Music 121J<br>& Music 122J | Classical Theory I<br>and Classical Theory II<br>Jazz Theory I<br>and Jazz Theory II | 6     |
| Music 221C  | Classical Theory III   | 3     |

| Total Units  |  | 30-33 |

**Applied Music and Ensemble Requirements:** In addition to the courses listed above, BMus students also must register for applied music lessons and at least one ensemble every semester once the major has been declared. Students with a performance emphasis must take at least 2 units of applied music lessons per semester; all others must take at least 1 unit per semester.

**Elective courses:** Each of the five BMus concentrations includes additional requirements, as follows:

#### Performance Emphasis:

| Code  | Title  | Units |
|---|--|-------|
| Upper-level music history elective (other than Music 3011-Music 3013) |  | 3     |
| Music 4221  | Introduction to the Analysis of 20th-Century Music | 3     |
| 400- or 500-level music theory elective                               |  | 3     |
| Music 439   | Diction I  | 3     |
| Junior half-recital   |  | 0     |

#### Theory Emphasis:

| Code  | Title   | Units |
|---|---|-------|
| Music 4221  | Introduction to the Analysis of 20th-Century Music  | 3     |
| 400- or 500-level electives   |   | 12    |
| Upper-level music history elective (other than Music 3011-Music 3013) |   | 3     |
| Music 401<br>& Music 402<br>or Music 429<br>& Music 430               | Elementary Technique of Electronic Music<br>and Advanced Techniques of Electronic Music<br>Composition<br>and Composition | 6     |

#### Composition Emphasis:

| Code  | Title | Units |
|---|-------|-------|
| Upper-level music composition (Music 429, Music 430, repeatable)      |       | 12    |
| Upper-level music history elective (other than Music 3011-Music 3013) |       | 3     |

|  |  |   |
|--|--|---|
| Music 4221                               | Introduction to the Analysis of 20th-Century Music                                   | 3 |
| 400- or 500-level music theory electives |  | 6 |
| Music 401 & Music 402                    | Elementary Technique of Electronic Music and Advanced Techniques of Electronic Music | 6 |

*History and Culture Emphasis:*

| Code   | Title  | Units |
|--|--|-------|
| Upper-level music history electives (other than Music 3011-Music 3013) |  | 15    |
| Music 4221   | Introduction to the Analysis of 20th-Century Music | 3     |
| 400- or 500-level music theory electives                               |  | 6     |

*General Emphasis:*

| Code   | Title  | Units |
|--|--|-------|
| Upper-level music history electives (other than Music 3011-Music 3013) |  | 6     |
| Music 4221   | Introduction to the Analysis of 20th-Century Music | 3     |
| 400- or 500-level music theory electives                               |  | 6     |
| Elective units   |  | 9     |

**Senior Honors:** Music majors are encouraged to work toward Latin Honors. To qualify, students must have an outstanding academic record and satisfactorily complete a senior capstone project (in Music 4993), including an oral examination with a faculty committee. Project proposals are due at the end of the junior year.

## Minors

### The Minor in Music — General Studies

**Units required:** 18

**Required courses:**

| Code                                | Title                                      | Units |
|-------------------------------------|--|-------|
| Music 121C & Music 122C             | Classical Theory I and Classical Theory II | 6     |
| or Music 121J & Music 122J          | Jazz Theory I and Jazz Theory II           |       |
| One of the following three courses: |  |       |
| Music 3011                          | Music History I                            | 3     |
| or Music 3012                       | Music History II                           |       |
| or Music 3013                       | Music History III                          |       |
| Lower-level electives               |  | 3     |

|                       |           |
|-----------------------|-----------|
| Upper-level electives | 6         |
| <b>Total Units</b>    | <b>18</b> |

For the elective units, a maximum of 6 units of ensemble participation may be included.

### Additional Information

Special scholarships are available for the study of applied music.

Students whose interests are not served by these requirements may apply to the department chair with an alternative proposal.

### The Minor in Jazz Studies

**Units required:** 18

**Required courses:**

| Code                    | Title                            | Units |
|-------------------------|----------------------------------|-------|
| Music 121J & Music 122J | Jazz Theory I and Jazz Theory II | 6     |
| Music 105               | History of Jazz                  | 3     |
| Music 3091              | Jazz Improvisation I             | 3     |
| Music 3023              | Jazz in American Culture         | 3     |

One of the following five courses:

|                                      |  |   |
|--------------------------------------|--|---|
| Music 3021                           | Music of the African Diaspora            | 3 |
| or Music 3013                        | Music History III                        |   |
| or Music 416                         | Contemporary Music                       |   |
| or Music 401                         | Elementary Technique of Electronic Music |   |
| or Upper-level applied music in jazz |  |   |

|                    |           |
|--------------------|-----------|
| <b>Total Units</b> | <b>18</b> |
|--------------------|-----------|

### Additional Information

The minor requires 18 units of credit in courses offered by the Department of Music of which at least 9 must be at the 300 level or above. Upper-level credits may be obtained in Ensemble Performance or Applied Music if the requisite standard is attained. Other upper-level credits in Music or kindred studies (such as African and African-American Studies) may be approved at the discretion of the department chair.

### Courses

**L27 Music 100W Preregistration: Woodwinds Applied Music**

Credit variable, maximum 2 units.

---

**L27 Music 101E Introductory Survey of Western Music I**

A survey of "art" music in Western culture from the Middle Ages to the mid-18th century. Emphasis in the first term is on sacred and secular music of the church, court and middle-class society in its historical and cultural context. Regular listening and writing assignments are designed to develop the capacity to hear perceptively and write critically about the music studied. No prior knowledge of musical notation required. This course is not recommended for music minors or majors. For a one-semester course covering Western classical and popular music and music from other cultures, refer to Music 114E.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

---

**L27 Music 1021 Musics of the World**

This course provides an introduction to the field of ethnomusicology as well as a survey of selected musics from around the world. We will investigate not only musical sound itself but how music interacts with other cultural domains, such as religion/cosmology, politics, economics, and social structure. The course will use case studies from regions around world (such as Indonesia, India, the Middle East, Sub-Saharan Africa, and Latin America) to illustrate the conceptual problems and methodologies raised by the cross-cultural study of music, as well as acquaint you with the rich variety of music around the globe.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: HUM EN: H

---

**L27 Music 1023 Beethoven in His Time and Ours**

Ludwig van Beethoven not only composed some of the most significant works of Western classical music — he continues to make his mark as the prototypical "troubled genius," symbol for a wide range of political causes, subject of numerous films, and classical music's main representative in American pop culture. We begin with an exploration of Beethoven's life, music and historical context and continue by tracing how, after his death, Beethoven became a cultural hero whose image took on a life of its own. Throughout, we unravel the interaction of music, culture and mythmaking. No previous musical experience required.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

---

**L27 Music 1024 Mozart: The Humor, Science and Politics of Music**

Wolfgang Amadeus Mozart is one of the most recognized composers of "classical" music. A child prodigy of astonishing precocity, he has come to symbolize genius for Western culture — a composer whose music embodies superhuman, even utopian beauty and perfection. In this course, we learn that there was more to Mozart. Mozart was a lover of codes and

puzzles who delighted in the science of music, a sampler of non-Western music, and a musical humorist whose comedies make provocative statements — ranging from cynical to poignant — about politics, gender and morality. Our focus works include Mozart's symphonies, piano music, string quartets, and such comedies as *The Magic Flute* and *The Marriage of Figaro*. We also explore Mozart's afterlife — how his music has figured in film, literature and popular culture. This course is open to all undergraduates. No previous musical course work or experience is required.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

**L27 Music 102E Introductory Survey of Western Music II**

A survey of "art" music in Western culture from the middle of the 18th century to the present. Music of composers from Haydn and Mozart to George Crumb and John Cage are studied in its historical and cultural context. Regular listening and writing assignments are designed to develop the capacity to hear perceptively and write critically about the music studied. No prior knowledge of musical notation required. This course is not recommended for music minors or majors.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

---

**L27 Music 103E Theory I: Introduction to Music Theory**

Vocabularies and skills basic to music theory introduced through concentrated work in notation, the development of specific compositional skills, and musical analysis. Concepts of musical structure and aesthetic experience are explored through the study of music from three periods of the western tradition: medieval liturgical chant, music of the Classical period, and music of the early 20th century. Ability to read musical notation required. Keyboard skills desirable. Music 103E is the entry-level course for all music minors and majors.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

---

**L27 Music 104E Music Theory II**

A systematic introduction to the basic principles of tonality as manifested in western European music of the 18th and early 19th centuries. Topics include pitch, time, line and linear elaboration, counterpoint, harmony, phrase, form and chromaticism. The principles are explored through both musical composition and interpretation of musical art works. Prerequisite: Music 103E.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

---

**L27 Music 105 History of Jazz**

History of jazz to the present, including its African elements.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

---

**L27 Music 107 Listening Laboratory**

Optional analytical listening sessions to supplement Music 101E and 102E respectively. Taped listening assignments. Required of music majors and of students in the first-year seminar section. Concurrent registration in Music 101E or 102E is required.

Credit 1 unit. A&S: LA A&S IQ: HUM

---

**L27 Music 109 Ragtime**

A history of ragtime music: survey of composers and performers. Emphasis on St. Louis and the music of Scott Joplin. University College students should register for U24 109 Section 02.

Credit 2 units. A&S: LA A&S IQ: HUM BU: HUM

---

**L27 Music 1091 Jazz Theory I**

Jazz Theory I introduces the jazz music language as a preparation for the study of improvisation. The course study consists of basic music theory including music-reading skills and notation, scales, intervals and triads. An introduction to extended tertian chords as derived from the 21 modes of the major, melodic and harmonic minor scales forms the basis of the jazz harmonic language. The study of chord progression and chord substitution, song form and the blues prepares the student for a detailed study of the modern jazz language.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

---

**L27 Music 1092 Jazz Theory II**

Jazz Theory II outlines the harmonic, rhythmic and improvisational practices from the Bebop period of the late 1940s to the jazz music of the present day. Discussions include intermediate to advanced chord substitution, quartal and bitonal harmony, modal improvisation, pentatonic scales and polyrhythmic drumming, concentrating on the work the major improvisers of the 1950s to 1970s. Prerequisite: Music 1091.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

---

**L27 Music 109M Mathematics and Music**

An elementary introduction to the connections between mathematics and musical sound. Review of integers, ratios, prime numbers, functions, rationality, exponents, logarithms, trigonometry. Review of scales, clefs, key signatures, intervals, time signatures. Frequency and pitch. The connection between intervals and logarithms. Tuning and temperament, just intonation. Scales and modular arithmetic. The mathematics of harmony; the sound of the low prime numbers and their roles in harmony. Harmonics, partials and overtones. Numerical integration and basic Fourier analysis. The nature of complex tones. Analysis of instrument sounds. Human vowels and formants. Prerequisites: two years of high school algebra, and trigonometry.

Same as L24 Math 109

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Arch: NSM Art: NSM

---

**L27 Music 110G Study in Guitar**

Students taking guitar off-roster/not for credit.

---

**L27 Music 110P Studies in Piano**

Students taking piano not for credit/off-roster.

---

**L27 Music 110S Study in Strings**

Students taking strings not for credit.

---

**L27 Music 110V Study in Voice**

Students taking voice not for credit.

---

**L27 Music 110W Study in Woodwinds**

Students taking woodwinds not for credit.

---

**L27 Music 113 Fundamentals of Music**

This course provides a broad overview of music fundamentals designed to enhance the student's experience of music as well as provide a foundation for further study in music theory. Students become acquainted with the basic vocabulary and

building blocks of music: intervals, rhythms, scales, triads, chords and harmony.

Credit 2 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

---

**L27 Music 114E Exploring Music**

A wide-ranging introduction to music in its many forms. Western classical and popular music are studied along with music from other cultures to highlight the varied conceptions, functions and practices of music in different times and places. Discussion of specific pieces facilitates growth in basic musical skills and provide insights into music's multifaceted historical/cultural resonances. No previous musical background required. Includes regular reading and listening assignments.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

---

**L27 Music 115 Reading Music**

Elements of music notation for those with little or no music-reading skill. Designed to develop a basic acquaintance with the principles of notation for students enrolled in introductory courses, applied music and ensembles as well as those with a general interest in learning to read music.

Credit 1 unit. A&S: LA

---

**L27 Music 1161 Freshman Seminar: Writing About Music**

This course explores the various ways in which writers from the 18th century to the present discuss music. Issues include respect for a tried and true musical "canon," music as an imitative vs. absolute art form, and a focus on performing virtuosity/spectacle vs. musical content. In addition to reading what previous authors have written, students write on a regular basis about examples from classical, popular and non-Western music and critique each others' work. Ability to read music is not required.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM

---

**L27 Music 1162 Freshman Seminar: Bruce Springsteen's USA**

This course examines the career and work of Bruce Springsteen as songwriter, singer, rock musician, pop star, and public figure. Conducted in seminar format, the primary course materials are Springsteen's recordings and videos, as well as the many interviews he has given. Selections from the vast body of popular and academic scholarship on Springsteen also informs class discussions. The course is limited to freshmen.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

---

**L27 Music 1163 Freshman Seminar: Youth in Revolt: Popular Music as Protest**

When is popular music also protest music? In this course we will listen to music linked to the mid-century Civil Rights Movement, the Vietnam War, Black Power, the wars in Iraq, Occupy Wall Street, and the recent confrontations between protestors and the police. While exploring genres such as rock, soul, pop, punk, hip-hop and grunge, we will ask how popular musics might express or embody various forms of protest in American life. Selections from contemporaneous testimonials, alternative presses, interviews, and popular and academic writing will also inform our discussions.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

---

**L27 Music 1164 Love Songs and Laptops: Rediscovering Medieval Music in the Digital Age**

Using our laptops as portals into the past, students will gain first-hand experience as historical detectives. In this seminar, we will explore the world of medieval love — from the chivalrous and courtly to the bodily and obscene — as represented in books of songs from the 15th century. Scrumptiously decorated and preserved, five interrelated songbooks from central France, known as the "Loire Valley Chansonniers" contain the majority of love songs from this period. Working from digitized versions of the songbooks, online editions, and modern audio recordings, we will address the following questions: What do the songbooks tell us about the culture in which they were created? How do the graphic decorations that frame each song interact with its music and lyrics? Lastly, by contextualizing these digital sources with respect to the growing interest in the interface between the humanities and digital technology, we will discuss what we can gain from these developments and what — if anything — we stand to lose. Ability to read music not required.

**L27 Music 119 Guitar Class I**

Jazz Guitar Class I introduces the fundamentals of music as a preparation for the study of jazz proper, guiding the student to the development of an operational musical language on the instrument. This performance practice class consists of basic music theory realized on the guitar including major and minor diatonic and pentatonic scales, triads in all positions and inversions, seventh chords and an introduction to extended tertian chords. As well, music reading, rhythmic skills and basic performance techniques are emphasized. The course culminates in the reading of jazz lead-sheets where students play the melody in all positions of the key and also play the harmony from chord symbols. *Note:* If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly.

Credit 1 unit.

---

**L27 Music 120 Guitar Class II**

Jazz Guitar Class II reinforces the materials of Music 119 including scales and triads in all positions, while introducing new materials including 9th, 11th, 13th and altered chords. An introduction to improvisation, this course stresses making music in real time through the embellishment of melody, the study of arpeggio, the modes of the major scale and idiomatic devices of the jazz language. The course stresses the development of strong rhythmic skills while furthering a proper technique. Jazz Guitar II culminates in the reading of jazz lead-sheets where the student improvises in fundamental ways. *Note:* If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly.

Credit 1 unit.

---

**L27 Music 121C Classical Theory I**

Introduction to vocabularies and skills basic to music theory through concentrated work in notation, the development of

specific compositional skills, and musical analysis. Concepts of musical structure and aesthetic experience are explored through the study of music from the Western classical tradition. Ability to read musical notation required. Keyboard skills desirable. Students who register for Music 121C are required to register for one of the subsections.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

**L27 Music 121J Jazz Theory I**

Introduction to the jazz music language as a preparation for the study of improvisation. The course of study consists of basic music theory including music-reading skills and notation, scales, intervals and triads. An introduction to extended tertian chords as derived from the 21 modes of the major, melodic and harmonic minor scales forms the basis of the jazz harmonic language. The study of chord progression and chord substitution, song form, and the blues prepares the student for a detailed study of the modern jazz language. Students who register for Music 121J are required to register for one of the subsections.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

---

**L27 Music 122C Classical Theory II**

A review of diatonic harmony and followed by a study of chromatic harmony and issues of tonality and form. Topics include tonicization and modulation, chromatic voice-leading, modal mixture, altered and extended chords, modulation to foreign keys, and elaboration of diatonic sequences. Work involves written and class-related exercises, analysis of 18th- and 19th-century works, and model composition. Students who register for Music 122C are required to register for one of the subsections. Prerequisite: Music 121C.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

---

**L27 Music 122J Jazz Theory II**

A study of the harmonic, rhythmic, and improvisational practices from the Bebop period of the late 1940s to the jazz music of the present day. Discussions include intermediate to advanced chord substitution, quartal and bitonal harmony, modal improvisation, pentatonic scales, and polyrhythmic drumming, concentrating on the major improvisors of the 1950s-1970s. Students who register for Music 122J are required to register for one of the subsections. Prerequisite: Music 121J.

**L27 Music 230 Composition**

An intermediate course in contemporary music composition, with a 30-minute private lesson and weekly master class. Prerequisite: Music 229 or permission of instructor.  
Credit 2 units.

---

**L27 Music 231C Small Chamber Ensembles**

Students interested in performance of chamber music are organized into various ensembles and assigned a coach. A public chamber music concert is given once each semester. May be repeated for credit. Prerequisite: permission of the instructor. Consult Course Listings for more information.  
Credit variable, maximum 1 units.

---

**L27 Music 232W Chamber Winds**

A group of select woodwind and brass players who form brass and woodwind choirs and smaller ensembles such as quintets and quartets. The weekly rehearsals are coached. The ensembles perform on student recitals and at various campus functions.  
Credit 1 unit.

---

**L27 Music 233 Jazz Band**

Study of the literature of big band jazz. Concerts presented each semester. May be repeated for credit. Prerequisite: admission by audition. Two and one-half rehearsal hours a week.  
Credit 1 unit.

---

**L27 Music 234S Symphony Orchestra**

Performance and reading of works for orchestra. May be repeated for credit. Prerequisite: admission by audition. Two and one-half class hours a week including sectionals.  
Credit 1 unit.

---

---

**L27 Music 235F Flute Choir**

Weekly two-hour rehearsals of flute ensemble literature of many styles, Bach to bop. Developing skills of tone production, technique, intonation, sight reading and musicianship. One performance per semester required. Prerequisite: admission by audition. Special fee applicable.  
Credit variable, maximum 1 units.

---

**L27 Music 236J Jazz Combo**

Students are placed in small combos for regular, weekly coaching. May be repeated for credit. Prerequisite: permission of department.  
Credit variable, maximum 1 units.

---

**L27 Music 237 Concert Choir**

A study of the repertory of the vocal ensemble from the Renaissance to the 20th century, with performance in public concerts. May be repeated for credit. Prerequisite: audition and consent of instructor. Four class hours a week.  
Credit variable, maximum 2 units.

---

**L27 Music 238 Chamber Choir**

Study and performance of advanced repertoire for small vocal ensemble from Renaissance to the present. May be repeated for credit. Prerequisites: audition and consent of instructor.  
Credit 1 unit.

**L27 Music 295 Independent Study: Language and Arts**

Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit.  
Credit variable, maximum 3 units.

---

**L27 Music 296 Independent Study: Textual and Historical Studies**

Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit.  
Credit variable, maximum 3 units.

---

**L27 Music 298 Directed Internship**

Students receive credit for a faculty-directed and approved internship, usually with a music professional or musical organization. The primary objective of the internship is to obtain professional experience outside the classroom. Students obtain a Learning Agreement from the Career Center and have it signed by the Career Center, the faculty sponsor and the site supervisor, if appropriate. A final written project is agreed upon before work begins and is evaluated by the faculty sponsor at the end of the internship. Students may not receive credit for work done for pay but are encouraged to obtain written evaluations of such work for the student's academic adviser and career placement file. Credit should correspond to actual time spent in work activities; e.g., eight to 10 hours per week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours. Consult department for faculty selections in this course.  
Credit variable, maximum 3 units.

---

**L27 Music 299 Performance Project**

Students may contract with a faculty supervisor for credit for work on musical performance projects or research on musical performance. Contracts must be signed by the student, the faculty supervisor and the department chair before the student's work on the project commences. Consult department for faculty selections in this course.  
Credit variable, maximum 3 units.

---

**L27 Music 3011 Music History I**

A study of music history and literature from the Middle Ages to 1750. Composers treated include Machaut, Dufay, Josquin, Palestrina, Monteverdi, Vivaldi, Handel and Bach. Prerequisite: Music 103.  
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM

---

**L27 Music 3012 Music History II**

A study of music history and literature from 1750 to 1850. Composers treated include Haydn, Mozart, Beethoven, Schumann and his contemporaries. Prerequisite: Music 3011 or Music 104E.  
Credit 3 units. A&S: TH A&S IQ: HUM, WI BU: HUM

---

**L27 Music 3013 Music History III**

A study of music history and literature from 1850 to the present. Composers treated include Liszt, Wagner, Brahms, Tchaikovsky, Mahler, Debussy, Stravinsky, Schoenberg, Boulez, Stockhausen, Cage, Glass, Reich and Adams. Prerequisite: Music 3012 or Music 104.  
Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI BU: HUM

---

**L27 Music 3014 Ethnomusicology**

This course provides an introduction to the field of ethnomusicology, defined broadly as "the study of music in — or as — culture" or "the study of people making music." We explore the varied ethnographic, anthropological, historical, and music-analytical approaches that ethnomusicologists have employed to explain the vital role of music-making in diverse human societies. We seek to understand the social significance of a variety of musical practices, drawing on ethnomusicological scholarship to address music's performance, circulation and reception. Case studies from around the world demonstrate the multiple ways that sound shapes — and is shaped by — issues of cultural practice and representation, ideologies of authenticity, intersectional identities, cultural memory, ideas and structures of tradition, colonialism and postcolonialism, transnationalism and globalization. Our case studies introduce students to a number of important musical genres and traditions, including (in the order in which they appear in the class): Mbira (Zimbabwe), Andean Kena music (Peru), Jazz (U.S.), Samba (Brazil), Gamelan (Java), Funk (U.S.), Egyptian musics, Ottoman-Turkish classical music, Karnatic Music (South India), Gisaeng music (Korea), Ngoma (South Africa), Agbekor (Ghana), Hip-hop (U.S.), and Noise (Japan). Prerequisites: Music 121C and 122C (Theory I and II) or Music 121J and 122J (Jazz Theory I and II).  
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: BA EN: H

---

**L27 Music 3015 American Popular Music and Media**

This course considers the history of American popular music as delivered by successive mass media platforms in the industrial and post-industrial eras: from mass-produced sheet music in the mid-19th century to digital music and video on the internet. Historical contextualization and in depth analysis of musical scores and various kinds of audio recordings and audiovisual texts are at the center of the course. Topics considered include: the history of sound recording technologies and formats; the role of electronic mass media structures (radio, film, television, the internet); urbanization, national commercial music centers (New York, Hollywood, Nashville), and the importance of regional sounds in a national context; the formation and transformation of select genres (rock, country, various black musics); legal frameworks relating to music as a commodity (copyright, sampling); the impact of visual media on music dissemination, performance and meanings; and how recorded media of all kinds have transformed the act of listening. Issues of race, gender, sexuality, personal, and national identity are considered across the course. Prerequisites: Music 121C and 122C (Theory I and II) or Music 121J and 122J (Jazz Theory I and II).  
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

---

**L27 Music 3021 Music of the African Diaspora**

This course explores musical cross-fertilization between the African continent and South America, the Caribbean and Europe. Beginning with traditional musics from selected regions of the African continent, the course examines the cultural and musical implications of transnational musical flows on peoples of the African diaspora and their multicultural audiences.  
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS

---

**L27 Music 3022 Native American Musical Traditions of the Western United States**

Exploration of music and its historical and contemporary contexts among Native American cultures of the Southwest and the Northern Plains, chiefly Navajo and Lakota, but with some considerations of Pueblo, Shoshone and other nations. Examinations of intertribal pow-wow movements, crossover musics, European appropriation and refashioning of Native American culture in Hollywood and elsewhere.  
Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: HUM

---

**L27 Music 3023 Jazz in American Culture**

This course will address the role of jazz within the context of 20th-century African-American and American cultural history, with particular emphasis on the ways in which jazz has shaped, and has been shaped by, ideas about race, gender, economics and politics. We will make use of recordings and primary sources from the 1910s to the present in order to address the relationship between jazz performances and critical and historical thinking about jazz. This course is not a survey, and students should already be familiar with basic jazz history. Prerequisite: L27 Music 105 or permission of instructor.  
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Arch: HUM Art: HUM BU: HUM

---

**L27 Music 3024 From Cage to Glass and Beyond**

Explores the various directions composers took in the second half of the 20th century, including "chance" music of John Cage, minimalism of Philip Glass and postmodernism. Includes concert attendance. Prerequisite: ability to read music is advisable but not required.  
Credit 3 units. A&S: TH BU: HUM

---

**L27 Music 3025 Women of Music**

Popular music and art music around the world, from the perspective of women. The roles of women as creators, performers, sponsors and consumers. The representation of women in music and how it relates to cultures of the past and present.  
Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

---

**L27 Music 3027 Close Harmony: A Cappella Musical Traditions**

An examination of ensemble music for unaccompanied voices. Although it focuses on the Western art tradition (e.g., Renaissance sacred and secular polyphony), it also addresses genres of "world music" (Yankton Sioux choral peyote songs, Makwayera singing of Zimbabwe) and less "high style," more popular unaccompanied vocal textures (e.g., shape-note, barbershop, spirituals, the Comedian Harmonists, male gospel quartets, doowop). Study of the historical and cultural contexts of the various musical types balances examination

of representative musical works. Prerequisite: the ability to read music, permission of instructor; Music 103 is highly recommended, but not required.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

#### L27 Music 3028 Music of the 1960s

The music of the 1960s played a significant and widely noted role in an era of global political and social upheaval. This course surveys a broad range of music produced during the decade, spanning the world but with emphasis on Anglo-American popular music. While a music course traditionally deals with a single genre such as "world music," classical or jazz, this course analyzes several genres together to show how each influenced the others and how all were informed by broader social and cultural concerns. The course thus both familiarizes students with diverse musical traditions and introduces them to a new way of thinking about music and culture. Topics discussed include the transnational music industry; the contested concept of "folk" and "traditional" music; music and political protest; music and migration; and music's relation to ethnic and class identity.

#### L27 Music 3029 Game of Thrones, Game of Tones: Medieval Music in the Age of HBO

Credit 3 units. A&S IQ: HUM, LCD EN: H

---

#### L27 Music 3031 Music and Healing

In this course, we broadly consider issues of music and healing, drawing from the fields of medical ethnomusicology, medical anthropology, music therapy, and psychology. Our case studies are multi-sited, as we interrogate musical healings and healing music from diverse global and historical perspectives. We approach our study of musical practices with the understanding that the social, cultural and political contexts where "music" and "healing" are themselves created inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We read a variety of academic literature and use media texts and listening examples to develop interdisciplinary and cross-cultural analyses of music and healing. Issues of national consciousness, postcolonialism, gender, sexuality, race, ethnicity, class, religion, dis/ability and the role of history/memory remain central to our explorations of music and healing.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

---

#### L27 Music 3051 Text and Music

How do composers respond to the structure and meaning of text? Can spoken language become musical sound? Can musical sounds become textual signifiers? The course explores these questions by examining a broad range of texted music: Gregorian chant, Japanese Noh drama, English madrigals, Bach cantatas, 19th-century German lieder, operas by Mozart and Wagner, American musical theater, high modernist works by Schoenberg, Stockhausen, Berio and Lansky, as well as popular music. Some knowledge of music theory is required, and familiarity with German is helpful, though all texts are provided with English translations. A lot of listening and reading, several short and analytical assignments, three essays. Prerequisite: one year of music theory or permission of instructor.

Credit 3 units. A&S: TH

---

#### L27 Music 3091 Jazz Improvisation I

An introduction to improvising music in the jazz tradition, including diatonic and chromatic harmony, extended chords, modes and jazz scales. Exercises in basic aspects of the blues and in the styles of be-bop and modern jazz. Prerequisite: Music 1091.

Credit 3 units. BU: HUM

---

#### L27 Music 3112 Choral Music before 1800

A study of choral music of the Western world, from the medieval period through the 18th century, examining both the repertoire itself and the evolution of the chorus. Topics include the development of various choral forms, the role of choral music in sacred and secular settings, the changing nature of choirs over the centuries, and the hallmarks of choral style and performance practice in the Medieval, Renaissance, Baroque and Classical periods. Choral music for small and large forces, both for voices alone and with accompaniment, are surveyed. Works from each period are examined from textual, analytical and cultural perspectives. Composers studied include Palestrina, Monteverdi, Handel, J. S. Bach, Mozart and Haydn, as well as lesser-known contemporaries. Prerequisite: ability to read music is helpful, but not required.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

---

#### L27 Music 3113 Choral Music from Beethoven to the Present

A study of choral music of the Western world from the time of Beethoven to the present, examining both the repertoire itself and the evolution of the choral instrument. Topics include the development of various choral forms, the role of choral music in sacred and secular settings, the changing nature of choirs over the centuries, and the hallmarks of choral style and performance practice in the late Classical, Romantic, and Contemporary periods. Choral music for small and large forces, both for voices alone and with accompaniment, are surveyed. Works from each period are examined from textual, analytical and cultural perspectives. Composers studied include masters such as Beethoven, Schubert, Brahms, Britten, Stravinsky, as well as well-established present-day composers such as Lauridsen, Larsen and Whitacre. Prerequisites: Ability to read music is helpful, but not required.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

#### L27 Music 3132 Romantic Revolutions in European Music and Culture

The early 19th century in Europe witnessed sweeping changes in social, political and cultural life, but some of the most fascinating happened in music. This course considers intersections between Romantic thinking about music — which inspired an idealistic vision of the art form as a source of quasi-spiritual experience — and other contemporary "revolutions." To what extent was Romantic music a "holy art" that offered a refuge from the world? In what ways was it a worldly participant in larger currents in society and culture? By exploring these questions and more, students develop the skills and framework needed to incorporate works of music into their investigation of enduring issues in history and the humanities. Although this course requires listening and viewing of musical works, it is designed for students with intellectual curiosity but without prior musical background. We also require weekly readings, occasional presentations, three short papers and spirited class discussion.

**L27 Music 320 The American Musical Film**

Film musicals were crucial to the success of the American film industry from the dawn of sound film in the late 1920s to the demise of the studio system in the late 1950s. This course examines the American film musical from a variety of aesthetic, critical and historical perspectives, with particular attention to how the genre interacted with popular music and dance and the major political and social trends of the Thirties, Forties and Fifties. Required screenings.

---

**L27 Music 3221 Music Cognition**

An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.

---

**L27 Music 3232 Keyboard Skills V**

Advanced skills in score reading, figured bass and improvisation, as well as drills, including seventh chords and modulation.

Prerequisite: Music 2242. One and one-half class hours a week. Credit 1 unit.

---

**L27 Music 3237 The Art of Popular Song: From Folk and Musical Theatre to Rock and Contemporary A Capella**

This course explores the art of songwriting through the lens of American popular music. Students examine landmark songs from multiple eras and create their own original songs in a variety of styles, from classical music, folk music and Broadway to rock, pop and a capella. Through composing and arranging, listening and analysis, students gain insight into the sonic structure and cultural significance of popular music. The course also responds to students' individual interests and performance backgrounds, offering opportunities to write music for vocal ensembles, small groups, singer-songwriter formats, and electronic media.

**L27 Music 328 History of the Film Score**

This course looks at the role of music in Hollywood films from the beginning of the sound era to the present. Larger themes include the importance of technology, industry structures shaping the nature of scores, notable film music composers, the relationship between music, gender and genre, music's role in the adaptation of literary texts to film, the power of directors to shape the content of film scores, and the importance of popular music as a driving economic and aesthetic force in film music history. Films screened include *From Here to Eternity*, *Stagecoach*, *High Noon*, *The Night of the Hunter*, *Butch Cassidy and the Sundance Kid*, *Born on the Fourth of July*, *Casino*, *Jarhead* and *The Social Network*. Required screenings.

**L27 Music 3313 Interactivity and DSP**

This course is a project-based course in interactivity and digital signal processing using the MaxMSP programming environment. It will cover the composition of interactive computer music, as well as the theory and application of MIDI, synthesis, and digital signal processing. Programming examples, along with scores and recordings, will be presented for weekly study in class. Readings from the required texts, tutorials that demonstrate programming with MaxMSP, and weekly exercises that promote an understanding of the programming demonstrated in class, will be assigned for completion outside of class. Students will also produce a midterm project and final project. These will be interactive pieces that utilize the different techniques that have been discussed in class and experimented with in the

exercises. Both pieces should be planned in advance and worked on throughout the semester. The final exam will be a short programming exercise that covers topics that have been presented in class and realized in the weekly exercises, and it will be completed in the scheduled two-hour exam period.

**L27 Music 3370 Music and Performance**

In his 1998 book, *Musicking*, Christopher Small asserts that music is not a thing but an activity — something that people do. Starting from this premise, this course explores musical performance as a live event, one in which additional aspects of performance — dramatic enactments, costume, choreography, and stage design — also come into play. While recorded music plays an important role in our investigations, we focus on musical events that take place before and with live audiences. Exploring the choices of performers and the expectations of audience members in settings from gospel churches to Radio City Music Hall, this course moves through a wide variety of musical genres, including cabaret, blues, opera, protest song, musical theater and rock. We examine artists whose work blurs the line between "music" and "theater," including George Clinton, Taylor Mac, and Gertrude Stein, as well as everyday people, such as the singers of the Civil Rights Movement, who used the power of live musical performance to change the course of human history. We also attend performances around St. Louis, guided by the interests of the class. Students with an interest in music, theater, dance, cultural history, American studies, and African-American studies are especially welcome.

**L27 Music 3581 Musica Ebraica: Jewish Identities in Western Music From 1600 to the 21st Century**

The course explores Western music from the 17th century to the 21st century through the prism of musical works that were written by Jews and for Jews and of musical compositions reflecting their composers' identifying themselves as Jews. Jewish art music from these periods will be examined against

the background of musical development in general, the social, political, and religious context of the composers, and written reflections about Jewish music. Examples of Jewish art music will be analyzed through different approaches in order to determine the cultural interrelationships between Jews and non-Jews, Jewish cultural autonomy, and the perception of Jewishness in music.

---

**L27 Music 3582 Music in Jewish Culture and Society**

The common term "Jewish Music" raises numerous questions that emanate from the difficulty to define "Jewish" identity of any given music. This course deals with various approaches to the definition of Jewish music, perceived as a cultural and sociological component in the Jewish communities throughout the diaspora. We survey the functions in which music is performed in traditional Jewish communities, especially Jewish liturgy, and the substantial vicissitudes in these musics after the European Enlightenment, European colonialism in north-Africa, and in the Mediterranean. We study the background and the different characteristics of selected Jewish communities — Ashkenazic, Sephardic, Italian, Yemenite, and others — as well as instrumental music, questions of gender, and the relationship between music and text. A secondary goal of this course is the study of the bibliography and discography of Jewish musics.

**L27 Music 3583 The Soundtrack of Israeli History**

This course explores connections between Israeli history, nationality and culture, and between Israeli art music. Such an encounter between reveals the reflection of, and responses to, local social developments in various historic and constitutive moments in Israeli history such as: the fifth Aliya (wave of immigration) in the 1930s, the statehood years, the waning of nationalistic sentiments in the late 1950s, the aftermath of Israeli wars, the negotiation between Israeli and Jewish identities, and even artistic expressions of postmodernity within the Israeli context. These histories are surveyed through historical studies as well as through their musics and against the background of developments in 20th-century music.

---

**L27 Music 3585 Islam, Music, Muslim Media**

How do Muslim individuals and communities understand and negotiate the relationship between sound and spirituality? How does Islamic philosophy challenge Western definitions of music?

How do music and cultural practices reflect and shape diverse Muslim identities and political struggles? To what extent can we speak of an "Islamic world," musical or otherwise? In this course, we investigate Islamic musics and musical practices in the lives and experiences of Muslims throughout the world. We approach our study of Muslim musical practices with the understanding that the social, cultural and political contexts where music is created, disseminated and consumed inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We engage with a variety of academic, musical and media texts to develop interdisciplinary analyses about Islam, music, sound experience and Muslim subjectivities. Issues of nationalism and transnationalism, class, race and ethnicity, gender and sexualities, colonialism and postcolonialism, history and memory remain central to our exploration of spirituality and religion in Muslim musical and cultural practices.

---

**L27 Music 3586 Combat Movie Music and Sound After Vietnam**

This course considers the Hollywood combat movie genre after the Vietnam War (post 1975) by listening closely to how these always noisy films use music and sound effects to tell stories of American manhood and militarism. Centering on an elite group of prestige films — action movies with a message for adult audiences — the course examines thirty-five years of Hollywood representations of World War II, the Vietnam War, the Gulf War, and post-9/11 wars against terrorism. Close analysis of how combat film directors and composers have used music and sound in conjunction with the cinematic image are set within a larger context of ancillary texts (source materials, soundtrack recordings, published and unpublished scripts), media folios (press kits, reviews, editorials, newspaper and magazine stories and interviews), and scholarly writing from across the disciplines. Films screened include *Apocalypse Now*, *Platoon*, *Hamburger Hill*, *Courage Under Fire*, *Saving Private Ryan*, *The Thin Red Line*, *We Were Soldiers*, *Flags of our Fathers*, *The Hurt Locker*, and *Act of Valor*, as well as pre-1975 combat films starring John Wayne. The ability to read music is not required. Required screenings. Prerequisites: none.

---

**L27 Music 3631 Russian Literature and Opera**

This interdisciplinary course surveys the intersections between Russian literature and opera from the 19th century to the present. Literary works in a variety of genres (short stories, narrative poems, plays and novels) by Russian authors (with Pushkin as a clear favorite) have inspired generations of leading Russian composers, resulting in significant operatic adaptations, including Tchaikovsky's *Eugene Onegin*, based on Pushkin, Prokofiev's *The Gambler*, based on Dostoevsky, and Shostakovich's *The Nose*, based on Gogol. For each pairing of author and composer, we read and discuss the literary text before considering the ways in which the original was refined, trimmed and generally transformed for the operatic stage. We frequently view opera productions and consider issues of staging, embodiment and fidelity to the original. The broader goal of the class is to consider the possibilities and limits of artistic media, specifically the points of agreement or dissonance between literature and music.

---

**L27 Music 4131 Music in the 18th Century**

Musical activity in Europe during the 18th century is the subject of this course, which brings the high baroque, galant and classical eras into a single narrative. Patronage, publishing, star performers and highly specific musical publics were central to the music-making across the century. How these forces shaped the professional and creative lives of major 18th-century composers is a principal theme of the course. A broad range of 18th-century instrumental and vocal music is surveyed, including works by Corelli, F. Couperin, Vivaldi, Rameau, Telemann, Handel, Hasse, Haydn, Mozart, D. Scarlatti and several members of the Bach family. Extensive listening assignments and score analysis are supplemented by readings drawn from recent scholarship and examination of 18th-century music publishing and other period sources in facsimile. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L27 Music 414 Music of the Classic Period**

An intensive survey of music literature from ca. 1750 to ca. 1830 with attention to the music of Haydn, Mozart, Beethoven and some of their predecessors. Prerequisite: Music 3012 or permission of instructor. Credit 3 units. A&S: TH

---

**L27 Music 415 Music of the Romantic Period**

Credit 3 units. A&S: TH

**L27 Music 4281 The Italian Madrigal**

The most important musical genre of the late Renaissance, the madrigal, intersects with poetry, theater and the visual arts, and thus, constitutes an ideal point of entry to early modern Italy. This course explores the stylistic development of the madrigal from its origins in the early 16th century to its demise some hundred years later. The course is structured around close readings of madrigals by Verdelot, Arcadelt, Willaert, Rore, Wert, Marenzio, Luzzaschi, Fontanelli, Gesualdo and Monteverdi. Secondary readings focus on the relation between words and music; the construction of subjectivity; concepts of mode; theories of chromaticism; and performance practice, framed in the context of 16th-century society and culture. Prerequisite: Music 3011, graduate standing or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L27 Music 4282 The "Crossover" Tradition in Anglo-American Music Theater**

The musical stage in the United States and Britain has remained a vital artistic and commercial arena over the past 100 years despite the emergence of mass media formats such as film and television. Audiences continue to clamor for stage stories where actors sing or singers act, and composers, writers, producers and directors have created a stunning variety of musical theater styles to meet the demand. This course surveys important English-language operas, operettas and singer-centered musicals from the turn of the 20th century to the start of the 21st with an emphasis on "crossover" works that blur the lines between opera and the commercial musical stage. All the works included in the course continue to be performed today, forming a core repertory of music theater works in English that emphasize singers and singing. The overlapping, ever-changing spheres of the opera house and Broadway and West End theaters provide the geography of the course, which is peopled by performers, creators and audiences. In-class analysis of 14 works focuses on how the singing voice has been used as an expressive vehicle and how theater singers have adapted to an age of amplification and recording. Works studied include *Carousel*, *Sweeney Todd*, *The Phantom of the Opera*, *Show Boat*, *Candide*, *Street Scene*, *The Pirates of Penzance*, *The Light in the Piazza*, *My Fair Lady*, *Albert Herring*, *Porgy and Bess*, *The Most Happy Fella*, *Margaret Garner* and *The Student Prince*. In-class singing is encouraged as a means to get inside the musical and dramatic values of these works. Prerequisites: ability to read music, and graduate or upper-division standing.

**L27 Music 4561 Soundtrack Studies: Music, Voices, Noise**

This course considers the interaction of film, sound and music from the silent era to the present by screening representative films from around the world and exploring current directions in scholarship from the disciplines of film studies and musicology. Topics include: historical and critical understandings of the sound track, major film sound theorists (such as Michel Chion), technological shifts (such as synchronized sound, Dolby and digital surround sound), the uses of Richard Wagner (both his music and his ideas), the relationship between a film genre (noir) and sound and music and the relationship between a musical genre (opera) and film, and the juxtaposition of popular and classical, Western and non-Western musical styles in art cinema. Films screened include Meek's *Cutoff*, *Blow Out*, *Days of Heaven*, *Sous le toits de Paris*, *Love Me Tonight*, *Casablanca*, *Alien*, *Apocalypse Now*, *La cérémonie*, *Le Cercle rouge*, *The Pillow Book*, *The Scent of Green Papaya*, and *The Bourne Ultimatum*. The course is in seminar format. Readings from recent scholarly work on film sound and music inform class discussions of the screened films. Close analysis of how music,

sound and image interact in film making and the film experience lies at the heart of the course. The ability to read music is not required. A primary goal of the course is the development of specific listening skills that are useful when working in this area. Targeted writing assignments ask students to write about film sound and music from a variety of critical and historical perspectives. Prerequisites: graduate status or completion of Film 360 The History of the Film Score, or AMCS 360 or Music 328 and permission of the instructor. Required screenings. Same as L53 Film 456

**L27 Music 4621 Ancient Greek and Roman Music**

Music played a vital role in Ancient Greece and Rome. New resources and perspectives now allow us to appreciate the ancients' music better than ever before. This course addresses the nature of ancient music (instruments, melody and rhythm, modes), ancient attitudes toward music, and its contribution to public and private life. The focus throughout is on our ancient sources, both literary and archaeological.

## Performing Arts

Performing Arts at Washington University comprise dance (p. 705) and drama (p. 706).

### Dance

Students may select dance (p. 330) as a major through the Performing Arts Department. This course of study combines intensive studio work in technique and theory of modern dance, ballet and composition with seminars examining dance as a global phenomenon with forms reflecting culturally specific historical, aesthetic and anthropological features. The program also includes a broad range of courses such as stagecraft, music resources, improvisation, anatomy for dancers, pedagogy, dance therapy, musical theater dance, world dance forms, jazz and tap. Students also may choose to minor in modern dance or ballet or in world music, dance and theater. The interdisciplinary minor in world music, dance and theater encourages students already interested in the performing arts to explore those outside Euro-American traditions. A certificate program in somatic studies is offered through the University College division of Arts & Sciences.

The senior capstone experience is framed in consultation with Performing Arts faculty. In April, prior to registration for the fall semester, dance majors discuss the capstone requirement with their adviser. The dance capstone requirement can be satisfied by a senior honors thesis or senior dance project. The format may range from a research paper or written analysis of the student's dance development to a project emphasizing movement expression (e.g., the creation of a video résumé, a performance, or a choreographic project). In all cases, dance capstones have a written component.

Those who study dance at Washington University learn from faculty members who have both professional experience and academic degrees. Students also have the opportunity to study with guest artists-in-residence who teach master classes and set choreography.

Students may audition for the Washington University Dance Theatre, which holds annual auditions for students. Selected students will appear in faculty and guest artist-choreographed concerts in Edison Theatre. Dance students particularly interested in performance may, with the approval of its director, rehearse and perform with The Slaughter Project, Washington University's dance company in residence. Students may also participate in departmental drama productions as well as student work in choreography and theater. Each year, students have the opportunity to attend the regional American College Dance Conference to adjudicate work, perform, and take master classes.

Dance students may pursue study abroad at University of Auckland, New Zealand; University of Ghana, Legon; and Roehampton University, London. With approval from the Dance

program, courses at these institutions may fulfill dance major and minor requirements. Courses in other disciplines taught at these institutions may also be accepted by Washington University.

## Drama

The drama (p. 340) major combines the historical, cultural and theoretical study of theater and performance with a full array of theater production courses, including acting, directing, performance art, design (set, costume, lighting, sound) and playwriting.

The theater and performance studies faculty offer courses in theater history, performance studies, and dramatic and performance theory. Majors also may take cross-listed courses in such departments as African and African-American studies; classics; English; East Asian languages and cultures; and film and media studies. Our courses analyze theater and performance as resonant and significant cultural practices, both historically and currently. Courses combine critical analysis with attention to the corporeal and material embodiment of actual performance.

In small, individualized classes (capped by a maximum of 16 students) characterized by a high number of weekly contact hours (generally six), professionally and academically trained faculty teach a rigorous system of production courses. A carefully graduated four-semester sequence in acting culminates in a class for seniors (Acting IV) focused on individual projects. A two-course directing sequence issues into a public showing of student-directed work, and some students have chosen to direct a fully designed production as their Senior Honors thesis. Recent graduates of the acting and directing sequence have been placed in prestigious MFA programs, internships and jobs in regional American theaters, as well as in various professional schools and graduate programs. A nationally recognized program in design and technical theater works students through a structure of costume, scene, lighting and sound design courses, with several electives on such topics as mask making and baroque costume that are informed by historical and cultural study. A highly successful playwriting program, enriched by the annual A.E. Hotchner Playwriting Competition and annual workshops run by leading American dramaturges, has produced playwrights whose work is now being performed in nationally recognized venues such as Chicago's Steppenwolf Theater.

The culture of performance is abundantly rich at Washington University. A wide array of student theater groups, with a particular focus on improvisation, provides many opportunities for student-generated performance on campus.

Since 1991, the Performing Arts Department and Globe Education (London) have been running a national summer program held at Shakespeare's Globe in London. This four-week program includes a 3-unit course on the textual, historical and cultural study of Shakespeare; a 3-unit course on acting Shakespeare (with particular attention to acting on the Globe

stage); master classes taught by Globe personnel; playgoing in London and Stratford; and more.

## Majors

The Performing Arts Department offers majors in dance and in drama. For the major in dance, visit the Dance (p. 331) page. For the major in drama, visit the Drama (p. 340) page.

## Minors

### The Minor in World Music, Dance and Theater

**Required units:** 17-19

**Required courses:**

| Code       | Title               | Units |
|------------|---------------------|-------|
| Music 1021 | Musics of the World | 3     |
| Dance 315  | Dance Spectrum      | 3     |

#### And one to two of the following courses (3-5 units):

| Code        | Title                                   | Units |
|-------------|---|-------|
| AFAS 301    | A History of African-American Theater   | 3     |
| Chinese 467 | The Chinese Theater                     | 3     |
| Drama 223   | Cross-Cultural Women Playwrights        | 3     |
| Dance 343   | West African Music and Dance in Context | 2     |
| Japan 446   | The Japanese Theater                    | 3     |

#### Elective courses (choose 8 units):

| Code       | Title   | Units |
|------------|---|-------|
| Drama 368  | Black Theater Workshop III                                      | 3     |
| Music 3021 | Music of the African Diaspora                                   | 3     |
| Music 3022 | Native American Musical Traditions of the Western United States | 3     |
| Dance 305Z | Music Resources for Dance                                       | 2     |
| Dance 328  | Contemporary Dance and the Michio Ito Method                    | 2     |
| Dance 340  | Ballet as Ethnic Dance and Classical Art                        | 3     |
| Dance 343  | West African Music and Dance in Context                         | 2     |

#### Additional electives available in University College (U31):

| Code      | Title                                | Units |
|-----------|--------------------------------------|-------|
| Dance 235 | Dance Doorway to India               | 2     |
| Dance 328 | Dance of West Africa: Intermediate   | 2     |
| Dance 335 | Bharata Natyam as Movement Narrative | 1     |

## Additional Information

This is an interdisciplinary minor, drawing on the distinctive methodologies and training inherent in several disciplines. This minor encourages the student already interested in the performing arts to explore those outside Euro-American traditions. However, students majoring in fields such as anthropology, political science, psychology, education, comparative literature, history and foreign languages may find this minor a useful complement to their primary discipline.

## The Minor in Dance

For the minor in dance, visit the Dance (p. 332) page of this *Bulletin*.

Note: Students in the Class of 2018 and before may instead complete either the minor in ballet or the minor in modern dance,

both listed on the Performing Arts Department website (<http://pad.artsci.wustl.edu/dance-minors>).

## The Minor in Drama

For the minor in drama, visit the Drama (p. 341) page of this *Bulletin*.

## Courses

### Dance

For dance courses, visit the Dance (p. 333) page of this *Bulletin*.

### Drama

For drama courses, visit the Drama (p. 341) page of this *Bulletin*.

## Philosophy

Philosophy tackles central questions in human life, such as: *What counts as human knowledge? How should I live? What is truth? How is the mind related to the body? What is a just society?* These difficult but fundamental questions are rigorously explored in philosophy and worked through by drawing on the historical tradition and utilizing careful reasoning. Because philosophers have shaped many of the central ideas on which Western civilization is based, the study of philosophy plays a vital role in a well-rounded liberal arts education.

Philosophy courses at Washington University provide opportunities to gain deeper knowledge of the history of philosophy, from the work of the ancient philosophers Plato and Aristotle through key thinkers such as Descartes and Kant to the present. Students can study the interface between philosophy and other disciplines (such as psychology, environmental studies, women's studies, law and political science); they also can examine the methods of inquiry and underlying conceptual frameworks of scientific work itself. Courses in logic equip students to think and argue clearly and rigorously, while courses in analytic philosophy allow for the exploration of fundamental questions about knowledge and metaphysics. The department offers a variety of courses in ethics, where students can consider different theoretical approaches to current political, social, medical and environmental problems.

Hortense and Tobias Lewin Distinguished Professor Emeritus in the Humanities  
PhD, Harvard University

## Majors

Please refer to the following sections for more information about:

- The Major in Philosophy (p. 709)
  - Philosophy Research Track (p. 710)
  - Law and Policy Track (p. 710)
  - Philosophy of Science Track (p. 711)

## The Major in Philosophy

**Total units required:** 27 units, of which at least 6 units must be at the 400 level, and an additional 15 units must be at the 300 level or above.

Majors are encouraged to take more than this minimum number of courses, especially if they are considering graduate work in philosophy. Majors and minors are encouraged to fulfill the writing-intensive requirement by taking Phil 390 Philosophical Writing. All majors are required to complete a capstone experience in philosophy, either an Honors thesis (Phil 499) or the Philosophy Capstone Course (Phil 3991). Majors who are planning to do graduate work in philosophy should attain at least reading proficiency in German, Greek, Latin or French.

### Required courses:

Majors must complete at least one core course in each of the three areas below. Students who do not take Phil 390 will be required to take one additional core course. The core courses, by area, are:

#### *Contemporary/Analytic Philosophy:*

| Code      | Title                  | Units |
|-----------|------------------------|-------|
| Phil 301G | Symbolic Logic         | 3     |
| Phil 306G | Philosophy of Language | 3     |
| Phil 3113 | Theory of Knowledge    | 3     |

|           |                             |   |
|-----------|-----------------------------|---|
| Phil 315  | Philosophy of Mind          | 3 |
| Phil 321G | Philosophy of Science       | 3 |
| Phil 3481 | Introduction to Metaphysics | 3 |

*History of Philosophy:*

| Code      | Title                                    | Units |
|-----------|--|-------|
| Phil 347C | Ancient Philosophy                       | 3     |
| Phil 349C | Descartes to Hume                        | 3     |
| Phil 357C | Kant and 19th-Century Philosophy         | 3     |
| Phil 358  | Conceptual Foundations of Modern Science | 3     |

*Value Theory:*

| Code      | Title                           | Units |
|-----------|---------------------------------|-------|
| Phil 331F | Classical Ethical Theories      | 3     |
| Phil 339F | Philosophy of the Arts          | 3     |
| Phil 340F | Social and Political Philosophy | 3     |
| Phil 345F | Issues in Applied Ethics:       | 3     |
| Phil 346  | Philosophy of Law               | 3     |

On occasion it may be appropriate to substitute a 400-level course in one of these areas for a 300-level core course; individual petitions for substitutions will be considered by the undergraduate director. Generally, for a course to count either as "core" or as partly satisfying the requirement for 6 units at the 400 level, it must be home-based in Philosophy. At most, 3 units of credit in Phil 499 or Phil 500 can be counted toward the required 6 units of 400-level course work.

**Optional tracks:** The department offers the following three special tracks through the major: the philosophy research track (<http://philosophy.artsci.wustl.edu/undergraduate/philosophy-research-track>), the law and policy track (<http://philosophy.artsci.wustl.edu/undergraduate/law-and-policy-track>), and the philosophy of science track (<http://philosophy.artsci.wustl.edu/undergraduate/philosophy-science-track>).

## Philosophy Research Track

The philosophy research track is especially recommended for students who plan to pursue graduate studies and an advanced degree in philosophy — a must for anyone interested in a career as a university or college philosophy teacher. It will give the student a broad background in philosophy, which is a competitive advantage when applying to graduate programs in the field.

**Requirements:**

- At least 36 units total
- Phil 100G Logic and Critical Analysis
- One 100-level class in addition to Phil 100G Logic and Critical Analysis, preferably Phil 120F Problems in Philosophy or Phil 125C Great Philosophers

• **In Contemporary/Analytic:**

| Code         | Title                       | Units |
|--------------|-----------------------------|-------|
| Phil 301G    | Symbolic Logic              | 3     |
| Phil 3113    | Theory of Knowledge         | 3     |
| or Phil 3481 | Introduction to Metaphysics |       |
| Phil 306G    | Philosophy of Language      | 3     |
| or Phil 315  | Philosophy of Mind          |       |
| or Phil 321G | Philosophy of Science       |       |
| Total Units  |                             | 9     |

• **In History:** Any two core courses (a 400-level History course may be substituted for a second 300-level course):

| Code      | Title                                    | Units |
|-----------|--|-------|
| Phil 347C | Ancient Philosophy                       | 3     |
| Phil 349C | Descartes to Hume                        | 3     |
| Phil 357C | Kant and 19th-Century Philosophy         | 3     |
| Phil 358  | Conceptual Foundations of Modern Science | 3     |

• **In Value Theory** (Phil 4310 or Phil 4315 can satisfy a 400-level requirement):

| Code         | Title                      | Units |
|--------------|----------------------------|-------|
| Phil 331F    | Classical Ethical Theories | 3     |
| Phil 4310    | 20th-Century Metaethics    | 3     |
| or Phil 4315 | Normative Ethical Theory   |       |
| Total Units  |                            | 6     |

- Phil 390 Philosophical Writing or another core course
- Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
- At least 30 units at the 300 level or above (including core courses)\*
- At least 6 of those 30 units at the 400 level\*\*
- Courses taken pass/fail **cannot** count toward the major.

## Law and Policy Track

This track is especially recommended for students who intend to pursue a career in law or public policy. The track involves taking certain specific courses for the major, and possibly a few extra courses, that will provide the student with additional preparation and a competitive edge when applying to law school, post-graduate programs in public policy, and related jobs.

**Requirements:**

- At least 27 units total
- Phil 100G Logic and Critical Analysis or Phil 301G Symbolic Logic
- Strongly recommended: a 100-level class in addition to Phil 100G Logic and Critical Analysis

- One core course in **Contemporary/Analytic** and one core course in **History**

*Contemporary/Analytic Courses:*

| Code      | Title                       | Units |
|-----------|-----------------------------|-------|
| Phil 301G | Symbolic Logic              | 3     |
| Phil 306G | Philosophy of Language      | 3     |
| Phil 3113 | Theory of Knowledge         | 3     |
| Phil 315  | Philosophy of Mind          | 3     |
| Phil 321G | Philosophy of Science       | 3     |
| Phil 3481 | Introduction to Metaphysics | 3     |

*History Courses:*

| Code      | Title                                    | Units |
|-----------|--|-------|
| Phil 347C | Ancient Philosophy                       | 3     |
| Phil 349C | Descartes to Hume                        | 3     |
| Phil 357C | Kant and 19th-Century Philosophy         | 3     |
| Phil 358  | Conceptual Foundations of Modern Science | 3     |

- Phil 340F Social and Political Philosophy and Phil 346 Philosophy of Law
- Strongly recommended: at least one other **Value Theory** course:

| Code      | Title                           | Units |
|-----------|---------------------------------|-------|
| Phil 340F | Social and Political Philosophy | 3     |
| Phil 346  | Philosophy of Law               | 3     |

- Strongly recommended: at least one 200-level course
- Phil 390 Philosophical Writing or another core course
- Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
- At least 21 units at the 300 level or above (including core courses)\*
- At least 6 of those 21 units at the 400 level\*\*
- Courses taken pass/fail **cannot** count toward the major.

## Philosophy of Science Track

The philosophy of science track is available only as a second major in combination with work in one or more of the sciences. It is intended for those students with a scientific background who have an interest in pursuing philosophical issues relating to the natural and physical sciences.

**Requirements:**

- At least 27 units total
- **In Contemporary/Analytic:**

| Code      | Title          | Units |
|-----------|----------------|-------|
| Phil 301G | Symbolic Logic | 3     |

|             |                       |   |
|-------------|-----------------------|---|
| Phil 321G   | Philosophy of Science | 3 |
| Total Units |                       | 6 |

- **In History:** Any one of the core courses listed below:

| Code      | Title                                    | Units |
|-----------|--|-------|
| Phil 347C | Ancient Philosophy                       | 3     |
| Phil 349C | Descartes to Hume                        | 3     |
| Phil 357C | Kant and 19th-Century Philosophy         | 3     |
| Phil 358  | Conceptual Foundations of Modern Science | 3     |

- **In Advanced Philosophy of Science:**

| Code      | Title                                    | Units |
|-----------|--|-------|
| Phil 4210 | Topics in Advanced Philosophy of Science | 3     |

- Any three of the Supplementary Courses listed below, which must include Phil 390 Philosophical Writing if the writing-intensive requirement is to be fulfilled in Philosophy
- Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
- At least 27 units at the 300 level or above (including core courses)\*
- At least 6 of those 27 units at the 400 level\*\*
- Courses taken pass/fail **cannot** count toward the major.

**Supplementary Courses:**

*General Philosophy Courses:*

| Code     | Title                 | Units |
|----------|-----------------------|-------|
| Phil 390 | Philosophical Writing | 3     |
| Phil 426 | Theories of Concepts  | 3     |

*Logic and Method Courses:*

| Code      | Title                 | Units |
|-----------|-----------------------|-------|
| Phil 403  | Mathematical Logic 1  | 3     |
| Phil 404  | Mathematical Logic II | 3     |
| Phil 405  | Philosophical Logic   | 3     |
| Phil 4051 | Philosophy of Logic   | 3     |

*Epistemology and Metaphysics Courses:*

| Code      | Title                       | Units |
|-----------|-----------------------------|-------|
| Phil 3113 | Theory of Knowledge         | 3     |
| Phil 3481 | Introduction to Metaphysics | 3     |
| Phil 4141 | Advanced Epistemology       | 3     |
| Phil 4142 | Advanced Metaphysics        | 3     |
| Phil 4332 | Cognition and Computation   | 3     |

*Life and Science Courses:*

| Code     | Title                            | Units |
|----------|----------------------------------|-------|
| Phil 423 | Philosophy of Biological Science | 3     |

|          |           |   |
|----------|-----------|---|
| Phil 452 | Aristotle | 3 |
|----------|-----------|---|

*Mind and Science Courses:*

| Code      | Title                                      | Units |
|-----------|--|-------|
| Phil 315  | Philosophy of Mind                         | 3     |
| Phil 418  | Current Controversies in Cognitive Science | 3     |
| Phil 419  | Philosophy of Psychology                   | 3     |
| Phil 4212 | Philosophy of Neuroscience                 | 3     |
| PNP 495   | PNP Seminar (with approval of topic)       | 3     |

### Additional Information

**Senior Honors:** Eligible majors are encouraged to work toward Senior Honors. To qualify, students must have the agreement of a faculty member to serve as thesis adviser. In addition, they must have, at the end of the junior year, at least a 3.65 overall GPA. For important additional information regarding Senior Honors, consult our webpage (<http://philosophy.artsci.wustl.edu/undergraduate/honors-thesis-philosophy>).

**The Writing-Intensive Seminar:** Majors are encouraged to fulfill their writing-intensive requirement by taking Phil 390, which is specially designated as writing-intensive. It is typically taken in the junior year and is limited to 15 students. Significant attention is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays. A philosophy major who does not take a philosophy writing-intensive seminar must take a fourth core course, in any of the three core areas. Priority is given to philosophy majors and minors who have not yet completed their writing-intensive requirement.

**Capstone Experience:** All philosophy majors are required to complete a capstone experience either by writing an honors thesis or by taking the Philosophy Capstone Course (Phil 3991).

**Please be aware that the Capstone Course is offered only in the spring semester**, so students will need to plan their class schedules accordingly if they decide not to do an honors thesis. To qualify for doing an honors thesis, students must have, at the end of the junior year, at least a 3.5 GPA in the major, a 3.5 GPA in advanced philosophy courses, and a 3.65 overall GPA. Alternatively, majors should sign up for Phil 3991 (a 3-credit course), which will draw together a variety of different philosophical areas. Only philosophy majors of senior standing may take this course; preference is given to students not pursuing honors.

\*At least 27 units of the required upper-level courses must be completed with a minimum of a C-.

\*\*Three of these credits (one course) must not be from Honors Thesis or Independent Study.

**Study Abroad:** Students can pursue the philosophy major while studying abroad. The department has special study abroad arrangements with University College, London; King's College, London; Trinity College, Dublin (Ireland); Sussex

University (U.K.); Utrecht University (the Netherlands); and the University of Auckland (New Zealand). Information about study abroad and about specific overseas programs is available from the departmental website (<http://philosophy.artsci.wustl.edu/undergraduate/study-abroad>) and the Study Abroad adviser.

### Minors

Please refer to the following sections for more information about:

- The Minor in Philosophy (p. 712)
- The Minor in Philosophy of Science (p. 713)

### The Minor in Philosophy

**Units required:** 18

**Required courses:**

Philosophy minors are required to complete at least 12 units at the 300 level or above, which must include at least one course in each of the following three "core" areas:

*Contemporary/Analytic Philosophy:*

| Code      | Title                       | Units |
|-----------|-----------------------------|-------|
| Phil 301G | Symbolic Logic              | 3     |
| Phil 306G | Philosophy of Language      | 3     |
| Phil 3113 | Theory of Knowledge         | 3     |
| Phil 315  | Philosophy of Mind          | 3     |
| Phil 321G | Philosophy of Science       | 3     |
| Phil 3481 | Introduction to Metaphysics | 3     |

*History of Philosophy:*

| Code      | Title                                    | Units |
|-----------|--|-------|
| Phil 347C | Ancient Philosophy                       | 3     |
| Phil 349C | Descartes to Hume                        | 3     |
| Phil 357C | Kant and 19th-Century Philosophy         | 3     |
| Phil 358  | Conceptual Foundations of Modern Science | 3     |

*Value Theory:*

| Code      | Title                           | Units |
|-----------|---------------------------------|-------|
| Phil 331F | Classical Ethical Theories      | 3     |
| Phil 339F | Philosophy of the Arts          | 3     |
| Phil 340F | Social and Political Philosophy | 3     |
| Phil 345F | Issues in Applied Ethics:       | 3     |
| Phil 346  | Philosophy of Law               | 3     |

### Additional Information

Minors are encouraged to take the writing-intensive course Philosophical Writing (Phil 390). A philosophy minor must receive a grade of C- or above in each course. Many philosophy courses also can be taken as part of a minor in history, philosophy of science, or legal studies.

## The Minor in Philosophy of Science

Units required: 18

### Required courses:

| Code        | Title                                    | Units |
|-------------|--|-------|
| Phil 301G   | Symbolic Logic                           | 3     |
| Phil 321G   | Philosophy of Science                    | 3     |
| Phil 4210   | Topics in Advanced Philosophy of Science | 3     |
| Total Units |  | 9     |

### Elective courses:

At least one course from the following four:

| Code      | Title                                    | Units |
|-----------|--|-------|
| Phil 347C | Ancient Philosophy                       | 3     |
| Phil 349C | Descartes to Hume                        | 3     |
| Phil 357C | Kant and 19th-Century Philosophy         | 3     |
| Phil 358  | Conceptual Foundations of Modern Science | 3     |

At least one course from the following:

| Code      | Title                                      | Units |
|-----------|--|-------|
| Phil 3113 | Theory of Knowledge                        | 3     |
| Phil 315  | Philosophy of Mind                         | 3     |
| Phil 3481 | Introduction to Metaphysics                | 3     |
| Phil 390  | Philosophical Writing                      | 3     |
| Phil 403  | Mathematical Logic 1                       | 3     |
| Phil 404  | Mathematical Logic II                      | 3     |
| Phil 405  | Philosophical Logic                        | 3     |
| Phil 4051 | Philosophy of Logic                        | 3     |
| Phil 4141 | Advanced Epistemology                      | 3     |
| Phil 4142 | Advanced Metaphysics                       | 3     |
| Phil 418  | Current Controversies in Cognitive Science | 3     |
| Phil 419  | Philosophy of Psychology                   | 3     |
| Phil 4212 | Philosophy of Neuroscience                 | 3     |
| Phil 423  | Philosophy of Biological Science           | 3     |
| Phil 426  | Theories of Concepts                       | 3     |
| Phil 4332 | Cognition and Computation                  | 3     |
| Phil 452  | Aristotle                                  | 3     |
| PNP 495   | PNP Seminar (with approval of topic)       | 3     |

## Courses

Visit online course listings to view semester offerings for L30 Phil (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L30&crslvl=1:4>).

### L30 Phil 100G Logic and Critical Analysis

Introduction to the elementary tools of logic required for constructing and critically evaluating arguments and the claims they support. Topics include: the nature of an argument; argument structure; how arguments can fail both in structure and in content; formal and informal fallacies; propositional logic and predicate calculus; and critical analysis of rhetorical strategies for presenting arguments. Students will be encouraged to develop critical reasoning skills that can be widely applied.

Credit 3 units. A&S: LA, QA A&S IQ: NSM, AN Art: NSM BU: HUM

### L30 Phil 102 Introduction to Scientific Reasoning

This course analyzes scientists' reasoning strategies. Case studies from the history of astronomy, epidemiology, molecular biology, and neuroscience provide a basis for understanding of the character of scientific theories and the means by which they are evaluated. Special attention is given to the construction and evaluation of statistical and causal hypotheses, including experimental design, and to the use of scientific knowledge in public policy decision-making. Students acquire basic skills in critical thinking and scientific reasoning and an introductory understanding of issues in the philosophy of science.

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: HUM

### L30 Phil 120F Problems in Philosophy

Introduction to philosophical methods and concepts through an investigation of major issues in Western philosophy such as: what counts as knowledge; truth and belief; the existence of God; the mind-body problem; materialism and idealism; moral theory and concepts of justice. A range of historical and contemporary views on these issues is considered. The aim of the course is to prepare students to think and write about philosophical problems on their own.

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: ETH

### L30 Phil 125C Great Philosophers

In this course we focus on some of the most important texts in the history of Western philosophy in order to discuss a wide range of central philosophical problems. We typically consider, for example, the existence of God, the justification of claims to knowledge, and the requirements of a good human life, including the demands of morality. Among the philosophers most likely studied are Plato, Aristotle, Descartes, Hume, Kant, Marx, Nietzsche and Wittgenstein. Our goal is not just to appreciate the genius of some great philosophers but also to grapple with the current philosophical problems they have bequeathed to us.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: ETH EN: H

### L30 Phil 131F Present Moral Problems

An investigation of a range of contemporary moral issues and controversies that draws on philosophical ethics and culturewide moral considerations. Topics may include: racism, world hunger, war and terrorism, the distribution of income and wealth, gender discrimination, pornography, lesbian and gay rights, abortion, euthanasia, and capital punishment. The aim of the course is to present diverse points of view regarding these topics and to provide conceptual and theoretical tools that enable the student

to make headway in thinking carefully and critically about the issues.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

---

**L30 Phil 202A Puzzles and Revolutions: Text and Tradition**

One major force in human history has been inquiry into the natural world. Especially after 1550, natural science has, by virtue of its role in the development of technology and the improvement of health, brought about great changes on all scales of human existence, first in Western Europe and then globally. In this course, the changing character of inquiry into the natural world, from antiquity forward, will be the object of study. Does natural science enable us, for example, to study nature as it is in itself, or are culturally-determined perspectives or frameworks inescapable? How is it that natural science has, especially since 1800, proved so useful in the development of technology? How has it impinged on the arts? The requirements will include writing several short papers and brief responses to the readings.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: SCI EN: H

---

**L30 Phil 233F Biomedical Ethics**

A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH EN: H

---

**L30 Phil 235F Introduction to Environmental Ethics**

A general survey of current issues in environmental ethics, focusing on problems such as the obligation to future generations, protection of endangered species, animal rights, problems of energy and pollution, wilderness, global justice, and business obligations. Students also learn some ethical and political theory.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

---

**L30 Phil 239 Topics in Philosophy and Environment**

Philosophical questions are central to study of the environment. Such questions span many philosophical fields including metaethics, value theory, applied ethics, aesthetics, political philosophy and philosophy of science. Given such a diversity of important questions, this course focuses on a different intersection of philosophy and environment each time it runs. It aims to develop students' understanding of the complex philosophical claims and problems that lie behind environmental values, practices and policies. Examples of topics considered are: wilderness, food and agriculture, and animals.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L30 Phil 2401 Jewish Political Thought**

This course uses the concepts of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rule (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish

community's self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single "Jewish political thought" but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these questions through a range of materials that include both primary and secondary literature.

---

**L30 Phil 2501 Zionism**

Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is, at its heart, applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.

---

**L30 Phil 297 Undergraduate Independent Study**

Prerequisite: permission of the department.

Credit variable, maximum 6 units.

---

**L30 Phil 299 Internship in Philosophy**

Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement, which the student obtains from the Career Center and which must be filled out and signed by the Career Center, the site supervisor and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., eight to 10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours.

Credit variable, maximum 3 units.

---

**L30 Phil 3001 Philosophy of Medicine**

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L30 Phil 301G Symbolic Logic**

In the first half of the course we study some features of truth — functional and first-order classical logics, including studying the model theory and metatheory for first-order logic in much greater depth than in Phil 100. In the second half of the course we go on to study three different styles of proof system — tableaux, axiomatic and natural deduction. This course continues where Phil 100 An introduction to Logic and Critical Analysis leaves off. It is recommended for students who already have taken that introductory course, or for students who already have a

strong background in mathematics. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: LA A&S IQ: NSM, AN Art: NSM BU: HUM

---

### L30 Phil 306G Philosophy of Language

A survey of major philosophical problems concerning meaning, reference and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues will be selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke, and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

### L30 Phil 308 Introduction to Semantics

Semantics is the branch of linguistics which studies how speakers assign meaning to words, sentences, and larger units of discourse. We combine perspectives from both linguistics and philosophy to explore a variety of topics including polysemy, compositionality, quantification, anaphora, definite descriptions, attitude reports, presupposition and implicature. Prerequisite: Ling 170D or Phil 301G or permission of instructor.

Same as L44 Ling 311

Credit 3 units. A&S: LA A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

---

### L30 Phil 309 Topics in the Wilderness

Philosophical questions are central to study of the environment. Such questions span many philosophical fields including metaethics, value theory, applied ethics, aesthetics, political philosophy and philosophy of science. Given such a diversity of important questions, this course focuses on a different intersection of philosophy and environment each time it runs. It aims to develop students' understanding of the complex philosophical claims and problems that lie behind environmental values, practices and policies. Examples of topics considered are: wilderness, food and agriculture, and animals.

### L30 Phil 310 Contemporary Jewish Thought

A study of the representative figures and problems of modern Jewish thought from Spinoza to the present. Other topics include: the impact of the European Enlightenment; Zionism; Buber; Rosenzweig; Kaplan; and Soloveitchik. Prerequisite: JINE 208F or the equivalent.

Same as L75 JINE 310

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

---

### L30 Phil 3101 Topics in Philosophy of Religion

The question of how God can allow evil to occur to the righteous or innocent people has been a perennial dilemma in religion and philosophy. We study the classic statement of the problem in the biblical book of Job, the ancient Near Eastern literature on which Job is based, and traditional Jewish and Christian interpretation of Job. We study the major approach to the problem of evil in Western philosophical and religious thought.

Same as L23 Re St 3101

Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: ETH EN: H

---

### L30 Phil 3113 Theory of Knowledge

This course will focus on issues in epistemology with the aim of providing a survey of contemporary work. The course begins with a close reading of Descartes' first three Meditations. These should help us set some of the problems that figure in more recent work and provide an introduction to certain fundamental epistemological concepts. No particular background will be assumed, but participants are expected to come to class prepared to discuss topics at an advanced level. Readings are taken from original sources and can be challenging. Although most assignments are reasonably short, students should allow time for careful reading and re-reading. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

---

### L30 Phil 315 Philosophy of Mind

An introduction to philosophical analyses of the nature of mind, especially those developed by contemporary philosophers.

The focus will be on questions such as the following: What is a mind? How does it relate to a person's brain? How does it relate to a person's body and the external world? Can a mind exist in a very different kind of body (e.g., a computer or a robot)? Does thinking require a language-like code? If so, can nonlinguistic species think? What is it to have a mental image or to experience pain? Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM EN: H

---

### L30 Phil 316 Mind and Morals

This course explores a number of issues at the intersection of ethics and cognitive science. Possible topics include: Are we rational? Do we know our own thoughts and motivations? Can one believe that one ought to do something without being motivated to do it? Do emotions impair or enhance our ability to reason? How do moral beliefs develop through childhood? Are traits such as intelligence and character unchangeable, and what implications follow if they are (or are not)? Does retaining my identity over time require having the same mind, and, if so, am I the same person now as I was as a child? Are nonhuman animals worthy of moral consideration? If brain activity is determined by causal laws, can we have free will? Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

---

### L30 Phil 321G Philosophy of Science

Pivotal concepts common to empirical sciences are examined and clarified. These include: explanation, confirmation, prediction, systematization, empirical significance, and the relationship of all these concepts to the structure of scientific theory. Examples may be drawn from both contemporary and historical science, including the social, biological and physical sciences. Students with a background in science are particularly encouraged to consider this course. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM EN: H

---

### L30 Phil 327 Philosophy of Religion

Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H

---

**L30 Phil 331F Classical Ethical Theories**

Intensive readings of great works in the history of ethics, especially by Plato, Aristotle, Hume, Kant, and Mill. Topics may include: the sources of moral knowledge, the nature of practical moral judgment, the moral role of emotion and desire, weakness of will, moral autonomy, and the universality of moral norms. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH EN: H

---

**L30 Phil 3321 Feminist Philosophy**

This course focuses on vital normative issues of government, community, culture and interpersonal relationships that bear on women's lives in distinctive ways. We consider diverse topics from varied feminist perspectives. Probable topics include: race/ethnicity and gender; care and justice; varieties of oppression; lesbianism; sexuality; radical democracy; violence against women; and whether philosophical modes of investigation are biased against women.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: ETH EN: H

---

**L30 Phil 339F Philosophy of the Arts**

An examination both of general issues that apply to all types of art and of issues specific to particular art forms. For example, what is art? What are the central artistic values: beauty, truth, emotional expressiveness, representational power, or something else? Does art have a moral or political function? How can we account for the history of art and for different artistic styles?

In regard to selected forms, there are important questions concerning how pictures represent, whether music and dance are forms of "language," and the nature of literary interpretation. Some consideration is given to the relation of psychology and theories of the mind to art. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH EN: H

---

**L30 Phil 340F Social and Political Philosophy**

Study of certain fundamental issues concerning government, society and culture. For example: What are the nature and limits of legitimate political authority? Are ordinary human beings capable of governing themselves justly? Do citizens have a duty to obey the state? If so, to what extent, if at all, is that duty grounded in consent or contract? Should the state limit or regulate the personal relationships of citizens, such as marriage, family and sexuality? How should social institutions rectify a history of political or social injustice against oppressed groups? Readings from historical and contemporary sources. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH, HUM

---

**L30 Phil 345F Issues in Applied Ethics:**

Advanced study of a selected topic in applied ethics. Abstract ethical theories and methods are brought to bear on the moral problems that arise in an area of social and professional practice such as medicine, business, law, journalism, engineering, or scientific and humanistic research. Possible topics include: reproductive health care and policy, the just distribution of medical resources, the social responsibilities of corporations, accountability in the media and public office, and the ethics of research on or affecting human subjects. Prerequisites: one

course at the 100 or 200 level in applied ethics; or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

---

**L30 Phil 346 Philosophy of Law**

This course will first focus on the philosophical foundations of law, examining both the relationship between law and rules, as well as the types of legal reasoning. Second, the course will focus on philosophical issues that arise in the key substantive areas of law: contracts, torts, property, criminal law and constitutional law, as well in specialized areas such as family and employment law. The course will end with a brief discussion of several problems in legal ethics. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

---

**L30 Phil 347C Ancient Philosophy**

An examination of the high-water marks of philosophy in ancient Greece and Rome, focusing primarily on Plato and Aristotle. A wide range of philosophical problems is discussed, including the nature of the good life, the justification of knowledge, and the ultimate nature of mind and world. Attention is paid to how these problems unfolded in their historical context and to how the ancient treatments of them compare to contemporary efforts. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: ETH

---

**L30 Phil 3481 Introduction to Metaphysics**

This course is an introduction to central debates of contemporary analytic metaphysics. Metaphysics is concerned with the nature of the most general kinds of things and the relationship between these things. We discuss the nature of and relationship between properties, material objects, persons, time, space and modality. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L30 Phil 349C Descartes to Hume**

An examination of major philosophical systems and problems in Modern Philosophy as presented in the original writings of the 17th and 18th centuries. Topics may include rationalism and empiricism, idealism, materialism, and skepticism, with readings selected from the continental rationalists, Descartes, Spinoza, and Leibniz, and from the British empiricists, Locke, Berkeley, and Hume. Central problems include the mind-body problem, representationalism, and transcendentalism. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: HUM

---

**L30 Phil 3507 Legal Conflict in Modern American Society**

Thousands of lawsuits are filed daily in the state and federal courts of the United States. The disputes underlying those lawsuits are as messy and complex as the human, commercial, cultural and political dynamics that trigger them, and the legal processes for resolving those disputes are expensive, time-consuming and, for most citizens, seemingly impenetrable. At the same time, law and legal conflict permeate public discourse in the United States to a degree that is unique in the world, even among the community of long-established democracies.

The overarching objective of the course is to prepare our undergraduate students to participate constructively in that discourse by providing them with a conceptual framework for understanding both the conduct and resolution of legal conflict by American legal institutions, and the evolution of — and values underlying — the substantive law American courts apply to those conflicts. This is, at core, a course in the kind of legal or litigation "literacy" that should be expected of the graduates of first-tier American universities. Some of the legal controversies that are used to help develop that "literacy" include those surrounding the permissible use of lethal force in self-defense, the constitutionality of affirmative action in university admissions, contracts that are unconscionably one-sided, sexual harassment in the workplace, the duty of landlords to prevent criminal assaults on their tenants, groundwater pollution alleged to cause pediatric cancers, and warrantless searches of cellphone locator data by police.

---

### L30 Phil 351 History of Western Philosophy: Modern

Credit 3 units. BU: ETH

---

### L30 Phil 357C Kant and 19th-Century Philosophy

Examination of Kant and 19th-century philosophy. We will discuss Kant's "Copernican Turn" in metaphysics and epistemology, as well as his moral philosophy, and we will study works of selected 19th-century philosophers such as those of Hegel, Marx, Mill, and Nietzsche. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

---

### L30 Phil 358 Conceptual Foundations of Modern Science

The aim of this course is to present some of the basic concepts underlying modern science. Insofar as many of those concepts first appeared or became predominant in the 17th and early 18th centuries, the course concentrates on primary works from that period. Among the concepts to be studied are: 1. Nature and natures: the ontology of matter and force; causal closure. 2. Methods: observing and intervening, systematic and organized. 3. Explanations: appeal to laws and mechanisms; teleology. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

---

### L30 Phil 361 Philosophy of Emotions

Emotions like fear, joy, disgust, sadness and love are central to how we engage with each other and understand the world around us. But what can we say about what emotions are, how they function, and when they are valuable? This course will draw on research in philosophy as well as the social and cognitive sciences. The aim will be to develop a rich combination of conceptual, empirical, and phenomenological resources and bring them to bear on central questions about the nature and significance of emotions.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA EN: H

---

### L30 Phil 366 Art and the Mind-Brain

In recent years, there has been a growing interest in the bearing of cognitive science on the perception and understanding of art.

This interest has roots in tradition: Historically, art, aesthetics, and vision science have often been linked. But the growth of knowledge in cognitive science has opened up new opportunities for understanding art and addressing philosophical questions. The converse is also true. The production, perception and understanding of art are human capacities that can shed light on the workings of the mind and brain. This course considers questions such as: What is art? How do pictures represent? Does art express emotion? Why does art have a history? Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

---

### L30 Phil 375 Existentialism

The philosophical systems of selected philosophers such as Kierkegaard, Nietzsche and Sartre are examined to determine their historical origins, their ontological and epistemological ramifications, and their relationships to contemporary philosophy. Prerequisite: one course in Philosophy at the 100 or 200 level or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

---

### L30 Phil 3801 Ancient Greek and Roman Medicine

This course introduces the student to the practice and theory of medicine in the ancient Mediterranean, beginning in Egypt and continuing through Greece and Rome. In the end, we will find ourselves in the Middle Ages. Our focus will be on Greco-Roman medicine: how disease was understood; how disease was treated surgically, pharmacologically, and through diet; the intellectual origins of Greek medicine; the related close relationship between Greco-Roman medicine and philosophy; and the social status of medical practitioners. We will also discuss how medicine was written and in what terms its practitioners conceived it.

Same as L08 Classics 3801

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

---

### L30 Phil 390 Philosophical Writing

This seminar has a different topic of central philosophical importance each semester. Significant attention also is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays. Limited to 15 students. Priority is given to philosophy majors and minors who have not yet completed their writing-intensive requirement.

Credit 3 units. A&S: TH, WI A&S IQ: HUM, WI BU: HUM EN: H

---

### L30 Phil 397 Undergraduate Independent Study

Credit variable, maximum 6 units.

---

### L30 Phil 3991 Philosophy Capstone Course

This course focuses either on classic writings from the past century or on contemporary writings that address a major philosophical concern, such as "the meaning of life" or "the concept of self." In either case, the course draws together a variety of philosophical specializations. Must be taken by all philosophy majors who are not writing an honors project. Work for the course typically consists of one written project, one oral presentation, and one commentary on another student's oral presentation. Prerequisites: senior standing and major

in philosophy; preference given to those majors not pursuing Honors.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

### L30 Phil 403 Mathematical Logic I

A first course in mathematical logic, an introduction to both proof theory and model theory. The structure and properties of first-order logic are studied in detail, with attention to such notions as axiomatic theory, proof, model, completeness, compactness and decidability. Prerequisite: Phil 301G or equivalent or a background in mathematics.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

---

### L30 Phil 404 Mathematical Logic II

Godel's Incompleteness Theorem: its proof, its consequences, its reverberations. Prerequisite: Phil 403 or a strong background in mathematics.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 405 Philosophical Logic

What the philosophy student needs to know of logic, its techniques and its use as a tool in philosophical analysis. Some attention to the history of the subject and to its metatheory.

Prerequisite: previous exposure to formal logic, or permission of instructor.

Credit 3 units. A&S: LA

---

### L30 Phil 4051 Philosophy of Logic

This course surveys some important issues in the philosophy of logic. We begin with basic foundational issues in classical logic, including the relation of logic to psychological reasoning and Tarski's definition of logical consequence, and gradually go on to consider the motivations and status of well-known extensions (sometimes regarded as "neo-classical" logics) such as modal logics and second-order logic. In the last weeks of the course, we examine some outright challengers, including intuitionistic and paraconsistent logics. After evaluating the arguments for and against these challenges, we examine one recent, controversial view—logical pluralism—which suggests that we might not need to choose among the rival systems. Many of the readings for this course are classics of contemporary philosophy, and the subject is likely to be of especial interest to students who have interests in logic, and in the philosophy and foundations of mathematics and language. Some of the important ideas in the course presuppose at least a basic acquaintance with formal logic, and hence either Phil 100 or Phil 301 (or permission of the instructor) are prerequisites.

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

### L30 Phil 4061 Topics in the Philosophy of Language

Focus on the work of a single philosopher of language such as Carnap, Chomsky, Foucault, or Kripke, or on a central topic such as the theory of reference, the theory of meaning, or the problem of cross-cultural translation. Prerequisite: one course in epistemology, philosophy of language, or analytic philosophy, or permission of instructor.

Credit 3 units. A&S: TH

---

### L30 Phil 4065 Advanced Philosophy of Language

An advanced-level treatment of basic topics in the philosophy of language as this discipline is understood in the analytic

tradition. The main positions and the problems they pose are surveyed; focal themes include meaning, reference and truth. The aim of the course is to help students develop effective expository techniques and to provide them with the necessary conceptual resources to analyze and criticize different theoretical views. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM

---

### L30 Phil 4070 Global Justice

This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course will be of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally.

Same as L32 Pol Sci 4070

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

---

### L30 Phil 410 Theories of Perception

A consideration of recent work in philosophy and cognitive science on the nature of perception and its contribution to thought, knowledge and behavior. Special attention is paid to two questions: To what extent can perceptual experience be changed through learning? In what sense do perceptual states have content? The relation of these issues to more general theories of mental content, to the possibility of objective and theory-neutral observation in science, and to the directness or indirectness of perception are discussed. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of instructor.

Credit 3 units. A&S: TH

---

### L30 Phil 4141 Advanced Epistemology

Competing theories of knowledge and belief justification are considered. Careful attention is given to selected problems such as skepticism, certainty, foundations, coherence, perception, induction. Prerequisite: one course in Philosophy at the 300 level, graduate standing or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 4142 Advanced Metaphysics

Through readings from both classical and contemporary sources, a single traditional metaphysical concern is made the subject of careful and detailed analytic attention. Possible topics include such concepts as substance, category, cause, identity, reality and possibility, and such positions as metaphysical realism, idealism, materialism, relativism and irrealism. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 418 Current Controversies in Cognitive Science

An advanced survey of current debates in cognitive science with an emphasis on the philosophical issues raised by these debates. Topics may include: evolutionary psychology; innateness and neural plasticity; perception and action; consciousness; connectionism; robotics; embodied cognition; moral reason; emergence and artificial life; concepts and content; animal cognition. Prerequisites: one course in

Philosophy at the 300 level, graduate standing, or permission of the instructor.

Same as L64 PNP 418

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

### L30 Phil 419 Philosophy of Psychology

An investigation of the philosophical presuppositions and implications of various traditions in psychology, including behaviorism, Gestalt and cognitivism, with a special emphasis on the development of the information processing approach of contemporary cognitivism. The conception of psychological phenomena, data and explanation central to each of these traditions are examined, and typical topics include the debates between propositional and imagistic models of representation, different accounts of concepts and categorization, and the relation of psychology to ethics. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 4202 Contemporary Feminisms

The purpose of this course is to provide a framework, a map, within which students can locate feminist ideas. The course, which may be presented historically, explores and compares different types of feminism selected from, for example, the following feminisms: liberal; Marxist; socialist; radical; lesbian; black; existentialist; postmodern. The class considers how such feminisms analyze the nature and sources of women's oppressions, the worlds they envision, and the means they use to bring about change. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: completion of at least one women, gender, and sexuality studies course or permission of the instructor. Same as L77 WGSS 420

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM EN: H

---

### L30 Phil 4210 Topics in Advanced Philosophy of Science

This course varies in topics related to philosophy of science from semester to semester. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 4212 Philosophy of Neuroscience

This course focuses on the historical roots of neuroscience as well as its contemporary developments. Topics include: (1) the nature of explanatory strategies in neuroscience; (2) the relation between neuroscience research and higher-level disciplines such as psychology; and (3) the epistemology of the investigatory tools of neuroscience. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 423 Philosophy of Biological Science

This course examines a number of theoretical, conceptual, and methodological issues that arise in the attempts of biologists to explain living systems. One sort of problem concerns the relation between biology (and biological descriptions and explanations) and physics and chemistry. Biological phenomena have often seemed very different from ordinary physical phenomena in being teleological or goal oriented. Vitalists, accordingly, resisted

the attempt to invoke physics and chemistry in the attempt to explain biological phenomena. But recently biology has come more and more to draw upon physics and chemistry; we will examine the conceptual frameworks that underlie these efforts. Another sort of problem concerns the adaptiveness of living organisms. Charles Darwin offered one naturalistic explanation of this feature, an explanation that was further developed in this century as the synthetic theory of evolution. A number of controversial issues have arisen within this context of adaptation, and the range of levels at which selection can occur. The ubiquity of evolution, moreover, has been challenged in recent years, as a number of non-selectionist explanations have recently been put forward. We will consider the arguments for the synthetic theory and these alternatives.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 426 Theories of Concepts

Concepts are the building blocks of thought. They are implicated in just about every cognitive task. Beyond that, there is little consensus. What information do concepts encode? How are they acquired? How are they combined to form thoughts? How are they related to perception and imagery? Each of these questions has been answered in numerous ways. In this course, we explore competing theories of concepts that have been proposed by philosophers, psychologists and other cognitive scientists. No prior acquaintance with these issues is required. Prerequisite: one previous course in Philosophy at the 300 level, graduate standing or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 430 Topics in Ethics

Selected advanced topics in ethics. Prerequisite: 6 units of philosophy, or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM

---

### L30 Phil 4310 20th-Century Metaethics

An examination of metaphysical and epistemological issues in ethics. Topics include: the nature of the good and the right, the meaning of ethical terms, the logic of moral argument, and the status of moral knowledge. We consider philosophical works written since 1900 by such authors as Moore, Ross, Stevenson, Ayer, Foot, Hare, Brink, Harmon, Blackburn, and McDowell. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 4315 Normative Ethical Theory

An exploration of the three major normative ethical theories debated by philosophers in the last hundred years: Kantian ethics, utilitarianism, and virtue theory. Authors covered in the course may include: Henry Sidgwick, R. M. Hare, R.B. Brandt, John Rawls, Bernard Williams, Philippa Foot, Thomas Nagel, Christine Korsgaard, Michael Slote, and Barbara Herman. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 4320 British Moralists

An investigation of the work of the great British moral philosophers of the 17th-19th centuries, especially Hobbes, Hume, and Mill. Other figures may include Reid, Butler, Hutcheson, Bentham, and Sidgwick. In considering these philosophers, we explore the relations between normative ethics,

moral psychology, and political philosophy, and may include a discussion of legal, social and economic philosophies as well. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 4332 Cognition and Computation

This course introduces students to some of the key frameworks for thinking about the mind in computational terms. We will be looking at some basic topics in the theory of computation, in addition to considering philosophical issues raised by computational models of cognitive processes. This course is required for graduate students in the PNP PhD program. Prerequisites: at least two 400-level PNP courses cross-listed in Philosophy.  
Same as L64 PNP 4332  
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

### L30 Phil 438 Aesthetics

A careful consideration of selected issues regarding the experience of visual art, architecture, music or literature, as well as of the power or beauty of nature, people and artifacts. For example, is there a special form of aesthetic experience or aesthetic attitude? In what do aesthetic power and beauty consist? Are they different in art and nature? Do the artists' intentions matter? Some central concerns are: how do visual art and literary texts have "meaning," what role do the viewer's or reader's interpretations play, and how might recent work in cognitive science and social theory shed light on these issues? Prerequisites: one course in Philosophy at the 300 level, graduate standing or permission of the instructor.  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

---

### L30 Phil 4400 Advanced Social and Political Philosophy

A selective investigation of one or two advanced topics in the philosophical understanding of society, government and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism, communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism and the rights of cultural minorities. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 451 Plato

An examination of some of Plato's most important dialogues, typically including *Gorgias*, *Phaedo*, and *The Republic*, with the aim of grasping the development of Plato's most influential thoughts in ethics and in metaphysics and epistemology. In order to provide both historical understanding and philosophical evaluation, attention is paid to the context and structure of the dialogues and to the best of recent secondary literature. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.  
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

### L30 Phil 452 Aristotle

This course offers a maximally full and detailed introduction to the works of Aristotle. His logic, natural philosophy, psychology, metaphysics, ethics and political philosophy are discussed, and stress is laid on the interpretive problems facing contemporary philosophers seeking to understand Aristotle's achievement.

Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.  
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

### L30 Phil 4530 Hellenistic Philosophy

The Hellenistic Age, traditionally dated from the death of Alexander and his (Macedonian) Empire at 323 BCE to the birth of Augustus' (Roman) Empire in 31 BCE, gave the West three of its most innovative and influential schools of philosophy: Epicureanism, Skepticism and Stoicism. This course investigates the central features of their thought. Special attention is paid to the still-relevant debates between the Stoics and Skeptics about the possibility of knowledge, to the disagreements among all three schools about the issues of freedom, responsibility and determinism, and to their ethical theories. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.  
Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

### L30 Phil 4550 Continental Rationalism

A rationalist is a philosopher for whom at least one certain truth is inborn or comes from reason rather than from empirical or sensory experience. The major systemic writings of Descartes, Spinoza and Leibniz are examined with a focus on the question: does the epistemology determine the ontology of these philosophical systems or vice versa? The lines of development connecting these philosophers are traced, and such enduring problems as the relation of mind to body are examined. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 4570 Kant's Critique of Pure Reason

An in-depth investigation of Kant's *Critique of Pure Reason*, one of the most important books in the history of Western philosophy. Some supplementary readings from other philosophers are used to situate Kant's work in a systematic and historical context, to present some "Kantian" positions in current philosophy, and to bring in some important contrasting views and criticisms. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 4575 Kant's Moral Theory

An in-depth examination of Kant's practical philosophy: his moral and political theory. Readings include the *Critique of Practical Reason*, parts of the *Metaphysics of Morals*, *Perpetual Peace* and other writings. Supplementary readings are used to situate Kant's work in its systematic and historical context, to provide orientation in the world of Kant scholarship, and to introduce important contrasting views and criticisms. We also discuss recent reformulations of Kantian themes in the works of contemporary philosophers. Prerequisite: one course in Philosophy at the 300 level, graduate standing or permission of the instructor.  
Credit 3 units. A&S: TH A&S IQ: HUM

---

### L30 Phil 464 Advanced Continental Philosophy

A study of selected texts by such major figures of 20th-century continental philosophy as Husserl, Heidegger, Merleau-Ponty, Sartre, de Beauvoir, Levinas, Habermas, Foucault, Derrida and Irigaray. Such topics as phenomenology, hermeneutics, existentialism, critical theory, structuralism and post-structuralism

are investigated. Prerequisite: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

### L30 Phil 465 Topics in the History of Philosophy

Study of individual philosophers or themes from the ancient, medieval, and/or modern periods. Examples: Spinoza, St. Thomas Aquinas, neo-Platonism, universals in ancient and medieval thought, ancient and modern theories of space and time. Prerequisite: 6 units in philosophy or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

### L30 Phil 4751 Reformers and Radicals: Feminist Thinking Through History

We focus on feminist thought in Western culture but also examine non-Western ideas about feminisms. We trace the relationship among emergent feminist ideas and such developments as the rise of scientific methodology, Enlightenment thought, revolutionary movements and the gendering of the political subject, colonialism, romanticism, socialism, and global feminisms. Readings are drawn from both primary sources and recent feminist scholarship on the texts under consideration. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: completion of at least one Women, Gender, and Sexuality Studies course or permission of the instructor. Students who have taken L77 WGSS 475 Intellectual History of Feminism can not take this class.

Same as L77 WGSS 475

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM

---

### L30 Phil 497 Undergraduate Independent Study

Prerequisite: permission of the department.

Credit variable, maximum 6 units.

---

### L30 Phil 499 Study for Honors

Prerequisites: Visit <http://philosophy.artsci.wustl.edu/undergraduate/honors-thesis-philosophy>.

Credit 3 units. A&S: TH

---

## Philosophy-Neuroscience-Psychology

Philosophy-Neuroscience-Psychology (PNP) is an interdisciplinary program that provides an opportunity to examine the mind from multiple perspectives. Students who choose to major in PNP will learn to bring some of the newest findings in science to bear on some of the oldest questions in philosophy; equally important, they will see new questions emerge and learn to pursue those as well. Examples include: Is the mind-brain a single entity, or does having a mind involve something over and above the activity of a brain? What assumptions are made by cognitive psychologists when they divide mental activity into separate processes and use response times or other measures of task performance to describe those processes? What assumptions are made by neuroscientists when they use

imaging techniques to determine where in the brain a cognitive process is carried out? What are we to make of Chomsky's claim that language is an innate mental organ designed to generate an infinite number of sentences? PNP majors will seek answers to questions such as these in courses offered by PNP and PNP's affiliated departments.

## Faculty

### Director

**Ron Mallon** (<http://philosophy.artsci.wustl.edu/people/ron-mallon>)

Professor

PhD, Rutgers University

(Philosophy; Philosophy-Neuroscience-Psychology)

### Core Faculty

**Carl F. Craver** ([http://philosophy.artsci.wustl.edu/people/Carl\\_Craver](http://philosophy.artsci.wustl.edu/people/Carl_Craver))

Professor

PhD, University of Pittsburg

(Philosophy; Philosophy-Neuroscience-Psychology)

**John Doris** ([http://philosophy.artsci.wustl.edu/people/John\\_Doris](http://philosophy.artsci.wustl.edu/people/John_Doris))

Professor

PhD, University of Michigan

(Philosophy; Philosophy-Neuroscience-Psychology)

**Brett D. Hyde** ([http://philosophy.artsci.wustl.edu/people/Brett\\_Hyde](http://philosophy.artsci.wustl.edu/people/Brett_Hyde))

Associate Professor

PhD, Rutgers University

(Philosophy; Linguistics; Philosophy-Neuroscience-Psychology)

**Casey O'Callaghan** (<http://pnp.artsci.wustl.edu/people/casey-ocallaghan>)

Professor

PhD, Princeton University

(Philosophy; Philosophy-Neuroscience-Psychology)

**Mark Rollins** (<http://philosophy.artsci.wustl.edu/people/mark-rollins>)

Professor; Chair, Performing Arts Dept.; Dean, University College

PhD, Columbia University

(Philosophy; Philosophy-Neuroscience-Psychology)

**Elizabeth Schechter** (<http://philosophy.artsci.wustl.edu/people/elizabeth-schechter>)  
Assistant Professor  
PhD, University of Maryland  
(Philosophy; Philosophy-Neuroscience-Psychology)

## Postdoctoral Fellow

**Joseph McCaffrey**  
PhD, University of Pittsburgh

## Participating Faculty

**Richard A. Abrams** (<http://psychweb.wustl.edu/people/richard-abrams>)  
Professor  
PhD, University of Michigan  
(Psychological & Brain Sciences)

**David A. Balota** (<http://psychweb.wustl.edu/people/david-balota>)  
Professor  
PhD, University of South Carolina  
(Psychological & Brain Sciences)

**Deanna M. Barch** (<http://psychweb.wustl.edu/people/deanna-barch>)  
Professor  
PhD, University of Illinois  
(Psychological & Brain Sciences)

**Joe Barcroft** (<http://rll.wustl.edu/people/barcroft>)  
Professor  
PhD, University of Illinois at Urbana-Champaign  
(Romance Languages and Literatures)

**Cindy Brantmeier** (<http://rll.wustl.edu/people/brantmeier>)  
Professor  
PhD, Indiana University  
(Romance Languages and Literatures; Education)

**Todd S. Braver** (<http://psychweb.wustl.edu/people/todd-braver>)  
Professor  
PhD, Carnegie Mellon University  
(Psychological & Brain Sciences)

**John Bruer** ([http://philosophy.artsci.wustl.edu/people/John\\_Bruer](http://philosophy.artsci.wustl.edu/people/John_Bruer))  
Adjunct Professor  
PhD, Rockefeller University  
(Philosophy)

**Dennis DesChene** ([http://philosophy.artsci.wustl.edu/people/Dennis\\_DesChene](http://philosophy.artsci.wustl.edu/people/Dennis_DesChene))  
Professor  
PhD, Stanford University  
(Philosophy; Interdisciplinary Project in the Humanities)

**Janet M. Duchek** (<http://psychweb.wustl.edu/people/janet-duchek>)  
Associate Professor  
PhD, Washington University  
(Psychological & Brain Sciences)

**Leonard Green** (<http://psychweb.wustl.edu/green>)  
Professor  
PhD, State University of New York–Stony Brook  
(Psychological & Brain Sciences; Economics)

**John Heil** ([http://philosophy.artsci.wustl.edu/people/John\\_Heil](http://philosophy.artsci.wustl.edu/people/John_Heil))  
Professor  
PhD, Vanderbilt University  
(Philosophy)

**Erik Herzog** (<http://wubio.wustl.edu/herzog>)  
Professor  
PhD, Syracuse University, Institute for Sensory Research  
(Biology)

**Lori Markson** (<http://psychweb.wustl.edu/markson>)  
Associate Professor  
PhD, University of Arizona  
(Psychological & Brain Sciences)

**Kathleen McDermott** (<http://psychweb.wustl.edu/mcdermott>)  
Professor  
PhD, Rice University  
(Psychological & Brain Sciences)

**Camillo Padoa-Schioppa** (<http://thalamus.wustl.edu/cps>)  
Associate Professor  
PhD, Massachusetts Institute of Technology  
(Anatomy and Neurobiology; Biological Engineering)

**Jonathan Peelle** (<http://jonathanpeelle.net>)  
Assistant Professor  
PhD, Brandeis University  
(Otolaryngology)

**Anya Plutynski** (<http://philosophy.artsci.wustl.edu/people/anya-plutynski>)  
Associate Professor  
PhD, University of Pennsylvania  
(Philosophy)

**Marcus E. Raichle** (<http://www.nil.wustl.edu/labs/raichle>)  
Professor  
MD, University of Washington  
(Radiology)

**Andrew Rehfeld** ([http://polisci.wustl.edu/andrew\\_rehfeld](http://polisci.wustl.edu/andrew_rehfeld))  
Professor  
PhD, University of Chicago  
(Political Science)

**Larry Snyder** (<http://thalamus.wustl.edu/O-bios/lhs>)

Professor  
PhD, University of Rochester  
(Anatomy and Neurobiology)

**Mitchell S. Sommers** (<http://psychweb.wustl.edu/sommers>)

Professor  
PhD, University of Michigan  
(Psychological & Brain Sciences)

**Roy Sorensen** (<http://philosophy.artsci.wustl.edu/people/roy-sorensen>)

Professor  
PhD, Michigan State  
(Philosophy)

**Paul S.G. Stein** (<http://wubio.wustl.edu/stein>)

Professor  
PhD, Stanford University  
(Biology)

**Brian Talbot** (<http://philosophy.artsci.wustl.edu/people/brian-talbot>)

Study Abroad Advisor; Lecturer  
PhD, University of Southern California  
JD, University of California, Berkeley  
(Philosophy)

**James Wertsch** ([http://anthropology.artsci.wustl.edu/wertsch\\_james](http://anthropology.artsci.wustl.edu/wertsch_james))

Marshall S. Snow Professor in Arts & Sciences  
PhD, University of Chicago  
(Anthropology; American Culture Studies; Education;  
International and Area Studies)

**Desirée A. White** (<http://psychweb.wustl.edu/white>)

Professor  
PhD, Washington University  
(Psychological & Brain Sciences)

**Jeffrey M. Zacks** (<http://psychweb.wustl.edu/zacks>)

Professor  
PhD, Stanford University  
(Psychological & Brain Sciences)

## Endowed Professors

**John Baugh** ([http://anthropology.artsci.wustl.edu/baugh\\_john](http://anthropology.artsci.wustl.edu/baugh_john))

Margaret Bush Wilson Professor in Arts & Sciences  
PhD, University of Pennsylvania  
(African and African-American Studies; American Culture  
Studies; Anthropology; Education; English; Psychological &  
Brain Sciences)

**Pascal R. Boyer** ([http://anthropology.artsci.wustl.edu/boyer\\_pascal](http://anthropology.artsci.wustl.edu/boyer_pascal))

Henry Luce Professor of Collective and Individual Memory  
PhD, University of Paris–Nanterre  
(Anthropology; Religious Studies)

**Maurizio Corbetta** (<https://neuro.wustl.edu/biographies/maurizio-corbetta-md>)

Norman J. Stupp Professor of Neurology  
MD, University of Verona, Italy

**Steven E. Petersen** (<https://neuro.wustl.edu/biographies/steven-petersen-phd>)

James S. McDonnell Professor of Cognitive Neuroscience  
PhD, California Institute of Technology  
(Neurology; Neurological Surgery; Psychological & Brain  
Sciences)

**Henry L. Roediger III** (<http://psychweb.wustl.edu/roediger>)

James S. McDonnell Distinguished University Professor  
PhD, Yale University  
(Psychological & Brain Sciences; American Culture Studies)

**Rebecca Treiman** (<http://psychweb.wustl.edu/treiman>)

Burke and Elizabeth High Baker Professor of Child  
Developmental Psychology  
PhD, University of Pennsylvania  
(Psychological & Brain Sciences)

## Majors

### The Major in Philosophy- Neuroscience-Psychology

#### I. Core Undergraduate Requirements for PNP

Required for all students, regardless of track:

#### Entry Sequence

Choose one of the following:

PNP Sequence

PNP 200 Introduction Cognitive Science and

PNP 201 Inquiry in the Cognitive Sciences **or**  
Psych 301 Experimental Psychology

**or**

Mind, Brain, Behavior Sequence (MBB)

MBB 120A Introduction to Study of the Mind-  
Brain: Psychological, Biological and Philosophical  
Perspectives

MBB 122 Introduction to the Study of the Mind Brain  
II **or** PNP 200 Introduction Cognitive Science

#### Core Philosophy Requirements

Prerequisites:

| Code         | Title                                | Units |
|--------------|--------------------------------------|-------|
| Phil 100G    | Logic and Critical Analysis          | 3     |
| or Phil 102  | Introduction to Scientific Reasoning |       |
| or Phil 120F | Problems in Philosophy               |       |

or Phil 125C Great Philosophers

**Upper division:** Two courses at the 300 or 400 level.

Majors must take either

PNP 315 Philosophy of Mind, or  
PNP 306 Philosophy of Language

and another from the list below:

| Code      | Title   | Units |
|-----------|---|-------|
| PNP 301   | Symbolic Logic  | 3     |
| PNP 306   | Philosophy of Language  | 3     |
| PNP 315   | Philosophy of Mind  | 3     |
| PNP 316   | Mind and Morals   | 3     |
| PNP 321   | Philosophy of Science   | 3     |
| Phil 339F | Philosophy of the Arts  | 3     |
| Phil 3481 | Introduction to Metaphysics   | 3     |
| Phil 349C | Descartes to Hume   | 3     |
| PNP 3581  | Conceptual Foundations of Modern Science  | 3     |
| Phil 366  | Art and the Mind-Brain  | 3     |
| Phil 390  | Philosophical Writing (upon approval of subject matter, consult PNP office for each semester) | 3     |
| PNP 4023  | Models of Social Science  | 3     |
| Phil 403  | Mathematical Logic 1  | 3     |
| Phil 404  | Mathematical Logic II   | 3     |
| Phil 405  | Philosophical Logic   | 3     |
| Phil 4051 | Philosophy of Logic   | 3     |
| Phil 4061 | Topics in the Philosophy of Language  | 3     |
| PNP 4065  | Advanced Philosophy of Language   | 3     |
| Phil 410  | Theories of Perception  | 3     |
| PNP 4141  | Advanced Epistemology   | 3     |
| PNP 4142  | Advanced Metaphysics  | 3     |
| PNP 418   | Current Controversies in Cognitive Science  | 3     |
| PNP 419   | Philosophy of Psychology  | 3     |
| PNP 4210  | Topics in Advanced Philosophy of Science  | 3     |
| Phil 4212 | Philosophy of Neuroscience  | 3     |
| Phil 423  | Philosophy of Biological Science  | 3     |
| PNP 426   | Theories of Concepts  | 3     |
| PNP 4332  | Cognition and Computation   | 3     |
| PNP 495   | PNP Seminar   | 3     |
| PNP 496   | PNP Seminar   | 3     |

### Core Psychological & Brain Sciences Requirements

**Prerequisite:** Psych 100B Introduction to Psychology

**Upper division:** Two courses at the 300 or 400 level.

Unless a student has completed MBB 120A with a grade of B- or higher, they must take

PNP 360 Cognitive Psychology, or  
PNP 408 Psychology of Language

and another from the list below:

| Code       | Title                                     | Units |
|------------|---|-------|
| Psych 300  | Introduction to Psychological Statistics  | 3     |
| Psych 301  | Experimental Psychology                   | 4     |
| PNP 3151   | Introduction to Social Psychology         | 3     |
| PNP 3211   | Developmental Psychology                  | 3     |
| PNP 323    | Play and Development                      | 3     |
| Psych 326  | Introduction to the Psychology of Aging   | 3     |
| PNP 330    | Sensation and Perception                  | 3     |
| PNP 3401   | Biological Psychology                     | 3     |
| PNP 3451   | Genes, Environment, and Human Behavior    | 3     |
| PNP 3531   | Psychology of Personality                 | 3     |
| PNP 3541   | Abnormal Psychology                       | 3     |
| Psych 357  | Introduction to Clinical Psychology       | 3     |
| Psych 358  | Language Acquisition                      | 3     |
| PNP 360    | Cognitive Psychology                      | 3     |
| PNP 361    | Psychology of Learning                    | 3     |
| PNP 362    | The Biological Basis of Human Behavior    | 3     |
| PNP 3661   | Psychology of Creativity                  | 3     |
| Psych 374  | Drugs, Brain and Behavior                 | 3     |
| PNP 380    | Human Learning and Memory                 | 3     |
| PNP 408    | Psychology of Language                    | 3     |
| Psych 4046 | Developmental Neuropsychology             | 3     |
| Psych 4182 | Perception, Thought and Action            | 3     |
| PNP 4302   | Cognitive Psychology Applied to Education | 3     |
| Psych 4625 | Autobiographical Memory                   | 3     |
| Psych 4651 | History and Modern Systems of Psychology  | 3     |
| PNP 495    | PNP Seminar                               | 3     |

## II. Track-specific Requirements

### Courses required for the Cognitive Neuroscience (CN) track

**Prerequisites:** Biol 2960 or Psych 3401\*

and permission of instructor; Biol 3058 recommended.

**Upper division:** Two neuroscience courses at the 300 or 400 level. Students **must** take:

| Code       | Title                            | Units |
|------------|----------------------------------|-------|
| Biol 3411  | Principles of the Nervous System | 3     |
| Psych 3604 | Cognitive Neuroscience           | 3     |

(\*Psych 3401 Biological Psychology **can** count toward the depth requirement in neuroscience, if taken as a prerequisite.)

### **Courses required for the Language, Cognition and Culture (LCC) track**

#### **Prerequisites:**

| Code        | Title                           | Units |
|-------------|---------------------------------|-------|
| Anthro 170D | Introduction to Linguistics     | 3     |
| Anthro 150A | Introduction to Human Evolution | 3     |

**Upper division:** Two courses at the 300 or 400 level, chosen from those below:

| Code        | Title   | Units |
|-------------|---|-------|
| PNP 301     | Symbolic Logic  | 3     |
| PNP 306     | Philosophy of Language                                      | 3     |
| PNP 309     | Syntactic Analysis  | 3     |
| PNP 3111    | Introduction to Semantics                                   | 3     |
| Ling 312    | Phonetics   | 3     |
| PNP 313     | Phonological Analysis                                       | 3     |
| PNP 3171    | Introduction to Computational Linguistics                   | 3     |
| PNP 320     | Historical and Comparative Linguistics                      | 3     |
| Anthro 3386 | Language, Culture and Society                               | 3     |
| Ling 339    | Introduction to Sociolinguistics                            | 3     |
| Psych 358   | Language Acquisition  | 3     |
| PNP 362     | The Biological Basis of Human Behavior                      | 3     |
| PNP 3662    | Primate Biology   | 3     |
| PNP 3701    | Introduction to Hispanic Linguistics                        | 3     |
| PNP 396     | Linguistics Seminar: Pragmatics in Second Language Learning | 3     |
| PNP 406     | Primate Ecology and Social Structure                        | 3     |
| PNP 4065    | Advanced Philosophy of Language                             | 3     |
| PNP 408     | Psychology of Language                                      | 3     |
| PNP 4122    | Language and Gender   | 3     |
| Span 413    | Linguistics and Language Learning                           | 3     |
| Span 416    | Introduction to Hispanic Linguistics                        | 3     |
| PNP 4192    | Primate Cognition   | 3     |
| PNP 4315    | Culture, Language and the Education of Black Students       | 3     |
| Psych 4351  | Reading and Reading Development                             | 3     |
| PNP 466     | Second Language Acquisition                                 | 3     |
| PNP 467     | Grammar and Vocabulary Acquisition                          | 3     |

|          |  |   |
|----------|--|---|
| Span 469 | Reading and Writing in a Second Language | 3 |
|----------|--|---|

### **III. Depth Requirement**

Students on the CN track must complete at least 9 units, including at least 3 units at the 400 level or above, in one area of either philosophy, psychology or neuroscience.

Students on the LCC track must complete at least 9 units, including at least 3 units at the 400 level or above, in one area of either philosophy, psychology, anthropology or linguistics.

Note that for either track, for students matriculating in 2015 and beyond who have another major in one of the designated areas, courses from the other major may not count toward satisfying the depth requirement; i.e., there is no "double counting" between the majors.

Three units of MBB 300 **may** be counted toward the depth requirement, in an area appropriate to the research undertaken (e.g., a psychology research project would count toward the psychology depth requirement). All 9 depth requirement units **must** be taken in a single area.

### **Philosophy**

| Code      | Title                                      | Units |
|-----------|--|-------|
| Phil 3001 | Philosophy of Medicine                     | 3     |
| PNP 301   | Symbolic Logic                             | 3     |
| PNP 306   | Philosophy of Language                     | 3     |
| PNP 315   | Philosophy of Mind                         | 3     |
| PNP 316   | Mind and Morals                            | 3     |

| PNP 496     | PNP Seminar   | 3     |

## IV. Capstone

The Capstone is required for honors students and first majors; it is recommended for second majors. It consists of one of the following:

- A PNP Honors project (PNP 499, 6 units; requires PNP Honors form to be filled out and approved by Honors Coordinator).

- The 2-unit PNP Reading Class (formerly PNP Book Club) plus the PNP Seminar (PNP 495) of PNP 496
- The PNP Reading Class (formerly PNP Book Club) plus 3 advanced units of independent study, PNP 500. The independent study details are available on the PNP website (<https://pnp.artsci.wustl.edu/undergraduate/independent-study>).

Units from a capstone experience can count toward the depth requirement in either the CN or LCC tracks.

## Minors

### The Minor in Philosophy-Neuroscience-Psychology

**Units required:** 15

**Required courses:** Minors are required to complete at least 15 units, of which 9 must be at the 300 level or above.

The minor is composed of a **6-unit introductory sequence** (PNP 200 and PNP 201, or MBB 120A and MBB 122), followed by:

- 3 units in Philosophy:
  - PNP 315 Philosophy of Mind/Phil 315
  - or**
  - PNP 306 Philosophy of Language/Phil 306G
- 3 units of Neuroscience:
  - PNP 3411 Principles of the Nervous System/Biol 3411
  - or**
  - Psych 3604 Cognitive Neuroscience
- 3 units in Psychology:
  - PNP 360 Cognitive Psychology/Psych 360
  - or**
  - PNP 408 Psychology of Language

## Additional Information

Psych 100B is the prerequisite for all psychological & brain science courses at the 300 level and above. Note that no more than 6 units counted toward a minor in PNP may be transferred or earned abroad, and no more than 3 units may be counted toward another major or minor.

## Courses

Visit online course listings to view semester offerings for L64 PNP (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L64&crslvl=1:4>).

### L64 PNP 200 Introduction Cognitive Science

We seek to understand the mind-brain by integrating findings from several of the cognitive sciences, including philosophy, psychology, neuroscience, linguistics, anthropology and artificial

intelligence. This course considers multiple perspectives on such topics as mental imagery, concepts, rationality, consciousness, emotion, language, thought, memory, attention and machine intelligence. Prerequisite: completion of at least one of the following courses: Psych 100B, Phil 120F, Phil 125C, Biol 296A, MBB 120A or Ling 170D.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

---

#### L64 PNP 201 Inquiry in the Cognitive Sciences

Understanding the mind-brain involves orchestrating a variety of conceptual tools and modes of inquiry from the cognitive sciences. This course offers a hands-on introduction to a variety of research tactics used in the behavioral and biological sciences and emphasizes the advantages of combining them. For example, neuroimaging can enhance the interpretation of experiments by cognitive psychologists and modeling can be used to simulate and understand the effects of brain lesions. Prerequisite: completion of at least one of the following courses: Psych 100B, Phil 120F, Phil 125C, Biol 296A, MBB 120 or Ling 170D.

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Arch: NSM Art: NSM

---

#### L64 PNP 3001 Research in the Mind, Brain, and Behavior

An introduction to research for students in the Mind, Brain and Behavior program (formerly known as Hewlett Program). Students work under the supervision of a mentor. Prerequisite: admission to the Mind, Brain and Behavior program, completion of MBB/PNP 122, and permission of the mentor. Same as L96 MBB 300

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

#### L64 PNP 301 Symbolic Logic

In the first half of the course we study some features of truth-functional and first-order classical logics, including studying the model theory and metatheory for first-order logic in much greater depth than in Phil 100. In the second half of the course we go on to study three different styles of proof-system: tableaux, axiomatic, and natural deduction. This course continues on where Phil 100: An Introduction to Logic and Critical Analysis leaves off. It is recommended for students who have already taken that introductory course, or for students who already have a strong background in mathematics. Priority given to majors in philosophy and PNP.

Same as L30 Phil 301G

Credit 3 units. A&S: LA A&S IQ: NSM, AN Art: NSM BU: HUM

---

#### L64 PNP 306 Philosophy of Language

A survey of major philosophical problems concerning meaning, reference, and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues will be selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke, and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 306G

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM BU: HUM

---

#### L64 PNP 309 Syntactic Analysis

The ability to produce and understand an infinite number of sentences is perhaps the most fascinating aspect of the human language faculty. Syntax is the study of how the brain organizes sentences from smaller phrases and words. This course explores syntactic analysis from several perspectives within generative linguistics, focusing primarily on the Government and Binding framework but also introducing Minimalist and Optimality Theoretic approaches. Topics include phrase structure, transformations, case theory, thematic roles and anaphora. Assignments help students learn to construct and compare analyses of syntactic problems in English and other languages. Prerequisite: Ling 170D or permission of instructor. Same as L44 Ling 309

Credit 3 units. A&S: LA A&S IQ: SSC BU: HUM EN: S

---

#### L64 PNP 311 Introduction to Semantics

Semantics is the branch of linguistics which studies how speakers assign meaning to words, sentences, and larger units of discourse. We combine perspectives from both linguistics and philosophy to explore a variety of topics including polysemy, compositionality, quantification, anaphora, definite descriptions, attitude reports, presupposition and implicature. Prerequisite: Ling 170D or Phil 301G or permission of instructor. Same as L44 Ling 311

Credit 3 units. A&S: LA A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

---

#### L64 PNP 313 Phonological Analysis

There are several important abilities involved in the use of human language, one of these being the ability to organize speech sounds. The system that the brain uses to accomplish this task is the subject matter of phonology. This course explores phonology from several perspectives within generative linguistics, including both traditional rule-based and current Optimality Theoretic approaches. Topics discussed include phonological features, lexical phonology, prosodic morphology, tone, and metrical stress. Assignments help students learn to analyze phonological problems in a variety of languages and to evaluate the consequences of using different analytic approaches. Prerequisite: Ling 170D or permission of instructor. Same as L44 Ling 313

Credit 3 units. A&S: LA A&S IQ: SSC BU: BA EN: S

---

#### L64 PNP 315 Philosophy of Mind

An introduction to philosophical analyses of the nature of mind, especially those developed by contemporary philosophers. The focus will be on questions such as the following: What is a mind? How does it relate to a person's brain? How does it relate to a person's body and the external world? Can a mind exist in a very different kind of body (e.g., a computer or a robot)? Does thinking require a language-like code? If so, can non-linguistic species think? What is it to have a mental image or to experience pain? Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 315

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM EN: H

---

#### L64 PNP 3151 Introduction to Social Psychology

Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory, and political psychology, among other issues. Prerequisite: Psych 100B.

Same as L33 Psych 315  
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU:  
BA EN: S

---

**L64 PNP 316 Mind and Morals**

This course explores a number of issues at the intersection of ethics and cognitive science. Possible topics include: Are we rational? Do we know our own thoughts and motivations? Can one believe that one ought to do something without being motivated to do it? Do emotions impair or enhance our ability to reason? How do moral beliefs develop through childhood? Are traits such as intelligence and character unchangeable, and what implications follow if they are (or are not)? Does retaining my identity over time require having the same mind, and, if so, am I the same person now as I was as a child? Are non-human animals worthy of moral consideration? If brain activity is determined by causal laws, can we have free will? Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Same as L30 Phil 316

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: ETH

---

**L64 PNP 3171 Introduction to Computational Linguistics**

Use of computers to analyze, understand, and generate human language. Emphasis on appreciating practical applications such as text analysis, search and creation of dictionaries and corpora, information retrieval, machine translation, and speech interfaces. Survey of rule-based and statistical techniques. Students acquire programming skills appropriate for solving small- to medium-scale problems in linguistics and text processing, using a language such as Python. Students have regular programming assignments and complete a semester project. No previous knowledge of programming required. Prerequisite: L44 Ling 170D.

Same as L44 Ling 317

Credit 3 units. A&S: LA A&S IQ: SSC EN: H, S

---

**L64 PNP 320 Historical and Comparative Linguistics**

Historical linguistics focuses on how languages change over time. Comparative linguistics focuses on their similarities and differences. In this course we trace some of the differences and changes in sound (phonetics and phonology), word formation (morphology), sentence structure (syntax), and meaning (semantics). Topics include linguistic universals, the structural and genetic classification of languages, the techniques of reconstructing proto-languages, and the causes of language change. Examples from Indo-European languages (for example, Greek, English, and Spanish) and from Native American languages (for example, Quechua and Mayan) are emphasized. Prerequisite: Ling 170D.

Same as L44 Ling 320

Credit 3 units. A&S: LA A&S IQ: LCD, SSC Art: HUM BU: HUM EN: S

---

**L64 PNP 321 Philosophy of Science**

Pivotal concepts common to empirical sciences are examined and clarified. These include: explanation, confirmation, prediction, systematization, empirical significance, and the relationship of all these concepts to the structure of scientific theory. Examples may be drawn from both contemporary and historical science, including the social, biological, and physical sciences. Students with a background in science are particularly encouraged to consider this course. Priority given to majors in philosophy and PNP.

Same as L30 Phil 321G  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM EN: H

---

**L64 PNP 3211 Developmental Psychology**

This course concentrates on the cognitive and social development of the person from conception to adolescence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior. Prerequisite: Psych 100B.

Same as L33 Psych 321

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU:  
BA

---

**L64 PNP 3221 Music Cognition**

An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.

Same as L27 Music 3221

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU:  
HUM

---

**L64 PNP 323 Play and Development**

An examination of current research and theory in play, in development and education, from infancy through the early school years. Topics include play and the development of language, social skills, creativity, and cognitive abilities. We will also examine the uses of play in educational contexts, focusing on preschool and the early primary grades. Prerequisite: Psych 321 (Developmental Psychology) or Educ 304 (Educational Psychology).

Same as L12 Educ 337

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

**L64 PNP 330 Sensation and Perception**

What's involved in seeing and hearing? This course covers perceptions from the physical stimuli (light and sound) that impinge upon the sensory receptors through the higher-level percepts that the stimuli generate. Demonstrations and illusions are used as we learn about the anatomy and physiology of the sensory systems, and study the brain mechanisms that are involved in vision and audition. Prerequisite: Psych 100B.

Same as L33 Psych 330

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA, SCI

---

**L64 PNP 3401 Biological Psychology**

An introduction to biological mechanisms underlying behavior. Topics include the physiology of nerve cells, anatomy of the nervous system, control of sensory and motor activity, arousal and sleep, motivation and higher mental processes. Prerequisite: Psych 100B.

Same as L33 Psych 3401

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L64 PNP 3411 Principles of the Nervous System**

The basic anatomical, physiological, and chemical organization of the nervous system; how nerve cells communicate with each other, the ionic basis of nerve signals, the function and

properties of chemical agents in the nervous system, the development of neural circuitry, and how neurons interact to produce behavior. Prerequisite: Biol 2960, Biol 2970 recommended, Biol 3058 recommended or Psych 3401 and permission of instructor.  
Same as L41 Biol 3411  
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L64 PNP 3451 Genes, Environment, and Human Behavior**

This class will examine how genetic influences impact various dimensions of human behavior, ranging from traits (e.g., personality) to psychiatric disorders. Topics to be covered include methods used to study genetic influence, how genetic predispositions interact with the environment, and ethical implications. Modern methods for gene-identification, such as genome-wide association studies, polygenic risk scores and epigenetic experiments will be examined in detail. Emphasis will be placed on understanding core concepts (e.g., what is identity-by-descent) as well as application (e.g., calculate heritability, interpretation of results from published studies). Prerequisite: Psych 100B.  
Same as L33 Psych 345  
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

**L64 PNP 350 Physics of the Brain**

Concepts and techniques of physics are applied to study the functioning of neurons and neuronal circuits in the brain. Neurons and neural systems are modeled at two levels: (i) at the physical level, in terms of the electrical and chemical signals that are generated and transmitted and (ii) at the information-processing level, in terms of the computational tasks performed. Specific topics include: neuronal electrophysiology, neural codes, neural plasticity, sensory processing, neural network architectures and learning algorithms, and neural networks as dynamical and statistical systems. Course grade is based primarily on an individualized term project. Prerequisite: Physics 117A-118A, Physics 197-198, or permission of the instructor.  
Same as L31 Physics 350  
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI EN: SU, TU

---

**L64 PNP 3531 Psychology of Personality**

Review of basic theoretical orientations to the understanding of personality and complex human behavior. Overview of related techniques, procedures, and findings of personality assessment and personality research. Discussion of critical issues in evaluation of personality theories. Prerequisite: Psych 100B.  
Same as L33 Psych 353  
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

---

**L64 PNP 3541 Abnormal Psychology**

This is an introductory course in psychopathology or the scientific study of mental health disorders. The course includes definitions, theories and classification of abnormal behavior. Content focuses on symptoms, classification, prevalence, etiology, and treatment of mental health disorders, including mood, anxiety, eating, schizophrenia spectrum, substance use and personality disorders. Prerequisite: Psych 100B.  
Same as L33 Psych 354

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

**L64 PNP 355 Physics of Vision**

How do the eyes capture an image and convert it to neural messages that ultimately result in visual experience? This lecture and demonstration course covers the physics of how we see. The course is addressed to physics, pre-medical, and life-sciences students with an interest in biophysics. Topics include physical properties of light, evolution of the eyes, image formation in the eye, image sampling with an array of photoreceptors, transducing light into electrical signals, color coding, retinal organization, computing with nerve cells, compressing the 3-D world into optic nerve signals, inferring the 3-D world from optic nerve signals, biomechanics of eye movement, engineered vision in machines. The functional impact of biophysical mechanisms for visual experience are illustrated with psychophysical demonstrations. Corequisite: Physics 117A, Physics 197 or permission of instructor.  
Same as L31 Physics 355  
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI EN: TU

---

**L64 PNP 3581 Conceptual Foundations of Modern Science**

The aim of this course is to present some of the basic concepts underlying modern science. Insofar as many of those concepts first appeared or became predominant in the seventeenth and early eighteenth centuries, the course concentrates on primary works from that period. Among the concepts to be studied are: 1. Nature and natures: the ontology of matter and force; causal closure. 2. Methods: observing and intervening, systematic and organized. 3. Explanations: appeal to laws and mechanisms; teleology. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.  
Same as L30 Phil 358  
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

---

**L64 PNP 360 Cognitive Psychology**

Introduction to the study of thought processing from an information-processing approach. Emphasis on theoretical models grounded in empirical support. Topics include pattern recognition, attention, memory, reasoning, language processes, decision-making and problem-solving. Prerequisite: Psych 100B.  
Same as L33 Psych 360  
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

---

**L64 PNP 361 Psychology of Learning**

Basic learning processes in animals, such as conditioning, reinforcement, punishment, and constraints on learning. Comparisons and interactions between classical and operant conditioning. Consideration given to learning theorists and theories, along with applications from the laboratory to the "real world." Prerequisite: Psych 100B.  
Same as L33 Psych 361  
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

---

**L64 PNP 3611 Philosophy of Emotions**

Introduction to anatomy and physiology of the peripheral hearing system and central nervous system, including functional descriptions of the systems and processes underlying speech and hearing function and dysfunction.  
Same as M89 PACS 401  
Credit variable, maximum 3 units.

---

**L64 PNP 362 The Biological Basis of Human Behavior**

Infidelity, marriage customs, inner city violence, infanticide, intelligence...Are the behavioral patterns we see genetically fixed and racially variable? What is the evolutionary and biological basis of human behavior? This course offers a critical evaluation of these from an anthropological perspective.

Same as L48 Anthro 362

Credit 3 units. A&S: NS, CD, SD A&S IQ: LCD, NSM, SD Arch:  
NSM Art: NSM BU: BA

---

**L64 PNP 366 Art and the Mind-Brain**

In recent years, there has been a growing interest in the bearing of cognitive science on the perception and understanding of art. This interest has roots in tradition: historically, art, aesthetics, and vision science have often been linked. But the growth of knowledge in cognitive science has opened up new opportunities for understanding art and addressing philosophical questions.

The converse is also true. The production, perception, and understanding of art are human capacities that can shed light on the workings of the mind and brain. This course considers questions such as: What is art? How do pictures represent? Does art express emotion? Why does art have a history?.

Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 366

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: HUM

---

**L64 PNP 3661 Psychology of Creativity**

This course is an introduction to the psychological study of art and creativity. Our topics include the artist, the audience, the artistic product, the creative process, and social, cultural, and institutional influences on the creative process. We will explore these issues by considering a range of creative fields, including painting, literature, music and theater performance. Throughout the semester, we will take a developmental perspective on psychology and art. How do children learn to create, perceive and understand different art forms? What role can the arts play in education? To ground our study of the psychology of art, we will explore what "art" is, which members of society are labeled "artists," and how these categories are socially and culturally defined. Prerequisites: Educ 304 Educational Psychology or Psych 325 Adolescent Psychology or Psych 321 Developmental Psychology.

Same as L12 Educ 366

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

---

**L64 PNP 3662 Primate Biology**

This course takes a multifaceted introductory approach to the primates, the closest relatives of human beings, by investigating anatomy, growth and development, reproduction, behavioral adaptations, ecology, geographic distribution, taxonomy and evolution. Emphasis is placed not only on the apes and monkeys, but also on the lesser-known lemurs, lorises, bushbabies, tarsiers and many others. The importance of primate biology to the discipline of anthropology is discussed. Intended for students who have already taken Anthro 150A, and recommended for students who wish to take the more advanced 400-level courses on primates. Prerequisite: Anthro 150A or permission of instructor.

Same as L48 Anthro 3661

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L64 PNP 3701 Introduction to Hispanic Linguistics**

An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages.

Same as L38 Span 370

Credit 3 units. A&S: LA A&S IQ: LCD BU: HUM EN: H

---

**L64 PNP 380 Human Learning and Memory**

A survey of issues related to the encoding, storage and retrieval of information in humans. Topics include memory improvement strategies, people with extraordinary memories, memory illusions and distortions, among other topics. Limited to 25 students.

Prerequisite: Psych 100B.

Same as L33 Psych 380

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

---

**L64 PNP 390 PNP Reading Class**

Each time this course is offered a book is selected that does an exemplary job of bringing together insights and results from multiple disciplines in targeting an important topic. We read and discuss the book and possibly a small amount of supplementary reading. A short presentation and paper are required. Prerequisite: PNP major standing.

Credit 2 units. A&S: SS A&S IQ: SSC BU: HUM EN: S

---

**L64 PNP 396 Linguistics Seminar: Pragmatics in Second Language Learning**

Readings on a selected topic in theoretical linguistics with an emphasis on discussion, presentation and writing. Prerequisite: varies with topic.

Same as L44 Ling 396

Credit 3 units. A&S: TH A&S IQ: SSC EN: S

---

**L64 PNP 402 The Physiology and Biophysics of Consciousness**

This course will explore the questions surrounding the search to understand the biophysical substrate of consciousness. Some areas to be explored: 1. Can consciousness be addressed like any other biological property in the sense that it has evolved by natural selection and that some elements of it are present in simple model systems, such as the fruit fly? Can insight be gained studying simple model systems? 2. Where in the brain is consciousness? What is the pattern of neurological events that occurs during consciousness? Is brain activity generating consciousness localized or distributed? Does it involve interacting brain regions? Does brain activity generating consciousness migrate to different brain regions? 3. How does the dynamic core hypothesis of Edelman relate to these questions? What can functional brain imaging add to these questions? Are Gamma waves involved in higher mental activity, and do they promote synchronized firing of neurons from different brain areas? How does this relate to the binding problem? 4. How does the brain's ability to function as a computer relate to consciousness? In many respects the brain functions as a computer using electrical signals called Action

Potentials. Action potentials in neuronal networks function in an analogous way as DC electrical impulses function in computer circuits. What is the output of computation in an electrical device? What are the theoretical limitations regarding what computation can achieve and ask whether electrical activity in the brain also has a fundamentally different purpose in addition to computation. 5. Is our knowledge of the physical world too primitive and incomplete to understand consciousness? The brain is an electronic device and consciousness clearly depends on its electrical activity. Yet, electrical forces are poorly understood, both in the context of classical physics and quantum physics. Will understanding consciousness have to wait for a unified theory that more accurately describes electrical forces? Taught in the medical school: McDonnell Science Building 983. Prerequisites: Bio3411 or equivalent. College-level physics, some knowledge of computers.  
Credit 2 units. A&S: NS A&S IQ: NSM

---

#### L64 PNP 4023 Models of Social Science

What distinguishes the social sciences from the natural sciences? What goals and assumptions do they share? Does studying "humans" with free will pose any problems for applying the methods of the natural sciences to the study of society? How do various social sciences — in particular anthropology, economics and political science — differ from one another? And where did the social sciences (both the disciplines and the conceptual issues) come from historically? These are the animating questions of this course. This class explores these questions in historical and contemporary perspective, as they relate to the rise of the social sciences as a set of academic disciplines. We set out the theoretical structure of the scientific method, paying particularly close attention to the relationships between theory and evidence, inference and hypotheses. Next we consider four problems and methods of the social sciences. These include questions of i) treating human beings as a rational actors; ii) attributing causal forces other than a person's own will to human behavior; iii) empirical observations and inference; and iv) the role of interpretation. In all four cases, we are interested in asking: Toward what solutions have these problems led social scientists, and what other sets of difficulties do their solutions raise? We also pay particularly close attention to the role that concepts play in social analysis.  
Same as L98 AMCS 4023  
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

#### L64 PNP 404 Laboratory of Neurophysiology

Neurophysiology is the study of living neurons. Students record electrical activity of cells to learn principles of the nervous system including sensory transduction and coding, intercellular communication and motor control. The course meets for 9 hours each week. Students may leave the lab for up to 2 hours. Prerequisites: Biol 3411 or Psych 4411 and permission of Student Coordinator, Erin Gerrity. Biol 3411 may be taken concurrently.  
Same as L41 Biol 404  
Credit 4 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

---

#### L64 PNP 4041 Math Logic II

Godel's Incompleteness Theorem: its proof, its consequences, its reverberations. Prerequisite: Philosophy 403 or a strong background in mathematics.  
Same as L30 Phil 404  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

#### L64 PNP 406 Primate Ecology and Social Structure

Survey of the ecology, individual and social behavior, adaptations, and interactions of the major groups of primates. Emphasis on studies designed to examine the relationships among ecology, morphophysiology, and behavior. Methods used in collecting data on primates in the field. Prerequisite: Anthro 150A or one 100-level biology course.  
Same as L48 Anthro 406  
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L64 PNP 4065 Advanced Philosophy of Language

An advanced-level treatment of basic topics in the philosophy of language as this discipline is understood in the analytic tradition. The main positions and the problems they pose are surveyed; focal themes include meaning, reference and truth. The aim of the course is to help students develop effective expository techniques and to provide them with the necessary conceptual resources to analyze and criticize different theoretical views. Prerequisite: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.  
Same as L30 Phil 4065  
Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM

---

#### L64 PNP 408 Psychology of Language

This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B.  
Same as L33 Psych 433  
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

#### L64 PNP 4141 Advanced Epistemology

Competing theories of knowledge and belief justification are considered. Careful attention is given to selected problems such as skepticism, certainty, foundations, coherence, perception, induction. Prerequisite: one course in Philosophy at the 300 level, graduate standing or permission of the instructor.  
Same as L30 Phil 4141  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

#### L64 PNP 4142 Advanced Metaphysics

Through readings from both classical and contemporary sources, a single traditional metaphysical concern will be made the subject of careful and detailed analytic attention. Possible topics include such concepts as substance, category, cause, identity, reality and possibility, and such positions as metaphysical realism, idealism, materialism, relativism and irrealism. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.  
Same as L30 Phil 4142  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

#### L64 PNP 418 Current Controversies in Cognitive Science

An advanced survey of current debates in cognitive science with an emphasis on the philosophical issues raised by these debates. Topics may include: evolutionary psychology; innateness and neural plasticity; perception and action; consciousness; connectionism; robotics; embodied cognition;

moral reason; emergence and artificial life; concepts and content; animal cognition. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

#### L64 PNP 419 Philosophy of Psychology

An investigation of the philosophical presuppositions and implications of various traditions in psychology, including behaviorism, Gestalt and cognitivism, with a special emphasis on the development of the information processing approach of contemporary cognitivism. The conception of psychological phenomena, data and explanation central to each of these traditions are examined, and typical topics include the debates between propositional and imagistic models of representation, different accounts of concepts and categorization, and the relation of psychology to ethics. Prerequisite: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Same as L30 Phil 419

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

#### L64 PNP 4190 Primate Behavior

Discussion and analysis of recent research on the social behavior of nonhuman primates. Data from both field and laboratory study. Prerequisite: Anthro 406, or permission of instructor.

Same as L48 Anthro 419

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L64 PNP 4192 Primate Cognition

This course investigates historical and current views regarding the cognitive capacities of nonhuman primates, and the extent to which these abilities are shared with humans. Topics for this class include: social cognition, problem-solving, tool use, culture, communication, theory of mind, deception, self-recognition, imitation, and numerical cognition. The classes involve discussion and critical evaluation of theory and methods in this challenging and exciting area of primate cognitive research.

Same as L48 Anthro 4191

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

#### L64 PNP 4210 Topics in Advanced Philosophy of Science

This course varies in topics related to philosophy of science from semester to semester. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Same as L30 Phil 4210

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

#### L64 PNP 426 Theories of Concepts

Concepts are the building blocks of thought. They are implicated in just about every cognitive task. Beyond that, there is little consensus. What information do concepts encode? How are they acquired? How are they combined to form thoughts? How are they related to perception and imagery? Each of these questions has been answered in numerous ways. In this course, we will explore competing theories of concepts that have been proposed by philosophers, psychologists, and other cognitive scientists. No prior acquaintance with these issues is required. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Same as L30 Phil 426

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

#### L64 PNP 4302 Cognitive Psychology Applied to Education

This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning and comprehension with special focus on areas, theory and research that have potential application to education. Thus, the course provides selective coverage of theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes is explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. Prerequisites: junior/senior status, 9 units in psychology and Psych 100B or junior/senior status, 9 units in education and Psych 100B.

Same as L33 Psych 4302

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

#### L64 PNP 4315 Culture, Language and the Education of Black Students

This course examines the communicative patterns of what is called variously African-American language, Pan-African linguistic systems and Ebonics within the context of public school policy and practice. In addition to a review of the structural and pragmatic aspects of black speech, the course highlights relationships between controversies within the linguistic community, contrasting views of speech within black lay communities, public discourse, and educational policy. Students also conduct a field-based research project in accord with their particular interests.

Same as L12 Educ 4315

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Art: SSC EN: S

---

#### L64 PNP 4332 Cognition and Computation

This course introduces students to some of the key frameworks for thinking about the mind in computational terms. We look at some basic topics in the theory of computation, in addition to considering philosophical issues raised by computational models of cognitive processes. This course is required for graduate students in the PNP PhD program. Prerequisites: at least two 400-level PNP courses cross-listed in Philosophy.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

#### L64 PNP 4450 Functional Neuroimaging Methods

This course is intended for students wishing to become sophisticated producers or consumers of functional neuroimaging data. Emphasis will be on extracting the most information from neuroimaging techniques toward the goal of answering psychologically motivated questions. A number of issues relating to neuroimaging methodology will be covered, including technical principles, acquisition options, potential sources of artifact, experimental design, software tools, and analytical techniques. Class approach will be hands-on, with students gaining experience in actually acquiring and working with neuroimaging data. Prerequisites: Permission of instructor required.

Same as L33 Psych 4450

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L64 PNP 4488 The Cognitive Neuroscience of Film**

To understand complex events in real life depends on perception, action and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar uses results from psychology and neuroscience to try to better understand the experience of a movie viewer, and uses theory and practice to explore psychological hypotheses about perception. Prerequisite: Psych 360 or Psych 3604, or Psych 4604, or graduate standing in psychology.

Same as L33 Psych 488

Credit 3 units. A&S: NS A&S IQ: NSM

---

**L64 PNP 466 Second Language Acquisition**

There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first- and second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners' errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required.

Same as L44 Ling 466

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

**L64 PNP 467 Grammar and Vocabulary Acquisition**

This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing; explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such a learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices.

Same as L38 Span 467

Credit 3 units. A&S: LA A&S IQ: LCD BU: BA EN: H

---

**L64 PNP 4691 Second Language Reading and Writing: Theory, Research and Practice**

This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required

course for the undergraduate minor in applied linguistics and an elective for the Graduate Certificate in Language Instruction.

Same as L38 Span 4691

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L64 PNP 495 PNP Seminar**

Subject varies per semester. Not always offered as writing-intensive, refer to individual semester listing. Prerequisites: a 300-level philosophy course (Phil/PNP 315 is recommended) and PNP major standing or approval of instructor.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L64 PNP 495W PNP Seminar: Writing Intensive**

Subject varies per semester. Fulfills Writing Intensive (WI) requirement. Prerequisites: a 300-level philosophy course (Phil/PNP 315 is recommended); and PNP major standing or approval of instructor.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

---

**L64 PNP 496 PNP Seminar**

Subject varies each semester. Prerequisites: a 300-level philosophy course (Phil/PNP 315 is recommended); and PNP major standing or approval of instructor.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

### Director of Athletics

**Anthony J. Azama** (<http://bearsports.wustl.edu/information/directory/bios/Azama?view=bio>)

John M. Schael Director of Athletics  
MBA, Miami University

## Majors

Students may take both lecture-laboratory and performance courses through the Department of Athletics; however, there is no major in this area.

## Minors

Students may take both lecture-laboratory and performance courses through the Department of Athletics; however, there is no minor in this area.

## Courses

Visit online course listings to view semester offerings for L28 P.E. (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L28&crslvl=1:4>)

---

### L28 P.E. 115 Topics in Physical Education: Beginning Weight Training

Beginning Weight Training. Major emphasis is on strength development.  
Credit 1 unit.

---

### L28 P.E. 1201 Fundamentals of Rowing for Fitness

This course will focus on the effective use of Concept II Rowing as tools to learn the rowing stroke as well as to maintain aerobic fitness and develop strength. Emphasis will be placed on the correct use of technique to decrease risk of injury; varying duration and intensity of work on the machine to develop different energy systems; using these new skills in developing lifetime fitness. Instruction will include the use of video tape and video monitoring. Athletic shoes and clothes that are not baggy are needed to participate. There will be a minimum amount of running of light low-impact aerobic activity required as a warm up. Class location is South Campus.  
Credit 1 unit.

---

### L28 P.E. 121 Topics in Physical Education: Varsity Sports

Varsity Sports. Prerequisite: permission of instructor.  
Credit 1 unit.

---

### L28 P.E. 132 Topics in Physical Education: High-Intensity Conditioning

Credit 1 unit.

---

### L28 P.E. 135 Step Aerobics

Step Aerobics. A low-impact aerobic class in which choreography and equipment are combined to meet the needs of participants at all levels of fitness. There is a fee of \$45.00 for this course.  
Credit 1 unit.

---

### L28 P.E. 136 Fitness and Conditioning

Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time.  
Credit 1 unit.

---

### L28 P.E. 137 Indoor Cycling

Music, stationary bicycles, and an instructor who cues students to ride through hills, valleys and other terrain, changing resistance and pace to simulate different types of riding. All levels welcome — students can tailor the ride to fit their personal fitness goals and needs. A water bottle and towel are required for this class. There will be a \$45.00 fee for this class.

Credit 1 unit.

---

### L28 P.E. 139 Topics in Physical Education: Advanced Tennis

Advanced Tennis.  
Credit 1 unit.

---

### L28 P.E. 140 Topics in Physical Education: Beginning Tennis

Beginning Tennis.  
Credit 1 unit.

---

### L28 P.E. 143 Intermediate Tennis

Intermediate Tennis.  
Credit 1 unit.

---

### L28 P.E. 148 Topics in Physical Education: Individual Physical Education

Individual physical education. Prerequisite: medical referral.  
Credit 1 unit.

---

### L28 P.E. 212 Topics in Physical Education: Intermediate and Advanced Basketball

Intermediate and advanced basketball. Designed to develop an appreciation for basketball through team competition and activity. Individual instruction and skill development also are available.  
Credit 1 unit.

---

### L28 P.E. 214 Topics in Physical Education: Advanced Weight Training

Major emphasis on muscular strength and flexibility through free weight resistance exercise. Pre- and post-assessment of physical fitness levels may be established. Prerequisite: Beginning Weight Training.  
Credit 1 unit.

---

### L28 P.E. 215 Weight Training

Beginning weight training. Major emphasis on strength development.  
Credit 1 unit.

---

### L28 P.E. 216 Soccer

Designed to develop an appreciation for soccer through the development of soccer skills, concepts of group play and team competition. All students who register must check in with the departmental office during the first two weeks of the semester.  
Credit 1 unit.

---

### L28 P.E. 220 Topics in Physical Education: Varsity Sports

Prerequisite: permission of the department.  
Credit 1 unit.

---

### L28 P.E. 2201 Fundamentals of Rowing for Fitness

This course focuses on the effective use of Concept II Rowing effective as a tool to learn the rowing stroke as well as to maintain aerobic fitness and develop strength. Emphasis is placed on the correct use of technique to decrease risk of injury; on varying duration and intensity of work on the machine to develop different energy systems; and on using these new skills

in developing lifetime fitness. Instruction includes the use of video tape and video monitoring. Athletic shoes and clothes that are not baggy are needed to participate. There is a minimum amount of running or light low-impact aerobic activity required as a warm-up.  
Credit 1 unit.

---

**L28 P.E. 232 Topics in Physical Education: High-Intensity Conditioning**

High-intensity conditioning. Varied program of high-intensity conditioning techniques designed for individual needs. Supervised areas covered are: cardiovascular and strength testing; weight training; plio-metric training; flexibility and stretching and aerobic and anerobic training.  
Credit 1 unit.

---

**L28 P.E. 234 Topics in Physical Education: Lifeguard Training**

The course provides skill instruction and knowledge needed to prevent and respond to aquatic emergencies in a pool setting. Successful completion of requirements results in certification in American Red Cross Lifeguard Training for swimming pools, CPR and First Aid. Prerequisite: swimming test given during the first week of class.  
Credit 1 unit.

---

**L28 P.E. 235 Topics in Physical Education: Step Aerobics**  
Step Aerobics. Section 01: Step Plus: Primarily designed around step aerobics with occasional workouts using other fitness techniques such as box aerobics, interval training. Section 02: Combo Training: Combination of many fitness techniques, such as step aerobics, box aerobics, low-impact.  
Credit 1 unit.

---

**L28 P.E. 236 Topics in Physical Education: Fitness and Conditioning**

Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time. Students required to attend an orientation session. Step Plus: primarily designed around step aerobics with occasional workouts using other fitness techniques; i.e., box aerobics, interval training. Combo Training: combination of many fitness techniques; i.e., step aerobics, box aerobics, low-impact. Prerequisite: P.E. 208.  
Credit 1 unit.

---

**L28 P.E. 237 Indoor Cycling**

Credit 1 unit.

---

**L28 P.E. 239 Topics in Physical Education**

Credit 1 unit.

---

**L28 P.E. 240 Topics in Physical Education: Intermediate Tennis**

Intermediate Tennis. Note: Eight- or nine-week course. All students who register must check in with the departmental office during the first two weeks of the semester.  
Credit 1 unit.

---

**L28 P.E. 248 Topics in Physical Education: Individual Physical Education**

Individual physical education. Prerequisite: medical referral needed.  
Credit 1 unit.

---

**L28 P.E. 255 Topics in Physical Education: Practicum in Sports Leadership**

Practicum in sports leadership. Participation in formal leadership tasks under the direction of the Washington University Athletic Department personnel. Selection of task and scope of work is determined before enrollment by conference with instructor. Prerequisite: permission of the department.  
Credit 1 unit.

---

**L28 P.E. 258 Indoor Cycling**

Music, stationary bicycles and an instructor who cues students to ride through hills, valleys and other terrain, changing resistance and pace to simulate different types of riding. All levels welcome — students can tailor the ride to fit their personal fitness goals and needs. A water bottle and towel are required. There will be a \$45.00 fee for this class.  
Credit 1 unit.

---

**L28 P.E. 291 Fundamentals of Athletic Training**

Study of the duties of the athletic trainer, in relation to physical education classes, competitive sports and recreation, including study and practice of first-aid care and prevention of injuries.  
Credit 3 units.

---

## Physics

Physics is the discipline that deals with the most fundamental aspects of our universe, such as the properties of atoms, nuclei and elementary particles; the nature of the forces between them; and the collective behavior of atoms in solids, liquids and gases. It deals with the entire universe, from its birth to its ultimate fate. At the same time, physics provides the tools that help us to understand extremely complex everyday things, like the behavior of sand piles, the strength of materials, or processes in the brain. Physics seeks to discover and understand the mathematical rules that govern the behavior of things. Its early successes in comprehending motion, thermodynamics, electricity and magnetism provided a foundation upon which other physical sciences have grown.

For students planning a career in science and technology or planning to pursue graduate studies in physics, astronomy, earth sciences, environmental sciences, medical physics, meteorology or oceanography, a major in physics provides a solid foundation. The program is sufficiently flexible to allow students to combine a physics major with a second major in chemistry, mathematics or engineering, or with pre-medical studies, or with other disciplines in the humanities and social sciences. In addition to the fundamentals of physics, the program is designed to give students a broad range of skills in laboratory techniques, critical thinking, computer use and teamwork, which

will serve them well in their chosen careers. In consultation with a faculty adviser, students may design a program of study to meet individual goals and interests. Physics majors are strongly encouraged to participate in physics research projects directed by faculty members.

**Introductory Physics:** Both the Physics 197–Physics 198 and Physics 117A–Physics 118A sequences are calculus-based introductions to physics intended for adequately prepared students interested in majoring in science or engineering or undertaking pre-medical studies. Physics 197 or Physics 117A also fulfill the requirements for the Sam Fox School. Both sequences use interactive, active-learning techniques. Calculus I (Math 131) is a corequisite, although previous or concurrent enrollment in Calculus II (Math 132) is strongly recommended.

The department offers several other courses of general interest to the nonscience student. In most cases, these have no prerequisite.

## Faculty

### Chair

**Mark Alford** ([http://physics.wustl.edu/people/alford\\_mark-g](http://physics.wustl.edu/people/alford_mark-g))  
Professor  
PhD, Harvard University  
Nuclear/particle physics

### Endowed Professors

**Carl M. Bender** ([http://physics.wustl.edu/people/bender\\_carl](http://physics.wustl.edu/people/bender_carl))  
Wilfred R. and Ann Lee Konneker Professor of Physics  
PhD, Harvard University  
Elementary particles

**Ramanath Cowsik** ([http://www.physics.wustl.edu/people/cowsik\\_ramanath](http://www.physics.wustl.edu/people/cowsik_ramanath))  
James S. McDonnell Professor of Space Sciences  
PhD, University of Bombay  
Astrophysics and space sciences

**Kenneth F. Kelton** ([http://www.physics.wustl.edu/people/kelton\\_kenneth-f](http://www.physics.wustl.edu/people/kelton_kenneth-f))  
Arthur Holly Compton Professor of Physics  
PhD, Harvard University  
Condensed matter and materials physics

**James G. Miller** ([http://www.physics.wustl.edu/people/miller\\_james-g](http://www.physics.wustl.edu/people/miller_james-g))  
Albert Gordon Hill Professor of Physics  
PhD, Washington University  
Physics applications in biology and medicine

### Professors

**James H. Buckley** ([http://physics.wustl.edu/people/buckley\\_james-h](http://physics.wustl.edu/people/buckley_james-h))  
PhD, University of Chicago  
Astrophysics and space sciences

**Anders E. Carlsson** ([http://physics.wustl.edu/people/carlsson\\_anders-e](http://physics.wustl.edu/people/carlsson_anders-e))  
PhD, Harvard University  
Biophysics

**Mark S. Conradi** ([http://www.physics.wustl.edu/people/conradi\\_mark-s](http://www.physics.wustl.edu/people/conradi_mark-s))  
PhD, Washington University  
Condensed matter and materials physics

**Willem H. Dickhoff** ([http://www.physics.wustl.edu/people/dickhoff\\_willem-h](http://www.physics.wustl.edu/people/dickhoff_willem-h))  
PhD, Free University, Amsterdam  
Many-body theory

**Martin H. Israel** ([http://www.physics.wustl.edu/people/israel\\_martin-h](http://www.physics.wustl.edu/people/israel_martin-h))  
PhD, California Institute of Technology  
Astrophysics and space sciences

**Jonathan I. Katz** ([http://www.physics.wustl.edu/people/katz\\_jonathan-i](http://www.physics.wustl.edu/people/katz_jonathan-i))  
PhD, Cornell University  
Astrophysics

**Henric Krawczynski** ([http://www.physics.wustl.edu/people/krawczynski\\_henric](http://www.physics.wustl.edu/people/krawczynski_henric))  
PhD, University of Hamburg  
Astrophysics and space sciences

**Michael C. Ogilvie** ([http://www.physics.wustl.edu/people/ogilvie\\_michael-c](http://www.physics.wustl.edu/people/ogilvie_michael-c))  
PhD, Brown University  
Elementary particles

**James S. Schilling** ([http://www.physics.wustl.edu/people/schilling\\_james-s](http://www.physics.wustl.edu/people/schilling_james-s))  
PhD, University of Wisconsin-Madison  
Condensed matter and materials physics

**Ralf Wessel** ([http://www.physics.wustl.edu/people/wessel\\_ralf](http://www.physics.wustl.edu/people/wessel_ralf))  
PhD, University of Cambridge  
Physics applications in biology and medicine

### Joint Professors

**Shankar M.L. Sastry** ([http://www.physics.wustl.edu/people/sastry\\_shankar](http://www.physics.wustl.edu/people/sastry_shankar))  
PhD, University of Toronto  
(Mechanical Engineering)

**Lee G. Sobotka** ([http://www.physics.wustl.edu/people/sobotka\\_lee-g](http://www.physics.wustl.edu/people/sobotka_lee-g))  
PhD, University of California, Berkeley  
(Chemistry)

## Associate Professors

**Francesc Ferrer** ([http://www.physics.wustl.edu/people/ferrer\\_francesc](http://www.physics.wustl.edu/people/ferrer_francesc))  
PhD, Universitat Autònoma de Barcelona  
Astrophysics and space sciences

**Zohar Nussinov** ([http://www.physics.wustl.edu/people/nussinov\\_zohar](http://www.physics.wustl.edu/people/nussinov_zohar))  
PhD, University of California, Los Angeles  
Condensed matter and materials physics

**Alexander Seidel** ([http://www.physics.wustl.edu/people/seidel\\_alexander](http://www.physics.wustl.edu/people/seidel_alexander))  
PhD, Massachusetts Institute of Technology  
Condensed matter and materials physics

**Li Yang** ([http://www.physics.wustl.edu/people/yang\\_li](http://www.physics.wustl.edu/people/yang_li))  
PhD, Georgia Institute of Technology  
Condensed matter and materials science

## Assistant Professors

**Bhupal Dev** ([http://physics.wustl.edu/people/dev\\_bhupal](http://physics.wustl.edu/people/dev_bhupal))  
PhD, University of Maryland, College Park  
Elementary particle physics, particle astrophysics, cosmology and theoretical physics

**Erik Henriksen** ([http://www.physics.wustl.edu/people/henriksen\\_erik](http://www.physics.wustl.edu/people/henriksen_erik))  
PhD, Columbia University  
Condensed matter and materials science

**Kater Murch** ([http://www.physics.wustl.edu/people/murch\\_kater](http://www.physics.wustl.edu/people/murch_kater))  
PhD, University of California, Berkeley  
Quantum information and materials

**Ryan Ogliore** ([http://physics.wustl.edu/people/ogliore\\_ryan](http://physics.wustl.edu/people/ogliore_ryan))  
PhD, California Institute of Technology  
Cosmochemistry, planetary science

## Lecturers

**Vikram Duvvuri** ([http://www.physics.wustl.edu/people/duvvuri\\_vikram](http://www.physics.wustl.edu/people/duvvuri_vikram))  
PhD, University of Chicago

**Mairin Hynes** ([http://www.physics.wustl.edu/people/hynes\\_kathryn-mairin](http://www.physics.wustl.edu/people/hynes_kathryn-mairin))  
PhD, Washington University

## Research Professors

**Sachiko Amari** ([http://www.physics.wustl.edu/people/amari\\_sachiko](http://www.physics.wustl.edu/people/amari_sachiko))  
PhD, Kobe University

**Robert Binns** ([http://www.physics.wustl.edu/people/binns\\_w-robert](http://www.physics.wustl.edu/people/binns_w-robert))  
PhD, Colorado State University

**Christine Floss** ([http://www.physics.wustl.edu/people/floss\\_christine](http://www.physics.wustl.edu/people/floss_christine))  
PhD, Washington University

**Alexander Meshik** ([http://www.physics.wustl.edu/people/meshik\\_alex](http://www.physics.wustl.edu/people/meshik_alex))  
PhD, Vernadsky Institute of Cosmochemistry

## Research Assistant Professors

**Viatcheslav Bugaev** ([http://www.physics.wustl.edu/people/bugaev\\_viatcheslav](http://www.physics.wustl.edu/people/bugaev_viatcheslav))  
PhD, Altai State University

**Fabian Kislak** ([http://physics.wustl.edu/people/kislak\\_fabian](http://physics.wustl.edu/people/kislak_fabian))  
PhD, Humboldt University

**Brian Rauch** ([http://www.physics.wustl.edu/people/rauch\\_brian](http://www.physics.wustl.edu/people/rauch_brian))  
PhD, Washington University

## Professors Emeriti

**Claude W. Bernard** ([http://physics.wustl.edu/people/bernard\\_claude](http://physics.wustl.edu/people/bernard_claude))  
PhD, Harvard University

**Thomas Bernatowicz** ([http://physics.wustl.edu/people/bernatowicz\\_thomas-j](http://physics.wustl.edu/people/bernatowicz_thomas-j))  
PhD, Washington University

**John W. Clark** ([http://www.physics.wustl.edu/people/clark\\_john-w](http://www.physics.wustl.edu/people/clark_john-w))  
Wayman Crow Professor of Physics  
PhD, Washington University

**Peter A. Fedders** ([http://www.physics.wustl.edu/people/fedders\\_peter](http://www.physics.wustl.edu/people/fedders_peter))  
PhD, Harvard University

**Michael W. Friedlander** ([http://www.physics.wustl.edu/people/friedlander\\_michael-w](http://www.physics.wustl.edu/people/friedlander_michael-w))  
PhD, University of Bristol

**Patrick C. Gibbons** ([http://www.physics.wustl.edu/people/gibbons\\_patrick-c](http://www.physics.wustl.edu/people/gibbons_patrick-c))  
PhD, Harvard University

**Charles M. Hohenberg** ([http://physics.wustl.edu/people/hohenberg\\_charles-m](http://physics.wustl.edu/people/hohenberg_charles-m))  
PhD, University of California, Berkeley

**Kazimierz Luszczynski** ([http://www.physics.wustl.edu/people/luszczynski\\_kazimierz](http://www.physics.wustl.edu/people/luszczynski_kazimierz))  
PhD, University of London

**Peter R. Phillips** ([http://www.physics.wustl.edu/people/phillips\\_peter-r](http://www.physics.wustl.edu/people/phillips_peter-r))  
PhD, Stanford University

**John H. Scandrett** ([http://www.physics.wustl.edu/people/scandrett\\_john-h](http://www.physics.wustl.edu/people/scandrett_john-h))  
PhD, University of Wisconsin-Madison

**Stuart A. Solin** ([http://www.physics.wustl.edu/people/solin\\_stuart](http://www.physics.wustl.edu/people/solin_stuart))  
Charles M. Hohenberg Professor of Experimental Physics  
PhD, Purdue University

**Wai-Mo Suen** ([http://www.physics.wustl.edu/people/suen\\_wai-mo](http://www.physics.wustl.edu/people/suen_wai-mo))  
PhD, California Institute of Technology

**Clifford Will** ([http://www.physics.wustl.edu/people/will\\_clifford-m](http://www.physics.wustl.edu/people/will_clifford-m))  
PhD, California Institute of Technology

## Majors

### The Major in Physics

**Total units required:** 42-49

**Prerequisites:** As prerequisites for the major, students should complete Physics I and II (Physics 197 and Physics 198) or General Physics I and II (Physics 117A and Physics 118A) during the first year. Majors should consider taking Physics 217, Physics 316 or Physics 321, Physics 318, and Physics 411 in the second year.

**Required Physics courses:** Students are required to complete a minimum program of 21 units of advanced courses (300-level or higher) in Physics. These 21 units must include:

| Code        | Title                           | Units |
|-------------|---------------------------------|-------|
| Physics 322 | Physical Measurement Laboratory | 3     |
| Physics 411 | Mechanics                       | 3     |
| Physics 421 | Electricity and Magnetism       | 3     |

- One additional upper-level laboratory course. Choose from:

| Code        | Title                              | Units |
|-------------|------------------------------------|-------|
| Physics 316 | Optics and Wave Physics Laboratory | 3     |
| Physics 321 | Electronics Laboratory             | 3     |
| Physics 360 | Biophysics Laboratory              | 3     |
| Physics 435 | Nuclear and Radiochemistry Lab     | 3     |

- Students not taking Physics 217 must take either Physics 318 Introduction to Quantum Physics II or Physics 471 Quantum Mechanics.
- The remaining physics courses must be at the 300 level or above, excluding Physics 341, Physics 342, Physics 441, Physics 442, Physics 499 and Physics 500.

**Recommended Physics courses:** In addition to the above requirements, students who are preparing for graduate study in physics or astronomy should consider taking:

| Code        | Title                                    | Units |
|-------------|--|-------|
| Physics 422 | Electricity and Magnetism II             | 3     |
| Physics 463 | Statistical Mechanics and Thermodynamics | 3     |
| Physics 471 | Quantum Mechanics                        | 3     |

As well as some of:

| Code        | Title                            | Units |
|-------------|----------------------------------|-------|
| Physics 472 | Solid State Physics              | 3     |
| Physics 474 | Introduction to Particle Physics | 3     |
| Physics 476 | Astrophysics                     | 3     |

and additional lab courses

Students also should consider taking Physics 501/Math 501–Physics 502/Math 502 and additional mathematics courses.

Students who are preparing for employment after the AB degree should take additional laboratory courses from the following choices:

| Code        | Title                              | Units |
|-------------|------------------------------------|-------|
| Physics 316 | Optics and Wave Physics Laboratory | 3     |
| Physics 321 | Electronics Laboratory             | 3     |
| Physics 322 | Physical Measurement Laboratory    | 3     |
| Physics 360 | Biophysics Laboratory              | 3     |
| Physics 435 | Nuclear and Radiochemistry Lab     | 3     |

Other relevant courses may include:

| Code        | Title                                    | Units |
|-------------|--|-------|
| Physics 314 | Physics of the Heart                     | 3     |
| Physics 350 | Physics of the Brain                     | 3     |
| Physics 351 | Introduction to Biomedical Physics       | 3     |
| Physics 352 | Physics of Biomolecules                  | 3     |
| Physics 355 | Physics of Vision                        | 3     |
| Physics 422 | Electricity and Magnetism II             | 3     |
| Physics 463 | Statistical Mechanics and Thermodynamics | 3     |
| Physics 471 | Quantum Mechanics                        | 3     |
| Physics 472 | Solid State Physics                      | 3     |

Students also might consider:

| Code     | Title                              | Units |
|----------|------------------------------------|-------|
| Chem 435 | Nuclear and Radiochemistry Lab     | 3     |
| Chem 436 | Radioactivity and Its Applications | 3     |

Students who are preparing for medical school should give special consideration to:

| Code        | Title                              | Units |
|-------------|------------------------------------|-------|
| Physics 314 | Physics of the Heart               | 3     |
| Physics 316 | Optics and Wave Physics Laboratory | 3     |
| Physics 321 | Electronics Laboratory             | 3     |

|                |                                    |   |
|----------------|------------------------------------|---|
| Physics 344    | Energy and Environmental Physics   | 3 |
| or Physics 444 | Energy and Environmental Physics   |   |
| Physics 350    | Physics of the Brain               | 3 |
| Physics 351    | Introduction to Biomedical Physics | 3 |
| Physics 352    | Physics of Biomolecules            | 3 |
| Physics 355    | Physics of Vision                  | 3 |
| Physics 360    | Biophysics Laboratory              | 3 |

**Math courses required for the physics major:**

| Code        | Title   | Units |
|-------------|---|-------|
| Math 131    | Calculus I  | 3     |
| Math 132    | Calculus II   | 3     |
| Math 233    | Calculus III  | 3     |
| Math 217    | Differential Equations (We recommend that Math 217 precede Physics 411) | 3     |
| Total Units |   | 12    |

**Math courses recommended for the physics major:**

- Math 308 Mathematics for the Physical Sciences or ESE 318 Engineering Mathematics A (We recommend that this course precede Physics 421.)
- Math 309 Matrix Algebra (We recommend that Math 309 precede Physics 471.)
- Physics 501/Math 501 and Physics 502/Math 502 also are recommended.

**Science-breadth requirement:** Majors must select three of the following courses to satisfy the science-breadth requirement. One of the three courses must be Chem 111A, Chem 112A, Chem 401 or Chem 402.

| Code      | Title                                    | Units |
|-----------|--|-------|
| Chem 111A | General Chemistry I                      | 3     |
| Chem 112A | General Chemistry II                     | 3     |
| Chem 151  | General Chemistry Laboratory I           | 2     |
| Chem 152  | General Chemistry Laboratory II          | 2     |
| Chem 401  | Physical Chemistry I                     | 3     |
| Chem 402  | Physical Chemistry II                    | 3     |
| Chem 445  | Instrumental Methods: Physical Chemistry | 3     |
| CSE 131   | Computer Science I                       | 3     |
| CSE 132   | Computer Science II                      | 3     |

**Additional Information**

**Senior Honors:** Students are encouraged to work toward Latin Honors (cum laude, magna cum laude, summa cum laude). To qualify, students must meet the academic requirements of the college and successfully complete a suitable project under the supervision of a faculty member in the department. The project, whether experimental or theoretical, should demonstrate the

student's capacity for independent work. Honors candidates must apply to the Undergraduate Studies Committee no later than the first day of classes senior year. The application should include a description of the proposed project, co-signed by the supervising professor. A written report of the completed work must be submitted to the committee by a deadline in March. By enrolling in Physics 499, students may earn up to 6 units of credit for the honors project.

The physics department also offers physics majors the possibility to earn departmental distinctions. These distinctions require the same GPA cutoff as Latin Honors (p. 888) but are calculated exclusively from the grades in physics courses (all courses with the prefix L31). Three levels of distinction are offered: (1) highest distinction, (2) high distinction, and (3) distinction. The highest and high distinctions require at least one semester of undergraduate research and a senior thesis describing the results, and are limited to the top 15 percent (highest distinction) and top 15-50 percent (high distinction) of the physics majors in their senior year ranked by their GPA in the physics courses. Students meeting the GPA cutoff but not undertaking undergraduate research and a senior thesis may only receive the third level of distinction.

**Minors**  
**The Minor in Physics**

**Units required: 17**

**Required courses:**

| Code           | Title                              | Units |
|----------------|------------------------------------|-------|
| Physics 117A   | General Physics I                  | 4     |
| or Physics 197 | Physics I                          |       |
| Physics 118A   | General Physics II                 | 4     |
| or Physics 198 | Physics II                         |       |
| Physics 217    | Introduction to Quantum Physics    | 3     |
| Physics 318    | Introduction to Quantum Physics II | 3     |
| Total Units    |                                    | 14    |

**Elective courses:**

At least one course at the 300 level or above (with the exception of Physics 303, Physics 304, Physics 341, Physics 342, Physics 441, Physics 442, Physics 499 and Physics 500) with a grade of C- or better.

**Additional Information**

Corequisite for taking Physics 117A General Physics I is enrollment in or placement out of Math 131 Calculus I. Math 132 Calculus II is a corequisite for Physics 197 Physics I. Calculus II also is necessary to provide adequate preparation for Physics 217/318 Quantum Physics I, II. Note that for some advanced courses, Math 233 Calculus III and Math 217 Differential Equations are prerequisites.

## The Minor in Astrophysics and Astroparticle Physics

Units required: 20

### Required courses:

| Code                           | Title                            | Units |
|--------------------------------|----------------------------------|-------|
| Physics 117A<br>or Physics 197 | General Physics I<br>Physics I   | 4     |
| Physics 118A<br>or Physics 198 | General Physics II<br>Physics II | 4     |
| Physics 217                    | Introduction to Quantum Physics  | 3     |
| Physics 312                    | Introduction to Astrophysics     | 3     |
| Total Units                    |                                  | 14    |

Two courses from the following six courses:

| Code        | Title                              | Units |
|-------------|------------------------------------|-------|
| Physics 318 | Introduction to Quantum Physics II | 3     |
| Physics 456 | Stellar Astrophysics               | 3     |
| Physics 460 | X-Ray & Gamma-Ray Astrophysics     | 3     |
| Physics 474 | Introduction to Particle Physics   | 3     |
| Physics 476 | Astrophysics                       | 3     |
| Physics 478 | From Black Holes to the Big Bang   | 3     |

## The Minor in Biomedical Physics

Units required: 17

### Required courses:

| Code                           | Title                            | Units |
|--------------------------------|----------------------------------|-------|
| Physics 117A<br>or Physics 197 | General Physics I<br>Physics I   | 4     |
| Physics 118A<br>or Physics 198 | General Physics II<br>Physics II | 4     |
| Total Units                    |                                  | 8     |

### Elective courses:

Two courses from the following three:

| Code        | Title                | Units |
|-------------|----------------------|-------|
| Physics 314 | Physics of the Heart | 3     |
| Physics 350 | Physics of the Brain | 3     |
| Physics 355 | Physics of Vision    | 3     |

One course from the following four laboratory courses:

| Code        | Title                              | Units |
|-------------|------------------------------------|-------|
| Physics 316 | Optics and Wave Physics Laboratory | 3     |
| Physics 321 | Electronics Laboratory             | 3     |
| Physics 322 | Physical Measurement Laboratory    | 3     |
| Physics 360 | Biophysics Laboratory              | 3     |

## Additional Information

This is a minor for students interested in the discussion and application of methods and techniques from physics to topics in the area of biology and medicine. The program may be of interest to the pre-medicine student or the research-oriented science major. New courses are being developed that also will satisfy these requirements.

## Courses

Visit online course listings to view semester offerings for L31 Physics (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L31&crslvl=1:4>).

### L31 Physics 101A Basic Physical Science

An introduction to the concepts and modes of thought involved in understanding the physical world. The focus is not only on everyday phenomena (e.g., falling objects, skidding cars, the tides) but also on questions of cosmic significance (e.g., relativity, the Big Bang, black holes, the origin of the elements). Verbal reasoning is emphasized. No prerequisites. Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN BU: SCI

### L31 Physics 107A How Things Work

Why is the sky blue? How can a baseball curve? Natural and manmade phenomena can be understood by simple and basic ideas of physics. This course illustrates these underlying principles by using examples from everyday life as well as from physics and other fields. Because the phenomena are many and the principles are few we find that apparently very different events sometimes have similar explanations; we come to understand how the stretching of a rubber band is related to ice skating, and how the blue of the sky is related to the red of the sunset and the white color of milk. No prerequisites. Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

### L31 Physics 110A Awesome Ideas in Physics

The ideas of physics that have revolutionized our perception of the world and reality. Emphasis is on understanding a selected set of crucial concepts without losing track of the numbers. Using the writings of Hawking, Feynman and Lightman, a study is made of such topics as energy and conservation laws, the relativity of time, the wave-particle duality, the modern picture of matter at the smallest and the largest distance scales, and the history of the universe. Must be taken for a letter grade. No prerequisites. Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

### L31 Physics 111 Variational Calculus — A Mathematical Blade for Cutting-Edge Science

Variational calculus, a fancy generalization of ordinary calculus, is the study of functionals. In variational calculus one tries to find the special function that extremizes a functional. The applications of variational calculus are ubiquitous in modern science. Variational calculus is the mathematical setting for describing the physical world. In all areas of classical and quantum physics, the physical world is expressed in terms of functions that extremize specific functionals. In this seminar

variational calculus is explained at an elementary level and many of its applications in science are examined. A good understanding of elementary first-year calculus is required to take this seminar.

Credit 3 units. A&S: NS, QA

---

### L31 Physics 117A General Physics I

Calculus-based introduction to the concepts, laws, and structure of physics. The course is taught in a lecture-based style and requires students to complete weekly homework assignments. Topics include kinematics, Newton's laws, energy, linear momentum, angular momentum, the conservation laws, gravitational force, harmonic motion, wave motion and interference, sound, and special relativity. Concurrent registration in a Physics 117A lab section is required.

Prerequisite: Previous or concurrent enrollment in Calculus I (Math 131) is required; previous or concurrent enrollment in Calculus II (Math 132) strongly recommended. Credit may not be obtained for both Physics 117A and Physics 197, and students may not simultaneously enroll in both courses.

Credit 4 units. A&S: NS, QA A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

---

### L31 Physics 118A General Physics II

Continuation of Physics 117. Calculus-based introduction to concepts, laws and structure of physics. Topics include electromagnetic forces and fields, direct current circuits, capacitance and inductance, electromagnetic radiation, light, geometrical and physical optics, interference and diffraction, early quantum theory, and nuclear physics. Prerequisite: Physics 117A, Physics 197 or permission of instructor. Concurrent registration in a Physics 118 lab section is required. Previous or concurrent enrollment in Calculus II Math 132 is recommended. Credit may not be obtained for both Physics 118 and Physics 198.

Credit 4 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

---

### L31 Physics 125A Solar System Astronomy

Designed for the nonscience major, this course deals with the planets, their moons and rings, comets, meteorites and interplanetary dust particles. In order to understand both classical astronomy and the results obtained from modern telescopes and the space program, basic scientific ideas (including optics and the laws of motion) are reviewed first. There also is some discussion of astronomical history to show how we have arrived at our present ideas of the structure and evolution of the solar system. Prerequisites: high school algebra and trigonometry or concurrent enrollment in Math 131.

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

---

### L31 Physics 126A Stars, Galaxies and Cosmology

Intended as a general survey for the nonscience major. Topics include the structure and evolution of stars, such as red giants, white dwarfs, neutron stars, pulsars and black holes; galaxies and quasars; cosmology and the Big Bang theory. Prerequisites: high school algebra and trigonometry, or concurrent enrollment in Math 131.

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

---

### L31 Physics 141 Selected Topics in Physics I

Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

### L31 Physics 142 Selected Topics in Physics I

Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

### L31 Physics 171A Physics and Society

Introduction to physics: its goals, methods and relevance for society. Topics include energy as a unifying principle of physics and society's use of energy: resources and costs. Nuclear energy: history, technology, radiation, waste, weapons. Global climate change: the greenhouse effect, the hole in the ozone layer. Science and government. Bad science, pseudoscience, antiscience. Intended for science and nonscience majors. Must be taken for a letter grade.

Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM BU: SCI

---

### L31 Physics 197 Physics I

Calculus-based introduction to the central concepts, laws, and structure of physics, presented in an active learning environment. The course is structured around three themes that are treated in depth: conservation laws, Newtonian physics, and special relativity. A daily regimen of homework and reading, as well as weekly homework assignments, small-group problem-solving exercises, and active class participation are integral parts of this course. Concurrent registration in a Physics 197 lab section is required. Prerequisite: Previous or concurrent enrollment in Calculus I (Math 131) is required; previous or concurrent enrollment in Calculus II (Math 132) strongly recommended. Credit may not be obtained for both Physics 117A and Physics 197, and students may not simultaneously enroll in both courses.

Credit 4 units. A&S: NS, QA A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

---

### L31 Physics 198 Physics II

Continuation of Physics 197. An advanced, calculus-based introduction to central concepts in physics for students who desire to major in physics or another physical science, or who have a special interest in physics. The course is structured around three themes that are treated in depth: electricity and magnetism, quantum physics, and statistical and thermal physics. A daily regimen of homework and reading as well as active class participation are integral parts of the course. Prerequisites: Physics 197 and Calculus II. Students who

have not taken Physics 197 may not register for Physics 198. Concurrent registration in a Physics 198 lab section is required. Credit may not be obtained for both Physics 118 and Physics 198.

Credit 4 units. A&S: NS, QA A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

---

**L31 Physics 216 Introduction to Relativity: The Special Theory**

Introduction to the special and general theories of relativity. Einstein's postulates of the principle of relativity and the constancy of the speed of light. Simple kinematics and dynamics: simultaneity, time dilation, space-time diagrams, twin and other "paradoxes,"  $E=mc^2$ , laws of motion. Elements of general relativity; curved spacetime, experimental tests, black holes, gravitational waves. Prerequisite: Physics 117A, Physics 197 or permission of the instructor.

Credit 1 unit. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L31 Physics 217 Introduction to Quantum Physics**

Theoretical and experimental basis for quantum mechanics, following the historical development of 20th-century physics. Failure of classical physics; the Bohr theory of the atom; the Heisenberg uncertainty principle; the Schrodinger equation; atomic and molecular structure. Prerequisites: Physics 117A and 118A or Physics 197 and 198.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM BU: SCI

---

**L31 Physics 219 Energy and the Environment**

Examination of the topic of energy from many human-relevant perspectives. Humans use an enormous amount of energy, at the rate of 18 terawatts. Where does this energy come from? How long will it last? What are the consequences? Examination of energy resources and consumption from scientific, social, economic and political viewpoints. Relationship of energy to concepts such as heat, work and power. Energy use by society. Energy sources, pros and cons of use, availability now and in the future. Types, abundance, advantages, challenges of renewable energy sources. Prerequisite: one year of high-school physics or chemistry.

Same as L19 EPSc 219

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L31 Physics 241 Select Topics in Physics II**

Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L31 Physics 242 Selected Topics in Physics II**

Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: IS

---

**L31 Physics 312 Introduction to Astrophysics**

This course covers the physics needed for higher-level astrophysics courses, and is a requirement for those courses. Furthermore, it gives a first introduction to several topics in modern astrophysics, including stars (stellar structure and evolution), compact objects (neutron stars and black holes), galaxies (galactic structure), and cosmology. The course should be taken by everybody interested in astrophysics. Prerequisite: Physics 117A and 118A; or Physics 197 and 198; or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L31 Physics 314 Physics of the Heart**

A lecture and demonstration course that may be of particular interest to premedical and life-science students. Basic physics of the human cardiovascular system. Elasticity of vessels: properties of elastin and collagen. Energetics of the circulation: arterial and venous blood pressure, total fluid energy, gravitational potential energy, kinetic energy. Streamline flow and turbulence: effects of stenosis. Static and dynamic energy consumption of the heart: cardiac efficiency, the tension-time integral, Laplace's law, Starling's law. Metabolism of cardiac muscle. Electrophysiology: the heartbeat and cardiac arrhythmias. The physics of phonocardiograms, echocardiograms and other non-invasive techniques for physical assessment of cardiac abnormalities, including ischemia and myocardial infarction. Models of mechanical properties: contractile element, series elastic and parallel elastic elements. Corequisite: Physics 118A, Physics 198 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM BU: SCI  
EN: SU, TU

---

**L31 Physics 316 Optics and Wave Physics Laboratory**

Introduction to optics and to treatment of experimental data. Experiments and lectures on refraction, interference, diffraction, polarization and coherence properties of waves with emphasis on light. Data analysis using statistical methods. Prerequisites: Physics 117A–Physics 118A or Physics 197–Physics 198.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

**L31 Physics 318 Introduction to Quantum Physics II**

Application of elementary quantum principles to atomic and molecular physics, solid-state physics, and nuclear and particle physics. Prerequisite: Physics 217.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM BU: SCI

---

**L31 Physics 321 Electronics Laboratory**

Elements of linear and nonlinear circuits, amplifiers, feedback, with applications in experimental physics. Prerequisite: Physics 118A, Physics 198 or permission of instructor. Two three-hour laboratories and two one-hour lectures a week.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM BU: SCI  
EN: DU, SU, TU

---

**L31 Physics 322 Physical Measurement Laboratory**

A variety of classical and modern experiments in physics, including five experiments in nuclear radiation. Use of computers in experiment control, data acquisition, and data analysis.

Development of skills in writing lab notebooks and formal reports and giving short oral presentations on experiments. Two laboratory periods each week. Prerequisites: Physics 217 or permission of instructor; junior- or senior-level standing. Credit 3 units. A&S: NS, WI A&S IQ: NSM, AN, WI Art: NSM BU: SCI EN: TU

---

### L31 Physics 341 Selected Topics in Physics III

Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

### L31 Physics 342 Selected Topics in Physics III

Topics of special interest (e.g., holography, relativity, nuclear power, computer application in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

### L31 Physics 344 Energy and Environmental Physics

This intermediate-level course applies basic physics principles to this increasingly important area. It is designed for all science and engineering majors with an interest in energy and environmental issues. Topics covered include population trends, fossil fuel use, renewable energy sources, energy storage strategies and climate change. Particular emphasis is given to the use of the fundamental laws of physics, such as energy conservation, as well as more general concepts such as local and global stability, chaotic behavior, probability and risk. The aim of the course is the development of analytical skills and familiarity with important concepts, in order to enable an independent and informed view of environmental problems and possible solutions. A one-year introductory physics class on the level of Physics 117–118 or 197–198 is required. This course also may be taken as Physics 444, which requires an additional independent project.

Credit 3 units. A&S: NS A&S IQ: NSM, AN BU: SCI

---

### L31 Physics 350 Physics of the Brain

Concepts and techniques of physics are applied to study the functioning of neurons and neuronal circuits in the brain. Neurons and neural systems are modeled at two levels: (1) at the physical level, in terms of the electrical and chemical signals that are generated and transmitted, and (2) at the information-processing level, in terms of the computational tasks performed. Specific topics include: neuronal electrophysiology, neural codes, neural plasticity, sensory processing, neural network architectures and learning algorithms, and neural networks as dynamical and statistical systems. Course grade is based primarily on an individualized term project. Prerequisites: Physics 117A–118A, Physics 197–198, or permission of the instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI EN: SU, TU

---

### L31 Physics 351 Introduction to Biomedical Physics

Principles and application of key physical methods used in the diagnosis and treatment of diseases, and in biomedical research. Topics include interaction of radiation with living systems; fundamentals of optical and electron microscopy; imaging via X-rays, magnetic resonance and ultrasound; and electrical properties of organs and cells. Prerequisite: Physics 117A–118A or Physics 197–198.

Credit 3 units. A&S: NS Art: NSM BU: SCI EN: TU

---

### L31 Physics 352 Physics of Biomolecules

This course emphasizes the application of physical laws and concepts in understanding biomolecules and their interactions, and in developing tools to investigate their biological properties and functionalities. Topics include (1) a general introduction to biomolecules and cells, (2) physics of biopolymers as modeled by stochastic analyses, (3) transport processes in biological systems including diffusion, reaction kinetics and "life at low Reynolds number," and (4) the physics of fluorescence and its contemporary applications to dynamics of biomolecules, such as optical tweezers. Prerequisite: Physics 117–118 or Physics 197–198. Some familiarity with thermodynamics; Chem 111A–112A recommended.

Credit 3 units. A&S: NS A&S IQ: NSM, AN

---

### L31 Physics 355 Physics of Vision

How do the eyes capture an image and convert it to neural messages that ultimately result in visual experience? This lecture and demonstration course covers the physics of how we see. The course is addressed to physics, premedical and life-sciences students with an interest in biophysics. Topics include physical properties of light, evolution of the eyes, image formation in the eye, image sampling with an array of photoreceptors, transducing light into electrical signals, color coding, retinal organization, computing with nerve cells, compressing the 3-D world into optic nerve signals, inferring the 3-D world from optic nerve signals, biomechanics of eye movement, engineered vision in machines. The functional impact of biophysical mechanisms for visual experience is illustrated with psychophysical demonstrations. Corequisite: Physics 117A, Physics 197 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI EN: SU, TU

---

### L31 Physics 360 Biophysics Laboratory

This laboratory course consists of "table-top" experiments in biological physics that are designed to introduce the student to concepts, methods and biological model systems in biophysics. Most experiments combine experimentation with computer simulations. The list of available experiments includes electrophysiology, human bioelectricity, optical tweezers, ultrasonic imaging, mass spectrometer and viscosity measurements. Prerequisites: prior completion of Physics 117A–118A, Physics 197–198 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM

---

### L31 Physics 400 Physical Science in 12 Problems

Exercises related to general chemistry, classical mechanics, quantum mechanics, statistical mechanics, thermodynamics and kinetics, are solved with numerical software. Each exercise is accompanied by a lecture, a software template solving a problem and a related take-home problem. The software allows us to

focus on, and treat in a transparent fashion, physical problems without the unworldly idealizations and contrivances found in textbooks. Prerequisites: General Chem, concurrent enrollment with Chem 401 and prior or concurrent enrollment in General Physics.

Same as L07 Chem 400

Credit 1 unit. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

### L31 Physics 411 Mechanics

Motion of a point particle, rotational motion, oscillation, gravitation and central forces, Lagrangian and Hamiltonian formulation. Prerequisites: Physics 117A–118A or Physics 197–198, Math 217 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

### L31 Physics 421 Electricity and Magnetism

Starting from Coulomb's law, the Biot-Savart law and Faraday's law, the electrical and magnetic fields are defined and applied. Maxwell's equations are derived and their consequences, such as electromagnetic waves and relativity, are explored. Prerequisites: Physics 117A–118A or Physics 197–198, Math 217 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM BU: SCI EN: DU, SU, TU

---

### L31 Physics 422 Electricity and Magnetism II

The second course in a two-part series covering the classical theory of electricity and magnetism leading to the derivation and application of Maxwell's equation. Topics in electrodynamics including Faraday's law, the displacement current and Maxwell's equations in vacuum and in matter are covered. Electromagnetic waves and radiation, special relativity and relativistic electrodynamics also are discussed. Prerequisite: Physics 421 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM EN: DU, SU, TU

---

### L31 Physics 427 Introduction to Computational Physics

Lectures and hands-on experience in computational physics combining topics in numerical analysis, algorithms, statistics, visualization and computer algebra with projects in contemporary areas of physics. Prerequisites: Physics 217 or equivalent and familiarity with a programming language.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

### L31 Physics 435 Nuclear and Radiochemistry Lab

Application of radiochemical techniques to problems in chemistry, physics, and nuclear medicine. Prerequisites: 3 units of physical chemistry and permission of instructor. One lecture hour and five hours of laboratory a week.

Same as L07 Chem 435

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L31 Physics 436 Introduction to the Atomic Nucleus

Introduction to the production and decay of radioactive nuclides, the structure and properties of nuclei, and the applications of nuclear and radiochemical techniques to current scientific problems. Prerequisites: one year each of chemistry, mathematics and physics.

Same as L07 Chem 436

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM

---

### L31 Physics 441 Selected Topics in Physics IV

Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

### L31 Physics 442 Selected Topics in Physics IV

Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

### L31 Physics 444 Energy and Environmental Physics

This intermediate-level course applies basic physics principles to this increasingly important area. It is designed for all science and engineering majors with an interest in energy and environmental issues. Topics covered include population trends, fossil fuel use, renewable energy sources, energy storage strategies and climate change. Particular emphasis is given to the use of the fundamental laws of physics, such as energy conservation, as well as more general concepts such as local and global stability, chaotic behavior, probability and risk. The aim of the course is the development of analytical skills and familiarity with important concepts, in order to enable an independent and informed view of environmental problems and possible solutions. A one-year introductory physics class on the level of Physics 117-118 or Physics 197-198 is required. This course may also be taken as Physics 344. Physics 444 requires an additional independent project.

Same as L31 Physics 344

Credit 3 units. A&S: NS A&S IQ: NSM, AN BU: SCI

---

### L31 Physics 446 Galactic Astrophysics

This course discusses the motion of stars, gas, and dark matter in galaxies with the aim to gain a deep understanding of the morphologies and the kinematics of galaxies and galaxy clusters. The lectures focus on the dynamics and statistical mechanics of a collection of stars — treated as a collisionless system. The course begins with a discussion of potential theory and proceeds to discuss the density and phase distributions of stars in star clusters and galaxies, thus leading to an understanding of the equilibria and stability of these systems. Topics such as Chandrasekhar's dynamical friction, cosmology, the growth of density perturbations, galaxy formation, and dark matter constitute the final topics of discussion. This course is available for advanced undergraduates. Prerequisites: Physics 312, 411, and 463, or permission by the instructor, and graduate students.

Same as L31 Physics 546

Credit 3 units.

---

**L31 Physics 450 Physics of the Brain**

Contents are the same as Physics 350. Also intended for graduate students. Includes a more sophisticated term project than Physics 350. Prerequisites: Physics 117A–118A or Physics 197–198, or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI EN: SU, TU

---

**L31 Physics 455 Physics of Vision**

Contents are the same as Physics 355. Also intended for graduate students. Includes a more sophisticated term project than Physics 355. Corequisite: Physics 117A, Physics 197 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L31 Physics 456 Stellar Astrophysics**

The course Stellar Astrophysics discusses the physical processes that play a role inside stars. Relevant physical processes include emissions and absorption processes, radiation transfer, convective transfer, the weak and strong interactions, nuclear processes and nuclear burning, and the thermodynamics of equilibrium and non-equilibrium processes in stellar interiors. Subsequently, these processes are used to explain the structure and evolution of stars of different mass ranges. Finally, the course discusses endpoints of stellar evolution including white dwarfs, neutron stars, black holes, supernova explosions and gamma-ray burst. Prerequisites: Physics 312, Physics 318, or permission of instructor.

Same as L31 Physics 556

Credit 3 units.

---

**L31 Physics 460 X-Ray & Gamma-Ray Astrophysics**

Observers started to use X-ray and gamma-rays in the '60s and '70s to explore the cosmos with high-energy photons. The sky looks dramatically different at these energies with bright flares from mass accreting black holes and gamma-ray bursts and large diffuse emission from supernova remnants and cosmic rays interacting with galactic matter and magnetic fields dominating the emission. This course gives a comprehensive overview of the underlying physics and observable phenomenology. Topics covered include the history of X-ray and gamma-ray astronomy, high-energy radiation processes, particle heating and acceleration, accretion physics, blast waves and shocks, black holes, neutron stars, supernova remnants, gamma-ray bursts, and galaxy clusters. Prerequisite: L31 Physics 312.

Credit 3 units. A&S: NS A&S IQ: NSM

---

**L31 Physics 463 Statistical Mechanics and Thermodynamics**

Basic methods of classical and quantum statistical mechanics, thermodynamics and transport theory. Prerequisite: Physics 217 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM

---

**L31 Physics 471 Quantum Mechanics**

Origins of quantum theory, wave packets and uncertainty relations, Schrodinger's equation in one dimension, step potentials and harmonic oscillators, eigenfunctions and eigenvalues, Schrodinger's equation in three dimensions, the hydrogen atom, symmetry, spin and the periodic table, approximation methods for time independent problems, quantum

statistics. Prerequisite: Math 217, Physics 217, or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM EN: SU, TU

---

**L31 Physics 472 Solid State Physics**

Crystal structures, binding energies, thermal properties, dielectrics, magnetism, free electron theory of metals, band theory, semiconductors, defects in solids. Prerequisite: Physics 471.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L31 Physics 474 Introduction to Particle Physics**

Introduction to the standard model of particle physics, including symmetries, conservation laws, the weak interaction, the strong interaction, quark confinement and some more exotic ideas such as grand unified theories. Prerequisite: Physics 471.

Credit 3 units. A&S: NS A&S IQ: NSM, AN Art: NSM

---

**L31 Physics 476 Astrophysics**

This Astrophysics course focuses on cosmic rays. Victor Hess discovered in 1912 that ionizing radiation impinges on the top of Earth's atmosphere. Even though physicists have been studying cosmic rays (the ionizing radiation) for more than 100 years now with a fantastic repertoire of experimental and theoretical tools, cosmic rays never stop to surprise us, and cosmic ray physicists are still pushing the frontier of cosmic exploration in many ways. This course gives an introduction into this exciting topic covering historical and recent cosmic ray measurements at all energies, particle and antiparticle observations, and neutrino observations. The presently favored models of cosmic ray acceleration and transport are discussed in detail, and some topics of current interest are highlighted (including the production of particles and antiparticles by dark matter). The course also covers radio astronomy and highlights the clues about the origin of the cosmic rays that can be obtained from radio observations. Prerequisite: Physics 312 or permission of instructor.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L31 Physics 477 Physics of Finite and Infinite Nuclear Systems**

Quantum mechanics of finite and infinite systems of protons and neutrons. Interaction between nucleons. Independent-particle model of nuclei and shell structure. Contrast with atomic shell model. Isospin symmetry. Information from weakly and strongly interacting probes of nuclei. Nuclear decay properties and some historical context. Many-particle description of nuclear systems. Single-particle versus collective phenomena. Properties of excited states. Bulk properties of nuclei. Nuclear and neutron matter. Role of different energy scales in determining nuclear properties: influence of long-range, short-range, and medium-induced interactions. Pairing correlations in nuclear systems. Relevance of nuclear phenomena and experiments for astrophysics and particle physics. Prerequisites: Physics 318 or Physics 471, or permission of instructor

Credit 3 units. A&S: NS A&S IQ: NSM

---

**L31 Physics 478 From Black Holes to the Big Bang**

An introduction to general relativity. The goal is to illustrate important features of general relativity without the full-blown mathematics of Einstein's equations by restricting attention to spherically symmetric spacetimes. Topics include: principle of equivalence; curved spacetime; spherical stars and black holes;

the Big Bang model, observational cosmology. Prerequisite:  
Physics 411 or permission of instructor.  
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

### L31 Physics 482 Research Seminar

Designed to introduce students to current developments in physics and to research carried out by faculty. Topics vary each year. Each member of the department addresses their particular specialty. Interested undergraduates may take this seminar in their junior or senior year. Must be taken pass/fail.  
Credit 1 unit. A&S: NS A&S IQ: NSM Art: NSM

---

### L31 Physics 499 Honors Program

Prerequisites: junior standing, an average grade of B or better, and permission of the chair of the department. Program and credit to be determined; maximum 6 units.  
A&S: NS Art: NSM

---

## Political Science

The Department of Political Science offers undergraduates the opportunity to study all aspects of politics using cutting-edge technical and theoretical tools. Our courses are animated by longstanding problems related to the use of power, its rightful exercise by governments and individual actors, and the institutions that affect how that power is exercised. Reflecting the breadth of the discipline, we offer a range of classes, including courses on elections and electoral politics; international political economy; justice and the state; and comparative analyses of political institutions across states.

A major in political science thus exposes students to the primary themes of the discipline: American politics, comparative politics, international politics, judicial politics, political methodology and political theory. A major in political science can prepare students well for professional training and advanced study in law, business, education, journalism, policy analysis, political science, public administration, social work and urban planning. Political science graduates enter careers in business; federal, state and local government; the media; and nonprofit organizations.

Because political science is a broad discipline, students often choose to combine the major with such related fields as African and African-American studies; American culture studies; anthropology; economics; environmental policy; history; international studies; Jewish, Islamic and Near Eastern studies; Latin American studies; philosophy; psychology; and women, gender and sexuality studies.

## Faculty

### Chair

**James Spriggs II** ([http://polisci.wustl.edu/james\\_spriggs](http://polisci.wustl.edu/james_spriggs))  
Sidney W. Souers Professor of Government  
PhD, Washington University

### Associate Department Chair

**Matthew Gabel** ([http://polisci.wustl.edu/Matthew\\_Gabel](http://polisci.wustl.edu/Matthew_Gabel))  
Professor  
PhD, University of Rochester

### Director of Undergraduate Studies

**Justin Fox** (<http://polisci.wustl.edu/faculty/justin-fox>)  
Associate Professor  
PhD, University of Rochester

### Director of Graduate Studies

**Andrew Reeves** (<http://polisci.wustl.edu/faculty/andrew-reeves>)  
Associate Professor  
PhD, Harvard University

### Endowed Professors

**Randall Calvert** ([http://polisci.wustl.edu/Randall\\_Calvert](http://polisci.wustl.edu/Randall_Calvert))  
Thomas F. Eagleton University Professor of Public Affairs and Political Science  
PhD, California Institute of Technology

**Lee Epstein** (<http://epstein.wustl.edu>)  
Ethan A.H. Shepley Distinguished University Professor  
PhD, Emory University

**James L. Gibson** ([http://polisci.wustl.edu/James\\_Gibson](http://polisci.wustl.edu/James_Gibson))  
Sidney W. Souers Professor of Government  
PhD, University of Iowa

**Norman J. Schofield** ([http://polisci.wustl.edu/norman\\_schofield](http://polisci.wustl.edu/norman_schofield))  
William Taussig Professor of Political Economy  
PhD, Essex University

**Steven S. Smith** ([http://polisci.wustl.edu/steven\\_smith](http://polisci.wustl.edu/steven_smith))  
Kate M. Gregg Professor of Social Sciences; Director of the Weidenbaum Center on the Economy, Government, and Public Policy  
PhD, University of Minnesota

### Professors

**Brian F. Crisp** (<http://polisci.wustl.edu/pages.wustl.edu/crisp>)  
PhD, University of Michigan

**William R. Lowry** ([http://polisci.wustl.edu/William\\_Lowry](http://polisci.wustl.edu/William_Lowry))  
PhD, Stanford University

**Itai Sened** ([http://polisci.wustl.edu/itai\\_sened](http://polisci.wustl.edu/itai_sened))  
PhD, University of Rochester

## Associate Professors

**Michael Bechtel** (<http://polisci.wustl.edu/faculty/michael-bechtel>)  
PhD, University of Konstanz

**David Carter**  
PhD, University of Rochester

**Justin Fox** (<http://polisci.wustl.edu/faculty/justin-fox>)  
PhD, University of Rochester

**Clarissa Hayward** ([http://polisci.wustl.edu/ClarissaRile\\_Hayward](http://polisci.wustl.edu/ClarissaRile_Hayward))  
PhD, Yale University

**Francis Lovett** ([http://polisci.wustl.edu/Frank\\_Lovett](http://polisci.wustl.edu/Frank_Lovett))  
PhD, Columbia University

**Ian MacMullen** ([http://polisci.wustl.edu/IanR\\_MacMullen](http://polisci.wustl.edu/IanR_MacMullen))  
PhD, Duke University

**Sunita Parikh** ([http://polisci.wustl.edu/Sunita\\_Parikh](http://polisci.wustl.edu/Sunita_Parikh))  
PhD, University of Chicago

**Andrew Reeves** (<http://polisci.wustl.edu/faculty/andrew-reeves>)  
PhD, Harvard University

**Andrew Rehfield** ([http://polisci.wustl.edu/andrew\\_rehfeld](http://polisci.wustl.edu/andrew_rehfeld))  
PhD, University of Chicago

**Betsy Sinclair** (<http://polisci.wustl.edu/faculty/betsy-sinclair>)  
PhD, California Institute of Technology

## Assistant Professors

**Deniz Aksoy**  
PhD, University of Rochester

**Sarah Brierley**  
PhD, University of California, Los Angeles

**Jacob Montgomery** (<http://polisci.wustl.edu/faculty/jacob-montgomery>)  
PhD, Duke University

**Keith Schnakenberg** (<http://polisci.wustl.edu/faculty/keith-schnakenberg>)  
PhD, Washington University

## Professors Emeriti

**Gary Miller** ([http://polisci.wustl.edu/GaryJ\\_Miller](http://polisci.wustl.edu/GaryJ_Miller))  
PhD, University of Texas at Austin

**John Sprague** ([http://polisci.wustl.edu/John\\_Sprague](http://polisci.wustl.edu/John_Sprague))  
Sidney W. Souers Professor Emeritus of Government  
PhD, Stanford University

## Majors

### The Major in Political Science

**Total units:** Students who major in political science are required to complete 30 graded units (10 classes) in political science with a C or better, distributed as follows:

#### Required courses:

- **Substantive Introductory Courses:** 6 graded units must come from any two introductory classes. (*Note: Students scoring a 4 or 5 on a relevant AP exam may place out of the associated introductory course and replace it with an upper-level course in a related subfield.*)
- **Methodology Course:** 3 graded units must come from Pol Sci 363 Quantitative Political Methodology. All majors are urged to take this course in the fall of their sophomore year. (*Note: Some statistics courses offered in other departments will allow students to opt out of this class, but those credits **will not** count toward their political science major. These courses include U25 PolSci 323 Introduction to Quantitative Methods [subject to the limit of 6 "outside" credit units], QBA 121 Managerial Statistics II, Math 3200 Elementary to Intermediate Statistics and Data Analysis, and ESE 326 Probability and Statistics for Engineering.*)

#### Elective courses:

- **Distribution Requirement:** 18 graded units must come from any six 300- or 400-level classes. Of these 18 units, students must complete at least one 3-unit course in three of the following five fields: American politics, comparative politics, international politics, political methodology, or political theory. (*Note: Pol Sci 363 does not count toward this upper-level distribution requirement.*)
- **Other courses:** A student's remaining graded units may be earned by any political science course or independent study. However, credits given for writing a senior thesis (detailed in Senior Thesis section below) do not count toward the major.

## Limitations

**No more than 6 units from the following may count toward the major:** study abroad, summer school, Pol Sci 419 Teaching Practicum in Political Science, transfer credit, and University College.

**No more than 6 units from the following may count toward the major:** Pol Sci 413 Directed Research, Pol Sci 412 Directed Readings, and independent study.

## Additional Information

**Concentrations:** Political science majors may concentrate in a subfield of political science by taking (as part of their distribution requirement) three upper-level courses in any one of the five subfields (American politics, comparative politics, international

politics, political methodology, or political theory) and submitting a subfield concentration form. Students may earn concentrations in up to two subfields. The successful completion of a subfield concentration will be listed on a student's transcript.

**Senior Thesis/Capstone Option:** The department encourages serious students to pursue independent research by working toward a senior thesis. Students admitted to this program work closely with a faculty adviser for a full calendar year, beginning at the end of their junior year. Students writing a senior thesis receive 6 units of college credit for two semesters of work by enrolling in Pol Sci 415 Senior Thesis Research; however, this credit does not count toward the completion of the political science major. Although there is no GPA requirement for writing a senior thesis, an application is required. For more information, contact the department office. All majors may apply.

To qualify to write a senior thesis, students must:

- Complete Pol Sci 363 Quantitative Political Methodology or its equivalent by the fall of their junior year (all majors are strongly urged to take this in the fall of their sophomore year);
- Complete Pol Sci 495 Research Design and Methods in the spring semester of their junior year;
- Complete a second methods course appropriate for their thesis by the start of their senior year. (A complete list of courses can be found on our website (<http://polisci.wustl.edu>); Pol Sci 495 does not count toward this requirement.);
- Complete a subfield concentration (detailed in Concentrations section above) by the end of the fall of their senior year in the subfield appropriate for their senior thesis. At least two-thirds of the concentration must be completed by the end of their junior year;
- Apply during their junior year for admission into the program;
- Students planning to study abroad and write a senior thesis should take Pol Sci 363 Quantitative Political Methodology in the fall of their sophomore year and should go abroad during the fall of their junior year. Students who wish to study abroad in the spring of their junior year and write a thesis senior year must meet with the director of undergraduate study before the start of their junior year.

**Senior Honors:** To graduate with Latin Honors, students must successfully complete a senior thesis and have a minimum grade point average of 3.65, as specified by the College of Arts & Sciences.

## The Major in Environmental Policy

**Required units: 40**

Students who major in environmental policy will be required to complete 40 graded units (13 classes) distributed as follows:

- 16 units from required foundation courses

- 9 units from research methods requirements
- 9 units from the list of upper-division courses in political science
- 3 units from a social science breadth requirement
- 3 units from a substantive distribution requirement

At least 24 of those total units must be at the 300-400 level.

We also strongly recommend that students complete a capstone experience. Possible options include a senior honors thesis, the environmental law clinic, or an appropriate internship. We intend to develop more capstone possibilities in the future.

### Required courses:

**All students take the following five foundation courses (16 units):**

| Code         | Title                                     | Units |
|--------------|---|-------|
| Anthro 361   | Culture and Environment                   | 3     |
| Biol 2950    | Introduction to Environmental Biology     | 3     |
| EPSc 201     | Earth and the Environment                 | 4     |
| Pol Sci 2010 | Introduction to Environmental Policy      | 3     |
| Pol Sci 331  | Topics in Politics (Theories of Justice*) | 3     |
| Total Units  |   | 16    |

\*Note: Students also may substitute Pol Sci 4070 Global Justice or EnSt 335F Introduction to Environmental Ethics for Pol Sci 331: Theories of Justice.

### Research Methods Requirements:

Students take three methods courses (9 units)

| Code         | Title   | Units |
|--------------|---|-------|
| Econ 1011    | Introduction to Microeconomics                          | 3     |
| Pol Sci 363  | Quantitative Political Methodology **                   | 3     |
| Pol Sci 4043 | Public Policy Analysis, Assessment and Practical Wisdom | 3     |
| Total Units  |   | 9     |

\*\*Note: Students may opt out of this class if they complete one of the approved courses below; however, students who chose this option **must take another upper-level class to complete the 40 required units.**

Political Science: Quantitative Political Methodology (Pol Sci 363)

University College: U25 Introduction to Quantitative Methods (PolSci 323)

Business School: Managerial Statistics II (QBA 121)

Math: Elementary to Intermediate Statistics and Data Analysis (Math 3200)

Engineering: Probability and Statistics for Engineering (ESE 326)

### Upper-Division Requirements:

Students need 15 additional units of upper-level course work (300-400 level) distributed in the following way:

(1) 9 units (three courses) must come from the following political science courses\*\*\*:

| Code         | Title  | Units |
|--------------|--|-------|
| Pol Sci 3070 | Politics and Policymaking in the American States                             | 3     |
| Pol Sci 3171 | Topics in Politics (The Politics of Environmental Regulation)                | 3     |
| Pol Sci 3211 | Public Opinion and American Democracy  | 3     |
| Pol Sci 3240 | The Political Economy of Public Goods  | 3     |
| Pol Sci 332B | Environmental and Energy Issues  | 3     |
| Pol Sci 333  | Topics in Politics (International Environmental Politics)                    | 3     |
| Pol Sci 340  | Topics: Environmental Justice (Environmental Justice)                        | 3     |
| Pol Sci 345  | Legislative Process  | 3     |
| Pol Sci 349  | Politics in Bureaucracies  | 3     |
| Pol Sci 3752 | Topics in American Politics: Globalization, Urbanization and the Environment | 3     |
| Pol Sci 4013 | Negotiating Major Legislation in Congress                                    | 3     |
| Pol Sci 4050 | Political Representation   | 3     |
| Pol Sci 4070 | Global Justice   | 3     |
| Pol Sci 4731 | Global Political Economy   | 3     |
| Pol Sci 4792 | Globalization and National Politics  | 3     |
| Pol Sci 480  | Topics in International Politics: Growth and Development                     | 3     |
| Pol Sci 489  | Politics of Regulation   | 3     |

\*\*\*Note: Students who have not taken Pol Sci 363 will need to complete four courses.

(2) Social Science breadth requirement. Students take at least one offering (3 units) from the following:

| Code        | Title  | Units |
|-------------|--|-------|
| Anthro 3322 | Brave New Crops  | 3     |
| Anthro 3391 | Economies as Cultural Systems  | 3     |
| Anthro 3472 | Global Energy and the American Dream   | 3     |
| Anthro 3612 | Population and Society   | 3     |
| Anthro 3616 | From Deep Ecology to Indigenous Ecological Identity: Environmental Social Movements and Anthropology | 3     |
| Anthro 399B | Rich Nations, Poor Nations   | 3     |
| Anthro 406  | Primate Ecology and Social Structure   | 3     |

|             |  |   |
|-------------|--|---|
| Anthro 4244 | Oil Wars: America & the Cultural Politics of Global Energy | 3 |
| Anthro 4253 | Researching Fertility, Mortality and Migration             | 3 |
| Anthro 4282 | Political Ecology  | 3 |
| ARCH 336A   | Sustainability   | 3 |
| ARCH 336B   | Designing Sustainable Environments                         | 3 |
| ARCH 336D   | Biomimicry: A Biokinetic Approach to Sustain(Able) Design  | 3 |
| ARCH 336E   | Biomimicry, Teleology and Organic Architecture             | 3 |
| ARCH 654D   | Metropolitan Landscapes                                    | 3 |
| ARCH 656    | Metropolitan Urbanism                                      | 3 |
| Econ 1021   | Introduction to Macroeconomics                             | 3 |
| Econ 403    | Economics of Law   | 3 |
| Econ 451    | Environmental Policy                                       | 3 |
| EnSt 3068   | The Human History of Climate Change                        | 3 |
| EnSt 310    | Ecological Economics                                       | 3 |
| EnSt 380    | Applications in GIS  | 3 |

or the following courses in University College:

|         |   |   |
|---------|---|---|
| IA 5421 | International Environmental Issues  | 3 |
| IA 5403 | Global Collective Action: Why Do Nations Cooperate? Climate Change and Other Cases. | 3 |

(3) Substantive Distribution Requirement

The environmental policy major provides students with the social scientific tools to address policy problems related to the environment. To supplement this social scientific knowledge, it is also important that students have substantive knowledge of the natural science of the environment itself and/or practical experience in the policy area. All students are therefore required to complete one substantive area course (3 units) with a passing grade.

| Code     | Title  | Units |
|----------|--|-------|
| Biol 381 | Introduction to Ecology                                      | 3     |
| EPSc 323 | Biogeochemistry  | 3     |
| EECE 210 | Introduction to Environmental Engineering                    | 3     |
| EECE 311 | Green Engineering  | 3     |

## Minors

### The Minor in Political Science

**Units required:** 15

**Required courses:** Students must take a minimum of 15 graded units of course work with a C or better, including at least 9 advanced units.

### Additional Information

No more than 3 units may be counted from among the following: Pol Sci 412 Directed Readings, Pol Sci 413 Directed Research, Pol Sci 419 Teaching Practicum in Political Science, summer school, University College courses or credits from another institution including study abroad.

## Courses

Visit online course listings to view semester offerings for L32 Pol Sci (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L32&crslvl=1:4>).

#### L32 Pol Sci 101B American Politics

This course provides an overview of the politics of the American system of government. Among the topics covered are the historical developments of American politics, federalism, political participation (voting, interest groups, parties), institutions (congress, the courts, the president and public opinion). A theme underlying our examination of these and other topics is the fact that political actors are purposive in their strategic pursuit of various objectives. We explore the many ways in which this aspect of political behavior impacts institutions and the interactions between political actors throughout the American political system.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA UColl: PSA

#### L32 Pol Sci 102B Introduction to Comparative Politics

One of the primary goals of a course in comparative politics is to familiarize students with a broad array of political systems. The approach taken in this course can best be characterized as the active acquisition and use of a set of tools for looking at the political world. In other words, instead of putting emphasis on what textbook writers think political scientists know, in this course the emphasis is on "how we know what we know" and on building knowledge. This approach equips students with a set of tools to use long after the course is over. These comparative tools are focused on historical, recent and current events, and students are provided the opportunity to delve more deeply into a study of the parts of the world they find most interesting.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: BA, IS UColl: PSC

#### L32 Pol Sci 103B International Politics

Globalization, the accelerating rate of interaction between people of different countries, creates a qualitative shift in the relationship between nation-states and national economies. Conflict and war is one form of international interaction. Movement of capital, goods, services, production, information, disease, environmental degradation, and people across national boundaries are other forms of international interactions. This course introduces the study of global political-economic relations. We focus upon building a toolkit that will help us understand the micro-foundations of the globalization of material and social relations.

#### L32 Pol Sci 1041 Freshman Seminar: Introduction to Political Theory I

Why is democracy a good form of government? What if a benevolent dictator arose who wrote and enforced laws that were just and equitable? What if she honored the sanctity of human life and its flourishing, guaranteed a full range of liberties to her citizens — including political ones, such as the right of free speech and organization (but not including the right to rule)? Given the problems of most living democracies, why wouldn't this be a better regime than a democratic one? And are people really capable of governing themselves anyway? Why should we trust them so? In short, what's so special about "democracy" and its corresponding idol, "public opinion," that people bow to them as hallowed virtues of a good society? In this class we provide a framework in which these and other central questions of political theory have been and can be addressed. This course is designed to introduce students to the main theoretical issues of Western political theory, including but not limited to the following concepts: justice, legitimacy, equality, democracy, liberty, sovereignty and the role of history in the political and social world. In short, the questions are meant to explore the underlying assumptions and themes of contemporary politics and political science research today. The course is designed around the careful reading of primary text materials and engagement with contemporary problems of politics available on the front pages of any daily newspaper. Although designed as a two-semester class, students may enroll in either one or both. In this first semester, we lay out the fundamental themes of political theory in Plato's *Republic* and Aristotle's *Politics* asking, among other things, what justice is and what place democracy has among other forms of government. Passing briefly onto Augustine and Aquinas' struggles with religion and civil society, we emerge in modernity with Machiavelli's *Prince* and question whether the "good" and the "political" are or ought to be different aims. We conclude the semester with the social contract theory of Hobbes and Locke in which political legitimacy is based on the terms familiar to citizens of modernity: the right to rule is somehow related to a citizen's consent to be governed. In the spring semester, we turn to the struggle that modernity and the Enlightenment raised for issues of politics, including that of history, nature, institution building and economics, guided by the texts of Rousseau, Hamilton and Madison, Tocqueville, Mill, Marx, Nietzsche, and Weber.

Credit 3 units. A&S: SS EN: S

#### L32 Pol Sci 2001 The Great Economists

Examination of the great economic thinkers, the problems they sought to solve, the historically conditioned assumptions

they bring to their work, and the moral issues they raise. The class reads from the works of Adam Smith, Ricardo, Malthus, Marx, Veblen, Keynes, Schumpeter, Galbraith and others as well as commentary from Heilbroner. These readings are paired with selected texts on the social and moral issues of their times. Open only to participants in Text and Tradition.

---

**L32 Pol Sci 2010 Introduction to Environmental Policy**

This course provides an introduction to and overview of environmental policy. Subjects covered include the policy process, the behavior of interest groups and political parties, and the actions of policymakers like Congress and the President. We'll also examine issues such as pollution control, climate change, and biodiversity.

---

**L32 Pol Sci 226 The Immigrant Experience**

This course explores the history and politics of immigrant groups in the 19th- and 20th-century United States. Topics include legislation, patterns of migration, comparisons of different waves of immigration, and changing social attitudes. This course is a core requirement for the ethnic studies concentration in American Culture Studies.

---

**L32 Pol Sci 227 Just Do It! Skills That Turn Passion Into Policy**

The course focuses on skills related to the democratic expression of political rights and responsibilities. The course balances background knowledge of the issues with application. Students explore how to use coalition building and advocacy skills to relate to personal issues to public issues. Students research a current Missouri bill, create a strategic plan for its passage or failure, and prepare to give testimony on such bill in a mock House of Representatives committee hearing. Students also learn about ethical dilemmas in policy and politics and create a plan for turning their passions into policy.

---

**L32 Pol Sci 240 Jewish Political Thought**

This course uses the concepts of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rule (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish community's self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single "Jewish political thought" but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these

questions through a range of materials that include both primary and secondary literature.

---

**L32 Pol Sci 245A Fair Division in Theory and Practice**

The concept of fair division is a central tenet in the design of procedures aimed at generating equitable social outcomes and mitigating conflict. At the national level, such procedures include systems of apportionment, voting, and legislative districting, to name a few. On a smaller scale, these procedures could govern how assets are divided in a divorce, or how to divide a cake. While "fairness" in theory is indisputably a good thing, in practice the courts, politicians, and even mathematicians have grappled with the question of what it means for a procedure to be fair. This course examines algorithms and applications of procedures that aim to divide or allocate resources fairly. Some of these procedures were developed by mathematicians looking for formulas that satisfy mathematical properties such as envy-freeness and equitability. All of the procedures we consider are examined in terms of the fairness goals they aspire to achieve, the mechanisms they employ to achieve those goals, and the shortcomings of the procedures.

---

**L32 Pol Sci 2500 Zionism**

Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.  
Same as L57 RelPol 250

---

**L32 Pol Sci 258 Law, Politics and Society**

This course is an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system (in contrast to legal mythology), as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law. Not open to students who have previously taken Pol Sci 358.  
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L32 Pol Sci 260 Game Theory in Science and Culture**

Introduces the major intellectual insights of game theory in a nontechnical fashion, and examines the influence game theory has had on geopolitics, social philosophy, psychology, art and

the humanities. In addition to covering the basic machinery of the theory, the class participates in numerous illustrative classroom games; examines game theory in film, literature and literary criticism; sees how game theory has contributed to social theory; and learns about the background of game theory and its history and perception as a hoped-for tool in the Cold War. Grades based on problems, short essays, two short essay exams and participation.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

### L32 Pol Sci 3010 Gender and Politics

This course surveys central topics in the study of gender and politics, covering such issues as women's participation in political parties and social movements, women as voters and candidates in political elections, feminism and the state, and gender and international politics. It draws on examples from various world regions and time periods to analyze similarities and differences across cases around the globe.

Credit 3 units. A&S: SS EN: S

---

### L32 Pol Sci 3011 Computational Modeling in the Social Sciences

This course introduces students to the theory and practice of computational modeling in social science. Computational modeling allows us to explore topics — including complexity, emergence and dynamics — that are difficult to study using traditional analytic methods. This course covers the theoretical foundations behind computational modeling in addition to offering an introduction to the design and programming of such models.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

### L32 Pol Sci 3012 Advanced Modeling in the Social Sciences

This course explores advanced topics and issues in the building and validation of models in the social sciences. The principal component of the course is the design and development of an individual research project by each student. The conclusion of the course involves a public research symposium with a poster session in which all students present their models and findings to the broader campus community. Prerequisite: Pol Sci 3011 Computational Modeling in Social Science.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

### L32 Pol Sci 3024 International Institutions

This course surveys in historically and theoretically informed fashion the role of various international institutions in international relations. It addresses the fundamental question of the contribution of international institutions to world order. The course first traces the historical evolution of international organizations before turning to international institutions since World War II. It then focuses on the following: the most important regional international organization, the European Union; the most important international organizations dealing with the issues of peace and security, the United Nations and NATO; and the major international economic institutions, the WTO, the IMF and the World Bank. Prerequisite: Pol Sci 103B Introduction to International Politics.

---

### L32 Pol Sci 3031 Race and Ethnicity in American Politics

This seminar discusses the continuing importance of race and ethnicity in American politics and the politics of racial minority

groups in America. It examines the disadvantage minorities have in the American political structure, including problems with political participation. It examines how the structure and functions of the branches of government and its bureaucracy affect the aspirations of minorities. The role of pressure groups on political structure is discussed. Additional discussion focuses on urban politics and tensions.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

### L32 Pol Sci 3044 Foundations of American Democracy

Since its founding, the United States of America has been strongly identified with principles of democratic rule. This course provides an introduction to some philosophical and historical foundations of American democracy. Over the course of the semester, we ask what democracy means and what it requires. We examine thinking about political rights and liberty at the American founding. We ask what democratic inclusion and political equality entail. We ask what democracy means, and what it should mean, in the American context, and whether and to what extent American institutions embody democratic ideals.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

### L32 Pol Sci 3055 The Comparative Study of Legislative Institutions

This course focuses on understanding the variation in legislative institutions around the world.

Credit 3 units. A&S: SS A&S IQ: SSC BU: IS EN: S

---

### L32 Pol Sci 306 American Political Thought

This is a course on American political and constitutional thought. The main theme is the problem of freedom: how it should be understood, and the constitutional and other conditions which sustain it. We also touch on questions of leadership, class and foreign policy as they relate to the main theme. We begin with the political thought of the American colonists, then turn to the Federalist/Anti-Federalist debate on the constitution, and trace these lines of thinking to a point just before the outbreak of the Civil War. Apart from writings of prominent American political thinkers such as Madison, Jefferson, Adams, Hamilton and Calhoun, we also consider the work of the foreign observer of American life and honorary American, Alexis de Tocqueville.

Credit 3 units.

---

### L32 Pol Sci 3070 Politics and Policymaking in the American States

The American federal system is often overlooked in discussions about politics in the United States; however, state governments unquestionably touch the lives of Americans every day. As such, an education in American politics is not complete without serious examination of state governments and their political institutions. This course illuminates the importance of the American states in U.S. politics and policymaking by critically examining topics such as intergovernmental relations; the historical evolution of American federalism; the organization and processes associated with state legislative, executive and judicial branches; state elections; political parties; interest groups; and specific state policy areas such as budgeting, welfare, education and the environment. Prerequisite: Pol Sci 101B.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

**L32 Pol Sci 3073 Global War on Terrorism**

This course presents an historical assessment of the Global War on Terrorism (GWOT) from the perspective of its major participants: militant Sunni Islamist jihadists, especially the Al-Qaeda network, and the nation-states that oppose them, particularly the United States and its allies. The course then concludes by analyzing the current state and future of Islamist jihad and the GWOT.

---

**L32 Pol Sci 3090 Civil War and Peace**

This course examines the causes and consequences of intrastate conflict as well as the potential solutions to it, drawing on examples from countries throughout the world, including Bosnia-Herzegovina, India, Iraq, Russia, Rwanda, Spain, etc. We consider many potential causes of intrastate violence, including ethnic and religious identities, economic and security concerns, elite manipulation, and international diffusion. In order to understand the challenges countries face recovering from violence, we subsequently examine different ways in which conflicts are conducted, as well as their consequences, including economic underdevelopment, rape, child soldiers and disease. Finally, using what we have learned about the causes and consequences of conflict, we analyze the utility of different tools for managing intrastate conflict, including, but not limited to, minority representation, consociationalism, decentralization and partition.

---

**L32 Pol Sci 3115 Indian Barbie, Asian Tigers and IT Dreams: Politics of Globalization and Development in South Asia**

This course explores how South Asia is at the heart of current debates about globalization, development, empire, gender, sexuality and ethnic identity. We raise questions such as: What has led to sex trafficking in Nepal? Can information technology solve India's social problems and unemployment? What is biopiracy and how are South Asian activists challenging the global corporatization of world food and water supplies? Readings, films and discussions take us to countries such as Bangladesh, Nepal, Pakistan, Sri Lanka and India.

BA EN: S

---

**L32 Pol Sci 320A Religious Freedom in America**

This interdisciplinary course, co-taught by a law school professor and an American historian, concerns the intersection of religion, liberty and law in American culture. It introduces students to the major texts and historical issues concerning religious liberty, using legal history and case law, intellectual and social history, and political philosophy. It will address issues of significant contemporary debate — from the role of religious groups on college campuses to bakers and gay weddings — along with the deep historical background, from English settlement of North America and the making of the Constitution, through the Civil War, to the Cold War and the recent political developments.

Same as I50 InterD 320

Credit 3 units. A&S IQ: HUM, SD EN: H

---

**L32 Pol Sci 321 Comparative European Politics**

This course is designed to provide students with an introduction to politics in Europe, with a focus on national politics. The course has two main goals. One goal is that students acquire a general understanding of the institutions of democratic governance and how they affect how voters' preferences are translated into government policy. As most European states are variations of parliamentary democracies, we pay particular attention to the connection between voters and policymakers through parliamentary institutions. The second goal is that students achieve a basic understanding of specific political systems in Europe and appreciate current political issues particularly those related to democratic transitions in Eastern Europe. Prerequisites: Pol Sci 102B Intro to Comparative Politics; Pol Sci 363 Quantitative Political Methodology (can be taken concurrently).

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU:  
BA, IS

---

**L32 Pol Sci 3211 Public Opinion and American Democracy**

This course is about the salience of public opinion and its influence on American Politics. Topics covered include many of the theories developed to explain how public opinion is formed, if and why it changes, and the relationship between public opinion and the political behavior of citizens and elites. Therefore, the course describes and analyzes many of the factors that influence the formation, structure and variation in public opinion: information processing, education, core values, racial attitudes, political orientation (ideology and party identification), political elites, social groups, the media and religion. Additional topics include presidential approval, congressional approval and the relationship between public opinion and public policy. The course also trains students in several concepts of statistical analysis (assuming no prior knowledge) so that students can use

these tools as part of their own research projects. Prerequisite: previous course work in American politics or communications. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

---

**L32 Pol Sci 3240 The Political Economy of Public Goods**

This course explores the nature of public goods by investigating the economic and political rationales for providing them. We explore the endogenous creation of public goods, such as the formation of mutually agreed upon constitutions to protect property rights and the exogenous imposition of public goods, such as the regulatory framework that provides clean air.

Through the use of efficiency analysis, we explore the costs and benefits to alternative institutional arrangements, such as private property or market exchanges, to the government or voluntary provision of public goods.

Credit 3 units.

---

**L32 Pol Sci 326B Latin American Politics**

This course is an introduction to the politics in Latin America, focusing on the trend toward the establishment of democracy. We examine the impact of political culture, economic development, and the legacy of authoritarian regimes on contemporary politics. The course also reviews many of the most pressing challenges confronting Latin American governments: the role of the military in politics; the reform of political institutions; threats from radical guerrillas and drug traffickers; debt and economic restructuring; and relations with the United States. Country studies focus on Argentina, Brazil, Chile, Peru, Mexico and Nicaragua. Prerequisite: 100-level introductory course in political science or its equivalent in history or international and area studies.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: IS

---

**L32 Pol Sci 327B African Politics**

A survey of politics in the states of sub-Saharan Africa. Major themes include the givens of African politics; the colonial inheritance; ethnicity, race and politics; religion and politics; forms and styles of rule and governance; pathologies and nonnormal politics; and the international relation of African states. Requirements include two short papers and a written briefing on an assigned country.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: IS

---

**L32 Pol Sci 3292 Topics in Politics: Modern South Asian Politics**

This course focuses on the recent political history and development of South Asia. It begins with a review of the British colonial period and the Independence movement. The remainder of the course examines different political issues in India, Pakistan, Bangladesh and Sri Lanka. Topics include political mobilization; land reform; law and politics; social movements; religious and caste politics; the rise of religious nationalism; and political control of the economy.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: IS

---

**L32 Pol Sci 3296 Race and Ethnicity in the United States**

This course is designed to explore relations within and between the racial and ethnic groups of the United States. We examine the social, economic, and political similarities and differences of African Americans, Asian Americans, Latinos, and New Immigrants that distinguish their American experience. Of particular interest are their respective experiences in relation to one another and the majority population for understanding

the origins of conflict and unanimity within and between the different groups. We pay specific attention to events in Ferguson, Missouri, and the tensions between political leaders, policing and minorities more generally, the disproportionate levels of poverty experienced by African Americans and Mexican Americans, and the vilifying of certain minorities by the majority population.

Same as L98 AMCS 3296

Credit 3 units. A&S IQ: HUM, SD BU: BA EN: H

---

**L32 Pol Sci 3302 Politics and Policies of Immigration in the United States**

This class examines the history and politics of American immigration from colonial times to the present. It begins with an overview of the colonial period, then discusses the immigration waves of the 19th and early 20th centuries, and concludes with an examination of current topics and debates about immigration. Issues include racial, ethnic and class relations among groups; changes in immigration policies over time; comparative group experiences; transnational issues in immigration; and the impact of immigration on other American social and political processes and events. This class is a writing-intensive and modified version of Pol Sci 226/AMCS 202. Students who have taken that course should *not* take this course. Because this is a writing-intensive class, we also spend time studying research paper design and writing.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

---

**L32 Pol Sci 331 Topics in Politics**

---

**L32 Pol Sci 331B Gender and American Politics**

This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category and the relationship between gender, race, ethnicity and power. Second, we study gender-based social movements, including the suffrage and women's rights movements, women's participation in the Civil Rights Movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement. Third, we examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights.

Credit 3 units. A&S: SS, SD BU: BA, ETH

---

**L32 Pol Sci 3321 Topics in Politics: Constitutionalism and Democracy**

An introductory analysis of a range of issues related to constitutions and democratic government. The main focus is on such theoretical questions as: Why do societies produce constitutions? Why do subsequent generations abide by them? What is the relationship between constitutional principles and democratic decision making? Who benefits from constitutional constraints?

Credit 3 units. A&S: SS BU: BA

---

**L32 Pol Sci 3323 The Democracy Lab**

The U.S. states are often called laboratories of democracy because the lessons learned from an "experiment" in one state or city can inform other governments. This course embraces the idea that we can act as scientists in the laboratories of local government. The course teaches students about research design. We also help them design their own experiments and then give students the opportunity to work with local officials to help design, conduct and analyze an experiment relating to governance.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

**L32 Pol Sci 3325 Topics in Politics: Constitutional Politics in the United States**

The principal purpose of this course is to introduce students to the politics of constitutional interpretation. We first discuss the origins of the Constitution; the structure, operation and work of courts; and judicial decision making. Afterwards, we examine various areas of the law relating to institutional powers and constraints (e.g., federalism, presidential powers, Congressional authority). In so doing, we develop an understanding for the legal doctrine in each area of the law and also examine explanations for the legal change we observe.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

---

**L32 Pol Sci 332B Environmental and Energy Issues**

This course considers the major issues in these increasingly important areas of public policy. We will discuss the importance of political processes and actors on such phenomenon as pollution, global warming and wilderness protection. This course emphasizes the American experience but also considers international implications. Two lectures and one section meeting each week.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

**L32 Pol Sci 3363 Interchangeables, Influentials, and Essentials**

Do you want to know how to obtain power? How to influence the powerful? Or even how to unseat those in power? In this course, we focus on how leaders, of all types, get and keep their jobs. Regardless of setting — democratic or dictatorial (or corporate, for that matter) — it is all about those whom the leader finds to be interchangeable, those the leader finds influential, and those who are essential. Students learn the "Rules to Rule By" and why, when leaders follow them, they often behave badly causing those they govern to suffer.

---

**L32 Pol Sci 3400 Social and Political Philosophy**

Study of certain fundamental issues concerning government, society and culture. For example: What are the nature and limits of legitimate political authority? Are ordinary human beings capable of governing themselves justly? Do citizens have a duty to obey the state? If so, to what extent, if at all, is that duty grounded in consent or contract? Should the state limit or regulate the personal relationships of citizens, such as marriage, family and sexuality? How should social institutions rectify a history of political or social injustice against oppressed groups? Readings from historical and contemporary sources. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 340F

**L32 Pol Sci 3403 The Politics of Congressional Elections**

This course introduces students to the study of American legislative elections. The first part of the course focuses on congressional election campaigns, in which we discuss who runs for office, the incumbency advantage, campaign finance, congressional primaries, electoral competition, voter turnout, and vote choice. The second part of the course examines how electoral factors affect legislative politics, focusing on questions involving representation, accountability and lawmaking. Prerequisite: L32 Pol Sci 101B Intro to American Politics.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

**L32 Pol Sci 342 The American Presidency**

Consideration of part played by the president in American politics and public policy. The powers of the president; the staffing and organization of the executive office; the relations of the president with Congress, the bureaucracy and other participants in American politics; presidential elections. Recommended: Pol Sci 101B.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

---

**L32 Pol Sci 3422 Americans and Their Presidents**

How have Americans understood what it means to be President of the United States? This seminar uses that question as a point of departure for a multidisciplinary cultural approach to the presidency in the United States, examining the shifting roles of

the chief executive from George Washington through Barack Obama. In addition to a consideration of the President's political and policymaking roles, this course examines how the lived experiences of presidents have informed the ways Americans have conceived of public and private life within a broader political culture. In the process, this course uses the presidency as a means to explore topics ranging from electioneering to gender, foreign policy to popular media. Readings are drawn from a broad range of fields.

### L32 Pol Sci 3431 Constitutional Law

Introduction to constitutional law and practice in the United States. Emphasis on the role of the U.S. Supreme Court as an interpreter of the Constitution.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU:

BA

---

### L32 Pol Sci 344 Courts and Civil Liberties

This course focuses on constitutional law principles in the Bill of Rights, and examines how Supreme Court decisions influence these principles in everyday life. We explore how the courts, and particularly the Supreme Court, have interpreted these rights in light of changing times and emerging issues. Topics include the First Amendment; free exercise of religion and the establishment clause; freedom of speech, assembly and association; freedom of the press; the Fourth Amendment and the rights of those accused and convicted of crimes; the right to privacy, including reproductive freedom and the right to die; equal protection and civil rights, including race, gender, sexual orientation; immigrants' rights and voting rights; and civil liberties after September 11. Recommended for the Liberal Arts and Business (LAB) Certificate.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU:

BA, ETH, HUM

---

### L32 Pol Sci 3441 Defendant's Rights

This course explores the operations of the American criminal justice system. Substantial emphasis on the constitutional rights accorded to the criminally accused. Readings consist primarily, but not exclusively, of Supreme Court cases.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA, ETH

---

### L32 Pol Sci 3462 The Politics of Privacy in the Digital Age

This course explores the changing nature of privacy in contemporary society.

### L32 Pol Sci 349 Politics in Bureaucracies

Focuses on politics and political conflicts involving bureaucratic organizations, primarily but not exclusively those of the federal government. Attention given to the characteristics of bureaucratic organizations and their members; their relations with one another as well as with other participants in policymaking also considered. Major activities within bureaucracies — planning, program development, organizing, budgeting and service delivery — discussed with a view to clarifying their political implications and consequences; problems associated with controlling and changing bureaucracies.

### L32 Pol Sci 3507 Legal Conflict in Modern American Society

Thousands of lawsuits are filed daily in the state and federal courts of the United States. The disputes underlying those lawsuits are as messy and complex as the human, commercial, cultural and political dynamics that trigger them, and the legal processes for resolving those disputes are expensive, time-consuming and, for most citizens, seemingly impenetrable. At the same time, law and legal conflict permeate public discourse in the United States to a degree that is unique in the world, even among the community of long-established democracies. The overarching objective of the course is to prepare our undergraduate students to participate constructively in that discourse by providing them with a conceptual framework for understanding both the conduct and resolution of legal conflict by American legal institutions, and the evolution of — and values underlying — the substantive law American courts apply to those conflicts. This is, at core, a course in the kind of legal or litigation "literacy" that should be expected of the graduates of first-tier American universities. Some of the legal controversies that are used to help develop that "literacy" include those surrounding the permissible use of lethal force in self-defense, the constitutionality of affirmative action in university admissions, contracts that are unconscionably one-sided, sexual harassment in the workplace, the duty of landlords to prevent criminal assaults on their tenants, groundwater pollution alleged to cause pediatric cancers, and warrantless searches of cellphone locator data by police.

### L32 Pol Sci 3551 The Welfare State and Social Policy in America

How can we understand the recent debate about fundamental health care reform? Should social security be partially or wholly privatized? Was the 1996 welfare reform a success? Contemporary political questions frequently focus on the American welfare state and the social policies that compose it. The first half of this course describes the American welfare state broadly construed, places it in a comparative context, and elucidates major political science explanations for the size and scope of American social policy. We touch on several areas of social policy while constructing the generalized lenses through which particular political outcomes can be understood. The second part of the course then focuses on three major aspects of the American welfare state: health care, old age pensions and policies related to work, poverty and inequality.

---

### L32 Pol Sci 3552 Political Economy of Democracy

In the past few years, a number of important books have appeared that combine elements of economics reasoning and political science, in an effort to understand the wide variation in economic development in the world. This course deals with

the logic apparatus underpinning these books. In addition, the course introduces the student to the theoretical apparatus that can be used to examine democratic institutions in the developed world, and the success or otherwise of moves to democratization in the less-developed world.

### L32 Pol Sci 3575 US Foreign Policy: Theory and Practice

In this class we focus on the procedures and institutions that shape U.S. foreign policy decisions. This is neither a course on international relations theory nor a history of U.S. foreign policy. Rather, this course examines the domestic politics surrounding U.S. foreign policy decisions. How do public opinion, electoral politics, and interest groups shape foreign policy? Which branch controls foreign policy — the president, Congress, the courts? Or is it ultimately the foreign affairs bureaucracy that pulls the strings? We examine these topics through reading and writing assignments, class discussion, and simulations to promote deeper understanding and build practical skills.

---

### L32 Pol Sci 358 Law, Politics and Society

This course is an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system (in contrast to legal mythology), as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce students to legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

### L32 Pol Sci 359 The Mathematics of Elections

Voting procedures provide the most common means of aggregating the preferences of individuals into societal outcomes. These procedures play an integral role in our daily lives, from having a show of hands to decide which type of pizza to order for a club meeting, to electing a president. This course examines the effects that different voting procedures have on how groups make decisions. We evaluate electoral systems mathematically, by considering the various properties that procedures may or may not satisfy. A classic example is Arrow's Impossibility Theorem, which tells us that every electoral system must fail to satisfy one or more criteria of fairness or sensibility. In addition to Arrow's claim, we examine other legislative paradoxes and learn why the choice of electoral procedure is critical to our understanding of how "good" and "bad" decisions can be made. We also discuss the comparative properties of electoral systems in operation, such as fairness, proportionality, representativeness and legitimacy.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

### L32 Pol Sci 3610 Legislative Politics

This course is an introduction to the politics of the U.S. Congress and the federal lawmaking process. We focus on the behavior of individual legislators and the role they play in crafting federal legislation in policy areas such as health care, civil rights and the environment. In general we examine questions such as: Why do legislators behave as they do? Whose interests are being represented?

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

### L32 Pol Sci 362 Politics and the Theory of Games

This course is intended to cover through analytical discussion and illustrations the basic concepts and major achievements of Game Theory in different subfields of research in the social sciences today. We discuss examples of the usefulness of cooperative and noncooperative game theory to the study of human behavior in general and political science and political economy in particular.

Credit 3 units. A&S: SS A&S IQ: SSC, AN Art: SSC BU: BA

---

### L32 Pol Sci 363 Quantitative Political Methodology

This is an introduction to research methodology and quantitative analysis for social scientists. Students are introduced to the logic of social scientific inquiry, and to the basic statistical tools used to study politics. Students learn and apply the following to answer substantive questions: measurement, descriptive analysis, correlation, graphical analysis, hypothesis testing, confidence intervals, analysis of variance and regression analysis. Major components of the course include learning how to collect, manage and analyze data using computer software, and how to effectively communicate to others results from statistical analyses. Students work collaboratively on research projects in which they pose their own questions, design a study, collect and analyze the data, and present their findings in a research paper.

Credit 3 units. A&S: SS, QA A&S IQ: SSC, AN EN: S

---

### L32 Pol Sci 3680 The Cold War, 1945-1991

This course presents an assessment of the Cold War from the perspective of its major participants. Topics include: the origins of the Cold War in Europe and Asia; the Korean War; the Stalin regime; McCarthyism and the Red Scare; the nuclear arms race; the conflict over Berlin; Cold War film and literature; superpower rivalry in Guatemala, Cuba, Vietnam, Africa, and the Middle East; the rise and fall of detente; the Reagan years and the impact of Gorbachev; the East European Revolutions; and the end of the Cold War.

### L32 Pol Sci 3690 Politics of International Trade

In this course we study the relationship between international trade and domestic politics. We cover the basic models of international trade, the distributional consequences of international trade, the relationship between trade and economic development, an analysis of the trade protectionism (causes and consequences) and an analysis of international organizations related to international trade (special focus on the World Trade Organization). Prerequisite: Pol Sci 103B.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

**L32 Pol Sci 373 International Political Economy**

Analysis of the interplay of economics and politics in the world arena, focused primarily on the political basis of economic policies in both advanced and less-developed societies. Treating differing perspectives on the international economy, production, trade and finance, and international economic relations.

Prerequisite: junior standing or permission of instructor.

Credit 3 units. A&S: SS BU: IS

**L32 Pol Sci 374 Contemporary American Foreign Policy**

This course surveys post-war American foreign policy in historical perspective. It begins by evaluating the rise of the United States as a world power during the 20th century, its current position of primacy and its consequences in the post-Cold War period, and the distinctive traditions and institutions shaping the making of American foreign policy. It then examines the origins of the strategy of containment in the early Cold War period before considering how these debates animated the changing course of American foreign policy through the various phases of the Cold War conflict. The course concludes by analyzing American foreign policy since the end of the Cold War, up to and including debates about the consequences of September 11, 2001, for the United States' position of primacy, the Bush Doctrine and the American-led intervention in and subsequent occupation of Iraq.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: IS

**L32 Pol Sci 3782 Topics in Comparative Politics: Terrorism and Political Violence**

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

**L32 Pol Sci 381 The Politics of Electoral Systems**

It is impossible to appreciate the variety of electoral systems used to select legislative bodies without taking a comparative perspective. We begin this course with a brief consideration of what goals political founders and reformers are pursuing when they design an electoral system. Then we define the conceptual dimensions along which electoral rules can vary. With these basic concepts in hand, we then study specific national cases to assess the impact of electoral laws on party systems, legislator behavior, and interbranch relations. After completing a series of case studies, we return to a comparative perspective to discuss recent scholarly research in this field. This research conceives of electoral systems as incentive structures for voters, candidates, parties and politicians. To wrap up the course, we return to the question of what founders and reformers can hope to achieve when selecting electoral systems.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI BU: BA EN: S

**L32 Pol Sci 389 Power, Justice and the City**

This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban

political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by "privatism" in cities and their suburbs. In addition, the course devotes considerable attention to honing students' writing skills, through class assignments that stress rewriting and revising, and also through four in-class writing workshops devoted to formulating a thesis and making an argument; revising and rewriting; writing with style; and peer consultation.

Credit 3 units. A&S: SS, SD, WI A&S IQ: SSC, SD, WI Arch: SSC Art: SSC BU: BA EN: S

**L32 Pol Sci 389A Power, Justice and the City**

This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. **L32 Pol Sci 391A Democracy and Citizenship Seminar II**

What does it mean to be a citizen in a democratic society? What are the rights of citizenship and what are its responsibilities? How are the answers to these questions different for citizens of the United States of America, with its particular history, values and status in the world? Enrollment in this seminar is limited to freshmen who have been admitted to the Democracy and Citizenship Focus program.

Credit 1 unit.

**L32 Pol Sci 393 History of Political Thought III: Liberty, Democracy and Revolution**

How, if at all, should the political institutions of the modern state express and secure the liberty and equality of citizens? What is the political significance of private property? Is world history to be understood as progress toward one best form of government — capitalist democracy, perhaps, or communism? What forces drive history? We address these and other timeless political questions through close reading and rigorous analysis of classic texts in the history of Western political thought. Authors studied include Kant, Hegel, Marx, Tocqueville, John Stuart Mill and Nietzsche. Prerequisite: one previous course in political theory or political philosophy. The course is designed to be the third in a three-semester sequence on the history of political thought, and students are encouraged but not required to take the courses in chronological sequence.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

**L32 Pol Sci 4001 American Democracy and the Policymaking Process**

This course is part of the Semester in DC Program.

Credit 3 units. EN: S

**L32 Pol Sci 4010 Pluralism, Liberalism and Education**

How should liberal democratic states respond to religious and cultural pluralism? In what ways is pluralism different from mere disagreement, and what normative implications does pluralism have for public policy? How can liberal states justify

using their coercive power against a background of pluralism and in ways that systematically disadvantage certain religious and cultural groups in society? In particular, what is to be done when religious parents and the liberal state make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? Readings are taken from contemporary political philosophy. Prerequisites: Pol Sci 106, Pol Sci 107, Phil 340 or permission of instructor.  
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L32 Pol Sci 4013 Negotiating Major Legislation in Congress**

This course examines the outcomes of the legislative process in the United States. The first third of the course examines key concepts and major determinants of the negotiation process: majority rule instability, agenda control, political parties, the amendment process and the uncovered set. The rest of the course examines the negotiations that led to some of the most significant legislation in the past 100 years, from the Federal Reserve Act of 1913 through the Voting Rights Act of 1965 to the immigration bill of 2006. Along with other assignments, each student writes several drafts of a major research project on a major piece of legislation. Each research project examines the amendments offered, the strategic intentions of the amendments' sponsors, the agenda process and the role of party. Prerequisite: Pol Sci 101B.

**L32 Pol Sci 4024 The Meaning of National Security in the 21st Century**

The 21st century has brought with it new challenges to national security. Standard assumptions about nations and the borders that separate them have been brought into question, and one of the results of this is that the very meaning of national security is undergoing change. Instead of threats to security coming from outside national boundaries, they now often exist within and across borders. This course focuses on contemporary ideas about these issues. It includes a brief overview of current discussions of national security, but it is primarily devoted to examining the conceptual resources we have for making sense of national security in a new world.

Same as L97 IAS 402

---

**L32 Pol Sci 4025 Experiments in Politics**

This is a lab-style seminar in which we design, field and analyze an experimental study on political attitudes or political behavior. Our ultimate goal is to publish a scholarly article in a peer-reviewed journal in political science. Prerequisite: Pol Sci 363 Quantitative Political Methodology (can be taken concurrently).  
Credit 3 units.

---

**L32 Pol Sci 4030 Political Theory of Education**

This course explores issues of authority, legitimacy, citizenship, freedom and equality through contemporary readings in the political theory of education. What is to be done when parents, citizens and educational experts make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? How should public schools

aim to equip their students for the responsibilities of citizenship in a diverse liberal democratic state? What do the concepts of equality and equality of opportunity mean in the context of education, and (how) should governments pursue these values through education policy? We explore these issues through contemporary works of political theory as well as through considering a number of important U.S. court cases, including those dealing with the schooling of children from minority religious and cultural groups, affirmative action in university admissions, and school desegregation plans. Prerequisite: one previous course in political theory or political philosophy.  
Credit 3 units. A&S: SS A&S IQ: SSC BU: ETH EN: S

---

**L32 Pol Sci 4040 Capstone Seminar in International Politics: Public Policy Responses to Global Poverty**

This course is designed for senior political science majors with a background in international politics (refer to prerequisites). In this course we examine the theoretical and empirical literature on the causes of global poverty and evaluate public policy responses from the international community. Topics include: foreign aid (including micro finance), debt relief, trade reform, global health initiatives and private-public partnerships. Students are expected to have a strong theoretical background in the tools and concepts in political science and a strong interest in development topics. As a capstone class, the teaching style focuses on a student-centered classroom, where students run the class and help moderate discussions with outside speakers. Prerequisites: Pol Sci 103B, one advanced course in international politics, and a second advanced course in either international or comparative politics.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L32 Pol Sci 4043 Public Policy Analysis, Assessment and Practical Wisdom**

This course provides an introduction to the study, professional practice, ex-ante and ex-post assessment of public policy and the professional practice of public analysis. We rely heavily on David L. Weimer and Aidan R. Vining's text, *Policy Analysis: Concepts and Practice*. This course covers a series of critical concepts in the understanding of practicing, analyzing and assessing public policy.

---

**L32 Pol Sci 4050 Political Representation**

In this class we study the concept of representation. Historically, how has representation been conceived? Conceptually, what should count as political representation, and must it always be democratic? As a normative problem, what should representatives do? And how should institutions be designed to foster these normative ends? Readings provide a broad overview of the subject and address enduring questions, including problems of minority representation, voting rights and redistricting. Prerequisite: Pol Sci 106 or Pol Sci 107.

Credit 3 units. A&S: SS A&S IQ: SSC BU: ETH EN: S

---

**L32 Pol Sci 406 Topics in Political Thought**

Questions regarding the relationship between the state and civil society are among the most enduring in political science — and the most pressing in contemporary political practice.

This course examines an array of texts in political theory and recent empirical studies of the relationship between state and civil society. Among the questions we address are the following: What kinds of groups "count" as being part of civil society? What is the relationship between the state and civil society in a democracy? Can we meaningfully distinguish between political associations and economic associations? What is the relationship between voluntary associations and the market? What is the purpose of civil society? This course focuses on close readings of the assigned texts and consideration of contemporary understandings of the topic. It is aimed at students interested in comparative politics, political philosophy and political economy.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

### L32 Pol Sci 4070 Global Justice

This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course is of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

---

### L32 Pol Sci 412 Directed Readings

Credit variable, maximum 3 units. A&S: SS

---

### L32 Pol Sci 413 Directed Research

Research activities or project in political science done under the direction of an instructor in the department.

Credit variable, maximum 3 units. A&S: SS

---

### L32 Pol Sci 4131 Intolerance and Prejudice

Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315.

Same as L33 Psych 413

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

### L32 Pol Sci 414 Directed Fieldwork

This course is a fieldwork project carried out under the direction of an instructor in the department.

Credit variable, maximum 9 units. A&S: SS

---

### L32 Pol Sci 415 Senior Thesis Research

Intensive research, conducted under the supervision and guidance of a faculty sponsor of the thesis.

Credit variable, maximum 3 units. A&S: SS

---

### L32 Pol Sci 419 Teaching Practicum in Political Science

This course is an opportunity for undergraduates to assist in course instruction, tutoring and preparation of problems, readings and exam materials with permission and under supervision of instructor. This course counts toward up to 6 hours of credit in an advanced field for the political science major.

Credit variable, maximum 3 units. A&S: SS

---

### L32 Pol Sci 4212 Elections

This course examines how politicians and policies are selected by citizens in democracies. The literature exploring the rules and procedures that govern elections is perhaps the most theoretically and empirically sophisticated body of knowledge in the study of politics. We explore how differences in these institutional rules across a variety of democracies shape the types of strategic choices voters make, the coalitions that legislators form, whose interests are represented, the structure of parties, the career paths of politicians, and the policies that governments pursue. We further investigate how, when and why electoral rules are changed with reference to several recent cases of electoral reform.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

### L32 Pol Sci 4231 Contemporary Issues in Latin America

How do the institutional designs of contemporary democratic governments help us understand the nature and quality of representation? We concentrate on variations in the powers granted presidents by constitutions as well as the institutional determinants of whether executives are likely to find support for their policies in the legislature. In addition, we explore how incentives established by electoral laws influence the priorities of members of congress. Given all these variations in democratic institutional design, can voters go to the polls with the confidence that politicians will implement the economic policies for which their parties have long stood or which they promised in their campaigns?

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: IS

---

### L32 Pol Sci 4241 Topics in American Politics: Race and Politics

From the moment enslaved Africans were brought to American shores, race and racism has been central to the American political project. In this class we examine how notions of race and racism inform conceptions of citizenship, the allocation of state resources, the development of political parties, and political participation. We also examine the way that race and racism influence public opinion.

Credit 3 units. A&S: SS

---

### L32 Pol Sci 425 Law, Religion, and Politics

What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.

### L32 Pol Sci 426 Topics in American Politics: Politics of the Civil Rights Movement

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests. Prerequisite: Pol Sci 101B.

Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Art: SSC EN: S

---

**L32 Pol Sci 4260 Writing about Civil Rights**

The substantive goal of this course is to study the civil rights movement in order to learn more about the role of social movements, federalism, the legislative process, the presidency, political parties and the courts in American politics. This is a writing-intensive seminar, limited to 18 students, each of whom write three essays. Each student submits an early draft of each essay, which is edited and returned to the student for polishing. There are review sessions on grammar, punctuation, word usage and paragraph construction. The readings for the course include some of the best essays on the subject of civil rights by W.E.B. DuBois, Malcolm X, Martin Luther King Jr. and others. Prerequisite: Pol Sci 101B.

Credit 3 units. A&S: SS, SD, WI A&S IQ: SSC, SD, WI EN: S

---

**L32 Pol Sci 4280 Political Intolerance in World Politics**

This course is an investigation into the meaning, causes and consequences of political intolerance. Our goal is to expose students to contemporary research on: a) how political intolerance is conceptualized and understood, especially within the context of theories of democracy; b) how political intolerance can be measured, both at the level of the individual and the institution/society; c) where intolerance originates, both in terms of individual psychology and system-level politics; and d) what consequences flow from intolerance, especially in terms of legal and extra-legal political repression, as well cultural consequences (e.g., a "culture of conformity"). The course makes little distinction between American politics and politics in other parts of the world (although no knowledge of specific non-U.S. systems is required as a prerequisite).

Credit 3 units. A&S IQ: SSC Arch: SSP Art: SSP EN: S

---

**L32 Pol Sci 4281 Comparative Political Parties**

An introduction to theories and concepts used in the analysis of political parties in democratic regimes, with emphasis on the classic literature covering West European advanced industrial democracies and the more recent scholarship on Latin American party systems. The course illuminates the complex aims, consequences and characteristics of modern party politics.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

---

**L32 Pol Sci 4291 Polarization in American Politics**

This course examines the political polarization of the American political parties and explores its effects on the mass public and American democracy more generally. We examine what exactly is polarization, how it is measured, historical changes, potential causes, and its potential effects on the mass public and governance. Prerequisites: L32 Pol Sci 101B Intro to American Politics, L32 Pol Sci 363 Quantitative Political Methodology or equivalent.

Credit 3 units.

---

**L32 Pol Sci 4331 Topics in Comparative Politics**

Credit 3 units. A&S: SS A&S IQ: SSC

---

**L32 Pol Sci 4373 Immigration, Identity and the Internet**

This class examines a critical issue in contemporary societies: How do changes in technology affect the process of immigration and how immigrant identity is shaped?

Credit 3 units. A&S: SS, CD, WI A&S IQ: LCD, SSC, WI Arch: SSC Art: SSC EN: S

---

**L32 Pol Sci 4400 Advanced Social and Political Philosophy**

A selective investigation of one or two advanced topics in the philosophical understanding of society, government and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism, communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism, and the rights of cultural minorities. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor.

Same as L30 Phil 4400

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM

---

**L32 Pol Sci 4402 Topics in Political and Social Theory: Constitutionalism**

This course is intended primarily for sophomores and juniors.

The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S: SS EN: S

---

**L32 Pol Sci 4451 Contemporary Politics in India**

This seminar examines current topics and controversies in contemporary Indian politics. The course has three main foci: the links between politics and economic liberalization over the past two decades; the links between ascriptive identities such as religion, caste and gender and contemporary political processes, including ethnic and gender quotas; and the changes in party politics at the national and state levels that have accompanied the decline of Congress party dominance. Specific topics include the role of caste and religion in contemporary politics; the rise of state parties and its effects on federal relations; the effects of economic reform and globalization on economy and society; urbanization and migration flows; the rise of modern Hindu nationalism; and the links between collective violence and electoral politics.

Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC BU: IS EN: S

---

**L32 Pol Sci 4504 Contemporary Democratic Theory**

Contemporary debates in democratic theory have produced a number of challenging and provocative accounts of how democratic institutions can and should work. In this course we analyze a number of competing theories of democracy and assess the similarities and differences among them. Although the course focuses primarily on theoretical issues, special attention is given to how empirical research in the social sciences on democratic institutions and procedures informs and clarifies these debates.

Credit 3 units. A&S: SS, WI

---

**L32 Pol Sci 4505 American Political Parties**

This seminar introduced students to core literature on political parties with a strong bias toward recent research.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L32 Pol Sci 451 Topics in American Politics: Supreme Court**

This seminar has two purposes: to introduce students to the state of the art in studies of the Supreme Court and to cover a series of particular topics with emphasis on the major controversies within the field of law and the courts.

Credit 3 units. A&S: SS

---

---

**L32 Pol Sci 4513 Topics in Politics: Criminal Law and Criminal Justice: Homicide**

Seminar investigates current controversies surrounding the homicide laws. Topics include the definitions of homicide and claims of self-defense, the controversies about admissions of evidence at various stages of prosecution, and the debates about the use of capital punishment (including the capital punishment of youths). Includes general academic readings, readings of recent court opinions, and guest discussants from the legal community.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI Art: SSC BU: BA

---

**L32 Pol Sci 4522 Topics in American Politics**

This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S: SS

---

**L32 Pol Sci 4551 Seminar in Political Economy**

This research seminar introduces the student to recent work on the political economy of democracy. We start with a historical account of the development of democratic institutions in Britain and the United States, and then continue with recent work on modeling elections. We compare elections in countries that make use of proportional electoral systems, such as Israel, with those like the United States and Britain that are highly majoritarian. Finally, we discuss the forces of democratization and globalization. The required work for the seminar is a research paper approximately 20 pages (double-spaced) in length.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

**L32 Pol Sci 4552 Comparative Political Economy**

This seminar introduces the student to aspects of social choice theory, applied to themes to do with the economic origins of democracy, democratization and the stability of social orders. We read and discuss a number of recent books: Acemoglu and Robinson on *Economic Origins*; North, Weingast and Wallis on *Violence and Social Order*; Przeworski on *Democracy and Development*; Ferguson on *Money*; Collier on *Wars, Guns and Votes*. If time permits, we discuss recent work by Stern on the *Economics of Climate Change*. Students are expected to work on two short research papers, either empirically or theoretically based, and make a presentation of their work near the end of the semester.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

**L32 Pol Sci 4621 Politics and the Theory of Games**

This course covers basic primitives and more sophisticated tools of game theory as they are used in contemporary political science. It covers some issues of the forefront of contemporary research in game theory as the central analytical tool in studying the science of politics. The main substantive issues are the emergence of law and order in society, markets vs. political mechanisms, and the distinctive characteristics of parliamentary vs. presidential democratic systems. The course also includes some real case studies, basic experiments and, in general, a lot of fun.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

**L32 Pol Sci 4625 Topics in Politics**

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L32 Pol Sci 4626 Applied Statistical Programming**

Statistical computing is a quickly changing field. Standard techniques of today would have been difficult to execute 15 years ago and impossible in the early 1990s. Rapid improvements in computing power have been accompanied by swift changes in standard statistical methods. In just the last decade, techniques ranging from Markov chain Monte Carlo (MCMC) simulation, randomization inference, network analysis, and non-parametric matching have moved from being novel, advanced applications to commonplace across the social sciences. This class is designed to achieve two broad objectives. More narrowly, it aims to guide students as they learn the specifics of the R programming language, a powerful statistical computing environment widely used in the fields of political science, network analysis, machine learning, and statistics. Achieving this goal will require students to learn commands, best practices, and work-arounds specific to the sometimes idiosyncratic R language.

Same as L32 Pol Sci 5625

Credit 3 units.

---

**L32 Pol Sci 464 Topics in American Politics: The United States in Vietnam: Origins, Developments and Consequences**

This course focuses on America's involvement in Vietnam from the era of French colonialism through the collapse of United States intervention. Special attention is given to political, military, economic, and cultural aspects, as well as to international relationships, and the significance of the experience and subsequent developments upon both American and Vietnamese societies.

Same as L22 History 4894

Credit 3 units. A&S: TH A&S IQ: HUM, LCD

---

**L32 Pol Sci 4730 Political Economy of Multinational Enterprises**

In this class we explore the literature in political science and economics on the relationship between multinational enterprises and domestic governments. The four main themes of the course are: 1) defining and understanding multinational enterprises, 2) governments attracting and competing for multinationals, 3) the impact of multinationals on economic development and groups within society, and 4) attempts to regulate multinationals both domestically and internationally. Prerequisite: Pol Sci 102 or 103B.

Credit 3 units. A&S: SS A&S IQ: LCD, SSC BU: IS EN: S

---

**L32 Pol Sci 4731 Global Political Economy**

This course will borrow on the insights of international relations scholarship and economic theory to develop a broad understanding of international economic relations. Specifically, this course attempts to address the following two sets of questions: 1) How do global economic relations fit into the broader category of international relations? How do the existing theories in international relations (liberalism, realism and Marxism) help us understand international economic relations between nation-states? 2) What are the effects of these international economic forces (trade, finance and multinational production) on domestic governments and societies?

Credit 3 units. A&S: SS A&S IQ: LCD, SSC Art: SSC BU: IS EN: S

---

**L32 Pol Sci 475 Topics in International Politics**

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: IS

---

**L32 Pol Sci 4761 Politics of International Finance**

In this course we examine the complex relationship between international finance, economic development, and domestic politics by drawing on the recent scholarly literature in economics, political science and finance. The focus is on the theoretical literature on both the determinants of international financial flows and its effects on domestic societies. Specially, we focus on five forms of international finance: (1) international equity markets (stocks), (2) flows of foreign direct investment (multinational corporations), (3) currency markets (with a special focus on currency crisis), (4) international debt and (5) international aid.

Credit 3 units. A&S: SS EN: S

---

**L32 Pol Sci 4792 Globalization and National Politics**

This seminar examines globalization and its interaction with national politics. The movements of ideas, capital, goods, services, production and people across national borders provide a skeletal framework for the global political economy. Politicians, policymakers and societies discover new opportunities, but also dilemmas, as expanding interdependence challenges traditional notions of sovereignty and national policy autonomy. Prerequisite: Pol Sci 102 or Pol Sci 103.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

**L32 Pol Sci 480 Topics in International Politics: Growth and Development**

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L32 Pol Sci 4861 Seminar on American Election and Voting**

Survey of major contributions to the study of American elections and voting behavior; patterns of voting through time as well as contemporary cross-sectional patterns.

Credit 3 units. A&S: SS

---

**L32 Pol Sci 489 Politics of Regulation**

Events such as the Gulf oil spill and the economic meltdown have dramatized the importance of regulation in the United States, and at the same time called into question the most fundamental beliefs about the nature of the regulatory process. This course reviews the notion of market failure as basic to understanding the rationale for government regulation; it also examines theories of governmental failure as a source of skepticism and concern regarding impediments to effective regulation. Much of the course reviews the development of regulatory machinery in the 20th century. We examine the political forces that have resulted in expansion of the institutions of regulation — interest groups, partisan conflict, legislative negotiation, and executive leadership. We examine these forces in detail in examining the political and legislative response to recent financial and environmental crises.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

---

**L32 Pol Sci 491 Collection and Analysis of Qualitative Data**

This course covers basic techniques for collecting, interpreting and analyzing qualitative data. Students select a research

project, collect appropriate qualitative data and conduct a preliminary analysis. Students learn how to gather several types of qualitative data, including participant observation and open- and closed-ended interviews. In addition, they evaluate and analyze primary data collected by others including oral histories, archival records, interview transcripts. We consider the advantages and disadvantages of non-randomly collected data, such as those gathered through ethnographic and archival methods. We assess the utility of building statistical datasets from such data, and students learn the basic techniques of using computer programs such as Nvivo and Atlas.ti for qualitative data. Biweekly assignments that focus on different aspects of collection and analysis are designed to help students produce a research paper as a final project.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L32 Pol Sci 495 Research Design and Methods**

This course provides an introduction to qualitative and quantitative research methods in political science. Topics address issues related to theory building as well as theory testing. Technical issues related to these methods are not the focus of this course, as are theoretical issues regarding the advantages and disadvantages of the different approaches. Ultimately, the goal of this course is twofold: (1) to instruct students to critically analyze scholarly articles with particular attention to research design; and (2) to guide students in how to design an original research project. Both the reading assignments, including methodological and applied readings, and the written assignments are directed toward these goals.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

**L32 Pol Sci 496 Game Theory and Collective Choice**

An introduction to models of collective choice important in political science, including game theory, the spatial voting model and axiomatic social choice theory. The course concentrates primarily on noncooperative game theory, whose main topics include: strategic and sequential forms, Nash equilibrium, solution by backward induction, imperfect information, repeated games; and applications to voting, campaigning, public goods, agenda design, bargaining and collective action. With noncooperative games as a foundation, the course then examines cooperative game theory (games in coalition form), voting as a social choice mechanism (including the median voter theorem and global cycling theorems), and social-choice possibility theorems (such as Arrow's Theorem). Prerequisite: Math 131 Calculus I or Pol Sci 5052 Mathematical Modeling, or equivalent.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L32 Pol Sci 49PK The Founding Fathers' Government in an Electronic Age**

This is a research seminar that examines how Americans sought to translate their notions of government into a realistic set of priorities and a functioning set of public institutions. Extending from 1789 through the 1820s, this course investigates how the federal government came into being, what it did, and who populated the civilian and military rank of American officialdom. This is also a course in digital history. Students create new knowledge through their own contributions to an ongoing digital project that seeks to reconstitute the early federal workforce. In the process, students learn a variety of digital techniques, ranging from encoding languages to electronic systems to software packages.

Same as L22 History 49PK

---

## Portuguese

Portuguese is the sole official language of seven countries spanning three continents. These include: Angola, Brazil, Cape Verde, Guinea-Bissau, Mozambique, Portugal, and São Tomé and Príncipe. In addition, Portuguese enjoys co-official language status in East Timor, Equatorial Guinea, and Macau. It is the sixth most spoken language worldwide and the fifth most spoken on the internet.

Among the countries where Portuguese is an official language, Brazil stands out as a formidable emerging 21st-century economic power. With a population of more than 190 million people, it is one of the 10 largest markets in the world.

Students learning Portuguese are often initially attracted by the array of vibrant Lusophone cultures, but the language is also appealing for pragmatic reasons to increasing numbers of business, economics, political science, anthropology, and environmental studies majors. Many students are interested in Latin American Studies or globalization, or are curious about Brazil's rich natural resources and booming technology industry.

Portuguese is an outstanding supplement to any student's education and, for those already fluent in Spanish, represents the chance to take a fast-paced course sequence and be fluent more quickly in multiple languages.

At Washington University, Portuguese classes are marked by the same joyful, positive environment characteristic of many Lusophone cultures. Outside the classroom, students can improve their fluency at cultural events and Lusophone Movie Nights, in addition to choosing from study abroad programs affiliated with the university, either for the summer or for an entire semester.

*Bem-vindos!*

## Faculty

For a list of affiliated faculty, please visit the Department of Romance Languages and Literatures faculty (p. 810) page.

## Majors

The Department of Romance Languages and Literatures offers two years of intensive course work in Portuguese and, while there is not yet an official major in this area, students can opt to include Portuguese as one of their three (3) languages of concentration in the pursuit of a Romance languages major. For

more information about this option, please contact: Dr. Valéria M. Souza (vsouza@wustl.edu).

## Minors

The Department of Romance Languages and Literatures offers course work in Portuguese; however, there is not yet a minor in this area.

### L37 Portug 101 Portuguese I

Introduction to Portuguese language. The course emphasizes acquisition of communicative ability. It also covers basic grammar points through reading and writing activities. Classes are taught entirely in Portuguese. No prior experience in the language is required.

Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

### L37 Portug 102A Portuguese II

Introduction to Portuguese language. This second course in the Portuguese program emphasizes acquisition of communicative ability. It also covers basic grammar structures through reading and writing activities. Classes are taught entirely in Portuguese. Prerequisite: Portug 101 or permission of instructor.

Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

### L37 Portug 103 Portuguese for Spanish Speakers I

Intensive and accelerated course especially designed to take advantage of students' knowledge of Spanish and to promote a more rapid learning of Portuguese. Classes are entirely taught in Portuguese and stress oral communication, basic use of grammar, reading and writing skills. Intermediate online placement exam in Spanish is required.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

### L37 Portug 104 Portuguese for Spanish Speakers II

This course intends to offer a sequence in the learning process initiated in Portug 103. It is a fast-paced class, designated for Spanish speakers with the objective of improving conversational, writing and reading skills. Prerequisite: Portug 103 or permission of instructor.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

### L37 Portug 215 Reading and Conversation I

The goal of this course is to review and enhance the content learned at the basic level. Through culturally relevant readings and related conversational activities, students are expected to enrich their vocabulary, gain fluency, and improve both reading comprehension and writing skills. Prerequisites: two college semesters of Portuguese or permission of instructor.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

### L37 Portug 220 Reading and Conversation II: Intermediate Portuguese

This course is a continuation of Portug 215, therefore an intermediate level in the Portuguese section. Its main goal is to

improve students' reading proficiency, as well as to provide a class environment in which conversational skills can be practiced and made into a solid foundation. In addition, the class provides tools to expand vocabulary and promote a cultural understanding of Brazil. Prerequisite: Portug 215 or permission of instructor Credit 3 units. A&S: LA A&S IQ: LCD BU: HUM EN: H

**L37 Portug 400 Independent Study**  
Credit variable.

## Praxis

The Praxis program provides an exciting opportunity to combine the analytical reading, writing and thinking skills of a liberal arts education with the marketable skills required in the 21st century to take students into career paths of their own design.

**Eligibility Requirements:** The program is designed for students entering their sophomore year. Students must fill out an application for the program (available online (<http://college.artsci.wustl.edu/praxis>)). Students may apply to the program after their first semester freshman year, and applicants are accepted on a rolling basis through the first semester junior year. Students must have maintained at least a 3.0 grade point average in their first semester to be considered eligible.

**Faculty:** The Arts & Sciences faculty, from a wide variety of backgrounds, have helped to develop the program and are eager to teach, monitor and mentor the Praxis students. In addition, leaders in business, nonprofit organizations and government, many of whom discovered the foundation for their success in liberal arts studies, will be lecturers in the signature Praxis courses.

**Focused Workforce Curriculum:** Not only does the Praxis program provide students with the foundation of a liberal arts education, the curriculum is designed specifically to provide students with many additional tools essential for their future in the world of work. Besides the specialized content of a particular field, the student will be acquiring the expertise essential for his or her first job as well as for careers that may not yet exist:

- Analysis of multiple perspectives essential in the increasing globalization of our world
- Critical thinking
- Familiarity with quantitative analysis and methods
- Outstanding writing and speaking skills
- Foreign language literacy and culture
- Team and group work expertise and psychology
- Essential skills in traditional and emerging technology

**Internships:** The Praxis experience culminates in an internship taken normally at the end of the junior year that allows students to synthesize the tools and theories they have learned and use them in the workplace. Locations for internships may include national and international sites.

**Community:** The success of our students is central to our program. The academic advisers, as well as each Praxis faculty member, assist students in tailoring their education to their own interests and goals. In particular, each student's faculty mentor closely monitors the student's progress. The faculty and staff and all the Praxis students form a supportive community that stimulates and encourages the highest standards of excellence in the students' studies and in their chosen careers.

## The Program

**1. Leadership and group experience** (3 units) (fall of sophomore year)

**Required:** Praxis 201 Leaders in Context

**2. Information technology skills** (2 units) (fall of sophomore year)

**Required:** Praxis 207 Fluency in Sociotechnology

**3. Communication skills, both written and oral** (3 units) (spring of sophomore year)

**Required:** Praxis 285 Communication That Works

**4. Analytic and problem-solving requirement** (3 units)

**Required:** Econ 1011 Introduction to Microeconomics

**5. Quantitative skills** (3 units)

**Required:** A course in statistics (select one from below):

| Code        | Title   | Units |
|-------------|---|-------|
| Math 1011   | Introduction to Statistics                              | 3     |
| Math 2200   | Elementary Probability and Statistics                   | 3     |
| Math 3200   | Elementary to Intermediate Statistics and Data Analysis | 3     |
| Pol Sci 363 | Quantitative Political Methodology                      | 3     |
| Psych 300   | Introduction to Psychological Statistics                | 3     |

**6. International perspective or experience** (3 units)

**Required:**

The study of any language through the 300 level

**or**

Study Abroad

**or**

One course in international economics or economic development (must be 300-level or above)

**7. Internship** (3 units)

As the capstone experience of the Praxis program, the internship allows students to put into practice the skills and knowledge learned in the Praxis curriculum. The Praxis internship is conducted with the mentorship of a sponsoring Praxis faculty member and usually occurs by the end of the junior year. Students should contact the Praxis internship coordinator and have a faculty mentor in place before beginning the internship.

It is not possible to fulfill the internship portion of the Praxis program with an internship that occurred before completing the majority of Praxis requirements, and the internship should consist of 135 hours.

Upon completion of the internship, there are two options available for students in order to fulfill the Praxis internship requirement. In conjunction with the approval of the faculty sponsor, the student submits a 10-page paper exploring the relevant issues and questions set by the sponsoring faculty. Depending on the topic, nature of the internship and discretion of the sponsoring faculty, a daily journal may be submitted in lieu of the 10-page paper. For full details as to the requirements for this internship, contact Dean Joy Kiefer ([jkiefer@wustl.edu](mailto:jkiefer@wustl.edu)). Required for completion of the Praxis program.

#### 8. Praxis Seniors Master Class (1 unit)

As a capstone to the Praxis program experience, this course revisits the major themes of the core Praxis courses in order to analyze their meanings in an interdisciplinary way. Students learn and explore the deeper applications of the topics introduced to them in their Praxis course work at a time in which they can reflect about what they have learned in the context of their internship experience.

Interdisciplinary lectures from the Praxis associated faculty in political science, anthropology and psychology will include the topics of organizational culture, leadership, followership, cooperation, communication, decision-making and presentation. This course is a requirement for the seniors enrolled in the Praxis program.

Visit online course listings to view semester offerings for L62 Praxis (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L62&crslvl=1:4>).

---

### L62 Praxis 201 Leaders in Context

In this course we explore leadership both theoretically and practically. Focus is on understanding the concept of culture and how the cultural context informs a leader's style and effectiveness. This course also is designed to help students develop insights about leadership practice through readings, discussions, conversations with leaders, and group projects based on fieldwork. Students examine a wide variety of leaders and leadership styles in order to better understand how leaders mobilize followers within the constraints of their particular settings. Students also analyze the creation of institutional identity within organizations and corporate culture and explore effective leadership practices within these settings, as well as analyzing some cross-cultural examples of leadership. This course is limited only to students enrolled in the Praxis program. Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

### L62 Praxis 207 Fluency in Sociotechnology

This course studies the fundamentals of technology and how that technology is effectively implemented in organizations and affects human interactions and processes. We consider much of Microsoft Office: Excel, Access and PowerPoint and how the presentation of data in these forms affects our decision-making processes and how humans interact using these technologies. We also develop web skills with a close look at how presentation of information and data in general functions or does not function

based simply on how it is presented. This course is limited only to students enrolled in the Praxis program.  
Credit 2 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

**L62 Praxis 225 Presentation Matters: The Art and Science of Visually Using Technology**

This course seeks to add in-depth sophistication to the functional skills acquired in one of the Praxis core courses, Fluency in Sociotechnology. Through interdisciplinary reading and exercises, the course illustrates to students that not all visual messages are created equal even when they contain the same information. For example, the most commonly used presentation tool, Microsoft PowerPoint, is routinely used in ways that misrepresents the data it is meant to explain. Organizations often create confusing and complicated spreadsheets that produce numerous and costly errors, the very thing the software is meant to eliminate. Furthermore, websites are regularly so difficult to navigate and use they unknowingly hemorrhage profits and customers, the two things the technology is designed to attract. In this course, students learn the social, psychological and organizational implications of using these technologies so they may become more skillful and effective practitioners. This course is limited only to students in the Praxis program. Prerequisite: Praxis 207 Fluency in Sociotechnology.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

**L62 Praxis 285 Communication That Works**

This course focuses on the communication forms and skills essential to contemporary living and working. Various forms of writing for different audiences and purposes: business letters, memorandums, proposals, reports, press releases, speeches as well as public speaking are practiced and critiqued. The use of technology common in public speaking is practiced and critiqued. The use of technology common in public presentations is expected. Course reading is supplemented with viewing and listening. Final grade is based on combination of quizzes, writing assignments and demonstration of speaking skills. This course is limited only to students enrolled in the Praxis program.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

**L62 Praxis 286 Entrepreneurship and the Liberal Arts**

It is a little-known truth that more entrepreneurs come out of Arts & Sciences than any other college. This course begins by exploring why this is so, examining in particular the creative and innovative qualities developed in liberal arts that are crucial to the success of the entrepreneur. We then move on to examine entrepreneurs in action, hearing from those in the field and reading of others, learning how the liberal arts proved instrumental in various ways to their development and ultimate success as entrepreneurs.

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

**L62 Praxis 300 Praxis Seniors Master Class**

As a capstone to the Praxis Program experience, this course revisits the major themes of the core Praxis courses in order to analyze their meanings in an interdisciplinary way. Students learn and explore the deeper applications of the topics introduced to them in their Praxis course work at a time in which they can reflect about what they have learned in the context of their internship experience. Interdisciplinary lectures from the Praxis associated faculty in political science, anthropology,

psychology, topics include organizational culture, leadership, followership, cooperation, communication, decision-making and presentation. This course is a requirement for seniors enrolled in the Praxis program.

Credit 1 unit. A&S: SS EN: S

---

**L62 Praxis 367 Seminar in Positive Psychology**

Reviews the relatively recent development in the field known as "Positive Psychology." Topics may include: happiness and life-satisfaction, positive self-esteem, creativity, caring relationships, love (passionate and otherwise), empathy, optimism, ambition, moral character development, attachment, compassion, forgiveness, helping, work ethics, and successful aging. Designed to take a sampling of those aspects of psychology that emphasize the positive side of human nature. Prerequisites: Psych 100B, junior or senior standing.

Same as L33 Psych 367

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

## Psychological & Brain Sciences

Psychological & Brain Sciences allows students to examine in depth the study of behavior in the areas of:

- Aging and development
- Biological bases of behavior
- Clinical and abnormal psychology
- Cognition
- Cognitive neuroscience
- Learning and memory
- Personality
- Sensation and perception
- Social interactions

The Department of Psychological & Brain Sciences at Washington University has particular strengths in the areas of:

- Aging
- Behavioral economics
- Human development
- Cognitive neuroscience
- Judgment and decision making
- Learning and operant conditioning
- Neuropsychology
- Personality and individual differences
- Adult psychopathology
- Sensory processes in vision and audition
- Social theories of self and social processes
- Human emotion

Opportunities for undergraduates include:

- Research involvement with faculty members
- Supervised internships with community service agencies

- Practicum in Applied Behavior Analysis
- Study abroad
- Concentrations within the major
- Senior Honors
- Membership in Psi Chi, the national honor society in psychology

## Faculty

### Chair

**Deanna M. Barch** (<http://psychweb.wustl.edu/people/deanna-barch>)  
Gregory B. Couch Professor of Psychiatry  
PhD, University of Illinois at Urbana-Champaign

### Associate Chair

**Jeffrey M. Zacks** (<http://dcl.wustl.edu/%7Ejzacks>)  
Professor  
PhD, Stanford University

### Endowed Professors

**John Baugh** (<http://psychweb.wustl.edu/people/john-baugh>)  
Margaret Bush Wilson Professor in Arts & Sciences  
PhD, University of Pennsylvania  
(African and African-American Studies; Anthropology; Education; English)

**Pascal R. Boyer**  
Luce Professor of Collective and Individual Memory  
PhD, University of Paris  
(Anthropology)

**Randy J. Larsen** (<http://psychweb.wustl.edu/larsen>)  
William R. Stuckenberg Professor of Human Values and Moral Development  
PhD, University of Illinois at Urbana-Champaign

**Thomas F. Oltmanns** (<http://psychweb.wustl.edu/oltmanns>)  
Edgar James Swift Professor of Arts & Sciences  
PhD, State University of New York–Stony Brook

**Steven E. Petersen** (<https://neuro.wustl.edu/biographies/steven-petersen-phd>)  
James S. McDonnell Professor of Cognitive Neuroscience  
PhD, California Institute of Technology  
(Neurology and Neurological Surgery)

**Henry L. Roediger III** (<http://psychweb.wustl.edu/roediger>)  
James S. McDonnell Distinguished University Professor  
PhD, Yale University

**Rebecca A. Treiman** (<https://psychweb.wustl.edu/treiman>)  
Burke and Elizabeth High Baker Professor of Child Developmental Psychology  
PhD, University of Pennsylvania

**Denise E. Wilfley** (<https://psychweb.wustl.edu/wilfley>)  
Scott Rudolph University Professor of Psychiatry  
PhD, University of Missouri

### Professors

**Richard A. Abrams** (<http://psychweb.wustl.edu/people/richard-abrams>)  
PhD, University of Michigan

**David A. Balota** (<http://psychweb.wustl.edu/people/david-balota>)  
PhD, University of South Carolina

**Todd Braver** (<http://psychweb.wustl.edu/people/todd-braver>)  
PhD, Carnegie Mellon University

**Brian D. Carpenter** (<http://psychweb.wustl.edu/people/brian-carpenter>)  
PhD, Case Western Reserve University

**Ian G. Dobbins** (<https://psychweb.wustl.edu/people/ian-dobbins>)  
PhD, University of California, Davis

**Leonard Green** (<http://psychweb.wustl.edu/green>)  
PhD, State University of New York–Stony Brook

**Sandra S. Hale** (<https://psychweb.wustl.edu/hale>)  
PhD, University of Wisconsin–Milwaukee

**Mark A. McDaniel** (<http://psychweb.wustl.edu/mcdaniel>)  
PhD, University of Colorado

**Kathleen B. McDermott** (<https://psychweb.wustl.edu/mcdermott>)  
PhD, Rice University

**Mitchell Sommers** (<http://www.psych.wustl.edu/sommers>)  
PhD, University of Michigan

**Michael J. Strube** (<http://psychweb.wustl.edu/people/michael-strube>)  
PhD, University of Utah

**Desirée A. White** (<http://psychweb.wustl.edu/white>)  
PhD, Washington University

### Endowed Associate Professor

**Joshua Jackson** (<http://psychweb.wustl.edu/jackson>)  
Saul and Louise Rosenzweig Associate Professor of Personality Science  
PhD, University of Illinois at Urbana-Champaign

### Associate Professors

**Julie M. Bugg**  
PhD, Colorado State University

**Janet M. Duchek** (<https://psychweb.wustl.edu/people/janet-duchek>)  
PhD, University of South Carolina

**Denise P. Head** (<http://psychweb.wustl.edu/people/denise-head>)  
PhD, University of Memphis

**Alan J. Lambert** (<http://psychweb.wustl.edu/lambert>)  
PhD, University of Illinois at Urbana-Champaign

**Lori Markson** (<http://psychweb.wustl.edu/markson>)  
PhD, University of Arizona

**Thomas L. Rodebaugh** (<http://psychweb.wustl.edu/rodebaugh>)  
PhD, University of North Carolina at Chapel Hill

## Assistant Professors

**Ryan Bogdan** (<http://psychweb.wustl.edu/people/ryan-bogdan>)  
PhD, Harvard University

**Tammy English** (<http://psychweb.wustl.edu/english>)  
PhD, University of California, Berkeley

**Patrick Hill** (<https://psychweb.wustl.edu/hill-0>)  
PhD, University of Notre Dame

**Calvin Lai**  
PhD, University of Virginia

PhD, University of Missouri-Columbia

## Professors Emeriti

**Stanley Finger** (<http://psychweb.wustl.edu/finger>)  
PhD, Indiana University Bloomington

**Larry Jacoby** (<http://psychweb.wustl.edu/jacoby>)  
PhD, Southern Illinois University Carbondale

**Brett Kessler** (<http://psychweb.wustl.edu/kessler>)  
PhD, Stanford University

**Michael Merbaum** (<http://psychweb.wustl.edu/merbaum>)  
PhD, University of North Carolina at Chapel Hill

**Anthony Schuham** (<http://psychweb.wustl.edu/schuham>)  
PhD, Washington University

**Martha Storandt** (<http://psychweb.wustl.edu/storandt>)  
PhD, Washington University

**Robert L. Williams** (<http://psychweb.wustl.edu/williams>)  
PhD, Washington University

## Majors

The Department of Psychological & Brain Sciences (P&BS) offers the following majors:

- Psychological & Brain Sciences (p. 771)
  - Concentrations in Psychological & Brain Sciences (p. 772)
- Cognitive Neuroscience (p. 774)

## The Major in Psychological & Brain Sciences

The field of psychology encompasses a large and diverse area of study that is empirical, theoretical and practical. As the science concerned with the study of behavior, psychology includes such areas as biological bases of behavior; brain-behavior interactions; learning; memory; cognition; motivation; emotion; sensation and perception; the study of social interactions, persuasion and attitudes; aging and development; personality; clinical, abnormal, and health psychology; and leisure and work experiences. Psychology is a multipurpose, valuable discipline in which to major. It has relevance for those considering careers in law, medicine, the health professions, education and business. In addition, it provides important skills

and knowledge for those who may not be planning additional schooling.

**Total units required:** 34 units, of which at least 25 must be at the 300 level or above.

**Required courses:**

- Psych 100B Introduction to Psychology is a prerequisite for all upper-level courses (numbered 300 and above). Exemption from Psych 100B is possible in the following circumstances:
  - Completion of an equivalent course transferred from another institution, if approved by the director of undergraduate studies.
  - An AP Psychology test score of 5 or IB score of 6 or 7. (*N.B.:* AP or IB earns *exemption* from Psych 100B but no units of credit toward the major.)
- Psych 300 Introduction to Psychological Statistics
  - Math 2200 or Math 3200 or both Marketing Statistics QBA 120 & QBA 121 may substitute for Psych 300 but earn no units of credit toward the major.
- Psych 301 Experimental Psychology or Psych 3011 Experimental Psychology

**Core requirements:** At least one course from each of the following five categories:

**Social/Personality:**

| Code      | Title                             | Units |
|-----------|-----------------------------------|-------|
| Psych 315 | Introduction to Social Psychology | 3     |
| Psych 353 | Psychology of Personality         | 3     |

**Abnormal/Affective Psychology:**

| Code       | Title  | Units |
|------------|--|-------|
| Psych 3501 | Psychotherapy: Introduction to Practice and Research | 3     |
| Psych 354  | Abnormal Psychology                                  | 3     |
| Psych 3645 | Understanding Emotions                               | 3     |

**Biological/ Neurological Bases of Behavior:**

| Code       | Title                                  | Units |
|------------|--|-------|
| Psych 330  | Sensation and Perception               | 3     |
| Psych 3401 | Biological Psychology                  | 3     |
| Psych 345  | Genes, Environment, and Human Behavior | 3     |
| Psych 3604 | Cognitive Neuroscience                 | 3     |
| Psych 374  | Drugs, Brain and Behavior              | 3     |

**Behavior and Cognition:**

| Code      | Title                  | Units |
|-----------|------------------------|-------|
| Psych 360 | Cognitive Psychology   | 3     |
| Psych 361 | Psychology of Learning | 3     |

|           |                           |   |
|-----------|---------------------------|---|
| Psych 380 | Human Learning and Memory | 3 |
| Psych 433 | Psychology of Language    | 3 |

**Lifespan Development:**

| Code      | Title                                   | Units |
|-----------|---|-------|
| Psych 321 | Developmental Psychology                | 3     |
| Psych 325 | Psychology of Adolescence               | 3     |
| Psych 326 | Introduction to the Psychology of Aging | 3     |
| Psych 427 | Social Gerontology                      | 3     |

**Elective courses:** An additional 9 units of course work

No more than 6 units from the following categories may be used to satisfy the minimum requirements for the psychological & brain sciences major:

- 100-/200-level classes (other than Psych 100B)
- Psych 333 Independent Study in Psychological and Brain Sciences
- Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences
- Psych 498 Study for Honors and Psych 499 Study for Honors
- University College-approved psychology classes
- Cross-listed courses not home-based in Psychological & Brain Sciences
- Transfer classes (students transferring from another college, please refer to the Transfer Credit section below)

**Additional Information**

**Transfer Credit:** If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the director of undergraduate studies in the psychological & brain sciences department for their applicability toward the major.

**Senior Honors:** The primary goal of the Honors Program in psychological & brain sciences is to provide students who have achieved a superior academic record the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Overall and psychological & brain sciences GPAs  $\geq 3.65$
- Completion of both Psych 300 and Psych 301 (or Psych 3011)
- An approved honors research adviser

**Concentrations in Psychological & Brain Sciences**

To augment the broadly based psychological & brain sciences major, the department offers concentrations for students who wish to engage more intensively with a specific

area within the discipline. The concentrations are meant as an enrichment of the major, but all of the units for the concentrations may be part of the regular P&BS major requirements.

A concentration requires a minimum of 12 units, which include required and elective courses, one of which must be at the 400 level. In addition, to complete a concentration, students will have to undertake an approved research assistantship (Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences), or an approved internship, practicum or honors thesis.

A concentration will be a valuable experience for students planning on graduate study in psychology or related fields, or for those who have a particular interest or want to gain expertise in one of the approved concentrations. Each concentration will have a member of the faculty as the contact person to meet with and advise students in the concentration.

Courses taken for a concentration may be used to fulfill no more than one of the Core categories or distribution requirements of a psychological & brain sciences major. None of the units for a concentration can be counted for any other major or minor (i.e., there is no double counting). For those doing the psychological & brain sciences: cognitive neuroscience major, the cognitive neuroscience concentration is not an option.

### There are six concentrations:

**Cognition in Children** — This concentration allows students to acquire deeper knowledge of cognition and its development in the first few years of life. The courses for the concentration consider child development more generally and then explore in more depth the early development of cognitive, conceptual and social-cognitive abilities. Adviser/coordinator: Professor Lori Markson.

Course work required: Psych 321 Developmental Psychology

Electives (must include two classes, at least one of which is at the 400 level):

| Code       | Title                               | Units |
|------------|-------------------------------------|-------|
| Psych 358  | Language Acquisition                | 3     |
| Psych 4046 | Developmental Neuropsychology       | 3     |
| Psych 4591 | The Development of Social Cognition | 3     |

*Research mentorship:* Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Pascal Boyer, Lori Markson, Rebecca Treiman, Desirée White.

**Cognitive Neuroscience** — This concentration allows students to acquire deeper knowledge of the relation between mind and brain. The courses for the concentration consider the neurobiological basis for psychological functions at a more general level, and then explore in greater depth specialized topics relating to how higher cognitive processes, such as

memory, attention, perception and emotion, emerge from brain function. Adviser/coordinator: Professor Todd Braver.

Course work required:

| Code         | Title                            | Units |
|--------------|----------------------------------|-------|
| Psych 3401   | Biological Psychology            | 3     |
| or Psych 344 | Principles of the Nervous System |       |

Electives (must include two classes, at least one of which is at the 400 level):

| Code       | Title   | Units |
|------------|---|-------|
| Psych 3604 | Cognitive Neuroscience  | 3     |
| Psych 374  | Drugs, Brain and Behavior   | 3     |
| Psych 4046 | Developmental Neuropsychology   | 3     |
| Psych 4413 | Advanced Cognitive Neuroscience (Writing Intensive)                         | 3     |
| Psych 4450 | Functional Neuroimaging Methods   | 3     |
| Psych 4745 | Genes, Brain and Behavior: Pathways to Psychopathology                      | 3     |
| Psych 4765 | Inside the Disordered Brain: Biological Bases of the Major Mental Disorders | 3     |
| Psych 488  | The Cognitive Neuroscience of Film  | 3     |

*Research mentorship:* Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Deanna Barch, Todd Braver, Ryan Bogdan, Ian Dobbins, Denise Head, Kathleen McDermott, Desirée White, Jeff Zacks.

**Reading, Language and Language Acquisition** — This concentration provides students with a deep and broad knowledge of linguistic development. The courses look in-depth at the development of written and spoken language. Adviser/coordinator: Professor Rebecca Treiman.

Course work required: Ling 170D Introduction to Linguistics

Electives (must include two classes, at least one of which is at the 400 level):

| Code       | Title  | Units |
|------------|--|-------|
| Psych 234  | Introduction to Speech and Hearing Disorders | 3     |
| Psych 358  | Language Acquisition                         | 3     |
| Psych 358W | Language Acquisition (WI)                    | 3     |
| Psych 433  | Psychology of Language                       | 3     |
| Psych 4351 | Reading and Reading Development              | 3     |
| Psych 4352 | Reading and Reading Development WI           | 3     |

*Research mentorship:* Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Rebecca Treiman, David Balota, Lori Markson, Mitchell Sommers.

**Lifespan Development** — Many introductory courses in developmental psychology focus on changes that occur from birth to adolescence. The supplemental concentration in lifespan development provides students with an understanding of the cognitive and physiological changes that occur over the lifespan, with a primary focus on older adulthood. A major goal of the concentration is to provide students with an understanding of the similarities and differences in development at different stages of the lifespan. Adviser/coordinator: Professor Mitchell Sommers.

Course work required:

| Code      | Title                                   | Units |
|-----------|---|-------|
| Psych 326 | Introduction to the Psychology of Aging | 3     |
| Psych 427 | Social Gerontology                      | 3     |

Electives (must include one of the following courses):

| Code       | Title  | Units |
|------------|--|-------|
| Psych 321  | Developmental Psychology                     | 3     |
| Psych 4301 | Contemporary Topics in Cognitive Development | 3     |

*Research mentorship or internship experience:* Students can complete this aspect of the concentration with *either* a prior approved research mentorship *or* an approved internship related to older adults. Successful completion of a paper is required in either case. Relevant faculty for research mentorship: Mitchell Sommers, David Balota, Brian Carpenter, Sandra Hale, Denise Head, Lori Markson. *Possible internships:* Work in an assisted-living facility or other community-based program designed to assist older adults. Other internships are available; contact Dr. Brian Carpenter for opportunities.

**Experimental Psychopathology** — This concentration allows students to acquire more advanced knowledge of the ways in which psychologists study mental disorders. Current research has demonstrated the importance of integrating psychological and biological variables in understanding the classification, etiology and treatment of a wide variety of mental disorders, including schizophrenia, mood disorders, anxiety disorders, substance use disorders and eating disorders. Students who pursue this concentration will develop a broadly-based appreciation for conceptual and methodological issues that are central to research in psychopathology. Adviser/coordinator: Professor Deanna Barch.

Course work required: Psych 354 Abnormal Psychology

Electives (must include two classes, at least one of which is at the 400 level):

| Code       | Title                                  | Units |
|------------|--|-------|
| Psych 345  | Genes, Environment, and Human Behavior | 3     |
| Psych 374  | Drugs, Brain and Behavior              | 3     |
| Psych 4541 | Personality and Psychopathology        | 3     |

|            |   |   |
|------------|---|---|
| Psych 4557 | Biopsychosocial Aspects of Eating Disorders and Obesity                     | 3 |
| Psych 4745 | Genes, Brain and Behavior: Pathways to Psychopathology                      | 3 |
| Psych 4765 | Inside the Disordered Brain: Biological Bases of the Major Mental Disorders | 3 |

*Research mentorship:* Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Deanna Barch, Ryan Bogdan, Josh Jackson, Tom Oltmanns, Tom Rodebaugh, Renee Thompson, Denise Wilfley.

**Personality and Individual Differences** — This concentration allows students to acquire deeper knowledge of how and why individuals differ from one another and the ways in which individual (e.g., personality, self) and group differences (e.g., gender) influence behavior, emotion, experience, identity and psychopathology. The core course for the concentration (Psych 353) considers personality more generally. The seminars explore in depth specific aspects of personality and individual differences, including biological bases of individual differences (i.e., genetics), the interpersonal processes associated with personality and personality judgment, individual differences in self and identity, group differences and personality pathology. Adviser/coordinator: Professor Tammy English.

Course work required: Psych 353 Psychology of Personality

Electives (must include two classes, at least one of which is at the 400 level):

| Code       | Title   | Units |
|------------|---|-------|
| Psych 3645 | Understanding Emotions                        | 3     |
| Psych 367  | Positive Psychology: The Science of Happiness | 3     |
| Psych 413  | Contemporary Topics in Social Psychology      | 3     |
| Psych 4541 | Personality and Psychopathology               | 3     |

*Research mentorship:* Prior approved research mentorship with a relevant faculty member and successful completion of a research paper. Relevant faculty: Tammy English, Josh Jackson, Randy Larsen, Tom Oltmanns, Michael Strube, Renee Thompson, Heike Winterheld.

## The Major in Cognitive Neuroscience

*How does the brain think?* Cognitive neuroscience refers to the scientific study of the linkage between mental functions and the operation of the brain and nervous system. The goal of cognitive neuroscience is to provide an understanding of psychological processes, such as attention, memory, thinking and emotion, in terms of physical principles and biological components. At the same time, it aims to provide an understanding of the psychological constraints on how the

brain functions, computes, and generates behavior. Students who pursue the undergraduate major in psychological & brain sciences: cognitive neuroscience will gain a strong foundation in how to study the brain and mind at various levels of analysis, including cellular biology, brain systems, cognitive and affective function, and neural computation. In addition, they will gain an appreciation of the relation between healthy cognitive and brain function and its breakdown in various disease states and disorders. A cognitive neuroscience degree provides excellent preparation for a career in health and medical professions, scientific research, computer fields, education and the law.

**Total units required:** 37 units/12 courses (plus prerequisites).

**Prerequisites Outside of Psychological & Brain Sciences (6 units):**

| Code      | Title                   | Units |
|-----------|-------------------------|-------|
| Math 132  | Calculus II             | 3     |
| Biol 2960 | Principles of Biology I | 4     |

**Note:** Each of these prerequisites has its own prerequisites — Math 132 requires Math 131, and Biol 2960 requires Chem 111A and Chem 112A (concurrently).

**Note:** These are Biology and Pre-Med prerequisites as well and are typically completed in a student's first year. They might alternatively be satisfied through AP or any other already-approved mechanism from the respective department or the college.

**Core Requirements (19 units/6 courses):**

| Code          | Title                                    | Units |
|---------------|--|-------|
| Psych 100B    | Introduction to Psychology               | 3     |
| Psych 300     | Introduction to Psychological Statistics | 3     |
| Psych 301     | Experimental Psychology                  | 4     |
| or Psych 3011 | Experimental Psychology                  |       |
| Psych 3401    | Biological Psychology                    | 3     |
| or Psych 344  | Principles of the Nervous System         |       |
| Psych 360     | Cognitive Psychology                     | 3     |
| Psych 3604    | Cognitive Neuroscience                   | 3     |
| Total Units   |  | 19    |

**Note:** The first three requirements (i.e., Psych 100B, 300, and 301/3011) are the same as those for the regular psychological & brain sciences major.

**Note:** L33 Psych 344 is home-based in Biology; students should register under the cross-listed Psych L33 course designation, not L41 Biol 3411.

Exemption from Psych 100B is possible in the following circumstances:

- Completion of an equivalent course transferred from another institution, if approved by the director of undergraduate studies.

- An AP Psychology test score of 5 or IB score of 6 or 7. (*N.B.:* AP or IB earns *exemption* from Psych 100B but no units of credit toward the major.)

Math 2200 or Math 3200 or both Marketing Statistics QBA 120 & QBA 121 may substitute for Psych 300 but earn no units of credit toward the major.

**Additional Biological & Cognitive Distributions (2 courses): One each from A & B:**

**Group A eligible courses:**

| Code      | Title                     | Units |
|-----------|---------------------------|-------|
| Psych 330 | Sensation and Perception  | 3     |
| Psych 361 | Psychology of Learning    | 3     |
| Psych 380 | Human Learning and Memory | 3     |

**Group B eligible courses:**

| Code        | Title                                  | Units |
|-------------|--|-------|
| Biol 3058   | Physiological Control Systems          | 2     |
| Biol 3151   | Endocrinology                          | 3     |
| Physics 350 | Physics of the Brain                   | 3     |
| Psych 345   | Genes, Environment, and Human Behavior | 3     |
| Psych 374   | Drugs, Brain and Behavior              | 3     |

**Computation Requirement (1 course):**

| Code       | Title                                  | Units |
|------------|--|-------|
| CSE 131    | Computer Science I                     | 3     |
| Psych 4175 | Applied Statistical Analysis with R    | 3     |
| Psych 5007 | Statistics and Data Analysis in MATLAB | 2     |

Or, with prior approval, another course involving a significant computational/programming component.

**Capstone/Depth requirement (9 units/3 courses): One each from A, B, C:**

(**Note:** None of these can be used to also fulfill any of the other requirements — i.e., no double counting.)

**Group A eligible courses:**

| Code       | Title   | Units |
|------------|---|-------|
| Psych 4046 | Developmental Neuropsychology   | 3     |
| Psych 4182 | Perception, Thought and Action  | 3     |
| Psych 4413 | Advanced Cognitive Neuroscience (Writing Intensive)                         | 3     |
| Psych 4450 | Functional Neuroimaging Methods   | 3     |
| Psych 4745 | Genes, Brain and Behavior: Pathways to Psychopathology                      | 3     |
| Psych 4765 | Inside the Disordered Brain: Biological Bases of the Major Mental Disorders | 3     |

Psych 488 The Cognitive Neuroscience of Film 3

or an appropriate 400-level course from outside the department (with prior approval), e.g.:

| Code      | Title                                       | Units |
|-----------|---|-------|
| Biol 4030 | Biological Clocks                           | 3     |
| Biol 404  | Laboratory of Neurophysiology               | 4     |
| Biol 4580 | Principles of Human Anatomy and Development | 3     |
| Phil 4212 | Philosophy of Neuroscience                  | 3     |

**Group B eligible courses in capstone research/writing intensive experience:**

| Code       | Title   | Units |
|------------|---|-------|
| Psych 4046 | Developmental Neuropsychology                                   | 3     |
| Psych 4413 | Advanced Cognitive Neuroscience (Writing Intensive)             | 3     |
| Psych 444B | Independent Study for the Major in P&BS: Cognitive Neuroscience | 3     |
| Psych 498  | Study for Honors  | 3     |

**Group C eligible courses:** An additional 3 units from group A or group B or, by prior approval: MBB 300, Psych 333, or Psych 498/Psych 499.

**Acceptance into the Psychological & Brain Sciences: Cognitive Neuroscience Major**

Acceptance to the major is contingent on an application and then approval by the major committee. As part of this application, the student will meet with an appropriate adviser who will carefully review the requirements and oversee the student's progress. A brief one-page statement from the student on why they feel that the cognitive neuroscience major is appropriate for them will be requested as part of the application.

Washington University students will be considered for admission to the cognitive neuroscience major no sooner than in their third semester (sophomore year). Decisions are based upon the student's statement, academic record, and interview with the major adviser.

## Minors

### The Minor in Psychological & Brain Sciences

**Units required:** 15

**Required course:** Psych 100B Introduction to Psychology

**Elective courses:**

Four additional courses (i.e., a minimum of 12 units of additional course work) in Psychological & Brain Sciences, all of which must be at the 300 level or above.

## Additional Information

No more than 3 units of an approved cross-listed course originating outside the Department of Psychological & Brain Sciences, an approved psychology course taken in University College, an approved psychology course taken at another university, or an independent study-type course (e.g., Psych 333) may count toward the minor. (Transfer students must complete at least 9 advanced units of home-based Psychological & Brain Sciences courses at Washington University.)

For those who have a broad or general interest in psychological and brain sciences, we recommend taking several courses from the five core areas (i.e., Social/Personality; Abnormal/Affective Psychology; Biological/Neurological Bases of Behavior; Behavior and Cognition; and Lifespan Development).

For those students who want to concentrate in a more specialized area, courses can reflect such specialization. For example, a student interested in the helping professions or counseling may wish to select from such courses as Psych 353 Psychology of Personality, Psych 354 Abnormal Psychology, Psych 361 Psychology of Learning, and Psych 321 Developmental Psychology. A student wishing to pursue a specialization in experimental psychology/neuroscientific bases of behavior might select from such classes as Psych 3401 Biological Psychology, Psych 361 Psychology of Learning, Psych 330 Sensation and Perception, Psych 360 Cognitive Psychology, and Psych 3604 Cognitive Neuroscience, and consider doing Independent Study (Psych 333).

## Courses

Visit online course listings to view semester offerings for L33 Psych (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L33&crslvl=1:4>).

### L33 Psych 100B Introduction to Psychology

A survey and analysis of concepts, theory and research covering the areas of learning, memory, social, abnormal, clinical, physiological and sensory psychology. This is a general survey course designed to introduce students to the diversity of areas, approaches and theories that comprise the study of mind and behavior. Psych 100B is required of all majors and is prerequisite to all upper-level courses in Psychology. Open to freshmen. Note: For freshmen with AP/IB exemption, and freshmen and sophomores concurrently enrolled in Psych 100B who are interested in exploring a few areas of Psychology within a seminar format, refer to the companion course, Psych 102 Seminar: Introduction to Psychology.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

### L33 Psych 102 Seminar: Introduction to Psychology

This seminar will enable students enrolled in Introduction to Psychology (Psych 100B) to explore in greater depth several of the ideas and concepts in contemporary psychology. Open to freshmen and sophomores who are concurrently enrolled in Psych 100B, and freshmen with AP/IB exemption. Sections are limited to 15 students.

---

Credit 1 unit. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L33 Psych 105 Psychology of Young Adulthood: College Years**

This course will cover selected topics relevant to the developmental, social, personal, and cognitive issues confronting young adults during their college years. Material will be drawn mainly from the field of psychology, and the emphasis will be on the scientific basis of concepts and on empirically supported strategies for growth and development. The knowledge gained may contribute to academic success, personal development, and a more rewarding social and academic experience over the course of college and beyond. This 1-unit course is only open to first-semester freshmen. Credit/No Credit only.

Credit 1 unit.

---

**L33 Psych 106 The Science of Effective Study Strategies**

You have now spent at least 12 years in school, studying for exams and/or tests (for most of you, that's most of your lifetime). What can current research tell us about how well we study, whether we make efficient study decisions, and whether our study strategies are effective? This course offers an overview of current research from cognitive and educational psychology on effective study strategies. Throughout this course, students are encouraged to develop their understanding of scientific research and evaluate evidence supporting study strategies. Prerequisite: open only to freshmen and sophomores. Credit/no credit only.

Credit 1 unit. A&S: SS A&S IQ: SSC EN: S

---

**L33 Psych 107 The Science of #Slaying It! in College**

You have spent the last 12 or so years "slaying it" as a student. You likely have developed lots of effective strategies for succeeding in school. Recently, our understanding of what those successful strategies are has greatly expanded. But, how do we know what skills are particularly helpful to do well academically? From psychological research! In this class students will learn about the psychological research that has illuminated which strategies are most helpful when studying, when in the classroom, and when asking for help. We will focus on how to most effectively study but will discuss other strategies as well. Students will also be asked to apply these skills in the other classes that they're taking this semester, with the hope that they develop and refine the skills they already have and continue slaying it as a student. Prerequisite: open only to freshmen and sophomores. Permission of instructor required. Credit/No Credit option only.

Credit 1 unit.

---

**L33 Psych 109 Research Seminar in Psychology**

Weekly presentations by various members of the psychology faculty; introduces students to research areas and current issues. Attendance at all lectures required. Open to freshmen and sophomores only. Prerequisite: Psych 100B. Credit/no credit only.

Credit 1 unit. A&S: SS A&S IQ: SSC Art: SSC

---

**L33 Psych 111 Mindfulness: Science and Practice**

Mindfulness is a term that is becoming increasingly used in popular culture to refer to a set of skills associated with increased attentional focus, successful stress-management, and improved health, sleep, and emotional well-being. This course will expose students to the various facets of mindfulness from both an applied and scientific perspective, both through

the teaching of mindfulness skills through a set of easy-to-learn practices and exercises, and through a survey of empirical research regarding mindfulness effects on cognition, emotion, brain function and health. The goal of the seminar will be to provide practical skills that can contribute to personal development, emotional well-being and academic success, while also developing critical thinking skills in learning how to read and evaluate primary scientific literature on mindfulness. Open to freshmen only.

Credit 1 unit.

---

**L33 Psych 212 Study Abroad: Experiences in Psychology**

Prerequisite: enrollment in an approved Psychology study abroad program and prior permission of the director of undergraduate studies. Credit to be arranged. Credit/No Credit only.

Credit variable, maximum 3 units.

---

**L33 Psych 219 The Infant Mind**

What goes on inside the mind of an infant? Descartes argued that the infant was entirely bound by sensation; thus, to think like a baby was to not think at all. Over the past few decades, however, research has revealed that the mind of the infant is abuzz with activity, capable of quickly learning astonishing amounts of information in a relatively short time. In this course we explore different topics concerning the inner workings of the infant mind. We cover topics such as imagination, language, memory, emotions and morality. This course is open to students from all majors, but Psych 100B is highly recommended.

Enrollment is restricted to 24 sophomores or by permission of the instructor.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L33 Psych 221 Freshman Seminar: Introduction to Memory Studies**

This course focuses on memory not only as an individual phenomenon but also as the basis for the transmission of culture and the construction of collective identity. We survey such topics as experimental methods and findings in the study of individual memory; questions of accuracy and vividness of memory and witness reports; repressed memories; transmission of cultural norms and identity through narratives; shared historical memories; individual trauma and historical upheaval; revision of the past and political usage of collective memory.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

**L33 Psych 225 Internship in Psychology**

An opportunity to gain supervised, applied experience in a nonacademic, community service agency. For a description of prerequisites, goals, agency selection, registration policies and course requirements, obtain a copy of *A Guide to Internships in Psychology* available outside room 221 and room 419A, Psychology Building. In addition to work at their internship site, students are required to meet regularly with the internship coordinator. This course can be taken only once. CET (<https://gephardt.institute.wustl.edu/cec/college-of-arts-sciences>) course. Permission of instructor required. Credit/No Credit option only.

Credit 3 units.

---

**L33 Psych 234 Introduction to Speech and Hearing Disorders**

Introduction to the fields of speech-language pathology, audiology, education of hearing-impaired children, and speech and hearing sciences. Normal speech and hearing processes are discussed, as well as communication disorders. Selected research topics in speech and hearing sciences are presented. Same as L12 Educ 234  
Credit 3 units. BU: BA EN: S

---

**L33 Psych 235 Practicum in Applied Behavior Analysis: Autism Spectrum Disorder**

An opportunity to be trained in applied behavior analytic techniques and to work with a child with autism/pervasive developmental disorder. Training and supervision are arranged and coordinated by the family of the child and their consultant. To receive credit, students must undertake a year's work with the child, complete the minimum number of hours of training and therapy, and attend regular therapy meetings. In addition, students must meet with the practicum coordinator for discussion of assigned readings and presentations on autism and therapy. Completion of a paper also is required. For further information and petition form, pick up the Practicum brochure from the department. This course can be taken only once for credit. Credit/no credit only. Enrollment through the practicum coordinator only. CET (<https://gephardt.institute.wustl.edu/cec/college-of-arts-sciences>) course.  
Credit 3 units.

---

**L33 Psych 246 Mindfulness in Psychology and Eastern Philosophies: Sophomore Seminar**

This course is intended to explore the connection between psychology and Eastern philosophies, including aspects of Buddhism, mindfulness, Zen meditation and yogic traditions.  
Credit 3 units. A&S: SS, CD A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

---

**L33 Psych 300 Introduction to Psychological Statistics**

Descriptive statistics including correlation and regression. Inferential statistics including nonparametric and parametric tests of significance through two-way analysis of variance. Course emphasizes underlying logic and is not primarily mathematical, although knowledge of elementary algebra is essential. Prerequisite: Psych 100B.  
Credit 3 units. A&S: NS, QA A&S IQ: NSM, AN Art: NSM

---

**L33 Psych 301 Experimental Psychology**

This course provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation, whereas the laboratory sections provide an introduction to a range of psychological phenomena through hands-on experience in experimentation. Each student also completes an independent research project. Declared psychology majors will have priority. Limited to 15 students per section. Prerequisites: Psych 100B and Psych 300.  
Credit 4 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

---

**L33 Psych 3011 Experimental Psychology**

Psych 3011 is limited to students who have not taken Psych 300 and want to enroll in Psych 300 and Experimental Psychology concurrently. Therefore, students who enroll in Psych 3011 must also register for Psychology 300. Psych 3011 fulfills the Psych 301 requirement for the major. Topics in the two courses (i.e., Psych 300 and Psych 3011) will be coordinated in order to integrate the concepts from Statistics with those from Experimental Psychology. Experimental Psychology provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation while the laboratory component provides an introduction to a range of psychological phenomena through hands-on experience in experimentation. Each student also completes an independent research project of their own design under supervision of a faculty member. Enrollment limited to 15 students. Declared psychology majors will have priority. Prerequisites: Psych 100B and concurrent enrollment in Psych 300.  
Credit 4 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: BA

---

**L33 Psych 304 Educational Psychology**

A course in psychological concepts relevant to education. Organized around four basic issues: how humans think and learn; how children, adolescents and adults differ in their cognitive and moral development; the sense in which motivation and intention explain why people act as they do; how such key human characteristics as intelligence, motivation and academic achievement can be measured. Prerequisite: sophomore standing. Offered fall and spring semester.  
Same as L12 Educ 304  
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

---

**L33 Psych 305 Health Psychology**

Review and discussion of psychobiological approaches to health, as well as psychological aspects of physical illness. Topics: stress and coping, psychosocial factors in the etiology and progression of chronic illness, and psychological sequelae of chronic illness. There will be an emphasis on research methodology and results. Prerequisite: Psych 100B.  
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

---

**L33 Psych 3091 Lesbian, Gay, Bisexual Identity Development**

Examination of sexual orientation and identity. Topics: historical perspectives, gender socialization, identity formation across the life span, cultural prejudices, the liberation movement, and recent legal changes affecting stigmatized minorities. Prerequisite: Psych 100B.  
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Art: SSC BU: BA

---

**L33 Psych 314 Behavior Modification and Self-Management**

Provides an overview of behavior modification and its applications for behavior change in various personal and social contexts. An important focus is on how behavioral tools can be used to enhance the personal change process leading to

effective self-improvement. Prerequisite: Psych 100B. Enrollment limited to 15.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU:  
BA EN: S

---

**L33 Psych 315 Introduction to Social Psychology**

Introduction to the scientific study of individual behavior in a social context. Topics: person perception; stereotyping and prejudice; attitudes; memory; and political psychology, among other issues. Prerequisite: Psych 100B.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU:  
BA EN: S

---

**L33 Psych 3195 Abnormal Child Psychology**

This course familiarizes students with current perspectives on the nature, causes, assessment, treatment and prevention of child psychiatric disorders and related family dysfunction. Theoretical perspectives and research findings are discussed pertaining to anxiety, depression, conduct disorder, attention deficit/hyperactivity disorder, autism, learning impairments and parent-child conflict. Prerequisite: Psych 100B.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

**L33 Psych 321 Developmental Psychology**

This course concentrates on the cognitive and social development of the person from conception to adolescence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior. Prerequisite: Psych 100B.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU:  
BA

---

**L33 Psych 3211 Music Cognition**

An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.

Same as L27 Music 3221

Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU:  
HUM

---

**L33 Psych 323 Play and Development**

An examination of current research and theory in play, in development and education, from infancy through the early school years. Topics include play and the development of language, social skills, creativity, and cognitive abilities. We will also examine the uses of play in educational contexts, focusing on preschool and the early primary grades. Prerequisite: Psych 321 (Developmental Psychology) or Educ 304 (Educational Psychology).

Same as L12 Educ 337

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

**L33 Psych 3242 Introduction to African-American Psychology**

This course provides an introduction to the experiences of African Americans from a psychological perspective. Throughout the course, we will consider a range of theoretical

and methodological approaches that scholars have developed to conceptualize the thoughts, styles and behaviors of African Americans. The course begins with an overview of these theories, methodologies and frameworks. The second part of the course is devoted to exploring psychological research around pertinent topics in the field such as racism and discrimination, gender, achievement and schooling, kinship and family, racial identity, religion and spirituality, and mental health. Finally, we conclude the course with discussions of current topics, controversies, and recent advances in African-American psychology. Prerequisite: Intro to Africana Studies.

Same as L90 AFAS 3242

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU:  
BA EN: S

---

**L33 Psych 325 Psychology of Adolescence**

A broad introduction to adolescence as a developmental period of transition and change. The major topics include the fundamental changes of adolescence; the context of adolescence; and processes of psychological development. Prerequisite: Psych 100B.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU:  
BA

---

**L33 Psych 326 Introduction to the Psychology of Aging**

Study of the processes of aging in the individual in terms of their behavioral effects. Age changes in biological functions, sensation, perception, intelligence, learning, memory and creativity are studied to understand the capacities and potentials of the mature and older person. Limited to 20 students. Prerequisite: Psych 100B.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU:  
BA EN: S

---

**L33 Psych 330 Sensation and Perception**

What's involved in seeing and hearing? This course covers perception from the physical stimuli (light and sound) that impinge upon the sensory receptors through the higher-level percepts that the stimuli generate. Demonstrations and illusions are used as we learn about the anatomy and physiology of the sensory systems and study the brain mechanisms that are involved in vision and audition. Prerequisite: Psych 100B.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA, SCI

---

**L33 Psych 333 Independent Study in Psychological and Brain Sciences**

Prerequisites: Psych 100B and permission of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work. Credit to be arranged. A maximum of 6 units may be applied toward the major. The electronic Petition for Supervision of Independent Study form is available online (<http://eyes.wustl.edu/psych333>). Students will be enrolled only after their form is approved by the faculty supervisor and forwarded to the undergraduate coordinator. Credit/ No Credit only.

Credit variable, maximum 3 units.

---

**L33 Psych 3401 Biological Psychology**

An introduction to biological mechanisms underlying behavior. Topics include the physiology of nerve cells; anatomy of the nervous system; control of sensory and motor activity,

arousal and sleep; motivation; and higher mental processes.  
Prerequisite: Psych 100B.  
Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

---

### L33 Psych 344 Principles of the Nervous System

The basic anatomical, physiological and chemical organization of the nervous system; how nerve cells communicate with each other, the ionic basis of nerve signals, the function and properties of chemical agents in the nervous system, the development of neural circuitry, and how neurons interact to produce behavior. Prerequisite: Biol 2960, Biol 2970 recommended, Biol 3058 recommended or Psych 3401 and permission of instructor.  
Same as L41 Biol 3411  
Credit 3 units. A&S: NS A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

### L33 Psych 345 Genes, Environment, and Human Behavior

This class will examine how genetic influences impact various dimensions of human behavior, ranging from traits (e.g., personality) to psychiatric disorders. Topics to be covered include methods used to study genetic influence, how genetic predispositions interact with the environment, and ethical implications. Modern methods for gene-identification, such as genomewide association studies, polygenic risk scores and epigenetic experiments will be examined in detail. Emphasis will be placed on understanding core concepts (e.g., what is identity-by-descent) as well as application (e.g., calculate heritability, interpretation of results from published studies). Prerequisite: Psych 100B.  
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

### L33 Psych 347 Environmental Psychology

Explores relations between people and their physical and social environments. Topics include interactions between human behavior and toxins, habitat destruction/species extinction, exhaustion of fossil fuels, and climate change as well as environmental contributors to psychopathology. The course examines the influence of space on human behavior and the design of homes, work areas, educational settings, and urban environments. Prerequisite: Psych 100B.  
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

### L33 Psych 3501 Psychotherapy: Introduction to Practice and Research

This is an introductory course in psychotherapy: The treatment of psychological problems through the application of interventions grounded in psychological theory and focusing on behavior or mental processes. Students become familiar with the more popular schools of psychotherapy, including their historical context, characteristic techniques, theoretical underpinnings and current research support. Students also gain an appreciation of the problems and solutions in researching psychotherapy, as well as emerging variations on psychotherapy procedures. Prerequisite: Psych 100B.  
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

### L33 Psych 353 Psychology of Personality

Review of basic theoretical orientations to the understanding of personality and complex human behavior. Overview of related techniques, procedures and findings of personality assessment and personality research. Discussion of critical

issues in evaluation of personality theories. Prerequisite: Psych 100B.  
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

---

### L33 Psych 354 Abnormal Psychology

This is an introductory course in psychopathology or the scientific study of mental health disorders. The course includes definitions, theories and classifications of abnormal behavior. Content focuses on symptoms, classification, prevalence, etiology and treatment of mental health disorders, including mood, anxiety, eating, schizophrenia spectrum, substance use and personality disorders. Prerequisite: Psych 100B.  
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

### L33 Psych 356 Introduction to Forensic Psychology

This course is an introduction to the interaction between psychology and the legal system. The contribution of psychology to such legal areas as family law, juvenile delinquency, criminal cases, law enforcement and correctional psychology is surveyed. Topics covered include domestic violence, child abuse, personal injury, eyewitness testimony, insanity, sex offenders and psychopaths. Legal standards regarding insanity, civil commitment and expert testimony are reviewed. We also focus on the emerging contributions of neuroscience to the field of forensic psychology. Prerequisite: Psych 100B.  
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

### L33 Psych 357 Introduction to Clinical Psychology

A survey of clinical psychology. Emphasis is placed on historical and recent developments in the field (e.g., managed care), as well as the consideration of the roles, functions and techniques of clinical psychologists including psychological testing and psychotherapy. Prerequisites: Psych 100B and either Psych 353 or Psych 354.  
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

---

### L33 Psych 358 Language Acquisition

This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include; biological bases of language development; development of phonology, syntax, and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisites: Psych 100B and Ling 170D.  
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA

---

### L33 Psych 358W Language Acquisition

This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include: biological bases of language development; development of phonology, syntax and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisites: Psych 100B and Ling 170D and junior or senior standing. Writing-intensive.  
Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

**L33 Psych 360 Cognitive Psychology**

Introduction to the study of thought processing from an information-processing approach. Emphasis on theoretical models grounded in empirical support. Topics include pattern recognition, attention, memory, reasoning, language processes, decision making and problem solving. Prerequisite: Psych 100B. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

**L33 Psych 360A Cognitive Neuroscience**

A general introduction to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis is placed on how emerging methods and approaches from both neuroscience and cognitive psychology have been integrated to yield new insights into the organization and structure of higher mental processes. Topics include perception, attention, memory, language and executive control. Prerequisite: Psych 100B.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

**L33 Psych 361 Psychology of Learning**

Basic learning processes in animals, such as conditioning, reinforcement, punishment and constraints on learning. Comparisons and interactions between classical and operant conditioning. Consideration given to learning theorists and theories, along with applications from the laboratory to the "real world." Prerequisite: Psych 100B.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

**L33 Psych 361A Psychology of Learning: Laboratory**

This laboratory course is a supplement to the Psych 361 Psychology of Learning class. Students gain firsthand experience, via a virtual rat, of principles and procedures related to the acquisition and maintenance of behavior. Weekly lab meetings introduce Pavlovian and operant principles, which are then implemented as laboratory exercises with the virtual rat. Concurrent enrollment in Psych 361 required.

Credit 1 unit. A&S: NS A&S IQ: NSM

**L33 Psych 3645 Understanding Emotions**

Emotions shape and are shaped by our subjective experiences, physiology, behaviors, cognitions, social interactions and health. Their complexity and significance make the study of emotions particularly exciting and challenging. This course offers an overview of theory and research on emotions with content stretching across psychological disciplines, including personality, social, clinical, developmental and neuropsychology. Course content includes definitions of emotions, physiological changes associated with emotions, and individual differences in emotional experience. The course also examines how culture, cognitions and relationships shape and are shaped by emotions and how emotions are related to physical and mental health. Prerequisite: Psych 100B.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

**L33 Psych 366 Psychology of Creativity**

This course is an introduction to the psychological study of art and creativity. Our topics include the artist, the audience, the artistic product, the creative process, and social, cultural, and institutional influences on the creative process. We will explore these issues by considering a range of creative fields, including painting, literature, music and theater performance. Throughout the semester, we will take a developmental perspective on psychology and art. How do children learn to create, perceive

and understand different art forms? What role can the arts play in education? To ground our study of the psychology of art, we will explore what "art" is, which members of society are labeled "artists," and how these categories are socially and culturally defined. Prerequisites: Educ 304 Educational Psychology or Psych 325 Adolescent Psychology or Psych 321 Developmental Psychology.

Same as L12 Educ 366

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

**L33 Psych 367 Positive Psychology: The Science of Happiness**

Reviews the relatively recent development in the field known as "Positive Psychology." Topics may include: happiness and life-satisfaction, positive self-esteem, creativity, caring relationships, love (passionate and otherwise), empathy, optimism, ambition, moral character development, attachment, compassion, forgiveness, helping, work ethics, and successful aging. Designed to take a sampling of those aspects of psychology that emphasize the positive side of human nature. Prerequisites: Psych 100B, junior or senior standing.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA EN: S

**L33 Psych 374 Drugs, Brain and Behavior**

This course reviews information pertaining both to medications used to treat psychiatric disorders and to psychoactive drugs of abuse. By learning principles of pharmacology and mechanisms of action of these agents, students develop an enhanced knowledge of the brain mechanisms underlying abnormal human behavior. Prerequisites: Psych 100B and one of the following: Psych 354 or Psych 3401 or Psych 344.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: SCI

**L33 Psych 380 Human Learning and Memory**

A survey of issues related to the encoding, storage and retrieval of information in humans. Topics include memory improvement strategies, people with extraordinary memories, memory illusions and distortions, among other topics. Limited to 25 students. Prerequisite: Psych 100B.

Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM BU: BA

**L33 Psych 399 Living, Dying and Death: A Biopsychosocial Approach to Understanding the End of Life**

This survey course examines dying and death from biological, psychological and social perspectives. Topics include theoretical and research approaches to studying dying and death; historical and cross-cultural attitudes; psychological understanding and coping with death over the life span; the process of dying and definitions of death; health care professionals and treatment approaches for the dying; assisted death and other ethical/legal issues, grief and bereavement, mass tragedy and public death, and planning for death. Prerequisite: Psych 100B.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

**L33 Psych 4046 Developmental Neuropsychology**

Development of the brain and associated changes in cognitive abilities are discussed, with an emphasis on recent research that integrates the theoretical perspectives of cognitive psychology and neuropsychology. Discussion focuses on early development and disorders affecting the brain such as cerebral palsy, sickle cell disease and autism. Prerequisite: Psych 321, Psych 360, Psych 3604 or Psych 3401.

Credit 3 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

---

**L33 Psych 4075 Advanced Research Methods & Design**

This course is an advanced foray into research design and methods used in psychological science. This course is project-based, writing-intensive, and will be supplemented heavily with readings and discussions of topics of broad importance to psychological research (e.g., reliability, validity, signal detection theory, philosophy of science). These readings will enhance students' abilities to think critically about psychological research design and methods, as both a consumer and creator of psychological research. During the course of the semester they will complete two original research projects (e.g., an observation study and an experimental study). Together with their classmates they will devise research questions, design studies to test their research questions, collect data, and statistically analyze their results. Individually, students will write-up, and then revise, each research project in an APA-style paper. The writing requirements for this course build on the skills students acquired in Experimental Psychology and will further their abilities to communicate scientific ideas more skillfully, clearly and accurately. Prerequisite: L33 Psych 301 or 3011. Credit 3 units. A&S IQ: NSM, WI

---

**L33 Psych 413 Contemporary Topics in Social Psychology**

Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

**L33 Psych 4135 Human Behavior in Extreme Situations**

This course familiarizes students with psychological theory and research that attempts to answer the question: What are the protective factors that help people who find themselves in an extreme situation respond constructively to the stress they must cope with? Extreme situations are characterized by conditions that force individuals and groups to adapt themselves involuntarily, entirely and with the greatest of speed. Readings are drawn from two sources (a) literature that describes extreme situations and human response to the trauma they cause (e.g., prisoner behavior in Nazi concentration camps, brainwashing of American soldiers during the Korean War, and response to a natural disaster and an airliner crash), and (b) research on potentially protective psychological variables such as coping and resilience. Prerequisites: junior or senior standing and 6 hours of advanced, home-based psychology course work. Enrollment limited to 17. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L33 Psych 4175 Applied Statistical Analysis with R**

This course is designed to introduce R as both a means of applied statistical analysis as well as a window into data organization and programming. The goal of the course is to teach the tools needed to take a raw dataset and not only perform a statistical test in R, but also to learn how to arrange the dataset to perform a variety of tests, to choose the appropriate test, and to visualize the results. Students gain practical knowledge of how to use statistics in research. Prerequisites: Psych 300, or Math 2200 or Math 3200, or other approved university statistics course; or graduate standing in psychology, or graduate standing in another department by permission. Credit 3 units.

---

**L33 Psych 4182 Perception, Thought and Action**

This course focuses on current topics in visual perception, visual attention, eye movements and sensory-motor behavior. Readings consist of recent journal articles. Class meetings emphasize presentation and discussion of the material in the readings. Prerequisite: previous course work in cognitive psychology, experimental psychology or perception. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

**L33 Psych 4227 The Psychology of Close Relationships**

This course examines close relationships from a scientific perspective. The course focuses on intimate relationships but also touches on friendships and family relationships. The objective of this course is to introduce students to the scientific perspective of close relationships. Students learn how research psychologists apply the scientific method of data collection and analysis to investigate how people experience and think about relationships. We explore questions such as: Why are people attracted to some people but not others? How do relationships develop over time? How does each person's personality influence the trajectory of a relationship? How do external factors (e.g., social norms, stress, life events) influence relationships? How do gender and sexual orientation influence people's experiences in romantic relationships? Prerequisites: Psych 100B and Psych 301. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L33 Psych 427 Social Gerontology**

This course provides an introduction to aging and growing old, from an interdisciplinary perspective. Specific attention is paid to demographics, physical health and illness, mental health, interpersonal relations, work issues, living arrangements, ethics, and death and dying. Prerequisites: junior or senior standing and completion of 6 advanced units in Psych. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

**L33 Psych 4301 Contemporary Topics in Cognitive Development**

Cognitive Developmental topics include: Piagetian abilities (e.g., conservation, formal reasoning), basic cognitive abilities (e.g., processing speed), executive functions (e.g., working memory), and other current topics (e.g., processing facial stimuli). Prerequisite: Psych 321 or 360. Credit 3 units. A&S: SS, WI

---

**L33 Psych 4302 Cognitive Psychology Applied to Education**

This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning and comprehension with special focus on areas, theory and research that have potential application to education. Thus, the course provides selective coverage of theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes are explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. Prerequisites: junior/senior status; 9 units in psychology and Psych 100B or junior/senior status; 9 units in Education and Psych 100B. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

---

**L33 Psych 4305 Psychological Science: Fact and Fiction**

Skeptical analysis of psychological science as practiced and popularized in the media. Analysis of discrepancies between media and scientific claims regarding areas such as repressed memory, brain imaging, heritability and psychotherapy. Additional examination of scientific career demands such as peer review, journal publication and research funding. These topics are interwoven with a review of common errors in reasoning particularly with respect to probabilistic reasoning and the public misperception of the practice and principles of scientific psychology. Prerequisite: junior or senior standing and completion of 6 advanced units in psychology. Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI Arch: HUM Art: SSC EN: S

---

**L33 Psych 433 Psychology of Language**

This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

---

**L33 Psych 4351 Reading and Reading Development**

This seminar surveys current research on reading and spelling skills and their development. Students read and discuss journal articles that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. Prerequisites: permission of instructor and previous course work in experimental psychology or psychology of language. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L33 Psych 4352 Reading and Reading Development WI**

This writing-intensive seminar surveys current research on reading and spelling skills and their development. Students read and discuss articles and chapters that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. Prerequisites: Psych 100B and Ling 170D and junior or senior standing. Credit 3 units. A&S: SS, WI A&S IQ: SD, WI EN: S

---

**L33 Psych 4361 Psychological Perspectives on the Self**

Historical and contemporary theories related to the self in social psychology. Emphasis on contemporary research and a focus on the self as a construct central to understanding important social phenomena. Topics include definitions and measurement of the self; motivational implications of the self for impression management, ability appraisal, self-regulation and social inference. Prerequisites: Psych 100B and Psych 315. Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI Art: SSC

---

**L33 Psych 4408 Trauma and Memory**

A thorough investigation of the effects of trauma on memory in both individuals and collective groups. Topics include flashbulb memories; forgetting and repression; post-traumatic stress and memory; and effects of trauma on individual and group identity. Prerequisites: Psych 100B and 6 units of advanced-level psychology or anthropology course work. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

---

**L33 Psych 4413 Advanced Cognitive Neuroscience (Writing Intensive)**

An intensive, case-study-based approach to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis is placed on understanding and evaluating cutting-edge neuroscience research that has yielded new insights into the organization and structure of higher mental processes. Students develop critical thinking and writing skills via a strong class participation component and a writing-intensive format. Topics include perception, attention, memory, language, emotion and executive control. Writing Intensive. Declared psychology majors are given priority over others to enroll. Prerequisites: Psych 100B and either Psych 3401 or Psych 344/Biol 3411 or Psych 3604. Credit 3 units. A&S: NS, WI A&S IQ: NSM, WI Art: NSM

---

**L33 Psych 444A Independent Study for a Supplemental Concentration**

Prerequisite: acceptance into a supplemental concentration in Psychological & Brain Sciences (only for students who matriculated prior to 2016). Written permission (Petition for Supervision of Psych 444A) of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work is also required. In addition to the approved research for the supplemental concentration, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444A forms are available in the Psychology Building, room 207B. Students will be enrolled only after they have completed both the Petition for a Supplemental Concentration in P&BS and the Petition for Supervision of P&BS 444A, and returned them to the undergraduate coordinator in Psychology 207B. Open only to P&BS majors, and by approval. Credit 3 units.

---

**L33 Psych 444B Independent Study for the Major in P&BS: Cognitive Neuroscience**

Prerequisites: acceptance into the P&BS cognitive neuroscience major. Permission of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work. In addition to the approved research in the area of cognitive neuroscience, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444B forms are available in the Psychology Building, room 207B. Students will be enrolled only after they have completed the petition and returned it to the undergraduate coordinator in Psychology 207B. Credit 3 units. A&S IQ: SSC EN: S

---

**L33 Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences**

Prerequisites: acceptance into a concentration in Psychological & Brain Sciences (only for students who matriculate Summer 2016 and later). Written permission (Petition for Supervision of P&BS 444C) of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work is also required. In addition to the approved research for the concentration, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444C forms are available in the Psychology Building, room 207B. Students will be enrolled only after they have completed both the Petition for a Concentration in P&BS

and the Petition for Supervision of P&BS 444C, and returned them to the undergraduate coordinator in 207B. Open only to P&BS majors and by approval.  
Credit 3 units.

---

### L33 Psych 4450 Functional Neuroimaging Methods

This course is intended for students wishing to become sophisticated producers or consumers of functional neuroimaging data. Emphasis will be on extracting the most information from neuroimaging techniques toward the goal of answering psychologically motivated questions. A number of issues relating to neuroimaging methodology will be covered, including technical principles, acquisition options, potential sources of artifact, experimental design, software tools, and analytical techniques. Class approach will be hands-on, with students gaining experience in actually acquiring and working with neuroimaging data. Prerequisites: Permission of instructor required.

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

### L33 Psych 4535 Personality Judgment: How We Perceive Ourselves and Others

This course examines how we form judgments of people's personalities. The central question is the accuracy of personality judgments. The readings examine theory and research concerning this topic, and class discussion focuses on critical evaluations of the readings and generation of new research questions. This course examines personality judgment from a scientific perspective and addresses such questions as: How should accuracy be measured? What do you have to know about a person to judge their personality accurately? Does accuracy increase with greater acquaintance? Who makes a good judge of personality? How well do relationship partners know each others' personalities? How is judging our own personality similar to or different from judging others' personalities? How accurate are our perceptions of our own personality? How can the accuracy of personality judgment be improved? Prerequisites: at least 6 units of home-based psychology courses and Psych 353.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

### L33 Psych 4541 Personality and Psychopathology

This course is an advanced seminar in the study of personality disorders. It covers a range of conceptual and methodological issues involved in scientific efforts to understand ways in which pathological personality features disrupt people's lives. Students learn about the similarities and distinctions between normal and pathological features of personality as well as the role that personality may play with regard to the causes and treatment of other kinds of mental disorder. A laboratory component of the class focuses on the development of practical skills in conducting research interviews designed to elicit information about personality and social adjustment. Prerequisites: Psych 354, junior or senior standing, and permission of the instructor.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

### L33 Psych 4555 Emotion Regulation

The purpose of this course is to provide an introduction to the field of emotion regulation. We will discuss theoretical and empirical work on emotion regulation from various areas of psychology, including social, personality, developmental, clinical and neuroscience. Example topics include definitional issues, goals and strategies, personal and interpersonal consequences, sociocultural influences, lifespan development, health and psychopathology. Prerequisite: Psych 301.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

### L33 Psych 4557 Biopsychosocial Aspects of Eating Disorders and Obesity

The aim of this seminar course is to examine the epidemiology, etiology, prevention and treatment of body image, eating disorders and obesity. An emphasis is placed on understanding the characteristic symptoms of excessive dieting, body image disturbance and binge eating, not only as formal psychiatric syndromes but as a representation of dysregulatory processes reflecting social-cultural, psychological and biological disturbances. Students also learn about the clinical characteristics, medical sequelae and physical aspects of eating disorders and obesity. Prerequisites: Psych 100B and junior/senior standing plus 6 units of advanced home-based psychology.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

### L33 Psych 4591 The Development of Social Cognition

This course explores what is known about the development of social cognition. Our starting point is infants' capacity to navigate the social world, for instance, detecting agents, identifying social partners and learning from those around us. We consider what happens when the human ability to reason about others breaks down (as with autism), and what this can teach us about typical development. Each week we cover one topic and a related set of readings. Class meetings are devoted to active discussion and debate about the content of the readings. Students are required to write a weekly reaction paper to the readings to promote class discussion and give an in-class presentation on a novel research topic at the end of the semester. Graduate students may have additional course requirements. Prerequisites: Psych 100B and one of the following: Psych 315 or Psych 321 or Psych 360.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

### L33 Psych 4592 Development of Social Cognition (Writing Intensive)

This course will explore what is known about the development of social cognition, with a focus on infants' and children's reasoning about others' actions and minds. We will begin by framing the critical issues in social cognitive development, with a focus on attachment in infancy and the human propensity to connect with others. We will then consider contemporary research concerning infants' ability to navigate the social world, for example, identifying social partners and learning from others. We will also look at what happens when the human capacity to reason about others breaks down, as with autism. Further topics will include children's reasoning about social groups, development of bias and prejudice, various aspects of morality, and social exclusion and bullying. Each week we will cover a topic that includes a set of readings, for which you will write a brief response paper. Class time will be devoted to active discussion of these readings, with lectures to set the stage for discussion. Writing Intensive. Prerequisites: Psych 100B, and either Psych 315, 321, or 360

Credit 3 units. A&S IQ: SSC, WI EN: S

---

### L33 Psych 461 Seminar in Selected Topics in Learning & Memory: Collective Memory

This course provides an overview and analysis of phenomena of people remembering as part of a group — one's country, one's state, one's university, one's family. Collective memories are critical for one's identity, for knowing who we are and how

to interpret the world around us. We will consider narcissistic tendencies of group memories in specific contexts (e.g., the Russian vs. American interpretation of world events; views of Trump supporters vs. Clinton supporters on events in the U.S.). The course will range from humanistic, anthropological, psychological, and sociological perspectives on memory. Prerequisites: Psych 100B and a course on human memory or permission of the instructor.  
Credit 3 units.

---

### L33 Psych 4615 The Science of Paying Attention

What processes underlie humans' ability to "pay" attention? This course will introduce students to theories of attention and cognitive control. Students will develop an understanding of empirical approaches to studying the control of attention, and examine factors that facilitate and impair humans' ability to pay attention. A final section will examine attention and cognitive control challenges that accompany aging and select psychological disorders such as ADHD, and applications of attention and cognitive control research to the classroom, driving, and other contexts. Prerequisites: Psych 100B and Psych 301.  
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

### L33 Psych 462 Psychology of Memory and Cognition

This course will explore the core readings that have shaped the way scientists tackle fundamental aspects of memory and cognition. These include cognitive methods, pattern recognition, attention, working memory, episodic memory, semantic memory, language acquisition and comprehension, decision making, problem solving, and expertise. Each week we will explore at least three "classic" readings on a given topic along with some more recent papers. The goal is to expose students to this foundational literature, and develop a better understanding of the zeitgeist that set the stage for these papers to change how researchers tackled specific problems. Prerequisite: Psych 360 or Psych 380.  
Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

### L33 Psych 4625 Autobiographical Memory

This course investigates how people create and remember their personal life histories, with an emphasis on empirical studies within the cognitive tradition. Possible topics include childhood amnesia, false memories, emotional memories, the role of motivation in remembering, and how personal events are represented in memory. Prerequisite: Psych 360 or Psych 301 or Psych 380.  
Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI Art: SSC

---

### L33 Psych 4647 Ancient Madness

In this course we will ask what madness meant in Greek and Roman culture. We will find reading strategies that are sensitive both to ancient evidence and to the ethical demands of talking about, evaluating, and categorizing people treated as mad. While we will concentrate on literary (particularly tragic and epic), philosophical, and medical texts, we will also look at visual representations and evidence from ritual and cult. An important part of our project will involve tracing the afterlife of classical ideas: The history of melancholia will ground this aspect of the course. Finally, we will consider how antiquity informs psychoanalysis (Oedipus, Antigone, Narcissus), and how ancient madness might partake in a critique of contemporary understandings of mental illness.  
Same as L08 Classics 4647

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

---

### L33 Psych 4651 History and Modern Systems of Psychology

An introduction to the history of psychology. This course begins with a brief consideration of forces leading to development of psychology in the mid-1800s. It then examines the birth of modern psychology in Germany, and the schools of psychology that emerged early in the 20th century. Newer orientations and ideas are considered in the final segment of the course. We also consider the impact of psychology on American public life during the 20th century. Prerequisites: Psych 100B, junior or senior standing and 6 units of advanced home-based Psychology courses.  
Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM EN: H

---

### L33 Psych 4702 Current Debates in Psychology

In this seminar we debate issues of current controversy in psychology. Topics range from perception (Can subliminal messages affect behavior?) to development (Do children in daycare develop differently than children cared for at home?) to mental illness (Is road rage a real psychological illness?). Discussions are based on readings of primary research and review articles, and are augmented by written assignments. Prerequisite: completion of 6 units of advanced home-based psychology courses.  
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

### L33 Psych 4745 Genes, Brain and Behavior: Pathways to Psychopathology

This seminar introduces students to emerging methods and recent empirical literature evaluating links between genes, brain and behavior, that is beginning to illuminate specific biological pathways shaping risk for and the emergence of psychopathology. In particular, the course focuses on the design, analysis and interpretation of multimodal research (e.g., fMRI, PET, EEG, pharmacology, molecular genetics, environmental assessment/manipulation) examining the biological underpinnings of behavioral traits relevant to psychopathology. Seminar readings are primary journal articles, reviews and book chapters. Prerequisite: Psych 3401 (or equivalent).  
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

### L33 Psych 4746 Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior

This seminar will introduce students to methods and recent empirical literature evaluating links between genes, brain and behavior. This research is beginning to illuminate specific biological pathways shaping risk for psychopathology. In particular, the course focuses on the design, analysis and interpretation of multimodal research (e.g., fMRI, PET, EEG, pharmacology, molecular genetics, environmental assessment/manipulation) examining the biological underpinnings of behavior relevant to psychopathology. Primary journal articles, reviews, and book chapters are the readings for this seminar. Prerequisites: Psych 100B and Psych 345 or Psych 3401 or Biol 2970.  
Credit 3 units. A&S: NS A&S IQ: NSM Arch: SSC Art: SSC

---

### L33 Psych 4765 Inside the Disordered Brain: Biological Bases of the Major Mental Disorders

How do subtle disturbances in brain circuits lead to abnormal behavior and psychopathology? This course provides students

with a working knowledge of our rapidly evolving understanding of brain circuits that create order in our social, emotional and cognitive worlds, and how disorder within these circuits leads to a broad range of psychopathology including depression, anxiety, phobias, PTSD, OCD, addiction, schizophrenia, psychopathy and violence. Prerequisites: Psych 100B and Biological Psychology (Psych 3401). Same as L64 PNP 4765. Credit 3 units. A&S: NS A&S IQ: NSM Art: NSM

---

### L33 Psych 488 The Cognitive Neuroscience of Film

To understand complex events in real life depends on perception, action and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar uses results from psychology and neuroscience to try to better understand the experience of a movie viewer, and uses theory and practice to explore psychological hypotheses about perception. Prerequisite: Psych 360 or Psych 3604 or Psych 4604, or graduate standing in Psychology.

Credit 3 units. A&S: NS A&S IQ: NSM

---

### L33 Psych 4891 The Science and Politics of Testing in the United States

Why do tests permeate American Society? Tests have been integral to the decision-making process in many venues of American culture-e.g., immigration opportunities, voting rights, college admissions, workforce considerations, special education placement, educational reform, and graduation requirements. The credibility of these decisions depends upon the claim that a particular test is a scientific instrument and relevant to the decision-making process. This claim is worthy of study. The purpose of this course is twofold. The first purpose is to examine how the nexus of science and politics influence testing practices in American society. The second purpose is explore how testing practices influence the culture of schools, civil liberties, the work place, and public discourse about merit.

Same as L12 Educ 4891

Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD EN: S

---

### L33 Psych 494 Behavioral Psychology Readings Group

This weekly journal-style readings class provides the opportunity to read and discuss seminal as well as current papers on the conceptual aspects of behavioral psychology and relevant research. Points of contact among behaviorism, cognitivism and neuroscience, and the natural lines of fracture, are examined. Prerequisite: permission of instructor.

Credit 1 unit. A&S: SS A&S IQ: SSC EN: S

---

### L33 Psych 4971 Undergraduate Teaching

Limited opportunities for outstanding undergraduates to serve as teaching assistants for selected departmental courses. Prerequisites: Psychology majors only, junior/senior standing and permission of psychology adviser, course instructor and departmental approval. Credit cannot be counted toward fulfilling the requirements for the major or minor in psychology. Credit/No Credit only. Enrollment by department only.

Credit 2 units.

---

### L33 Psych 498 Study for Honors

Acceptance into the Honors Program is based on superior performance as evidenced by the student's record in undergraduate course work and the written agreement (Petition for Permission to Enroll) of a member of the faculty of the

department (or other approved supervisor) to supervise an Honors project. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the department. Recommendation for an Honors degree is based on the evaluation of the written thesis and the student's overall performance as an undergraduate. Students in the Honors Program meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. Psych 498 is a writing-intensive course. All students must meet with Dr. Sommers prior to registering. Prerequisite: Psych 301 or equivalent and permission of instructor. Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI Art: SSC

---

### L33 Psych 499 Study for Honors

Acceptance into the Honors Program is based on superior performance as evidenced by the student's record in undergraduate course work and the written agreement (Petition for Permission to Enroll) of a member of the faculty of the department (or other approved supervisor) to supervise an Honors project. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the Department. Recommendation for an Honors degree is based on the evaluation of the written thesis and the student's overall performance as an undergraduate. Students in the Honors Program meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. Permission of instructor is required for this course. All students must meet with Dr. Sommers prior to registering. Prerequisite: Psych 301 or Psych 3011.

## Religion and Politics

The John C. Danforth Center on Religion and Politics serves as an ideologically neutral venue for fostering rigorous scholarship and informing broad academic and public communities about the intersections of religion and U.S. politics.

The Center's programs include:

- Public lectures, conferences and symposia (<http://rap.wustl.edu/events>) relating to issues at the intersection of religion and U.S. politics;
- Research colloquia on American religion, politics and culture, in which scholars and students discuss cutting-edge research;
- *Religion & Politics*, an online journal engaging a diverse array of scholars, journalists and public leaders;
- New courses (<http://rap.wustl.edu/courses-type/current-courses>) on American religion and politics for Washington University students. The courses contribute to an interdisciplinary undergraduate minor in religion and politics.

The Center offers a religion and politics minor, an interdisciplinary program that combines resources from the Danforth Center on Religion and Politics with relevant offerings from other academic programs, including Religious Studies,

Political Science, History, American Culture Studies, African-American Studies, English, and Women, Gender, and Sexuality Studies. Designed to complement and contribute to students' major fields of study, the minor also aims to augment the undergraduate education of those considering postgraduate professional programs in public policy, education, law, medicine or social work. The religion and politics minor provides an opportunity for exploring in sustained ways how religion and politics have intersected American culture, both in historical and contemporary terms.

As part of the program, students may examine any number of issues such as church-state relations, religion's role in shaping gender and sexuality debates, religion and electoral politics, public conflicts over the nexus of religion and science, religion's entwining with reform movements (from abolition to environmentalism), or confluences of religion and politics in national vocabularies, media and imagination.

## Majors

The Center does not offer a major. Interested students are encouraged to explore the minor in religion and politics. Please refer to the Minors section for more information.

## Minors

### The Minor in Religion and Politics

#### Required units: 15

15 units of course work, including:

- **One required course:** This should be completed prior to the second semester of the junior year.  
RelPol 201 Religion and American Society (3 units)  
or RelPol 225 Religion and Politics in American History (3 units)
- 12 additional units, 9 of which must be 300 or 400 level, and 9 of which, at any level, must be taught by Center faculty.

#### Required activities:

Attendance at five events sponsored by the Center on Religion and Politics (lectures, colloquia, lunch discussions, film screenings). Students must inform the director of undergraduate studies of the events they attend so this can be recorded for their record.

#### L57 RelPol 102 Thinking About Religion

Nearly everyone has had some experience with something they would call "religion," from at least a passing familiarity through the media to a lifetime of active participation in religious communities. But what do we actually mean when we use the word? What is a religion? What does it mean to call something a religion, or "religious"? And what does it mean to study religion, given the slipperiness of the concept itself? This course offers an introduction to the academic study of religion through a consideration of these questions: What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? We will also consider what is at stake

in our investigation and inquiry into religion — for the inquirers, for the subjects of inquiry, and for society more broadly — and what kind of lens the study of religion offers us on ourselves, our neighbors, and society, in turn. To these ends, we will discuss major theoretical approaches to the study of religion and significant work on religions and religious phenomena, toward a better understanding of what "religion" might be and how it might be studied today. No prior knowledge or experience of religion, religions, or anything religious is expected or required. This course is required for religious studies majors and minors. Same as L23 Re St 102

---

**L57 RelPol 130 Fresh Sem: The Ritual Landscape of Cahokia: Perspectives on the Politics of Religion & Chiefly Power**

The purpose of this class is to engage and challenge freshman students in an open discussion about the prehistoric Mississippian community of Cahokia. The focus of this course is two-fold. The first is to study the way in which the archaeological evidence has been interpreted. The second is to examine other perspectives on Cahokia, especially from the Native American descendants who consecrated this landscape nearly a millennium ago. An underlying tenet of this seminar in understanding Cahokia can also be achieved through the traditions and literature of Native Americans. In the end we want to understand the basis for Cahokia's organization as a prehistoric Native American community, and the role that ritual and religion played in the rather dramatic and dynamic history of this community and the surrounding region. Same as L48 Anthro 130

---

**L57 RelPol 1711 Literature Seminar for Freshmen: Literature, Spirituality, and Religion**

Reading courses, each limited to 15 students. Topics: selected writers, varieties of approaches to literature, e.g., Southern fiction, the modern American short story, the mystery; consult Course Listings. Prerequisite: first-year standing. Same as L14 E Lit 171  
Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

---

**L57 RelPol 201 Religion and American Society**

This course explores religious life in the United States. We focus our study on groups and movements that highlight distinctive ways of being both "religious" and "American," including the Americanization of global religions in the U.S. context. Major themes include religious encounter and conflict; secularization, resurgent traditionalism and new religious establishments; experimentalism, eclecticism and so-called "spiritual" countercultures; the relationship between religious change and broader social and political currents (including clashes over race, class, gender and sexuality); and the challenges of religious multiplicity in the United States. Students: (1) acquire knowledge of the disparate religions practiced in North America during the 20th century and beyond; (2) examine some of the chief conflicts as well as alliances between religion and the American social order in a global context; and (3) develop interpretive tools for understanding religion's present and enduring role in the U.S. and the world.  
Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H

---

**L57 RelPol 209 Scriptures and Cultural Traditions: America's Bible**

When we think of the word "scripture" in antiquity, we might think of the texts that have been compiled in the different holy books that we currently have today. Yet the function of "scriptures" within a community, and the status given to different texts treated as "scriptural," has changed in different times and places. In this course, we will consider texts that would eventually come to be part of the Hebrew Bible, New Testament, and the Qu'ran as well as several of the exegetes and reading communities that shaped their various interpretations. We will explore how non-canonical sources played a role in the formation of the various canons we have today, comparing the authoritative status given to these texts to that given to other works from antiquity, such as the epics of Homer. Special attention will be played to the role of the receiving community in the development of "scripture," and the variety of the contexts in which scripture can function in the construction of and opposition to religious authority. Same as L93 IPH 209

---

**L57 RelPol 215 Performing Religion, Ritualizing Gender**

What's the difference between a wink and a blink? What the difference between graduation, a sacrament, and the electric slide? We make fine-grained distinctions every day in our own enactment and interpretation of these different kinds of practices. This class will introduce students to key academic approaches to "ritual," "practice" and "performance," and will ask whether these distinctions are important or arbitrary. Ritual studies (based in religious studies) also happens to center around the very same questions that gave birth to gender and queer studies (is gender a performance?), thus a parallel examination of ritual and performance studies necessarily brings religious identity into conversation with broader questions of identity (gender, race, class).  
Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

---

**L57 RelPol 220 Whose St. Louis? Religion, Race, and Power in the Gateway City**

Through the city's history, St. Louis residents and their leaders have established laws, policies and practices that have privileged certain groups at the expense of others. Race has often been part of that equation. This course examines moments of social crisis in St. Louis history — up to the present day — when residents have mobilized, resisted or ignored efforts to address race-based inequalities. We consider how St. Louis' religious communities in particular have understood the city's racial codes and how they have positioned themselves in relation to movements for social change. Along the way we explore slavery, property and housing restrictions, interstate construction, hiring practices, and gun violence. In addition to course reading assignments and film screenings, students will visit three religious sites to encounter and analyze the intersections of race, religion and power in present-day St. Louis.  
Credit 3 units. A&S IQ: HUM BU: BA EN: H

---

**L57 RelPol 225 Religion and Politics in American History**

The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic. These competing visions of the nation have created conflict throughout

American history and have made the relationship between religion and politics quite contentious. This course surveys the complex entanglements of religion and public life from the colonial era through the contemporary landscape. Topics covered include: religious liberty and toleration, secularization, the rise of African-American churches, the Civil War, national identity and the Protestant establishment, the religious politics of women's rights, religion and the presidency, the Cold War, the religious left and right, and debates over church-state separation. Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: BA EN: H

---

**L57 RelPol 230 Black-Jewish Relations in the United States**

The relationship of blacks and Jews in the United States is at once intimate and strained, mutually beneficial and antagonistic. This course examines this uneasy alliance from a number of perspectives including anthropology, politics and identity politics, history, religion and class. Beginning with American anthropology's Jewish founding father, Franz Boas, challenging the concept of race, the course traces the relations of blacks and Jews throughout the 20th century and in our contemporary moment. We will pay particular attention to the civil rights era, which is commonly upheld as the golden age of black-Jewish relations, as well as to this alliance's unraveling in the post-civil rights era. The course then moves to a unit focused on more recent ruptures and collaborations including the 1991 Crown Heights race riots, during which Orthodox Jews clashed with their black neighbors, and Jewish involvement in the Black Lives Matter movement. The course concludes with a unit on identity and identity politics focused on the complexity and fluidity of the categories "white," "black" and "Jewish." Credit 3 units. A&S IQ: HUM, SD BU: BA EN: H

---

**L57 RelPol 240 Jewish Political Thought**

This course uses the concepts of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rule (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish community's self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single "Jewish political thought" but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these questions through a range of materials that include both primary and secondary literature. Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

---

**L57 RelPol 250 Zionism**

Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared

in the 65 years since the founding of the modern Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government. Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

---

**L57 RelPol 260 Religion in the African-American Experience: A Historical Survey**

This course introduces students to important themes in the history of African-American, and thus in American, religious history, among them slavery, emancipation, urbanization, migration, consumer culture, sexuality, politics and media technologies. Primary attention is given to Afro-Protestantism in North America and the cultural, social and religious practices and traditions of these black communities. However, students will also be introduced to specific expressions of religious diversity and varying religious traditions and practices in African-American communities. Credit 3 units. A&S: TH A&S IQ: HUM BU: ETH EN: H

---

**L57 RelPol 305 Between Malcolm X and Martin Luther King, Jr.: Race, Religion, and the Politics of Freedom**

This course focuses on the political and spiritual lives of Martin and Malcolm. We will examine their personal biographies, speeches, writings, representations, FBI Files, and legacies as a way to better understand how the intersections of religion, race and politics came to bare upon the freedom struggles of people of color in the U.S. and abroad. The course also takes seriously the evolutions in both Martin and Malcolm's political approaches and intellectual development, focusing especially on the last years of their respective lives. We will also examine the critical literature that takes on the leadership styles and political philosophies of these communal leaders, as well as the very real opposition and surveillance they faced from state forces like the police and FBI. Students will gain an understanding of what social conditions, religious structures and institutions, and personal experiences led to first the emergence and then the assassinations of these two figures. We will discuss the subtleties of their political analyses, pinpointing the key differences and similarities of their philosophies, approaches and legacies, and we will apply these debates of the mid-20th century to contemporary events and social movements in terms of how their legacies are articulated and what we can learn from them in struggles for justice and recognition in 21st-century America and beyond. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: BA EN: H

---

**L57 RelPol 3081 City on a Hill: The Concept and Culture of American Exceptionalism**

This course examines the concept, history and culture of American exceptionalism: the idea that America has been specially chosen or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture — a thesis our class reassesses with the help of modern critics. In the second part of this class, we broaden our discussion to consider the wider (and newer)

meanings of American exceptionalism, theorizing the concept while looking at the way it has been revitalized, redefined and redeployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan to the current day. In the end, students gain a firm grasp of the long history and continuing significance — the pervasive impact — of this concept in American culture.

Same as L98 AMCS 3081

Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

---

**L57 RelPol 315 Virtues, Vices, Values: Regulating Morality in Modern America**

This course takes morality and the question of "what's right" seriously as a lens through which to understand and assess modern American history. "Morality" is, of course, a devilishly flexible rhetoric, a language invoked to tell people how to act and how to be good, or, conversely, to criticize and to shame. When the state or a community wants its citizens or members to be "good," it crafts laws and creates customs to encourage or inhibit behaviors. This class examines how state and non-state actors have attempted to regulate the lived experiences of Americans and the conflicts that emerge over what, exactly, is correct, or right, or good for individuals, society and the state. It interrogates what values the state impresses upon its citizens and what values citizens want the state to uphold.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: ETH EN: H

---

**L57 RelPol 320 Religious Freedom in America**

This interdisciplinary course, co-taught by a law school professor and an American historian, concerns the intersection of religion, liberty and law in American culture. It introduces students to the major texts and historical issues concerning religious liberty, using legal history and case law, intellectual and social history, and political philosophy. It will address issues of significant contemporary debate — from the role of religious groups on college campuses to bakers and gay weddings — along with the deep historical background, from English settlement of North America and the making of the Constitution, through the Civil War, to the Cold War and the recent political developments.

Same as I50 InterD 320

Credit 3 units. A&S IQ: HUM, SD EN: H

---

**L57 RelPol 321 American Religion, Gender, and Sexuality**

Religious beliefs about gender and sexuality have long played a vital role in American politics, vividly evident in debates over such issues as birth control, censorship, pornography, funding for AIDS research, abortion, contraceptive access, abstinence-only sex education, sexual harassment, same-sex marriage, and more. Educated citizens need to understand the impact of these religiously inflected debates on our political culture. This course explores the centrality of sex to religion and politics in the U.S., emphasizing Christianity (both Protestant and Catholic forms) and its weighty social and political role regulating the behavior of women and men, children and teens, as well as its uses in legal and judicial decisions. Alongside scholarly readings in gender and sexuality, we will discuss popular devotional texts — on chastity, marriage, and homosexuality — with a political bent. Students will leave the course able to analyze how religious beliefs about sex shape specific gender norms central to U.S. politics.

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

---

**L57 RelPol 330 Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs**

This course surveys the history and historiography of how Native Americans, Europeans and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter — through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM

---

**L57 RelPol 3504 The Making of American Conservatism Since 1932, from Herbert Hoover to Donald Trump**

Beginning with Hayek's *The Road to Serfdom* and Buckley's *God and Man at Yale*, this course examines some of the major conservative writers and thinkers in the United States since World War II. The course includes readings by Russell Kirk, Richard Weaver, Barry Goldwater, Phyllis Schlafly, Irving Kristol, Newt Gingrich, and Pat Buchanan as well younger conservatives like Mark Steyn, Jonah Goldberg, Ramesh Ponnuru, S.E. Cupp, and Kevin Williamson. Several classes are devoted to black conservatives including Thomas Sowell, Shelby Steele, and Walter Williams. We will try to answer the questions: What is conservatism and who are its adherents? Can we speak of conservatism in the singular or are there several types of conservatism? Are the various forms of conservatism politically and intellectually compatible? How has conservatism changed since Reagan and the 1980s? What inroads has conservatism made in the cultural and political life of the United States? Is the United States essentially a conservative nation? Time permitting, we may also watch a few Hollywood movies by conservative filmmakers.

Credit 3 units. A&S: TH A&S IQ: HUM BU: HUM EN: H

---

**L57 RelPol 360 Religion and the Modern Civil Rights Movement, 1954-1968**

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.

Credit 3 units. A&S: TH A&S IQ: HUM BU: BA EN: H

---

**L57 RelPol 368 Theories and Methods in the Study of Religion**

What is religion? In this course, we explore how religious ritual may help to clarify the nature and function of religion. We first

consider "classic" theories of religion and ritual, such as those of James Frazer, Sigmund Freud, Emile Durkheim, Mircea Eliade, Max Weber, E.E. Evans-Pritchard, and Clifford Geertz. We then consider more recent theories of ritual and its relationship to religion (such as those of Victor Turner and Maurice Bloch). Alongside, and in light of, these theoretical writings, we look at specific instances of ritual practice from various cultures and periods. Note: This course is required for religious studies majors and minors. It is recommended that this course be taken after completion of L23 Re St 102 Thinking About Religion. Same as L23 Re St 368  
Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

---

#### L57 RelPol 370 Religion and the Origins of Capitalism

This course explores the economic, cultural and social history of the origins of Anglo-American capitalism from 1500 to 1800. Throughout we will discuss the worldviews and day-to-day business decisions of the merchants who created England's transatlantic market order and empire. Rather than treat early capitalism only in terms of material or purely economic dynamics, it probes the intellectual constructs that combined with commercial innovations to form capitalism into a social system.

#### L57 RelPol 3743 History of U.S. Foreign Relations since 1920

This course explores the major diplomatic, political, legal, and economic issues shaping U.S. relations with the wider world from the 1920s through the aftermath of the 9/11 attacks. Same as L22 History 3743  
Credit 3 units. A&S IQ: HUM BU: IS EN: H

---

#### L57 RelPol 385 Religion and Politics in the Long 1920s

This course is a historical survey of the dynamic relationship between religion and politics during the 1920s. The 1920s were a tipping point for a great deal of the fundamental issues that shaped the 20th century in the U.S. This course seeks to investigate how religious activism, evangelism, discourse, practice and reinvention contributed to and was shaped by such change.

---

#### L57 RelPol 390 Mormonism and the American Experience

The focus of this seminar is Mormonism, meaning, primarily, the Church of Jesus Christ of Latter-day Saints (or LDS Church), which is the largest Mormon body. Mormons in the United States have gone from being one of the most intensely persecuted religious groups in the country's history to the fourth largest religious body in the U.S. (by one count), with a reputation for patriotism and conservative family values. In addition to introducing who the Mormons are, their beliefs and religious practices, this seminar will explore issues raised by Mormonism's move toward the religious mainstream alongside its continuing distinctiveness. These issues include: What is the religious "mainstream" in the U.S.? How did conflicts over Mormonism during the 19th century, especially the conflict over polygamy, help define the limits of religious tolerance in this country? How have LDS teachings about gender and race, or controversies about whether or not Mormons are Christian, positioned and repositioned Mormons within U.S. society?

---

#### L57 RelPol 395 Topics in Religion and Politics: Religious Celebrity

This course investigates the intersection of religion and celebrity in American culture through figures such as Oprah and Billy Graham. Beyond looking at particular religious celebrities, the course looks at the history of fame, theories of "charisma," and secular celebrities as gods of the modern age. The course also traces the rise of theatrical stardom and religious charisma in the United States, and the ways in which political celebrity draws on these traditions.

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

#### L57 RelPol 407 Solidarity and Silence: Religious Strategies in the Political Sphere

Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of nonviolent resistance. This course considers the role of religious thought and practice in such movements in the 20th century. The history of these movements presents an apparent paradox: How can political action emerge from the supposedly "private" realm of religion in the modern era, particularly its most individualistic formations in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual and depoliticizing? With these questions animating our investigations, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King Jr., Simone Weil, and William Barber, as well as the history of movements associated with their work. Toward the end of the semester, we will turn to contemporary movements against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism.

---

#### L57 RelPol 410 The FBI and Religion

This seminar examines the relationship between the Federal Bureau of Investigation (FBI) and religion (i.e., faith communities, clerics and religious professionals) as a way to study and understand 20th-century religion and politics. The course investigates the history of the FBI as well as the various ways in which the FBI and religious groups have interacted. The course pays particular attention to what the professor calls the four interrelated "modes" of FBI-religious engagement: counter-intelligence and surveillance, coordination and cooperation, censorship and publicity, and consultation.

---

#### L57 RelPol 4121 American Religion, Politics, and Culture: Historical Foundations

This seminar offers a wide-ranging overview of the leading historical scholarship concerning the busy intersections of American religion and politics. Topics include: church-state relations, religion and foreign policy, religion and social justice, religion and the science wars, the rise of the Religious Right,

and the role of religion in public life. Prerequisites: advanced undergraduate or graduate standing in a related field or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L57 RelPol 4122 American Religion, Politics & Culture: Commentary from Alexis de Tocqueville to Contemporary Pundits**

This research-oriented seminar involves in-depth historiographical investigation of leading scholarship at the busy intersections of American religion, politics and culture. The second semester focuses on classic and contemporary commentaries on the American religious and political scene from Alexis de Tocqueville through today's leading pundits. Some sessions will include a visiting scholar engaged in cutting-edge research — a feature that will allow seminar members to work with important scholars from beyond the university. Possible topics include: church-state relations, religion and foreign policy, religion and civil rights, religion and the science wars, the rise of the Religious Right, and the role of religion in national elections. The seminar is taught under the auspices of the John C. Danforth Center on Religion and Politics and is offered in two complementary parts (though enrollment in either one of the two is certainly possible). Its ambition is to build up a community of inquirers engaged in the core questions that animate the Danforth Center. Prerequisites: Advanced undergraduate or graduate standing in AMCS, History, or Religious Studies or permission of instructor.

Credit 3 units. A&S: TH A&S IQ: HUM

---

**L57 RelPol 425 Law, Religion, and Politics**

What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.

Credit 3 units. A&S IQ: HUM EN: H

---

**L57 RelPol 430 Pilgrims and Seekers: American Spirituality from Transcendentalism to the New Age**

The seminar focuses on the formation of "spirituality" in American culture from the Transcendentalist world of Ralph Waldo Emerson and Walt Whitman on through more recent expressions of the "spiritual-but-not-religious" sensibility. For the purposes of this course, "spirituality" is usefully placed in quotation marks in order to emphasize its peculiar construction as something positively distinct from "religion" — a reordering of American religious thought and experience that we explore in historical and contemporaneous terms. The social and political consequences of this turn to the spiritual over the religious also is explored: for example, the consecration of liberal individualism, the environmental vision of nature mysticism, the blessing of a "bourgeois-bohemian" consumerism, and the negotiation of cultural pluralism.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L57 RelPol 4491 American Unbelief from the Enlightenment to the New Atheism**

This seminar examines American secularism, humanism and atheism from the Enlightenment forward to the present. Topics emphasized include: the relationship between believers and nonbelievers, the civil liberties of atheists, religion in the public schools, social radicalism and women's rights, and the more recent growth of religious disaffiliation and public atheism. The course considers not only the intellectual dimensions of freethinking unbelief but also the broader politics of secularism in a nation routinely imagined as "under God."

Credit 3 units. A&S: TH A&S IQ: HUM Arch: SSP Art: SSP EN: H

---

**L57 RelPol 4564 American Pragmatism**

This course examines the history of American pragmatism through three of its primary founders, the philosophers Charles Peirce, William James and John Dewey. It considers pragmatism as a response to the experience of uncertainty brought on by modernity and contextualizes it amid late 19th- and early 20th-century thought and politics, namely, scientific methodology, evolutionary theory, the probabilistic revolution, Transcendentalism, the rise of secularism, slavery, Abolitionism and the Civil War. Major essays by each thinker are read as well as three intellectual biographies and one critical survey.

Same as L22 History 4564

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

**L57 RelPol 480 Readings in African-American Religious History**

This course is an introduction to the history and variety of African-American religions in the New World diaspora. The approach will be chronological, from the earliest years to the New World to contemporary expressions. We will also explore some of the major historiographical themes that have catalyzed current scholarship, the purpose and effectiveness of black nationalist movements, issues of class and gender, the persistence of African elements of New World religious practice, performance and popular culture.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L57 RelPol 485 Christian Nation, Secular Republic**

The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic, and those conjoined framings have created recurrent conflict throughout American history. This seminar is designed to introduce advanced undergraduates and graduate students to current discussions of religion, secularism, and unbelief in American religious and political history. The course also places a complementary emphasis on close readings of crucial primary works, say, about the rise of deistic toleration or the persisting political power of Christianity-in textual particularities. The course takes as its starting point Charles Taylor's monumental account *A Secular Age* and works from there through various episodes of the Enlightenment and its long aftermath.

## Religious Studies

If I headed back to college today, I would major in comparative religions rather than political science.

John Kerry, "Religion and Diplomacy" (<http://americamagazine.org/issue/religion-and-diplomacy>)

Religion is a major source of inspiration, meaning and controversy in human societies. Fast-moving forces of globalization, migration and technology continue to bring diverse communities into closer proximity, often creating new religious forms in the process. The Religious Studies program at Washington University gives students the opportunity to learn about diverse religions as well as to study past and current events with a critical but open mind.

One does not have to be religious in order to study religion! Religious Studies covers subjects as diverse as U.S. politics, Beyoncé, the Middle East, atheism, Tolstoy, Gandhi, Black Lives Matter, climate change, and Buddhist philosophies. The diversity of topics that can be covered in Religious Studies is huge and is best studied in all its interdisciplinary complexity. As such, courses offered by our program are taught by faculty in a variety of disciplines and areas, including: The John C. Danforth Center on Religion and Politics; Anthropology; Classics; East Asian Languages and Cultures; English; History; Jewish, Islamic and Near Eastern Studies; and Political Science.

A major in Religious Studies will help students understand and appreciate the complex ways in which religious traditions inform human thought and behavior. A double major or a minor will also enhance a broad range of studies from politics and law to business and medicine. So whether a student is interested in preparing for the advanced academic study of religion, seeking to complement another area of study, or simply feels the need to acquire a greater knowledge of religions, a major or minor in religious studies is excellent preparation for living and working in a pluralistic society and global culture.

## Majors

### The Major in Religious Studies

**Total units required:** 30 units; 24 must be 300-level or above

**Required courses** (6 units):

| Code        | Title   | Units |
|-------------|---|-------|
| Re St 102   | Thinking About Religion                       | 3     |
| Re St 368   | Theories and Methods in the Study of Religion | 3     |
| Total Units |   | 6     |

**Senior Capstone Experience** (3 units): In their senior year, religious studies majors are required to take Re St 479 Senior Seminar in Religious Studies. Alternatively, students can fulfill the capstone requirement by writing an honors thesis.

**Elective courses** (21 units; 18 must be 300-level or above): All majors must take at least seven courses chosen in consultation with their major adviser and should fulfill the following:

- A. At least one course from four of the following areas: Judaism; History of Christianity; Islam; Buddhism; East Asian religions; South Asian religions; and religion in the Americas.
- B. A three-course series in one religious tradition or thematic concentration; and a two-course series in a different religious tradition or thematic concentration.

Please note: A course can count toward both A and B. For examples of how these electives can be fulfilled please visit the Religious Studies website (<http://religiousstudies.artsci.wustl.edu/program/major>).

### Additional Information

**Senior Honors:** Qualified majors are encouraged to apply for Senior Honors. Applications are available on the Religious Studies website (<http://religiousstudies.artsci.wustl.edu/program/honors>) and are due prior to the end of the junior year. Students wishing to pursue this option need to meet the minimum honors requirements stated in this *Bulletin* and satisfactorily complete, during the senior year, Re St 498 Independent Work for Senior Honors I (fall) and Re St 499 Independent Work for Senior Honors II (spring). Full guidelines are available on the Religious Studies website.

**Transfer Credit:** A maximum of 6 units of course work completed elsewhere, whether another college or university or through a Washington University-approved study abroad program, may be applied toward the major. Credit will be awarded only to those courses that have been approved by the Religious Studies program.

## Minors

### The Minor in Religious Studies

**Total units required:** 18 units; 12 must be 300-level or above

**Required courses** (6 units):

| Code        | Title   | Units |
|-------------|---|-------|
| Re St 102   | Thinking About Religion                       | 3     |
| Re St 368   | Theories and Methods in the Study of Religion | 3     |
| Total Units |   | 6     |

**Elective courses** (12 units; 9 must be 300-level or above): Minors may choose their electives based on individual interest and in consultation with their minor adviser. At least three of the four courses must be numbered 300 or above.

### Additional Information

**Transfer Credit:** A maximum of 3 units of course work completed elsewhere, whether another college or university or through a Washington University-approved study abroad program, may be applied toward the minor. Credit will be awarded only to those courses that have been approved by the Religious Studies program.

## Courses

#### L23 Re St 102 Thinking About Religion

Nearly everyone has had some experience with something they would call "religion," from at least a passing familiarity through the media to a lifetime of active participation in religious communities. But what do we actually mean when we use the word? What is a religion? What does it mean to call something a religion, or "religious"? And what does it mean to study religion, given the slipperiness of the concept itself? This course offers an introduction to the academic study of religion through a consideration of these questions: What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? We will also consider what is at stake in our investigation and inquiry into religion — for the inquirers, for the subjects of inquiry, and for society more broadly — and what kind of lens the study of religion offers us on ourselves, our neighbors, and society, in turn. To these ends, we will discuss major theoretical approaches to the study of religion and significant work on religions and religious phenomena, toward a better understanding of what "religion" might be and how it might be studied today. No prior knowledge or experience of religion, religions, or anything religious is expected or required. This course is required for religious studies majors and minors. Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

---

**L23 Re St 1550 Temple & Palace in World History:**

**Approaches to Religion and Politics in the Middle East**

This course aims to examine the ways in which temple and palace cooperated with and competed against each other in the Middle East from ancient to the present times. As sites of spiritual and political power, temples and palaces have played a major role in human history. They have been a source of cooperation and conflict by inspiring and regulating the spiritual and social lives of people, including how they enacted laws, developed cultures, established institutions, and interacted with each other as individuals, families and societies. The course will trace how their interactions produced various models of authority, law and social association and how they collectively and separately rationalized social hierarchy and diversity in human societies. Introductory course to the major and minor. Same as L22 History 1550

---

**L23 Re St 2010 Religion and American Society**

This course explores religious life in the United States. We will focus our study on groups and movements that highlight distinctive ways of being both "religious" and "American," including the Americanization of global religions in the U.S. context. Major themes will include religious encounter and conflict; secularization, resurgent traditionalism, and new religious establishments; experimentalism, eclecticism, and so-called "spiritual" countercultures; the relationship between religious change and broader social and political currents (including clashes over race, class, gender and sexuality); and the challenges of religious multiplicity in the U.S. Students will: 1) acquire knowledge of the disparate religions practiced in North America during the 20th century and beyond; 2) examine some of the chief conflicts as well as alliances between religion and the American social order in a global context; and 3) develop interpretive tools for understanding religion's present and enduring role in the U.S. and the world.

---

**L23 Re St 208F History, Text and Identity: Introduction to Jewish Civilization**

The anthropologist Clifford Geertz once famously invoked Max Weber in writing that "man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs." The main goal of this course — designed as an introduction to Jewish history, culture and society — is to investigate the "webs of significance" produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester we focus on the following historical settings: seventh-century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period we investigate the social and political conditions of Jewish

life; identify the major texts that Jews possessed, studied and produced; determine the non-Jewish influences on their attitudes and aspirations; and the explore the efforts that Jews made to define what it meant to be part of a Jewish collective.

**L23 Re St 215 Ritual And Performance Studies**

What's the difference between a wink and a blink? What the difference between graduation, a sacrament, and the electric slide? We make fine-grained distinctions every day in our own enactment and interpretation of these different kinds of practices. This class will introduce students to key academic approaches to "ritual," "practice" and "performance," and will ask whether these distinctions are important or arbitrary. Ritual studies (based in religious studies) also happens to center around the very same questions that gave birth to gender and queer studies (is gender a performance?), thus a parallel examination of ritual and performance studies necessarily brings religious identity into conversation with broader questions of identity (gender, race, class).

Same as L57 RelPol 215

Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

---

**L23 Re St 220 Whose St. Louis? Religion, Race, and Power in the Gateway City**

Through the city's history, St. Louis residents and their leaders have established laws, policies and practices that have privileged certain groups at the expense of others. Race has often been part of that equation. This course examines moments of social crisis in St. Louis history — up to the present day — when residents have mobilized, resisted or ignored efforts to address race-based inequalities. We consider how St. Louis' religious communities in particular have understood the city's racial codes and how they have positioned themselves in relation to movements for social change. Along the way we explore slavery, property and housing restrictions, interstate construction, hiring practices, and gun violence. In addition to course reading assignments and film screenings, students will visit three religious sites to encounter and analyze the intersections of race, religion and power in present-day St. Louis.

Same as L57 RelPol 220

**L23 Re St 225 Religion and Politics in American History**

The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic. These competing visions of the nation have created conflict throughout American history and have made the relationship between religion and politics quite contentious. This course surveys the complex entanglements of religion and public life from the colonial era through the contemporary landscape. Topics covered include: religious liberty and toleration, secularization, the rise of African-American churches, the Civil War, national identity and the Protestant establishment, the religious politics of women's rights, religion and the presidency, the Cold War, the religious left and right, and debates over church-state separation. **L23 Re St 2300 Black-Jewish Relations in the United States**

The relationship of blacks and Jews in the United States is at once intimate and strained, mutually beneficial and antagonistic. This course examines this uneasy alliance from a number of perspectives including anthropology, politics and identity politics, history, religion and class. Beginning with American anthropology's Jewish founding father, Franz Boas, challenging the concept of race, the course traces the relations of blacks and Jews throughout the 20th century and in our contemporary moment. We will pay particular attention to the civil rights era, which is commonly upheld as the golden age of black-Jewish relations, as well as to this alliance's unraveling in the post-civil rights era. The course then moves to a unit focused on more recent ruptures and collaborations including the 1991 Crown Heights race riots, during which Orthodox Jews clashed with their black neighbors, and Jewish involvement in the Black Lives Matter movement. The course concludes with a unit on identity and identity politics focused on the complexity and fluidity of the categories "white," "black" and "Jewish."

**L23 Re St 236F Introduction to East Asian Religions**

This introductory course provides a basic, yet systematic, overview of certain major religious traditions that evolved in East Asia, particularly in China and Japan, but also in Korea. We begin with the classical Chinese traditions of Confucianism and Daoism, then turn our attention to Buddhism, which originated in India (ca. 500 BCE) and was later introduced into China (first century CE), Korea (fourth century CE) and Japan (sixth century CE). We then examine the Japanese tradition of Shinto, and focus more specifically upon the development of new Japanese forms of Buddhism. The course ends with a brief look at the coming of some of these religions to the West, and in particular the United States.

**L23 Re St 2400 Jewish Political Thought**

This course uses the concepts of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rule (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish community's self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single "Jewish political thought" but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these questions through a range of materials that include both primary and secondary literature.

**L23 Re St 2500 Zionism**

Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.

**L23 Re St 3012 Biblical Law and the Origins of Western Justice**

This course will explore how law developed from the earliest periods of human history and how religious ideas and social institutions shaped law. The course will also illuminate how

biblical law was influenced by earlier cultures and how the ancient Israelites reshaped the law they inherited. It will further analyze the impact of biblical law on Western culture and will investigate how the law dealt with those of different social classes and ethnic groups, and we will probe how women were treated by the law.

### L23 Re St 303 Daoist Traditions

This course offers an introduction to the history, practices and worldviews that define the Daoist traditions. Through both secondary scholarship and primary texts, we consider the history of Daoism in reference to the continuities and discontinuities of formative concepts, social norms, and religious practices. Our inquiry into this history centers on consideration of the social forces that have driven the development of Daoism from the second century to the modern day. Special consideration is given to specific Daoist groups and their textual and practical traditions: the Celestial Masters (Tianshi), Great Clarity (Taiqing), Upper Clarity (Shangqing), Numinous Treasure (Lingbao), and Complete Perfection (Quanzhen). Throughout the semester we also reflect on certain topics and themes concerning Daoist traditions. These include constructions of identity and community, material culture, the construction of sacred space, and cultivation techniques.

### L23 Re St 3044 Humors, Pox, and Plague: Medieval and Early Modern Medicine

This course examines how people thought about, experienced and managed disease in the medieval and early modern periods. Students will consider developments in learned medicine alongside the activities of a diverse range of practitioners — e.g., surgeons, empirics, quacks, midwives, saints, and local healers — involved in the business of curing a wide range of ailments. Significant attention will be paid to the experiences of patients and the social and cultural significance of disease. Major topics include: the rise and fall of humoral medicine; religious explanations of illness; diseases such as leprosy, syphilis and plague; the rise of anatomy; herbs and pharmaceuticals; the experience of childbirth; and the emergence of identifiably "modern" institutions such as hospitals, the medical profession, and public health. The focus will be on Western Europe but we'll also consider developments in the Islamic world and the Americas.

### L23 Re St 3062 Islam, Culture and Society in West Africa

This course explores the introduction of Islam into West Africa beginning in the 10th century and explore its expansion and development in the region, placing emphasis on the 19th century to present day. It focuses on the development of West African Muslim cultural, social, religious and political life, to understand not only how the religion affected societies, but also how West

African local societies shaped Islam. The course also aims to introduce students to a critical understanding of Islamic writing in West Africa. It also examines the organization of Muslim Sufi orders in West Africa through time and space. The course is organized around a series of lectures, readings, as well as print and visual media.

### L23 Re St 307F Introduction to the New Testament

What can be known — from an historical perspective — about the life and teachings of Jesus and his earliest followers? How did Jesus see himself and how did his followers see him? How did the lives, teachings and deaths of Jesus and his followers come to form the heart of a new movement? If Jesus and the apostles were all Jews, how did Christianity emerge as a distinct "religion"? This course investigates these questions through a focus on the earliest sources for Jesus and his first followers, including and extending beyond the canonical books of the Christian New Testament. Our approach in this course is historical and literary, rather than theological or confessional: We ask what Jesus, his first followers, and their Jewish and "pagan" contemporaries did and believed, and we try to catch glimpses of the worlds in which they lived and the cultures which they took for granted.

---

### L23 Re St 3080 City on a Hill: The Concept and Culture of American Exceptionalism

This course examines the concept, history and culture of American exceptionalism: the idea that America has been specially chosen or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture — a thesis our class reassesses with the help of modern critics. In the second part of this class, we broaden our discussion to consider the wider (and newer) meanings of American exceptionalism, theorizing the concept while looking at the way it has been revitalized, redefined and redeployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan to the current day. In the end, students gain a firm grasp of the long history and continuing significance — the pervasive impact — of this concept in American culture.

### L23 Re St 3082 From the Temple to the Talmud: The Emergence of Rabbinic Judaism

This course offers a survey of the historical, literary, social and conceptual development of Rabbinic Judaism from its emergence in late antiquity to the early Middle Ages. The goal of the course is to study Rabbinic Judaism as a dynamic phenomenon — as a constantly developing religious system. Among the topics explored are: How did Judaism evolve from a sacrificial cult to a text-based religion? How did the "Rabbis" emerge as a movement after the destruction of the Second Temple and how could they replace the old priestly

elite? How did Rabbinic Judaism develop in its two centers of origin, Palestine (the Land of Israel) and Babylonia (Iraq), to become the dominant form of Judaism under the rule of Islam? How did Jewish ritual and liturgy develop under Rabbinic influence? How were the Rabbis organized and was there diversity within the group? What was the Rabbis' view of women? How did they perceive non-Rabbinic Jews and non-Jews? As Rabbinic Literature is used as the main source to answer these questions, the course provides an introduction to the Mishnah, the Palestinian and Babylonian Talmuds, and the Midrash collections — a literature that defines the character of Judaism down to our own times. All texts are read in translation. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: HUM

---

**L23 Re St 3091 Confucian Thought**

This course is designed to introduce students to the history and teachings of one of the world's major religious traditions: Confucianism. We will examine how Confucianism developed in ancient China and afterwards spread throughout East Asia and beyond. In particular, we will pay attention to the issue of ritual and how Confucians attempted to ritualize social interactions and the world at large. In order to do so, we will engage in the writings of Confucius, Mengzi, and Xunzi, three early Chinese writers whose basic ideas about ritual heavily informed myriad cultural practices that are formative for large portions of East Asia today. Hence, this course on ancient thinkers not only introduces thoughts and practices prevalent throughout premodern China, Japan and Korea. It also functions as a catalyst that helps us understand some of the reasons and motivations behind these communities' recent efforts to renegotiate and question "the colonialist flavor" of human rights and democracy.

---

**L23 Re St 3100 Religion and Violence**

Is religion intrinsically connected with violence or merely manipulated to justify political positions and incite supporters? How has religion been the motivation and justification behind violent conflict, aggression and persecution? Does religion have a greater power to make war or peace? People have debated these questions for centuries as believers waged war in the name of their god(s). We'll study several critical theories about religion and violence and test them on historical and recent "religious" conflicts. Our investigation will be organized around five types of violence: 1) martyrdom and redemptive suffering, 2) claims on sacred space, 3) the violence of social stratification and "othering," 4) war and 5) apocalyptic and spiritual warfare. Case studies ranging from early Christian martyrs and crusades to attacks on abortion clinics and Tokyo subways will help clarify patterns and types of religious violence.

**L23 Re St 3101 The Problem of Evil**

The question of how God can allow evil to occur to the righteous or innocent people has been a perennial dilemma in religion and philosophy. We study the classic statement of the problem in the biblical book of Job, the ancient Near Eastern literature on which Job is based, and traditional Jewish and Christian interpretation of Job. We study the major approaches to the problem of evil in Western philosophical and religious thought.

**L23 Re St 3105 American Holidays, Rituals, and Celebrations**

This seminar examines a variety of holidays, festivals and rituals in American history and culture. Topics include: conflicts over Christmas, the sentiments of greeting cards, African-American emancipation celebrations, Roman Catholic festivals dedicated to the Virgin Mary, modern renderings of Jewish ritual (including Hanukkah), the masculinity embodied in fraternal lodge ceremonies, Neopagan festivals, and Halloween Hell Houses. Various interpretive approaches are explored, and the intent is to broach a wide range of questions about history and tradition, gender and race, public memory and civic ceremony, moral order and carnival, through this topical focus on ritual and performance. A major emphasis is also placed on original research and writing, evident in the weight given the concluding seminar report and the final paper.

**L23 Re St 311 Buddhist Traditions**

This course examines the historical development of Buddhism from its origins in South Asia in the sixth to fifth century BCE, through the transmission of the teachings and practices to East Asia, Southeast Asia and Tibet, to contemporary transformations of the tradition in the modern West. In the first third of the course, we focus on the biographical and ritual expressions of the historical Buddha's life story, the foundational teachings attributed to the Buddha, and the formation and development of the Buddhist community. In the second third, we examine the rise of the Mahayana, the development of the Mahayana pantheon and rituals, and the spread of Mahayana in East Asia. In the final third, we explore the Theravada tradition in Sri Lanka and Thailand, then Tantric Buddhism in India, Tibet and East Asia. We close the course with an overview of Buddhism in the modern West.

**L23 Re St 312 South Asian Religious Traditions**

The Indian subcontinent is home to Hindu, Islamic, Buddhist, Jain, and Sikh traditions, among others. In this course we explore several traditions that are vital to life in India, Pakistan and beyond. We first encounter each tradition through narrative, with the support of visual media. We then explore how contemporary adherents make these traditions meaningful for themselves — in their everyday lives, in their struggles for social change, and in their political statements and contestations. Students will have the opportunity for creative projects or individual research.

**L23 Re St 314C Islamic History 1200-1800**

An introduction to Islamic politics and societies from the Mongol conquests to the 13th century to the collapse and weakening of the colossal "gunpowder" empires of the Ottomans, Safavids and Mughals in the early 18th century. Broadly speaking, this course covers the Middle Period (1000-1800) of Islamic history, sandwiched between the Early and High Caliph periods (600-100) on the one hand and the Modern Period (1800-present) on the other hand. Familiarity with the Early and High Caliph periods is not assumed. The course is not a "survey" of this period but a series of "windows" that allows students to develop both an in-depth understanding of some key features of Islamic societies and a clear appreciation of the challenges (as well as the rewards!) that await historians of the Middle Period. Particular attention is given to the Mamluk and Ottoman Middle East, Safavid Iran and Mughal India.

---

**L23 Re St 315 Virtues, Vices, Values: Regulating Morality in Modern America**

This course takes morality and the question of "what's right" seriously as a lens through which to understand and assess modern American history. "Morality" is, of course, a devilishly flexible rhetoric, a language invoked to tell people how to act and how to be good, or, conversely, to criticize and to shame. When the state or a community wants its citizens or members to be "good," it crafts laws and creates customs to encourage or inhibit behaviors. This class examines how state and non-state actors have attempted to regulate the lived experiences of Americans and the conflicts that emerge over what, exactly, is correct, or right, or good for individuals, society and the state. It interrogates what values the state impresses upon its citizens and what values citizens want the state to uphold.

**L23 Re St 321 American Religion and the Politics of Gender and Sexuality**

Religious beliefs about gender and sexuality have long played a vital role in American politics, vividly evident in debates over such issues as birth control, censorship, pornography, funding for AIDS research, abortion, contraceptive access, abstinence-only sex education, sexual harassment, same-sex marriage and more. Educated citizens need to understand the impact of these religiously inflected debates on our political culture. This course explores the centrality of sex to religion and politics in the U.S., emphasizing Christianity (both Protestant and Catholic forms) and its weighty social and political role regulating the behavior of women and men, children and teens, as well as its uses in legal and judicial decisions. Alongside scholarly readings in gender and sexuality, we will discuss popular devotional texts — on chastity, marriage and homosexuality — with a political bent. Students will leave the course able to analyze how religious beliefs about sex shape specific gender norms central to U.S. politics.

---

**L23 Re St 323 Jews and Christians in the Premodern World**

In modern times, it is common to think of Judaism and Christianity as two distinct, if historically connected, "religions." Increasingly, however, historians of ancient religions have thought more deeply about the implications of taking Christianity and Judaism in antiquity as more fluid and porous than we tend to think of them. In this upper-division course, we will explore the ways in which the boundaries that early Christians attempted to draw between Christianity and Judaism remained unstable and incomplete. While the various efforts to establish early Christian identity led to the production of a variety of hermeneutical representations of the Judaioi, these literary representations nevertheless often reflected, to various degrees, engagement with actual historical Jews/Judeans, who shared political, economic, and intellectual worlds with Christians. We will consider how early Christian discourse about Jews and Judaism informed and was informed by intra-Christian disputes and their negotiations of their relationships with the wider Greco-Roman culture. We will explore how Christian efforts to establish both continuity and difference between Judaism played a role in the construction of "orthodoxy" and "heresy," as well as the way in which Christians re-appropriated Jewish texts, rituals and ideas in their efforts to construct a Christian identity. We will also explore how this continued dynamic of difference and continuity continued into the Middle Ages.

**L23 Re St 3300 Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs**

This course surveys the history and historiography of how Native Americans, Europeans and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter — through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they

know about these encounters, and what materials enable them to answer their historical questions.

---

**L23 Re St 334C Crusade, Conflict, and Coexistence: Jews in Christian Europe**

This course will investigate some of the major themes in the history of the Jews in Europe, from the Middle Ages to the eve of the French Revolution. Jews constituted a classic, nearly continuous minority in the premodern Christian world — a world that was not known for tolerating dissent. Or was it? One of the main purposes of the course is to investigate the phenomenon of majority/minority relations, to examine the ways in which the Jewish community interacted with and experienced European societies, cultures and politics. We will look at the dynamics of boundary formation and cultural distinctiveness; the limits of religious and social tolerance; the periodic eruption of persecution in its social, political, and religious contexts; and the prospects for Jewish integration into various European societies during the course of the Enlightenment era.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: ETH, HUM, IS

---

**L23 Re St 3354 Vienna, Prague, Budapest: Politics, Culture, and Identity in Central Europe**

The term Central Europe evokes the names of Freud and Mahler; Kafka and Kundera; Herzl, Lukács, and Konrád. In politics, it evokes images of revolution and counter-revolution, ethnic nationalism, fascism and communism. Both culture and politics, in fact, were deeply embedded in the structures of empire (in our case, the Habsburg Monarchy) — structures which both balanced and exacerbated ethnic, religious, and social struggles — in modern state formation, and in the emergence of creative and dynamic urban centers, of which Vienna, Budapest and Prague were the most visible. This course seeks to put all of these elements into play — empire, nation, urban space, religion and ethnicity — in order to illustrate what it has meant to be modern, creative, European, nationalist or cosmopolitan since the 19th century. It engages current debates on nationalism and national identity; the viability of empires as supranational constructs; urbanism and modern culture; the place of Jews in the social and cultural fabric of Central Europe; migration; and authoritarian and violent responses to modernity.

Credit 3 units. A&S IQ: HUM, LCD BU: IS

---

**L23 Re St 335C Becoming Modern: Emancipation, Antisemitism, and Nationalism in Modern Jewish History**

This course offers a survey of the Jewish experience in the modern world by asking, at the outset, what it means to be — or to become — modern. To answer this question, we look at two broad trends that took shape toward the end of the 18th century — the Enlightenment and the formation of the modern state — and we track changes and developments in Jewish life down to the close of the 20th century with analyses of the (very different) American and Israeli settings. The cultural, social, and political lives of Jews have undergone major transformations and dislocations over this time — from innovation to revolution, exclusion to integration, calamity to triumphs. The themes that we will be exploring in depth include the campaigns for and against Jewish "emancipation;" acculturation and religious reform; traditionalism and modernism in Eastern Europe; the rise of political and racial antisemitism; mass migration and the formation of American Jewry; varieties of Jewish national politics; Jewish-Gentile relations between the World Wars; the destruction of European Jewry; the emergence of a Jewish nation-state; and Jewish culture and identity since 1945.

**L23 Re St 336C History of the Jews in Islamic Lands**

This course is a survey of Jewish communities in the Islamic world, their social, cultural, and intellectual life from the rise of Islam to the Imperial Age. Topics include: Muhammad, the Qur'an and the Jews; the legal status of Jews under Islam; the spread of Rabbinic Judaism in the Abbasid empire; the development of new Jewish identities under Islam (Karaites); Jewish traders and scholars in Fatimid Egypt; the flourishing of Jewish civilization in Muslim Spain (al-Andalus); and Sephardi (Spanish) Jews in the Ottoman empire. On this background, we will look closely at some of the major Jewish philosophical and poetical works originating in Islamic lands. Another important source to be studied will be documents from the Cairo Genizah, reflecting social history, the status of women, and other aspects of daily life.

**L23 Re St 3421 Childhood, Culture, and Religion in Medieval Europe and the Mediterranean World**

From child saints to child scholars and from child crusaders to child casualties, the experience of childhood varied widely throughout the European Middle Ages. This course will explore how medieval Jews, Christians and Muslims developed some parallel and some very much divergent concepts of childhood, childrearing, and the proper cultural roles for children in their respective societies. Our readings will combine primary and secondary sources from multiple perspectives and multiple regions of Europe and the Mediterranean World, including a few weeks on the history and cultural legacy of the so-called Children's Crusade of 1312. We will conclude with a brief survey

of medieval childhood and its stereotypes as seen through contemporary children's books and TV shows. This course fulfills the Language & Cultural Diversity requirement for Arts & Sciences.

**L23 Re St 343C Europe in the Age of the Reformation**

How should people act toward each other, toward political authorities and toward their God? Who decided what was the "right" faith: the individual? the family? the state? Could a community survive religious division? What should states do about individuals or communities who refused to conform in matters of religion? With Martin Luther's challenge to the Roman Catholic Church, the debates over these questions transformed European theology, society and politics. In this class we examine the development of Protestant and Radical theology, the Reformers' relations with established political authorities, the response of the Catholic Church, the development of new social and cultural expectations, the control of marginalized religious groups such as Jews, Muslims and Anabaptists, and the experiment of the New World.

**L23 Re St 3465 Islamic Law**

This course presents a general overview of Islamic law and an introduction to the study of religious legal authority which values consensus. It then explores the formation of the major schools of law. Next it debates the notions of "ijtihad" and "taqlid" and discusses how open and independent legal decisions have been in the Islamic world. It also traces the transmission of legal knowledge in religious institutions across time and place by focusing on medieval Muslim societies and by closely examining the education of a modern-day Ayatollah.

**L23 Re St 3513 Muhammad in History and Literature**

This course intends to examine the life and representations of the Prophet Muhammad from the perspective of multiple spiritual sensibilities as articulated in various literary genres from medieval to modern periods. The course is divided roughly into two parts. One part deals with the history of Muhammad and the related historiographical questions. The second part deals with the representations of Muhammad in juristic, theological, Sufi, etc., literature. Because of the availability of primary sources in English translation, there is a healthy dose of primary source reading and analysis throughout the semester. Those students with advanced Arabic (and Persian and Turkish) skills are encouraged to engage sources in their original language.

**L23 Re St 3540 Anthropological and Sociological Study of Muslim Societies**

This course introduces students to anthropological and sociological scholarship on Muslim societies. Attention will be given to the broad theoretical and methodological issues which orient such scholarship. These issues include the nature of Muslim religious and cultural traditions, the nature of modernization and rationalization in Muslim societies, and the nature of sociopolitical relations between "Islam" and the "West." The course explores the preceding issues through a series of ethnographic and historical case studies, with a special focus on Muslim communities in the Middle East, Southeast Asia, and Europe. Case studies address a range of specific topics, including religious knowledge and authority, capitalism and economic modernization, religion and politics, gender and sexuality, as well as migration and globalization.

**L23 Re St 359 Travelers, Tricksters, and Storytellers: Jewish Travel Narratives and Autobiographies**

Jewish literature includes a number of highly fascinating travel accounts and autobiographies that are still awaiting their discovery by a broader readership. In this course, we will explore a broad range of texts originating from the Middle Ages to the 19th century. They were written by both Ashkenazi and Sephardi Jews hailing from countries as diverse as Spain, Italy, Germany, and the Ottoman Empire. Among the authors were pilgrims, rabbis, merchants, and one savvy business woman. We will read their works as responses to historical circumstances and as expressions of Jewish identity, in its changing relationship to the Christian or Muslim environment in which the writers lived or traveled. Specifically, we will ask questions such as: How do travel accounts and autobiographies enable their authors and readers to reflect on issues of identity and difference? How do the writers produce representations of an "other," against which and through which they define a particular sense of self? To what extent are these texts reliable accounts of their authors' personal experiences, and where do they serve their own self-fashioning? How do the writers portray Christians, Muslims and Jews from other cultural backgrounds than their own? How do they construe the role of women in a world dominated by men? How do they reflect on history, geography, and other fields of knowledge that were not covered by the traditional Jewish curriculum; and how do they respond to the challenges and opportunities of early modernity? This course is open to students of varying interests, including Jewish, Islamic, or Religious Studies, medieval and early modern history, European or Near Eastern literatures. All texts will be read in English translation.

**L23 Re St 3600 Religion and the Modern Civil Rights Movements, 1954-1968**

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the

modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.

**L23 Re St 3660 The Sephardic Experience: 1492 to the Present**

This course explores the history and culture of the Sephardic diaspora from the expulsion of Spanish and Portuguese Jewry at the end of the 15th century to the present. We will start with a brief introduction into the history of Iberian Jews prior to 1492, asking how this experience created a distinct subethnic Jewish group: the Sephardim. We will then follow their migratory path to North Africa, Italy, the Ottoman Empire, the Netherlands and the Americas. The questions we will explore include: In what sense did Jews of Iberian heritage form a transnational community? How did they use their religious, cultural, and linguistic ties to advance their commercial interests? How did they transmit and transform aspects of Spanish culture and create a vibrant Ladino literature? How did the Sephardim interact with Ashkenazi, Greek, North African, and other Jewish, Muslim, and Christian communities? How did Jewish emigres from Spain and Portugal become intermediaries between Christian Europe and the Ottoman Empire? What was the role of Sephardim in Europe's transatlantic expansion? How did conversos (converts to Christianity) return to Judaism and continue to grapple with their ambiguous religious identity? How did Ottoman and North African Jews respond to European cultural trends and colonialism and create their own unique forms of modern culture? How did the Holocaust impact Sephardic Jewry? The course will end with a discussion of the Sephardic experience in America and Israel today.

**L23 Re St 3670 Gurus, Saints and Scientists: Religion in Modern South Asia**

Many long-standing South Asian traditions have been subject to radical reinterpretation, and many new religious movements have arisen, as South Asians have grappled with how to accommodate their traditions of learning and practice to what they have perceived to be the conditions of modern life. In this course we consider some of the factors that have contributed to religious change in South Asia, including British colonialism, sedentarization and globalization, and new discourses of democracy and equality. We consider how new religious organizations were part and parcel with movements for social equality and political recognition; examine the intellectual contributions of major thinkers like Swami Vivekananda, Sayyid Ahmad Khan and Mohandas Gandhi; and explore how Hindu, Islamic and other South Asian traditions were recast in the molds of natural science, social science and world religion.

---

**L23 Re St 368 Theories and Methods in the Study of Religion**

What is religion? In this course, we explore how religious ritual may help to clarify the nature and function of religion. We first consider "classic" theories of religion and ritual, such as those of James Frazer, Sigmund Freud, Emile Durkheim, Mircea Eliade, Max Weber, E.E. Evans-Pritchard, and Clifford Geertz. We then consider more recent theories of ritual and its relationship to religion (such as those of Victor Turner and Maurice Bloch). Alongside, and in light of, these theoretical writings, we look at specific instances of ritual practice from various cultures and periods. Note: This course is required for religious studies majors and minors. It is recommended that this course be taken after completion of L23 Re St 102 Thinking About Religion.

**L23 Re St 3831 Magicians, Healers and Holy Men**

Magic is perhaps not one of the first words one associates with Greco-Roman antiquity. Yet for most individuals living in the ancient Mediterranean, including philosophers, businessmen, and politicians, magic was a part of everyday life. Casting spells, fashioning voodoo dolls, wearing amulets, ingesting potions, and reading the stars are just some of the activities performed by individuals at every level of society. This course examines Greco-Roman, early Christian, and Judaic "magical" practices. Students read spell-books which teach how to read the stars, make people fall in love, bring harm to enemies, lock up success in business, and win fame and the respect of peers. Students also look at what is said, both in antiquity and in contemporary scholarship, about magic and the people who practiced it, which helps illuminate the fascinating relationship between magic, medicine, and religion.

**L23 Re St 3900 Mormonism and the American Experience**

The focus of this seminar is Mormonism, meaning, primarily, the Church of Jesus Christ of Latter-day Saints (or LDS Church), which is the largest Mormon body. Mormons in the United States have gone from being one of the most intensely persecuted religious groups in the country's history to the fourth largest religious body in the U.S. (by one count), with a reputation for patriotism and conservative family values. In addition to introducing who the Mormons are, their beliefs and religious practices, this seminar will explore issues raised by

Mormonism's move toward the religious mainstream alongside its continuing distinctiveness. These issues include: What is the religious "mainstream" in the U.S.? How did conflicts over Mormonism during the 19th century, especially the conflict over polygamy, help define the limits of religious tolerance in this country? How have LDS teachings about gender and race, or controversies about whether or not Mormons are Christian, positioned and repositioned Mormons within U.S. society?

**L23 Re St 3921 Secular and Religious: A Global History**

Recent years have seen a dramatic rethinking of the past in nearly every corner of the world as scholars revisit fundamental questions about the importance of religion for individuals, societies and politics. Is religion as a personal orientation in decline? Is Europe becoming more secular? Is secularism a European invention? Many scholars now argue that "religion" is a European term that doesn't apply in Asian societies. This course brings together cutting-edge historical scholarship on Europe and Asia in pursuit of a truly global understanding. Countries covered will vary, but may include Britain, France, Turkey, China, Japan, India and Pakistan.

**L23 Re St 396 Islamic Philosophy, Mysticism, and Theology**

How does an individual achieve access to knowledge and access to God? To what extent is such access dependent upon scripture? To what extent is such access dependent upon reason? Are there forms of truth and experience that only reveal themselves through mysticism? Questions of this sort are central to the interrelated disciplines of Islamic philosophy, Islamic theology, and Islamic mysticism (i.e., Sufism). This course examines the preceding three disciplines, with a focus on the premodern period. Students will be introduced to major figures within these disciplines, including al-Ghazali, Ibn Sina, Ibn al-'Arabi, Ibn Taymiyya, and Rumi. Moreover, students will also examine how these disciplines have shaped various aspects of social life within premodern Muslim communities. Although the course addresses a range of issues, special attention will be given to the following topics: (1) the relationship between Islamic scripture/law and Islamic philosophy, mysticism and theology; (2) the relationship between Islamic religious teachings and the forms of both "high" and "popular" culture found in premodern Muslim societies; (3) free thought, scientific inquiry, heterodoxy, skepticism and blasphemy in premodern Muslim societies; (4) Muslim institutions and social movements dedicated to promoting philosophy, mysticism and theology; (5) the aesthetic

significance of philosophical, mystical, and theological teachings, and the expression of such teachings in Islamic ritual, poetry, literature, music, dance, painting and architecture.

**L23 Re St 3977 The Making of the Modern Catholic Church**

This course examines the work of three church councils that put their stamp on the Catholic Church at key moments in its history, making it what it is today. The first section is dedicated to the Fourth Lateran Council (1215), which defined the high medieval church as an all-encompassing papal monarchy with broad powers over the lives of all Europeans, Christian and non-Christian alike. In the second section we turn our attention to the Council of Trent (1545-1563), which responded to the threat posed by the Protestant Reformation by reforming the Catholic church, tightening ecclesiastical discipline, improving clerical education, and defining and defending Catholic doctrine. We conclude with a consideration of the largest church council ever, Vatican II (1962-1965), which reformed the liturgy and redefined the church to meet the challenges of the modern, multicultural, postcolonial world.

**L23 Re St 4060 Convivencia or Reconquista? Muslims, Jews and Christians in Medieval Iberia**

Senior Seminar. This seminar will provide an opportunity to explore in some depth various facets of the convivencia ("dwelling together"; coexistence) of Muslims, Jews, and Christians in medieval Iberia. While we will pick up the timeline with the emergence of an Ibero-Islamic society in the eighth century CE, the seminar's historical horizon stretches up to the turn of the 15th to the 16th century, when Spanish Jews and Muslims were equally faced with the choice between exile and conversion to Christianity. Until about the mid-11th centuries Muslims dominated most of the Iberian Peninsula. From roughly the mid-11th through 15th centuries, Christians ruled much and

eventually all of Spain and Portugal. Through a process termed, from a Christian perspective, as reconquista ("reconquest"), Catholic kingdoms acquired large Muslim enclaves. As borders moved, Jewish communities found themselves under varying Muslim or Christian dominion, or migrated from one realm to the other. Interactions between the three ethno-religious communities occurred throughout, some characterized by mutual respect and shared creativity and others by rivalry and strife. The course focuses on these religious and cultural contacts, placing them in various historical and geographic contexts. It will raise questions concerning the ambiguities of religious change and concerning the interplay of persecution and toleration. Methodologically, the seminar emphasizes the study of primary sources, including documentary, historiographical, literary and poetical texts. In the course of their study, attention will be paid to peculiarities of genre, and difficulties involved in formulating historical assessments. In this sense, we will also aim at developing critical reading skills in relation to secondary literature. Seniors in Jewish, Islamic and Near Eastern Studies will be given preference in admission. Advanced students in other fields are asked to contact the instructor prior to enrollment.

### L23 Re St 407 Solidarity and Silence: Religious Strategies in the Political Sphere

Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of nonviolent resistance. This course considers the role of religious thought and practice in such movements in the 20th century. The history of these movements presents an apparent paradox: How can political action emerge from the supposedly "private" realm of religion in the modern era, particularly its most individualistic formations in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual and depoliticizing? With these questions animating our investigations, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King Jr., Simone Weil, and William Barber, as well as the history of movements associated with their work. Toward the end of the semester, we will turn to contemporary movements against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism. ### L23 Re St 408 Nuns

Nuns — women vowed to a shared life of poverty, chastity and obedience in a cloistered community — were central figures in medieval and early modern religion and society. This course explores life in the convent, with the distinctive culture that developed among communities of women, and the complex relations between the world of the cloister and the world outside the cloister. We look at how female celibacy served social and political, as well as religious, interests. We read works by nuns: both willing and unwilling; and works about nuns: nuns behaving well, and nuns behaving scandalously badly; nuns embracing their heavenly spouse, and nuns putting on plays; nuns possessed by the devil, and nuns managing their

possessions; nuns as enraptured visionaries, and nuns grappling with the mundane realities of life in a cloistered community.

### L23 Re St 412 Islamic Theology

This course explores major themes of early Islamic theology as developed by the Mutazilite, Ash'arite, and Maturidi schools. Some attention is paid to defunct theological systems, the traces of which have remained in the heresiographical literature. Most readings are in primary sources in English translation, though the students are also introduced to some secondary literature on various themes. Some comparative theology with reference to the Judeo-Christian tradition is a regular feature of class discussion. Topics include (but are not limited to): debates over the createdness of the Qur'an; predestination and foreknowledge; God's attributes; the nature of language; the nature of the human soul; and creation and afterlife.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM EN: H

### L23 Re St 413 Topics in Islam

Fall 2017 Topic: History of Political Thought. This course aims to study political thought and practice in Islamic history (circa eighth through 13th centuries) through a close reading of a selection of primary sources in translation (and in their original language if language proficiency is satisfactory). Particular attention will be given to historical contexts in which thoughts are espoused and texts written. We plan to examine the development of political concepts and themes as articulated in diverse literary genres (legal, theological, political) from the eighth through the 13th century. We hope to engage various theoretical models to analyze the relationship between politics and religion and tease out the role of power in determining sociopolitical relations, distinctions and structures. We hope to have a better grasp on the historicity of ideas presented in timeless categories in political discourse. Prerequisite: advanced knowledge of Arabic preferred but not required.

**L23 Re St 418 Gender and Sexuality in East Asian Religions**

In this course we explore the role of women in the indigenous religious traditions of China, Japan and Korea (Confucianism, Daoism, Shamanism and Shinto), as well as Buddhism, Christianity and Islam. We begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses; shamans and mediums; hermits and recluses; and ordinary laywomen — both historically and in more recent times. Class materials include: literary and religious texts; historical and ethnological studies; biographies and memoirs; and occasional videos and films. Prerequisites: This class is conducted as a seminar, with minimal lectures; substantial reading and writing; and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, need to obtain the instructor's permission before enrolling.

Credit 3 units. A&amp;S: TH, CD, SD A&amp;S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

**L23 Re St 419 Of Zombies, Ghosts, and Ancestors: Interactions of the Living and the Dead in Chinese Religions**

This course introduces a basic aspect of the multifaceted history of Chinese religions, culture and civilization by centering on the practice of taking care of the dead. In particular, we will observe how various religious texts, short stories, and plays from China's earliest times until the 16th century depicted the interactions of the living and the dead. Despite the distinct genres, time periods and topics, one important aspect will regularly appear: Apparently people perceived the boundaries between the living and the dead to be quite porous in premodern China. In other words, the dead seemed to have played as much of a role in society and everyday life as living family members, friends and government officials.

Credit 3 units. A&amp;S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

**L23 Re St 4213 Sufism and Islamic Brotherhoods in Africa**

Muslim societies are prevalent in Africa — from the Horn, the North, the East to the West, with smaller enclaves in Central and South Africa. Islam has played an influential role in these diverse societies, particularly through its Sufi form. Even though Sufism originated in the Arabian Peninsula, it has fit well with African beliefs and cultures. This course aims to explore Sufi beliefs, values and practices in Africa. It reconsiders the academic constructions of "African Islam" by exploring education, intellectual life, economics, gender roles, social inequalities and politics. The goal is to show that Africa is a dynamic part of the Muslim world and not a peripheral one, as it is most often portrayed by the international media or historically, through travelers and colonial accounts. African Muslim brotherhoods have served as political mediators between countries and people (i.e., the role of the Tijaniyya in the diplomatic rivalry between Morocco and Algeria, or its role in reconciliation of clan rivalries in Sudan). In addition, the course pays attention to hierarchy in particular tariqa. Finally, the course examines how African Sufi orders have shaped their teachings to fit transnational demands over the 20th and 21st century. We explore these issues through readings, current media, lectures and special guest speakers.

**L23 Re St 4225 European Utopian Settlements in the American Midwest (1814-1864): Diversity and Antislavery**

During the first part of the 19th century a number of utopian visionaries from Europe (Germany, France and England) tried to establish communities in the American Midwest. These colonies were based either on religious or philosophical/social ideals which could be traced back to interpretations of the Old and the New Testament or to Enlightenment principles of freedom and equality that had been propagated during the revolutions in Europe of 1789, 1830 and 1848 which in turn had been influenced by the American war of independence. These groups showed strong antislavery convictions. The Midwest was chosen since the areas in the vicinity of the confluence of the Mississippi and the Missouri were seen as open to new social experiments. Part of the seminar are field trips to the St. Louis-based Missouri History Library as well as to the St. Louis Public Library and one-day excursions to New Harmony in Indiana, Nauvoo in Illinois, and to small towns in Warren County, Missouri.

**L23 Re St 424 Gender and Power in Religious Thought**

Gender has often been posed as the fundamental distinction of the human condition, creating the original opportunity for relation across that distinction. In some strands of religious thought, this distinction comes second to the creation of the world distinct from the divine. Religious and secular thinkers have turned to ordinary experiences of interpersonal relations for insight into these purportedly more fundamental relations and the connection between them. This seminar examines the role of interpersonal relationships in recent religious, ethical, and political thought, with particular attention to the way they bring gender and sexual desire more centrally into view.

**L23 Re St 425 Zen Buddhism**

This course is designed as an exploration of the history, teachings, and literature of Zen Buddhism in China (Chan), Korea (Sôn), Japan (Zen), and the United States. We discuss how Zen's conception of its history is related to its identity as a special tradition within Mahayana Buddhism, as well as its basic teachings on the primacy of enlightenment, the role of practice, the nature of the mind, and the limitations of language. We also look at Zen Buddhism and its relation to the arts, including poetry and painting, especially in East Asia. Finally, we briefly explore the response of Zen teachers and practitioners to questions of war, the environment and other contemporary issues. Open to seniors and graduate students. Prerequisites: L23 Re St 311 Buddhist Traditions or instructor's permission.

Credit 3 units. A&amp;S: TH A&amp;S IQ: HUM, LCD EN: H

**L23 Re St 4250 Law, Religion, and Politics**

What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the

relationship between religion and government, and the nature of religious practice and tradition.

---

**L23 Re St 4300 Pilgrims and Seekers: American Spirituality from Transcendentalism to the New Age**

The seminar focuses on the formation of "spirituality" in American culture from the transcendentalist world of Ralph Waldo Emerson and Walt Whitman on through more recent expressions of the "spiritual-but-not-religious" sensibility. For the purposes of this course, "spirituality" is usefully placed in quotation marks in order to emphasize its peculiar construction as something positively distinct from "religion" — a re-ordering of American religious thought and experience that we will explore in historical and contemporaneous terms. The social and political consequences of this turn to the spiritual over the religious will also be explored: for example, the consecration of liberal individualism, the environmental vision of nature mysticism, the blessing of a "bourgeois-bohemian" consumerism, and the negotiation of cultural pluralism.

---

**L23 Re St 432 Early Christianity and Classical Culture**

This course explores the development of Early Christianity from the Apostolic fathers (late first century CE) to Augustine in the fifth century. We will be focused on contextualizing these early Christian communities within the classical Greek and Roman worlds through which they spread, examining their engagement with Greco-Roman models of rhetoric, philosophy and literature. Prerequisites: L23 307F Introduction to the New Testament or previous work in Classical Studies recommended but not required.

Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

**L23 Re St 4357 The Holocaust in the Sephardic World**

The course provides students with a comprehensive understanding of the Holocaust, of its impact on the Sephardic world, of present-day debates on the "globalization" of the Holocaust, and of the ways in which these debates influence contemporary conflicts between Jews, Muslims and Christians in Southern Europe and North Africa. We will turn to the history of these conflicts, and study the Sephardic diaspora by focusing on the consequences that the 1492 expulsion had within the Iberian Peninsula, in Europe, and in the Mediterranean world. We will study Sephardic communities in Europe and North Africa and their interactions with Christians and Muslims before World War II. Once we have examined the history of the Holocaust and its impact on the Sephardic world in a more general sense, our readings will focus on the different effects of the Holocaust's "long reach" into Southeastern Europe, the Balkans, and North Africa, paying close attention to interactions among Jews, local communities, and the Nazi invaders. Finally, we will address the memory of the Sephardic experience of the Holocaust, and the role of Holocaust commemoration in different parts of the world. We will approach these topics through historiographies, memoirs, novels, maps, poetry and film.

---

**L23 Re St 4380 Islam, Transnationalism, and the African Diaspora**

This course is designed for students who are interested in religion among African immigrants and African diaspora communities living mostly, but not exclusively, in Europe and North America, especially during waves of migration to the Americas. We begin in the days of the transatlantic slave trade, where we examine how interactions, bricolage, and influences of Christianity, Judaism, African indigenous religions, and Islam have impacted the African diaspora living in the Americas. We equally examine how Islam served as a means of resistance to slavery and provided a spiritual connection with the motherland. Same as L90 AFAS 438

---

**L23 Re St 4401 Topics in Rabbinic Texts**

The course aims to introduce students to independent reading of selected rabbinic texts in the original language. We will focus on a number of topics representing the range of rabbinic discussion, including legal, narrative, and ethical issues. At the same time, we will study the necessary linguistic tools for understanding rabbinic texts. Prerequisites: HBRW 385 or HBRW 401 or instructor's permission.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

**L23 Re St 444 The Mystical Tradition in Judaism**

What is Jewish "mysticism"? What is its relationship to the category of "religion"? Is Jewish mysticism just one form of a general phenomenon common to a variety of religious traditions or is it a specific interpretation of biblical, rabbinic, and other Jewish traditions? Taking the above questions as a starting point, this course aims at a systematic and historically contextualized analysis of a broad range of Jewish texts that are commonly classified as "mystical." (All primary texts are read in translation.) At the same time, we explore such overarching themes as: the interplay of esoteric exegesis of the Bible and visionary experiences; the place of traditional Jewish law (halakhah) within mystical thought and practice; the role of gender, sexuality, and the body in Jewish mystical speculation and prayer; the relationship between mysticism and messianism; Ashkenazic and Sephardic traditions and their mutual impact on Jewish mysticism; the "absence of women" from Jewish mystical movements; esoteric traditions of an elite vs. mysticism as a communal endeavor; and the tension between innovation and (the claim to) tradition in the history of Jewish mysticism.

---

**L23 Re St 4491 American Unbelief from the Enlightenment to the New Atheism**

This seminar examines American secularism, humanism, and atheism from the Enlightenment forward to the present. Topics emphasized include: the relationship between believers and nonbelievers, the civil liberties of atheists, religion in the public schools, social radicalism and women's rights, and the more recent growth of religious disaffiliation and public atheism. The course considers not only the intellectual dimensions of freethinking unbelief but also the broader politics of secularism in a nation routinely imagined as "under God."

---

**L23 Re St 4711 Topics in Religious Studies: Gender and Religion in China**

In this course, we explore the images, roles and experience of women in Chinese religions: Confucianism, Daoism, Buddhism, and so-called "popular" religion. Topics discussed include: gender concepts, norms and roles in each religious tradition; notions of femininity and attitudes toward the female body; biographies of women in Confucian, Daoist, and Buddhist literature; female goddesses and deities; and the place of the Buddhist and Daoist nun and laywoman in Chinese society. All readings are in English or in English translation. Prerequisite: senior/graduate standing. Students with no previous background in Chinese religion, literature or culture need to obtain instructor's permission before enrolling. Credit 3 units. A&S: TH A&S IQ: HUM, LCD

---

**L23 Re St 479 Senior Seminar in Religious Studies**

The topic for this seminar differs every year. Previous topics include Saints and Society; Religion and the Secular: Struggles over Modernity; and Pilgrimage and Sacred Space in Antiquity. The seminar is offered every spring semester and is required of all religious studies majors, with the exception of those writing an honors thesis. The class is also open, with the permission of the instructor, to other advanced undergraduates with previous course work in Religious Studies. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

---

**L23 Re St 4790 Advanced Seminar: Empire and Messianism in the Middle East**

Senior Seminar: This course looks at imperial politics in its relations to monotheistic messianic movements and ideologies in the Islamic Mediterranean from the late antiquity to the 16th century. Messianic beliefs offered political hope, rallied opposition against the existing rule, defined and ordered lived reality for imperial subjects, presented a political leitmotiv for rulers, and advocated a just sociopolitical order to be realized in the immediate or indefinite future. Thus, this course attempts to see how politics became messianic by its very ability to promise a better future. Despite the chronological scope of the course, we examine only specific ideas, practices and movements as case studies to study in depth various facets of messianic movements and thought in their geographic and historical context. We use primary sources, which are the main methodological focus of the course, and secondary literature. We aim to develop skills in identifying, reading, analyzing and dealing with primary sources in their variety and critically engaging modern scholarship on the political role of Messianism. Students write a term paper and several reports on preassigned readings, and make regular class presentations. Admission preference is given to graduating seniors in JINELC, but the course is open to all advanced students provided that they consult the instructor prior to enrolling. Knowledge of a relevant primary source language is highly desired but not required. Same as L75 JINE 4970. Credit 3 units. A&S: TH A&S IQ: HUM EN: H

**L23 Re St 486 Europe's "Jewish Question": Emancipation, Anti-Semitism and Jewish-Christian Confrontation**

The so-called "Jewish Question" was a product of European modernity. It emerged in conjunction with the formation of modern states, Enlightenment projects for political reform, the decline of religious influence in society, and struggles over Jewish emancipation. In this seminar, students examine the unusual career of this obsession from the 16th through the 20th century by focusing selectively on a number of illustrative episodes: Christian Hebraism and the Reformation; the Enlightenment assault on religious power; European debates on Jewish emancipation; the emergence of the "Jewish Question" in the 19th century; anti-Semitism as a modern political phenomenon; the renewed discourse of Jewish "ritual murder" at the turn of the 20th century; Zionism and other forms of Jewish nationalism; and the question of anti-Zionism in the reformulation of the "Jewish Question" during the past half-century. Same as L22 History 4942. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

**L23 Re St 4993 Advanced Seminar in History: Women and Religion in Medieval Europe**

This course explores the religious experience of women in medieval Europe and attempts a gendered analysis of the Christian Middle Ages. In it, we examine the religious experience of women in a variety of settings — from household to convent. In particular, we try to understand how and why women came to assume public roles of unprecedented prominence in European religious culture between the 12th century and the 16th, even though the institutional church barred them from the priesthood and religious precepts remained a principal source of the ideology of female inferiority. Same as L22 History 4993. Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

**L23 Re St 49CA Advanced Seminar in History: Religion and the Secular: Critical Perspectives from South Asia**

A generation ago, scholars and observers around the world felt assured that modernization would bring the quiet retreat of religion from public life. But the theory of secularization now stands debunked by world events, and a host of questions has been reopened. This course provides students with a forum to think through these issues as they prepare research papers on topics of their own choosing.

---

**L23 Re St 49JK Advance Seminar in History: Blood and Sacred Bodies: Ritual Murder and Host Desecration Accusations**

This seminar follows the history of the ritual murder and Host desecration accusations from the origins in 12th- and 13th-century Europe to the 20th century. It pays close attention to the social and political functions of the narratives; their symbolic importance in Christianity's salvific drama; attacks on such beliefs from both within and outside the community of the faithful; the suppression and decline of the ritual murder accusation; the integration of Jews into European societies in the 19th century; and the reappearance of the blood libel in the aftermath of emancipation.

## Romance Languages and Literatures

Romance Languages and Literatures offers vibrant programs in French, Italian, Portuguese and Spanish. Our language classes have long been popular with undergraduates, including those interested in international travel and those who anticipate a global dimension to their future careers. All of our classes focus on culture writ large: We study great texts, and we do so with an eye to gender roles, traditions, communities, individual freedom, social obligations and many other topics of critical importance today. We offer concentrations in French, Italian and Spanish, as well as applied linguistics and introductory Portuguese.

Our undergraduate programs in French, Italian and Spanish include a compelling series of language, literature, culture and civilization courses that introduce students to the global Hispanic, Francophone and Italoophone communities. The curriculum affords students the opportunity to become fluent in a foreign language, enrich their historical and cultural understanding, and acquaint themselves with influential intellectual, literary and artistic traditions.

Students also benefit from linguistic and cultural immersion opportunities through our many summer, semester and year-long study abroad programs. These programs offer unique possibilities to combine foreign language training with other interests, including participating in business internships in Paris; pursuing fieldwork in Cameroon; studying art history

in Italy, literature in Madrid, or Andean culture in Ecuador.

These experiences lead to a variety of career paths, including international law, international business, medicine, journalism, and graduate studies in political science, international relations, history, anthropology, art history, comparative literature, French and film studies. In order to prepare our students to take full advantage of such opportunities, our faculty provides an innovative range of courses that combine the study of literature with contemporaneous developments in philosophy, science, music, art and theory.

For undergraduates interested in cross-language study, we offer two programs. First, students may elect to major in Romance languages and literatures. This major requires advanced course work in French, Italian and Spanish, with one of the three languages as the focus of primary emphasis. Second, they may minor in applied linguistics, studying the theoretical, empirical and practical foundations of teaching and learning languages. The minor is available to all majors on campus but is particularly suited to language majors.

## Majors

Prospective Romance languages majors should consult with the director of Undergraduate Language Studies of the chosen language as early as possible.

For the French major, please visit the French (p. 464) page.

For the Italian major, please visit the Italian (p. 605) page.

For the Spanish major, please visit the Spanish (p. 821) page.

## The Major in Romance Languages and Literatures

Like our other majors, the Romance languages major requires a writing-intensive course and a capstone experience. Further details are available on the department's website (<http://rll.wustl.edu>).

**Total units required:** A minimum of 42 units at the 300 and 400 level, distributed among French, Italian and Spanish.

### Required courses:

- Language I: courses through the 400 level, including 307, 308, two literature surveys (French 325 and French 326, or Ital 323W and Ital 324W, or Span 335C and Span 336C),

and two 400-level courses (in Italian, two literature courses; in French, either two literature courses or one literature course and French 411; in Spanish, either two literature courses or one literature and one linguistics course).

- Language II: courses through the 400 level, including 307, 308, at least two literature surveys (French 325 and French 326, or Ital 323W and Ital 324W, or Span 335C and Span 336C), and one 400-level course (in Italian and French, a literature course; in Spanish, either literature or linguistics).
- Language III: courses through and including one literature survey (307, 308, plus, depending on the language, French 325 or French 326; Ital 323W or Ital 324W; Span 335C or Span 336C).
- One WI (writing-intensive) course either in Spanish or Italian, or via French 411 (fall only).
- A capstone experience, either by completing Latin Honors or by completing a senior undergraduate seminar in the junior or senior year with a grade of B+ or better. We encourage students to consider doing an honors thesis, perhaps combining French and Spanish. The 6 units of 495 (honors) would be above and beyond the requirements listed above for each language.

Students need to take these classes for a letter grade and earn a B- or better, with a B average overall, per departmental requirements of all majors.

Students need approval from directors of undergraduate studies for Italian, French and Spanish for this major.

### Additional Information

Students who plan to teach or pursue graduate study should consider taking a second foreign language, as well as linguistics courses. In all departmental courses for the major the student must receive a grade of B- or above. Each student's progress toward achieving the objectives of the major will be assessed on a regular basis and by a variety of means. More information is available in the departmental mission statement.

**Spanish Honors in Linguistics:** To qualify for Spanish Honors in Linguistics in the major by thesis, a student must complete linguistic research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. The honors thesis in linguistics may include scientific experiments conducted in Spanish. The written thesis will include several drafts, all of which will be written in Spanish.

**Study Abroad:** Students are encouraged to participate in a study abroad program. Programs are available in France, Italy, Spain, Ecuador, Mexico and Chile.

**Senior Honors:** Students who have maintained at least a 3.65 overall cumulative GPA through the end of the junior year are encouraged to work toward Latin Honors (cum laude, magna cum laude, summa cum laude). To qualify for Latin Honors in

the major by thesis, a student must complete special literary research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. To qualify for Latin Honors by course work, the student must complete four literature courses at the 400 level, including two in literature before 1800, and present two critical essays written for those courses to be judged by an honors faculty committee. Recommendations for honors are based on performance and the quality of the thesis or critical essays, plus the cumulative grade point average.

### Minors

For the minor in French, visit the French (p. 465) page.

For the minor in Italian, visit the Italian (p. 605) page.

For the minor in Spanish, visit the Spanish (p. 822) page.

### Courses

#### French

For French courses, visit the French (p. 465) page of this *Bulletin*.

#### Italian

For Italian courses, visit the Italian (p. 606) page of this *Bulletin*.

#### Portuguese

#### Spanish

For Spanish courses, visit the Spanish (p. 823) page of this *Bulletin*.

### Russian Language and Literature

Students who want to achieve a high level of proficiency in the Russian language and study Russian literature in depth can pursue a minor in Russian language and literature. The program offers elementary through third-year language courses and a number of courses on 19th- and 20th-century Russian literature (in translation) on a wide variety of topics. Students are strongly encouraged to study abroad.

An independent minor, Russian language and literature (<http://ias.wustl.edu/russian/russian-language-literature>) is administered by International and Area Studies. Students undertaking this minor are encouraged to consider a major in Eurasian studies (p. 597) (through IAS), comparative literature (p. 320) or history (p. 494), all of which can be pursued with a focus on Russia and the former Soviet Union.

PhD, Washington University

## Majors

There is no major in Russian language and literature. Students interested in Russian are encouraged to consider a major in Eurasian studies (p. 597), comparative literature (p. 320) or

history (p. 494), all of which can be pursued with a focus on Russia and the former Soviet Union.

## Minors

### The Minor in Russian Language and Literature

**Total units required:** 20

#### Prerequisites:

Russ 101D Elementary Russian and Russ 102D Elementary Russian or the equivalent.

#### Requirements:

| Code   | Title                | Units |
|--|----------------------|-------|
| Russ 211D  | Intermediate Russian | 4     |
| Russ 212D  | Intermediate Russian | 4     |
| Russ 322D  | Third-Year Russian   | 3     |
| Russ 324D  | Third-Year Russian   | 3     |
| One 300- or 400-level course in Russian Literature   |                      | 3     |
| One elective course chosen either from an advanced Russian language and culture course (Russian 404, 405, 431 or 432) or from a Russian subject course taught in such departments as history, music or political science |                      | 3     |
| Total Units  |                      | 20    |

#### Regulations:

- Students can earn up to 6 credits from a semester or summer study abroad program, with the approval of the Russian language and literature adviser.
- All advanced units must be unique to the Russian language and literature minor (i.e., not counted toward any other major or minor).
- Students must earn at least a B- in language courses in order to continue to the next level. They must also maintain at least a B- average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course(s) in question or earn at least a B- in an approved equivalent course or courses (either during the summer or in a study abroad program).

## Additional Information

**Study Abroad:** Students are strongly encouraged to participate in a Washington University study abroad program in St. Petersburg, Russia. Semester options include both language and area studies programs. Although the summer program is language-focused only, there are programs available for students at any language level, including beginning. The university's programs in St. Petersburg are conducted under the auspices of the Council for International Educational Exchange (CIEE), the longest running such program in Russia.

Financial aid may be available for these programs through both Washington University and CIEE.

## Courses

Visit online course listings to view semester offerings for L39 Russ (<https://courses.wustl.edu/CourseInfo.aspx?scl=L&dept=L39&crslvl=1:4>).

---

### L39 Russ 101D Elementary Russian

Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary post-Soviet Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review and testing. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

### L39 Russ 102D Elementary Russian

Continuation of 101D. Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review and testing. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

### L39 Russ 211D Intermediate Russian

Designed to solidify students' command of Russian grammar and advance conversational, reading and writing skills. Includes video materials produced in Russia and conveying an up-to-the-minute picture of contemporary Russian life. Credit 4 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

### L39 Russ 212D Intermediate Russian

Continuation of 211D, completes comprehensive review of Russian grammar and further advances conversational, reading, writing and listening skills. Revised textbook with new audio and video materials that convey an up-to-the-minute picture of contemporary Russian life. Credit 4 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

### L39 Russ 315 Selected Areas for Special Study I: Russian Music

Same as L27 Music 315  
Credit 3 units. A&S: TH A&S IQ: HUM EN: H

---

### L39 Russ 322D Third-Year Russian

Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts and write compositions. Prerequisite: Russ 212D or equivalent. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

### L39 Russ 324D Third-Year Russian

Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with

newspapers, read literary texts and write compositions. Prerequisite: Russ 322D or equivalent. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

### L39 Russ 332 From Swan Lake to Punk Prayer: Russian Theater, Drama and Performance

This course explores performance in Russia from the wandering minstrels of medieval times to protest art of the present day. Genres include tragedy and comedy (Griboedov, Pushkin Gogol), drama (Ostrovsky, Turgenev, Chekhov), experimental theater (Stanislavsky, Evreinov, Meyerhold), ballet (Imperial, Soviet, Ballets Russes), opera (Tchaikovsky, Mussorgsky, Shostakovich), and performance art (Futurists, Pussy Riot, Pavlensky). We also consider performativity in rituals, public events, and everyday life. Our discussions center on the analysis of short and full-length plays, critical theory, specific productions and performers, and the role that performance has played in shaping Russian culture. All readings are in English translation. No prerequisites. Credit 3 units. A&S IQ: HUM, LCD

---

### L39 Russ 350C The 19th-Century Russian Novel (WI)

The 19th-century "realistic" novel elevated Russian literature to world literary significance. In this course we do close readings of three major Russian novels: Alexander Pushkin's *Eugene Onegin*, Fyodor Dostoevsky's *Crime and Punishment* and Lev Tolstoy's *Anna Karenina*. While we consider a variety of formal and thematic concerns, special emphasis is placed on the social context and on questions of Russian cultural identity. Readings and discussions are supplemented by critical articles and film. This is a writing-intensive course: workshops are required. All readings are in English translation. No prerequisites. Credit 3 units. A&S: TH, SD, WI A&S IQ: HUM, LCD, SD, WI Art: HUM BU: HUM

---

### L39 Russ 3559 Socialist and Secular? A Social History of the Soviet Union

This class explores daily life and cultural developments in the Soviet Union, 1917 to 1999. Focusing on the everyday experience of Soviet citizens during these years, students learn about the effects of large-scale social and political transformation on the private lives of people. To explore daily life in the Soviet Union, this class uses a variety of sources and media, including scholarly analysis, contemporaneous portrayals, literary representations and films. Students receive a foundation in Soviet political, social and cultural history with deeper insights into select aspects of life in Soviet society. Same as L22 History 3559  
Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

---

### L39 Russ 363 Russian Literature and Opera: Transpositions and Transgressions

This interdisciplinary course surveys the intersections between Russian literature and opera from the 19th century to the present. Literary works in a variety of genres (short stories, narrative poems, plays and novels) by Russian authors (with Pushkin as a clear favorite) have inspired generations of leading Russian composers, resulting in significant operatic adaptations, including Tchaikovsky's *Eugene Onegin*, based on Pushkin, Prokofiev's *The Gambler*, based on Dostoevsky, and Shostakovich's *The Nose*, based on Gogol. For each pairing of author and composer, we read and discuss the literary text

before considering the ways in which the original was refined, trimmed and generally transformed for the operatic stage. We frequently view opera productions and consider issues of staging, embodiment and fidelity to the original. The broader goal of the class is to consider the possibilities and limits of artistic media, specifically the points of agreement or dissonance between literature and music.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

---

### L39 Russ 364 Anarchism: History, Theory, and Praxis

This course analyzes the origins, historical trajectories and influence of anarchism from its classical period (1860s-1930s) until the present. It examines the major personalities, complex ideas, vexing controversies and diverse movements associated with anarcho-collectivism, anarcho-communism, individualist anarchism, anarcho-syndicalism, anarchist feminism, green anarchism, lifestyle anarchism and poststructuralist anarchism. In doing so, it explores traditional anarchist concerns with state power, authority, social inequality, capitalism, nationalism, imperialism and militarism. It also analyzes anarchism's conception of individual and collective liberation, mutual aid, workers' organization, internationalism, direct democracy, education, women's emancipation, sexual freedom and social ecology. Special attention is given to past and contemporary globalizing processes and their relation to the dissemination and reception of anarchism in the global South.

---

### L39 Russ 372 Dostoevsky's Novels

In this discussion-based course we focus on two of Dostoevsky's major novels: *Demons* (also translated as *The Possessed and Devils*) and *The Brothers Karamazov*. Our close readings of the novels are enriched by literary theory and primary documents providing socio-historical context. All readings are in English translation. No prerequisites.

Credit 3 units. A&S IQ: HUM, LCD, WI

---

### L39 Russ 375 Topics in Russian Lit and Culture: Madmen or Visionaries? (WI)

Where is the borderline between "insanity" and the "visionary" experience? What is the correlation between madness and creativity? How does the Russian conception of madness compare to the Western one? In general, how do our cultural experiences shape our perception of madness? These are some of the questions we address in this course as we explore the role and representation of madness in Russian culture and literature. Class discussions focus on close readings of formative works by Pushkin, Gogol, Dostoevsky, Tolstoy, Chekhov, Gippius and Nijinsky. These primary literary texts are supplemented by critical and theoretical articles as well as film. This is a writing-intensive course: workshops are required. All readings are in English translation. No prerequisites.

Same as L97 IAS 3750

Credit 3 units. A&S: TH, CD, WI A&S IQ: HUM, LCD, WI BU: IS EN: H

---

### L39 Russ 379 Russians Abroad: Literature, Migration, Identity

This course focuses on several waves of Russian emigration in the 20th century: the so-called "White Russian" emigration

in the wake of the 1917 Revolution; the exile of dissidents and defectors from behind the "Iron Curtain"; Jewish emigration in the 1980s; and migrations and displacements after the disintegration of the Soviet Union. Through our exploration of novels, short stories, poetry, memoirs, literary essays and film, we "travel" to China (Harbin), Turkey, Europe (Paris, Berlin, Prague), America (Mexico City, New York), Central Asia and Israel. We read works by Nabokov, Tsvetaeva, Bunin, Brodsky, Ulitskaya and others. Main topics discussed include memory, place, nostalgia, alienation, citizenship, and various constructs of personal and cultural identity. All assignments are in English and English translation. There are no prerequisites.

Same as L97 IAS 379

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD BU: IS EN: H

---

### L39 Russ 3866 Interrogating "Crime and Punishment"

Whether read as psychological thriller, spiritual journey, or social polemic, Dostoevsky's 1866 novel *Crime and Punishment* has inspired diverse artistic responses around the world. From the 19th century to the present day, writers and filmmakers have revisited (and often subverted) questions that Dostoevsky's novel poses: What internal and external forces cause someone to "step over" into crime? What are the implications of a confession? To what extent can the legal system provide a just punishment? Are forgiveness and redemption possible, or even relevant? What role does grace — or luck — play in the entire process? This course begins with our close reading of Dostoevsky's novel and then moves on to short stories, novels, literary essays and movies that engage in dialogue with the Russian predecessor. A central concern of our intertextual approach is to explore the interplay between specific socio-historical contexts and universal questions. All readings are in English. No prerequisites.

Same as L97 IAS 3866

Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM BU: BA EN: H

---

### L39 Russ 396 Comintern: The Communist International's Global Impact

The Communist International was the third of the global left-wing organizations aimed to develop communist organizations around the globe to aid the development of a proletarian revolution. Begun in 1919, hosted in Moscow, and closely tied to the developing USSR, the Comintern hosted seven World Congresses and 13 Enlarged Plenums before Stalin dissolved it in 1943. This course examines the history of the nearly 25 years of the Comintern, paying particular attention to engagement with countries outside of the Soviet sphere. Class texts provide a general historical overview and interrogate central ideological arguments/debates across several countries and political systems. Course materials look at the Comintern's engagement with Fascism and the Spanish Civil War, ideas of Nationalism and Internationalism, and Self-Determination in the Colonial World. Class units are designed to highlight regional similarities and differences, taking a global approach to the study of Communism. Students gain an understanding of the global political complexities developing after World War I and leading to World War II. Reflecting on the critique of imperialist capitalism offered by the Comintern, students explore liberation struggles and ideological dictatorships around the globe.

---

**L39 Russ 404 Fourth-Year Russian**

Further develops students' abilities in all spheres of the language: speaking, listening, reading, writing. Vocabulary building, conversation practice and student compositions based on materials from the Russian mass media, contemporary films and readings in modern Russian literature. Prerequisite: three years of college Russian or equivalent.

Credit 3 units. A&S: LA A&S IQ: LCD, LS

---

**L39 Russ 405 Fourth-Year Russian**

Further develops students' abilities in all spheres of the language: speaking, listening, reading, writing. Vocabulary building, conversation practice and student compositions based on materials from the Russian mass media, contemporary films and readings in modern Russian literature. Prerequisite: three years of college Russian or equivalent.

Credit 3 units. A&S: LA A&S IQ: LCD, LS

---

**L39 Russ 419 Readings in Russian Literature, 1861 to 1917**

Credit 3 units. A&S IQ: LCD

---

**L39 Russ 431 Russia Today and Yesterday: Cultural Perspectives (in Russian)**

On the basis of contemporary literature, official media, popular songs and films, the course examines the ever-changing culture of the Russian people and society during the pre- and post-perestroika periods. Class discussions, lectures and student presentations. Prerequisite: three years of college Russian or the equivalent.

Credit 3 units. A&S: LA A&S IQ: LCD, LS Art: HUM BU: IS

---

**L39 Russ 432 Russia Today and Yesterday (in Russian)**

Readings of 19th- and 20th-century Russian writers, as well as other literary and non-literary texts. Refinement and expansion of Russian communication skills (speaking, listening, writing, reading). Class discussions, student presentations, compositions. Prerequisite: Russ 431 or the equivalent.

Credit 3 units. A&S: LA A&S IQ: LCD, LS Art: HUM

---

**L39 Russ 442 The Jewish Experience in Eastern Europe**

A study of Jewish culture, society and politics in Poland-Lithuania, Hungary, the Czech lands, Russia, Romania and the Ukraine, from the 16th century through the 20th century. Among the topics covered are: economic, social and political relations in Poland-Lithuania; varieties of Jewish religious culture; Russian and Habsburg imperial policies toward the Jews; nationality struggles and anti-Semitism; Jewish national and revolutionary responses; Jewish experience in war and revolution; the mass destruction of East European Jewish life; and the transition from Cold War to democratic revolution.

Same as L22 History 4442

Credit 3 units. A&S: TH, CD

---

**L39 Russ 4869 Reading War and Peace**

What is it like to enter into a fictional world for a semester? In this course we read Leo Tolstoy's *War and Peace* in its entirety. Set during the Napoleonic wars (1805-1812), *War and Peace* takes the reader on a panoramic journey from the battlefield to the hay field, from the war room to the ballroom. It is a vivid portrayal of 19th-century Russian society as well as a penetrating examination of the causes and consequences of violence and the nature of love and family dynamics. In

our discussions, we explore philosophies of history, issues of social injustice and gender inequality, the psychology of human suffering and joy, questions of literary form and genre, and the very experience of reading a long work of fiction. We begin with a selection of Tolstoy's early works that laid the foundation for *War and Peace* and conclude with a few of Tolstoy's late works that had an enormous influence on, among others, Mahatma Gandhi. Primary texts are supplemented with literary theory and film. All readings are in English.

Same as L97 IAS 4869

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD EN: H

---

## Sociology

Sociology explores the processes that create and transform structures within social systems. Teaching and research in the Washington University Department of Sociology address central questions about how modern U.S. and global societies operate and evolve.

The department was re-established in 2015 after a hiatus of more than two decades. In the initial years of the new program, we will offer an expanding set of courses and activities that explore a variety of critical social issues. Examples include inequality across race, gender and economic class, as well as the sources and consequences of social conflict.

Sociological analysis begins from theoretical perspectives that explain how the structures that organize and govern social systems emerge and change. Our curriculum and research also emphasize an understanding of social processes that is well grounded in empirical data on how societies actually function. The evolving program will give students the research tools to develop their own perspectives on social function. We also seek to engage with social policies and formal and informal social institutions to better understand the world in which we live and to help guide social change.

## Majors

### The Major in Sociology

The major in sociology provides students with a rigorous understanding of the ways in which social relations and settings shape a range of individual and group experiences and outcomes, with an emphasis on how various forms of inequality are created and propagated through time. Reflecting the diversity of social settings that motivate sociological inquiry, students will enroll in multiple introductory-level courses. We intend that these first courses will help students develop a sociological lens through which they can better understand the baseline determinants of inequality, social order and change.

Because the discipline draws on diverse theoretical and methodological tools to engage with these core issues, required course work ensures that students develop expertise in classical and contemporary theoretical concepts as well as both quantitative and qualitative research methods. Upper-level seminars provide majors and minors with an opportunity to apply these substantive, theoretical, and methodological foundations to a focused and deep study of specific sociological topics. The major additionally features a capstone experience, enabling students to deploy sociological tools to undertake original work

connected with a research project, internship, practicum or honors thesis.

### Major Requirements

**(a) Introductory requirement (6 credits total):** Any two 100- or 200-level sociology courses. (Students may substitute an upper-level sociology course for an introductory course with approval of their major adviser.)

**(b) Theory requirement (3 credits):** SOC 3001 Social Theory

**(c) Methods requirement (6 credits):** SOC 3030 Introduction to Research Methods and SOC 3050 Statistics for Sociology. Students may substitute Math 2200, Math 3200, or a disciplinary statistics course from another social science with the approval of their major adviser.

**(d) Upper-level sociology electives (15 credits):** Any five 300- or 400-level courses

**(e) Capstone (1-3 credits)**

To be fulfilled in two parts. First, attendance at a minimum of five department-sponsored events (this co-curricular requirement can be fulfilled at any point following a student's initial declaration as a sociology major.) We will maintain a list of qualifying events on our website, and our department administrator will coordinate a sign-in procedure to verify attendance at events. Second, majors will choose one of the following options:

- i. One-unit research paper tied to upper-level seminar (SOC 4900)
- ii. Internship (SOC 4910)
- iii. Honors thesis

Students who opt for internship or thesis options may apply those credits toward requirement (d), meaning that, in addition to their thesis or internship, they would need to complete four additional 300-/400-level courses.

## Minors

### The Minor in Sociology

#### Minor Requirements

**(a) Introductory requirement (3 credits total):** One 100- or 200-level sociology course

**(b) Theory requirement (3 credits):** SOC 3001 Social Theory (offered every year)

**(c) Methods requirement (3 credits):** Either SOC 3030 Introduction to Research Methods or SOC 3050 Statistics for Sociology

**(d) Additional upper-level sociology electives (6 credits):** Any two 300- or 400- level courses

Courses taken pass/fail and courses in which a student earns less than a C- do not fulfill major or minor requirements.

## Courses

---

### L40 SOC 2010 The Roots of Ferguson: Understanding Racial Inequality in the Contemporary U.S.

Overview of sociological understandings of race, with a particular focus on race relations in the contemporary United States. We begin by investigating how sociologists understand racial distinctions, asking: What comprises a racial group? What constitutes a "group" in the social sense? We then shift our attention to patterns of racial inequality in the U.S., investigating the intersection of economic, political, and racial stratification. After analyzing national trends in racial stratification, we narrow the focus to particular regions and metropolitan areas, including St. Louis, to shed light on pressing public concerns such as the interrelationships between race and the criminal justice system. The course ends by looking beyond U.S. borders to compare the way that race is understood in other countries. Are there common patterns of racial classification shared by many societies? What makes the U.S. system of racial stratification distinctive? No prerequisites.

Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

---

### L40 SOC 2020 Order and Change in Society

Identification and analysis of processes that create social order and forces that generate social change. What kinds of structures make social life coherent so that we all can navigate a wide range of social settings? How do societies sometimes mobilize to alter the status quo, and what kinds of barriers limit those efforts to change social systems? This course engages with such core issues through a sociological lens. Specific topics include: the emergence of social roles and status systems; how social networks matter in communities, schools and other groups; and the performance, reproduction and subversion of privilege and inequality. No prerequisites.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

### L40 SOC 2030 Social Movements

Social movements are collective efforts to produce political, economic and/or cultural change. This course draws on a range of historical and contemporary case studies to analyze such collective actions by interrogating distinctive aspects of movements and their associated campaigns. Key questions include: When and where do movements occur, who participates and why, how do protest strategies and tactics develop, how do police and other movement targets react to challenges to the status quo, and how can we assess the direct and indirect impacts of contention? Introductory level, no prerequisites.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

### L40 SOC 2110 Social Inequality in America

Americans face different challenges and opportunities that depend on a variety of characteristics, including race, class, gender and sexual orientation. This class examines these

intersecting categories from a sociological perspective — not simply as ways to classify people, but as social constructions that help to explain social inequality. We examine these systems in a variety of institutional contexts, such as popular culture, family life, education, the criminal justice system and the labor force. Introductory level, no prerequisites.

Credit 3 units. A&S IQ: SSC, SD EN: S

---

### L40 SOC 2510 Sociological Approaches to American Health Care

Exploration through the sociological lens of how health, illness, and health care delivery in the United States are influenced by the social structure in which they are embedded. With the backdrop of the ongoing crisis of health care in the United States and the controversy surrounding the Affordable Care Act, we focus on the intersection of diversity factors including such as race, social class, gender, sexuality that predict risks in navigating the health care system. Professionals representing a variety of health-oriented settings and serving the needs of a diverse constituency will share their perspectives. No prerequisites.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

---

### L40 SOC 3001 Social Theory

Overview of major theoretical frameworks used by sociologists to understand social behavior and group patterns. Explores classical theories, including those developed by Marx, Weber, and Durkheim along with contemporary perspectives such as exchange and feminist theories. Class discussions and writing assignments emphasize application of theory to understand current social experiences and structures. The course has no specific prerequisites, but students should be prepared for intensive study of challenging ideas and the application of these ideas in new contexts relevant to modern society.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

### L40 SOC 3030 Introduction to Research Methods

Overview of research methods commonly used to investigate sociological phenomena including experiments, surveys, ethnographic field research, and analysis of existing data. The course explores general issues in sociological research, such as research design, conceptualization and measurement, reliability, validity, sampling and ethical conduct. We also review applications of research methods in specific sociological studies and analyze how research results are communicated. This is a core course in the study of sociology. It has no specific prerequisites but some familiarity with sociological analysis is recommended.

Credit 3 units. A&S: SS A&S IQ: SSC BU: BA EN: S

---

### L40 SOC 3050 Statistics for Sociology

Introduction to descriptive and inferential statistical techniques used in sociological research. Topics addressed include probability distributions, data presentation and visualization, confidence intervals, hypothesis testing, and linear regression. Applications of statistical analysis drawn from sociological research and other social science data sources, such as polling and economic data. Students will use statistical software to complete assignments. Prerequisite: introductory course in sociology or consent of the instructor.

Credit 3 units. A&S IQ: SSC, AN Arch: SSC Art: SSC EN: S

---

**L40 SOC 3212 The Social Construction of Race**

Examination of race, ethnicity and racism from a sociological perspective to understand race as a socially constructed phenomenon manifested in a wide range of social institutions. The course focuses on how race and racism impact contemporary social problems and public policy issues including immigration, affirmative action, education, media representation and work. Application of sociological analysis to understand current race-related events. This course has no specific prerequisites but completion of an introductory course in sociology is recommended before enrollment.  
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

---

**L40 SOC 3310 The New Inequality**

Exploration of recent trends of economic inequality in the United States that have reached levels not seen since before the Great Depression. We examine factors that account for the decades-long increase in economic disparities, paying particular attention to patterns in educational attainment, political developments, and the role of technological change. We will also compare recent movements in economic inequality and macroeconomic performance in the U.S. with other advanced industrialized nations. This course has no specific prerequisites but completion of an introductory course in sociology is recommended before enrollment.  
Credit 3 units. A&S: SS, SD, WI A&S IQ: SSC, SD, WI Arch: SSC Art: SSC BU: BA EN: S

---

**L40 SOC 3350 Poverty and the New American City**

Exploration of structural changes that are transforming the American urban landscape, especially for low-income populations. We begin with a review of classic theories of urban poverty and consider their relevance in the modern context. We then analyze key political, economic, demographic and geographic shifts in how urban poverty is organized and reproduced, including gentrification, immigration, social policy reform and the credit crisis. Special attention will be devoted to exploring the social and political implications of changing urban policy approaches, as well as the "suburbanization" of poverty. We will conclude by discussing how urban poverty interfaces with broader social structures, including law, markets and the state. Prerequisite: an introductory course in sociology or consent of the instructor.  
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

**L40 SOC 3410 Gender in Society**

Introduction to the sociological study of gender. The primary focus is U.S. society, but we will also discuss gender in an international context. From the moment of birth, boys and girls are treated differently. Gender structures the experiences of people in all major social institutions, including the family, the workplace and schools. We will explore how gender impacts lives and life chances. The central themes of the course are historical changes in gender beliefs and practices; socialization practices that reproduce gender identities; how race/ethnicity, class and sexuality shape the experience of gender; and the relationship between gender, power and social inequality. Prerequisite: introductory course in sociology or consent of the instructor.  
Credit 3 units. A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

---

---

**L40 SOC 351 Topics in Sociology**

Improving the health of the U.S. population and reducing disparities in health are national priorities. To reach these goals much research has sought to determine the factors that influence health status beyond health care quality and access. This course explores the broad area of study termed the "social determinants of health," while placing special emphasis on the exploration of health disparities in the United States. We will examine the social conditions that relate to the health of populations with particular attention to how patterns of health vary by social class, race/ethnicity and gender. We will also consider mechanisms that produce and maintain these differences. In addition to sociology, we will draw upon the work of multiple disciplines including public health, demography, anthropology, public policy, economics and medicine to understand what makes our populations sick and what might make them better. Prerequisite: introductory course in sociology or consent of the instructor.  
Credit 3 units.

---

**L40 SOC 3550 Sociology of Work**

Sociological understanding of work and, in particular, how work reduces or replicates inequality. Classic and contemporary sociological theories of work; how work in the U.S. has changed over time; and how workers are matched to "good" and "bad" jobs. Threaded through the course is the exploration of barriers to racial, gender, and class inclusion and advancement at work. We will explore how organizational structures, policies and practices can increase or decrease those barriers. Prerequisite: introductory course in sociology or consent of the instructor.  
Credit 3 units. A&S IQ: SSC BU: BA EN: S

---

**L40 SOC 3660 Social Conflict**

Comparative and historical examination of conflict between social groups, including groups defined by race, ethnicity and class. Readings combine classical and contemporary perspectives on collective conflict with in-depth analyses of historical and contemporary episodes. We discuss various ways in which conflicts can manifest, including the formation and hardening of divisive attitudes, discriminatory lawmaking and criminal justice practices, riots and collective violence, residential segregation, and sustained social movement activity. Prerequisite: introductory course in sociology or consent of the instructor.  
Credit 3 units. A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

---

**L40 SOC 3710 Sociology of Immigration**

A review of theoretical and empirical research on how and why people migrate across international borders, and the consequences of international migration for immigrants and natives in the United States. While immigration is one of the most controversial issues in the contemporary United States, these contentious debates are not new. Americans once voiced the same concerns about the economic and social impact of Southern and Eastern European immigrants that today are aimed at immigrants from Latin America, Asia, Africa and the Caribbean. In this course we will compare historical (1880-1920) and contemporary (1965-present) waves of immigration to the United States. We will explore why and how people migrate, immigrant integration, the impact of immigration on native-born Americans, and how government policies — at the national, state, and local level — shape immigrant assimilation and what it means to be considered truly "American" in a social as well as a

legal sense. Prerequisite: completion of an introductory sociology course or consent of the instructor.  
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

**L40 SOC 3910 Economic Realities of the American Dream**

Exploration of the realities of economic life in the U.S. and how they correspond to the American Dream. Interdisciplinary perspectives from economics, sociology and other areas of social inquiry. Emphasis on the consistency between empirical data and different concepts of the American Dream. Specific topics to include sources of economic growth and changing living standards, unemployment, impact of globalization on U.S. citizens, economic mobility, poverty and inequality, and social justice. Prerequisites: Econ 1011 and Econ 1021, or consent of the instructors.

Same as L11 Econ 348

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

**L40 SOC 3950 Culture and Identity: Urban Ethnography in St. Louis**

Topics course focusing on instances of identity and culture within the American scope. Varies by semester, refer to Course Listings for description of current semester's offering.

Same as L98 AMCS 330D

Credit 3 units. A&S: TH A&S IQ: HUM Art: HUM BU: BA EN: H

---

**L40 SOC 4610 Seminar in Selected Topics in Learning & Memory: Collective Memory**

This course provides an overview and analysis of phenomena of people remembering as part of a group — one's country, one's state, one's university, one's family. Collective memories are critical for one's identity, for knowing who we are and how to interpret the world around us. We will consider narcissistic tendencies of group memories in specific contexts (e.g., the Russian vs. American interpretation of world events; views of Trump supporters vs. Clinton supporters on events in the U.S.). The course will range from humanistic, anthropological, psychological, and sociological perspectives on memory.

Prerequisites: Psych 100B and a course on human memory or permission of the instructor.

Same as L33 Psych 461

Credit 3 units.

---

**L40 SOC 4621 Politics of Education**

Politics is interpreted broadly to include not just government, but any situation in which people have to solve a problem or come to a decision. This course focuses on schools and the processes through which certain stories, identities and practices are promoted, and others, not.

Same as L12 Educ 462

Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

---

**L40 SOC 4750 Sociology of Education**

This course provides an overview of sociological theory and research on education in contemporary U.S. society. Drawing from sociological perspectives, it covers the implications of schools and schooling for social inequality, mobility and group relations. It examines major theoretical perspectives on the purpose and social organization of mass education in the United States, and topics related to the organization and function of schools, access to educational resources, and group disparities in school experiences and outcomes.

Same as L12 Educ 453B

Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Art: SSC BU: BA, ETH

---

**L40 SOC 4900 Research in Sociology**

Independent work linked to the material covered by an associated 300- or 400-level class in sociology leading to completion of a research paper. Work is supervised by the faculty member teaching the associated class. Registration may be concurrent with the associated course or after the course is completed. Successful completion of this paper satisfies the capstone requirement for the sociology major. Students will normally receive 1 credit for this course, but students may register for up to 3 credits with the approval of their faculty supervisor. Open to sociology majors only; register for the section assigned to the faculty supervisor. Prerequisite: approval of faculty supervisor.

Credit variable, maximum 3 units.

---

**L40 SOC 4910 Internship in Sociology**

Students may receive up to 3 units of credit for an approved, faculty-sponsored internship that relates to the study and application of sociological material. Credit determined by the number of hours worked. Specific requirements are set by the faculty supervisor in consultation with the supervisor in the organization where the internship work is completed. Students should complete a learning agreement provided by the Career Center. Successful completion of an internship approved by the student's major adviser satisfies the capstone requirement for the sociology major. Open to sociology majors and minors only; register for the section assigned to the faculty supervisor. Prerequisites: completion of the "Learning Agreement" provided by the Career Center and approval of faculty supervisor.

Credit variable, maximum 3 units.

---

**L40 SOC 4920 Teaching Practicum in Sociology**

Students may receive up to 3 units of credit for work assisting in course instruction, tutoring and preparation of course materials under the supervision of a faculty member. This course does not fulfill sociology major requirements. Register for the section assigned to the faculty supervisor.

Credit variable, maximum 3 units.

---

**L40 SOC 497 Honors Thesis I**

Credit variable, maximum 3 units.

---

## Spanish

Speaking Spanish is the key to unlocking the cultures, traditions and experiences of 20 different countries throughout the world. From the medieval knights and Don Quixote through the modern novels by prize-winning authors and the world of film, the Spanish faculty at the Department of Romance Languages and Literatures guides Spanish students into the unexpected territories of Europe and Latin America, territories that are as rich geographically as they are culturally. Students who major and minor in Spanish graduate with top-notch communication skills. Our students speak Spanish and they speak culture, which are valuable professional skills today. The exponential growth of the Spanish-speaking population in the United States, the constant

presence of Latin America at the top of America's political and business agenda, and the continued lure of Spain as a gateway to Europe and parts of Africa makes speaking Spanish and the ability to interpret the cultures of Spanish-speaking countries two of the most profitable and enjoyable skills that one can acquire.

Study Abroad opportunities complement our courses in St. Louis, including Freshman Focus programs in Argentina and Cuba; summer programs in Argentina and Spain; and semester programs in Chile and Spain. In addition, our Spanish program is linked to volunteer opportunities with the Latino community in St. Louis. For more information on the Spanish major and minor visit our website (<http://rll.wustl.edu/spanish/undergrad>).

## Majors

### The Major in Spanish

**Required units:** 27-30

A minimum of 30 units (double majors: 27 units) at the 300 level or above, of which 21 units must be taken in residence. Study at Washington University's own programs in Spain or Chile is considered "in residence."

### Required courses

The following courses must be included in the 30 units:

#### Advanced Grammar and Composition (6 units)

Span 307D Spanish Level 4: Grammar and Composition (or elective if placed in L38 Span 308E)

Span 308E Advanced Reading and Writing (L38 Span 308E is now offered instead of L38 Span 308D)

- Students who place out of L38 Span 307D through Washington University's placement exam and consultation with the director of undergraduate studies receive back credits toward graduation but not toward the major. These students need to take another advanced (300- or 400-level) Spanish course to obtain the credits typically obtained through L38 Span 307D.
- L38 Span 307D is a prerequisite for the 300-level literature surveys.
- Students are strongly encouraged also to take L38 Span 308E before registering for the survey classes but may take

308E and their first 300-level survey concurrently (listed below).

### Three Literature Survey courses (9 units)

Three of the following courses, including one Peninsular and one Spanish-American course:

| Code     | Title                                    | Units |
|----------|--|-------|
| Span 341 | Literary and Cultural Studies in Spanish | 3     |
| Span 342 | Iberian Literatures and Cultures         | 3     |
| Span 343 | Latin American Literatures and Cultures  | 3     |

Study Abroad:

| Code      | Title  | Units |
|-----------|--|-------|
| Span 354  | A View from the Southern Cone: Perspectives on Art, Literature and Culture (Chile) | 3     |
| Span 3341 | Spanish Literature II in Chile/Spain (Spain)                                       | 3     |
| Span 3361 | Spanish-American Literature II in Chile/Spain (Spain/Chile)                        | 3     |

### Notes for students considering 400-level courses and study abroad:

- A minimum of two survey courses are prerequisites for all 400-level courses.
- One literature course taken in the Chile or Spain Romance Languages and Literatures semester programs, designated as an acceptable substitute, may be used as one of the three required 300-level survey courses. Students who still must fulfill a survey on campus after returning from study abroad may, with permission of the director of undergraduate studies in Spanish, petition to take an **appropriate** 400-level seminar in place of the remaining 300-level survey course. Otherwise, students may not take a 400-level course to replace a required 300-level survey course.

### One Culture or Linguistics Survey Course (3 units)

Choose one from:

| Code     | Title                                | Units |
|----------|--------------------------------------|-------|
| Span 370 | Introduction to Hispanic Linguistics | 3     |
| Span 380 | Topics in Hispanic Cultures          | 3     |

Study Abroad:

| Code      | Title  | Units |
|-----------|--|-------|
| Span 3181 | Spanish Culture and Civilization                       | 3     |
| Span 311  | Hispanic Culture and Civilization I (summer in Madrid) | 3     |

Span 313 Chilean Contemporary Culture (Chile) 3

### **Two 400-Level Seminars (6 units)**

Span 405W Major Seminar (selected topics)

Span 410 Major Seminar (selected topics)

Other 400-level class *taught in Spanish*

- **Beginning 2016-17, students may take 405W or 410 in any combination; 405W will fulfill the College's Writing Intensive requirement for those who need it.**
- When offered, **one** of the following language seminars may be substituted for one of the two 400-level literature seminars: Span 417 Spanish Phonetics, Phonology and Dialectology or Span 411 Advanced Grammar and Syntax.
- Span 370 (or consent of the instructor) is a prerequisite for the 400-level linguistics courses taught in Spanish.

Study Abroad:

- One 400-level seminar must be taken on campus
- Approved 400-level course from the Madrid or Chile program (refer to Study Abroad guidelines on our website (<http://rll.wustl.edu/abroad>))

### **Elective courses (two for single majors; one for double majors)**

| Code     | Title   | Units |
|----------|---|-------|
| Span 324 | Conversation in Cinema (Span 324 is the only University College course that can count as elective credit for the major and minor) | 3     |
| Span 331 | Hispanic Art/Arte Hispano   | 3     |
| Span 351 | Business Spanish  | 3     |
| Span 353 | Medical Spanish   | 3     |

Any other advanced 300- or 400-level Spanish (L38) class taught by a Romance languages and literatures faculty member

- Only one elective course taught in English may be taken, when available, for the major

Study Abroad:

- Span 322 Advanced Conversation in Spain
- Elective credit from semester programs in Santiago or Madrid
- Elective from the Latin American Studies summer program in Buenos Aires (either Latin American and Argentine Literature or Argentine History)
- Elective credit from Petitioned, Organization for Tropical Studies, School for International Training, or Comparative Literature programs (refer to Study Abroad guidelines on our website (<http://rll.wustl.edu/abroad>))

- Spanish courses completed (and approved) from Study Abroad programs other than those at Washington University may be used for Spanish elective credit only.
- All Study Abroad credit requires authorization from the director of undergraduate studies.

### **Other Requirements**

Prior to declaring a major, students are required to fill out a questionnaire about their previous preparation and objectives in studying Spanish. As seniors they may fill out an optional survey about the major. Double-major seniors may elect to do their capstone experience in a 400-level course; single majors must do so. The capstone may be fulfilled through the completion of a 400-level class with a B+ or better, or via Honors (refer to Honors guidelines on our website (<http://rll.wustl.edu/latin-honors>)). All qualified majors in the school of Arts & Sciences may elect to meet the requirements for honors. To be eligible to earn honors in Spanish, Spanish must be the student's prime major.

#### **Recommended for prospective teachers:**

1. A second language
2. Span 466, Span 467, Span 469, Span 413, Span 417, Span 411
3. Semester or year in Spain or Chile

#### **Recommended for prospective graduate students:**

1. A second language related to student's area of interests
2. Advanced work in other literatures, literary criticism and theory, and related course work in other literature or film programs
3. Year in Spain or Chile
4. Senior Honors by thesis or course work (refer to Honors guidelines on our website (<http://rll.wustl.edu/latin-honors>)). Students who have maintained at least a minimum cumulative GPA of 3.65 through the end of the junior year are encouraged to work toward Latin Honors (cum laude, magna cum laude, summa cum laude).

## **Minors**

### **The Minor in Spanish**

**Units required: 18**

The Spanish minor includes 18 units, of which 12 must be taken in residence. Students must complete courses with a grade of B- or above and maintain a B average or better overall in Spanish. Courses taken Credit/No Credit (Pass/Fail) do not count toward the Spanish minor.

## Required courses

### Advanced Grammar and Composition (6 credits)

Span 307D Spanish Level 4: Grammar and Composition (or elective if placed in 308E). Spanish 307D is a prerequisite for the 300-level literature surveys.

Span 308E Advanced Reading and Writing (Spanish 308E is now offered instead of 308D). Students are strongly encouraged also to take Spanish 308E before registering for the 300-level survey classes but may take 308E and their first 300-level survey concurrently.

### Two Literature and Culture Surveys (6 credits)

Two of the following courses, including one Peninsular and one Spanish American course:

| Code     | Title                                    | Units |
|----------|--|-------|
| Span 341 | Literary and Cultural Studies in Spanish | 3     |
| Span 342 | Iberian Literatures and Cultures         | 3     |
| Span 343 | Latin American Literatures and Cultures  | 3     |

Study Abroad:

| Code      | Title  | Units |
|-----------|--|-------|
| Span 354  | A View from the Southern Cone: Perspectives on Art, Literature and Culture | 3     |
| Span 3341 | Spanish Literature II in Chile/Spain                                       | 3     |
| Span 3361 | Spanish-American Literature II in Chile/Spain                              | 3     |

#### Notes for students studying abroad and/or students considering the major in Spanish:

- A minimum of two survey courses are prerequisites for all 400-level courses.
- One literature course taken in the Chile or Spain RLL semester programs, designated by the department as an acceptable substitute, may count as one of the three required 300-level surveys. Students who return from Study Abroad needing to complete one outstanding survey may, with permission of the director of undergraduate studies in Spanish, petition to take an **appropriate** 400-level seminar in place of the remaining 300-level survey. Students who do not receive approval from the director of undergraduate studies may *not* take a 400-level course in place of a required 300-level survey course.

### One Culture or Linguistics Survey Course (3 credits)

One of the following courses:

| Code     | Title                                | Units |
|----------|--------------------------------------|-------|
| Span 370 | Introduction to Hispanic Linguistics | 3     |
| Span 380 | Topics in Hispanic Cultures          | 3     |

Study Abroad:

| Code      | Title                               | Units |
|-----------|-------------------------------------|-------|
| Span 311  | Hispanic Culture and Civilization I | 3     |
| Span 3181 | Spanish Culture and Civilization    | 3     |
| Span 313  | Chilean Contemporary Culture        | 3     |

### One Elective Course (3 credits)

One of the following courses:

| Code     | Title                     | Units |
|----------|---------------------------|-------|
| Span 331 | Hispanic Art/Arte Hispano | 3     |
| Span 351 | Business Spanish          | 3     |
| Span 353 | Medical Spanish           | 3     |

Any other advanced-level Spanish course offerings either at the 300 or 400 level or approved study abroad course.

Study Abroad:

- Span 322 Advanced Conversation in Spain
- Elective credit from semester programs in Santiago or Madrid
- Elective credit from the Latin American Studies summer program in Buenos Aires (either Latin American and Argentine Literature or Argentine History)
- Elective credit from petitioned OTS, SIT, or Comparative Literature program (refer to Study Abroad guidelines on our website (<http://rl.wustl.edu/abroad>))
- Spanish courses completed (and approved) from Study Abroad programs other than those at Washington University may be used for Spanish elective credit only. All Study Abroad credit requires authorization by the director of undergraduate studies.

## Courses

Visit online course listings to view semester offerings for L38 Span (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L38&crslvl=1:4>).

#### L38 Span 101 Elementary Spanish 1

Beginning language program stressing acquisition of spoken ability together with attention to the development of reading, writing and listening skills. In addition to three hours of class, students complete weekly, assessed independent learning activities with multimedia resources.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

#### L38 Span 102 Elementary Spanish 2

Second semester of the beginning language program stressing acquisition of spoken ability together with attention to the development of reading, writing and listening skills. In addition

to three hours of class, students complete weekly, assessed independent learning activities with multimedia resources. Prerequisite: Span 101D or placement by examination. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

**L38 Span 201D Spanish Level 3: Intermediate Spanish**

An accelerated intermediate-level grammar review taught by a team of instructors in a MWF grammar class and a T/TH literature/composition class. Reviews basic and some advanced skills intensively with increased emphasis upon reading, writing, culture, and vocabulary learning. Prerequisite: Span 102D or placement by examination. Students must register for both a T/TH and a MWF class. Credit 5 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

**L38 Span 201E Intermediate Spanish I**

The first half of a two-semester intermediate-level sequence. Reviews basic knowledge and introduces advanced skills in grammar, reading, writing, culture and vocabulary. Prerequisite: Span102D, or placement by examination. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

**L38 Span 202 Intermediate Spanish II**

The second half of a two-semester intermediate-level sequence. This class continues to review basic knowledge and to introduce advanced skills in grammar, reading, writing, culture and vocabulary. Prerequisite: Span201E or placement by examination. Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

**L38 Span 223 Intermediate Spanish Conversation and Culture**

Practice of spoken Spanish and expansion of vocabulary in a wide range of topics. Discussion and role play based on short readings, music and film. Use of the World Wide Web for up-to-date news and culture. Oral presentations and limited writing. Prerequisite: 201D or equivalent. Concurrent enrollment in Span 307D recommended. Credit 3 units. A&S: LA A&S IQ: LCD BU: HUM EN: H

---

**L38 Span 245 Women's Fiction in Contemporary Spain**

This course focuses on selected novels and short stories by 20th-century women writers in Spain, beginning with those writing during the post-Civil War years (1939-1975) and ending with the new generation of women writers who emerged after the end of the Franco dictatorship (post-1975). Discussions center on both political and aesthetic issues in the contexts of post-war and post-Franco Spain, including the effects of political repression and censorship; representations of gender and sexuality; and literature's relationship to feminist and nationalist movements in Spain. When relevant, other cultural media, such as film and music, are used in conjunction with our reading and analysis of literary texts. The course is taught in English. Credit 3 units. A&S: TH Art: HUM BU: IS EN: H

---

**L38 Span 246 Freshman Seminar: Latin American Women in History and Culture: Icons and Idols**

In English. This class takes an in-depth look at various iconic female figures in the history of Latin America, examining their (self-) representation in history, literature, art and other cultural manifestations. We examine their lives, writings and art to learn more about the historical and cultural moment they

lived in; how this moment shaped their lives and how they, in turn, shaped their historical moment. We aim to draw the larger conclusions of how women in history, despite hostile circumstances, have managed to forge political, cultural and artistic identities and make an impact on the world around them. We study these women in a chronological fashion, showing how society's attitudes changed toward women and how, in some ways, paradoxically, stayed the same. The women we study are all very different in terms of identity, historical period and sociocultural background but all are similar in terms of their desire to overcome convention and resist repression — sometimes with very tragic results. Figures we study include La Malinche, Sor Juana Inés de la Cruz, Manuela Saenz, Delmira Agustini, Frida Kahlo, Eva Perón, the Mothers of the Plaza de Mayo, Rigoberta Menchú and Ingrid Betancourt. Prerequisite: concurrent registration in individually appropriate level of Spanish language course is required. Credit 3 units. A&S: TH, SD A&S IQ: HUM, LCD, SD BU: IS EN: H

---

**L38 Span 247 Freshman Seminar**

Same as WGSS 247. Taught in English. Small group seminar devoted to readings and study of other texts such as films, paintings, etc., active discussion, writing. Topics vary; interdisciplinary focus. Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: ETH EN: H

---

**L38 Span 251 Latin American Nomads and Travelers**

Rites of passage and trespassing representing Latin American immigrants, nomads and travelers in narrative and film. This course is designed to map the multicultural context of travel, nomadism, displacement and immigration while studying narrative texts (*Before Night Falls*; *Heading South*, *Looking North*; *Life on the Hyphen*; *Translated Woman: Crossing the Border With Esperanza's Story*) and films (*El Norte*, *Gringuito*, *Old Gringo*, *Stand and Deliver*) by Latin American and Latino authors. We look at the images, metaphors and myths that pervade current conceptualizations of the borderlands and explore the variety of ways in which postcolonial rites of passage and trespassing inform the aesthetics of contemporary Latin American cultural expression. In English. Credit 3 units. A&S: TH BU: IS

---

**L38 Span 252 Introduction to Latino/a Studies: Exploring Memory**

The course is an interdisciplinary introduction to Latino Studies, a discipline that studies the experiences and conditions of U.S. Latinos drawing from both the Social Sciences and Humanities. The course presents and analyzes works that include methodological strategies and analytical approaches to learning about U.S. Latinos. We analyze the social, political, and cultural forces that have affected the experiences of Latinos/as with particular attention to the ways in which historical, collective, family, and personal memories have shaped and continue to shape these experiences. We explore the intersections of history, place and identity through a selection of works, including literary and media studies, in order to understand the principle questions and concerns in the major fields of interest to U.S. Latino Studies. Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

**L38 Span 299 Undergraduate Independent Study**

Prerequisites: Span 201D and permission of the department.

Credit variable, maximum 3 units.

---

**L38 Span 307D Spanish Level 4: Grammar and Composition**

This course combines a review of Spanish grammar and syntax with the analysis of several concrete examples of cultural production in Spanish. This dual emphasis on refining linguistic skills already studied, and exploring the cultural diversity of the Spanish-speaking world, will provide students with the tools for effective and culturally appropriate written and oral communication in Spanish necessary for establishing strong cross-cultural relations in today's interconnected world. Prerequisites: Span 201D or Span 202 or placement by examination.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

**L38 Span 308D Spanish Level 4: Grammar and Composition 2**

In-depth study of the process of writing, designed to prepare the Spanish major to write literary analysis. Literary texts studied as examples of writing styles. Regular compositions. Prerequisite: Span 307D or placement by examination.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM

---

**L38 Span 308E Advanced Reading and Writing**

In depth study of the process of advanced reading and writing designed to prepare the Spanish major for upper-level courses. Literary texts studied as examples of writing styles. Regular compositions. Prerequisite: Span 307D or placement by examination. Conducted in Spanish.

Credit 3 units. A&S: LA A&S IQ: LCD, LS BU: HUM EN: H

---

**L38 Span 310 Advanced Intermediate Spanish in Spain**

Continued study of Spanish grammar and syntax at Washington University's Madrid Carlos III University Program. A course designed for non-native speakers of Spanish, to refine communicative abilities in all four skills. Prerequisite: placement by exam at Carlos III.

Credit variable, maximum 4 units.

---

**L38 Span 311 Hispanic Culture and Civilization I**

Study of aspects of the political, social and cultural life of contemporary Spain and Portugal and their historical development. Class discussion; readings with compositions. Conducted in Spanish. May be repeated for credit. Prerequisite: Span 201D.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Art: HUM BU: BA EN: H

---

**L38 Span 312 Topics in Hispanic Culture and Civilization II**

Study of aspects of the political, social and cultural life of contemporary Latin America and their historical development. Class discussion; readings with compositions. Conducted in Spanish. Prerequisite: Span 201D or placement by examination.

Credit 3 units. A&S: TH, CD BU: BA EN: H

---

**L38 Span 313 Chilean Contemporary Culture**

This two-week course provides a panoramic view of Chilean contemporary culture, focusing on the years from 1988 to the present. We examine the representation of current issues in literature, the arts and the media, and study topics such as governmental institutions, the constitution of 1980, the economy, the role of the Catholic Church, public policy concerning culture,

etc. The course meets three hours a day, and there are several guest lecturers. Conducted in Spanish. Requirements: two short papers, short reports in class of the news or a cultural activity students have attended, and participation in class discussions. Course includes an all-day cultural excursion on Saturday, which features a visit to one of Neruda's houses, a history museum, etc.

---

**L38 Span 317 Advanced Spanish Language in Chile/Spain**

Continued study of Spanish grammar and syntax at Washington University's program in Chile or Spain. A course designed for non-native speakers of Spanish to refine mastery of difficult uses and structures in all four skills. Prerequisite: placement by exam or program director.

Credit variable, maximum 4 units.

---

**L38 Span 3181 Spanish Culture and Civilization**

This course is intended to acquaint students with important aspects of Spanish culture, including history, civilization, society, politics and the arts, dating from the first invasions of the Peninsula to the present. Students gain an awareness of the ethnic, cultural and aesthetic diversity of Spain as a country of multiple autonomous regions, by working with written texts and other media and by visits to various locations. The broader aim of the course is to enable students to engage with and to analyze Spanish culture from an intellectually critical perspective and knowledge of its sociohistorical distinctiveness. Requirements include active participation within all classes and excursions, presentations and various written assignments. This course is taught in Madrid, as part of the Washington University Carlos III Program. Conducted in Spanish.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Arch: HUM BU: IS EN: H

---

**L38 Span 322 Advanced Conversation in Spain**

Designed to offer students with advanced skills in Spanish an opportunity to refine their ability to discuss a variety of topics. Various media such as films, television, newspapers and other modes of communication are used for oral presentations and some writing. Prerequisite: Span 301, 307D or 308E, or multiple 300-level courses.

Credit 3 units. A&S: LA A&S IQ: LCD EN: H

---

**L38 Span 325 Exploration, Traveling and the Double Gaze: Mapping Geography and Identity in Colonial Spanish America**

In this course we examine the geographical, cultural and ideological mapping as described in the travel/exploration chronicles of the 16th, 17th and 18th centuries. We focus on the Southern hemisphere (Peru) as well as the Northern Frontier (Mexico, New Mexico, La Florida, Colorado) while reading narrative texts such as Columbus' *Diario*, Cabeza de Vaca's *Naufragios*, Inca Garcilaso de la Vega's *The Florida of the Inca*, Francisco Vásquez de Coronado's *Narratives of the Coronado Expedition*, and Alonso Carrió de la Vandra's *El Lazarillo de ciegos caminantes* (guide for travelers in 18th-century Spanish America). We use art work and historical maps for our study of the cultural and ideological representations of alterity and of the geography of the colonial empire. In English.

Credit 3 units. A&S: TH

---

**L38 Span 331 Hispanic Art/Arte Hispano**

This course focuses on the most important movements, artistic expressions and its representatives of the art history of Latin America and Spain. From the Pre-Columbian art of the Mayas, Aztecs and Incas, to the syncretism of Postcolonial Latin American art, the Mexican Muralism and the self-reconstruction portraits of Mexican artist Frida Kahlo to the Chicano Art in the USA. From the Medieval paintings of religious Spain, to the criticism of the Spanish nobility by Diego Velazquez, the Spanish Civil War of *Guernica* by Pablo Picasso, to the Surrealism of Salvador Dalí and Antonio Gaudi. The students visit the St. Louis and the Kemper Art Museums. Prerequisite: Span 308E. May be used for elective credit in the Spanish major or minor. In Spanish.

---

**L38 Span 3321 Spanish Film Studies in Spain**

An introduction to contemporary Spanish film taught at Washington University's program in Spain. Prerequisite: approval of Washington University's program director.

Credit 3 units. BU: IS

---

**L38 Span 3331 Spanish Literature I in Chile/Spain**

Introductory survey of Spanish literature from its beginnings in the Middle Ages to the baroque period at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent.

Credit 3 units. Art: HUM

---

**L38 Span 3332 Early Modern Spanish Texts: Whose Golden Age Do They Represent?**

This course studies a series of work from 16th- and 17th-century Spain canonized by later readers as classics of national Spanish literature, that daringly experiment with the literary genres of their period to incorporate discourses from daily life, thereby revealing the decadence of imperial Spain and questioning the representation of this period as a "Golden Age." Includes the *Lazarillo de Tormes*, *El Abencerraje*, *Fuenteovejuna*, *La vida es sueño*, *La dama boba* and short narratives by Cervantes and María de Zayas. Prerequisites: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. In Spanish.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, LCD, LS, SD BU: IS EN: H

---

**L38 Span 3334 Medieval Iberia: A World with Many Faces, Through its Texts and Other Cultural Artifacts**

This course offers a panoramic vision of the medieval literature of the Iberian Peninsula, from its beginnings until the end of the Middle Ages (11th to 15th centuries). We read student modernized and annotated versions of some of the most famous works of this period, originally written in Castilian: lyric and epic poetry, ballads, miracles and exemplary stories, and the first act of *Celestina*. This selection includes works written by Christian, Hispano-Arabic and Hispano-Hebrew authors, and also some works originally written in other languages of the Peninsula (Arabic, Hebrew, Portuguese and Latin), that were translated into Castilian during the Middle Ages and are now considered part of the corpus of Castilian literature, because they significantly influenced Castilian authors of this and later periods. We also use music, art, images of old manuscripts and books, and secondary readings that help us better understand the cultural

context of this period. Our discussion of the texts include topics such as the relations among the three main Cultures of the Peninsula: Arabic, Jewish and Christian, the role of the Christian Church in medieval society, the situation of minority and women, the presence of oral tradition in written texts, and the creation and spread of manuscripts and early printed books. Prerequisite: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, LS, SD BU: HUM EN: H

**L38 Span 3341 Spanish Literature II in Chile/Spain**

An introduction to key texts from Spanish literature in the 19th and 20th centuries at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent.

Credit 3 units. Art: HUM

---

**L38 Span 334C Spanish Literature II**

An introduction to key texts from Spanish literature and culture in the 19th, 20th and 21st centuries in their specific historical contexts. Topics may include encounters between Arabs, Christians and Jews in the Iberian peninsula; issues of gender and sexuality; the modern city; discourses of nationalism; the Spanish Civil War; the Francoist dictatorship; transition to democracy; and contemporary challenges in an increasingly multicultural and multiracial society. Prerequisites: Span 307D; concurrent registration in Span 308E is allowed; completion of Span 308E is recommended. In Spanish.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD, LS Art: HUM BU: IS

---

**L38 Span 3351 Spanish-American Literature I in Chile/Spain**

A survey of major figures and literary trends in Spanish America from 1492 to Modernismo (1880); at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent.

Credit 3 units. Art: HUM

---

**L38 Span 3352 Spanish-American Literature of the Long 19th Century: From Empire to Nation**

This survey examines the changing roles of literature and its creators during the period that saw the end of the powerful Spanish empire and the emergence of the political framework of independent nations we are familiar with today. Students are introduced to prominent themes such as independence writing, the experience of race in literature, romanticism, civilization vs. barbarism, the appeal of literature to popular classes, modernismo, the place of literature in nation building and in shaping national identity, and the idea of the past as present. Prerequisites: Span 307D or permission of instructor; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. In Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD, LS EN: H

---

**L38 Span 335C Spanish-American Literature I**

A survey of major figures and literary trends in Spanish America from 1492 to Modernismo (1880). Emphasis on the writings of either Colón or Columbus, Cortés, Bernal Diaz, Las Casas, Inca Garcilaso de la Vega; and Aztec reactions to the Conquest in the early period and on Sor Juana in colonial times. After the period of independence from Spain (1810-1824), the focus is on the literary representation of the making of the new nations and cultural autonomy. Readings include chapters

of a picaresque novel, the representation of dictatorship, civilization vs. barbarism, the gaucho epic, and 19th-century fiction. Lectures and class discussions of the readings; exams, papers and short reports. Prerequisites: Span 307D; concurrent registration in Span 308E is allowed; completion of Span 308E is recommended. In Spanish.

### L38 Span 3361 Spanish-American Literature II in Chile/Spain

A survey of major Spanish-American literary works from the end of the 19th century to the contemporary period at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent.

Credit 3 units. Art: HUM

---

### L38 Span 336C Spanish-American Literature II

A survey of major Latin American literary works focusing on canonical works of the 20th and 21st centuries in their cultural and historical contexts. The course includes discussions of major literary movements such as the avant-garde, the Boom and the post-Boom. Other topics may include the literary and cultural responses to revolution, dictatorship and the evolving definitions of Latin America. Authors may include Quiroga, Neruda, Guillén, Vallejo, Borges, Cortázar, Rulfo, Carpentier, García Márquez, Poniatowska, Fuentes, Ferré and others. Prerequisites: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended.

---

### L38 Span 337C The Chilean Short Story

In this course we trace the trajectory of the short story in Chile in the 20th century with special attention to such literary movements as realism, naturalism, vanguardism, surrealism and the new narrative, including the literature written during the dictatorship. The course tries to determine what specifically can be expressed about national identity through narrative, and is informed by historical, political and sociological analyses. The course includes several field trips to related sites and guest lectures by major Chilean writers and critics. Class requirements include a short essay, a long final essay and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. Conducted in Spanish.

Credit 3 units. A&S: TH Art: HUM

---

### L38 Span 340 Nationalism in Action: The Spanish-American War

We study nationalism as it was in evidence in the Spanish-American War in the United States and in Spain as an outgrowth of each country's history. We read periodicals of the period and study caricatures and other artistic expressions, as well as writings by authors such as Stephen Crane, Galdós, Mark Twain, Fernando Ortiz, Ivan Musicant and others. Cuba, Puerto Rico and the Philippines are included in the scope of the course. Students are expected to present a book report orally and to write it formally; in addition, a term paper of about 15 pages on a topic chosen in consultation with the instructor serves as a final project. The course is conducted in English although students able to read other languages may do some of the readings in the original. May count as elective credit for the major if work is done in Spanish. Enrollment limited to 15 students.

Credit 3 units. A&S: TH

---

### L38 Span 341 Literary and Cultural Studies in Spanish

This course is an introduction to cultural and literary analysis within Iberian and Latin American cultures. The course covers a wide variety of materials that span different countries, historical periods, and various cultural and literary forms. The main objective of the course is to introduce students to key historical, geographical and political aspects of these cultures, while at the same time applying different approaches of cultural analysis. The course is structured upon key central concepts as they are particularly related to the cultures of the Iberian Peninsula and Latin America, such as nation, colonialism/postcolonialism; modernity and postmodernity; popular and visual media; gender, race, migration and social class. The course combines the reading of literary texts, films and other cultural forms, with the examination of introductory critical works related to the key concepts that are explored throughout the semester. Prerequisites: Span 308E or concurrent enrollment in 308E. Taught in Spanish.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, LS, SD  
Arch: HUM Art: HUM BU: IS EN: H

### L38 Span 342 Iberian Literatures and Cultures

Which are the cultures that shape what Spain is today? This course explores the diversity of the Iberian Peninsula through its literatures and cultures. As part of both the Mediterranean and Western Europe, the Iberian Peninsula has been shaped through a dynamic of conflict and negotiation between various cultures, languages and religions. Students engage themes such as internal colonization, imperialism, multiculturalism, regional identities, nation formation, migration, media and popular culture, modernization, and gender and race relations, as they relate to our understanding of the country today. Focuses may include but are not limited to the following: multiculturalism of the Middle Ages, the Muslim and Jewish presence in Spain, identity narratives and power relations, stage and performance traditions, as well as authors and artists like Cervantes, Galdós, García Lorca, Picasso, Almodóvar. Prerequisites: Span 308E or concurrent enrollment in 308E. Taught in Spanish.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, LS, SD  
Arch: HUM Art: HUM BU: IS EN: H

---

### L38 Span 343 Latin American Literatures and Cultures

How did Latin America become Latin America? This course explores the different inventions and reinventions of the region through its literatures and cultures. Beginning with the encounter of Europeans with America, students engage themes like colonization and colonialism, urban and rural cultures, nation formation, modernization, media and popular culture, as well as gender and race relations. Authors studied may include Colón, Sor Juana, Sarmiento, Neruda, Borges, García Márquez, or Morejón. Prerequisites: Spanish 308E or concurrent enrollment in 308E. Taught in Spanish.

Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, LS, SD  
Arch: HUM Art: HUM BU: IS EN: H

---

### L38 Span 349 Don Quixote in Translation

Because Cervantes' masterpiece is considered to be the first modern novel, it is absolutely essential to any understanding of literature as a whole. By way of a close textual reading, this course focuses on all the ways *Don Quixote* recapitulates almost the entire Western tradition and how it anticipates so many of the later developments of the novel. Course conducted in English.

Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 350 Undergraduate Seminar in Spanish Literature and Culture**

Taught in Spanish. Topics vary. Can be repeated for credit. This course can be counted as one of the three surveys required to obtain a Spanish major. Prerequisites: Span 307D; concurrent registration in Span 308E is recommended. Satisfies the 300-level literature survey requirement for the Spanish major and minor.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

**L38 Span 3501 Latin American Women Writers in Translation**

Study of major 20th-century women writers in English translation. We read poems, plays, essays and short fiction by authors such as Agustini, Ocampo, Mistral, Bombal, Gambaro, Ferré, Valenzuela and others. Class conducted in English. Spanish majors do the readings and papers in Spanish. Enrollment limit 25.

Credit 3 units. A&S: TH Art: HUM BU: IS

---

**L38 Span 3502 Spanish-American Short Novel**

Study of the 20th-century short novel in Spanish America. Authors include Bombal, Bioy Casares, Hernández, Castellanos, Fuentes, García Márquez, Ferré, Valenzuela, del Río.

Credit 3 units. A&S: TH Art: HUM BU: HUM

---

**L38 Span 3503 Fiction, Crime and Enigma: Clues to Detective Narrative from the Americas**

Ever since the detective story took readers by storm during the last decades of the 19th century, the genre of detective fiction has continued to flourish while undergoing numerous transformations. Latin American literature is well known for the alternative re-readings of the crime fiction canon by well-established writers who broke canonical rules of classical and hard-boiled detective narrative and both parodied and politicized the genre through endless experimentation. In this course, we focus on the intersection of action and enigma, clues and patterns of a crime, the unraveling of a puzzle and the solution of a mystery in narratives by Poe, Borges, Chandler, Hammett, Valenzuela, Piglia, García Márquez and others, as well as in selected films based on their works. In English.

Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 3504 The Spanish Short Story During the Past 50 Years**

An explosion of storytellers: the rise and fall and rebirth of a genre. This course reviews a half century of short fiction in Spain, emphasizing the works written since 1970. We focus on the most significant, representative movements in relation to their historical and social contexts. Writers studied include Camilo José Cela, Miguel Delibes, Ignacio Aldecoa, Ana María Matute, Carmen Martín Gaité, Juan Benet, José María Merino, Luis Mateo Díez, Esther Tusquets, Cristina Fernández Cubas, Soledad Puértolas, Javier Marías, Antonio Muñoz Molina and Marina Mayoral. Prerequisites: Span 307E; concurrent registration in Span 308D is recommended. Paper, midterm and final exams. In Spanish.

Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 3505 Borges in Translation**

Comprehensive study of Borges' major works. Analysis of basic themes, philosophical implications and structural elements present in Borges' poetry, essays and short stories. We also study a number of film adaptations of Borges' work, as well as a number of texts by writers he has influenced.

Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 3506 Women Writers of Early Modern Spain**

This course analyzes early modern women's writings (both secular and religious) by considering sociohistoric context, genre studies (autobiography, convent narratives, short prose fiction, poetry and theater) and feminist criticism. Critical approaches included consider issues of self-representation and subjectivity; performance; mysticism; life writing; feminist and lesbian utopias; cross-dressing; the body and spirituality; and the role of the Inquisition and confessors in the collaborative process of confessional writing. Class conducted in English. Spanish majors do the readings and papers in Spanish.

Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 351 Business Spanish**

Study of language and structures used in conducting business in the Hispanic world. We use actual materials from various businesses — advertising, marketing, real estate, accounting. Particular stress on speaking and writing. Prerequisite: Span 308E or permission of instructor.

Credit 3 units. A&S: LA A&S IQ: LCD BU: HUM

---

**L38 Span 353 Medical Spanish**

Designed for future medical professionals, this course provides students with a complete vocabulary and cultural sensitivity necessary for treating Spanish-speaking patients. While the main focus is oral/aural, written exams, varied reading and some research are required. Volunteer work recommended for enrolled students. Advanced students are given priority. Prerequisite: Span 307D.

Credit 3 units. A&S: LA A&S IQ: LCD BU: HUM

---

**L38 Span 354 A View from the Southern Cone: Perspectives on Art, Literature and Culture**

This course deals with current issues of cultural, social, political and literary importance related to the Southern Cone. We study selected texts from Argentina, Chile and Uruguay as well as contemporary films and drama productions. This course seeks to determine what specifically can be expressed about national identity, globalization and the environment as these countries face the 21st century. Course requirements include four short essays and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. May be repeated for credit. Conducted in Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

---

**L38 Span 355 Spanish for the Social Sciences**

This is an advanced Spanish language course designed to develop conversational, writing and listening skills for students in the social sciences. Students will learn and use the language in a content-based format, guided by culturally sensitive readings, discussions and activities. Prerequisite: Spanish 307D. In Spanish.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

---

**L38 Span 360 Literature Topics Course in Spain**

Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prerequisite: approval of Washington University's Madrid Program director and Carlos III.

Credit variable, maximum 3 units. Art: HUM

---

**L38 Span 3601 Cultural Studies Topics Course in Spain**

Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prerequisite: approval of Washington University's Madrid Program director and Carlos III.

Credit variable, maximum 3 units.

---

**L38 Span 370 Introduction to Hispanic Linguistics**

An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax) and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages.

Credit 3 units. A&S: LA A&S IQ: LCD BU: HUM EN: H

---

**L38 Span 380 Topics in Hispanic Cultures**

This course surveys cultures in specific contexts (Latin America and Spain) and in different historical periods, from the Middle Ages to the present. The course provides students with critical and methodological tools in order to carry out an articulate and informed cultural analysis. Prerequisites: Span 307D; concurrent registration in Span 308E is recommended. In Spanish. Topics vary from semester to semester. Consult section description for current offering.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

---

**L38 Span 400 Intensive Translation for Graduate Students I**

The first part of a two-semester course sequence in reading and translating Spanish. For graduate students in the humanities and social and natural sciences. Nongraduate students may enroll with permission of the department. Must be followed by Span 401.

Credit 3 units. A&S: LA A&S IQ: LCD

---

**L38 Span 401 Intensive Translation for Graduate Students II**

Continuation of Span 400. For graduate students in the humanities and social and natural sciences. Prerequisite: Span 400. Credit for Span 400 is contingent on completion of Span 401.

Credit 3 units. A&S: LA A&S IQ: LCD

---

**L38 Span 4013 Second-Language Acquisition and Technology**

This seminar, for undergraduate and graduate students, transforms research and theory about second-language acquisition into practice while focusing on technology-driven applications. The course fosters professional development as participants formulate critical skills for evaluating, creating and integrating technology into the language classroom. Course formats include readings, discussions and demonstrations with technologies. The course is now open to undergraduates. Graduate students can enroll whenever it suits their course planning. The course counts for the Graduate Certificate in Language Instruction and for the undergraduate minor in applied linguistics. This course carries the Social and Behavioral Sciences attribute and can be taken as an elective in several different programs.

Same as L12 Educ 4023

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L38 Span 405W Major Seminar**

An undergraduate seminar. Topics vary. This is a writing-intensive course, which requires a minimum of three papers of approximately four to five pages in length, with rewrites; 50 percent of the grade must come from written work. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. In Spanish.

Credit 3 units. A&S: TH, WI A&S IQ: HUM, LCD, WI EN: H

---

**L38 Span 406 The Spanish Symbiosis: Christians, Moors and Jews**

This course explores the contributions of Christians, Muslims and Jews in the Spanish peninsula, which led to what historians have called a *convivencia* (the peaceful and productive coexistence of these groups in medieval Spain), albeit an arrangement that was often troubled and tested. Among the topics studied are the Visigothic kingdom, the "Golden Age" of Muslim and Jewish Spain, the *reconquista* (reconquest; a series of campaigns by Christian states to recapture territory from the Moors), the age of Alfonso X, the Inquisition, the conquest of the New World, the expulsion of the Jews and the *Moriscos* (Moors), and the formation of modern Spain. We read historical accounts by Vives, Américo Castro, Benassar. Literary texts in translation include some of the greatest works of the Spanish tradition: *The Cid*, *The Celestina*, Galdós' *Compassion*, Goytisolo's *Count Julian*, Aridjis's *1492* and excerpts from Fuentes' *Terra Nostra*, among others. Pertinent films are discussed in class. Prerequisite: reading knowledge of Spanish, Hebrew or Arabic, or permission of instructor.

Credit 3 units. A&S: TH, CD Art: HUM

---

**L38 Span 407 Seminar in Spain: Cultural Encounters**

The Spanish, Latinos and non-Hispanic North American vis-à-vis "the Other." Designed to study the historical and ideological bases of attitudes and mutual perceptions that inform these three cultures' understanding of each other. Analysis of literary and extra-literary representations of the three identities in question teach students to think critically about the cultural, religious and political foundations of intercultural perceptions. Washington University students' experiences living in Spain provide a context for them to examine their own attitudes about "Hispanidad," as well as to learn about their own cultures (American, "Latino") as they are understood from abroad. Study of theoretical concepts of identity, ethnicity, minority, gender, culture and intercultural communication enables students to

participate in practical discussions based on observation and experience with an objective, critical understanding of how they perceive and are perceived by others. Fulfills 400-level literature course requirement for the Spanish major. Prerequisites: Span 307D, Span 308E and two 300-level literature surveys or the equivalent in Spanish. Course taught in Madrid, Spain, through the Washington University Madrid Program.  
Credit 3 units. A&S: TH

---

**L38 Span 408 Topics in Medieval Literature and Culture**

This is a writing-intensive course that requires a minimum of three papers of approximately four to five pages in length, with rewrites; 50 percent of the grade must come from written work. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. In Spanish.  
Credit 3 units. A&S: TH

---

**L38 Span 410 Major Seminar**

An undergraduate seminar. Topics vary. Prerequisites: Span 307D and Span 308E and at least two 300-level literature/culture surveys taught in Spanish. In Spanish.  
Credit 3 units. A&S IQ: HUM, LCD EN: H

---

**L38 Span 411 Advanced Grammar and Syntax**

This course presents a detailed study of Spanish syntax. Different theories (including generative theory) as well as the relationship between (morpho) syntax and other linguistic subsystems are considered. Special attention is also given to Spanish/English contrasts of particular interest to language learners and teachers. Prerequisites: 6 units of 300-level Spanish, or permission of instructor.  
Credit 3 units. A&S: LA A&S IQ: LCD

---

**L38 Span 4111 Advanced Grammar and Syntax in Spain**

Detailed study of contemporary Spanish syntax. Special attention to fine points of grammar and syntax necessary for communication at the advanced level, taught at Washington University's Carlos III Program in Madrid. Prerequisite: placement by exam.  
Credit variable, maximum 4 units.

---

**L38 Span 4112 Bilingual Advanced Grammar and Syntax in Spain**

Detailed study of contemporary Spanish syntax for bilingual students, taught at Washington University's Carlos III Program in Madrid. Prerequisite: placement by exam or program director.  
Credit 3 units.

---

**L38 Span 413 Linguistics and Language Learning**

The course, taught in English, provides a critical survey of various components involved in the relationship between linguistics and language learning. The course emphasizes the language learner and explores dimensions of second-language acquisition. The course begins with an examination of linguistic theories and then highlights the influence of linguistic theories on L2 acquisition research. The course then moves to an exploration of research on language and the brain. With this foundation, the course covers both internal and external factors related to language acquisition, such as language aptitude, age, gender, memory, prior knowledge, etc. In summary, theoretical and research dimensions of both linguistics and language learning are treated. This course counts as a requirement for

the Graduate Certificate in Language Instruction and for the undergraduate minor in applied linguistics. Prerequisite: Ling 170 is recommended but not required.

Same as L12 Educ 4111

Credit 3 units. A&S: LA A&S IQ: SSC BU: BA EN: S

---

**L38 Span 416 Introduction to Hispanic Linguistics**

An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages. Preceptorial for undergraduates only.  
Credit 3 units. A&S: LA A&S IQ: LCD EN: H

---

**L38 Span 417 Spanish Phonetics, Phonology and Dialectology**

This course, conducted in Spanish, explores the linguistic varieties of the 21 Spanish-speaking countries from both a historical and a synchronic perspective. The course begins with a traditional look at Spanish phonetics and phonology, with all students memorizing and utilizing the International Phonetic Alphabet. Course readings and discussions extend beyond the descriptive and include a search for the sources of language variation within the Spanish-speaking world. Particular attention is devoted to language contact and bilingualism. Students read in areas such as history, sociolinguistics, dialectology and sociology, as well as traditional linguistic studies, in designing their projects concerning phonetics, phonology and dialect diversification.  
Credit 3 units. A&S: LA A&S IQ: LCD BU: IS EN: H

---

**L38 Span 419 Feminist Literary and Cultural Theory**

This course intends to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisites: advanced course work in WGSS or in literary theory (300-level and above) or permission of the instructor required.  
Same as L77 WGSS 419

**L38 Span 4211 Spanish-American Literature of the Colonial Period**

A selective survey of the literature of the three centuries between the first encounters of the European and American Indian cultures and independence from Spain. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.

Credit 3 units. A&S: TH, CD Art: HUM

---

**L38 Span 423 Trotaconventos, Celestina & Co.: Go-Betweens, Love, Witchcraft and Other Related Subjects**

In this course we study how the literary figure known as the "go-between" evolved in Spanish literature, from its origins in Roman literature, the *Cantigas* and the *Exempla*, to its culmination in the *Libro de buen amor* and the *Tragicomedia de Calisto y Melibea*, also called *Celestina*. We also read a selection of texts that were influenced by *Celestina* and examine how their authors recreated *Celestina*'s characters and theme. Our analysis of the go-between leads us to a series of reflections about various related subjects, including the literary representation of love, the uses of language and magic as instruments of manipulation and power, and the ethical problems associated with such uses. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Preceptorial for undergraduates only; in Spanish.

Credit 3 units. A&S: TH

---

**L38 Span 424 Latin American Literature and Theory: Reading the State, Culture and Desire**

In this course, we pair literary and theoretical texts in order to hone a way of reading in which theory and literature are mutually informative, provocative and inspiring. The idea of these loose groupings is not to prescribe a particular relationship between given literary and theoretical texts but rather is a way to begin negotiating the necessarily multiple relationships of theory and literature. These pairings come to seem more artificial over the course of the semester as we trace a network of relations that begins to look more and more like the Borgesian map that covered up the entire territory it described. The object of the course is, thus, not to define or prioritize a particular set of relations but rather to practice a way of reading literature theoretically and theory literarily, by which the strengths of both are allowed to come to the forefront in their complexity. Thematically, the course has several nuclei: the triangulation of State, culture and art (Piglia/Foucault, Burman/Agamben); a psychoanalytic approach to art as desire (Lispector/Lacan/Cixous); and finally, a third nucleus about which the first two commingle completely: "post-State," proliferating desire, libidinal economies wherein the State is anachronism and failure (Arlt/Deleuze; Sorin/Virilio/Sitrin, Sassen; Bolaño/Zizek). Readings may include: Piglia, Foucault, Agamben, Arlt, Deleuze, Virilio, Sassen, Borges, Benjamin, Bolaño, Zizek, Lispector, Lacan, Cixous, as well as the films *Garage Olimpo* and *Historias mínimas*. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

**L38 Span 425 Humanism, Magic and Rhetoric in 15th-Century Castilian Literature**

This course offers a panoramic view of 15th-century Castilian literature. We study a selection of texts produced both in the Castilian court and in some centers of higher learning, especially the University of Salamanca. The secondary readings help us to better understand the cultural context of the time and deepen our knowledge of four subjects that were highly present in the minds of 15th-century authors: humanism, rhetoric, love and magic. Because some of the texts selected for this course were written by (or have been attributed to) "converso" authors, we also examine the phenomenon of "converso" literature. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. One hour preceptorial for undergraduates only. In Spanish.

Credit 3 units. A&S: TH, CD A&S IQ: HUM, LCD EN: H

---

**L38 Span 426 Latin American Theater**

Survey of dramatic and theatrical currents from the late 19th century to the present. The course focuses on tracing the themes of nationalism, cultural identity, immigration, class displacement and the effects of consumerism in representative plays from the Rio de la Plata, Chile, Colombia and Mexico. The course studies manifestations of the sainete, the grotesco criollo, theater of the absurd, as well as the popular independent theater movements of the 1960s and '70s. Theoretical works studied include those of Brecht, Piscator, Esslin. Authors studied: Dragún, Payró, Cossa, Wolff, Sánchez, Díaz, Carballido, Gambaro, Buenaventura. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.

Credit 3 units. A&S: TH, SD

---

**L38 Span 4261 The Erotics of Violence in Latin America**

The course is based on a combined analysis of theories on violence, nation and urban spaces, and the study of literary texts pertaining to the Latin American post-Boom. Some of the authors to be studied are Ricardo Piglia, Fernando Vallejo, Jorge Franco, Roberto Bolaño, Mario Mendoza, Laura Restrepo, Evelio Rosero, Santiago Roncagliolo, Alonso Cueto, Martín Kohan, Guillermo Arriaga, Daniel Alarcón, Paulo Lins, etc. The course is conducted in Spanish and focuses on the interconnections between sexuality, violence and political issues, and on the discursive strategies used for the representation of collective subjectivities and social conflict in Latin American societies.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

**L38 Span 4281 Creative Difference: Reclaiming Spanish-American "Traditional" Novel**

This class focuses on a selection of aesthetically and socially representative 19th- and early 20th-century Spanish-American novels. Integrating a wide range of sources (critical essays, paintings, film), we explore abolitionist issues in *Sab* (Cuba), the reinvention of Amerindian legacies in *Aves sin nido* (Peru), and the different facets of modernization and nation-building in *Los de abajo* (Mexico) and *La vorágine* (Colombia). Students should finish the course with a broader knowledge of Spanish-American literary history, a deeper understanding of textual representations of gender, class and multiethnic identities, and a sharper awareness of their potential as reader and critic. Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span

308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates; in Spanish. Credit 3 units. A&S: TH, SD Art: HUM

---

**L38 Span 4282 Voice into Print: The Art of Storytelling in Spanish-American Short Story**

The short story has been a central part of the extraordinary originality and vitality of Spanish-American writing, and it enjoys great popularity among scholars and the general public alike. Integrating a wide range of complementary sources (critical essays, paintings, film), this course brings together the best examples of the genre that span over a hundred years of the history of Spanish-American literature and exemplifies a variety of themes and forms: from the fantastic to the "magical-realist," from crime fiction to romance, from rural to urban. Special emphasis is placed on the topics of gender, ethnicity, religious syncretism, political resistance, and popular culture. Students familiar with the "canonical" works of Quiroga, Borges, Rulfo, Fuentes, Cortázar, García Márquez or Valenzuela discover many more vibrant voices representing a variety of national literatures: Sommers and Roa Bastos (Paraguay), Ponte, Bobes and Padura (Cuba), Vega and Ferré (Puerto Rico), Onetti and Peri Rossi (Uruguay). Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites for undergraduate students: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish. Credit 3 units. A&S: TH, CD Art: HUM

---

**L38 Span 4291 The Politics and Poetics of Spanish-American New Novel**

When Spanish-American writers gained acclaim in the world literary scene in the so-called "Boom" of the 1960s, their spectacular success was often linked with the so-called magical realism that draws upon the oral and written tradition of both European and regional heritage (African, Amerindian) and shapes them to forge a uniquely Latin American poetics. Through theoretically informed approach, this course offers an overview of the most acclaimed Spanish-American novels published between 1950 and 1970, with special attention given to the divergent cultural legacies and political uses of "magical realism." Specific notions of New World/Old World, modernization/tradition, nation building/otherness are explored in novels such as: *Los pasos perdidos* by Carpentier (Cuba), *Pedro Páramo* by Rulfo (Mexico), *La ciudad y los perros* by Vargas Llosa (Peru), *Los recuerdos del porvenir* by Garro (Mexico), *La traición de Rita Hayworth* by Puig (Argentina), and *Cien años de soledad* by García Márquez (Colombia). Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish. Credit 3 units. A&S: TH, CD Art: HUM

---

**L38 Span 430 Latin American Essay**

Study of the principal movements and outstanding figures in the Spanish-American essay from the colonial period to the present. Sor Juana, Sarmiento, Alberdi, Martí, Rodo, Paz, Freire, Ortiz, Sabato, H.A. Murena. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

**L38 Span 4301 Print and Power in 19th-Century Latin America**

Open to advanced undergraduate and graduate students, this seminar covers one of the most fascinating periods in Latin American history and cultural production, spanning from the eve of the wars for independence to eve of the Mexican Revolution (1800-1910). Several reasons make this period and the connections between print media or print culture and power worthwhile. This long century was the most war-torn in the region's history. Not only did writers engage issues of war on what was almost a daily basis, but war generated a wealth of new modes of literature. Debates on the slave trade and abolition also occurred during the 1800s, and largely in writing. And while places such as Lima, Peru and Mexico City were established printing centers during the Iberian occupation of the Americas, true printing revolutions were not widespread until during and after the wars for independence. One of the results to emerge during the first third of the century was that writing and print media gave legitimacy to incipient republican states, wedding print to power in new ways. And by the end of the century, educators and state bureaucrats teamed up to push for public primary education and literacy as components of progressive, "civilized" nations. Add to this the visual technologies and an overall surge in new forms of symbolic communication through print, and it is easy to see why this period offers such a rich backdrop for observing how print and power fit into the landscape we now know as Latin America. We pay special attention to themes including writing as a legitimizing force, writing and nation building, and the intersection of print with war, race, identity formation, modernity and ideologies. Readings include archival materials, wartime and popular poetry, novels by authors such as Jorge Isaacs and Ignacio Altamirano, writings by Simon Bolivar and Domingo Sarmiento, and modernista poetry and prose. Historical and theoretical selections guide our analysis of primary sources. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

**L38 Span 431 Latin American Poetry I**

Survey of the major figures of Latin American poetry from the colonial period to modernism. Poets studied include Sor Juana, Caviedes, Avellaneda, Martí, Dario, Silva, Najera. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 432 Latin American Poetry II**

Survey of contemporary Latin American poetry, "postmodernismo" to the present. Poets studied include González Martínez, Vallejo, Neruda, Huidobro, Paz, Parra, Orozco, Pizarnik, Cardenal, Belli. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

**L38 Span 433 Spanish-American New Novel**

This course offers a critical overview of the most acclaimed Spanish-American novels published between 1950 and 1970. The following texts are read critically with special attention given to the problematics of canonicity and formal experimentation:

*Los pasos perdidos* by Carpentier, *Pedro Páramo* by Rulfo, *La ciudad y los perros* by Vargas Llosa, *Los recuerdos del porvenir* by Garro, *La traición de Rita Hayworth* by Puig and *Cien años de soledad* by García Márquez. Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

#### L38 Span 434 The 19th-Century Spanish Novel

Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH Art: HUM

---

#### L38 Span 435 Mediterranean Cultural Studies

This course is a cultural studies seminar for advanced undergraduate and graduate students. Taking a Mediterranean perspective as a background (and we certainly spend some time discussing what such a perspective entails), we investigate the different historical, political and cultural crossings that have been taking place and are taking place at the Iberian Peninsula. Rather than a historical or chronological survey, the different sections of the course focus on the questions and conflicts that arise in these different Mediterranean encounters. These appear articulated in a series of texts that include literature, film, historical documents, song and art. Even though we mainly concentrate on texts from the second part of the 20th century, the historical background, particularly regarding the Arab and Sephardic presence in Spain, is highlighted throughout the semester. The interdisciplinary approach of this course allows students to explore human and Mediterranean geography, analyze different genres, and, finally, discuss present problems and debates from a historical perspective. Some of the issues addressed include: the question of a Mediterranean perspective, Arab and Sephardic Spain, the Mediterranean during the Spanish Civil War and World War II, old and new migrations, sexuality, globalization, and tourism. Course requirements include short papers at the end of every section and a final paper for undergraduate students, a presentation on a related topic, and a research paper for graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units.

---

#### L38 Span 436 Spanish-American Fiction: 1970 to the Present

Study of Spanish-American narrative from the early 1970s to the present. Includes novels by writers both established before the 1970s (Vargas Llosa, García Márquez, Fuentes) and writers associated with the newest novelistic trends (Eltit, Fuguet, Martínez, Paz, Valenzuela). Prerequisite: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

#### L38 Span 4361 Latin American Prose Fiction: 1975 to Present

Study of Latin American narrative from the late 1970s to the present includes both recent novels of writers established before the 1970s (Vargas Llosa, García Márquez, Fuentes) and younger writers associated with the post-"Boom" phenomenon.

Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH Art: HUM

---

#### L38 Span 442 Literature and Revolution

Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

#### L38 Span 443 The Inconvenient Indio: Imagining Indigenous Cultures in Peru and Bolivia

In the cultural history of the Andean nations, the Indio has always been a powerful yet perpetually unstable signifier, whose meaning is constantly redefined by non-Indians. An archaic residue for some, the bedrock of a new society for others, the Indio conjures contradictory imaginaries of articulation, combination, disjunction and metamorphosis that have shaped a wide range of debates: from assimilation and mestizaje in the context of nation-building and modernity, to the politicizing of ethnic identities in the context of immigration and globalization. Focusing on Peru and Bolivia, this course examines these cultural imaginaries and the debates in which they appear, as well as the models of community and identity they suggest. In doing so, we discuss topics such as the discourse of illness, indigenismo, transculturation, heterogeneity, violence and memory. Materials analyzed include poetry by César Vallejo and Carlos Oquendo de Amat; essays by José Carlos Mariátegui and Ángel Rama; José María Arguedas's novel *Los ríos profundos*; Jorge Sanjinés's film *El Coraje del pueblo*; and theatrical performances by Grupo Yuyachkani. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates; in Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

#### L38 Span 4471 Spanish-American Women Writers I

A study of women's writing from the turn of the century to 1970. Readings include novels, short stories, poetry, essays and autobiographical texts. Prerequisites: Span 307D, Span 308E and at least two 300-level literature course taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH, SD Art: HUM

---

#### L38 Span 4472 Spanish-American Women Writers II

A study of contemporary women's writing from 1970 to the present within a feminist theoretical framework. Topics include the construction of gender, female subjectivity, love and power, women and politics, literary strategies, etc. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH, SD Art: HUM

---

#### L38 Span 450 Special Topics in Hispanic Literature and Culture

Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. May be repeated for credit. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Arch: HUM Art: HUM

---

**L38 Span 4502 Latin American Narrative in Film**

Analysis and discussion of a select group of films, focusing on their literary origins or their peculiar elaboration of critical conflicts in contemporary Latin American society. Films by Littin, Puenzo, Lombardi, Skarmeta, Solanas, Gutiérrez Alea, Lilienthal and others. Novels by Vargas Llosa, Carpentier, Amado, Puig, Skarmeta and Soriano. Course conducted in English. Does not fulfill 400-level literature requirement.

Credit 3 units. A&S: TH

---

**L38 Span 4503 Latin American Film: Argentine Cinema**

This course examines the development of cinema in Argentina, from the earliest attempts to codify a particularly Argentine perspective in Tango musicals to the present day. We explore the relationships between both film and nation building and film and revolution. We also study the role of cinema in national memory, using the cinema of the post-dictatorship as a case study. We read widely in film, cultural and political theory to enrich our study of the various films under consideration.

Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Conducted in Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD BU: IS

---

**L38 Span 450C Advanced Seminar Abroad in Spanish and Latin American Literature**

Credit 3 units.

---

**L38 Span 451 Medieval Spanish Literature**

Study of the development of the principal literary traditions of medieval Spain, emphasizing major genres, themes and styles. Consideration of various critical approaches and responses to medieval texts. Lectures, papers and class reports. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

**L38 Span 453 Survey of 18th-Century Latin American Narrative**

Exploring new ways of thinking; scientific observation and traveling; historiography; and the organization of knowledge. Analysis and discussion of a variety of 18th-century Latin American narratives such as conventual writing by women, memoirs, travel, scientific writing and newspaper articles, to understand how that century's attempts to compile, question, seek, build and reform came about. The narratives are regarded in their historical context and in a dialogue with some of the most recent literary studies about 18th-century Latin America. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates.

Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 4533 Narratives of Fear: Violence in Latin American Literature**

This course analyzes different representations of violence in Latin American literature. Based on a critical analysis of 19th- and early 20th-century texts, we study how the recognition and legitimization of violence occurs in the context of hierarchical relationships in the society. Also we study how the literary images of bandits, pirates, thieves and assassins become the counter-discourse of the views of progress sustained by the

hegemonic powers. The role of power and ideology is discussed in texts that define different levels of violence as a cultural manifestation.

Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 455 History of the Language**

A study of the evolution of Spanish and its dialects from Latin to contemporary usage. Knowledge of Latin helpful but not required. Prerequisites: Span 307D and Span 308E.

Credit 3 units. A&S: LA

---

**L38 Span 456 Romance Philology**

Study of the evolution of the major Romance languages from their common Latin origins. Knowledge of classical Latin not required, but acquaintance with phonetics of at least one Romance language extremely helpful. Conducted in English. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.

Same as L34 French 456

Credit 3 units. A&S: LA

---

**L38 Span 4571 Exemplarity, the Writing of History and the Beginnings of Chivalry in Medieval Spain**

This course is devoted to the study of exemplarity, historical discourse and chivalric fiction in medieval Iberia. It begins with an introductory selection of 13th-century texts that prepares students to better understand the development of Castilian identity, as shown in a selection of historical chronicles, and in some of the most canonical texts of the 15th century, such as *El Libro del Conde Lucanor*, *El Libro de buen amor* and *El Libro del caballero Zifar*.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

**L38 Span 458 Gender, Politics and Writing in Women's Fiction of the Post-Franco Era**

This course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco's death and continue to write into the new century (Esther Tusquets, Cristina Fernández Cubas, Rosa Montero, Carmen Riera and Adelaida García Morales), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucía Etxebarria and Espido Freire). We consider the works of these women within their cultural, historical and political contexts, addressing issues such as the representation of gender and sexuality; the cultural impact of feminism, nationalism and globalization; and the influence of the publishing industry and the market on literary production. Whenever available, film adaptations of these literary works are used in conjunction with the readings. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One hour preceptorial for undergraduates only. In Spanish.

Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 459 16th- and 17th-Century Drama**

Study of early modern Spain's highly influential and innovative *Comedias*, from Lope de Vega's creation of new popular forms for public *Corrales* to the spectacles of court theater for elite audiences in the generation that followed. Includes study of selected plays, as both texts and performances. Prerequisites: Span 307D, Span 308E and at least two 300-level courses

taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM BU: HUM

---

### L38 Span 461 Cervantes: Don Quixote

Study of the famous work that launched the novel, giving voice to surprisingly different forms of experience and identity as it narrates the life of a crazed reader who attempts to rewrite his own history by becoming a knight errant. Includes Parts 1 and 2 of Cervantes' *Don Quixote*, a range of critical readings, and the use of visual media that reflect how this work has in subsequent centuries entered popular culture. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

### L38 Span 4611 The Golden Age Novelas

A detailed study of the novela, or novella, genre in 17th-century Spain, including selected novelas ejemplares by Cervantes and selected novelas amorosas and *Desengaños amorosos* by María de Zayas. The course considers the problem of exemplarity, the representation of transgression or deviancy, literary tradition and sociohistorical context in these works. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH Art: HUM

---

### L38 Span 462 16th- and 17th-Century Prose

Reading of works that are groundbreaking in the formal development of Golden Age Spanish literature and in the representation of ideas concerning national and individual identity during the imperial period. To include *Dialogo de la lengua*, *Lazarillo de Tormes*, *Diana* and selected works by Guevara, Cervantes, Quevedo and Zayas. Seminar discussions and research paper. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

### L38 Span 463 16th- and 17th-Century Poetry

Classical Spanish poetry during the Renaissance and the baroque periods. Poets range from the Marques de Santillana and Garcilaso de la Vega to Luis de Gongora, San Juan de la Cruz and Francisco de Quevedo. Movements and trends explored include the tradition of courtly love, culteranismo, Spanish mysticism and conceptismo. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH Art: HUM

---

### L38 Span 464 Self-Representation and Picaresque Fiction in Early Modern Spain

This course investigates self-representation through the figure of the picaro and fictional autobiography in the representative works of the Spanish picaresque genre (*Lazarillo*, *Guzmán de Alfarache* and *El buscón*). We also examine the figure of the picara in novels with female protagonists such as *La lozana andaluza* and *La picara Justina* (as well as a short story by María de Zayas) and consider the relation of the picara to women's roles in Spanish fiction and culture. This course considers aspects of gender, ethnicity, class and desire in the sociohistorical context of picaresque fiction as well as narratological approaches to these texts. Prerequisites: Span

307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH Art: HUM

---

### L38 Span 465 The Spanish Trickster

A study of Spain's major picaresque novels in the Golden Age in the context of early modern Europe. Translations of works such as the *Lazarillo* and *El buscón*, as well as selected foreign imitations and parodies of the Spanish picaresque from the 17th and 18th centuries. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Does not fulfill the 400-level literature requirement for the Spanish major but is applicable to other credit required for the major. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH Art: HUM

---

### L38 Span 466 Second-Language Acquisition

There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first- and second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners' errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required.

### L38 Span 467 Grammar and Vocabulary Acquisition

This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing; explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such as learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices.

Credit 3 units. A&S: LA A&S IQ: LCD BU: BA EN: H

---

### L38 Span 468 Don Quixote

A close reading of the English translation of Cervantes' masterpiece, with special attention given to the European literary context. Conducted in English.

Credit 3 units. A&S: TH Art: HUM

---

### L38 Span 469 Reading and Writing in a Second Language

This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range

of theoretical and research issues, both historical and current. Literacy acquisition among second-language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in Applied Linguistics and an elective for the Graduate Certificate in Language Instruction. Credit 3 units. A&S: TH A&S IQ: HUM, LCD

---

**L38 Span 4691 Second Language Reading and Writing: Theory, Research and Practice**

This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second-language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in applied linguistics and an elective for the Graduate Certificate in Language Instruction. This course carries the Social and Behavioral Sciences attribute. Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L38 Span 471 Borges**

Comprehensive study of Borges' major works. Analysis of basic themes, philosophical implications and structural elements present in Borges' poetry, essays and short stories. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

**L38 Span 472 19th-Century Novel**

Departing from writings on realism by both 19th-century European writers and more contemporary literary theorists, the course carries out a critical reappraisal of the notion of "realism" in the 19th-century Spanish novel. Texts covered include selected works of Benito Pérez Galdós, Leopoldo Alas (Clarín), and Emilia Pardo Bazán that represent different periods of their literary trajectory. Daily readings and discussions focus on issues such as: the "reality effect"; the poetics of detail; naturalism in the Spanish context; the aesthetics of beginnings and endings; gender and consumption; fin-de-siècle crisis of gender ("New Women" and emasculated men); the problem of modernity; and the intersections of gender, class and national identity. These critical issues are situated in the context of theoretical discussions on the complex, and often ambivalent, function of realist discourse in Spanish fin-de-siècle culture and society. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

**L38 Span 473 Romanticism**

The origins of romanticism as a movement explored before reading and analyzing key works by the main Spanish romantic

writers: Cadalso, El Duque de Rivas, Espronceda, Larra, Mesonero Romanos, Becquer, Campoamor and Zorilla. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 474 Mexican Film in the Age of NAFTA (1990-2010)**

Starting in the 1990s, as NAFTA came into effect, Mexico revitalized its film industry and managed to produce not only a somewhat sustainable market within the country, but also a set of recognized figures in acting (Salma Hayek, Gael García, Diego Luna), directing (Guillermo del Toro, Alfonso Cuarón, Alejandro González Iñárritu), and moviemaking in general (Emmanuel Lubezki, Rodrigo Prieto, and others). This course explores the underlying processes that allowed for such a rebirth. The main focus of the course is to understand the contradictory impact of neoliberalism in film, understanding neoliberalism as the economic doctrine of unbridled free markets, and its social and cultural consequences. Paradoxically, neoliberalism allowed the industry to become financially and aesthetically viable, while becoming inaccessible to the lower classes in Mexico. The course mostly develops four of these processes: the undermining of nationalism as the main topic; the displacement of the target audience from the working classes, both rural and urban, to the urban middle class; the transformation of political cinema from the leftist films of the '70s to the conservative ideologies of neoliberal politics; and the intersection of Mexican film to the global market of so-called "art house cinema." Students compare films that have reached an international market with those viewed only within Mexico. In addition, students are introduced to critical approaches that allow them to appreciate these movies in the context of film aesthetics, social identities, and the relationship between film and economic development. Movies are shown outside of class in Spanish with English subtitles. The class is conducted in English. Written course work may be pursued in English or Spanish. No prerequisites. Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

**L38 Span 475 The Other in Contemporary Spanish Fiction**

An examination of the various manifestations of "the other" in works of Delibes, Perez Reverte, Matute, Goytisolo, Riera, Atxaga. Aspects studied include history, culture, religion, language and gender. Ancillary readings treat theoretical as well as critical issues. Two or three short papers (two to three pages) and a longer paper with specific installments and revisions due during the semester (undergraduates, 15 pages; graduates, 20 pages). Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 479 Generation of 1898: Theater and Poetry**

Analysis of works by Azorin, Unamuno, Baroja, Maeztu and Valle-Inclán. Various approaches to each work encouraged, and the theory of "generations" questioned. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 480 The Generation of '98**

An analysis of the Spanish-American War, the warring parties, and particularly of the literature it created in Spain by authors such as Unamuno, Machado, Valle-Inclán, Azorín and Baroja. The "desastre" led to introspective analyses of philosophy, education, and history. It attempted to rediscover the Hispanic ethos, to re-create its landscape poetically, and to become European without losing its Spanish roots. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 481 Modern Drama**

Readings from 19th- and 20th-century playwrights such as Zorrilla, Benavente, Valle-Inclán, Lorca, Buero-Vallejo. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 482 Topics in 19th-Century Spanish Cultural Studies**

Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

**L38 Span 486 20th-Century Novel**

A study of the novel in 20th-century Spain, focusing on the contemporary period. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD Art: HUM

---

**L38 Span 487 Discourses on Gender in 19th- and 20th-Century Spain**

This course focuses on discourses on gender, from the late 19th century to the present in the context of feminism in Spain. We explore the social, political and cultural role of Spanish women (writers) within their specific historical contexts, with a special attention to their struggle to construct a new female subjectivity through their writings. To this end, their narrative fiction (novels, short stories) are read in conjunction with nonfiction writings (essays, journalism, etc.). Authors studied include 19th-century proto-feminists such as Emilia Pardo Bazán and Concepción Arenal; early 20th-century writers such as Carmen de Burgos, Margarita Nelken, and other female activists of the Republican period; and women writers of the post-War and post-Franco eras. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduate students. In Spanish.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, LCD, SD EN: H

---

**L38 Span 488 Narrating Mexico City**

The city has been one of the central topics of modern Mexican literature. Ever since the emergence of the modern capital at the end of the 19th century, urban culture became one of the central concerns of Mexican and Latin American intellectuals across the continent. With the emergence of the megalopolis and the new centrality of questions of violence, postmodernity and urban experience, Mexican literature and film have contributed, in the past 20 years, new ways to approach, discuss and narrate

the city. This class seeks to tackle different meanings of Mexico City in the cultural discourse of Mexico, by exploring novels (Carlos Fuentes, José Emilio Pacheco, Juan Villoro), poems (Manuel Mapes Arce, Vicente Quirarte, Fabio Morábito), urban chronicles (Carlos Monsiváis, Elena Poniatowska, José Joaquín Blanco) and films (*Amores perros*, *Todo el poder*, *Vivir mata*). Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

**L38 Span 489 Cities of the Past Future: Literary Institutions & Peripheral Modernity in the Latin American Avant-Garde**

This class proposes a study of the Latin American avant-garde as a phenomenon of "peripheral modernity" and as a critique of the "institution literature" developed by 19th century and modernista liberalisms. This reading, rather than merely proposing a one-by-one reading of canonic texts, seeks to engage the avant-garde as a global cultural phenomenon with impact in literature, art, society and ideology. To achieve this, the class focuses on four regional contexts of the avant-garde. First, we visit post-Revolutionary Mexico, to understand the way in which the avant-garde redefined notions of literature in Latin America by carefully analyzing the stakes of groups such as the estridentistas or the contemporaneos. Second, we analyze the reinvention of Buenos Aires as a literary city in the 1920s and 1930s to understand the impact of "peripheral modernity" in the constitution of the avant-garde as a specifically Latin American phenomenon. Third, we discuss the impact of the *semana de arte moderno* of São Paulo, to understand how the idea of "antropofagia" created an articulation of the avant-garde with debates of cultural identity and transculturation. Finally, we go to the Andes to understand how avant-garde phenomena dealt with the questions of "divergent modernities." Authors discussed include Arqueles Vela, Manuel Mapes Arce, Jorge Cuesta, Xavier Villaurrutia, Jorge Luis Borges, Oliverio Girondo, Roberto Arlt, Mario de Andrade, Oswald de Andrade, Manuel Bandeira, César Vallejo, Pablo Palacio, César Moro and José Carlos Mariátegui. Scholarship includes Peter Bürger, Matei Calinescu, Renato Poggioli, Rubén Gallo, Pedro Angel Palou, Beatriz Sarlo, Fernando Rosenberg, Haroldo de Campos, William Rowe and Roland Forgues. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH A&S IQ: HUM, LCD EN: H

---

**L38 Span 490 Spanish Women's Fiction on the Edge of the Millennium**

The course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco's death and continue to write into the new century (Cristina Fernández Cubas, Rosa Montero, Soledad Puértolas and Carme Riera), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucía Etxebarria, Belén Gopegui). We consider not only the aesthetic innovations of these writers, but also their preoccupation with the following sociopolitical and cultural issues: connections between gender, sexuality and writing; their response to feminist literary criticism and politics; and their relationship to the market and consumer society in the context of globalization. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

Credit 3 units. A&S: TH, SD Art: HUM

---

---

**L38 Span 491 18th- to 19th-Century Literature**

Readings in various genres covering significant figures and works in neoclassicism, romanticism and realism. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 4921 The Avant-Garde in Spain: Poetry/Visual Art/ Cinema**

This course examines the development of the avant-garde in Spain during the two decades prior to the Spanish Civil War (1936-1939) from an interdisciplinary perspective, including poetry, the visual arts and cinema. We first study the development of the historical avant-garde through a study of four key avant-garde movements either developed by Spanish artists or taking place in Spain: Cubismo (Pablo Picasso, Juan Gris), Creacionismo (Vicente Huidobro, Gerardo Diego), Ultraísmo (Gomez de la Serna, Cansinos-Assens, Pedro Salinas) and Surrealismo (Luis Buñuel, Salvador Dalí, Rafael Alberti, Luis Cernuda, Federico García Lorca and Joan Miró). We then analyze different connections with the historical avant-garde traceable in the work of a later generation of experimental Spanish poets and artists working under the strict censorship existing during Franco's fascist dictatorship, such as Jose Val del Omar, Joan Brossa, Antoni Tàpies, José Angel Valente, Pere Gimferrer, Jose Miguel Ullán and José Luis Guerin. We also incorporate in our discussion theoretical writings by various critics including Ortega y Gasset, Peter Burger, C. Brian Morris, and Román Gubern. Prerequisites: Span 307D, Span 308D and at least two 300-level literature/culture courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish. Credit 3 units. A&S: LA A&S IQ: LCD EN: H

---

**L38 Span 494 20th-Century Poetry**

Examination of 20th-century Spanish poetry from Machado and Juan Ramon Jimenez to the Generation of '27 and younger poets. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH Art: HUM

---

**L38 Span 495 Honors**

Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prerequisite: permission of director of undergraduate studies. Preregistration not permitted. Credit variable, maximum 3 units. A&S: TH

---

**L38 Span 4951 Honors**

Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prerequisite: permission of director of undergraduate studies. Preregistration not permitted. Pass/fail. Credit 3 units. A&S: TH EN: H

---

**L38 Span 498 Contemporary Spanish Novel**

A study of modern novels by established authors, such as Benet, Goytisolo and Martin Gaité, and new figures such as Landero,

Millas and Puertolas. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH

---

**L38 Span 499 Contemporary Spanish Novel II: 1965 to Present**

A study of modern novels by established authors, such as Benet, Goytisolo and Martin Gaité, and new figures such as Landero, Millas and Puertolas. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S: TH Art: HUM

---

## Speech and Hearing

The minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine and is designed for students interested in exploring topics related to typical and disordered human communication. Course work provides an overview of the fields of hearing, deafness, language and speech, with opportunities to explore related topics in more depth. This minor is especially valuable for students in fields such as psychology, education, philosophy-neuroscience-psychology (PNP), and linguistics, but has broad applicability for many fields of study. Course work completed as part of this minor can also be used to fulfill the total units requirements for graduation, and as prerequisites for graduate studies in audiology, deaf education and speech-language pathology; however, the minor may not be used as an Integration in Arts & Sciences Integrated Inquiry (IQ) curriculum (<http://college.artsci.wustl.edu/academics/IQrequirements>) and does not otherwise fulfill any Arts & Sciences distribution requirements.

**Contact:** William W. Clark  
**Phone:** 314-747-0104  
**Email:** [clarkw@wustl.edu](mailto:clarkw@wustl.edu)  
**Website:** <http://pacs.wustl.edu>

## Faculty

### Program Director

**William W. Clark** (<http://pacs.wustl.edu/our-faculty/william-w-clark-phd>)  
Professor of Audiology and Communication Sciences; Professor of Otolaryngology; Professor of Education  
PhD, University of Michigan

### Director of Audiology Studies

**L. Maureen Valente** (<http://pacs.wustl.edu/our-faculty/l-marureen-valente-phd>)  
Associate Professor of Audiology and Communication Sciences;  
Associate Professor of Otolaryngology  
PhD, Washington University

## Director of Deaf Education Studies

**Heather Hayes** (<http://pacs.wustl.edu/our-faculty/heather-hayes-phd>)  
Associate Professor of Audiology and Communication Sciences;  
Associate Professor of Otolaryngology  
PhD, Washington University

## Assistant Professors

**Brian T. Faddis** (<http://pacs.wustl.edu/our-faculty/brian-t-faddis-phd>)  
Assistant Professor of Audiology and Communication Sciences;  
Research Assistant Professor of Otolaryngology  
PhD, University of California, Davis

**Rosalie M. Uchanski** (<http://pacs.wustl.edu/our-faculty/rosalie-m-uchanski-phd>)  
Assistant Professor of Audiology and Communication Sciences;  
Research Assistant Professor of Otolaryngology  
PhD, Massachusetts Institute of Technology

## Other

For our full faculty list, please visit the PACS website.  
(<https://pacs.wustl.edu/our-faculty>)

## Majors

There is no major in this area. The minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (<http://pacs.wustl.edu>) at Washington University School of Medicine. The program also offers graduate programs in the fields of audiology, deaf education, and speech and hearing sciences, leading to the following degrees: Doctor of Audiology (AuD), Master of Science in Deaf Education (MSDE), Doctor of Philosophy (PhD)—Speech and Hearing Sciences.

## Minors

### The Minor in Speech and Hearing

Total units required: 15

#### Required courses:

Educ 234 Introduction to Speech and Hearing Disorders

#### Elective courses:

At least four of the following, totaling at least 12 units:

| Code      | Title  | Units |
|-----------|--|-------|
| PACS 401  | Anatomy and Physiology of Speech and Hearing | 2-3   |
| PACS 421  | Introduction to Electroacoustics             | 3     |
| PACS 424  | Speech and Hearing Sciences                  | 1     |
| PACS 4301 | Sign Language I                              | 2     |
| PACS 4302 | Sign Language II                             | 2     |
| PACS 434  | Typical Language Development                 | 3     |

|           |   |   |
|-----------|---|---|
| PACS 543  | Survey of Speech and Language Disorders                       | 2 |
| PACS 544  | Clinical Observation and Methods in Speech-Language Pathology | 3 |
| PACS 5601 | Clinical Audiology I  | 3 |
| Educ 408  | Education and Psychology of Exceptional Children              | 3 |
| Psych 433 | Psychology of Language  | 3 |
| Ling 170D | Introduction to Linguistics                                   | 3 |
| Ling 312  | Phonetics   | 3 |

## Additional Information

As the minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine, it may not be used as an Integration and does not otherwise fulfill any Arts & Sciences distribution requirements.

This minor is composed of a minimum of 15 hours that focus on the study of speech, language and hearing. Of these, at least nine (9) units must be at the 300 level or above. Courses to count toward the minor must be approved in advance by the minor adviser, and one or more elective courses must come from M89 PACS. Additional courses not listed may be allowed, with advance approval of the minor adviser, based on the student's individual area(s) of interest. Some courses may be subject to instructor approval in advance.

Special notes for students interested in continuing their studies in either the Doctor of Audiology (AuD) or Master of Science in Deaf Education (MSDE) program in PACS: Please consult the minor adviser for information on the appropriate course of study. In such cases, course work should focus upon applicable prerequisite courses; required introductory course work that can be waived during graduate enrollment; and other applicable requirements for professional certification. Completing other required course work prior to matriculation in one of the PACS graduate programs may impact a student's full-time status, course of study, tuition, scholarship amount, and/or other aspects of enrollment.

## Courses

Visit online course listings to view offerings for M89 PACS (<https://courses.wustl.edu/CourseInfo.aspx?sch=M&dept=M89>).

### M89 PACS 234 Introduction to Speech and Hearing Sciences and Disorders

Introduction to the fields of speech-language pathology, audiology, education of hearing-impaired children, and speech and hearing sciences. Normal speech and hearing processes are discussed, as well as communication disorders. Selected research topics in speech and hearing sciences are presented. Same as L12 Educ 234  
Credit 3 units. BU: BA EN: S

---

**M89 PACS 401 Anatomy and Physiology of Speech and Hearing**

Introduction to anatomy and physiology of the peripheral hearing system and central nervous system, including functional descriptions of the systems and processes underlying speech and hearing function and dysfunction.  
Credit variable, maximum 3 units.

---

**M89 PACS 4011 Behavior Management**

Introduction to various behavior management systems effective in both individual and group environments. Behavior interventions, classroom management strategies, environmental controls, psychodynamic techniques, and biophysical interventions are discussed, observed and practiced. Focus is on working with children who are deaf or hard of hearing. Lectures and experience with children. Prerequisite: Permission of department required.  
Credit 2 units.

---

**M89 PACS 414 Hearing**

Study of the basic auditory phenomena: sensitivity, psychophysical attributes, masking, localization, adaptation and complex auditory perception. Prerequisite: Permission of department required.  
Credit 3 units.

---

**M89 PACS 416 Evaluation Techniques for Children Who Are Deaf or Hard of Hearing**

A basic introduction to psychometrics with emphasis on the selection, interpretation and evaluation of assessments. Specific techniques for evaluating intellectual, educational, and linguistic abilities and achievement in children who are deaf or hard of hearing, from infancy through adolescence, are discussed and demonstrated. Prerequisite: Permission of department required.  
Credit 3 units.

---

**M89 PACS 421 Introduction to Electroacoustics**

Introduction to the physics of sound. Topics include production, transmission and reception of sound and factors affecting human communication. Includes discussion, lectures, problems and lab.  
Credit 3 units.

---

**M89 PACS 424 Speech and Hearing Sciences**

Surveys a broad array of speech and hearing science topics. Focus is on how speech and hearing science research findings can be applied to the practice of deaf education.  
Credit 1 unit.

---

**M89 PACS 4301 Sign Language I**

Basics of American Sign Language are introduced, including vocabulary, grammatical structure, fingerspelling and cultural information about the deaf community. This is a highly interactive and participatory course.  
Credit 2 units.

---

**M89 PACS 4302 Sign Language II**

Continues development of American Sign Language with additional vocabulary, emphasis on expressive and receptive abilities, conversational skills, and knowledge of deaf culture. This is a highly interactive and participatory course. Prerequisite: PACS 4301-Sign Language I.

Credit 2 units.

---

**M89 PACS 434 Typical Language Development**

Study of typical language development, including the phonologic, morphologic, semantic, syntactic and metalinguistic aspects. Interactions between linguistic and other areas of child development will be discussed. Contrasts will be explored between typical and atypical child development to shed light on language learning processes.  
Credit 3 units.

---

**M89 PACS 438 Early Literacy Development of Children Who Are Deaf or Hard of Hearing**

Development of early print-recognition, reading and writing of children who are typically hearing and children who are deaf or hard of hearing. Focus is on the years leading up to kindergarten. An overarching theme is the interaction between early language and early literacy development. Evidence-based strategies for differentiated instruction will also be discussed. Permission of department required.  
Credit 3 units.

---

**M89 PACS 444 Amplification Systems and Aural Rehabilitation for Children**

This course will provide students with a broad understanding of amplification systems and principles and methods of aural rehabilitation as they apply to children who are deaf or hard of hearing. Amplification systems to be covered will include digital hearing aids, cochlear implants and a full range of assistive devices. Aural rehabilitation topics will emphasize patient management and will include communication strategies, conversation styles and speech recognition assessment. Students will be provided with videotapes, live demonstrations and in-class activities. Direct contact with children and technological devices will also be used to support lectures and discussions. Prerequisite: Permission of department required.  
Credit 2 units.

---

**M89 PACS 4500 Observation in Deaf Education**

Supervised observation of children who are deaf or hard of hearing in educational settings. Prerequisite: Permission of department required.  
Credit variable, maximum 6 units.

---

**M89 PACS 4511 Practicum in Deaf Education**

Study of typical language development, including the phonologic, morphologic, semantic, syntactic and metalinguistic aspects. Interactions between linguistic and other areas of child development will be discussed. Contrasts will be explored between typical and atypical child development to shed light on language learning processes. Prerequisite: Permission of department required.  
Credit 7 units.

---

**M89 PACS 4512 Practicum in Deaf Education**

Supervised practicum in education of children who are deaf or hard of hearing. Students will be placed in field experiences (early, mid-level and culminating levels) in a variety of educational settings with a variety of age ranges, using interventions in areas such as language, speech, auditory training, reading, math and other content areas. Prerequisite: Permission of department required.

---

Credit 7 units.

---

**M89 PACS 4515 Language Instruction for Children Who Are Deaf or Hard of Hearing**

Principles and methods of developing competence in spoken English in children who are deaf or hard of hearing, birth to grade 12. Includes presentation of differentiated instructional techniques for teaching a diverse population of children who are deaf or hard of hearing English vocabulary, syntax and pragmatics, as well as techniques for auditory training. Evaluations and data-driven lesson planning/IEP/IFSP development will be discussed, as well as the role of families as engaged, educational partners in spoken language development. Prerequisite: Permission of department required.

Credit 3 units.

---

**M89 PACS 4525 Foundations of Literacy Theory and Instruction**

Principles and methods of developing reading and writing competence in children who are typically hearing, with an emphasis on the stages of development and appropriate teaching sequences. Based on this foundation, strategies and methods will be presented for making appropriate differentiated learning adaptations and interventions for reading instruction with students who are deaf or hard of hearing who have language and reading deficits. Additional topics include the use of children's literature in instruction, the intersection of language and reading development, content literacy, and general language arts instruction. 4525A: Emphasizes observation and some practice planning and teaching reading and writing with students who are typical and atypical learners, including children who are deaf or hard of hearing and who struggle to develop appropriate literacy skills. Observations will focus on areas such as how teachers use differentiated learning strategies for diverse learners, the use of children's literature in instruction, the intersection of language and reading development, instruction in content literacy, and general language arts instruction. Prerequisite: Permission of department required.

Credit 6 units.

---

**M89 PACS 454 Mathematics and Content-Area Instruction for Children Who Are Deaf or Hard of Hearing I**

Principles and methods of teaching mathematics to students who are typically hearing and those who are deaf or hard of hearing. Strategies for other content-area instruction (science, social studies), use of instructional technology, and strategies for improving content literacy will also be discussed, with an emphasis on techniques for working with children who are deaf or hard of hearing. Students will practice developing and implementing lesson plans that are aligned to state and national standards. Prerequisite: Permission of department required.

Credit 3 units.

---

**M89 PACS 455 Mathematics and Content-Area Instruction for Children Who Are Deaf or Hard of Hearing II**

A continuation of PACS 454. Principles and methods of teaching mathematics to students who are typically hearing and those who are deaf or hard of hearing. Strategies for other content-area instruction (science, social studies), use of instructional technology, and strategies for improving content literacy will also be discussed, with an emphasis on techniques for working with children who are deaf or hard of hearing. Students will practice developing and implementing lesson plans that are aligned to

state and national standards. Prerequisites: PACS 454 and permission of department required.

Credit 3 units.

---

**M89 PACS 457 Counseling Parents of Children Who Are Deaf or Hard of Hearing**

Examines the psychological needs of families who have children who are deaf or hard of hearing. The aim of the course is to help teachers of children who are deaf or hard of hearing interact more effectively with parents and caregivers, using a collaborative model that views families as engaged partners in the educational process. Students will develop a repertoire of interviewing and counseling skills, as well as learn about a wealth of resources to share with families. Prerequisite: Permission of department required.

Credit 3 units.

---

**M89 PACS 458 Speech for Children Who Are Deaf or Hard of Hearing**

Development, improvement and maintenance of speech skills for children who are deaf or hard of hearing through multisensory approaches. Articulation, voice and rhythm patterns are considered. Lectures, demonstrations and practice. Prerequisite: Permission of department required.

Credit 3 units.

---

**M89 PACS 460 Observation and Practicum in Audiology**

Supervised observation and practicum in audiology. Prerequisite: Permission of department required.

Credit 1 unit.

---

**M89 PACS 4611 Practicum in Audiology**

Supervised practicum in audiology. Prerequisite: Permission of department required.

Credit 3 units.

---

**M89 PACS 4612 Practicum in Audiology**

Supervised practicum in audiology. Prerequisite: Permission of department required.

Credit 3 units.

---

**M89 PACS 4614 Practicum in Audiology**

Supervised practicum in audiology. Prerequisite: Permission of department required.

Credit 3 units.

---

**M89 PACS 4615 Practicum in Audiology**

Supervised practicum in audiology. Prerequisite: Permission of department required.

Credit 3 units.

---

**M89 PACS 4620 Clinical Externship in Audiology**

Full-time clinical externship in audiology (on campus). Prerequisite: Permission of department required.

Credit 12 units.

---

**M89 PACS 4621 Clinical Externship in Audiology**

Full-time clinical externship in audiology (on campus). Prerequisite: Permission of department required.

Credit 12 units.

---

**M89 PACS 4630 Clinical Externship in Audiology**

Full-time clinical externship in audiology (off campus).  
Prerequisite: Permission of department required.  
Credit 12 units.

---

**M89 PACS 4631 Clinical Externship in Audiology**

Full-time clinical externship in audiology (off campus).  
Prerequisite: Permission of department required.  
Credit 12 units.

---

**M89 PACS 466 Rehabilitative Audiology**

Principles and methods of aural rehabilitation with an emphasis on patient management. Topics include communication strategies and conversation styles, speech recognition assessment and hearing aid service provisions for adults, older persons, children and family members. Prerequisite: Permission of department required.  
Credit 3 units.

---

**M89 PACS 468 Pediatric Audiology**

Fundamentals of audiologic assessment for infants and children. Behavioral and electrophysiologic procedures, and assessment of auditory processing abilities, are presented. Prerequisite: Permission of department required.  
Credit 3 units.

---

**M89 PACS 470 Business Practices**

Issues relating to establishing a private practice including clinical management, small business and accounting practices, models of private practice, referrals and reimbursement, and managed care. Prerequisite: Permission of department required.  
Credit 2 units.

---

**M89 PACS 5001 Electrophysiologic Techniques I**

Introduces basic concepts in administration and interpretation of physiologic and electrophysiologic measures, with focus on auditory evoked potentials (AEP). Content covers basic instrumentation, parameters and variables affecting the AEP, auditory brainstem response (ABR), middle (MLR) and late (LLR) evoked potentials, auditory steady state response (ASSR) and otoacoustic emissions (OAE). Prerequisite: Permission of department required.  
Credit 3 units.

---

**M89 PACS 5002 Electrophysiologic Techniques II**

Advanced concepts related to the administration and interpretation of physiologic and electrophysiologic measures. Content includes in-depth study of ABR and other auditory evoked potentials, and the clinical application of these for the audiologist. Additional topics include study of electrocochleography (ECoChG), P300 auditory responses, and mismatched negativity (MMN). This course will include a thorough study of intraoperative monitoring including neurophysiology and anatomy review, cranial nerve monitoring, spinal cord monitoring, and facial nerve monitoring. Prerequisites: Permission of department required.  
Credit 2 units.

---

**M89 PACS 502 Pharmacology**

Includes basic information related to medications utilized for treating common hearing/balance disorders. Hearing and

balance side effects of medications are discussed, as are ototoxic and preventative mechanisms related to pharmacology. Prerequisites: Permission of department required.  
Credit 1 unit.

---

**M89 PACS 505 Auditory Neuroscience**

Development of an in-depth understanding of issues related to auditory neurophysiology from the auditory nerve to the cortex. Prerequisites: Permission of department required.  
Credit 2 units.

---

**M89 PACS 506 Genetics in Hearing Loss**

Study of the genetic causes of hearing loss and balance disorders, and syndromes affecting the auditory and vestibular systems. Prerequisites: Permission of department required.  
Credit 1 unit.

---

**M89 PACS 507 Vestibular Disorders**

Comprehensive course covering the assessment, diagnosis and treatment of vestibular disorders. Prerequisites: Permission of department required.  
Credit variable, maximum 3 units.

---

**M89 PACS 510 Auditory Perception**

Study of how the listener perceives parameters of and differences in acoustical stimuli. Perception of the speech stimulus is also studied in detail, both for listeners who are typically-developing and those who are deaf or hard of hearing. Prerequisites: Permission of department required.  
Credit 3 units.

---

**M89 PACS 511 Hearing Conservation**

This course will cover topics related to hearing conservation, including effects of noise on hearing, environmental noise, classroom acoustics, federal regulations, interactions of noise and other agents, and ototoxicity. Additional topics may vary year-to-year. Prerequisites: Permission of department required.  
Credit 3 units.

---

**M89 PACS 517 Counseling for Audiology**

Examines the relationship between clinician and patient in audiology. Topics include counseling theory and practices, and principles and methods of effective interviewing and counseling across the lifespan. Prerequisites: Permission of department required.  
Credit 2 units.

---

**M89 PACS 519 Psychosocial and Educational Foundations of Deafness**

Examines psychological, social, educational, legal, historical, and cultural influences related to individuals who are deaf or hard of hearing. Additional topics include IEPs and interprofessional collaboration related to post-high-school transitions. Prerequisite: Permission of department required.  
Credit 3 units.

---

**M89 PACS 543 Survey of Speech and Language Disorders**

Surveys a broad range of speech and language disorders in terms of associated characteristics, assessment techniques and treatment considerations. Prerequisites: Permission of department required.

Credit 2 units.

---

**M89 PACS 544 Clinical Observation and Methods in Speech-Language Pathology**

Provides students with an introduction to clinical methods and observation experiences in speech-language pathology. Prerequisites: Permission of department required. Credit 3 units.

---

**M89 PACS 551 Research Seminar**

A seminar of variable topics related to research in speech and hearing sciences. Each semester/section has its own specific area of focus, which may include an investigation of active areas of research, an overview of outcomes-based research and evidence-based practice for students' research projects, or thorough analysis and discussion of a specific area of active research. Refer to section description for information on specific topics by section. Prerequisite: Permission of department required.

Credit variable, maximum 3 units.

---

**M89 PACS 551A Journal Club**

Presentation and discussion of current issues and recent research in the fields related to hearing and deafness. Prerequisites: Permission of department required.

Credit variable, maximum 6 units.

---

**M89 PACS 554 Fundamentals of Early Intervention and Child Development**

Course provides information about general and exceptional child development, focusing on ages birth through five years. Course also discusses historical and philosophical tenets of early intervention practice, focusing on a collaborative coaching model, which views families as engaged partners in the child's education. Other topics include addressing needs of families from a variety of cultural and economic backgrounds, linking families to resources, and federal laws that govern special education services for children with disabilities including transitions in service provisions for children at the age of 3 years. Prerequisites: Permission of department required.

Credit 1 unit.

---

**M89 PACS 555 Early Intervention: Serving Children Who Are Deaf or Hard of Hearing, Birth to Age 5**

This course provides an overview of early childhood development of children who are deaf or hard of hearing, birth to age 5, with particular focus on early speech and language development, intervention strategies, assessment techniques, instructional strategies, and aural rehabilitation. Course discusses the philosophical tenets of early intervention practice, which views families as engaged partners in the child's education, and respects cultural and linguistic diversity. Students will learn about IFSP and IEP development, as well as a variety of resources that can be provided to families. Prerequisite: Permission of department required.

Credit 3 units.

---

**M89 PACS 558 Pre-Service Teacher Preparation**

This course is designed to help students in the deaf education teacher training program create a teaching portfolio that reflects their own teaching development. Students will demonstrate their ability to reflect on and critique their own teaching practice

especially in relation to course planning, instructional strategies, differentiated learning, data-based decision-making, tiered systems for supporting instruction, and classroom management. Professional issues, including developing a résumé and conducting interviews, will also be discussed. Prerequisites: Permission of department required.

Credit 1 unit.

---

**M89 PACS 5601 Clinical Audiology I**

An introduction to the field of clinical audiology. Covers the role of the audiologist in the diagnosis and treatment of hearing disorders; the administration and interpretation of audiologic test results; and amplification systems and assistive devices, such as DM/FM technology. Additional topics may include relevant calibration and instrumentation requirements, audiology as a career, aural rehabilitation, and legal and ethical issues in the field. Prerequisites: Permission of department required.

Credit 3 units.

---

**M89 PACS 5602 Clinical Audiology II**

Covers hearing evaluation and diagnosis in clinical audiology from infancy through adulthood. Topics include auditory processing disorders, functional hearing loss, and other advanced measures. Prerequisites: Permission of department required.

Credit 3 units.

---

**M89 PACS 565 Hearing Devices in Audiology I**

Philosophical issues related to the selection and evaluation of hearing devices, including hearing aids and alternative devices. Means of adjusting hearing devices and measuring their function and benefit are covered. Prerequisites: Permission of department required.

Credit 3 units.

---

**M89 PACS 5652 Hearing Devices in Audiology II**

Advanced issues related to the selection and evaluation of hearing aids. Means of adjusting hearing aids and measuring their function and benefit. Prerequisites: Permission of department required.

Credit 3 units.

---

**M89 PACS 5653 Hearing Devices in Audiology III**

Course covers a variety of topics related to selection, fitting and rehabilitation of cochlear implant patients. Lectures and practical experience in psychophysical testing, programming of the cochlear implant, and auditory training. Prerequisites: Permission of department required.

Credit 3 units.

---

**M89 PACS 569 Hearing Disorders**

This course covers the nature and causes of hearing disorders, including outer and middle ear, cochlear, retrocochlear and central nervous system. Prerequisites: Permission of department required.

Credit 2 units.

---

**M89 PACS 570 Independent Study**

Students engage in independent work on the Independent Study, which demonstrates advanced critical thinking and writing skills. Prerequisites: Permission of department required.

Credit variable, maximum 6 units.

---

**M89 PACS 5700 Capstone Project**

Independent work on the Capstone Project. Prerequisites: Permission of department required.  
Credit variable, maximum 6 units.

---

**M89 PACS 5701 Capstone Project Seminar**

This weekly, joint meeting is intended to provide extra and preliminary support for initiation of the Capstone Project. Areas will include but are not limited to: journal article critique, scientific writing, overview of research design and methodologies, statistical review, support for graph and table construction, and others. Prerequisites: Permission of department required.  
Credit 1 unit.

---

**M89 PACS 574 Statistics and Research Methods**

Examines experimental and field research methods as they apply to audiology and communication sciences. Covers such methods as surveys, survey interviews, content analysis, and experimental design. Prerequisites: Permission of department required.  
Credit 2 units.

---

**M89 PACS 575 Special Topics**

Special topics in speech and hearing sciences, audiology and/or education of the deaf or hard of hearing. Contact the department for more information. Prerequisites: Permission of department required.  
Credit variable, maximum 4 units.

---

**M89 PACS 577 Research in Speech and Hearing**

Prerequisites: Permission of department required.  
Credit variable, maximum 12 units.

---

**M89 PACS 587 Dissertation Research**

Prerequisites: Permission of department required.  
Credit variable, maximum 12 units.

---

**M89 PACS 885 Master's Nonresident**

Prerequisites: Permission of department required.

---

## Urban Studies

The interdisciplinary major in urban studies is ideal for students drawn to serious examination of the profound issues confronting urban/metropolitan America. Urban Studies seeks to prepare students, indeed our nation's future leaders, for the challenge of solving these issues. We seek to prepare students to research and investigate issues concerned with evolving patterns of metropolitanism and the necessity for central city reconstruction; problems associated with regentrification, urban sprawl and affordable housing; crises confronting newly emerging immigrant communities and the social cleavages of urban marginalized communities; unemployment and underemployment; law and justice; HIV/AIDS and issues of public health; the economic underdevelopment of poor communities; race and inequality; the paradox of declining welfare rolls amidst escalating poverty rates; underperforming urban schools; and the in-migration

and out-migration of the city and its schools, among others. All available social indices suggest that such domestic issues in our central cities will only increase in significance in the years ahead. The fact that many of the aforementioned issues are deeply embedded in cities of the world makes Urban Studies not just focused on domestic cities but global cities as well.

Urban studies is a stand-alone major. The students presently in the program are jointly pursuing study in urban studies and in pre-law, pre-medicine, political science, educational studies, environmental studies, economics, international and area studies, philosophy-neuroscience-psychology, architecture, and comparative arts, among others. Our purpose is to prepare students to critically engage the social, political and economic dilemmas facing our cities, both domestically and internationally, with intellectual rigor, integrity, sensitivity and compassion. The program draws faculty and course work from the various academic units including, but not limited to, Arts & Sciences, the Brown School, the School of Law, the College of Architecture, and the Graduate School of Architecture & Urban Design. To complement our course work, Urban Studies accepts internships based locally, nationally or internationally, with appropriate support documents.

(Psychological & Brain Sciences; Public Health)

## Majors

### The Major in Urban Studies

**Total required units:** 33 units, 21 of which must be 300-level or above. Of these 21 advanced units, no more than 6 units may be from independent study courses.

**Required courses:** URST 299 The Study of Cities and Metropolitan America; one introductory course in math or applied statistics; one 400-level independent study or an internship located locally, nationally or internationally; and a senior thesis (or senior seminar if offered).

**Elective courses:** There are five subject area concentrations in Urban Studies: neighborhoods and community development;

urban education; cities of the world; public policy/social policy; and public health. Once a student declares a major in urban studies, they will be assigned a major adviser who will help the student formulate the area concentration.

*Because of the nature of the major and requirements of the nonresidential components, majors are strongly encouraged to declare by their third semester in residency.*

## Additional Information

**Study Abroad:** The program offers the International Urban Scholars Study Abroad Program through Oxford University, the London School of Economics and Political Science, University of Cape Town in South Africa, and Fudan University in Shanghai, China.

**Senior Honors:** Urban studies majors are encouraged to work for Senior Honors, for which they may apply in the junior year. Acceptance into the program is based on the student's previous academic performance and a proposal to a core (not affiliated) faculty member in Urban Studies who agrees to supervise the honors research. The honors candidate must complete honors thesis research, which is evaluated by a three-member faculty committee.

## Minors

### The Minor in Urban Studies

**Total required units:** 15

**Required courses:**

| Code     | Title  | Units |
|----------|--|-------|
| URST 299 | The Study of Cities and Metropolitan America | 3     |

**Elective courses:**

12 units at the 300 level or above. All courses for the minor must be taken for a letter grade, with a passing grade of C or better. These courses must be home-based in three different departments or programs and may not include courses in the student's major field. A complete list of general courses that count toward the urban studies minor is published each semester in WUCRSL. No more than 3 units may be counted from among the following: directed readings, independent study, internships, University College, or credits from another institution including study abroad.

## Additional Information

The minor in urban studies facilitates the study of urbanization across the globe, from multiple disciplinary perspectives, and is designed to complement any major field of study. Students are encouraged to pursue course work, in companion with their major field of interest, that is distinctive yet complementary to the study of urbanization, which impacts all fields of inquiry. Courses

must be selected in consultation with the program director/  
adviser in Urban Studies.

### L18 URST 101 Introduction to Urban Studies

This course provides a survey of the field of urban studies, utilizing the City of St. Louis as a field site. The major purpose of the course is to gradually reveal how a city operates internally, and how it operates externally with its sister cities, surrounding metropolitan areas and neighboring states, amidst competing and often contradictory interests. Utilizing historical analysis as a guide, the course briefly revisits the experiences of previous waves of ethnic groups to the St. Louis metropolitan area, as a lens for understanding the current social, political and economic dilemmas that many urban dwellers in St. Louis now face. The course reveals to students the intricacies of social welfare issues and policies among high density populations, in St. Louis, that are homogeneous and heterogeneous, at the same time. Visits and discussions with various governmental and nongovernmental agencies, and how such agencies function or dysfunction for various constituencies allow students to ask crucial questions regarding equality of opportunity in a democratic society. Students also encounter diverse communities and neighborhoods and the intended and unintended consequences of social welfare policies designed to ameliorate urban dilemmas such as poverty and inequality, homelessness, educational underachievement, gentrification, migration and immigration, development, health care, fiscal issues, the informal economy, and issues concerned with crime and social justice, among others. Readings are reinforced and challenged through visits, interactions and observations with broad constituencies and institutions, ranging from city officials to community residents. As such, this course offers a survey discussion of the rich interdisciplinary field of urban studies for those who may be interested in pursuing a standalone major in the field of urban studies.

---

### L18 URST 163 Freedom, Citizenship, and the Making of American Culture

This course offers a broad survey of American history from the era before European settlement of North America to the late 20th century. The course explores the emergence and geographic expansion of the United States and addresses changes in what it meant to be an American during the nation's history. Tracing major changes in the nation's economic structures, politics, social order and culture, the course chronicles, among other issues, changes in the meanings of freedom, citizenship and American identity. Introductory course to the major and minor. Same as L22 History 163

---

### L18 URST 2020 The Immigrant Experience

This course explores the history and politics of immigrant groups in the 19th- and 20th-century United States. Topics include legislation, patterns of migration, comparisons of different waves

of immigration, and changing social attitudes. This course is a core requirement for the ethnic studies concentration in American Culture Studies.

### L18 URST 2091 Freshman Seminar: The City in Early Modern Europe

From the city-states of Renaissance Italy to the 18th-century boomtowns of London and Paris, cities functioned as political, economic and cultural centers, creating unique opportunities and challenges for their diverse inhabitants. Using a wide variety of primary and secondary sources, this course examines how men and women, rich and poor, established citizens and marginal groups, tried to understand and manage life in the city. Their conflicting experiences and expectations created not only social and economic unrest, but also a resilient social infrastructure, a tradition of popular participation in politics, and a rich legacy of cultural accomplishment. Topics studied include: urban political and economic organization; the creation and use of public spaces; religion as a source of community and conflict; and urban crime and public punishment.

Same as L22 History 2091

---

### L18 URST 233 Biomedical Ethics

A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.

---

### L18 URST 258 Law, Politics and Society

This course is an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system (in contrast to legal mythology), as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law. Not open to students who have previously taken Pol Sci 358.

**L18 URST 299 The Study of Cities and Metropolitan America**

This course serves as the introductory course analyzing the forces shaping America's cities and surrounding metropolitan areas. It examines strategies for dealing with many of the profound social issues affecting urban/metropolitan America. Emanating from a historical perspective, it examines the ways in which industrialization and deindustrialization shaped Northern American cities and the consequences of deindustrialization on urban citizenry. It further surveys the demographic and spatial transformation of American cities, examining the consequences of urban transformation on federal, state and local politics on society and on her institutions. Similarly, the course focuses on the origin and societal changes and emerging goals of urban development, gentrification and evolving patterns of metropolitanism and the necessity for central city as well as neighborhood reconstruction. The dynamics of racial residential segregation; crime and punishment; issues of academic achievement and under-achievement; and the social cleavages of urban marginalized communities, family structure, urban homelessness, urban sprawl and health care among others, are viewed from the perspective of social justice by exploring social, political, economic, racial and ethnic factors that impact on access, equity and care. Various theoretical perspectives and philosophies are introduced that have dominated the discourse on race and urban poverty. A field-based component complements the course work, and is designed to build interest, awareness and skills in preparation for outreach to urban communities. Prerequisite: sophomore standing. Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

**L18 URST 3025 Sports & Culture: Empire of Hoop: Basketball as American Culture**

Topics course focusing on instances of identity and culture within the American scope. Varies by semester; refer to Course Listings for description of current semester's offering. Same as L98 AMCS 3025. Credit 3 units. A&S: TH A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

**L18 URST 3036 Migration and Modernity: Human Mobility, Identity and State Formation — Russian/Soviet/Post-Soviet Context**

This class introduces students to a broad history of 19th- and 20th-century Russia and the Soviet Union alongside problems of migration. In this class, students are introduced to the historical, social and political dimensions of migration within, to and from the Russian Empire, the Soviet Union and its successor states. We look at the intersection of the movement of people with long-term economic, social and political transformations,

but also pay attention to crucial events and phenomena of Soviet history that set large-scale migrations in motion. Course materials, for instance, address mass movements related to modernization and internal colonization, analyze the role of revolutionary change and warfare for forced displacement, and study the implications of geopolitical changes in the aftermath of the breakdown of the USSR for human rights discourses. Alongside the historically grounded overview, the class explores concepts of citizenship, diaspora, nationality policy, gender specific experiences of migration, and the ethics and political economy of migration politics, thereby highlighting how current trends in Russian society are indicative of broader discourses on difference and social transformation. Same as L97 IAS 384. Credit 3 units. A&S: TH, CD, SD A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM EN: H

---

**L18 URST 304 Educational Psychology**

A course in psychological concepts relevant to education. Organized around four basic issues: how humans think and learn; how children, adolescents and adults differ in their cognitive and moral development; the sense in which motivation and intention explain why people act as they do; how such key human characteristics as intelligence, motivation and academic achievement can be measured. Prerequisite: sophomore standing. Offered fall and spring semesters. Same as L12 Educ 304. Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC BU: BA

---

**L18 URST 3066 The American City in the 19th and 20th Centuries**

This course will explore the cultural, political, and economic history of U.S. cities in the 19th and 20th centuries. The course will focus on New York, Chicago, St. Louis, Los Angeles and Atlanta, although other cities may be included. Students will conduct significant primary research on sections of St. Louis, developing a detailed history of one of the city's neighborhoods. Much of the course readings address broad themes such as immigration, industrialization, deindustrialization, and race and gender relations in American cities. Same as L22 History 3066. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: HUM

---

**L18 URST 308 Human Variation**

A survey of human biological diversity, considering its adaptive and taxonomic significance from the perspective of origins and distribution of traits and adaptation. ---

**L18 URST 3091 Poverty and Social Reform in American History**

This course explores the history of dominant ideas about the causes of and solutions to poverty in American society from the early republic to the end of the 20th century. We will investigate changing economic, cultural, and political conditions that gave rise to new populations of impoverished Americans, and to the expansion or contraction of poverty rates at various times in American history. We will, however, focus primarily on how various social commentators, political activists and

reformers defined poverty, explained its causes, and struggled to ameliorate its effects. The course aims to highlight changes in theories and ideas about the relationship between dependence and independence, personal responsibility and social obligation, and the state and the citizen.

Same as L22 History 3091

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: BA EN: H

---

**L18 URST 313B Education, Childhood, Adolescence and Society**

An examination of childhood, child development and education from different perspectives. Observation of children in a variety of settings, including classrooms. Through historical, sociological, psychological and political readings, students will clarify current ideas about children, investigate the nature of childhood, and begin to understand how and why childhood is constructed as it is. Prerequisite: sophomore standing. Limited to 45 students.

---

**L18 URST 3141 Literacies, Schools and Communities**

The well-known "literacy crisis" has forced scholars from many nations to turn their attention to learning about linguistic, cultural and class diversity of students and what this means for learning in schools. In this course we engage with the perceived disjuncture between homes, communities and schools in an era of higher literacy standards, local literacies and community knowledge. We examine the contribution of sociolinguistics to what we know about language and literacy education, achievement and how this relates to social transformation within and across communities. Students can expect theoretical and methodological conversations as we use critical discourse theories, systemic linguistic approaches and empowerment theories as lenses to formulate, challenge and critique the existing status of language and literacy education.

**L18 URST 316F Rediscovering the Child: Interdisciplinary Workshops in an Urban Middle School**

It is said that at this time in history the entire country must make a commitment to improve the positive possibilities of education. We must work to lift people who are underserved; we must expand the range of abilities for those who are caught in only one kind of training; and we must each learn to be creative thinkers contributing our abilities to many sectors of our society. In this course, we expand our views about learning by experimenting with the creative process of lateral thinking. In the first six weeks of the semester, we learn about learning by meeting with exceptional people with many scholarly, professional, and civic engagement accomplishments. We also learn by working in teams to develop an exciting set of 2-D/3-D, hands-on, problem-solving workshops for middle-schoolers

from economically disadvantaged urban families; the workshop curriculum is based upon students' knowledge and passion as well as their interests. During the last eight weeks, we deliver these workshops once a week to students at Compton-Drew Middle School (adjacent to the Science Center in the city of St. Louis). In this course we celebrate the choices of studies we each pursue, and expand our experience by learning from each other's knowledge bases and creativity. The course is open to students from all disciplines and schools, freshmen through seniors, and meets the multidisciplinary fieldwork requirement for AMCS majors.

**L18 URST 3211 Introduction to Colonial Latin America**

This course surveys the history of Latin America from the pre-Columbian civilizations through the Iberian exploration and conquest of the Americas until the Wars of Independence (roughly 1400-1815). Stressing the experiences and cultural contributions of Americans, Europeans and Africans, we consider the following topics through primary written documents, firsthand accounts and excellent secondary scholarship, as well as through art, music and architecture: Aztec, Maya, Inca and Iberian civilizations; models of conquest in comparative perspective (Spanish, Portuguese and Amerindian); environmental histories; consolidation of colonialism in labor, tributary and judicial systems; race, ethnicity, slavery, caste and class; religion and the Catholic Church and Inquisition; sugar and mining industries, trade and global economies; urban and rural life; the roles of women, gender and sexuality in the colonies. Geographically, we cover Mexico, the Andes and, to a lesser extent, Brazil, the Southwest, Cuba, and the Southern Cone. Premodern, Latin America.

**L18 URST 3283 Introduction to Global Health**

This course provides a general introduction to the field of public health. It examines the philosophy, history, organization,

functions, activities and results of public health research and practice. Case studies include infectious and chronic diseases, mental health, maternal and reproductive health, food safety and nutrition, environmental health, and global public health. Students are encouraged to look at health issues from a systemic and population-level perspective, and to think critically about health systems and problems, especially health disparities and health care delivery to diverse populations. No background in anthropology or public health is required.

**L18 URST 3352 China's Urban Experience: Shanghai and Beyond**

The course studies the history of Chinese cities from the mid-19th century to the late 20th century. It situates the investigation of urban transformation in two contexts: the domestic context of modern China's reform and revolution; and the global context of the international flow of people, products, capitals and ideas. It chooses a local narrative approach and situates the investigation in one of China's largest, complex, and most dynamic and globalized cities — Shanghai. The experience of the city and its people reveals the creative and controversial ways people redefined, reconfigured and reshaped forces such as imperialism, nationalism, consumerism, authoritarianism, liberalism, communism and capitalism. The course also seeks to go beyond the "Shanghai model" by comparing Shanghai with other Chinese cities. It presents a range of the urban experience in modern China.

**L18 URST 3405 For Freedom's Sake: The Civil Rights Movement in America**

This course provides an introduction to the period of struggle in American history known as the Civil Rights Movement. Our primary task is to survey the major historical figures,

organizations, locations, strategies and ideas that coalesce to make the history of the movement. The course broadly covers the years of the Black Freedom Struggle between 1945 and 1971, with a sharper focus on the pivotal years of 1954-1965. By placing the movement within a broader context, the course seeks to identify the historical developments and social realities that made the movement necessary and possible. The class also looks at the years following the movement, and the general transition from Civil Rights to Black Power.

**L18 URST 343 Understanding the Evidence: Provocative Topics of Contemporary Women's Health and Reproduction**

Contemporary topics of women's health and reproduction are used as vehicles to introduce the student to the world of evidence-based data acquisition. Selected topics span and cross a multitude of contemporary boundaries. Issues evoke moral, ethical, religious, cultural, political and medical foundations of thought. Students are provided introductory detail to each topic and subsequently embark on an independent critical review of current data and opinion to formulate their own said notions. Examples of targeted topics for the upcoming semester include, but are not limited to: Abortion, Human Cloning, Genetics, Elective Cesarean Section, Fetal Surgery, Hormone Replacement, Refusal of Medical Care, Medical Reimbursement, Liability Crisis and Gender Bias of Medical Care.

**L18 URST 3472 Global Energy and the American Dream**

This lecture course explores the historical, cultural and political relationship between America and global energy, focusing on oil, coal, natural gas, biofuels and alternatives. Through case studies at home and abroad, we examine how cultural, environmental, economic and geopolitical processes are entangled with changing patterns of energy-related resource extraction, production, distribution and use. America's changing position as global consumer and dreamer is linked to increasingly violent contests over energy abroad while our fuel-dependent dreams of boundless (oil) power give way to uncertainties and new possibilities of nation, nature and the future. Assuming that technology and markets alone will not save us, what might a culturally, politically and socially minded inquiry contribute to understanding the past and future of global energy and the American dream?

---

**L18 URST 3551 The Welfare State and Social Policy in America**

How can we understand the recent debate about fundamental health care reform? Should social security be partially or wholly privatized? Was the 1996 welfare reform a success? Contemporary political questions frequently focus on the American welfare state and the social policies that compose it. The first half of this course describes the American welfare state broadly construed, places it in a comparative context, and elucidates major political science explanations for the size and scope of American social policy. We touch on several areas of social policy while constructing the generalized lenses through which particular political outcomes can be understood. The second part of the course then focuses on three major aspects of the American welfare state: health care, old age pensions and policies related to work, poverty and inequality.

**L18 URST 360 Religion and the Modern Civil Rights Movement, 1954-1968**

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.

---

**L18 URST 3612 Population and Society**

This review of population processes and their social ramifications begins with an introduction to the basic terminology, concepts, and methods of population studies, followed by a survey of human population trends through history. The course then investigates biological and social dimensions of marriage and childbearing, critically examines family planning policies, deals

with the social impacts of epidemics and population ageing, and looks at connections between population movements and sociocultural changes. The overall objective of the course is to understand how population processes are not just biological in nature, but are closely related to social, cultural, political, and economic factors.

**L18 URST 3613 City of Peace: Baghdad in Medieval Times**

The subject of this course is an exploration of the city of Baghdad in medieval times from its foundation in the eighth century to its sack by the Mongols in the 13th. Starting from the background history of its location in Mesopotamia, we study the reasons of its foundation in that location and examine its topography, city planning and layout, institutions, citizens, neighborhoods, markets, libraries and workshops to discuss life in the city. Because Baghdad was the seat of the Abbasid caliphate at the time, we examine its role as the hub of the empire (in politics, administration, economy and literature), and its links to and rivalries with other provincial cities.

**L18 URST 3626 Adventures in Nosology: The Nature and Meaning of Disease**

What is a "disease" and how do you diagnose one? What are "medicines" and how, when, and for what purpose should they be used? These questions reflect universal human concerns, but the answers given to these questions have varied enormously in different times and places. The course considers the nature of health, illness, disease and its treatment, beginning with a detailed examination of the traditional ethnomedical system of the Hausa people of northern Nigeria. Using this West African medical system as a baseline for comparison, the course then explores the nature of "nosology" (the classification of diseases) and the underlying logic of different therapeutic systems in different times and cultures, including our own. The course draws on ethnography, the history of medicine, bioethics and human biology to understand how these questions are asked and answered in different societies, times and places.

**L18 URST 3670 The Long Civil Rights Movement**

The Civil Rights Movement is known as a southern movement, led by church leaders and college students, fought through sit-ins and marches, dealing primarily with non-economic

objectives, framed by a black and white paradigm, and limited to a single tumultuous decade. This course seeks to broaden our understanding of the movement geographically, chronologically and thematically. It pays special attention to struggles fought in the North, West and Southwest; it seeks to question binaries constructed around "confrontational" and "accommodationist" leaders; it reveals how Latinos, Native Americans and Asian Americans impacted and were impacted by the movement; and it seeks to link the public memory of this movement with contemporary racial politics.

#### L18 URST 3755 Disability, Quality of Life & Community Responsibility

The increasing prevalence of disability presents major challenges for American society. Social participation can be a challenge for people with disabilities, while resources to address these needs tend to be limited. This course will begin by critically analyzing concepts of disability, Quality of Life, health and social participation. We will construct a framework for examining social participation and community resources across the lifespan. Public health, educational and environmental theories and methods will be applied to programs and services that aim to enhance quality of life with disabilities. We will analyze ecological approaches to enhancing social participation. Upon completion of this course, students will be equipped to analyze challenges and prioritize resources for individual and population health.

#### L18 URST 3798 Building St. Louis History: The City and Its Renaissance

This course aims to provide a national and local understanding of how Americans and St. Louisans dealt with the problems of racism, poverty and sexism from 1945 to the present. While history courses traditionally require that students analyze the credibility and subjectivity of each historical source, this course further challenges students to use the methods of oral history to compare evidence from oral historical memory with written texts. By comparing St. Louis history with that of the rest of the nation, students analyze regional differences and understand the unique historical conditions that shaped this city.

Same as L22 History 3789

---

#### L18 URST 380 Applications in GIS

This introductory course in Geographic Information Systems (GIS) is designed to provide basic knowledge of GIS theory and applications using the existing state-of-the-art GIS software. The course is taught using a combination of lectures, demonstrations and hands-on, interactive tutorials in the classroom. The first week of the course provides a broad view of how students can display and query spatial data and produce map products. The remainder of the course focuses on applying spatial analytical tools to address questions and solve problems. As the semester develops, more tools are added to students' GIS toolbox so that they can complete a final independent project that integrates material learned during the course. Students are encouraged to design individualized final projects using their own or other available data; however, some already-prepared final projects also are available.

#### L18 URST 394 Urban Development and the Global Economy

This course is designed to familiarize students with the urban effects of economic globalization and to provide students with tools that enable them to engage in scholarly and practical debates on economic growth and the city. Students are exposed to a variety of theoretical statements comparative studies, and case-specific research focusing on cities and the global economy. Topics include: industrial reorganization and its connection to the urban form; the ability of "dead" cities to adapt to economic change; how economic innovation is encouraged or suppressed within cities; growth coalitions and urban politics; networks and culture in relation to capitalist commitment to urban space; and the role of the arts and entertainment in new development versus production-based paradigms.

#### L18 URST 400 Urban Education in Multiracial Societies

This course offers students an analysis of the historical development and contemporary contexts of urban education

in English-speaking, multiracial societies. It examines legal decisions, relevant policy decisions, and salient economic determinants that inform urban systems of education in Western societies including, but not limited to, the United States, Canada, Great Britain, and South Africa. The course draws on quantitative, qualitative, and comparative data as an empirical foundation to provide a basis for a cross-cultural understanding of the formalized and uniform system of public schooling characteristic of education in urban settings. Given the social and material exigencies that shape urban school systems in contemporary societies, special attention is given in this course to the roles of migration, immigration urbanization, criminal justice, industrialism, de-industrialism, and globalization in shaping educational outcomes for diverse students in the aforementioned settings. Prerequisite: junior standing or permission of instructor.

Credit 3 units. A&S: SS, WI A&S IQ: SSC, WI EN: S

---

#### **L18 URST 403 Directed Study in Urban Studies**

Directed study with an urban studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the urban studies adviser. Enrollment by permission of the instructor.

Credit variable, maximum 3 units.

---

#### **L18 URST 4033 Video Microanalysis: Methods and Tools**

The purpose of this course is to explore video microanalysis as a methodological tool for studying and valuing unconscious aspects of culturally diverse settings. Utilizing a social/cultural theoretical lens, this type of analysis reveals fleeting actions, subtle movements, peripheral events, and nonverbal communication that are not easily identified in real time viewing. Specifically we may look at facial expressions, direction of gaze, hand movements, body position, and use of material resources as micro techniques to expand our capacity to explore minute aspects and alternative interpretations of social interactions.

Same as L12 Educ 4033

Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD EN: S

---

#### **L18 URST 404 Directed Readings in Urban Studies**

This course consists of readings in urban studies that deal with a range of contemporary issues, focusing on cities and the surrounding metropolitan regions. It can be taken only under the direction of the director of the urban studies program.

Prerequisite: permission of instructor. The student must be a declared major in urban studies. Consult program approval form.

Credit 3 units.

---

#### **L18 URST 4041 Islam and Politics**

Blending history and ethnography, this course covers politics in the Islamic world in historical and contemporary times. Topics include history of Islam, uniformity and diversity in belief and practice (global patterns, local realities), revolution and social change, women and veiling, and the international dimensions of resurgent Islam. Geographical focus extends from Morocco to Indonesia; discussion of other Muslim communities is included (Bosnia, Chechnya, sub-Saharan Africa, U.S.).

#### **L18 URST 406 Sexual Health and the City: A Community-Based Learning Course**

In this community-based learning course, students partner with a St. Louis AIDS service organization (ASO) or sexual health agency to explore how the interrelationships among gender, class, race/ethnicity and sexual identity shape sexual health decisions, outcomes and access to services. Students also examine the complex relationship between men's and women's life goals and constraints, on the one hand, and the public health management of sexual health, on the other. In collaboration with their community partner and its clients, students develop a project that addresses an identified need of the organization and the community it serves. Course readings draw from the fields of anthropology, public health, feminist studies and policy making. Prerequisite: PHealth 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics or permission from the instructor, which is determined based on past student's experience in the fields of medical anthropology or sexual/reproductive health.

#### **L18 URST 4070 Global Justice**

This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course is of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally.

#### **L18 URST 4101 Metropolitan Finance**

This course is an interdisciplinary examination of fiscal policies in metropolitan regions and the related public policies that can make them better or worse places for living and working. A particular focus is on the financial structures and arrangements — both public and private — that support or hinder quality of life in urban spaces. Core topics of study include the potential impact of decentralized governments on metropolitan economic development, determination of optimal arrangements for sharing fiscal responsibilities among levels of government, evaluation of local revenue and expenditure decisions, and assessment of prospects and options for intergovernmental fiscal reform. The course is consistent in its approach to policy. Drawing on literature in sociology, education, public finance, community development, political economy and other related fields, the course readings and experiences explore how fiscal policies can and do affect urban dwellers and their well-being. This is a departure from many public finance courses.

Such an approach leads to very different questions: How do liquor zoning regulations influence minority and nonminority children in schools? Should whites be paid to move into minority neighborhoods or vice versa? This approach to the study of metropolitan finance puts an emphasis on topics such as child care, public transportation, minimum wage, housing codes, street behavior, homelessness, incarceration, alcohol, sports stadiums, illicit drugs, tax abatements, water service, garbage collection, schools, higher education, sprawl and technological change, with consideration given to political, institutional and cultural factors. Students are required to attend hearings, meetings and other relevant functions associated with the

development of public financial policy. Prerequisites: URST 299 and either junior standing or permission of the instructor.  
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L18 URST 4102 Latin America and the Rise of the Global South**

The rise of the global south — and the reordering of global geopolitics, economics and cultural imaginaries — is characterized by progressive change and intense conflict. Economic growth coincides with the impacts of global warming, the assault on natural resources, the rise of new consumers and the entrenchment of deep inequalities. We also see the emergence of cultural and political formations that range from the horrific to the inspiring. Latin America is a central node of the new global south. Here history takes unpredictable turns in the face of declining U.S. hegemony, the economic growth of Brazil, legacies of militarism and political violence, a feverish attack on nature, resurgent economic nationalism, and defiant "anti-globalization" movements. Through close reading of contemporary ethnographies of Latin America we explore emergent cultural and political-economic processes in the region; we consider south-south articulations (theoretical, cultural, political-economic) between Latin America, China, Africa and India; and we reflect on the changing role, meaning and relationships of the United States in the region.

---

**L18 URST 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics**

In the year 2000, HIV became the world's leading infectious cause of adult death, and in the next 10 years, AIDS was expected to kill more people than all wars of the 20th century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not lack of knowledge or resources, but global inequalities and the conceptual frameworks with which we understand health, human interaction and sexuality. This course emphasizes the ethnographic approach for cultural analysis of responses to HIV/AIDS. Students explore the relationship between local communities and wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power and culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates; ethics and responsibilities; drug testing and marketing; the making of the AIDS industry and "risk" categories; prevention and education strategies; interaction between biomedicine and alternative healing systems; and medical advances and hopes.

**L18 URST 418 Studying the City: Approaches to Social Research**

In this course we explore social science/social scientific research methods. The course is designed primarily for students majoring in urban studies. However, the research skills that students acquire can be applied to any substantive topic in the social sciences. The main goal of this course is that students develop the skills to independently design and execute high-quality social research, regardless of their substantive interests. To develop these skills we read about methods, assess published

research from a methodological perspective, and complete original research projects.  
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

**L18 URST 4211 New Media Literacy and Popular Culture in Education**

At the closing of the 20th century, the "digital turn" began to shape how individuals learn, communicate and interact with one another. Current and emerging media technologies have continued to change how individuals (youth and adults alike) gather information; consume, produce and disseminate texts; and participate in both local and global communities through print- and screen-based platforms such as email, blog, podcast and mash-ups, among others. In this course, we explore what we mean by technology, the various types and uses of technology and the relationship of technology to literacy and education. We begin with characteristics of "new media" and consequences of the digital revolution. Then, we examine conceptualizations of literacy in a historical context—from literacy as reading and writing to literacy as multimodality, convergence and participation. Finally, we shift our inquiry to investigate how new media literacies and technologies are shaping (and are shaped by) different forms of popular culture in United States and international contexts, including parts of Asia, Australia, Europe, Africa and North and South America. We make explicit the connections to education and explore possible directions for research and practice, including copyright and fair use issues present in educational settings. Readings, discussions and activities online and in actual communities culminate in individual- and class-based new media productions. Prerequisite: at least junior standing or permission of the instructor.

**L18 URST 4261 Political Economy of Urban Education**

Defining a political economy of urban education involves the examination of power and wealth and the manner in which they operate in urban settings. It requires analysis of the larger urban social and economic context and consideration of historical forces that have brought the schools to their present state. In this course, we consider various political and economic factors that have influenced and shaped urban education in the United States, drawing upon the extant literature on urban education and related social science disciplines to characterize and discuss them. A particular focus of this course is on the dynamic interrelationships among the political economy, urban education and social stratification.

**L18 URST 4280 History of Urban Schooling in the United States**

This reading colloquium examines the history of urban schooling and school policy in the United States. Readings focus on the growing literature in the history of urban schooling and on primary source material. We explore urban schooling in general and we examine particular primary source material as well as particular cities and their school districts. Such districts may include New York, Boston, Chicago, Detroit, St. Louis, Los Angeles, San Francisco, Atlanta and others. The course has two goals: to develop a strong contextual understanding of the conditions of urban schooling, the history of urban school reform, and the debates over the purposes of urban schools; and to

examine the ways historians have explored urban schooling in the U.S. Students should expect to read a book a week as well as primary source materials and occasional articles.

Same as L12 Educ 4280

---

**L18 URST 4289 Neighborhoods, Schools, and Social Inequality**

A major purpose of the course is to study the research and policy literature related to neighborhoods, schools and the corresponding opportunity structure in urban America. The course is informed by theoretical models drawn from economics, political science, sociology, anthropology, education and law. A major focus is to gain greater understanding of the experiences and opportunity structure(s) of urban dwellers, in general, and urban youth, in particular. While major emphasis is placed on data derived from the interface of urban environments and the corresponding institutions within them, the generational experiences of various ethnic groups complement the course foci.

**L18 URST 4315 Culture, Language and the Education of Black Students**

This course examines the communicative patterns of what is called variously African-American language, Pan-African linguistic systems and Ebonics within the context of public school policy and practice. In addition to a review of the structural and pragmatic aspects of black speech, the course highlights relationships between controversies within the linguistic community, contrasting views of speech within black lay communities, public discourse, and educational policy. Students also conduct a field-based research project in accord with their particular interests.

---

**L18 URST 4361 Culture, Power and the State**

This seminar surveys anthropological theory and ethnography of the nation-state. We will discuss how culture and power are interrelated in the formation of state institutions and ideologies, governance and violence, social and spatial inequalities, and citizen identities, daily lives, and movements for change. We'll read key theoretical works (Weber, Marx, Foucault, Gramsci, liberal political theory, feminism, and post-structuralism, among others) and contemporary ethnographies of the state. Anthropology's place in public debates on "culture" and violent crises of the state — from Iraq to the U.S. heartland — will be addressed at the end of the semester.

Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L18 URST 4411 In the Field: Ethnographic and Qualitative Methods**

This course provides an introduction to ethnographic and qualitative research. Ethnography is the study of culture and social organization primarily through participant observation and interviewing. Ethnographic research provides descriptive and interpretive analyses of the routine practices of everyday life. Ethnographic accounts represent different ways people live and make sense of their experiences and describe the types of social organization (for example, gender relations, class systems, racial

divisions, or cultural contexts) that, in part, serve to structure or pattern social behavior. Students conduct a small-scale qualitative research project, and in the process they gain skills in various qualitative research methods. This course is suitable for both undergraduate and graduate students. One purpose of the course is to help students plan for subsequent thesis research, independent study projects, or dissertation research.

**L18 URST 4512 Environmental Policy**

Course examines the relationship between environmental economics and environmental policy. The course focuses on air pollution, water pollution and hazardous wastes, with some attention given to biodiversity and global climate change. The course examines critically two prescriptions that economics usually endorses: (1) "balancing" of benefits against costs (e.g., benefit-cost analysis) and the use of risk analysis in evaluating policy alternatives; and (2) use of market incentives (e.g., prices, taxes or charges) or "property rights" instead of traditional command-and-control regulations to implement environmental policy. Prerequisite: Econ 1011.

Same as L11 Econ 451

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH

---

**L18 URST 453 Sociology of Education**

This course provides an overview of sociological theory and research on education in contemporary U.S. society. Drawing from sociological perspectives, it covers the implications of schools and schooling for social inequality, mobility, and group relations. It examines major theoretical perspectives on the purpose and social organization of mass education in the United States, and topics related to the organization and function of schools, access to educational resources, and group disparities in school experiences and outcomes.

---

**L18 URST 461B Construction and Experience of Black Adolescence**

This course examines the construct of black adolescence from the general perspectives of anthropology, sociology and psychology. It begins by studying the construct of black adolescence as an "invention" of the social and behavioral sciences. The course then draws upon narrative data, autobiography, literature and multimedia sources authored by black youth to recast black adolescence as a complex social, psychological, cultural and political phenomenon. This course focuses on the meaning-making experiences of urban-dwelling black adolescents and highlights these relations within the contexts of class, gender, sexuality and education.

**L18 URST 4622 Labor and Labor Movements in Global History**

Focusing on the period from mid-19th century (industrial revolution) until the present neoliberal capitalist era, this course analyzes working class formation, organization, collective action, and politics on a worldwide scale. It seeks to explore the connections between historical and contemporary workers' movements in the global North and global South, eschewing national perspectives and global/local dichotomies. Special attention is given to Latin American workers and labor movements. In particular, it examines the influence of immigration, the role of export workers, the impact of radical ideologies, the development of labor relations systems, the nature of informal work, and recent struggles for workers' control. The principal aim of this course is to introduce students to the key topics and themes pertaining to global labor history. These themes are varied and complex and range from workers' struggles.

Credit 3 units. A&S: SS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

**L18 URST 476 The City in American Arts and Popular Culture, 1910-1940**

Using visual media—painting; prints and illustration; film and animation — along with studies of vaudeville, and other forms of popular and mass entertainment — this seminar analyzes the presence of the city as a theme that registers a range of cultural attitudes toward the modern. Through close readings of visual and verbal texts, we consider such issues as the relationship between work and leisure, and between high culture and popular arts. We look at critiques and celebrations as well as at how the popular arts help the ordinary man and women to negotiate the challenges of the new mechanized and overscaled urban environment. Prerequisites: 300-level course in American 20th-century cultural history, or American art or literature; or permission of instructor.  
Same as L01 Art-Arch 475  
Credit 3 units. A&S: TH A&S IQ: HUM Art: AH

---

**L18 URST 4792 Globalization and National Politics**

This seminar examines globalization and its interaction with national politics; the movement of ideas, capital, goods, services, production and people across national borders; and provides a skeletal framework for the global political economy. Politicians, policymakers and societies discover new opportunities, but also dilemmas as expanding interdependence challenge traditional notions of sovereignty and national policy autonomy.  
Same as L97 IAS 4792  
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC

**L18 URST 482 Senior Thesis in Urban Studies**

This course is required for students to complete the degree requirements in urban studies. Students discuss research methods and make regular research reports both to the instructor and for other students.  
Credit 3 units.

---

**L18 URST 4872 Colonial Cities and the Making of Modernity**

Massive urban growth has been a central result of the incorporation of many areas — both central and peripheral — into the global economy in the 19th and 20th centuries. Scholars have long theorized urbanization as a key component of modernity, but they have usually done so by looking at urbanization and modernization from the perspective of the

West. This course investigates the character of cities in the colony and then uses these empirical and analytical entry points to examine critically some theories of modernity. The geographical focus of the course is primarily on cities in the Middle East, North Africa and South Asia.

#### **L18 URST 4891 Education and Public Policy in the United States**

This course takes a triangulated approach to the field of public policy as it relates to education and social problems. First, the course emphasizes theories of public policy that frame the field of policy studies. Major questions extending from this course feature include: What is public policy, policy behavior, its defining processes/features, and what social function does it serve? Second, the course emphasizes the skills related to the exercise of policy analysis. These skills include the crafting of technical documents within the field of public policy (e.g., a policy brief) and the application of scientific methods to the exploration of social problems/governmental actions. Likely issues related to this course feature include the use of scientific knowledge in political arenas, engagement with stakeholders and the intended/unintended consequences of policy science to political decision-making. Third, this course simulates the policy-making context through students' participation in mock congressional testimonies. These focal areas become central to an understanding of four social concerns: school desegregation following the Brown decisions; affirmative action in higher education; Head Start programs; and/or the ESEA Act of 1965, also known as No Child Left Behind. Educational opportunity, achievement inequality and social change are the primary interests that link these course features.

#### **L18 URST 4892 The Science and Politics of Testing in the United States**

Why do tests permeate American Society? Tests have been integral to the decision-making process in many venues of American culture-e.g., immigration opportunities, voting rights, college admissions, workforce considerations, special education placement, educational reform, and graduation requirements.

The credibility of these decisions depends upon the claim that a particular test is a scientific instrument and relevant to the decision-making process. This claim is worthy of study. The purpose of this course is twofold. The first purpose is to examine how the nexus of science and politics influence testing practices in American society. The second purpose is explore how testing practices influence the culture of schools, civil liberties, the work place, and public discourse about merit.

#### **L18 URST 4992 The Business of Us All: In/equality in Practice and Theory**

This course uses a transdisciplinary approach to discuss in/equality and its interrelated topics of inequality, inequity and social justice. While the focus is on the U.S. predominantly, lessons learned from our global partners are important components of our discussions. The course will emphasize the implications of our findings for other ethnic/racial minorities around the world. Equality speaks to issues of priority, fairness and impartiality. On the other hand, inequality is defined as marked difference among individuals or groups of individuals in the distribution of social goods. Inequity, which considers bias, discrimination and injustice in distributive systems, pushes the discussion further. As the various forms of social, political and economic inequalities are mutually reinforced, we examine economic inequality, residential segregation and housing quality; dis/investment in neighborhoods and communities; resource allocation to low income, city and predominantly ethnic minority schools; academic underachievement of minority youth; access to and provision of appropriate health care; curtailment of social welfare programs; the presentation of stereotypical images of persons of color in the media and school curricula; morbidity, mortality, and longevity rates for persons of color; environmental hazards; the surge in incarceration related to substance abuse and escalating criminal prosecution, as well as discriminatory behavior of police and judges. All of the foregoing is made worse

by race and gender status variables. Such factors cannot be considered inconsequential to social im/mobility and equality in the larger society. The collateral damage borne by the intergenerational transfer of social im/mobility and in/equality to future generations are integral to course discussions.

## Women, Gender, and Sexuality Studies

Courses in the Department of Women, Gender, and Sexuality Studies (WGSS) examine how gender and sexuality affect and intersect with many aspects of the world in which we live, including political structures; social relations; economic institutions; the production of literature, art and history; and cultural representations of gender, sexuality, race, class and ethnicity. The curriculum provides opportunities to explore the specificity of gendered experiences, concerns and perspectives, and to see how these vary among different social groups and at different points in time. WGSS courses examine the ways constructions of difference — ethnicity, race, class, nationality, ability and religion — intersect with constructions of gender and sexuality. The department has four areas of focus around which courses are organized: literature/theory/history; sexuality/the body/health; global and transnational feminist and gender studies; and critical race studies of gender and sexuality. Students may choose to concentrate in one of these areas or to investigate all four.

Among the first in the nation (est. 1972), the Department of Women, Gender, and Sexuality Studies at Washington University has emphasized the importance of gender and sexuality to such disciplines and interdisciplinary programs as philosophy, psychology, history, education, law, architecture, art history and archaeology, anthropology, political science, international studies, American culture studies, and studies in culture and languages.

The Department of Women, Gender, and Sexuality Studies offers both interdisciplinary courses based in the department and more disciplinary-based courses coming from departments and programs throughout the university. Examples of interdisciplinary courses located within the department include: Introduction to Women, Gender, and Sexuality Studies; Black Masculinities; Women's Healthcare in America; Queer Histories; On Love and Intimacy: Theorizing Kinship in the Multiple; Transnational Feminisms; and Sex, Gender, and Popular Culture.

Women, Gender, and Sexuality Studies students are often leaders in campus organizations that deal with issues concerning women, gender relations, sexuality and health. They also participate in a wide spectrum of co-curricular organizations available to undergraduates, including Students for Choice, Uncle Joe's Peer Counseling, MORE, Student Forum on

Sexuality, SARAH, Pride Alliance WU, and the Representation Project.

Women, Gender, and Sexuality Studies encourages students to think critically and to participate actively in their education. Most classes are small, rely heavily on classroom discussion, and emphasize interaction between faculty and students. Courses in Women, Gender, and Sexuality Studies can be taken as electives, toward a primary or secondary major, or toward a minor. Graduate students can pursue a certificate in Women, Gender, and Sexuality Studies.

Women, Gender, and Sexuality Studies can help students prepare for a career that involves women's and men's concerns or issues of gender or sexuality. Many graduates who continue their schooling choose to focus on such issues in medical school, law school, public health programs or social work. Some students envisage a career in college or university teaching, where they can apply a gender studies focus. Other students find jobs in social agencies focused on women's or gender issues. Others currently are employed in such areas as health care, business, education, the arts, media, politics and law.

## Majors

### The Major in Women, Gender, and Sexuality Studies

**Total required units:** 27 units

**3 credits of the introductory course:** WGSS 100B Introduction to Women, Gender, and Sexuality Studies

**3 credits of theory:**

The following courses may fulfill this requirement:

| Code      | Title   | Units |
|-----------|---|-------|
| WGSS 3013 | On Love and Intimacy: Theorizing Kinship in the Multiple  | 3     |
| WGSS 3031 | Queer Theory  | 3     |
| WGSS 335  | Feminist Theory   | 3     |
| WGSS 383  | Topics in Women, Gender, and Sexuality Studies: Spectacular Blackness, Race Gender & Visual Culture | 3     |
| WGSS 4012 | Advanced Queer Theory: The Intimacy of Precarity  | 3     |
| WGSS 406  | Queering Theory: A Multidisciplinary Approach   | 3     |
| WGSS 416  | The Politics of Pleasure  | 3     |
| WGSS 419  | Feminist Literary and Cultural Theory   | 3     |
| WGSS 420  | Contemporary Feminisms  | 3     |
| WGSS 421  | From Mammy to the Welfare Queen: African-American Women Theorize Identity                           | 3     |

|          |  |   |
|----------|--|---|
| WGSS 475 | Reformers and Radicals:Feminist Thinking through History | 3 |
|----------|--|---|

Note: The 400-level theory classes also will satisfy the requirement for a 400-level class.

**3 credits of a research methods or service learning course:**

The following courses may fulfill this requirement:

| Code   | Title   | Units |
|--|---|-------|
| WGSS 3133  | Service Learning: Feminist and Queer Youth Studies        | 4     |
| WGSS 3171  | Service Learning: Women and Prison                        | 4     |
| WGSS 3173  | Service Learning: Documenting the Queer Past in St. Louis | 4     |
| WGSS 3942  | Service Learning: Projects in Domestic Violence           | 4     |
| WGSS 417W  | Feminist Research Methodologies                           | 3     |
| Any other service learning course approved by WGSS |   |       |

**3 credits at the 400 level or an honors thesis:**

- Any home-based or cross-listed WGSS class at the 400 level or a WGSS honors thesis will satisfy this requirement.

**3 credits of a historical context course:**

- A course home-based or cross-listed in WGSS that explores gender, sex or sexuality in a historical context or studies the history of these categories.

**3 credits of an ethnic/global/racial context course:**

- A course home-based or cross-listed in WGSS that considers gender and ethnicity, or gender and race, or gender in a global context.

**9 credits of WGSS courses** in addition to the credits required in the categories above:

- Courses home-based or cross-listed in WGSS.

Note: Only two home-based or cross-listed WGSS courses below the 300 level may be counted toward the 27 required units for the major.

## Additional Information

**Study Abroad:** We strongly encourage and support students who wish to study abroad and will accept up to 9 credits from approved programs. Please contact Barbara Baumgartner ([http://wgss.artsci.wustl.edu/people/baumgartner\\_barbara](http://wgss.artsci.wustl.edu/people/baumgartner_barbara)), WGSS Study Abroad supervisor, about this option.

**Honors:** The honors program in Women, Gender, and Sexuality Studies is open to majors who have strong academic records. Students who have maintained a cumulative 3.65 grade point average through five semesters and have at least a 3.65 in the major may be considered for honors. Application to the program

must be made by April 1 of junior year (no late applications will be accepted).

## Minors

### The Minor in Women, Gender, and Sexuality Studies

**Units required:** 18 units, 12 of which are at or above the 300 level. All 18 units must be separate courses not double-counted toward a major. All minor courses must be home-based or cross-listed in Women, Gender, and Sexuality Studies. All courses taken for the minor must be taken for a grade.

**Required courses:**

Individual programs are designed in consultation with an adviser in light of the student's interests and abilities, major course of study, and plans for the future. All courses must be home-based or cross-listed in Women, Gender, and Sexuality Studies.

---

### L77 WGSS 100B Introduction to Women, Gender, and Sexuality Studies

This course will provide an introduction to the major and concepts in the interdisciplinary field of women, gender, and sexuality studies. We will examine the meanings attached to terms such as "man," "woman," "gay," and "sex." Topics discussed may include the history of feminist movements, masculinity, biological frameworks for understanding gender, intimate violence, sexual identities, and intersectionality. Five seats are reserved for freshmen, sophomores, juniors and seniors in each section. One section is reserved for freshman and sophomore students only. Attendance mandatory first day in order to reserve class enrollment.

---

### L77 WGSS 102 Women in Science: An Introduction

Throughout the centuries, women were interested and involved in the sciences. Their scientific contributions, however, have often been overlooked and their abilities questioned. The 2005 proposition by Harvard's President Larry Summers that women's innate differences explain why fewer women succeed in math and science suggests that women continue to face assumptions about their scientific competence. In addition to examining the history of women's participation in science, this class explores the continuing cultural and economic barriers to women interested in science. Starting with a historical overview of women in science, we look at the contributions of women scientists. We review the numbers of women in various fields with good representation, such as biology, and those with few women, such as physics and computer science. Like the prestigious journal *Science*, we also explore whether women

do science differently. This course is restricted to Women in Science Focus program participants.

---

**L77 WGSS 103 Freshman Seminar: Sex & Gender in the Gutter: An Intro to Gender and Sexuality Studies Through Comics**

This freshman seminar serves as an introduction to some of the history and concepts important in the field of gender and sexuality studies through graphic storytelling. Topics include the history of feminism in the United States, violence against girls and women, queer theory, intersectionality, and transnational feminism. Please be advised that while we will read comics — most of these texts are not for kids. We discuss traumatic issues and will look at some disturbing images. Please spend some looking at descriptions of the required texts and think about whether or not this class is for you.

---

**L77 WGSS 1135 Freshmen Seminar: The World of Cleopatra**

Cleopatra, the last queen of ancient Egypt, captivated her contemporaries and has fascinated the Western world ever since her famous suicide by asp in 31 BCE. She was a woman of contrasts: Pharaoh of Egypt and Greco-Macedonian queen; seductive woman and shrewd political strategist; a ruthless monarch using every means available to consolidate her position in the face of the encroaching power of the Roman Empire. Through texts and material culture, the seminar seeks to understand Cleopatra in the context both of her native Egypt and of the wider Mediterranean world. We thus examine the traditions of Pharaonic Egypt; the historical events that brought Egypt under the control of the Macedonian Ptolemies (Cleopatra's dynasty); the wider stage of East-West tension and conquest in which Cleopatra struggled to maintain her power; her relationships (political and personal) with famous men of her day (Caesar, Herod, Mark Antony); her capital city of Alexandria, the largest metropolis of its day; Cleopatra's brilliant court and its luxury arts; and finally the many Cleopatras that have populated art and literature of later times. We emerge with a sense of Cleopatra, both as a unique individual and as a product of her time.

---

**L77 WGSS 206 Sexuality and the State: Introduction to Sexuality Studies**

Taking Michel Foucault's idea of biopolitics as a starting point. This course examines the ways in which sexuality has been produced and regulated by the state. Drawing on history, theory, and literature, we will look at contemporary examples of the relationship between the state and sexuality. What assumptions lie behind our ideas of sexuality? How are bodies linked by the prevailing logic of sexuality? How does sexuality inform the way that we see bodies as gendered, raced, or able-bodied. In addition to looking at the relationship between sexuality and capitalism, religion, and nation, this course asks how these ideas are embodied in particular raced and gendered ideologies.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: BA EN: H

---

**L77 WGSS 214C Gender and Texts**

Discussion of canonical and nontraditional texts, most by women. Emphasis on how these texts represent gender, how literature contributes to identity formation, and how women have used the written word to change their social and imaginative conditions.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: HUM

---

**L77 WGSS 2250 Freshman Seminar: African-American Women's History: Sexuality, Violence and the Love of Hip-Hop**

Black women, much like their male counterparts, have shaped the contours of African-American history and culture. Still, close study of African-American women's history has burgeoned only within the past few decades as scholars continue to uncover the multifaceted lives of Black women. This course explores the lived experiences of Black women in North America through a significant focus on the critical themes of violence and sexuality. We examine African-American women as the perpetrators and the victims of violence and as the objects of sexual surveillance and we explore a range of contemporary debates concerning the intersections of race, class and gender, particularly within the evolving hip-hop movement. We take an interdisciplinary approach through historical narratives, literature, biographies, films and documentaries.

**L77 WGSS 240 Not Members of this Club: Women and Slaves in the Greco-Roman World**

Both the Athenian Democracy and the Roman Senatorial Oligarchy were societies in which political power was the exclusive property of free, citizen males. With very few exceptions, the astounding accomplishments of those societies were also the creations of free, citizen males. This course examines the lives of two disparate but comparable groups of outsiders within Greek and Roman society. The status, rights and accomplishments of Athenian and Roman women are explored and placed in the context of other premodern societies. Likewise, the institution of slavery in Greece and Rome is explored and compared with other slave-holding societies, ancient and modern.

---

**L77 WGSS 246A Freshman Seminar: Latin American Women in History and Culture: Icons and Idols**

In English. This class takes an in-depth look at various iconic female figures in the history of Latin America, examining their (self-) representation in history, literature, art and other cultural manifestations. We examine their lives, writings and art to learn more about the historical and cultural moment they lived in; how this moment shaped their lives and how they, in turn, shaped their historical moment. We aim to draw the larger conclusions of how women in history, despite hostile circumstances, have managed to forge political, cultural and artistic identities and make an impact on the world around them. We study these women in a chronological fashion, showing how society's attitudes changed toward women and how, in some ways, paradoxically, stayed the same. The women we

study are all very different in terms of identity, historical period and sociocultural background but all are similar in terms of their desire to overcome convention and resist repression — sometimes with very tragic results. Figures we study include La Malinche, Sor Juana Inés de la Cruz, Manuela Saenz, Delmira Agustini, Frida Kahlo, Eva Perón, the Mothers of the Plaza de Mayo, Rigoberta Menchú and Ingrid Betancourt. Prerequisite: concurrent registration in individually appropriate level of Spanish language course is required.

---

#### L77 WGSS 253 Women's Fiction in Contemporary Spain

This course focuses on selected novels and short stories by 20th-century women writers in Spain, beginning with those writing during the post-Civil War years (1939-1975) and ending with the new generation of women writers who emerged after the end of the Franco dictatorship (post-1975). Discussions center on both political and aesthetic issues in the contexts of post-war and post-Franco Spain, including the effects of political repression and censorship; representations of gender and sexuality; and literature's relationship to feminist and nationalist movements in Spain. When relevant, other cultural media, such as film and music, are used in conjunction with our reading and analysis of literary texts. The course is taught in English.

#### L77 WGSS 299 Independent Study: Internships

This course number is to be used for internships only.

Credit variable, maximum 3 units. Art: HUM

---

#### L77 WGSS 2991 Undergraduate Teaching Assistant

In this course an advanced undergraduate can assist a faculty member in the teaching of an introductory-level Women, Gender, and Sexuality Studies course. Students can enroll in one course only after having obtained permission from a faculty member who is willing to supervise. Students do not engage in any grading but may serve in a variety of other capacities — as discussion leaders, in providing logistical support, or in otherwise assisting with the transmission of course material.

---

#### L77 WGSS 3003 Writing Intensive in Ancient Studies: Helen of Troy in Greece and Rome

Study of selected topics in Classics. This is a Writing Intensive course.

Same as L08 Classics 3003

Credit 3 units. A&S: TH, WI A&S IQ: HUM, LCD, WI EN: H

---

#### L77 WGSS 3013 On Love and Intimacy: Theorizing Kinship in the Multiple

Love and intimacy are terms that have a lot of cultural cache. In this course, we analyze the ways in which intimacy has

been embedded within certain discourses of privacy, rights and individuality. In addition to the couple form, we examine friendship, celibacy, therapy and relationships people form with pets and with objects to flesh out intimacy's multiplicities to see how these forces impact these affective tides. This course brings together history, critical theory and film to think through various expressions of intimacy and what it means to relate to the other. Prerequisites: any 100- or 200-level Women, Gender, and Sexuality Studies course or permission from the instructor.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: BA, ETH EN: H

---

#### L77 WGSS 301A The Politics of Kanye West: Black Genius and Sonic Aesthetics

As a hip-hop artist Kanye West has had unprecedented impact on the sonic force of music, fashion, politics and videography. Coupling his controversial moments with his corpus of musical texts with special focus on sonic production, this course illuminates "Mr. West" as a case study for interrogating the interplay between fame, gender, sexuality and race. Mostly, we explore how racialized ways of doing iconography, complex ways of seeing, create a distorted or reductive frame through which we see the black and famous. Nonetheless, the course oscillates with entertaining these nuances, while being entertained by the decade-long catalogue of music and visual imagery. Together, we extract the "Politics of Mr. West" in his music and life, while also illuminating the importance of a politics of genius-making in the larger arc of black pop culture tradition.

Same as L90 AFAS 3010

Credit 3 units. A&S IQ: HUM, SD BU: BA EN: H

---

#### L77 WGSS 303 Gender and Education

An examination, through the lens of gender, of educational practices at the preprimary, primary, secondary, and higher education levels. A sociological and historical approach links gender discrimination in education to other forms of discrimination as well as social forces. Students' own gender-related educational experiences are analyzed in the context of the literature used in the course. Prerequisite: sophomore standing, or permission of instructor.

Same as L12 Educ 303

---

#### L77 WGSS 3031 Queer Theory

This course provides students with an interdisciplinary examination of the history, politics and cultural expressions of gay and lesbian communities in American culture. It explores the ways lesbians, gay men, bisexual and transgendered people construct, participate in and resist various constructions of gender and sexuality. We question desire and social/cultural power, the nature and power of social change, etc. Particular attention is paid to examining the roots and effects of heterosexism and homophobia, the call for hate crime legislation, the ethics of "outing" and "passing," the impact of AIDS, partnership recognition and domestic violence on LGBT communities. Throughout the course students are encouraged to examine the intersections of gender, race, ethnicity and social class with sexual orientation.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

---

**L77 WGSS 304 Sex, Gender and Popular Culture**

A critical survey of sex and gender in the production, reception and content of contemporary popular culture. Possible topics include: television, film, advertising, popular fiction, music, comics, internet, foodways and fashion. Themes include: the representation and stylization of sexed and gendered bodies; popular models of sexual and gendered social relations; production of normative and alternative sex and gender identities through media consumption; sex and gender in systems of popular cultural production.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD BU: BA EN: H

---

**L77 WGSS 3041 Making Sex and Gender: Understanding the History of the Body**

This course provides an overview of the history of the body from antiquity to modern times using an interdisciplinary approach. By exploring selections from medical texts, literature, fashion, art, accounts of "new world" exploration, legal records, self-help books and contemporary media representations of human bodies, we consider the changing historical perception of the body. The intersection of gender, race and class factor significantly in our discussions of how the body has been construed historically and how it is currently being constructed in contemporary American culture. This course also provides an introduction to feminist/gender methodologies that apply to understanding the history of the body. This course is not open to students who have taken WGSS 204. Prerequisite: any 100- or 200-level WGSS course or permission of instructor.

**L77 WGSS 310 From Hysteria to Hysterectomy: Women's Health Care in America**

This course examines issues surrounding women's health care in America. While the scope is broad, the major emphasis will be on the 19th and 20th centuries. Through an examination of popular writing, scientific/medical writing, letters, diaries and fiction, we will look at the changing perceptions and conceptions of women's bodies and health in America.

**L77 WGSS 3101 An Intellectual History of Sex and Gender**

When did sexuality begin? Is it safe to assume that gender constructions are universal and timeless? In this course, we engage with a broad range of readings that serve as primary texts in the history of sexuality and gender. Our aims are threefold: to analyze the literary evidence we have for sexuality and gender identity in Western culture, to survey modern scholarly approaches to those same texts and to consider the ways in which these modern theoretical frameworks have become the most recent set of "primary" texts on sexuality and gender.

**L77 WGSS 3132 Service Learning: Girls' Studies**

2012 marked the 100th anniversary of Girl Scouts of America, an organization that has played a significant role in defining what it means to be a girl in American culture. This class looks back at girlhood over the past 100 years to today by exploring topics that include literature for girls, the education of girls, sports and girlhood, marketing to girls, girls' health and sexuality, and, of course, the history of organizations for girls in the United States and abroad. This course introduces students to the emerging field of Girl Studies within the field of Feminist/Gender Studies research. Because the course builds upon basic knowledge of women's movements in the U.S. and builds upon an understanding of core women and gender studies readings, students must take Introduction to Women and Gender Studies or Introduction to Sexuality Studies before enrolling in this course. This course includes a fieldwork component in addition to regular course meetings. Prerequisite: any 100-level WGSS course.

Credit 4 units. A&S: TH A&S IQ: HUM BU: BA EN: H

**L77 WGSS 3133 Service Learning: Feminist and Queer Youth Studies**

Categorizing life experience into childhood and adolescence is a relatively new construct. The first part of the course will examine how the categories of early childhood and adolescence developed in social and medical discourses. The remainder of the course encourages students to draw connections between Feminist and Queer theoretical scholarship on children, and the practice of designing and implementing programming for children. Students will examine the relationship between the course readings and their experience working with various agencies in St. Louis. Important Note: This is a service-learning class, which means it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which will necessitate an additional 4-5 hours a week. Before beginning community service, students must complete required training and submit material for a background check. Prerequisite: Introduction to Women, Gender, and Sexuality Studies (L77 100B). CET (<https://gephardtinststitute.wustl.edu/cec/college-of-arts-sciences>) course.

**L77 WGSS 313A Topics in English & American Literature: Dreams**

Called the "Age of Revolution," the Romantic Age of British literature, 1770-1830, witnessed the birth of new lyric forms, the effacement of traditional strictures on style and taste, and produced through poetic voice (and its quaverings and multiplications) what might be called, oversimply, the modern subject. Within a developing discourse of human rights and personal freedom, this growing assertion through poetry of individual expressivity allowed William Blake to construct in a single work a visual and verbal "Jerusalem." It encouraged William Wordsworth to write a pathbreaking investigation of the sources of his own creativity that challenged conventional restraints on what topics can, and cannot, be confessed in poetry. Beginning with these two poets, we consider the historical contexts, and the sometimes competing histories of ideas, that shaped the five major British Romantic poets: Blake, Wordsworth, Samuel Taylor Coleridge, Lord Byron, and John Keats. We follow an anthology for much of the poetry, including the poems and prose of influential contemporaries (female as well as male) who included the political philosopher Edmund

Burke and Mary Wollstonecraft. Texts assigned also include Mary Shelley's *Frankenstein* and Byron's *Don Juan*. Same as L14 E Lit 313

---

**L77 WGSS 3152 Sex and Gender in Greco-Roman Antiquity**  
Ideas about sex and gender have not remained stable over time. The ancient Greeks and Romans had their own ideas — ideas that strike us today as both deeply alien and strikingly familiar. This course will consider questions such as: What constituted "normal" sex for the Greeks and for the Romans? What sex acts did they consider to be problematic or illicit, and why? What traits did the Greeks and Romans associate with masculinity? With femininity? How did society treat those who did not quite fit into those categories? How did peoples of the ancient world respond to same-sex and other-sex relationships, and was there an ancient concept of "sexuality"? How did issues of class, ethnicity and age interact with and shape these concepts? How does an understanding of these issues change the way we think about sex and gender today? We will read an array of ancient texts in translation, consider various theoretical viewpoints, and move toward an understanding of what sex and gender meant in the ancient world.

**L77 WGSS 3171 Service Learning: Women and Prison**  
Since President Reagan declared a war on drugs in the 1980s, the numbers of women in prison has increased dramatically. Due to mandatory minimum sentencing requirements and increasingly punitive prisoners for nonviolent offenses, there are no more than 200,000 women incarcerated in the United States with more than 1 million on probation and parole. While women are the fastest growing population in prison, men still make up the vast majority of prisoners, and the system is largely geared toward men and their needs. In this course, we explore the historical and contemporary issues of girls and women who are convicted of a crime. Through readings, films, reflective writings and facility tours, we explore the impact of incarceration on women and their families. While our scope is national, we focus on the corrections system in Missouri. Prerequisite: Introduction to Women and Gender Studies or Introduction to Sexuality Studies. CET (<https://gephardtstitute.wustl.edu/cec/college-of-arts-sciences>) course.

**L77 WGSS 3172 Queer Histories**  
Queer history is a profoundly political project. Scholars and activists use queer histories to assert theories of identity formation, build communities and advance a vision of the meanings of sexuality in modern life and the place of queer people in national communities. This history of alternative sexual identities is narrated in a variety of settings — the internet as well as the academy, art and film as well as the streets — and draws upon numerous disciplines, including anthropology, geography, sociology, oral history, fiction and memoir, as well as history. This discussion-based course examines the sites and genres of queer history, with particular attention to moments of contestation and debate about its contours and meanings.

**L77 WGSS 3173 Service Learning: Documenting the Queer Past in St. Louis**

Around the U.S. and the world, grassroots LGBTQ history projects investigate the queer past as a means of honoring the courage of those who have come before, creating a sense of community today, and understanding the exclusions and divisions that shaped their communities and continue to limit them. In this course, we participate in this national project of history-making by helping to excavate the queer past in the greater St. Louis region. Course readings will focus on the ways that sexual identities and communities in the United States have been shaped by urban settings since the late 19th century, with particular attention to the ways that race, class and gender have structured queer spaces and communities. In their community service project, students will work with the grassroots St. Louis LGBT History Project to research St. Louis' queer past, including conducting oral histories with local LGBTQ elders. Important Note: This is a service-learning class, which means it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which will necessitate an additional 3-4 hours a week. Before beginning community service, students must complete required training. Prerequisite: Introduction to Women, Gender, and Sexuality Studies or Introduction to Queer Studies, or permission of instructor. **L77 WGSS 3201 Gender, Culture and Madness**  
This course explores the relationships among gender constructs, cultural values and definitions of mental health and illness. Understandings of the proper roles, sensibilities, emotions and dispositions of women and men are often culturally and morally loaded as indicators of the "proper" selves permitted in a given context. Across cultures, then, gender often becomes an expressive idiom for the relative health of the self. Gender identities or presentations that run counter to these conventions are frequently identified as disordered and in need of fixing. In this course, we take up these issues through three fundamental themes: the social and cultural (re)production of gendered bodies and dispositions; the normalization of these productions and the subsequent location of "madness" in divergent or dissonant experiences of embodiment; and the situation of discourses of "madness" within debates of resistance and conformity, selfhood and agency.

**L77 WGSS 323A Sex Trafficking**

Both in the United States and on a global level, interrelated inequities in gender, sex, power, class, opportunity, education, culture, politics, race, and sexual objectification are among the social phenomena that contribute to the larger number of women and girls who enter into systems of prostitution and sex trafficking. We will examine the dynamics of sex trafficking on a local and global level from various perspectives, with particular attention given to the sexed and gendered social conditions that impact sex trafficking. In studying the extent and nature of the problem we will look at demand, prevalence, experiences of victims, methods of traffickers, child trafficking, cultural dynamics, and global power dynamics. We also examine international, federal and state legislation along with organizational and grassroots efforts to prevent and respond to sex trafficking.

**L77 WGSS 330A Native American/Euro-American**

**Encounters: Confrontations of Bodies and Beliefs**

This course surveys the history and historiography of how Native Americans, Europeans and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter — through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

**L77 WGSS 3313 Topics in Gender & Religion**

This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we will examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category, and the relationship between gender, race, ethnicity and power. Second, we will study gender-based social movements, including the suffrage and woman's rights movements, women's participation in the civil rights movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement. Third, we will examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we will examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights.

**L77 WGSS 335 Feminist Theory**

This course begins by examining the 19th- and early 20th-century historical context out of which contemporary feminist theory emerged. We then turn to the 1960s and the emergence of the "Second Wave" of feminism. We focus on some of the major theories that developed during the 1960s, 1970s and 1980s and the conflicts and internal problems these theories generated. We then examine some of the ways these problems were resolved in feminist theory of the 1990s. The last part of the course focuses on topics of concern to contemporary

feminists — such as the family, sexuality and globalism — and the contributions feminist theory brings to these topics. Open to graduate students by enrolling in L77 WS 500; contact the Women, Gender, and Sexuality Studies office for details. Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Art: HUM BU: BA EN: H

---

**L77 WGSS 337 Women's Literature: Before Thelma and Louise: American Women's Adventure Stories**

American literature is filled with adventurers and adventure stories. Some of the most exciting tales were written by women. Their adventures include Mary Rowlandson's autobiography of her capture by and life with the Indians, E.D.E.N. Southworth's story of a 19th-century heroine who rescues imprisoned maidens and fights duels, and Octavia Butler's science fiction account of a 20th-century black woman who is transported back through time to an antebellum plantation. Until recently, American women authors and their stories were largely dismissed because they were perceived to focus on domestic concerns, which were seen as narrow and trivial. But the works of many women authors are far different from sentimental domestic fiction. In addition to looking closely at the historical and cultural conditions in which the narratives were written, we examine the ways in which these writers conform to and rebel against cultural prescriptions about femininity. Finally, we read some contemporary and current criticism about these works and American women's writing and discuss the politics of canon formation. Tentative Reading List: Mary Rowlandson, *The Captivity and Restoration of Mrs. Mary Rowlandson* (1682); *The Journal of Madam Knight* (1704); Catharine Maria Sedgwick, *Hope Leslie* (1827); E.D.E.N. Southworth, *The Hidden Hand* (1858); Zora Neale Hurston, *Their Eyes Were Watching God* (1937); Octavia Butler, *Kindred* (1979); Paule Marshall, *Praisesong for the Widow* (1983). Writing-intensive.

---

**L77 WGSS 3410 Gender in Society**

Introduction to the sociological study of gender. The primary focus is U.S. society, but we will also discuss gender in an international context. From the moment of birth, boys and girls are treated differently. Gender structures the experiences of people in all major social institutions, including the family, the workplace and schools. We will explore how gender impacts lives and life chances. The central themes of the course are historical changes in gender beliefs and practices; socialization practices that reproduce gender identities; how race/ethnicity, class and sexuality shape the experience of gender; and the relationship between gender, power and social inequality. Prerequisite: introductory course in sociology or consent of the instructor.

**L77 WGSS 3413 Women in Early Modern Europe**

From the Renaissance to the Enlightenment, European women experienced tremendous change as Europe witnessed religious upheaval, economic retrenchment, political consolidation, and intellectual revolution. However, many of the core ideas about women's role and status remained remarkably stable during this period, and women continually struggled to create opportunity for themselves. We will examine both the changing and unchanging nature of women's lives through sources such as conduct manuals for women, biographies about women from different economic, social, and religious backgrounds, and the works of female authors.

**L77 WGSS 345A Sexual Politics in Film Noir and Hardboiled Literature**

Emerging in American films most forcefully during the 1940s, film noir is a cycle of films associated with a distinctive visual style and a cynical worldview. In this course, we explore the sexual politics of film noir as a distinctive vision of American sexual relations every bit as identifiable as the form's stylized lighting and circuitous storytelling. We explore how and why sexual paranoia and perversion seem to animate this genre and why these movies continue to influence "neo-noir" filmmaking into the 21st century, even as film noir's representation of gender and sexuality is inseparable from its literary antecedents, most notably, the so-called "hard-boiled" school of writing. We read examples from this literature by Dashiell Hammett, James Cain, Raymond Chandler and Cornell Woolrich, and discuss these novels and short stories in the context of other artistic and cultural influences on gendered power relations and film noir. We also explore the relationship of these films to censorship and to changing post-World War II cultural values. Films screened in complete prints or in excerpts likely include many of the following: *The Maltese Falcon*, *Double Indemnity*, *Murder My Sweet*, *Phantom Lady*, *Strangers on a Train*, *The Big Sleep*, *The Killers*, *Mildred Pierce*, *The High Wall*, *Sudden Fear*, *The Big Combo*, *Laura*, *The Glass Key*, *The Big Heat*, *Kiss Me Deadly*, *The Crimson Kimono*, *Touch of Evil*, *Alphaville*, *Chinatown*, *Taxi Driver*, *Devil in a Blue Dress*, *The Bad Lieutenant* and *Memento*. Required screenings.

**L77 WGSS 347 Gender and Citizenship: Writing-Intensive Seminar**

In this writing-intensive course we examine how ideas about gender have shaped the ways Americans understand what it means to be a citizen. We focus on a variety of cases in the past and present to explore the means by which women and men have claimed the rights and responsibilities of citizenship. The types of questions that we ask include: What rights or duties devolve from the status of citizen? Who qualifies for citizenship and what qualifies them? What distinct models of citizenship have been available to Americans? How have individuals used notions of gender identity to make claims to political subjectivity? And finally, how do gendered claims to citizenship intersect or conflict with claims based on race, class, ethnicity or humanity? Prerequisite: previous course work in Women, Gender, and Sexuality Studies or permission of the instructor. Not open to students who have taken WGSS 210.

**L77 WGSS 348 Rethinking the Second Wave: Race, Sexuality and Class in the Feminist Movement 1960-1990**

The U.S. women's movement has been called "the 20th century's most influential movement," but until recently assessments of its origins, characteristics and impact have been largely impressionistic and subjective, left to movement participants and popular culture. Building on a recent explosion of historical studies of American feminism, this course examines

the history of the so-called "second wave" of the women's movement from its origins in the early 1960s to its alleged demise in the late 1980s. Topics covered include the origins of feminist activism; the traditional history of the women's movement and recent revisions; how race and class shaped the feminist movement; how feminist ideas and organizing transformed American society; feminism and individual experience; and responses to the women's movement. In this discussion-based course, we read scholarly analyses of the women's movement as well as memoirs, popular essays and many primary documents from the period.

**L77 WGSS 3560 Black Women Writers**

When someone says "black woman writer," you may well think of Nobel Prize winner Toni Morrison. But not long ago, to be a black woman writer meant to be considered an aberration. When Thomas Jefferson wrote that Phillis Wheatley's poems were "beneath the dignity of criticism," he could hardly have imagined entire Modern Language Association sessions built around her verse, but such is now the case. In this class we survey the range of Anglophone African-American women authors. Writers likely to be covered include Phillis Wheatley, Harriet Wilson, Nella Larsen, Lorraine Hansberry, Octavia Butler and Rita Dove, among others. Be prepared to read, explore, discuss and debate the specific impact of race and gender on American literature.

---

**L77 WGSS 3561 Law, Gender, & Justice**

This course (formerly called "Women and the Law") explores how social constructions of gender, race, class and sexuality have shaped traditional legal reasoning and American legal concepts, including women's legal rights. We will begin by placing our current legal framework, and its gender, race, sexuality, and other societal assumptions, in an historical and Constitutional context. We will then examine many of the questions raised by feminist theory, feminist jurisprudence, and other critical perspectives. For example, is the legal subject

gendered male, and, if so, how can advocates (or women and men) use the law to gain greater equality? What paradoxes have emerged in areas such as employment discrimination, family law, or reproductive rights, as women and others have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? How do intersectionality and various schools of feminist thought affect our concepts of discrimination, equality and justice? The course is thematic, but we will spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women. Over the years, this course has attracted WGSS students and pre-law students. This course is taught by law students under the supervision of a member of the School of Law faculty. In spring 2017, Jesse Doggendorf, Sapna Khatri, Rebecca Swarm, and Sarah Watson will be teaching this course under the supervision of Professor Susan Appleton. *Students who have taken L77 3561 Women and the Law can not take this class.*

#### L77 WGSS 358 Scribbling Women: 19th-Century American Women Writers

In 1855, Nathaniel Hawthorne wrote to his publisher, William Tichnor, that "America is now wholly given over to a damned mob of scribbling women, and I should have no chance of success while the public taste is occupied with their trash." In this class, we examine works of those scribbling women of the 19th century. We read one of the best-selling novels of the century, one that created a scandal and ruined the author's literary reputation, along with others that have garnered more attention in our time than their own. In addition to focusing on these women writers, we also explore questions about the canon of American literature: What makes literature "good"? What constitutes American literature? How does an author get in the canon and stay there? Finally, in this writing-intensive course, there are frequent writing assignments and a strong emphasis on the essential writing process of drafting and revising.

#### L77 WGSS 359 Topics in European History: Modern European Women

This course examines the radical transformation in the position and perspective of European women since the 18th century. The primary geographical focus is on Britain, France and Germany. Topics include: changing relations between the sexes; the emergence of mass feminist movements; the rise of the "new woman"; women and war; and the cultural construction and social organization of gender. We will look at the lives of women as nurses, prostitutes, artists, mothers, hysterics, political activists, consumers and factory hands.

#### L77 WGSS 360 Trans\* Studies

Trans\* Studies is an interdisciplinary course that was previously named Transgender Studies. The new course title represents the development of the field and the identity in U.S. culture. In this course students engage with the following questions: When and why did the category gender emerge? What is the relationship between sex, sexuality and gender? How have the fields of medicine and psychology dealt with gender? How have approaches to "gender dysphoria" changed over time?

Why is LGBT grouped together as a social movement? What are the advantages and disadvantages of this grouping? What are the legal obstacles faced by people who resist normative gender categories? What legal obstacles are faced by people who transition from one sex to another? To what extent do U.S. citizens have autonomy over defining their gender or sex? How are trans people represented in fiction? What does it mean to apply transgender theory to interpret fictional accounts of trans? Any of the following are suitable (but not required) courses to take before enrolling in this class: WGSS 100B, WGSS 105, WGSS 205 or WGSS 3091.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

#### L77 WGSS 3601 The Traffic in Women and Contemporary European Cinema

What binds society together? One of the most influential answers to this question was offered by French anthropologist Claude Lévi-Strauss. He argued that the fabric of a society is formed by a network of exchanges among kinship groups, which circulate three kinds of objects: economic goods, linguistic signs and women. In this course, we inquire into the place of women in this argument. We trace rudiments of the traditional marriage system (a father figure still "gives away" the bride in the marriage ceremony), its range of displacements in a global economy (transnational wives, nannies and domestic servants), the role of new media in the formation of new systems of trafficking (internet brides), and the place of the debate on gay marriage within the larger conversation. We read texts by Friedrich Engels, Sigmund Freud, Marcel Mauss, Claude Lévi-Strauss, Gayle Rubin, Luce Irigaray, Judith Butler, Barbara Ehrenreich and Arlie Russell Hochschild; and we watch a number of films that dramatize the traffic in women in the context of contemporary Europe: Coline Serreau's *Chaos*, Lukas Moodisson's *Lilja 4-ever*, Cristian Mungiu's *Occident*, Nilita Vachani's *When Mother Comes Home for Christmas*, Fatih Akin's *Head-on*, Jean-Pierre and Luc Dardenne's *The Silence of Lorna*.

#### L77 WGSS 361 Women and Social Movements: Gender and Sexuality in US Social Movements

This course examines the history of grassroots activism and political engagement of women in the U.S. Looking at social movements organized by women or around issues of gender and sexuality, class texts interrogate women's participation in, and exclusion from, political life. Key movements organizing the course units include, among others: the Temperance Movement, Abolitionist Movements, the Women's Suffrage Movements, Women's Labor Movements, Women's Global Peace Movements, and Recent Immigration Movements. Readings and discussion pay particular attention to the movements of women of color, as well as the critiques of women of color of dominant women's movements. Course materials analyze how methods of organizing reflect traditional forms of "doing politics," but also strategies and tactics for defining problems and posing solutions particular to women. Prerequisites: any 100- or 200- level Women, Gender, and Sexuality Studies course or permission from the instructor.

**L77 WGSS 363 Neither Man Nor Woman: Transgender Ethnographies in Global Context**

This seminar examines transgenderism and gender variance more broadly in a global context that includes, but does not privilege, Western analytical frameworks. We read ethnographic accounts of gender diversity that complicate Western notions of sex, gender and sexuality. In particular, we interrogate the idea of transgenderism as a crossing from one gender to an opposite one (i.e., male to female or female to male), investigate the relationship between gender identity and sexuality, and examine the particularities of local gender forms in cultural context. Any of the following are suitable (but not required) courses to take before enrolling in this class: L77 WGSS 100B, L77 WGSS 105, L77 WGSS 205 or L77 WGSS 3091.

**L77 WGSS 3666 Women and Film**

The aim of this course is primarily to familiarize students with the work of prominent women directors over the course of the 20th century, from commercial blockbusters to the radical avant-garde. Approaching the films in chronological order, we consider the specific historical and cultural context of each filmmaker's work. In addition we discuss the films in relation to specific gender and feminist issues such as the status of women's film genres, representations of men and women on screen, and the gender politics of film production. Required screenings.

**L77 WGSS 369A Reading Sex in Premodern England**

This course introduces students to the literary representation of gender and sexuality in England from the medieval period to the 18th century. To understand a tradition that addressed the intractable problem of human sexuality in terms very different from ours, we ask: how does premodern culture imagine gendered identities, sexual difference, and erotic desire? How do various contexts — medical, religious, social, private, public — inform the literary representation of gender and sexuality? What are the anatomies and economies of the body, the circuits of physical pleasure, and the disciplines of the self that characterize human sexuality? Students have the opportunity to study romances, saints' lives, mystical writings, diaries, plays, sex guides, novels and scientific treatises. By learning how to "read sex" in premodern literature, students acquire a broad cultural and historical understanding of English sexualities before the descent of modern sensibilities.

**L77 WGSS 3751 Topics in Women's History: Women, Gender and Sexuality in Postwar America**

We explore the history of the United States since 1945 by focusing on the ways that gender and sexuality have shaped the lives of Americans, particularly the diverse group of women who make up more than half the nation's population. Topics include: domesticity and the culture of the 1950s; gendering the cold war; the gender politics of racial liberation; the sexual revolution; second-wave feminism and the transformation of American culture; the new right's gender politics; and the impact of new conceptions of sexual and gender identity at century's end. Course texts include scholarly literature, memoirs, novels and film.

**L77 WGSS 384 Gender & Consumer Culture in U.S. Fiction of the Late 19th and Early 20th Century**

The decades between the end of the Civil War and the 1930s saw the rise of a mass consumer culture that would dramatically reshape America. The fiction writers of this period, keen to capture the spirit of the age, helped to create the enduring idea that consumerism and an orientation toward material acquisition are at the heart of gendered concepts of American identity. Their stories documented, and sometimes celebrated, the emergence of recognizable "types" of American womanhood and manhood — such as self-made millionaires, ambitious "working girls," bargain-hunting middle-class housewives, and the commercially minded women and men of the social and intellectual elite. At the same time, their stories articulated anxieties about U.S. consumer culture and its impact on the world. Students in this course will read, discuss and write about novels and short stories by writers such as Henry James, Mary Wilkins Freeman, Kate Chopin, Theodore Dreiser, Edith Wharton, Nella Larsen, Langston Hughes, and F. Scott Fitzgerald. Students in the course will also examine primary materials such as magazine advertisements, and will read and respond to relevant scholarship on the period. Writing Intensive course.

**L77 WGSS 3884 Regulating Reproduction: Morality, Politics and (In)justice**

This course centers on the burgeoning corpus of anthropological scholarship on reproduction, with special attention to the regulation of reproductive behaviors and population management in cross-cultural perspective. Anthropologists and feminist scholars have shown how reproduction — which

links individual bodies to the body politic — is a privileged site for processes of governance. Scholars have also shown how seemingly personal reproductive choices made in the micro units of families are always bound up with broader, if obscured, economic, national and political projects. In this course, we will cover how diverse entities, including the state, the Church, NGOs and feminist groups, seek to manage reproductive behaviors and politics across the world. We will discuss population control campaigns (such as China's notorious one-child policy) and pronatalist population policies (like those seen in Israel) in order to underscore how the management of fertility becomes a crucial site for nationalist and state-building projects. In this course we examine processes of "reproductive governance" around topics including pregnancy and birth, family planning, abortion and adoption. We also examine how the global proliferation of Assisted Reproductive Technologies (such as in vitro, sonogram, abortifacient pills, amniocentesis) intersects with efforts to govern reproduction. Crucially, we take class and race as key axes through which reproduction is experienced and stratified in diverse contexts. At the end of this course students should have a solid grasp of key topics and themes in the anthropology of reproductive governance, as well as more in-depth knowledge of a particular controversial reproductive issue that they choose to focus on for their final research paper.

#### L77 WGSS 393 Gender Violence

This course explores the issue of violence against women within families, by strangers in the workplace, and within the context of international and domestic political activity. In each area, issues of race, class, culture and sexuality are examined as well as legal, medical and sociological responses. Readings cover current statistical data, research and theory as well as information on the history of the battered women's movement, the rape crisis center movement, violent repression of women's political expressions internationally, and the effect of violence on immigrant and indigenous women in the United States and abroad. Not open to students who have taken U92 (UCollege) WGSS 363.

---

#### L77 WGSS 3942 Service Learning: Projects in Domestic Violence

In this course, we explore the links between the theories and practices of Women, Gender, and Sexuality Studies through a combination of research and direct community engagement. Course readings focus on the ways that poverty and violence, along with race and gender expectations, shape the lives of women. A required community service project for this course

asks students to examine the relationship between the course readings and the lives of actual women in St. Louis. Over the course of the semester, students design and execute programming for women at a local community agency. This is a writing-intensive course. Students must contact instructor for permission to enroll. CET (<https://gephardtinsttute.wustl.edu/cec/college-of-arts-sciences>) course.

---

#### L77 WGSS 3943 Violence Against Women Court Project

The seminar explores the links between the theories and practices of Women, Gender, and Sexuality Studies through a combination of readings, discussion and direct community engagement. Readings focus on the legal system and the ways domestic violence is confronted and how criminal justice interventions have responded to new theories and research about the nature of intimate partner violence. Particular attention is directed to the ways that issues of race, poverty, parenthood and sexual orientation influence the criminal justice response and shape the lives of abused women. Students participate in a court advocacy program to investigate the important discrepancies between theory and practice in the field. Students are required to take L77 WGSS 393 or have taken L77 WGSS 393 to enroll in the seminar.

---

#### L77 WGSS 396 Gender and Social Class

This course examines the intersection of class and gender from the late 19th century to the present. It begins by asking how a focus on women challenges conventional notions of class. Some of the topics covered include women, race and class; class and family formation; women, class and globalization; class and feminist politics; women and work; class and domestic labor; women and unionization; and class and sexual identity. The emphasis is on women and class in the U.S. but includes analysis of women and class in a broader, global context. This course examines these topics using nonfictional and fictional texts. Prerequisites: one 100- or 200-level Women, Gender, and Sexuality Studies course or permission of instructor. Students who have taken L77 WGSS 3561 Women and Social Class can not take this class.

**L77 WGSS 39SC Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar**

What is the connection between the appropriation of other people's resources and the obsession with sex? Why is "race" essential to the sexual imperatives of imperialism? How has the nexus between "race," sexuality, and imperial entitlement reproduced itself despite the end of formal colonialism? By studying a variety of colonial documents, memoirs produced by colonized subjects, novels, films and scholarship on imperialism, we will seek to understand the history of imperialism's sexual desires and its continuation in our world today.

**L77 WGSS 4012 Advanced Queer Theory: The Intimacy of Precarity**

This seminar uses precarity to produce a map of some trends in queer theory today in order to outline the stakes of this current intellectual work and ask how we can use this work to rethink sexuality. In outlining the current stakes of precarity, this seminar focuses on two main threads of queer theory — queer of color critique and public feelings — because both of these spaces have enabled complex theoretical and political discussions centered around precarity and both also introduce historical framings of queer theory. By orienting their contributions to queer studies around precarity, these scholars are asking both how one lives with this condition and what formations of knowledge have produced these conditions of liminality and vulnerability. Overall, this emphasis on precarity has made certain tensions surrounding the place of difference within queer theory visible and highlighted the role of structures, particularly neoliberalism, which is a particular nexus of collusion between the state and formations of capital, over the individual.

---

**L77 WGSS 4013 Queer of Color Critique: Sense and Sexuality**

That sensation produces surplus, often uncontainable knowledge, is something that is beginning to be explored in various arenas of queer theory as an important component of queer of color critique. This seminar will explore different sensational arenas, the different possible critiques that they produce, and what this means for thinking about sexuality, gender and queer theory. Throughout the course of the semester, we will explore sensation in multiple ways: 1) as a diagnostic tool for understanding some of the different ways that race, gender and sexuality intersect; 2) as a way to trouble the dichotomy between interiority and exteriority to understand the ways in which orders of knowledge become imprinted on the body; 3) as a mode of producing alternate forms of knowledge about gender, race and sexuality. In addition to reading about different sensations and their relationships to politics and sexuality, this course will require students to think creatively as they attempt to write about sensation, sexuality and politics. Ultimately, the purpose of this class is to examine sexuality and sensation as collections of embodied and politicized experiences. Prerequisite: Introduction to Women, Gender, and Sexuality Studies (L77 100B) or permission of instructor.

Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM EN: H

---

**L77 WGSS 401A Transnational Queer Activism**

This course explores the recent emergence of visible movements for sexual and gender minorities across the globe. The course begins with an overview of theories of collective action, putting canonical texts in social movement studies in conversation with postcolonial, queer, and transnational feminist approaches to activism and resistance. The aim is to lay a theoretical foundation for transnational analysis that does not center Western experience. The second part of the course moves through some key issues in LGBTI organizing that are overlooked when focusing on Euro-America, including: the importance of democratic transition for social movements; the prevalence of human rights as frames for sexual rights in the global South; limitations of the term "homophobia" when conceiving of hostility toward sexual minorities cross-culturally; and the role of colonialism and neo-colonialism in the globalization of LGBTI identities. Students will read texts attentive to the specificities of activism and resistance in the global South such as *Out in Africa: LGBT Organizing in Namibia and South Africa*, *Queer Activism in India*, and *Mobilizing Gay Singapore: Rights and Resistance in an Authoritarian State*. Course materials will also include primary source material from translated interviews with Argentine transgender activists the months before the passage of the "Gender Identity Law." Oral presentations will compare a case of LGBTI activism discussed in class to the work done by a St. Louis-based organization. By the end of the course, the students will be able to explain the important ways global Southern LGBTI movements differ from their Northern counterparts, contextualize news reports of events like the passage of the anti-homosexuality bill in Uganda, and craft research contributions based on global Southern case studies. Prerequisite: Introduction to Women, Gender, and Sexuality Studies (L77 100B) or permission of instructor.

**L77 WGSS 402 Transnational Reproductive Health Issues: Meanings, Technologies, Practices**

This course covers recent scholarship on gender and reproductive health, including such issues as reproduction and the disciplinary power of the state, contested reproductive relations within families and communities, and the implications of global flows of biotechnology, population and information for reproductive strategies at the local level. We also explore how transnational migration and globalization have shaped reproductive health, the diverse meanings associated with reproductive processes, and decisions concerning reproduction. Reproduction serves as a focus to illuminate the cultural politics of gender, power and sexuality.

**L77 WGSS 403 Race, Sex and Sexuality: Concepts of Identity**

This course examines changes in the meanings of three concepts of identity — race, sex and sexuality — from the early modern period to the present. The course begins by looking at early modern constructions of these concepts in Western Europe. We then focus on changes occurring during the course of the 18th and 19th centuries in Europe and the United States and at how such changes were similar and different among these three concepts. We then examine 20th-century challenges

to 19th-century constructions. The course concludes by studying the relationship between these challenges and 20th-century identity political movements organized around these concepts. Prerequisite: completion of at least one WGSS course or permission of the instructor.  
Credit 3 units. A&S: SS, SD A&S IQ: SSC, SD Art: SSC BU: BA

---

**L77 WGSS 4031 Topics in Gender and Judaism: Gender and Sexuality in Judaism**

A critical inquiry into the Jewish sociocultural construction of gender, past and present. Topics include the nature of the Jewish covenantal community and male circumcision as a sign of membership; the matrilineal principle of ancestry; genital emissions and purity; marriage and divorce; and male and female roles, including leadership roles. Documents by and about Jewish women, their daily lives and their sacral lives, are among the materials explored. JINE 208F is recommended. Same as L75 JINE 403  
Credit 3 units. A&S: TH, SD

---

**L77 WGSS 406 Queering Theory: A Multidisciplinary Approach**

This class aims to use theory to destabilize the concepts of race, sexuality, gender, disability and academic methodology. This class submerges students in some of the most influential texts in queer theory. The selected readings range across many disciplines, including biology, philosophy, anthropology, sociology, history and cultural studies. The core premise of this class is that to queer something is to destabilize it. Therefore, not all of the readings specifically are about gay, lesbian, bisexual or transgender people. However, these readings help any scholar in their future work in queer theory. Prerequisite: any 300-level WGSS class or equivalent or permission from instructor.  
Credit 3 units. A&S: SS A&S IQ: SSC EN: S

---

**L77 WGSS 408A Nuns**

Nuns — women vowed to a shared life of poverty, chastity and obedience in a cloistered community — were central figures in medieval and early modern religion and society. This course explores life in the convent, with the distinctive culture that developed among communities of women, and the complex relations between the world of the cloister and the world outside the cloister. We look at how female celibacy served social and political, as well as religious, interests. We read works by nuns: both willing and unwilling; and works about nuns: nuns behaving well, and nuns behaving scandalously badly; nuns embracing their heavenly spouse, and nuns putting on plays; nuns possessed by the devil, and nuns managing their possessions; nuns as enraptured visionaries, and nuns grappling with the mundane realities of life in a cloistered community. Same as L23 Re St 408

**L77 WGSS 4112 Body and Flesh: Theorizing Embodiment**

This seminar explores a wide range of readings on "the body" as a site of theoretical analysis in social scientific and humanistic inquiry. Issues include: How do we think about the body as simultaneously material (flesh and bone) and constructed in and through social and political discourse? How do we think about the relationship between these contingent bodies and subjective experiences of "self" in various contexts? The course focuses upon the different ways in which these questions have been posed and engaged, and the implications of these formulations for the theorizing of human experience. Prerequisite: Anthro 3201 or permission of instructor.  
Same as L48 Anthro 4112  
Credit 3 units. A&S: SS A&S IQ: SSC Art: SSC EN: S

**L77 WGSS 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics**

In the year 2000, HIV became the world's leading infectious cause of adult death, and in the next 10 years, AIDS was expected to kill more people than all wars of the 20th century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not lack of knowledge or resources, but global inequalities and the conceptual frameworks with which we understand health, human interaction and sexuality. This course emphasizes the ethnographic approach for cultural analysis of responses to HIV/AIDS. Students explore the relationship between local communities and wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power and culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates; ethics and responsibilities; drug testing and marketing; the making of the AIDS industry and "risk" categories; prevention and education strategies; interaction between biomedicine and alternative healing systems; and medical advances and hopes.

#### **L77 WGSS 414 Gender, Religion, Medicine and Science**

Until recently the histories of science, medicine and religion were written by men and for men. These fields did not critically analyze gender or sexuality. Neither masculinity nor femininity were topics of interest in the studies of great scientists or famous theologians. Sexuality in scientific writing and religious thought barely received more than a sentence or two in the writings of historians. What changed? Feminist/Queer theory made us rethink the way we learn about the history of medicine, science and religion. Despite these great strides, we are only beginning to explore the interplay between these fields from a feminist/queer perspective. In other words, while feminist/queer scholars have deepened our understandings of both science and religion, they have only recently begun to examine the relationship between these two fields. This course explores how feminist research has broadened our understanding of the interplay between the authority of religion, science and medicine in historical and contemporary studies. Some of the topics we explore include: conception and gestation, birth control, birthing, sexuality and aging. Prerequisites: Introduction to Women and Gender Studies and at least one 300-level WGSS course that addresses feminist and/or queer theory such as: Masculinities, Making Sex and Gender, Transgender Studies.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

---

#### **L77 WGSS 416 The Politics of Pleasure**

This 400-level seminar interrogates the concept of pleasure. Pleasure occupies a fraught space in feminist and queer theory. This course examines several ways that people have theorized pleasure as a space for politics, a space for conservatism, or a way to think about racialized difference. This course is not interested in defining what pleasure is, but it interrogates what the stakes of talking about pleasure have been within contemporary theory and culture. Beginning with an examination of pleasure in the context of early 20th-century sexology, this course looks at the sex wars of the 1970s, the turn toward pleasure as a space of protest, and ends by thinking of ways to imagine pleasure outside of current paradigms of sexuality. The course takes gender, race and sexuality as central analytic components to understand how pleasure is defined and who has access to it. Either Introduction to Sexuality Studies or Introduction to Women, Gender and Sexuality Studies are prerequisites.

Credit 3 units. A&S: TH, SD A&S IQ: HUM, SD EN: H

---

#### **L77 WGSS 417W Feminist Research Methodologies**

Research is the foundation of academic knowledge and of much knowledge produced outside of the academy in think tanks, nonprofit organizations, social service agencies, corporations, and many other venues of economic and social activity. Informed by theory, and shaped by specific methods, research can and does help to frame problems, contribute to policymaking, and evaluate the effectiveness of policies and programs. Research is employed in a variety of ways in the different disciplines within the academy and within different practices outside of the academy. This course examines the different ways in which research is conducted and examines the reasons for these differences and the ways in which they contribute to or hamper feminist goals. The course also explores the ways in which some research methods are privileged over others in hegemonic understandings of what counts as "research"

and of what counts as "knowledge." The course examines how gender theory and feminist politics shape the kinds of research questions researchers ask, the types of materials and other information researchers use, and the ways researchers define our relationships with our sources of data, evidence and other information. Students are expected to reflect on and engage with feminist approaches to research in this course in order to develop and complete a detailed research proposal. Prerequisite: At least two courses in WGSS, including Introduction to WGSS or Sexuality Studies at the 100 or 200 levels and one 300-level WGSS course, preferably in feminist or queer theory. This class is a writing-intensive course.

#### **L77 WGSS 418C Gender and Sexuality in East Asian Religions**

In this course we explore the role of women in the indigenous religious traditions of China, Japan and Korea (Confucianism, Daoism, Shamanism and Shinto), as well as Buddhism, Christianity and Islam. We begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses; shamans and mediums; hermits and recluses; and ordinary laywomen — both historically and in more recent times. Class materials include: literary and religious texts; historical and ethnological studies; biographies and memoirs; and occasional videos and films. Prerequisites: This class is conducted as a seminar, with minimal lectures; substantial reading and writing; and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, need to obtain the instructor's permission before enrolling.

#### **L77 WGSS 419 Feminist Literary and Cultural Theory**

This course is intended to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. Note: this course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisite: advanced course work in WGSS or in literary theory (300-level and above), or permission of the instructor required.

Credit 3 units. A&S: TH A&S IQ: HUM Arch: HUM Art: HUM

---

#### **L77 WGSS 420 Contemporary Feminisms**

The purpose of this course is to provide a framework, a map, within which students can locate feminist ideas. The course, which may be presented historically, explores and compares different types of feminism selected from, for example, the following feminisms: liberal, Marxist, socialist, radical, lesbian, black, existentialist, postmodern. The class considers how such feminisms analyze the nature and sources of women's oppressions, the worlds they envision, and the

means they use to bring about change. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: completion of at least one WGSS course or permission of the instructor.

**L77 WGSS 4201 The Novel in the Feminine (Le Roman au féminin)**

Informed through feminist criticism (Beauvoir, Cixous, Kristeva), this course examines the deconstruction of the novel as a traditional genre by 20th-century women writers such as Colette, Nathalie Sarraute, Marguerite Duras, Marguerite Yourcenar, Annie Ernaux and Mariama Bâ. We place special emphasis on the representation of the writing woman in the text itself and on the issue of "écriture féminine" in its sociocultural context. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.

Same as L34 French 4201

---

**L77 WGSS 421 From Mammy to the Welfare Queen: African-American Women Theorize Identity**

How do representations of identity affect how we see ourselves and the world sees us? African-American women have been particularly concerned with this question, as the stories and pictures circulated about black female identity have had a profound impact on their understandings of themselves and political discourse. In this course we look at how black feminist theorists from a variety of intellectual traditions have explored the impact of theories of identity on our world. We look at their discussions of slavery, colonialism, sexuality, motherhood, citizenship, and what it means to be human.

**L77 WGSS 424 Gender and Power in Religious Thought**

Gender has often been posed as the fundamental distinction of the human condition, creating the original opportunity for relation across that distinction. In some strands of religious thought, this distinction comes second to the creation of the world distinct from the divine. Religious and secular thinkers have turned to ordinary experiences of interpersonal relations for insight into these purportedly more fundamental relations and the connection between them. This seminar examines the role of interpersonal relationships in recent religious, ethical, and political thought, with particular attention to the way they bring gender and sexual desire more centrally into view.

**L77 WGSS 427 Technology and Feminist Practice: Gender Violence Prevention Tools**

How can we best use technology, and the tools and insights of the Digital Humanities in particular, to promote effective approaches to addressing gender-based violence? What are the most effective ways to bridge the innovations of the research university with the everyday work of practitioners seeking to prevent violence or intervene in its aftermath? What are the ethics involved in constructing tools for public and professional use? Which interests should govern the choices in content, design and dissemination of information? This course will introduce students to the strategies and challenges of devising technological tools for violence prevention for use beyond the classroom. Class readings and discussions will be supplemented by hands-on project work with Washington University's Gender Violence Database and lab sessions that focus on skill-building in digital project construction. Prerequisite: For undergraduate students, L77 393 01 or previous work experience with the Gender Violence Database. Graduate students by permission of instructor.

**L77 WGSS 430A Divergent Voices: Italian Women Writers**

This course engages the fictional and political works of Italian women writers from the 17th century to the present day. We will read one of the acclaimed Neapolitan novels of Elena Ferrante, who is considered by many to be the most important Italian fiction writer of her generation. We will examine a cloistered Venetian nun's defiant 1654 indictment of the misogynist society that forced her into the convent. We will confront the reality of a woman writer who in 1901 was compelled to choose between her child and her literary career. Among other contemporary writers, we will study the humorous and radical feminist one-acts of playwright Franca Rame. Taught in English. No Final.

---

**L77 WGSS 432 Women Writers of the 20th Century**

This course examines select novels, poetry and political writings by such noted authors as Sibilla Aleramo, Dacia Maraini, Luisa Muraro and Anna Banti. Special attention is paid to the historical, political and cultural contexts that influenced authors and their work. Textual and critical analysis focuses on such issues as historical revisionism in women's writing, female subjectivity and the origins and development of contemporary Italian feminist thought and practice. Taught in English.

**L77 WGSS 4333 Women of Letters**

We investigate the representation of women in 18th-century texts. Why did the novel and epistolary fiction become so closely associated with women as writers, heroines and readers in the course of the century? Why were women considered exemplary and yet, at the same time, a threat? The 18th century saw the last of the salons led by women well-versed in philosophy, literature, art and politics. It saw the reinforcement of the opposition between the public and the private sphere. Woman

was the incarnation of the ideal of liberty and yet excluded from the "rights of man." Rousseau praised women's role as nurturers and peacemakers but cast into doubt their capacity for genius. Literary texts that feature women became a sparring ground for two of the century's major literary trends: Sensibility and Libertinage, for a woman's sensitivity was thought to contain the seeds of virtue and licentiousness. We investigate philosophical discourses on the senses and emotions and political discourses on republican responsibility. We read these texts in conjunction with the literary works of men and women authors, including Prévost, Marivaux, Graffigny, Riccoboni, Diderot, Rousseau, Charrière, Laclose, Sade and Staël. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One hour preceptorial required for undergraduates. Same as L34 French 4331  
Credit 3 units. A&S: TH Art: HUM

**L77 WGSS 436 Black Sexual Politics**

Borrowing from Patricia Hill Collins' perspective in *Black Sexual Politics*, this seminar examines the historic and popular understandings of black sexuality and how they maintain color line, as well as threaten to spread what Hill Collins refers to as a "new brand of racism." Particularly, this course engages questions about sexuality that have only begun to be discussed with African-American Studies and the larger public sphere. Taking the intersections of identities very seriously, this course interrogates the ways in which these constructions have affected black women, while also being attentive to how "others" are implicated within discourses of black sexuality. Similarly, we will also engage the various distortions of black men — depictions of the black and masculine as almost always violent, sexually and socially irresponsible, brutish, questionable and unfaithful. Together we will use various critical texts and media to better understand the impact and the importance of visual and material images in the interplay of race, sex and politics in contemporary America.

Credit 3 units. A&S IQ: SSC, SD EN: S

**L77 WGSS 437 Transnational Feminisms**

This course engages contemporary feminist theories from diverse transnational contexts, as well as the social movements and local resistances they inspire. Through engagement with key works of feminist theory, political manifestos, and creative works of resistance, we will explore how transnational feminist alliances and coalitions have contested and responded to gendered and racialized forms of exploitation, navigating and reshaping territorial and social boundaries. We will engage with debates around the notion of a "global sisterhood"; tensions between universal and local feminist practice; the role of difference, nationality and culture in navigating the possibility of solidarity; the role of the internet in forging cross-border alliances; human rights-based activism; "women's" work; transgender inclusivity and transfeminisms. Part of our goal will be to ask how feminist theories from diverse geographical locations have influenced the politics of borders, movements for environmental justice, migrations and mobility, resistance to imperialism and the forging of alternative economies. We will also explore the gray areas existing in between binaries such as feminist/anti-feminist; local/global; home/away; global South/North; victim/agent; domination/dependency. Finally, we will ask how processes of knowledge-production take shape within different intellectual and political movements such as postcolonial feminism, decolonial and indigenous feminism, liberal and radical feminism, Marxist feminism and religiously-based feminisms.

**L77 WGSS 4494 Modern Japanese Women Writers**

Japanese women have been scripted by Western (male) imagination as gentle, self-effacing creatures. From their (re)emergence in the late 19th century to their dominance in the late 20th, Japanese women writers have presented an image of their countrywomen as anything but demure. Struggling to define their voices against ever-shifting expectations and social contexts, the women they create in their fiction are

valiant, if not at times violent. This course examines the various manifestations of the female image in female-authored modern Japanese fiction. Writers to be considered are Higuchi Ichiyo, Hirabayashi Taiko, Uno Chiyo, Enchi Fumiko, Yamada Eimi, and others. A selection of novels and shorter fiction will be available in English translation, and students need not be familiar with Japanese. Prerequisites: 6 units of literature/women's studies and junior standing, or permission of the instructor. Writing Intensive course.

#### L77 WGSS 4502 Women and the Medieval French Literary Theory

The Middle Ages constitute a beginning — a period when new languages and literatures came into being, along with Romanesque book — illumination and stained glass, Gothic cathedrals, Gregorian chant, Troubadour song, Crusades for the Holy Land and quests for the Holy Grail. Medieval French Literature is therefore a new literature, defining itself against antique models and its own rich multilingual, highly visual and oral culture. This course provides an overview of this diverse and fascinating French literary tradition while focusing on the status of women in the literary production of the Middle Ages. Particular attention is given to women's role in the creation of texts as authors and patrons. We also examine how gender roles are constructed and challenged through the literary representation of female characters. Readings include examples from major genres: Marie de France's *Lais*, Chrétien de Troyes' *Lancelot*, Rutebeuf's *Vie de Sainte Elyzabel*, the anonymous *Aucassin et Nicolette*, as well as *Fabliaux*, poetry of the *Trouvères* and *Trobairitz*, excerpts of the *Roman de la Rose*, and works by Christine de Pizan. All readings and discussions are in modern French. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates.

#### L77 WGSS 4581 Gender, Politics and Writing in Women's Fiction of the Post-Franco Era

This course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco's death and continue to write into the new century (Esther Tusquets, Cristina Fernández Cubas, Rosa Montero, Carmen Riera and Adelaida García Morales), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucía Etxebarria and Espido Freire). We consider the works of these women within their cultural, historical and political contexts, addressing issues such as the representation of gender and sexuality; the cultural impact of feminism, nationalism and globalization; and the influence of the publishing industry and the market on literary production. Whenever available, film adaptations of these literary works are used in conjunction with the readings. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One hour preceptorial for undergraduates only. In Spanish.

#### L77 WGSS 4601 Taboo: Contesting Race, Sexuality and Violence in American Cinema

Pushing the envelope or going too far? What is the boundary between films that challenge us and films that offend us? This is a course about films that crossed that boundary, most often by presenting images of race, sexuality and violence, images that could attract audiences as much as they offended moral guardians and courted legal sanctions. Because they were denied the First Amendment protection of free speech by a 1915 Supreme Court decision, movies more than any prior art form were repeatedly subject to various attempts at regulating content by government at federal, state, and even municipal levels. Trying to stave off government control, Hollywood instituted forms of self-regulation, first in a rigid regime of censorship and subsequently in the Ratings system still in use. Because taboo content often means commercial success, Hollywood could nonetheless produce films that pushed the envelope and occasionally crossed over into more transgressive territory. While control of content is a top-down attempt to impose moral norms and standards of behavior on a diverse audience, it also reflects changing standards of acceptable public discourse. That topics once barred from dramatic representation by the Production Code — miscegenation, homosexuality and "lower forms of sexuality," abortion, drug addiction — could eventually find a place in American movies speaks to changes in the culture at large. In trying to understand these cultural changes, this course explores films that challenged taboos, defied censorship, and caused outrage, ranging from films in the early 20th century that brought on the first attempts to control film content through to films released under the ratings system, which has exerted subtler forms of control. Required screenings.

---

**L77 WGSS 4755 Queering Sexual Cultures in Africa and the Diaspora**

This course examines gender and sexuality in contemporary Africa and the diaspora. We will focus specifically on queerness as a category of analysis and will examine queer identities, practices, communities and cultures in Africa and the African diaspora. In recent years, many African countries have adopted harsh anti-homosexuality laws and much of the political and popular discourse frames expressions of same-sex desire as "un-African." However, there is a long history of non-normative sexualities in Africa, challenging the manner in which the continent is constructed as heterosexual by both local and global forces. Similarly, black communities across

the African diaspora have relied on the regulation of gender and sexuality to demarcate the boundaries of blackness, and have traditionally sought belongingness to the nation through compulsory heterosexuality. Many scholars, artists and activists in the African diaspora continue to critique parochial definitions of Africanness and Blackness that rely on the exclusion of queer subjects. By drawing on historical, theoretical and visual texts, we will examine the debates concerning sexuality, citizenship and human rights on the African continent and the diaspora as well as their relationship to global issues around sexual citizenship and human rights. By focusing on the lived experiences of LGBTQ subjects in the African diaspora, we will interrogate the contested relationship between sexuality and politics. This reading-intensive, interdisciplinary course will familiarize students with the debates and issues of Queer African Studies, Black Queer Studies, and Black and African Feminist Thought.

**L77 WGSS 487A Discourses on Gender in 19th- and 20th-Century Spain**

This course focuses on discourses on gender, from the late 19th century to the present in the context of feminism in Spain. We explore the social, political and cultural role of Spanish women (writers) within their specific historical contexts, with a special attention to their struggle to construct a new female subjectivity through their writings. To this end, their narrative fiction (novels, short stories) are read in conjunction with nonfiction writings (essays, journalism, etc.). Authors studied include 19th-century

proto-feminists such as Emilia Pardo Bazán and Concepción Arenal; early 20th-century writers such as Carmen de Burgos, Margarita Nelken, and other female activists of the Republican period; and women writers of the post-War and post-Franco eras. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduate students. In Spanish.

**L77 WGSS 4993 Advanced Seminar: Women and Religion in Medieval Europe**

This course explores the religious experience of women in medieval Europe and attempts a gendered analysis of the Christian Middle Ages. In it, we will examine the religious experience of women in a variety of settings — from household to convent. In particular, we will try to understand how and why women came to assume public roles of unprecedented prominence in European religious culture between the 12th century and the 16th, even though the institutional church barred them from the priesthood and religious precepts remained a principal source of the ideology of female inferiority.

**L77 WGSS 49MB Advanced Seminar: Women and Gender in Modern Caribbean History**

This course will highlight women in the "making" of Caribbean history, and it will consider how "men" and "women" were made in the English-speaking Caribbean from emancipation (1838) to the present. We will explore women and gender issues within the context of significant political shifts including the transition from slavery to wage and indentured labor, the labor rebellions of the 1930s, the rise of labor unions and political parties, anti-colonial activism, decolonization and nationalism. The course will also situate the Caribbean within an international context, paying attention to migration, black internationalism and the Third World movement.

## Writing

The English department offers a full range of courses in the writing of poetry, fiction, drama and various forms of nonfiction, as well as advanced courses in expository writing.

An English major with a special interest in writing may complete a major in English literature with a concentration in creative writing. Alternatively, a student completing the regular English major may count toward this major up to 9 upper-division units of classes designated Writing toward the English major.

The department also offers a minor in writing, which can be combined with any major, including the English major. In this latter case, students are advised to take English and American literature courses (designated L14 E Lit) exclusively for the English major and Writing courses (designated L13 Writing) exclusively for the writing minor.

Except where noted, students are expected to receive a grade of C or better in each course.

**Website:** <http://english.artsci.wustl.edu>

## Faculty

For a list of affiliated faculty, please visit the Department of English faculty (p. 401) page.

## Majors

While the English department does not offer a writing major, they do offer the option of completing an English major with a creative writing concentration. To complete the major, students must take five creative writing courses, including at least three upper-division courses. Students will specialize in one particular genre — poetry, fiction or creative nonfiction — ultimately taking a three-course sequence in that genre (200-, 300- and 400-level) while taking at least one course outside this genre. The concentration will not change the requirements of the English major and thus requires 6 additional credit hours compared to a regular English major.

Students interested in majoring in English literature with a concentration in creative writing should visit the English (p. 402) page of this *Bulletin* for additional information.

## Minors

### The Minor in Writing

The writing minor is fulfilled by completing 15 units of Writing courses, no more than 6 units of which can be taken at the 200 level. At least one of the five courses elected must be Writing 311 Exposition or Writing 312 Argumentation.

With department approval, up to 6 units of journalism courses in writing or editing offered in University College can be counted toward the minor. An off-campus internship (Writing 298 Journalism: Communications Internship) oriented toward writing may also be counted toward the minor. Regardless of level, at least 9 units counted toward the minor must be completed in regular courses home-based in Writing.

Students who wish to take a writing minor in addition to an English major are advised to take English and American

literature courses (L14 E Lit) exclusively for the major and Writing courses (L13) exclusively for the minor. (Please note: 100-level L13 classes do not normally count toward the writing minor.) Students who wish to combine writing with their English major are encouraged to consider an English major with a concentration in creative writing (p. 402).

## Courses

Courses listed on this page include L13 Writing (p. 881) and L59 CWP (p. 885) (Writing Center). **Please note:** L59 classes and 100-level L13 classes do not normally count toward the writing minor.

### L13 Writing 103 What is Justice?

This class seeks to develop the advanced reading, writing and research skills that students need in a university setting. It uses classical texts of the western tradition to investigate the question of justice and to develop arguable claims through the careful analysis of evidence.

Credit 3 units. A&S IQ: HUM EN: H

---

### L13 Writing 203 The Sentence in English

Though formal knowledge of English grammar is not always necessary for effective writing, learning it can help students understand how sentences are put together, and it can allow them to develop their own writing using a new set of skills. The Reed-Kellogg system of diagramming is a method of learning grammar by creating "pictures," or maps, of sentences. These pictures show the logical relations between words, phrases and clauses, and they illustrate the choices writers are making as they craft individual sentences. Using a recent textbook by Eugene Moutoux, we learn to diagram sentences both famous and ordinary, both contemporary and of historical interest. Our aims are (1) to learn both the "rules" and the peculiarities of English grammar, (2) to understand how the structure of a sentence can influence its meaning, and (3) to use this knowledge productively in crafting and revising our own prose. By the end of the course, students should be able to diagram just about any sentence in English, whatever the genre or time period, including their own. Extensive practice in writing and revising sentences gives students a consciousness of how grammar and syntax influence the meaning and effectiveness of their own writing.

### L13 Writing 205 Writing the Visual World

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA EN: H

---

### L13 Writing 211 Writing 2

This course invites students to pursue a writing project that centers on their own intellectual interests and that complicates their approaches to researched, creative and analytical work.

Consult section description for details about specific class emphases. Limit: 12 students. Prerequisite: CWP 100 College Writing 1.

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

### L13 Writing 212 Rhetoric and Power

The study of rhetoric, one of the original seven liberal arts, is perhaps more relevant today, in a world where diverse opinions reverberate 24/7 from television and the internet, than in ancient times when rhetors invented arguments to help people choose the best course of action when they disagreed about important political, religious, or social issues. How do we make our voices heard? How can we invent and present compelling written discourse? This course introduces students to common rhetorical principles and to the disciplinary history of rhetoric and compositional studies. Assignments in this class include rhetorical exercise in invention and craft, imitations, and varied compositions, ranging from the personal to critical, from the biographical to argumentative. We examine rhetorical principles (audience, context, kairos, exigency, ethos, pathos, logos, and so forth) that are employed, for example, not only in literary analysis but in law, politics, education and science. We aim for a mastery of craft and a refinement of thought.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

### L13 Writing 213 The Long Essay

This course is designed for skilled writers who want to bring more complexity and depth to their style and content. Emphasis is on the innovation that can occur when we give sustained interest to our subjects in a long work. The class is particularly well-suited to students who wish to produce extended works of creative nonfiction, honors theses, or artist statements.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

---

### L13 Writing 220 Creative Nonfiction Writing 1

A course designed to introduce students to the fundamental craft elements involved in writing creative nonfiction. While the course covers the major forms within the genre of creative nonfiction, including literary journalism, biography, profiles, nature writing and travel writing, special emphasis is given to personal essay and memoir. Prerequisite: CWP 100 College Writing 1.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

### L13 Writing 221 Fiction Writing 1

A course designed to introduce students to the fundamental craft elements involved in writing fiction. Prerequisite: CWP 100 College Writing 1.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

---

### L13 Writing 222 Poetry Writing 1

A course designed to introduce students to the fundamental craft elements involved in writing poetry. Prerequisite: Writing 1.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

---

### L13 Writing 224 Playwriting

An introductory course in playwriting. Limited to 8 students. Prerequisites: CWP 100 College Writing 1 and permission of the instructor.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

### L13 Writing 298 Journalism: Communications Internship

For students undertaking projects in newspaper or magazine journalism, in radio or television, or in business, government, foundations and the arts. The student must secure permission of the chair of the Undergraduate Committee, file a description of their project with the department and, at the end of the semester, submit a significant portfolio of writing together with an evaluation by the internship supervisor. Up to 3 units acceptable toward the writing minor, but cannot be counted toward the English major or literature minor. Prerequisite: CWP 100 College Writing 1. Must be taken credit/no credit.

Credit variable, maximum 3 units.

---

### L13 Writing 307 Writing and Medicine

Credit 3 units. A&S IQ: HUM, WI EN: H

---

### L13 Writing 309 Writing the Natural World

For students interested in the environment and natural sciences. This course brings together essays from a wide range of communities including biology, physics, medicine, environmental studies, creative writing and more. Readings and assignments are intended to enhance students' understanding of the relationship between writing and their experience/knowledge of the natural world. Major assignments allow students to follow, explore and write about their own unique interest in a related subject, and include a personal essay, an expository essay, and a researched argumentative essay, as well as peer review workshops, oral presentations, and revision. Students record and explore their own experiences of nature in short creative assignments that prepare them for the major papers. Prerequisites: CWP 100 College Writing 1 and junior standing. Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI Arch: HUM Art: HUM BU: SCI EN: H

---

### L13 Writing 310 Guided Research in Composition: Theory and Pedagogy of One-to-One Writing Instruction

This course teaches theoretical and practical approaches to the tutoring of writing, specifically focusing on tutoring writing within the context of undergraduate courses. Students learn collaborative methods of tutoring writing, explore different approaches to writing comments on student work in various content areas, and examine the connections between writing and thinking. Students analyze their own writing processes and learn how to help others through the writing and revision process. Readings and discussions focus on writing theory and pedagogy, and students practice one-to-one methods in mock conferences and with sample essays. Assignments: two short essays, a longer research paper and presentation, and a journal.

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

### L13 Writing 311 Exposition

This advanced writing course considers style in relationship to audience and purpose, asking the writer to engage more consciously with writing conventions, and to explore strategies appropriate to various writing situations. Prerequisites: CWP 100

College Writing 1 and junior standing. A note for students and advisers: when registering refer to WebSTAC for updated information on section times and available seats.

Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM

---

**L13 Writing 3111 Exposition (Visual)**

This advanced writing course emphasizes writing and visual analysis, asking students to examine important forms of visual media to develop a sophisticated sense of the strategies, techniques and the rhetoric of visual representation.

Prerequisites: CWP 100 College Writing 1 and junior standing.  
Credit 3 units. A&S: LA

---

**L13 Writing 3112 Exposition: Writing and Medicine**

For students who have a particular interest in health, illness and medical care. Exposition is a course that considers style in relationship to audience and purpose, asking the writer to engage more consciously with writing conventions, and to explore strategies appropriate to various writing situations, from the more experimental and performative to the more formal and scholarly. The course involves frequent practice in analyzing and critiquing, with special attention to techniques of organization, argument and emphasis. Students in this special section of Exposition read essays, journalism and personal narratives about the experience of physicians and patients in the modern health care system. Students use expository writing to think critically and personally about their own experiences with illness and disease. Pre-medical students might use this opportunity to write and think about the anticipated rewards and challenges of the profession they hope to join.

Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

---

**L13 Writing 312 Argumentation**

This advanced writing course examines the strategies of argumentation, exploring such elements of argument as the enthymeme, the three appeals, claim types and fallacies.

Prerequisites: CWP 100 College Writing 1 and junior standing. A note for students and advisers: when registering refer to WebSTAC for updated information on section times and available seats.

Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM

---

**L13 Writing 314 Topics in Composition**

An advanced writing course focusing on selected topics related to writing. Topics chosen by department/instructor. Consult section description for details about specific class emphases. (Note: In some cases, this course may be cross-listed with other programs/departments and may satisfy the writing-intensive requirement.) Prerequisites: CWP 100 College Writing 1 and junior standing.

Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI Arch: HUM Art: HUM EN: H

---

**L13 Writing 320 Creative Nonfiction Writing 2**

This course is aimed at undergraduates who have taken Nonfiction Writing 1 and wish to pursue both their development as writers and the study of craft in the context of a more rigorous workshop. Prerequisites: CWP 100 College Writing 1, Writing 220 Creative Nonfiction Writing 1.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

**L13 Writing 321 Fiction Writing 2**

This course is aimed at undergraduates who have taken Fiction Writing 1 and wish to pursue both their development as writers and the study of craft in the context of a more rigorous workshop.

Prerequisites: Writing 220, Writing 221.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

---

**L13 Writing 321W Mellon Undergraduate Fellows Seminar**

Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI EN: H

---

**L13 Writing 322 Poetry Writing 2**

This course is aimed at undergraduates who have taken Poetry Writing 1 and wish to pursue both their development as poets and the study of craft in the context of a more rigorous workshop.

Prerequisites: Writing 221, Writing 222.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

---

**L13 Writing 322W Kling Undergraduate Honors Fellowship Seminar**

Credit 3 units. A&S: LA, WI A&S IQ: HUM, WI EN: H

---

**L13 Writing 323 Fiction Writing: The Short-Short, Sudden Fiction, and Microfiction**

This course is aimed at undergraduates who have taken Fiction Writing 1 or Poetry Writing 1 and wish to further explore the craft of fiction through the medium of the short-short story. The course focuses on reading, writing and thinking critically about short-shorts.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

**L13 Writing 324 Fiction Writing: Coming of Age in the Short Story**

A fiction writing course that explores coming of age themes.

Credit 3 units. A&S: LA A&S IQ: HUM BU: HUM EN: H

---

**L13 Writing 325 Poetry Writing: The Poetry of Travel**

This course is offered for students who have taken Poetry 1 and are interested in further developing their craft.

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

**L13 Writing 326 Fiction Writing: Stories in the Suburbs**

In the 1950s, the suburbs were still somewhat of a novelty in American culture — most people still lived in cities and small towns, or on the farm. Back then, Levittowns and the like were embraced with either gee-whiz optimism, or seen as sinister dystopias where youth, ideals and romance went to fester and die. But now that the American mainstream is stucco McMansions, strip malls and big box stores; now that the suburbs have become more ethnically diverse; now that literature is being generated from these places instead of just about them, how have stories set in the 'burbs changed? We read short stories written from the 1950s until the present day exploring this particular setting, and, through a series of exercises, workshops and our own short fiction, we explore the

milieu as writers (whether we happen to be from the suburbs or not), always on the lookout for the unexpected in these familiar places.

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

**L13 Writing 327 Creative Nonfiction: Personal Essay and Memoir**

This is an intermediate course in writing creative nonfiction, with a concentration on personal essay and memoir. Prerequisite: Writing 220 Creative Nonfiction Writing 1.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

**L13 Writing 330 Fiction Writing: Fiction and Obsession**

Desire is at the heart of fiction, from the forces that drive the decisions characters make to the ways stories work on us as readers.

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

**L13 Writing 331 Fiction Writing: Historical Fiction**

A literature/creative writing hybrid course, students read a number of contemporary historical fictions and then write one of their own. We consider the ways in which these fictions inhabit, depart from and reflect upon the historiography and history they're built from — upon the indeterminacy of the historical record, and the limits of its reach — but we also discuss fiction's responsibility to historical "facts" and documents, and the relevance of fictions among nonfictions in approaching an event or figure. Prerequisites: CWP 100 College Writing 1, Writing 221 Fiction 1.

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

**L13 Writing 352 Introduction to Screenwriting**

Writers explore the various elements, structures and styles used in crafting a motion picture screenplay. They experience this process as they conceive, develop and execute the first act of a feature-length script. Writers create a screenplay story, present an outline for class discussion and analysis, then craft Act One. Writers are encouraged to consult with the instructor at various stages: concept, outline, character and scene development, and dialogue execution. While the students fashion their screenwriting independently, the class also explores the general elements of theme, genre and voice. A more specific examination of mechanics, the nuts and bolts of story construction, plotting, pacing, etc., follows to support the ongoing writing process. In-class exercises aid the writer in sharpening skills and discovering new approaches to form and content. Writers' work is shared and discussed regularly in class. Screening of film scenes and sequences provides students with concrete examples of how dramatic screenwriting evolves once it leaves the writer's hands.

Same as L53 Film 352

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

---

**L13 Writing 373 Cultural Journalism**

In the Internet Age, journalism has migrated from traditional, or "legacy" institutions (book publishers, film & television production companies, newspapers) to digital versions of the same thing; however, the craft remains tied to its legacy models. The migration online has endangered certain ecologies of journalistic practice — in particular, arts journalism, especially criticism, the long-form investigative essay, and foreign reporting. The

first two of these three fit under what we describe as cultural journalism, and our purpose in this class is to practice what have been cultural journalism's forms, at the same time as we inquire into the modes and genres that are its future.

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM

---

**L13 Writing 375 Political Writing**

Defined most simply, politics is that which pertains to the "affairs of the polis," one's community. In its real-life context, writing always interacts with a community in some way, engaging a defined audience to produce an intended effect. In this sense, writing always touches the affairs of a polis, and thus, writing is inherently political, regardless of whether the writer considers this during composition. In this class, we will focus on explicitly political writing by writers who are not politicians, that is to say, sanctioned experts in the affairs of the polis. Foregoing public policy memoranda and economic analyses, we will look at how journalists, grassroots organizers, and creative writers have consciously written to intervene in the affairs of their communities despite their outsider status. Using techniques of rhetorical analysis and logical structure, we will examine how these writers crafted works that inspire and move audiences through the conventions of several genres: essay, polemic, journalism and satire.

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM EN: H

---

**L13 Writing 401 Writing for Children and Young Adults**

In this course we examine various genres of writing for young people: poetry, fiction and nonfiction.

Credit 3 units. A&S: LA

---

**L13 Writing 403 Dramaturgy Workshop**

A laboratory course that investigates dramaturgy from four vantage points: New Play Dramaturgy, Institutional Dramaturgy, Dramaturgy of Classics, and Dramaturgical Approaches to Nontraditional and Devised Theater. This is a "hands-on" course where student dramaturgs not only pursue the study of dramaturgy, but work actively and collaboratively with playwrights, actors and each other. Prerequisite: Drama 343. Same as L15 Drama 403

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM

---

**L13 Writing 4131 Topics in Composition**

Composition topics course — offerings vary from semester to semester.

---

**L13 Writing 420 Advanced Nonfiction**

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

**L13 Writing 421 Advanced Fiction Writing**

For qualified students who wish to continue their creative writing and reading through immersion in an intensive fiction workshop. Students wishing to enroll must not only register but also submit a 15-page (double-spaced) fiction sample. The sample must include a cover page with: student's name, the semester they took Fiction Writing 2, and the name of the Fiction Writing 2 instructor. Submit samples to the English Department mailbox of the L13 Writing 421 instructor no later than April 20. No one is officially enrolled in this class until contacted by the instructor. Prerequisites: CWP 100 College Writing 1, Writing 221 Fiction Writing 1, Writing 321 Fiction Writing 2.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

### L13 Writing 422 Advanced Poetry Writing

For qualified students who wish to continue their creative writing and reading through immersion in an intensive poetry workshop. Students wishing to enroll must not only register but also submit eight poems. The sample must include a cover page with: student's name, the semester he or she took Poetry Writing 2, and the name of the Poetry Writing 2 instructor. Submit samples to the English Department mailbox of the L13 Writing 421 instructor no later than April 20. No one is officially enrolled in this class until contacted by the instructor. Prerequisites: CWP 100 College Writing 1, Writing 222 Poetry Writing 1, Writing 322 Poetry Writing 2.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

### L13 Writing 423 Proseminar in Writing: Nonfiction Prose

For students qualified to pursue their own projects in nonfiction prose; criticism by other members of the class and by the instructor. Limit: 12 students. Prerequisite: permission of instructor upon submission of writing samples.

Credit 3 units. A&S: LA

---

### L13 Writing 424 Poetry Tutorial

These credits are available to students who have completed Writing 222 Poetry I and Writing 322 Poetry II. This is an opportunity for students who have already completed Writing 422 Advanced Poetry, or who are not able to take Advanced Poetry because of scheduling conflicts, to meet individually with the instructor to develop a portfolio of poems. During weekly meetings students explore various writing processes and revision techniques. There are directed readings and discussions of selected topics related to contemporary poetry and poetics. Credits may be taken concurrently with Advanced Poetry. Permission of the instructor is required.

Credit 3 units. A&S: LA A&S IQ: HUM EN: H

---

### L13 Writing 431 Craft of Fiction

A literature/creative writing hybrid course; students read a number of contemporary historical fictions — an increasingly important and innovative genre — and then write one of their own.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

### L13 Writing 432 The Craft of Poetry

An investigation into the art and craft of poetry, in order to consider the choices a poet makes in the process of composing and revising. The students are asked to complete many poetry writing exercises, as well as the writing of critical papers, in their investigation of poetic forms and modes from many historical periods. (This course is highly recommended for those who have completed or are taking the 300-level creative writing courses and to students in The Writing Program.)

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM

---

### L13 Writing 440 Critic as Writer

Credit 3 units. A&S IQ: HUM EN: H

---

### L13 Writing 4521 Advanced Screenwriting

This course is intended for students who have already taken Film 352 Introduction to Screenwriting. Building on past writing experiences, students explore the demands of writing feature-length screenplays, adaptations and experimental forms. Particular attention is paid to the task of rewriting. Same as L53 Film 452

Credit 3 units. A&S: LA A&S IQ: HUM Art: HUM EN: H

---

### L13 Writing 4731 Advanced Playwriting

This course explores the tendencies and relationship between each individual student writer and the page. Exercises dispel any lingering doctrine that presupposes a certain style of writing. A large part of the class centers around collaborations. The writers write scenes as a final project for an acting class, and also work with two professional actors in an extended writing project that culminates in a script-in-hand presentation. The informal moments between collaborations look at the process beyond the first draft — i.e., the playground of language, nonverbal options, and the maintaining of "the work" through rewrites, readings, workshops and productions. Prerequisite: Drama 227 Introduction to Playwriting.

Same as L15 Drama 473

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM

---

## Writing Center Courses

Visit online course listings to view semester offerings for L59 CWP (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L59&crslvl=1:4>).

---

### L59 CWP 100 College Writing 1

This course teaches writing as a way of thinking and learning. Throughout the semester, students explore writing as a creative and intellectual process. They learn how to brainstorm, explore and structure ideas on a page; share their writing and learn how to give and take constructive criticism; and learn how to revise their work, both for issues related to the paper's larger idea and for issues related to grammar and style. By regularly working their way through the writing process, students develop the habits and skills that make advanced study possible: paying close attention to the words and ideas of others; forming and responding to arguments of others; and refining a lucid style of prose that meets the expectations of the audience and occasion. This course is taught in small sections of 12 students or fewer.

Credit 3 units.

---

### L59 CWP 1001 Fundamentals of Academic Writing

A preparatory course required of some students before they take CWP 100 College Writing 1 (placement to be determined by the department). Particular attention is paid to reading comprehension, critical thinking, organization of ideas and grammar. In some cases, students may be required to enroll in a one-credit tutorial along with this course.

Credit 3 units. A&S: LA A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

### L59 CWP 200 Writing Tutorial

A tutorial in writing; may be taken for credit in one of two cases: (1) Students may be required to enroll in the tutorial for concentrated practice in writing fundamentals under the guidance of a tutor in addition to taking CWP 100 College Writing

1. In these cases, satisfying the first-year writing requirement means receiving a satisfactory grade in CWP 100 and receiving a passing grade in the tutorial. Students enroll in CWP 200 for 1 credit hour. Tutorials taken concurrently with CWP 100 must be taken pass/fail. (2) Students may be required to take the tutorial for 3 credit hours after taking CWP 100 in order to satisfy the first-year writing requirement. In this case, the tutorial is taken for credit. Direct all questions to Writing 1 office: 314-935-4899. Credit variable, maximum 3 units.

---

#### L59 CWP 201 Writing Workshop

An intensive workshop focusing on selected topics related to writing. Topics chosen by the department/instructor. Must be taken for credit. Consult course and section descriptions in online course listings for details about workshop emphases. Credit 1 unit. A&S: LA A&S IQ: HUM EN: H

---

## Degree Requirements

The faculty of the College of Arts & Sciences believes each student should strive toward breadth and depth of study, as represented in the formal requirements. The faculty also believes that primary responsibility for selection of an academic program rests with the student, in consultation with academic advisers. This freedom of choice carries with it a corresponding responsibility for the consequence of such choices, and students are therefore expected to familiarize themselves with and meet the requirements detailed below.

## Planning

The degree requirements for the Bachelor of Arts degree in Arts & Sciences are designed to provide students with strong and sustained training in writing and numerical applications; to enable students to construct a coherent program in which courses reinforce each other in challenging and productive ways; and to take advantage of two distinctive features of the academic environment at Washington University — the strong tradition of cooperation among faculty working in different disciplines and the fact that teaching and learning at Washington University draw energies from an environment of vigorous and creative research.

The College of Arts & Sciences regards active student engagement in curricular planning as central to successful student learning. Each semester, students' advisers will help them project a personalized academic plan that responds to what they have already learned — about the university, about the structure and aims of intellectual disciplines, and about themselves.

*By the end of the sophomore year, students must have declared a major and constructed and nominated a preliminary online curricular plan that will satisfy all the following General Education requirements:*

## Basic Skills

**A. College Writing I (3 units):** Students demonstrate proficiency in reading and writing English and begin to develop mature skills in framing and revising arguments by completing course work determined by The College Writing Program with grades of C- or better. This requirement should be completed in the freshman year.

**B. Applied Numeracy (3 units):** Students develop their skills in numerical applications by completing one of an approved list of "AN" courses with a grade of C- or better. Students often find that there is an AN course in their major field of interest. This course may also satisfy other degree requirements.

**C. Social Contrasts (3 units):** *For students matriculating 2017 and beyond.* Students take one course whose primary emphasis is on the formation, maintenance or impact of social categories such as race, ethnicity, gender, class, sexual orientation, religious affiliation, ability status or other categories. This course, which may be taken credit/no credit, must be selected from an approved list of "SC" courses; it may also satisfy other requirements.

**D. Writing-Intensive Course (3 units):** To consolidate their written communication skills, students must take a writing-intensive course, preferably in their major field. The course, selected from an approved list of "WI" courses, must be completed with a C- or better; it may also satisfy other requirements.

## Area Requirements

**A.** Students must complete course work in each of the following academic areas:

1. Humanities (HUM): three courses totaling at least 9 units
2. Natural Sciences and Mathematics (NSM): three courses totaling at least 9 units
3. Social Sciences (SSC): three courses totaling at least 9 units
4. Linguistic and Cultural Diversity (LCD): in this area, students take either three sequenced courses of at least 3 units each in a single foreign language, or at least four courses designated "LCD" of at least 3 units each

Up to 12 units of the area requirements may be taken credit/no credit.

**B.** To achieve depth and coherence, students must complete three integrations in at least two of the four areas of study (HUM, NSM, SSC, LCD). There are four types of integrations:

- Majors, second majors and minors
- Focus and other multisequence first-year programs
- Designated study away programs
- Integrated inquiries

For a detailed list of Integrations, visit the Course Listings website (<https://acadinfo.wustl.edu/CourseListings/IQ/Integrations.aspx>).

## The Major

Students must complete a major of no fewer than 18 units of courses numbered 300 or above with a grade of C- or better. Degree completion is based on the primary major of record. At least half of the units for the major must be completed in residence. Students are strongly encouraged to complete a capstone experience in their major as a way of culminating their undergraduate education.

For more details regarding majors — including information on second majors, special majors, and majors across schools — visit the main Arts & Sciences (p. 136) section of this *Bulletin*. For more information regarding specific departments' major requirements, visit the Majors pages (p. 893) of this *Bulletin*.

## Additional Requirements

**A.** Students must complete 120 units with at least 30 units in advanced courses (numbered 300-level and above). The 30 units in advanced courses may include the number of advanced units required for the major.

**B.** Students must have an overall GPA of at least 2.0.

**C.** Students must earn the final 30 units toward the degree at Washington University, enrolled in the College of Arts & Sciences. Students pursuing 3-2 degrees should follow the requirements laid out by their master's programs.

**D.** Students must be recommended by the College of Arts & Sciences to the Board of Trustees.

## Regulations

**A.** No more than 24 units may be earned using the credit/no credit option, and no more than 12 of the 24 credit/no credit units may be for area distribution requirements.

**B.** No more than 15 units of pre-matriculation credit may be counted toward the degree. Pre-matriculation sources include Advanced Placement (AP), International Baccalaureate (IB), British Advanced (A) Levels, and course credit earned by proficiency (i.e., back credit). For the class matriculating in the fall of 2016 and later, pre-matriculation sources also include college courses taken after the sophomore year in high school but not applied toward the high school diploma; for the classes entering prior to fall 2016, such courses may be included only if they were taken after the junior year in high school. Credits earned via the High School Summer Scholars or High School College Access programs through University College are considered to be pre-matriculation units and are subject to the same regulation.

**C.** Students may not earn more than 12 units toward the bachelor's degree in group and/or individual performance

courses. Exceptions may be made for students majoring in departments requiring a large number of performance courses for the major, such as dance, drama and music.

**D.** No more than 12 units of work may be taken outside the College of Arts & Sciences during the first and sophomore years. Thereafter, additional work may be taken with the approval of the adviser, provided that the student earns at least 90 units of credit in Arts & Sciences course work.

**E.** No more than 18 units of credit in independent study may be applied to the AB; no more than 6 units of independent study may be attempted in a single semester.

**F.** No more than 6 units of internship credit may be applied to the AB; no more than 3 units of internship credit may be attempted in a single semester.

**G.** A student may receive no more than a total of two majors and one minor or one major and two minors.

## Transfer Students

Transfer students matriculating in the academic year 2017-18 will follow the requirements of the Integrated Inquiry Curriculum, outlined above. Where appropriate, previous course work may be applied to the distribution requirements based on the following guidelines:

**A.** Transfer students who have not taken a college writing course at their prior school will take College Writing 1 in their first year at Washington University. Students who have taken such a course may be eligible to submit a writing portfolio to the College Writing Program for evaluation. The program director will review the portfolio to determine if the College Writing 1 requirement has been satisfied or if the student must complete additional writing course work.

**B.** The transfer advisers will evaluate a student's transcript on an individual basis. Generally speaking, a student transferring after one year at another school may count the other institution's course work toward the college's area requirements; however, the three required integrations must be completed through courses taken in residence.

**C.** Transfer students must be enrolled for at least four consecutive full-time semesters to satisfy the residency requirement. They must complete a minimum number of units at Washington University and a minimum number of units in the College of Arts & Sciences, according to the following table. No more than 3 units per semester may be taken on a credit/no credit basis.

| Semester in Residence | A&S Units in Residence | Total WUSTL Units in Residence |
|-----------------------|------------------------|--------------------------------|
| 7 semesters           | 78 units               | 105 units                      |
| 6 semesters           | 69 units               | 90 units                       |
| 5 semesters           | 57 units               | 75 units                       |

4 semesters      45 units      60 units

## Finalization of the Transcript

Conferral of the degree finalizes the student's academic record at Washington University. No changes can be made to the student's academic record after May 31 for a spring degree, October 31 for a summer degree, or January 31 for a fall degree. All students are strongly advised to obtain a copy of their final transcript, available for order from the Office of the University Registrar via WebSTAC (<http://webstac.wustl.edu>).

## Academic Honors & Awards

**Dean's List:** At the end of each semester, in recognition of exceptional scholarship, the college compiles a list of those students whose work has been particularly worthy of commendation. Students will be cited on the Dean's List if they complete a minimum of 14 units of graded work while achieving a grade point average of 3.6 for the semester. No incomplete or "N" grades may be outstanding as part of the semester record. All work must be completed and grades posted by the first day of the following semester in order to be considered for Dean's List. For spring semester courses, all work must be completed by the beginning of Summer Session II (typically mid-June).

**College Honors:** Upon assessment by the College Office, the AB with College Honors will be awarded to any student who achieves collegewide academic excellence as measured by a cumulative grade point average of 3.6 or better throughout eight semesters and who does not receive Latin Honors.

**Latin Honors:** To be eligible for Latin Honors, the student must have maintained a 3.65 grade point average through the sixth semester and must be accepted for candidacy by the relevant department or program. Latin Honors candidates must enroll in such courses as their department or program may require, satisfactorily complete a significant project appropriate to the nature of the discipline, and pass such written and/or oral examinations as the department or program may set. To earn such honors, candidates must also have maintained the minimum 3.65 grade point average through the final semester.

Upon certification by the department that the Honors program has been satisfactorily completed, the student may be awarded the AB cum laude, magna cum laude, or summa cum laude according to the following proportions: the top 15 percent in overall grade point average of the full cohort of Latin Honors candidates who complete the necessary requirements of their major departments will graduate summa cum laude; the next 35 percent magna cum laude; the next 50 percent cum laude.

To be eligible for Latin Honors, transfer students must have earned a minimum of 48 letter-graded Washington University units prior to the final semester. Grades earned at other institutions do not figure in the calculation of minimum averages required for eligibility for Latin Honors.

**Phi Beta Kappa:** For more than 200 years, election to Phi Beta Kappa has been a distinctive recognition of intellectual accomplishment in the liberal arts and sciences. The Washington University chapter, Beta of Missouri, established in 1913, strives to enhance worthy intellectual endeavors and to recognize individual achievement.

Candidates for Phi Beta Kappa should have demonstrated both superior scholarship and breadth and depth of interest in the liberal arts. Study of a foreign language and of mathematics, while not required, strongly enhances candidacy. Extensive study in pre-professional fields detracts from candidacy.

Students do not apply for Phi Beta Kappa; rather, each year the Washington University chapter elects students into membership from the College of Arts & Sciences. The chapter also gives the annual Burton M. Wheeler Book Award for distinguished achievement in the first year. Selection committees are composed of Washington University faculty who are members of Phi Beta Kappa.

## Departmental Prizes and Awards

Several departments recognize the superior achievement of graduating seniors with election to the honor societies of their major fields. These honor societies include Sigma Gamma Epsilon for earth and planetary sciences students, Omicron Delta Epsilon for economics students, Delta Phi Alpha for German students, Phi Alpha Theta for history students, Sigma Iota Rho for international and area studies students, Pi Mu Epsilon for mathematics students, Mu Phi Epsilon for music students, Pi Sigma Alpha for political science students, and Psi Chi for psychological & brain sciences students.

Departments may recognize work a student has accomplished within the major by awarding the major with highest distinction, high distinction, or distinction.

In a number of academic fields, special recognition is given to students whose accomplishments have been exceptionally noteworthy. The majority of such awards carry modest monetary prizes and include the following, listed alphabetically by department:

- Best essay on any subject related to African-American culture and life in the United States (African and African-American Studies)
- Henry Hampton Prize for Best Civil Rights Essay
- James Baldwin Essay Prize for Best Essay on African-American Culture and Life in the U.S.
- Julius Nyerere Essay Prize for Best Essay on African Culture and Life
- Louis Lomax Journalism Prize in African and African-American Studies
- Ralph Bunche Prize for Best Political Science Essay about Africans or African Americans

- Sylvia Wynter Essay Prize for Best Essay on African Culture and Life Outside of the U.S.
- Lynne Cooper Harvey Undergraduate Writing Prize in American Culture Studies
- John W. Bennett Prize to the Outstanding Graduating Senior in Anthropology
- Mark S. Weil Prize for Distinction in Art History and Museum Practice
- Murphy Family Prize for Outstanding Honors Thesis in Art History and Archaeology
- Yale Book Prize for Distinction in Art History and Archaeology
- Harrison D. Stalker Prize in Biology
- Marian Smith Spector Prize for Outstanding Graduate in Biology
- John C. Snowden Prize for Outstanding Senior in Chemistry
- The Hemholtz Award in Chemistry
- The Lipkin Award in Chemistry
- The Wahl Award in Chemistry
- The Weissman Award in Chemistry
- Stanley Spector Memorial Award for Outstanding Paper in East Asian Languages and Cultures
- Ansehl Prize for Excellence in Chinese
- Yukiko Takahashi Prize for Excellence in Japanese
- Carl Conrad Prize for Excellence in Classical Studies
- Eugene Tavenner Prize for Excellence in the Study of Classics
- Edward Weltin Award for Excellence in the Study of Ancient History
- Liselotte Dieckmann Prize for Excellence in Comparative Literature
- William H. Matheson Prize for Excellence in Comparative Literature
- A.E. Hotchner Playwriting Competition Award
- Annelise Mertz Memorial Award for Outstanding Achievement in Modern Dance
- Ian D.W. Cramer Prize for Outstanding Achievement in Dance
- John J. Jutkowitz Memorial Prize for Outstanding Contributions in Performing Arts
- Margaret Ewing Memorial Prize for Outstanding Achievement in Acting
- Stephen H. Duncan Prize for Outstanding Achievement in Design and Technical Theatre
- Courtney Werner Memorial Prize for Outstanding Academic Achievement in Earth and Planetary Sciences
- Ernest L. Ohle Jr. Award for Outstanding Potential in Earth and Planetary Sciences
- Margaret E. Bewig Memorial Field Camp Award for Academic Merit in Earth and Planetary Sciences
- Adam Smith Prize for Excellence in Economics
- Hyman P. Minsky Prize for Excellence in Economics
- Olin Prize for Excellence in Economics
- Howard Nemerov Award Prize in Poetry
- James Merrill Prize for Poetry
- Julia Viola McNeely Prize for Poetry
- Norma Lowry Memorial Prize in Poetry
- Roger Conant Hatch Prize for Lyric Poetry
- F. Ward Denys Prize for Critical Prose
- Herbert E. Metz Prize for Literary Criticism
- Leanna Boysko Prize for Best Essay in English Literature
- Admussen Prize for Outstanding Senior Honors Thesis in French
- Cecilia L. Hospes Scholarship for Study Abroad in Germany
- David Bronsen Prize for Excellence in German Studies
- Raoul Wallenberg Prize for Excellence in Swedish Studies
- J. Walter Goldstein Prize for Best Senior Thesis in History
- Rowland T. Berthoff Award in History
- Shirley McDonald Wallace Prize in History
- Madeleine Albright Scholarship for Special Scholarly Achievement in International and Area Studies
- Outstanding Senior Honors Thesis in International and Area Studies
- The International and Area Studies Portfolio Prize
- Stone Prize for Excellence in International Studies Research
- Paul and Silvia Rava Prize for Excellence in Italian Studies
- David and Sarah Visenberg Prize for Outstanding Thesis in Jewish Studies
- Steven S. Schwarzschild Prize for Overall Excellence in Jewish Studies
- Martin Silverstein Award for Outstanding Student in Mathematics/Statistics and Probability
- Putnam Examination Prize for Mathematics
- Ross Middlemiss Prize for Outstanding Mathematics Major
- Antoinette Frances Dames Award for Productive Scholarship in Music
- Clare M. Westmont Award in Music
- The Friends of Music Award
- Lewis B. Hilton Award in Music
- Helen Stenner Memorial Essay Prize in Philosophy
- Nishi Luthra Prize for Outstanding Graduate in Philosophy
- Greg Delos Prize for Undergraduate Research in Physics
- Robert N. Varney Prize for Excellence in Introductory Physics
- Antoinette Frances Dames Prizes for Lower-Division Paper in Political Science

- Antoinette Frances Dames Prizes for Upper-Division Paper in Political Science
- Antoinette Frances Dames Prizes for Best Senior Honors Thesis in Political Science
- Arnold J. Lien Prize for Outstanding Graduate in Political Science
- Grossman-Alexander Prize for Outstanding Graduate in American Politics
- Robert H. Salisbury Prize for Initiative, Leadership, and Service in Political Science
- Todd Lewis Friedman Memorial Prize for Outstanding Work in Comparative or International Politics
- William Benton Parshall Prize for Outstanding Paper on Women in Politics
- Hyman Meltzer Memorial Award for Undergraduate Research in Psychology
- John A. Stern Award for Undergraduate Research in Psychology
- Louis G. Zelson Prize for Study Abroad in Spain
- Sherman Eoff Prize for Excellence in Spanish
- Helen Power Women, Gender, and Sexuality Studies Award for Scholarship and Service

## Academic Regulations

### Attendance

Successful education at the college level depends to a large extent on regular attendance at classes and laboratories. The College of Arts & Sciences has no fixed rules for "cuts" or "excused absences" but leaves to the judgment of each department or instructor the number of absences of any kind a student may have and still expect to pass a course. The faculty expects each instructor to give reasonable consideration to unavoidable absences and to the feasibility of making up missed work. The student is expected to explain to instructors the reasons for such absences and to discuss the possibility of completing missed assignments.

### Units and Grades

The grading system used by the College of Arts & Sciences assumes that evaluation is useful to effective learning and that grades provide an indicator of accomplishment to the student, to advisers and the College Office, to graduate and professional schools, and to employers to whom the student chooses to submit them. Grades are symbols of achievement in a particular endeavor and should not be confused either with achievement itself or with personal worth.

Grades are important, particularly for students with pre-professional interests, but the student whose concern for grades is primary may lose sight of the total educational process.

| Grade | Points per Unit                                 |
|-------|---|
| A+    | 4.0   |
| A     | 4.0   |
| A-    | 3.7   |
| B+    | 3.3   |
| B     | 3.0   |
| B-    | 2.7   |
| C+    | 2.3   |
| C     | 2.0   |
| C-    | 1.7   |
| D+    | 1.3   |
| D     | 1.0   |
| D-    | 0.7   |
| F     | 0.0   |
| CR    | Credit awarded, work not given finer evaluation |
| NCR   | No credit awarded due to unsatisfactory work    |
| I     | Course work incomplete                          |
| W     | Withdrawal                                      |
| R     | Repeat  |
| L     | Successful audit                                |
| Z     | Unsuccessful audit                              |
| N     | No grade submitted                              |
| S     | Satisfactory thesis work                        |
| U     | Unsatisfactory thesis work                      |

Grades earned in physical education courses are not included in calculating the student's GPA.

### Auditing a Course

Students may register for a specific course as an auditor, which entitles them to all the privileges of a regularly enrolled member of the class. Audit courses do not count toward the degree. Consult the instructor on the requirements of a successful audit, as unsatisfactory performance results in a grade of Z. A successful audit results in a grade of L.

### Incomplete Grades

If a student experiences medical or personal problems that make satisfactory completion of course work difficult or unlikely, they may request a grade of Incomplete (I) from one or more instructors. In such a situation, the student should take the following steps:

1. Meet with the instructor before the final examination or due date for the final paper to discuss the request.
2. If the instructor consents, agree on the work remaining to complete the course and on a date when it will be submitted.

If these steps are not followed, the instructor is under no obligation to award a grade of I. Failure to submit completed work by the last day of classes of the next full semester will

result in the I grade being changed automatically to a grade of F. For spring semester courses, this will be the last day of summer classes, typically mid-August.

By action of the faculty of the College of Arts & Sciences and the ArtSci Council, the college limits the number of accrued grades of Incomplete (I). The policy is intended to protect the student from building an overwhelming burden of unfulfilled course work. The regulation reads as follows: "Students who accrue three or more Incompletes will not be permitted to enroll for any subsequent semester until the number is reduced to two or fewer." Should students have too many Incompletes, they will be declared ineligible for subsequent semesters until they have complied with the regulation. Compliance is normally achieved by the posting of grades online, but it also may be achieved by a note from the professor(s) to the College Office confirming that the student has turned in all requisite assignments for the relevant class(es).

### Pass/Fail Option

To encourage students to enroll in courses they might not otherwise take, the faculty has established the credit/no credit option under which a student may register in courses and receive a grade of credit (CR) or no credit (NCR). In any semester, a full-time student may enroll in one course under the credit/no credit option. A maximum of 24 units earned under this option may be applied toward the AB degree. Students must designate which course is to be taken under the credit/no credit option each semester at the time of registration. No change into or out of the option may be made after the dates designated in the dates and deadlines calendar, published online in Course Listings (<https://courses.wustl.edu>) each semester.

No more than 12 of the 24 units allowed for the credit/no credit option may be applied to area distribution requirements.

It is the student's responsibility to discuss with the faculty member what constitutes a successful pass/credit in a particular course. Although the general pass mark is a C-, instructors have the discretion to set the pass mark higher in their individual courses.

The first-year writing course, the writing-intensive course, the applied numeracy course, and courses in the major and minor are excluded from the credit/no credit option. Pre-professional and prospective graduate students should also consider seriously the strong probability that professional schools may seek more definite grades than CR in courses that are required or strongly recommended for admission to professional or graduate study.

A few courses particularly designated by departments may require enrollment on a credit/no credit basis. When so required, students are permitted to elect an additional course to be taken credit/no credit but should consider carefully the consequences of that choice.

### Reading Days and Final Examination Period

When registering for classes at Washington University, students commit to all course requirements including the examination procedures chosen and announced by the course instructor. In selecting courses, students are advised to take note of all final exam information. Students anticipating conflicts in their final examination schedule should seek to resolve them with the relevant instructors before enrolling. Students should not register for courses that result in three or more final examinations on one day. If a student does so, the instructors are not obligated to offer an alternative exam.

Final exam days and times are subject to change. The most current final exam schedule information can be found on the Course Listings (<https://courses.wustl.edu>) website.

### Minimum and Maximum Course Loads

The average course load necessary to fulfill the required 120 units for the bachelor's degree in a timely fashion is 15 units — typically five courses — in each semester. Except for students approved for a reduced course load through Disability Resources, students must attempt a minimum of 12 units to be considered full-time. Students may not enroll for more than 21 units without permission and an additional per-unit tuition charge. Any enrollment between 12 and 18 units is considered typical.

Courses in the college that require more preparation and class time than average — foreign languages, mathematics and science — may carry 4 or 5 units of credit. When enrolled in these and other demanding courses, students should consider taking fewer than 15 units of academic work in a particular semester, then balancing such intensive semesters with modest increased units in subsequent semesters.

### Repeating a Course

Students whose performance in a course has not met their expectations are permitted to retake the course, receive a second grade, and have the letter R, denoting the retake, placed next to the grade for the first enrollment. All registrations will show on the transcript; however, only the grade and units of the final enrollment will be used to calculate the GPA.

Please note: This procedure is not pedagogically sound and should be avoided in all but serious cases, such as a grade of D in a course required for the major.

**Regulations:** While courses initially taken credit/no credit (pass/fail) may be retaken for a letter grade, courses initially taken for a letter grade **must** be retaken for a letter grade. Credit earned in the original enrollment will not be revoked should a failing grade be earned in the second or subsequent enrollments. Except in the case of a retake of an unsuccessful audit, the retake policy

will not be invoked if the grade option for any of the enrollments is audit.

No student may use the retake option to replace a failing course grade received as a sanction for violation of the Academic Integrity Policy.

## Academic Probation and Suspension

Students are expected to maintain the highest level of scholarship during their time at Washington University. At a minimum, however, students must meet the standards set by the faculty as well as those mandated by the U.S. Department of Education. Those who do not complete at least 12 units or achieve a semester grade point average of 2.0 or better for each semester are subject to probation or, in extreme cases of poor academic performance, suspension. In certain cases, students who have completed at least 12 units and have a semester grade point average of at least 2.0 for each semester may still be placed on academic warning or probation if the Committee on Academic Progress identifies areas of significant concern about a student's progress.

Students must make acceptable progress toward meeting degree requirements. Students must be on pace to complete their program by attempting no more than 150 percent of the credits required. Anytime students fall below completing 2/3 or fewer of the credits they have attempted overall, they are considered to not be achieving satisfactory academic progress (SAP). The college will work with those students to develop a plan to help them achieve acceptable pace within a set period of semesters. Additionally, if it is determined that a student cannot complete their program within the 150 percent maximum credits, the student may not continue their program of study at Washington University.

In the event of academic probation, the student will be matched with a progress counselor for the following semester. The student must complete an academic agreement with the progress counselor to map out how improvement will be achieved. Failure to attend class or complete work in a timely manner may result in termination of enrollment for that semester.

In order to be eligible for a return to good academic standing, a student on warning or probation must complete at least 12 units of credit and earn no single grade of C- or lower. Students who do not meet this standard may be subject to academic suspension from the college. Students suspended for academic deficiency are not eligible for readmission to the College of Arts & Sciences until they demonstrate, under the conditions set for each individual case, a capacity to work productively at the level required by the college curriculum.

## Leaves of Absence

For certain students, time spent away from the academic setting is of great value in discovering objectives and gaining

experiences not available within the academic community. Undergraduates in good standing at the completion of a term are eligible to take a leave of absence (LOA) by completing an LOA request. Students on an LOA are assured reinstatement for the next two years. Before returning, students are asked to notify the College Office and submit a Reinstatement Form at least six weeks prior to the beginning of the appropriate term.

A student wishing to take a medical leave of absence (MLOA) must have a recommendation from Student Health Services submitted to the appropriate dean in the College Office prior to leaving and prior to re-enrollment. Upon reviewing the recommendations from Student Health Services and the student's file, the dean in the College Office will decide whether or not to grant the request for the MLOA and/or for re-enrollment.

## Transfer Credit

With preapproval, courses from accredited colleges and universities can be transferred to Washington University and will count toward a student's 120 units required for the Bachelor of Arts degree; such courses may also serve as prerequisites to advanced courses and may count, with prior departmental approval, toward a student's major or minor. They do not, however, substitute in Integrations or count toward other Arts & Sciences distribution requirements. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity Policy.

For further information pertaining to transfer credit, matriculating first-year students should visit the Pre-Matriculation Credit (p. 136) section in this *Bulletin*; transfer students, visit the Transfer Students (p. 886) section in this *Bulletin*.

## Military Training

Army and Air Force ROTC programs are available at Washington University.

ROTC courses numbered I25 MILS 301C, MILS 302C, MILS 401C, MILS 402C and AFROTC courses numbered I02 MAIR 301, MAIR 302, MAIR 401, MAIR 402 will be granted full credit toward the AB degree, for a total of 12 units. The courses do not count toward the 90 minimum Arts & Sciences units required for the Bachelor of Arts degree but will instead be categorized in the 30 maximum units that students may earn in courses taken from Olin Business School, the School of Engineering & Applied Science, University College, or the Sam Fox School. These courses are letter graded and will count toward the GPA, as do courses from University College and the professional schools listed above.

ROTC courses numbered I25 MILS 101C, MILS 102C, MILS 201C, MILS 202C and AFROTC courses numbered I02 MAIR 101, MAIR 102, MAIR 201, MAIR 202 will be granted 1 credit each for the Physical Training component, as commensurate with performance courses currently receiving

credit toward the Bachelor of Arts degree, including courses listed under L28 Physical Education. Such courses will not count toward the GPA.

## University College Courses

Students in the College of Arts & Sciences may enroll in course work offered by University College (<http://ucollege.wustl.edu>) as long as they do not exceed one course a semester and a maximum total of 24 units. University College courses are subject to the degree requirement that stipulates only 30 units from any of the other schools of the university may be applied to the Bachelor of Arts degree. University College courses do not fulfill distribution requirements and can only count for a major or minor with approval from the relevant department. Students in the College of Arts & Sciences do not receive credit for online courses offered by University College.

## Administration

### Barbara A. Schaal, PhD

Dean of Arts & Sciences

The Mary-Dell Chilton Distinguished Professor in the Department of Biology in Arts & Sciences

### Jennifer R. Smith, PhD

Dean of the College of Arts & Sciences

## Majors (directory)

Below is a list of majors offered by the College of Arts & Sciences. Visit a page below to view more information about a specific major. For the entire list of majors offered by all the undergraduate schools, please visit the Majors (all schools) (p. 34) directory.

African and African-American Studies (p. 145)

American Culture Studies (p. 165)

Ancient Studies (p. 309)

Anthropology (p. 211)

Anthropology: Global Health and Environment (p. 211)

Applied Linguistics (p. 386)

Arabic (p. 238)

Archaeology (p. 242)

Art History and Archaeology (p. 251)

Biology (p. 271)

Biology: Biochemistry and Molecular Biology (p. 271)

Biology: Ecology and Evolution (p. 271)

Biology: Genomics and Computational Biology (p. 271)

Biology: Neuroscience (p. 271)

Chemistry (p. 287)

Chemistry: Biochemistry (p. 287)

Chinese Language and Culture (p. 301)

Classics (p. 309)  
Comparative Arts (p. 320)  
Comparative Literature (p. 320)  
Dance (p. 331)  
Development/International and Area Studies (p. 594)  
Drama (p. 340)  
Earth and Planetary Sciences: Geochemistry (p. 354)

# Business

## About Olin Business School

At Olin, students get down to business from day one. We believe that the more they learn, the more opportunity they have to become the people they want to be. Their immersion in business begins immediately, giving them a full four years to discover and develop their passions. Students choose from our eight business majors and three business minors. They can earn two majors and one minor, both inside Olin and with other Washington University schools. They'll take 40 percent of their classes outside the business school to give them flexibility to explore other interests and create their own unique paths.

Olin Business School is a welcoming community where everyone values teamwork and collaboration. Students form lifelong relationships, both personal and professional. They can rely on the support they need from faculty, staff and their fellow students while still feeling challenged in their studies. They'll get to know their professors, dedicated teachers who genuinely care about their success in the program — and afterwards.

Students find many opportunities to apply what they've learned in class to real-world situations on campus, in St. Louis, and around the globe. These experiential learning opportunities — from student consulting and internships to case competitions and study abroad programs — prepare students to thrive in a constantly changing, global marketplace. In fact, more than 50 percent of our undergrads participate in study abroad and internship opportunities around the world, gaining a global perspective that will serve them well throughout their careers.

Olin prepares students to be leaders who use critical and creative thinking to solve problems and achieve results. Our Midwestern values of integrity, empathy and hard work will become second nature to them. Whatever career path they choose to take after graduation, Olin Business School is an exceptional launching pad for success.

## Bachelor of Science in Business Administration (BSBA)

Olin Business School offers a full-time Bachelor of Science in Business Administration (BSBA) degree program of instruction. Undergraduate students at the Olin School may choose to major in one or two professional fields in business as part of their degrees. Our BSBA students enroll in business courses in their first year. The curriculum covers the core functional areas of business. At least one major course of study in a field of business and at least 40 percent of the course work must be in nonbusiness fields — from fine arts to science — allowing students to pursue individual careers and ensuring a well-rounded educational experience.

## Majors

BSBAs are offered the option to focus their studies in a specific field of business. While a business student is not required to declare a business major, almost all our business students earn at least one professional major. A student may pursue one or two majors from the list below:

- Accounting
- Economics and Strategy
- Entrepreneurship
- Finance
- Financial Engineering (This is offered to any BSBA as a second major option only.)
- Health Care Management
- Leadership and Strategic Management
- Marketing
- Operations and Supply Chain Management

Specific requirements for each major can be found in the "Majors for BSBA Degree Candidates" section of this page.

## Combined Majors

Business students have the option to major in more than one field of study. BSBA students can earn a total of two majors either both in business or one in business and one outside of the Olin School. For example, a student could earn a BSBA degree with a major in finance and a major in English literature from the College of Arts & Sciences. Students must complete the specific courses required for the second major, but they are not required to complete the general requirements for the second degree. Students should consult with their academic advisers for additional information. Upon completion, the student's transcript would show a BSBA degree along with the earned second major. A diploma is awarded for the degree, with reference to any major(s) on the official transcript.

## Minors

Many departments and schools in the university offer minors. Business students also can pursue a minor outside of Olin Business School in any recognized academic discipline offered within the university by satisfactorily completing all the requirements for both the BSBA degree and the minor. Required courses for a minor outside of business may range from 15 to 27 units, depending on the specific regulations of the academic department. A business student who applies for a minor and completes all of the requirements will have the award of the minor noted on the official transcript. A student must be approved for admission to a minor program by the department offering the minor.

Business students typically may not minor in a business subject. However, BSBA students may choose our business of sports minor, business of entertainment minor, or the international business minor offered through the Olin Business School.

Additional information, as well as information for students from other schools of Washington University who wish to pursue business minors, can be found in the Minors for Non-BSBA Degree Candidates (p. 913) section of this page.

## Combined Degrees

A student also can earn two undergraduate degrees simultaneously — a BSBA degree and another undergraduate degree offered at the university. The student must be admitted to the other degree-granting program, and they must meet specific degree requirements for both schools. Typically, this option requires additional time to complete all requirements. For example, if a student combines a business degree with a degree from the College of Arts & Sciences, the student must complete a minimum of 150 units between the two disciplines. Of the 150 units, at least 90 units must be from the College of Arts & Sciences and at least 60 units from Olin Business School. Some courses may be used to satisfy both degree requirements simultaneously. Because requirements for a second degree vary from discipline to discipline, students should talk with their primary adviser to plan their program.

## Joint Undergraduate and Business Master's Degrees

### Master of Business Administration (MBA)

A special five-year program combining an undergraduate degree with the Master of Business Administration degree is available to a select number of undergraduates. Often referred to as the 3+2 program, it combines three years of undergraduate study and two years of MBA study for completion of both degrees in five years. Joint programs include: the AB/MBA degrees offered with the College of Arts & Sciences, the BS/MBA degrees offered with the School of Engineering & Applied Science, and the BSBA/MBA degrees offered through Olin Business School.

Admission to the 3+2 program is extremely competitive. The student must have a superior academic record, an outstanding performance on the Graduate Management Admission Test (GMAT) or Graduate Record Exam (GRE) and substantive summer internship experience in a related field.

Students apply during the winter of their junior year and begin the full-time MBA program in the fall semester. They must complete at least 90 units of undergraduate course work before entering Olin's MBA program and then complete an additional 66 units of graduate-level courses. Students should consult their academic adviser during their sophomore year regarding specific degree requirements. If a student's undergraduate major is in the School of Engineering & Applied Science or the College of Arts & Sciences, up to 15 units of remaining undergraduate courses will apply toward the 66 units required in the MBA program. If a student's undergraduate major is in Olin Business School, up to 6 units of remaining undergraduate course work will apply

toward the 66 units required in the MBA program. Visit the MBA website page on joint degrees (<http://www.olin.wustl.edu/EN-US/academic-programs/full-time-MBA/academics/joint-degrees/Pages/default.aspx>) for more information, including additional requirements for Arts & Sciences candidates.

To apply, contact the Graduate Programs Office in Knight Hall, Room 310, or send an email to [OlinGradAdmissions@wustl.edu](mailto:OlinGradAdmissions@wustl.edu) ([mba@olin.wustl.edu](mailto:mba@olin.wustl.edu)).

## Specialized Master's Programs

A specialized master's degree is highly concentrated and singular in focus, providing intensive education in one business discipline. Olin Business School offers a variety of specialized master's programs. Visit our website (<http://olin.wustl.edu/SMP>) for details. Further information is available in the Graduate Programs Office in Knight Hall, Room 310, or by emailing the programs using the contact information below.

Undergraduate students interested in pursuing a specialized master's degree should contact the Graduate Programs Office as early as possible. Combined Program General Principles and Guidelines are as follows:

1. Undergraduate students should apply to a specialized master's program (SMP) during their junior year (as defined by credit hours) in order to allow sufficient lead time for an admissions decision and for academic planning.
2. Undergraduate students who have been admitted to a combined SMP will be limited to taking a maximum of 21 graduate credit hours during their senior year while still officially coded as an undergraduate student.
3. Students must enroll for at least one full-time semester (fall, spring or summer) coded and registered as a graduate student.
4. Tuition for the graduate semester will be applied at the full-time graduate program rate for the specific degree program the student is pursuing.
5. If the student needs additional course work beyond the immersive graduate semester, they will be charged the full-time or part-time graduate tuition rate — whichever applies based on the number of credit hours.

For students at Washington University, the GMAT/GRE requirement and \$100 application fee are waived.

### Master of Accounting (MACC)

For career interests in public or corporate accounting, consulting or financial services, the Olin School's Master of Accounting (MACC) program will prepare students for an exciting and challenging future. This program requires 33 graduate-level credit units in addition to the course work requirements for an undergraduate degree. Course work is included to help meet eligibility requirements to sit for the CPA exam in states with the

"150-hour rule." It is expected that students will have completed Intermediate Financial Accounting before beginning the program.

Visit the MACC website (<http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/master-of-accounting/Pages/default.aspx>) or email [OlinGradAdmissions@wustl.edu](mailto:OlinGradAdmissions@wustl.edu) ([mba@olin.wustl.edu](mailto:mba@olin.wustl.edu)).

### Master of Science in Customer Analytics (MSCA)

The MSCA program provides students with the tools to become analytics-driven business managers, well-versed to guide firms in the emerging era of big data and data-driven decision-making. Washington University's Olin Business School, School of Engineering & Applied Science, and the College of Arts & Sciences have partnered with business technology industry leader IBM to create a curriculum that will help students formulate and implement analytics-driven approaches to marketing.

Completion of the degree requires a minimum of 39 credits of graduate-level (500-level) structured course work, in addition to the course requirements for an undergraduate degree. A two-day course in SPSS programming is taught in August and required as a foundations course. Students must maintain a minimum GPA of 3.0. Applicants to the MSCA program should have taken at least two courses in calculus or equivalent course work and one course in statistics.

Visit the MSCA website (<http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/ms-in-customer-analytics/Pages/default.aspx>) or email [OlinGradAdmissions@wustl.edu](mailto:OlinGradAdmissions@wustl.edu) ([mba@olin.wustl.edu](mailto:mba@olin.wustl.edu)).

### Master of Science in Finance (MSF)

Graduates of the Olin School's Master of Science in Finance (MSF) develop highly targeted skills by selecting the curriculum track best suited to their career aspirations. These rigorous and comprehensive graduate programs offer in-depth training in securities research, asset management, derivative pricing, fixed income and corporate finance for students pursuing specialized finance careers:

- The Corporate Finance and Investments track (<https://olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MS-finance/Pages/Corporate-Finance-and-Investments-Curriculum.aspx>) and Wealth and Asset Management track (<https://olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MS-finance/Pages/wealth-and-asset-management-curriculum-.aspx>) require 30.5 graduate-level credit units in addition to the course requirements for an undergraduate degree. These prepare students for careers in asset management, sales and trading, industry finance, investment banking, private wealth management and consulting.

- The Quantitative Finance track (<https://olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MS-finance/Pages/Quantitative-Finance-Curriculum.aspx>) requires 39 graduate-level credit units in addition to the course requirements for an undergraduate degree. It prepares students for careers in credit risk analysis, derivative pricing, risk management modeling and financial software development.

Applicants to the MSF program must have taken microeconomics, statistics and calculus.

Visit the MSF website (<http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MS-finance/Pages/default.aspx>) or email [OlinGradAdmissions@wustl.edu](mailto:OlinGradAdmissions@wustl.edu) ([mba@olin.wustl.edu](mailto:mba@olin.wustl.edu)).

### Global Master of Finance Program (GMF)

To meet demand for graduates with global financial expertise, Olin Business School offers programs that feature study at the campuses of five prestigious international universities.

- Singapore Management University (<http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/SMU-MAF/Pages/default.aspx>)
- Yonsei University in South Korea (<http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/Yonsei-MBA/Pages/default.aspx>)
- IDC Herzliya in Israel (<http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/IDC-MSF/Pages/default.aspx>)
- WHU Otto Beisheim School of Management in Germany (<http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/WHU/Pages/default.aspx>)
- Universitat Pompeu Fabra, Barcelona School of Management in Spain (<http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/UPF/Pages/default.aspx>)

Applicants to the Global Master of Finance dual degree program should have taken microeconomics, statistics and calculus.

Visit the GMF website (<http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/Pages/default.aspx>) or email [OlinGradAdmissions@wustl.edu](mailto:OlinGradAdmissions@wustl.edu).

### Master of Science in Supply Chain Management (MSSCM)

Exceptional management of the production and delivery of a firm's products and services — its supply chain — is essential. The Master of Science in Supply Chain Management degree equips graduates to stand out in this challenging and critically important career field. This program provides students with comprehensive preparation in all areas relevant to sophisticated

management of a company's supply chain, whether the company is engaged in manufacturing or in the delivery of complex services.

Completion of the degree requires a minimum of 36 graduate-level credit hours in addition to the course requirements for an undergraduate degree.

Visit the MSSCM website (<http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MS-supply-chain-management/Pages/default.aspx>) or email [OlinGradAdmissions@wustl.edu](mailto:OlinGradAdmissions@wustl.edu) ([mba@olin.wustl.edu](mailto:mba@olin.wustl.edu)).

## Special Opportunities

### Center for Experiential Learning

The Center for Experiential Learning (CEL) is an educational center located in the Olin Business School. The CEL is focused on creating innovative learning opportunities with meaningful impact in the business and nonprofit communities. Courses available to undergraduate students include team-based consulting projects ranging from startups to Fortune 500 companies to local nonprofit organizations. Visit the CEL website (<http://www.olin.wustl.edu/cel/Pages/default.aspx>) for more information.

### Entrepreneurship

Olin School offers both a major and minor in entrepreneurship, a business plan course known as the Hatchery, and the CEL Entrepreneurial Consulting Team. There are also many universitywide resources including the Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship. Read about entrepreneurship opportunities on the BSBA website (<http://www.olin.wustl.edu/EN-US/academic-programs/bs-business-administration/academics/Pages/entrepreneurship.aspx>).

### Independent Study

Independent study under the direction of a faculty member is available on a selective basis. The purpose of independent study is to provide an opportunity for students to pursue subject matter beyond the specific course offerings found in the Olin School. Projects may be done for 1 to 6 units, but normally no more than 3 units will be granted in any one semester. For more information, please refer to the Olin School's *Undergraduate Student Handbook*.

Students may apply a maximum of 6 units of independent study in business and 6 units outside of the Olin School toward the 120-unit degree requirement.

### Internship for Credit Opportunities

Olin Business School first-year students and sophomores who have a summer internship can enroll in MGT 450A for academic credit. This online course is designed to deepen a student's overall learning gained from an internship. Students enroll in this 1.5-credit course on a Pass/Fail basis. While this course will be

listed on a student's academic transcript, it will not count toward the 120 units needed for graduation.

Olin Business School juniors or seniors who have completed the core requirement and one advanced elective in the appropriate major field may apply to receive credit for internship experience. Students must work under the direction of a faculty member to complete an academic paper/project. The Internship Petition Form must be submitted to the student's academic adviser by the end of the second week of the academic semester. A maximum of 6 units of internship course work may be applied toward the BSBA degree.

### Management Communication Center

Students hone their communication skills with free lab-based coaching at Olin's Management Communication Center (MCC). Our communication consultants help them learn to communicate effectively, present confidently, and ultimately, influence business decisions. Through strategies like personalized coaching, rehearsals, interactive workshops and critique sessions, students will develop the personal and professional skills required for lifelong career advancement in today's global marketplace. The MCC is located in Simon Hall. Visit the MCC website (<http://www.olin.wustl.edu/EN-US/partners-resources/facilities-services/Pages/Management-Communication-Center.aspx>) for more information.

### Study Abroad

Business students have the opportunity to participate in various study abroad programs, providing they meet the eligibility requirements.

Options include:

- **Olin International Internship Programs** (<https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/global-programs/Pages/international-internships.aspx>) combine classroom learning with full-time internship placement of approximately 10-12 weeks. Students complete a significant research project in conjunction with the internship experience.
- **Olin Semester Study Abroad Opportunities** (<https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/global-programs/Pages/study-abroad.aspx>) in Asia, Europe and South America offer business, language and general studies courses. Some programs require intensive language courses, others are taught in English.

**Academic Study Tours** are a required academic component for several of our abroad programs. Students earn business credit for this experience. The European Study Tour is designed to develop research, analysis and presentation skills in an experiential format to allow students to apply theory, concepts and skills gained at Olin to consulting-type exercises abroad. The Asian Study Tour Series allows students the opportunity to explore the business and culture of that region. Information on

programs that participate in the Academic Study Tours (<https://olinwustl.campusgroups.com/bsbaglobal/academic-study-tours>) are available on the Olin Global Programs website.

- Study abroad programs sponsored by Overseas Programs (<http://overseas.wustl.edu>) in the College of Arts & Sciences.
- Short-term and summer programs lasting from two to eight weeks for 3 to 6 credits.

Detailed information and eligibility requirements for study abroad are available on the Olin Global Programs website (<https://olinwustl.campusgroups.com/bsbaglobal/about>) or in the BSBA Programs office.

### Israel Summer Business Academy (ISBA)

Students may participate in the Israel Summer Business Academy (ISBA), administered by Washington University in St. Louis but open to students from all institutions. This unique opportunity, open to undergraduate students of all faiths and beliefs, allows students to study and immerse themselves in the Israeli business environment. They will learn about entrepreneurship, innovation and startup consulting through course work, speakers, company visits and consulting while earning 6 units of academic credit. ISBA is a collaboration between Olin Business School at Washington University in St. Louis and the Interdisciplinary Center (IDC) in Herzliya, Israel. Students learn firsthand about business in Israel, a country that has built itself around entrepreneurship. For more information visit the ISBA website (<https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/global-programs/israel-summer-business-academy/Pages/default.aspx>).

## Undergraduate Teaching Assistantships

In this challenging program, outstanding students are chosen to assist various professors with their course development work or research efforts. Students may conduct library research, perform computer programming, develop new learning materials for class, assist other students with their writing skills, or tutor in various areas of the curriculum.

Participation in the Undergraduate Teaching Assistantship (UTA) program is voluntary and may begin as early as the first year. As a participant, students are paid the going rate for student assistants. UTA experience also impresses company recruiters.

## Academic Support Services

### Academic Advising

Olin Business School provides students with expert academic advising and support. BSBA Student Services has nine academic advisers who serve as professional advisers to all undergraduate students on procedural matters, course planning, registration and other academic matters.

### The Olin School Peer Ambassadors

In this program, undergraduate business students who are familiar with the university and with the Olin School's programs and policies help incoming students make a smooth transition to the university by providing informal peer advising services throughout their first year here.

## Weston Career Center

To provide students with personalized career planning and job search services, Olin Business School operates its own career center in Knight and Bauer Halls. The Weston Career Center (WCC) delivers a variety of career management programs and services to Olin Business School undergraduate and graduate students. Services include: one-on-one advising and consultation with a functional career specialist, workshops and professional development seminars, company information sessions, mock interviews, self-assessments, résumé and cover letter writing, and networking — all the tools needed for an effective job search.

On-campus interviews take place in the Knight and Bauer Hall Interview Suite or Danforth Center throughout the academic year. Business students are encouraged to meet with the center's staff early in the school year to discuss career and professional goals. The WCC also maintains an extension office in Simon Hall for quick questions and technical support. For more information, visit the OlinCareers website (<http://olincareers.wustl.edu/EN-US/Pages/default.aspx>), or contact the Weston Career Center by phone at 314-935-5950 or email at [wcc@olin.wustl.edu](mailto:wcc@olin.wustl.edu).

## Faculty

### Dean

**Mark Taylor** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=mark.p.taylor>)  
PhD, Birbeck College, University of London

### Endowed Professors

**Nicholas S. Argyres** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=argyres>)  
Vernon W. and Marion K. Piper Professor of Strategy  
PhD, University of California, Berkeley

**William P. Bottom** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=bottomb>)  
Joyce and Howard Wood Distinguished Professor of Organizational Behavior  
PhD, University of Illinois at Urbana-Champaign

**J. Stuart Bunderson** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=bunderson>)  
George and Carol Bauer Professor of Organizational Ethics and Governance  
PhD, University of Minnesota

**Siddhartha Chib** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=chib>)  
Harry C. Hartkopf Professor of Econometrics and Statistics  
PhD, University of California, Santa Barbara

**Kurt T. Dirks** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=dirks>)  
Bank of America Professor of Managerial Leadership  
PhD, University of Minnesota

**Philip H. Dybvig** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=dybvig>)  
Boatmen's Bancshares Professor of Banking and Finance  
PhD, Yale University

**Hillary Anger Elfenbein** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=helfenbein>)  
John K. Wallace Jr. and Ellen A. Wallace Distinguished Professor  
PhD, Harvard University

**Richard M. Frankel** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=frankel>)  
Beverly and James Hance Professor of Accounting  
PhD, Stanford University

**Barton H. Hamilton** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=hamiltonb>)  
Robert Brookings Smith Distinguished Professor of Entrepreneurship  
PhD, Stanford University

**Ronald R. King** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=rking>)  
Myron Northrop Professor of Accounting  
PhD, University of Arizona

**Panos Kouvelis** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=kouvelis>)  
Emerson Professor of Operations and Manufacturing Management  
PhD, Stanford University

**Hong Liu** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=liuh>)  
Fossett Distinguished Professor in Finance  
PhD, University of Pennsylvania

**Glenn M. MacDonald** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=macdonald>)  
John M. Olin Distinguished Professor of Economics and Strategy  
PhD, University of Rochester

**Judi McLean Parks** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=mcleanparks>)  
Reuben C. and Anne Carpenter Taylor Professor of Organizational Behavior  
PhD, University of Iowa

**Todd T. Milbourn** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=milbourn>)  
Hubert C. and Dorothy R. Moog Professor of Finance  
PhD, Indiana University

**Chakravarthi Narasimhan** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=narasimhan>)  
Philip L. Siteman Professor of Marketing  
PhD, University of Rochester

**Jackson A. Nickerson** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=nickerson>)  
Frahm Family Professor of Organization and Strategy  
PhD, University of California, Berkeley

**Stephen M. Nowlis** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=nowlis>)  
August A. Busch Jr. Distinguished Professor of Marketing  
PhD, University of California, Berkeley

**Robert A. Pollak** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=pollak>)  
Hemreich Distinguished Professor of Economics  
PhD, Massachusetts Institute of Technology

**P.B. (Seethu) Seetharaman** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=seethu>)  
W. Patrick McGinnis Professor of Marketing  
PhD, Cornell University

**Anjan Thakor** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=thakor>)  
John E. Simon Professor of Finance  
PhD, Northwestern University

**Guofu Zhou** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=zhou>)  
Frederick Bierman and James E. Spears Professor of Finance  
PhD, Duke University

## Professors

**Tat Y. Chan** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=chan>)  
PhD, Yale University  
(Marketing)

**Lingxiu Dong** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=dong>)  
PhD, Stanford University  
(Operations and Manufacturing Management)

**Radhakrishnan Gopalan** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=gopalan>)  
PhD, University of Michigan  
(Finance)

**Ohad Kadan** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=kadan>)  
PhD, Hebrew University  
(Finance)

**Anne Marie Knott** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=knott>)  
PhD, University of California, Los Angeles  
(Strategy)

**J. Lamar Pierce** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=pierce>)  
PhD, University of California, Berkeley  
(Strategy)

**Stephen Ryan** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=stephen.p.ryan>)  
PhD, Duke University  
(Economics)

**Fuqiang Zhang** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=fzhang22>)  
PhD, University of Pennsylvania  
(Operations and Manufacturing Management)

## Associate Professors

**Mariagiovanna Baccara** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=mbaccara>)  
PhD, Princeton University  
(Economics)

**Markus Baer** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=baer>)  
PhD, University of Illinois at Urbana-Champaign  
(Organizational Behavior)

**Cynthia Cryder** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=cryder>)  
PhD, Carnegie Mellon University  
(Marketing)

**Daniel Elfenbein** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=elfenbein>)  
PhD, Harvard University  
(Organization and Strategy)

**Ignacio Esponda** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=iesponda>)  
PhD, New York University  
(Economics)

**Armando Gomes** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=gomes>)  
PhD, Harvard University  
(Finance)

**Todd Gormley** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=gormley>)  
PhD, Massachusetts Institute of Technology  
(Finance)

**Baojun Jiang** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=baojunjiang>)  
PhD, Carnegie Mellon University  
(Marketing)

**Andrew P. Knight** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=knightap>)  
PhD, University of Pennsylvania  
(Organizational Behavior)

**Mark Leary** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=leary>)  
PhD, Duke University  
(Finance)

**Robyn LeBoeuf** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=leboeuf>)  
PhD, Princeton University  
(Marketing)

**Asaf Manela** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=amanela>)  
PhD, University of Chicago  
(Finance)

**Xiumin Martin** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=xmartin>)  
PhD, University of Missouri-Columbia  
(Accounting)

**Raymond T. Sparrowe** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=sparrowe>)  
PhD, University of Illinois at Chicago  
(Organizational Behavior)

**Raphael Thomadsen** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=thomadsen>)  
PhD, Stanford University  
(Marketing)

**Danko Turcic** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=Turcic>)  
PhD, Case Western Reserve University  
(Operations Manufacturing and Management)

## Assistant Professors

**Deniz Aydin** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=daydin>)  
PhD, Stanford University  
(Finance)

**Taylor Begley** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=tbegley>)  
PhD, University of Michigan  
(Finance)

**Kimball Chapman** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=kimballchapman>)  
PhD, Pennsylvania State University  
(Accounting)

**Phech Colatat** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=pcolatat>)  
PhD, Massachusetts Institute of Technology  
(Strategy)

**Joseph Cullen** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=jacullen>)  
PhD, University of Arizona  
(Economics)

**Kaitlin Daniels** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=k.daniels>)  
PhD, University of Pennsylvania  
(Operations Management)

**Jennifer Dlugosz** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=jdlugosz>)  
PhD, Harvard University  
(Finance)

**Jason Donaldson** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=j.r.donaldson>)  
PhD, London School of Economics  
(Finance)

**Amr Farahat** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=farahat>)  
PhD, Massachusetts Institute of Technology  
(Operations and Manufacturing Management)

**Jacob Feldman** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=jbfeldman>)  
PhD, Cornell University  
(Operations and Manufacturing Management)

**Tarek Ghani** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=tghani>)  
PhD, University of California, Berkeley  
(Business Administration)

**Arun Gopalakrishnan** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=agopala>)  
PhD, University of Pennsylvania  
(Marketing)

**Daniel Gottlieb** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=d.gottlieb>)  
PhD, Massachusetts Institute of Technology  
(Economics)

**Chad Ham** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=cham>)  
PhD, University of Maryland  
(Accounting)

**Ashley Hardin**  
PhD, University of Michigan  
(Organizational Behavior)

**Xing Huang**  
PhD, University of California, Berkeley  
(Finance)

**Jared Jennings** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=jaredjennings>)  
PhD, University of Washington  
(Accounting)

**Zachary Kaplan** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=zrkaplan>)  
PhD, University of Chicago  
(Accounting)

**Kevin Koharki** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=kkoharki>)  
PhD, Pennsylvania State University  
(Accounting)

**Jeongmin Lee** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=jlee89>)  
PhD, University of Maryland  
(Finance)

**Zawadi Lemayian** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=lemayian>)  
PhD, Massachusetts Institute of Technology  
(Accounting)

**Thomas Maurer** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=thomas.maurer>)  
PhD, London School of Economics  
(Finance)

**Yulia Nevskaya** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=yulia.nevskaya>)  
PhD, University of Rochester  
(Marketing)

**Hannah Perfecto**  
PhD, University of California, Berkeley  
(Marketing)

**Iva Rashkova** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=irashkova>)  
PhD, London Business School  
(Management Science and Operations)

**Rachael Ruttan**  
PhD, Northwestern University  
(Organizational Behavior)

**Sydney Scott**  
PhD, University of Pennsylvania  
(Marketing)

**Bernardo Silveira** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=silveira>)  
PhD, New York University  
(Economics)

**Janis Skrastins** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=jskrastins>)  
PhD, London Business School  
(Finance)

**Ngoc-Khanh Tran** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=ntran>)  
PhD, Massachusetts Institute of Technology  
(Finance)

**Ulya Tsolmon** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=utsolmon>)  
PhD, Duke University  
(Strategy)

**Dennis Zhang** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=denniszhang>)  
PhD, Northwestern University  
(Operations and Manufacturing Management)

## Senior Lecturers

**Sergio Chayet** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=chayet>)  
PhD, Northwestern University  
(Operations and Manufacturing Management)

**Samuel S. Chun** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=schun>)  
PhD, Washington University  
(Marketing)

**Charles J. Cuny** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=cuny>)  
PhD, Stanford University  
(Finance)

**Thomas D. Fields** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=tfields>)  
PhD, Northwestern University  
(Accounting)

**Michael R. Gordinier** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=gordinier>)  
PhD, University of Wisconsin-Madison  
(Management)

**Clifford K. Holekamp** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=holekampc>)  
MBA, Washington University  
(Entrepreneurship)

**John Horn** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=johnhorn>)  
PhD, Harvard University  
(Economics)

**Konstantina Kiouisis** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=kiouisis>)  
PhD, University of California, Los Angeles  
(Business Administration)

**Lee J. Konczak** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=konczak>)  
PhD, University of Missouri-St. Louis  
(Organizational Behavior and Leadership Development)

**David R. Meyer** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=dmeyer24>)  
PhD, University of Chicago  
(Management)

**Patrick Rishe** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=prishe>)  
PhD, Binghamton University  
(Finance)

**Richard Ryffel** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=ryffel>)  
MBA, Boston University  
(Finance)

**James Sawhill** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=sawhill>)  
PhD, University of California, Berkeley  
(Marketing)

**Eli M. Snir** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=snir>)  
PhD, University of Pennsylvania  
(Management)

**Mark E. Soczek** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=soczek>)  
ABD, Northwestern University  
(Accounting)

**Durai Sundaramoorthi** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=sundaramoorthi>)  
PhD, University of Texas at Arlington  
(Management)

## Lecturers

**Cathy Dunkin** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=cdunkin>)  
BA, University of Missouri-Columbia  
(Management)

**Ivan Lapuka** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=ilapuka>)  
PhD, University of South Florida  
(Marketing)

**Staci Thomas** ([https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=staci\\_thomas](https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=staci_thomas))  
MA, Webster University  
(Communications)

## Adjunct and Other Faculty

**Pier Alsup** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=alsup.pier.y>)  
MS, Webster University  
(Marketing)

**Amy Altholz** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=altholza>)  
MBA, Washington University  
(Accounting)

**Yossi Aviv**  
PhD, Columbia University  
(Operations Manufacturing and Management)

**Richard Batsell** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=batsell>)  
PhD, University of Texas at Austin  
(Marketing)

**Anatoliy Belaygorod** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=belaygorod>)  
PhD, Washington University  
(Finance)

**Peter Boumgarden** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=boumgardenp>)  
PhD, Washington University  
(Organizational Behavior)

**Spencer Burke** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=burkesb>)  
JD, University of Pennsylvania  
(Management)

**David Butler** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=david.butler>)  
MBA, Washington University  
(Health Care Management)

**Amy Choy** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=amychoy>)  
PhD, Washington University  
(Accounting)

**Robert Collins** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=rbcollins>)  
MS, Harvard University  
(Accounting)

**Jeremy Degenhart** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=jdegenhart9876>)  
BS, BA, Washington University  
(Finance)

**William R. Emmons** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=emmons>)  
PhD, Northwestern University  
(Finance)

**Peter S. Finley** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=finley>)  
MBA, Stanford University  
(Entrepreneurship)

**Ronald K. Fisher** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=fisher>)  
JD, Washington University  
(Labor and Employment Laws)

**David Fritsch** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=fritschd>)  
MBA, Washington University  
(Business Administration)

**Bruce Lee Hall** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=hallb>)  
PhD, MD, Duke University  
(Health Care Management)

**Carol F. Johaneck** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=johaneck>)  
MBA, Saint Louis University  
(Marketing)

**Nevada Kent IV**  
BSBA, Tennessee Technical University  
(Accounting)

**Sarah Luem**  
JD, Saint Louis University  
(Management)

**Steven Malter**  
PhD, University of Missouri-St. Louis  
(Management)

**Mary Mason**  
MD, Washington University  
(Management)

**Tom McCain**  
MBA, Washington University  
(Management)

**Mark McLaren**  
MBA, Columbia University  
(Management)

**Paul W. Paese** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=paese>)  
PhD, University of Illinois at Urbana-Champaign  
(Organizational Behavior)

**Donald W. Paule** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=dpaule>)  
LLM, Washington University  
(Business Law)

**David Pearson** (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=dpearson>)  
DBA, Indiana University  
(Accounting)

**Jeff Plunkett** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=jplunkett>)  
JD, Saint Louis University  
(Accounting)

**David A. Poldoian** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=poldoian>)  
MBA, Harvard University  
(Entrepreneurship)

**Robert A. Portnoy** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=rportnoy>)  
PhD, University of Missouri-Columbia  
(Human Resource Management)

**Casey Quinn** (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=quinncc>)  
MBA, Washington University  
(Health Care Management)

**Ryan Rakestraw**  
MBA, Washington University  
(Finance)

**Majors**

**Majors for BSBA Degree Candidates**

In addition to the 41 core professional units (listed on the Degree Requirements (p. 930) page of this *Bulletin*), a BSBA degree candidate must complete at least 19 professional elective units. Students may apply these professional electives toward a specific professional major. Majors in the business curriculum are offered as an option to focus their studies in a specific field of business. All major courses must be taken in residence.

Course work from an approved Washington University study abroad program will count as in-residence work. However, only one course per major may be taken through a study abroad experience.

Students may select a major from the following disciplines:

- Accounting (p. 907)
- Economics and Strategy (p. 907)
- Entrepreneurship (p. 908)
- Finance (p. 908)
- Financial Engineering (p. 908)\*
- Health Care Management (p. 909)
- Leadership and Strategic Management (p. 909)
- Marketing (p. 910)
- Operations and Supply Chain Management (p. 910)

\*The financial engineering major is offered to any undergraduate day division student as a second major option only.

**The Major in Accounting**

**Total units required: 15**

- Accounting Core: 6 units
  - ACCT 3610 Intermediate Financial Accounting Theory I
  - ACCT 3620 Intermediate Financial Accounting II
- Accounting Elective Choices: 9 units

| Code      | Title                                  | Units |
|-----------|--|-------|
| ACCT 400C | Not-For-Profit Accounting              | 1.5   |
| ACCT 400L | Ethical Decision Making in Accounting  | 1.5   |
| ACCT 464  | Auditing                               | 3     |
| ACCT 466  | Financial Statement Analysis           | 3     |
| ACCT 467  | Income Tax Fundamentals                | 3     |
| ACCT 4680 | Advanced Financial Accounting Problems | 3     |

**The Major in Economics and Strategy**

**Total units required: 12**

- Economics and Strategy Core: 12 units

| Code     | Title                                      | Units |
|----------|--|-------|
| MEC 370  | Game Theory for Business                   | 3     |
| MEC 400K | Research Analysis in Industry              | 3     |
| MEC 470  | Market Competition and Value Appropriation | 3     |
| MEC 471  | Empirical Techniques for Industry Analysis | 3     |

## The Major in Entrepreneurship

Total units required: 15

Entrepreneurship Core: 6 units

| Code    | Title  | Units |
|---------|--|-------|
| MGT 421 | Introduction to Entrepreneurship                     | 3     |
| MGT 424 | Business Planning for New Enterprises (The Hatchery) | 3     |

Entrepreneurship Electives: 9 units (must select 3 units from each category)

- Industry Elective Choices: (at least 3 units required)

| Code     | Title  | Units |
|----------|--|-------|
| CSE 131  | Computer Science I                                       | 3     |
| Econ 335 | Money and Banking  | 3     |
| FIN 549H | Special Topics: Real Estate Finance                      | 1.5   |
| INTL 320 | Business, Innovation and Entrepreneurship in Israel      | 3     |
| MEC 460  | Economics of Entertainment                               | 3     |
| MGT 320  | Olin Grand Rounds: The Business and Practice of Medicine | 3     |
| MGT 380  | Business Strategy  | 3     |
| MGT 440  | Sports Management  | 1.5   |
| MKT 465  | Retail Management  | 3     |

- Experiential Elective Choices: (at least 3 units required)

| Code     | Title                               | Units |
|----------|-------------------------------------|-------|
| MGT 401  | Management Center Practicum         | 3     |
| MGT 450C | Venture Consulting                  | 3     |
| MGT 450X | CEL Entrepreneurial Consulting Team | 3     |
| MGT 460K | Taylor Community Consulting         | 3     |

- Skills Elective Choices: (at least 3 units required)

| Code     | Title                                      | Units |
|----------|--|-------|
| ACCT 466 | Financial Statement Analysis               | 3     |
| CSE 104  | Web Development                            | 3     |
| CSE 438S | Mobile Application Development             | 3     |
| MEC 370  | Game Theory for Business                   | 3     |
| MEC 470  | Market Competition and Value Appropriation | 3     |
| MGT 301  | Legal Environment of Business Management   | 3     |
| MKT 378  | Marketing Research                         | 3     |
| MKT 400E | Sales Management                           | 3     |
| MKT 400F | Brand Management                           | 3     |
| MKT 478  | New Product Management                     | 3     |
| OB 461   | Negotiation                                | 3     |

## The Major in Finance

Total units required: 12

Finance Core: 9 units

| Code    | Title                                      | Units |
|---------|--|-------|
| FIN 441 | Investments                                | 3     |
| FIN 448 | Advanced Financial Management              | 3     |
| FIN 451 | Options, Futures and Derivative Securities | 3     |

Finance Elective Choices: 3 units

| Code        | Title   | Units |
|-------------|---|-------|
| FIN 400I    | Mergers & Acquisitions                            | 1.5   |
| FIN 400J    | Advanced Valuation                                | 1.5   |
| B52 FIN 420 | International Economics and Finance               | 3     |
| FIN 428     | Investments Praxis                                | 3     |
| FIN 443     | International Finance                             | 3     |
| FIN 447     | Information, Intermediation and Financial Markets | 3     |
| FIN 470A    | Research Methods in Finance                       | 3     |

## The Major in Financial Engineering

The financial engineering major is offered only as a second major option. Therefore, BSBA students must select another business major in order to be eligible to pursue this major.

Total units required: 30 required units and 18 units of prerequisite course work

Background Requirements: 18 units

| Code     | Title   | Units |
|----------|---|-------|
| CSE 131  | Computer Science I                                    | 3     |
| Math 217 | Differential Equations                                | 3     |
| Math 233 | Calculus III  | 3     |
| Math 309 | Matrix Algebra  | 3     |
| MEC 290  | Microeconomics  | 3     |
|          | or Econ 4011 Intermediate Microeconomic Theory        |       |
| QBA 121  | Managerial Statistics II                              | 3     |
|          | or ESE 326 Probability and Statistics for Engineering |       |
|          | or Econ 413 Introduction to Econometrics              |       |
|          | or Math 439 Linear Statistical Models                 |       |

Engineering Professional Core Requirements: 15 units

| Code     | Title  | Units |
|----------|--|-------|
| CSE 240  | Logic and Discrete Mathematics                         | 3     |
| CSE 247  | Data Structures and Algorithms                         | 3     |
| CSE 417T | Introduction to Machine Learning                       | 3     |
|          | or CSE 427S Cloud Computing with Big Data Applications |       |

|                       |                                     |   |
|-----------------------|-------------------------------------|---|
| ESE 403<br>or ESE 415 | Operations Research<br>Optimization | 3 |
| ESE 427               | Financial Mathematics               | 3 |

Olin Professional Core Requirements: 9 units

| Code      | Title                                    | Units |
|-----------|--|-------|
| ACCT 2610 | Principles of Financial Accounting       | 3     |
| FIN 340   | Capital Markets and Financial Management | 3     |
| FIN 441   | Investments                              | 3     |

Olin Elective Choices: 6 units required

| Code     | Title  | Units |
|----------|--|-------|
| FIN 500Q | Quantitative Risk Management                   | 3     |
| FIN 537  | Advanced Derivative Securities                 | 3     |
| FIN 539  | Mathematical Finance                           | 1.5   |
| FIN 551  | Advanced Fixed Income and Credit Risk Modeling | 2     |
| FIN 552  | Fixed Income Derivatives                       | 1.5   |

## The Major in Health Care Management

Total units required: 15

Health Care Management Core: 12 units

| Code    | Title  | Units |
|---------|--|-------|
| MGT 320 | Olin Grand Rounds: The Business and Practice of Medicine | 3     |
| MGT 321 | Health Economics and Policy                              | 3     |
| MGT 322 | Health Care Management                                   | 3     |
| MGT 420 | Research in Health Care Management                       | 3     |

Health Care Management Elective Choices: 3 units

| Code        | Title  | Units |
|-------------|--|-------|
| AMCS 226    | Sociological Approaches to American Health                       | 3     |
| AMCS 4135   | Tobacco: History, Culture, Science, and Policy                   | 3     |
| Anthro 260  | Topics in Health and Community                                   | 1     |

## The Major in Leadership and Strategic Management

Total units required: 12 units

Leadership Group A Elective Choices: (at least 3 units from Group A required)

| Code     | Title  | Units |
|----------|--|-------|
| MGT 450V | Defining Moments: Lessons in Leadership & Character From the Top | 1.5   |
| OB 400C  | Women in Leadership  | 1.5   |
| OB 400D  | Thinking Creatively and Leading Creative Teams                   | 1.5   |
| OB 461   | Negotiation  | 3     |
| OB 462   | Leadership in Organizations                                      | 3     |

Leadership Group B Elective Choices: (at least 3 units from Group B required)

| Code     | Title   | Units |
|----------|---|-------|
| MGT 380  | Business Strategy   | 3     |
| MGT 402  | Ethical Issues in Managerial Decision Making                                    | 1.5   |
| MGT 450R | Business & Government: Understanding and Influencing the Regulatory Environment | 1.5   |
| MGT 460G | Critical Thinking and Complex Problem Solving for Business                      | 1.5   |
| MGT 460H | Corporate and Global Strategy   | 3     |

Leadership Group C Elective Choices: (recommended for HR/HR Consulting)

| Code     | Title                                | Units |
|----------|--------------------------------------|-------|
| HRM 325A | Personnel/Human Resources Management | 3     |

|         |  |   |
|---------|--|---|
| MEC 391 | Economics of Human Resource Management | 3 |
|---------|--|---|

## The Major in Marketing

**Total units required:** 12

Marketing Core: 3 units

| Code    | Title              | Units |
|---------|--------------------|-------|
| MKT 378 | Marketing Research | 3     |

Marketing Electives: 9 units

- Group A Marketing Elective Choices: (at least 6 units from Group A required)

| Code     | Title                           | Units |
|----------|---------------------------------|-------|
| MKT 377  | Consumer Behavior               | 3     |
| MKT 400F | Brand Management                | 3     |
| MKT 400G | Digital Marketing and Analytics | 3     |
| MKT 470E | Pricing Strategies              | 3     |
| MKT 478  | New Product Management          | 3     |
| MKT 480  | Marketing Strategy              | 3     |

- Group B Marketing Elective Choices:

| Code        | Title                              | Units |
|-------------|------------------------------------|-------|
| MKT 400E    | Sales Management                   | 3     |
| MKT 450F    | Luxury Goods and a Dash of Fashion | 3     |
| MKT 465     | Retail Management                  | 3     |
| MKT 477     | International Marketing            | 3     |
| or MKT 477S | International Marketing Sydney     |       |
| or MKT 477L | International Marketing London     |       |
| MKT 481     | Integrated Marketing Communication | 3     |

## The Major in Operations and Supply Chain Management

**Total units required:** 12 units

Group A OSCM Elective Choices (at least 6 units from Group A required)

| Code      | Title                                | Units |
|-----------|--------------------------------------|-------|
| OSCM 400C | Analytics for Operational Excellence | 3     |
| OSCM 400D | Supply Chain Management              | 3     |
| OSCM 458  | Operations Planning and Control      | 3     |

Group B OSCM Elective Choices

| Code     | Title                         | Units |
|----------|-------------------------------|-------|
| MGT 380  | Business Strategy             | 3     |
| MGT 460H | Corporate and Global Strategy | 3     |
| MKT 378  | Marketing Research            | 3     |
| MKT 465  | Retail Management             | 3     |

### Class of 2021 Degree Requirements:

For a comprehensive view of our degree program, please review the requirements on our website (<http://www.olin.wustl.edu/EN-US/academic-programs/bs-business-administration/academics/Pages/curriculum.aspx>).

### Academic Options for Non-BSBA Degree Students

A student in another undergraduate division of the university may choose to complete a second major or a minor in a business discipline.

### Second Majors

Any non-BSBA degree student may earn a second major in a specific major discipline offered through Olin Business School. This opportunity allows students to combine their academic interests between two schools. If students wish to pursue a second major in business, they are required to follow the degree requirements for their primary school/major along with a set of core business requirements and 12-15 units of professional electives.

### Core Business Requirements:

| Code         | Title                                  | Units |
|--------------|--|-------|
| ACCT 2610    | Principles of Financial Accounting     | 3     |
| ACCT 2620    | Principles of Managerial Accounting    | 3     |
| Math 132     | Calculus II                            | 3     |
| MGT 100      | Individual in a Managerial Environment | 3     |
| or MGT 380   | Business Strategy                      |       |
| MEC 290      | Microeconomics                         | 3     |
| or Econ 4011 | Intermediate Microeconomic Theory      |       |
| MEC 292      | Global Economy                         | 3     |
| or Econ 1021 | Introduction to Macroeconomics         |       |
| QBA 120      | Managerial Statistics I *              | 3     |
| QBA 121      | Managerial Statistics II               | 3     |
| or Econ 413  | Introduction to Econometrics           |       |
| or Math 439  | Linear Statistical Models              |       |
| Total Units  |  | 24    |

\*Second majors may substitute Math 2200, Math 3200, ESE 326 or Pol Sci 363 for QBA 120.

Students may select a second major from the following disciplines:

- Accounting (p. 911)
- Economics and Strategy (p. 911)\*\*
- Entrepreneurship (p. 911)
- Finance (p. 912)
- Health Care Management (p. 912)

- Leadership and Strategic Management (p. 912)
- Marketing (p. 913)
- Operations and Supply Chain Management (p. 913)

**Regulations:**

1. Second majors are required to complete a minimum of 24 business units through Olin School.
2. All courses for any business major must be taken for a grade.
3. An overall 2.0 average must be achieved in course work taken as part of the business major.
4. All major courses must be taken in residence. Course work from an approved Washington University study abroad program will be considered as satisfying this residency policy. However, second majors may take one core course and one major course through a study abroad experience.
5. Students may not count one course toward two majors.
6. University College courses will not count toward any business major.
7. AP credit for Math 2200 will not serve as a substitute for our QBA 120 requirement. All second majors must complete QBA 120.
8. Students must declare their second major online through WebSTAC by the end of their junior year. A second major will not be awarded to a student unless proper declaration is made.
9. \*\*Economics and strategy majors must take MEC 290 since Econ 1011 will not satisfy the prerequisite requirement for MEC 370.
10. Engineering students who have taken ESE 326 and are majoring in finance will not be required to take QBA 120 or QBA 121.

Non-BSBA degree students may choose to pursue one major from the areas below:

## The Second Major in Accounting

**Total units required: 15**

Accounting Core: 6 units

ACCT 3610 Intermediate Financial Accounting Theory I

ACCT 3620 Intermediate Financial Accounting II

Accounting Elective Choices: 9 units

| MKT 465  | Retail Management             | 3     |

## Minors

### Minors for Non-BSBA Degree Candidates

Non-BSBA degree students are eligible to pursue a minor in one of the specific fields of business listed below:

- Accounting (p. 914)
- Business Economics (p. 914)
- Business of Entertainment (p. 914)\*
- Business of Sports (p. 915)\*
- Entrepreneurship (p. 915)
- Finance (p. 915)
- General Business (p. 915)
- Health Care Management (p. 915)

- International Business (p. 915)\*
- Leadership (p. 916)
- Marketing (p. 916)
- Operations and Supply Chain Management (p. 916)
- Strategy (p. 917)

\*Any undergraduate day division student (which includes BSBA students) can earn the business of sports, business of entertainment, or the international business minor as part of their undergraduate degree.

**Prerequisites for the Business Minor:**

The following prerequisites are required for all minors:

Math 132 Calculus II

Math 2200 Elementary Probability and Statistics  
or Math 3200 Elementary to Intermediate Statistics and Data Analysis  
or ESE 326 Probability and Statistics for Engineering  
or Pol Sci 363 Quantitative Political Methodology  
or QBA 120 Managerial Statistics I\*

Econ 1011 Introduction to Microeconomics or MEC 290 Microeconomics\*\*

QBA 121 is also a prerequisite for minors in marketing, finance, and general business.

ACCT 2610 is a prerequisite for the OSCM minor.

\*AP Credit for Math 2200 will satisfy this prerequisite. This exemption applies only to non-BSBA students earning a business minor.

\*\*Minors in managerial economics, business of entertainment, general business, and strategy minors must take MEC 290 as Econ 1011 is not a prerequisite for the core course requirements for any of these minors.

Engineering students who have taken ESE 326 and are minoring in finance will not be required to take QBA 120 or QBA 121.

## The Minor in Accounting

**Total units required: 15**

**Required courses:** Five courses including:

| Code      | Title                                      | Units |
|-----------|--|-------|
| ACCT 2610 | Principles of Financial Accounting         | 3     |
| ACCT 2620 | Principles of Managerial Accounting        | 3     |
| ACCT 3610 | Intermediate Financial Accounting Theory I | 3     |

Plus two chosen from the following:

| Code      | Title                                | Units |
|-----------|--------------------------------------|-------|
| ACCT 3620 | Intermediate Financial Accounting II | 3     |
| ACCT 400C | Not-For-Profit Accounting            | 1.5   |

|           |  |     |
|-----------|--|-----|
| ACCT 400L | Ethical Decision Making in Accounting  | 1.5 |
| ACCT 464  | Auditing                               | 3   |
| ACCT 466  | Financial Statement Analysis           | 3   |
| ACCT 467  | Income Tax Fundamentals                | 3   |
| ACCT 4680 | Advanced Financial Accounting Problems | 3   |

## The Minor in Business Economics

**Total units required: 15**

**Required courses:** Five courses including:

| Code     | Title                                      | Units |
|----------|--|-------|
| MEC 290  | Microeconomics                             | 3     |
| MEC 370  | Game Theory for Business                   | 3     |
| MEC 400K | Research Analysis in Industry              | 3     |
| MEC 470  | Market Competition and Value Appropriation | 3     |
| MEC 471  | Empirical Techniques for Industry Analysis | 3     |

## The Minor in the Business of Entertainment

**Total units required: 15**

**Required courses:** Five courses including:

| Code    | Title                      | Units |
|---------|----------------------------|-------|
| MEC 290 | Microeconomics             | 3     |
| MEC 460 | Economics of Entertainment | 3     |
| MKT 370 | Principles of Marketing    | 3     |

**Entertainment Group A Electives: (at least 3 units from Group A)**

| Code      | Title                          | Units |
|-----------|--------------------------------|-------|
| AMCS 3490 | Media Cultures                 | 3     |
| Film 220  | Introduction to Film Studies   | 3     |
| Film 423  | Histories of Media Convergence | 3     |

**Entertainment Group B Electives: (at least 3 units from Group B)**

| Code     | Title                                      | Units |
|----------|--|-------|
| FIN 448  | Advanced Financial Management              | 3     |
| MEC 471  | Empirical Techniques for Industry Analysis | 3     |
| MGT 301  | Legal Environment of Business Management   | 3     |
| MKT 378  | Marketing Research                         | 3     |
| MKT 400F | Brand Management                           | 3     |

Non-BSBA students must take a minimum of 12 Olin units to earn the entertainment minor.

BSBA students minoring in the business of entertainment:

- may not double count more than one course (3 units) toward their business major.
- must take QBA 120 since AP credit for Math 2200 is not a substitute for QBA 120.

## The Minor in the Business of Sports

**Total required units:** 15

**Required courses:** Five courses including:

| Code     | Title                                  | Units |
|----------|--|-------|
| MGT 100  | Individual in a Managerial Environment | 3     |
| MGT 440  | Sports Management                      | 1.5   |

| MGT 460I | Sports Business Analytics              | 1.5   |
| MKT 370  | Principles of Marketing                | 3     |

**Electives:** At least 3 units from the following:

| Code     | Title                                      | Units |
|----------|--|-------|
| FIN 448  | Advanced Financial Management              | 3     |
| MEC 460  | Economics of Entertainment                 | 3     |
| MEC 471  | Empirical Techniques for Industry Analysis | 3     |
| MGT 460J | Legal Issues in Sports                     | 1.5   |
| MKT 378  | Marketing Research                         | 3     |
| MKT 400F | Brand Management                           | 3     |

BSBA students minoring in the business of sports:

- may not double count more than one course (3 units) toward their business major.
- must take QBA 120 since AP credit for Math 2200 is not a substitute for QBA 120.

## The Minor in Entrepreneurship

**Total units required:** 15

**Required courses:** Five courses including:

| Code      | Title                                    | Units |
|-----------|--|-------|
| ACCT 2610 | Principles of Financial Accounting       | 3     |
| MGT 100   | Individual in a Managerial Environment   | 3     |
| MGT 301   | Legal Environment of Business Management | 3     |
| MGT 421   | Introduction to Entrepreneurship         | 3     |

|         |  |   |
|---------|--|---|
| MGT 424 | Business Planning for New Enterprises (The Hatchery) | 3 |
|---------|--|---|

## The Minor in Finance

**Total units required:** 15

**Required courses:** Five courses including:

| Code                             | Title                                    | Units |
|----------------------------------|--|-------|
| ACCT 2610                        | Principles of Financial Accounting       | 3     |
| FIN 340                          | Capital Markets and Financial Management | 3     |
| FIN 441                          | Investments                              | 3     |
| FIN 448                          | Advanced Financial Management            | 3     |
| Plus a 3-credit Finance elective |  | 3     |

## The Minor in General Business

**Total units required:** 15

**Required courses:** Five courses including:

| Code      | Title                              | Units |
|-----------|------------------------------------|-------|
| ACCT 2610 | Principles of Financial Accounting | 3     |
| MGT 380   | Business Strategy                  | 3     |

Choose three courses from the following options:

| Code     | Title                                    | Units |
|----------|--|-------|
| MKT 370  | Principles of Marketing                  | 3     |
| FIN 340  | Capital Markets and Financial Management | 3     |
| OSCM 356 | Operations Management                    | 3     |
| OB 360   | Organization Behavior Within the Firm    | 3     |

## The Minor in Health Care Management

**Total units required:** 15

**Required courses:** Five courses including:

| Code    | Title  | Units |
|---------|--|-------|
| MGT 100 | Individual in a Managerial Environment                   | 3     |
| MGT 320 | Olin Grand Rounds: The Business and Practice of Medicine | 3     |
| MGT 321 | Health Economics and Policy                              | 3     |
| MGT 322 | Health Care Management                                   | 3     |
| MGT 420 | Research in Health Care Management                       | 3     |

## The Minor in International Business

**Total units required:** 15

**Required courses:** Five courses including:

| Code    | Title                                  | Units |
|---------|--|-------|
| MGT 100 | Individual in a Managerial Environment | 3     |
| MGT 308 | Introduction to International Business | 3     |

A study abroad experience must be completed for this minor.

Choose 9 units from the following:

**International Business Group A course choices:** at least 3 units from the following:

| Code        | Title   | Units |
|-------------|---|-------|
| B52 FIN 420 | International Economics and Finance                 | 3     |
| INTL 320    | Business, Innovation and Entrepreneurship in Israel | 3     |
| MGT 200B    | Global Perspectives                                 | 3     |
| MGT 400S    | International Business Environment                  | 3     |
| MGT 405S    | International Business Environment - Sydney         | 3     |
| MGT 418     | International Business: A Euro Perspective          | 3     |
| MGT 450C    | Venture Consulting                                  | 3     |
| MGT 450T    | Strategy and Social Responsibility                  | 1.5   |
| MGT 450Z    | European Study Tour                                 | 1.5   |
| MKT 477S    | International Marketing Sydney                      | 3     |

**International Business Group B course choices:**

| Code     | Title                         | Units |
|----------|-------------------------------|-------|
| FIN 443  | International Finance         | 3     |
| MEC 292  | Global Economy                | 3     |
| MGT 460H | Corporate and Global Strategy | 3     |
| MKT 477  | International Marketing       | 3     |

BSBA students minoring in international business:

- may not double count more than one course (3 units) toward their business major.
- can take either MKT 477, MKT 477L or MKT 477S.
- can take either MEC 292 or MEC 292L.

## The Minor in Leadership

**Total units required:** 15

**Required courses:** Five courses including:

| Code    | Title                                  | Units |
|---------|--|-------|
| MGT 100 | Individual in a Managerial Environment | 3     |
| OB 360  | Organization Behavior Within the Firm  | 3     |
| OB 461  | Negotiation                            | 3     |

|        |                             |   |
|--------|-----------------------------|---|
| OB 462 | Leadership in Organizations | 3 |
|--------|-----------------------------|---|

Plus 3 units from the following:

| Code     | Title  | Units |
|----------|--|-------|
| MGT 201  | Management Communication   | 3     |
| MGT 450V | Defining Moments: Lessons in Leadership & Character From the Top | 1.5   |
| OB 400C  | Women in Leadership  | 1.5   |
| OB 400D  | Thinking Creatively and Leading Creative Teams                   | 1.5   |

## The Minor in Marketing

**Total units required:** 15

**Required courses:** Five courses including:

| Code    | Title                   | Units |
|---------|-------------------------|-------|
| MKT 370 | Principles of Marketing | 3     |
| MKT 378 | Marketing Research      | 3     |

Plus three courses chosen from the following:

| Code        | Title                              | Units |
|-------------|------------------------------------|-------|
| MKT 377     | Consumer Behavior                  | 3     |
| MKT 400E    | Sales Management                   | 3     |
| MKT 400F    | Brand Management                   | 3     |
| MKT 400G    | Digital Marketing and Analytics    | 3     |
| MKT 465     | Retail Management                  | 3     |
| MKT 470E    | Pricing Strategies                 | 3     |
| MKT 477     | International Marketing            | 3     |
| or MKT 477S | International Marketing Sydney     |       |
| or MKT 477L | International Marketing London     |       |
| MKT 478     | New Product Management             | 3     |
| MKT 480     | Marketing Strategy                 | 3     |
| MKT 481     | Integrated Marketing Communication | 3     |

## The Minor in Operations and Supply Chain Management

**Total units required:** 15

**Required courses:** Five courses including:

| Code     | Title  | Units |
|----------|--|-------|
| QBA 121  | Managerial Statistics II                       | 3     |
| QBA 200A | Analytics and Modelling for Business Decisions | 3     |
| OSCM 356 | Operations Management                          | 3     |

OSCM Electives: at least two courses from the following:

| Code      | Title                                | Units |
|-----------|--------------------------------------|-------|
| OSCM 400C | Analytics for Operational Excellence | 3     |
| OSCM 400D | Supply Chain Management              | 3     |

OSCM 458 Operations Planning and Control 3

## The Minor in Strategy

Total units required: 15

Required courses: Two courses including:

| Code    | Title                                  | Units |
|---------|--|-------|
| MGT 100 | Individual in a Managerial Environment | 3     |
| MGT 380 | Business Strategy                      | 3     |

Strategy Electives: Three courses including:

| Code     | Title   | Units |
|----------|---|-------|
| MGT 450R | Business & Government: Understanding and Influencing the Regulatory Environment | 1.5   |
| MGT 460G | Critical Thinking and Complex Problem Solving for Business                      | 1.5   |
| MGT 460H | Corporate and Global Strategy   | 3     |
| OB 462   | Leadership in Organizations   | 3     |

## Fulfilling the Business Minor

All non-BSBA students pursuing any business minor must:

- declare their minor online through WebSTAC no later than the end of their sixth semester;
- satisfy all prerequisites. It is preferred that prerequisites be completed at Washington University. Courses taken in University College or at another university do not satisfy any of the five required courses;
- take all 15 units of required courses at Olin Business School. Students may take one minor course through an approved study abroad program for each minor. Two courses can be taken at an Olin Study Abroad Program for the international business minor;
- take all 15 units of required courses for grades, i.e., no pass/fail;
- achieve no less than a 2.0 GPA average in all business minor course work;
- receive permission from their academic adviser and the Olin Business School to declare a second business minor.
- 15 additional units would be required to earn two business minors, as double counting is not allowed.

## Courses

Courses include:

- B50 ACCT (Accounting) (p. 917)
- B52, B62 FIN (Finance) (p. 918)
- B56 HRM (Human Resources Management) (p. 920)
- B99 INTL (International Business) (p. 920)

- B53 MGT (Management) (p. 920)
- B54 MEC (Managerial Economics) (p. 925)
- B55 MKT (Marketing) (p. 926)
- B58 OSCM (Operations and Supply Chain Management) (p. 928)
- B66 OB (Organizational Behavior) (p. 929)
- B59 QBA (Quantitative Business Analysis) (p. 929)

## Accounting

Visit online course listings to view semester offerings for B50 ACCT (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B50&crslvl=1:4>).

### B50 ACCT 2610 Principles of Financial Accounting

Provides an overview of the financial accounting reporting process, with a primary focus on the analysis of economic events and their effect on the major financial statements (balance sheet, income statement and statement of cash flows). Prerequisite: second semester freshman standing. Credit 3 units.

### B50 ACCT 2620 Principles of Managerial Accounting

Emphasis on the accumulation and analysis of data for internal decision makers. Introduces the vocabulary and mechanics of managerial accounting and accounting techniques used by internal managers in planning, directing, controlling and decision-making activities within their organizations. Prerequisite: ACCT 2610. Credit 3 units.

### B50 ACCT 3610 Intermediate Financial Accounting Theory I

The first of a two-course sequence in corporate financial reporting. Examines the environment of financial accounting, the standards-setting process and the conceptual framework that underlies financial accounting in the United States. Topics: review accounting basics, events and transactions that impact financial statements, comprehension of corporate financial reports, and examination of political and economic factors influencing accounting policy. Prerequisite: ACCT 2610. Credit 3 units.

### B50 ACCT 3620 Intermediate Financial Accounting II

Continuation of ACCT 3610. Focus on the accounting and reporting of various stakeholders' claims against the corporate entity. Claims of shareholders, long-term creditors, employees and governmental bodies are examined. An in-depth understanding of applicable generally accepted accounting principles is developed by examining the strengths and weaknesses of these principles and alternative accounting practices. Prerequisite: ACCT 3610. Credit 3 units.

### B50 ACCT 400A Analysis of Financial Institutions & Financial Instruments

The main goal of the course is to give students an in-depth understanding of how financial reports provide unusually accurate and detailed (but not perfect) information about the risks and performance of firms in the financial services

industries. These firms' financial statements increasingly are based on fair value accounting, and their financial reports typically include extensive risk and estimation sensitivity disclosures. Both fair value accounting and risk and estimation sensitivity disclosures are necessary ingredients for financial reports to convey the risk and performance of financial services firms in today's world of complex, structured, and risk-partitioning financial instruments and transactions. While financial services firms often apply fair value accounting and risk and estimation sensitivity disclosures imperfectly (or worse), careful joint analysis of the information they do provide invariably yields important clues about their risks and performance. Prerequisite: ACCT 501B.

Credit 1.5 units.

---

#### **B50 ACCT 400C Not-For-Profit Accounting**

Students will gain an understanding of the unique facets of not-for-profit accounting, including understanding not-for-profit financial statements, differences in not-for-profit GAAP, and the IRS Form 990. Prerequisite: ACCT 2610.

Credit 1.5 units.

---

#### **B50 ACCT 400L Ethical Decision Making in Accounting**

Accountants frequently find themselves working in environments ripe with ethical challenges. This course is designed to provide students with an understanding of various ethical theories and related frameworks for ethical decision making, with an emphasis on how these frameworks may be applied to situations frequently faced by accountants. The course will draw heavily upon actual cases faced by accountants, and also incorporate the current professional standards required for CPAs by the American Institute of Certified Public Accountants (AICPA) Code of Professional Conduct.

Credit 1.5 units.

---

#### **B50 ACCT 464 Auditing**

This course deals with the professional service industry of auditing. The auditing industry provides the service of objectively obtaining, evaluating, and communicating evidence regarding managerial assertions about economic events. Specifically, auditing ascertains the degree of correspondence between managerial assertions and established criteria. The course is organized around the basic categories of: (1) the economic role of external corporate auditing in securities markets, (2) the composition of the firms in the auditing industry, (3) the regulatory environment of auditing, (4) litigation issues facing the accounting/auditing industry, and (5) the requirements for conducting audits. Topics included in the last area include a consideration of the scope and application of Generally Accepted Auditing Standards (GAAS) and the general technology of auditing which are some general auditing topics typically covered on the CPA exam. Grading is based on homework, a group-based project, and two exams. Prerequisite: ACCT 3620 for undergraduates.

Credit 3 units.

---

#### **B50 ACCT 466 Financial Statement Analysis**

Designed to enhance students' understanding of the process of evaluating financial statement information. Requires a basic familiarity with financial accounting and the assumptions underlying measurements reported in financial statements, an understanding of the economic and regulatory forces underlying corporate disclosure of financial statement information and their effects on financial statement information, and familiarity

with data sources and analytical tools to extract and evaluate this data. Objectives are to develop familiarity with this type of analysis and to gain an appreciation for its limitations. Topics: profitability and risk analysis, credit risk models, forecasting and valuation. Prerequisite: ACCT 3610.

Credit 3 units.

---

#### **B50 ACCT 467 Income Tax Fundamentals**

This course provides an introduction to federal income taxation with primary emphasis on the tax implications of business transactions. The objectives of the course are to develop a basic understanding of federal income tax laws and to provide a framework for integrating income tax planning into the decision-making process. The course is of value to all students who need to recognize the important tax consequences of many common business transactions and is not intended solely for accounting majors or those students interested in becoming tax specialists. Prerequisites: junior standing and ACCT 2610.

Credit 3 units.

---

#### **B50 ACCT 4680 Advanced Financial Accounting Problems**

Examination of the nature and financial reporting aspects of various business transactions: corporate acquisitions, mergers and the formation of other strategic alliances. Topics: accounting for business combinations and consolidations, joint ventures and foreign currency translation, accounting and financial reporting issues facing government entities. Prerequisite: ACCT 3620.

Credit 3 units.

---

### **Finance**

Visit online course listings to view semester offerings for B52 FIN (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B52&crslvl=1.4>). For B62 FIN (p. 920), please refer to the course listed below.

---

#### **B52 FIN 340 Capital Markets and Financial Management**

Students will learn how the decisions of a company affect shareholder value and what decisions can increase it. To understand the perspectives of shareholders, we will study basic principles of investing: time value of money, valuation of debt and equity securities, discounted cash flow as a foundation for stock prices, the impact of diversification and leverage on portfolio risk, the relationship between risk and expected return in securities markets, and capital market efficiency. We will use these principles to analyze capital investment decisions by estimating cash flows and discounting them at the appropriate cost of capital. We will also study how shareholder value is affected by a firm's financing decisions, such as the choice of using debt or equity capital. Prerequisites: Math 132, ACCT 2610, MEC 290 or Econ 1011, QBA 120 and completion or concurrent enrollment in QBA 121.

Credit 3 units. EN: S

---

#### **B52 FIN 343 Personal Finance**

Examines issues underlying decision making regarding personal investments. Topics: present value concepts, financial markets and instruments, portfolio theory, bond and equity valuations, mutual funds, mortgages, taxes, and personal financial planning. BSBA students may enroll in this course but it will not count toward their degree nor toward their Washington University GPA. Prerequisite: junior standing.

Credit 3 units.

---

### **B52 FIN 400I Mergers & Acquisitions**

This course focuses on identifying ways to increase firm value through mergers and acquisitions (M&A) and corporate restructurings. We survey the drivers of success (and failure) in M&A transactions and develop skills in the design and evaluation of such transactions. Specific topics that we address in the course are the valuation of companies, the motivations underlying mergers, structuring of transactions, deal tactics and strategy, leveraged buyouts, corporate restructuring through divestitures, spin-offs, carve-outs and acquisitions of private firms. We also delve into issues of law, accounting and tax and how they affect the outcome of M&A transactions. Why is M&A an important component of any corporate finance professional toolset? It lays the foundation for effective work in a wide range of fields including corporate development, investment banking, consulting and strategy advising senior management. The presentations, class discussions, case analyses and readings help students master these important career skills. Prerequisites: FIN 340 and completion or concurrent enrollment in FIN 448. Credit 1.5 units.

---

### **B52 FIN 400J Advanced Valuation**

This course covers advanced topics in valuation. Main topics covered will be the valuation of private firms and young businesses, and the valuation of financial services firms such as banks and insurance companies. The course applies both theory and practical valuation methods through the analysis of cases and real world examples. Prerequisite: FIN 448. Credit 1.5 units.

---

### **B52 FIN 420 International Economics and Finance**

Analysis of a global financial center and the current financial crisis, its origins and how the global markets are affected. Initially, the course looks at the rise of London (Section 1) or the Asian Markets (Section 2) to become one of the world's financial centers, outlining the historical developments and regulatory changes. Then, it focuses in more details on the role of the government in setting policy which affects financial services domestically and internationally. The course continues to look at specific functional areas — hedge funds, private equity, structures products, liquidity and central banks. The module discusses in different sessions the current financial crises and what role different financial institutions and products played in its development. Prerequisite: admission to either the London Internship Program or the Asia Pacific Internship Program. Credit 3 units.

---

### **B52 FIN 428 Investments Praxis**

Students serve as managers of a portfolio, the Investment Praxis Fund, which is owned by the university. Students analyze investment opportunities in various industries and present recommendations to the class for possible purchases or sales of stocks, consistent with the style and objectives of the fund. Valuation tools, financial statement analysis and investment techniques are emphasized as part of a thorough analysis. The course focus is on developing and implementing investment ideas. Prerequisite: FIN 448. Credit 3 units.

---

### **B52 FIN 441 Investments**

Introduces the theory and practice of investments from the point of view of an investment/portfolio manager. We will begin with a review of asset classes, financial history, and preferences for risk. Next, we will have a brief review of statistics and finance and we will review matrix algebra. We will then apply these tools to examine the trade-off between risk and return and to develop and implement Modern Portfolio Theory. The major topics covered will include the Capital Asset Pricing Model (CAPM), Markowitz optimization, performance evaluation, market efficiency, and Arbitrage Pricing Theory (APT). The last portion of the course will be devoted to fixed income securities including interest rates, bond valuation, and bond immunization. Prerequisites: FIN 340, Math 132, MEC 290 or Econ 1011, QBA 120 and completion or concurrent enrollment in QBA 121. Credit 3 units.

---

### **B52 FIN 443 International Finance**

Provides a framework for making financial decisions in an international context. Topics include: relevant features of financial markets and instruments (such as foreign exchange, currency futures and options, swaps); exchange rates; corporate risk management; international investing and capital budgeting issues. Prerequisite: FIN 340. Credit 3 units.

---

### **B52 FIN 447 Information, Intermediation and Financial Markets**

Examines the organization and function of financial markets from the corporate perspective with an emphasis on investment banking activities. Topics: design, issuance and trading of corporate securities, risk management and corporate control transactions. Develop familiarization with current practices while building a conceptual framework for understanding and anticipating change in the institutions that make up the financial markets. Prerequisites: FIN 340, QBA 120 and QBA 121. Credit 3 units.

---

### **B52 FIN 448 Advanced Financial Management**

Advanced study of corporate financial management. A major focus is the relationship between the internal decisions of the corporation and the valuation of the firm in the capital market. Topics: capital budgeting systems, capital structure, debt policy, cash and working capital management, short- and long-term financial planning. Prerequisites: FIN 340 and QBA 121. Credit 3 units.

---

### **B52 FIN 451 Options, Futures and Derivative Securities**

Examines the theory and practical application of derivative securities such as futures, options and swaps. Central to the theory of derivative security pricing is arbitrage and payoff replication. In practice, derivative securities provide a principal route to manage and, in particular, hedge financial risk. Futures, options and swaps on different types of underlying assets are examined with emphasis on pricing and application. Prerequisite: FIN 340. Credit 3 units.

---

### **B52 FIN 470A Research Methods in Finance**

The course is designed to prepare students for independent research in finance by exploring methods and techniques in a manner that allows the students to implement them correctly and efficiently. The curriculum emphasizes practical applications

of empirical methods used in financial research and how to implement them. Students in the course learn empirical methods in corporate finance and asset pricing; obtain basic knowledge and familiarity of the databases used in common finance research; get exposure to recent research in finance which applies the methods covered; and learn how to implement the methods covered using relevant programming languages. Prerequisites: FIN 340, QBA 120 and QBA 121. Credit 3 units.

---

#### **B62 FIN 549H Special Topics: Real Estate Finance**

This course provides a broad introduction to real estate finance and investments. Topics include both equity and debt. We begin with an overview of real estate markets in the United States. On the equity side students will be introduced to the fundamentals of real estate financial analysis, including pro forma analysis and cash flow models, and elements of mortgage financing and taxation. Ownership structures, including individual, corporate, partnerships and REITS will also be covered. On the debt side, we examine a number of financing tools in the context of the evolution of the secondary mortgage market, both residential and commercial. Those wishing to pursue more advanced topics in real estate finance could follow this course with Fixed Income and Mortgage-Backed Securities. Prerequisites: FIN 340 and approval of Graduate Programs Offices for undergraduates. Credit 1.5 units.

---

### **Human Resources Management**

Visit online course listings to view semester offerings for B56 HRM (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B56&crslvl=1:4>).

---

#### **B56 HRM 325A Personnel/Human Resources Management**

Emphasis on development of attitudes and skills of managers and supervisors in solving human problems and in building and maintaining effective employer-employee relations. Major topic areas include: selection and placement, training, and compensation. Other topics include legal aspects of employment policies, labor relations, and other aspects of human resources management. Prerequisite: junior standing. Credit 3 units.

---

### **International Business**

Visit online course listings to view semester offerings for B99 INTL (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B99&crslvl=1:4>).

---

#### **B99 INTL 300A Planning for International Learning**

The primary focus of this course is on preparation for the study abroad/internship experience. Topics include the following: What does a global firm look for in a globally competent recruit; development of goals and objectives for international experience; develop a working knowledge of host country key features such as businesses, culture and politics; overview of logistics for abroad, including timeline expectations, visa, housing, travel, contact with Olin, and registration for return semester; Career Services resources on how to use study abroad/internship to obtain a summer job/internship. Prerequisite: admission to one

of Olin's study abroad or international internship programs or permission of instructor. Credit 0.5 units.

---

#### **B99 INTL 300B Applying International Experiences**

Course focus is on strengthening student experiences while on a study abroad/internship experience. Topics include the following: minimizing impact of culture shock and new academic programming through participation in on-site orientations; maximizing academic advising services while abroad; identifying opportunities to engage with the local culture; connecting students' individual personal and professional goals by revisiting actions and outcomes. Prerequisite: required of all students who are participating in an Olin semester abroad program. Credit 0.5 units.

---

#### **B99 INTL 320 Business, Innovation and Entrepreneurship in Israel**

Israel is an innovation and entrepreneurial hub with more listings on the NASDAQ than any country other than the U.S., more patents per capita and more entrepreneurial events occurring in Israel in both the commercial and social arena than anywhere else in the world. Students learn about the Israeli economy, different industries, Israeli culture and politics along with the critical business challenges and opportunities that face Israel. This course includes a required immersion to Israel during spring break and contains an additional lab fee for the immersion. Credit 3 units. EN: S

---

#### **B99 INTL 420 Business Research Internship**

This is the capstone course for overseas internship programs where students learn to apply rigorous statistical and analytical approaches to research questions in business, but not limited to questions relating to marketing, management, finance and economics, operations and policy. Students identify a research topic and present this topic to faculty supervisors for approval. The goal is to capitalize on the practical knowledge gained while interning abroad and apply that to a research question in the area in which a student is interning. Students are required to review the current literature on their topic, formulate their own research questions, identify potential data sources they can use to address these questions, and make recommendations to add to the body of knowledge on their chosen subject. Prerequisite: admission to one of Olin's International Internship Programs. Credit 3 units.

---

#### **B53 MGT 100 Individual in a Managerial Environment**

An introduction to the foundations of business. The course covers four major themes: (1) how markets work; (2) motivating and managing people; (3) business strategy and firm performance; (4) ethics and corporate social responsibility. In the fall semester, MGT 100 is only open to incoming BSBA freshmen, and students must be concurrently enrolled in MGT 150A. Spring semester enrollments are open to any freshman and sophomore. Credit 3 units. EN: S

---

**B53 MGT 150A Foundations of Business**

Provides first semester business students with an introduction to each of the functional areas of business as well as the entrepreneurial function. As they work to design their own enterprise, students will build skills in teamwork, communication, critical thinking, and an understanding of the complex interplay of business functions. Prerequisites: fall semester enrollment is only open to incoming business freshmen and students must be concurrently enrolled in MGT 100.  
Credit 2 units.

---

**B53 MGT 200A Business Fundamentals and Professional Competencies for Non-Business Students**

This course is intended to help successfully position arts and sciences, engineering, and design majors for careers in organizations such as nonprofits, entrepreneurial ventures, and corporations, among others. Students learn key technical and professional skills that are valued and often required by employers. Topics addressed include working in teams, data-driven decision making, financial and business analysis, concepts for organizational strategy, professional communication, and career strategies. The course uses a combination of lectures, exercises, projects and cases to introduce participants to these topics. The class is designed for Washington University undergraduates in Arts & Sciences, Engineering, and Design and Visual Arts who are preparing for internships or jobs. Recommended for sophomores and juniors. Business students cannot receive credit.  
Credit 3 units. EN: S

---

**B53 MGT 200B Global Perspectives**

We examine the economic, political, cultural and social bases of business in Cuba from a global perspective. These bases are explored to understand how business in Cuba is conducted and how it relates to the global economy. We examine these bases in their historical context, current changes in Cuba, and future prospects. Normalization of relations between the United States and Cuba will be studied in terms of its impact on business for United States and Cuban firms. An immersion experience covering the topics of the course occurs on a one-week trip to Cuba during spring break. Enrollment limited to 16. Prerequisites: MGT 100 or permission of instruction and application via sa.wustl.edu.  
Credit 3 units.

---

**B53 MGT 201 Management Communication**

Managers who write and speak effectively excel in business leadership. Persuasive and authentic communication is not only useful in advancing a business career; business employers also consider communication skills to be the most important attribute in people they hire. Effective communication involves more than mastering technical writing and presentation skills. Successful communicators use critical thinking to assess business scenarios and the audience who will hear or read a message; they craft communication in order to attain targeted results. This course gives students the opportunity to become more polished communicators as they work toward the following goals: applying rhetorical principles to management communication; using critical thinking to analyze the audience, the organizational environment and problems before choosing communication strategies; implementing principles of plain language and effective design; collaborating with colleagues to create effective group projects; representing a company or product in a "crisis

communication" press conference. Priority for enrollment is given to BSBA students. CET (<https://gephardtinststitute.wustl.edu/cec/olin-business-school>) course.  
Credit 3 units.

---

**B53 MGT 301 Legal Environment of Business Management**

Surveys the various areas of law that make up the legal environment of business. Develops a basic understanding of law as it relates to business, with traditional emphasis on private law and business transactions. This study of the micro law of business reviews the detailed substantive rules in the areas of contracts, sales, product liability, agency, corporations and partnership. In addition, a summary review of contemporary legal problems such as insider trading, discrimination in employment, sexual harassment and ethics may be discussed, if time permits. Case studies are analyzed in order to give the student an understanding of how various laws apply to actual situations. Prerequisite: sophomore standing.  
Credit 3 units.

---

**B53 MGT 308 Introduction to International Business**

Focus on the aspects of management of a business enterprise that are necessary to compete in the global marketplace. The course begins with a survey of the environmental context in which international companies operate (economic systems and cultural factors). This is followed by a review of International Trade Theory and Economics. This forms a basis for concentration in the second half of the course on strategies and structure for global operations. The course deals with the situations in Europe, Japan, Latin America and China through case studies and discussion of current topics and their relation to the fundamental aspects of global business management. Prerequisite: junior standing or permission of instructor.  
Credit 3 units.

---

**B53 MGT 320 Olin Grand Rounds: The Business and Practice of Medicine**

Grand rounds in medical schools are a forum for presenting new and challenging clinical problems and cases. The goal of Olin Grand Rounds is to focus on the challenges and solutions facing the business of medicine. The course therefore provides an introduction to the current issues facing the health care sector that integrates management tools and clinical knowledge. The objective is to provide students new insights into how modern management tools can be combined with scientific and clinical knowledge to manage health care organizations more efficiently and practice medicine more effectively.  
Credit 3 units. EN: S

---

**B53 MGT 321 Health Economics and Policy**

The basic tenets of health economics are covered. This course places a unique emphasis on incorporating materials from three broad source categories: textbook elements, "lay" press and media, and academic journal publications with the aim to foster application of rigorous, critical thought to media presentations of health care economics and policy issues.  
Credit 3 units. EN: S

---

**B53 MGT 322 Health Care Management**

The goal of the course is to develop facility in applying basic tenets of general management to actual situations and dilemmas that might be faced by health care managers, consultants, financiers, investors, innovators or providers in the course

of their work. Issues addressed include but are not limited to financial issues, management challenges and conduct of operations. The first phase covers the basic background on the structure and financing of the health care industry to include very brief reviews of critical topics such as insurance and government-provided health care. A few basic frameworks are then developed for students to apply to course topics moving forward, such as cost/benefit analysis and evaluation of risk. The remainder of the course involves critical analyses of health care cases involving varied subjects and management challenges. Sessions emphasize student-led discussions.  
Credit 3 units. EN: S

---

#### **B53 MGT 380 Business Strategy**

The course adopts the perspective of the general manager — the individual charged with developing and implementing the long-term strategy of a business. The course develops basic tools and concepts in strategy formulation, including competitive advantage, value creation and capture, industry analysis, capability assessment, competitive positioning, and strategy implementation. The course is designed to develop students' skills in both analyzing observed strategies and in formulating and implementing new ones. Prerequisite: MEC 290.  
Credit 3 units. EN: S

---

#### **B53 MGT 400S International Business Environment**

What is the relationship between the dominance of the financial interests centered in the City of London and the competitive performance of British industry? How does Britain reconcile an advanced capitalist economy alongside a traditional social and political structure? How great is the tension between domestic forces that seek closer economic and political integration with Europe and those pushing for greater engagement with Britain's former English-speaking colonies? Is British foreign policy driven more by economics than national security? This course addresses these and other important questions regarding British political economy by contextualizing current issues within the wider evolution of the country's political, economic and social systems since 1945.  
Credit 3 units. BU: IS

---

#### **B53 MGT 401 Management Center Practicum**

The Practicum allows students to work in four-person teams on consulting projects, applying insights from their course work to real-world business problems under faculty supervision. Each student is expected to spend a minimum of 150 hours during the semester on the project. Students' grades are based on the quality of the final written and oral reports at the conclusion of the project, as determined by the faculty supervisor. In addition, students receive payment of up to \$1,200 depending on the quality of the work as viewed by the client. Prerequisite: Students must apply for Practicum projects. Students are notified when projects are available.  
Credit 3 units.

---

#### **B53 MGT 402 Ethical Issues in Managerial Decision Making**

This course considers not only what ethical behavior means for a business entity, but how to: (i) balance competing ethical concerns against each other; and (ii) implement and sustain this balance across an organization. Readings and classwork zero in on the issues and situations most likely to put a manager in jail and the company in bankruptcy. Classes include Socratic discussion, simulations, analysis of video clips, and team tasks.

The emphasis is on practical frameworks and tools managers can apply in the real world. Prerequisite: senior standing.  
Credit 1.5 units.

---

#### **B53 MGT 405A Asian Study Tour**

Individual and team research, writing, presentation, and participation in Olin's Asian Study Tour. Includes required attendance and expected professional contributions to all corporate and government visits and briefings and other required individual and group activities. Prerequisite: admission to the Asia Pacific Internship Program.  
Credit 1.5 units.

---

#### **B53 MGT 405S International Business Environment - Sydney**

The aim of this course is to internalize and develop multicultural competency applied within personal, organizational and business contexts. Reaching this goal includes developing personal awareness, understanding of important concepts and developing multicultural skills. The ability to recognize and overcome common pitfalls that prevent people from operating effectively within, and actually benefiting from, multicultural contexts will be explored. Prerequisite: admission to the Asia Pacific Internship Program.  
Credit 3 units.

---

#### **B53 MGT 418 International Business: A Euro Perspective**

Examines the economic and institutional setting of Europe from a general business perspective. The economic and political structures of major countries are studied. The role of the European Economic Community examined as well as that of some major international organizations such as GATT and OECD. The primary emphasis is with countries of western Europe. Other topics: theory of customs, unions, monetary and economic integration, and multicountry policy integration. Opportunities for and problems of doing business in Europe examined from both an overall strategic perspective and from the perspective of the different functional areas. Prerequisite: admission to the London Internship Program.  
Credit 3 units. BU: IS

---

#### **B53 MGT 420 Research in Health Care Management**

This is the capstone course for the Health Management major where students learn to apply rigorous statistical and analytical approaches to research questions in health services, but not limited to questions relating to management, finance and economics, operations and policy. Faculty identify several available research project options and present these options in class. The goal is to capitalize on the strength of the university medical school and affiliated medical centers, in addition to capitalizing on existing relationships between Olin and health care firms to identify the student research projects. Students also are encouraged to formulate their own research questions and to identify potential data sources they could use to address these questions, if they so desire. Students work in teams of 3-4, using the approach developed for the Practicum and Hatchery courses.  
Credit 3 units.

---

#### **B53 MGT 421 Introduction to Entrepreneurship**

Through case studies, frequent guest speakers, and the professor's own experience, the real world of entrepreneurship will be brought into the classroom to provide a context for students to learn the fundamentals of founding, operating, and

exiting a startup business. Students will learn new perspectives that will teach them to think like an entrepreneur. Those who are interested in the general study of entrepreneurship, those who want to be entrepreneurs, and those who would like to leverage entrepreneurial principles in other career paths are all good candidates for the course. This course can only be taken for a grade. Prerequisite: sophomore, junior, or senior standing in any school or college.

Credit 3 units. EN: S

---

### **B53 MGT 424 Business Planning for New Enterprises (The Hatchery)**

In this course, students form teams to pursue their own or an outside entrepreneur's commercial or social venture. The first session will feature a "Team Formation" event where students and community members pitch their ideas and opportunities to the class. During the semester, the teams are supported and advised by the Instructor, Executive Coach, and Mentor(s) as they research and develop startup plans. Academic deliverables include two presentations to a panel of judges and a complete business plan for commercial ventures or sustainability plan for social ventures. The course is open to students from all disciplines and degree programs. Most of the work will be done outside the classroom with the support of the coaches, mentors, advisors and instructor. Classes will be held once per week for the first half of the semester. Workshops and rehearsals will be required in the second part of the term. Prerequisite: MGT 424 or instructor discretion for all undergraduates from all degree types. CET (<https://gephardt.institute.wustl.edu/cec/olin-business-school>) course.

Credit 3 units.

---

### **B53 MGT 440 Sports Management**

This course examines business and management issues involved in the sports industry. This industry is very diverse, ranging from global sports events (such as the Olympic Games, World Cup Soccer, etc.) to major national competitions (such as the National Football League, Major League Baseball, etc.). Engaged in this industry are many different players, including franchises, governing leagues, sponsors, media, stadium owners, government, fans, and so forth. This course will take a practical look at the world of sports management and administration, with an eye on extracting key lessons for corporate management and administration.

Credit 1.5 units.

---

### **B53 MGT 450A Internship in Business**

This is an online course designed to deepen the overall learning students gain from an internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin business curriculum, the value of the internship will be markedly increased — for both students and employers. Internship in Business is a 1.5-credit Pass/Fail course for Olin Business School undergraduates. The course, credit, and pass/fail grading are transcript notations, but the hours earned for MGT 450A do not count toward the 120 hours minimum needed for graduation. Students must submit application for approval to the Weston Career Center. Prerequisite: approval from Weston Career Center (WCC) prior to enrolling in this course.

Credit 1.5 units.

---

### **B53 MGT 450C Venture Consulting**

Students who complete the course will gain a deep understanding of the issues of both operational management and investment management of startup firms. Students will learn of the fundamental strategies and tactics employed by private equity and venture capital firms as well as aid in the development of business strategies for the companies in which they invest. Additionally, students will learn how to take into account the macroeconomic, political, and cultural issues that affect startup businesses that are both operating internationally and raising capital internationally. Furthermore, students will learn of the subtleties in the complex relationship between the investment firm and the entrepreneur and will understand both their shared and disparate motivations and objectives. Students who complete the course will develop competency in the research and writing of professional consulting reports and will gain a more sophisticated understanding of both venture capital and entrepreneurship management and strategy. Students will better understand the interpersonal dynamics between the relevant stakeholders, will become proficient in the terminology of private equity investing, and will learn how to create structure to unstructured problems thus improving their ability for critical thinking. Participants will be given the opportunity to apply their efforts beyond their basic functional business skills, and toward issues of relationship management and strategy. Prerequisite: MGT 421.

Credit 3 units. EN: S

---

### **B53 MGT 450D Honors Thesis I: Research and Analysis**

The Olin BSBA Honors Thesis challenges motivated students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. Senior BSBA degree students in good standing with a cumulative grade point average of 3.70 or higher have the opportunity to develop an intensive research project, which extends far beyond the limits of the material in a single course during a single semester. In the two-semester honors thesis sequence, research and analysis are the foci of the first semester and, upon successful progress, the student writes, presents and defends the research in the subsequent semester. Prerequisites: senior standing and faculty permission.

Credit 3 units.

---

### **B53 MGT 450E Honors Thesis II: Writing and Presentation**

The Olin BSBA Honors Thesis challenges motivated students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. Senior BSBA degree students in good standing with a cumulative grade point average of 3.70 or higher have the opportunity to develop an intensive research project, which extends far beyond the limits of the material in a single course during a single semester. In the two-semester honors thesis sequence, research and analysis are the foci of the first semester and, upon successful progress, the student writes, presents and defends the research in the subsequent semester. Prerequisite: MGT 450D.

Credit 3 units.

---

### **B53 MGT 450G The Business of Sports**

This course provides an overview of the major aspects of the sports business industry, including but not limited to (1) the primary revenues and expenditures of pro and college sports, (2) collective bargaining agreements, (3) sports media rights, (4) facility financing, (5) sports sponsorships and athlete endorsements, (6) the role sports commissions play within

communities, and (7) current events impacting the growth and evolution of the sports business industry.

Credit 3 units.

---

**B53 MGT 450I International Internship in Business**

The online course deepens the overall learning a student gains from an international internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin business curriculum, the value of the internship increases markedly — for student and employers. Prerequisite: admission to one of Olin's International Internship Programs.

Credit 1.5 units.

---

**B53 MGT 450R Business & Government: Understanding and Influencing the Regulatory Environment**

The United States, as well as many of the world's governments, has entered a new episode with respect to the interaction of business and government. Now, more than ever, government regulations are attempting to spur job growth and the economy on one hand, but also are intruding into many aspects of business and the markets on the other hand. Business students must not only understand the shifting business government landscape, but also how to engage government officials and legislators to help shape policies that affect their firms and industries. As an introductory course, student will learn from business and government leaders how to interact with and affect the processes of regulation. Prerequisite: online application (<http://sa.wustl.edu>).

Credit 1.5 units.

---

**B53 MGT 450T Strategy and Social Responsibility**

In the modern world, large corporations have come to dominate many parts of economic life. Managers in large corporations face a challenging set of trade-offs about (1) how to balance value creation for present and future generations and (2) how to coordinate the distribution of this value among shareholders, customers, suppliers, employees, and the communities in which they operate. The supremacy of shareholders among these constituencies has led some groups to fear that they will be exploited when shareholders' interests conflict with their own. In this course, we will examine different perspectives on the role of corporate self-interest, changing social values, NGOs, and government regulation in addressing this apparent conflict. In particular, the course examines how pro-social business practices affect the relationships between for-profit corporations and customers, employees, suppliers, investors, regulators, and non-governmental organizations. We explore how these practices can be integrated into a firm's operating strategy, and how they can be employed to enhance a firm's competitive position. Prerequisites: MGT 100 and MEC 290 or permission of instructor.

Credit 1.5 units.

---

**B53 MGT 450V Defining Moments: Lessons in Leadership & Character From the Top**

Most successful leaders can point to a handful of "defining moments" in their careers — key choice points that defined the trajectory of their character, their career, and/or their company. How can aspiring business leaders prepare themselves to face these defining moments with insight and integrity? How do leaders achieve business performance without sacrificing character or integrity? This course examines these questions by learning from notable leaders who exemplify both business

excellence and personal character. Top executives from leading companies will sit down with us to talk about their "defining moments" and to engage with us in considering these questions. These conversations will be supplemented with contemporary cases and readings on leadership and character. Prerequisites: senior status or juniors with permission of instructor.

Credit 1.5 units.

---

**B53 MGT 450X CEL Entrepreneurial Consulting Team**

Early stage companies provide a unique environment for students to make a meaningful impact on the future trajectory of a growing organization. CElect is an experiential learning course that matches teams of Washington University students with St. Louis area start-up ventures to perform defined management consulting projects. In addition to the required day-long orientation and concluding sessions taught at the T-REx incubator downtown, students will work directly with the professor and with their client company on a consistent, but variable, schedule depending on the needs over the course of the semester. In addition to being embedded on a project for an early stage company, students will have the opportunity to engage with other entrepreneurship support organizations such as local accelerators, venture capital firms, and incubators. Enrollment is limited. Prerequisite: Application required. Once accepted, students may not drop this class. Please note: There is a required orientation session that will be held on the second Friday of the graduate business semester.

Credit 3 units.

---

**B53 MGT 450Z European Study Tour**

Individual and team research, writing, presentation and participation in Olin's European Study Tour (EST), including Mock Parliament. Includes required attendance and expected professional contributions to all EST corporate and government visits and briefings and other EST individual and group activities. Prerequisite: admission to one of Olin's European International Programs.

Credit 1.5 units.

---

**B53 MGT 460F Contemporary Issues in Sports Business**

This course will involve a series of class sessions each organized around a particular sports management topic, and jointly taught by the instructor and a different guest speaker (or speakers) each week. Each session will include a mini-case or real-time business example facing the sports management professionals at that time. Overarching objective is to provide students with contemporary and experiential opportunities in the sports business industry. Prerequisite: MGT 450G.

Credit 1.5 units.

---

**B53 MGT 460G Critical Thinking and Complex Problem Solving for Business**

The course introduces students to rigorous techniques for critical and strategic thinking, problem formulation and problem solving, advancing their ability to provide valuable advice to organizations and preparing them for management consulting company interviews by exploring methods to engage in case analysis, various cognitive biases that can emerge as a problem is being formulated and analyzed, such as the use of inappropriate analogies, confirmation bias, self-serving bias, conflation of correlation and causation, etc.

Credit 1.5 units.

---

### **B53 MGT 460H Corporate and Global Strategy**

Business-level strategy involves a firm's choices regarding how to compete in a particular single industry or market. Corporate strategy, on the other hand, involves choices about which sets of different industries or markets to compete in, and how to do so. It also involves choices about which kinds of activities to undertake within the firm, and which to organize through contracts or alliances with other firms. Global strategy is a particular type of corporate strategy that involves choices about which geographic regions or national markets to compete in and how.  
Credit 3 units.

---

### **B53 MGT 460I Sports Business Analytics**

This course introduces students to business analytics through sports-themed applications, academic research pertaining to sports topics, class readings, and guest lecturers from industry. Objectives for students include: 1) learning estimation and forecasting skills/trends used in sports; and 2) developing critical thinking skills necessary to assist managerial decision making to augment the performance of sports teams, leagues or companies. Prerequisite: MEC 290 or Econ 4011.  
Credit 1.5 units.

---

### **B53 MGT 460J Legal Issues in Sports**

This course introduces the fundamentals of sports law. It teaches the basic tenets of a variety of legal disciplines through the lens of sport. It focuses on legal issues that have a direct relationship to sport with an emphasis on current legal sports issues in the news. In the tort arena, we will explore the potential liability of athletes for reckless violent actions toward their competitors, of sports teams and leagues for failing to adequately protect the health of participants (e.g., concussion lawsuits), of coaches, trainers and medical personnel at all levels for failing to properly train, monitor and assess athletes, of product manufacturers for injuries caused by defective sports equipment, and of teams for injuries to spectators, among other potential liabilities.  
Credit 1.5 units.

---

### **B53 MGT 460K Taylor Community Consulting**

Students work in four-person teams on consulting projects, applying insights from their course work to real-world business problems under faculty supervision. Each student is expected to spend about 150 hours on the project. Grades are based on the quality of the final written and oral reports, as determined by the faculty supervisor. Students are paid a small gratuity, the amount, depending on the quality of the work. Students are only eligible to participate in one Taylor Course per semester, if selected. Prerequisite: Students must apply for Taylor projects. Students are notified when projects are available.  
Credit 3 units.

---

### **B53 MGT 460L Introduction to Social Entrepreneurship**

The course is designed for students who are interested in how to create positive social change through market-based strategies. Social entrepreneurship refers to the practice of combining innovation, resourcefulness and opportunity to address critical social and environmental challenges. Social entrepreneurs focus on transforming systems and practices to enable human potential and to create sustainable systems change. We will learn how social entrepreneurs have responded to social challenges through creating companies. What are the strengths and weaknesses of this approach compared to "traditional" nonprofit management, activism and SR? Students will learn the basics of entrepreneurship, and focus on ways to understand

and define a social problem and test various approaches to work with others on systems change. Students will learn to think like an entrepreneur, looking for opportunities and leverage, to create (social) value without many formal resources. This semester, selected students will also have the opportunity to work closely with community social entrepreneurs shortlisted from the Social Entrepreneurship and Innovation Competition, to write cases to make their business and impact models clearer and contribute to the knowledge-base of social entrepreneurship. Students may take either MGT 421 or this course.  
Credit 3 units.

---

### **B53 MGT 490 Honors Seminar I**

The first of a two-course honors seminar. Students have the opportunity to investigate current issues in business using an interdisciplinary approach to their research. Seminar content varies from year to year. Prerequisites: senior standing and faculty invitation.  
Credit 3 units.

---

### **B53 MGT 491 Honors Seminar II**

The second of a two-course honors seminar. Students have the opportunity to investigate current issues in business utilizing an interdisciplinary approach to their research. Seminar content varies from year to year. Prerequisite: MGT 490.  
Credit 3 units.

---

## **Managerial Economics**

Visit online course listings to view semester offerings for B54 MEC (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B54&crslvl=1:4>).

---

### **B54 MEC 290 Microeconomics**

Provides a rigorous analysis of the behavior of consumers and firms in competitive and monopoly markets; oligopoly markets are introduced. Consumer topics include preferences and utility, budget constraints, consumer optimal choice and demand curves. Firm topics include technology, cost minimization and profit maximization. The course concludes with price determination in monopoly and competitive markets, and an introduction to oligopoly and game theory. The focus of the course is on microeconomics as a decision making tool for consumers and managers. Prerequisite: Math 131.  
Credit 3 units. EN: S

---

### **B54 MEC 292 Global Economy**

Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include: introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; global economic competition and business strategy. Prerequisites: QBA 120; and MEC 290 or Econ 1011.  
Credit 3 units. EN: S

---

---

**B54 MEC 292S Global Economy - Australia**

Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include: introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal, and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; global economic competition and business strategy. Prerequisites: MEC 290 or Econ 1011, QBA 120 and admission to the Asia Pacific Internship Program.  
Credit 3 units.

---

**B54 MEC 370 Game Theory for Business**

Provides students with a methodological framework to analyze strategic business situations. Building on a background in microeconomics and statistics, this course includes such topics as the following: modeling strategic problems, games with sequential moves, games with simultaneous moves, strategies and the derivation of strategic forms, general classes of games, uncertainty and information, strategy and voting, auctions, bargaining. Prerequisite: MEC 290.  
Credit 3 units. EN: S

---

**B54 MEC 391 Economics of Human Resource Management**

Key to a firm's success is whether it can develop a firm organization and a human resource management system that reinforce the firm's strategic position. This course covers topics in managing work forces and organizations that are of fundamental importance to all managers, and teaches how organizational design and human resource policies interact with the firm's market strategy and production environment. We look at how management can motivate executive and employee performance, screen and attract appropriate workers, and improve the way information is processed and decisions are made within organizations. This course combines economic analysis with case discussions to address topics including hiring policy, turnover, training, variable pay, promotions, evaluation, job design, teams, worker empowerment, hierarchy, and organizational structure like centralization and decentralization. Prerequisite: MEC 290.  
Credit 3 units.

---

**B54 MEC 400K Research Analysis in Industry**

Research in Industry Analysis will build on the materials taught in MEC 370 (Game Theory) MEC 470 (Market Competition and Value Appropriate) and MEC 471 (Empirical Techniques in Industry Analysis), integrating them with methods of industry analysis used in practice and applying them to companies. Prerequisites: MEC 370, MEC 470 and MEC 471.  
Credit 3 units.

---

**B54 MEC 460 Economics of Entertainment**

This course focuses on the unusual economics of the entertainment industry and the associated management challenges. The sessions cover the basic economics of entertainment, then focus specifically on the music and movie industries, plus one other that varies from year to year. Classes consist of lecture and discussion, as well as speakers from the relevant industries. The primary student deliverable is a twenty

minute documentary-style production in which student teams present findings of their research into specific industries within the broader industries studied in class, e.g., rock, classical or rap within music, blockbusters within music, etc. Prerequisite: MEC 290 or Econ 4011.  
Credit 3 units.

---

**B54 MEC 470 Market Competition and Value Appropriation**

Provides students with frameworks and capabilities for making intelligent decisions in evolving markets. Course begins with general game theory concepts, which form the basis for two main topics: models of competition in markets and value appropriation. Students learn the basic framework and apply it in the context of a detailed industry study. Specific topics may include firm interactions in stable and evolving market environments, industry life cycles, the evolution of new product markets, and strategic decision-making in developing markets. Prerequisite: MEC 370.  
Credit 3 units.

---

**B54 MEC 471 Empirical Techniques for Industry Analysis**

Students will learn how to use data to answer a wide variety of questions regarding the incentives and behavior that generate market activity. We emphasize inference about the strategic decisions of firms and consumers. Students are introduced to new statistical and econometric tools by examining the application of these tools to current research in economics. Among the topics considered are the empirical implications of: strategic bidding in auctions, price discrimination and dispersion, differences across products, and the internal organization of firms. Prerequisites: MEC 290, QBA 120 and QBA 121.  
Credit 3 units.

**Marketing**

Visit online course listings to view semester offerings for B55 MKT (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B55&crslvl=1:4>).

---

**B55 MKT 370 Principles of Marketing**

Marketing is the window to the customer, making the function a critical component of any successful organization. Through a mixture of lectures, case discussions and classroom exercises, this course gives students an overview of the best theories and practices in marketing management today. Specific topics include: how to segment the customer base and choose target markets, how to create perceived value both from an economic and psychological perspective, how to differentiate a product or service from a competitor's offering, how to build and maintain a strong brand, and how to employ different marketing tools such as advertising, pricing, product design, service and location. The class also provides students with some basic tools for evaluating the financial impact of marketing activities. Prerequisites: sophomore standing and MEC 290 or Econ 1011 or MGT 100.  
Credit 3 units. EN: S

---

**B55 MKT 377 Consumer Behavior**

Psychological, sociological and social psychological principles as they apply to consumer response to product offerings, media communications, personal influence and other environmental factors. Consumer buying behavior is analyzed from theoretical, empirical and applied perspectives. Current applications of

concepts employed by marketers are discussed in the context of both consumer and industrial marketing situations. Prerequisite: MKT 370.

Credit 3 units. EN: S

---

#### **B55 MKT 378 Marketing Research**

The four P's of marketing are product, place, price and promotion. Using these decision variables, firms seek to maximize profits. Making these decisions requires market information. Marketing research is the process of actively collecting, assimilating, and analyzing market information to support management decision making. Teaches the nuts and bolts of market research. Prerequisites: MKT 370, QBA 120 and QBA 121 or concurrent enrollment in QBA 121.

Credit 3 units.

---

#### **B55 MKT 400E Sales Management**

This course will provide students with a thorough understanding of the sales function in a managerial context as well as the process of selling from prospecting through solution selling and account maintenance. Specific topics addressed include sales force structure, salesperson selection, evaluation and compensation. Students will study sales technique, strategic selling, and key account management. Prerequisite: MKT 370.

Credit 3 units.

---

#### **B55 MKT 400F Brand Management**

A brand is a promise, and this promise is often the most valuable asset of a firm. In this class, students will examine the creation and building of brand equity to create long-term profit for the firm. The class will examine what we know about brand management and brand theory from years of rigorous scientific research in the area. While learning the foundations of brand management, students will develop the skills needed to create a meaningful brand, position a brand, develop brand names and logos, promote a brand, leverage brand equity, extend a brand, and communicate brand meaning via traditional and social media. Students will learn some of the day-to-day skills performed by brand managers and interact with brand managers via guest speakers from top branding firms. Prerequisite: MKT 370 and either completion or concurrent enrollment in MKT 378.

Credit 3 units.

---

#### **B55 MKT 400G Digital Marketing and Analytics**

The aim of this course is to provide a rigorous and comprehensive introduction to technology and methods of conducting marketing activities online and analyzing the data that inform and result from those activities. Prerequisite: MKT 370.

Credit 3 units.

---

#### **B55 MKT 450F Luxury Goods and a Dash of Fashion**

This course focuses on the structure, strategies and business models of the global personal luxury apparel and accessory market. We study brands such as Burberry, Moncler, Louis Vuitton, Chanel and other industry leaders. The course is divided into two major segments. The first part is an on-campus 12-class segment which concludes with a final exam and a team report. The next segment is a spring break field trip to New York where we will visit the headquarters and showrooms of luxury brands and fashion retailers and meet with their executive leadership teams. Students will apply to take the course, and enrollment will be capped at 15 students. Applications will be due November

10, 2017. Application is online ([http://sa.wustl.edu/index.cfm?FuseAction=Programs.ViewProgram&Program\\_ID=10304](http://sa.wustl.edu/index.cfm?FuseAction=Programs.ViewProgram&Program_ID=10304)). Contact instructor or BSBA Office for questions. Prerequisite: completion or concurrent enrollment in MKT 370 and instructor permission.

Credit 3 units.

---

#### **B55 MKT 465 Retail Management**

Explores the fundamental factors that are critical to the success of most retailers; merchandising, store design and display, personal selling, advertising and promotion, pricing and location. A wide variety of retailers — department stores, specialty stores, wholesale clubs, direct marketers, franchisers, food retailers, discounters and others — are studied. Through case methodology, the role that managers play in problem solving and development of strategies are studied. Topics include: positioning for success; retailing organizations; retail economics; pricing strategy; and entrepreneurial retailing. Prerequisite: MKT 370.

Credit 3 units.

---

#### **B55 MKT 470E Pricing Strategies**

This course equips students with the concepts, techniques, and latest thinking on assessing and formulating pricing strategies. Through lectures, in-class discussions, case studies, group project/presentations, and pricing simulation games, students learn to use the fundamental analytical tools, theories and conceptual frameworks to formulate proactive pricing strategies improving the firm's profitability. Topics of discussion include incremental contribution analysis, EVC analysis, segmentation and price customization, competitive pricing strategy, pricing innovative products, price promotion, psychological/behavioral issues in pricing, dynamic pricing, pricing and market making on the internet, and pricing of digital products and services. Prerequisite: MKT 370.

Credit 3 units.

---

#### **B55 MKT 477 International Marketing**

Addresses three fundamental decisions confronting a company whose operations extend beyond the domestic market: (1) choosing which foreign markets to penetrate; (2) determining the mode of market entry; and (3) devising the international marketing plan. Topics include: global marketing planning; environmental and cultural influences on international marketing decisions; organizational and control issues in international marketing decisions; global marketing intelligence; foreign risk and feasibility studies; and issues of ethics in other countries. Prerequisite: MKT 370.

Credit 3 units. EN: S

---

#### **B55 MKT 477L International Marketing London**

Many companies, large & small, prepare a business environmental analysis for each country in which they do business. The analysis assesses the (consumer, industrial or organizational) demand in a particular country for merchandise like the company markets as well as the company's ability & willingness to supply that merchandise to that country. Students will prepare a marketing environmental analysis for some merchandise (either a new or existing service or product) of their choice from a company of their choice in London. Prerequisites: MKT 370 and admission to the London Internship Program.

Credit 3 units.

---

**B55 MKT 477S International Marketing Sydney**

Many companies, large & small, prepare a business environmental analysis for each country in which they do business. The analysis assesses the (consumer, industrial or organizational) demand in a particular country for merchandise like the company markets as well as the company's ability & willingness to supply that merchandise to that country. Students will prepare a marketing environmental analysis for some merchandise (either a new or existing service or product) of their choice from a company of their choice in Australia. Prerequisites: MKT 370 and admission to the Asia Pacific Internship Program. Credit 3 units.

---

**B55 MKT 478 New Product Management**

In a rapidly changing business environment where product life cycles are shortening and competition is intensifying, creating new products has become the most significant and most risky activity within a firm. This course aims to develop an understanding of the "state of the art" strategies, processes and methods used in developing new products. This course focuses on key new product issues including generation and assessment of ideas, value creation in competitive markets, the impact of disruptive technologies on mainstream industries, the diffusion of innovative new products and services, business model innovation, marketing mix (4P's) decisions for new products, concept and market testing, first mover dis/advantage, and expanding the product portfolio. This is a case-based course, where students participate in a dynamic and interactive group environment to develop the capacity to use the information learned to make informed new product decisions. Prerequisite: completion of concurrent enrollment in MKT 378. Credit 3 units.

---

**B55 MKT 480 Marketing Strategy**

Successful business plans are dependent on well-defined and carefully crafted marketing strategies. In this course, students explore the interconnections between business strategy and marketing strategy through a series of lectures, case discussions, and participation in an online marketing simulation exercise. The course also places heavy emphasis on the discussion of topical marketing issues faced by companies in the current environment. Students are required to read the relevant business press and bring real world issues into the class for brainstorming and interactive discussion. Through this process, students become astute observers of the strategic trends in marketing across a variety of industries. Prerequisite: MKT 370. Credit 3 units.

---

**B55 MKT 481 Integrated Marketing Communication**

This course focuses on an Integrated Marketing Communications (IMC) approach to advertising and other forms of commercial communications. The purpose is to provide future managers and practitioners with a foundation in communications theory, based on understanding the target's role in the demand chain for goods and services, as well as "hands on" experience in developing marketing communications plans. A practical understanding is provided of each of the range of marketing communications vehicles: consumer and business-to-business advertising, sales promotion/incentives, direct marketing, public relations, events and sponsorships, as well as online/interactive communications. Copy strategy, creative development, media planning, promotion strategy, and the evaluation of these programs are all addressed in this course. Industry experts will give guest lectures. We will have four companies in different

industry sectors for which the class will develop marketing communications plans during the course. Prerequisite: MKT 370. Credit 3 units.

---

**Operations and Supply Chain Management**

Visit online course listings to view semester offerings for B58 OSCM (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B58&crslvl=1:4>).

---

**B58 OSCM 356 Operations Management**

Introduces a variety of common operations issues that are frequently dealt with in both manufacturing and service industries and that affect other functions of the business. Specific topics include: process design and control; quality; waiting line models; inventory systems; and supply chain management. Prerequisites: ACCT 2610, MEC 290 and completion of QBA 200A or concurrent enrollment in QBA 200A. Credit 3 units.

---

**B58 OSCM 400C Analytics for Operational Excellence**

This course provides advanced modeling and analytic tools to analyze operational processes, identify key drivers for business performance, and prescribe action plans to improve operational excellence. The emphasis is on modeling tools that are widely used in diverse industries and functional areas, including operations, finance and marketing. Applications include service capacity planning, advertising planning, revenue management, portfolio optimization, corporate risk management, environmental policy modeling, among others. Prerequisite: OSCM 356. Credit 3 units.

---

**B58 OSCM 400D Supply Chain Management**

A supply chain is a network of all firms and relationships that get a product to market, including the original acquisition of raw materials, production of the item at a manufacturing facility, distribution to a retailer, sale of the finished item to the customer, and any installation, repair, or service activities that follow the sale. How to effectively manage the supply chain is a central issue for all levels of management, regardless of industry. More demanding customers, the Internet and digital technology, growing competitive pressures, and globalization create new opportunities and challenges on how supply chains should be configured and managed. Many innovations and new business models have emerged, arising from application of information technology and reconfiguration of the supply chain network. Prerequisite: OSCM 356. Credit 3 units.

---

**B58 OSCM 458 Operations Planning and Control**

Examines the concepts and techniques essential for effective operations planning and control in various manufacturing and service organizations. The course builds on the knowledge and skills acquired in core operations management and quantitative method courses, and covers key topics including inventory management, linear and nonlinear programming, aggregate planning, Markov chain models. The course introduces students to the major trade-offs and issues in operations planning and control, as well as important tools and techniques available for helping operations managers to make analysis and decisions. Prerequisite: OSCM 356.

Credit 3 units.

---

## Organizational Behavior

Visit online course listings to view semester offerings for B66 OB (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B66&crslvl=1:4>).

---

### B66 OB 360 Organization Behavior Within the Firm

Provides a toolbox of skills that are necessary to be an effective team member and manager. Focuses on behavior at the individual, group, and organizational levels to provide a broad picture of management in organizations. Ongoing themes include motivation, team dynamics, organizational design, and corporate culture. Assignments, experiential exercises, and course materials are designed to build skills in team management, organization and communication that will be useful for other group assignments as well as work experiences. Prerequisites: MGT 100 or sophomore standing.

Credit 3 units. EN: S

---

### B66 OB 400C Women in Leadership

Using a multifaceted approach to learn about women and leadership. To better prepare students to lead in organizations, we will learn from notable leaders who will share their experiences and advice with the class. These conversations will be supplemented with cases and readings of women leaders pulled from a range of organizations as well as a review the current state of empirical evidence about the status of women as leaders. Finally, there will be time to engage in deep reflection about what students expect from their careers, as well as a chance to consider the pathways they must take to become effective and inclusive leaders in increasingly diverse organizations.

Credit 1.5 units.

---

### B66 OB 400D Thinking Creatively and Leading Creative Teams

This course is designed for students who want to improve their ability to develop creative solutions to tough business problems and to be able to inspire creativity in others. In a world of rapid change and increasing complexity, existing approaches simply won't do it anymore — at least not for long. Thus, the ability not only to update and refresh existing products and services but also to generate ideas for new-to-the world offerings becomes indispensable. Students who have mastered the skills of creative thinking and doing and can foster those skills in others are therefore in a position to add tremendous value to their firms and, ultimately, to society. This course is designed to help students understand and begin to master those skills. Prerequisite: OB 360.

Credit 1.5 units.

---

### B66 OB 461 Negotiation

Skillful negotiation is an important aspect of management. Designed to improve a student's skills in analyzing and conducting negotiations in a variety of settings. Topics include two-party bargaining, multiparty bargaining, arbitration and coalition formation. Prerequisite: OB 360.

Credit 3 units.

---

### B66 OB 462 Leadership in Organizations

This course is designed to fulfill three broad objectives for students. The first is to provide a useful overview of the primary leadership perspectives, focusing on how each framework links individual leadership to organizational outcomes. The second objective involves students in self-assessment of strengths and weaknesses in relation to the abilities and skills that are predictive of leadership effectiveness. Third, the course is designed to enable participants to articulate an effective strategic plan for individual leadership development. Course topics include perspectives on individual leadership effectiveness, leadership and motivation, developing subordinates, leading groups and teams, leading the resolution of conflict, and leading organizational change. Prerequisite: sophomore standing.

Credit 3 units.

---

## Quantitative Business Analysis

Visit online course listings to view semester offerings for B59 QBA (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B59&crslvl=1:4>).

---

### B59 QBA 120 Managerial Statistics I

The first of a two-course sequence in business applications of statistics, focused on descriptive statistics, probability and distributions, inferential statistics, and linear regression. Approximately the first quarter of the course is about descriptive statistics and applications of covariance. The second quarter is devoted to probability: basic rules, conditional probabilities, Bayes' theorem, expected values, and probability distributions. This work is followed by an introduction to sampling distributions and inferential statistics. Confidence intervals and hypothesis testing are introduced to make inferences about parameters. The last one-fourth of the course focuses on simple linear regression. Throughout the course, functions, data analysis, VBA, and solver features of Excel are introduced. Prerequisite: completion or concurrent enrollment in Math 132.

Credit 3 units.

---

### B59 QBA 121 Managerial Statistics II

The second of a two-course sequence in business applications of statistics, focused on forecasting. The course is devoted to the use of linear regression models in business, and ways to deal with problems of collinearity, outliers, non-linear relationships, and heteroscedasticity. Advanced topics, including time series regression and logistic models, are covered as time permits. There are quizzes and group projects in addition to a midterm and final. Prerequisites: QBA 120 or approved equivalent; Math 132; and MEC 290 or Econ 1011.

Credit 3 units.

---

### B59 QBA 200A Analytics and Modelling for Business

#### Decisions

The primary goal of the course is to help students become effective problem solvers, smart consumers of data and, finally, intelligent business decision makers in various management situations. The course utilizes structured problem solving approaches heavily relying on data for defining the problem, uncovering useful relationships between critical variables and outcomes, defining measures for evaluating alternatives, modeling underlying conceptual relationships and constraining resources, and proposing via rigorous search process of

exploration and exploitation "best fitting and robust" solutions for the given environment and its underlying uncertainties. Applications of those analytic tools will be illustrated using examples from various business functional areas, finance, marketing, operations, economics and strategy. Prerequisites: QBA 120 and completion or concurrent enrollment in QBA 121. Credit 3 units.

## Degree Requirements

### BSBA Degree Requirements

The Bachelor of Science in Business Administration degree is awarded to students by recommendation of the faculty. Standards established by the faculty for recommendation are:

1. Satisfactory completion of requirements regarding required and elective courses, accumulation of a minimum of 120 units of course work, and satisfactory fulfillment of other requirements established in accordance with the rules and regulations of the Olin Business School.
2. Completion of the last 30 units in residence at Washington University for entering first-year students. Transfer students must complete a minimum of 60 units in residence at Washington University.

### General Requirements (a minimum of 48 units)

Each student must complete a minimum of 48 units outside of the Olin School to include the following specific requirements:

**A. College Writing (3 units):** Students must demonstrate proficiency in reading and writing the English language by satisfactorily completing CWP 100 with a grade of C- or better.

**B. Calculus (3-6 units):** Students must complete Math 131–Math 132 or other calculus courses approved by the Olin Business School.

**C. Distribution Requirements (18 units):** Students must complete 3 units of physical and life sciences, 3 units of humanities, 6 units of international studies, 3 units of behavioral analysis, and 3 units of ethics and values. Approved course selections are available in the university's Course Listings.

**D. Advanced Electives (12 units):** Students must complete at least 12 graded units of advanced course work. Advanced electives are defined as any course numbered 300 or above that is offered as any day division course. Advanced electives also may satisfy a distribution requirement.

### Professional Requirements (a minimum of 60 units)

#### A. Core Requirements (41 units):

| Code      | Title                              | Units |
|-----------|------------------------------------|-------|
| ACCT 2610 | Principles of Financial Accounting | 3     |

|              |  |    |
|--------------|--|----|
| ACCT 2620    | Principles of Managerial Accounting            | 3  |
| MEC 290      | Microeconomics                                 | 3  |
| MEC 292      | Global Economy                                 | 3  |
| or Econ 1021 | Introduction to Macroeconomics                 |    |
| MGT 100      | Individual in a Managerial Environment         | 3  |
| MGT 150A     | Foundations of Business                        | 2  |
| MGT 201      | Management Communication                       | 3  |
| FIN 340      | Capital Markets and Financial Management       | 3  |
| MKT 370      | Principles of Marketing                        | 3  |
| OB 360       | Organization Behavior Within the Firm          | 3  |
| OSCM 356     | Operations Management                          | 3  |
| QBA 120      | Managerial Statistics I                        | 3  |
| QBA 121      | Managerial Statistics II                       | 3  |
| QBA 200A     | Analytics and Modelling for Business Decisions | 3  |
| Total Units  |  | 41 |

\*Transfer students entering Olin Business School must take one of the following: MGT 100 or MGT 380 to satisfy this requirement.

#### B. Professional Electives (a minimum of 19 units)

Professional electives are non-required business courses offered by the Olin Business School that may or may not lead toward a specific business major. Additional information about the specific requirements for each business major is available on our Majors (p. 907) page.

### Electives (units will vary)

Students must take enough electives to earn the minimum of 120 units.

### Typical Four-Year Curriculum for a BSBA Student

Typically, students must earn 30 units a year to stay on target with a four-year graduation plan.

*120 credits minimum*

#### First Year

| Fall                  | Units | Spring               | Units |
|-----------------------|-------|----------------------|-------|
| MGT 100               | 3     | MEC 290              | 3     |
| Math 131 or higher*   | 3     | QBA 120              | 3     |
| English Composition** | 3     | Math 132 or elective | 3     |
| MGT 150A              | 2     | Electives            | 6     |
| Electives             | 3-6   |                      |       |

### Sophomore Year

| Fall                | Units | Spring              | Units |
|---------------------|-------|---------------------|-------|
| QBA 121             | 3     | QBA 200A            | 3     |
| ACCT 2610           | 3     | Core requirement(s) | 3-6   |
| MGT 201             | 3     | Electives           | 6-9   |
| Core requirement(s) | 0-3   |                     |       |
| Electives           | 3-6   |                     |       |

### Junior Year

| Fall                            | Units | Spring                          | Units |
|---------------------------------|-------|---------------------------------|-------|
| Core/ Professional requirements | 6-12  | Core/ Professional requirements | 6-12  |
| Electives                       | 3-9   | Electives                       | 3-9   |

### Senior Year

| Fall                   | Units | Spring                 | Units |
|------------------------|-------|------------------------|-------|
| Professional electives | 6     | Professional electives | 6     |
| Electives              | 9     | Electives              | 9     |

#### Notes:

\*Students may enroll in a higher level of calculus providing their academic preparation suggests a different level of calculus.

\*\*BSBA students are assigned to enroll in their Writing course in either fall or spring semester of their first year. Some students may start at a different level of English preparation and may take their Writing course as late as sophomore year.

## Additional Requirements

**A.** Students must complete a minimum of 120 units including 48 units outside of the Olin School and 60 units from the Olin School. Students who substitute a non-business course for a business requirement will still be required to enroll in another business course, as a minimum of 60 credits must be earned in Olin Business School.

**B.** Students must earn a minimum of 2.0 overall grade point average (GPA) and 2.0 GPA in all professional course work taken at Olin Business School.

**C.** Students must earn the final 30 units (60 units for an external transfer) toward the degree at Washington University.

**D.** Students must be recommended by the Olin Business faculty for degree confirmation by the Board of Trustees.

## Regulations

**A.** A maximum of 15 units of pre-matriculation credit may be counted toward graduation. Pre-matriculation sources include Advanced Placement (AP), International Baccalaureate (IB),

British Advanced (A) Levels and college courses taken after the junior year in high school. These units will count toward the 120 credits but will not satisfy any distribution, statistics or advanced education requirements. If a student takes a course in residence in which AP credit has already been awarded, the AP credit will be removed from the student's record.

**B.** BSBA students may earn a maximum of two majors to include two professional majors or one professional major and one major outside of the Olin School.

**C.** BSBA students may earn one or two minors, depending on the number of majors they pursue. The options are two majors and one minor or one major and two minors. Most of our minors are offered outside of Olin Business School.

**D.** Distribution requirements and advanced general electives (12 credits) must be taken for a grade. However, if a student completed a distribution/advanced course on a pass/fail basis prior to transferring to Olin Business School, then this course would count toward that requirement.

**E.** All business courses must be taken for a grade with the exception of MGT 450A.

**F.** BSBA students may enroll in one physical education course per semester.

**G.** BSBA students may enroll in one pass/fail course each semester. These credits will count only as general education electives.

**H.** BSBA students may enroll in one University College course per semester. However, these credits will not count toward the 120 units needed for their BSBA degree. The grade from this course will not be factored into the GPA.

**I.** The Olin School does not accept any online course work for transfer credit.

**J.** BSBA students may transfer up to 6 credits per summer toward their BSBA degree requirements.

**K.** BSBA students must complete 54 of the 60 professional units in residence. Course work taken on an approved Washington University international program will satisfy this residency policy.

**L.** BSBA students must complete all professional courses for each business major in residence. Course work taken on an approved Washington University international program will satisfy this residency policy.

**M.** BSBA students may double count only one course in a business major. For example, if a BSBA student is majoring in both marketing and entrepreneurship, they could not count B55 MKT 378 and B55 MKT 465 toward both majors.

**N.** Students are obligated to requirements and policies at the time of matriculation into the BSBA Program. However, faculty has and reserves the right to make changes to degree

requirements, policies and procedures, including modifying or adding new requirements, policies and procedures at any time.

O. ROTC units numbered 300 or above will count toward the student's 120 units for graduation. These credits may count toward the advanced non-business requirements providing the course is taken for a grade.

## Academic Honors & Awards

**Scholars in Business Program:** The Scholars in Business program allows alumni, corporations and friends of Olin Business School to provide scholarship funds to students of high academic promise who require financial support to attend the university. Students are considered for this award when they apply for financial aid in the fall of each year. Donors and students meet each other at the annual Scholars in Business dinner.

**Dean's List:** Dean's List honors are awarded to undergraduates who have completed a minimum of 14 graded units and achieved a semester grade point average of 3.6 or above. No incomplete or "N" grades may be outstanding as part of the student's semester record.

**Beta Gamma Sigma Honor Society:** The top 7 percent of the junior class and the top 10 percent of the senior class are eligible for invitation to Beta Gamma Sigma, the national business society. The student must have completed a minimum of 30 units at Washington University to be eligible.

**Latin Honors:** Graduating seniors in the top 5 percent of the class, based on overall university academic records, graduate *summa cum laude*. Seniors in the top 6 to 15 percent of the class graduate *magna cum laude*. These designations are recorded on the official university transcripts. All candidates for the BSBA degree in August, December or May will be considered as one group for purposes of final honors. Honors are determined in May for all graduates.

**Honors in Management:** The Honors in Management (HIM) Seminar is a two-semester sequence course that gives students the opportunity to work with senior-level faculty in a specialized format. In the fall semester, the HIM course will be team taught with various faculty members. For the spring semester, students will form teams to develop substantial research projects under the direction of one of the participating faculty for the remainder of the academic year. HIM students also must have a total of 126 credits of academic work (including MGT 490 and MGT 491) in order to receive the Honors in Management designation at graduation.

**Honors Thesis:** The Olin BSBA Honors Thesis challenges students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. The Honors Thesis is a two-semester sequence in which the student engages in research and analysis in the first semester and, upon successful progress, the student writes, presents and defends their research in the subsequent semester. Students must apply

and be approved to participate in this experience. All applicants must be senior BSBA degree students in good standing with a cumulative GPA of 3.7.

## Academic Regulations

### Attendance

Olin Business School allows each instructor of a course to decide how many absences the student may have and still pass the course. The Olin Business School expects faculty to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their instructors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

### Enrollment

BSBA students must be enrolled in a minimum of 12 units to a maximum number of 21 units each semester. Olin undergraduates will be assessed a full-time tuition charge for their course of study through eight semesters of enrollment.

### Units and Grades

A unit is a measure of quantity given for one hour of lecture or recitation course a week for one semester. A grade point is a measure of the quality of work done in the course. The Olin Business School employs the following grading system in evaluating student performance:

| Grade | Points Per Unit        |
|-------|------------------------|
| A     | 4.0                    |
| A-    | 3.7                    |
| B+    | 3.3                    |
| B     | 3.0                    |
| B-    | 2.7                    |
| C+    | 2.3                    |
| C     | 2.0                    |
| C-    | 1.7                    |
| D+    | 1.3                    |
| D     | 1.0                    |
| D-    | 0.7                    |
| F     | 0.0                    |
| P#    | Pass                   |
| F#    | Failing                |
| I     | Course work incomplete |
| W     | Withdrawal             |
| R     | Repeat                 |
| L     | Successful audit       |
| Z     | Unsuccessful audit     |
| N     | No grade submitted     |

Grade points per course are calculated by multiplying the number of units of a course by the grade points earned. A student may retake a course if a higher grade is required or desired. The initial grade received in the course remains on the student's record, along with an R to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing the student's grade point average.

## Auditing a Course

Students may not audit a business course. However, a student may take nonbusiness courses for audit with the approval of the professor. An audited course does not count toward the student's degree requirements. A grade of L indicates satisfactory completion of an audit; unsatisfactory completion results in a grade of Z. Fees for auditing a course are assessed at the same rate as for all other courses.

## Incomplete Grades

A student may be given an I (incomplete) when extenuating circumstances preclude the satisfactory completion of course work during the semester in which a particular course is taken. While an incomplete grade is sometimes appropriate, a student should make every effort to avoid the accumulation of incomplete grades. Incomplete grades are expected to be finished. Failure to finish an incomplete grade by the following semester will result in a failing grade.

## Pass/Fail Option

A student may take a maximum of one course per semester on a pass/fail basis. A grade of P# (pass) indicates that credit has been awarded, but the work was not subject to finer evaluation. No required or business course work may be taken on a pass/fail option. This option is provided so that a student may take nonbusiness courses in subject areas with which they may have little familiarity.

## Minimum and Maximum Course Loads

In Olin, business students are required to enroll in a minimum of 12 units to a maximum of 21 units each semester at Washington University. A minimum 2.0 grade point average in all course work taken at the university and a 2.0 in all professional course work taken at Olin must be achieved to satisfy BSBA graduation requirements.

## Repeating a Course

A student may retake a course if a higher grade is required or desired. The initial grade received in the course remains on the student's record. An R will be placed next to the course with the lower grade to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing the student's grade point average.

## Academic Probation and Suspension

Approximately three weeks following the end of a semester, the Academic Review Committee reviews the record of each enrolled student. Students must attain and maintain a minimum 2.0 grade point average in professional (business) and general courses to be in "good academic standing." Failure to achieve minimum standards may result in the student being placed on academic probation or becoming ineligible for future registration in the Olin Business School. Failure on the part of a student to meet the conditions of probation in the following semester may result in dismissal from the school.

Another cause for probationary action or dismissal is failure on the part of a student to complete professional requirements within a reasonable time period. Students who fall behind in completing requirements should make an appointment to see their primary adviser to work out a plan for making up the work at the earliest possible time. Registration is restricted to a maximum of 15 credits for students on academic probation.

## Leave of Absence Process

If a student is an undergraduate in good standing at the completion of a term, they are eligible to apply to take a leave of absence from the Olin Business School. The student should first contact their academic adviser to discuss the situation. Students must submit a request for a Leave of Absence to their four-year academic adviser. A student on an approved leave of absence should submit a Reinstatement Form by March 1 for a fall semester return or October 1 for a spring semester return.

A student wishing to take a medical leave of absence (MLOA) should first talk with a representative from Student Health Services. Then, the student should submit the MLOA petition to Student Health Services (SHS). A student's request for the MLOA or re-enrollment from an approved MLOA will be reviewed by SHS once the recommendations are received. The decision on whether or not to grant the request for a medical leave of absence or re-enrollment will be communicated to the student by the BSBA Programs Office. A student considering a medical leave of absence should first contact Student Health Services to initiate this leave.

In either case, the student must complete the Leave of Absence or the Medical Leave of Absence form and submit it to the appropriate office for consideration.

A student who wishes to formally withdraw from the university should meet with their business school adviser to file a Withdrawal Petition. In the event that a student wishes to return after formally withdrawing from Olin, a student must re-apply for admission if they wish to return to the university.

## Transfer Credit

Students who are enrolled at Olin and wish to receive transfer credit for course work subsequently taken at another institution must receive approval from their adviser prior to the time the course is to be taken. General guidelines are as follows:

- The institution must meet accreditation requirements.
- No course work may be taken at a two-year institution after a student has accumulated 60 credit hours of work.
- Credit will not be given for course work taken at another institution during a student's last 30 credit hours.
- A catalog description for each course must be submitted with the petition for review.
- No credit will be granted for course work taken online through another university.
- A maximum of 6 units may be taken during a summer program from another university.
- 54 of the 60 professional units must be taken in residence.
- All business major course work must be taken in residence. While major course work can be taken through an approved study abroad program, only one course will be counted for each business major.
- No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity policy.

The Olin School expects that all business courses be taken at Washington University. Under certain circumstances, permission may be granted for a student to take a business course from another university with accreditation by AACSB—International (Association to Advance Collegiate Schools of Business). In order for consideration to be given, a syllabus showing text used must be submitted. However, a BSBA student must still complete 54 of their 60 business units in residence. Any course counting toward a business major must be taken in residence also.

No transfer credit (including course work taken through a Washington University approved study abroad program) will be accepted with less than a C grade.

## University College Courses

BSBA students may enroll in one University College course per semester. However, these units will not count toward the 120 units needed for the BSBA degree nor toward a student's GPA.

## Pre-Matriculation Units

Pre-matriculation units are earned before the student's enrollment at Washington University as a first-year student. These units would include Advanced Placement (AP) examinations, International Baccalaureate (IB), British Advanced (A) Levels and college credit earned after the student's junior year in high school. These units will be noted on the student's

transcript. The maximum number of pre-matriculation units awarded is 15. These pre-matriculation credits will transfer as general elective course work and will not satisfy any distribution requirement. All BSBA students and second majors will be required to take QBA 120 Managerial Statistics I even when AP credit is earned for Math 2200 Elementary Probability and Statistics.

## Administration

Mark Taylor  
Dean

---

Stuart Bunderson, PhD  
Senior Associate Dean and Director of Executive Education

Paula A. Crews, MBA  
Associate Dean and Director, Marketing and Communications

Joseph P. Fox, MBA  
Associate Dean, Graduate Programs

Steven J. Malter, PhD  
Associate Dean and Director of Undergraduate Programs

Jessica R. Martin  
Senior Associate Dean — Chief of Staff

Todd Milbourn, PhD  
Senior Associate Dean — Faculty, Research and Programs

Anjan Thakor, PhD  
Director of the PhD Program, Director of the Institute for Innovation and Growth, and Director of the Center for Finance and Accounting Research

Ronald Allen, MBA, MLS  
Asa F. Seay Librarian

Charles A. Balsamo, MBA  
Director of Information Services

Nancy Barter  
Executive Director of Development

Yoon Groves, MA  
Associate Director of Undergraduate Advising and Student Affairs

Karen Heise  
Interim Director, Weston Career Center

Konstance P. Henning, BS  
Associate Director of Undergraduate Advising and Student Affairs

Brent Jenson, MBA  
Associate Dean of Finance

Dorothy D. Kittner, MBA  
Assistant Dean and Director of Corporate Relations

Paige E. LaRose, JD  
Assistant Dean and Director of Student Development & Strategic Initiatives

Glenn MacDonald, PhD  
Director of the Center for Research in Economics and Strategy

Cynthia Newell, MA  
Undergraduate Registrar

Analisa E. Ortiz, MEd  
Undergraduate Academic and Student Affairs Advisor

Christopher K. Presley, MEd  
Undergraduate Academic and Student Affairs Advisor

Elizabeth Shabani, MEd  
Associate Director of Global Programs

Lanna K. Skadden, MEd  
Assistant Dean and Director of Academic Affairs

Damian Whitney, MEd  
Undergraduate Academic and Student Affairs Advisor

## Majors (directory)

Below is a list of majors offered by the Olin Business School. Visit the **Majors section of the Olin Business School page** (p. 907) in this *Bulletin* to view more information about a specific major:

- Accounting
- Economics and Strategy
- Entrepreneurship
- Finance
- Financial Engineering\*
- Health Care Management
- Leadership and Strategic Management
- Marketing
- Operations and Supply Chain Management

\*The financial engineering major is offered to any undergraduate day division student as a second major option only.

## Minors (directory)

Non-BSBA students are eligible to pursue a minor in one of the specific fields of business listed below. Visit the **Minors section of the Olin Business School page** (p. 913) in this *Bulletin* to view more information about a specific minor:

- Accounting
- Business Economics
- Business of Entertainment\*
- Business of Sports\*
- Entrepreneurship
- Finance

- General Business
- Health Care Management
- International Business\*
- Leadership
- Marketing
- Operations and Supply Chain Management
- Strategy

\*BSBA students can earn the business of sports, business of entertainment, or the international business minor as part of their undergraduate degree.

# Engineering & Applied Science

## Mission Statement

The mission of the School of Engineering & Applied Science (SEAS) at Washington University is to serve society as a center for learning in engineering, science and technology. It is our duty to disseminate and create knowledge through teaching, research, publications and the transfer of important ideas and research into the development of new products and technologies. We strive to provide an environment that nurtures critical thinking and the education of innovators and leaders for the future.

## Undergraduate Degree Programs

The School of Engineering & Applied Science offers four-year, full-time programs of instruction leading to various Bachelor of Science degrees. Bachelor of Science degrees are available in the fields of biomedical engineering, chemical engineering, computer science, computer engineering, electrical engineering, mechanical engineering, and systems science and engineering.

If a student is interested in an academic program broadly based on the engineering sciences, the School of Engineering & Applied Science offers the Bachelor of Science (BS) Major in Applied Science degree with several options including chemical engineering, electrical engineering, mechanical engineering, and systems science & engineering. These degree options provide more flexibility for students who do not intend to become licensed engineers and want to select their course work according to their personal educational objectives. For example, some students use this flexibility to gain technical background and training while pursuing or preparing for professional training in medicine, business or law. However, although the flexibility exists to do so, it is not necessary to combine an Applied Science degree program with another major or degree. Students can also use this added flexibility to achieve a well-rounded undergraduate education by selecting courses from across the university while pursuing a degree in the School of Engineering & Applied Science.

## BS in Engineering (Individually Designed Major)

The requirements to be admitted to an IDM are more stringent than those for our other engineering degree programs, and the IDM will not be available to students when they first enter Washington University (so it will not be listed on the admissions application as an option).

Students applying for an IDM should:

- have already completed at least one semester at Washington University.
- apply before the beginning of the junior year.
- have at least a 3.5 cumulative GPA at Washington University and be maintaining good standing in the School of Engineering.
- find an Engineering faculty member who will agree to serve as that student's IDM adviser. The student and adviser will design a plan of study, which lists the courses that must be successfully completed to earn the IDM. That plan must include at least 42 engineering units of credit.
- satisfy all other general engineering degree requirements (p. 1033).
- present (with the help of their adviser) the plan to a standing engineering committee (normally, the Engineering Undergraduate Studies Committee), which will then assess the proposed plan and will approve or deny the request.

## Combined Majors and/or Multiple Degrees

### Multiple Majors in Engineering

All undergraduate divisions at Washington University allow students to pursue majors and degrees in more than one division. The following options are available:

**Second Degrees.** A student in any undergraduate division of the university may be allowed by another division to pursue a second bachelor's degree. For this, the student must satisfactorily complete all of the degree requirements for *both* degrees in order to earn two diplomas. These requirements may include a "residency" requirement. For engineering majors, this residency requirement is stated on the Engineering Degree Requirements (p. 1033) page. In addition, the College of Arts & Sciences requires any student earning an AB degree and a bachelor's degree from another division to earn a minimum of 150 total units. If the additional residency and units requirement for a second degree are incompatible with a student's plan, then the student should consider a second major as a more convenient and equally viable alternative.

**Second Majors.** A student pursuing a bachelor's degree in engineering may also pursue second majors offered by other undergraduate divisions. There are four second majors offered by the School of Engineering & Applied Science: computer science, electrical engineering science, financial engineering and systems science. In addition, there are second majors offered by the College of Arts & Sciences and the School of Business. Students may declare a second major online via WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>) up until the time they have filed an Intent to Graduate. Upon completion of the requirements, the student's transcript will show an engineering degree and all earned second majors. Only one diploma is

granted; no reference to the second major is noted on the diploma.

**Minors.** Undergraduate students are allowed to pursue minors offered by any undergraduate division of the university. A minor usually requires five to six courses. The minor program's home division sets the requirements for admission and completion of the minor program. Students may declare a minor online via WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>) up until the time they have filed an Intent to Graduate. An engineering student who completes all of the requirements will have the award of the minor noted on the official transcript; no reference of the minor is noted on the diploma.

**Residency Rule for Engineering Minors:** No more than 6 units of credit transferred from another institution (outside Washington University) can be used to meet the requirements of any minor offered by the School of Engineering & Applied Science. The remaining units (up to the amount required for the minor) must be applicable units from Washington University. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

## Process Control Systems

The Department of Energy, Environmental & Chemical Engineering and the Department of Electrical & Systems Engineering jointly sponsor a double-degree program in process control systems. Undergraduate degrees are earned in both Chemical Engineering and in Systems Science & Engineering.

The emphasis in this course of study is on the science and technology of process automation with a solid traditional foundation in the two major disciplines. Graduates of the program can contribute, through automation, to improved product quality, reduced manufacturing costs, greater capital productivity, and improved safety and environmental quality.

## Bachelor's/Master's Program in Engineering

This program provides students who enter Washington University as undergraduates in day-school programs the opportunity to earn School of Engineering & Applied Science (SEAS) master's degrees which includes Sever Institute master's degrees. Interested students are encouraged to discuss the program with faculty advisers by the end of their junior year in order to best develop a plan for their master's study.

Students must meet the admission requirements and application deadlines stipulated by SEAS and the department of interest. A minimum 3.0 GPA is required for admission, but some programs may have higher GPA requirements. Each SEAS department has the option to participate as well as to decide which master's programs to offer students. Students must be admitted to a degree program in Engineering at least one semester prior to their anticipated graduation semester.

Scholarship support may be available to students during their master's year of study. Full-time student status is typically required to be eligible for scholarship support. For more information regarding scholarships and financial aid in the final master's year of study, please visit the Bachelor's/Master's Program (<https://engineering.wustl.edu/prospective-students/graduate-admissions/Pages/bs-ms.aspx>) website.

### Engineering Undergraduates

The Bachelor's/Master's Program for current School of Engineering & Applied Science (SEAS) undergraduate students normally takes one additional year to complete and requires participants to complete at least 150 total units. When approved by the department, up to 6 units of the 150 total units can be used to satisfy requirements for both degrees. However, at least 150 units must still be completed, and all stipulated degree requirements for all programs must be satisfied.

To satisfy residency for both degrees, all participants must complete a minimum of 84 applicable Washington University units, which includes a combination of at least 60 in-residence units counted for the SEAS undergraduate degree and at least 30 in-residence units counted for the SEAS master's degree, with up to 6 units used to satisfy requirements for both degrees if approved by the department.

The cumulative GPA used to determine undergraduate final Latin honors will include all undergraduate and graduate course work completed up until the time Latin honors are officially determined in May of each year. This means that master's courses will also be included in the calculations if a student defers earning the BS degree until the master's degree is also earned.

### Non-Engineering Undergraduates

Students from other undergraduate divisions at Washington University are also eligible to participate in the Bachelor's/Master's Program. These students must complete their undergraduate degrees before they are designated as being primary School of Engineering & Applied Science (SEAS) master's students. Admitted students might take longer than one year to complete the requirements for a master's degree. Part-time graduate enrollment might be possible with prior permission, but students will be required to maintain Satisfactory Academic Progress (SAP) standards connected to financial aid in order to maintain scholarship and financial aid support. Scholarship support can be applied to "E" courses taken at Washington University during the summer if those courses count toward fulfilling the requirements of the master's degree. Scholarship support used during a summer session will count as one of the total semesters of scholarship support available to the student.

A reasonable number of required prerequisite courses as defined by the department may be taken while admitted to the master's program, but these courses will not be counted toward the SEAS master's degree if they are courses not normally counted toward

its requirement. Prerequisite courses will count in the student's GPA when determining probation/suspension eligibility and SAP standards. Poor performance (earning less than B- grades) in these courses can be grounds for removal from the program by the department.

A minimum of 24 units of residency counted for the Engineering master's degree is required for all students. When approved by the department, up to 6 units can be used to satisfy requirements for both the non-Engineering undergraduate degree and the Engineering master's degree.

### Other Bachelor's/Master's Programs

These programs allow engineering undergraduates to earn master's degrees outside of the School of Engineering & Applied Science. Students in these 3/2 programs will pay the standard full-time undergraduate tuition rate for the fourth year, except for the MBA program which charges a premium above the undergraduate tuition rate. Students will receive financial aid for the fourth year based upon their eligibility for undergraduate financial aid awards, including Pell grants.

There is no commitment for undergraduate financial aid beyond the fourth year of study; students in 3/2 programs may apply to the professional programs for graduate student financial aid for study in the professional program beyond the fourth year.

This policy applies to the current 3/2 programs involving bachelor's/master's programs in Engineering, Social Work and Business and to any future Washington University 3/2 programs.

### BS/MBA Program

The School of Engineering & Applied Science and the Olin Business School offer a five-year program leading to the Bachelor of Science engineering degree and the Master of Business Administration degree. The purpose of the program is to provide students with the opportunity to develop an educational background particularly in demand by industry.

Students should apply to this joint program by April 1 of their junior year. They must complete the application for admission to the Olin Business School, available through the business school. There is no GPA requirement, but students must take the Graduate Management Admission Test (GMAT). Registration materials for the test may be obtained through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and personal interviews.

The BS/MBA student's fourth-year curriculum is composed largely of business courses. The fifth-year curriculum is divided almost evenly between business and engineering courses. Because merging of the two curricula results in very tight scheduling, it is possible that course overloads may be necessary to complete both programs in 10 semesters. Students are strongly urged to meet with their advisers to plan the remaining years of the program.

## Dual Degree Program

The School of Engineering & Applied Science offers a Dual Degree Program with numerous other liberal arts (<http://engineering.wustl.edu/prospective-students/dual-degree/Pages/affiliated-schools.aspx>) colleges and universities. Qualified students earn both a non-engineering baccalaureate from the first school and a Washington University bachelor's degree in engineering by attending the affiliated institution for three or four years, then completing the program with two years of concentrated engineering study at Washington University.

If students are enrolled at an affiliated institution, they may apply for admission to dual degree study under this program, provided they are recommended by an official representative of their college or university and will receive or have received the non-engineering baccalaureate. For more information, please visit the Dual Degree Program website (<http://engineering.wustl.edu/DualDegreeProgram.aspx>).

### Engineering Undergraduate Degree (Undergraduate 2-Year Option)

Students enter as undergraduate students and complete a liberal arts degree (from their current school) and an engineering undergraduate degree (from Washington University).

Participants are undergraduate students who commonly follow a 3/2 or a 4/2 schedule, entering Washington University after their junior or senior year. Please note that all students earning an undergraduate engineering degree are required to complete a minimum of 60 course units taken at Washington University.

### Engineering Undergraduate & Graduate Degrees (Graduate 3-Year Option)

Students enter as graduate students and complete both a liberal arts degree (from their current school) and then an engineering undergraduate degree and engineering master's degree in three years at Washington University. The engineering master's degree and undergraduate degree can be in different areas. Participants commonly follow a 3/3 or 4/3 schedule, entering Washington University after their junior or senior year. Please note that all students earning both an undergraduate and graduate degree are required to complete a minimum of 84 course units at Washington University. The GRE is not required for admission.

## Study Abroad and International Experiences

Students in the School of Engineering & Applied Science (SEAS) can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience. These opportunities will help students become global citizens better able to address current issues.

For information about these programs, please visit the SEAS website (<https://engineering.wustl.edu/current-students/outside-classroom/Pages/study-abroad.aspx>).

## Cooperative Education and Internships

The Engineering Cooperative (Co-op) Program is coordinated through the Career Center. It offers students a unique opportunity to gain in-depth engineering experience prior to graduation. Co-op students learn about a field of engineering by working alongside practicing engineers on extensive projects of the sort that are typically undertaken by entry-level engineers. This type of experience gives students a chance to preview a career path and employment options, gain career clarification, improve communication and team project skills, and enhance marketability with future employers. The cooperative education experience is typically completed over the course of a semester and a summer term.

In addition, the Career Center provides resources for students searching for summer internships and/or part-time fall or spring internships with local companies while enrolled in courses.

For more information on co-ops and internships, please visit the Career Center website (<http://careercenter.wustl.edu>) or call 314-935-5930.

## Pre-Medical Education

The School of Engineering & Applied Science makes available, as options within its undergraduate degree programs, curricula that prepare students for entry into medical, dental or veterinary school while they pursue the undergraduate degree.

These curricula were formulated in recognition of the increasing importance in medicine of the methods and subject matter of the basic engineering sciences. The student who successfully completes one of the curricula will be well prepared for the study of medicine and will have, in addition, a solid background in engineering. Moreover, the student who decides not to go on to medical school will have an exceptionally wide selection of options, including not only those commonly open to the graduate in engineering, but also those of graduate study in biomedical engineering. In accordance with the recommendations of the school's Pre-Medicine Committee, all curricula include, in addition to the normal degree requirements, the following courses:

**Biology:** Biol 2960, Biol 2970

**General Chemistry:** two semesters with lab

**Organic Chemistry:** two semesters with lab

**Psychology:** Psych 100B

**Sociology:** SOC 2510

Many medical schools have other assorted prerequisites, which can be found in the AMCAS Instruction Manual. Students may download the manual from the Association of American Medical Colleges (AAMC) website (<http://www.aamc.org>).

If students are interested in attending medical or dental school, they must consult and register with the Pre-Medicine Committee before the end of their sophomore year. Engineering students should contact the pre-medical adviser in Engineering Student Services (<https://engineering.wustl.edu/current-students/student-services/Pages/premedicine.aspx>), Lopata Hall, Room 303.

There is extensive detailed information concerning the Medical College Admission Test, the choice of advanced biology or chemistry courses, and the choice of medical school that should be discussed prior to the beginning of the junior year. Students requesting letters of recommendation from the Pre-Medicine Committee must do so in writing by the end of the fall semester of the senior year. The Pre-Medicine Committee reserves the right not to write letters for students deemed not qualified.

## Engineering Summer School

The School of Engineering & Applied Science offers a variety of engineering courses each summer. Class times are varied to accommodate both traditional daytime students and those with full- or part-time employment. The Engineering Summer School calendar comprises one full eight-week evening session as well as several accelerated sessions of shorter duration.

If students are interested in enrolling in an engineering summer course, they can obtain further information in Lopata Hall, Room 303, 314-935-6100.

## Student Services

### Engineering Student Services

Engineering Student Services, located in Lopata Hall, Room 303, has three main areas: Admissions, Advising Support, and Registrar. Our admissions officers work closely with the university Admissions Office to provide current and useful information to students and parents who are learning about our university, our community, and the opportunities available in the School of Engineering & Applied Science. The advising staff has a comprehensive knowledge of all campus resources and can help with such items as tutoring, international studies, assistance with the registration process, and general advising. The registrar handles class scheduling, transfer and AP credit, course registration, graduation eligibility, and other student records-related processes. Engineering Student Services (<https://engineering.wustl.edu/current-students/student-services/Pages/default.aspx>) serves all students, faculty and staff. For an appointment, call 314-935-6100.

### Engineering Communication Center

The Engineering Communication Center offers all engineering students, faculty and postdocs free help with their engineering

communication needs. The faculty who staff the center work with individuals to define audiences and purposes, develop and organize ideas, create effective graphics and page design, and sharpen self-editing skills. Help is offered for résumés and employment correspondence, proposals, formal reports, lab reports, graduate program application statements, and presentations. For an appointment, call 314-935-4902 or email [ecc@seas.wustl.edu](mailto:ecc@seas.wustl.edu).

## The Career Center

The Career Center helps engineering students prepare for a lifetime of career management by offering innovative approaches to help prepare them for a successful co-op, internship and job search. The Career Center offers a variety of services and resources for Engineering undergraduate and graduate students.

Whether students are looking for a summer internship, a co-op or a full-time job, the center is here to help. The Career Center offers a breadth of resources, including CareerLink: an online job, co-op and internship database; the Engineering Mentoring Program; ENGroups: Engineering Careers Interest Groups; special events; skill-building workshops; career fairs and on-campus interviews; and résumé referrals for job opportunities.

The Career Center offers one-on-one career guidance to students at any stage of their career-planning process. Students are encouraged to meet with a career adviser early in their academic career and at least once each year to build a relationship. To schedule an advising appointment, please contact 314-935-5930 or email [careers@wustl.edu](mailto:careers@wustl.edu) or visit the website (<http://careercenter.wustl.edu>).

## Course Descriptions

For administrative purposes, the School of Engineering & Applied Science is subdivided into five academic departments: Biomedical Engineering (E62); Computer Science & Engineering (E81); Electrical & Systems Engineering (E35); Energy, Environmental & Chemical Engineering (E44); and Mechanical Engineering & Materials Science (E37). Each department may offer courses leading to one or more bachelor's, master's or doctoral degrees.

The courses of instruction are numbered according to the following system:

- 100 to 199 are primarily for first-year students.
- 200 to 299 are primarily for sophomores.
- 300 to 399 are primarily for juniors.
- 400 to 499 are primarily for juniors and seniors, although certain courses may carry graduate credit.
- 500 or above are offered to graduate students and to juniors and seniors who have met all stated requirements. If there are no stated requirements, juniors and seniors should obtain permission of the instructor.

One unit of credit is given for each hour of lecture, and one unit for each two and one-half hours of laboratory. Each course description shows the course's credit. A table of all engineering courses (PDF) ([https://engineering.wustl.edu/current-students/student-services/Documents/Engineering\\_Course\\_Attributes\\_Feb%2028\\_2017.pdf](https://engineering.wustl.edu/current-students/student-services/Documents/Engineering_Course_Attributes_Feb%2028_2017.pdf)) and, for each course, the division of its topics units (PDF) is available and frequently updated on the school's website.

## First-Year Program

This First-Year Program is offered as a starting point for beginning students and their advisers when planning each student's individual course schedule.

A typical first-year course load totals 14 to 16 units for each semester, and it is not wise to enroll for more than 16 units during the first semester. It may be that a load of less than 14 units is desirable. Students should enroll in the following courses:

**Calculus:** Beginning engineering students with previous calculus course work usually begin with Math 132 Calculus II. Students with a strong mathematics background may be ready for Math 233 Calculus III or even Math 217 Differential Equations.

**Physics and/or Chemistry:** If biomedical engineering or chemical engineering is a likely major, chemistry and physics should be completed during the first year; for other majors, physics is the recommended choice.

**Other Courses:** Most first-year engineering students also enroll in one or more humanities/social sciences courses, engineering courses at the 100 level, and perhaps a computer science course. If students have a major or are strongly leaning toward a major, they should follow the recommendations for that major.

**English Proficiency:** The English proficiency requirement must be completed as soon as possible. Refer to the Engineering Degree Requirements (<http://bulletin.wustl.edu/undergrad/engineering/requirements>) for further details on this requirement.

## Suggested Courses for First Semester

| Courses   | Units |
|---|-------|
| Mathematics (Math 132)                          | 3     |
| Physics (Physics 117A or Physics 197)           | 4     |
| Chemistry (Chem 111A and Chem 151) <sup>*</sup> | 5     |
| Humanities/social sciences elective             | 3     |
| Engineering course(s)                           | 3-6   |

<sup>\*</sup>Required for Biomedical Engineering, Chemical Engineering and Pre-Medicine students

## Suggested Courses for Second Semester

| Courses                   | Units |
|---------------------------|-------|
| Mathematics (next course) | 3     |

|                                       |     |
|---------------------------------------|-----|
| Physics (Physics 118A or Physics 198) | 4   |
| Chemistry (Chem 112A and Chem 152)**  | 5   |
| Humanities/social sciences elective   | 3   |
| Engineering course(s)                 | 3-6 |

\*\*Required for Biomedical Engineering, Chemical Engineering and Pre-Medicine students

## Recommended Courses

The following list recommends course sequences for each engineering major.

**Biomedical Engineering:** BME 140, first semester; Biol 2960, second semester.

**Chemical Engineering:** EECE 101

**Computer Engineering:** CSE 131, first semester; CSE 132, second semester.

**Computer Science:** CSE 131–CSE 132, first and second semester; CSE 240, second semester.

**Electrical Engineering:** CSE 131 and ESE 103, first semester; ESE 260, second semester.

**Mechanical Engineering:** MEMS 202, first semester.

**Systems Science and Engineering:** CSE 131, first semester; Math 309, first or second semester; ESE 205 Introduction to Engineering Design, second semester.

**Contact:** Engineering Student Services

**Phone:** 314-935-6100

**Website:** <http://engineering.wustl.edu>

## Fields of Study

- Biomedical Engineering (p. 941)
- Computer Science & Engineering (p. 954)
- Electrical & Systems Engineering (p. 973)
- Energy, Environmental & Chemical Engineering (p. 998)
- Mechanical Engineering & Materials Science (p. 1012)
- Process Control Systems (p. 1030)
- University of Missouri-St. Louis/Washington University Joint Undergraduate Engineering Program (p. 1032)

## Biomedical Engineering

### About Biomedical Engineering

Biomedical engineering is an interdisciplinary field in which the concepts, methods and techniques of engineering are applied to solving problems in biology and medicine. It applies quantitative, analytical and integrative methods from the molecular level to that of the whole organism to further our understanding of basic

biological processes and to develop innovative approaches for the prevention, diagnosis and treatment of disease.

A student majoring in biomedical engineering will have the opportunity to participate in the world-class research activities of engineering and medical faculty in biomaterials, imaging, cardiovascular engineering, cell and tissue engineering, molecular cellular and systems engineering, and neural engineering. All students in biomedical engineering are encouraged to join and be active in the Biomedical Engineering Society.

## Mission Statement

Our **departmental mission** is to serve society as a center for learning and knowledge-creation in engineering and science for the purpose of advancing biology and medicine.

Our overall educational objective is to prepare those receiving a bachelor's degree in biomedical engineering for a variety of career paths. To that end, our undergraduate curriculum is designed to provide technical proficiency as well as communication and other professional skills so that our graduates will be able to:

- Pursue careers in the biomedical engineering industry or related fields.
- Undertake advanced study (e.g., MS, PhD) in biomedical engineering or a related field, in preparation for careers utilizing this further training.
- Complete professional degrees (e.g., in medicine, dentistry, law, business) in preparation for careers utilizing those degrees.

## Academic Programs

The Bachelor of Science in Biomedical Engineering (BS–BME) is designed to prepare graduates for the practice of engineering at a professional level and is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

The curriculum is structured around a basic core of 87 credits. In addition, a complementary set of courses totaling at least 33 credits completes the degree requirements.

In order to satisfy ABET (<http://www.abet.org>) requirements, all professional engineering curricula at the baccalaureate level must include the equivalent of one and one-half years of engineering topics, to include engineering sciences and engineering design appropriate to biomedical engineering. The BS–BME degree at Washington University requires 47 credits of engineering topics. The basic core curriculum includes 35 engineering topics credits. Therefore, students pursuing a BS–BME degree will need 12 to 15 additional engineering topics credits beyond the basic core curriculum. They also may receive up to 6 credits of academic credit for a research or design project by registering for BME 400, BME 400A, BME 400B or BME 400C Independent Study. In addition, their

course program must include sufficient laboratory experience to ensure competence in experimental design, data collection and data analysis. For more information regarding engineering topics credit requirements, please refer to the Undergraduate Curriculum webpage (<http://bme.wustl.edu/undergraduate/pages/undergraduate-curriculum.aspx>).

## Bachelor's/Master's (BS/MS) Program in Engineering

This program allows current BME undergraduate students to earn a master's degree with only one additional year of study. Interested engineering students should discuss the program with their BME academic and Engineering Student Services advisers by the end of their junior year in order to best develop a plan for their senior year leading into their master's year. With adviser and departmental approval, up to 6 graduate-level credits can be shared between the BS and MS degrees; however, the combined program still requires students to complete a minimum of 150 units in total.

## Double Majors

An option available to students majoring in biomedical engineering is the double major, leading to a second professional Bachelor of Science degree in one of the other engineering disciplines in four years. A degree in biomedical engineering combined with a professional degree in one of the traditional engineering disciplines can be expected to enhance employment options in industry. Depending upon the second major chosen, total unit requirements may range from 140 to 148 (or less if the student enters with AP credits). Hence, some summer work may be necessary in order to complete a double major within four academic years. To determine the specific requirements to be satisfied for both degrees, students are urged to consult with an adviser in the second department as early as possible.

## Pre-Medical Preparation

Biomedical engineering is also excellent preparation for various professional schools, particularly medical schools. Many students complete their pre-medical requirements while obtaining their BME degrees. Pre-medical preparation is not a major, but rather entails fulfilling the requirements needed for entry to medical school. These generally consist of one year of college-level biology, chemistry, mathematics, English, and one year of organic chemistry with laboratory. Further information can be obtained by visiting the Pre-Medicine webpage (<https://engineering.wustl.edu/current-students/student-services/Pages/premedicine.aspx>) and contacting the School of Engineering & Applied Science's Health Professions Advisor, Ron Laue ([ron.laue@wustl.edu](mailto:ron.laue@wustl.edu)).

## Cooperative Experience

Cooperative experience is available to upper-level students at numerous life science/technology companies both in the St. Louis area and nationwide. This experience is particularly valuable for students wishing to enter industry. However, since most companies ask that students spend the equivalent of one semester and a summer, it may be difficult to complete the degree requirements in eight semesters, unless students enter with sufficient advanced placement credits and/or take summer courses.

## Faculty

### Chair

**Lori A. Setton** (<https://engineering.wustl.edu/Profiles/Pages/Lori-Setton.aspx>)

Lucy and Stanley Lopata Distinguished Professor of Biomedical Engineering

PhD, Columbia University

Biomaterials for local drug delivery; tissue regenerations specific to the knee joints and spine

### Endowed Professors

**Rohit V. Pappu** (<https://engineering.wustl.edu/Profiles/Pages/Rohit-Pappu.aspx>)

Edwin H. Murty Professor of Engineering

PhD, Tufts University

Macromolecular self assembly and function; computational biophysics

**Yoram Rudy** (<https://engineering.wustl.edu/Profiles/Pages/Yoram-Rudy.aspx>)

Fred Saigh Distinguished Professor of Engineering

PhD, Case Western Reserve University

Cardiac electrophysiology; modeling of the cardiac system

**Frank Yin** (<https://engineering.wustl.edu/Profiles/Pages/Frank-Yin.aspx>)

Stephen F. and Camilla T. Brauer Distinguished Professor of Biomedical Engineering

MD, PhD, University of California, San Diego

Tissue and cell biomechanics; hemodynamics

### Professors

**Mark Anastasio** (<https://engineering.wustl.edu/Profiles/Pages/Mark-Anastasio.aspx>)

PhD, University of Chicago

Imaging sciences; phase-contrast; x-ray imaging

**Jianmin Cui** (<https://engineering.wustl.edu/Profiles/Pages/Jianmin-Cui.aspx>)  
PhD, State University of New York–Stony Brook  
Ion channels; channel structure-function relationship; biophysics

**Daniel Moran** (<https://engineering.wustl.edu/Profiles/Pages/Daniel-Moran.aspx>)  
PhD, Arizona State University  
Motor control; neural engineering; neuroprosthetics; movement biomechanics

**Quing Zhu** (<https://engineering.wustl.edu/Profiles/Pages/Quing-Zhu.aspx>)  
PhD, University of Pennsylvania  
Biophotonics and multimodality ultrasound and optical imaging

## Associate Professors

**Dennis L. Barbour** (<https://engineering.wustl.edu/Profiles/Pages/Dennis-Barbour.aspx>)  
MD, PhD, Johns Hopkins University  
Auditory physiology; sensory cortex neurocircuitry; novel perceptual diagnostics and therapeutics

**Vitaly Klyachko** (<https://engineering.wustl.edu/Profiles/Pages/Vitaly-Klyachko.aspx>)  
PhD, University of Wisconsin-Madison  
Synaptic function and plasticity; neural circuits; information analysis; neurological disorders

**Baranidharan Raman** (<https://engineering.wustl.edu/Profiles/Pages/Barani-Raman.aspx>)  
PhD, Texas A&M University  
Computational and systems neuroscience; neuromorphic engineering; pattern recognition; sensor-based machine olfaction

**Jin-Yu Shao** (<https://engineering.wustl.edu/Profiles/Pages/Jin-Yu-Shao.aspx>)  
PhD, Duke University  
Cell mechanics; receptor and ligand interactions; molecular biomechanics

**Kurt A. Thoroughman** (<https://engineering.wustl.edu/Profiles/Pages/Kurt-Thoroughman.aspx>)  
PhD, Johns Hopkins University  
Human motor control and motor learning; neural computation

## Assistant Professors

**Jan Bieschke** (<https://engineering.wustl.edu/Profiles/Pages/Jan-Bieschke.aspx>)  
PhD, Max Planck Institute for Biophysical Chemistry/University of Braunschweig  
Single molecule fluorescence and other biophysical methods to probe the mechanistic underpinnings of protein misfolding

**Hong Chen** (<https://engineering.wustl.edu/Profiles/Pages/Hong-Chen.aspx>)  
PhD, University of Washington  
Physical acoustics; therapeutic ultrasound and ultrasound imaging

**Nate Huebsch**  
PhD, Harvard University  
Joining January 2018

**Kristen Naegle** (<https://engineering.wustl.edu/Profiles/Pages/Kristen-Naegle.aspx>)  
PhD, Massachusetts Institute of Technology  
Computational systems biology with emphasis on cellular networks involved in cancer and diabetes

**Jon Silva** (<https://engineering.wustl.edu/Profiles/Pages/Jonathan-Silva.aspx>)  
PhD, Washington University  
Ion channel biophysics

**Michael D. Vahey**  
PhD, Massachusetts Institute of Technology  
Joining March 2018

## Senior Professors

**Larry Taber** (<https://bme.wustl.edu/faculty/Pages/faculty.aspx?bio=19>)  
PhD, Stanford University  
Mechanics of growth and development; cardiac mechanics

## Lecturers

**Noah Ledbetter**  
PhD, University of Utah

**Patricia Widder**  
MS, Washington University

## Majors

### The Major in Biomedical Engineering

The BS in Biomedical Engineering requires completion of the courses in the Core Curriculum and four upper-level courses (Tier) beyond the Core, as described below. Students must also meet all School of Engineering & Applied Science (SEAS) and Washington University requirements (including the English Composition requirement; please refer to the Engineering Degree Requirements page (p. 1033)) and, to satisfy ABET requirements for a professional degree, must accrue 47 engineering topics units over their course work. A list of Topics Units - Engineering Courses (<http://engineering.wustl.edu/current-students/student-services/Pages/default.aspx>) is available on the Engineering Student Services website.

## The Basic Core

The Biomedical Engineering Core Curriculum consists of 87 credits, outlined below.

| Courses   | Units     |
|---|-----------|
| <b>Physical Sciences</b>  |           |
| General Chemistry (Chem 111A, Chem 112A)  | 6         |
| General Chemistry Laboratory I, II (Chem 151, Chem 152)                           | 4         |
| General Physics (Physics 117A, Physics 118A or Physics 197, Physics 198)          | 8         |
|   | <b>18</b> |
| <b>Biological Science</b>   |           |
| Principles of Biology I (Biol 2960)   | 4         |
| Principles of Biology II (Biol 2970)  | 4         |
| Physiological Control Systems (Biol 3058)   | 2         |
|   | <b>10</b> |
| <b>Mathematics</b>  |           |
| Calculus II & III (Math 132, Math 233)  | 6         |
| Differential Equations (Math 217)   | 3         |
| Engineering Mathematics A & B (ESE 318, ESE 319)                                  | 6         |
| Probability and Statistics for Engineering (ESE 326)                              | 3         |
|   | <b>18</b> |
| <b>Engineering Science</b>  |           |
| Computer Science (CSE 131)  | 3         |
| Introduction to Electrical and Electronic Circuits (ESE 230)                      | 4         |
| Engineering Electromagnetics Principles (ESE 330)                                 | 3         |
|   | <b>10</b> |
| <b>Biomedical Engineering</b>   |           |
| Introduction to Biomedical Engineering (BME 140)                                  | 3         |
| Biomechanics (BME 240) and Biomechanics Lab (BME 240L)                            | 4         |
| Quantitative Physiology I, II (BME 301A, BME 301B)                                | 8         |
| Bioengineering Thermodynamics (BME 320B)  | 3         |
| Transport Phenomena in BME (BME 366)  | 3         |
| Senior Design A, B (BME 401A, BME 401B)   | 4         |
|   | <b>25</b> |
| <b>Other</b>  |           |
| Engineering Practice and Professional Values (Engr 4501, Engr 4502 and Engr 4503) | 3         |
| Technical Writing (Engr 310)  | 3         |
|   | <b>6</b>  |
| Total, Basic Core   | <b>87</b> |

Students must complete **four upper-level Tier engineering courses, five humanities and social sciences, and two general electives** beyond the Core to complete the major and to prepare for particular fields of employment or education beyond the baccalaureate degree. At least two of the four Tier electives need to be drawn from the Tier I course list below. The remaining two can be chosen from either Tier list below.

### Tier I

| Code        | Title   | Units |
|-------------|---|-------|
| Physics 314 | Physics of the Heart  | 3     |
| BME 329     | Biothermodynamics in Practice   | 3     |
| BME 450     | Numerical Methods for Computational Modeling in Biomedicine   | 3     |
| BME 459     | Intermediate Biomechanics   | 3     |
| BME 461     | Protein Structure and Dynamics  | 3     |
| BME 464     | Orthopaedic Biomechanics — Cartilage/Tendon (#)   | 3     |
| BME 465     | Biosolid Mechanics (#)  | 3     |
| BME 471     | Bioelectric Phenomena   | 3     |
| BME 4902    | Cellular Neurophysiology  | 3     |
| BME 4904    | Interfaces and Attachments in Natural and Engineered Structures                                     | 3     |
| BME 493     | Computational Methods for Inverse Problems  | 3     |
| BME 494     | Ultrasound Imaging  | 3     |
| BME 524     | Tissue Engineering  | 3     |
| BME 572     | Biological Neural Computation   | 3     |
| BME 575     | Molecular Basis of Bioelectrical Excitation (#)   | 3     |
| BME 5913    | Molecular Systems Biology: Computation & Measurements for Understanding Cell Physiology and Disease | 3     |

The remaining three courses may be earned from the Tier I list above or from the Tier II list below. Tier II consists of other 3-credit, 3 engineering topics credits, upper-level (300-500) BME courses (refer to the BME listings in Course Listings (<https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E62>)) or from the SEAS courses listed below.

### Tier II

| Code     | Title  | Units |
|----------|--|-------|
| CSE 330S | Rapid Prototype Development and Creative Programming | 3     |
| CSE 332S | Object-Oriented Software Development Laboratory      | 3     |
| CSE 587A | Algorithms for Computational Biology                 | 3     |
| EECE 302 | Transport Phenomena II: Mass Transfer                | 3     |

|           |   |   |
|-----------|---|---|
| EECE 305  | Materials Science   | 3 |
| EECE 551  | Metabolic Engineering and Synthetic Biology                   | 3 |
| ESE 351   | Signals and Systems   | 3 |
| ESE 425   | Random Processes and Kalman Filtering                         | 3 |
| ESE 441   | Control Systems   | 3 |
| ESE 444   | Sensors and Actuators   | 3 |
| ESE 447   | Robotics Laboratory   | 3 |
| ESE 455   | Quantitative Methods for Systems Biology                      | 3 |
| ESE 482   | Digital Signal Processing                                     | 3 |
| ESE 488   | Signals and Communication Laboratory                          | 3 |
| MEMS 3110 | Machine Elements  | 3 |
| MEMS 3410 | Fluid Mechanics   | 3 |
| MEMS 3420 | Heat Transfer   | 3 |
| MEMS 350  | Engineering Mechanics III                                     | 3 |
| MEMS 3601 | Materials Engineering   | 3 |
| MEMS 3610 | Materials Science   | 3 |
| MEMS 4101 | Manufacturing Processes                                       | 3 |
| MEMS 424  | Introduction to Finite Element Methods in Structural Analysis | 3 |
| MEMS 4310 | Dynamics and Vibrations                                       | 3 |

*Please Note:* 1) Courses above that are marked with (#) are offered every other year or less. 2) The most up-to-date Tier lists can be found on the BME website (<http://bme.wustl.edu/undergraduate/Pages/undergraduate-curriculum.aspx>).

## Minors

A majority of undergraduate engineering students pursue a minor in engineering or other disciplines, such as business. For biomedical engineering majors, there are four engineering minors that are easily obtainable within the typical four year BME curriculum. These recommended minors require four or fewer additional classes — most of which count toward the electives within the BME major.

### Recommended Engineering Minors for Biomedical Engineering Majors

- **Bioinformatics** - Bioinformatics is a joint program of the Department of Computer Science & Engineering in the School of Engineering & Applied Science and the Department of Biology in the College of Arts & Sciences. Mindful of the emerging opportunities at the interface of biology and computer science, the departments of Biology and of Computer Science & Engineering are sponsoring a bioinformatics minor that will serve students from both departments, as well as other students from the natural sciences and engineering with an interest in this field.

- **Computer Science** - As computing drives innovation in nearly all industries, the Department of Computer Science & Engineering offers a minor in computer science to provide a basic foundation in software and computer science.
- **Electrical Engineering** - This program covers classes in several fields of science and engineering, encompassing electronics, solid-state devices, applied electromagnetics, RF and microwave technology, fiber-optic communication, applied optics, nanophotonics, sensors, and medical and biological imaging technology.
- **Mechanical Engineering** - The minor in mechanical engineering complements studies in a field related to mechanical engineering, such as biomedical engineering, electrical engineering, physics, chemistry or architecture. The minor is intended to provide students with a credential that could enhance their opportunities for employment or graduate study.

The engineering school offers additional minors; however, they typically require 15 units or more of course work outside the standard BME curriculum. Students who enter with significant transfer credit and/or advanced placement may be able to complete these minors in the standard four years. Otherwise, students will typically require a summer semester or two to complete these minors.

### Engineering Minors requiring Advanced Placement or Summer Effort for BME Majors

- Aerospace Engineering (p. 1018)
- Energy Engineering (p. 1002)
- Environmental Engineering Science (p. 1002)
- Mechatronics (p. 1018)
- Nanoscale Science & Engineering (p. 1002)
- Robotics (p. 1018)
- Systems Science & Engineering (p. 982)

## Courses

Visit online course listings to view semester offerings for E62 BME (<https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E62&crslvl=1:5>).

### E62 BME 140 Introduction to Biomedical Engineering

An introduction to the vast and diverse field of biomedical engineering (BME), this very challenging course has two main purposes. One is to teach students — via lectures, reading assignments, homework and exams — to think on their own, to solve problems and know how engineering principles are applied to the areas of bioelectricity, biomechanics, biomolecules, biotechnology and bioimaging. The second is to introduce students — via guest lectures by school of medicine and engineering faculty — to some of the fascinating and challenging ongoing research in these areas. The course is challenging because students at this early stage, by and large, lack the knowledge base to understand either the engineering/biological aspects of the topical areas or the research being presented.

Nevertheless, because future success depends on such, emphasis throughout is placed on developing self-learning as well as quantitative and analytical problem-solving skills, but at an appropriate level. By the end of the course it is hoped that students have begun to acquire the skills and approaches necessary to succeed in the engineering curriculum as well as a much more in-depth and informed perspective of BME. Corequisites: Physics 117A OR 197, Chem 111A, and college-level calculus.

Credit 3 units. EN: TU

---

#### **E62 BME 240 Biomechanics**

Principles of static equilibrium and solid mechanics applied to the human anatomy and a variety of biological problems. Statics of rigid bodies with applications to the musculoskeletal system. Mechanics of deformable media (stress, strain; stretching, torsion and bending) with introduction to nonlinear behavior, viscoelasticity and growth in living tissue. Applications to cells, bone, muscle, arteries, the heart and the cochlea. Prerequisites: Physics 117A or 197.

Credit 3 units. EN: TU

---

#### **E62 BME 240L Biomechanics Laboratory**

This course will consist of hands-on laboratory experiments in topics relevant to bioengineering mechanics such as statics of rigid bodies, viscoelasticity, and stress/strain analysis of biological materials. A focus of the course will be extending fundamental mechanical principles to biological applications through experimentation. The course is designed to follow and enhance the material covered in BME 240. Additionally, students will have the opportunity to design their own experiments, explore topics of special interest, and present their findings. Prerequisites: concurrent or completed BME 240.

Credit 1 unit. EN: TU

---

#### **E62 BME 301A Quantitative Physiology I**

A course (lectures, recitation and supervised laboratory sections) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include bioinstrumentation, eye movement, muscle mechanics, action potentials, sensory systems, neuroprosthetics. Prerequisites: BME 140, CSE 131, ESE 230, Biol 3058 (previously Biol 3050 or 3059), ESE 319, or permission of instructor.

Credit 4 units. EN: TU

---

#### **E62 BME 301B Quantitative Physiology II**

A course (lecture and supervised laboratory sessions) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include electrocardiography; heart contractility and molecular bases; cell signaling, pulse wave propagation in arteries; pulmonary function; renal function; imaging, and systems biology. Immune system; drug delivery. Prerequisites: BME 140, CSE 131, ESE 230, ESE 319, Biol 3058, or permission of instructor.

Credit 4 units. EN: TU

---

#### **E62 BME 320B Bioengineering Thermodynamics**

This course teaches the foundations of thermodynamics with strong emphasis on concepts, problem solving, and applications

in bioengineering and biophysics. The course will cover classical thermodynamics as well as statistical mechanics, and the statistical underpinnings of thermodynamic functions will be emphasized. Applications of thermodynamic control in biomolecular and cellular systems will be discussed. The target audience for this course is sophomores or juniors majoring in biomedical engineering. Students have to enroll in recitation section. Recommended prerequisites: Chem 112A, Phys 118A or 198, Math 132, Math 233, Math 217.

Credit 3 units. EN: TU

---

#### **E62 BME 329 Biothermodynamics in Practice**

This course will include hands-on, laboratory experiments in topics relevant to bioengineering thermodynamics, such as heat transfer, relationships involving temperature and pressure, equilibria, mixing, and solution chemistry. A focus of the course will be extending fundamental scientific principles to biological applications. Students will have the opportunity to design their own experiments, explore topics of special interest, and present their findings. Prerequisites: Chem 111A and 151; Physics 117A, 118A or 197, 198.

Credit 3 units. EN: TU

---

#### **E62 BME 366 Transport Phenomena in Biomedical Engineering**

Many processes of importance in biology and medicine involve the transfer of mass, heat or momentum. Through the use of the differential control volume approach, the fundamental transport equations will be derived. Systematic derivation of differential equations appropriate for different types of transport problems will be explored. Solutions of the resulting differential equations for simple chemical/biological systems will then be sought. Macroscopic descriptions of fluid flow will be applied to the design of blood pumps for the heart. Unsteady mass transfer with diffusion, advection and chemical reactions will also be applied to the transport of proteins, metabolites and therapeutics throughout the body. Prerequisites: BME 240, Math 217, ESE 318 and ESE 319, BME 320B.

Credit 3 units. EN: TU

---

#### **E62 BME 400 Independent Study**

Independent investigation on topic of special interest. This course has no engineering topics units. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.

Credit variable, maximum 6 units.

---

#### **E62 BME 400A Independent Study**

Independent investigation on a topic of special interest. This course has 1 unit of engineering topics. The student and mentor must justify the number of engineering topic units being requested, and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.

Credit 1 unit. EN: TU

---

#### **E62 BME 400B Independent Study**

Independent investigation on a topic of special interest. This course has 2 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested, and the BME Undergraduate Studies Committee must approve the requested number of engineering topics.

Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.  
Credit 2 units. EN: TU

---

### E62 BME 400C Independent Study

Independent investigation on a topic of special interest. This course has 3 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested, and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.  
Credit 3 units.

---

### E62 BME 401A Senior Capstone Design A

A hands-on design experience to provide students practical application of engineering. Working in small teams, students will either meet with possible clients to discern a biomedical problem, or bring an original idea of their own to the class. The students will work on an original design or redesign of a component or system of biomedical engineering significance. The students will be taught how to craft a project scope with the required design specifications. The design experience will require application of knowledge and skills acquired in earlier course work; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401A will be a descriptive paper design of their solution. Prerequisite: BME senior standing.  
Credit 2 units. EN: TU

---

### E62 BME 401B Senior Capstone Design B

A hands-on design experience to provide students practical application of engineering. Working in small teams, students will work toward building a prototype of the student design which was a product of 401A. The students will be expected to design a verification and validation plan to test the prototype built. The design experience will require application of knowledge and skills acquired in earlier course work and lab experiences; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401B will be a prototype, and a descriptive paper describing their solution documenting how the prototype satisfies the design specifications, with the validation and verification results. Prerequisites: BME 401A.  
Credit 2 units. EN: TU

---

### E62 BME 410 International Community Service Learning Project

This pass/fail course is a two-week summer international experience in conjunction with the faculty and students of our partner, The Biomedical Engineering Institute of Hong Kong Polytechnic University. Students first attend an orientation at HKPU to learn about functional electrical stimulation (FES) and treating cerebral palsy with orthotic devices. The entire group then goes to a clinic in mainland China where they put into practice what they have learned, the former in patients who have

suffered strokes and the latter in children with cerebral palsy — working in teams to diagnose, fit and fabricate orthotic devices. A written summary of the experience is the final product. Academic credits are awarded at the end of the fall semester following the summer experience. Prerequisites: completion of junior year, BME 301A. Enrollment: Students must apply by Feb. 1 each spring. Enrollment is restricted to 10 of the applicants.  
Credit 2 units.

---

### E62 BME 413 Engineering for First- and Third-World Health

Biomedical engineering, as a discipline, aspires to improve the human condition through the alleviation of suffering in disease; through diagnosis, treatment and prevention; and through the promotion of health. Although BME can address several problems at several levels, one distinction arises in practice, and a second in undergraduate life. The real-world problems and solutions arise in the developed and developing world; these domains share several similarities but also feature real differences that call upon differential engineering approaches. This course examines the engineering principles and practice that best apply to emergent solutions and unmet challenges in First-World and Third-World health. The collegiate experience often isolates the majority of undergraduate courses as "foundational" or "core" rather than applicable to very current, challenging, multidimensional problems. Our department, our school and university, and our societies value the contribution of engineers in solving these problems. Indeed, students very often achieve meaningful impact in real-world problems, but experienced most directly through extracurricular, not curricular, experience. This course provides the framework for students to build substantive ties between their curricular base and extracurricular problems and solutions. Corequisites: junior or senior standing; E62 BME 301A and/or 301B. Prerequisites: Candidate students need to have had previous engagement outside of class (through extracurriculars, volunteering, employment, etc.) with a particular problem in First- or Third-World medicine or health, most broadly construed. At registration students submit a short paragraph identifying the problem and how the student has engaged the problem outside the traditional classroom. This problem serves as the theme for the student's independent engineering analysis in the course. Identification of the problem, through submission of the paragraph, will move students from the waitlist to course registration (up to the seat limit).

Credit 3 units. EN: TU

---

### E62 BME 433 Biomedical Signal Processing

An advanced undergraduate/graduate-level course. Continuous-time and discrete-time application of signal processing tools to a variety of biomedical problems. Course topics include linear systems theory, frequency transforms, sampling theorem, basis functions, linear filtering, feature extraction, noise analysis, system identification. Concepts learned in class will be applied using software tools to real biomedical signals such as speech, ECG, EEG, medical images. Prerequisites: ESE 317, ESE 351.  
Credit 3 units. EN: TU

---

### E62 BME 450 Numerical Methods for Computational Modeling in Biomedicine

Advanced computational methods are required for the creation of biological models. Students will be introduced to the process of model development from beginning to end, which includes model formulation, how to solve and parameterize equations, and how to evaluate model success. To illustrate the potential

of these methods, participants will systematically build a model to simulate a "real-life" biological system that is applicable to their research or interest. A mechanistic appreciation of the methods will be gained by programming the methods in a low-level language (C++) in a Linux environment. While extensive programming knowledge is not required, participants are likely to find that some programming background will be helpful. Students enrolled in the 550 graduate class will be required to complete a final project that incorporates the methods taught in class. Prerequisites: Introductory programming course similar to E81 CSE 131.

Credit 3 units. EN: TU

---

#### **E62 BME 459 Intermediate Biomechanics**

This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity, and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle, and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing. Prerequisites: BME 240 and ESE 318 and ESE 319 or equivalent, or permission of instructor.

Same as E62 BME 559

Credit 3 units. EN: TU

---

#### **E62 BME 461 Protein Structure and Dynamics**

This course covers the concepts and methods involved in the analysis of protein structure, stability, folding and misfolding. Topics include protein structural elements, amyloid structure, intra- and intermolecular forces, folding pathways and intermediates, phi-value analysis, kinetics of protein folding and of amyloid formation, and their application to problems of bioengineering and biophysics. Two-thirds of the course will consist of lectures; the other third will be student seminars, in which each student presents a paper from primary literature and its concept and methodology that is discussed in detail. Prerequisites: BME 320B Bioengineering Thermodynamics or equivalent.

Credit 3 units. EN: TU

---

#### **E62 BME 464 Orthopaedic Biomechanics — Cartilage/ Tendon**

Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Note: BME 590Z (BME 463/563) Orthopaedic Biomechanics — Bones and Joints is *not* a prerequisite.

Same as E37 MEMS 5564

Credit 3 units. EN: TU

---

#### **E62 BME 465 Biosolid Mechanics**

Introduction to the mechanical behaviors of biological tissues of musculoskeletal, cardiac and vascular systems. Topics to be covered include static force analysis and nonlinear optimization theory; linearly elastic models for stress-strain analysis and solutions to relevant problems in bioelasticity; models of active

structures (e.g., muscles); strain energy methods and nonlinear tissue behaviors; and introductory theory for finite element analysis. Emphasis will be placed on modeling stress-strain relations with relevance to biological tissues. Prerequisites: BME 240 or equivalent and ESE 318 and ESE 319.

Credit 3 units. EN: TU

---

#### **E62 BME 471 Bioelectric Phenomena**

This course is a quantitative introduction to the origins of bioelectricity with an emphasis on neural and cardiac electrophysiology. Topics include electric fields and current flow in volume conductors; cell membrane channels and their role in generating membrane potentials; action potentials and their propagation in myelinated and unmyelinated axons as well as cardiac tissue. Minor topics of discussion include both skeletal muscle and nonhuman (e.g., electric fish) sources of bioelectricity. Prerequisite: ESE 330.

Credit 3 units. EN: TU

---

#### **E62 BME 472 Biological Neural Computation**

This course considers the computations performed by the biological nervous system with a particular focus on neural circuits and population-level encoding/decoding. Topics include Hodgkin-Huxley equations, phase-plane analysis, reduction of Hodgkin-Huxley equations, models of neural circuits, plasticity and learning, and pattern recognition and machine learning algorithms for analyzing neural data. *Note:* Graduate students in psychology or neuroscience who are in the cognitive, computational and systems neuroscience curriculum pathway may register in Biol 5657 for 3 credits. For non-BME majors, conceptual understanding and selection/application of right neural data analysis technique are stressed. Hence homework assignments/examinations for the two sections are different, however all students are required to participate in a semester-long independent project as part of the course. Prerequisites: calculus, differential equations, basic probability and linear algebra. Undergraduates need permission of the instructor. Biol 5657 prerequisites: permission from the instructor.

Same as E62 BME 572

Credit 3 units. EN: TU

---

#### **E62 BME 4902 Cellular Neurophysiology**

This course examines the biophysical concepts of synaptic function with the focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information coding, mechanisms of learning and memory, function of synapses in sensory systems, models of synaptic disease states such as Parkinson and Alzheimer's diseases. Additionally, a set of lectures is devoted to modern electrophysiological and imaging techniques, and modeling approaches to study synapses and neural circuits. Prerequisites: senior or graduate standing.

Same as E62 BME 5902

Credit 3 units. EN: TU

---

#### **E62 BME 4903 Physical Methods for Biomedical Scientists**

The course will introduce the spectrum of biophysical techniques used in biomedical sciences with a focus on advanced fluorescence spectroscopy. The first half of the course

(January to spring break) will introduce the concepts behind techniques such as: dynamic light scattering, SPR, analytical ultracentrifugation size-exclusion and affinity chromatography, atomic force microscopy, fluorescence spectroscopy, FRET, FTIR, circular dichroism, fluorescence correlation spectroscopy, sub-diffraction microscopy. The second half of the course will be held as six 3 h block lab classes (Fridays 10 a.m.-1 p.m.) in which the students will use these techniques in experiments on protein folding, protein stability and amyloid formation. Prior attendance of BME 461 Protein Structure and Dynamics is encouraged. Because of limited room in the experimental lab, attendance will be limited to nine students. Prerequisite: senior or graduate standing.

Credit 3 units. EN: TU

---

**E62 BME 4904 Interfaces and Attachments in Natural and Engineered Structures**

Attachment of dissimilar materials in engineering and surgical practice is a challenge. Bimaterial attachment sites are common locations for injury and mechanical failure. Nature presents several highly effective solutions to the challenge of bimaterial attachment that differ from those found in engineering practice. This course bridges the physiologic, surgical, and engineering approaches to connecting dissimilar materials. Topics in this course are: natural bimaterial attachments; engineering principles underlying attachments; analysis of the biology of attachments in the body; mechanisms by which robust attachments are formed; concepts of attaching dissimilar materials in surgical practice and engineering; and bioengineering approaches to more effectively combine dissimilar materials.

Same as E37 MEMS 5560

Credit 3 units. EN: TU

---

**E62 BME 493 Computational Methods for Inverse Problems**

Inverse problems are ubiquitous in science and engineering, and form the basis for modern imaging methods. This course will introduce students to the mathematical formulation of inverse problems and modern computational methods employed to solve them. Specific topics covered will include regularization theory, compressive sampling, and a survey of relevant numerical optimization methods. The application of these methods to tomographic imaging problems will be addressed in detail. Prerequisites: ESE 318, 319, 326, 351.

Credit 3 units. EN: TU

---

**E62 BME 494 Ultrasound Imaging**

Introduce basic principles of ultrasound imaging, diagnostic ultrasound imaging system, clinical applications, and emerging technologies in industry. Prerequisite: ESE 351.

Credit 3 units. EN: TU

---

**E62 BME 501C BME Doctoral Seminar Series**

This is a 1-unit credit option for BME students who attend regularly scheduled BME seminars (or approved substitute seminars). A satisfactory grade is obtained by submission of a two-page peer-reviewed paper written by one of the regularly scheduled BME seminar speakers whose seminar the student attended. Papers are to be submitted to the graduate student administrator for review by the director of doctoral studies. Prerequisites: Students must be current BME students in their second year and beyond in order to register.

Credit 1 unit.

---

**E62 BME 506 Seminar in Imaging Science and Engineering**

This seminar course consists of a series of tutorial lectures on Imaging Science and Engineering with emphasis on applications of imaging technology. Students are exposed to a variety of imaging applications that vary depending on the semester, but may include multispectral remote sensing, astronomical imaging, microscopic imaging, ultrasound imaging, and tomographic imaging. Guest lecturers come from several parts of the university. This course is required of all students in the Imaging Science and Engineering program; the only requirement is attendance. This course is graded pass/fail. Prerequisite: admission to Imaging Science and Engineering program.

Same as E35 ESE 596

Credit 1 unit.

---

**E62 BME 507 Radiological Physics and Dosimetry**

This class is designed to construct a theoretical foundation for ionizing radiation dose calculations and measurements in a medical context and prepare graduate students for proper scientific presentations in the field of x-ray imaging and radiation therapy. Specifically, a student completing this course will be able to do the following: 1. Understand and apply key concepts specific to energy deposition for both ionizing photon interactions and transport in matter and for energetic charged particle interactions and transport in matter. Radiation sources include radioactivity, x-ray tubes, and linear accelerators. 2. Understand the theoretical details of ion-chamber based dosimetry and of both cavity-theory based (TG-21) and Monte-Carlo based (TG-51) clinical protocols. 3. Perform and present real-world style research projects as a group, and present these projects in a typical professional scientific format and style. 4. Achieve an appreciation of the history and potential future developments in ionizing radiation detection and dosimetry. Prerequisites: BS in physics or engineering and instructor approval.

Credit 3 units.

---

**E62 BME 5071 Radiobiology**

Effects of ionizing radiations on living cells and organisms, including physical, chemical, and physiological bases of radiation cytotoxicity, mutagenicity and carcinogenesis. Textbook: *Radiobiology for the Radiologist*. Eric Hall and Amato Giaccia. Two lectures per week. Prerequisites: graduate student standing and one year each of biology, physics and organic chemistry, or approval of instructor.

Credit 2 units.

---

**E62 BME 5073 Radiation Protection and Safety**

This course will introduce concepts of radiation protection and safety. The focus will be on how to protect humans and environment from ionizing radiation. Special emphasis will be on radiological protection in clinics. Prerequisite: graduate student standing or permission of the instructor.

Credit 2 units.

---

**E62 BME 524 Tissue Engineering**

This course integrates the principles and methods of engineering and life sciences toward the fundamental understanding of normal and pathological mammalian tissues especially as they relate to the development of biological substitutes to restore or improve tissue function. Current concepts and strategies including drug delivery, tissue and cell transplantation, and in vivo tissue regeneration will be introduced as well as their

respective clinical applications. Prerequisites: BME 366; or MEMS 3410, Biol 2960 and 2970; or permission of the instructor. Credit 3 units. EN: TU

---

#### **E62 BME 527 Design of Artificial Organs**

Medical devices that replace the function of one of the major organs in the body must usually interface with flowing blood. Examples include total artificial hearts, left ventricular assist devices, membrane oxygenators, hemodialysis systems and encapsulated endocrine cells. The design of these devices relies on integration of knowledge from a variety of fields, in particular computational fluid dynamics and blood rheology. We study the process by which a concept for a device eventually leads to a functioning, blood-contacting medical device, with most of the focus on the design of left ventricular assist devices. Students learn to use CAD to design blood pumping devices, test their designs via computational fluid dynamics, and 3-D print and test their pumps with water. Prerequisite: BME 366 or equivalent course in Transport Phenomena (including momentum and mass transfer).

Credit 3 units. EN: TU

---

#### **E62 BME 528 Translational Regenerative Medicine**

This course provides students with an opportunity to connect basic research with applications in translation for several tissues/disease models. Course sessions will alternate between literature on basic mechanisms of development/stem cell biology and applications led by researchers or clinicians working in each area. Areas of focus will include cardiovascular development/congenital heart disease and arrhythmia, lung, endocrinology/diabetes, gut/intestinal disorders, musculoskeletal, neural (peripheral and brain), liver, hematology and eye. Emphasis on how discovery can be translated will be a major focus of the course. Students will be expected to review and present on primary literature in the field. Graduate standing is required. Prerequisites: graduate standing Engineering or DBBS.

Credit 3 units.

---

#### **E62 BME 530A Molecular Cell Biology for Engineers**

This course is designed for upper-level undergraduates and first-year graduate students with a background in engineering. This course covers the biology of cells of higher organisms: protein structure and function; cellular membranes and organelles; cell growth and oncogenic transformation; cellular transport, receptors and cell signaling; the cytoskeleton, the extracellular matrix and cell movement. Emphasis is placed on examples relevant to biomedical engineering. The course includes two lectures per week and one discussion section. In the discussion section, the emphasis is on experimental techniques used in cell biology and the critical analysis for primary literature. Note this course does not count for engineering topics credits and is meant to fulfill a life science requirement for engineering or physical sciences graduate students. Prerequisites: Biol 2960 and 2970 or graduate standing.

Credit 4 units.

---

#### **E62 BME 533 Biomedical Signal Processing**

Course designed for graduate students with little or no background in signal processing. Continuous-time and discrete-time application of signal processing tools to a variety of biomedical problems. Course topics include review of linear signals and systems theory, frequency transforms, sampling theorem, basis functions, linear filtering, feature extraction, parameter estimation and biological system modeling. Special

emphasis will be placed on signal transduction and data acquisition. Additional topics include noise analysis of real-world biosignals, biological system identification, stochastic/chaotic/fractal/nonlinear processes in biological systems. Concepts learned in class will be applied using software tools to 1D biomedical signals such as biological rhythms, chemical concentrations, blood pressure, speech, EMG, ECG, EEG. Prerequisites: graduate standing or consent of instructor. Credit 3 units. EN: TU

---

#### **E62 BME 537 Computational Molecular Biology**

This course is a survey of algorithms and mathematical methods in biological sequence analysis (with a strong emphasis on probabilistic methods) and systems biology. Sequence analysis topics include introduction to probability, probabilistic inference in missing data problems, hidden Markov models (HMMs), profile HMMs, sequence alignment, and identification of transcription-factor binding sites. Systems biology topics include discovery of gene regulatory networks, quantitative modeling of gene regulatory networks, synthetic biology, and (in some years) quantitative modeling of metabolism. Prerequisite: CSE 131 or CSE 501N.

Same as E81 CSE 587A

Credit 3 units.

---

#### **E62 BME 538 Cell Signal Transduction**

This class covers the elements of cell signal transduction important to human development, homeostasis and disease. Lectures are combined with primary literature review to cover canonical signaling and current topics within the field. Spatial, time and dose-dependent aspects of signaling are of particular focus. Topics include: G protein-coupled receptors, receptor tyrosine kinases, adhesion signaling, the MAPK cascade, lipid signaling, the DNA damage response, and autocrine, paracrine and juxtacrine signaling. Prerequisites: BME 530A or BME 5068. Credit 3 units.

---

#### **E62 BME 550 Numerical Methods for Computational Modeling in Biomedicine**

Advanced computational methods are required for the creation of biological models. Students will be introduced to the process of model development from beginning to end, which includes model formulation, how to solve and parameterize equations, and how to evaluate model success. To illustrate the potential of these methods, participants will systematically build a model to simulate a "real-life" biological system that is applicable to their research or interest. A mechanistic appreciation of the methods will be gained by programming the methods in a low-level language (C++) in a Linux environment. While extensive programming knowledge is not required, participants are likely to find that some programming background will be helpful. Students enrolled in the 550 graduate class will be required to complete a final project that incorporates the methods taught in class. Prerequisites: introductory programming course similar to E81 CSE 131.

Same as E62 BME 450

Credit 3 units. EN: TU

---

#### **E62 BME 5565 Mechanobiology of Cells and Matrices**

At the interface of the cell and the extracellular matrix, mechanical forces regulate key cellular and molecular events that profoundly affect aspects of human health and disease. This course offers a detailed review of biomechanical inputs that drive cell behavior in physically diverse matrices. In particular,

cytoskeletal force-generation machineries, mechanical roles of cell-cell and cell-matrix adhesions, and regulation of matrix deformations are discussed. Also covered are key methods for mechanical measurements and mathematical modeling of cellular response. Implications of matrix-dependent cell motility in cancer metastasis and embryonic development are discussed. Prerequisite: graduate standing or permission of the instructor. Same as E37 MEMS 5565  
Credit 3 units. EN: TU

---

**E62 BME 559 Intermediate Biomechanics**

This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle, and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing. Prerequisites: BME 240 and ESE 318 and ESE 319 or equivalent, or permission of instructor.  
Credit 3 units. EN: TU

---

**E62 BME 5610 Protein Structures and Dynamics**

This course covers the concepts and methods involved in the analysis of protein structure, stability, folding and misfolding. Topics include protein structural elements, amyloid structure, intra- and intermolecular forces, folding pathways and intermediates, phi-value analysis, kinetics of protein folding and of amyloid formation, and their application to problems of bioengineering and biophysics. Two-thirds of the course will consist of lectures; the other third will be student seminars, in which each student presents a paper from primary literature and its concept and methodology that is discussed in detail. Prerequisites: BME 320B Bioengineering Thermodynamics or equivalent.  
Same as E62 BME 461  
Credit 3 units. EN: TU

---

**E62 BME 562 Mechanics of Growth and Development**

This course applies the fundamental principles of solid mechanics to problems involving growth, remodeling and morphogenesis of cells, tissues and organs. Introduction to developmental biology, nonlinear elasticity, viscoelasticity and active contraction. Particular topics include cellular morphogenetic mechanisms, growth and development of the cardiovascular system, and adaptive remodeling of bone. Prerequisites: BME 240 or MEMS 241 or equivalent.  
Credit 3 units. EN: TU

---

**E62 BME 564 Orthopaedic Biomechanics — Cartilage/Tendon**

Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisite: BME 240 or equivalent. *Note:* BME 590Z (BME 463/563) Orthopaedic Biomechanics — Bones and Joints is *not* a prerequisite.  
Same as E37 MEMS 5564

Credit 3 units. EN: TU

---

**E62 BME 565 Biosolid Mechanics**

Introduction to the mechanical behaviors of biological tissues of musculoskeletal, cardiac and vascular systems. Topics to be covered include static force analysis and nonlinear optimization theory; linearly elastic models for stress-strain analysis and solutions to relevant problems in bioelasticity; models of active structures (e.g., muscles); strain energy methods and nonlinear tissue behaviors; and introductory theory for finite element analysis. Emphasis will be placed on modeling stress-strain relations with relevance to biological tissues. Prerequisites: BME 240 or equivalent and ESE 318 and ESE 319.  
Same as E62 BME 465  
Credit 3 units. EN: TU

---

**E62 BME 5702 Application of Advanced Engineering Skills for Biomedical Innovators**

Students will work in small teams to apply core engineering skills covered in BME 5701 such as FEM, CAD, microcontroller programming, circuit design, data informatics, and app development to particular clinical needs or processes chosen by the instructing staff. Prerequisites: BME 5701 or permission of instructor.  
Credit 3 units.

---

**E62 BME 5711 Ideation of Biomedical Problems and Solutions**

This course is part one of the year-long master's design sequence for the BME Master of Engineering. The course will begin with a boot camp primer of HIPAA certification, clinical etiquette, medical law, and intellectual property law. This will be followed by a rotation period of guided shadowing of clinicians. Following each rotation, students will review and present their findings, with a view toward problem solving and project generation. Three-fourths of the way through the course, students will form into teams, choose a master's project, and begin intensive study of their chosen problem or process. The final weeks of the course will focus on problem scope and definition, identification of creative alternatives, and consultation with experts in the field. Prerequisite: acceptance into the Master of Engineering program.  
Credit 3 units.

---

**E62 BME 5712 Implementation of Biomedical Solutions**

This course is part two of the year-long master's design sequence for the BME Master of Engineering. Students will work in small groups to begin to design a solution to the problem identified in BME 5711. Options and alternatives will be evaluated and a best-choice solution will be chosen, based on an in-depth study of constraints upon the problem, including engineering materials, economic, safety, social, manufacturing, ethical, sustainability, and other requirements. Core skills such as FEM, CAD, circuit design, microcontroller programming, and 3-D printing will be applied to create first an alpha mockup for proof of concept, followed by a full working prototype by the end of the semester. Prerequisites: BME 5711 or permission of instructor.  
Credit 3 units.

---

**E62 BME 5713 Translation of Biomedical Solutions to Products**

This course is the third and final part of the year-long master's design course sequence. Through a repeated sequence of iteration, fabrication and verification, design teams will refine and optimize their master's design project, bringing it to completion. Prerequisites: BME 5712 or permission of instructor. Credit 4 units.

---

**E62 BME 572 Biological Neural Computation**

This course considers the computations performed by the biological nervous system with a particular focus on neural circuits and population-level encoding/decoding. Topics include Hodgkin-Huxley equations; phase-plane analysis; reduction of Hodgkin-Huxley equations; models of neural circuits; plasticity and learning; and pattern recognition and machine learning algorithms for analyzing neural data. Note: Graduate students in psychology or neuroscience who are in the Cognitive, Computational and Systems Neuroscience curriculum pathway may register in Biol 5657 for 3 credits. For non-BME majors, conceptual understanding, and selection/application of right neural data analysis technique are stressed. Hence homework assignments/examinations for the two sections are different, however all students are required to participate in a semester-long independent project as part of the course. Prerequisites: calculus, differential equations, basic probability and linear algebra. Undergraduates need permission of the instructor. Biol 5657 prerequisites: permission from the instructor. Credit 3 units. EN: TU

---

**E62 BME 5722 Feasibility Evaluation of Biomedical Products**

This is the second course of the Master of Engineering - Biomedical Innovation sequence in product development. Students will practice the steps in biomedical product development, including medical need validation, brainstorming initial solutions, market analysis, solution evaluation, regulatory, patent, and intellectual property concerns, manufacturability, risk assessment and mitigation, and global considerations. The course will focus on applying product development techniques to several real unmet medical needs; students will thus perform analysis and create reports and presentations for several different product solutions. Peer and faculty evaluations will provide feedback to improve individual technique. Local biomedical entrepreneurs will also visit to share their expertise and experiences. Prerequisite: admission to the Master of Engineering program. Credit 2 units.

---

**E62 BME 5723 Realization of Biomedical Products in the Marketplace**

This course is the third in the MEng-BMI Biomedical Product Development sequence, focusing on the final stages of analysis to bring forth a leading solution concept. Solution concepts are screened for killer risks in the areas of intellectual property, regulatory, reimbursement, business models, and technical feasibility to identify viable concepts. From there, manufacturability and product specifications are evaluated against user and design requirements to select a concept that offers the highest value with lowest risk. Throughout the course, students will practice effective communication of risk factors through pitch presentations and executive summary reports. In addition, specialists from the St. Louis entrepreneurial community will share their experiences as guest speakers. Prerequisites: BME 5722; MEng-BMI candidates only.

Credit 1 unit.

---

**E62 BME 5731 Business Foundations for Biomedical Innovators**

For medical innovators, a successful translation from product to market will require careful strategy and an understanding of the steps needed to form and fund a biotech business, either as a new startup or as an extension of the product line of an existing company. This course will provide a first look at the steps in this process, including intellectual property concerns, R&D, clinical strategy, regulatory issues, quality management, reimbursement, marketing strategy, sales and distribution, operating plans, and approaches to funding. Prerequisites: MEng program. Credit 2 units.

---

**E62 BME 5732 Entrepreneurship for Biomedical Innovators**

This course will apply the concepts covered in BME 5731 in an interactive process that will provide practical experience. Topics of intellectual property, R&D, clinical strategy, regulatory issues, quality management, reimbursement, marketing strategy, sales and distribution, operating plans, and approaches to funding will be covered. Along with practical exercises, access to specialists and experts in these topics from the St. Louis entrepreneurial community will be provided as an integral part of the course. Prerequisites: BME 5731; MEng-BMI candidates only. Credit 2 units.

---

**E62 BME 574 Quantitative Bioelectricity and Cardiac Excitation**

Action potential generation, action potential propagation, source-field relationships in homogeneous and inhomogeneous media, models of cardiac excitation and arrhythmia, quantitative electrocardiography. Prerequisites: differential equations, Laplace transform, electromagnetic field theory (undergraduate level). Credit 3 units. EN: TU

---

**E62 BME 575 Molecular Basis of Bioelectrical Excitation**

Ion channels are the molecular basis of membrane excitability in all cell types, including neuronal, heart and muscle cells. This course presents the structure and the mechanism of function of ion channels at the molecular level. It introduces the basic principles and methods in the ion channel study as well as the structure-function relation of various types of channels. Exemplary channels that have been best studied are discussed to illustrate the current understanding. Prerequisites: knowledge of differential equations, electrical circuits and chemical kinetics. Credit 3 units.

---

**E62 BME 5771 Biomedical Product Development**

Advances in science and technology have opened the health care field to innovation now more than any other time in history. Engineers and inventors can make real and rapid improvements to patient treatments, length of hospital stay, procedure time, cost containment, and accessibility to treatment. However, a successful transition from idea to implementation requires careful market analysis and strategy planning. This course will address the steps in this process, including personal and team strength assessment, medical need validation, brainstorming initial solutions, market analysis, solution evaluation, regulatory, patent and intellectual property concerns, manufacturability, risk assessment and mitigation, and global considerations. Students will be expected to review resource material prior to

coming to class in order to facilitate active class discussion and team-based application of the material during class; regular attendance will be key to course success. The course will focus on applying product development techniques to several real unmet medical needs; students will thus perform analysis and create reports and presentations for several different product solutions. Peer and faculty evaluations will provide feedback to improve individual technique. In addition, throughout the semester, local biomedical entrepreneurs will visit to share their expertise and experiences. Prerequisites: graduate or professional student standing or permission of the instructor. Credit 3 units.

---

#### **E62 BME 5772 Biomedical Business Development**

For medical innovators, a successful translation from product to market will require careful strategy and an understanding of the steps needed to form and fund a biotech business, either as a new startup or as an extension of the product line of an existing company. This course will address the steps in this process, including intellectual property concerns, R&D, clinical strategy, regulatory issues, quality management, reimbursement, marketing strategy, sales and distribution, operating plans, and approaches to funding. Prerequisites: graduate or professional student standing or permission of the instructor. Credit 3 units.

---

#### **E62 BME 5799 Independent Study for Candidates in the Master of Engineering Program**

Independent investigation on a topic of special interest. The student and mentor must justify the requested number of units. The MEng program director must approve the requested number of units. Credit variable, maximum 6 units.

---

#### **E62 BME 5820 Fundamentals and Applications of Modern Optical Imaging**

Analysis, design and application of modern optical imaging systems with emphasis on biological imaging. First part of course will focus on the physical principles underlying the operation of imaging systems and their mathematical models. Topics include ray optics (speed of light, refractive index, laws of reflection and refraction, plane surfaces, mirrors, lenses, aberrations), wave optics (amplitude and intensity, frequency and wavelength, superposition and interference, interferometry), Fourier optics (space-invariant linear systems, Huygens-Fresnel principle, angular spectrum, Fresnel diffraction, Fraunhofer diffraction, frequency analysis of imaging systems), and light-matter interaction (absorption, scattering, dispersion, fluorescence). Second part of course will compare modern quantitative imaging technologies including, but not limited to, digital holography, computational imaging, and super-resolution microscopy. Students will evaluate and critique recent optical imaging literature. Prerequisites: ESE 318 and ESE 319 or their equivalents; ESE 330 or Physics 421 or equivalent. Same as E35 ESE 582. Credit 3 units. EN: TU

---

#### **E62 BME 589 Biological Imaging Technology**

This class develops a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section examines how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure

and function, image formation methods and diffraction limited imaging. The math section examines image decomposition using basis functions (e.g., Fourier transforms), synthesis of measurement data, image analysis for feature extraction, reduction of multidimensional imaging datasets, multivariate regression and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology are critiqued.

Same as E35 ESE 589  
Credit 3 units. EN: TU

---

#### **E62 BME 5901 Integrative Cardiac Electrophysiology**

Quantitative electrophysiology of the heart, integrating from the molecular level (ion channels, regulatory pathways, cell signaling) to the cardiac cell (action potential and calcium transient), multicellular tissue (cell-cell communication) and the whole heart. Prerequisite: permission of instructor. Credit 3 units. EN: TU

---

#### **E62 BME 5902 Cellular Neurophysiology**

This course examines the biophysical concepts of synaptic function with the focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information coding, mechanisms of learning and memory, function of synapses in sensory systems, models of synaptic disease states such as Parkinson and Alzheimer's diseases. Additionally, a set of lectures is devoted to modern electrophysiological and imaging techniques, and modeling approaches to study synapses and neural circuits. Prerequisite: senior or graduate standing. Credit 3 units. EN: TU

---

#### **E62 BME 5903 Physical Methods for Biomedical Scientists**

The course will introduce the spectrum of biophysical techniques used in biomedical sciences with a focus on advanced fluorescence spectroscopy. The first half of the course (January to spring break) will introduce the concepts behind techniques such as: dynamic light scattering, SPR, analytical ultracentrifugation size-exclusion and affinity chromatography, atomic force microscopy, fluorescence spectroscopy, FRET, FTIR, circular dichroism, fluorescence correlation spectroscopy, sub-diffraction microscopy. The second half of the course will be held as six 3 h block lab classes (Fridays 10 a.m.-1 p.m.) in which the students will use these techniques in experiments on protein folding, protein stability and amyloid formation. Prior attendance of BME 461 Protein Structure and Dynamics is encouraged. Because of limited room in the experimental lab, attendance will be limited to nine students. Prerequisite: senior or graduate standing. Same as E62 BME 4903. Credit 3 units. EN: TU

---

#### **E62 BME 591 Biomedical Optics I: Principles**

This course covers the principles of optical photon transport in biological tissue. Topics include a brief introduction to biomedical optics, single-scatterer theories, Monte Carlo modeling of photon transport, convolution for broad-beam responses, radiative

transfer equation and diffusion theory, hybrid Monte Carlo method and diffusion theory, and sensing of optical properties and spectroscopy. Prerequisite: Differential equations. Credit 3 units. EN: TU

---

**E62 BME 5911 Cardiovascular Biophysics Journal Club**

This journal club is intended for beginning graduate students, advanced undergraduates and MSTP students with a background in the quantitative sciences (engineering, physics, math, chemistry, etc.). The subjects covered are inherently multidisciplinary. We review landmark and recent publications in quantitative cardiovascular physiology, mathematical modeling of physiologic systems and related topics such as chaos theory and nonlinear dynamics of biological systems. Familiarity with calculus, differential equations and basic engineering/thermodynamic principles is assumed. Knowledge of anatomy/physiology is optional. Credit 1 unit.

---

**E62 BME 5913 Molecular Systems Biology: Computation & Measurements for Understanding Cell Physiology and Disease**

Systems-level measurements of molecules in cells and tissues harbor the promise to identify the ways in which tissues develop, maintain, age, and become diseased. This class will introduce the systems-level measurement techniques for capturing molecular information and the mathematical and computational methods for harnessing the information from these measurements to improve our understanding of cell physiology and disease. This is a practical class, which involves implementation of the concepts in MATLAB and will be applied to existing, real data from published journal articles. Molecular topics will include: gene expression, microRNA, proteins, post-translational modifications, drugs, and splicing. Computational/mathematical topics covered will include: statistical inference, dimensionality reduction techniques, unsupervised and supervised machine learning, and graph-based techniques. Prerequisites: A working knowledge of molecular biology, linear algebra, and statistics is required. Credit 3 units. EN: TU

---

**E62 BME 593 Computational Methods for Inverse Problems**

Inverse problems are ubiquitous in science and engineering, and form the basis for modern imaging methods. This course will introduce students to the mathematical formulation of inverse problems and modern computational methods employed to solve them. Specific topics covered will include regularization theory, compressive sampling, and a survey of relevant numerical optimization methods. The application of these methods to tomographic imaging problems will be addressed in detail. Prerequisites: ESE 318, 319, 326, 351. Same as E62 BME 493. Credit 3 units. EN: TU

---

**E62 BME 594 Ultrasound Imaging**

Introduce basic principles of ultrasound imaging, diagnostic ultrasound imaging system, clinical applications, and emerging technologies in industry. Prerequisite: ESE 351. Same as E62 BME 494. Credit 3 units. EN: TU

---

**E62 BME 599 Master's Research**

Credit variable, maximum 6 units.

---

## Computer Science & Engineering

### About Computer Science & Engineering

The field of computer science and engineering studies the design, analysis, implementation and application of computation and computer technology. Computing plays an important role in virtually all fields, including science and medicine, music and art, business, law and human communication; hence the study of computer science and engineering can be interdisciplinary in nature. Whether a student's goal is to become a practitioner or to take a few courses to develop a basic understanding of computing for application to another field, the Department of Computer Science & Engineering at Washington University is committed to helping students gain the background they need.

People are attracted to the study of computing for a variety of reasons. Consequently, the department offers a wide variety of academic programs, including a five-course minor, a second major, two undergraduate degrees, combined undergraduate and graduate programs, as well as undergraduate research opportunities. Each academic program can be tailored to a student's individual needs.

The breadth of Computer Science & Engineering may be best understood in terms of the general areas of *applications*, *software systems*, *hardware* and *theory*.

**Applications** are the ways in which computer technology is applied to solve problems, often in other disciplines. Most applications courses provide background not only in the applications themselves but also in how the applications are designed and implemented. Examples of application areas include artificial intelligence, computer graphics, game design, and computational biology.

**Software Systems** are collections of interacting software components that work together to support the needs of computer applications. Courses in this area help students gain a solid understanding of how software systems are designed and implemented. While in the process, students develop their own software systems. Examples include operating systems, which manage computational resources; network protocols, which are responsible for the delivery of information; programming languages, which support the construction of software systems and applications; and compilers, which translate computer programs into executable form.

**Hardware** is the term used to describe the physical and mechanical components of a computer system. Courses in this area provide background in logic circuits, which carry out basic computations; computer architecture, which defines the organization of functional components in a computer system,

and peripheral devices such as disks, robot arms that are controlled by the computer system, and sensor systems that feed information which computer systems use to interact with the physical world.

**Theory** is the study of the fundamental capabilities and limitations of computer systems. A knowledge of theory helps students choose among competing design alternatives on the basis of their relative efficiency and helps them to verify that their implementations are correct. Theory courses provide background in algorithms, which describe how a computation is to be carried out; data structures, which specify how information is to be organized within the computer; analytical techniques to characterize the time or space requirements of an algorithm or data structure; and verification techniques to prove that solutions are correct.

A well-rounded study of computing includes training in each of these areas. However, depending on a student's educational goals, the student may prefer to concentrate on certain areas for greater depth of knowledge. To help students balance their elective courses, most upper-level departmental courses are classified in one of these categories: S for software systems, M for machines (hardware), T for theory, and A for applications. If a student's interests are concentrated in the first two areas, a Computer Engineering degree might be best. Students are encouraged to meet with a faculty adviser in the Department of Computer Science & Engineering to discuss their options and develop a plan consistent with their goals.

## Undergraduate Programs

The Department of Computer Science & Engineering (CSE) offers an array of courses which can be taken as requirements or electives for either of the undergraduate degree programs. We offer a Bachelor of Science in Computer Science (BSCS), a Bachelor of Science in Computer Engineering (BSCoE), or a second major in computer science. In addition to these three programs, CSE offers a pre-medical option and combined undergraduate/graduate programs. As a part of our program, each student is assigned an adviser, who can help design an individualized program, monitor a student's progress, and consult about curriculum and career options. Additional information can be found on our website (<http://cse.wustl.edu>), or any of the CSE faculty (<https://cse.wustl.edu/faculty/Pages/default.aspx>) can offer further guidance and information about our programs.

**Bachelor of Science in Computer Science:** The computer science (<https://cse.wustl.edu/undergraduate/programs/Pages/bs-in-computer-science.aspx>) major is designed for students planning a career in computing.

**Bachelor of Science in Computer Engineering:** The computer engineering (<https://cse.wustl.edu/undergraduate/programs/Pages/bs-in-computer-engineering.aspx>) major encompasses

studies of hardware, software and systems issues that arise in the design, development and application of computer systems.

**Second Major in Computer Science:** The second major (<https://cse.wustl.edu/undergraduate/programs/Pages/second-major.aspx>) provides an opportunity to combine computer science with another degree program. A second major in computer science can expand a student's career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major is also well suited for students planning careers in medicine, law, business, architecture and fine arts.

**Pre-Medical Option within Computer Science:** Students may pursue a pre-medicine curriculum in conjunction with either the BS degree or second major in computer science programs. Students interested in the pre-medical option should refer to the School of Engineering & Applied Science (p. 939) *Bulletin* page for details.

## Combined Undergraduate and Graduate Study

The Department of Computer Science & Engineering offers in-depth graduate study in many areas. Students entering the graduate programs require a background in computer science fundamentals. Washington University undergraduates seeking admission to the graduate degree program to obtain a master's degree in computer science or computer engineering do not need to take the Graduate Record Examination (GRE). For more information, contact the department office by email ([admissions@cse.wustl.edu](mailto:admissions@cse.wustl.edu)) or call 314-935-6132.

### The Joint Bachelor's/Master's Program

This five-year program that leads to both the bachelor's and master's degrees offers the student an excellent opportunity to combine undergraduate and graduate studies in an integrated curriculum. The combination of the two programs extends the flexibility of the undergraduate curriculum to more advanced studies, thereby enabling students to plan their entire spectrum of computing studies in a more comprehensive educational framework. Consistent with the general requirements (p. 1033) defined by the School of Engineering & Applied Science (SEAS), a minimum of 150 units is required for completion of the Bachelor's/Master's program. Provided that the 150-unit requirement is satisfied, up to 6 units of course work acceptable for the master's degree can be counted toward both the bachelor's and master's requirement. Students in the Bachelor's/Master's program can take advantage of the program's flexibility by taking graduate courses toward the graduate degree while still completing the undergraduate degree requirements.

The Bachelor's/Master's program offers early admission to the graduate programs in computer science and computer engineering and allows a student to complete the master's degree typically in only one additional year of study (instead of

the usual three semesters). Undergraduate financial support is not extended for the additional semesters to complete the master's degree requirements; however, scholarship support based upon a student's cumulative GPA, calculated at the end of the junior year, will be awarded automatically in the student's final year of study. Students are classified as graduate students in their final year of study, and their tuition charges are at the graduate student rate. For information regarding scholarship amounts, please visit the Bachelor's/Master's Program in Engineering webpage (<http://engineering.wustl.edu/current-students/student-services/Pages/BS-MS-program.aspx>).

If students plan to apply to this program, it is recommended that they complete at least an undergraduate minor in computer science, three additional computer science courses at the 400 level, and one at the 500 level during their first four years. Students must apply to this program by October 1 of the first semester of their senior year, and a minimum GPA of 3.0 is required of all applicants. Late applications will be accepted after October 1 if submitted prior to the end of the applicant's senior year. Late applicants either have a reduced scholarship scale or, in some cases, may no longer be eligible for scholarship.

## BS/MBA Program

The growing importance of computer-based information systems in the business environment has produced a sustained high demand for graduates with master's degrees in business administration and undergraduate majors in computer science and engineering.

Students should apply to this joint program by February 1 of their junior year. The application for admission to the Olin Business School (p. 896) is available through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and a personal interview.

## Undergraduate Courses

Course requirements for the minor and majors may be fulfilled by CSE 131 Computer Science I, CSE 132 Computer Science II, CSE 240 Logic and Discrete Mathematics, CSE 247 Data Structures and Algorithms, CSE 347 Analysis of Algorithms, and CSE courses with a letter suffix in any of the categories: software systems (S), hardware (M), theory (T) and applications (A). In addition, with approval of the instructor, up to 6 units of CSE 400E Independent Study can be used toward the CSE electives of any CSE degree. Other CSE courses provide credit toward graduation but not toward the CSE elective requirements for the second major, BSCS or BSCoE. Undergraduates are encouraged to consider 500-level courses. If a student is interested in taking a course but is not sure if they have the needed prerequisites, the student should contact the instructor.

## Broadening Experiences

If a student wants to become involved in computer science or computer engineering research or gain experience in industry while they are an undergraduate, there are many opportunities to do so. A few of these are listed below.

**Co-op:** The Cooperative Education Program allows a student to get valuable experience working in industry while an undergraduate. A co-op can give students another perspective on their education and may lead to full-time employment. Numerous companies participate in this program. More information is available from the Engineering Co-op and Internship Program (<http://careercenter.wustl.edu/tools/careerdevelopment/Pages/engineeringcoop.aspx>) that is part of the Career Center in the Danforth University Center, Suite 110.

**Research:** Participating in an undergraduate research project is a great way to learn more about a specific area. Research projects are available either for pay or for credit through CSE 400E Independent Study. Visit the CSE website (<https://cse.wustl.edu/undergraduate/Pages/undergraduate-research.aspx>) for details.

**Study Abroad:** Students in the School of Engineering can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience. These opportunities will help students become global citizens better able to address current issues.

The study of computer science and engineering is especially well suited and popular for study abroad. Students from our department routinely study abroad in Europe, the UK, Australia, Israel, and many other places. Our department works closely with students to identify courses suitable for computer science credit.

For more information about these programs, please visit the SEAS website (<https://engineering.wustl.edu/our-school/initiatives/Pages/global.aspx>).

## Research Opportunities

The Department of Computer Science & Engineering actively promotes a culture of strong undergraduate participation in research. Many undergraduates work in research labs with state-of-the-art equipment that provides them the opportunity to take part in computer science and computer engineering research. Sensor networks, high-speed routers, specialized FPGA hardware, wireless devices, RF tags, digital cameras, robots, large displays and multiprocessors are just a few of the hardware devices undergraduates often use in their projects. Opportunities for exploring modern software development techniques and specialized software systems further enrich the range of research options and help undergraduates sharpen their design and programming skills.

## Advanced Placement/Proficiency

Students receiving a 4 or 5 on the AP Computer Science A exam are awarded credit for CSE 131 Computer Science I. Any student can take the CSE 131 proficiency exam, and a suitable score will waive CSE 131 as a requirement.

Upon request, the computer science department will evaluate a student for proficiency for any of our introductory courses. If a student is determined to be proficient in a given course, that course will be waived (without awarding credit) in the student's degree requirements, and the student will be offered guidance in selecting a more advanced course. Questions should be directed to the associate chair ([associatechair@cse.wustl.edu](mailto:associatechair@cse.wustl.edu)).

**Phone:** 314-935-6160  
**Website:** <https://cse.wustl.edu/undergraduate/programs>

## Faculty

### Chair

**Roch Guérin** (<https://engineering.wustl.edu/Profiles/Pages/Roch-Gu%C3%A9rin.aspx>)  
Harold B. and Adelaide G. Welge Professor of Computer Science  
PhD, California Institute of Technology  
Computer networks and communication systems

### Professors

**Aaron Bobick** (<https://engineering.wustl.edu/Profiles/Pages/Aaron-Bobick.aspx>)  
James M. McKelvey Professor and Dean  
PhD, Massachusetts Institute of Technology  
Computer vision, graphics, human-robot collaboration

**Michael R. Brent** (<https://engineering.wustl.edu/Profiles/Pages/Michael-Brent.aspx>)  
Henry Edwin Sever Professor of Engineering  
PhD, Massachusetts Institute of Technology  
Systems biology, computational and experimental genomics, mathematical modeling, algorithms for computational biology, bioinformatics

**Jeremy Buhler** (<https://engineering.wustl.edu/Profiles/Pages/Jeremy-Buhler.aspx>)  
PhD, Washington University  
Computational biology, genomics, algorithms for comparing and annotating large biosequences

**Roger D. Chamberlain** (<https://engineering.wustl.edu/Profiles/Pages/Roger-Chamberlain.aspx>)  
DSc, Washington University  
Computer engineering, parallel computation, computer architecture, multiprocessor systems

**Yixin Chen** (<https://engineering.wustl.edu/Profiles/Pages/Yixin-Chen.aspx>)  
PhD, University of Illinois at Urbana-Champaign  
Mathematical optimization, artificial intelligence, planning and scheduling, data mining, learning data warehousing, operations research, data security

**Patrick Crowley** (<https://engineering.wustl.edu/Profiles/Pages/Patrick-Crowley.aspx>)  
PhD, University of Washington  
Computer and network systems, network security

**Ron K. Cytron** (<https://engineering.wustl.edu/Profiles/Pages/Ron-Cytron.aspx>)  
PhD, University of Illinois at Urbana-Champaign  
Programming languages, middleware, real-time systems

**Christopher D. Gill** (<https://engineering.wustl.edu/Profiles/Pages/Christopher-Gill.aspx>)  
DSc, Washington University  
Distributed real-time embedded systems, middleware, formal models and analysis of concurrency and timing

**Raj Jain** (<https://engineering.wustl.edu/Profiles/Pages/Raj-Jain.aspx>)  
PhD, Harvard University  
Wireless networks, network security, next generation internet, sensor networks, telecommunications networks, performance analysis, traffic management, quality of service

**Tao Ju** (<https://engineering.wustl.edu/Profiles/Pages/Tao-Ju.aspx>)  
PhD, Rice University  
Computer graphics, visualization, mesh processing, medical imaging and modeling

**Chenyang Lu** (<https://engineering.wustl.edu/Profiles/Pages/Chenyang-Lu.aspx>)  
Fullgraf Professor in the Department of Computer Science & Engineering  
PhD, University of Virginia  
Real-time and embedded systems, wireless sensor networks, mobile computing

**Weixiong Zhang** (<https://engineering.wustl.edu/Profiles/Pages/Weixiong-Zhang.aspx>)  
PhD, University of California, Los Angeles  
Computational biology, genomics, machine learning and data mining, and combinatorial optimization

### Associate Professors

**Kunal Agrawal** (<https://engineering.wustl.edu/Profiles/Pages/Kunal-Agrawal.aspx>)  
PhD, Massachusetts Institute of Technology  
Parallel computing, cyber-physical systems & sensing, theoretical computer science

**Sanmay Das** (<https://engineering.wustl.edu/Profiles/Pages/Sanmay-Das.aspx>)  
PhD, Massachusetts Institute of Technology  
Design of algorithms for complex environments, computational social science, machine learning

**Caitlin Kelleher** (<https://engineering.wustl.edu/Profiles/Pages/Caitlin-Kelleher.aspx>)  
Hugo F. & Ina Champ Urbauer Career Development Associate Professor  
PhD, Carnegie Mellon University  
Human-computer interaction, programming environments, and learning environments

**William D. Richard** (<https://engineering.wustl.edu/Profiles/Pages/William-Richard.aspx>)  
PhD, University of Missouri-Rolla  
Ultrasonic imaging, medical instrumentation, computer engineering

## Assistant Professors

**Roman Garnett** (<https://engineering.wustl.edu/Profiles/Pages/Roman-Garnett.aspx>)  
PhD, University of Oxford  
Active learning (especially with atypical objectives), Bayesian optimization, and Bayesian nonparametric analysis

**Brendan Juba** (<https://engineering.wustl.edu/Profiles/Pages/Brendan-Juba.aspx>)  
PhD, Massachusetts Institute of Technology  
Theoretical approaches to artificial intelligence founded on computational complexity theory and theoretical computer science more broadly construed

**Angelina Lee** (<https://engineering.wustl.edu/Profiles/Pages/I-Ting-Angelina-Lee.aspx>)  
PhD, Massachusetts Institute of Technology  
Designing linguistics for parallel programming, developing runtime system support for multithreaded software, and building novel mechanisms in operating systems and hardware to efficiently support parallel abstractions

**Benjamin Moseley** (<https://engineering.wustl.edu/Profiles/Pages/Ben-Moseley.aspx>)  
PhD, University of Illinois at Urbana-Champaign  
Design and analysis of algorithms, online and approximation algorithms, parallel computing, large data analysis, green computing and algorithmic applications

**Alvitta Ottley** (<https://cse.wustl.edu/faculty/Pages/faculty.aspx?bio=109>)  
PhD, Tufts University  
Designing personalized and adaptive visualization systems, including information visualization, human-computer interaction, visual analytics, individual differences, personality, user modeling and adaptive interfaces

## Professor of the Practice

**Dennis Cosgrove**  
BS, University of Virginia  
Programming environments and parallel programming

## Lecturers

**Ruth Miller** (<https://cse.wustl.edu/faculty/Pages/Ruth-Miller.aspx>)  
PhD, University of Houston  
Data mining, database, bioinformatics

**Marion Neumann** (<https://cse.wustl.edu/faculty/Pages/Marion-Neumann.aspx>)  
PhD, University of Bonn, Germany  
Machine learning with graphs; solving problems in agriculture and robotics

**Jonathan Shidal** (<https://cse.wustl.edu/faculty/Pages/Jon-Shidal.aspx>)  
PhD, Washington University  
Computer architecture and memory management

**Douglas Shook** (<https://cse.wustl.edu/faculty/Pages/Doug-Shook.aspx>)  
MS, Washington University  
Imaging sensor design, compiler design and optimization

**William Siever** (<https://cse.wustl.edu/faculty/Pages/Bill-Siever.aspx>)  
Principal Lecturer  
PhD, Missouri University of Science and Technology

**Todd Sproull** (<https://cse.wustl.edu/faculty/Pages/Todd-Sproull.aspx>)  
PhD, Washington University  
Computer networking and mobile application development

## Senior Professors

**Jerome R. Cox Jr.**  
ScD, Massachusetts Institute of Technology  
Computer system design, computer networking, biomedical computing

**Mark A. Franklin**  
Hugo F. and Ina Champ Urbauer Professor of Engineering  
PhD, Carnegie Mellon University  
Computer architecture, systems analysis and parallel processing, storage systems design

**Jonathan S. Turner**  
PhD, Northwestern University  
Design and analysis of internet routers and switching systems, networking and communications, algorithms

## Professors Emeriti

### Takayuki D. Kimura

PhD, University of Pennsylvania  
Communication and computation, visual programming

### Seymour V. Pollack

MS, Brooklyn Polytechnic Institute  
Intellectual property, information systems

## Majors

Please refer to the following sections for information about the **Bachelor of Science in Computer Science** (p. 959), the **Bachelor of Science in Computer Engineering** (p. 959), and the **second major in computer science** (p. 960).

## Bachelor of Science in Computer Science

The Bachelor of Science in Computer Science (BSCS) is designed for students planning a career in computing. Students working toward a BSCS degree must meet all requirements for an applied science degree (p. 1033) from the School of Engineering & Applied Science. In addition, there are the following departmental course requirements:

- **Computer Science Core Requirements**

| Code        | Title   | Units |
|-------------|---|-------|
| CSE 131     | Computer Science I                              | 3     |
| CSE 132     | Computer Science II                             | 3     |
| CSE 240     | Logic and Discrete Mathematics                  | 3     |
| or Math 310 | Foundations for Higher Mathematics              |       |
| CSE 247     | Data Structures and Algorithms                  | 3     |
| CSE 332S    | Object-Oriented Software Development Laboratory | 3     |
| CSE 347     | Analysis of Algorithms                          | 3     |
| Total Units |   | 18    |

Each of these core courses must be passed with a grade of C- or better.

- **Computer Science Technical Elective Requirements:**

At least 24 additional units in computer science or computer science-related courses with an S, M, T or A suffix of which at least one must be a systems (S) course and at least one must be a machine (M) or application (A) course. Students may use up to 6 units of approved independent work (CSE 400E, CSE 497-CSE 499) as part of their computer science electives. Such independent work can be classified as S, M, T or A with approval.

There are several technical elective course sequences (<https://cse.wustl.edu/undergraduate/programs/Pages/bs-in-computer-science.aspx>) described on the department

webpage that are recommended for students whose interests are in particular areas of computing.

- **Math Requirements:**

| Code                 | Title   | Units |
|----------------------|---|-------|
| Math 131             | Calculus I  | 3     |
| Math 132             | Calculus II   | 3     |
| Math 233             | Calculus III  | 3     |
| Math 309             | Matrix Algebra  | 3     |
| or ESE 318           | Engineering Mathematics A                               |       |
| ESE 326              | Probability and Statistics for Engineering              | 3     |
| or Math 3200         | Elementary to Intermediate Statistics and Data Analysis |       |
| or QBA 120 & QBA 121 | Managerial Statistics I and Managerial Statistics II    |       |
| or Psych 300         | Introduction to Psychological Statistics                |       |
| Total Units          |   | 15    |

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the math department's back credit policy ([http://college.artsci.wustl.edu/policies/placement\\_credit/backcredit](http://college.artsci.wustl.edu/policies/placement_credit/backcredit)).

- **Additional Departmental Requirements:**

| Code                                     | Title             | Units |
|--|-------------------|-------|
| CWP 100                                  | College Writing 1 | 3     |
| Engr 310                                 | Technical Writing | 3     |
| Natural Sciences electives               |                   | 8     |
| Humanities and Social Sciences electives |                   | 18    |

The College Writing and Humanities and Social Sciences requirements are those required of all students in the School of Engineering & Applied Science. The Natural Sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies, or Physics. The College Writing and Natural Sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/fail basis.

## Bachelor of Science in Computer Engineering

Computer Engineering encompasses studies of hardware, software, and systems issues that arise in the design, development, and application of computer systems. Computer

engineers are particularly well suited to address the particular challenges that exist as computing systems interact with the real, physical world. This includes sensing, actuation, timing, security, and computing systems with widely varying form factors (ranging from servers to mobile devices to the Internet of Things (IoT)).

Students working toward a BSCoE degree must meet all requirements for an engineering degree (p. 1033) from the School of Engineering & Applied Science. Required courses and technical electives cannot be taken on a pass/fail basis:

• **Common Studies Program Requirements:**

Computer engineering students must meet the common studies program requirements, which are required of all students pursuing an engineering degree. These requirements, as they pertain to BSCoE students specifically, are described below:

| Code                                     | Title                             | Units |
|--|-----------------------------------|-------|
| Math 131                                 | Calculus I                        | 3     |
| Math 132                                 | Calculus II                       | 3     |
| Math 217                                 | Differential Equations            | 3     |
| Math 233                                 | Calculus III                      | 3     |
| Physics 117A<br>or Physics 197           | General Physics I<br>Physics I    | 4     |
| Physics 118A<br>or Physics 198           | General Physics II<br>Physics II  | 4     |
| Natural Sciences elective                |                                   | 3     |
| CWP 100                                  | College Writing 1 (unless waived) | 3     |
| Engr 310                                 | Technical Writing                 | 3     |
| Humanities and social sciences electives |                                   | 18    |
| Total Units                              |                                   | 47    |

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the math department's back credit policy ([http://college.artsci.wustl.edu/policies/placement\\_credit/backcredit](http://college.artsci.wustl.edu/policies/placement_credit/backcredit)).

The Natural Sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies, or Physics. These courses must be completed with a grade of C- or better.

The College Writing and Humanities and Social Sciences requirements are those required of all students in the School of Engineering & Applied Science.

• **Computer Engineering Core Requirements:**

The following courses are required of all computer engineering students:

| Code    | Title              | Units |
|---------|--------------------|-------|
| CSE 131 | Computer Science I | 3     |

|  |   |       |
|--|---|-------|
| CSE 132  | Computer Science II   | 3     |
| ESE 230  | Introduction to Electrical and Electronic Circuits  | 4     |
| ESE 232  | Introduction to Electronic Circuits   | 3     |
| CSE 240<br>or Math 310   | Logic and Discrete Mathematics<br>Foundations for Higher Mathematics  | 3     |
| CSE 247  | Data Structures and Algorithms  | 3     |
| CSE 260M   | Introduction to Digital Logic and Computer Design   | 3     |
| ESE 326<br>or Math 3200<br>or QBA 120<br>& QBA 121<br>or Psych 300 | Probability and Statistics for Engineering<br>Elementary to Intermediate Statistics and Data Analysis<br>Managerial Statistics I and Managerial Statistics II<br>Introduction to Psychological Statistics | 3-6   |
| CSE 361S   | Introduction to Systems Software  | 3     |
| CSE 362M   | Computer Architecture   | 3     |
| CSE 422S   | Operating Systems Organization  | 3     |
| CSE 462M<br>or CSE 465M  | Computer Systems Design<br>Digital Systems Laboratory   | 3     |
| Total Units  |   | 37-40 |

Each of these core courses must be passed with a grade of C- or better.

• **Computer Engineering Focus Area:**

At least 18 units of technical electives, drawn from either of the following:

- CSE courses with suffix S, M, T or A,
- ESE courses at the 300-level or higher.

The above can include courses at the graduate level; however, they must still meet one of the two criteria above. Up to 6 units of Independent Study (CSE 400E, CSE 497-CSE 499, ESE 400, ESE 497) can count toward technical electives. There is no limit as to how many independent study courses can count toward the general 120 units.

## The Second Major in Computer Science

The second major provides an opportunity to combine computer science with another degree program. A second major in computer science can expand a student's career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major also is well suited for students planning careers in medicine, law, business, architecture and fine arts. The requirements are as follows. There are no additional distribution or unit requirements for the second major.

• **Computer Science Core Requirements:**

| Code        | Title   | Units |
|-------------|---|-------|
| CSE 131     | Computer Science I                              | 3     |
| CSE 132     | Computer Science II                             | 3     |
| CSE 240     | Logic and Discrete Mathematics                  | 3     |
| or Math 310 | Foundations for Higher Mathematics              |       |
| CSE 247     | Data Structures and Algorithms                  | 3     |
| CSE 332S    | Object-Oriented Software Development Laboratory | 3     |
| CSE 347     | Analysis of Algorithms                          | 3     |
| Total Units |   | 18    |

Each of these core courses must be passed with a grade of C- or better.

• **Computer Science Electives:**

At least 24 units of computer science electives, selected from any CSE courses with an S, M, T or A suffix.

• **Math Requirement:**

Calculus (Math 131) and Probability (ESE 326 or Math 3200, or the sequence QBA 120-QBA 121).

## Minors

Please refer to the following sections for information about the **minor in computer science** (p. 961) and the **minor in bioinformatics** (p. 961).

## The Minor in Computer Science

If a student's goal is a basic foundation in computer science for application to another field, but they are not planning a career as a practicing computer scientist, the minor in computer science is a good choice. The minor consists of five CSE courses, including two core courses and three electives. The core courses provide an introduction to computer science concepts and problem-solving techniques. The electives offer flexibility to integrate computer science studies with a major area. Students select the courses that are most important to them, whether their interests are in fine arts, linguistics, psychology, philosophy, law, business, medicine, the natural sciences or anything else.

**Units required:** 15

**Required courses:**

| Code        | Title                          | Units |
|-------------|--------------------------------|-------|
| CSE 131     | Computer Science I             | 3     |
| CSE 247     | Data Structures and Algorithms | 3     |
| Total Units |                                | 6     |

**Elective courses:**

Any three additional CSE courses selected from CSE 132 Computer Science II, CSE 240 Logic and Discrete Mathematics,

CSE 347 Analysis of Algorithms, or any CSE course with a T, S, M or A suffix.

## Additional Information

All courses used for the computer science minor must be taken for a grade, and the student must earn a C- or better. Should the student decide to go further in the field, all courses in the computer science minor can be used toward a second major in computer science or a degree in computer science or computer engineering.

## The Minor in Bioinformatics

Mindful of the emerging opportunities at the interface of biology and computer science, the Department of Biology and Department of Computer Science & Engineering have fashioned the minor in bioinformatics that serves students from both departments as well as other students from the natural sciences and engineering with an interest in this field.

**Units required:** 23-24 units as described below

**Core courses:**

| Code         | Title   | Units |
|--------------|---|-------|
| Biol 2960    | Principles of Biology I                                 | 4     |
| Biol 2970    | Principles of Biology II                                | 4     |
| CSE 131      | Computer Science I                                      | 3     |
| CSE 247      | Data Structures and Algorithms                          | 3     |
| Math 2200    | Elementary Probability and Statistics                   | 3     |
| or Math 3200 | Elementary to Intermediate Statistics and Data Analysis |       |
| or ESE 326   | Probability and Statistics for Engineering              |       |
| Total Units  |   | 17    |

**Advanced biology elective:** Choose one of:

| Code      | Title   | Units |
|-----------|---|-------|
| Biol 3492 | Laboratory Experiments with Eukaryotic Microbes | 3     |
| Biol 4181 | Population Genetics                             | 3     |
| Biol 4342 | Research Explorations in Genomics               | 4     |
| Biol 437  | Laboratory on DNA Manipulation                  | 4     |

**CSE elective:** Choose one of:

| Code         | Title                                 | Units |
|--------------|---------------------------------------|-------|
| CSE 514A     | Data Mining                           | 3     |
| CSE 584A     | Algorithms for Biosequence Comparison | 3     |
| or Biol 5504 | Algorithms for Biosequence Comparison |       |
| CSE 587A     | Algorithms for Computational Biology  | 3     |

## Additional Information

It is anticipated that for those students majoring in biology or CSE, some portion of the introductory sequence will overlap with courses required for the major, and these courses will be applicable to both the major and the minor. Upper-level courses in Biology and CSE used to fulfill the minor may not be used to fulfill another major or minor in Arts & Sciences. A minimum grade of C- is required for all courses to count toward the minor.

## Courses

Visit online course listings to view semester offerings for E81 CSE (<https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E81&crslvl=1:5>).

Prerequisites are advisory in our course listings, but students are cautioned against taking a course without the necessary background. Note that if one course mentions another as its prerequisite, the prerequisites of the latter course are implied to be prerequisites of the former course as well. Students in doubt of possessing the necessary background for a course should correspond with the course's instructor.

---

### E81 CSE 104 Web Development

This comprehensive course does not assume prior programming background or web design experience. Explores elementary principles that go into designing, creating and publishing an effective website. Topics include the production process, design metaphors, interface/information design, page layout concepts, graphics preparation, color theory, development tools, HTML, style sheets, basic scripting techniques, search engine optimization and site maintenance/marketing strategies. Credit 3 units. EN: TU

---

### E81 CSE 131 Computer Science I

An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation and object-oriented programming. Recursion, iteration and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: Comfort with algebra and geometry at the high school level is assumed. Patience, good planning and organization promote success. This course assumes no prior experience with programming. Credit 3 units. BU: SCI EN: TU

---

### E81 CSE 131R Seminar: Computer Science I

A seminar and discussion session that complements the material studied in CSE 131. Provides background and breadth for the disciplines of computer science and computer engineering. Features guest lectures and highly interactive discussions of diverse computer science topics. Highly recommended for majors and for any student seeking a broader view of computer science or computer engineering. Pass/Fail only.

Credit 1 unit.

---

### E81 CSE 132 Computer Science II

CSE 132 introduces students to fundamental concepts in the basic operation of computers, ranging from desktops and servers to microcontrollers and handheld devices. Subjects include digital and analog input/output, sensing the physical world, information representation, basic computer architecture and machine language, time-critical computation, machine-to-machine communication and protocol design. Students will use both desktop systems and handheld microcontrollers for laboratory experiments. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisite: CSE 131. Credit 3 units. EN: TU

---

### E81 CSE 141 The Digital Society

Our modern digital society is both exciting and challenging. As the effectiveness of computing advances, and digital technologies like the internet and algorithmic decision-making affect and penetrate more and more aspects of our lives, we face extraordinary opportunities and equally extraordinary challenges. Computer driven automation increases our quality of life but eradicates our jobs! The internet and smartphones keep us connected but subject us to growing corporate, government and criminal surveillance! In this course, co-taught by professors from the Schools of Engineering and Law, we will examine the fundamental technical underpinnings of digital society and its consequences. We will discuss "Welcome to the Future," "The Future of Jobs," and "The Future of Humans." All aspects of life are evolving rapidly in our digital society, and we will draw on expert and engaging guest speakers from all seven schools of Washington University and intellectual leaders from beyond our campus to share their perspectives and insights. This course will help students to perceive the modern world in new ways in order to better understand how technological shifts are changing and challenging notions of individual and collective prosperity. Our goal is to give students both the technical understanding of how our new technologies work and the critical skills to evaluate them for themselves as citizens and leaders of our new digital society. Same as 150 InterD 141. Credit 3 units.

---

### E81 CSE 222S Internet of Things

For a very long time, the Things in our world have lived relatively lonely and single-purposed lives. With the advent of the Internet of Things, we can address, control, and interconnect these formerly isolated devices to create new and interesting applications. In this course we study Bluetooth Low Energy, one of the fundamental networking technologies behind Internet-of-Things devices, and Accessories, which include smart watches, health monitors, toys and appliances. In addition to learning about the Bluetooth Low Energy protocol and network stack, students gain hands-on experience developing multi-platform solutions that control and communicate with Things using an accompanying app on a mobile device. Students apply their knowledge and skill to develop a project of their choosing using topics from the course. Prerequisite: CSE 132. Credit 3 units. EN: TU

---

**E81 CSE 231S Introduction to Parallel and Concurrent Programming**

This course explores concepts, techniques, and design approaches for parallel and concurrent programming. We study how to write programs that make use of multiple processors for responsiveness and that share resources reliably and fairly. Parallel programming concepts include task-level, functional, and loop-level parallelism. Concurrent programming concepts include threads, synchronization and locks. We cover how to adapt algorithms to achieve determinism and avoid data races and deadlock. Concepts and skills are acquired through the design and implementation of software projects. Collaboration skills are developed through work performed in small teams. Prerequisite: CSE 131 or equivalent.

Credit 3 units. EN: TU

---

**E81 CSE 232 Programming Skills Workshop**

This course provides an overview of practical implementation skills. Topics include compilation and linking, memory management, pointers and references, using code libraries, testing and debugging. Prerequisites: CSE 132.

Credit 1 unit.

---

**E81 CSE 240 Logic and Discrete Mathematics**

Introduces elements of logic and discrete mathematics that allow reasoning about computational structures and processes. Generally, the areas of discrete structures, proof techniques, probability and computational models are covered. Topics typically include propositional and predicate logic; sets, relations, functions and graphs; proof by contradiction, induction and reduction; finite state machines and regular languages; and introduction to discrete probability, expected value and variance. Prerequisite: CSE 131.

Credit 3 units. EN: TU

---

**E81 CSE 247 Data Structures and Algorithms**

Study of fundamental algorithms, data structures, and their effective use in a variety of applications. Emphasizes importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Prerequisite: CSE 240.

Credit 3 units. EN: TU

---

**E81 CSE 260M Introduction to Digital Logic and Computer Design**

Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisites: CSE 131.

Credit 3 units. EN: TU

---

**E81 CSE 316A Social Network Analysis**

This course looks at social networks and markets through the eyes of a computer scientist. We will look at questions including, "Why are acquaintances rather than friends more likely to get us job opportunities?" and, "Why do the rich get richer?" We begin by studying graph theory (allowing us to study the structure) and game theory (allowing us to study the interactions) of social networks and market behavior at the introductory level. Among other topics, we will study auctions, epidemics, and the structure of the internet (including web searches). This course examines the intersection of computer science, economics, sociology, and applied mathematics. Prerequisites: CSE 247 and ESE 326.

Credit 3 units. EN: TU

---

**E81 CSE 330S Rapid Prototype Development and Creative Programming**

This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a website from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ the AngularJS web framework, and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: After a formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131.

Credit 3 units. EN: TU

---

**E81 CSE 332S Object-Oriented Software Development Laboratory**

Intensive focus on practical aspects of designing, implementing and debugging software, using object-oriented, procedural, and generic programming techniques. The course emphasizes familiarity and proficiency with a wide range of C++ language features through hands-on practice completing studio exercises and lab assignments, supplemented with readings and summary presentations for each session. Prerequisites: CSE 247.

Credit 3 units. EN: TU

---

**E81 CSE 341T Parallel and Sequential Algorithms**

The course aims to teach how to design, analyze and implement parallel algorithms. The emphasis is on teaching fundamental principles and design techniques that easily transfer over to parallel programming. These techniques include divide and conquer, contraction, the greedy method, etc. Prerequisite: CSE 247.

Credit 3 units. EN: TU

---

**E81 CSE 347 Analysis of Algorithms**

Introduces techniques for the mathematical analysis of algorithms, including randomized algorithms and non-worst-case analyses such as amortized and competitive analysis. Introduces the standard paradigms of divide-and-conquer, greedy, and dynamic programming algorithms, as well as reductions. Also provides an introduction to the study of intractability and techniques to determine when good algorithms cannot be designed. Prerequisite: CSE 247.

Credit 3 units. EN: TU

---

---

**E81 CSE 361S Introduction to Systems Software**

Introduction to the hardware and software foundations of computer processing systems. This course provides a programmer's perspective of how computer systems execute programs and store information. The course material aims to enable students to become more effective programmers, especially in dealing with issues of performance, portability and robustness. It also serves as a foundation for other system courses, such as compilers, networks, and operating systems, where a deeper understanding of systems-level issues is required. Topics covered include: machine-level code and its generation by optimizing compilers, performance evaluation and optimization, computer arithmetic, memory organization and management, and supporting concurrent computation. Prerequisites: CSE 132.

Credit 3 units. EN: TU

---

**E81 CSE 362M Computer Architecture**

This course explores the interaction and design philosophy of hardware and software for digital computer systems. Topics include: processor architecture, instruction set architecture, Assembly Language, memory hierarchy design, I/O considerations, and a comparison of computer architectures. Prerequisite: CSE 260M.

Credit 3 units. EN: TU

---

**E81 CSE 365S Elements of Computing Systems**

All computers are made up of 0s and 1s. However, the conceptual gap between the 0s and 1s and the day-to-day operation of modern computers is enormously wide. This fast-paced course aims to bridge the divide by starting with simple logic gates and building up the levels of abstraction until one can create games like Tetris. There is no specific programming language requirement, but some experience with programming is needed. Prerequisite: CSE 247.

Credit 3 units. EN: TU

---

**E81 CSE 400 Independent Study**

Investigation of a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. This course carries university credit, but does not count toward a CSE major or minor. To arrange for CSE major or minor credit for independent study, a student must enroll in CSE 400E instead of CSE 400. Consult also: CSE 400E.

Credit variable, maximum 6 units.

---

**E81 CSE 400E Independent Study**

Investigation of a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Credit earned for CSE 400E can be counted toward a student's major or minor program, with the consent of the student's adviser. Consult also: CSE 400.

Credit variable, maximum 6 units.

---

**E81 CSE 417T Introduction to Machine Learning**

The field of machine learning is concerned with the question of how to construct computer programs that automatically improve with experience. This course is a broad introduction to machine

learning, covering the foundations of supervised learning and important supervised learning algorithms. Topics to be covered are the theory of generalization (including VC-dimension, the bias-variance trade-off, validation and regularization) and linear and nonlinear learning models (including linear and logistic regression, decision trees, ensemble methods, neural networks, nearest-neighbor methods, and support vector machines). Prerequisites: CSE 347 (can be taken concurrently), ESE 326 (or Math 3200), Math 233, and Math 309 (can be taken concurrently).

Credit 3 units.

---

**E81 CSE 422S Operating Systems Organization**

Exploration of operating systems as managers of shared resources. Students study algorithms and data structures that support essential operating systems services. Concepts are reinforced through programming exercises and comparative studies. Topics include: proportional sharing and real-time scheduling of processes and threads, I/O facilities, memory management, virtual memory, device management, concurrent programming, and file system organization. Prerequisite: CSE 361S.

Credit 3 units. EN: TU

---

**E81 CSE 425S Programming Systems and Languages**

A systematic study of the principles, concepts and mechanisms of computer programming languages: their syntax, semantics and pragmatics; the processing and interpretation of computer programs; programming paradigms; and language design. Illustrative examples are selected from a variety of programming language paradigms. Prerequisites: CSE 332S.

Credit 3 units. EN: TU

---

**E81 CSE 427S Cloud Computing with Big Data Applications**

This course provides a comprehensive introduction to applied parallel computing using the MapReduce programming model facilitating large-scale data management and processing. There will be an emphasis on hands-on experience working with the Hadoop architecture, an open-source software framework written in Java for distributed storage and processing of very large data sets on computer clusters. Further, we will make use of related big data technologies from the Hadoop ecosystem of tools, such as Hive, Impala, and Pig in developing analytics and solving problems faced by enterprises today. Prerequisites: CSE 247, CSE 131 (or solid background in programming with Java), CSE 247, and CSE 330.

Credit 3 units. EN: TU

---

**E81 CSE 431S Translation of Computer Languages**

The theory of language recognition and translation is introduced in support of compiler construction for modern programming languages. Topics include syntactic and semantic analysis, symbol table management, code generation, and runtime libraries. A variety of parsing methods is covered, including top-down and bottom-up. Machine problems culminate in the course project, for which students construct a working compiler. Prerequisites: CSE 240 and CSE 247.

Credit 3 units. EN: TU

---

**E81 CSE 432S Pattern-Oriented Software Design and Development**

Intensive focus on design and implementation of software using design patterns. Particular emphasis on successive refinement

based on identification of unresolved design forces at each step of the design process, and on application of patterns to guide design refinement. Design implementations are conducted in Java and C++ in a team setting, with weekly presentations and critiques of design and implementation decisions and outcomes throughout the course. Prerequisites: CSE 332S or graduate standing, and proficiency in Java and C++ software development.

Credit 3 units. EN: TU

---

### **E81 CSE 437S Software Engineering Workshop**

An introduction and exploration of concepts and issues related to large-scale software systems development. Areas of exploration include technical complexities, organization issues, and communication techniques for large-scale development. Students participate through teams emulating industrial development. The projects cover the principal system development life-cycle phases from requirements analysis, to software design, and to final implementation. Issues relating to real-time control systems, human factors, reliability, performance, operating costs, maintainability and others are addressed and resolved in a reasonable manner. Prerequisite: junior or senior standing.

Credit 3 units. EN: TU

---

### **E81 CSE 438S Mobile Application Development**

Learn how to create iOS apps in the Swift programming language. This course covers a variety of topics in the development of modern mobile applications, with a focus on hands-on projects. Students will create multiple fully-functional apps from scratch. The course emphasizes object-oriented design patterns and real-world development techniques. Time is provided at the end of the course for students to work on a project of their own interest. Prerequisites: CSE 247.

Credit 3 units. EN: TU

---

### **E81 CSE 450A Video Game Programming**

This course teaches the core aspects of a video game developer's toolkit. Students work in groups and with a large game software engine to create and playtest a full-featured video game. Students will explore topics around the design of games through analysis of current games. Students have the opportunity to explore additional topics including graphics, artificial intelligence, networking, physics, and user interface design through their game project. Prerequisite: CSE 3xxS or 4xxS.

Credit 3 units. EN: TU

---

### **E81 CSE 452A Computer Graphics**

Introduction to computer graphics. The course covers fundamental concepts, data structures and algorithms related to the construction, display and manipulation of three-dimensional objects. Topics include scan-conversion, basic image processing, transformations, scene graphs, camera projections, local and global rendering, fractals, and parametric curves and surfaces. Students develop interactive graphics programs using C++ language. Prerequisites: CSE 332S and Math 309.

Credit 3 units. EN: TU

---

### **E81 CSE 460T Switching Theory**

Advanced topics in switching theory as employed in the synthesis, analysis and design of information processing

systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits, and built-in self-test techniques. Prerequisite: CSE 260M.

Credit 3 units. EN: TU

---

### **E81 CSE 462M Computer Systems Design**

Introduction to modern design practices, including the use of FPGA design methodologies. Students use a commercial CAE/CAD system for VHDL-based design and simulation while designing a selected computation system. Prerequisites: CSE 361S and CSE 362M.

Credit 3 units. EN: TU

---

### **E81 CSE 465M Digital Systems Laboratory**

Hardware/software co-design; processor interfacing; procedures for reliable digital design, both combinational and sequential; understanding manufacturers' specifications; use of test equipment. Several single-period laboratory exercises, several design projects, and application of microprocessors in digital design. One lecture and one laboratory period a week. Prerequisites: CSE 260M and CSE 361S.

Same as E35 ESE 465

Credit 3 units. EN: TU

---

### **E81 CSE 467S Embedded Computing Systems**

Introduces the issues, challenges and methods for designing embedded computing systems — systems designed to serve a particular application, which incorporate the use of digital processing devices. Examples of embedded systems include PDAs, cellular phones, appliances, game consoles, automobiles and iPod. Emphasis is given to aspects of design that are distinct to embedded systems. The course examines hardware, software and system-level design. Hardware topics include microcontrollers, digital signal processors, memory hierarchy and I/O. Software issues include languages, run-time environments and program analysis. System-level topics include real-time operating systems, scheduling, power management and wireless sensor networks. Students perform a course project on a real wireless sensor network testbed. Prerequisite: CSE 361S.

Credit 3 units. EN: TU

---

### **E81 CSE 473S Introduction to Computer Networks**

A broad overview of computer networking. Topics include history, protocols, Hyper Text Transfer Protocol (HTTP), File Transfer Protocol (FTP), Simple Mail Transfer Protocol (SMTP), Domain Name System (DNS), peer-to-peer (P2P), transport layer design issues, transport layer protocols, Transmission Control Protocol (TCP), User Datagram Protocol (UDP), TCP congestion control, network layer, Internet Protocol version 4 (IPv4), Internet Control Message Protocol (ICMP), Internet Protocol version 6 (IPv6), routing algorithms, routing protocols, Open Shortest Path First (OSPF), Routing Information Protocol (RIP), Border Gateway Protocol (BGP), datalink layer and local area networks carrier sense multiple access with collision detection (CSMA/CD), Ethernet, virtual local area networks (VLANs), Point-to-Point Protocol (PPP), Multi-Protocol Label Switching, wireless and mobile networks, multimedia networking, security in computer networks, cryptography, and network management. Prerequisites: CSE 132 and 247.

Credit 3 units. EN: TU

---

**E81 CSE 483M Introduction to Electronic Instrumentation Design**

This course covers the principles underlying the design of electronic instrumentation systems. As a case study we will design and analyze a complete instrumentation amplifier integrated circuit and discuss topics related to signal conditioning, amplification, filtering, biasing, data conversion, interface design, mixed-signal layout and mixed-signal simulation. Students are expected to work with state-of-the-art circuit simulation and layout tools for their homework and project assignments. Prerequisites: CSE 260 and ESE 232. Credit 3 units. EN: TU

---

**E81 CSE 497 Senior Project I**

Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving exploration and extension of theoretical structures, or may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or community. In either case, the project serves as a focal point for crystallizing the concepts, techniques and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal for approval by the department during the spring semester of the junior year. Prerequisite: senior standing. Credit 3 units.

---

**E81 CSE 498 Senior Project II**

Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving exploration and extension of theoretical structures, or may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or community. In either case, the project serves as a focal point for crystallizing the concepts, techniques and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal for approval by the department during the spring semester of the junior year. Prerequisite: senior standing. Credit 3 units.

---

**E81 CSE 499 Undergraduate Honors Thesis**

Working closely with a faculty member, the student investigates an original idea (algorithm, model technique, etc.), including a study of its possible implications, its potential application and its relationship to previous related work reported in the literature. Contributions and results from this investigation are synthesized and compiled into a publication-quality research paper presenting the new idea. Prerequisites: a strong academic record and permission of instructor. Credit 3 units.

---

**E81 CSE 500 Independent Study**

Credit variable, maximum 3 units.

---

**E81 CSE 501N Programming Concepts and Practice**

An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation, and object-oriented programming. Recursion, iteration, and simple data

structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: Comfort with algebra and geometry at the high school level is assumed. Patience, good planning, and organization will promote success. This course assumes no prior experience with programming. Same as E81 CSE 131  
Credit 3 units. BU: SCI EN: TU

---

**E81 CSE 502N Fundamentals of Computer Science**

Study of fundamental algorithms, data structures, and their effective use in a variety of applications. Emphasizes importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Prerequisite: CSE 240.  
Same as E81 CSE 247  
Credit 3 units. EN: TU

---

**E81 CSE 503S Rapid Prototype Development and Creative Programming**

This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a website from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ the AngularJS web framework, and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: After a formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131.  
Same as E81 CSE 330S  
Credit 3 units. EN: TU

---

**E81 CSE 504N Object-Oriented Software Development Laboratory**

Intensive focus on practical aspects of designing, implementing and debugging software, using object-oriented, procedural, and generic programming techniques. The course emphasizes familiarity and proficiency with a wide range of C++ language features through hands-on practice completing studio exercises and lab assignments, supplemented with readings and summary presentations for each session. Prerequisites: CSE 247.  
Same as E81 CSE 332S  
Credit 3 units. EN: TU

---

**E81 CSE 505N Introduction to Digital Logic and Computer Design**

Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture,

hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisite: CSE 131. Same as E81 CSE 260M  
Credit 3 units. EN: TU

---

**E81 CSE 506M Principle and Methods of Micro- and Nanofabrication**

A hands-on introduction to the fundamentals of micro- and nanofabrication processes with emphasis on cleanroom practices. The physical principles of oxidation, optical lithography, thin film deposition, etching and metrology methods will be discussed, demonstrated and practiced. Students will be trained in cleanroom concepts and safety protocols. Sequential microfabrication processes involved in the manufacture of microelectronic and photonic devices will be shown. Training in imaging and characterization of micro- and nanostructures will be provided. Prerequisites: graduate or senior standing or permission of the instructor.  
Same as E37 MEMS 5611  
Credit 3 units. EN: TU

---

**E81 CSE 507A Technology Entrepreneurship**

This is a course for students who plan to be, or work with, entrepreneurs. An entrepreneurial mindset is needed to create or grow economically viable enterprises, be they new companies, new groups within companies, or new university laboratories. This course aims to cultivate an entrepreneurial perspective with particular emphasis on information technology-related activities. The course is jointly offered for business and CSE students, allowing for acculturation between these disciplines. In addition to an introductory treatment of business and technology fundamentals, course topics include: business ethics, opportunity assessment, team formation, financing, intellectual property and university technology transfer. The course features significant participant and guest instruction from experienced practitioners.  
Prerequisites: none.  
Credit 3 units.

---

**E81 CSE 511A Introduction to Artificial Intelligence**

The discipline of artificial intelligence (AI) is concerned with building systems that think and act like humans or rationally on some absolute scale. This course is an introduction to the field, with special emphasis on sound modern methods. The topics include knowledge representation, problem solving via search, game playing, logical and probabilistic reasoning, planning, dynamic programming, and reinforcement learning. Programming exercises concretize the key methods. The course targets graduate students and advanced undergraduates. Evaluation is based on written and programming assignments, a midterm exam and a final exam. Prerequisites: CSE 347, ESE 326, Math 233.  
Credit 3 units.

---

**E81 CSE 513T Theory of Artificial Intelligence and Machine Learning**

Mathematical foundations for Artificial Intelligence and Machine Learning. An introduction to the PAC-Semantics ("Probably Approximately Correct") as a common semantics for knowledge obtained from learning and declarative sources, and the computational problems underlying the acquisition and processing of such knowledge. We emphasize the design and analysis of efficient algorithms for these problems, and examine

for which representations these problems are known or believed to be tractable. Prerequisite: CSE 347.  
Credit 3 units. EN: TU

---

**E81 CSE 514A Data Mining**

With the vast advancement in science and technology, data acquisition in large quantities are routinely done in many fields. Examples of large data include various types of data on the internet, high-throughput sequencing data in biology and medicine, extraterrestrial data from telescopes in astronomy, and images from surveillance cameras in security. Mining a large amount of data through data mining has become an effective means to extracting knowledge from data. This course introduces the basic concepts and methods for data mining and provides hands-on experience for processing, analyzing and modeling structured and unstructured data. Homework problems, exams and programming assignments will be administered throughout the course to enhance learning. Prerequisites: CSE 247 and ESE 326 (or Math 320) or their equivalent, or permission of the instructor.  
Credit 3 units. EN: TU

---

**E81 CSE 515T Bayesian Methods in Machine Learning**

This course will cover machine learning from a Bayesian probabilistic perspective. Bayesian probability allows us to model and reason about all types of uncertainty. The result is a powerful, consistent framework for approaching many problems that arise in machine learning, including parameter estimation, model comparison, and decision making. We will begin with a high-level introduction to Bayesian inference, then proceed to cover more-advanced topics. These will include inference techniques (exact, MAP, sampling methods, the Laplace approximation, etc.), Bayesian decision theory, Bayesian model comparison, Bayesian nonparametrics, and Bayesian optimization. Prerequisites: CSE 417T, ESE 326.  
Credit 3 units. EN: TU

---

**E81 CSE 516A Multi-Agent Systems**

This course introduces the fundamental techniques and concepts needed to study multi-agent systems, in which multiple autonomous entities with different information sets and goals interact. We will study algorithmic, mathematical, and game-theoretic foundations, and how these foundations can help us understand and design systems ranging from robot teams to online markets to social computing platforms. Topics covered may include game theory, distributed optimization, multi-agent learning and decision-making, preference elicitation and aggregation, mechanism design, and incentives in social computing systems. Prerequisites: CSE 347 (may be taken concurrently), ESE 326 (or Math 3200), and Math 233 or equivalents, or permission of instructor. Some prior exposure to artificial intelligence, machine learning, game theory, and microeconomics may be helpful, but is not required.  
Credit 3 units. EN: TU

---

**E81 CSE 517A Machine Learning**

This course assumes a basic understanding of machine learning and covers advanced topics at the frontier of the field in-depth. Topics to be covered include kernel methods (support vector machines, Gaussian processes), neural networks (deep learning), and unsupervised learning. Depending on developments in the field, the course will also cover some advanced topics, which may include learning from structured data, active learning, and practical machine learning (feature

selection, dimensionality reduction). Prerequisites: CSE 247, CSE 417T, ESE 326, Math 233 and Math 309. The instructor will hold a take-home placement exam (on basic mathematical knowledge) for all students currently enrolled and on the waitlist. The exam will be due on the first day of class. Only students who pass the placement exam will be enrolled in the course. Credit 3 units. EN: TU

---

#### **E81 CSE 519T Advanced Machine Learning**

This course provides a close look at advanced machine learning algorithms — their theoretical guarantees (computational learning theory) and tricks to make them work in practice. In addition, this course focuses on more specialized learning settings, including unsupervised learning, semi-supervised learning, domain adaptation, multi-task learning, structured prediction, metric learning and learning of data representations. Learning approaches may include graphical models, non-parametric Bayesian statistics, and technical topics such as sampling, approximate inference and non-linear function optimization. Mathematical maturity and general familiarity of machine learning is required. Prerequisites: CSE 517A or 511A or 7100. Credit 3 units. EN: TU

---

#### **E81 CSE 520S Real-Time Systems**

This course covers software systems and network technologies for real-time applications such as automobiles, avionics, industrial automation and Internet of Things. Topics include real-time scheduling, real-time operating systems and middleware, Quality of Service, industrial networks and real-time cloud computing. Prerequisite: CSE 422S. Credit 3 units. EN: TU

---

#### **E81 CSE 521S Wireless Sensor Networks**

Dense collections of smart sensors networked to form self-configuring pervasive computing systems provide a basis for a new computing paradigm that challenges many classical approaches to distributed computing. Naming, wireless networking protocols, data management and approaches to dependability, real-time, security and middleware services all fundamentally change when confronted with this new environment. Embedded sensor networks and pervasive computing are among the most exciting research areas with many open research questions. This class studies a large number of research papers that deal with various aspects of wireless sensor networks. Students perform a project on a real wireless sensor network composed of tiny devices each consisting of sensors, a radio transceiver and a microcontroller. Prerequisite: CSE 422S. Credit 3 units. EN: TU

---

#### **E81 CSE 522S Advanced Operating Systems**

This course explores core OS abstractions, mechanisms and policies and how they impact support for general purpose, embedded and real-time operating environments. How to evaluate, modify and optimize the use of kernel-level resources is covered hands-on and in detail, including CPU and I/O scheduling, memory management, and interprocess communication. Prerequisite: CSE 422S. Credit 3 units. EN: TU

---

#### **E81 CSE 523S Systems Security**

This course examines the intersection between computer design and information security. While performance and efficiency in digital systems have improved markedly in recent decades, computer security has worsened overall in this time frame. To understand why, we will explore the role that design choices play in the security characteristics of modern computer and network systems. Students will use and write software to illustrate mastery of the material. Projects will include identifying security vulnerabilities, exploiting vulnerabilities, and detecting and defending against exploits. Prerequisite: CSE 361S. Credit 3 units. EN: TU

---

#### **E81 CSE 530S Database Management Systems**

A study of data models and the database management systems that support these data models. The design theory for databases is developed and various tools are utilized to apply the theory. General query languages are studied and techniques for query optimization are investigated. Integrity and security requirements are studied in the context of concurrent operations on a database, where the database may be distributed over one or more locations. The unique requirements for engineering design databases, image databases, and long transaction systems are analyzed. Prerequisite: CSE 247. Credit 3 units.

---

#### **E81 CSE 531S Theory of Compiling and Language Translation**

Algorithms and intermediate representations for automatic program analysis are examined, with an emphasis on practical methods and efficient engineering of program optimization and transformations. The course includes a thorough treatment of monotone data flow frameworks: a mathematical model in which most optimization problems can be specified and solved. The course primarily covers optimizations that are applicable to any target architecture; however, optimizations specific to parallel, distributed and storage-hierarchical systems also are discussed. Prerequisite: CSE 431S or CSE 425S. Credit 3 units. EN: TU

---

#### **E81 CSE 532S Advanced Multiparadigm Software Development**

Intensive focus on advanced design and implementation of concurrent and distributed system software in C++. Topics covered include C++11 concurrency and synchronization features and software architecture patterns. Prerequisites: CSE 332S/CSE 504N or graduate standing and strong familiarity with C++; and CSE 422S or CSE 522S. Credit 3 units. EN: TU

---

#### **E81 CSE 536S Distributed System Design: Models and Languages**

Modern computing environments are highly distributed. This has been the result of major advances in networking technology and their rapid assimilation by a society that functions in a highly distributed and decentralized manner. The goal of this course is to familiarize students with basic concepts, models and languages that shaped recent developments in distributed computing. The focus is on exploring new ways of thinking about computing and communication that made the development of distributed software systems possible. Competing concepts and design strategies will be examined both from a theoretical and a practical perspective. Prerequisites: CSE 240 and CSE 247.

Credit 3 units. EN: TU

---

### **E81 CSE 538T Modeling and Performance Evaluation of Interconnected Computer Systems**

Modern computing systems consist of multiple interconnected components, which all influence performance. The focus of this course is on developing modeling tools aimed at understanding how to design and provision such systems to meet certain performance or efficiency targets, and the trade-offs involved. The course covers Markov chains and their applications to simple queues, and proceeds to explore more complex systems including server farms and how to optimize their performance through scheduling and task assignment policies. The course includes a brief review of the necessary probability and mathematical concepts. Prerequisite: ESE 326.

Credit 3 units. EN: TU

---

### **E81 CSE 539S Concepts in Multicore Computing**

Nowadays, the vast majority of computer systems are built using multicore processor chips. This fundamental shift in hardware design impacts all areas of computer science — one must write parallel programs in order to unlock the computational power provided by modern hardware. The goal of this course is to study concepts in multicore computing. We will examine the implications of the multicore hardware design, discuss challenges in writing high performance software, and study emerging technologies relevant to developing software for multicore systems. Topics include memory hierarchy, cache coherence protocol, memory models, scheduling, high-level parallel language models, concurrent programming (synchronization and concurrent data structures), algorithms for debugging parallel software, and performance analysis. Prerequisites: CSE 332S and CSE 361S.

Credit 3 units. EN: TU

---

### **E81 CSE 541T Advanced Algorithms**

Provides a broad coverage of fundamental algorithm design techniques with the focus on developing efficient algorithms for solving combinatorial and optimization problems. The topics covered include: greedy algorithms, dynamic programming, linear programming, NP-completeness, approximation algorithms, lower bound techniques, and on-line algorithms. Throughout this course there is an emphasis on correctness proofs and the ability to apply the techniques taught to design efficient algorithms for problems from a wide variety of application areas. Prerequisites: CSE 247 and 347.

Credit 3 units. EN: TU

---

### **E81 CSE 542T Advanced Data Structures and Algorithms**

This course is concerned with the design and analysis of efficient algorithms, focusing principally on algorithms for combinatorial optimization problems. A key element in the course is the role of data structures in algorithm design and the use of amortized complexity analysis to determine how data structures affect performance. The course is organized around a set of core problems and algorithms, including the classical network optimization algorithms, as well as newer and more efficient algorithms. This core is supplemented by algorithms selected from the recent technical literature. Prerequisite: CSE 247.

Credit 3 units.

---

### **E81 CSE 543T Algorithms for Nonlinear Optimization**

The course will provide an in-depth coverage of modern algorithms for the numerical solution of multidimensional optimization problems. Unconstrained optimization techniques including Gradient methods, Newton's methods, Quasi-Newton methods, and conjugate methods will be introduced. The emphasis is on constrained optimization techniques: Lagrange theory, Lagrangian methods, penalty methods, sequential quadratic programming, primal-dual methods, duality theory, nondifferentiable dual methods, and decomposition methods. The course will also discuss applications in engineering systems and use of state-of-the-art computer codes. Special topics may include large-scale systems, parallel optimization, and convex optimization. Prerequisites: Calculus I and Math 309.

Credit 3 units.

---

### **E81 CSE 544T Special Topics in Computer Science Theory**

Cake-cutting algorithms consider the division of resources among a set of participants such that the recipients believe they have been treated fairly. In some cases, a given resource can be divided without loss of value, while in other cases, dividing a resource may lessen its value, perhaps significantly. Notions of fairness include proportionality, envy-freeness and equitability. This course is organized around a rich set of fair-division problems, studying the correctness, complexity, and applicability of algorithms for solving such problems. The problems and algorithms studied span millennia and include recent technical literature.

Credit 3 units.

---

### **E81 CSE 546T Computational Geometry**

Computational geometry is the algorithmic study of problems that involve geometric shapes such as points, lines and polygons. Such problems appear in computer graphics, vision, robotics, animation, visualization, molecular biology, and geographic information systems. This course covers data structures that are unique to geometric computing, such as convex hull, Voronoi diagram, Delaunay triangulation, arrangement, range searching, KD-trees, and segment trees. Also covered are algorithms for polygon triangulation, shortest paths, the post office problem, and the art gallery problem. Prerequisite: CSE 247.

Credit 3 units.

---

### **E81 CSE 547T Introduction to Formal Languages and Automata**

An introduction to the theory of computation, with emphasis on the relationship between formal models of computation and the computational problems solvable by those models. Specifically, this course covers finite automata and regular languages; Turing machines and computability; and basic measures of computational complexity and the corresponding complexity classes. Prerequisites: CSE 247.

Credit 3 units.

---

### **E81 CSE 548T Concurrent Systems: Design and Verification**

Formerly CSE 563T. Concurrency presents programmers with unprecedented complexity further exacerbated by our limited ability to reason about concurrent computations. Yet, concurrent algorithms are central to the development of software executing on modern multiprocessors or across computer networks. This course reviews several important classes of concurrent algorithms and presents a formal method for specifying, reasoning about, verifying, and deriving concurrent algorithms. The selected algorithms are judged to have made

significant contributions to our understanding of concurrency. Rigorous treatment of the design and programming process is emphasized. Students entering this course must be familiar with predicate calculus and sequential algorithms. Upon completion of this course students will be able to reason completely formally about small concurrent programs and to apply systematically and correctly their formal skills to larger problems. Prerequisite: CSE 247.

Credit 3 units.

---

#### **E81 CSE 549T Theory of Parallel Systems**

The course covers various aspects of parallel programming such as algorithms, schedulers and systems from a theoretical perspective. We will cover both classic and recent results in parallel computing. Topics include parallel algorithms and analysis in the work/span model, scheduling algorithms, external memory algorithms and their analysis, cache-coherence protocols, etc. The focus will be on design and analysis. Prerequisite: CSE 247.

Credit 3 units. EN: TU

---

#### **E81 CSE 552A Advanced Computer Graphics**

This course covers advanced topics in graphics in the areas of modeling, rendering, volume rendering, image-based rendering and image processing. Topics include, but are not limited to, subdivision surfaces, splines, mesh simplification, implicit or blobby modeling, radiosity, procedural textures, filtering, BRDFs and procedural modeling. The class has several structured programming assignments and an optional final group project. Students are exposed to the wide variety of techniques available in graphics and also pick one area to study in depth. Prerequisites: CSE 332S and CSE 452A.

Credit 3 units. EN: TU

---

#### **E81 CSE 553S Advanced Mobile Robotics**

This course covers advanced topics from the theory and practice of mobile robotics. Students read, present and discuss papers from the current research literature. There is a substantial programming project, in which students implement and test ideas from the current research literature on one of the department's research robot platforms. Prerequisites: CSE 550A and strong programming skills (preferably in C++).

Credit 3 units. EN: TU

---

#### **E81 CSE 554A Geometric Computing for Biomedicine**

With the advance of imaging technologies deployed in medicine, engineering and science, there is a rapidly increasing amount of spatial data sets (images, volumes, point clouds, etc.) that need to be processed, visualized and analyzed. This course will focus on a number of geometry-related computing problems that are essential in the knowledge discovery process in various spatial-data-driven biomedical applications. These problems include visualization, segmentation, mesh construction and processing, shape representation and analysis. The course consists of lectures that cover theories and algorithms, and a series of hands-on programming projects using real-world data collected by various imaging techniques (CT, MRI, electron cryo-microscopy, etc.). Prerequisites: CSE 247 and CSE 332 or approval by instructor.

Credit 3 units. EN: TU

---

#### **E81 CSE 555A Computational Photography**

Computational Photography describes the convergence of computer graphics, computer vision, and the internet with photography. Its goal is to overcome the limitations of traditional photography using computational techniques to enhance the way we capture, manipulate and interact with visual media. In this course we study many interesting, recent image-based algorithms and implement them to the degree that is possible. Topics may include: cameras and image formation, human visual perception, image processing (filtering, pyramids), image blending and compositing, image retargeting, texture synthesis and transfer, image completion/inpainting, super-resolution, deblurring, denoising, image-based lighting and rendering, high dynamic range, depth and defocus, flash/no flash photography, coded aperture photography, single/multiview reconstruction, photo quality assessment, non photorealistic rendering, modeling and synthesis using internet data, and others. Prerequisites: CSE 452A, CSE 554A, or CSE 559A. Permission of instructor required to enroll.

Credit 3 units. EN: TU

---

#### **E81 CSE 556A Human-Computer Interaction Methods**

An introduction to user centered design processes. The course covers a variety of HCI techniques for use at different stages in the software development cycle, including techniques that can be used with and without users. Students will gain experience using these techniques through in-class exercises and then apply them in greater depth through a semester long interface development project. Students who enroll in this course are expected to be comfortable with building user interfaces in at least one framework and be willing to learn whatever framework is most appropriate for their project. Over the course of the semester, students will be expected to present their interface evaluation results through written reports and in class presentations. Prerequisites: 3xxS or 4xxS.

Credit 3 units. EN: TU

---

#### **E81 CSE 557A Information Visualization**

We are in an era where it is possible to have all of the world's information at our fingertips. However, the more information we can access, the more difficult it is to obtain a holistic view of the data or to determine what's important to make decisions. Computer-based visualization systems provide the opportunity to represent large and/or complex data visually to aid comprehension and cognition. In this course, we study the principles for transforming abstract data into effective information visualizations. We learn about the state-of-the-art in visualization research and development, and we gain hands-on experience with designing and developing information visualizations. We also learn how to critique existing visualizations and how to evaluate the systems we build. Readings will include current research papers from the Information Visualization community. Prerequisite: permission of professor (this may change in subsequent semesters).

Credit 3 units. EN: TU

---

#### **E81 CSE 558A Motion Planning**

This course studies the general motion planning problem: computing a sequence of motions that transforms a given (initial) arrangement of physical objects to another (goal) arrangement of those objects. Many motion planning methods were developed in the realm of robotics research. For example, a typical problem might be to find a sequence of motions (called a path) to move a robot from one position to another without colliding with any

objects in its workspace. However, the general motion planning problem that will be studied arises in many other application domains as well. For example, assembly planning (e.g., finding a valid order for adding the parts when building an engine), mechanical CAD studies (e.g., can you remove a certain part from an engine without taking the engine apart), artificial life simulations (e.g., moving a herd of animals from one location to another), and medicine (e.g., can a drug molecule reach a protein molecule). Prerequisite: CSE 247.  
Credit 3 units. EN: TU

---

**E81 CSE 559A Computer Vision**

Computer vision is the process of automatically extracting information from images and video. This course covers imaging geometry (camera calibration, stereo, and panoramic image stitching), and algorithms for video surveillance (motion detection and tracking), segmentation and object recognition. Final projects for the course will explore challenges in analysis of real-world data. Students with non-standard backgrounds (such as video art, or the use of imaging in physics and biology) are encouraged to contact the instructor. Prerequisites: CSE 247 and linear algebra.  
Credit 3 units. EN: TU

---

**E81 CSE 560M Computer Systems Architecture I**

An exploration of the central issues in computer architecture: instruction set design, addressing and register set design, control unit design, microprogramming, memory hierarchies (cache and main memories, mass storage, virtual memory), pipelining, and bus organization. The course emphasizes understanding the performance implications of design choices, using architecture modeling and evaluation using VHDL and/or instruction set simulation. Prerequisites: CSE 361S and CSE 260M.  
Credit 3 units. EN: TU

---

**E81 CSE 561M Computer Systems Architecture II**

Advanced techniques in computer system design. Selected topics from: processor and system-on-chip design (multicore organization, system-level integration), run-time systems, memory systems (topics in locality and special-purpose memories), I/O subsystems and devices, systems security, and power considerations. Prerequisite: CSE 560M or permission of instructor.  
Credit 3 units. EN: TU

---

**E81 CSE 564M Advanced Digital Systems Engineering**

This course focuses on advanced sensor design. The class covers various basic analog and digital building blocks that are common in most sensor integrated circuits. The class extensively uses state-of-the-art CAD program Cadence to simulate and analyze various circuit blocks. The first half of the course focuses on analyzing various operational amplifiers, analog filters, analog memory and analog to digital converters. The second half of the course focuses on understanding the basic building blocks of imaging sensors. The class has a final project consisting of designing a smart sensor using Cadence tools. Prerequisites: ESE 232 and CSE 362M.  
Credit 3 units. EN: TU

---

**E81 CSE 565M Acceleration of Algorithms in Reconfigurable Logic**

Reconfigurable logic, in the form of Field-Programmable Gate Arrays (FPGAs), enables the deployment of custom

hardware for individual applications. To exploit this capability, the application developer is required to specify the design at the register-transfer level. This course explores techniques for designing algorithms that are amenable to hardware acceleration as well as provides experience in actual implementation. Example applications are drawn from a variety of fields, such as networking, computational biology, etc. Prerequisites: basic digital logic (CSE 260M) and some experience with a hardware description language (e.g., VHDL or Verilog).  
Credit 3 units. EN: TU

---

**E81 CSE 566S High Performance Computer Systems**

Many applications make substantial performance demands upon the computer systems upon which those applications are deployed. In this context, performance is frequently multidimensional, including resource efficiency, power, execution speed (which can be quantified via elapsed run time, data throughput, or latency), etc. Modern computing platforms exploit parallelism and architectural diversity (e.g., co-processors such as graphics engines and/or reconfigurable logic) to achieve the desired performance goals. This course addresses the practical aspects of achieving high performance on modern computing platforms. This includes questions ranging from how the computing platform is designed to how are applications and algorithms expressed to exploit the platform's properties. Particular attention is given to the role of application development tools. Prerequisite: familiarity with software development in Linux preferred, graduate standing or permission of instructor.  
Credit 3 units. EN: TU

---

**E81 CSE 567M Computer Systems Analysis**

A comprehensive course on performance analysis techniques. The topics include common mistakes, selection of techniques and metrics, summarizing measured data, comparing systems using random data, simple linear regression models, other regression models, experimental designs,  $2^{**k}$  experimental designs, factorial designs with replication, fractional factorial designs, one factor experiments, two factor full factorial design w/o replications, two factor full factorial designs with replications, general full factorial designs, introduction to queueing theory, analysis of single queues, queueing networks, operational laws, mean-value analysis, time series analysis, heavy tailed distributions, self-similar processes, long-range dependence, random number generation, analysis of simulation results, and art of data presentation. Prerequisites: CSE 131 and CSE 260M.  
Credit 3 units. EN: TU

---

**E81 CSE 568M Imaging Sensors**

This course will cover topics on digital imaging sensors including basic operations of silicon photodetectors; CCD and CMOS passive and active sensor operation; temporal and spatial noise in CMOS sensors; spatial resolution and MTF; SNR and dynamic range; high dynamic range architectures and application specific imaging sensors such as polarization imaging and fluorescent imaging sensors. Prerequisites: CSE 260M and ESE 232.  
Credit 3 units.

---

**E81 CSE 569M Parallel Architectures and Algorithms**

A number of contemporary parallel computer architectures are reviewed and compared. The problems of process synchronization and load balancing in parallel systems are studied. Several selected applications problems are investigated and parallel algorithms for their solution are considered. Selected

parallel algorithms are implemented in both a shared memory and distributed memory parallel programming environment. Prerequisites: graduate standing and knowledge of the C programming language. Credit 3 units. EN: TU

---

#### **E81 CSE 570S Recent Advances in Networking**

This course covers the latest advances in networking. The topics include Networking Trends, Data Center Network Topologies, Data Center Ethernet, Carrier IP, Multi-Protocol Label Switching (MPLS), Carrier Ethernet, Virtual Bridging, LAN Extension and Virtualization using Layer 3 Protocols, Virtual Routing Protocols, Internet of Things (IoT), Datalink Layer and Management Protocols for IoT, Networking Layer Protocols for IoT, 6LoWPAN, RPL, Messaging Protocols for IoT, MQTT, OpenFlow, Software Defined Networking (SDN) Network Function Virtualization (NFV), Big Data, Networking Issues for Big Data, Network Configuration, and Data Modeling, NETCONF, YIN, YANG, BEEP, and UML. Prerequisite: CSE 473S or equivalent. Credit 3 units. EN: TU

---

#### **E81 CSE 571S Network Security**

A comprehensive treatment of network security. Topics include Security Overview, Classical Encryption Techniques, Block Ciphers and DES, Basic Concepts in Number Theory and Finite Fields, Advanced Encryption Standard (AES), Block Cipher Operations, Pseudo Random Number Generation and Stream Ciphers, Number Theory, Public Key Cryptography, other Public Key Cryptosystems, Cryptographic Hash Functions, Message Authentication Codes, Digital Signatures, Key Management and Distribution, User Authentication Protocols, Network Access Control and Cloud Security, Transport Level Security, Wireless Network Security, Electronic Mail Security, IP Security, Intrusion Detection, and Malicious Software. Prerequisite: CSE 473S. Credit 3 units. EN: TU

---

#### **E81 CSE 573S Protocols for Computer Networks**

An introduction to the design, performance analysis and implementation of existing and emerging computer network protocols. Protocols include multiple access protocols (e.g., CSMA/CD, token ring), internet, working with the internet protocol (IP), transport protocols (e.g., UDP, TCP), high-speed bulk transfer protocols, and routing protocols (e.g., BGP, OSPF). General topics include error control, flow control, packet switching, mechanisms for reliable, ordered and bounded-time packet delivery, host-network interfacing and protocol implementation models. Substantial programming exercises supplement lecture topics. Prerequisite: CSE 473S or permission of the instructor. Credit 3 units. EN: TU

---

#### **E81 CSE 574S Wireless and Mobile Networking**

First course in wireless networking providing a comprehensive treatment of wireless data and telecommunication networks. Topics include recent trends in wireless and mobile networking, wireless coding and modulation, wireless signal propagation, IEEE 802.11a/b/g/n/ac wireless local area networks, 60 GHz millimeter wave gigabit wireless networks, vehicular wireless networks, white spaces, IEEE 802.22 regional area networks, Bluetooth and Bluetooth Smart, wireless personal area networks, wireless protocols for Internet of Things, ZigBee, cellular networks: 1G/2G/3G, LTE, LTE-Advanced, and 5G. Prerequisites: CSE 473S or permission of the instructor. Credit 3 units. EN: TU

---

#### **E81 CSE 577M Design and Analysis of Switching Systems**

Switching is a core technology in a wide variety of communication networks, including the internet, circuit-switched telephone networks and optical fiber transmission networks. The last decade has been a time of rapid development for switching technology in the internet. Backbone routers with 10 Gb/s links and aggregate capacities of hundreds of gigabits per second are becoming common, and advances in technology are now making multi-terabit routers practical. This course is concerned with the design of practical switching systems and evaluation of their performance and complexity. Prerequisites: CSE 247, 473S and ESE 326.

Credit 3 units. EN: TU

---

#### **E81 CSE 581T Approximation Algorithms**

Numerous optimization problems are intractable to solve optimally. The intractability of a problem could come from the problem's computational complexity, for instance the problem is NP-Hard, or other computational barriers. To cope with the inability to find an optimal algorithm, one may desire an algorithm that is guaranteed to return a solution that is comparable to the optimum. Such an algorithm is known as an approximation algorithm. Approximation algorithms are a robust way to cope with intractability, and they are widely used in practice or are used to guide the development of practical heuristics. The area of approximation algorithms has developed a vast theory, revealing the underlying structure of problems as well as their different levels of difficulty. The majority of this course will focus on fundamental results and widely applicable algorithmic and analysis techniques for approximation algorithms. Prerequisite: CSE 347.

Credit 3 units. EN: TU

---

#### **E81 CSE 582T Complexity Theory**

An introduction to the quantitative theory of computation with limited resources. The course examines the relative power of limited amounts of basic computational resources, such as time, memory, circuit size and random bits, as well as parallel, nondeterministic, alternating and interactive machine models. Models that capture special kinds of computational problems, such as counting problems or approximate solutions, will also be introduced and related to the standard models. This examination will emphasize surprising relationships between seemingly disparate resources and kinds of computational problems. The course will also discuss some meta-theory, illuminating the weaknesses of standard mathematical techniques of the field against its notorious open conjectures. Prerequisites: CSE 347 and mathematical maturity. CSE 547T recommended.

Credit 3 units. EN: TU

---

#### **E81 CSE 583A Topics in Computational Molecular Biology**

In-depth discussion of problems and methods in computational molecular biology. Each year three topics will be covered and those will change yearly. Prerequisite: Biol 5495 or instructor's consent.

Same as L41 Biol 5497

Credit 2 units.

---

#### **E81 CSE 584A Algorithms for Biosequence Comparison**

This course surveys algorithms for comparing and organizing discrete sequential data, especially nucleic acid and protein sequences. Emphasis is on tools to support search in massive biosequence databases and to perform fundamental comparison

tasks such as DNA short-read alignment. These techniques are also of interest for more general string processing and for building and mining textual databases. Algorithms are presented rigorously, including proofs of correctness and running time where feasible. Topics include classical string matching, suffix array string indices, space-efficient string indices, rapid inexact matching by filtering (including BLAST and related tools), and multiple alignment. Students complete written assignments and implement advanced comparison algorithms to address problems in bioinformatics. This course does not require a biology background. Prerequisites: CSE 347, graduate standing, or permission of instructor.

Credit 3 units. EN: TU

---

### **E81 CSE 587A Algorithms for Computational Biology**

This course is a survey of algorithms and mathematical methods in biological sequence analysis (with a strong emphasis on probabilistic methods) and systems biology. Sequence analysis topics include introduction to probability, probabilistic inference in missing data problems, hidden Markov models (HMMs), profile HMMs, sequence alignment, and identification of transcription-factor binding sites. Systems biology topics include discovery of gene regulatory networks, quantitative modeling of gene regulatory networks, synthetic biology, and (in some years) quantitative modeling of metabolism. Prerequisites: CSE 131 or CSE 501N.

Credit 3 units.

---

## **Electrical & Systems Engineering**

### **About Electrical & Systems Engineering**

The mission of our undergraduate programs is to instill in students the knowledge and perspective, appropriate both for a professional career and for the pursuit of advanced degrees, in fields that rely on key electrical engineering and systems principles and practices. Such principles and practices include rigorous quantitative reasoning and robust engineering design. This mission is accomplished by ensuring that students achieve both depth and breadth of knowledge in their studies and by maintaining a high degree of flexibility in the curriculum. Our programs also seek to provide good preparation for life, including the ability to communicate in written and oral forms and a desire to continue learning throughout life. In addition, they aim to provide the opportunity and training for students to acquire the skills and attitudes to become leaders.

The department offers courses of study leading to degrees in both electrical engineering and systems science and engineering. Opportunities for study and research currently available in the department include semiconductor theory and devices, optoelectronics, nanophotonics, communication theory and systems, information theory, signal and image processing, tomographic imaging, linear and nonlinear dynamics and control, robotics, identification and estimation, multisensor fusion and navigation, computational mathematics, optimization,

optimal control, autonomous systems, operations research, and financial engineering. Students are encouraged to participate in research activities as soon as they have received training in the fundamentals appropriate for a given research area.

Electrical engineering is the profession for those intrigued with electrical phenomena and eager to contribute their skills to a society increasingly dependent on electricity and sophisticated electronic devices. It is a profession of broad scope with many specialty careers designed for engineers who seek an endless diversity of career paths on the cutting edge of technology. The Institute of Electrical and Electronics Engineers publishes transactions on about 60 different topics, from aerospace and electronic systems to visualization and computer graphics. This is a breadth so great that no single electrical engineering department can hope to span it. Moreover, those fields themselves encompass still more fascinating specialties. We give the basics; the future is yours to shape.

Systems science and engineering is based on an approach that views an entire system of components as an entity rather than simply as an assembly of individual parts; each component is designed to fit properly with the other components rather than to function by itself. The engineering and mathematics of systems is a rapidly developing field. It is one of the most modern segments of applied mathematics, as well as an engineering discipline. It is concerned with the identification, modeling, analysis, design and control of systems that are potentially as large and complex as the U.S. economy or as precise and vital as a space voyage. Its interests run from fundamental theoretical questions to the implementation of operational systems. It draws on the most modern and advanced areas of mathematics. A very important characteristic of the systems field is that its practitioners must, of necessity, interact within a wide interdisciplinary environment, not only with various engineers and scientists but also with economists, biologists or sociologists. Such interaction is both emphasized and practiced in the programs.

Our Department of Electrical & Systems Engineering offers a challenging basic curriculum, a broadly qualified faculty, and modern facilities so that students can receive a contemporary preparation for a career in electrical or systems engineering.

### **Undergraduate Degree Programs**

The Department of Electrical & Systems Engineering (ESE) offers four undergraduate degree programs: two professional degrees and two applied science degrees. The two professional degrees are the Bachelor of Science in Electrical Engineering (BSEE) and the Bachelor of Science in Systems Science & Engineering (BSSSE). These two programs are accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>). The two applied science degrees are the Bachelor of Science in Applied Science (Electrical Engineering) and the Bachelor of Science in Applied Science (Systems Science & Engineering). All programs have flexible curricula as

well as specific requirements, and students may elect programs of study tailored to individual interests and professional goals.

In the professional BSEE curriculum, there are required courses in electrical circuits, signals and systems, digital systems and electromagnetic fields, along with laboratory and design courses, which provide students with a common core of experience. Subsequently, one may orient the program toward breadth, so that many disciplines within the profession are spanned or toward a specialty with more emphasis on depth in one or more disciplines. Areas of specialization include modern electronics, applied physics, telecommunications, control systems, and signal and image processing.

Students in the professional BSSSE degree program take required courses in engineering mathematics, signals and systems, operations research, and automatic control systems, along with laboratory and design courses. This program emphasizes the importance of real-world applications of systems theory, and accordingly students are required to take a concentration of courses in one of the traditional areas of engineering or science. There are numerous elective courses in control theory and systems, signal processing, optimization, robotics, probability and stochastic processes, and applied mathematics.

Students enrolled in any of the ESE undergraduate degree programs have a variety of opportunities to augment their educational experience at Washington University. Students may participate in the Pre-Medical Engineering program or in the Cooperative Education program. Some students pursue double majors, in which two sets of degree requirements, either within or outside the ESE department, are satisfied concurrently. The Process Control Systems program is one such double-degree program, involving the degrees Bachelor of Science in Systems Science & Engineering (BSSSE) and Bachelor of Science in Chemical Engineering (BSChE). Finally, students may earn both an undergraduate and a graduate degree through the school's five-year BS–Master's program.

Students who seek a broad undergraduate education in electrical engineering or systems science and engineering but plan on careers outside of engineering may pursue the applied science degrees: Bachelor of Science in Applied Science (Electrical Engineering) and Bachelor of Science in Applied Science (Systems Science & Engineering). These programs of study are appropriate for students planning to enter medical, law or business school, who desire a more technical undergraduate experience than what otherwise may be available to them.

The ESE department also offers a variety of educational opportunities for students enrolled in other departments. These include the second major in systems science and the second major in electrical engineering science, which are open to students inside as well as outside of the School of Engineering & Applied Science, such as the College of Arts & Sciences and the School of Business. They also include the minor in

applied physics & electrical engineering, the minor in electrical engineering, the minor in energy engineering, the minor in mechatronics, the minor in robotics, and the minor in systems science & engineering.

## BS–Master's Programs in Electrical & Systems Engineering

Students enrolled in any of the undergraduate degree programs in the School of Engineering & Applied Science may choose to extend their educational experience by enrolling in a five-year BS–Master's program. The Master of Science in Electrical Engineering (MSEE), Master of Science in Systems Science and Mathematics (MSSSM), Master of Control Engineering (MCE), Master of Engineering in Robotics (MER), and Master of Science in Engineering Data Analytics and Statistics (MSDAS) degrees are participating graduate degrees, and these may be combined with any undergraduate degree that provides the appropriate background.

General requirements for the BS–Master's programs include the residency and other applicable requirements of the university and the School of Engineering & Applied Science, which are found elsewhere in this catalog. In summary, students must complete all the degree requirements for both the undergraduate and graduate degrees (at least 120 units plus 30 units; 150 units) but are not required to complete all the undergraduate degree requirements first.

**Website:** <http://ese.wustl.edu>

## Faculty

### Chair

**R. Martin Arthur** (<https://engineering.wustl.edu/Profiles/Pages/Martin-Arthur.aspx>)  
Newton R. and Sarah Louisa Glasgow Wilson Professor of Engineering  
PhD, University of Pennsylvania  
Ultrasonic imaging, electrocardiography

### Associate Chair

**Hiroaki Mukai** (<https://engineering.wustl.edu/Profiles/Pages/Hiro-Mukai.aspx>)  
Professor  
PhD, University of California, Berkeley  
Theory and computational methods for optimization, optimal control, systems theory, electric power system operations, differential games

## Endowed Professors

**Arye Nehorai** (<https://engineering.wustl.edu/Profiles/Pages/Arye-Nehorai.aspx>)  
Eugene and Martha Lohman Professor of Electrical Engineering  
PhD, Stanford University  
Signal processing, imaging, biomedicine, communications

**Joseph A. O'Sullivan** (<https://engineering.wustl.edu/Profiles/Pages/Joseph-OSullivan.aspx>)  
Samuel C. Sachs Professor of Electrical Engineering  
Dean, UMSL/WUSTL Joint Undergraduate Engineering Program  
PhD, Notre Dame University  
Information theory, statistical signal processing, imaging science with applications in medicine and security, and recognition theory and systems

**Lan Yang** (<https://engineering.wustl.edu/Profiles/Pages/Lan-Yang.aspx>)  
Edward H. & Florence G. Skinner Professor of Engineering  
PhD, California Institute of Technology  
Nano/micro photonics, ultra high-quality optical microcavities, ultra-low-threshold microlasers, nano/micro fabrication, optical sensing, single nanoparticle detection, photonic molecules, photonic materials

## Professors

**Shantanu Chakrabarty** (<https://ese.wustl.edu/faculty/Pages/default.aspx?bio=101>)  
PhD, Johns Hopkins University  
New frontiers in unconventional analog computing techniques using silicon and hybrid substrates, fundamental limits of energy efficiency, sensing and resolution by exploiting computational and adaptation primitives inherent in the physics of devices

**Heinz Schaettler** (<https://engineering.wustl.edu/Profiles/Pages/Heinz-Schaettler.aspx>)  
PhD, Rutgers University  
Optimal control, nonlinear systems, mathematical models in biomedicine

## Associate Professors

**Jr-Shin Li** (<https://engineering.wustl.edu/Profiles/Pages/Jr-Shin-Li.aspx>)  
Das Family Distinguished Career Development Associate Professor  
PhD, Harvard University  
Mathematical control theory, optimization, quantum control, biomedical applications

**Robert E. Morley Jr.** (<https://engineering.wustl.edu/Profiles/Pages/Robert-Morley.aspx>)  
DSc, Washington University  
Computer and communication systems, VLSI design, digital signal processing

## Assistant Professors

**ShiNung Ching** (<https://engineering.wustl.edu/Profiles/Pages/ShiNung-Ching.aspx>)  
Das Family Distinguished Career Development Assistant Professor  
PhD, University of Michigan  
Systems and control in neural medicine, nonlinear and constrained control, physiologic network dynamics, stochastic control

**Zachary Feinstein** (<https://engineering.wustl.edu/Profiles/Pages/Zachary-Feinstein.aspx>)  
PhD, Princeton University  
Financial engineering, operations research, variational analysis

**Humberto Gonzalez** (<https://engineering.wustl.edu/Profiles/Pages/Humberto-Gonzalez.aspx>)  
PhD, University of California, Berkeley  
Cyber-physical systems, hybrid dynamical systems, optimization, robotics

**Matthew D. Lew** (<https://engineering.wustl.edu/Profiles/Pages/Matthew-Lew.aspx>)  
PhD, Stanford University  
Microscopy, biophotonics, computational imaging, nano-optics

**Jung-Tsung Shen** (<https://engineering.wustl.edu/Profiles/Pages/Jung-Tsung-Shen.aspx>)  
Das Family Distinguished Career Development Assistant Professor  
PhD, Massachusetts Institute of Technology  
Theoretical and numerical investigations on nanophotonics, optoelectronics, plasmonics, metamaterials

**Xuan "Silvia" Zhang** (<https://engineering.wustl.edu/Profiles/Pages/Xuan-%28Silvia%29-Zhang.aspx>)  
PhD, Cornell University  
Robotics, cyber-physical systems, hardware security, ubiquitous computing, embedded systems, computer architecture, VLSI, electronic design automation, control optimization, and biomedical devices and instrumentation

## Senior Professors

**I. Norman Katz**  
PhD, Massachusetts Institute of Technology  
Numerical analysis, differential equations, finite element methods, locational equilibrium problems, algorithms for parallel computations

**Paul S. Min**  
PhD, University of Michigan  
Routing and control of telecommunication networks, fault tolerance and reliability, software systems, network management

**William F. Pickard**  
PhD, Harvard University  
Biological transport, electrobiology, energy engineering

**Daniel L. Rode**

PhD, Case Western Reserve University  
Optoelectronics and fiber optics, semiconductor materials, light-emitting diodes (LEDs) and lasers, semiconductor processing, electronics

**Ervin Y. Rodin**

PhD, University of Texas at Austin  
Optimization, differential games, artificial intelligence, mathematical modeling

**Barbara A. Shrauner**

PhD, Harvard University (Radcliffe)  
Plasma processing, semiconductor transport, symmetries of nonlinear differential equations

**Donald L. Snyder**

PhD, Massachusetts Institute of Technology  
Communication theory, random process theory, signal processing, biomedical engineering, image processing, radar

**Barry E. Spielman**

PhD, Syracuse University  
High-frequency/high-speed devices, RF & MW integrated circuits, computational electromagnetics

**Tzyh Jong Tarn**

DSc, Washington University  
Quantum mechanical systems, bilinear and nonlinear systems, robotics and automation, life science automation

## Professors of Practice

**Dedric Carter**

PhD, Nova Southeastern University  
MBA, MIT Sloan School of Management

**Dennis Mell**

MS, University of Missouri-Rolla

**Ed Richter**

MS, Washington University

## Senior Lecturers

**Martha Hasting**

PhD, Saint Louis University

**Jason Trobaugh**

DSc, Washington University

## Lecturers

**Randall Brown**

PhD, Washington University

**Randall Hoven**

MS, Johns Hopkins University

**Vladimir Kurenok**

PhD, Belarus State University (Minsk, Belarus)

**Tsitsi Madziwa-Nussinov**

PhD, University of California, Los Angeles

**Jinsong Zhang**

PhD, University of Miami

## Research Assistant Professors

**Scott Marrus**

MD, PhD, Washington University School of Medicine  
Cardiac electrophysiology

## Professors Emeriti

**William M. Boothby**

PhD, University of Michigan  
Differential geometry and Lie groups, mathematical system theory

**Lloyd R. Brown**

DSc, Washington University  
Automatic control, electronic instrumentation

**David L. Elliott**

PhD, University of California, Los Angeles  
Mathematical theory of systems, nonlinear difference, differential equations

**Robert O. Gregory**

DSc, Washington University  
Electronic instrumentation, microwave theory, circuit design

## Majors

Please refer to the sections below for information about the **BS in Electrical Engineering** (p. 976), **BS in Systems Science & Engineering** (p. 978), **BS in Applied Science (Electrical Engineering)** (p. 980), **BS in Applied Science (Systems Science & Engineering)** (p. 980), the **Second Major in Electrical Engineering Science**, **Second Major in Systems Science** and the **Second Major in Financial Engineering** (p. 981).

## Bachelor of Science in Electrical Engineering

This professional degree program is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

## Educational Objectives of the BSEE Degree Program

A. Our graduates will be engaged as practicing professionals in a broad range of careers in industry or government or be pursuing advanced degrees in academic graduate education in engineering or a related field.

B. Our graduates will function effectively as members of teams demonstrating sensitivity to professional and societal contexts, integrity and versatility.

**Student Outcomes**

Graduates of the BSEE program are expected to know or have:

- (a) An ability to apply knowledge of mathematics, science and engineering
- (b) An ability to design and conduct experiments, as well as to analyze and interpret data
- (c) An ability to design a system, component or process to meet desired needs
- (d) An ability to function on multidisciplinary teams
- (e) An ability to identify, formulate and solve engineering problems
- (f) An understanding of professional and ethical responsibility
- (g) An ability to communicate effectively
- (h) The broad education necessary to understand the impact of engineering solutions in a global and societal context
- (i) A recognition of the need for, and an ability to engage in, lifelong learning
- (j) A knowledge of contemporary issues
- (k) An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

**BSEE Degree Requirements**

To obtain the degree Bachelor of Science in Electrical Engineering, students must complete a minimum of 120 units consistent with the residency and other applicable requirements of Washington University and the School of Engineering, and subject to the following program requirements.

1. Common Studies program of the School of Engineering: This includes courses in engineering, mathematics, chemistry, humanities, social sciences and technical writing. The required chemistry sequence is Chem 111A–Chem 151, although Chem 111A–Chem 112A–Chem 151–Chem 152 is recommended.
2. Engr 4501 Engineering Ethics and Sustainability (1 unit).
3. Two of the following three computer science courses: CSE 131 Computer Science I (3 units); CSE 132 Computer Science II (3 units); or CSE 247 Data Structures and Algorithms (3 units).
4. Engineering and science breadth requirements: 9 units in engineering or science outside of electrical engineering. These units must be taken in the following areas: biomedical engineering; chemical engineering; computer science and engineering; mechanical engineering; systems science and engineering; economics; mathematics; physics; biology;

chemistry; earth and planetary sciences; and pre-medicine. These units must be at the 200 level or higher and shall not be used to satisfy the Common Studies requirements (item 1 above) or the CS requirement (item 3). Courses in other fields can be arranged with special departmental approval. Examples of engineering and science courses are MEMS 255 Engineering Mechanics II, EECE 210 Introduction to Environmental Engineering, EECE 203 Thermodynamics I in EECE, EECE 201 Engineering Analysis of Chemical Systems, CSE 247 Data Structures and Algorithms, Engr 324 From Concept to Market: The Business of Engineering, BME 240 Biomechanics, Physics 217 Introduction to Quantum Physics, Physics 318 Introduction to Quantum Physics II, MEMS 253 Engineering Mechanics I, Biol 2960 Principles of Biology I, Biol 2970 Principles of Biology II, Chem 261 Organic Chemistry I with Lab, Chem 262 Organic Chemistry II with Lab.

5. 28 units of required ESE courses:

| Code        | Title  | Units |
|-------------|--|-------|
| ESE 230     | Introduction to Electrical and Electronic Circuits | 4     |
| ESE 232     | Introduction to Electronic Circuits                | 3     |
| ESE 260     | Introduction to Digital Logic and Computer Design  | 3     |
| ESE 318     | Engineering Mathematics A                          | 3     |
| ESE 319     | Engineering Mathematics B                          | 3     |
| ESE 326     | Probability and Statistics for Engineering         | 3     |
| ESE 330     | Engineering Electromagnetics Principles            | 3     |
| ESE 351     | Signals and Systems                                | 3     |
| ESE 498     | Electrical Engineering Capstone Design Projects    | 3     |
| Total Units |  | 28    |

6. Two upper-level laboratory courses (6 units) from the following list: ESE 331, ESE 435, ESE 447, ESE 448, ESE 465, ESE 488. The selection must contain at least one course from ESE 331, ESE 435, ESE 465, ESE 488.
7. 15 units of elective ESE courses in electrical engineering subjects, from the following list: ESE 330–399, ESE 400, ESE 405, ESE 407, ESE 415, ESE 425, ESE 429–499, ESE 503–589.
8. The entire course sequence for the BSEE containing engineering topics of at least 45 units. The numbers of engineering topic units assigned to undergraduate courses in the School of Engineering & Applied Science vary from none (0) to the number of credits given to the course. For the precise number for each course, please refer to the table of Topics Units — Engineering Courses provided by Engineering Student Services (<http://engineering.wustl.edu/current-students/student-services/Pages/default.aspx>).

9. Limitations. No more than 3 credits of 500-level courses may be applied toward the EE elective requirement (item 7).
10. Limitations. No more than 6 units of the combined units of ESE 400 Independent Study and ESE 497 Undergraduate Research (including ESE 497A and ESE 497B) may be applied toward the EE elective requirement (Item 7) of the BSEE degree. The balance of combined units, if there are any left, are allowed as free electives to satisfy the requirement on the total number of units.
11. The courses taken to satisfy the following BSEE degree requirements must be taken for a letter grade and not on a pass/fail basis: Item 5 (required ESE courses), Item 6 (upper-level laboratory courses) and Item 7 (elective ESE courses).

Most students acquire more than 120 credit units. For a typical sequence of subjects for the Bachelor of Science in Electrical Engineering degree, please refer to the following tables:

- Sample Electrical Engineering Curriculum (p. 996)
- Sample Pre-Med Electrical Engineering Curriculum (p. 996)

For more information on BS in Electrical Engineering curriculums, please visit the ESE website (<http://ese.wustl.edu>).

## Bachelor of Science in Systems Science & Engineering

This professional degree program is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

### Objectives and Requirements

Key points:

- Systems Engineering: how to integrate different components in engineering systems
- Operations Research: mathematical solutions to business problems
- Pre-Financial Engineering: the best preparation for the MS in Financial Engineering
- Applied Mathematics
- Control Engineering: how to control jet airplanes, electric power grids, and the nation's economy
- Ideal for students strong in math and physics
- Ideal for students interested in engineering and business
- Ideal for students interested in a second degree
- The most mathematical program in the School of Engineering & Applied Science
- The most flexible professional program in the School of Engineering & Applied Science

This program educates students in the engineering and science of systems. Graduates are expected to have mathematical

competence and knowledge of systems analysis, control, design methods, numerical methods, differential equations, dynamic systems theory, automatic control theory, system stability, estimation, optimization, modeling, identification, simulation and basic computer programming. Graduates will have an engineering outlook and engineer's competence of their own and be able to interact fully with other engineers. They also will possess sufficient proficiency in computer use to design algorithms for simulation, estimation, control and optimization.

The engineering departments of high-technology industries are staffed by large numbers of engineers with this type of expertise. However, graduates are by no means restricted to careers in traditional industry or in high-technology industries. Within the outlined framework, a salient feature of the program is its flexibility and interdisciplinary nature. It is possible for students to orient study toward preparation for systems science and engineering work in large complex systems such as transportation or power or communications networks or in societal systems such as the economy, ecology, the cities or biological systems. Students may wish to prepare for work along theoretical or professional lines. There is ample room in the program structure to accommodate all these interests and to make preparation at the BS level ideally suited for a student's future plans and interests.

### Educational Objectives of the BSSSE Degree Program

- A. Our graduates will be engaged as practicing professionals in a broad range of careers in industry or government or be pursuing advanced degrees in academic graduate education in engineering or a related field.
- B. Our graduates will function effectively as members of teams demonstrating sensitivity to professional and societal contexts, integrity and versatility.

#### Student Outcomes

Graduates of the BSSSE program are expected to know or have:

- (a) An ability to apply knowledge of mathematics, science and engineering
- (b) An ability to design and conduct experiments, as well as to analyze and interpret data
- (c) An ability to design a system, component, or process to meet desired needs
- (d) An ability to function on multidisciplinary teams
- (e) An ability to identify, formulate and solve engineering problems
- (f) An understanding of professional and ethical responsibility
- (g) An ability to communicate effectively

(h) The broad education necessary to understand the impact of engineering solutions in a global and societal context

(i) A recognition of the need for, and an ability to engage in, life-long learning

(j) A knowledge of contemporary issues

(k) An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

## BSSSE Degree Requirements

The course sequence designed to achieve the type of education outlined above requires at least 120 units, satisfies the residency and other applicable requirements of Washington University and the School of Engineering & Applied Science, and meets the following program requirements:

1. Common Studies program of the School of Engineering & Applied Science. This includes courses in engineering, mathematics, physics, chemistry, humanities, social sciences and technical writing. The required chemistry sequence is Chem 111A–Chem 151.
2. Engr 4501 Engineering Ethics and Sustainability (1 unit).
3. Required courses in systems science and engineering: ESE 205 Introduction to Engineering Design (3 units); Math 309 Matrix Algebra (3 units); ESE 318 Engineering Mathematics A (3 units) and ESE 319 Engineering Mathematics B (3 units); ESE 326 Probability and Statistics for Engineering (3 units); ESE 351 Signals and Systems (3 units); ESE 403 Operations Research (3 units); ESE 441 Control Systems (3 units); ESE 448 Systems Engineering Laboratory (3 units); and ESE 499 Systems Science and Engineering Capstone Design Project (3 units).
4. Two of the following three computer science courses: CSE 131 Computer Science I (3 units); CSE 247 Data Structures and Algorithms (3 units); and CSE 132 Computer Science II (3 units). Students are encouraged to take CSE 131 Computer Science I and CSE 247 Data Structures and Algorithms. The other possible sequence is CSE 131 and CSE 132.
5. One of the following three laboratory courses: ESE 447 Robotics Laboratory (3 units), ESE 449 Digital Process Control Laboratory (3 units), ESE 488 Signals and Communication Laboratory (3 units). ESE 449 is only recommended to students with a chemical engineering background.
6. 12 units in elective courses in systems science and engineering: ESE 400 through 428; ESE 437; ESE 440 through 459; ESE 470 through 489; ESE 497; ESE 500 through 529; ESE 540 through 559. Up to 3 units of the following business courses may be part of the 12 units of SSE electives: OSCM 356 Operations Management, OSCM 458 Operations Planning and Control, OMM 576

Foundations of Supply Chain Management, OMM 577 Information Technology and Supply Chain Management.

7. 12 units in engineering concentration outside of systems science and engineering. These units must all be taken in one of the following engineering areas: Biomedical Engineering, Chemical Engineering, Computer Science & Engineering, Electrical Engineering (ESE 102; ESE 230 through 239; ESE 260 through 290; ESE 330 through 339; ESE 360 through 390; ESE 429 through 439; ESE 460 through 469; 490 through 496; ESE 498; ESE 530 through 539; ESE 560 through 589), or Mechanical Engineering & Materials Science. Of the 12 units, 9 units must be at the 200 level or higher. Sequences for concentrations in economics, mathematics, physics, pre-medicine and other fields can be arranged with special departmental approval to meet a student's specific needs. When a non-engineering discipline is chosen as the outside concentration, the student needs to pay special attention to the next requirement, which is required of all students, and make sure that enough engineering contents are obtained from the other courses. The use of basic required courses to fulfill the requirement for an outside concentration is not permitted.
8. The entire course sequence for the BSSSE, containing engineering topics of at least 45 units. The numbers of engineering topic units assigned to undergraduate courses in the School of Engineering & Applied Science vary from none (0) to the number of credits given to the course. For the precise number for each course, please refer to the table of Topics Units — Engineering Courses provided by Engineering Student Services (<http://engineering.wustl.edu/current-students/student-services/Pages/default.aspx>).
9. Limitations. No more than 6 units of the combined units of ESE 400 Independent Study and ESE 497 Undergraduate Research (including 497A and 497B) may be applied toward the SSE elective requirement (item 6) of the BSSSE degree. Any remaining combined units are allowed as free electives to satisfy the requirement on the total number of units.
10. The courses taken to satisfy the following BSSSE degree requirements must be taken for a letter grade and not on a pass/fail basis: item 3 (required ESE courses), item 5 (elective laboratory course) and item 6 (elective ESE courses).

The program requirements for the BS in Systems Science & Engineering allow a double major with another department. Changes in the program to accommodate such double majors may be made with departmental approval. For a sample program for the BS in Systems Science & Engineering, please refer to the following tables:

- Sample Systems Science & Engineering Curriculum (p. 998)
- Sample Pre-Med Systems Science & Engineering Curriculum (p. 997)

For more information on BS in Systems Science & Engineering curriculums, please visit the ESE website (<http://ese.wustl.edu>).

## Bachelor of Science in Applied Science (Electrical Engineering)

Students who do not plan to pursue a career in electrical engineering but seek a strong foundation in the principles of electrical engineering may choose the Bachelor of Science in Applied Science (Electrical Engineering). The program ensures that the student learns the foundations of electrical engineering through breadth requirements. In addition, there is flexibility in selecting upper-level courses to meet the student's individual objectives. This program also may be attractive for students interested in obtaining multiple degrees because the requirements are less strict than for the BSEE degree. Historically students have matched a degree in electrical engineering with degrees in other engineering disciplines, in the natural sciences, in music, in history and in business; other combinations are possible. This also may be an attractive option for students planning graduate studies in a variety of disciplines including medicine, law or business. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

The degree requirements include the residency and general requirements of the university and the School of Engineering & Applied Science and:

| Courses   | Units      |
|---|------------|
| Humanities and social sciences electives  | 18         |
| Mathematics, science and engineering electives  | 24         |
| Required courses in electrical engineering (ESE 230, ESE 232, ESE 330 and ESE 351)  | 13         |
| Computer Science requirement (CSE 131)  | 3          |
| Upper-level elective courses in electrical engineering (ESE 260, ESE 326, ESE 330–399, ESE 400, ESE 405, ESE 407, ESE 415, ESE 425, ESE 429–499, ESE 503–589) | 21         |
| Free electives  | 41         |
| <b>Total</b>  | <b>120</b> |

The program must include at least 48 units at the 300 level or higher.

## Bachelor of Science in Applied Science (Systems Science & Engineering)

This program provides a student with the opportunity to prepare their academic career with maximum flexibility, but with enough organization to assure substantive, consistent training in systems science methodology and outlook. This program is recommended if students wish to pursue a program that does not follow conventional lines. It is an especially advantageous

degree for a double major in association with mathematics, physics, economics or another engineering discipline. The program can be planned to provide a desirable background for graduate work in biological, medical or management fields. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

The degree requirements include the residency and general requirements of the university and the School of Engineering and:

| Courses  | Units      |
|--|------------|
| Humanities and social sciences electives   | 18         |
| Mathematics, science and engineering electives   | 24         |
| Required courses: ESE 205, ESE 351, ESE 403, and ESE 441   | 12         |
| Computer Science requirement (CSE 131)   | 3          |
| Systems science and engineering electives (ESE 400–428, ESE 437, ESE 440–459, ESE 470–489, ESE 500–529, ESE 540–559) | 15         |
| Free electives   | 48         |
| <b>Total</b>   | <b>120</b> |

The program must include at least 48 units at the 300 level or higher.

## The Second Major in Electrical Engineering Science

A second major in electrical engineering science is ideal for students majoring in many areas, such as mathematics, physics, chemistry and biology. Students in the School of Engineering & Applied Science as well as the other undergraduate divisions at Washington University now have the opportunity to pursue a second major in electrical engineering science. Students are not allowed to add this second major to either the BS in Electrical Engineering or the BS in Applied Science (Electrical Engineering).

The requirements for a second major in electrical engineering science are:

| Code    | Title  | Units |
|---------|--|-------|
| ESE 230 | Introduction to Electrical and Electronic Circuits | 4     |
| ESE 260 | Introduction to Digital Logic and Computer Design  | 3     |
| ESE 351 | Signals and Systems                                | 3     |

And one of the following:

| Code    | Title                               | Units |
|---------|-------------------------------------|-------|
| ESE 232 | Introduction to Electronic Circuits | 3     |
| ESE 318 | Engineering Mathematics A           | 3     |
| ESE 319 | Engineering Mathematics B           | 3     |

|         |  |   |
|---------|--|---|
| ESE 326 | Probability and Statistics for Engineering | 3 |
| ESE 330 | Engineering Electromagnetics Principles    | 3 |

And seven 3-unit ESE courses in the Electrical Engineering area chosen from:

| Code        | Title   | Units |
|-------------|---|-------|
| ESE 330–399 |   |       |
| ESE 400     | Independent Study                                 | 1-3   |
| ESE 405     | Reliability and Quality Control                   | 3     |
| ESE 407     | Analysis and Simulation of Discrete Event Systems | 3     |
| ESE 425     | Random Processes and Kalman Filtering             | 3     |

ESE 429–499

ESE 503–589

The above program assumes the completion of the following courses:

| Code         | Title                  | Units |
|--------------|------------------------|-------|
| Math 132     | Calculus II            | 6     |
| & Math 233   | and Calculus III       |       |
| Math 217     | Differential Equations | 3     |
| CSE 131      | Computer Science I     | 3     |
| Physics 117A | General Physics I      | 4     |
| Physics 118A | General Physics II     | 4     |

Students may petition to substitute electrical science-oriented courses from other disciplines in Arts & Sciences for up to two of the above 11 courses (for example, certain courses in physics or applied mathematics). When such substitutions are employed, the total number of units for non-Arts & Sciences courses is 31 or 32 units. Within this second major in electrical engineering science, areas of concentration are possible in: applied physics, signal processing, and control systems. The second major in the electrical engineering science program comprises a total of 34 or 35 units. To design a customized program, contact the director of the program Professor R. Martin Arthur ([rma@wustl.edu](mailto:rma@wustl.edu)).

## The Second Major in Systems Science

A second major in systems science is ideal for study in many areas such as physics, chemistry, economics, finance, supply chain management, and computational biology. Students in the School of Engineering as well as the other undergraduate divisions at Washington University have the opportunity to pursue a second major in systems science in the Preston M. Green Department of Electrical & Systems Engineering in the School of Engineering & Applied Science. Students are not

allowed to add this second major to either the BS in SSE or the BS in Applied Science (SSE).

The requirements for a second major in systems science are:

| Code     | Title                              | Units |
|----------|------------------------------------|-------|
| ESE 205  | Introduction to Engineering Design | 3     |
| Math 309 | Matrix Algebra                     | 3     |
| ESE 351  | Signals and Systems                | 3     |
| ESE 403  | Operations Research                | 3     |

One of the following:

| Code    | Title                                      | Units |
|---------|--|-------|
| ESE 318 | Engineering Mathematics A                  | 3     |
| ESE 319 | Engineering Mathematics B                  | 3     |
| ESE 326 | Probability and Statistics for Engineering | 3     |
| ESE 441 | Control Systems                            | 3     |

Eight 3-unit ESE courses in the Systems area chosen from:

- ESE 318 through 326
- ESE 400 through 428
- ESE 437
- ESE 440 through 459
- ESE 470 through 489
- ESE 500 through 529
- ESE 540 through 559

Students may petition to substitute systems-oriented courses from other disciplines in Arts & Sciences for two of these eight courses (for example, courses in computational physics, econometrics or computational mathematics). When such substitutions are employed, the total number of units for non-Arts & Sciences courses will be 30 units.

Within this second major in systems science, areas of concentration are possible in: robotics, control systems, and operations research.

This totals 34 to 40 units of systems science, depending on student's use of the substitution option for upper-level electives. To design a customized program, contact the departmental associate chair Professor Hiro Mukai (<https://ese.wustl.edu/faculty/Pages/default.aspx?bio=75>) or the director of the program Professor Heinz Schaettler (<https://engineering.wustl.edu/Profiles/Pages/Heinz-Schaettler.aspx>).

## The Second Major in Financial Engineering

A second major in financial engineering is ideal for students who are interested in careers or graduate school in financial engineering, quantitative finance, or related fields. This program covers classes in engineering, computer science and business.

Background Course Work: 18 units

| Code         | Title                                      | Units |
|--------------|--|-------|
| CSE 131      | Computer Science I                         | 3     |
| ESE 326      | Probability and Statistics for Engineering | 3     |
| or QBA 121   | Managerial Statistics II                   |       |
| or Econ 413  | Introduction to Econometrics               |       |
| or Math 439  | Linear Statistical Models                  |       |
| Math 217     | Differential Equations                     | 3     |
| Math 233     | Calculus III                               | 3     |
| Math 309     | Matrix Algebra                             | 3     |
| MEC 290      | Microeconomics                             | 3     |
| or Econ 4011 | Intermediate Microeconomic Theory          |       |

Engineering Professional Core Requirements: 15 units

| Code        | Title                                      | Units |
|-------------|--|-------|
| CSE 240     | Logic and Discrete Mathematics             | 3     |
| CSE 247     | Data Structures and Algorithms             | 3     |
| CSE 417T    | Introduction to Machine Learning           | 3     |
| or CSE 427S | Cloud Computing with Big Data Applications |       |
| ESE 403     | Operations Research                        | 3     |
| or ESE 415  | Optimization                               |       |
| ESE 427     | Financial Mathematics                      | 3     |

Olin Professional Core Requirements: 9 units

| Code      | Title                                    | Units |
|-----------|--|-------|
| ACCT 2610 | Principles of Financial Accounting       | 3     |
| FIN 340   | Capital Markets and Financial Management | 3     |
| FIN 441   | Investments                              | 3     |

Olin Elective Courses: 6 units minimum

| Code     | Title  | Units |
|----------|--|-------|
| FIN 500Q | Quantitative Risk Management                   | 3     |
| FIN 537  | Advanced Derivative Securities                 | 3     |
| FIN 539  | Mathematical Finance                           | 1.5   |
| FIN 551  | Advanced Fixed Income and Credit Risk Modeling | 2     |
| FIN 552  | Fixed Income Derivatives                       | 1.5   |

Financial Mathematics (ESE 427) is to be taken after Capital Markets and Financial Management (FIN 340) and to be taken before the 6 credit hours of FIN 500+.

Students must have a 3.0 or higher GPA to pursue this second major, which includes the cumulative GPA, business GPA, and engineering GPA.

For students earning School of Engineering & Applied Science undergraduate degrees:

- A maximum of 12 units may be double-counted for this second major and an engineering or computer science undergraduate degree (this does not include the background course work).

To design a customized program, contact the director of the program Professor Zachary Feinstein (<https://ese.wustl.edu/faculty/Pages/default.aspx?bio=69>).

## Minors

Please refer to the sections below for information about the minors in **applied physics & electrical engineering** (p. 982), **electrical engineering** (p. 983), **energy engineering (ESE)** (p. 983), **mechatronics (ESE)** (p. 983), **robotics** (p. 984), and **systems science & engineering** (p. 984).

## The Minor in Applied Physics & Electrical Engineering

(Program Director: Dr. Jung-Tsung Shen (<https://engineering.wustl.edu/Profiles/Pages/Jung-Tsung-Shen.aspx>))

Units required: 19

The minor in applied physics & electrical engineering provides students with course work that will enhance their background, knowledge and skills in the topical area of applied physics and electrical engineering. This program covers classes in several fields of science and engineering, encompassing electronics, solid-state devices, applied electromagnetics, RF and microwave technology, fiber-optic communication, applied optics, nanophotonics, sensors, and medical and biological imaging technology.

This program consists of six courses total: one required course, two core courses and three electives. At least three courses among the six courses must be ESE courses taught by the ESE department and not taught by other departments by means of cross-listing. Students who complete the following requirements in Applied Physics & Electrical Engineering subjects at Washington University as specified below may be awarded a minor in applied physics & engineering.

**Target students:** Students who are interested in applied physics and electrical engineering applications.

**Prerequisite:** ESE 318 Engineering Mathematics A, or equivalent, is recommended.

### Course requirements:

1. **Required course:**  
ESE 230 Introduction to Electrical and Electronic Circuits
2. **One core lab course** from the following list:  
ESE 331 Electronics Laboratory; or Physics 321 Electronics Laboratory  
ESE 435 Electrical Energy Laboratory
3. **One core course** from the following list:

ESE 232 Introduction to Electronic Circuits  
ESE 330 Engineering Electromagnetics Principles; or  
Physics 421 Electricity and Magnetism  
ESE 337 Electronic Devices and Circuits  
ESE 444 Sensors and Actuators  
Physics 471 Quantum Mechanics

4. **Three electives** from the following list. These three courses  
(i) must exclude the course selected in the requirement (3)  
above, and (ii) must include at least one Physics course:

| Code        | Title   | Units |
|-------------|---|-------|
| ESE 232     | Introduction to Electronic Circuits                           | 3     |
| ESE 330     | Engineering Electromagnetics Principles                       | 3     |
| ESE 332     | Power, Energy and Polyphase Circuits                          | 3     |
| ESE 337     | Electronic Devices and Circuits                               | 3     |
| ESE 433     | Radio Frequency and Microwave Technology for Wireless Systems | 3     |
| ESE 434     | Solid-State Power Circuits and Applications                   | 3     |
| ESE 438     | Applied Optics  | 3     |
| ESE 444     | Sensors and Actuators   | 3     |
| ESE 531     | Nano and Micro Photonics                                      | 3     |
| ESE 532     | Introduction to Nano-Photonic Devices                         | 3     |
| ESE 534     | Special Topics in Advanced Electrodynamics                    | 3     |
| ESE 575     | Fiber-Optic Communications                                    | 3     |
| Physics 463 | Statistical Mechanics and Thermodynamics                      | 3     |
| Physics 471 | Quantum Mechanics   | 3     |
| Physics 472 | Solid State Physics   | 3     |
| Physics 537 | Kinetics of Materials   | 3     |

## The Minor in Electrical Engineering

Units required: 16

Required courses:

| Code    | Title  | Units |
|---------|--|-------|
| ESE 230 | Introduction to Electrical and Electronic Circuits | 4     |
| ESE 330 | Engineering Electromagnetics Principles            | 3     |
| ESE 351 | Signals and Systems                                | 3     |

**Electives:** Students must select two electrical engineering elective courses from the following list:

| Code        | Title   | Units |
|-------------|---|-------|
| ESE 232     | Introduction to Electronic Circuits               | 3     |
| ESE 260     | Introduction to Digital Logic and Computer Design | 3     |
| ESE 330–399 |   |       |
| ESE 429–499 | with the exception of ESE 431                     |       |

For more information, contact the director for the minor (Professor R. Martin Arthur (rma@wustl.edu)) or visit the ESE website (<http://ese.wustl.edu>).

## The Minor in Energy Engineering (ESE)

This minor will provide students with course work that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor covers classes in several fields of science and engineering, encompassing the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science. A minor in energy engineering requires the completion of 18 units. It is open to undergraduate students pursuing an engineering major, students from the sciences (biology, chemistry, physics) in Arts & Sciences, and students pursuing the environmental studies major. The detailed requirements for the minor can be found on the Energy, Environmental & Chemical Engineering Minors page (p. 1002). Questions regarding the minor should be directed to a member of the committee for the energy engineering minor: Professor Pratim Biswas (EECE) (<https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx>), Professor Hiro Mukai (ESE) (<https://engineering.wustl.edu/Profiles/Pages/Hiro-Mukai.aspx>) or Professor David Peters (MEMS) (<https://engineering.wustl.edu/Profiles/Pages/David-Peters.aspx>).

## Committee to Oversee Energy Engineering Minor

**Pratim Biswas** (EECE, Coordinator)

**Hiro Mukai** (ESE)

**David Peters** (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program be cohesive.

Visit the ESE website (<http://ese.wustl.edu>) for more information.

## The Minor in Mechatronics (ESE)

(Program Director: Heinz Schaettler)

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role for "smart" systems, which combine electronic and mechanical

components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

**Four required courses:**

| Code        | Title  | Units |
|-------------|--|-------|
| MEMS 255    | Engineering Mechanics II (Dynamics)                          | 3     |
| MEMS 411    | Mechanical Engineering Design Project (Mechatronics project) | 3     |
| ESE 444     | Sensors and Actuators  | 3     |
| ESE 446     | Robotics: Dynamics and Control                               | 3     |
| Total Units |  | 12    |

**Two electives from the following:**

| Code                    | Title   | Units |
|-------------------------|---|-------|
| MEMS 4301<br>or ESE 441 | Modeling, Simulation and Control<br>Control Systems | 3     |
| MEMS 4310               | Dynamics and Vibrations                             | 3     |
| MEMS 5101               | Analysis and Design of Fluid-Power Systems          | 3     |
| ESE 337                 | Electronic Devices and Circuits                     | 3     |
| ESE 482                 | Digital Signal Processing                           | 3     |
| CSE 467S                | Embedded Computing Systems                          | 3     |

**Prerequisite:**

Basic programming course: CSE 131 Computer Science I

Visit the ESE website (<http://ese.wustl.edu>) for more information.

## The Minor in Robotics

Robotic systems have wide applications in modern technology and manufacturing. Robots can vary in complexity and use,

from microrobots for surgical procedures to moderate-size robots common in manufacturing and undersea exploration to macrorobots used for disposal of nuclear wastes and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in design and use of robots.

**Units required:** 18

**Prerequisites:**

| Code                           | Title                            | Units |
|--------------------------------|----------------------------------|-------|
| Math 217                       | Differential Equations           | 3     |
| Physics 117A<br>or Physics 197 | General Physics I<br>Physics I   | 4     |
| Physics 118A<br>or Physics 198 | General Physics II<br>Physics II | 4     |
| CSE 131                        | Computer Science I               | 3     |

**Required courses:**

| Code                    | Title  | Units |
|-------------------------|--|-------|
| MEMS 255                | Engineering Mechanics II                       | 3     |
| ESE 351<br>or MEMS 4310 | Signals and Systems<br>Dynamics and Vibrations | 3     |
| ESE 446                 | Robotics: Dynamics and Control                 | 3     |
| ESE 447                 | Robotics Laboratory                            | 3     |
| Total Units             |  | 12    |

Plus two courses chosen with the approval of the director of the program for a minor in robotics. Suggested courses are:

| Code                    | Title   | Units |
|-------------------------|---|-------|
| CSE 417T                | Introduction to Machine Learning                    | 3     |
| CSE 452A                | Computer Graphics                                   | 3     |
| CSE 546T                | Computational Geometry                              | 3     |
| ESE 407                 | Analysis and Simulation of Discrete Event Systems   | 3     |
| ESE 435                 | Electrical Energy Laboratory                        | 3     |
| ESE 441<br>or MEMS 4301 | Control Systems<br>Modeling, Simulation and Control | 3     |
| MEMS 3110               | Machine Elements                                    | 3     |

To find out more about this minor, contact the director (Heinz Schaeffler (<https://engineering.wustl.edu/Profiles/Pages/Heinz-Schaeffler.aspx>)) of the program.

## The Minor in Systems Science & Engineering

This minor consists of fundamental courses in control systems and operations research. In the area of control systems, students will be introduced to design techniques for controlling engineering and socioeconomic systems such as airplanes, automobiles, nuclear reactors, ecological systems,

communication networks, the nation's economy, and biological systems. In the area of operations research, students are introduced to techniques for optimally managing business resources and controlling business networks such as supply chains.

**Requirements:**

Students who complete 15 units of course work in Systems Science & Engineering at Washington University as specified below may be awarded a minor in systems science & engineering.

**The required courses for the minor are:**

| Code                  | Title  | Units |
|-----------------------|--|-------|
| ESE 151               | Introduction to Systems Science and Engineering    | 2     |
| ESE 351               | Signals and Systems                                | 3     |
| ESE 403<br>or ESE 404 | Operations Research<br>Applied Operations Research | 3     |
| ESE 441               | Control Systems                                    | 3     |

Students must select one Systems Science & Engineering elective course from the following list: ESE 400 through 425 except 409; ESE 437; ESE 440 through 459 except 449; ESE 470 through 489.

**Prerequisites:**

A student who has finished engineering common studies courses needs to take only ESE 318 in addition to the above five courses. The student may start taking ESE 151 before taking Math 217 or Math 233.

For more information, contact the director (Heinz Schaettler (<https://engineering.wustl.edu/Profiles/Pages/Heinz-Schaettler.aspx>)) for the minor.

## Courses

Visit online course listings to view semester offerings for E35 ESE (<https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E35&crslvl=1:5>).

---

### E35 ESE 101 Introduction to Engineering Tools: MATLAB and Simulink

MATLAB and Simulink are important tools in quickly analyzing different designs in many engineering disciplines and are also perhaps the most used software in many engineering schools. Gain skills in the basics of the array-based language MATLAB to write programs, including scripts and functions, to calculate and display variables and images. Learn the basics of Simulink to build and simulate models from standard blocks. Discover both MATLAB and Simulink in an environment with supervised practice and hands-on experience. Practice problems are chosen from different engineering fields as well as from a few socio-economic fields so that students can see the software being exploited in real life applications. This is a pass/fail course. Prerequisite: freshman standing.

Credit 1 unit. EN: TU

---

### E35 ESE 103 Introduction to Electrical Engineering

A hands-on introduction to electrical engineering to put the fun into the electrical engineering fundamentals. Experiments are designed to be easy to conduct and understand. Some of the technologies explored are used in a variety of applications including ultrasound imaging, computed tomography, DC motors, analog to digital converters and credit card readers. Students work in groups of two in the newly renovated Urbauer 115 laboratory. Each station is equipped with modern electronic test equipment and a computer with an integrated Data Acquisition system. Using this lab equipment, students design and build solutions to the exercises. The students also learn to program in LabVIEW to control the Data Acquisition system and process the acquired signals. Also, throughout the semester, presentations are given by the ESE faculty about their research.

Credit 1 unit. EN: TU

---

### E35 ESE 141 Introductory Robotics

A hands-on introduction to robotics. Project-oriented course where students build and program a robot guided by upper-division students. Friendly competition at the end of semester. Students gain electrical lab experience, programming experience, and a guided introduction into the field of robotics. Recommended to freshmen and sophomores. This is a pass/fail course.

Credit 1 unit. EN: TU

---

### E35 ESE 151 Introduction to Systems Science and Engineering

Systems Science and Engineering (SSE) has grown in applicability to many industries. This course will provide an overview of the broad applicability of the analytical methods studied in SSE, as well as introduce many of these analytical methods. Each module of the course will present a domain area (e.g., energy, health care, etc.) with examples of how one of the SSE analytical methods (e.g., optimization, discrete event systems, etc.) is used with assistance of one of the many computing tools available for SSE-style projects (e.g., MATLAB, SIMUL8, etc.). The course will close with a final, exploratory project and presentation of an analytical method of the students' choosing and how this is applied to an industry of their choosing. (Not open to seniors or graduate students.) Corequisite: Math 132, Physics 117A or 197.

Credit 2 units. EN: TU

---

### E35 ESE 205 Introduction to Engineering Design

A hands-on course where students, divided in groups of two or three, will creatively solve one problem throughout the semester using tools from electrical and systems engineering. The groups choose their own schedule and work under the supervision of an academic team consisting of faculty and higher-level students. The evaluation considers the completion of objectives set by the students with help of the academic team, as well as the originality, innovation, and impact of the project. Prerequisites: CSE 131, Physics 117A or equivalent.

Credit 3 units. EN: TU

---

### E35 ESE 230 Introduction to Electrical and Electronic Circuits

Electrical energy, current, voltage, and circuit elements. Resistors, Ohm's Law, power and energy, magnetic fields

and DC motors. Circuit analysis and Kirchhoff's voltage and current laws. Thevenin and Norton transformations and the superposition theorem. Measuring current, voltage and power using ammeters and voltmeters. Energy and maximum electrical power transfer. Computer simulations of circuits. Reactive circuits, inductors, capacitors, mutual inductance, electrical transformers, energy storage, and energy conservation. RL, RC and RLC circuit transient responses, biological cell action potentials due to Na and K ions. AC circuits, complex impedance, RMS current and voltage. Electrical signal amplifiers and basic operational amplifier circuits. Inverting, noninverting, and difference amplifiers. Voltage gain, current gain, input impedance, and output impedance. Weekly laboratory exercises related to the lectures are an essential part of the course. Prerequisite: Physics 118A. Corequisite: Math 217. Credit 4 units. EN: TU

---

### E35 ESE 232 Introduction to Electronic Circuits

Analysis and design of linear electronic circuits. Terminal characteristics of active semiconductor devices. Incremental and DC models for diodes, metal-oxide-semiconductor field effect transistors (MOSFETs) and bipolar junction transistors (BJTs). Design and analysis of single- and multistage amplifiers. Volatile and nonvolatile memories. Understanding of common application circuits (e.g., operational amplifier, memories) in integrated circuit chips. Semester-long design project. Prerequisite: ESE 230. Credit 3 units. EN: TU

---

### E35 ESE 260 Introduction to Digital Logic and Computer Design

Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisite: CSE 131. Same as E81 CSE 260M. Credit 3 units. EN: TU

---

### E35 ESE 297 Introduction to ESE Undergraduate Research Projects

This course is offered to students at all levels from all departments. The course is designed to give students some hands-on experience by implementing projects that use the lab PCs, the sbRIO robots from National Instruments, acoustic sensors, bio-medical sensors and 3D cameras. These projects are implemented in LabVIEW and Matlab and should prepare the students to work on topics that include the Robotic Sensing Undergraduate Research Projects in subsequent semesters. Note that under ESE 497 Undergraduate Research, students may select the Robotic Sensing Projects as well as other projects. Working in groups, students implement algorithms that run on PCs and our wireless robotic platforms to track a moving audio source. Also, they use an EEG system to implement a Brain Computer Interface (BCI) project and work with the new Kinect camera from Microsoft. Corequisite: CSE 131 or equivalent. Credit 3 units.

---

### E35 ESE 318 Engineering Mathematics A

Laplace transforms; matrix algebra; vector spaces; eigenvalues and eigenvectors; vector differential calculus and vector integral calculus in three dimensions. Prerequisites: Math 233 and Math 217 or their equivalents. Credit 3 units.

---

### E35 ESE 319 Engineering Mathematics B

Power series and Frobenius series solutions of differential equations; Legendre's equation; Bessel's equation; Fourier series and Fourier transforms; Sturm-Liouville theory; solutions of partial differential equations; wave and heat equations. Prerequisites: Math 233 and Math 217 or their equivalents. Credit 3 units.

---

### E35 ESE 326 Probability and Statistics for Engineering

Study of probability and statistics together with engineering applications. Probability and statistics: random variables, distribution functions, density functions, expectations, means, variances, combinatorial probability, geometric probability, normal random variables, joint distribution, independence, correlation, conditional probability, Bayes theorem, the law of large numbers, the central limit theorem. Applications: reliability, quality control, acceptance sampling, linear regression, design and analysis of experiments, estimation, hypothesis testing. Examples are taken from engineering applications. Prerequisites: Math 233 or equivalent. Credit 3 units. EN: TU

---

### E35 ESE 330 Engineering Electromagnetics Principles

Electromagnetic theory as applied to electrical engineering: vector calculus; electrostatics and magnetostatics; Maxwell's equations, including Poynting's theorem and boundary conditions; uniform plane-wave propagation; transmission lines, TEM modes, including treatment of general lossless lines, and pulse propagation; introduction to guided waves; introduction to radiation and scattering concepts. Prerequisites: Physics 118A and ESE 318 En Math A. Corequisite: ESE 319 En Math B. Credit 3 units. EN: TU

---

### E35 ESE 331 Electronics Laboratory

Laboratory exercises provide students with a combination of hands-on experience in working with a variety of real instruments and in working in a simulated "virtual" laboratory setting. A sequence of lab experiments provide hands-on experience with grounding and shielding techniques, signal analysis, realistic operation amplifier (op amp) characterization, op amp based active filters characterization, MOSFET chopper/amplifier behavior, measurement of pulses propagating on a transmission line with various terminations, experience with both AM and FM modulation. Students will gain experience in working with: sampling oscilloscopes, various signal generators, frequency counters, digital multimeters, spectrum analyzers, and contemporary connection boards. The course concludes with a hands-on project to design and demonstrate an electronic component. Prerequisites: ESE 230, ESE 232; Corequisite: ESE 330. Credit 3 units. EN: TU

---

### E35 ESE 332 Power, Energy and Polyphase Circuits

Fundamental concepts of power and energy; electrical measurements; physical and electrical arrangement of electrical

power systems; polyphase circuit theory and calculations; principal elements of electrical systems such as transformers, rotating machines, control and protective devices, their description and characteristics; elements of industrial power system design. Prerequisite: ESE 230.  
Credit 3 units. EN: TU

---

### E35 ESE 337 Electronic Devices and Circuits

Introduction to semiconductor electronic devices: transistors and diodes. Device electrical DC and high-frequency characteristics. Bipolar transistors and MOSFET transistors for analog electronics applications. Transistor fabrication as integrated-circuit chips and fundamentals of very large scale integration (VLSI). Large-signal and small-signal analysis of transistor amplifiers: voltage gain, input resistance and output resistance. Analysis of multitransistor amplifiers: cascoded amplifiers and differential amplifiers. Analysis of feedback circuits, operational amplifiers, stability, frequency compensation. Fundamentals of Analog VLSI Layout and post-layout simulation of operational amplifiers. Prerequisite: ESE 232.  
Credit 3 units. EN: TU

---

### E35 ESE 351 Signals and Systems

Introduction to concepts and methodology of linear dynamic systems in relation to discrete- and continuous-time signals. Mathematical modeling. Representation of systems and signals. Fourier, Laplace, and Z-transforms and convolution. Input-output description of linear systems: impulse response, transfer function. Time-domain and frequency-domain system analysis: transient and steady-state responses, system modes, stability, frequency spectra and frequency responses. System design: filter, modulation, sampling theorem. Continuity is emphasized from analysis to synthesis. Use of Matlab. Prerequisites: Physics 117A-118A, Math 217, CSE 131, matrix addition and multiplication; Corequisite: ESE 318.  
Credit 3 units. EN: TU

---

### E35 ESE 362 Computer Architecture

This course explores the interaction and design philosophy of hardware and software for digital computer systems. Topics include: Processor architecture, Instruction Set Architecture, Assembly Language, memory hierarchy design, I/O considerations, and a comparison of computer architectures. Prerequisite: CSE 260M.  
Same as E81 CSE 362M  
Credit 3 units. EN: TU

---

### E35 ESE 400 Independent Study

Opportunities to acquire experience outside the classroom setting and to work closely with individual members of the faculty. A final report must be submitted to the department. Not open to first-year or graduate students. Consult adviser. Hours and credit to be arranged.  
Credit variable, maximum 3 units.

---

### E35 ESE 401 Fundamentals of Engineering Review

A review and preparation of the most recent NCEES Fundamentals of Engineering (FE) Exam specifications is offered in a classroom setting. Exam strategies will be illustrated using examples. The main topics for the review include: engineering mathematics, statics, dynamics, thermodynamics, heat transfer, mechanical design and analysis, material science and engineering economics. A discussion of the importance and

responsibilities of professional engineering licensure along with ethics will be included.  
Same as E37 MEMS 4001  
Credit 1 unit.

---

### E35 ESE 403 Operations Research

Introduction to the mathematical aspects of various areas of operations research, with additional emphasis on problem formulation. This is a course of broad scope, emphasizing both the fundamental mathematical concepts involved, and also aspects of the translation of real-world problems to an appropriate mathematical model. Subjects to be covered include linear and integer programming, network problems, and dynamic programming. Prerequisites: CSE 131, Math 309, and ESE 326, or permission of instructor.  
Credit 3 units. EN: TU

---

### E35 ESE 404 Applied Operations Research

Application of operations research techniques to real-world problems. Emphasis is given to integer linear programming and computational methods. Real-world examples of integer programs will be studied in areas such as network flow, facility location, partitioning, matching, and transportation. Special emphasis will be placed on techniques used to solve integer programs. Prerequisites: ESE 403 and CSE 131.  
Credit 3 units. EN: TU

---

### E35 ESE 405 Reliability and Quality Control

An integrated analysis of reliability and quality control function in manufacturing. Statistical process control, acceptance sampling, process capability analysis, reliability prediction, design, testing, failure analysis and prevention, maintainability, availability, and safety are discussed and related. Qualitative and quantitative aspects of statistical quality control and reliability are introduced in the context of manufacturing. Prerequisite: ESE 326 or equivalent.  
Credit 3 units. EN: TU

---

### E35 ESE 407 Analysis and Simulation of Discrete Event Systems

Study of the dynamic behavior of discrete event systems and techniques for analyzing and optimizing the performance of such systems. Covers both classical and recent approaches. Classical topics include Markov chains, queueing theory, networks of queues, related algorithms and simulation methods. Recent approaches include decomposition and aggregation, approximation, and perturbation analysis of nonclassical systems. Applications are drawn from various areas, including production systems. Prerequisites: Math 217, ESE 326 or equivalent, programming experience such as CSE 131 or CSE 200.  
Credit 3 units. EN: TU

---

### E35 ESE 408 A System Dynamics Approach to Designing Sustainable Policies and Programs

Principles and practice of modeling dynamic systems in the sciences, engineering, social sciences and business. Model structure and its relationships to prior knowledge and assumptions, measurable quantities and ultimate use in solving problems in application areas. Problems considered are in the areas of intervention, policy making, business and engineering systems. Model verification. The basic theory and practice of

system dynamics. Quantitative methods are emphasized. Senior or graduate standing.  
Credit 3 units. EN: TU

---

### E35 ESE 415 Optimization

Optimization problems with and without constraints. The projection theorem. Convexity, separating hyperplane theorems; Lagrange multipliers, Kuhn-Tucker-type conditions, duality; computational procedures. Use of optimization techniques in engineering design. Prerequisites: CSE 131, Math 309 and ESE 318 or permission of instructor.  
Credit 3 units. EN: TU

---

### E35 ESE 425 Random Processes and Kalman Filtering

Probability and random variables; random processes; linear dynamic systems and random inputs; autocorrelation; spectral density; the discrete Kalman filter; applications; the extended Kalman filter for nonlinear dynamic systems. Kalman filter design using a computer package, mean square estimation; maximum likelihood; Wiener filtering and special factorization, LQG/LTR control. Prerequisite: ESE 326 and ESE 351 or equivalent.  
Credit 3 units. EN: TU

---

### E35 ESE 427 Financial Mathematics

This course is a self-contained introduction to financial mathematics at the undergraduate level. Topics to be covered include pricing of the financial instruments such as options, forwards, futures and their derivatives along with basic hedging techniques and portfolio optimization strategies. The emphasis is put on using of discrete, mostly binary models. The general, continuous case including the concepts of Brownian motion, stochastic integral, and stochastic differential equations, is explained from intuitive and practical point of view. Among major results discussed are the Arbitrage Theorem and Black-Scholes differential equations and their solutions. Prerequisites: ESE 318 and ESE 326 or the consent of the instructor.  
Credit 3 units. EN: TU

---

### E35 ESE 429 Basic Principles of Quantum Optics and Quantum Information

This course provides an accessible introduction to quantum optics and quantum engineering for undergraduate students. This course covers the following topics: concept of photons, quantum mechanics for quantum optics, radiative transitions in atoms, lasers, photon statistics (photon counting, Sub-/Super-Poissonian photon statistics, bunching, anti-bunching, theory of photodetection, shot noise), entanglement, squeezed light, atom-photon interactions, cold atoms, atoms in cavities. The course will also provide an overview for quantum information processing: quantum computing, quantum cryptography, and teleportation. Prerequisite: Engineering Mathematics 318 or equivalent.  
Credit 3 units. EN: TU

---

### E35 ESE 433 Radio Frequency and Microwave Technology for Wireless Systems

Focus is on the components and associated techniques employed to implement analog and digital radio frequency (RF) and microwave (MW) transceivers for wireless applications, including: cell phones; pagers; wireless local area networks; global positioning satellite-based devices; and RF identification systems. A brief overview of system-level considerations is provided, including modulation and detection approaches for

analog and digital systems; multiple-access techniques and wireless standards; and transceiver architectures. Focus is on RF and MW: transmission lines; filter design; active component modeling; matching and biasing networks; amplifier design; and mixer design. Prerequisite: ESE 330.  
Credit 3 units. EN: TU

---

### E35 ESE 434 Solid-State Power Circuits and Applications

Study of the strategies and applications power control using solid-state semiconductor devices. Survey of generic power electronic converters. Applications to power supplies, motor drives and consumer electronics. Introduction to power diodes, thyristors and MOSFETs. Prerequisites: ESE 232, ESE 351.  
Credit 3 units. EN: TU

---

### E35 ESE 435 Electrical Energy Laboratory

Experimental studies of principles important in modern electrical energy systems. Topics include: AC power measurements, electric lighting, photovoltaic cells and arrays, batteries, DC-DC and DC-AC converters, and three-phase circuits. Each experiment requires analysis, simulation with MultiSim, and measurement via LabView and the Elvis II platform. Prerequisites: ESE 230 and ESE 351.  
Credit 3 units. EN: TU

---

### E35 ESE 436 Advanced Electronic Devices

The physics of state-of-the-art electronic devices. Devices studied include novel diode structures (light-emitting diodes, semiconductor laser diodes), high-power devices (SCRs, TRIACs and power transistors), and high-speed devices. High-speed devices include heterojunction bipolar (HBT), heterojunction field-effect (HFET) and high electron mobility (HEMT) transistors used in very high-speed systems (up to 100 GHz). Advanced bipolar transistors (poly-Si), used in high-speed microprocessors, examined; also materials properties, transport mechanisms, band structure and physics of these devices. Prerequisite: ESE 336.  
Credit 3 units. EN: TU

---

### E35 ESE 437 Sustainable Energy Systems

We will survey the field of sustainable energy and explore contributions within electrical and systems engineering. Topics include introductory electric power systems, smart grids, and the roles of heat engines, photovoltaics, wind power, and energy storage, as well as analysis and optimization of energy systems. The course will include review and discussion of literature, problem sets, exams, and student projects. Prerequisites: ESE 318 or 319 and ESE 230 or ESE 351 or permission of instructor.  
Credit 3 units. EN: TU

---

### E35 ESE 438 Applied Optics

Topics relevant to the engineering and physics of conventional as well as experimental optical systems and applications explored. Items addressed include geometrical optics, Fourier optics such as diffraction and holography, polarization and optical birefringence such as liquid crystals, and nonlinear optical phenomena and devices. Prerequisite: ESE 330 or equivalent.  
Credit 3 units. EN: TU

---

### E35 ESE 439 Introduction to Quantum Communications

This course covers the following topics: quantum optics, single-mode and two-mode quantum systems, nonlinear optics, and quantum systems theory. Specific topics include

the following: Dirac notation quantum mechanics; harmonic oscillator quantization; number states, coherent states, and squeezed states; direct, homodyne, and heterodyne detection; linear propagation loss; phase insensitive and phase sensitive amplifiers; entanglement and teleportation; field quantization; quantum photodetection; phase-matched interactions; optical parametric amplifiers; generation of squeezed states, photon-twin beams, non-classical fourth-order interference, and polarization entanglement; optimum binary detection; quantum precision measurements; and quantum cryptography. Prerequisites: ESE 330 or Physics 421; Physics 217 or equivalent.

Credit 3 units. EN: TU

---

### E35 ESE 441 Control Systems

Introduction to the theory and practice of automatic control for dynamical systems. Dynamical systems as models for physical and observed phenomena. Mathematical representation of dynamical systems, such as state-space differential and difference equations, transfer functions, and block diagrams. Analysis of the time evolution of a system in response to control inputs, steady-state and transient responses, equilibrium points and their stability. Control via linear state feedback, and estimation using Leunberger observers. Relating the time response of a system to its frequency response, including Bode and Nyquist plots. Input-output stability and its relation to the stability of equilibrium points. Simple frequency-based controllers, such as PID and lead-lag compensators. Exercise involving the use of MATLAB/Simulink (or equivalent) to simulate and analyze systems. Prerequisites: CSE 131, and either ESE 351 or MEMS 431.

Credit 3 units. EN: TU

---

### E35 ESE 444 Sensors and Actuators

The course provide engineering students with basic understanding of two of the main components of any modern electrical or electromechanical system; sensors as inputs and actuators as outputs. The covered topics include transfer functions, frequency responses and feedback control. Component matching and bandwidth issues. Performance specification and analysis, Sensors: analog and digital motion sensors, optical sensors, temperature sensors, magnetic and electromagnetic sensors, acoustic sensors, chemical sensors, radiation sensors, torque, force and tactile sensors. Actuators: stepper motors, DC and AC motors, hydraulic actuators, magnet and electromagnetic actuators, acoustic actuators. Introduction to interfacing methods: bridge circuits, A/D and D/A converters, microcontrollers. This course is useful for those students interested in control engineering, robotics and systems engineering. Prerequisites: one of the following 4 conditions: (1) prerequisite of ESE 230 and corequisite of ESE 351; (2) prerequisites of ESE 230, ESE 318 and MEMS 255 (Mechanics II); (3) prerequisites of ESE 151 and ESE 351; (4) permission of instructor.

Credit 3 units. EN: TU

---

### E35 ESE 446 Robotics: Dynamics and Control

Homogeneous coordinates and transformation matrices. Kinematic equations and the inverse kinematic solutions for manipulators, the manipulator Jacobian and the inverse Jacobian. General model for robot arm dynamics, complete dynamic coefficients for six-link manipulator. Synthesis of manipulation control, motion trajectories, control of single- and multiple-link manipulators, linear optimal regulator. Model reference adaptive control, feedback control law for

the perturbation equations along a desired motion trajectory. Design of the control system for robotics. Prerequisites: ESE 351, knowledge of a programming language, and ESE 318; Corequisite: ESE 441.

Credit 3 units. EN: TU

---

### E35 ESE 447 Robotics Laboratory

Introduces the students to various concepts such as modeling, identification, model validation and control of robotic systems. The course focuses on the implementation of identification and control algorithms on a two-link robotic manipulator (the so-called pendubot) that will be used as an experimental testbed. Topics include: introduction to the mathematical modeling of robotic systems; nonlinear model, linearized model; identification of the linearized model: input-output and state-space techniques; introduction to the identification of the nonlinear model: energy-based techniques; model validation and simulation; stabilization using linear control techniques; a closer look at the dynamics; stabilization using nonlinear control techniques. Prerequisite: ESE 351 or MEMS 431. Corequisites or Prerequisites: ESE 441 and 446.

Credit 3 units. EN: TU

---

### E35 ESE 448 Systems Engineering Laboratory

Experimental study of real and simulated systems and their control. Identification, input-output analysis, design and implementation of control systems. Noise effects. Design and implementation of control laws for specific engineering problems. Corequisites: ESE 441 and knowledge of a programming language.

Credit 3 units. EN: TU

---

### E35 ESE 449 Digital Process Control Laboratory

Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics, and process control. Exercises in data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature, and pressure control. Term project. Prerequisite: ESE 441 or EECE 401 or equivalent. (Prior to FL2015, this course was numbered: E63 433.)

Same as E44 EECE 424

Credit 3 units. EN: TU

---

### E35 ESE 455 Quantitative Methods for Systems Biology

Application of computational mathematical techniques to problems in contemporary biology. Systems of linear ordinary differential equations in reaction-diffusion systems, hidden Markov models applied to gene discovery in DNA sequence, ordinary differential equation and stochastic models applied to gene regulation networks, negative feedback in transcription and metabolic pathway regulation. Prerequisites: (1) Math 217 Differential Equations and (2) a programming course and familiarity with MATLAB.

Credit 3 units. EN: TU

---

### E35 ESE 460 Switching Theory

Advanced topics in switching theory as employed in the synthesis, analysis, and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential

techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits, and built-in self-test techniques. Prerequisite: CSE 260M.

Same as E81 CSE 460T

Credit 3 units. EN: TU

---

### **E35 ESE 461 Design Automation for Integrated Circuit Systems**

Integrated circuit systems provide the core technology that power today's most advanced devices and electronics: smart phones, wearable devices, autonomous robots, and cars, aerospace or medical electronics. These systems often consist of silicon microchips made up by billions of transistors and contain various components such as microprocessors, DSPs, hardware accelerators, memories, and I/O interfaces; therefore, design automation is critical to tackle the design complexity at the system level. The objectives of this course are to 1) introduce transistor-level analysis of basic digital logic circuits; 2) provide a general understanding of hardware description language (HDL) and design automation tools for very large scale integrated (VLSI) systems; 3) expose students to the design automation techniques used in the best-known academic and commercial systems. Topics covered include device and circuits for digital logic circuits, digital IC design flow, logic synthesis, physical design, circuit simulation and optimization, timing analysis, power delivery network analysis. Assignments include homework, mini-projects, term paper and group project. Prerequisites: ESE 232; ESE 260.

Credit 3 units. EN: TU

---

### **E35 ESE 462 Computer Systems Design**

Introduction to modern design practices, including the use of FPGA design methodologies. Students use a commercial CAE/CAD system for VHDL-based design and simulation while designing a selected computation system. Prerequisites: CSE 361S and 362M.

Same as E81 CSE 462M

Credit 3 units. EN: TU

---

### **E35 ESE 465 Digital Systems Laboratory**

Hardware/software co-design; processor interfacing; procedures for reliable digital design, both combinational and sequential; understanding manufacturers' specifications; use of test equipment. Several single-period laboratory exercises, several design projects, and application of microprocessors in digital design. One lecture and one laboratory period a week. Prerequisites: CSE 260M and CSE 361S.

Credit 3 units. EN: TU

---

### **E35 ESE 467 Embedded Computing Systems**

Introduces the issues, challenges and methods for designing embedded computing systems — systems designed to serve a particular application, which incorporate the use of digital processing devices. Examples of embedded systems include PDAs, cellular phones, appliances, game consoles, automobiles and iPod. Emphasis is given to aspects of design that are distinct to embedded systems. The course examines hardware, software and system-level design. Hardware topics include microcontrollers, digital signal processors, memory hierarchy and I/O. Software issues include languages, run-time environments and program analysis. System-level topics include real-time operating systems, scheduling, power management and wireless sensor networks. Students perform a course project on a real wireless sensor network testbed. Prerequisite: CSE 361S.

Same as E81 CSE 467S

Credit 3 units. EN: TU

---

### **E35 ESE 471 Communications Theory and Systems**

Introduction to the concepts of transmission of information via communication channels. Amplitude and angle modulation for the transmission of continuous-time signals. Analog-to-digital conversion and pulse code modulation. Transmission of digital data. Introduction to random signals and noise and their effects on communication. Optimum detection systems in the presence of noise. Elementary information theory. Overview of various communication technologies such as radio, television, telephone networks, data communication, satellites, optical fiber and cellular radio. Prerequisites: ESE 351 and ESE 326.

Credit 3 units. EN: TU

---

### **E35 ESE 474 Introduction to Wireless Sensor Networks**

This is an introductory course on wireless sensor networks for senior undergraduate students. The course uses a combination of lecturing, reading, and discussion of research papers to help each student to understand the characteristics and operations of various wireless sensor networks. Topics covered include sensor network architecture, communication protocols on Medium Access Control and Routing, sensor network operation systems, sensor data aggregation and dissemination, localization and time synchronization, energy management, and target detection and tracking using acoustic sensor networks. Prerequisite: ESE 351 (Signals and Systems).

Credit 3 units. EN: TU

---

### **E35 ESE 482 Digital Signal Processing**

Introduction to analysis and synthesis of discrete-time linear time-invariant (LTI) systems. Discrete-time convolution, discrete-time Fourier transform, z-transform, rational function descriptions of discrete-time LTI systems. Sampling, analog-to-digital conversion and digital processing of analog signals. Techniques for the design of finite impulse response (FIR) and infinite impulse response (IIR) digital filters. Hardware implementation of digital filters and finite-register effects. The Discrete Fourier Transform and the Fast Fourier Transform (FFT) algorithms. Prerequisite: ESE 351.

Credit 3 units. EN: TU

---

### **E35 ESE 488 Signals and Communication Laboratory**

A laboratory course designed to complement the traditional EE course offerings in signal processing and communication theory. Signals and systems fundamentals: continuous-time and discrete-time linear time-invariant systems, impulse and step response, frequency response, A/D and D/A conversion. Digital signal processing: FIR and IIR digital filter design, implementation and application of the Fast Fourier Transform. Communication theory: baseband, digital communication, amplitude modulation, frequency modulation, bandpass digital communication. Laboratory experiments involve analog and digital electronics. Computer workstations and modern computational software used extensively for system simulation and real-time signal processing. Prerequisite: ESE 351.

Credit 3 units. EN: TU

---

### **E35 ESE 497 Undergraduate Research**

Undergraduate research under the supervision of a faculty member. The scope and depth of the research must be

approved by the faculty member prior to enrollment. A written final report and a webpage describing the research are required. Credit variable, maximum 3 units.

---

**E35 ESE 498 Electrical Engineering Capstone Design Projects**

Capstone design project supervised by the course instructor. The project must use the theory, techniques, and concepts of the student's major: electrical engineering or systems science & engineering. The solution of a real technological or societal problem is carried through completely, starting from the stage of initial specification, proceeding with the application of engineering methods, and terminating with an actual solution. Collaboration with a client, typically either an engineer or supervisor from local industry or a professor or researcher in university laboratories, is encouraged. A proposal, an interim progress update, and a final report are required, each in the forms of a written document and oral presentation, as well as a webpage on the project. Weekly progress reports and meetings with the instructor are also required. Prerequisite: ESE senior standing and instructor's consent. Note: This course will meet at the scheduled time only during select weeks. If you cannot attend at that time, you may still register for the course. Credit 3 units. EN: TU

---

**E35 ESE 499 Systems Science and Engineering Capstone Design Project**

Capstone design project supervised by the course instructor. The project must use the theory, techniques, and concepts of the student's major: electrical engineering or systems science & engineering. The solution of a real technological or societal problem is carried through completely, starting from the stage of initial specification, proceeding with the application of engineering methods, and terminating with an actual solution. Collaboration with a client, typically either an engineer or supervisor from local industry or a professor or researcher in university laboratories, is encouraged. A proposal, an interim progress update, and a final report are required, each in the forms of a written document and oral presentation, as well as a webpage on the project. Weekly progress reports and meetings with the instructor are also required. Prerequisite: ESE senior standing and instructor's consent. Note: This course will meet at the scheduled time only during select weeks. If you cannot attend at that time, you may still register for the course. Credit 3 units. EN: TU

---

**E35 ESE 500 Independent Study**

Opportunities to acquire experience outside the classroom setting and to work closely with individual members of the faculty. A final report must be submitted to the department. Prerequisite: Students must have the ESE Research/Independent Study Registration Form (PDF) ([https://ese.wustl.edu/research/areas/Documents/Independent%20Study%20Form\\_1.pdf](https://ese.wustl.edu/research/areas/Documents/Independent%20Study%20Form_1.pdf)) approved by the department. Credit variable, maximum 3 units.

---

**E35 ESE 501 Mathematics of Modern Engineering I**

Matrix algebra: systems of linear equations, vector spaces, linear independence and orthogonality in vector spaces, eigenvectors and eigenvalues; vector calculus: gradient, divergence, curl, line and surface integrals, theorems of Green, Stokes, and Gauss; Elements of Fourier analysis and its applications to solving some classical partial differential equations, heat, wave, and Laplace equation. Prerequisites: ESE 318 and ESE 319 or equivalent or

consent of instructor. This course will not count toward the ESE doctoral program. Credit 3 units. EN: TU

---

**E35 ESE 502 Mathematics of Modern Engineering II**

Fourier series and Fourier integral transforms and their applications to solving some partial differential equations, heat and wave equations; complex analysis and its applications to solving real-valued problems: analytic functions and their role, Laurent series representation, complex-valued line integrals and their evaluation including the residual integration theory, conformal mappings and their applications. Prerequisites: ESE 318 and ESE 319 or ESE 317 or equivalent, or consent of instructor. This course will not count toward the ESE doctoral program. Credit 3 units. EN: TU

---

**E35 ESE 512 Advanced Numerical Analysis**

Special topics chosen from numerical solution of partial differential equations, uniform and least-squares approximation spline approximation, Galerkin methods and finite element approximation, functional analysis applied to numerical mathematics, and other topics of interest. Prerequisite: ESE 511 or consent of instructor. Credit 3 units. EN: TU

---

**E35 ESE 513 Convex Optimization and Duality Theory**

Graduate introduction to convex optimization with emphasis on convex analysis and duality theory. Topics include: convex sets, convex functions, convex cones, convex conjugates, Fenchel-Moreau theorem, convex duality and biconjugation, directional derivatives, subgradients and subdifferentials, optimality conditions, ordered vector spaces, Hahn-Banach theorem, extension and separation theorems, minimax theorems, and vector and set optimization. Prerequisites: ESE 415, Math 4111. Credit 3 units.

---

**E35 ESE 514 Calculus of Variations**

Introduction to the theory and applications of the calculus of variations. Theory of functionals; variational problems for an unknown function; Euler's equation; variable end-point problems; variational problems with subsidiary conditions; sufficient conditions for extrema: applications to optimum control and/or to other fields. A term project is required. Prerequisites: ESE 318 and 319 or ESE 317 or equivalent. Credit 3 units.

---

**E35 ESE 516 Optimization in Function Space**

Linear vector spaces, normed linear spaces, Lebesgue integrals, the  $L_p$  spaces, linear operators, dual space, Hilbert spaces. Projection theorem, Hahn-Banach theorem. Hyperplanes and convex sets, Gateaux and Fréchet differentials, unconstrained minima, adjoint operators, inverse function theorem. Constrained minima, equality constraints, Lagrange multipliers, calculus of variations, Euler-Lagrange equations, positive cones, inequality constraints. Kuhn-Tucker theorem, optimal control theory, Pontryagin's maximum principle, successive approximation methods, Newton's methods, steepest descent methods, primal-dual methods, penalty function methods, multiplier methods. Prerequisite: Math 4111. Credit 3 units.

---

---

**E35 ESE 517 Partial Differential Equations**

Linear and nonlinear first order equations. Characteristics. Classification of equations. Theory of the potential linear and nonlinear diffusion theory. Linear and nonlinear wave equations. Initial and boundary value problems. Transform methods. Integral equations in boundary value problems. Prerequisites: ESE 318 and 319 or equivalent or consent of instructor. Credit 3 units. EN: TU

---

**E35 ESE 518 Optimization Methods in Control**

The course is divided in two parts: convex optimization and optimal control. In the first part we cover applications of Linear Matrix Inequalities and Semi-Definite Programming to control and estimation problems. We also cover Multiparametric Linear Programming and its application to the Model Predictive Control and Estimation of linear systems. In the second part we cover numerical methods to solve optimal control and estimation problems. We cover techniques to discretize optimal control problems, numerical methods to solve them, and their optimality conditions. We apply these results to the Model Predictive Control and Estimation of nonlinear systems. Prerequisites: ESE 551, and ESE 415 or equivalent. Credit 3 units. EN: TU

---

**E35 ESE 519 Convex Optimization**

Concentrates on recognizing and solving convex optimization problems that arise in applications. Convex sets, functions, and optimization problems. Basics of convex analysis. Least-squares, linear and quadratic programs, semidefinite programming, minimax, extremal volume, and other problems. Optimality conditions, duality theory, theorems of alternative, and applications. Interior-point methods. Applications to signal processing, statistics and machine learning, control and mechanical engineering, digital and analog circuit design, and finance. Prerequisites: Math 309 and ESE 415. Credit 3 units.

---

**E35 ESE 520 Probability and Stochastic Processes**

Review of probability theory; models for random signals and noise; calculus of random processes; noise in linear and nonlinear systems; representation of random signals by sampling and orthonormal expansions. Poisson, Gaussian and Markov processes as models for engineering problems. Prerequisite: ESE 326. Credit 3 units. EN: TU

---

**E35 ESE 521 Random Variables and Stochastic Processes I**

Mathematical foundations of probability theory, including constructions of measures, Lebesgue-measure, Lebesgue-integral, Banach space property of  $L_p$ , basic Hilbert-space theory, conditional expectation. Kolmogorov's theorems on existence and sample-path continuity of stochastic processes. An in-depth look at the Wiener process. Filtrations and stopping times. Markov processes and diffusions, including semigroup properties and the Kolmogorov forward and backward equations. Prerequisites: ESE 520 or equivalent, Math 411. Credit 3 units.

---

**E35 ESE 523 Information Theory**

Discrete source and channel model, definition of information rate and channel capacity, coding theorems for sources and channels, encoding and decoding of data for transmission over noisy channels. Corequisite: ESE 520.

Credit 3 units. EN: TU

---

**E35 ESE 524 Detection and Estimation Theory**

Study of detection and estimation of signals in noise. Linear algebra, vector spaces, independence, projections. Data independence, factorization theorem and sufficient statistics. Neyman-Pearson and Bayes detection. Least squares, maximum-likelihood and maximum a posteriori estimation of signal parameters. Conjugate priors, recursive estimation, Wiener and Kalman filters. Prerequisite: ESE 520. Credit 3 units. EN: TU

---

**E35 ESE 529 Special Topics in Information Theory and Applied Probability**

Credit 3 units.

---

**E35 ESE 531 Nano and Micro Photonics**

This course focuses on fundamental theory, design, and applications of photonic materials and micro/nano photonic devices. It includes review and discussion of light-matter interactions in nano and micro scales, propagation of light in waveguides, nonlinear optical effect and optical properties of nano/micro structures, the device principles of waveguides, filters, photodetectors, modulators and lasers. Prerequisite: ESE 330. Credit 3 units. EN: TU

---

**E35 ESE 532 Introduction to Nano-Photonic Devices**

Introduction to photon transport in nano-photonic devices. This course focuses on the following topics: light and photons, statistical properties of photon sources, temporal and spatial correlations, light-matter interactions, optical nonlinearity, atoms and quantum dots, single- and two-photon devices, optical devices, and applications of nano-photonic devices in quantum and classical computing and communication. Prerequisites: ESE 330 and Physics 217, or permission of instructor. Credit 3 units. EN: TU

---

**E35 ESE 534 Special Topics in Advanced Electrodynamics**

This course covers advanced topics in electrodynamics. Topics include electromagnetic wave propagation (in free space, confined waveguides, or along engineered surfaces); electromagnetic wave scattering (off nano-particles or molecules); electromagnetic wave generation and detection (antenna and nano-antenna); inverse scattering problems; and numerical and approximate methods. Prerequisites: ESE 330, or Physics 421 and Physics 422. Credit 3 units. EN: TU

---

**E35 ESE 536 Introduction to Quantum Optics**

This course covers the following topics: quantum mechanics for quantum optics, radiative transitions in atoms, lasers, photon statistics (photon counting, Sub-/Super-Poissonian photon statistics, bunching, anti-bunching, theory of photodetection, shot noise), entanglement, squeezed light, atom-photon interactions, cold atoms, atoms in cavities. If time permits, the following topics are selectively covered: quantum computing, quantum cryptography, and teleportation. Prerequisites: ESE 330 and Physics 217 or Physics 421. Credit 3 units. EN: TU

---

**E35 ESE 538 Advanced Electromagnetic Engineering**

The course builds on undergraduate electromagnetics to systematically develop advanced concepts in electromagnetic theory for engineering applications. The following topics are covered: Maxwell's equations; fields and waves in materials; electromagnetic potentials and topics for circuits and systems; transmission-line essentials for digital electronics and for communications; guided wave principles for electronics and optoelectronics; principles of radiation and antennas; and numerical methods for computational electromagnetics. Credit 3 units.

**E35 ESE 543 Control Systems Design by State Space Methods**

Advanced design and analysis of control systems by state-space methods: classical control review, Laplace transforms, review of linear algebra (vector space, change of basis, diagonal and Jordan forms), linear dynamic systems (modes, stability, controllability, state feedback, observability, observers, canonical forms, output feedback, separation principle and decoupling), nonlinear dynamic systems (stability, Lyapunov methods). Frequency domain analysis of multivariable control systems. State space control system design methods: state feedback, observer feedback, pole placement, linear optimal control. Design exercises with CAD (computer-aided design) packages for engineering problems. Prerequisite: ESE 351 and ESE 441, or permission of instructor. Credit 3 units. EN: TU

**E35 ESE 544 Optimization and Optimal Control**

Constrained and unconstrained optimization theory. Continuous time as well as discrete-time optimal control theory. Time-optimal control, bang-bang controls and the structure of the reachable set for linear problems. Dynamic programming, the Pontryagin maximum principle, the Hamiltonian-Jacobi-Bellman equation and the Riccati partial differential equation. Existence of classical and viscosity solutions. Application to time optimal control, regulator problems, calculus of variations, optimal filtering and specific problems of engineering interest. Prerequisites: ESE 551, ESE 552. Credit 3 units. EN: TU

**E35 ESE 545 Stochastic Control**

Introduction to the theory of stochastic differential equations based on Wiener processes and Poisson counters, and an introduction to random fields. The formulation and solution of problems in nonlinear estimation theory. The Kalman-Bucy filter and nonlinear analogues. Identification theory. Adaptive systems. Applications. Prerequisites: ESE 520 and ESE 551. Credit 3 units. EN: TU

**E35 ESE 546 Dynamics & Control in Neuroscience & Brain Medicine**

This course provides an introduction to systems engineering approaches to modeling, analysis and control of neuronal dynamics at multiple scales. A central motivation is the manipulation of neuronal activity for both scientific and medical applications using emerging neurotechnology and pharmacology. Emphasis is placed on dynamical systems and control theory, including bifurcation and stability analysis of single neuron models and population mean-field models. Synchronization properties of neuronal networks are covered and methods for control of neuronal activity in both oscillatory

and non-oscillatory dynamical regimes are developed. Statistical models for neuronal activity are also discussed. An overview of signal processing and data analysis methods for neuronal recording modalities is provided, toward the development of closed-loop neuronal control paradigms. The final evaluation is based on a project or research survey. Prerequisite(s): ESE 553 (or equivalent); ESE 520 (or equivalent); ESE 351 (or equivalent). Credit 3 units. EN: TU

**E35 ESE 547 Robust and Adaptive Control**

Graduate-level control system design methods for multi-input multi-output systems. Linear optimal-based methods in robust control, nonlinear model reference adaptive control. These design methods are currently used in most industry control system design problems. These methods are designed, analyzed and simulated using MATLAB. Linear control theory (review), robustness theory (Mu Analysis), optimal control and the robust servomechanism, H-infinity optimal control, robust output feedback controls, Kalman filter theory and design, linear quadratic gaussian with loop transfer recovery, the Loop Transfer Recovery method of Lavretsky, Mu synthesis, Lyapunov theory (review), LaSalle extensions, Barbalat's Lemma, model reference adaptive control, artificial neural networks, online parameter estimation, convergence and persistence of excitation. Prerequisite: ESE 543 or ESE 551 or equivalent. Credit 3 units. EN: TU

**E35 ESE 549 Special Topics in Control**

Credit 3 units.

**E35 ESE 551 Linear Dynamic Systems I**

Input-output and state-space description of linear dynamic systems. Solution of the state equations and the transition matrix. Controllability, observability, realizations, pole-assignment, observers and decoupling of linear dynamic systems. Prerequisite: ESE 351. Credit 3 units. EN: TU

**E35 ESE 552 Linear Dynamic Systems II**

Least squares optimization problems. Riccati equation, terminal regulator and steady-state regulator. Introduction to filtering and stochastic control. Advanced theory of linear dynamic systems. Geometric approach to the structural synthesis of linear multivariable control systems. Disturbance decoupling, system invertibility and decoupling, extended decoupling and the internal model principle. Prerequisite: ESE 551. Credit 3 units. EN: TU

**E35 ESE 553 Nonlinear Dynamic Systems**

State space and functional analysis approaches to nonlinear systems. Questions of existence, uniqueness and stability; Lyapunov and frequency-domain criteria;  $w$ -limits and invariance, center manifold theory and applications to stability, steady-state response and singular perturbations. Poincare-Bendixson theory, the van der Pol oscillator, and the Hopf Bifurcation theorem. Prerequisite: ESE 551. Credit 3 units. EN: TU

**E35 ESE 554 Advanced Nonlinear Dynamic Systems**

Differentiable manifolds, vector fields, distributions on a manifold, Frobenius' theorem, Lie algebras. Controllability, observability of nonlinear systems, examined from the viewpoint

of differential geometry. Transformation to normal forms. Exact linearization via feedback. Zero dynamics and related properties. Noninteracting control and disturbance decoupling. Controlled invariant distributions. Noninteracting control with internal stability. Prerequisites: ESE 553 and ESE 551.  
Credit 3 units.

---

### **E35 ESE 557 Hybrid Dynamic Systems**

Theory and analysis of hybrid dynamic systems, which is the class of systems whose state is composed by continuous-valued and discrete-valued variables. Discrete-event systems models and language descriptions. Models for hybrid systems. Conditions for existence and uniqueness. Stability and verification of hybrid systems. Optimal control of hybrid systems. Applications to cyber-physical systems and robotics. Prerequisite: ESE 551.  
Credit 3 units. EN: TU

---

### **E35 ESE 559 Special Topics in Systems**

Credit 3 units.

---

### **E35 ESE 560 Computer Systems Architecture I**

An exploration of the central issues in computer architecture: instruction set design, addressing and register set design, control unit design, microprogramming, memory hierarchies (cache and main memories, mass storage, virtual memory), pipelining, and bus organization. The course emphasizes understanding the performance implications of design choices, using architecture modeling and evaluation using VHDL and/or instruction set simulation. Prerequisites: CSE 361S and CSE 260M.  
Same as E81 CSE 560M  
Credit 3 units. EN: TU

---

### **E35 ESE 561 Computer Systems Architecture II**

Advanced techniques in computer system design. Selected topics from: processor design (multithreading, VLIW, data flow, chip-multiprocessors, application specific processors, vector units, large MIMD machines), memory systems (topics in locality, prefetching, reconfigurable and special-purpose memories), system specification and validation, and interconnection networks. Prerequisites: CSE 560M or permission of instructor.  
Same as E81 CSE 561M  
Credit 3 units. EN: TU

---

### **E35 ESE 562 Digital System Verification, Testing, and Reliability**

This course focuses on fundamental and advanced topics in analog and mixed-signal VLSI techniques. The first part of the course covers graduate-level materials in the area of analog circuit synthesis and analysis. The second part of the course covers applications of the fundamental techniques for designing analog signal processors and data converters. Several practical aspects of mixed-signal design, simulation and testing are covered in this course. This is a project-oriented course, and it is expected that the students apply the concepts learned in the course to design, simulate and explore different circuit topologies. Prerequisites: CSE 260 and ESE 232.  
Credit 3 units.

---

### **E35 ESE 565 Acceleration of Algorithms in Reconfigurable Logic**

Reconfigurable logic, in the form of Field-Programmable Gate Arrays (FPGAs), enables the deployment of custom hardware for individual applications. To exploit this capability, the application developer is required to specify the design at the register-transfer level. This course explores techniques for designing algorithms that are amenable to hardware acceleration as well as provides experience in actual implementation. Example applications are drawn from a variety of fields, such as networking, computational biology, etc. Prerequisites: basic digital logic (CSE 260M) and some experience with a hardware description language (e.g., VHDL or Verilog).  
Same as E81 CSE 565M  
Credit 3 units. EN: TU

---

### **E35 ESE 566A Modern System-on-Chip Design**

The System-on-Chip (SoCs) technology is at the core of most electronic systems: smart phones, wearable devices, autonomous robots, and cars, aerospace or medical electronics. In these SoCs, billions of transistors can be integrated on a single silicon chip, containing various components such as microprocessors, DSPs, hardware accelerators, memories, and I/O interfaces. Topics include SoC architectures, design tools and methods, as well as system-level tradeoffs between performance, power consumption, energy efficiency, reliability and programmability. Students gain an insight into the early stage of the SoC design process performing the tasks of developing functional specification, partition and map functions onto hardware and/or software, and evaluating and validating system performance. Assignments include hands-on design projects. Open to both graduate and senior undergraduate students. Prerequisite: ESE 461.  
Credit 3 units. EN: TU

---

### **E35 ESE 567 Computer Systems Analysis**

A comprehensive course on performance analysis techniques. The topics include common mistakes, selection of techniques and metrics, summarizing measured data, comparing systems using random data, simple linear regression models, other regression models, experimental designs, 2\*\*k experimental designs, factorial designs with replication, fractional factorial designs, one factor experiments, two factor full factorial design w/o replications, two factor full factorial designs with replications, general full factorial designs, introduction to queueing theory, analysis of single queues, queueing networks, operational laws, mean-value analysis, time series analysis, heavy tailed distributions, self-similar processes, long-range dependence, random number generation, analysis of simulation results, and art of data presentation. Prerequisites: CSE 131 and CSE 260M.  
Same as E81 CSE 567M  
Credit 3 units. EN: TU

---

### **E35 ESE 569 Parallel Architectures and Algorithms**

Several contemporary parallel computer architectures are reviewed and compared. The problems of process synchronization and load balancing in parallel systems are studied. Several selected applications problems are investigated and parallel algorithms for their solution are considered. Selected parallel algorithms are implemented in both a shared memory and distributed memory parallel programming environment. Prerequisites: graduate standing and knowledge of the C programming language.  
Same as E81 CSE 569M

---

Credit 3 units. EN: TU

---

**E35 ESE 570 Coding Theory**

Introduction to the algebra of finite fields. Linear block codes, cyclic codes, BCH and related codes for error detection and correction. Encoder and decoder circuits and algorithms. Spectral descriptions of codes and decoding algorithms. Code performances.

Credit 3 units. EN: TU

---

**E35 ESE 571 Transmission Systems and Multiplexing**

Transmission and multiplexing systems are essential to providing efficient point-to-point communication over distance. This course introduces the principles underlying modern analog and digital transmission and multiplexing systems and covers a variety of system examples.

Credit 3 units. EN: TU

---

**E35 ESE 572 Signaling and Control in Communication Networks**

The operation of modern communications networks is highly dependent on sophisticated control mechanisms that direct the flow of information through the network and oversee the allocation of resources to meet the communication demands of end users. This course covers the structure and operation of modern signaling systems and addresses the major design trade-offs that center on the competing demands of performance and service flexibility. Specific topics covered include protocols and algorithms for connection establishment and transformation, routing algorithms, overload and failure recovery and networking dimensioning. Case studies provide concrete examples and reveal the key design issues. Prerequisites: graduate standing and permission of instructor.

Credit 3 units. EN: TU

---

**E35 ESE 575 Fiber-Optic Communications**

Introduction to optical communications via glass-fiber media. Pulse-code modulation and digital transmission methods, coding laws, receivers, bit-error rates. Types and properties of optical fibers; attenuation, dispersion, modes, numerical aperture. Light-emitting diodes and semiconductor laser sources; device structure, speed, brightness, modes, electrical properties, optical and spectral characteristics. Prerequisites: ESE 330, ESE 336.

Credit 3 units. EN: TU

---

**E35 ESE 581 Radar Systems**

An introduction to the selection and processing of radar signals. Signal design for improving range and Doppler resolution, ambiguity functions, chirp and stepped-frequency waveforms, pulse-compression codes. Statistical models for radar data: range-spread, Doppler-spread, doubly spread reflectors. Matched-filter and estimator-correlator receivers for range and Doppler estimation. Tracking. Multiantenna radar receivers: interference rejection, adaptive canceling. Delay-Doppler radar-imaging using synthetic-aperture processing. Prerequisite: ESE 524.

Credit 3 units. EN: TU

---

**E35 ESE 582 Fundamentals and Applications of Modern Optical Imaging**

Analysis, design and application of modern optical imaging systems with emphasis on biological imaging. First part of

the course focuses on the physical principles underlying the operation of imaging systems and their mathematical models. Topics include ray optics (speed of light, refractive index, laws of reflection and refraction, plane surfaces, mirrors, lenses, aberrations), wave optics (amplitude and intensity, frequency and wavelength, superposition and interference, interferometry), Fourier optics (space-invariant linear systems, Huygens-Fresnel principle, angular spectrum, Fresnel diffraction, Fraunhofer diffraction, frequency analysis of imaging systems), and light-matter interaction (absorption, scattering, dispersion, fluorescence). Second part of the course compares modern quantitative imaging technologies including, but not limited to, digital holography, computational imaging, and super-resolution microscopy. Students evaluate and critique recent optical imaging literature. Prerequisites: ESE 318 and ESE 319 or their equivalents; ESE 330 or Physics 421 or equivalent. Credit 3 units. EN: TU

---

**E35 ESE 584 Statistical Signal Processing for Sensor Arrays**

Methods for signal processing and statistical inference for data acquired by an array of sensors, such as those found in radar, sonar and wireless communications systems. Multivariate statistical theory with emphasis on the complex multivariate normal distribution. Signal estimation and detection in noise with known statistics, signal estimation and detection in noise with unknown statistics, direction finding, spatial spectrum estimation, beam forming, parametric maximum-likelihood techniques. Subspace techniques, including MUSIC and ESPRIT. Performance analysis of various algorithms. Advanced topics may include structured covariance estimation, wide-band array processing, array calibration, array processing with polarization diversity, and space-time adaptive processing (STAP). Prerequisites: ESE 520, ESE 524, linear algebra, computer programming.

Credit 3 units. EN: TU

---

**E35 ESE 588 Quantitative Image Processing**

Introduction to modeling, processing, manipulation and display of images. Application of two-dimensional linear systems to image processing. Two-dimensional sampling and transform methods. The eye and perception. Image restoration and reconstruction. Multiresolution processing, noise reduction and compression. Boundary detection and image segmentation. Case studies in image processing (examples: computer tomography and ultrasonic imaging). Prerequisites: ESE 326, ESE 482.

Credit 3 units. EN: TU

---

**E35 ESE 589 Biological Imaging Technology**

This class develops a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section examines how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure and function, image formation methods, and diffraction limited imaging. The math section examines image decomposition using basis functions (e.g., Fourier transforms), synthesis of measurement data, image analysis for feature extraction, reduction of multidimensional imaging datasets, multivariate regression, and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology are critiqued.

Credit 3 units. EN: TU

**E35 ESE 590 Electrical & Systems Engineering Graduate Seminar**

This pass/fail course is required for the MS, DSc and PhD degrees in Electrical & Systems Engineering. A passing grade is required for each semester of enrollment and is received by attendance at regularly scheduled ESE seminars. MS students must attend at least three seminars per semester. DSc and PhD students must attend at least five seminars per semester. Part-time students are exempt except during their year of residency. Any student under continuing status is also exempt. Seminars missed in a given semester may be made up during the subsequent semester.

**E35 ESE 596 Seminar in Imaging Science and Engineering**

This seminar course consists of a series of tutorial lectures on Imaging Science and Engineering with emphasis on applications of imaging technology. Students are exposed to a variety of imaging applications that vary depending on the semester, but may include multispectral remote sensing, astronomical imaging, microscopic imaging, ultrasound imaging and tomographic imaging. Guest lecturers come from several parts of the university. This course is required of all students in the Imaging Science and Engineering program; the only requirement is attendance. This course is graded pass/fail. Prerequisite: admission to Imaging Science and Engineering program. Same as CSE 596 (when offered) and BME 506. Credit 1 unit.

**E35 ESE 599 Master's Research**

Prerequisite: Students must have the ESE Research/Independent Study Registration Form (PDF) ([https://ese.wustl.edu/research/areas/Documents/Independent%20Study%20Form\\_1.pdf](https://ese.wustl.edu/research/areas/Documents/Independent%20Study%20Form_1.pdf)) approved by the department. Credit variable, maximum 3 units.

## Energy, Environmental & Chemical Engineering

### About Energy, Environmental & Chemical Engineering

Our department focuses on environmental engineering, energy systems engineering and chemical engineering. We provide integrated and multidisciplinary programs of scientific education. Our mission is accomplished by: instilling a tradition of "lifelong learning"; a curriculum of fundamental education coupled with applications in advanced focal areas and strengthened by our breadth in other disciplinary areas; participation in cutting-edge research with faculty and industrial partners; and access to state-of-the-art facilities and instrumentation. Most undergraduate students in the department pursue the BS in Chemical Engineering degree, accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>). Other students pursue the BS in Applied Science degree with a major in chemical engineering. The department offers a minor in environmental engineering science and, in collaboration with other engineering departments, we co-sponsor a minor in energy engineering and a minor in nanoscale science and engineering. Graduate degrees (Master of Engineering and Doctor of Philosophy) in Energy, Environmental & Chemical Engineering are offered by the department.

Chemical engineers are involved in the transfer of scientific discoveries to modern technologies and novel products that benefit society and minimize the impact on the environment. They deal with multiscale aspects of generating clean energy, producing novel and superior materials, and utilizing the biological revolution to manufacture new products. They are involved in the development and manufacture of consumer products, as well as in design, operation and control of processes in a variety of industries (e.g., petroleum, petrochemical, chemical, consumer products, food, feed and pharmaceuticals). Their broad training in basic sciences (e.g., chemistry, physics, biology, mathematics) coupled with a strong foundation in chemical engineering principles (e.g., thermodynamics, mass and energy balances, transport phenomena, kinetics, separations, reaction engineering, control, product development and process design) makes them invaluable team members and leaders in any engineering

enterprise. It also prepares them well for graduate studies in biochemical, biomedical, chemical, environmental and materials engineering. In addition, the BS degree in Chemical Engineering is a great starting point for pursuing a degree in business, law or medicine.

The curriculum is planned so as to provide students with a strong background in basic chemical engineering concepts, while allowing individual latitude to emphasize study in a specialized area or obtain added breadth both within and outside chemical engineering. A contemporary approach to chemical engineering is focused on the multiscale aspects of the discipline, consistent with modern developments in computer-supported problem solving. Molecular-level understanding is utilized in product development and process design, which in turn are evaluated in terms of their impact on the environment and society according to the principles of green engineering.

## Mission Statement

The mission of the department is to teach chemical engineering principles and their application in an inspiring learning environment and to prepare students for engineering careers by developing the skills of critical thinking, analytical abilities and communication proficiency, and by instilling a sense of professional ethics and societal responsibility.

## Program Objectives

The Chemical Engineering program Educational Objectives are as follows.

(a) Graduates who are employed in chemical process and related industries will perform tasks related to plant operation, control, engineering decision making, and process and product design. Other graduates who are not employed in chemical process and related industries will be employed in diverse professions including other engineering fields, management, consulting, etc., using their engineering and analytical backgrounds. All will engage in activities that promote professional growth and fulfillment.

(b) Graduates pursuing doctoral studies or other professional degrees will make reasonable progress toward completing the degree requirements and will engage in activities that promote professional development and fulfillment.

## Advising

The department takes pride in the mentoring of undergraduate students. Each student who declares chemical engineering as a (potential) major is assigned an academic adviser from the full-time department faculty. Typically, the same adviser follows the student's academic progress and serves as a mentor from the first year through graduation.

**Phone:** 314-935-5545  
**Website:** <http://eece.wustl.edu/undergraduate/programs>

## Faculty

### Chair and Endowed Professor

**Pratim Biswas** (<https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx>)

Lucy and Stanley Lopata Professor  
PhD, California Institute of Technology  
Aerosol science and engineering, air quality and pollution control, nanotechnology, environmentally benign energy production

### Endowed Professors

**Richard L. Axelbaum** (<https://engineering.wustl.edu/Profiles/Pages/Richard-Axelbaum.aspx>)

Stifel and Quinette Jens Professor  
PhD, University of California, Davis  
Combustion, advanced energy systems, clean coal, aerosols, nanoparticle synthesis, rechargeable battery materials, thermal science

**Milorad P. Dudukovic** (<https://engineering.wustl.edu/Profiles/Pages/Milorad-Dudukovic.aspx>)

Laura and William Jens Professor  
PhD, Illinois Institute of Technology  
Chemical reaction engineering, multiphase reactors, visualization of multiphase flows, tracer methods, environmentally benign processing

**Daniel E. Giammar** (<https://engineering.wustl.edu/Profiles/Pages/Daniel-Giammar.aspx>)

Walter E. Browne Professor of Environmental Engineering  
PhD, California Institute of Technology  
Aquatic chemistry, environmental engineering, water quality, water treatment

**Young-Shin Jun** (<https://engineering.wustl.edu/Profiles/Pages/Young-Shin-Jun.aspx>)

Harold D. Jolley Career Development Professor and Director of Graduate Studies  
PhD, Harvard University  
Aquatic processes, molecular issues in chemical kinetics, environmental chemistry, surface/physical chemistry, environmental engineering, biogeochemistry, nanotechnology

### Vijay Ramani

Roma B. and Raymond H. Wittcoff Distinguished University Professor of Environment Engineering  
PhD, University of Connecticut, Storrs  
Electrochemical engineering, energy conversion

## Professor

**Palghat A. Ramachandran** (<https://engineering.wustl.edu/Profiles/Pages/Palghat-Ramachandran.aspx>)  
PhD, University of Bombay  
Chemical reaction engineering, applied mathematics, process modeling, waste minimization, environmentally benign processing

## Associate Professors

**John Fortner** (<https://engineering.wustl.edu/Profiles/Pages/John-Fortner.aspx>)  
I-CARES Career Development Assistant Professor  
PhD, Rice University  
Environmental engineering, aquatic processes, water treatment, remediation, and environmental implications and applications of nanomaterials

**John T. Gleaves** (<https://engineering.wustl.edu/Profiles/Pages/John-Gleaves.aspx>)  
PhD, University of Illinois  
Heterogeneous catalysis, particle chemistry

**Yinjie Tang** (<https://engineering.wustl.edu/Profiles/Pages/Yinjie-Tang.aspx>)  
Francis Ahmann Career Development Associate Professor and Director of Graduate Studies  
PhD, University of Washington, Seattle  
Metabolic engineering, bioremediation

**Jay R. Turner** (<https://engineering.wustl.edu/Profiles/Pages/Jay-Turner.aspx>)  
Vice Dean for Education  
DSc, Washington University  
Air quality planning and management; aerosol science and engineering, green engineering

**Brent Williams** (<https://engineering.wustl.edu/Profiles/Pages/Brent-Williams.aspx>)  
Raymond R. Tucker Distinguished I-CARES Career Development Assistant Professor  
PhD, University of California, Berkeley  
Aerosols, global climate issues, atmospheric sciences

**Fuzhong Zhang** (<https://engineering.wustl.edu/Profiles/Pages/Fuzhong-Zhang.aspx>)  
PhD, University of Toronto  
Metabolic engineering, protein engineering, synthetic and chemical biology

## Assistant Professors

**Peng Bai**  
PhD, Tsinghua University  
Energy storage systems

**Rajan Chakrabarty** (<https://engineering.wustl.edu/Profiles/Pages/Rajan-Chakrabarty.aspx>)  
PhD, University of Nevada, Reno  
Characterizing the radiative properties of carbonaceous aerosols in the atmosphere; and researching gas phase aggregation of aerosols in cluster-dense conditions

**Marcus Foston** (<https://engineering.wustl.edu/Profiles/Pages/Marcus-Foston.aspx>)  
PhD, Georgia Institute of Technology  
Utilization of biomass resources for fuel and chemical production, renewable synthetic polymers

**Tae Seok Moon** (<https://engineering.wustl.edu/Profiles/Pages/Tae-Seok-Moon.aspx>)  
PhD, Massachusetts Institute of Technology  
Metabolic engineering and synthetic biology

**Kimberly M. Parker**  
PhD, Stanford University  
Investigation of environmental organic chemistry in natural and engineered systems

**Elijah Thimsen** (<https://engineering.wustl.edu/Profiles/Pages/Elijah-Thimsen.aspx>)  
PhD, Washington University  
Gas-phase synthesis of inorganic nanomaterials for energy applications, and novel plasma synthesis approaches

## Research Associate Professor

**Tianxiang Li**  
PhD, University of Kentucky  
Combustion and applications in energy, pollutant control, biofuel synthesis, flame synthesis of nanomaterials

## Research Assistant Professors

**Su Huang**  
PhD, University of Washington, Seattle  
Photovoltaic materials and devices, nonlinear optical materials for photonic devices

**Benjamin Kumfer**  
DSc, Washington University  
Advanced coal technologies, biomass combustion, aerosol processes and health effects of combustion-generated particles

## Lecturers

**Janie Brennan**  
PhD, Purdue University  
Biomaterials, synthetic biology, engineering education

**Trent Silbaugh**  
PhD, University of Washington  
Chemical engineering

## Joint Faculty

### Himadri Pakrasi

PhD, University of Missouri-Columbia  
Systems biology, photosynthesis, metal homeostasis

**Nathan Ravi** ([http://ophthalmology.wustl.edu/Faculty/Ravi\\_N.aspx](http://ophthalmology.wustl.edu/Faculty/Ravi_N.aspx))

PhD, Virginia Polytechnic Institute  
Cataract, ocular biomaterials

## Adjunct Faculty

### Robert Heider

MME, Washington University  
Process control and process design

### Timothy Michels

MA, Washington University  
Energy economics, building construction and equipment sciences

### Nicholas J. Nissing

BS, Washington University  
Product development and process design

## Research Associate

### Raymond Ehrhard

BS, University of Missouri-Rolla  
Water and wastewater treatment technologies, process energy management

## Professor of Practice

### James Harlan

PhD, Harvard University, Kennedy School of Government  
Technology development economics and venture finance

## Senior Professor

### Rudolf B. Husar

PhD, University of Minnesota  
Environmental informatics, aerosol science and engineering

## Majors

Please refer to the sections below for information about the **Bachelor of Science in Chemical Engineering** (p. 1001), **double majors and the pre-medical program** (p. 1001), and the **Bachelor of Science in Applied Science (Chemical Engineering)** (p. 1002).

## Bachelor of Science in Chemical Engineering

The BSChE degree program is designed to provide students with comprehensive training in chemical engineering fundamentals. This degree program is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>). Program objectives are stated in the overview (p. 998). The

BSChE degree requires satisfactory completion of a minimum of 126 units as indicated in Table 1 (p. 1011). From the courses listed in Table 1, the humanities and social sciences courses (except Engr 450X courses) may be taken pass/fail. A sample year-by-year BSChE curriculum is shown in Table 2 (p. 1012).

The program of study consists of 26 units of physical and biological sciences (i.e., biology, chemistry and physics); 21 units of mathematics and engineering computing; 40 units of core chemical engineering courses; 21 units of humanities, social sciences and technical writing; and 18 units of chemical engineering electives. The chemical engineering electives permit students to tailor their studies toward specific goals such as obtaining more depth in a chemical engineering subdiscipline (e.g., materials) or increasing breadth by choosing courses from different subdisciplines. Some of these 18 units may be taken in other engineering departments or in the natural sciences or physical sciences. Students in collaboration with their advisers design a course of study (subject to certain requirements) for the chemical engineering electives. Consult the EECE department website (<http://eece.wustl.edu/undergraduate/programs/Pages/default.aspx>) for more details, including the requirements that must be satisfied by these chemical engineering electives.

Please refer to Table 1: BSChE Requirements. (p. 1011)

Please refer to Table 2: Sample BSChE Curriculum. (p. 1012)

The curriculum is designed to provide opportunities for students to explore areas of interest within chemical engineering. In addition to the accredited BS degree in Chemical Engineering, another choice is to pursue the course of study leading to the BS degree in Applied Science with a major in chemical engineering.

## Double Majors and Pre-Medical Program

Some students may be able to take more than the 126-unit minimum during a four-year program, especially if they have Advanced Placement units. This permits the choice of additional free electives from such areas as biology, computer science, humanities, social sciences or other engineering courses. It also provides an opportunity to pursue a double major. The rules for combining majors in engineering and multiple majors involving other university divisions are described in the Combined Majors and/or Multiple Degrees section (p. 936) of the School of Engineering & Applied Science. Particularly popular with chemical engineering students is the combined degree program in Process Control Systems.

Traditionally, the undergraduate chemical engineering degrees (both the accredited degree and the applied science option) have been popular with students interested in medicine because the curriculum automatically satisfies many of the pre-medical requirements. Many of the additional needed courses can be taken as electives.

## Bachelor of Science in Applied Science (Chemical Engineering)

This degree serves students who wish to be exposed to key chemical engineering principles yet seek a more flexible curriculum. The BS in Applied Science (Chemical Engineering) requires 18 units of 300-level or higher chemical engineering core courses. Consult the EECE department website (<https://eece.wustl.edu/undergraduate/programs>) for the specific requirements needed to earn this degree.

### Minors

Please refer to the sections below for information about the **minor in environmental engineering science** (p. 1002), the **minor in energy engineering** (p. 1002), and the **minor in nanoscale science & engineering** (p. 1003).

## The Minor in Environmental Engineering Science

The EECE department sponsors an undergraduate minor in environmental engineering science. This 21-unit program prepares the student to seek an entry-level position as an environmental engineer, scientist or analyst. The minor also provides a solid foundation for undertaking graduate study in environmental engineering. Visit the EECE department website (<http://eece.wustl.edu/Pages/default.aspx>) for more information.

**Units required:** 21

**Required courses:**

Select from the following menus:

**Introduction<sup>1</sup> (3 units):**

| Code     | Title   | Units |
|----------|---|-------|
| EECE 101 | Introduction to Energy, Environmental and Chemical Engineering (fall) | 3     |
| EECE 210 | Introduction to Environmental Engineering (spring)                    | 3     |

**Environmental Chemistry<sup>2</sup> (3 units):**

| Code     | Title                                  | Units |
|----------|--|-------|
| EECE 505 | Aquatic Chemistry (fall)               | 3     |
| EECE 531 | Environmental Organic Chemistry (fall) | 3     |

**Environmental Engineering electives<sup>2</sup> (9 units):**

| Code     | Title                                 | Units |
|----------|---------------------------------------|-------|
| EECE 311 | Green Engineering (fall)              | 3     |
| EECE 425 | Environmental Engineering Laboratory  | 3     |
| EECE 504 | Aerosol Science and Technology (fall) | 3     |
| EECE 512 | Combustion Phenomena (fall)           | 3     |

|          |  |   |
|----------|--|---|
| EECE 514 | Atmospheric Science and Climate (spring)                     | 3 |
| EECE 533 | Physical and Chemical Processes for Water Treatment (spring) | 3 |
| EECE 534 | Environmental Nanochemistry (spring)                         | 3 |

Additional eligible courses (new courses, special offerings) will be posted on the EECE website (<http://eece.wustl.edu/Pages/default.aspx>) as they become available.

**Natural Science (3 units):**

| Code     | Title   | Units |
|----------|---|-------|
| Biol 381 | Introduction to Ecology (spring)              | 3     |
| EPSc 323 | Biogeochemistry (spring)                      | 3     |
| EPSc 413 | Introduction to Soil Science (spring)         | 3     |
| EPSc 428 | Hydrology                                     | 3     |
| EPSc 444 | Environmental Geochemistry (fall, even years) | 3     |

**Environmental Policy and Social Science (3 units):**

| Code         | Title  | Units    |
|--------------|--|----------|
| EnSt 310     | Ecological Economics                                 | 3        |
| EnSt 357     | Environmental Problem Solving                        | 3        |
| Econ 451     | Environmental Policy (fall)                          | 3        |
| EnSt 539     | Interdisciplinary Environmental Clinic (fall/spring) | 3<br>max |
| Pol Sci 340  | Topics: Environmental Justice                        | 3        |
| Pol Sci 3752 | Topics in American Politics                          | 3        |

<sup>1</sup>Freshmen potentially interested in majoring in chemical engineering should take EECE 101; all other students working toward the minor in environmental engineering science should take EECE 210.

<sup>2</sup>Students taking both environmental chemistry courses can count one of them toward the environmental engineering electives.

## Committee to Oversee Environmental Engineering Science Minor:

Daniel Giammar (<https://engineering.wustl.edu/Profiles/Pages/Daniel-Giammar.aspx>) (EECE, Coordinator); John Fortner (<https://engineering.wustl.edu/Profiles/Pages/John-Fortner.aspx>) (EECE); Brent Williams (<https://engineering.wustl.edu/Profiles/Pages/Brent-Williams.aspx>) (EECE)

## The Minor in Energy Engineering

**Objective:** The goal is to provide students a course work experience that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor covers classes in several fields of science and engineering which encompass the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems

Engineering; and Department of Mechanical Engineering & Materials Science.

A minor in energy engineering requires the completion of 18 units selected from the following menus. It is open to any undergraduate student pursuing an engineering major, students from the sciences (biology, chemistry, physics) in Arts & Sciences, and the environmental studies major.

Interested departments should expose students to energy and related concepts in their introductory courses.

**Basic and Applied Sciences** (fundamental content) (two courses):

| Code         | Title   | Units |
|--------------|---|-------|
| EECE 203     | Thermodynamics I in EECE (fall)                             | 3     |
| or MEMS 301  | Thermodynamics  |       |
| EECE 301     | Transport Phenomena I: Basics and Fluid Mechanics           | 3     |
| or MEMS 3410 | Fluid Mechanics   |       |
| EECE 303     | Transport Phenomena III: Energy Transfer Processes (spring) | 3     |
| ESE 332      | Power, Energy and Polyphase Circuits (spring)               | 3     |

**Social Science/Policy/Economics Elective** (one course):

| Code      | Title                                  | Units |
|-----------|--|-------|
| EnSt 451  | Environmental Policy (fall)            | 3     |
| EnSt 350W | Environmental Issues: Writing (spring) | 3     |

**Electives:**

Choose three courses. One of the courses is required to be chosen from outside the student's major degree department. A partner department may approve the use of a course listed under basic and applied sciences as an elective.

| Code      | Title  | Units |
|-----------|--|-------|
| EECE 311  | Green Engineering (fall)                           | 3     |
| EECE 411  | International Experience in EECE (summer/fall)     | 3     |

## Committee to Oversee Energy Engineering Minor

Pratim Biswas (<https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx>) (EECE, Coordinator); Hiro Mukai (<https://engineering.wustl.edu/Profiles/Pages/Hiro-Mukai.aspx>) (ESE); David Peters (<https://engineering.wustl.edu/Profiles/Pages/David-Peters.aspx>) (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program be cohesive.

## The Minor in Nanoscale Science & Engineering

The minor in nanoscale science & engineering will enhance a student's background, knowledge and skills in the topical area of nanotechnology. This minor covers classes in several fields of science and engineering, encompassing all the departments in the School of Engineering & Applied Science and several in the College of Arts & Sciences. It is open to any undergraduate student pursuing an Engineering or Arts & Sciences (chemistry, physics, biology, environmental studies) major.

The minor in nanoscale science & engineering involves the following components: fundamentals; synthesis and applications; characterization, structures and modeling (CS&M). Two additional requirements are the Cleanroom Lab class entitled "Principles and Methods of Micro and Nanofabrication" and completion of a faculty supervised Independent Study "Project" for at least two semesters.

**Units required:** 18

**Required courses:**

Select from the following menus:

**Fundamentals** (choose one course):

| Code        | Title                               | Units |
|-------------|-------------------------------------|-------|
| Biol 4810   | General Biochemistry I              | 3     |
| Chem 401    | Physical Chemistry I                | 3     |
| Chem 465    | Solid-State and Materials Chemistry | 3     |
| EECE 305    | Materials Science                   | 3     |
| MEMS 3601   | Materials Engineering               | 3     |
| MEMS 5606   | Soft Nanomaterials                  | 3     |
| Physics 217 | Introduction to Quantum Physics     | 3     |
| Physics 352 | Physics of Biomolecules             | 3     |

Physics 472 Solid State Physics 3

**Synthesis & Applications** (choose one course):

| Code      | Title                                    | Units |
|-----------|--|-------|
| CSE 568M  | Imaging Sensors                          | 3     |
| EECE 504  | Aerosol Science and Technology           | 3     |
| EECE 534  | Environmental Nanochemistry              | 3     |
| ESE 438   | Applied Optics                           | 3     |
| ESE 532   | Introduction to Nano-Photonic Devices    | 3     |
| MEMS 463  | Nanotechnology Concepts and Applications | 3     |
| MEMS 5609 | Electronic Materials Processing          | 3     |
| MEMS 5801 | Micro-Electro-Mechanical Systems I       | 3     |

**Characterization, Structure and Modeling** (choose one course):

| Code      | Title  | Units |
|-----------|--|-------|
| BME 461   | Protein Structure and Dynamics                             | 3     |
| Chem 478  | Molecular Modeling   | 3     |
| Chem 543  | Physical Properties of Quantum Nanostructures              | 3     |
| Chem 550  | Mass Spectrometry  | 3     |
| EECE 420  | Properties of Materials                                    | 3     |
| EECE 536  | Computational Chemistry of Molecular and Nanoscale Systems | 3     |
| MEMS 5602 | Non-metallics  | 3     |
| MEMS 5603 | Materials Characterization Techniques I                    | 3     |
| MEMS 5604 | Materials Characterization Techniques II                   | 3     |

**Nanotechnology Laboratory Class** (required):

| Code                  | Title   | Units |
|-----------------------|---|-------|
| MEMS 5611             | Principles and Methods of Micro and Nanofabrication | 3     |
| or CSE 506M, EECE 595 |   |       |

**Independent Study Project** (required):

Students should sign up for at least **2 semesters** of Independent Study and work on a project related to nanotechnology under the supervision of a faculty member. A list of projects with potential faculty mentors will be circulated in the spring semester every year. Students will have to be signed up for the nanoscale science and engineering minor and must have completed at least two of the classes from the above categories before doing the Independent Study Project. Students can also come up with their own ideas for projects but need to get approval from the Nanoscale Science and Engineering Minor Committee and a faculty mentor.

*The classes listed above will count for elective credit for all Engineering majors; however, students should check with their major advisers to confirm this.*

## Committee to Oversee Nanoscale Science and Engineering Minor

Rohan Mishra (<https://mems.wustl.edu/faculty/Pages/default.aspx?bio=106>) (MEMS, Coordinator), Pratim Biswas (<https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx>) (EECE), Jung-Tsung Shen (<https://ese.wustl.edu/faculty/Pages/default.aspx?bio=79>) (ESE)

## Courses

Visit online course listings to view semester offerings for E44 EECE (<https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E44&crslvl=1:5>).

### E44 EECE 100 Independent Study

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: freshman standing. Credit variable, maximum 3 units.

### E44 EECE 101 Introduction to Energy, Environmental and Chemical Engineering

Key technical issues that face our society and some of the emerging technologies that hold promise for the future are examined and discussed. Relationship to chemical engineering principles is emphasized. (Prior to FL2015, this course was numbered: E63 146A.) Credit 3 units. EN: TU

### E44 EECE 200 Independent Study

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: sophomore standing. Credit variable, maximum 3 units.

### E44 EECE 201 Engineering Analysis of Chemical Systems

Introduction to the use of mathematics and methods of engineering in analysis of chemical and physical processes. Use of conservation balances and basic rate laws to describe processes with and without chemical reaction in both transient and steady state conditions. Prerequisites: Chem 112A, Math 233. Corequisites: EECE 203, Math 217. (Prior to FL2015, this course was numbered: E63 351.)

Credit 3 units. EN: TU

**E44 EECE 202 Computational Modeling in Energy, Environmental and Chemical Engineering**

Modeling and numerical methods to solve engineering, design and scientific problems encountered in thermodynamics, transport phenomena, separation processes and reaction kinetics. Use of conservation principles in model building, dimensionless representation of problems, multi-scale modeling and transient modeling. Numerical methods for solution of common problems in linear algebra, regression analysis, non-linear algebraic equations, ordinary and partial differential equations, and boundary value problems. Use of Matlab as a computational tool. Brief introduction to statistical techniques and Monte-Carlo methods. Use of various Matlab toolboxes. Illustrative application examples. Prerequisites: Math 233 and Math 217, or permission of instructor. (Prior to FL2015, this course was numbered: E63 275.)

Credit 3 units. EN: TU

**E44 EECE 203 Thermodynamics I in EECE**

Classical thermodynamics. First and second laws, properties of pure substances, mixtures, and solutions. Phase equilibria, chemical reaction equilibria. Prerequisites: Chem 111A, Math 132, Physics 117A. (Prior to FL2015, this course was numbered: E63 320.)

Credit 3 units. EN: TU

**E44 EECE 204 Thermodynamics II in EECE**

Molecular motions, kinetic theory of gases, kinetic theory of dense phases, chemical kinetics. Prerequisite: EECE 203. (Prior to FL2015, this course was numbered: E63 359.)

Credit 3 units. EN: TU

**E44 EECE 210 Introduction to Environmental Engineering**

The objective of this course is to introduce students to the field of environmental engineering. The course emphasizes basic principles of mass and energy conservation which govern physical, chemical and biological processes. Applications include the estimation of contaminant concentrations and the design of environmental controls. (Prior to FL2015, this course was numbered: E63 262.)

Credit 3 units. EN: TU

**E44 EECE 300 Independent Study**

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: junior standing.

Credit variable, maximum 3 units.

**E44 EECE 301 Transport Phenomena I: Basics and Fluid Mechanics**

Engineering principles involved in the exchange of heat and matter in chemical processes. Laws governing the flow of liquids and gases in laboratory and plant equipment. Prerequisites: EECE 202, EECE 203, Math 217, ESE 318, or permission of instructor. (Prior to FL2015, this course was numbered: E63 367.)

Credit 3 units. EN: TU

**E44 EECE 302 Transport Phenomena II: Mass Transfer**

Engineering principles involved in the exchange of heat and matter in chemical processes. Laws governing the flow of liquids and gases in laboratory and plant equipment. Prerequisite: EECE 301 (Prior to FL2015, this course was numbered: E63 368.)

Credit 3 units. EN: TU

**E44 EECE 303 Transport Phenomena III: Energy Transfer Processes**

Introductory treatment of the principles of heat transfer by conduction, convection or radiation. Mathematical analysis of steady and unsteady conduction along with numerical methods. Analytical and semi-empirical methods of forced and natural convection systems. Boiling and condensation heat transfer. Radiation between black-body and real surfaces. Radiation network analysis. Corequisite: EECE 302 or equivalent. (Prior to FL2015, this course was numbered: E63 369.)

Credit 3 units. EN: TU

**E44 EECE 304 Mass Transfer Operations**

Stagewise and continuous mass transfer operations, including distillation, gas absorption, humidification, leaching, liquid extraction, and membrane separations. Prerequisites: Math 217, EECE 201 and EECE 203. (Prior to FL2015, this course was numbered: E63 357.)

Credit 3 units. EN: TU

**E44 EECE 305 Materials Science**

Introduces the chemistry and physics of engineering materials. Emphasis on atomic and molecular interpretation of physical and chemical properties, the relationships between physical and chemical properties, and performance of an engineering material. Prerequisite: Math 217, Chem 111A. (Prior to FL2015, this course was numbered: E63 325.)

Credit 3 units. EN: TU

**E44 EECE 311 Green Engineering**

Strategies and methods for waste minimization and pollutant emission reduction. Principles of green engineering. Environmental transport and fate modeling. Design of heat and mass exchange networks for energy and waste reduction. Prerequisite: EECE 203 or permission of instructor. (Prior to FL2015, this course was numbered: E63 345.)

Credit 3 units. EN: TU

**E44 EECE 313 Engineering Economics, Analytics, and Policy Analysis Tools**

Introduction to basic engineering economics, cash flow modeling, and investment or policy analysis tools/frameworks applied to resource allocation problems with significant technical aspects. Tools developed with applications to case study examples and projects including practical spreadsheet modeling, economic and financial metrics, and basic decision sciences tools. Prerequisite: junior standing or permission of instructor. (Prior to FL2015, this course was numbered: E33 382.)

Credit 3 units. EN: TU

**E44 EECE 314 Air Quality and Pollution Control**

Generation, transport and fate of gaseous and particulate air pollutants. Meteorology and its coupling to air quality.

Photochemical smog formation, visibility impairment, pollutant dispersion modeling, and source apportionment. Prerequisite: junior standing or permission of instructor. (Prior to FL2015, this course was numbered: E63 344.)

Credit 3 units. EN: TU

---

#### **E44 EECE 400 Independent Study**

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: senior standing.

Credit variable, maximum 6 units.

---

#### **E44 EECE 401 Chemical Process Dynamics and Control**

A state-of-the-art industrial virtual plant is used for the development of dynamic simulations, selection of instrumentation, statistical analysis of variability, and implementation of process control to improve process operation and efficiency. Prerequisites: Math 217 and EECE 201. (Prior to FL2015, this course was numbered: E63 462.)

Credit 3 units. EN: TU

---

#### **E44 EECE 402 ChE Capstone**

Application of engineering science and design, fundamentals of process and product development, computational techniques and economic principles to design of chemical and biological processes and procedures. A design project and/or an AIChE national design contest is included. Prerequisites: EECE 203, 301, 302, 304 and 403. (Prior to FL2015, this course was numbered: E63 478A.)

Credit 3 units. EN: TU

---

#### **E44 EECE 403 Chemical Reaction Engineering**

Introduction to chemical reaction engineering principles and applications in process and product development. Evaluation of reaction rates from mechanisms and experimental data, quantification of pertinent transport effects and application to reactor and product design. Prerequisites: EECE 201, 203, 204, 301. (Prior to FL2015, this course was numbered: E63 471.)

Credit 3 units. EN: TU

---

#### **E44 EECE 405 Unit Operations Laboratory**

Laboratory experiments designed to illustrate the principles of transport (heat, mass and momentum), thermodynamics, kinetics and reaction engineering, and separations that apply to chemical and biological systems. Experiments include traditional chemical engineering unit operations and emerging areas such as biotechnology, bioenergy and materials. One laboratory period and one workshop are alternating once a week. Lecture session(s) on process engineering components and process safety are scheduled every week. Prerequisites: EECE 301, 304. Corequisite: EECE 403. (Prior to FL2015, this course was numbered: E63 473A.)

Credit 4 units. EN: TU

---

#### **E44 EECE 411 International Experience in EECE**

This course provides undergraduate students with an international experience related to energy, environmental and/or chemical engineering. The country visited varies from year to year with one or more EECE faculty members developing the program in collaboration with McDonnell Global Energy

and Environment Partnership (MAGEEP) universities. Example activities include conducting field or laboratory research, attending short courses taught by MAGEEP university faculty members, and visiting attractions relevant to the course focus (e.g., industrial facilities). Students also gain an understanding of the local culture and history of the country visited. Course content includes a seminar series in the spring semester prior to the international experience, a two-to-three week visit to the location of study, and a follow-up student project and presentations during the fall semester which draw upon the experience. Students enroll in EECE 411 for the fall semester following the trip. (Prior to FL2015, this course was numbered: E33 401.)

Credit 3 units. EN: TU

---

#### **E44 EECE 412 Sustainability Exchange: Community and University Practicums**

The Sustainability Exchange will bring together students working in transdisciplinary teams to tackle real-world energy, environmental, and sustainability problems through an experiential form of education. Students will participate in projects with clients and partners on- or off-campus, developed with and guided by faculty advisers drawn from across the university, with the intention of delivering an applicable end-product that explores "wicked" problems requiring innovative methods and solutions. These projects matter to the client or partner. The team-based project will be complemented by a seminar that will explore the field of design and design thinking through problem solving strategies and methodologies drawn from a wide range of creative practices, including design, engineering and science, as well as contemporary topics in energy, environment and sustainability. Students will draw on these topics to influence their projects. This course is open to all undergraduate juniors and seniors. An application is required; students will be accepted off the wait list following the application process.

Same as I50 InterD 405

Credit 3 units. A&S IQ: SSC EN: S

---

#### **E44 EECE 413 Energy Conversion and Storage**

This course takes a thermodynamics perspective to analyzing electricity production and distribution systems, which are imperative to modern society. The course contains a hands-on laboratory component. Traditional and advanced heat engine cycles will be discussed. Opportunities and challenges with renewable energy technologies will be covered. Essential to the widespread adoption of renewable electricity sources, and also to increasing energy efficiency, are smart grid and smart building technologies. The goal is to give the student a quantitative overview, while focusing in on the details of a few important technological examples. Prerequisites: E44 EECE 203 or E37 MEMS 301 and E44 EECE 301 or E37 MEMS 3410; or instructor permission.

Credit 3 units. EN: TU

---

#### **E44 EECE 414 New Product and Process Development**

An overview of product development, innovative solutions to technical problems, designed experimentation, evaluation of abstract data, product design, and the basics of intellectual property. Prerequisites: junior standing and Chem 251, EECE 203 or by permission of the instructor. (Prior to FL2015, this course was numbered: E63 450.)

Credit 3 units. EN: TU

**E44 EECE 416 Industrial Process Safety**

Analysis and management of fire and explosion hazards. Control of human exposure to toxic materials. Codes, standards, and regulations. Transportation and disposal of noxious substances. Analysis of drift from clouds, flares, and stacks. Venting of pressure vessels. Hazard evaluation and safety review of processes. Emergency plans for accidents and disasters. Prerequisite: EECE 203 or Chem 421 or permission of instructor. (Prior to FL2015, this course was numbered: E63 479/569.) Credit 3 units. EN: TU

**E44 EECE 418 Principles of Surface and Colloid Science**

Interfacial phenomena play key roles in such industrial operations as emulsification, catalysis, and detergency. Introduction to principles of surface science. Particular attention to describing the nature of the liquid/gas, liquid/liquid, solid/liquid, and solid/gas interfaces. Specific topics include methods of measuring surface tension, interfacial adsorption, surface area and particle size determinations, dispersion stabilization/flocculation, emulsification, and wetting. Prerequisite: EECE 203 or permission of instructor. (Prior to FL2015, this course was numbered: E63 480.) Credit 3 units. EN: TU

**E44 EECE 420 Properties of Materials**

A detailed look at the mechanical, chemical and surface properties of materials. Topics include elastic properties; plastic deformation; viscoelastic behavior; chemical resistance; corrosion resistance; and the electromagnetic properties of metal, plastic, ceramic and composite systems. Prerequisite: EECE 305. (Prior to FL2015, this course was numbered: E63 476.) Credit 3 units. EN: TU

**E44 EECE 421 Advanced Energy Lab**

Laboratory experiments to illustrate the application of engineering fundamentals to the study of advanced energy generation, storage, distribution and delivery systems. Modules include both lecture and laboratory components and explore topics such as fossil fuel combustion, solar PV and solar thermal systems, wind-derived energy, biofuels production, electrochemical energy storage. Extensive metering of energy use in Brauer Hall is used to study systems performance including energy efficiency. Prerequisites: EECE 203 or MEMS 301, and EECE 301 or MEMS 3410; or permission of instructor. (Prior to FL2015, this course was numbered: E33 439.) Credit 3 units. EN: TU

**E44 EECE 423 Senior Thesis**

Research project to be selected by the student with the permission and recommendation of a faculty supervisor and the approval of the department chair. At conclusion of project, student prepares a report in the form of a senior thesis. (Prior to FL2015, this course was numbered: E63 499.) Credit variable, maximum 6 units.

**E44 EECE 424 Digital Process Control Laboratory**

Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics, and process control. Exercises in data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level,

temperature, and pressure control. Term project. Prerequisite: ESE 441 or EECE 401 or equivalent. (Prior to FL2015, this course was numbered: E63 433.) Credit 3 units. EN: TU

**E44 EECE 425 Environmental Engineering Laboratory**

Laboratory experiments to illustrate the application of engineering fundamentals to environmental systems. Applications of experimental design and data analysis principles. Introduction to relevant analytical instrumentation and laboratory techniques. Laboratory work supported by theoretical analysis and modeling as appropriate. Prerequisite: consent of instructor. (Prior to FL2015, this course was numbered: E63 408A/508A.) Credit 3 units. EN: TU

**E44 EECE 426 ChE Honors Design Project for AIChE Student Contest Problem**

Application of engineering science and design, fundamentals of process and product development, computational techniques and economic principles to design of chemical and biological processes and procedures in solving the AIChE national student contest problem. Up to two single and up to two group (2-3 per group) solutions may be chosen for national competition. Concurrent with EECE 402. Prerequisites: EECE 203, 301, 302, 304 and 403. (Prior to FL2015, this course was numbered: E63 478B.) Credit 1 unit. EN: TU

**E44 EECE 500 Independent Study**

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: graduate-level standing. Credit variable, maximum 9 units.

**E44 EECE 501 Transport Phenomena in EECE**

The aim of the course is for students to develop skills in applying principles of momentum, heat and mass transport in a unified manner to problems encountered in the areas of energy, environmental and chemical processes. A systems approach is followed so that the general principles can be grasped, and the skills to develop mathematical models of seemingly different processes are emphasized. This provides the students with a general tool which they can apply later in their chosen field of research. (Prior to FL2015, this course was numbered: E33 501.) Credit 3 units.

**E44 EECE 502 Advanced Thermodynamics in EECE**

The objective of this course is to understand classical thermodynamics at a deeper level than is reached during typical undergraduate work. Emphasis is placed on solving problems relevant to chemical engineering materials science. Prerequisite: E63 ChE 320 or E44 203 or equivalent. (Prior to FL2015, this course was numbered: E33 511.) Credit 3 units.

**E44 EECE 503 Mathematical Methods in EECE**

The course introduces students to mathematical principles essential for graduate study in any engineering discipline. Applied mathematical concepts are demonstrated by

applications to various areas in energy, environmental, biomedical, chemical, mechanical, aerospace, electrical and civil engineering. (Prior to FL2015, this course was numbered: E33 502.)

Credit 3 units.

---

#### **E44 EECE 504 Aerosol Science and Technology**

Fundamental properties of particulate systems — physics of aerosols, size distributions, mechanics and transport of particles: diffusion, inertia, external force fields. Visibility and light scattering. Aerosol dynamics — coagulation, nucleation, condensation. Applications to engineered systems: nanoparticle synthesis, atmospheric aerosols, combustion aerosols, pharmaceutical aerosols. Prerequisites: EECE 301, ESE 318 and 319. (Prior to FL2015, this course was numbered: E63 518.) Credit 3 units. EN: TU

---

#### **E44 EECE 505 Aquatic Chemistry**

Aquatic chemistry governs aspects of the biogeochemical cycling of trace metals and nutrients, contaminant fate and transport, and the performance of water and wastewater treatment processes. This course examines chemical reactions relevant to natural and engineered aquatic systems. A quantitative approach emphasizes the solution of chemical equilibrium and kinetics problems. Topics covered include chemical equilibrium and kinetics, acid-base equilibria and alkalinity, dissolution and precipitation of solids, complexation of metals, oxidation-reduction processes, and reactions on solid surfaces. A primary objective of the course is to be able to formulate and solve chemical equilibrium problems for complex environmental systems. In addition to solving problems manually to develop chemical intuition regarding aquatic systems, software applications for solving chemical equilibrium problems are also introduced. Prerequisite: Chem 112A. (Prior to FL2015, this course was numbered: E33 443/543.)

Credit 3 units. EN: TU

---

#### **E44 EECE 506 Bioprocess Engineering I: Fundamentals & Applications**

The course covers the fundamentals and provides the basic knowledge needed to understand and analyze processes in biotechnology in order to design, develop and operate them efficiently and economically. This knowledge is applied to understand various applications and bioprocesses, such as formation of desirable bio and chemical materials and products, production of bioenergy, food processing and waste treatment. The main objective of the course is to introduce the essential concepts and applications of bioprocessing to students of diverse backgrounds. An additional project is required to obtain graduate credit. Prerequisites: L41 Biol 2960 or equivalent or permission of instructor. (Prior to FL2015, this course was numbered: E63 453/553.)

Credit 3 units. EN: TU

---

#### **E44 EECE 507 Kinetics and Reaction Engineering Principles**

The course is aimed at a modern multiscale treatment of kinetics of chemical and biochemical reactions and application of these fundamentals to analyze and design reactors. Application of reaction engineering principles in the areas related to energy generation, pollution prevention, chemical and biochemical processes are studied and illustrated with case studies and computer models. Description of the role of mass and heat transport in reacting systems is also provided with numerous

examples. (Prior to FL2015, this course was numbered: E33 503.)

Credit 3 units.

---

#### **E44 EECE 508 Research Rotation**

First-year doctoral students in EECE should undertake research rotation as a requirement prior to choosing a permanent research adviser. The rotation requires the student to work under the guidance of a faculty member. (Prior to FL2015, this course was numbered: E33 508.)

---

#### **E44 EECE 509 Seminar in Energy, Environmental, and Chemical Engineering**

All graduate students in EECE should attend the Departmental Seminar Series to gain exposure in various diverse fields of research. Students are also expected to participate in journal clubs and other discussion formats to discuss topical research areas. The course is required of all graduate students every semester of residency in the program. (Prior to FL2015, this course was numbered: E33 509.)

Credit 1 unit.

---

#### **E44 EECE 510 Advanced Topics in Aerosol Science & Engineering**

This course is focused on discussion of advanced topics in aerosol science and engineering and its applications in a variety of fields — materials science, chemical engineering, mechanical engineering, and environmental engineering. Prerequisite: EECE 504. (Prior to FL2015, this course was numbered: E63 592A.)

Credit 3 units. EN: TU

---

#### **E44 EECE 512 Combustion Phenomena**

Introduction to fundamental aspects of combustion phenomena including relevant thermochemistry, fluid mechanics, and transport processes. Emphasis is on elucidation of the physico-chemical processes, problem formulation, and analytical techniques. Topics covered include ignition, extinction, diffusion flames, particle combustion, deflagrations, and detonations. Prerequisites: graduate standing or permission of instructor. (Prior to FL2015, this course was numbered: E33 5404.)

Credit 3 units. EN: TU

---

#### **E44 EECE 513 Topics in Nanotechnology**

This course is focused on the discussion of topics in nanotechnology — with a focus on nanoparticles and their applications in a variety of fields — materials science, chemical engineering, mechanical engineering, environmental engineering, medicine. (Prior to FL2015, this course was numbered: E63 526.)

Credit 3 units. EN: TU

---

#### **E44 EECE 514 Atmospheric Science and Climate**

This course covers current research topics in atmospheric chemistry and climate change. Topics include atmospheric composition, chemistry, transport, dynamics, radiation, greenhouse gases, natural and anthropogenic primary pollution sources and secondary aerosol production, and measurement techniques. Focus is placed on how our atmosphere and climate are altered in a world of changing energy production and land use. Prerequisites: Chemistry 112A, Physics 118 or 198, and junior or higher standing. (Prior to FL2015, this course was numbered: E33 547.)

Credit 3 units. EN: TU

---

#### **E44 EECE 515 Dynamics of Air Pollution**

Physicochemical processes governing the dynamics of pollutants from point and non-point sources: generation, transport and decay. Application of fundamental thermodynamics, mass/heat transfer and fluid mechanics principles to environmental systems. Prerequisites: EECE 203, ESE 317 or ESE 318 and 319, and EECE 505, or equivalent, or permission of instructor. (Prior to FL2015, this course was numbered: E63 510.)

Credit 3 units. EN: TU

---

#### **E44 EECE 516 Measurement Techniques for Particle Characterization**

The purpose of this course is to introduce students to the principles and techniques of particle measurement and characterization. Practical applications of particle technology include air pollution measurement, clean manufacturing of semiconductors, air filtration, indoor air quality, particulate emission from combustion sources and so on. The course focuses on (1) integral moment measurement techniques, (2) particle sizing and size distribution measuring techniques, and (3) particle composition measurement techniques. The related issues such as particle sampling and transportation, the instrument calibration, and particle standards also are covered. (Prior to FL2015, this course was numbered: E63 563.)

Credit 3 units. EN: TU

---

#### **E44 EECE 518 Sustainable Air Quality**

Introduction to sustainability and sustainable air quality. Systems science as an organizing principle for air quality management. Setting of air quality goals. Observing the status and trends. Establishing causal factors: energy use and chemical processing. Natural sources and variability. Corrective actions to reach air quality goals. Process design for emission reductions. Adoptive response to air pollution episodes. A web-based class project is conducted through the semester. (Prior to FL2015, this course was numbered: E63 549.)

Credit 3 units. EN: TU

---

#### **E44 EECE 531 Environmental Organic Chemistry**

Fundamental, physical-chemical examination of organic molecules (focused on anthropogenic pollutants) in aquatic (environmental) systems. Students learn to calculate and predict chemical properties that are influencing the partitioning of organic chemicals within air, water, sediments and biological systems. This knowledge is based on understanding intermolecular interactions and thermodynamic principles. Mechanisms of important thermochemical, hydrolytic, redox, and biochemical transformation reactions are also investigated, leading to the development of techniques (such as structure-reactivity relationships) for assessing environmental fate or human exposure potential. Prerequisite: Chem 112A. (Prior to FL2015, this course was numbered: E33 448/548.)

Credit 3 units. EN: TU

---

#### **E44 EECE 533 Physical and Chemical Processes for Water Treatment**

Water treatment is examined from the perspective of the physical and chemical unit processes used in treatment. The theory and fundamental principles of treatment processes are covered and are followed by the operation of treatment processes. Processes covered include gas transfer, adsorption, precipitation, oxidation-

reduction, flocculation, sedimentation, filtration, and membrane processes. (Prior to FL2015, this course was numbered: E33 588.)

Credit 3 units. EN: TU

---

#### **E44 EECE 534 Environmental Nanochemistry**

This course involves the study of nanochemistry at various environmental interfaces, focusing on colloid, nanoparticle, and surface reactions. The course also (1) examines the thermodynamics and kinetics of nanoscale reactions at solid-water interfaces in the presence of inorganic or organic compounds and microorganisms; (2) investigates how nanoscale interfacial reactions affect the fate and transport of contaminants; (3) introduces multidisciplinary techniques for obtaining fundamental information about the structure and reactivity of nanoparticles and thin films, and the speciation or chemical form of environmental pollutants at the molecular scale; (4) explores connections between environmental nanochemistry and environmental kinetic analysis at larger scales. This course helps students attain a better understanding of the relationship between nanoscience/technology and the environment — specifically how nanoscience could potentially lead to better water treatments, more effective contaminated-site remediation, or new energy alternatives. (Prior to FL2015, this course was numbered: E33 534.)

Credit 3 units. EN: TU

---

#### **E44 EECE 536 Computational Chemistry of Molecular and Nanoscale Systems**

This course explores the structure, properties and reactivity of molecular and nanoscale systems in engineering using computational chemistry tools. The science behind density functional theory (DFT) calculations and molecular dynamics (MD) simulations is explained and applied in the context of multiscale modeling. Special emphasis is placed on solid-state materials and aqueous/biological systems found in engineering. Students are encouraged to apply the methods discussed in class to their own research topics. Prerequisites: EECE 203 and 204, or permission of the instructor. (Prior to FL2015, this course was numbered: E33 591.)

Credit 3 units. EN: TU

---

#### **E44 EECE 551 Metabolic Engineering and Synthetic Biology**

Synthetic Biology is a transformative view of biology from "observation approach" to "synthesis approach." It is a new "engineering" discipline and aims to make the engineering of new biological function predictable, safe and quick. It will pave a wide range of applications to transform our views on production of sustainable energy and renewable chemicals, environmental problems, and human disease treatments. The field intersects with Metabolic Engineering in areas such as the design of novel pathways and genetic circuits for product generation and toxic chemical degradation. In this course, the field and its basis are introduced. First, relevant topics in biology, chemistry, physics and engineering are covered. Second, students will participate in brain-storming and discussion on new biology-based systems. Last, students will design and present new synthetic biology systems to solve real-world problems. (Prior to FL2015, this course was numbered: E33 596A.) No prerequisite. Both undergrad and graduate students can take this course.

Credit 3 units. EN: TU

---

#### E44 EECE 552 Biomass Energy Systems and Engineering

This course offers background in the organic chemistry, biology and thermodynamics related to understanding the conversion of biomass. In addition, it includes relevant topics relating to biomass feedstock origin, harvest, transportation, storage, processing and pretreatment along with matters concerning thermo- and biochemical conversion technologies required to produce fuels, energy, chemicals and materials. Also, various issues with respect to biomass characterization, economics and environmental impact are discussed. The main objective of the course is to introduce concepts central to a large-scale integrated biomass bioconversion system. (Prior to FL2015, this course was numbered: E33 495D/595D.)

Credit 3 units. EN: TU

---

#### E44 EECE 554 Molecular Biochemical Engineering

This course is set for junior-level graduate students to bridge the gap between biochemical engineering theory and academic research in bioengineering. It covers common molecular biotechnologies (molecular biology, microbiology, recombinant DNA technology, protein expression, etc.), biochemical models (enzyme catalysis, microbial growth, bioreactor, etc.) and bioengineering methodologies (protein engineering, expression control systems, etc.). These theories and technologies are introduced in a manner closely related to daily academic research or biochemical industry. Areas of application include biofuel and chemical production, drug discovery and biosynthesis, bioremediation, and environmental applications. This course also contains a lab section (20–30%) that requires students to apply the knowledge learned to design experiments, learn basic experimental skills and solve current research problems. Prerequisites: EECE 101, Biol 2960, Biol 4810. (Prior to FL2015, this course was numbered: E33 595C.)

Credit 3 units. EN: TU

---

#### E44 EECE 556 Bioenergy

A broad overview of the flow of energy, captured from sunlight during photosynthesis, in biological systems, and current approaches to utilize the metabolic potentials of microbes and plants to produce biofuels and other valuable chemical products. An overall emphasis is placed on the use of large-scale genomic, transcriptomic and metabolomic datasets in biochemistry. The topics covered include photosynthesis, central metabolism, structure and degradation of plant lignocellulose, and microbial production of liquid alcohol, biodiesel, hydrogen & other advanced fuels. Course meets during the second half of the spring semester. Prerequisites: Biol 4810 or permission of instructor. (Prior to FL2015, this course was numbered: E33 4830/5830.)

Credit 2 units.

---

#### E44 EECE 571 Industrial and Environmental Catalysis

Major industrial and environmental catalytic processes. Principal theories of heterogeneous catalysis. Experimental methods and techniques used to develop modern catalytic systems. Examples from the petrochemical industry, automotive exhaust systems and industrial emissions abatement. Prerequisites: Chem 112, 262. (Prior to FL2015, this course was numbered: E63 525.)

Credit 3 units. EN: TU

---

#### E44 EECE 572 Advanced Transport Phenomena

Analytical tools in transport phenomena: Scaling, perturbation and stability analysis. Numerical computations of common transport problem with MATLAB tools. Low Reynolds number

flows and applications to microhydrodynamics. Turbulent flow analysis and review of recent advances in numerical modeling of turbulent flows. Convective heat and mass transfer in laminar and turbulent flow systems. Introduction to two phase flow and multiphase reactors. Pressure-driven transport and transport in membranes, electrochemical systems, double layer effects and flow in microfluid devices. Prerequisites: EECE 501 (Transport phenomena) or equivalent senior level courses in fluid mechanics and heat transfer. (Prior to FL2015, this course was numbered: E63 514.)

Credit 3 units. EN: TU

---

#### E44 EECE 574 Electrochemical Engineering

This course will teach the fundamentals of electrochemistry and the application of the same for analyzing various electrochemical energy sources/devices. The theoretical frameworks of current-potential distributions, electrode kinetics, porous electrode and concentrated solution theory will be presented in the context of modeling, simulation and analysis of electrochemical systems. Applications to batteries, fuel cells, capacitors, copper deposition will be explored. Pre-/corequisites: EECE 501-502 (or equivalent), or permission of instructor. (Prior to FL2015, this course was numbered: E33 589.)

Credit 3 units.

---

#### E44 EECE 576 Chemical Kinetics and Catalysis

This course reflects the fast, contemporary progress being made in decoding kinetic complexity of chemical reactions, in particular heterogeneous catalytic reactions. New approaches to understanding relationships between observed kinetic behavior and reaction mechanism are explained. Present theoretical and methodological knowledge are illustrated by many examples taken from heterogeneous catalysis (complete and partial oxidation), combustion and enzyme processes. Prerequisite: senior or graduate student standing. (Prior to FL2015, this course was numbered: E33 598.)

Credit 3 units. EN: TU

---

#### E44 EECE 591 Energy and Buildings

There is a \$2 trillion U.S. market in energy efficiency with paybacks of 4-5 years. This course is an introduction to energy use in the built environment and means and methods for evaluating and harvesting these financial benefits. It is based on fundamentals of energy usage in building systems. Building sciences for architectural envelope, heating and cooling systems, lighting and controls. Building/weather interaction and utility weather regression analyses. Building dynamics and rates of change in energy usage. Students work in groups to perform an energy audit for a building on campus. Prerequisite: senior or graduate student standing, or permission of instructor. (Prior to FL2015, this course was numbered: E33 495/595.)

Credit 3 units.

---

#### E44 EECE 593 Energy and Environment

This course sets out to instruct the student on how to understand decision-making regarding energy and the environment, and provides a unique educational experience, wherein the challenges and potential solutions to meeting future energy needs are clearly elucidated via lectures and experiential learning. Topics include: overview of energy and the environment and associated challenges; description of power generation from coal, natural gas, biomass, wind, solar, hydro, geothermal and nuclear; political, environmental and social considerations; regulations, economics, decision-

making; students gain experience with software capable of analyzing renewable energy projects worldwide, from backyard to power-plant scale systems. (Prior to FL2015, this course was numbered: E33 500A.)

Credit 3 units.

#### E44 EECE 595 Principles of Methods of Micro and Nanofabrication

A hands-on introduction to the fundamentals of micro- and nanofabrication processes with emphasis on cleanroom practices. The physical principles of oxidation, optical lithography, thin film deposition, etching and metrology methods will be discussed, demonstrated and practiced. Students will be trained in cleanroom concepts and safety protocols. Sequential microfabrication processes involved in the manufacture of microelectronic and photonic devices will be shown. Training in imaging and characterization of micro- and nanostructures will be provided. Prerequisite: graduate or senior standing or permission of the instructor.

Same as E37 MEMS 5611

Credit 3 units. EN: TU

#### E44 EECE 597 EECE Project Management

An introduction to the theory and practice of engineering project management, with an emphasis on projects related to environmental protection and occupational health and safety. Topics include: project definition and justification; project evaluation and selection; financial analysis and cost estimation; project planning, including scheduling, resourcing and budgeting; project oversight, auditing and reporting; and effective project closure. Students will be introduced to commonly used project management tools and systems, such as work breakdown structures, network diagrams, Gantt charts, and project management software. Topics will also include project management in different organizational structures and philosophies; creating effective project teams; and managing projects in international settings. Prerequisites: enrolled in MEng program; senior or higher standing.

Credit 3 units.

#### E44 EECE 599 Master's Research

Credit variable, maximum 9 units.

## BSCHE Requirements

Table 1

| Physical Sciences  | Units     |
|--|-----------|
| General Chemistry (Chem 111A, Chem 112A)                                   | 6         |
| General Chemistry Laboratory (Chem 151, Chem 152)                          | 4         |
| General Physics (Physics 117A or Physics 197; Physics 118A or Physics 198) | 8         |
| Organic Chemistry I (Chem 261)   | 4         |

| General Physics II or Physics II (Physics 118A or Physics 198)                      | —         | 4         |
| Humanities/social sciences elective   | —         | 3         |
|   | <b>16</b> | <b>15</b> |
| <b>Second Year</b>  |           |           |
| Organic Chemistry I with Lab (Chem 261)   | 4         | —         |
| Humanities/social sciences elective   | 3         | —         |
| Differential Equations (Math 217)   | 3         | —         |
| Engineering Analysis of Chemical Systems (EECE 201)                                 | 3         | —         |
| Thermodynamics I in EECE (EECE 203)   | 3         | —         |
| Computational Modeling in Energy, Environmental and Chemical Engineering (EECE 202) | —         | 3         |
| Thermodynamics II in EECE (EECE 204)  | —         | 3         |
| Principles of Biology I (Biol 2960)   | —         | 4         |
| Engineering Mathematics A (ESE 318)   | —         | 3         |
| Probability and Statistics for Engineering (ESE 326)                                | —         | 3         |
|   | <b>16</b> | <b>16</b> |
| <b>Third Year</b>   |           |           |
| Transport Phenomena I: Basics and Fluid Mechanics (EECE 301)                        | 3         | —         |
| Materials Science (EECE 305)  | 3         | —         |
| ChE elective  | 3         | 6         |
| Engineering Mathematics B (ESE 319)   | 3         | —         |
| Humanities/social sciences electives**  | 3         | 3         |
| Transport Phenomena II: Mass Transfer (EECE 302)                                    | —         | 3         |
| Mass Transfer Operations (EECE 304)   | —         | 3         |
| Technical Writing (Engr 310)  | —         | 3         |
|   | <b>15</b> | <b>18</b> |

### Fourth Year

|   |           |           |
|---|-----------|-----------|
| Humanities/social sciences electives                          | 3         | 3         |
| ChE electives   | 3         | 6         |
| Chemical Process Dynamics and Control (EECE 401)              | 3         | —         |
| Chemical Reaction Engineering (EECE 403)                      | 3         | —         |
| Unit Operations Laboratory (EECE 405)                         | 4         | —         |
| Transport Phenomena III: Energy Transfer Processes (EECE 303) | —         | 3         |
| ChE Capstone (EECE 402)                                       | —         | 3         |
|   | <b>16</b> | <b>15</b> |

\*Recommended but not required.

\*\*Engr 4501, Engr 4502 and Engr 4503 should be taken in the third year.

## Mechanical Engineering & Materials Science

The Department of Mechanical Engineering & Materials Science (MEMS) offers the Bachelor of Science in Mechanical Engineering (BSME) and the Bachelor of Science in Applied Science (Mechanical Engineering). In addition, minors in aerospace engineering, energy engineering, environmental engineering science, materials science & engineering, nanoscale science & engineering, robotics, mechatronics, and mechanical engineering, and in related scientific and engineering fields, are available to students.

The MEMS curriculum emphasizes the core principles of mechanics (the study of forces, materials and motion) that underlie mechanical engineering. The common curriculum during the student's early academic development encourages breadth of understanding, interdisciplinary thinking and creativity. First-year students, sophomore and early junior years are focused on learning fundamental concepts in statics, dynamics, fluid mechanics and thermodynamics. In the junior and senior years, students choose electives that emphasize their specific interests and prepare them for a particular professional or academic career. The undergraduate curriculum for the BSME degree provides Mechanical Engineering & Materials Science students with a strong base in fundamental mathematics, science and engineering; exposes the students to diverse applications of mechanics and materials; and provides the flexibility to explore creative ideas through undergraduate research and project-based courses.

Mechanical engineering is critical in a variety of important emerging technologies. Mechanical engineers design and develop artificial organs, prosthetic limbs, robotic devices, adaptive materials, efficient propulsion mechanisms, high-performance aerospace structures, and advanced renewable energy systems. The core concepts of mechanics, thermal

systems and materials science are at the heart of these technologies.

## Mission Statement

The Mechanical Engineering & Materials Science faculty is committed to providing the best possible undergraduate mechanical engineering education possible. We strive to nurture the intellectual, professional and personal development of the students, to continually improve the curriculum, to be professionally current, and to maintain state-of-the-art facilities for teaching and learning.

We seek to prepare students for professional practice with a scientifically grounded foundation in the major topics of mechanical engineering: solid mechanics, mechanical design, dynamics and vibrations, systems control, fluid mechanics, thermal science and materials science.

## Bachelor of Science in Mechanical Engineering

The mission of the undergraduate program in mechanical engineering is to prepare students within the broad and evolving field of mechanical engineering. The program instills in students a capacity for creative design through critical and analytical thought. The BSME is the first step toward a career in industry, academia or government; it encourages a commitment to independent, lifelong learning and professional development. In addition to their technical studies, students learn to communicate their ideas clearly and to conduct themselves in an ethical and socially responsible manner.

The curriculum is a four-year program leading to the first professional degree, Bachelor of Science in Mechanical Engineering, which is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>). The curriculum prepares the student for professional practice or postgraduate education in a broad spectrum of mechanical and other engineering or professional fields. The curriculum provides critical knowledge in solid mechanics, fluid mechanics, thermodynamics and heat transfer, materials science, dynamics and control, and design. The curriculum has 34 units of mathematics and basic sciences, 58 units of engineering topics, and 28 units of general education for a total degree requirement of 120 units. The general education includes 18 units of social science and humanities.

Core courses must be taken for credit (grade). The social science and humanities courses may be taken pass/fail. The undergraduate program provides the necessary foundations in these areas and the opportunity to specialize in topics of particular interest. Specialization is accomplished by judicious choice of engineering electives taken in 300-, 400- or 500-level courses approved by the student's adviser. At the end of the four-year program, the student is ready to go on to graduate education, research or professional practice.

## Program Educational Objectives

Program educational objectives are broad statements that describe what graduates are expected to attain within a few years of graduation. These objectives are based on the needs of the program's constituencies.

Within a few years from graduation, graduates of the Bachelor of Science in Mechanical Engineering program are expected to:

- Engage in professional practice and/or advanced study
- Further their knowledge and skills through education and/or professional development
- Serve society by using and communicating their knowledge and values

## Student Outcomes

Student outcomes describe what students are expected to know and be able to do by the time of graduation. These relate to the skills, knowledge and behaviors that students acquire as they progress through the program.

The Student Outcomes are:

- (a) An ability to apply knowledge of mathematics, science and engineering
- (b) An ability to design and conduct experiments, as well as to analyze and interpret data
- (c) An ability to design a system, component or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability
- (d) An ability to function on multidisciplinary teams
- (e) An ability to identify, formulate and solve engineering problems
- (f) An understanding of professional and ethical responsibility
- (g) An ability to communicate effectively
- (h) The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental and societal context
- (i) A recognition of the need for, and an ability to engage in, lifelong learning
- (j) A knowledge of contemporary issues
- (k) An ability to use the techniques, skills and modern engineering tools necessary for engineering practice

## Bachelor of Science in Applied Science (Mechanical Engineering)

The Bachelor of Science in Applied Science (Mechanical Engineering) degree program will offer a degree path for students to gain technical knowledge in mechanical engineering

with more course selection flexibility. Students who do not desire to become licensed engineers, but seek to acquire analytical engineering thinking skills, may choose to pursue this program. The added degree flexibility will allow these students to pursue additional second majors and/or minors and increase their ability to participate in programs such as study abroad.

## Pre-Medical Option

Research and practice in the biological and medical sciences increasingly involves advanced technology, including mechanical engineering. For those interested in a career in medicine, the pre-medical option in Mechanical Engineering & Materials Science makes it possible to obtain an accredited Bachelor of Science and simultaneously meet the admission requirements of most medical and dental schools. The program also provides a foundation for graduate study and research in biomedical engineering. The essential requirements of the pre-medical option are two semesters of general biology (Biol 2960, Biol 2970); two semesters of general chemistry with a laboratory, and two semesters of organic chemistry with a laboratory (Chem 111A, Chem 151, Chem 112A, Chem 152, Chem 261, Chem 262); and one semester of biochemistry (Biol 451). Psychology (Psych 100B) and sociology are highly recommended. One semester of organic chemistry may be counted as an upper-level MEMS elective; the student must take 6 units of other upper-level mechanical engineering electives to complete the 9-unit requirement. The pre-medical option is easier for those who have a high school background in biology or, by reason of advanced placement in math/science, have reduced requirements in the Common Studies portion of the curriculum. For additional information on the pre-medical option, please refer to the pre-medical education section located in the introduction to the School of Engineering & Applied Science's Undergraduate Programs (p. 936) or contact the pre-health adviser, Ron Laue (ron.laue@wustl.edu), for additional information.

## Graduate Programs

The department offers programs for graduate study at both the master's and doctoral levels. All programs are designed to direct advanced study into an area of specialization and original research that includes recent scientific and technological advances.

A graduate degree can provide significant advantages and rewards to a mechanical engineer, including increased income and a wider range of career options. Graduate programs include professional, course-option master's degrees (MS and MEng) and research-based master's (MS) or doctoral (PhD) degrees. The undergraduate curriculum provides an excellent foundation for graduate study, and a careful selection of electives in the third and fourth years can facilitate the transition to graduate work. The master's degrees can be pursued on a part-time or

full-time basis, while PhD degrees are typically pursued by full-time students.

## Faculty

### Chair

**Philip V. Bayly** (<https://engineering.wustl.edu/Profiles/Pages/Philip-Bayly.aspx>)  
Lilyan and E. Lisle Hughes Professor of Mechanical Engineering  
PhD, Duke University  
Nonlinear dynamics, vibrations, biomechanics

### Associate Chairs

**Katharine M. Flores (Materials Science)** (<https://engineering.wustl.edu/Profiles/Pages/Kathy-Flores.aspx>)  
PhD, Stanford University  
Mechanical behavior of structural materials

**David A. Peters (Mechanical Engineering)**  
McDonnell Douglas Professor of Engineering  
PhD, Stanford University  
Aeroelasticity, vibrations, helicopter dynamics

### Endowed Professors

**Ramesh K. Agarwal** (<https://engineering.wustl.edu/Profiles/Pages/Ramesh-Agarwal.aspx>)  
William Palm Professor of Engineering  
PhD, Stanford University  
Computational fluid dynamics and computational physics

**Mark J. Jakiela** (<https://engineering.wustl.edu/Profiles/Pages/Mark-Jakiela.aspx>)  
Lee Hunter Professor of Mechanical Design  
PhD, University of Michigan  
Mechanical design, design for manufacturing, optimization, evolutionary computation

**Shankar M.L. Sastry** (<https://engineering.wustl.edu/Profiles/Pages/Shankar-Sastry.aspx>)  
Christopher I. Byrnes Professor of Engineering  
PhD, University of Toronto  
Materials science, physical metallurgy

### Professor

**Guy M. Genin** (<https://engineering.wustl.edu/Profiles/Pages/Guy-Genin.aspx>)  
PhD, Harvard University  
Solid mechanics, fracture mechanics

### Associate Professors

**Srikanth Singamaneni** (<https://engineering.wustl.edu/Profiles/Pages/Srikanth-Singamaneni.aspx>)  
PhD, Georgia Institute of Technology  
Microstructures of cross-linked polymers

**Jessica E. Wagenseil** (<https://engineering.wustl.edu/Profiles/Pages/Jessica-Wagenseil.aspx>)  
DSc, Washington University  
Arterial biomechanics

## Assistant Professors

**Damena D. Agonafer**  
PhD, University of Illinois at Urbana-Champaign  
Computational fluid dynamics and computational physics

**Parag Banerjee** (<https://engineering.wustl.edu/Profiles/Pages/Parag-Banerjee.aspx>)  
PhD, University of Maryland  
Materials sciences and engineering, nanostructured materials, materials synthesis, and novel devices for storing and harvesting energy

**Spencer P. Lake** (<https://engineering.wustl.edu/Profiles/Pages/Spencer-Lake.aspx>)  
PhD, University of Pennsylvania  
Soft tissue biomechanics

**J. Mark Meacham** (<https://engineering.wustl.edu/Profiles/Pages/Mark-Meacham.aspx>)  
PhD, Georgia Institute of Technology  
Micro-/Nanotechnologies for thermal systems and the life sciences

**Rohan Mishra** (<https://engineering.wustl.edu/Profiles/Pages/Rohan-Mishra.aspx>)  
PhD, Ohio State University  
Computational materials science

**Amit Pathak** (<https://engineering.wustl.edu/Profiles/Pages/Amit-Pathak.aspx>)  
PhD, University of California, Santa Barbara  
Cellular biomechanics

**Patricia B. Weisensee**  
PhD, University of Illinois at Urbana-Champaign  
Thermal fluids

## Professors of the Practice

**Harold J. Brandon**  
DSc, Washington University  
Energetics, thermal systems

**Swami Karunamoorthy**  
DSc, Washington University  
Helicopter dynamics, engineering education

## Joint Faculty

**Richard L. Axelbaum (EECE)** (<https://engineering.wustl.edu/Profiles/Pages/Richard-Axelbaum.aspx>)  
The Stifel & Quinette Jens Professor of Environmental Engineering Science  
PhD, University of California, Davis  
Combustion, nanomaterials

**Elliot L. Elson (Biochemistry and Molecular Biophysics)**  
(<http://bmbweb.wustl.edu/faculty/faculty/elliott-elson>)  
Professor Emeritus of Biochemistry & Molecular Biophysics  
PhD, Stanford University  
Biochemistry and molecular biophysics

**Michael D. Harris (Physical Therapy, Orthopaedic Surgery and MEMS)** (<https://pt.wustl.edu/faculty-staff/faculty/mike-harris-phd>)  
PhD, University of Utah  
Whole body and joint-level orthopaedic biomechanics

**Kenneth F. Kelton (Physics)** ([http://www.physics.wustl.edu/people/kelton\\_kenneth-f](http://www.physics.wustl.edu/people/kelton_kenneth-f))  
Arthur Holly Compton Professor of Arts & Sciences  
PhD, Harvard University  
Study and production of titanium-based quasicrystals and related phases

**Eric C. Leuthardt (Neurological Surgery and BME)** (<http://www.neurosurgery.wustl.edu/patient-care/find-a-physician/clinical-faculty/eric-c-leuthardt-md-250>)  
MD, University of Pennsylvania School of Medicine  
Neurological surgery

**Lori Setton (BME)**  
Lucy and Stanley Lopata Distinguished Professor of Biomedical Engineering  
PhD, Columbia University  
Biomechanics for local drug delivery: tissue regenerations specific to the knee joints and spine

**Matthew J. Silva (Orthopaedic Surgery)** (<http://www.orthoresearch.wustl.edu/content/Laboratories/2963/Matthew-Silva/Silva-Lab/Overview.aspx>)  
Julia and Walter R. Peterson Orthopaedic Research Professor  
PhD, Massachusetts Institute of Technology  
Biomechanics of age-related fractures and osteoporosis

**Larry A. Taber (BME)**  
Dennis and Barbara Kessler Professor of Biomedical Engineering  
PhD, Stanford University  
Biomechanics, mechanics of development

**Simon Tang (Orthopaedic Surgery, BME)** (<http://www.orthoresearch.wustl.edu/content/Laboratories/3043/Simon-Tang/Tang-Lab/Overview.aspx>)  
PhD, Rensselaer Polytechnic Institute  
Biological mechanisms

## Senior Professors

**Phillip L. Gould**  
PhD, Northwestern University  
Structural analysis and design, shell analysis and design, biomechanical engineering

**Kenneth L. Jerina**

DSc, Washington University  
Materials, design, solid mechanics, fatigue and fracture

**Salvatore P. Suter**

PhD, California Institute of Technology  
Viscous flow, biorheology

**Barna A. Szabo**

PhD, State University of New York–Buffalo  
Numerical simulation of mechanical systems, finite-element methods

## Lecturers

**Emily J. Boyd**

PhD, University of Texas at Austin  
Thermofluids

**J. Jackson Potter**

PhD, Georgia Institute of Technology  
Senior design

**H. Shaun Sellers**

PhD, Johns Hopkins University  
Mechanics and materials

**Louis G. Woodhams**

BS, University of Missouri-St. Louis  
Computer-aided design

## Senior Research Associate

**Ruth J. Okamoto**

DSc, Washington University  
Biomechanics, solid mechanics

## Research Assistant Professor

**Anupriya Agrawal**

PhD, Ohio State University  
Materials science

## Adjunct Instructors

**Ricardo L. Actis**

DSc, Washington University  
Finite element analysis, numerical simulation, aircraft structures

**Robert G. Becnel**

MS, Washington University  
FE Review

**John D. Biggs**

MEng, Washington University  
Thermal science

**Andrew W. Cary**

PhD, University of Michigan  
Computational fluid dynamics

**Dan E. Driemeyer**

PhD, University of Illinois  
Thermoscience

**Richard S. Dyer**

PhD, Washington University  
Propulsion, thermodynamics, fluids

**John M. Griffith**

BS, Washington University  
Manufacturing

**Hanford Gross**

BS, Washington University  
Engineering project management

**Jason Hawks**

MS, Washington University  
Structural analysis

**Richard R. Janis**

MS, Washington University  
Building environmental systems

**Rigoberto Perez**

PhD, Purdue University  
Fatigue and fracture

**Dale M. Pitt**

DSc, Washington University  
Aeroelasticity

**Gary D. Renieri**

PhD, Virginia Polytechnic Institute and State University  
Structural applications, composite materials

**Hiroshi Tada**

PhD, Lehigh University  
Solid mechanics

**Matthew J. Watkins**

MS, Washington University  
Finite elements

**Michael C. Wendl**

DSc, Washington University  
Mathematical theory and computational methods in biology and engineering

## Laboratory and Design Specialist

**Mary K. Malast**

DSc, Washington University  
Materials science

## Professor Emeritus

**Wallace B. Diboll Jr.**

MSME, Rensselaer Polytechnic Institute  
Dynamics, vibrations, engineering design

## Majors

Please refer to the sections below for information about the **Bachelor of Science in Mechanical Engineering** (p. 1017) and the **Bachelor of Science in Applied Science (Mechanical Engineering)** (p. 1017).

## Bachelor of Science in Mechanical Engineering

The Department of Mechanical Engineering & Materials Science offers a four-year curriculum leading to a professional baccalaureate degree, a Bachelor of Science in Mechanical Engineering (BSME). This degree is designed to prepare students for graduate school, a professional graduate program or industry. The program is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>). The BSME curriculum is structured around a basic core of 58 units and a complementary mechanical engineering program of at least 62 units to complete the degree requirement of a total of 120 units.

### Basic Core Courses

#### Humanities, Social Science and Writing

| Code  | Title             | Units |
|---|-------------------|-------|
| Humanities and social science (refer to SEAS degree requirements for details) |                   | 18    |
| Engr 310  | Technical Writing | 3     |
| Total Units   |                   | 21    |

#### Mathematics and Computation

| Code        | Title                                      | Units |
|-------------|--|-------|
| Math 132    | Calculus II                                | 3     |
| Math 233    | Calculus III                               | 3     |
| Math 217    | Differential Equations                     | 3     |
| ESE 318     | Engineering Mathematics A                  | 3     |
| ESE 319     | Engineering Mathematics B                  | 3     |
| ESE 326     | Probability and Statistics for Engineering | 3     |
| CSE 131     | Computer Science I                         | 3     |
| Total Units |  | 21    |

#### Physical Sciences

| Code                           | Title                            | Units |
|--------------------------------|----------------------------------|-------|
| Chem 111A                      | General Chemistry I              | 3     |
| Chem 151                       | General Chemistry Laboratory I   | 2     |
| Physics 117A<br>or Physics 197 | General Physics I<br>Physics I   | 4     |
| Physics 118A<br>or Physics 198 | General Physics II<br>Physics II | 4     |

Physical or Life Science (200-level or above natural science in Biology, Chemistry, Physics, Earth and Planetary Science, or Environmental Studies)

Total Units 16

#### Mechanical Engineering Courses

| Code                  | Title  | Units |
|-----------------------|--|-------|
| MEMS 202              | Computer-Aided Design                              | 3     |
| MEMS 205              | Mechanics and Materials Science Laboratory         | 2     |
| MEMS 253              | Engineering Mechanics I                            | 3     |
| MEMS 255              | Engineering Mechanics II                           | 3     |
| MEMS 301              | Thermodynamics                                     | 3     |
| MEMS 305              | Fluid Mechanics and Heat Transfer Laboratory       | 2     |
| MEMS 3110             | Machine Elements                                   | 3     |
| MEMS 3410             | Fluid Mechanics                                    | 3     |
| MEMS 3420             | Heat Transfer                                      | 3     |
| MEMS 350              | Engineering Mechanics III                          | 3     |
| MEMS 3610             | Materials Science                                  | 3     |
| MEMS 405              | Vibrations and Machine Elements Laboratory         | 2     |
| MEMS 411              | Mechanical Engineering Design Project              | 3     |
| MEMS 412              | Design of Thermal Systems                          | 3     |
| MEMS 4301             | Modeling, Simulation and Control                   | 3     |
| MEMS 4310             | Dynamics and Vibrations                            | 3     |
| ESE 230               | Introduction to Electrical and Electronic Circuits | 4     |
| MEMS senior electives |  | 9     |
| Other courses         |  | 4     |
| Total Units           |  | 62    |

#### Optional Courses:

| Code      | Title  | Units |
|-----------|--|-------|
| MEMS 1001 | Machine Shop Practicum                                       | 1     |
| MEMS 1003 | Mechanical Engineering Design and Build                      | 1     |
| MEMS 101  | Introduction to Mechanical Engineering and Mechanical Design | 2     |

## Bachelor of Science in Applied Science (Mechanical Engineering)

The Bachelor of Science in Applied Science (Mechanical Engineering) program provides substantive and consistent training in mechanical engineering with maximum flexibility. This program is advantageous if a student wishes to pursue a more flexible program than the accredited BSME degree program. It is especially suitable for a double major in combination

with mathematics, physics, chemistry, biology, economics or another engineering discipline. The program can be planned to provide a background for graduate work in biological, medical or management fields. The BS in Applied Science is a nonprofessional degree and is not accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

The degree requirements include the residency and general requirements of the university and the school. The Bachelor of Science in Applied Science (Mechanical Engineering) degree requirements are:

- Complete a total of at least 120 applicable units
- Complete a minimum of 60 units at Washington University
- Complete at least 42 units at the 300 level or higher
- Complete at least 48 units in mathematics, natural science and engineering
- Complete at least 30 units of mechanical engineering (MEMS) courses
- Satisfy the SEAS English composition requirement
- Satisfy the SEAS humanities and social science requirement
- Satisfy the residency requirement of 30 units of 200-level or higher engineering courses
- Earn at least a 2.0 cumulative GPA in all applicable courses taken at Washington University
- Earn at least a 2.0 cumulative GPA in engineering courses

## Minors

Please refer to the sections below for information about the minors in **aerospace engineering** (p. 1018), **energy engineering** (p. 1018), **environmental engineering science** (p. 1019), **materials science & engineering** (p. 1019), **nanoscale science & engineering** (p. 1020), **robotics** (p. 1020), **mechatronics** (p. 1021), and **mechanical engineering** (p. 1021).

## The Minor in Aerospace Engineering

Whether students are intent on a career in aviation, or simply enthusiastic about space and flight, a minor in aerospace engineering can satisfy their scientific curiosity, prepare them for a job, or uncover opportunities for technical contributions. The minor in aerospace engineering is available to all undergraduates but is most attractive to those pursuing a degree in mechanical engineering. The minor in aerospace engineering requires a minimum of 15 units of courses selected from the list below; it is possible to earn the minor without increasing the number of units (120) required for the BSME.

Aerospace engineering deals with the analysis, design and performance of flight vehicles such as transport and military aircraft, helicopters, missiles and launch vehicles, and spacecraft. Students learn about aerospace engineering by taking courses in aerodynamics, aircraft flight dynamics

and control, aerospace propulsion, aerospace structures and aerospace vehicle design. Students also may have the opportunity to gain experience in aerospace engineering design through collaborative programs with local companies such as Boeing. Aerospace engineers from industry teach courses as adjunct instructors at Washington University, and many Washington University regular faculty members have extensive aerospace industry experience.

**Units required: 15**

**Required courses:**

| Code        | Title                            | Units |
|-------------|----------------------------------|-------|
| MEMS 4301   | Modeling, Simulation and Control | 3     |
| or ESE 441  | Control Systems                  |       |
| MEMS 5700   | Aerodynamics                     | 3     |
| Total Units |                                  | 6     |

**Core courses: (3-6 units)**

| Code      | Title                | Units |
|-----------|----------------------|-------|
| MEMS 5701 | Aerospace Propulsion | 3     |
| MEMS 5704 | Aircraft Structures  | 3     |

**Electives: (3-6 units)**

Any course from the aerospace MS concentration list (<https://mems.wustl.edu/graduate/programs/Pages/MS-In-Aerospace-Engineering.aspx>) (found on the MS in Aerospace Engineering webpage) can be used as an aerospace minor elective.

To find out more about this minor, contact the department chair or the adviser for the minor in aerospace engineering or visit the minor webpage (<http://mems.wustl.edu/undergraduate/programs/Pages/minors.aspx#aerospace>).

## The Minor in Energy Engineering

This minor will provide students with course work that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor covers classes in several fields of science and engineering, encompassing the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science. A minor in energy engineering requires the completion of 18 units. It is open to undergraduate students pursuing an engineering major, students from the sciences (biology, chemistry, physics) in Arts & Sciences, and students pursuing the environmental studies major. The detailed requirements for the minor can be found on the minor in energy engineering (p. 1002) section of this *Bulletin*. Questions regarding the minor should be directed to a member of the committee for the energy engineering minor: Professor Pratim Biswas (<https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx>) (EECE), Professor Hiro Mukai (<https://engineering.wustl.edu/Profiles/Pages/Hiro-Mukai.aspx>)

(ESE) or Professor David Peters (<https://engineering.wustl.edu/Profiles/Pages/David-Peters.aspx>) (MEMS).

## The Minor in Environmental Engineering Science

The minor in environmental engineering science may be earned by students receiving any of the Bachelor of Science degrees offered by the School of Engineering & Applied Science or the Environmental Studies degree or the Earth and Planetary Sciences degree offered by the College of Arts & Sciences. The 21-22 unit program prepares a graduate to seek an entry-level position as an environmental engineer, scientist or analyst. The minor also provides a solid foundation for undertaking graduate study in environmental engineering. The detailed requirements for the minor can be found on the minor in environmental engineering science (p. 1002) section of this *Bulletin*. Questions regarding the minor should be directed to a member of the committee for the environmental engineering minor: Professor Pratim Biswas (<https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx>) (EECE) or Professor Jay Turner (<https://engineering.wustl.edu/Profiles/Pages/Jay-Turner.aspx>) (EECE).

## The Minor in Materials Science & Engineering

Materials science and engineering (MSE) is an interdisciplinary field that applies the fundamental knowledge of the physical sciences to create engineering innovations. In general, "engineering" implies actively designing a system for a given application; MSE enables the design of systems from the atoms up. MSE focuses on the interrelationship between a materials structure, from the subatomic- to the macro-scale, and the properties or behaviors that the material exhibits. Materials synthesis and processing techniques enable engineers to control and change the material structure in order to obtain the desired properties. Understanding the structure-properties-processing relationship requires a fundamental understanding of the underlying chemistry and physics, and is key to obtaining materials with the desired performance for engineering applications in a wide variety of fields, from computing to medicine to energy.

The minor in MSE builds upon the fundamental insights into material structure and properties gained through required introductory courses in chemistry and materials science. Students then select at least two courses from specialization "pick lists" to gain depth in a particular application area. A free elective provides the opportunity to gain additional depth in the fundamentals or exposure to another application area.

Students will be approved for the minor after discussing appropriate course selection with the adviser for the minor. Some courses have prerequisites.

### Requirements for the minor in MSE:

Units required: 17

| Courses                                    | Units     |
|--|-----------|
| 3 required courses                         | 8         |
| 2 courses from specialization "pick lists" | 6         |
| 1 free elective                            | 3         |
| <b>Total</b>                               | <b>17</b> |

### Required courses:<sup>1</sup>

| Code                     | Title                          | Units    |
|--------------------------|--------------------------------|----------|
| Chem 111A                | General Chemistry I            | 3        |
| Chem 151                 | General Chemistry Laboratory I | 2        |
| MEMS 3610<br>or EECE 305 | Materials Science              | 3        |
| <b>Total Units</b>       |                                | <b>8</b> |

<sup>1</sup>Students majoring in geology, geophysics, geochemistry, or environmental earth science may substitute EPSc 352 Earth Materials, for the required combination of Chem 111A and Chem 151. In this case, EPSc 352 may not be used to fulfill the specialization pick list or free elective requirements.

### Specialization "pick lists":

Students should select at least 2 courses from any one of the following categories.

#### Structural Materials:

| Code                   | Title   | Units |
|------------------------|---|-------|
| MEMS 3601              | Materials Engineering   | 3     |
| MEMS 5506              | Experimental Methods in Solid Mechanics                         | 3     |
| MEMS 5507              | Fatigue and Fracture Analysis                                   | 3     |
| MEMS 5560/<br>BME 4904 | Interfaces and Attachments in Natural and Engineered Structures | 3     |
| MEMS 5601              | Mechanical Behavior of Materials                                | 3     |
| MEMS 5602              | Non-metallics   | 3     |
| MEMS 5605              | Mechanical Behavior of Composites                               | 3     |

#### Electronic/Optical Materials:

| Code      | Title   | Units |
|-----------|---|-------|
| Chem 542  | Special Topics in Inorganic Chemistry (The Chemistry of Energy Storage) | 3     |
| Chem 543  | Physical Properties of Quantum Nanostructures                           | 3     |
| ESE 336   | Principles of Electronic Devices  | 3     |
| ESE 531   | Nano and Micro Photonics  | 3     |
| ESE 536   | Introduction to Quantum Optics  | 3     |
| MEMS 463  | Nanotechnology Concepts and Applications                                | 3     |
| MEMS 5609 | Electronic Materials Processing   | 3     |

|                                     |   |   |
|-------------------------------------|---|---|
| MEMS 5611/<br>CSE 506M/<br>EECE 595 | Principles and Methods of Micro and Nanofabrication | 3 |
| Physics 472                         | Solid State Physics                                 | 3 |

*Biomaterials/Soft Materials:*

| Code                   | Title   | Units |
|------------------------|---|-------|
| BME 461                | Protein Structure and Dynamics                                  | 3     |
| BME 523                | Biomaterials Science  | 3     |
| EECE 596               | Computational Chemistry of Molecular and Nanoscale Systems      | 3     |
| MEMS 5560/<br>BME 4904 | Interfaces and Attachments in Natural and Engineered Structures | 3     |
| MEMS 5606              | Soft Nanomaterials  | 3     |
| MEMS 5607              | Introduction to Polymer Blends and Composites                   | 3     |
| MEMS 5608              | Introduction to Polymer Science and Engineering                 | 3     |

*Materials for Energy and Environmental Technologies:*

| Code     | Title   | Units |
|----------|---|-------|
| Chem 542 | Special Topics in Inorganic Chemistry (The Chemistry of Energy Storage) | 3     |
| EECE 504 | Aerosol Science and Technology  | 3     |
| EECE 505 | Aquatic Chemistry   | 3     |
| EECE 571 | Industrial and Environmental Catalysis                                  | 3     |

*Natural Materials:*

| Code     | Title                                  | Units |
|----------|--|-------|
| EPSc 336 | Minerals and Rocks in the Environment  | 3     |
| EPSc 352 | Earth Materials                        | 5     |
| EECE 571 | Industrial and Environmental Catalysis | 3     |

**Free electives:**

To complete the minor, students may select one additional course from the categories above, or from the list of courses below.

| Code      | Title                                     | Units |
|-----------|---|-------|
| Chem 465  | Solid-State and Materials Chemistry       | 3     |
| EECE 418  | Principles of Surface and Colloid Science | 3     |
| EECE 420  | Properties of Materials                   | 3     |
| MEMS 4101 | Manufacturing Processes                   | 3     |
| MEMS 5102 | Materials Selection in Design             | 3     |
| MEMS 5603 | Materials Characterization Techniques I   | 3     |
| MEMS 5604 | Materials Characterization Techniques II  | 3     |

|             |  |   |
|-------------|--|---|
| MEMS 5610   | Quantitative Materials Science and Engineering | 3 |
| MEMS 5612   | Atomistic Modeling of Materials                | 3 |
| MEMS 5801   | Micro-Electro-Mechanical Systems I             | 3 |
| Physics 217 | Introduction to Quantum Physics                | 3 |
| Physics 318 | Introduction to Quantum Physics II             | 3 |
| Physics 537 | Kinetics of Materials                          | 3 |

For more information contact the adviser for the minor in materials science and engineering: Prof. Katharine Flores (MEMS), floresk@wustl.edu.

## The Minor in Nanoscale Science & Engineering

Nanotechnology deals with materials, structures or devices, one of whose dimensions are in the 1 to 100 nm length scale. These entities have properties (physical, chemical or biological) that are very different from their bulk counterparts and can be tuned to obtain novel and desired functionalities. The goal of this minor is to enhance the background, knowledge and skills in the topical area of nanotechnology. The minor covers classes in several fields of science and engineering, encompassing all the departments in the School of Engineering & Applied Science and several in the School of Arts & Sciences. It is open to any undergraduate student pursuing an Engineering or Arts & Sciences (chemistry, physics, biology, environmental studies) major. The departments of Mechanical Engineering & Materials Science; Energy, Environmental & Chemical Engineering; and Electrical & Systems Engineering sponsor the minor.

For more information and requirements, contact a member of the Committee to Oversee the Nanoscale Science Minor: Rohan Mishra (<https://mems.wustl.edu/faculty/Pages/default.aspx?bio=106>) (MEMS, Coordinator), Pratim Biswas (<https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx>) (EECE), Jung-Tsung Shen (<https://ese.wustl.edu/faculty/Pages/default.aspx?bio=79>) (ESE), or visit the minor in nanoscale science (p. 1002) section of this *Bulletin*.

## The Minor in Robotics

Robotic systems have wide applications in modern technology and manufacturing. Robots can vary in complexity and use, from microrobots for surgical procedures to moderate-size robots common in manufacturing and undersea exploration to macrorobots used for disposal of nuclear wastes and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in design and use of robots.

**Units required:** 18

**Prerequisites:**

| Code           | Title                  | Units |
|----------------|------------------------|-------|
| Math 217       | Differential Equations | 3     |
| Physics 117A   | General Physics I      | 4     |
| or Physics 197 | Physics I              |       |
| Physics 118A   | General Physics II     | 4     |
| or Physics 198 | Physics II             |       |
| CSE 131        | Computer Science I     | 3     |

**Required courses:**

| Code         | Title                          | Units |
|--------------|--------------------------------|-------|
| MEMS 255     | Engineering Mechanics II       | 3     |
| ESE 351      | Signals and Systems            | 3     |
| or MEMS 4310 | Dynamics and Vibrations        |       |
| ESE 446      | Robotics: Dynamics and Control | 3     |
| ESE 447      | Robotics Laboratory            | 3     |
| Total Units  |                                | 12    |

Plus two courses chosen with the approval of the director of the program for a minor in robotics. Suggested courses are:

| Code         | Title   | Units |
|--------------|---|-------|
| CSE 417T     | Introduction to Machine Learning                  | 3     |
| CSE 452A     | Computer Graphics                                 | 3     |
| CSE 546T     | Computational Geometry                            | 3     |
| ESE 407      | Analysis and Simulation of Discrete Event Systems | 3     |
| ESE 435      | Electrical Energy Laboratory                      | 3     |
| ESE 441      | Control Systems                                   | 3     |
| or MEMS 4301 | Modeling, Simulation and Control                  |       |
| MEMS 3110    | Machine Elements                                  | 3     |

To find out more about this minor, contact the director (Heinz Schaettler (<https://engineering.wustl.edu/Profiles/Pages/Heinz-Schaettler.aspx>)) of the program.

## The Minor in Mechatronics (ESE)

(Program Director: Heinz Schaettler)

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role for "smart" systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical

parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

**Four required courses:**

| Code        | Title  | Units |
|-------------|--|-------|
| MEMS 255    | Engineering Mechanics II (Dynamics)                          | 3     |
| MEMS 411    | Mechanical Engineering Design Project (Mechatronics project) | 3     |
| ESE 444     | Sensors and Actuators  | 3     |
| ESE 446     | Robotics: Dynamics and Control                               | 3     |
| Total Units |  | 12    |

**Two electives from the following:**

| Code       | Title                                      | Units |
|------------|--|-------|
| MEMS 4301  | Modeling, Simulation and Control           | 3     |
| or ESE 441 | Control Systems                            |       |
| MEMS 4310  | Dynamics and Vibrations                    | 3     |
| MEMS 5101  | Analysis and Design of Fluid-Power Systems | 3     |
| ESE 337    | Electronic Devices and Circuits            | 3     |
| ESE 482    | Digital Signal Processing                  | 3     |
| CSE 467S   | Embedded Computing Systems                 | 3     |

**Prerequisite:**

Basic programming course: CSE 131 Computer Science I

Visit the ESE website (<http://ese.wustl.edu>) for more information.

## The Minor in Mechanical Engineering

The minor in mechanical engineering complements studies in a field related to mechanical engineering, such as biomedical engineering, electrical engineering, physics, chemistry or architecture. The minor is intended to provide students with a credential that could enhance their opportunities for employment or graduate study. Completion of the minor demonstrates that the student has pursued a structured program approved by the faculty of the Department of Mechanical Engineering & Materials Science.

Students pursuing the minor in mechanical engineering must complete a total of 18 units of course work as described below. Courses selected for the minor program may count toward

program requirements of the student's major. The subjects selected for a minor in mechanical engineering are expected to constitute a coherent program within the field of mechanical engineering. Courses taken under the pass/fail grading option cannot be used for a minor program.

**Required courses:**

| Code           | Title                     | Units |
|----------------|---------------------------|-------|
| MEMS 253       | Engineering Mechanics I   | 3     |
| or BME 240     | Biomechanics              |       |
| MEMS 255       | Engineering Mechanics II  | 3     |
| or Physics 411 | Mechanics                 |       |
| MEMS 350       | Engineering Mechanics III | 3     |
| Total Units    |                           | 9     |

**Three electives from the following:**

| Code        | Title                         | Units |
|-------------|-------------------------------|-------|
| MEMS 301    | Thermodynamics                | 3     |
| or EECE 203 | Thermodynamics I in EECE      |       |
| or BME 320B | Bioengineering Thermodynamics |       |
| MEMS 3110   | Machine Elements              | 3     |
| MEMS 3410   | Fluid Mechanics               | 3     |
| MEMS 3610   | Materials Science             | 3     |
| MEMS 4310   | Dynamics and Vibrations       | 3     |

To find out more about this minor, contact the department chair or the adviser for the minor in mechanical engineering or visit the minor webpage (<http://mems.wustl.edu/undergraduate/programs/Pages/minors.aspx#mechanical>).

## Courses

Visit online course listings to view semester offerings for E37 MEMS (<https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E37&crslvl=1:5>).

---

### E37 MEMS 1001 Machine Shop Practicum

Operation of basic machine tools including: lathe, drill press, grinder and mill. Machine tool use and safety are covered. Student shop privilege requires completion of this practicum. Credit 1 unit. EN: TU

---

### E37 MEMS 1003 Mechanical Engineering Design and Build

The course provides an introduction to design and fabrication. Students formulate designs, build prototypes and compete in engineering exploration-based creative design projects. Emphasis is placed on producing working hardware and prototypes in response to design needs. Specialized learning modules focus on the knowledge required to complete projects, such as introductory topics in shop skills, machine elements, electronics, design, visualization and communication. Enrollment limited to engineering freshmen. Credit 1 unit.

---

### E37 MEMS 101 Introduction to Mechanical Engineering and Mechanical Design

Mechanical engineers face new challenges in the areas of energy, materials and systems. This course introduces students to these areas through team-based, hands-on projects that emphasize engineering design, analysis and measurement skills. The course is strongly recommended for mechanical engineering majors. Students from other disciplines are welcome and encouraged to enroll. Credit 2 units. EN: TU

---

### E37 MEMS 103 Computer-Aided Design — AutoCAD

AutoCAD is the most used two-dimensional drawing software for architectural and engineering production drawings. Introduction to AutoCAD, title blocks, drawing setup, absolute and relative coordinates, drawing entities, layouts, drafting geometry, dimensioning, plotting drawings to scale, sectional and other special views, isometric pictorial views. Class work involves typical drawings from industry. Credit 1 unit. EN: TU

---

### E37 MEMS 202 Computer-Aided Design

An introduction to computer-aided engineering design in the context of mechanical and structural engineering. Students learn the fundamentals of spatial reasoning and graphical representation. Freehand sketching skills, including pictorial and orthographic views, are applied to the design process. Computer modeling techniques provide accuracy, analysis, and visualization tools necessary for the design of structures, devices and machines. Topics include: detailing design for production, fasteners, dimensioning, tolerancing, creation of part and assembly drawings, computer-aided design, analysis and optimization of parts and assemblies; solid modeling of complex surfaces, assembly modeling, assembly constraints, and interference checking. Credit 3 units. EN: TU

---

### E37 MEMS 203 Advanced CAD

Computer-aided design, analysis and optimization of parts and assemblies; solid modeling of complex surfaces, creation of detail drawings, dimensioning and tolerancing; assembly modeling, assembly constraints, interference checking; motion constraints, force and acceleration analysis, thermal analysis; part optimization for weight, strength and thermal characteristics using Solidworks software. Prerequisite: MEMS 202 or equivalent. Credit 3 units. EN: TU

---

### E37 MEMS 205 Mechanics and Materials Science Laboratory

Laboratory experiments and exercises focusing on mechanical properties of engineering materials; metallography; heat treatment; beam deflection; stress and strain measurement; properties and structure of engineering materials; calibration and use of instrumentation; acquisition, processing and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data. Prerequisite: MEMS 253. Corequisite: MEMS 3610. Credit 2 units. EN: TU

---

### E37 MEMS 253 Engineering Mechanics I

Principles of statics, solid mechanics, force systems and equilibrium. Equivalent systems of forces and distributed forces.

Applications to trusses, frames, machines, beams and cables. Mechanics of deformable solids and indeterminate problems. Stress, strain, deflection, yield and fracture in beams, columns and torsion members. Prerequisite: Physics 197 or 117A. Corequisite: Math 217. Credit 3 units. EN: TU

---

### E37 MEMS 255 Engineering Mechanics II

Review of vector algebra and calculus. Kinematics of a particle. Newton's laws and the kinetics of a particle. Work and energy. Impulse and momentum. Kinematics of rigid bodies. General theorems for systems of particles. Kinetics of rigid bodies. The inertia tensor. Computer problems form a significant part of the class. Corequisite: Math 217. Credit 3 units. EN: TU

---

### E37 MEMS 301 Thermodynamics

This course of classical thermodynamics is oriented toward mechanical engineering applications. It includes properties and states of a substance, processes, cycles, work, heat and energy. Steady-state and transient analyses utilize the First and Second Laws of Thermodynamics for closed systems and control volumes, as well as the concept of exergy. Prerequisites: Chem 111A, Math 132, Physics 197 or 117A. Credit 3 units. EN: TU

---

### E37 MEMS 305 Fluid Mechanics and Heat Transfer Laboratory

Laboratory experiments and exercises focusing on fluid properties, flow phenomena, thermal science and heat transfer phenomena; calibration and use of instrumentation; acquisition, processing and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data. Prerequisite: MEMS 3410. Corequisite: MEMS 3420. Credit 2 units. EN: TU

---

### E37 MEMS 3110 Machine Elements

Overview of the steps in the engineering design process and an introduction to several classes of machine elements such as bearings, gears, belts, brakes and springs. Underlying analytical models of the machine elements are presented along with guidelines about designing and choosing such elements for practical applications. A case study of the steps of the design process as well as the rationale for choosing particular machine elements is discussed. Corequisites: MEMS 253 and MEMS 3610. Credit 3 units. EN: TU

---

### E37 MEMS 3410 Fluid Mechanics

Fundamental concepts of fluids as continua. Topics include: viscosity, flow fields, velocity, vorticity, streamlines, fluid statics, hydrostatic forces, manometers, conservation of mass and momentum, incompressible inviscid flow, dimensional analysis and similitude, flow in pipes and ducts, flow measurement, boundary-layer concepts, flow in open channels. Corequisite: MEMS 255. Prerequisites: Math 233 and Math 217. Credit 3 units. EN: TU

---

### E37 MEMS 3420 Heat Transfer

Introductory treatment of the principles of heat transfer by conduction, convection or radiation; analysis of steady and

unsteady conduction with numerical solution methods; analytical and semi-empirical methods of forced and natural convection; boiling and condensation heat transfer; and radiation heat transfer. Prerequisites: MEMS 3410 and 301, ESE 318 and ESE 319.

Credit 3 units. EN: TU

---

### E37 MEMS 350 Engineering Mechanics III

A continuation of MEMS 253 containing selected topics in the mechanics of deformable solids, presented at an intermediate level between introductory strength of materials and advanced continuum mechanics. Lectures discuss elastic and elastoplastic response, failure criteria, composites, beams and structural stability, as well as an introduction of the tensorial formulation of stress and strain and the governing equations of 3-D linear elasticity. Mathematical methods from calculus, linear algebra and linear differential equations are used. Computer problems form a significant part of the class. MEMS 255 not required. Prerequisite: MEMS 253. Corequisite: ESE 318. Credit 3 units. EN: TU

---

### E37 MEMS 3601 Materials Engineering

The application of fundamental materials science principles in engineering disciplines. Topics include: design of new materials having unique property combinations, selection of materials for use in specific service environment, prediction of materials performance under service conditions, development of processes to produce materials with improved properties, structural and functional use of metals, polymers, ceramics and composites. Credit 3 units. EN: TU

---

### E37 MEMS 3610 Materials Science

Introduction to properties, chemistry and physics of engineering materials; conduction, semiconductors, crystalline structures, imperfections, phase diagrams, kinetics, mechanical properties, ceramics, polymers, corrosion, magnetic materials, and thin films; relationship of atomic and molecular structure to physical and chemical properties; selection of materials for engineering applications; relationships between physical properties, chemical properties and performance of engineering materials. Prerequisites: Chem 111A and 151. Credit 3 units. EN: TU

---

### E37 MEMS 400 Independent Study

Independent investigation on topic of special interest. Prerequisites: junior or senior standing and permission of department chair. Students must complete the Independent Study Approval form available in the department office. Credit variable, maximum 6 units.

---

### E37 MEMS 4001 Fundamentals of Engineering Review

A review and preparation of the most recent NCEES Fundamentals of Engineering (FE) Exam specifications is offered in a classroom setting. Exam strategies will be illustrated using examples. The main topics for the review include: engineering mathematics, statics, dynamics, thermodynamics, heat transfer, mechanical design and analysis, material science and engineering economics. A discussion of the importance and responsibilities of professional engineering licensure along with ethics will be included. Credit 1 unit.

---

**E37 MEMS 405 Vibrations and Machine Elements Laboratory**

Laboratory experiments and exercises focusing on vibration of mechanical systems; kinematic response, dynamic response and design of mechanisms and machine components; displacements, velocities and accelerations in mechanical systems and components; response to static and dynamic forces; transient and steady state response; design of mechanical components for power transmission; calibration and use of instrumentation; acquisition, processing and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports and presentation of data. Prerequisite: MEMS 3110. Corequisite: MEMS 4310.

Credit 2 units. EN: TU

---

**E37 MEMS 4101 Manufacturing Processes**

Manufacturing processes and machinery are explained and described. Topics include: analytical tools of machine science, heat transfer, vibrations and control theory are applied to the solution of manufacturing problems, analytical development and application of engineering theory to manufacturing problems, machine tools and automated production equipment.

Credit 3 units. EN: TU

---

**E37 MEMS 411 Mechanical Engineering Design Project**

Simulating an integrated product team (IPT) experience, student teams will complete a conceptual design study, select a design project, procure parts, build a prototype, track cost and schedule, and manage project risk. Projects will have multiple design constraints including cost, codes, standards, environmental, ethical, and societal constraints. SolidWorks CAD and SolidWorks simulation-based engineering analysis will support design and prototype activities. Student teams will publish a project report through WUSTL library's open scholarship repository. Lectures have an active learning format of outside reading assignments, guest speakers, group discussion, and design reviews. Prerequisite: MEMS 3110.

Credit 3 units. EN: TU

---

**E37 MEMS 412 Design of Thermal Systems**

Analysis and design of advanced thermo-fluid systems. Student teams participate in the design process which could involve research, design synthesis, codes, standards, engineering economics, a design project report, and formal presentations. Topics include thermo-fluid systems and components such as: power, heating and refrigeration systems; pumps, fans, compressors, combustors, turbines, nozzles, coils, heat exchangers and piping. Prerequisite: MEMS 301 Thermodynamics.

Credit 3 units. EN: TU

---

**E37 MEMS 424 Introduction to Finite Element Methods in Structural Analysis**

Application of finite element methods to beams, frames, trusses and other structural components. Modeling techniques for different types of structural engineering problems. Topics in stress analysis, applied loads, boundary conditions, deflections and internal loads, matrix methods, energy concepts, structural mechanics and the development of finite element modeling methods. Prerequisites: MEMS 253, MEMS 350 and ESE 318.

Credit 3 units. EN: TU

---

**E37 MEMS 4301 Modeling, Simulation and Control**

Introduction to simulation and control concepts. Topics include: block diagram representation of single- and multiloop systems; control system components; transient and steady-state performance; stability analysis; Nyquist, Bode and root locus diagrams; compensation using lead, lag and lead-lag networks; design synthesis by Bode plots and root-locus diagrams; state-variable techniques; state-transition matrix; state-variable feedback. Prerequisites: MEMS 255, ESE 318 and ESE 319.

Credit 3 units. EN: TU

---

**E37 MEMS 4310 Dynamics and Vibrations**

Introduction to the analysis of vibrations in single- and multidegree of freedom systems; free and forced vibration of multidegree of freedom and distributed parameter mechanical systems and structures; methods of Laplace transform; complex harmonic balance; matrix formulation; Fourier series; and transient response of continuous systems by partial differential equations. Prerequisites: MEMS 255, ESE 318 and ESE 319.

Credit 3 units. EN: TU

---

**E37 MEMS 4401 Combustion and Environment**

Introduction to combustion and its application in devices. Topics include: chemical thermodynamics and kinetics; ignition and explosion; deflagration and detonation waves; transport phenomena and the governing equations for heat and mass transfer in chemically reacting flows; laminar and turbulent flame propagation; non-premixed flames; the emission of combustion-generated pollutants and subsequent interaction with the environment; toxic-waste incineration; and practical combustion devices. Prerequisites: MEMS 301, MEMS 342 or equivalent.

Credit 3 units. EN: TU

---

**E37 MEMS 463 Nanotechnology Concepts and Applications**

The aim of this course is to introduce to students the general meaning, terminology and ideas behind nanotechnology and its potential application in various industries. The topics covered include nanoparticles — properties, synthesis and applications, carbon nanotubes — properties, synthesis and applications, ordered and disordered nanostructured materials and their applications, quantum wells, wires and dots, catalysis and self-assembly, polymers and biological materials, nanoelectronics and nanophotonics, nanomanufacturing and functional nanodevices, health effects and nanotoxicity, etc. Prerequisite: none. Students with a background in general physics, chemistry and biology should be able to comprehend the material.

Credit 3 units.

---

**E37 MEMS 500 Independent Study**

Independent investigation on topic of special interest. Prerequisites: graduate standing and permission of the department chair. Students must complete the Independent Study Approval Form available in the department office.

Credit variable, maximum 6 units.

---

**E37 MEMS 5001 Optimization Methods in Engineering**

Analytical methods in design. Topics include: mathematical methods; linear and nonlinear programming; optimality criteria; fully stressed techniques for the design of structures and machine components; topological optimization; search techniques; and genetic algorithms. Prerequisites: calculus and computer programming.

Credit 3 units. EN: TU

---

---

### E37 MEMS 501 Graduate Seminar

This is a required pass/fail course for master's and doctoral degrees. A passing grade is required for each semester of full-time enrollment. A passing grade is received by attendance at the weekly seminars.

---

### E37 MEMS 5101 Analysis and Design of Fluid-Power Systems

Design of hydraulic and pneumatic control and power systems using advanced concepts and analytical tools. Topics include: analysis of fluid flow through orifices and between parallel and inclined planes, theory of spool and flapper valves, feasibility, synthesis, analysis and applications of fluid systems, configuration of pumps, motors, fluid lines and valves, accumulators and storage devices, integration of components into systems, power systems, servo-systems, hydrostatic transmissions, performance diagrams using MATLAB and Simulink, design and analysis of fluid power systems.

Credit 3 units. EN: TU

---

### E37 MEMS 5102 Materials Selection in Design

Analysis of the scientific bases of material behavior in the light of research contributions of the past 20 years. Development of a rational approach to the selection of materials to meet a wide range of design requirements for conventional and advanced applications. Although emphasis is placed on mechanical properties, acoustical, optical, thermal and other properties of interest in design are discussed.

Credit 3 units. EN: TU

---

### E37 MEMS 5104 CAE-Driven Mechanical Design

An introduction to the use of computer-aided engineering (CAE) tools in the mechanical design process. Topics include: integrating engineering analysis throughout the process; multidisciplinary optimization; and computer-aided design directed toward new manufacturing processes. Students will work with commercial and research software systems to complete several projects. Students should have experience and familiarity with a CAD tool, optimization and the finite element method. Prerequisite: MEMS 202 Computer-Aided Design or equivalent.

Credit 3 units. EN: TU

---

### E37 MEMS 5301 Nonlinear Vibrations

In this course, students are introduced to concepts in nonlinear dynamics and vibration and application of these concepts to nonlinear engineering problems. Specific topics include: modeling of lumped and continuous nonlinear systems (strings, beams and plates); vibrations of buckled structures; perturbation and other approximate analytical methods; the use and limitations of local linearization; properties of nonlinear behavior, such as dimension and Lyapunov exponents; stability of limit cycles; bifurcations; chaos and chaotic vibrations; experimental methods and data analysis for nonlinear systems. Concepts are reinforced with a number of examples from recently published research. Applications include aeroelastic flutter, impact dynamics, machine-tool vibrations, cardiac arrhythmias and control of chaotic behavior.

Credit 3 units. EN: TU

---

### E37 MEMS 5302 Theory of Vibrations

Analytical methods in vibrations. Topics include: Duhamel's integral, Laplace and Fourier transforms and Fourier series with applications to transient response, forced response and vibration isolation; Lagrange's equations for linear systems, discrete systems, degrees of freedom, reducible coordinates, holonomic constraints and virtual work; matrix methods and state variable approach with applications to frequencies and modes, stability and dynamic response in terms of real and complex modal expansions, dynamic response of continuous systems by theory of partial differential equations, Rayleigh-Ritz and Galerkin energy methods, finite difference and finite element algorithms.

Credit 3 units. EN: TU

---

### E37 MEMS 5401 General Thermodynamics

General foundations of thermodynamics valid for small and large systems, and for equilibrium and nonequilibrium states. Topics include: definitions of state, work, energy, entropy, temperature, heat interaction and energy interaction. Applications to simple systems; phase rule; perfect and semi-perfect gas; bulk-flow systems; combustion, energy and entropy balances; availability analysis for thermo-mechanical power generation; and innovative energy-conversion schemes. Prerequisite: graduate standing or permission of instructor.

Credit 3 units. EN: TU

---

### E37 MEMS 5402 Radiation Heat Transfer

Formulation of the governing equations of radiation heat transfer. Topics include: electromagnetic theory of radiation; properties of ideal and real surfaces; techniques for solutions of heat transfer between gray surfaces; radiation in absorbing, emitting and scattering media.

Credit 3 units. EN: TU

---

### E37 MEMS 5403 Conduction and Convection Heat Transfer

This course examines heat conduction and convection through various fundamental problems that are constructed from the traditional conservation laws for mass, momentum and energy. Problems include the variable-area fin, the unsteady Dirichlet, Robbins and Rayleigh problems, multidimensional steady conduction, the Couette flow problem, duct convection and boundary layer convection. Though some numerics are discussed, emphasis is on mathematical technique and includes the extended power series method, similarity reduction, separation of variables, integral transforms, and approximate integral methods.

Credit 3 units. EN: TU

---

### E37 MEMS 5404 Combustion Phenomena

Introduction to fundamental aspects of combustion phenomena including relevant thermochemistry, fluid mechanics, and transport processes. Emphasis is on elucidation of the physico-chemical processes, problem formulation, and analytical techniques. Topics covered include ignition, extinction, diffusion flames, particle combustion, deflagrations and detonations. Prerequisites: graduate standing or permission of instructor. (Prior to FL2015, this course was numbered: E33 5404.)

Same as E44 EECE 512

Credit 3 units. EN: TU

---

**E37 MEMS 5410 Fluid Dynamics I**

Formulation of the basic concepts and equations governing a Newtonian, viscous, conducting, compressible fluid. Topics include: transport coefficients and the elements of kinetic theory of gases, vorticity, incompressible potential flow; singular solutions; flow over bodies and lifting surfaces; similarity method; viscous flow, boundary layer, low Reynolds number flows, laminar and turbulent flows.

Credit 3 units. EN: TU

---

**E37 MEMS 5411 Fluid Dynamics II**

Governing equations and thermodynamics relations for compressible flow. Topics include: kinetic theory of gases; steady, one-dimensional flows with friction and heat transfer; shock waves; Rankine-Hugoniot relations; oblique shocks; reflections from walls and flow interfaces, expansion waves, Prandtl-Meyer flow, flow in nozzles, diffusers and inlets, two- and three dimensional flows; perturbation methods; similarity rules; compressible laminar and turbulent boundary layers; acoustic phenomena. Emphasis is relevant to air vehicles.

Credit 3 units. EN: TU

---

**E37 MEMS 5412 Computational Fluid Dynamics**

Computational fluid dynamics relevant to engineering analysis and design. Topics include: fundamentals of finite-difference, finite-volume and finite-element methods; numerical algorithms for parabolic, elliptic and hyperbolic equations; convergence, stability and consistency of numerical algorithms; application of numerical algorithms to selected model equations relevant to fluid flow, grid-generation techniques and convergence acceleration schemes. Prerequisite: senior or graduate standing or permission of the instructor.

Credit 3 units. EN: TU

---

**E37 MEMS 5413 Advanced Computational Fluid Dynamics**

Scope and impact of computational fluid dynamics. Governing equations of fluid mechanics and heat transfer. Three-dimensional grid-generation methods based on differential systems. Numerical methods for Euler and compressible Navier-Stokes equation. Numerical methods for incompressible Navier-Stokes equations. Computation of transonic inviscid and viscous flow past airfoils and wings. Analogy between the equations of computational fluid dynamics, computational electromagnetics, computational aeroacoustics and other equations of computational physics. Non-aerospace applications — bio-fluid mechanics, fluid mechanics of buildings, wind and water turbines, and other energy and environment applications. Prerequisite: MEMS 5412 or permission of the instructor.

Credit 3 units. EN: TU

---

**E37 MEMS 5414 Aeroelasticity and Flow-Induced Vibrations**

This course deals with the interactions between aerodynamics, dynamics and structures in aerospace systems. Topics covered include unsteady aerodynamics, finite-state aerodynamic models, classical fixed-wing flutter, rotary-wing aeroelasticity and experimental methods in aeroelasticity. Emphasis is given to the prediction of flutter and limit cycles in aeroelastic systems.

Credit 3 units.

---

**E37 MEMS 5416 Turbulence**

Hydrodynamic instabilities and the origin of turbulence. Mixing length and vorticity transport theories. Statistical theories of turbulence. Phenomenological considerations of turbulence

growth, amplification and damping, turbulent boundary layer behavior, and internal turbulent flow. Turbulent jets and wakes. Credit 3 units. EN: TU

---

**E37 MEMS 5420 HVAC Analysis and Design I**

Fundamentals of heating, ventilating, and air conditioning — moist air properties, the psychrometric chart, classic moist air processes, design procedures for heating and cooling systems. Design of HVAC systems for indoor environmental comfort, health, and energy efficiency. Heat transfer processes in buildings. Development and application of techniques for analysis of heating and cooling loads in buildings, including the use of commercial software. Course special topics can include LEED rating and certification, cleanrooms, aviation, aerospace, and naval applications, ventilation loads, animal control facilities, building automation control, and on-site campus tours of state-of-the-art building energy and environmental systems.

Credit 3 units. EN: TU

---

**E37 MEMS 5421 HVAC Analysis and Design II**

Fundamentals of heating, ventilating, and air conditioning — energy analysis and building simulation, design procedures for building water piping systems, centrifugal pump performance, design of building air duct systems, fan performance, optimum space air diffuser design for comfort, analysis of humidification and dehumidification systems, and advanced analysis of refrigeration systems. HVAC analytical techniques will include the use of commercial software. Course special topics can include LEED rating and certification, management for energy efficiency, energy auditing calculations, aviation, aerospace, and naval applications, ventilation loads, building automation control, and on-site campus tours of state-of-the-art building energy and environmental systems.

Credit 3 units. EN: TU

---

**E37 MEMS 5422 Solar Energy Thermal Processes**

Extraterrestrial solar radiation, solar radiation on Earth's surface, and weather bureau data. Review of selected topics in heat transfer. Methods of solar energy collection and solar energy storage. Transient and long-term solar system performance. Prerequisite: MEMS 342 or equivalent.

Credit 3 units. EN: TU

---

**E37 MEMS 5423 Sustainable Environmental Building Systems**

Sustainable design of building lighting and HVAC systems considering performance, life cycle cost and downstream environmental impact. Criteria, codes and standards for comfort, air quality, noise/vibration and illumination. Life cycle and other investment methods to integrate energy consumption/conservation, utility rates, initial cost, system/component longevity, maintenance cost and building productivity. Direct and secondary contributions to acid rain, global warming and ozone depletion.

Credit 3 units. EN: TU

---

**E37 MEMS 5424 Thermo-Fluid Modeling of Renewable Energy Systems**

Overview of sustainable energy systems. Fundamentals of energy conversion. Renewable energy sources and energy conversion from wind, biomass, solar-thermal, geothermal and ocean/waves. Applications to energy storage, fuel cells, green air and ground transportation, energy-efficient buildings. Energy-

economics modeling, emissions modeling, global warming and climate change.

Credit 3 units. EN: TU

---

### **E37 MEMS 5500 Elasticity**

Elastic constitutive relations for isotropic and anisotropic materials. Formulation of boundary-value problems. Application to torsion, flexure, plane stress, plane strain and generalized plane stress problems. Solution of three-dimensional problems in terms of displacement potentials and stress functions. Solution of two-dimensional problems using complex variables and conformal mapping techniques. Variational and minimum theorems.

Credit 3 units. EN: TU

---

### **E37 MEMS 5501 Mechanics of Continua**

A broad survey of the general principles governing the mechanics of continuous media. Topics include: general vector and tensor analysis, rigid body motions, deformation, stress and strain rate, large deformation theory, conservation laws of physics, constitutive relations, principles of continuum mechanics and thermodynamics, two-dimensional continua. Prerequisites: ESE 501–502 or instructor's permission.

Credit 3 units. EN: TU

---

### **E37 MEMS 5502 Plates and Shells**

Introduction to the linear theory of thin elastic plates and shells. The emphasis is on application and the development of physical intuition. The first part of the course focuses on the analysis of plates under various loading and support conditions. The remainder of the course deals mainly with axisymmetric deformation of shells of revolution. Asymptotic methods are used to solve the governing equations. Applications to pressure vessels, tanks and domes. Prerequisites: BME 240 or MEMS 253; ESE 318 and ESE 319 or equivalent.

Credit 3 units. EN: TU

---

### **E37 MEMS 5504 Fracture Mechanics**

Classical fracture and fatigue analysis and their limitations. Topics include: Griffith-Irwin, linear-elastic fracture-mechanics analysis, historical aspects, formulation of stability criteria, subcritical crack growth, anisotropic and inhomogeneous effects, fracture-control analysis, with applications to fracture-safety analysis relating to nuclear reactors, aircraft, rotating machinery, elastic-plastic fracture-mechanics analysis and future prospects and applications. Prerequisites: graduate standing or permission of instructor.

Credit 3 units. EN: TU

---

### **E37 MEMS 5506 Experimental Methods in Solid Mechanics**

Current experimental methods to measure mechanical properties of materials are covered. Lectures include theoretical principles, measurement considerations, data acquisition and analysis techniques. Lectures are complemented by laboratory sections using research equipment such as biaxial testing machines, pressure myographs, indentation devices for different scales, and viscometers.

Credit 3 units. EN: TU

---

### **E37 MEMS 5507 Fatigue and Fracture Analysis**

The course objective is to demonstrate practical methods for computing fatigue life of metallic structural components. The course covers the three major phases of metal fatigue

progression: fatigue crack initiation, crack propagation and fracture. Topics include: stress vs. fatigue life analysis, cumulative fatigue damage, linear elastic fracture mechanics, stress intensity factors, damage tolerance analysis, fracture toughness, critical crack size computation and load history development. The course focus is on application of this technology to design against metal fatigue and to prevent structural failure.

Credit 3 units. EN: TU

---

### **E37 MEMS 5510 Finite Element Analysis**

Theory and application of the finite element method. Topics include: basic concepts, generalized formulations, construction of finite element spaces, extensions, shape functions, parametric mappings, numerical integration, mass matrices, stiffness matrices and load vectors, boundary conditions, modeling techniques, computation of stresses, stress resultants and natural frequencies, and control of the errors of approximation. Prerequisite: graduate standing or permission of instructor.

Credit 3 units. EN: TU

---

### **E37 MEMS 5515 Numerical Simulation in Solid Mechanics I**

Solution of 2-D and 3-D elasticity problems using the finite element method. Topics include: linear elasticity; laminated material; stress concentration; stress intensity factor; solution verification; J integral; energy release rate; residual stress; multi-body contact; nonlinear elasticity; plasticity; and buckling. Prerequisite: graduate standing or permission of instructor.

Credit 3 units.

---

### **E37 MEMS 5516 Numerical Simulation in Solid Mechanics II**

Solution of 2-D and 3-D elasticity problems using the finite element method. Topics include: laminates and composite materials; nonlinear elasticity; plasticity; incremental theory of plasticity; residual stress; geometric nonlinearity; membrane and bending load coupling; multi-body contact; stress intensity factor; interference fit; and buckling analysis. Prerequisite: graduate standing or permission of instructor.

Credit 3 units.

---

### **E37 MEMS 5520 Advanced Analytical Mechanics**

Lagrange's equations and their applications to holonomic and nonholonomic systems. Topics include: reduction of degrees of freedom by first integrals, variational principles, Hamilton-Jacobi theory, general transformation theory of dynamics, applications such as theory of vibrations and stability of motion, and use of mathematical principles to resolve nonlinear problems. Prerequisite: senior or graduate standing or permission of instructor.

Credit 3 units. EN: TU

---

### **E37 MEMS 5560 Interfaces and Attachments in Natural and Engineered Structures**

Attachment of dissimilar materials in engineering and surgical practice is a challenge. Bimaterial attachment sites are common locations for injury and mechanical failure. Nature presents several highly effective solutions to the challenge of bimaterial attachment that differ from those found in engineering practice. This course bridges the physiologic, surgical and engineering approaches to connecting dissimilar materials. Topics in this course are: natural bimaterial attachments; engineering principles underlying attachments; analysis of the biology of attachments in the body; mechanisms by

which robust attachments are formed; concepts of attaching dissimilar materials in surgical practice and engineering; and bioengineering approaches to more effectively combine dissimilar materials.

Credit 3 units. EN: TU

---

#### **E37 MEMS 5561 Mechanics of Cell Motility**

A detailed review of biomechanical inputs that drive cell motility in diverse extracellular matrices (ECMs). This class discusses cytoskeletal machineries that generate and support forces, mechanical roles of cell-ECM adhesions, and regulation of ECM deformations. Also covered are key methods for cell level mechanical measurements, mathematical modeling of cell motility, and physiological and pathological implications of mechanics-driven cell motility in disease and development.

Credit 3 units.

---

#### **E37 MEMS 5562 Cardiovascular Mechanics**

This course focuses on solid and fluid mechanics in the cardiac and cardiovascular system. Cardiac and cardiovascular physiology and anatomy. Solid mechanics of the heart, heart valves, arteries, veins and microcirculation. Flow through the heart chambers and blood vessels. Prerequisites: graduate standing or permission of instructor.

Credit 3 units. EN: TU

---

#### **E37 MEMS 5564 Orthopaedic Biomechanics-Cartilage/Tendon**

Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Note: BME 590Z (463/563) Orthopaedic Biomechanics—Bones and Joints is *not* a prerequisite.

Credit 3 units. EN: TU

---

#### **E37 MEMS 5565 Mechanobiology of Cells and Matrices**

At the interface of the cell and the extracellular matrix, mechanical forces regulate key cellular and molecular events that profoundly affect aspects of human health and disease. This course offers a detailed review of biomechanical inputs that drive cell behavior in physically diverse matrices. In particular, cytoskeletal force-generation machineries, mechanical roles of cell-cell and cell-matrix adhesions, and regulation of matrix deformations are discussed. Also covered are key methods for mechanical measurements and mathematical modeling of cellular response. Implications of matrix-dependent cell motility in cancer metastasis and embryonic development are discussed. Prerequisite: graduate standing or permission of the instructor

Credit 3 units. EN: TU

---

#### **E37 MEMS 5601 Mechanical Behavior of Materials**

A materials science-based study of mechanical behavior of materials with emphasis on mechanical behavior as affected by processes taking place at the microscopic and/or atomic level. The response of solids to external or internal forces as influenced by interatomic bonding, crystal/molecular structure, crystalline/noncrystalline defects and material microstructure

are studied. The similarities and differences in the response of different kinds of materials viz., metals and alloys, ceramics, polymers and composites are discussed. Topics covered include physical basis of elastic, visco elastic and plastic deformation of solids; strengthening of crystalline materials; visco elastic deformation of polymers as influenced by molecular structure and morphology of amorphous, crystalline and fibrous polymers; deformation and fracture of composite materials; mechanisms of creep, fracture and fatigue; high strain-rate deformation of crystalline materials; and deformation of noncrystalline materials.

Credit 3 units. EN: TU

---

#### **E37 MEMS 5602 Non-metallics**

Structure, mechanical and physical properties of ceramics and cermets, with particular emphasis on the use of these materials for space, missile, rocket, high-speed aircraft, nuclear and solid-state applications.

Credit 3 units. EN: TU

---

#### **E37 MEMS 5603 Materials Characterization Techniques I**

An introduction to the basic theory and instrumentation used in transmission electron, scanning electron and optical microscopy. Practical laboratory experience in equipment operations, experimental procedures and material characterization.

Credit 3 units. EN: TU

---

#### **E37 MEMS 5604 Materials Characterization Techniques II**

Introduction to crystallography and elements of X-ray physics. Diffraction theory and application to materials science including following topics: reciprocal lattice concept, crystal-structure analysis, Laue methods, rotating crystal methods, powder method, and laboratory methods of crystal analysis.

Credit 3 units. EN: TU

---

#### **E37 MEMS 5605 Mechanical Behavior of Composites**

Analysis and mechanics of composite materials. Topics include micromechanics, laminated plate theory, hydrothermal behavior, creep, strength, failure modes, fracture toughness, fatigue, structural response, mechanics of processing, nondestructive evaluation, and test methods. Prerequisite: graduate standing or permission of the instructor.

Credit 3 units. EN: TU

---

#### **E37 MEMS 5606 Soft Nanomaterials**

Soft nanomaterials, which range from self-assembled monolayers (SAMs) to complex 3-D polymer structures, are gaining increased attention owing to their broad-range applications. The course introduces the fundamental aspects of nanotechnology pertained to soft matter. Various aspects related to the design, fabrication, characterization and application of soft nanomaterials are discussed. Topics covered include but are not limited to SAMs, polymer brushes, layer-by-layer assembly, responsive polymers structures (films, capsules), polymer nanocomposites, biomolecules as nanomaterials and soft lithography.

Credit 3 units. EN: TU

---

#### **E37 MEMS 5607 Introduction to Polymer Blends and Composites**

The course covers topics in multicomponent polymer systems (polymer blends and polymer composites) such as: phase separation and miscibility of polymer blends, surfaces and

interfaces in composites, microstructure and mechanical behavior, rubber toughened plastics, thermoplastic elastomers, block copolymers, fiber reinforced and laminated composites, techniques of polymer processing with an emphasis on composites processing, melt processing methods such as injection molding and extrusion, solution processing of thin films, selection of suitable processing methods and materials selection criteria for specific applications. Advanced topics include: nanocomposites such as polymer/CNT composites, bioinspired nanocomposites, and current research challenges. Prerequisite: MEMS 3610 or equivalent or permission of instructor. Credit 3 units. EN: TU

---

**E37 MEMS 5608 Introduction to Polymer Science and Engineering**

Topics covered in this course are: the concept of long-chain or macromolecules, polymer chain structure and configuration, microstructure and mechanical (rheological) behavior, polymer phase transitions (glass transition, melting, crystallization), physical chemistry of polymer solutions (Flory-Huggins theory, solubility parameter, thermodynamics of mixing and phase separation), polymer surfaces and interfaces, overview of polymer processing (extrusion, injection molding, film formation, fiber spinning) and modern applications of synthetic and biopolymers.

Credit 3 units. EN: TU

---

**E37 MEMS 5609 Electronic Materials Processing**

This course covers "unit processes" for manufacturing semiconductor chips. Topics include: crystal growth and doping of wafers, oxidation and diffusion, ion implantation, deposition, etching, cleaning and lithography. Processes are described with key concepts derived from science and engineering and process integration is covered for devices such as transistors and light emitting diodes. Nanoprocessing concepts are highlighted in the end to provide students with practical and advanced knowledge of semiconductor manufacturing. Prerequisites: undergraduate engineering mathematics, materials science and basic electronics or instructor's permission.

Credit 3 units. EN: TU

---

**E37 MEMS 5610 Quantitative Materials Science and Engineering**

Quantitative Materials Science and Engineering covers the mathematical foundation of primary concepts in materials science and engineering. Topics covered are: mathematical techniques in materials science and engineering; Fourier series; ordinary and partial differential equations; special functions; matrix algebra; and vector calculus. Each is followed by its application to concepts in: thermodynamics; kinetics and phase transformations; structure and properties of hard and soft matter; and characterization techniques. This course is intended especially for students pursuing graduate study in materials science.

Credit 3 units. EN: TU

---

**E37 MEMS 5611 Principles and Methods of Micro and Nanofabrication**

A hands-on introduction to the fundamentals of micro- and nanofabrication processes with emphasis on cleanroom practices. The physical principles of oxidation, optical lithography, thin film deposition, etching and metrology methods will be discussed, demonstrated and practiced. Students will be

trained in cleanroom concepts and safety protocols. Sequential microfabrication processes involved in the manufacture of microelectronic and photonic devices will be shown. Training in imaging and characterization of micro- and nanostructures will be provided. Prerequisite: graduate or senior standing or permission of the instructor.

Credit 3 units. EN: TU

---

**E37 MEMS 5612 Atomistic Modeling of Materials**

This course will provide a hands-on experience using atomic scale computational methods to model, understand and predict the properties of real materials. It will cover modeling using classical force-fields, quantum-mechanical electronic structure methods such as density functional theory, molecular dynamics simulations, and Monte Carlo methods. The basic background of these methods along with examples of their use for calculating properties of real materials will be covered in the lectures. Atomistic materials modeling codes will be used to calculate various material properties. Prerequisites: MEMS 3610 or equivalent or permission of instructor.

Credit 3 units. EN: TU

---

**E37 MEMS 5700 Aerodynamics**

Fundamental concepts of aerodynamics, equations of compressible flows, irrotational flows and potential flow theory, singularity solutions, circulation and vorticity, Kutta-Joukowski theorem, thin airfoil theory, finite wing theory, slender body theory, subsonic compressible flow and Prandtl-Glauert rule, supersonic thin airfoil theory, introduction to performance, basic concepts of airfoil design. Prerequisite: graduate standing or permission of instructor.

Credit 3 units. EN: TU

---

**E37 MEMS 5701 Aerospace Propulsion**

Propeller, jet, ramjet and rocket propulsion. Topics include: fundamentals of propulsion systems, gas turbine engines, thermodynamics and compressible flow, one-dimensional gas dynamics, analysis of engine performance, air breathing propulsion system, the analysis and design of engine components, and the fundamentals of ramjet and rocket propulsion.

Credit 3 units. EN: TU

---

**E37 MEMS 5703 Analysis of Rotary-Wing Systems**

This course introduces the basic physical principles that govern the dynamics and aerodynamics of helicopters, fans and wind turbines. Simplified equations are developed to illustrate these principles, and the student is introduced to the fundamental analysis tools required for their solution. Topics include: harmonic balance, Floquet theory and perturbation methods.

Credit 3 units. EN: TU

---

**E37 MEMS 5704 Aircraft Structures**

Basic elements of the theory of elasticity; application to torsion of prismatic bars with open and closed thin-wall sections; the membrane analogy; the principle of virtual work applied to 2-D elasticity problems. Bending, shear and torsion of open and closed thin-wall section beams; principles of stressed skin construction, structural idealization for the stress analysis of wings, ribs and fuselage structures. Margin of safety of fastened connections and fittings. Stability of plates, thin-wall section columns and stiffened panels. Application of the finite element method for the analysis of fastened connections, structural

fittings and problems of local stability of aircraft structural components.

Credit 3 units.

---

### **E37 MEMS 5705 Wind Energy Systems**

A comprehensive introduction to wind energy systems, a practical means of extracting green and sustainable energy. Topics include: a historical perspective of wind turbines; horizontal axis and vertical axis wind turbines; the basic parameters such as power rating and efficiency; the structural components ranging from blade and hub to nacelle and tower; wind turbine aerodynamics, aeroelasticity and control systems; blade fatigue; statistical wind modeling; unsteady airfoil aerodynamics and downstream wake; and environmental considerations such as noise and aesthetics. Prerequisite: senior or graduate standing in engineering or permission of the instructor.

Credit 3 units. EN: TU

---

### **E37 MEMS 5801 Micro-Electro-Mechanical Systems I**

Introduction to MEMS: Microelectromechanical systems (MEMS) are ubiquitous in chemical, biomedical and industrial (e.g., automotive, aerospace, printing) applications. This course covers important topics in MEMS design, micro-/nanofabrication, and their implementation in real-world devices. The course includes discussion of fabrication and measurement technologies (e.g., physical/chemical deposition, lithography, wet/dry etching, and packaging), as well as application of MEMS theory to design/fabrication of devices in a cleanroom. Lectures cover specific processes and how those processes enable the structures needed for accelerometers, gyros, FR filters, digital mirrors, microfluidics, micro total-analysis systems, biomedical implants, etc. The laboratory component allows students to investigate those processes first-hand by fabricating simple MEMS devices.

Credit 3 units. EN: TU

---

### **E37 MEMS 5804 Engineering Project Management**

Basic fundamentals and advanced concepts of engineering project management applicable to projects and programs, both large and small. Project management skills, techniques, systems, software and application of management science principles are covered and related to research, engineering, architectural and construction projects from initial evaluations through approval, design, procurement, construction and startup.

Credit 3 units. EN: TU

---

### **E37 MEMS 5912 Biomechanics Journal Club**

This journal club is intended for graduate students and advanced undergraduates with an interest in biomechanics. We review landmark and recent publications in areas such as brain, cardiovascular and orthopedic biomechanics, discussing both experimental and modeling approaches. This course meets once weekly at a time to be arranged.

Credit 1 unit. EN: TU

---

### **E37 MEMS 597 MEMS Research Rotation**

Independent research project that will be determined jointly by the doctoral student and the instructor. Assignments may include background reading, presentations, experiments, theoretical, and/or modeling work. The goal of the course is for the doctoral student to learn the background, principles and techniques associated with research topics of interest and to determine a mutual fit for the student's eventual doctoral thesis laboratory.

Credit 3 units.

---

### **E37 MEMS 598 Energy Design Project**

Credit variable, maximum 6 units.

---

### **E37 MEMS 599 Master's Research**

Credit variable, maximum 6 units.

---

## **Process Control Systems**

### **A Jointly Sponsored Undergraduate Program**

Process Control Systems is a program intended to provide students with a broad background in chemical and systems engineering, with emphasis on the science and technology of process automation. Through a careful selection of courses in chemical engineering and systems engineering, a unified approach is developed to the analysis, design, operation and control of chemical and other manufacturing processes. Electives in systems engineering allow further in-depth specialization in applied mathematics, discrete-event systems, robotics, quality control, optimization and dynamical systems.

In addition to the traditional laboratory work in chemistry, physics and chemical engineering, a laboratory course in digital process control is offered based on computers and advanced commercial distributed-control equipment. Familiarity with computers and with process modeling, data acquisition and control software is an essential component of the training. In the senior year, students can elect to complete a major design project either in chemical processing systems (chemical engineering) or in technological or engineering systems (systems engineering).

Upon successful completion, a student receives both the Bachelor of Science in Chemical Engineering and the Bachelor of Science in Systems Science & Engineering.

The Process Control Systems program satisfies an increasing demand by manufacturing and petrochemical companies for professionals trained in advanced automation to improve product quality, to reduce costs, to improve capital productivity, and to improve safety and environmental quality. This interdisciplinary program provides the background necessary to combine traditional engineering skills with new systems engineering techniques and meet these challenges. The program is staffed by faculty members from both the Energy, Environmental & Chemical Engineering and the Electrical & Systems Engineering departments and is supervised by a coordinating committee. Students are assigned two advisers, one from each department, who are members of the committee.

Further information about the program can be obtained from the coordinating committee through either of the cooperating departments.

## The Process Control Systems Program

|   | Units     |           |
|---|-----------|-----------|
|   | Fall      | Spring    |
| First Year  |           |           |
| Calculus II, III (Math 132, 233)  | 3         | 3         |
| General Chemistry I, II (Chem 111A, 112A)   | 3         | 3         |
| General Chemistry Laboratory I, II (Chem 151, 152)  | 2         | 2         |
| Introduction to Energy, Environmental and Chemical Engineering (EECE 101)   | 3         | —         |
| General Physics I or Physics I (Physics 117A or Physics 197)  | 4         | —         |
| General Physics II or Physics II (Physics 118A or Physics 198)  | —         | 4         |
| Matrix Algebra (Math 309)   | —         | 3         |

**Pratim Biswas** (<https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx>)

Lucy and Stanley Lopata Professor  
PhD, California Institute of Technology  
(Energy, Environmental & Chemical Engineering)

**Hiroaki Mukai** (<https://engineering.wustl.edu/Profiles/Pages/Hiro-Mukai.aspx>)

PhD, University of California, Berkeley  
(Electrical & Systems Engineering)

**Heinz Schaettler** (<https://engineering.wustl.edu/Profiles/Pages/Heinz-Schaettler.aspx>)

PhD, Rutgers University  
(Electrical & Systems Engineering)

**Jay R. Turner** (<https://engineering.wustl.edu/Profiles/Pages/Jay-Turner.aspx>)

DSc, Washington University  
(Chemical Engineering)

## Majors

To satisfy the core requirements of the School of Engineering & Applied Science, the following courses are required:

| Code                                 | Title   | Units |
|--------------------------------------|---|-------|
| Physics 197<br>& Physics 198         | Physics I<br>and Physics II   | 8     |
| Chem 111A<br>& Chem 112A             | General Chemistry I<br>and General Chemistry II                       | 6     |
| Chem 151<br>& Chem 152               | General Chemistry Laboratory I<br>and General Chemistry Laboratory II | 4     |
| Math 132<br>& Math 233<br>& Math 217 | Calculus II<br>and Calculus III<br>and Differential Equations         | 9     |
| Humanities/social sciences electives |   | 18    |
| Total Units                          |   | 45    |

To complete the core requirements of both chemical engineering and systems engineering, the following additional requirements apply:

| Code                 | Title  | Units |
|----------------------|--|-------|
| Chem 261             | Organic Chemistry I with Lab                               | 4     |
| EECE 305             | Materials Science  | 3     |
| ESE 326              | Probability and Statistics for<br>Engineering              | 3     |
| Engr 310             | Technical Writing  | 3     |
| ESE 318<br>& ESE 319 | Engineering Mathematics A<br>and Engineering Mathematics B | 6     |
| Biol 2960            | Principles of Biology I                                    | 4     |
| Total Units          |  | 23    |

The balance of the curriculum is carefully structured to satisfy the combined degree requirements and to meet the objectives of the program. Please refer to the accompanying Process Control Systems program chart (p. 1030) for details. The general degree requirements include the residency and other applicable requirements of the university and the School of Engineering & Applied Science.

The curriculum meets the requirements of both degrees and can be completed in four years. The total number of units required is 143. The semester course load exceeds the usual schoolwide average of 15 units per semester, so students must be highly motivated to accomplish this objective in eight semesters. The course load in individual semesters may be lightened by attending summer school or by adding an additional semester. A number of courses (e.g., Engr 310, Math 309, ESE 318, ESE 319, ESE 326, ESE 351; and humanities and social sciences courses) usually are offered in the summer as well.

## Minors

There is no minor in this area.

## Courses

There are no courses specific to this program.

## University of Missouri-St. Louis/ Washington University Joint Undergraduate Engineering Program

In 1993, Washington University and the University of Missouri-St. Louis held the first classes in the Joint Undergraduate Engineering Program. This partnership, the first of its kind in the United States, offers University of Missouri-St. Louis students the opportunity to benefit from the engineering program at Washington University and its century-long tradition of excellence. Effective in October 1999, the three bachelor's degrees (civil, electrical and mechanical engineering) offered in our joint program were accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>). Besides being the first undergraduate engineering degrees offered in a public/private partnership, they are also the first such degrees to receive ABET accreditation.

The courses are organized for both full-time students and part-time students with daytime commitments who need to attend classes in the evening. Students who enter the program take about half their course work — mathematics, physics, chemistry, humanities and social sciences — on the campus of the University of Missouri-St. Louis. The remaining half of the degree program, consisting of upper-level engineering courses and laboratories, is taken on the Washington University campus. Students may choose civil, electrical or mechanical engineering. Students receive their undergraduate engineering degrees from the University of Missouri.

For information about this program, please contact the University of Missouri-St. Louis Joint Undergraduate Engineering Program at 314-516-6800 or the Washington University School of Engineering & Applied Science at 314-935-6510.

## Faculty

### Faculty Members at University of Missouri-St. Louis

#### Dean

**Joseph A. O'Sullivan**

Samuel C. Sachs Professor of Electrical Engineering  
PhD, University of Notre Dame

#### Associate Dean

**Bernard J. Feldman**

PhD, Harvard University

#### Assistant Director of Student Services

**Mary E. McManus**

MEd, University of Missouri-St. Louis

## Degree Requirements

Undergraduate degrees awarded by the School of Engineering & Applied Science are divided into two groups: engineering degrees and applied science degrees. Engineering degrees are named Bachelor of Science (BS) in Biomedical Engineering, BS in Chemical Engineering, BS in Computer Engineering, BS in Computer Science, BS in Electrical Engineering, BS in Mechanical Engineering, and BS in Systems Science & Engineering. Applied science degrees are named BS Major in Applied Science [Chemical Engineering], BS Major in Applied Science [Electrical Engineering], BS Major in Applied Science [Mechanical Engineering], BS Major in Applied Science [Systems Science & Engineering].

### Engineering Bachelor of Science Degrees

To earn any of the following engineering degrees: BS in Biomedical Engineering, BS in Chemical Engineering, BS in Computer Engineering, BS in Electrical Engineering, BS in Mechanical Engineering, BS in Systems Science & Engineering, a student must satisfy all of the following general distribution requirements:

1. Complete the engineering Common Studies courses outlined below:
  - a. Calculus (Math 131, Math 132, Math 217, Math 233)
  - b. Physics I (Physics 117A or Physics 197) and Physics II (Physics 118A or Physics 198)
  - c. Chemistry (Chem 111A, Chem 151)  
Note 1: Some programs also require Chem 112A and Chem 152.  
Note 2: The BS in Computer Engineering program permits alternate science courses to satisfy this requirement.

Please consult with individual department program requirements.

- d. Technical Writing (Engr 310)
2. Satisfy the specific degree requirements of one of the engineering degree programs, as outlined in other sections of this *Bulletin*.
3. Satisfy the requirements listed under All Undergraduate Degrees (below).

### Applied Science Bachelor of Science Degrees

To earn any of the following degrees: BS in Applied Science [Chemical Engineering], BS in Applied Science [Electrical Engineering], BS in Applied Science [Mechanical Engineering], BS in Applied Science [Systems Science & Engineering], BS in Computer Science, a student must satisfy all of the following general distribution requirements:

1. Complete at least 120 applicable units.
2. Complete at least 48 units of the 120 in mathematics, natural sciences and engineering.
3. Complete at least 42 of the total 120 units at the 300 level or higher.
4. Satisfy the specific degree requirements of one of the applied science degree programs, as outlined in other sections of this *Bulletin*.
5. Satisfy the requirements outlined under All Undergraduate Degrees.

### All Undergraduate Degrees

To earn any undergraduate degree in the School of Engineering & Applied Science, a student must accomplish all the following:

1. Earn at least a C (2.0) cumulative grade point average in all applicable courses taken at Washington University.
2. Earn at least the minimum total number of units specified for the particular degree. All degrees require students to complete at least 120 applicable units.
3. Earn at least a C (2.0) grade point average in all engineering courses taken.
4. Satisfy all of the following residency requirements:
  - a. Complete a minimum of 30 units of 200-level or higher courses from the school, while matriculated at Washington University in a degree program. An engineering course transferring from an exchange program sanctioned by the School of Engineering & Applied Science may be counted as a school equivalent course for the purpose of satisfying this requirement.
  - b. Complete a minimum of 60 units at Washington University, while matriculated at Washington University

in a degree program. Exchange program courses sanctioned by the school may be counted toward this requirement.

- c. For students who pursue multiple engineering BS degrees, for each additional BS degree from the school, students must complete an additional 15 resident units of 200-level or higher courses from the school, which are in addition to the 30 units of 200-level or higher engineering courses that are listed in 4a above. No more than two BS degrees from the School of Engineering & Applied Science may be earned by the same student.
5. Complete the English proficiency requirement, and the humanities and social sciences requirement, of the School of Engineering & Applied Science.

## English Proficiency Requirement

Every student must demonstrate proficiency in reading and writing the English language. Students are considered proficient if they have earned one of the following scores: a 5 on the Advanced Placement English Examination of the College Board, or a score of 750 or higher on the SAT W examination, or a score of 36 on the ACT English exam, or a score of 7 on the International Baccalaureate examination. Proficiency is most commonly demonstrated by satisfactory performance on the First-Year English Composition proficiency test administered by the School of Engineering & Applied Science.

Students who do not demonstrate satisfactory proficiency on the test are required to enroll the following semester in the course or sequence of courses specified by the test's administrator. The school's English proficiency requirement is then satisfied only by a grade of C- or better in the university's College Writing 1 course (CWP 100). Courses taken at other institutions to satisfy the school's English proficiency requirement must be preapproved by the school's English proficiency coordinator. If the course is so approved, the student must pass with a grade of C- or better. College Writing 1 does not count toward the humanities and social sciences requirement of the School of Engineering & Applied Science. Waivers of the College Writing 1 requirement via the AP, SAT, ACT, IB or other proficiency exam do not carry degree credit.

The English proficiency requirement must be completed as soon as possible. Undergraduate students who have not yet satisfied this requirement must enroll in College Writing 1 (or an approved alternative course) at the first possible opportunity, commonly their first spring semester. Enrollment in English composition courses for subsequent semesters may be required until the proficiency requirement is satisfied.

Before enrolling in College Writing 1, some students may be required to complete CWP 1001 Fundamentals of Academic Writing or CWP 200 Writing Tutorial or U15 ELP 1511 Critical Reading and Analytical Writing; these courses will not be counted toward the student's degree requirements.

## Humanities and Social Sciences Requirement

To earn any bachelor's degree from the School of Engineering & Applied Science, students must complete the school's humanities and social sciences requirement:

1. Minimum units: At least 18 units of humanities and social sciences courses must be completed with passing grades. Humanities and social sciences courses, other than transfer courses, may be taken for pass/fail credit.
2. Breadth: At least 6 units of the 18 must be in the humanities and at least 6 units must be in the social sciences.
3. Upper-level: At least 3 units of the 18 units completed must be from one or more courses numbered 300 or higher.

Washington University courses labeled with the EN:H or EN:S attribute in the semester course listings will count respectively toward the humanities or social sciences requirement for engineering degrees. As a convenience, preapproved listings of humanities and social sciences courses are provided for Architecture (<http://registrar.seas.wustl.edu/EVALS/evals.asp?school=WASHINGTON%20UNIV-DESIGN%20AND%20VISUAL%20ARTS-ARCHITECTURE>), Business (<http://registrar.seas.wustl.edu/EVALS/evals.asp?school=WASHINGTON%20UNIV-BUSINESS%20COURSES%20Reviewed%20for%20H/SS>) and University College (<http://registrar.seas.wustl.edu/EVALS/evals.asp?school=WASHINGTON%20UNIV-UNIV%20COLLEGE>). In general, most if not all art courses (F10 and F20) will count toward the engineering school's humanities requirement, even if they do not have the specific EN:H designation.

Transfer courses must be approved through Engineering Student Services as acceptable transfer credit (<http://engineering.wustl.edu/current-students/student-services/Pages/transfer-course-credit.aspx>) and as applicable humanities or social sciences courses. All transfer courses must be taken for credit (not pass/fail), and students must earn a C- or better in transfer courses for the credit to transfer to the school. Grades do not transfer.

## Engineering Topics Units

Bachelor's degree programs accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>) require that the program require a minimum of one and one-half years of Engineering Topics.

One and one-half years is defined as 3/8 of the total number of units required for the particular degree, with a maximum of 48 units. The number of engineering topics units assigned to a course is the sum of the course's engineering science units and engineering design units: Engineering Topics Units = Engineering Design Units + Engineering Science Units. A course carrying Engineering Topics Units will be marked in Course

Listings (<https://courses.wustl.edu/Semester/Listing.aspx>) with the "Eng TU" attribute.

### Engineering Topics/Design Component

Engineering design is the process of devising a system, component or process to meet desired needs. It is a decision-making process (often iterative), in which the basic science and mathematics and engineering sciences are applied to convert resources optimally to meet a stated objective. Among the fundamental elements of the design process are the establishment of objectives and criteria, synthesis, analysis, construction, testing and evaluation. The engineering design component of a curriculum must include most of the following features: development of student creativity, use of open-ended problems, development and use of modern design theory and methodology, formulation of design problem statements and specifications, consideration of alternative solutions, feasibility considerations, production processes, concurrent engineering design and detailed system descriptions. Further, it is essential to include a variety of realistic constraints, such as economic factors, safety, reliability, aesthetics, ethics and social impact.

### Engineering Topics/Science Component

The engineering sciences have their roots in mathematics and basic sciences but carry knowledge further toward creative application. These studies provide a bridge between mathematics and basic sciences on the one hand and engineering practice on the other. Such subjects include mechanics, thermodynamics, electrical and electronic circuits, materials science, transport phenomena and computer science (other than computer programming skills), along with other subjects, depending upon the discipline. While it is recognized that some subject areas may be taught from the standpoint of either the basic sciences or engineering sciences, the ultimate determination of the engineering science content is based upon the extent to which there is extension of knowledge toward creative application. In order to promote breadth, the curriculum must include at least one engineering course outside the major disciplinary area.

### Applicable Undergraduate Engineering Degree Requirements

Undergraduate engineering students are required to satisfy the engineering degree requirements that are published in the online undergraduate *Bulletin* (p. 5) in effect at the time they first enroll at the university as degree-seeking undergraduate students.

Undergraduate engineering students must complete all undergraduate degree requirements and graduate within 10 consecutive years of enrolling as degree-seeking undergraduate students at the university.

A student who does not graduate within 10 consecutive years will be required to satisfy the degree requirements that are in the most recently published online undergraduate *Bulletin* and to

retake courses identified by the chair of the department in which the student is seeking the degree.

- When a student wishes to return to complete course work and earn a degree after the 10-year time period has passed, the most recent online undergraduate *Bulletin* is defined as the catalog in effect when the student re-enrolls in the School of Engineering & Applied Science as an undergraduate student seeking a degree.
- When a student has left the university and wishes to complete course work at another university to transfer back and graduate from the School of Engineering & Applied Science, and more than 10 years have elapsed since the student was first enrolled as an undergraduate engineering degree-seeking student, the most recent online undergraduate *Bulletin* is defined as the catalog in effect when the student files an intent to graduate for an engineering undergraduate degree. The course work the student intends to complete and transfer back to the School of Engineering & Applied Science must be approved by the Engineering School before the student enrolls in the course work.

### Definition of Class Levels

For classification purposes, a student's undergraduate class level is defined according to the year in which they intend to graduate.

### Academic Honors & Awards

**Dean's List:** The Dean's List is composed of freshman, sophomore, junior and senior engineering students who, for the preceding semester, have achieved a 3.6 or higher grade point average based on a minimum of 12 units of applicable courses taken for grades (not pass/fail). An appropriate entry is added to their official transcripts.

No "I" (incomplete) or "N" (no grade reported) grades may be a part of the semester's record. In order to be eligible for fall Dean's List, all final grades must be posted by the first day of the spring semester. For spring semester, all final grades must be posted by the beginning of Summer Session II in order for a student to be considered.

**Latin Honors:** The Engineering Curriculum Committee has the responsibility for determining which students will receive the designations cum laude, magna cum laude and summa cum laude. The criterion for making the decision is academic achievement based on cumulative grade point average. Grade point averages are reviewed the week of Commencement, after final grades are submitted, to determine which students are awarded final honors. Latin Honors for August and December graduates are not determined until the subsequent May at which time it will be posted to the students' records.

**Valedictorians:** Valedictorians are selected from graduating seniors who entered as freshmen. Candidates must have earned

a 4.0 cumulative grade point average at Washington University with no repeated courses.

**Washington University Engineering Scholarship Program:**

The Engineering Scholarship Program enables a sponsor — an individual, a group of individuals or a company — to provide a named scholarship. The selection of students is made by the dean's office and is based on academic achievement and potential for professional attainment. There is no application process. The awards are need-based. The total amount of the financial aid package does not change, but the source of the scholarship funds is shifted to funds that have been specifically contributed to the university for that purpose.

## Academic Regulations

### Attendance

Each professor in the School of Engineering & Applied Science decides how many absences a student may have and still pass the course. Professors are expected to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their professors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

### Units and Grades

A credit unit is the equivalent of one recitation or lecture hour a week for one semester, or one laboratory of two and one-half hours a week for one semester. A student's work is rated in terms of the following system of grades and grade points:

| Grade | Points per Unit        |
|-------|------------------------|
| A     | 4.0                    |
| A-    | 3.7                    |
| B+    | 3.3                    |
| B     | 3.0                    |
| B-    | 2.7                    |
| C+    | 2.3                    |
| C     | 2.0                    |
| C-    | 1.7                    |
| D+    | 1.3                    |
| D     | 1.0                    |
| D-    | 0.7                    |
| F     | 0.0                    |
| P#    | Pass                   |
| F#    | Failing                |
| I     | Course work incomplete |
| X     | No final exam taken    |
| W     | Withdrawal             |
| R     | Repeat                 |

|   |                    |
|---|--------------------|
| L | Successful audit   |
| Z | Unsuccessful audit |
| N | No grade submitted |

To graduate, a student must meet the following criteria:

1. at least a C (2.0) cumulative average and
2. at least a C (2.0) cumulative average in all engineering "E" courses taken

### Auditing a Course

A student may register for a specific course as an auditor. When a student uses the audit grading option, the student is expected to attend all course meetings. The criteria for a successful audit are determined by the course instructor, and a student should work with the instructor to ensure that these criteria are understood. Generally speaking, completion of homework and the taking of exams are not required. The grade L signifies a successful audit and the grade Z signifies an unsuccessful audit. Neither grade affects a student's grade point average, nor do the course's units contribute to the student's total cumulative degree-seeking units. Audit courses do not count toward any degree; however, audit units do count toward full-time status determination and tuition. Class attendance is required to earn the grade L; unsatisfactory attendance will result in a grade of Z. Computer science courses do not allow students with auditor status.

### Incomplete Grades

The grade I (incomplete) indicates that the work of a student has been generally acceptable but that extenuating circumstances led to certain requirements not having been met. The grade of X is recorded when a student is absent from a midterm or final examination because of illness or other unavoidable reason, provided the work has been otherwise satisfactory.

Grades of X and I must be removed no later than the close of the next full semester a student is in residence. On failure to make up an X or I, the student will not receive credit for the course, and the grade will be changed to F unless the student has been explicitly excused by the associate dean.

### Pass/Fail Option

All undergraduate engineering students are eligible to register each semester for up to 6 units on the pass/fail option, up to a maximum of 18 units attempted. Some departments require students to take certain courses pass/fail; credits in these courses do not count toward either the semester limit of 6 units or the cumulative limit of 18 units. Other than these courses, only elective courses may be taken on this option, including courses in other divisions of the university, but still contingent upon and subject to departmental requirements. Humanities, social sciences and some technical electives specifically allowed by individual engineering programs, as well as some engineering courses, both undergraduate and graduate that

are not specifically required for the student's major program, may be taken with the pass/fail option. Some programs do not allow courses, required or elective, to be taken with the pass/fail option. Graduate courses taken on the pass/fail basis cannot be transferred later for credit toward a graduate degree.

Changes from the regular grade basis to pass/fail or vice versa may not be made after the last dates specified in the current Course Listings (<https://courses.wustl.edu/Semester/Listing.aspx>). The normal regulations for withdrawal or change to auditor status also apply to pass/fail courses.

A final grade of P# (pass) will earn degree credit where applicable. A final grade of F# (fail) will not earn degree credit. Neither P# nor F# will affect the grade point average.

## Minimum and Maximum Course Loads

Undergraduate engineering students must take a minimum of 12 units of credit to be considered full-time. Students may not enroll in more than 21 units without special permission. An additional per-unit tuition charge will be assessed for any units over the 21-unit limit.

## Repeating a Course

If an Engineering student repeats a course at Washington University, only the second grade is included in the calculation of the grade point average. Both enrollments and grades are shown on the student's official transcript. The symbol R next to the first enrollment's grade indicates that the course was later retaken. Credit toward the degree is allowed for the latest enrollment only.

If an Engineering student repeats a course elsewhere (i.e., preapproved transfer course from another university), the student must take the course for credit and earn a C- or better for the units to transfer to Washington University. After an official transcript showing the final grade for the repeated course is received, the symbol R next to the first enrollment's grade indicates that the course was later retaken. The original grade will no longer figure into the student's grade point average, nor will the transfer course grade figure into the grade point average. The grade for the transfer course does not display on the student's Washington University record, but the units for the transfer course will count toward the degree program.

## Academic Probation and Suspension

A student whose work is of unsatisfactory quality is placed on academic probation and is classified as not being in good academic standing. If a student on probation doesn't improve their academic record after a reasonable time, probation is followed by dismissal. The regulations governing probation and dismissal are as follows:

1. At the close of each semester, each student's semester grade point average is computed as the total grade points earned during the semester divided by the total credit units attempted. At the same time, the cumulative grade point average is computed as the quotient of the cumulative total of grade points over the cumulative total of credit units attempted. The computations are made on the basis of the grade point scale indicated in the section on grades. Courses taken on a pass/fail basis are not included in these calculations.
2. At the close of each semester, each student's semester and cumulative grade point averages are reviewed. If either is below 2.0, the probation rules stated below apply and the student is notified of any academic probation or dismissal action.
3. At the end of a semester, any student who in the judgment of the associate dean is not making adequate academic progress is required to meet with their adviser before enrollment is allowed for the following semester.
4. A student who is dismissed may, if they desire to continue, present a written statement setting forth reasons why the student believes the situation should be reconsidered. This statement should be addressed to the Undergraduate Academic Standards Committee and forwarded via the associate dean (Lopata Hall, Room 303).

## Probation and Dismissal Rules

Probation follows any semester during which either the semester or cumulative grade point average is less than 2.0, or a student has three I (incomplete) grades at the end of a semester, or a student drops below full-time student status without the approval from their academic adviser or the associate dean for students.

A student placed on academic probation may have a "hold" placed on their record and must complete the steps below in order to have the hold removed:

1. Within two weeks of receiving a probation notification the student must contact their Engineering Student Services (Lopata Hall, Room 303) four-year adviser and schedule a meeting. The scheduled meeting must take place before the end of first week of classes for the upcoming semester.
2. Prepare a written statement with two sections. In the first section, provide a clear explanation of the circumstances that caused the grades received the previous semester. In the second section, describe the student's plan to improve grades in the future. The written statement should be sent to the four-year adviser before the scheduled meeting takes place so that the four-year adviser has an opportunity to review it before the meeting.
3. Meet with the four-year adviser at the scheduled date and time. The meeting is designed for the student to answer the question: "Are you getting appropriate help?" The four-year

adviser may recommend that routine meetings take place throughout the semester.

If applicable, the hold will be removed after the student meets with the four-year adviser.

If a student has been on academic probation twice previously, dismissal may follow the next time the student is eligible for probation.

Dismissal may result if a student becomes eligible for probation in two sequential semesters.

Dismissal may result if any course is failed twice.

Dismissal may result if a student was enrolled in credit courses and earns no degree credit at the end of a semester.

### First Academic Probation

The first time a student qualifies for probation, they are placed on "First Academic Probation." Students placed on First Academic Probation status are sent a letter informing them of this action.

### Second Academic Probation

The second time a student qualifies for probation, they are placed on "Second Academic Probation." Students placed on Second Academic Probation status are sent a letter informing them of this action.

### Special Academic Probation

Special Academic Probation means that a student was eligible for suspension but was not suspended.

### Academic Suspension

The third time a student qualifies for probation, or becomes eligible for probation the second semester in a row, or fails the same course twice, or was enrolled in credit courses and earns no degree credit at the end of a semester, they are dismissed from the university. Students placed on academic suspension status are sent a letter informing them of the suspension action. Students who wish to appeal are instructed to prepare a written statement that informs the Academic Standards Committee of the decision to appeal and respond to two questions: explain why the unsatisfactory academic performance occurred, and, if allowed to return, what would be done differently by the student. The student must then attend an appeal hearing. The student's academic record, written appeal and any other factors the student may wish to discuss are considered by the committee. When the discussion ends, the student leaves the hearing room, and the committee immediately makes a decision regarding the student's appeal. Engineering Student Services then informs the student of the committee's decision. The committee's decision is final (no other appeals are possible). If the appeal is successful, the student is placed on Special Academic Probation and the student is allowed to enroll in classes.

If a student is placed on academic suspension status and chooses not to appeal, or appeals and the appeal is denied, the

student is not allowed to enroll in any classes in any division at Washington University. A student placed on academic suspension is classified as not being in good academic standing. If a suspended student would like to return to the university at a future time, the student must apply for reinstatement to the School of Engineering & Applied Science.

### Satisfactory Academic Progress and Title IV Financial Aid

Federal regulations require that students receiving federal Title IV financial aid maintain satisfactory academic progress (SAP). SAP is evaluated annually at the end of the spring semester. In order to be considered to be maintaining SAP, and thus be eligible for federal financial aid, a student must maintain minimum requirements for cumulative grade point average (2.0) and pace (credit earned for at least 67 percent of the credits attempted). The degree must also be completed within the maximum time frame allowed for the program (no more than 180 credits). Students who are not maintaining progress will be notified by Engineering Student Services and — barring an approved appeal — are ineligible for aid for future semesters.

Additional information about SAP is available from Student Financial Services (<https://sfs.wustl.edu/resources/Pages/Satisfactory-Academic-Progress.aspx>).

### Full-Time and Part-Time Enrollment

Undergraduate degree programs are full-time programs. All students designated with full-time status will automatically be charged the full-time tuition. Part-time enrollment is not allowed unless serious documented health problems prevent a student from being enrolled full-time.

Part-time enrollment and partial tuition charges are allowed for seniors who must enroll for an extra semester. For students who enroll as freshmen, this status is allowed after their eighth semester. For dual degree students, part-time status is allowed after their fourth semester. (Note: Summer semesters are not counted as an academic semester.) Part-time students take 1 to 11 units and are charged for part-time tuition, along with the standard undergraduate fees. Scholarship support is not normally available for part-time students.

**Special Note to senior-level undergraduate students:** Senior-level students (those in their eighth semester) will automatically be designated as having full-time enrollment status if taking 6 or more units.

### Leaves of Absence

Engineering students may petition to take a leave of absence. On a leave of absence, students in good standing are assured re-enrollment within the next two years. Before returning, the student is to notify the School of Engineering & Applied Science and submit a Reinstatement Form at least six weeks prior to

the beginning of the appropriate term. A student wishing to take a medical leave of absence must have a recommendation for the medical leave of absence from Student Health Services submitted to the appropriate dean in the School of Engineering & Applied Science prior to leaving and prior to re-enrollment. The dean will decide whether or not to grant the request for the medical leave of absence and re-enrollment upon reviewing the recommendations from the Student Health Services and the student's file.

## Transfer Credit

A student must get prior approval before taking a course at another university. After completing the course, the student must have an official copy of the transcript sent to the School of Engineering & Applied Science for evaluation. If the credit is accepted, the course will show on the transcript with the units, but not the grade. Only units of credit for courses with a grade of C- or better will transfer. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity policy. The transfer course approval process is outlined on the School of Engineering's website (<http://engineering.wustl.edu/current-students/student-services/Pages/transfer-course-credit.aspx>).

## University College Courses

Engineering students may only enroll in a limited number of University College courses that have been preapproved by the Engineering Undergraduate Studies Committee. The approved courses listed below will display on official transcripts, and the course units will count toward engineering degree requirements, but the grade will not be calculated in grade point averages. Approved courses must be taken for letter grade, and students must earn a minimum grade of C- for the course units to count toward engineering degree requirements.

Current approved courses, which may be needed by students seeking admission into medical school, include:

- U29 Bio 204 Nutrition
- U29 Bio 322 Introduction to Anatomy and Physiology I
- U29 Bio 406 Introduction to Biochemistry
- U29 Bio 4170 Endocrine Physiology
- U29 Bio 4241 Immunology

Students who are required to do so may enroll in the courses listed below; these courses will display on official transcripts but the course units will not count toward engineering degree requirements:

- U15 ELP 1511 Critical Reading and Analytical Writing
- U15 ELP 199 Language Support for English Composition

Undergraduate engineering students in their final year of study may enroll in one University College course (not listed

above) each semester. These course units will not count toward graduation requirements.

## Military Training

Army and Air Force ROTC programs are available at Washington University.

A student in the School of Engineering & Applied Science who takes an ROTC course will have the course name, number, credit units and grade entered on the official transcript. If the course is numbered 100-299, the course's units and grade will not apply toward the student's degree requirements; if the course is numbered 300-499 and the grade is D- or better, the course's units will apply toward the student's degree requirements (as a free elective) and the grade will be counted in the student's cumulative and semester grade point average. Credit may be awarded for no more than one course per semester for a maximum of 16 units.

Course descriptions for Air Force ROTC (p. 1043) and Army ROTC (p. 1043) can be found in the appropriate sections of this *Bulletin*.

## Physical Education

Students in the School of Engineering & Applied Science may enroll in physical education courses, and the units will count toward the 120 units needed for graduation.

## Administration

**Dean's Office**

## Majors (directory)

Below is a list of majors offered by the School of Engineering & Applied Science. Visit the following sections of this *Bulletin* to view more information about a specific major. Students must log into WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>) and select the Major Programs link under Academics to switch their major program within Engineering or to declare a second major or minor online.

- Applied Science (Chemical Engineering) (p. 1001)
- Applied Science (Electrical Engineering) (p. 976)
- Applied Science (Mechanical Engineering) (p. 1017)
- Applied Science (Systems Science & Engineering) (p. 976)
- Biomedical Engineering (p. 943)
- Chemical Engineering (p. 1001)
- Computer Engineering (p. 959)
- Computer Science (p. 959)
- Electrical Engineering (p. 976)
- Individually Designed Major (p. 936)
- Mechanical Engineering (p. 1017)
- Systems Science & Engineering (p. 976)
- Second Major in Computer Science (p. 959)
- Second Major in Electrical Engineering Science (p. 976)
- Second Major in Financial Engineering (p. 976)
- Second Major in Systems Science (p. 976)
- Electrical Engineering (p. 982)
- Energy Engineering (p. 1002)
- Environmental Engineering Science (p. 1002)
- Materials Science & Engineering (p. 1018)
- Mechanical Engineering (p. 1018)
- Mechatronics (p. 1018)
- Nanoscale Science & Engineering (p. 1002)
- Robotics (p. 1018)
- Systems Science & Engineering (p. 982)

## Minors (directory)

### Residency Rule for Engineering Minors

No more than 6 units of credit transferred from another institution (outside Washington University) can be used to meet the requirements of any minor offered by the School of Engineering & Applied Science. The remaining units (up to the amount required for the minor) must be applicable units from Washington University. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

### Minors

Below is a list of minors offered by the School of Engineering & Applied Science. Visit the following sections of this *Bulletin* to view more information about a specific minor. Students must log into WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>) and select the Major Programs link under Academics to declare a minor online.

- Aerospace Engineering (p. 1018)
- Applied Physics & Electrical Engineering (p. 982)
- Bioinformatics (p. 961)
- Computer Science (p. 961)

## Interdisciplinary Opportunities

Washington University offers courses through Interdisciplinary Programs that include studies in a variety of disciplines that cross traditional academic boundaries and support academic areas outside the schools.

- Courses in the Gephardt Institute for Civic and Community Engagement (p. 1041) are all cross-listed with specific schools and departments.
- A limited opportunity for some Washington University students to enroll in courses at Saint Louis University and the University of Missouri–St. Louis is available through the Inter-University Exchange Program (p. 1042).
- ROTC (p. 1043) courses are offered in conjunction with the U.S. Air Force and U.S. Army.
- The Skandalaris Center (p. 1046) offers co-curricular programming and practical, hands-on training and funding opportunities to students and faculty in all disciplines and schools.

## Gephardt Institute for Civic and Community Engagement

Community-Engaged Teaching (CET) is embraced by schools and departments across Washington University.

Sometimes referred to as service-learning, these courses combine community engagement with academic course work, and integrate classroom theory with practice in the real world.

We have identified over 75 undergraduate- and graduate-level courses for academic year 2017-2018, enhanced by community-engaged teaching and learning at Washington University. These courses enable students of all disciplines, from business to art, to engage communities in service, projects and/or observation, while applying their learning in a real life context.

To nurture growth in this area, the Gephardt Institute for Civic and Community Engagement offers technical assistance, community partnership facilitation, and capacity-building grants through the Civic Engagement Fund.

## Inter-University Exchange Program

The Inter-University Exchange (IE) program between Washington University, Saint Louis University and the University of Missouri-St. Louis began in 1976 as an exchange agreement encouraging greater inter-institutional cooperation at the graduate level. Over time, this program has evolved to include undergraduate education; however, the basic provisions of the original agreement are still in place today, and participation continues to be at the discretion of each academic department or unit.

At Washington University, there are several schools that **do not participate** in this program (i.e., degree-seeking students in these schools are not eligible to participate in the IE program, and courses offered in these schools are not open to SLU and UMSL students attending Washington University through the IE program). They are the School of Law, the School of Medicine, University College and the Summer School. The Washington University schools that are open to participation in the Inter-University Exchange program may have specific limitations or requirements on participation; details are available in those offices.

**The following provisions apply to all course work taken by Washington University students attending Saint Louis University or the University of Missouri-St. Louis through the Inter-University Exchange program:**

- Such courses can be used in the fulfillment of degree or major requirements. (Students should consult with their dean's office for information about how IE course work will count toward GPA, units, and major requirements.)
- Such courses are not regularly offered at Washington University.
- Registration for such courses requires preliminary approval of the student's major/department adviser, the student's division office or dean, and the academic department of the host university.
- Students at the host institution have first claim on course enrollment (i.e., a desired course at SLU or UMSL may be fully subscribed and unable to accept Washington University students).
- Academic credit earned in such courses will be considered as resident credit, not transfer credit.
- Tuition for such courses will be paid to Washington University at the prevailing Washington University rates; there is no additional tuition cost to the student who enrolls in IE course work on another campus. However, students are responsible for any/all fees charged by the host school.
- Library privileges attendant on enrolling in a course on a host campus will be made available in the manner prescribed by the host campus.

## Instructions

Washington University students must be enrolled full-time in order to participate in the IE program and have no holds, financial or otherwise, on their academic record at Washington University or at the host institution.

1. The student must complete the Inter-University Exchange application form. Forms are available from the Office of the University Registrar and on its website (link below).
2. The student must provide all information requested in the top portion of the form and indicate the course in which they wish to enroll.
3. The student must obtain the approval signature of the professor teaching the class (or department chair) at SLU or UMSL, preferably in person.
4. The student also must obtain approval signatures of their major adviser at Washington University and the appropriate individual in their dean's office.
5. Completed forms must be submitted to the Office of the University Registrar in the Women's Building a minimum of one week before the start of the term.

Course enrollment is handled administratively by the registrars of the home and host institutions. Washington University students registered for IE course work will see these courses on their class schedule and academic record at WebSTAC under departments I97 (SLU) and I98 (UMSL). Final grades are recorded when received from the host institution. The student

does not need to obtain an official transcript from SLU or UMSL to receive academic credit for IE course work at Washington University.

## Reserve Officers Training Corps (ROTC)

- Air Force ROTC — Aerospace Studies (p. 1043)
- Army ROTC (p. 1044)

## Air Force ROTC — Aerospace Studies

### Professor

**Chad D. McAdams**  
Lieutenant Colonel, U.S.A.F.

**Military Aerospace Science.** Our Core Values: Integrity First, Service Before Self, Excellence In All We Do. Air Force operations are currently conducted in the technologically demanding environments of air, space and cyberspace.

AFROTC is a four-year officer development program, producing the leaders of tomorrow's Air Force. The program's purpose is to train and develop outstanding college students to earn commissions as U.S. Air Force Officers. Numerous Washington University students have participated in Air Force ROTC and gone on to distinguish themselves as Air Force aviators, engineers, physicians and astronauts.

In AFROTC, Washington University students have the opportunity to be challenged within a unique leadership environment, with the potential to earn a commission as a second lieutenant. Participation in Air Force ROTC is available to freshman and possibly sophomore Washington University students and will not obligate a student to serve in the U.S. Air Force.

Air Force ROTC attracts the very best and brightest college students. The categorization of officer candidates within Air Force ROTC is based upon competitive selection criteria.

For more information, contact the AFROTC Detachment 207 in St. Louis at 314-977-8227 or from our website (<http://www.slu.edu/organizations/afrotc>); or 888-4-AFROTC or from the AFROTC website (<http://www.afrotc.com>).

For AFROTC scholarship information, refer to the Scholarship Funds section (p. 30) of this *Bulletin*.

## Army ROTC

**Military Science.** Army ROTC is a program designed to develop leaders for life. In doing so, it develops leadership, management and training skills regardless of a student's career plans. Those who successfully complete the program earn a commission as a second lieutenant in the U.S. Army, Army Reserve or Army National Guard.

All students are eligible to participate in Army ROTC courses. Introductory courses are available in which students develop confidence, self-esteem and motivation. The intent is to develop and refine a student's leadership traits and skills to enable their future success. Instruction also includes the role of the military in national defense strategy. The number of ROTC credits that may be counted toward graduation requirements depends upon the student's program of study. ROTC students should consult with their academic adviser to determine if or how ROTC course work satisfies graduation requirements. Once a student accepts a scholarship or enters the advanced courses (300 and 400 levels), they incur a military obligation.

For more information, write to: Military Science Department, Washington University in St. Louis, 700 Rosedale Ave., Suite 1120, St. Louis, MO 63112, or call 314-935-5521, or visit the Washington University Army ROTC website (<http://rotc.wustl.edu>), or contact the Army ROTC Scholarships and Enrollment Officer, Mr. Lee Rodriguez ([lee.e.rodriguez@wustl.edu](mailto:lee.e.rodriguez@wustl.edu)).

For Army ROTC scholarship information, refer to the Scholarship Funds section (p. 30) of this *Bulletin*.

---

### 102 MAIR 101 Foundations of the United States Air Force I

A survey course designed to introduce students to the U.S. Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and an introduction to communication skills. Leadership Laboratory is mandatory for AFROTC cadets, and it complements this course by providing students with followership experiences and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the U.S. Air Force and the opportunities available as an officer.

---

### 102 MAIR 102 Foundations of the United States Air Force II

A survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and an introduction to communication skills. Leadership Laboratory is mandatory for Air Force ROTC cadets, and it complements this course by providing students with followership experiences and prepares them for field training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the United States Air Force and the opportunities available as an officer.

---

### 102 MAIR 201 Evolution of USAF Air and Space Power I

A survey course concerned with the beginnings of manned flight and the development of aerospace power in the United States, including the employment of air power in WWI, WWII, Korea, Vietnam, the Gulf War and the peaceful employment of U.S. air power in civic actions, scientific missions and support of space exploration. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing cadets with their first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the United States Air Force and the opportunities available as an officer.

---

### 102 MAIR 202 Evolution of USAF Air and Space Power II

A survey course concerned with the beginnings of manned flight and the development of aerospace power in the United States, including the employment of air power in WWI, WWII, Korea, Vietnam, the Gulf War and the peaceful employment of U.S. air power in civic actions, scientific missions and support of space exploration. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing them with their first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint cadets with the United States Air Force and the opportunities available as an officer.

---

### 102 MAIR 301 Air Force Leadership Studies, Principles of Leadership and Management I

This course is a study in the anatomy of leadership, the need for quality and management leadership, the role of discipline in leadership situations and the variables affecting leadership. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts. Cadets deal with actual problems and complete projects associated with planning and managing the Leadership Laboratory. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving cadets opportunities to apply leadership and management principles of this course. Classroom activity, three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced

courses designed to improve communication and management skills required of Air Force officers.

---

**I02 MAIR 302 Air Force Leadership Studies, Principles of Leadership and Management II**

This course continues the study in the anatomy of leadership, the need for quality and management leadership, the role of discipline in leadership situations and the variables affecting leadership. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts. Cadets deal with actual problems and complete projects associated with planning and managing the Leadership Laboratory. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving cadets opportunities to apply leadership and management principles of this course. Classroom activity, three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.

---

**I02 MAIR 401 National Security Studies and Preparation for Active Duty I**

Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets study topics that prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.

---

**I02 MAIR 402 National Security Studies and Preparation for Active Duty II**

Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets study topics that prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. **Army ROTC**

Visit online course listings to view semester offerings for I25 MILS (<https://courses.wustl.edu/CourseInfo.aspx?sch=I&dept=I25&crslvl=1:4>).

---

**I25 MILS 101C Introduction to Leadership I**

Students examine the challenges and competencies that are critical for effective leadership. Students learn how the personal development of life skills such as cultural understanding, goal setting, time management, mental/physical resiliency, and stress management relate to leadership, officership, and the U.S. Army profession. MILS 101C is open to all students, and enrollment does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 2 units display on their transcripts; however, the units will not count toward their degree program.

Credit 2 units.

---

**I25 MILS 102C Introduction to Leadership II**

Students investigate leadership fundamentals such as problem solving, listening, presenting briefs, providing feedback, and using effective writing skills. Students explore dimensions of leadership attributes and core leader competencies in the context of practical, hands-on, and interactive exercises. Students also learn fundamental military concepts and explore the Army's leadership philosophy. Aspects of personal motivation and team building are practiced by planning, executing and assessing team exercises. MILS 102C is open to all students, and enrollment does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 2 units display on their transcripts; however, the units will not count toward their degree program.

Credit 2 units.

---

**I25 MILS 201C Innovative Team Leadership**

Students explore the dimensions of creative and innovative tactical leadership strategies and styles by examining team dynamics and leadership theories. The course continues to build on developing knowledge of leadership attributes and core leader competencies through the understanding of Army rank, structure and duties as well as broadening knowledge of land navigation and squad tactics. Enrollment in MILS 201C does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.

Credit 3 units.

---

**I25 MILS 202C Foundations of Tactical Leadership**

Students develop greater self-awareness as they assess their leadership styles and practice communication and team building skills. Students examine and practice the challenges of leading teams in complex operational environments, and study dimensions of terrain analysis, patrolling, and operation orders. Further study of the theoretical basis of the Army Leadership Requirements Model explores the dynamics of adaptive leadership in the context of military operations. Case studies give insight into the importance and practice of teamwork and tactics in real-world scenarios. Enrollment in MILS 202C does not require a commitment to join the U.S. Army. Engineering

students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program. Credit 3 units.

---

#### **125 MILS 301C Adaptive Team Leadership**

This is an academically challenging course where students study, practice, and apply the fundamentals of leadership; Army values and ethics; and small unit tactics using the service learning model in leadership labs and assigned leadership roles. Cadets receive systematic and specific feedback on their leadership attributes and actions. Based on such feedback, as well as their own self-evaluations, cadets continue to develop their leadership and critical thinking abilities as well as their physical fitness and ability to manage stress. At the conclusion of this course students will be capable of planning, coordinating, navigating, motivating and leading a squad in the execution of tactical missions during classroom practical exercises, leadership labs, and during military situational training exercises in field environments. Prerequisite for this course is the successful completion of MILS 101C through 202C; or attendance at the Army ROTC Basic Camp. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program. Credit 3 units.

---

#### **125 MILS 302C Applied Team Leadership**

Students continue to learn and apply the fundamentals of Army leadership, officership, Army values and ethics as they hone their leadership abilities in a variety of environments including classroom instruction, leadership labs, and assigned leadership roles while utilizing the service learning model. At the conclusion of this course, students will be capable of planning, coordinating, navigating, motivating and leading a platoon in the execution of tactical missions during classroom practical exercises, leadership labs, and during military situational training exercises in field environments. Successful completion of MILS 302C helps prepare students for success at the Army ROTC Advanced Camp which cadets attend during the summer at Fort Knox, Kentucky. Cadets receive systematic and specific feedback on their leadership attributes, values and core leader competencies from instructors, other ROTC cadre, and senior cadets. Prerequisite for this course is the successful completion of MILS 301C. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program. Credit 3 units.

---

#### **125 MILS 401C Adaptive Leadership**

The MILS 401C course transitions the focus of student learning from being trained, mentored and evaluated as a military science 3 cadet to learning how to train, mentor and evaluate underclass cadets. This course focuses on practical application using the service learning model to gain knowledge of adaptive leadership. Students are assigned key battalion leadership roles and are responsible for the daily operation, assessment, and development of the cadet battalion. Throughout the semester, students will learn the duties and responsibilities of an Army staff officer, apply the principles of training and management, utilize the military decision making process, design and employ a comprehensive fitness program, mentor underclass cadets, and use effective verbal and written communication. Students will study ethics, the law of war, risk management, counseling, and

the Army officer's role in the Uniform Code of Military Justice. Cadets will also learn about the special trust reposed to Army Officers by the U.S. Constitution — a special confidence given to no other civilian profession. Prerequisite for this course is the successful completion of the ROTC Advanced Camp or permission of the professor of military science. Engineering students may petition Engineering Student Services (Lopata Hall 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program. Credit 3 units.

---

#### **125 MILS 402C Leadership in a Complex World**

This course builds on the lessons of MILS 401C. Students will continue to use the service learning model to gain leadership experience and knowledge while serving in assigned key battalion leadership roles and will be responsible for the daily operation and development of the cadet battalion. MILS 402C explores the dynamics of leading soldiers in full spectrum operations in the current operating environment. Students examine military customs and courtesies, military law, principles of war, and rules of engagement in a complex environment against an adaptive enemy. Students will also explore aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support. Military science 4 cadets will develop and present a battle analysis and participate in a Staff Ride to Pilot Knob, an historic military site. The course also places significant emphasis on preparing cadets for their first unit of assignment. It uses case studies and exercise scenarios to prepare cadets to face the complex ethical and practical demands of leading as commissioned officers in the United States Army. Prerequisite for this course is the successful completion of MILS 401C or permission of the professor of military science. Engineering students may petition Engineering Student Services (Lopata Hall 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program. Credit 3 units. EN: S

---

#### **125 MILS 403 Advanced Military Science**

A practical application of adaptive leadership. Throughout the semester, students are assigned the duties and responsibilities of an Army staff officer and must apply the fundamentals of principles of training, training management, the Army writing style, and the military decision making to weekly training meetings. During weekly training meetings, students will plan, execute, and assess ROTC training and recruiting events.

---

## **Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship**

The Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship (<http://skandalaris.wustl.edu>) is the place on campus *Where Creative Minds Connect*.

### **Mission**

At the Skandalaris Center, we provide **entrepreneurial resources** to those who **think differently** at Washington University, within St. Louis, and beyond.

## Who We Serve

Our initiatives serve all students, alumni, faculty, staff and the community. We call this the **SC Network**.

## Our Pursuits

Our initiatives are divided into three parts:

1. **Get Connected** (p. 1047)
2. **Get Trained** (p. 1047)
3. **Get Funded** (p. 1047)

### Get Connected

We are building the largest online community of Washington University talent, called ConNEXT (<http://skandalaris.wustl.edu/connext>). ConNEXT is a networking tool for sharing ideas, exchanging skills, and finding mentors and mentees.

ConNEXT is a resource for those who:

- Need someone else's help
- Have a skill to offer
- Want to be a mentor
- Want to find a mentor

Join the community via our website (<http://skandalaris.wustl.edu/connext>) or fill out our connection form (<https://skandalaris.wustl.edu/stay-connected-with-skandalaris>) to join the newsletter and learn about ways to get involved.

### Get Trained

The Skandalaris Center offers co-curricular programs to serve students, alumni, faculty, staff and the community in their entrepreneurial needs. These programs provide real-world, practical training opportunities.

1. **Pre-Orientation: Startup (W)U** (<http://skandalaris.wustl.edu/training/preorientation>)  
Startup (W)U is the Skandalaris Center's pre-orientation program for incoming first-year students. The program takes place each year on the Sunday-Thursday in August before Orientation and the start of classes. It allows innovative thinkers and students with an idea to be active in entrepreneurship and get to know the Skandalaris Center and St. Louis startup community as soon as they arrive on campus.  
Students from all majors are welcome and will experience the journey from idea to venture.
2. **Summer Entrepreneurial Internship Program** (<http://skandalaris.wustl.edu/training/internship>)  
This 10-week summer program offers undergraduate students in any school the opportunity to experience entrepreneurship in a real-world setting through a paid internship at an early stage startup. Students work at their ventures Monday through Thursday; then on Fridays, they

participate in unique activities including site visits to startups, panel discussions, and visits to St. Louis neighborhoods.

3. **Student Entrepreneurial Program (StEP)** (<http://skandalaris.wustl.edu/training/step>)  
StEP provides a unique opportunity for students to own a business on- or off-campus. Student owners can supplement the valuable business and entrepreneurial skills they learn in the classroom while gaining real-world experience as they manage and lead their own businesses.
4. **Workshops** (<http://skandalaris.wustl.edu/training/workshops>)  
We offer free, noncredit workshops designed to encourage ideation, develop skills and advance ideas. Workshops are held on both campuses, targeted toward various audiences. We recommend, but do not require, that participants attend all sessions, and have found that the workshops help competitors improve their deliverables.  
**Evidence-Based Entrepreneurship** is designed to transform students and faculty from any school into capable innovators and entrepreneurs through seven contiguous sessions.  
**Washington University Startup Training Lab (WU-STL)** is a free, year-long series that serves as a comprehensive introduction to innovation and entrepreneurship. Open to the community.
5. **Hatchery** (<http://skandalaris.wustl.edu/training/hatchery>)  
Various schools at Washington University offer entrepreneurial training for credit. One such course is The Hatchery (Business Planning for New Enterprises). It is offered by the Olin Business School in both the fall and spring semesters and is open to all students at the university.  
Students form teams around a commercial or social venture idea proposed by a student or community entrepreneur. The deliverables for the course include two presentations to a panel of judges and a complete business plan. The deliverables in the course are similar to the deliverables in the Skandalaris Center's business plan competitions and can be a valuable first step toward competitions and funding for a new venture.

### Get Funded

We host several competitions each year that provide funding to social and commercial ventures. Each of these is an annual competition.

**The Skandalaris Center Cup (SC Cup)** (<http://skandalaris.wustl.edu/funding/sc-cup>)

- The SC Cup awards student-funded, for-profit ventures.
- **Who Can Apply:** Washington University students and postdocs
- **Award:** Up to \$5K, six months of mentorship

**Social Enterprise and Innovation Competition (SEIC)** (<http://seic.wustl.edu>)

- SEIC awards socially focused for-profit and nonprofit ventures. Teams are funded by community donors and foundations.
- **Who Can Apply:** Anyone (no Washington University affiliation required)
- **Award:** Award amounts vary

**Washington University Patent Challenge** - (<http://skandalaris.wustl.edu/funding/washu-patent-challenge>) **New!**

- Translate real, high-level Washington University patents into everyday English, and then apply the technology to an innovative, commercializable use (no licensing options available, strictly educational).
- **Who Can Apply:** Washington University students and postdocs
- **Award:** \$10K in awards (\$5K to undergraduate teams, \$5K to graduate and postdoc teams)

**Suren G. Dutia and Jas K. Grewal Global Impact Award (GIA)** (<http://skandalaris.wustl.edu/funding/global-impact-award>)

- This awards scalable, impactful, quick-to-market Washington University startups.
- **Who Can Apply:** Washington University students and recent alumni
- **Award:** Up to \$50K

## Learn More

Please contact the Skandalaris Center (<https://skandalaris.wustl.edu/contact-us>) for additional information about all programs. We're excited to hear from you!
