Courses

L30 Phil 100G Logic and Critical Analysis
Introduction to the elementary tools of logic required for constructing and critically evaluating arguments and the claims they support. Topics include: the nature of an argument; argument structure; how arguments can fail both in structure and in content; formal and informal fallacies; propositional logic and predicate calculus; and critical analysis of rhetorical strategies for presenting arguments. Students will be encouraged to develop critical reasoning skills that can be widely applied.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: HUM

L30 Phil 102 Introduction to Scientific Reasoning
This course analyzes scientists’ reasoning strategies. Case studies from the history of astronomy, epidemiology, molecular biology, and neuroscience provide a basis for understanding of the character of scientific theories and the means by which they are evaluated. Special attention is given to the construction and evaluation of statistical and causal hypotheses, including experimental design, and to the use of scientific knowledge in public policy decision-making. Students acquire basic skills in critical thinking and scientific reasoning and an introductory understanding of issues in the philosophy of science.
Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

L30 Phil 120F Problems in Philosophy
Introduction to philosophical methods and concepts through an investigation of major issues in Western philosophy such as: what counts as knowledge; truth and belief; the existence of God; the mind-body problem; materialism and idealism; moral theory and concepts of justice. A range of historical and contemporary views on these issues is considered. The aim of the course is to prepare students to think and write about philosophical problems on their own.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 125C Great Philosophers
In this course we focus on some of the most important texts in the history of Western philosophy in order to discuss a wide range of central philosophical problems. We typically consider, for example, the existence of God, the justification of claims to knowledge, and the requirements of a good human life, including the demands of morality. Among the philosophers most likely studied are Plato, Aristotle, Descartes, Hume, Kant, Marx, Nietzsche and Wittgenstein. Our goal is not just to appreciate the genius of some great philosophers but also to grapple with the current philosophical problems they have bequeathed to us.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 131F Present Moral Problems
An investigation of a range of contemporary moral issues and controversies that draws on philosophical ethics and culturewide moral considerations. Topics may include: racism, world hunger, war and terrorism, the distribution of income and wealth, gender discrimination, pornography, lesbian and gay rights, abortion, euthanasia, and capital punishment. The aim of the course is to present diverse points of view regarding these topics and to provide conceptual and theoretical tools that enable the student to make headway in thinking carefully and critically about the issues.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 202A Puzzles and Revolutions: Text and Tradition
One major force in human history has been inquiry into the natural world. Especially after 1550, natural science has, by virtue of its role in the development of technology and the improvement of health, brought about great changes on all scales of human existence, first in Western Europe and then globally. In this course, the changing character of inquiry into the natural world, from antiquity forward, will be the object of study. Does natural science enable us, for example, to study nature as it is in itself, or are culturally-determined perspectives or frameworks inescapable? How is it that natural science has, especially since 1800, proved so useful in the development of technology? How has it impacted on the arts? The requirements will include writing several short papers and brief responses to the readings.
Same as L93 IPH 201a
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

L30 Phil 233F Biomedical Ethics
A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the medical issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 234F Business Ethics
Study of the nature and justification of economic systems, business organizations, and business practices. Focus on contemporary business and the ideology it embodies. Discussion of moral problems arising in business includes both the analysis of structural factors that cause them and the evaluation of courses of action that might resolve them.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

730
L30 Phil 235F Introduction to Environmental Ethics
A general survey of current issues in environmental ethics, focusing on problems such as the obligation to future generations, protection of endangered species, animal rights, problems of energy and pollution, wilderness, global justice, and business obligations. Students also learn some ethical and political theory.
Credit 3 units. A&S IQ: HUM; BU: EN; H

L30 Phil 237F Introduction to Aesthetics
Study of characteristic problems in aesthetics and the philosophy of art, e.g., the nature of aesthetic entities, of aesthetic experience, and of individual differences in the various arts. Primary emphasis on solutions various theories offer to these problems.
Credit 3 units. A&S IQ: HUM; AH BU: HUM

L30 Phil 239 Topics in Philosophy and Environment
Philosophical questions are central to study of the environment. Such questions span many philosophical fields including metaethics, value theory, applied ethics, aesthetics, political philosophy and philosophy of science. Given such a diversity of important questions, this course focuses on a different intersection of philosophy and environment each time it runs. It aims to develop students' understanding of the complex philosophical claims and problems that lie behind environmental values, practices and policies. Examples of topics considered are: wilderness, food and agriculture, and animals.
Credit 3 units. A&S IQ: HUM; H

L30 Phil 2401 Jewish Political Thought
This course uses the concepts of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rule (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish community's self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single "Jewish political thought" but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these questions through a range of materials that include both primary and secondary literature.
Same as L57 RelPol 250
Credit 3 units. A&S IQ: LCD, SSC Art: HUM BU: ETH; EN: H

L30 Phil 2451 Love and Reason
Love often seems dramatically unreasonable, and reason can seem oddly rational in a way that excludes any emotion, passion, or affiliation even akin to love. The supposed opposition between love and reason has been used by Christian and secular thinkers throughout modernity to organize ways of knowing and judging, and to criticize claims of faith, belief, and desire. But are love and reason really so distinct? What does it mean to say so, and why might someone make this claim? Can love be reasoned, and even reasonable? Can reason be aided by love, and even driven by it? How might different answers to these questions affect our understanding of other possibly unreasoned categories like faith, belief, and piety? This course offers an introduction to modern Christian thought and Western philosophy through these questions and themes.
Credit 3 units. A&S IQ: HUM; H

L30 Phil 2501 Zionism
Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is, at its heart, applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: H

L30 Phil 297 Undergraduate Independent Study
Prerequisite: permission of the department.
Credit variable, maximum 6 units.

L30 Phil 299 Internship in Philosophy
Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement, which the student obtains from the Career Center and which must be filled out and signed by the Career Center, the site supervisor and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., eight to 10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours.
Credit variable, maximum 3 units.

L30 Phil 3001 Philosophy of Medicine
Philosophy of medicine is an investigation into what doctors know, and how they know it. This course will investigate the following questions: What is disease? What is health? How do we classify disease? What counts as good evidence and good evidential reasoning in medicine? Is medicine a science? If so, what makes it distinctive as a science? What kinds of evidential roles do case studies play in medicine? How ought we to measure and compare outcomes in clinical trials and in systematic reviews? What is the appropriate relationship between medicine and the basic sciences, or, medicine and the public health sciences (e.g., epidemiology, biostatistics, economics, and behavioral science)? What role, if any, ought private industry - such as the pharmaceutical industry, or health insurance industry - play in shaping the practice of medicine? How ought we to define and measure "effectiveness" in medicine? Do values inform decision making about health policy, and if so, how? The overall goal of the course is to develop a reasoned, reflective approach to research and practice in medicine, through critical analysis of texts, and case studies in the history of medicine. You do not need a major in philosophy or background in philosophy to take this course. This course is
intended to be of special interest to pre-health professionals, or philosophy or science majors. For graduate students in philosophy, this course satisfies the seminar requirement. Extra assignments will be provided to satisfy graduate coursework; please see me for details.
Credit 3 units. A&S IQ: HUM EN: H

L30 Phil 301G Symbolic Logic
In the first half of the course, we will be studying some features of truth-functional and first-order classical logics, including studying the model theory and metatheory for first-order logic in much greater depth than in Phil 100. In the second half of the course, we will go on to study three different styles of proof-system: tableaux, axiomatic, and natural deduction. This course continues on where Philosophy 100: An Introduction to Logic and Critical Analysis leaves off. It is recommended for students who have already taken that introductory course or for students who already have a strong background in mathematics. Priority given to majors in philosophy and PNP.
Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: HUM

L30 Phil 306G Philosophy of Language
A survey of major philosophical problems concerning meaning, reference and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues will be selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke, and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.
Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: HUM

L30 Phil 308 Introduction to Semantics
Semantics is the branch of linguistics which studies how speakers assign meaning to words, sentences, and larger units of discourse. We combine perspectives from both linguistics and philosophy to explore a variety of topics including polysemy, compositionality, quantification, anaphora, definite descriptions, attitude reports, presupposition and implicature. Prerequisite: Ling 170D or Phil 301G or permission of instructor.
Same as L44 Ling 311
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L30 Phil 309 Topics in the Wilderness
Philosophical questions are central to study of the environment. Such questions span many philosophical fields including metaethics, value theory, applied ethics, aesthetics, political philosophy and philosophy of science. Given such a diversity of important questions, this course focuses on a different intersection of philosophy and environment each time it runs. It aims to develop students’ understanding of the complex philosophical claims and problems that lie behind environmental values, practices and policies. Examples of topics considered are: wilderness, food and agriculture, and animals.
Credit 3 units. A&S IQ: HUM BU: ETH

L30 Phil 310 Contemporary Jewish Thought
A study of the representative figures and problems of modern Jewish thought from Spinoza to the present. Other topics include: the impact of the European Enlightenment; Zionism; Buber; Rosenzweig; Kaplan; and Soloveitchik. Prerequisite: JINE 208F or the equivalent.
Same as L75 JIMES 310
Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 310 The Problem of Evil: The Holocaust and Other Horrors
The question of how God can allow evil to occur to the righteous or innocent people has been a perennial dilemma in religion and philosophy. We study the classic statement of the problem in the biblical book of Job, the ancient Near Eastern literature on which Job is based, and traditional Jewish and Christian interpretation of Job. We study the major approach to the problem of evil in Western philosophical and religious thought.
Same as L23 Re St 3101
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 313 Theory of Knowledge
This course will focus on issues in epistemology with the aim of providing a survey of contemporary work. The course begins with a close reading of Descartes’ first three Meditations. These should help us set some of the problems that figure in more recent work and provide an introduction to certain fundamental epistemological concepts. No particular background will be assumed, but participants are expected to come to class prepared to discuss topics at an advanced level. Readings are taken from original sources and can be challenging. Although most assignments are reasonably short, students should allow time for careful reading and re-reading. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L30 Phil 315 Philosophy of Mind
An introduction to philosophical analyses of the nature of mind, especially those developed by contemporary philosophers. The focus will be on questions such as the following: What is a mind? How does it relate to a person’s brain? How does it relate to a person’s body and the external world? Can a mind exist in a very different kind of body (e.g., a computer or a robot)? What is it to have a mental image or to experience pain? Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L30 Phil 316 Mind and Morals
This course explores a number of issues at the intersection of ethics and cognitive science. Possible topics include: Are we rational? Do we know our own thoughts and motivations? Can one believe that one ought to do something without being motivated to do it? Do emotions impair or enhance our ability to reason? How do moral beliefs develop through childhood? Are traits such as intelligence and character unchangeable, and what implications follow if they are (or are not)? Does retaining my identity over time require having the same mind, and, if so,
am I the same person now as I was as a child? Are nonhuman animals worthy of moral consideration? If brain activity is determined by causal laws, can we have free will? Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 321G Philosophy of Science
Pivotal concepts common to empirical sciences are examined and clarified. These include: explanation, confirmation, prediction, systematization, empirical significance, and the relationship of all these concepts to the structure of scientific theory. Examples may be drawn from both contemporary and historical science, including the social, biological and physical sciences. Students with a background in science are particularly encouraged to consider this course. Priority given to majors in philosophy and PNP. Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 327 Philosophy of Religion
This course focuses on debates concerning the existence of God as well as on special issues that arise within religion generally and also on some that arise within specific religious traditions. Topics include: the rationality of religious belief, the problem of evil, the coherence of theism, and the freedom-foreknowledge problem. Credit 3 units. A&S IQ: HUM BU: ETH EN: H

L30 Phil 331F Classical Ethical Theories
Intensive readings of great works in the history of ethics, especially by Plato, Aristotle, Hume, Kant, and Mill. Topics may include: the sources of moral knowledge, the nature of practical moral judgment, the moral role of emotion and desire, weakness of will, moral autonomy, and the universality of moral norms. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Credit 3 units. A&S IQ: HUM BU: ETH EN: H

L30 Phil 339F Philosophy of the Arts
An examination both of general issues that apply to all types of art and of issues specific to particular art forms. For example, what is art? What are the central artistic values: beauty, truth, emotional expressiveness, representational power, or something else? Does art have a moral or political function? How can we account for the history of art and for different artistic styles? In regard to selected forms, there are important questions concerning how pictures represent, whether music and dance are forms of "language," and the nature of literary interpretation. Some consideration is given to the relation of psychology and theories of the mind to art. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 340F Social and Political Philosophy
Study of certain fundamental issues concerning government, society and culture. For example: What are the nature and limits of legitimate political authority? Are ordinary human beings capable of governing themselves justly? Do citizens have a duty to obey the state? If so, to what extent, if at all, is that duty grounded in consent or contract? Should the state limit or regulate the personal relationships of citizens, such as marriage, family and sexuality? How should social institutions rectify a history of political or social injustice against oppressed groups? Readings from historical and contemporary sources. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH HUM EN: H

L30 Phil 345F Issues in Applied Ethics
Advanced study of a selected topic in applied ethics. Abstract ethical theories and methods are brought to bear on the moral problems that arise in an area of social and professional practice such as medicine, business, law, journalism, engineering, or scientific and humanistic research. Possible topics include: reproductive health care and policy, the just distribution of medical resources, the social responsibilities of corporations, accountability in the media and public office, and the ethics of research on or affecting human subjects. Prerequisites: one course at the 100 or 200 level in applied ethics; or permission of the instructor. Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 346 Philosophy of Law
This course will first focus on the philosophical foundations of law, examining both the relationship between law and rules, as well as the types of legal reasoning. Second, the course will focus on philosophical issues that arise in the key substantive areas of law: contracts, torts, property, criminal law and constitutional law, as well as in specialized areas such as family and employment law. The course will end with a brief discussion of several problems in legal ethics. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 347C Ancient Philosophy
This course will focus on philosophical issues that arise in the key substantive areas of law: contracts, torts, property, criminal law and constitutional law, as well as in specialized areas such as family and employment law. The course will end with a brief discussion of several problems in legal ethics. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 3481 Introduction to Metaphysics
This course is an introduction to central debates of contemporary analytic metaphysics. Metaphysics is concerned with the nature of the most general kinds of things and the relationship between these things. We will discuss the nature of and relationship between properties, material objects, persons, time, space, and modality. Prerequisite: one course in Philosophy at the 100 or 200 level or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 349C Descartes to Hume
An examination of major philosophical systems and problems in Modern Philosophy as presented in the original writings of the 17th and 18th centuries. Topics may include rationalism and
empiricism, idealism, materialism, and skepticism, with readings selected from the continental rationalists, Descartes, Spinoza, and Leibniz, and from the British empiricists, Locke, Berkeley, and Hume. Central problems include the mind-body problem, representationalism, and transcendentalism. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

**L30 Phil 3507 Legal Conflict in Modern American Society**

Thousands of lawsuits are filed daily in the state and federal courts of the United States. The disputes underlying those lawsuits are as messy and complex as the human, commercial, cultural and political dynamics that trigger them, and the legal processes for resolving those disputes are expensive, time-consuming and, for most citizens, seemingly impenetrable. At the same time, law and legal conflict permeate public discourse in the United States to a degree that is unique in the world, even among the community of long-established democracies. The overarching objective of the course is to prepare our undergraduate students to participate constructively in that discourse by providing them with a conceptual framework for understanding both the conduct and resolution of legal conflict by American legal institutions, and the evolution of—and values underlying—the substantive law American courts apply to those conflicts. This is, at core, a course in the kind of legal or litigation "literacy" that should be expected of the graduates of first-tier American universities. Some of the legal controversies that are used to help develop that "literacy" include those surrounding the permissible use of lethal force in self-defense, the constitutionality of affirmative action in university admissions, contracts that are unconscionably one-sided, sexual harassment in the workplace, the duty of landlords to prevent criminal assaults on their tenants, groundwater pollution alleged to cause pediatric cancers, and warrantless searches of cellphone locator data by police.

Same as L98 AMCS 3507
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H

**L30 Phil 351 History of Western Philosophy: Modern**

This course offers a survey of the history of 17th and 18th century Western (European) Philosophy, with a focus on the nature and limits of knowledge. Topics include skepticism, the mind-body relationship, the existence of God, the problem of induction, the distinction between primary and secondary qualities, personal identity, causation, and a priori versus a posteriori knowledge. We examine the canonical texts of Descartes, Locke, Berkeley, Hume, and Kant.

Credit 3 units. BU: ETH

**L30 Phil 357C Kant and 19th-Century Philosophy**

Examination of Kant and 19th-century philosophy. We will discuss Kant's "Copernican Turn" in metaphysics and epistemology, as well as his moral philosophy, and we will study works of selected 19th-century philosophers such as those of Hegel, Marx, Mill, and Nietzsche. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

**L30 Phil 358 Conceptual Foundations of Modern Science**

The aim of this course is to present some of the basic concepts underlying modern science. Insofar as many of those concepts first appeared or became predominant in the 17th and early 18th centuries, the course concentrates on primary works from that period. Among the concepts to be studied are: 1. Nature and natures: the ontology of matter and force; causal closure. 2. Methods: observing and intervening, systematic and organized. 3. Explanations: appeal to laws and mechanisms; teleology. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

---

**L30 Phil 361 Philosophy of Emotions**

Emotions like fear, joy, disgust, sadness and love are central to how we engage with each other and understand the world around us. But what can we say about what emotions are, how they function, and when they are valuable? This course will draw on research in philosophy as well as the social and cognitive sciences. The aim will be to develop a rich combination of conceptual, empirical, and phenomenological resources and bring them to bear on central questions about the nature and significance of emotions.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA EN: H

**L30 Phil 366 Art and the Mind-Brain**

In recent years, there has been a growing interest in the bearing of cognitive science on the perception and understanding of art. This interest has roots in tradition: historically, art, aesthetics, and vision science have often been linked. But the growth of knowledge in cognitive science has opened up new opportunities for understanding art and addressing philosophical questions. The converse is also true. The production, perception, and understanding of art are human capacities that can shed light on the workings of the mind and brain. This course considers questions such as the following: What is art? How do pictures represent? Does art express emotion? Why does art have a history? Prerequisites: one course in Philosophy at the 100 or 200 level or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H

**L30 Phil 375 Existentialism**

The philosophical systems of selected philosophers such as Kierkegaard, Nietzsche and Sartre are examined to determine their historical origins, their ontological and epistemological ramifications, and their relationships to contemporary philosophy. Prerequisite: one course in Philosophy at the 100 or 200 level or permission of the instructor.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

**L30 Phil 3801 Ancient Greek and Roman Medicine**

This course introduces students to the practice and theory of medicine in the ancient Mediterranean, beginning in Egypt and continuing through Greece and Rome. It ends in the Middle Ages. Greco-Roman medicine will be our focus. How was disease understood by practitioners and, as far as can be reconstructed, by laypeople? What form did surgical, pharmacological, and dietetic treatment take? What were the intellectual origins of Greek medicine? The social status of medical practitioners? How was medicine written and in what terms did its practitioners conceive it?

Same as L08 Classics 3901
L30 Phil 390 Philosophical Writing
This seminar has a different topic of central philosophical importance each semester. Significant attention also is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays. Limited to 15 students. Priority is given to philosophy majors and minors who have not yet completed their writing-intensive requirement. Credit 3 units. A&S IQ: HUM, WI BU: HUM EN: H

L30 Phil 397 Undergraduate Independent Study
Credit variable, maximum 6 units.

L30 Phil 3991 Philosophy Capstone Course
This course focuses either on classic writings from the past century or on contemporary writings that address a major philosophical concern, such as "the meaning of life" or "the concept of self." In either case, the course draws together a variety of philosophical specializations. Must be taken by all philosophy majors who are not writing an honors project. Work for the course typically consists of one written project, one oral presentation, and one commentary on another student's oral presentation. Prerequisites: senior standing and major in philosophy; preference given to those majors not pursuing Honors. Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 403 Mathematical Logic I
A first course in mathematical logic, an introduction to both proof theory and model theory. The structure and properties of first-order logic are studied in detail, with attention to such notions as axiomatic theory, proof, model, completeness, compactness and decidability. Prerequisites: Phil 301G or equivalent or a background in mathematics. Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM

L30 Phil 404 Mathematical Logic II
Gödel's Incompleteness Theorem: its proof, its consequences, its reverberations. Prerequisite: Phil 403 or a strong background in mathematics. Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 405 Philosophical Logic
What the philosophy student needs to know of logic, its techniques and its use as a tool in philosophical analysis. Some attention to the history of the subject and to its metatheory. Prerequisite: previous exposure to formal logic, or permission of instructor. Credit 3 units.

L30 Phil 4051 Philosophy of Logic
This course surveys some important issues in the philosophy of logic. We begin with basic foundational issues in classical logic, including the relation of logic to psychological reasoning and Tarski's definition of logical consequence, and gradually go on to consider the motivations and status of well-known extensions (sometimes regarded as "neo-classical" logics) such as modal logics and second-order logic. In the last weeks of the course, we examine some outright challengers, including intuitionistic and paraconsistent logics. After evaluating the arguments for and against these challenges, we examine one recent, controversial view—logical pluralism—which suggests that we might not need to choose among the rival systems. Many of the readings for this course are classics of contemporary philosophy, and the subject is likely to be of especial interest to students who have interests in logic, and in the philosophy and foundations of mathematics and language. Some of the important ideas in the course presuppose at least a basic acquaintance with formal logic, and hence either Phil 100 or Phil 301 (or permission of the instructor) are prerequisites. Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4061 Topics in the Philosophy of Language
Focus on the work of a single philosopher of language such as Carnap, Chomsky, Foucault, or Kripke, or on a central topic such as the theory of reference, the theory of meaning, or the problem of cross-cultural translation. Prerequisite: one course in epistemology, philosophy of language, or analytic philosophy, or permission of instructor. Credit 3 units. BU: HUM

L30 Phil 4065 Advanced Philosophy of Language
An advanced-level treatement of basic topics in the philosophy of language as this discipline is understood in the analytic tradition. The main positions and the problems they pose are surveyed; focal themes include meaning, reference and truth. The aim of the course is to help students develop effective expository techniques and to provide them with the necessary conceptual resources to analyze and criticize different theoretical views. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4070 Global Justice
This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course will be of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally. Same as L32 Pol Sci 4070 Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L30 Phil 410 Theories of Perception
A consideration of recent work in philosophy and cognitive science on the nature of perception and its contribution to thought, knowledge and behavior. Special attention is paid to two questions: To what extent can perceptual experience be changed through learning? In what sense do perceptual states have content? The relation of these issues to more general theories of mental content, to the possibility of objective and theory-neutral observation in science, and to the directness or indirectness of perception are discussed. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of instructor. Credit 3 units.

L30 Phil 4141 Advanced Epistemology
An advanced survey of selected issues in contemporary epistemology. Careful attention will be given to one or more specific epistemological topics, such as skepticism, certainty,
coherence, perception, induction, virtue epistemology, testimony, formal epistemology, the nature and value of understanding, or epistemic normativity. Prerequisite: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4142 Advanced Metaphysics
Through readings from both classical and contemporary sources, a single traditional metaphysical concern is made the subject of careful and detailed analytic attention. Possible topics include such concepts as substance, category, cause, identity, reality and possibility, and such positions as metaphysical realism, idealism, materialism, relativism and irreality. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 418 Current Controversies in Cognitive Science
An advanced survey of current debates in cognitive science with an emphasis on the philosophical issues raised by these debates. Topics may include: evolutionary psychology; innateness and neural plasticity; perception and action; consciousness; connectionism; robotics; embodied cognition; moral reason; emergence and artificial life; concepts and content; animal cognition. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L64 PNP 418
Credit 3 units. A&S IQ: HUM EN: H

L30 Phil 419 Philosophy of Psychology
An investigation of the philosophical presuppositions and implications of various traditions in psychology, including behaviorism, Gestalt and cognitivism, with a special emphasis on the development of the information processing approach of contemporary cognitivism. The conception of psychological phenomena, data and explanation central to each of these traditions are examined, and typical topics include the debates between propositional and imagistic models of representation, different accounts of concepts and categorization, and the relation of psychology to ethics. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 420 Topics in Advanced Philosophy of Science
This course varies in topics related to philosophy of science from semester to semester. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L30 Phil 421 Philosophy of Neuroscience
This course focuses on the historical roots of neuroscience as well as its contemporary developments. Topics include: (1) the nature of explanatory strategies in neuroscience; (2) the relation between neuroscience research and higher-level disciplines such as psychology; and (3) the epistemology of the investigatory tools of neuroscience. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 423 Philosophy of Biological Science
This course examines a number of theoretical, conceptual, and methodological issues that arise in the attempts of biologists to explain living systems. One sort of problem concerns the relation between biology (and biological descriptions and explanations) and physics and chemistry. Biological phenomena have often seemed very different from ordinary physical phenomena in being teleological or goal oriented. Vitalists, accordingly, resisted the attempt to invoke physics and chemistry in the attempt to explain biological phenomena. But recently biology has come more and more to draw upon physics and chemistry; we will examine the conceptual frameworks that underlie these efforts. Another sort of problem concerns the adaptiveness of living organisms. Charles Darwin offered one naturalistic explanation of this feature, an explanation that was further developed in this century as the synthetic theory of evolution. A number of controversial issues have arisen within this context of adaptation, and the range of levels at which selection can occur. The ubiquity of evolution, moreover, has been challenged in recent years, as a number of non-selectionist explanations have recently been put forward. We will consider the arguments for the synthetic theory and these alternatives.
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 426 Theories of Concepts
Concepts are the building blocks of thought. They are implicated in just about every cognitive task. Beyond that, there is little consensus. What information do concepts encode? How are they acquired? How are they combined to form thoughts? How are they related to perception and imagery? Each of these questions has been answered in numerous ways. In this course, we explore competing theories of concepts that have been proposed by philosophers, psychologists and other cognitive scientists. No prior acquaintance with these issues is required. Prerequisite: one previous course in Philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 430 Topics in Ethics
Selected advanced topics in ethics. Prerequisite: 6 units of philosophy, or permission of instructor.
Credit 3 units. A&S IQ: HUM

L30 Phil 4310 20th-Century Metaethics
An examination of metaphysical and epistemological issues in ethics. Topics include: the nature of the good and the right, the meaning of ethical terms, the logic of moral argument, and the status of moral knowledge. We consider philosophical works written since 1900 by such authors as Moore, Ross, Stevenson, Ayer, Foot, Hare, Brink, Harmon, Blackburn, and McDowell. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L30 Phil 4315 Normative Ethical Theory
An exploration of the three major normative ethical theories debated by philosophers in the last hundred years: Kantian ethics, utilitarianism, and virtue theory. Authors covered in the course may include: Henry Sidgwick, R. M. Hare, R.B. Brandt, John Rawls, Bernard Williams, Philippa Foot, Thomas Nagel, Christine Korsgaard, Michael Slote, and Barbara Herman. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L30 Phil 4316 Metaethics
This course examines a range of philosophical questions brought into focus by the development of contemporary metaethics, and considered in light of the major traditions in moral philosophy. These include: the nature of the good and right; the meaning of ethical terms; the role of natural language in answering moral questions; and the status of moral knowledge. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L30 Phil 4317 Axiology
A study of axiological and non-moral value theory. Topics may include: the nature of value and its importance to human life; the nature of values and virtues; the justification and dominance of values; and the role of values in metaethics. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L30 Phil 4318 Theories of Rights
This course examines a range of philosophical questions brought into focus by the development of contemporary theories of rights, and considered in light of the major traditions in moral philosophy. These include: the nature of rights; the role of rights in metaethics; the justification and dominance of rights; and the role of rights in metaethics. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L30 Phil 4319 Historical Controversies in Ethics
This course examines a range of philosophical questions brought into focus by the development of contemporary theories of historical controversies in ethics, and considered in light of the major traditions in moral philosophy. These include: the nature of historical controversies; the role of historical controversies in metaethics; the justification and dominance of historical controversies; and the role of historical controversies in metaethics. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L30 Phil 4320 History of Philosophy
A survey of the major traditions in philosophy, from ancient to contemporary. Topics include: the nature of philosophy; the role of philosophy in society; the history of philosophy as a discipline; and the major figures in the history of philosophy. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H
L30 Phil 4320 British Moralists
An investigation of the work of the great British moral philosophers of the 17th-19th centuries, especially Hobbes, Hume, and Mill. Other figures may include Reid, Butler, Hutcheson, Bentham, and Sidgwick. In considering these philosophers, we explore the relations between normative ethics, moral psychology, and political philosophy, and may include a discussion of legal, social and economic philosophies as well. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4332 Cognition and Computation
This course introduces students to some of the key frameworks for thinking about the mind in computational terms. We will be looking at some basic topics in the theory of computation, in addition to considering philosophical issues raised by computational models of cognitive processes. This course is required for graduate students in the PNP PhD program. Prerequisites: at least two 400-level PNP courses cross-listed in Philosophy.
Same as L64 PNP 4332
Credit 3 units. A&S IQ: SSC EN: S

L30 Phil 438 Aesthetics
A careful consideration of selected issues regarding the experience of visual art, architecture, music or literature, as well as of the power or beauty of nature, people and artifacts. For example, is there a special form of aesthetic experience or aesthetic attitude? In what do aesthetic power and beauty consist? Are they different in art and nature? Do the artists' intentions matter? Some central concerns are: how do visual art and literary texts have "meaning," what role do the viewer's or reader's interpretations play, and how might recent work in cognitive science and social theory shed light on these issues? Prerequisites: one course in Philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4400 Advanced Social and Political Philosophy
A selective investigation of one or two advanced topics in the philosophical understanding of society, government and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism, communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism and the rights of cultural minorities. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 452 Aristotle
This course offers a maximally full and detailed introduction to the works of Aristotle. His logic, natural philosophy, psychology, metaphysics, ethics and political philosophy are discussed, and stress is laid on the interpretive problems facing contemporary philosophers seeking to understand Aristotle's achievement. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

L30 Phil 4530 Hellenistic Philosophy
The Hellenistic Age, traditionally dated from the death of Alexander and his (Macedonian) Empire at 323 BCE to the birth of Augustus' (Roman) Empire in 31 BCE, gave the West three of its most innovative and influential schools of philosophy: Epicureanism, Skepticism and Stoicism. This course investigates the central features of their thought. Special attention is paid to the still-relevant debates between the Stoics and Skeptics about the possibility of knowledge, to the disagreements among all three schools about the issues of freedom, responsibility and determinism, and to their ethical theories. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM

L30 Phil 4550 Continental Rationalism
A rationalist is a philosopher for whom at least one certain truth is inborn or comes from reason rather than from empirical or sensory experience. The major systematic writings of Descartes, Spinoza and Leibniz are examined with a focus on the question: does the epistemology determine the ontology of these philosophical systems or vice versa? The lines of development connecting these philosophers are traced, and such enduring problems as the relation of mind to body are examined. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 4570 Kant's Critique of Pure Reason
An in-depth investigation of Kant's Critique of Pure Reason, one of the most important books in the history of Western philosophy. Some supplementary readings from other philosophers are used to situate Kant's work in a systematic and historical context, to present some "Kantian" positions in current philosophy, and to bring in some important contrasting views and criticisms. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4575 Kant's Moral Theory
An in-depth examination of Kant's practical philosophy: his moral and political theory. Readings include the Critique of Practical Reason, parts of the Metaphysics of Morals, Perpetual Peace and other writings. Supplementary readings are used to situate Kant's work in its systematic and historical context, to provide orientation in the world of Kant scholarship, and to introduce important contrasting views and criticisms. We also discuss recent reformulations of Kantian themes in the works of contemporary philosophers. Prerequisite: one course in Philosophy at the 300 level, graduate standing or permission of the instructor.
Credit 3 units. A&S IQ: HUM EN: H
L30 Phil 464 Advanced Continental Philosophy
A study of selected texts by such major figures of 20th-century continental philosophy as Husserl, Heidegger, Merleau-Ponty, Sartre, de Beauvoir, Levinas, Habermas, Foucault, Derrida and Irigaray. Such topics as phenomenology, hermeneutics, existentialism, critical theory, structuralism and post-structuralism are investigated. Prerequisite: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 465 Topics in the History of Philosophy
Study of individual philosophers or themes from the ancient, medieval, and/or modern periods. Examples: Spinoza, St. Thomas Aquinas, neo-Platonism, universals in ancient and medieval thought, ancient and modern theories of space and time. Prerequisite: 6 units in philosophy or permission of instructor. Credit 3 units. A&S IQ: HUM EN: H

L30 Phil 4751 Reformers and Radicals: Feminist Thinking Through History
We focus on feminist thought in Western culture but also examine non-Western ideas about feminisms. We trace the relationship among emergent feminist ideas and such developments as the rise of scientific methodology, Enlightenment thought, revolutionary movements and the gendering of the political subject, colonialism, romanticism, socialism, and global feminisms. Readings are drawn from both primary sources and recent feminist scholarship on the texts under consideration. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: completion of at least one Women, Gender, and Sexuality Studies course or permission of the instructor. Students who have taken L77 WGSS 475 Intellectual History of Feminism can not take this class. Same as L77 WGSS 475 Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM EN: H

L30 Phil 497 Undergraduate Independent Study
Prerequisite: permission of the department. Credit variable, maximum 6 units.

L30 Phil 499 Study for Honors
Prerequisites: Visit the Honors Thesis webpage (http://philosophy.artsci.wustl.edu/undergraduate/honors-thesis-philosophy). Credit 3 units.

Philosophy-Neuroscience-Psychology
Philosophy-Neuroscience-Psychology (PNP) is an interdisciplinary program that provides an opportunity to examine the mind from multiple perspectives. Students who choose to major in PNP will learn to bring some of the newest findings in science to bear on some of the oldest questions in philosophy; they will also see new questions emerge and learn to pursue those as well. They will consider questions like the following: Is the mind–brain a single entity, or does having a mind involve something over and above the activity of a brain? What assumptions are made by cognitive psychologists when they divide mental activity into separate processes and use response times or other measures of task performance to describe those processes? What assumptions are made by neuroscientists when they use imaging techniques to determine where in the brain a cognitive process is carried out? What are we to make of Chomsky's claim that language is an innate mental organ designed to generate an infinite number of sentences? PNP majors will seek answers to questions such as these in courses offered by PNP and PNP's affiliated departments.

### Majors

**The Major in Philosophy-Neuroscience-Psychology**

#### I. Core Undergraduate Requirements for PNP

Required for all students, regardless of track:

**Entry Sequence**

Choose one of the following:

- **PNP** Sequence
  - PNP 200 Introduction to Cognitive Science and
  - PNP 201 Inquiry in the Cognitive Sciences or
  - Psych 301 Experimental Psychology

  or

- **Mind, Brain, Behavior Sequence** (MBB)
  - FYP 120A Ampersand: Introduction to Study of the Mind-Brain: Psychological, Biological, & Philosophical Perspectives
  - FYP 122A AMP: Introduction to the Study of the Mind Brain II or PNP 200 Introduction to Cognitive Science

**Core Philosophy Requirements**

**Prerequisites:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Phil 100G</td>
<td>Logic and Critical Analysis</td>
<td>3</td>
</tr>
<tr>
<td>or Phil 102</td>
<td>Introduction to Scientific Reasoning</td>
<td></td>
</tr>
<tr>
<td>or Phil 120F</td>
<td>Problems in Philosophy</td>
<td></td>
</tr>
<tr>
<td>or Phil 125C</td>
<td>Great Philosophers</td>
<td></td>
</tr>
</tbody>
</table>

**Upper division:** Two courses at the 300 or 400 level

Majors must take either

- PNP 315 Philosophy of Mind or
- PNP 306 Philosophy of Language

and another from the list below:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>

</table>
Phil 349C Descartes to Hume 3
PNP 3581 Conceptual Foundations of Modern Science 3
Phil 361 Philosophy of Emotions 3
Phil 366 Art and the Mind-Brain 3
Phil 390 Philosophical Writing (upon approval of subject matter, consult PNP office for each semester) 3
Phil 403 Mathematical Logic I 3
Phil 404 Mathematical Logic II 3
Phil 405 Philosophical Logic 3
Phil 4051 Philosophy of Logic 3
Phil 4061 Topics in the Philosophy of Language 3
PNP 4065 Advanced Philosophy of Language 3
Phil 410 Theories of Perception 3
PNP 4141 Advanced Epistemology 3
PNP 4142 Advanced Metaphysics 3
PNP 418 Current Controversies in Cognitive Science 3
PNP 419 Philosophy of Psychology 3
PNP 4210 Topics in Advanced Philosophy of Science: Scientific Explanation 3
Phil 4212 Philosophy of Neuroscience 3
Phil 423 Philosophy of Biological Science 3
PNP 426 Theories of Concepts 3
PNP 4332 Cognition and Computation 3
PNP 495 PNP Seminar 3
PNP 496 PNP Seminar: Rethinking Psychological Kinds 3

Core Psychological & Brain Sciences Requirements

**Prerequisite:** Psych 100B Introduction to Psychology

**Upper division:** Two courses at the 300 or 400 level

Unless a student has completed FYP 120A with a grade of B- or higher, they must take

PNP 360 Cognitive Psychology or
PNP 408 Psychology of Language and

another from the list below:

II. Track-Specific Requirements

Courses Required for the Cognitive Neuroscience (CN) track

**Prerequisites:** Biol 2960 or Psych 3401* and permission of instructor; Biol 3058 recommended.

**Upper division:** Two neuroscience courses at the 300 or 400 level. Students must take the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Biol 3411</td>
<td>Principles of the Nervous System</td>
<td>3</td>
</tr>
<tr>
<td>Psych 3604</td>
<td>Cognitive Neuroscience</td>
<td>3</td>
</tr>
</tbody>
</table>

* Psych 3401 Biological Psychology can count toward the depth requirement, if taken as a prerequisite.
Courses Required for the Language, Cognition and Culture (LCC) track

Prerequisites:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Anthro 170D</td>
<td>Introduction to Linguistics</td>
<td>3</td>
</tr>
<tr>
<td>Anthro 150A</td>
<td>Introduction to Human Evolution</td>
<td>3</td>
</tr>
</tbody>
</table>

Upper division: Two courses at the 300 or 400 level, chosen from those below:

<table>
<thead>
<tr>

III. Depth Requirement

Students on the CN track must complete at least 9 units, including at least 3 units at the 400 level or above, in one area of either philosophy, psychology or neuroscience.

Students on the LCC track must complete at least 9 units, including at least 3 units at the 400 level or above, in one area of either philosophy, psychology, anthropology or linguistics.

Three units of FYP 3001 may be counted toward the depth requirement, in an area appropriate to the research undertaken (e.g., a psychology research project would count toward the psychology depth requirement). All 9 depth requirement units must be taken in a single area.

IV. Capstone

The Capstone is required for honors students and first majors; it is recommended for second majors. It consists of one of the following:

- A PNP Honors project (PNP 499, 6 units; requires PNP Honors form to be filled out and approved by Honors Coordinator)
- The 2-unit PNP Reading Class (formerly PNP Book Club) plus the PNP Seminar (PNP 495) or PNP 496
- The PNP Reading Class (formerly PNP Book Club) plus 3 advanced units of independent study (PNP 500). The independent study details are available on the PNP website (https://pnp.artsci.wustl.edu/undergraduate/independent-study).

Units from a capstone experience can count toward the depth requirement in either the CN or LCC track.

Minors

The Minor in Philosophy-Neuroscience-Psychology

Units required: 15

Required courses: Minors are required to complete at least 15 units, of which 9 must be at the 300 level or above.

The minor is composed of a 6-unit introductory sequence (PNP 200 and PNP 201 or FYP 120A and MBB 122), followed by the below courses:

- 3 units of Philosophy:
  
  PNP 315 Philosophy of Mind/Phil 315
  
  or
  
  PNP 306 Philosophy of Language/Phil 306G

- 3 units of Neuroscience:
  
  PNP 3411 Principles of the Nervous System/Biol 3411
  
  or
  
  Psych 3604 Cognitive Neuroscience

- 3 units of Psychology:
  
  PNP 360 Cognitive Psychology/Psych 360
  
  or
  
  PNP 408 Psychology of Language

Additional Information

Psych 100B is the prerequisite for all psychological & brain science courses at the 300 level and above. Note that no more than 6 units counted toward a minor in PNP may be transferred or earned abroad.

Courses

Visit online course listings to view semester offerings for L64 PNP (https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L64&crslvl=1:4).
L64 PNP 200 Introduction to Cognitive Science
We seek to understand the mind-brain by integrating findings from several of the cognitive sciences, including philosophy, psychology, neuroscience, linguistics, anthropology and artificial intelligence. This course considers multiple perspectives on such topics as mental imagery, concepts, rationality, consciousness, emotion, language, thought, memory, attention and machine intelligence. Prerequisite: completion of at least one of the following courses: Psych 100B, Phil 120F, Phil 125C, Biol 296A, MBB 120A or Ling 170D.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L64 PNP 201 Inquiry in the Cognitive Sciences
Understanding the mind-brain involves orchestrating a variety of conceptual tools and modes of inquiry from the cognitive sciences. This course offers a hands-on introduction to a variety of research tactics used in the behavioral and biological sciences and emphasizes the advantages of combining them. For example, neuroimaging can enhance the interpretation of experiments by cognitive psychologists and modeling can be used to simulate and understand the effects of brain lesions. Prerequisite: completion of at least one of the following courses: Psych 100B, Phil 120F, Phil 125C, Biol 296A, MBB 120 or Ling 170D.
Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L64 PNP 3001 Research in the Mind, Brain, and Behavior
An introduction to research for students in the Mind, Brain and Behavior program (formerly known as Hewlett Program). Students work under the supervision of a mentor. Prerequisite: admission to the Mind, Brain and Behavior program, completion of MBB/PNP 122, and permission of the mentor.
Same as L96 MBB 300
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L64 PNP 301 Symbolic Logic
During the first half of the course, we will be studying some features of truth-functional and first-order classical logics, including studying the model theory and metatheory for first-order logic in much greater depth than in Phil 100. During the second half of the course, we will go on to study three different styles of proof-system: tableaux, axiomatic, and natural deduction. This course continues on where Phil 100 leaves off. It is recommended for students who have already taken that introductory course or for students who already have a strong background in mathematics. Priority given to majors in philosophy and PNP.
Same as L30 Phil 301G
Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: HUM

L64 PNP 306 Philosophy of Language
A survey of major philosophical problems concerning meaning, reference, and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues will be selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke, and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.
Same as L30 Phil 306G
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L64 PNP 309 Syntactic Analysis
The ability to produce and understand an infinite number of sentences is perhaps the most fascinating aspect of the human language faculty. Syntax is the study of how the brain organizes sentences from smaller phrases and words. This course explores syntactic analysis from several perspectives within generative linguistics, focusing primarily on the Government and Binding framework but also introducing Minimalist and Optimality Theoretic approaches. Topics include phrase structure, transformations, case theory, thamatic roles and anaphora. Assignments help students learn to construct and compare analyses of syntactic problems in English and other languages. Prerequisite: Ling 170D or permission of instructor.
Same as L44 Ling 309
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

L64 PNP 3111 Introduction to Semantics
Semantics is the branch of linguistics which studies how speakers assign meaning to words, sentences, and larger units of discourse. We combine perspectives from both linguistics and philosophy to explore a variety of topics including polysemy, compositionality, quantification, anaphora, definite descriptions, attitude reports, presupposition and implicature. Prerequisite: Ling 170D or Phil 301G or permission of instructor.
Same as L44 Ling 311
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

L64 PNP 313 Phonological Analysis
There are several important abilities involved in the use of human language, one of these being the ability to organize speech sounds. The system that the brain uses to accomplish this task is the subject matter of phonology. This course explores phonology from several perspectives within generative linguistics, including both traditional rule-based and current Optimality Theoretic approaches. Topics discussed include phonological features, lexical phonology, prosodic morphology, tone, and metrical stress. Assignments help students learn to analyze phonological problems in a variety of languages and to evaluate the consequences of using different analytic approaches. Prerequisite: Ling 170D or permission of instructor.
Same as L44 Ling 313
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L64 PNP 315 Philosophy of Mind
An introduction to philosophical analyses of the nature of mind, especially those developed by contemporary philosophers. The focus will be on questions such as the following: What is a mind? How does it relate to a person's brain? How does it relate to a person's body and the external world? Can a mind exist in a very different kind of body (e.g., a computer or a robot)? Does thinking require a language-like code? If so, can non-linguistic species think? What is it to have a mental image or to experience pain? Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.
Same as L30 Phil 315
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
L64 PNP 3151 Introduction to Social Psychology
Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory, and political psychology, among other issues. Prerequisite: Psych 100B.
Same as L33 Psych 315
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 316 Mind and Morals
This course explores a number of issues at the intersection of ethics and cognitive science. Possible topics include: Are we rational? Do we know our own thoughts and motivations? Can one believe that one ought to do something without being motivated to do it? Do emotions impair or enhance our ability to reason? How do moral beliefs develop through childhood? Are traits such as intelligence and character unchangeable, and what implications follow if they are (or are not)? Does retaining my identity over time require having the same mind, and, if so, am I the same person now as I was as a child? Are non-human animals worthy of moral consideration? If brain activity is determined by causal laws, can we have free will? Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.
Same as L30 Phil 316
Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L64 PNP 3171 Introduction to Computational Linguistics
Use of computers to analyze, understand, and generate human language. Emphasis on appreciating practical applications such as text analysis, search and creation of dictionaries and corpora, information retrieval, machine translation, and speech interfaces. Survey of rule-based and statistical techniques. Students acquire programming skills appropriate for solving small- to medium-scale problems in linguistics and text processing, using a language such as Python. Students have regular programming assignments and complete a semester project. No previous knowledge of programming required. Prerequisite: L44 Ling 170D.
Same as L44 Ling 317
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 320 Historical and Comparative Linguistics
Historical linguistics focuses on how languages change over time. Comparative linguistics focuses on their similarities and differences. In this course we trace some of the differences and changes in sound (phonetics and phonology), word formation (morphology), sentence structure (syntax), and meaning (semantics). Topics include linguistic universals, the structural and genetic classification of languages, the techniques of reconstructing proto-languages, and the causes of language change. Examples from Indo-European languages (for example, Greek, English, and Spanish) and from Native American languages (for example, Quechua and Mayan) are emphasized. Prerequisite: Ling 170D.
Same as L44 Ling 320
Credit 3 units. A&S IQ: LCD, SSC Art: HUM BU: HUM EN: S

L64 PNP 321 Philosophy of Science
Pivotal concepts common to empirical sciences are examined and clarified. These include: explanation, confirmation, prediction, systematization, empirical significance, and the relationship of all these concepts to the structure of scientific theory. Examples may be drawn from both contemporary and historical science, including the social, biological, and physical sciences. Students with a background in science are particularly encouraged to consider this course. Priority given to majors in philosophy and PNP.
Same as L30 Phil 321G
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H

L64 PNP 3211 Developmental Psychology
This course concentrates on the cognitive and social development of the person from conception to adolescence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior. Prerequisite: Psych 100B.
Same as L33 Psych 321
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 3221 Music Cognition
An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.
Same as L27 Music 3221
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA, SCI

L64 PNP 330 Sensation and Perception
What’s involved in seeing and hearing? This course covers perceptions from the physical stimuli (light and sound) that impinge upon the sensory receptors through the higher-level perceptual stimuli that the stimuli generate. Demonstrations and illusions are used as we learn about the anatomy and physiology of the sensory systems, and study the brain mechanisms that are involved in vision and audition. Prerequisite: Psych 100B.
Same as L33 Psych 330
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA, SCI

L64 PNP 3401 Biological Psychology
An introduction to biological mechanisms underlying behavior. Topics include the physiology of nerve cells, anatomy of the nervous system, control of sensory and motor activity, arousal and sleep, motivation and higher mental processes. Prerequisite: Psych 100B.
Same as L33 Psych 3401
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA, SCI

L64 PNP 3411 Principles of the Nervous System
This course will provide a broad introduction to neuroscience, starting at the level of cellular and molecular neuroscience and ultimately ending at systems and theoretical neuroscience, with emphasis on the organization of the mammalian central nervous system. Topics will include neuronal structure, the action potential, information transmission between neurons, sensory/motor systems, emotion, memory, disease, drugs, behavior, and network dynamics. A fundamental goal of this course is to provide students with the ability to approach complex problems using the scientific method and to understand the limits of knowledge. This course will also expose students to some of the neuroscience community at Washington University. Prerequisites: Biol 2960, Biol 2970 (recommended) and Biol 3058 (recommended) or Psych 3401 and permission of instructor.
L64 PNP 351 Genes, Environment, and Human Behavior
This class will examine how genetic influences impact various dimensions of human behavior, ranging from traits (e.g., personality) to psychiatric disorders. Topics to be covered include methods used to study genetic influence, how genetic predispositions interact with the environment, and ethical implications. Modern methods for gene-identification, such as genomewide association studies, polygenic risk scores and epigenetic experiments will be examined in detail. Emphasis will be placed on understanding core concepts (e.g., what is identity-by-descent) as well as application (e.g., calculate heritability, interpretation of results from published studies). Prerequisite: Psych 100B.
Same as L33 Psych 345
Credit 3 units. A&S IQ: NSM Arch: SSC Art: SSC BU: SCI EN: S

L64 PNP 350 Physics of the Brain
Concepts and techniques of physics are applied to study the functioning of neurons and neuronal circuits in the brain. Neurons and neural systems are modeled at two levels: (i) at the physical level, in terms of the electrical and chemical signals that are generated and transmitted and (ii) at the information-processing level, in terms of the computational tasks performed. Specific topics include: neuronal electrophysiology, neural codes, neural plasticity, sensory processing, neural network architectures and learning algorithms, and neural networks as dynamical and statistical systems. Course grade is based primarily on an individualized term project. Prerequisite: Physics 117A, Physics 197-198, or permission of the instructor. Same as L31 Physics 350
Credit 3 units. A&S IQ: NSM Arch: SSC Art: SSC BU: SCI EN: S

L64 PNP 3531 Psychology of Personality
Review of basic theoretical orientations to the understanding of personality and complex human behavior. Overview of related techniques, procedures, and findings of personality assessment and personality research. Discussion of critical issues in evaluation of personality theories. Prerequisite: Psych 100B.
Same as L33 Psych 353
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 3541 Abnormal Psychology
This is an introductory course in psychopathology or the scientific study of mental health disorders. The course includes definitions, theories and classification of abnormal behavior. Content focuses on symptoms, classification, prevalence, etiology, and treatment of mental health disorders, including mood, anxiety, eating, schizophrenia spectrum, substance use and personality disorders. Prerequisite: Psych 100B.
Same as L33 Psych 354
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 355 Physics of Vision
How do the eyes capture an image and convert it to neural messages that ultimately result in visual experience? This lecture and demonstration course covers the physics of how we see. The course is addressed to physics, pre-medical, and life-sciences students with an interest in biophysics. Topics include physical properties of light, evolution of the eyes, image formation in the eye, image sampling with an array of photoreceptors, transducing light into electrical signals, color coding, retinal organization, computing with nerve cells, compressing the 3-D world into optic nerve signals, inferring the 3-D world from optic nerve signals, biomechanics of eye movement, engineered vision in machines. The functional impact of biophysical mechanisms for visual experience are illustrated with psychophysical demonstrations. Corequisite: Physics 117A, Physics 197 or permission of instructor.
Same as L31 Physics 355
Credit 3 units. A&S IQ: NSM Arch: SCI BU: SCI EN: BME T, TU

L64 PNP 3581 Conceptual Foundations of Modern Science
The aim of this course is to present some of the basic concepts underlying modern science. Insofar as many of those concepts first appeared or became predominant in the 17th and early 18th centuries, the course concentrates on primary works from that period. Among the concepts to be studied are the following: (1) Nature and natures: the ontology of matter and force; causal closure. (2) Methods: observing and intervening, systematic and organized. (3) Explanations: appeal to laws and mechanisms; teleology. Prerequisite: one course in Philosophy at the 100 or 200 level or permission of the instructor. Priority given to majors in philosophy and PNP.
Same as L30 Phil 358
Credit 3 units. A&S IQ: HUM Arch: HUM Art: H

L64 PNP 360 Cognitive Psychology
Introduction to the study of thought processing from an information-processing approach. Emphasis will be placed on theoretical models that are grounded in empirical support. Topics include pattern recognition, attention, memory, reasoning, language processes, decision making, and problem solving. Prerequisite: Psych 100B.
Same as L33 Psych 360
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA

L64 PNP 361 Psychology of Learning
Basic learning processes in animals, such as conditioning, reinforcement, punishment, and constraints on learning. Comparisons and interactions between classical and operant conditioning. Consideration given to learning theorists and theories, along with applications from the laboratory to the “real world.” Prerequisite: Psych 100B.
Same as L33 Psych 361
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L64 PNP 362 The Biological Basis of Human Behavior
Infidelity, marriage customs, inner city violence, infanticide, intelligence...Are the behavioral patterns we see genetically fixed and racially variable? What is the evolutionary and biological basis of human behavior? This course offers a critical evaluation of these from an anthropological perspective.
Same as L48 Anthro 362
Credit 3 units. A&S IQ: LCD, NSM Arch: NSM Art: NSM BU: SCI

L64 PNP 366 Art and the Mind-Brain
In recent years, there has been a growing interest in the bearing of cognitive science on the perception and understanding of art. This interest has roots in tradition: historically, art, aesthetics, and vision science have often been linked. However, the
growth of knowledge in cognitive science has opened up new opportunities for understanding art and addressing philosophical questions. The reverse is also true. The production, perception, and understanding of art are human capacities that can shed light on the workings of the mind and brain. This course considers questions such as the following: What is art? How do pictures represent? Does art express emotion? Why does art have a history? Prerequisites: one course in philosophy at the 100 or 200 level or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 366
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM

L64 PNP 3661 Psychology of Creativity
This course is an introduction to the psychological study of art and creativity. Our topics include the artist, the audience, the artistic product, the creative process, and social, cultural, and institutional influences on the creative process. We will explore these issues by considering a range of creative fields, including painting, literature, music and theater performance. Throughout the semester, we will take a developmental perspective on psychology and art. How do children learn to create, perceive and understand different art forms? What role can the arts play in education? To ground our study of the psychology of art, we will explore what "art" is, which members of society are labeled "artists," and how these categories are socially and culturally defined. Prerequisites: Educ 304 Educational Psychology or Psych 325 Adolescent Psychology or Psych 321 Developmental Psychology.

Same as L12 Educ 366
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA

L64 PNP 3662 Primate Biology
This course takes a multifaceted introductory approach to the primates, the closest relatives of human beings, by investigating anatomy, growth and development, reproduction, behavioral adaptations, ecology, geographic distribution, taxonomy and evolution. Emphasis is placed not only on the apes and monkeys, but also on the lesser-known lemurs, lorises, bushbabies, tarsiers and many others. The importance of primate biology to the discipline of anthropology is discussed. Intended for students who have already taken Anthro 150A, and recommended for students who wish to take the more advanced 400-level courses on primates. Prerequisite: Anthro 150A or permission of instructor.

Same as L48 Anthro 3661
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L64 PNP 3701 Introduction to Hispanic Linguistics
An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages.

Same as L38 Span 370
Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L64 PNP 380 Human Learning and Memory
A survey of issues related to the encoding, storage and retrieval of information in humans. Topics include memory improvement strategies, people with extraordinary memories, memory illusions and distortions, among other topics. Limited to 25 students. Prerequisite: Psych 100B.

Same as L33 Psych 380
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L64 PNP 390 PNP Reading Class
Each time this course is offered a book is selected that does an exemplary job of bringing together insights and results from multiple disciplines in targeting an important topic. We read and discuss the book and possibly a small amount of supplementary reading. A short presentation and paper are required. Prerequisite: PNP major standing.

Credit 2 units. A&S IQ: NSM BU: HUM EN: S

L64 PNP 396 Linguistics Seminar: Pragmatics in Second Language Learning
Readings on a selected topic in theoretical linguistics with an emphasis on discussion, presentation and writing. Prerequisite: varies with topic.

Same as L44 Ling 396
Credit 3 units. A&S IQ: SSC EN: S

L64 PNP 402 The Physiology and Biophysics of Consciousness
This course will explore the questions surrounding the search to understand the biophysical substrate of consciousness. Some areas to be explored: 1. Can consciousness be addressed like any other biological property in the sense that it has evolved by natural selection and that some elements of it are present in simple model systems, such as the fruit fly? Can insight be gained studying simple model systems? 2. Where in the brain is consciousness? What is the pattern of neurological events that occurs during consciousness? Is brain activity generating consciousness localized or distributed? Does it involve interacting brain regions? Does brain activity generating consciousness migrate to different brain regions? 3. How does the dynamic core hypothesis of Edelman relate to these questions? What can functional brain imaging add to these questions? Are Gamma waves involved in higher mental activity, and do they promote synchronized firing of neurons from different brain areas? How does this relate to the binding problem? 4. How does the brain’s ability to function as a computer relate to consciousness? In many respects the brain functions as a computer using electrical signals called Action Potentials. Action potentials in neuronal networks function in an analogous was as DC electrical impulses function in computer circuits. What is the output of computation in an electrical device? What are the theoretical limitations regarding what computation can achieve and ask whether electrical activity in the brain also has a fundamentally different purpose in addition to computation? 5. Is our knowledge of the physical world too primitive and incomplete to understand consciousness? The brain is an electronic device and consciousness clearly depends on its electrical activity. Yet, electrical forces are poorly understood, both in the context of classical physics and quantum physics. Will understanding consciousness have to wait for a unified theory that more accurately describes electrical forces? Taught in the medical school: McDonnell Science Building 983. Prerequisites: Bio3411 or equivalent. College-level physics, some knowledge of computers.
L64 PNP 404 Laboratory of Neurophysiology

Neurophysiology is the study of living neurons. Students record electrical activity of cells to learn principles of the nervous system including sensory transduction and coding, intercellular communication and motor control. The course meets for 9 hours each week. Students may leave the lab for up to 2 hours. Prerequisites: Biol 3411 or Psych 4411 and permission of Student Coordinator, Erin Gerrity. Biol 3411 may be taken concurrently.
Same as L41 Biol 404
Credit 4 units. A&S IQ: NSM, WI Art: NSM

L64 PNP 4041 Math Logic II

Godel's Incompleteness Theorem: its proof, its consequences, its reverberations. Prerequisite: Philosophy 403 or a strong background in mathematics.
Same as L30 Phil 404
Credit 3 units. A&S IQ: HUM Art: HUM

L64 PNP 406 Primate Ecology and Social Structure

Survey of the ecology, individual and social behavior, adaptations, and interactions of the major groups of primates. Emphasis on studies designed to examine the relationships among ecology, morphophysiology, and behavior. Methods used in collecting data on primates in the field. Prerequisite: Anthro 150A or one 100-level biology course.
Same as L48 Anthro 406
Credit 3 units. A&S IQ: NSM Art: NSM

L64 PNP 4065 Advanced Philosophy of Language

An advanced-level treatment of basic topics in the philosophy of language as this discipline is understood in the analytic tradition. The main positions and the problems they pose are surveyed; focal themes include meaning, reference and truth. The aim of the course is to help students develop effective expository techniques and to provide them with the necessary conceptual resources to analyze and criticize different theoretical views. Prerequisite: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 4065
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L64 PNP 408 Psychology of Language

This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B.
Same as L33 Psych 433
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L64 PNP 4141 Advanced Epistemology

An advanced survey of selected issues in contemporary epistemology. Careful attention will be given to one or more specific epistemological topics, such as skepticism, certainty, coherence, perception, induction, virtue epistemology, testimony, formal epistemology, the nature and value of understanding, or epistemic normativity. Prerequisite: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 4141
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L64 PNP 4142 Advanced Metaphysics

Through readings from both classical and contemporary sources, a single traditional metaphysical concern will be made the subject of careful and detailed analytic attention. Possible topics include such concepts as substance, category, cause, identity, reality and possibility, and such positions as metaphysical realism, idealism, materialism, relativism and irrealism. Prerequisite: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 4142
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L64 PNP 418 Current Controversies in Cognitive Science

An advanced survey of current debates in cognitive science with an emphasis on the philosophical issues raised by these debates. Topics may include: evolutionary psychology; innateness and neural plasticity; perception and action; consciousness; connectionism; robotics; embodied cognition; moral reason; emergence and artificial life; concepts and content; animal cognition. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM

L64 PNP 419 Philosophy of Psychology

An investigation of the philosophical presuppositions and implications of various traditions in psychology, including behaviorism, Gestalt and cognitivism, with a special emphasis on the development of the information processing approach of contemporary cognitivism. The conception of psychological phenomena, data and explanation central to each of these traditions are examined, and typical topics include the debates between propositional and imagistic models of representation, different accounts of concepts and categorization, and the relation of psychology to ethics. Prerequisite: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 419
Credit 3 units. A&S IQ: HUM Art: HUM

L64 PNP 4190 Primate Behavior

Discussion and analysis of recent research on the social behavior of nonhuman primates. Data from both field and laboratory study. Prerequisite: Anthro 406, or permission of instructor.
Same as L48 Anthro 419
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L64 PNP 4192 Primate Cognition

This course investigates historical and current views regarding the cognitive capacities of nonhuman primates, and the extent to which these abilities are shared with humans. Topics for this class include: social cognition, problem-solving, tool use, culture, communication, theory of mind, deception, self-recognition, imitation, and numerical cognition. The classes involve discussion and critical evaluation of theory and methods in this challenging and exciting area of primate cognitive research.
Same as L48 Anthro 4191
Credit 3 units. A&S IQ: NSM Art: NSM

L64 PNP 4210 Topics in Advanced Philosophy of Science: Scientific Explanation
This course will vary in topics related to Philosophy of Science from semester to semester. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Same as L30 Phil 4210
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM: H

L64 PNP 426 Theories of Concepts
Concepts are the building blocks of thought. They are implicated in just about every cognitive task. Beyond that, there is little consensus. What information do concepts encode? How are they acquired? How are they combined to form thoughts? How are they related to perception and imagery? Each of these questions has been answered in numerous ways. In this course, we will explore competing theories of concepts that have been proposed by philosophers, psychologists, and other cognitive scientists. No prior acquaintance with these issues is required. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 426
Credit 3 units. A&S IQ: HUM Art: HUM

L64 PNP 4302 Cognitive Psychology Applied to Education
This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning and comprehension with special focus on areas, theory and research that have potential application to education. Thus, the course provides selective coverage of theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes is explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. Prerequisites: junior/senior status, 9 units in psychology and Psych 100B or junior/senior status, 9 units in education and Psych 100B.
Same as L33 Psych 4302
Credit 3 units. A&S IQ: SSC EN: S

L64 PNP 4315 Culture, Language and the Education of Black Students
This course examines the communicative patterns of what is called variously African-American language, Pan-African linguistic systems and Ebonics within the context of public school policy and practice. In addition to a review of the structural and pragmatic aspects of black speech, the course highlights relationships between controversies within the linguistic community, contrasting views of speech within black lay communities, public discourse, and educational policy. Students also conduct a field-based research project in accord with their particular interests.
Same as L12 Educ 4315
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L64 PNP 4332 Cognition and Computation
This course introduces students to some of the key frameworks for thinking about the mind in computational terms. We look at some basic topics in the theory of computation, in addition to considering philosophical issues raised by computational models of cognitive processes. This course is required for graduate students in the PNP PhD program. Prerequisites: at least two 400-level PNP courses cross-listed in Philosophy.
Credit 3 units. A&S IQ: SSC EN: S

L64 PNP 4450 Functional Neuroimaging Methods
In this class, students will learn neuroimaging methods in the context of accurate, reproducible, and open science. There is no substitute for personally wrestling with data, so this is a hands-on course. Students will need to bring a laptop on which to install MATLAB and conduct analyses. Some background in neuroimaging or programming is helpful but not required. Topics covered include experimental design, accounting for artifacts, single-subject models, and group models. By the end, students will have used a computer script to analyze an fMRI dataset and have a good understanding of preprocessing and statistical analyses in IMRI. Limited to 20 students. Prerequisites: Psych 100B and either Psych 3604, Psych 4413, or graduate standing.
Same as L33 Psych 4450
Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L64 PNP 4488 The Cognitive Neuroscience of Film
To understand complex events in real life depends on perception, action and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar uses results from psychology and neuroscience to try to better understand the experience of a movie viewer, and uses theory and practice to explore psychological hypotheses about perception. Prerequisite: Psych 360 or Psych 3604, or Psych 4604, or graduate standing in psychology.
Same as L33 Psych 488
Credit 3 units. A&S IQ: SSC Art: NSM

L64 PNP 446 Second Language Acquisition
There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first- and second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners’ errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required.
Same as L44 Ling 466
Credit 3 units. A&S IQ: HUM Art: H

L64 PNP 467 Grammar and Vocabulary Acquisition
This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing;
explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such as learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices.

Same as L38 Span 467
Credit 3 units. A&S IQ: LCD BU; BA EN: H

L64 PNP 4691 Second Language Reading and Writing: Theory, Research and Practice
This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in applied linguistics and an elective for the Graduate Certificate in Language Instruction. Same as L38 Span 4691
Credit 3 units. A&S IQ: LCD BU; BA EN: H

L64 PNP 494 Behavioral Psychology Readings Group
This weekly journal-style readings class provides the opportunity for students to read and discuss seminal as well as current papers on the conceptual aspects of behavioral psychology and relevant research. Points of contact among behaviorism, cognitivism, and neuroscience and the natural lines of fracture will be examined. Prerequisite: Psych 100B and one of the following: Psych 361, Psych 360, or a Philosophy course. Same as L33 Psych 494
Credit 1 unit. A&S IQ: SSC EN: S

L64 PNP 495 PNP Seminar
Subject varies per semester. Not always offered as writing-intensive, refer to individual semester listing. Prerequisites: a 300-level philosophy course (Phil/PNP 315 is recommended) and PNP major standing or approval of instructor. Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC EN: S

L64 PNP 495W PNP Seminar: Writing Intensive
Subject varies per semester. Fulfills Writing Intensive (WI) requirement. Prerequisite: a 300-level philosophy course (Phil/PNP 315 is recommended); and PNP major standing or approval of instructor. Credit 3 units. A&S IQ: SSC WI EN: S

L64 PNP 496 PNP Seminar: Rethinking Psychological Kinds
Subject varies each semester. Prerequisite: a 300-level Philosophy course (Phil/PNP 315 is recommended); and PNP Major standing or approval of instructor. Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC EN: S

L64 PNP 499 Study for Honors
Prerequisites: Visit the PNP Honors webpage (http://pnp.artsci.wustl.edu/undergraduate/honors/prerequisites). Credit 3 units. EN: S

Physical Education
Undergraduate students may take both lecture-laboratory and performance courses through the Department of Athletics. A total of 12 performance units may be included in the 120 units required for graduation. All courses are offered only on a credit/no credit basis.

Contact: Kathy Lasater
Phone: 314-935-3477

Faculty
Director of Athletics
Anthony J. Azama (http://bearsports.wustl.edu/information/directory/bios/Azama?view=bio)
John M. Schael Director of Athletics
MBA, Miami University

Majors
Students may take both lecture-laboratory and performance courses through the Department of Athletics; however, there is no major in this area.

Minors
Students may take both lecture-laboratory and performance courses through the Department of Athletics; however, there is no minor in this area.

Courses

L28 P.E. 157 Okinawan Karate-do
Okinawan Karate-do is an effective form of self-defense for people of all ages and body types. Practiced as a traditional martial art, Okinawan Karate-do is an ethical discipline fostering physical fitness, holistic health, and personal development. Course fee: $30; beginners welcome! Credit 1 unit.

L28 P.E. 212 Topics in Physical Education: Intermediate and Advanced Basketball
Intermediate and advanced basketball. Designed to develop an appreciation for basketball through team competition and activity. Individual instruction and skill development will also be available. Credit 1 unit.
L28 P.E. 214 Topics in Physical Education: Advanced Weight Training
Advanced weight training. Major emphasis on muscular strength and flexibility through free weight resistance exercise. Pre- and post-assessment of physical fitness levels may be established. Prerequisite: Beginning Weight Training. Credit 1 unit.

L28 P.E. 215 Weight Training
Beginning weight training. Major emphasis on strength development. Credit 1 unit.

L28 P.E. 216 Soccer
Soccer. Designed to develop an appreciation for soccer through the development of soccer skills, concepts of group play and team competition. All students who register must check in with the departmental office during the first two weeks of the semester. Credit 1 unit.

L28 P.E. 220 Topics in Physical Education: Varsity Sports
Prerequisite: permission of the department. Credit 1 unit.

L28 P.E. 224 Topics in Physical Education: Lifeguard Training
This course provides the skill instruction and knowledge needed to prevent and respond to aquatic emergencies in a pool setting. Successful completion of requirements results in certification in American Red Cross Lifeguard Training for swimming pools, CPR and first aid. Prerequisite: Swimming test given during the first week of class. Credit 1 unit.

L28 P.E. 232 Topics in Physical Education: High-Intensity Conditioning
High-intensity conditioning. Varied program of high-intensity conditioning techniques designed for individual needs. Supervised areas covered are cardiovascular and strength testing, weight training, plyometric training, flexibility and stretching, and aerobic and anaerobic training. Credit 1 unit.

L28 P.E. 236 Topics in Physical Education: Fitness and Conditioning
Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time. Students are required to attend an orientation session. Step Plus is primarily designed around step aerobics, with occasional workouts using other fitness techniques such as box aerobics and interval training. Combo Training involves the combination of many fitness techniques, such as step aerobics, box aerobics, and low-impact aerobics. Prerequisite: P.E. 208. Credit 1 unit.

L28 P.E. 239 Topics in Physical Education: Beginning Tennis
Nine-week course. Credit 1 unit.

L28 P.E. 240 Topics in Physical Education: Intermediate Tennis
Nine-week course. All students who register must check in with the departmental office during the first two weeks of the semester. Credit 1 unit.

L28 P.E. 248 Topics in Physical Education: Individual Physical Education
Individual physical education. Prerequisite: medical referral needed. Credit 1 unit.

L28 P.E. 255 Topics in Physical Education: Practicum in Sports Leadership
Practicum in sports leadership. Participation in formal leadership tasks under the direction of the Washington University Athletic Department personnel. Selection of task and scope of work is determined before enrollment by conference with instructor. Prerequisite: permission of the department. Credit 1 unit.

L28 P.E. 258 Indoor Cycling
Indoor cycling is a high-energy cardiovascular workout performed on stationary bikes. All levels welcome; the workout can be tailored to the student's personal fitness goals and needs. A water bottle and towel are required. There will be a $45.00 fee for a heart-rate monitor for this class. Credit 1 unit.

L28 P.E. 291 Fundamentals of Athletic Training
Study of the duties of the athletic trainer in relation to physical education classes, competitive sports, and recreation, including the study and practice of first-aid care and the prevention of injuries. Credit 3 units.

Physics
Physics is the discipline that deals with the most fundamental aspects of our universe, such as the properties of atoms, nuclei and elementary particles; the nature of the forces between them; and the collective behavior of atoms in solids, liquids and gases. It deals with the entire universe, from its birth to its ultimate fate. At the same time, physics provides the tools that help us to understand extremely complex everyday things, like the behavior of sand piles, the strength of materials, and processes in the brain. Physics seeks to discover and understand the mathematical rules that govern the behavior of things. Its early successes in comprehending motion, thermodynamics, electricity and magnetism provided a foundation upon which other physical sciences have grown.

For students planning a career in science and technology or intending to pursue graduate studies in physics, astronomy, earth sciences, environmental sciences, medical physics, meteorology or oceanography, a major in physics provides a
solid foundation. The program is sufficiently flexible to allow students to combine a physics major with a second major in chemistry, mathematics or engineering; with pre-medical studies; or with other disciplines in the humanities and social sciences. In addition to the fundamentals of physics, the program is designed to give students a broad range of skills in laboratory techniques, critical thinking, computer use and teamwork, which will serve them well in their chosen careers. In consultation with a faculty adviser, students may design a program of study to meet individual goals and interests. Physics majors are strongly encouraged to participate in physics research projects directed by faculty members.

**Introductory Physics:** The Physics 191–Physics 192 and Physics 191L–Physics 192L sequence is a calculus-based introduction to physics intended for adequately prepared students interested in majoring in science or engineering or undertaking pre-medical studies. Physics 191 fulfills the requirements for the Sam Fox School. The sequence uses interactive, active-learning techniques. Calculus I (Math 131) is a corequisite, although previous or concurrent enrollment in Calculus II (Math 132) is strongly recommended.

The department also offers several other courses of general interest to the nonscience student. In most cases, these courses have no prerequisites.

Majors

The Major in Physics

Total units required: 42

Required courses: Majors in physics are required to complete the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 191</td>
<td>Physics I</td>
<td>3</td>
</tr>
<tr>
<td>Physics 191L</td>
<td>Physics I Laboratory</td>
<td>1</td>
</tr>
<tr>
<td>Physics 192</td>
<td>Physics II</td>
<td>3</td>
</tr>
<tr>
<td>Physics 192L</td>
<td>Physics II Laboratory</td>
<td>1</td>
</tr>
<tr>
<td>Physics 322</td>
<td>Physical Measurement Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 411</td>
<td>Mechanics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 421</td>
<td>Electricity and Magnetism</td>
<td>3</td>
</tr>
<tr>
<td>Total Units</td>
<td></td>
<td>17</td>
</tr>
</tbody>
</table>

Physics 201 and 204 are also recommended for physics majors.

One quantum physics course. Choose from the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 217</td>
<td>Introduction to Quantum Physics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 318</td>
<td>Introduction to Quantum Physics II</td>
<td>3</td>
</tr>
<tr>
<td>Physics 471</td>
<td>Quantum Mechanics</td>
<td>3</td>
</tr>
</tbody>
</table>

Note that Physics 217 does not fulfill the requirement of an upper-level course.

One additional upper-level laboratory course. Choose from the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 316</td>
<td>Optics and Wave Physics Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 321</td>
<td>Electronics Laboratory</td>
<td>3</td>
</tr>
</tbody>
</table>

Upper-Level Courses. Majors are required to complete a minimum of 21 units of advanced courses (300-level or higher), excluding Physics 341, Physics 342, Physics 441, Physics 442, Physics 499 and Physics 500. These 21 units include courses listed above.

Math courses required for the physics major:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 131</td>
<td>Calculus I</td>
<td>3</td>
</tr>
<tr>
<td>Math 132</td>
<td>Calculus II</td>
<td>3</td>
</tr>
<tr>
<td>Math 233</td>
<td>Calculus III</td>
<td>3</td>
</tr>
<tr>
<td>Math 217</td>
<td>Differential Equations (We recommend that Math 217 precede Physics 411)</td>
<td>3</td>
</tr>
<tr>
<td>Total Units</td>
<td></td>
<td>12</td>
</tr>
</tbody>
</table>

Math courses recommended for the physics major:

- Math 308 Mathematics for the Physical Sciences or ESE 318 Engineering Mathematics A (We recommend that this course precede Physics 421.)
- Math 309 Matrix Algebra (We recommend that Math 309 precede Physics 471.)
- Physics 501/Math 501 and Physics 502/Math 502 also are recommended.

Science-breadth requirement: Majors must select three of the following courses to satisfy the science-breadth requirement. One of the three courses must be Chem 105, Chem 106, Chem 111A, Chem 112A, Chem 401 or Chem 402.

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chem 105</td>
<td>Introductory General Chemistry I</td>
<td>3</td>
</tr>
<tr>
<td>Chem 106</td>
<td>Introductory General Chemistry II</td>
<td>3</td>
</tr>
<tr>
<td>Chem 111A</td>
<td>General Chemistry I</td>
<td>3</td>
</tr>
<tr>
<td>Chem 112A</td>
<td>General Chemistry II</td>
<td>3</td>
</tr>
<tr>
<td>Chem 151</td>
<td>General Chemistry Laboratory I</td>
<td>2</td>
</tr>
<tr>
<td>Chem 152</td>
<td>General Chemistry Laboratory II</td>
<td>2</td>
</tr>
<tr>
<td>Chem 401</td>
<td>Physical Chemistry I</td>
<td>3</td>
</tr>
<tr>
<td>Chem 402</td>
<td>Physical Chemistry II</td>
<td>3</td>
</tr>
<tr>
<td>Chem 445</td>
<td>Instrumental Methods: Physical Chemistry</td>
<td>3</td>
</tr>
<tr>
<td>CSE 131</td>
<td>Introduction to Computer Science</td>
<td>3</td>
</tr>
<tr>
<td>CSE 132</td>
<td>Introduction to Computer Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CSE 247</td>
<td>Data Structures and Algorithms</td>
<td>3</td>
</tr>
</tbody>
</table>

Biophysics Track

Physics majors may concentrate in the subfield of biophysics by taking the following (as part of their distribution requirement):
Physics requirement:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 463</td>
<td>Statistical Mechanics and Thermodynamics</td>
<td>3</td>
</tr>
</tbody>
</table>

One of the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 450</td>
<td>Physics of the Brain</td>
<td>3</td>
</tr>
<tr>
<td>Physics 455</td>
<td>Physics of Vision</td>
<td>3</td>
</tr>
</tbody>
</table>

One of the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 454</td>
<td>Physics of Living Systems</td>
<td>3</td>
</tr>
<tr>
<td>Physics 509</td>
<td>Nonlinear Dynamics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 563</td>
<td>Topics in Theoretical Biophysics</td>
<td>3</td>
</tr>
</tbody>
</table>

Biology requirements:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Biol 2960</td>
<td>Principles of Biology I</td>
<td>4</td>
</tr>
<tr>
<td>Biol 2970</td>
<td>Principles of Biology II</td>
<td>4</td>
</tr>
</tbody>
</table>

**Note:** Students wanting to have the biophysics track displayed on their transcript must send an email to the director of undergraduate studies (dus@physics.wustl.edu) at least one semester before their graduation date.

The Major in Astrophysics

Total units required: 47

**Required courses:** Majors in astrophysics are required to complete the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 191</td>
<td>Physics I</td>
<td>3</td>
</tr>
<tr>
<td>Physics 191L</td>
<td>Physics I Laboratory</td>
<td>1</td>
</tr>
<tr>
<td>Physics 192</td>
<td>Physics II</td>
<td>3</td>
</tr>
<tr>
<td>Physics 192L</td>
<td>Physics II Laboratory</td>
<td>1</td>
</tr>
<tr>
<td>Physics 312</td>
<td>Introduction to Astrophysics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 322</td>
<td>Physical Measurement Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 411</td>
<td>Mechanics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 421</td>
<td>Electricity and Magnetism</td>
<td>3</td>
</tr>
</tbody>
</table>

Total Units: 20

Physics 201 and 204 are recommended for physics majors.

**One quantum physics course.** Choose from the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 217</td>
<td>Introduction to Quantum Physics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 318</td>
<td>Introduction to Quantum Physics II</td>
<td>3</td>
</tr>
<tr>
<td>Physics 471</td>
<td>Quantum Mechanics</td>
<td>3</td>
</tr>
</tbody>
</table>

**One additional laboratory course.** Choose from the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 316</td>
<td>Optics and Wave Physics Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 321</td>
<td>Electronics Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>Physics 435</td>
<td>Nuclear and Radiochemistry Lab</td>
<td>3</td>
</tr>
</tbody>
</table>

**Required advanced courses:** In addition to the above requirements, students who are earning the astrophysics major are required to complete three advanced electives from the following list:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 446</td>
<td>Galactic Astrophysics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 456</td>
<td>Stellar Astrophysics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 460</td>
<td>X-Ray &amp; Gamma-Ray Astrophysics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 478</td>
<td>From Black Holes to the Big Bang</td>
<td>3</td>
</tr>
</tbody>
</table>

They must also complete one additional course from the preceding list of four courses or one from the following list of courses (3 units):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 422</td>
<td>Electricity and Magnetism II</td>
<td>3</td>
</tr>
<tr>
<td>Physics 474</td>
<td>Introduction to Particle Physics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 477</td>
<td>Physics of Finite and Infinite Nuclear Systems</td>
<td>3</td>
</tr>
<tr>
<td>Physics 547</td>
<td>Intro to Elementary Particle Physics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 558</td>
<td>Relativistic Astrophysics</td>
<td>3</td>
</tr>
<tr>
<td>EPSc 352</td>
<td>Earth Materials</td>
<td>5</td>
</tr>
<tr>
<td>EPSc 353</td>
<td>Earth Forces</td>
<td>4</td>
</tr>
<tr>
<td>EPSc 407</td>
<td>Remote Sensing</td>
<td>3</td>
</tr>
<tr>
<td>MEMS 3410</td>
<td>Fluid Mechanics</td>
<td>3</td>
</tr>
</tbody>
</table>

**Math courses required for the astrophysics major:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 131</td>
<td>Calculus I</td>
<td>3</td>
</tr>
<tr>
<td>Math 132</td>
<td>Calculus II</td>
<td>3</td>
</tr>
<tr>
<td>Math 233</td>
<td>Calculus III</td>
<td>3</td>
</tr>
<tr>
<td>Math 217</td>
<td>Differential Equations</td>
<td>3</td>
</tr>
</tbody>
</table>

Total Units: 12

**Science-breadth requirement:** Majors must select one of the following courses to satisfy the science-breadth requirement:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chem 105</td>
<td>Introductory General Chemistry I</td>
<td>3</td>
</tr>
<tr>
<td>Chem 106</td>
<td>Introductory General Chemistry II</td>
<td>3</td>
</tr>
<tr>
<td>Chem 111A</td>
<td>General Chemistry I</td>
<td>3</td>
</tr>
<tr>
<td>Chem 112A</td>
<td>General Chemistry II</td>
<td>3</td>
</tr>
<tr>
<td>Chem 151</td>
<td>General Chemistry Laboratory I</td>
<td>2</td>
</tr>
<tr>
<td>Chem 152</td>
<td>General Chemistry Laboratory II</td>
<td>2</td>
</tr>
<tr>
<td>Chem 401</td>
<td>Physical Chemistry I</td>
<td>3</td>
</tr>
</tbody>
</table>
Chem 402 Physical Chemistry II 3
Chem 445 Instrumental Methods: Physical Chemistry 3
EPSc 201 Earth and the Environment 4

Additional Information

Senior Honors: Students are encouraged to work toward Latin Honors (i.e., cum laude, magna cum laude, and summa cum laude). To qualify, students must meet the academic requirements of the college and successfully complete a suitable project under the supervision of a faculty member in the department. The project, whether experimental or theoretical, should demonstrate the student’s capacity for independent work. Honors candidates must apply to the Undergraduate Studies Committee no later than the first day of classes of their senior year. The application should include a description of the proposed project that has been co-signed by the supervising professor. A written report of the completed work must be submitted to the committee by a deadline in March. By enrolling in Physics 499, students may earn up to 6 units of credit for the honors project.

The physics department also offers physics majors the possibility to earn departmental distinctions. These distinctions require the same grade-point average cutoffs as Latin Honors (p. 909) but are calculated exclusively from the grades in physics courses (i.e., all courses with the prefix L31). Three levels of distinction are offered: (1) highest distinction; (2) high distinction; and (3) distinction. The highest and high distinctions require at least one semester of undergraduate research and a senior thesis describing the results; these distinctions are limited to the top 15 percent (highest distinction) and the top 15 to 50 percent (high distinction) of the physics majors in their senior year as ranked by their GPA in the physics courses. Students who meet the GPA cutoff but who do not undertake undergraduate research and a senior thesis may only receive the third level of distinction.

Minors

The Minor in Physics

Units required: 17

Required courses:

<table>

One of the following four laboratory courses:
Applications of variational calculus are ubiquitous in modern science. Variational calculus is the mathematical setting for describing the physical world. In all areas of classical and quantum physics, the physical world is expressed in terms of functions that extremize specific functionals. In this seminar variational calculus is explained at an elementary level and many of its applications in science are examined. A good understanding of elementary first-year calculus is required to take this seminar.

Credit 3 units. A&S: FYS

**L31 Physics 125A Solar System Astronomy**

Designed for the nonscience major, this course deals with the planets, their moons and rings, comets, meteorites and interplanetary dust particles. In order to understand both classical astronomy and the results obtained from modern telescopes and the space program, basic scientific ideas (including optics and the laws of motion) are reviewed first. There also is some discussion of astronomical history to show how we have arrived at our present ideas of the structure and evolution of the solar system. Prerequisites: high school algebra and trigonometry or concurrent enrollment in Math 131.

Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI

**L31 Physics 126A Stars, Galaxies and Cosmology**

Intended as a general survey for the nonscience major. Topics include the structure and evolution of stars, such as red giants, white dwarfs, neutron stars, pulsars and black holes; galaxies and quasars; cosmology and the Big Bang theory. Prerequisites: high school algebra and trigonometry, or concurrent enrollment in Math 131.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

**L31 Physics 141 Selected Topics in Physics I**

Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S IQ: NSM Art: NSM BU: SCI

**L31 Physics 142 Selected Topics in Physics I**

Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S IQ: NSM Art: NSM BU: SCI

**L31 Physics 171A Physics and Society**

Introduction to physics as it applies to the world we have built for ourselves. Energy as a unifying principle of physics and society's use of energy. Atoms, heat, and power. Essentials of conventional and alternative forms of energy. Nuclear energy, including radiation, waste, and weapons. Global climate change.

Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI

## Courses

### L31 Physics 101A Basic Physical Science

An introduction to the concepts and modes of thought involved in understanding the physical world. The focus is not only on everyday phenomena (e.g., falling objects, skidding cars, the tides) but also on questions of cosmic significance (e.g., relativity, the Big Bang, black holes, the origin of the elements). Verbal reasoning is emphasized. No prerequisites.

Credit 3 units. A&S IQ: NSM, AN BU: SCI

### L31 Physics 107A How Things Work

Why is the sky blue? How can a baseball curve? Natural and manmade phenomena can be understood by simple and basic ideas of physics. This course illustrates these underlying principles by using examples from everyday life as well as from physics and other fields. Because the phenomena are many and the principles are few we find that apparently very different events sometimes have similar explanations; we come to understand how the stretching of a rubber band is related to ice skating, and how the blue of the sky is related to the red of the sunset and the white color of milk. No prerequisites.

Credit 3 units. A&S IQ: NSM, AN BU: SCI

### L31 Physics 110A Awesome Ideas in Physics

The ideas of physics that have revolutionized our perception of the world and reality. Emphasis is on understanding a selected set of crucial concepts without losing track of the numbers. Using the writings of Hawking, Feynman and Lightman, a study is made of such topics as energy and conservation laws, the relativity of time, the wave-particle duality, the modern picture of matter at the smallest and the largest distance scales, and the history of the universe. Must be taken for a letter grade. No prerequisites.

Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI

### L31 Physics 111 Variational Calculus — A Mathematical Blade for Cutting-Edge Science

Variational calculus, a fancy generalization of ordinary calculus, is the study of functionals. In variational calculus one tries to find the special function that extremizes a functional. The
L31 Physics 191 Physics I
A calculus-based introduction to the concepts, laws, and structure of physics. Topics include kinematics, Newton's laws, energy, linear momentum, angular momentum, the conservation laws, gravitational force, harmonic motion, wave motion and interference, sound, and special relativity. There are two required evening exams followed by a required final exam. Prerequisite/corequisite: Math 131; previous or concurrent enrollment in Math 132 is also strongly recommended. A combination of Physics 191 and 191L is a replacement for Physics 197. Students may not receive credit for more than one of the following: Physics 117A, 197, and 191.
Credit 3 units. A&S IQ: NSM, AN BU: SCI

L31 Physics 191F Physics I — First-Years Only
This section of Physics 191 is for rising first-years only. Any non-first-year student enrolled in this section will be removed from the course; these students should enroll in Physics 191U. A calculus-based introduction to the concepts, laws, and structure of physics. Topics include kinematics, Newton's laws, energy, linear momentum, angular momentum, the conservation laws, gravitational force, harmonic motion, wave motion and interference, sound, and special relativity. There are two required evening exams followed by a required final exam. Prerequisite/corequisite: Math 131; previous or concurrent enrollment in Math 132 is also strongly recommended. A combination of Physics 191 and 191L is a replacement for Physics 197. Students may not receive credit for more than one of the following: Physics 117A, 197, and 191.
Credit 3 units. A&S IQ: NSM, AN BU: SCI

L31 Physics 191L Physics I Laboratory
Laboratory experience is an integral component of introductory physics. It is designed to provide a hands-on opportunity to explore concepts introduced in the lecture course and to develop careful measurement and documentation skills. Prerequisite/corequisite: Physics 191. Students may not receive credit for Physics 191L if they have already received credit for Physics 117A or 197.
Credit 1 unit.

L31 Physics 191U Physics I — Sophomores, Juniors, and Seniors Only
This section of Physics 191 is for rising sophomore, junior, and seniors only. Any first-year student enrolled in this section will be removed from the course; first-year students should enroll in Physics 191F. A calculus-based introduction to the concepts, laws, and structure of physics. Topics include kinematics, Newton's laws, energy, linear momentum, angular momentum, the conservation laws, gravitational force, harmonic motion, wave motion and interference, sound, and special relativity. There are two required evening exams followed by a required final exam. Prerequisite/corequisite: Math 131; previous or concurrent enrollment in Math 132 is also strongly recommended. A combination of Physics 191 and 191L is a replacement for Physics 197. Students may not receive credit for more than one of the following: Physics 117A, 197, and 191.
Credit 3 units. A&S IQ: NSM, AN BU: SCI

L31 Physics 197 Physics I
Calculus-based introduction to the central concepts, laws, and structure of physics, presented in an active learning environment. The course is structured around three themes that are treated in-depth: conservation laws, Newtonian physics, and special relativity. A daily regimen of homework and reading, as well as weekly homework assignments, small-group problem-solving exercises, and active class participation are integral parts of this course. Concurrent registration in a Physics 197 lab section is required. Prerequisite: previous or concurrent enrollment in Calculus I (Math 131) is required; previous or concurrent enrollment in Calculus II (Math 132) strongly recommended. Credit may not be obtained for both Physics 117A and Physics 197, and students may not simultaneously enroll in both courses.
Credit 4 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

L31 Physics 198 Physics II
Continuation of Physics 197. An advanced, calculus-based introduction to central concepts in physics for students who desire to major in physics or another physical science, or who have a special interest in physics. The course is structured around three themes that are treated in depth: electricity and magnetism, quantum physics, and statistical and thermal physics. A daily regimen of homework and reading as well as active class participation are integral parts of the course. Prerequisites: Physics 197 and Calculus II. Students who have not taken Physics 197 may not register for Physics 198. Concurrent registration in a Physics 198 lab section is required. Credit may not be obtained for both Physics 118 and Physics 198.
Credit 4 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

L31 Physics 201 Honors Problem Solving I
This is a problem-solving course for students considering a physics- or mathematics-heavy major. The problems we will focus on will be more difficult and sophisticated than those encountered in Physics 197. However, the content will be tightly linked to the weekly schedule of Physics 197, and the course will be taught by a Physics 197 instructor. This course is for incoming first-year students and rising sophomores. Prerequisites: concurrent enrollment in Physics 197 or AP physics and permission of the instructor.
Credit 1 unit.

L31 Physics 204 Honors Problem Solving II
This is a problem-solving course for students considering a physics or mathematics heavy major. The problems we will focus on will be more difficult and sophisticated than those encountered in Physics 198. However, the content will be tightly linked to the weekly schedule of Physics 198, and the course will be taught by a 198 instructor. This course is for incoming first-year students and rising sophomores. Prerequisites: Concurrent enrollment in Physics 198, AP physics, and permission of the instructor.
Credit 1 units.

L31 Physics 216 Introduction to Relativity: The Special Theory
Introduction to the special and general theories of relativity. Einstein's postulates of the principle of relativity and the constancy of the speed of light. Simple kinematics and dynamics: simultaneity, time dilation, space-time diagrams, twin and other "paradoxes," E=mc², laws of motion. Elements of general relativity: curved spacetime, experimental tests, black

L31 Physics 344 Energy and Environmental Physics
This intermediate-level course applies basic physics principles to this increasingly important area. It is designed for all science and engineering majors with an interest in energy and environmental issues. Topics covered include population trends, fossil fuel use, renewable energy sources, energy storage strategies and climate change. Particular emphasis is given to the use of the fundamental laws of physics, such as energy conservation, as well as more general concepts such as local and global stability, chaotic behavior, probability and risk. The aim of the course is the development of analytical skills and familiarity with important concepts, in order to enable an independent and informed view of environmental problems and possible solutions. A one-year introductory physics class on the level of Physics 117–118 or 197–198 is required. This course also may be taken as Physics 444, which requires an additional independent project. Credit 3 units. A&S IQ: NSM, AN BU: SCI

L31 Physics 350 Physics of the Brain
Concepts and techniques of physics are applied to study the functioning of neurons and neuronal circuits in the brain. Neurons and neural systems are modeled at two levels: (1) at the physical level, in terms of the electrical and chemical signals that are generated and transmitted, and (2) at the information-processing level, in terms of the computational tasks performed. Specific topics include: neuronal electrophysiology, neural codes, neural plasticity, sensory processing, neural network architectures and learning algorithms, and neural networks as dynamical and statistical systems. Course grade is based primarily on an individualized term project. Prerequisites: Physics 117A–118A, Physics 197–198, or permission of the instructor. Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI EN: BME T, SU, TU

L31 Physics 351 Introduction to Biomedical Physics
Principles and application of key physical methods used in the diagnosis and treatment of diseases, and in biomedical research. Topics include interaction of radiation with living systems: fundamentals of optical and electron microscopy; imaging via X-rays, magnetic resonance and ultrasound; and electrical properties of organs and cells. Prerequisite: Physics 117A–118A or Physics 197–198. Credit 3 units. Art: NSM BU: SCI EN: BME T, TU

L31 Physics 352 Physics of Biomolecules
This course emphasizes the application of physical laws and concepts in understanding biomolecules and their interactions, and in developing tools to investigate their biological properties and functionalities. Topics include (1) a general introduction to biomolecules and cells, (2) physics of biopolymers as modeled by stochastic analyses, (3) transport processes in biological systems including diffusion, reaction kinetics and “life at low Reynolds number,” and (4) the physics of fluorescence and its contemporary applications to dynamics of biomolecules, such as optical tweezers. Prerequisite: Physics 117–118 or Physics 197–198. Some familiarity with thermodynamics; Chem 111A–112A recommended. Credit 3 units. A&S IQ: NSM, AN

L31 Physics 354 Physics of Living Systems
One of the grand challenges in contemporary biophysics is placing our understanding of cellular systems on a firm quantitative footing. How does the collective activity of molecules enable the cell to sense its environment, make decisions, grow and develop? This course, aimed at physical and life science students, will serve as an introduction to the physical principles and mathematical techniques underlying the analysis of systems and synthetic biology. Topics will include modeling gene and signaling networks, the regulation of intracellular structures, and pattern formation in development. Students in this course can expect to learn both analytical and computer simulation approaches to fundamental problems in biology, biophysics, and biotechnology. Graduate students will explore the subject in more depth. Prerequisites: Physics 117A–118A or Physics 197–198 or Math 217 or Math 309, or permission of instructor. Credit 3 units. A&S IQ: NSM BU: SCI

L31 Physics 355 Physics of Vision
How do the eyes capture an image and convert it to neural messages that ultimately result in visual experience? This lecture and demonstration course covers the physics of how we see. The course is addressed to physics, premedical and life-sciences students with an interest in biophysics. Topics include physical properties of light, evolution of the eyes, image formation in the eye, image sampling with an array of photoreceptors, transducing light into electrical signals, color coding, retinal organization, computing with nerve cells, compressing the 3-D world into optic nerve signals, inferring the 3-D world from optic nerve signals, inferring 3-D movement, engineered vision in machines. The functional impact of biophysical mechanisms for visual experience is illustrated with psychophysical demonstrations. Corequisite: Physics 117A, Physics 197 or permission of instructor. Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI EN: BME T, SU, TU

L31 Physics 360 Biophysics Laboratory
This laboratory course consists of “table-top” experiments in biological physics that are designed to introduce the student to concepts, methods and biological model systems in biophysics. Most experiments combine experimentation with computer simulations. The list of available experiments includes electrophysiology, human bioelectricity, optical tweezers, ultrasonic imaging, mass spectrometer and viscosity measurements. Prerequisites: prior completion of Physics 117A–118A, Physics 197–198 or permission of instructor. Credit 3 units. A&S IQ: NSM, AN Art: NSM

L31 Physics 400 Physical Science in 12 Problems
Exercises related to general chemistry, classical mechanics, quantum mechanics, statistical mechanics, thermodynamics and kinetics, are solved with numerical software. Each exercise is accompanied by a lecture, a software template solving a problem and a related take-home problem. The software allows us to focus on, and treat in a transparent fashion, physical problems without the unworthy idealizations and contrivances found in textbooks. Prerequisites: General Chem, concurrent enrollment with Chem 401 and prior or concurrent enrollment in General Physics. Same as L07 Chem 400 Credit 1 unit. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L31 Physics 411 Mechanics
Motion of a point particle, rotational motion, oscillation, gravitation and central forces, Lagrangian and Hamiltonian formulation. Prerequisites: Physics 117A–118A or Physics 197–198, Math 217 or permission of instructor. Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM
L31 Physics 421 Electricity and Magnetism
Starting from Coulomb’s law, the Biot-Savart law and Faraday’s
law, the electrical and magnetic fields are defined and applied.
Maxwell’s equations are derived and their consequences,
such as electromagnetic waves and relativity, are explored.
Prerequisites: Physics 117A–118A or Physics 197–198, Math
217 or permission of instructor.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI EN: BME T,
DU, SU, TU

L31 Physics 422 Electricity and Magnetism II
The second course in a two-part series covering the classical
theory of electricity and magnetism leading to the derivation and
application of Maxwell’s equation. Topics in electrodynamics
including Faraday’s law, the displacement current and
Maxwell’s equations in vacuum and in matter are covered.
Electromagnetic waves and radiation, special relativity and
relativistic electrodynamics also are discussed. Prerequisite:
Physics 421 or permission of instructor.
Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM EN: BME
T, DU, SU, TU

L31 Physics 427 Introduction to Computational Physics
What does it mean to solve a research problem using a
computer? What is the difference between "someone ran a
simulation" and an interesting research result? What skills are
needed? Familiarity with a programming language is, of course,
essential, but that is only the beginning. This course will focus
on the methodology of computational research, touching also
on topics in numerical analysis, statistics, and visualization. The
format will combine lectures and hands-on experience with an
emphasis on research-style small-group projects. Prerequisites:
Physics 197/198, calculus, and familiarity with a programming
language.
Credit 3 units. A&S IQ: NSM Art: NSM

L31 Physics 435 Nuclear and Radiochemistry Lab
Application of radiochemical techniques to problems in
chemistry, physics, and nuclear medicine. Prerequisites: 3 units
of physical chemistry and permission of instructor. One lecture
hour and five hours of laboratory a week.
Same as L07 Chem 435
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 436 Introduction to the Atomic Nucleus
Introduction to the production and decay of radioactive
nuclides, the structure and properties of nuclei, and the
applications of nuclear and radiochemical techniques to current
scientific problems. Prerequisites: one year each of chemistry,
mathematics and physics.
Same as L07 Chem 436
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 441 Selected Topics in Physics IV
Topics of special interest (e.g., holography, relativity, nuclear
power, computer applications in physics, etc.) may be studied
under the supervision of a faculty member, variously by lectures,
seminars or individual study or research. Students hoping to
arrange such a course must prepare a proposal and secure the
instructor's consent to undertake direction of the course from a
faculty member and finally secure approval of the department
chair.
Credit variable, maximum 3 units. A&S IQ: NSM Art: NSM BU:
SCI

L31 Physics 442 Selected Topics in Physics IV
Topics of special interest (e.g., holography, relativity, nuclear
power, computer applications in physics, etc.) may be studied
under the supervision of a faculty member, variously by lectures,
seminars or individual study or research. Students hoping to
arrange such a course must prepare a proposal and secure the
instructor's consent to undertake direction of the course from a
faculty member and finally secure approval of the department
chair.
Credit variable, maximum 3 units. A&S IQ: NSM Arch: NSM Art:
NSM

L31 Physics 446 Galactic Astrophysics
In these lectures, the focus is on the dynamics and statistical
mechanics of a collection of stars, which is treated as a
collisionless system. The course begins with a discussion of
potential theory and proceeds to discuss the density and phase
distributions of stars in star clusters and galaxies, thus leading to
an understanding of the equilibria and stability of these systems.
Topics such as Chandrasekhar's dynamical friction, galaxy
formation, and dark matter will constitute the final topics of
discussion.
Credit 3 units. A&S IQ: NSM BU: SCI

L31 Physics 450 Physics of the Brain
Contents are the same as Physics 350. Also intended for
graduate students. Includes a more sophisticated term project
than Physics 350. Prerequisites: Physics 117A–118A or Physics
197–198, or permission of instructor.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI EN: BME T, SU,
TU

L31 Physics 454 Physics of Living Systems
Contents are the same as Physics 354. Graduate students
will explore the subject in more depth. Prerequisites: Physics
117A-118A or Physics 197-198 or Math 217 or Math 309, or
permission of instructor.
Credit 3 units. A&S IQ: NSM

L31 Physics 455 Physics of Vision
Contents are the same as Physics 355. Also intended for
graduate students. Includes a more sophisticated term project
than Physics 355. Corequisite: Physics 117A , Physics 197 or
permission of instructor.
Credit 3 units. A&S IQ: NSM

L31 Physics 456 Stellar Astrophysics
The course Stellar Astrophysics discusses the physical
processes that play a role inside stars. Relevant physical
processes include emissions and absorption processes,
radiation transfer, convective transfer, the weak and strong
interactions, nuclear processes and nuclear burning, and the
thermodynamics of equilibrium and non-equilibrium processes
in stellar interiors. Subsequently, these processes are used to
explain the structure and evolution of stars of different mass
ranges. Finally, the course discusses endpoints of stellar
evolution including white dwarfs, neutron stars, black holes,
supernova explosions and gamma-ray burst. Prerequisites: Physics 312, Physics 318, or permission of instructor. Same as L31 Physics 556. Credit 3 units.

L31 Physics 460 X-Ray & Gamma-Ray Astrophysics
Observers started to use X-ray and gamma-rays in the ‘60s and ‘70s to explore the cosmos with high-energy photons. The sky looks dramatically different at these energies with bright flares from mass accreting black holes and gamma-ray bursts and large diffuse emission from supernova remnants and cosmic rays interacting with galactic matter and magnetic fields dominating the emission. This course gives a comprehensive overview of the underlying physics and observable phenomenology. Topics covered include the history of X-ray and gamma-ray astronomy, high-energy radiation processes, particle heating and acceleration, accretion physics, blast waves and shocks, black holes, neutron stars, supernova remnants, gamma-ray bursts, and galaxy clusters. Prerequisite: L31 Physics 312. Credit 3 units. A&S IQ: NSM

L31 Physics 463 Statistical Mechanics and Thermodynamics
Basic methods of classical and quantum statistical mechanics, thermodynamics and transport theory. Prerequisite: Physics 217 or permission of instructor. Credit 3 units. A&S IQ: NSM, AN Art: NSM

L31 Physics 471 Quantum Mechanics
Origins of quantum theory, wave packets and uncertainty relations, Schroedinger’s equation in one dimension, step potentials and harmonic oscillators, eigenfunctions and eigenvalues, Schroedinger’s equation in three dimensions, the hydrogen atom, symmetry, spin and the periodic table, approximation methods for time independent problems, quantum statistics. Prerequisite: Math 217, Physics 217, or permission of instructor. Credit 3 units. A&S IQ: NSM Art: NSM EN: BME T, SU, TU

L31 Physics 472 Solid State Physics
Crystal structures, binding energies, thermal properties, dielectrics, magnetism, free electron theory of metals, band theory, semiconductors, defects in solids. Prerequisite: Physics 471. Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 474 Introduction to Particle Physics
Introduction to the standard model of particle physics, including symmetries, conservation laws, the weak interaction, the strong interaction, quark confinement and some more exotic ideas such as grand unified theories. Prerequisite: Physics 471. Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L31 Physics 476 Astrophysics
This Astrophysics course focuses on cosmic rays. Victor Hess discovered in 1912 that ionizing radiation impinges on the top of Earth’s atmosphere. Even though physicists have been studying cosmic rays (the ionizing radiation) for more than 100 years now with a fantastic repertoire of experimental and theoretical tools, cosmic rays never stop to surprise us, and cosmic ray physicists are still pushing the frontier of cosmic exploration in many ways. This course gives an introduction into this exciting topic covering historical and recent cosmic ray measurements at all energies, particle and antiparticle observations, and neutrino observations. The presently favored models of cosmic ray acceleration and transport are discussed in detail, and some topics of current interest are highlighted (including the production of particles and antiparticles by dark matter). The course also covers radio astronomy and highlights the clues about the origin of the cosmic rays that can be obtained from radio observations. Prerequisite: Physics 312 or permission of instructor. Credit 3 units. A&S IQ: NSM

L31 Physics 477 Physics of Finite and Infinite Nuclear Systems

L31 Physics 478 From Black Holes to the Big Bang
An introduction to general relativity. The goal is to illustrate important features of general relativity without the full-blown mathematics of Einstein’s equations by restricting attention to spherically symmetric spacetimes. Topics include: principle of equivalence; curved spacetime; spherical stars and black holes; the Big Bang model, observational cosmology. Prerequisite: Physics 411 or permission of instructor. Credit 3 units. A&S IQ: NSM Art: NSM

L31 Physics 482 Research Seminar
Designed to introduce students to current developments in physics and to research carried out by faculty. Topics vary each year. Each member of the department addresses their particular specialty. Interested undergraduates may take this seminar in their junior or senior year. Must be taken pass/fail. Credit 1 unit. A&S IQ: NSM Art: NSM

L31 Physics 499 Honors Program
Prerequisites: junior standing, an average grade of B or better, and permission of the chair of the department. Program and credit to be determined; maximum 6 units. Credit variable, maximum 3 units. Art: NSM

Political Science
The Department of Political Science offers undergraduates the opportunity to study all aspects of politics using cutting-edge technical and theoretical tools. Our courses are animated by long-standing problems related to the use of power, its rightful exercise by governments and individual actors, and the institutions that affect how that power is exercised. Reflecting the breadth of the discipline, we offer a range of classes, including
courses on elections and electoral politics; international political economy; justice and the state; and comparative analyses of political institutions across states.

A major in political science thus exposes students to the primary themes of the discipline: American politics, comparative politics, international politics, judicial politics, political methodology and political theory. A major in political science can prepare students well for professional training and advanced study in law, business, education, journalism, policy analysis, political science, public administration, social work and urban planning. Political science graduates enter careers in business; federal, state and local government; the media; and nonprofit organizations.

Because political science is a broad discipline, students often choose to combine the major with such related fields as African and African-American studies; American culture studies; anthropology; economics; environmental policy; history; international studies; Jewish, Islamic, and Middle Eastern studies; Latin American studies; philosophy; psychology; and women, gender and sexuality studies.

Majors

The Major in Political Science

Total units: Students who major in political science are required to complete 30 graded units (10 classes) in political science with a C or better, distributed as follows:

Required courses:

• Substantive Introductory Courses: 6 graded units must come from two introductory classes. (Note: Students scoring a 4 or 5 on a relevant AP exam may place out of the associated introductory course and replace it with an upper-level course in a related subfield.)

• Methodology Course: 3 graded units must come from Pol Sci 363 Quantitative Political Methodology. All majors are urged to take this course in the fall of their sophomore year. (Note: Some statistics courses offered in other departments will allow students to opt out of this class, but those credits will not count toward their political science major. These courses include U25 PolSci 323 Introduction to Quantitative Methods [subject to the limit of 6 “outside” credit units], DAT 121 Managerial Statistics II, Math 3200 Elementary to Intermediate Statistics and Data Analysis and ESE 326 Probability and Statistics for Engineering.)

Elective courses:

• Distribution Requirement: 18 graded units must come from any six 300- or 400-level classes. Of these 18 units, students must complete at least one 3-unit course in three of the following fields: American politics, comparative politics, international politics, political methodology or political theory. (Note: Pol Sci 363 does not count toward this upper-level distribution requirement.)

• Other courses: A student’s remaining graded units may be earned by any political science course or independent study. However, credits given for writing a senior thesis (detailed in the Senior Thesis section below) do not count toward the major.

Limitations

No more than 6 units from the following may count toward the major: study abroad, summer school, Pol Sci 419 Teaching Practicum in Political Science, transfer credit, and University College.

No more than 6 units from the following may count toward the major: Pol Sci 413 Directed Research, Pol Sci 412 Directed Readings, and independent study.

Additional Information

Concentrations: Political science majors may concentrate in a subfield of political science by taking (as part of their distribution requirement) three upper-level courses in any one of the five subfields (American politics, comparative politics, international politics, political methodology or political theory) and submitting a subfield concentration form. Students may earn concentrations in up to two subfields. The successful completion of a subfield concentration will be listed on the student’s transcript.

Senior Thesis: The department encourages serious students to pursue independent research by working toward a senior thesis. Students admitted to this program work closely with a faculty adviser for a full calendar year, beginning at the end of their junior year. Students writing a senior thesis receive 6 units of college credit for two semesters of work by enrolling in Pol Sci 415 Senior Thesis Research; however, this credit does...
not count toward the completion of the political science major. Although there is no grade-point average requirement for writing a senior thesis, an application is required. For more information, contact the department office. All majors may apply.

To qualify to write a senior thesis, students must do the following:

- Complete Pol Sci 363 Quantitative Political Methodology or its equivalent by the fall of their junior year (all majors are strongly urged to take this in the fall of their sophomore year).
- Complete Pol Sci 495 Research Design and Methods in the spring semester of their junior year.
- Complete a second methods course appropriate for their thesis by the start of their senior year. (A complete list of courses can be found on the Department of Political Science website (http://polisci.wustl.edu); Pol Sci 495 does not count toward this requirement.)
- Complete a subfield concentration (detailed in the Concentrations section above) by the end of the fall of their senior year in the subfield appropriate for their senior thesis. At least two-thirds of the concentration must be completed by the end of their junior year.
- Apply during their junior year for admission into the program.
- Students who wish to study abroad in the spring of their junior year and write a thesis senior year must meet with the director of undergraduate study before the start of their junior year.

Senior Honors: To graduate with Latin Honors, students must successfully complete a senior thesis and have a minimum GPA of 3.65, as specified by the College of Arts & Sciences.

The Major in Environmental Policy

Required units: 40

Students who major in environmental policy will be required to complete 40 graded units (13 courses), distributed as follows:

- 16 units from required foundation courses
- 9 units from research methods requirements
- 9 units from the list of upper-division courses in political science
- 3 units from a social science breadth requirement
- 3 units from a substantive distribution requirement

At least 24 of the total units must be at the 300 or 400 level.

We also strongly recommend that students complete a capstone experience. Possible options include a senior honors thesis, the environmental law clinic or an appropriate internship. We intend to develop more capstone possibilities in the future.

For additional information about this major, send an email to Sarah Winkler (sarahwinkler@wustl.edu).

Minors

The Minor in Political Science

Units required: 15

Required courses: Students must complete a minimum of 15 graded units of course work with a C or better, including at least 9 advanced units.

Additional Information

No more than 3 units may be counted from among the following: Pol Sci 412 Directed Readings, Pol Sci 413 Directed Research, Pol Sci 419 Teaching Practicum in Political Science, summer school, University College courses, or credits from another institution (including study abroad).

Courses

L32 Pol Sci 101B American Politics

This course provides an overview of the politics of the American system of government. Among the topics covered are the historical developments of American politics, federalism, political participation (voting, interest groups, parties), institutions (congress, the courts, the president and public opinion). A theme underlying our examination of these and other topics is the fact that political actors are purposive in their strategic pursuit of various objectives. We explore the many ways in which this aspect of political behavior impacts institutions and the interactions between political actors throughout the American political system.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S UColl: PSA

L32 Pol Sci 102B Introduction to Comparative Politics

One of the primary goals of a course in comparative politics is to familiarize students with a broad array of political systems. The approach taken in this course can best be characterized as the active acquisition and use of a set of tools for looking at the political world. In other words, instead of putting emphasis on what textbook writers think political scientists know, in this course the emphasis is on "how we know what we know" and on building knowledge. This approach equips students with a set of tools to use long after the course is over. These comparative tools are focused on historical, recent and current events, and students are provided the opportunity to delve more deeply into a study of the parts of the world they find most interesting.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA, IS EN: S UColl: PSC

L32 Pol Sci 103B International Politics

Globalization, the accelerating rate of interaction between people of different countries, creates a qualitative shift in the relationship between nation-states and national economies. Conflict and war is one form of international interaction. Movement of capital, goods, services, production, information, disease, environmental degradation, and people across national boundaries are other forms of international interactions. This course introduces
the study of global political-economic relations. We focus upon building a toolkit that will help us understand the micro-foundations of the globalization of material and social relations. Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S

L32 Pol Sci 1041 First-Year Seminar: Introduction to Political Theory I
Why is democracy a good form of government? What if a benevolent dictator arose who wrote and enforced laws that were just and equitable? What if she honored the sanctity of human life and its flourishing, guaranteed a full range of liberties to her citizens — including political ones, such as the right of free speech and organization (but not including the right to rule)? Given the problems of most living democracies, why wouldn’t this be a better regime than a democratic one? And are people really capable of governing themselves anyway? Why should we trust them so? In short, what’s so special about “ democracy” and its corresponding idol, “public opinion,” that people bow to them as hallowed virtues of a good society? In this class we provide a framework in which these and other central questions of political theory have been and can be addressed. This course is designed to introduce students to the main theoretical issues of Western political theory, including but not limited to the following concepts: justice, legitimacy, equality, democracy, liberty, sovereignty and the role of history in the political and social world. In short, the questions are meant to explore the underlying assumptions and themes of contemporary politics and political science research today. The course is designed around the careful reading of primary text materials and engagement with contemporary problems of politics available on the front pages of any daily newspaper. Although designed as a two-semester class, students may enroll in either one or both. In this first semester, we lay out the fundamental themes of political theory in Plato’s Republic and Aristotle’s Politics asking, among other things, what justice is and what place democracy has among other forms of government. Passing briefly onto Augustine and Aquinas’ struggles with religion and civil society, we emerge in modernity with Machiavelli’s Prince and question whether the “good” and the “political” are or ought to be different aims. We conclude the semester with the social contract theory of Hobbes and Locke in which political legitimacy is based on the terms familiar to citizens of modernity: the right to rule is somehow related to a citizen’s consent to be governed. In the spring semester, we turn to the struggle that modernity and the Enlightenment raised for issues of politics, including that of history, nature, institution building and economics, guided by the texts of Rousseau, Hamilton and Madison, Tocqueville, Mill, Marx, Nietzsche, and Weber. Credit 3 units. A&S: FYS EN: S

L32 Pol Sci 106 Introduction to Political Theory
This course offers an undergraduate level introduction to the field of political theory. We will focus on three major themes: social justice, power and freedom, and democracy—reading some canonical texts, such as Bentham’s Introduction to the Principles of Morals and Legislation and Marx’s Capital, but emphasizing contemporary works, such as those of John Rawls, Michael Walzer, Michel Foucault, and Robert Dahl. Credit 3 units. A&S IQ: SSC Art: FAAM BU: BA EN: S

L32 Pol Sci 2010 Introduction to Environmental Policy
This course provides an introduction to and overview of environmental policy. Subjects covered include the policy process, the behavior of interest groups and political parties, and the actions of policymakers like Congress and the President. We’ll also examine issues such as pollution control, climate change, and biodiversity. Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S

L32 Pol Sci 2121 Topics: Sophomore Seminar in Ethnic Violence
This course is intended primarily for first-year and sophomore students. The topic of this course varies by semester, dependent on faculty and student interests. Credit 3 units. A&S IQ: SSC BU: BA, ETH EN: S

L32 Pol Sci 226 The Immigrant Experience
This course explores the history and politics of immigrant groups in the 19th- and 20th-century United States. Topics include legislation, patterns of migration, comparisons of different waves of immigration, and changing social attitudes. This course is a core requirement for the ethnic studies concentration in American Culture Studies. Same as L98 AMCS 202 Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC BU: BA, HUM EN: S

L32 Pol Sci 227 Just Do It! Skills That Turn Passion Into Policy
The course focuses on skills related to the democratic expression of political rights and responsibilities. The course balances background knowledge of the issues with application. Students explore how to use coalition building and advocacy skills to relate to personal issues to public issues. Students research a current Missouri bill, create a strategic plan for its passage or failure, and prepare to give testimony on such bill in a mock House of Representatives committee hearing. Students also learn about ethical dilemmas in policy and politics and create a plan for turning their passions into policy. Credit 1 unit. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 240 Jewish Political Thought
This course uses the concepts of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rule (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish community’s self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single “Jewish political thought” but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these questions through a range of materials that include both primary and secondary literature. Same as L57 RelPol 240 Credit 3 units. A&S IQ: BA EN: H

L32 Pol Sci 245A Fair Division in Theory and Practice
The concept of fair division is a central tenet in the design of procedures aimed at generating equitable social outcomes and
L32 Pol Sci 2500 Zionism
Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.

Same as L57 RelPol 250
Credit 3 units. A&S IQ: LCD, SSC Arch; SSC Art; SSC BU; BA EN; TU

L32 Pol Sci 258 Law, Politics and Society
This course is an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system (in contrast to legal mythology), as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law. Not open to students who have previously taken Pol Sci 358.
Credit 3 units. A&S IQ: SSC EN; S

L32 Pol Sci 260 Game Theory in Science and Culture
Introduces the major intellectual insights of game theory in a nontechnical fashion, and examines the influence game theory has had on geopolitics, social philosophy, psychology, art and the humanities. In addition to covering the basic machinery of the theory, the class participates in numerous illustrative classroom games; examines game theory in film, literature and literary criticism; sees how game theory has contributed to social theory; and learns about the background of game theory and its history and perception as a hoped-for tool in the Cold War. Grades based on problems, short essays, two short essay exams and participation.

Credit 3 units. A&S IQ: SSC EN; S

L32 Pol Sci 3010 Gender, Politics, and Policy in the United States
This course surveys central topics in the study of gender and politics, covering such issues as women's participation in political parties and social movements, women as voters and candidates in political elections, feminism and the state, and gender and international politics. It draws on examples from various world regions and time periods to analyze similarities and differences across cases around the globe.
Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC BU; BA EN; S

L32 Pol Sci 3011 Computational Modeling in the Social Sciences
This course introduces students to the theory and practice of computational modeling in social science. Computational modeling allows us to explore topics — including complexity, emergence and dynamics — that are difficult to study using traditional analytic methods. This course covers the theoretical foundations behind computational modeling in addition to offering an introduction to the design and programming of such models.
Credit 3 units. A&S IQ: SSC EN; S

L32 Pol Sci 3012 Advanced Modeling in the Social Sciences
This course explores advanced topics and issues in the building and validation of models in the social sciences. The principal component of the course is the design and development of an individual research project by each student. The conclusion of the course involves a public research symposium with a poster session in which all students present their models and findings to the broader campus community. Prerequisite: Pol Sci 3011 Computational Modeling in Social Science.
Credit 3 units. A&S IQ: SSC EN; S

L32 Pol Sci 3024 International Institutions
This course surveys in historically and theoretically informed fashion the role of various international institutions in international relations. It addresses the fundamental question of the contribution of international institutions to world order. The course first traces the historical evolution of international organizations before turning to international institutions since World War II. It then focuses on the following: the most important regional international organization, the European Union; the most important international organizations dealing with the issues of peace and security, the United Nations and NATO; and the major international economic institutions, the WTO, the IMF and the World Bank. Prerequisite: Pol Sci 103B Introduction to International Politics.
Credit 3 units. A&S IQ: SSC EN; S

L32 Pol Sci 3031 Race and Ethnicity in American Politics
This seminar discusses the continuing importance of race and ethnicity in American politics and the politics of racial minority groups in America. It examines the disadvantage minorities have in the American political structure, including problems with political participation. It examines how the structure and functions of the branches of government and its bureaucracy affect the aspirations of minorities. The role of pressure groups on political structure is discussed. Additional discussion focuses on urban politics and tensions.
L32 Pol Sci 3044 Foundations of American Democracy
Since its founding, the United States of America has been strongly identified with principles of democratic rule. This course provides an introduction to some philosophical and historical foundations of American democracy. Over the course of the semester, we ask what democracy means and what it requires. We examine thinking about political rights and liberty at the American founding. We ask what democratic inclusion and political equality entail. We ask what democracy means, and what it should mean, in the American context, and whether and to what extent American institutions embody democratic ideals.
Credit 3 units. A&S IQ: SSC BU: BA, ETH IS EN: S

L32 Pol Sci 3055 The Comparative Study of Legislative Institutions
This course focuses on understanding the variation in legislative institutions around the world.
Credit 3 units. A&S IQ: SSC BU: IS EN: S

L32 Pol Sci 306 American Political Thought
This is a course on American political and constitutional thought. The main theme is the problem of freedom: how it should be understood, and the constitutional and other conditions which sustain it. We also touch on questions of leadership, class and foreign policy as they relate to the main theme. We begin with the political thought of the American colonists, then turn to the Federalist/Anti-Federalist debate on the constitution, and trace these lines of thinking to a point just before the outbreak of the Civil War. Apart from writings of prominent American political thinkers such as Madison, Jefferson, Adams, Hamilton and Calhoun, we also consider the work of the foreign observer of American life and honorary American, Alexis de Tocqueville.
Credit 3 units.

L32 Pol Sci 3070 Politics and Policymaking in the American States
The American federal system is often overlooked in discussions about politics in the United States; however, state governments unquestionably touch the lives of Americans every day. As such, an education in American politics is not complete without serious examination of state governments and their political institutions. This course illuminates the importance of the American states in U.S. politics and policymaking by critically examining topics such as intergovernmental relations; the historical evolution of American federalism; the organization and processes associated with state legislative, executive and judicial branches; state elections; political parties; interest groups; and specific state policy areas such as budgeting, welfare, education and the environment.
Prerequisite: Pol Sci 101B.
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3073 Global War on Terrorism
This course presents an historical assessment of the Global War on Terrorism (GWOT) from the perspective of its major participants: militant Sunni Islamist jihadists, especially the Al-Qaeda network, and the nation-states that oppose them, particularly the United States and its allies. The course then concludes by analyzing the current state and future of Islamist jihad and the GWOT.
Same as L22 History 3073

L32 Pol Sci 3090 Civil War and Peace
This course examines the causes and consequences of intrastate conflict as well as the potential solutions to it, drawing on examples from countries throughout the world, including Bosnia-Herzegovina, India, Iraq, Russia, Rwanda, Spain, etc. We consider many potential causes of intrastate violence, including ethnic and religious identities, economic and security concerns, elite manipulation, and international diffusion. In order to understand the challenges countries face recovering from violence, we subsequently examine different ways in which conflicts are conducted, as well as their consequences, including economic underdevelopment, rape, child soldiers and disease. Finally, using what we have learned about the causes and consequences of conflict, we analyze the utility of different tools for managing intrastate conflict, including, but not limited to, minority representation, consociationalism, decentralization and partition.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L32 Pol Sci 3117 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC BU: ETH IS EN: S

L32 Pol Sci 316B African-American Politics
This course examines the historical and contemporary efforts by African Americans to gain full inclusion as citizens in the U.S. political system. The course focuses on topics such as the politics of the Civil Rights Movement; African-American political participation; and the tension between racial group politics and class politics.
Same as L30. AFAS 3161
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L32 Pol Sci 3180 Democracy: Causes and Consequences
This course examines the major international and domestic causes and consequences of democracy worldwide.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 320A Religious Freedom in America
This interdisciplinary course, co-taught by a law school professor and an American historian, concerns the intersection of religion, liberty and law in American culture. It introduces students to the major texts and historical issues concerning religious liberty, using legal history and case law, intellectual and social history, and political philosophy. It will address issues of significant contemporary debate — from the role of religious groups on college campuses to bakers and gay weddings — along with the deep historical background, from English settlement of North America and the making of the Constitution, through the Civil War, to the Cold War and the recent political developments.
Same as IS 50. INTER D 320
Credit 3 units. A&S IQ: HUM, SC, SD BU: BA, ETH EN: H

L32 Pol Sci 321 Comparative European Politics
This course is designed to provide students with an introduction to politics in Europe, with a focus on national politics. The
course has two main goals. One goal is that students acquire a general understanding of the institutions of democratic governance and how they affect how voters’ preferences are translated into government policy. As most European states are variations of parliamentary democracies, we pay particular attention to the connection between voters and policymakers through parliamentary institutions. The second goal is that students achieve a basic understanding of specific political systems in Europe and appreciate current political issues particularly those related to democratic transitions in Eastern Europe. Prerequisites: Pol Sci 102B Intro to Comparative Politics; Pol Sci 363 Quantitative Political Methodology (can be taken concurrently).
Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC BU; BA, IS

L32 Pol Sci 3211 Public Opinion and American Democracy
This course is about the salience of public opinion and its influence on American Politics. Topics covered include many of the theories developed to explain how public opinion is formed, if and why it changes, and the relationship between public opinion and the political behavior of citizens and elites. Therefore, the course describes and analyzes many of the factors that influence the formation, structure and variation in public opinion: information processing, education, core values, racial attitudes, political orientation (ideology and party identification), political elites, social groups, the media and religion. Additional topics include presidential approval, congressional approval and the relationship between public opinion and public policy. The course also trains students in several concepts of statistical analysis (assuming no prior knowledge) so that students can use these tools as part of their own research projects. Prerequisites: previous course work in American politics or communications.
Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC BU; BA EN; S

L32 Pol Sci 3240 The Political Economy of Public Goods
This course explores the nature of public goods by investigating the economic and political rationales for providing them. We explore the endogenous creation of public goods, such as the formation of mutually agreed upon constitutions to protect property rights and the exogenous imposition of public goods, such as the regulatory framework that provides clean air. Through the use of efficiency analysis, we explore the costs and benefits to alternative institutional arrangements, such as private property or market exchanges, to the government or voluntary provision of public goods.
Credit 3 units.

L32 Pol Sci 3255 Development of the American Constitution
The U.S. Constitution has been so long maintained because it has adapted to new circumstances. Contrary to common mythology, this adaptation goes far beyond formal amendment and court interpretation. But past performance is no guarantee of future results. The course examines the processes through which American constitutional democracy has developed, considers its successes and failures, and assesses some of its most pressing challenges. In doing so the course treats topics such as: the Electoral College; the justice system; executive powers in war and peace; Congress versus the president; regulation and taxation; civil rights and Reconstructed; amendment politics; and constitutional rhetoric and beliefs.
Credit 3 units. A&S IQ: SSC BU; BA EN; S

L32 Pol Sci 326B African Politics
This course is designed to explore relations within and between the racial and ethnic groups of the United States. We examine the social, economic, and political similarities and differences of African Americans, Asian Americans, Latinos, and New Immigrants that distinguish their American experience. Of particular interest are their respective experiences in relation to one another and the majority population for understanding the origins of conflict and unamnity within and between the different groups. We pay specific attention to events in Ferguson, Missouri, and the tensions between political leaders, policing and minorities more generally, the disproportionate levels of poverty experienced by African Americans and Mexican Americans, and the vilifying of certain minorities by the majority population.
Same as L98 AMCS 3296
Credit 3 units. A&S IQ: HUM, SD BU; BA, HUM EN; H

L32 Pol Sci 3292 Topics in Politics: Modern South Asian Politics
This course is designed to explore relations within and between the social, economic, and political similarities and differences of African Americans, Asian Americans, Latinos, and New Immigrants that distinguish their American experience. Of particular interest are their respective experiences in relation to one another and the majority population for understanding the origins of conflict and unamnity within and between the different groups. We pay specific attention to events in Ferguson, Missouri, and the tensions between political leaders, policing and minorities more generally, the disproportionate levels of poverty experienced by African Americans and Mexican Americans, and the vilifying of certain minorities by the majority population.
Same as L98 AMCS 3296
Credit 3 units. A&S IQ: HUM, SD BU; BA, HUM EN; H

L32 Pol Sci 3302 Politics and Policies of Immigration in the United States
This course examines the history and politics of American immigration from colonial times to the present. It begins with an overview of the colonial period, then discusses the immigration waves of the 19th and early 20th centuries, and concludes with an examination of current topics and debates about immigration.
Issues include racial, ethnic and class relations among groups; changes in immigration policies over time; comparative group experiences; transnational issues in immigration; and the impact of immigration on other American social and political processes and events. This class is a writing-intensive and modified version of Pol Sci 226/AMCS 202. Students who have taken that course should not take this course. Because this is a writing-intensive class, we also spend time studying research paper design and writing.

Credit 3 units. A&S IQ: SSC, WI EN: S

L32 Pol Sci 331 Topics in Politics: Theories of Social Justice
This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH, HUM EN: S

L32 Pol Sci 331B Gender and American Politics
This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category and the relationship between gender, race, ethnicity and power. Second, we study gender-based social movements, including the suffrage and women's rights movements, women's participation in the Civil Rights Movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement. Third, we examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights.
Credit 3 units. BU: BA, ETH

L32 Pol Sci 332 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 332B Topics in Politics: Constitutionalism and Democracy
An introductory analysis of a range of issues related to constitutions and democratic government. The main focus is on such theoretical questions as: Why do societies produce constitutions? Why do subsequent generations abide by them? What is the relationship between constitutional principles and democratic decision making? Who benefits from constitutional constraints?
Credit 3 units. BU: BA

L32 Pol Sci 333 Topics in Politics: American Elections and Voting Behavior
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 333B Individual and Community
Same as L98 AMCS 301B
Credit 3 units. A&S IQ: SSC, SD BU: BA, ETH, IS EN: S

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA

L32 Pol Sci 3363 Interchangeables, Influentials, and Essentials
Do you want to know how to obtain power? How to influence the powerful? Or even how to unseat those in power? In this course, we focus on how leaders, of all types, get and keep their jobs. Regardless of setting — democratic or dictatorial (or corporate, for that matter) — it is all about those whom the leader finds to be interchangeable, those the leader finds influential, and those who are essential. Students learn the "Rules to Rule By" and why, when leaders follow them, they often behave badly causing those they govern to suffer.
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3381 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
L32 Pol Sci 339 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests. Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 340 Topics: Environmental Justice
This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests. Credit 3 units. A&S IQ: SSC Arch: SSC Art: CPSC, SSC BU: BA EN: S

L32 Pol Sci 3400 Social and Political Philosophy
Study of certain fundamental issues concerning government, society and culture. For example: What are the nature and limits of legitimate political authority? Are ordinary human beings capable of governing themselves justly? Do citizens have a duty to obey the state? If so, to what extent, if at all, is that duty grounded in consent or contract? Should the state limit or regulate the personal relationships of citizens, such as marriage, family and sexuality? How should social institutions rectify a history of political or social injustice against oppressed groups? Readings from historical and contemporary sources. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Same as L30 Phil 340F Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH, HUM EN: H

L32 Pol Sci 3401 Topics in Political Thought
This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests. Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH

L32 Pol Sci 3403 The Politics of Congressional Elections
This course introduces students to the study of American legislative elections. The first part of the course focuses on congressional election campaigns, in which we discuss who runs for office, the incumbency advantage, campaign finance, congressional primaries, electoral competition, voter turnout, and vote choice. The second part of the course examines how electoral factors affect legislative politics, focusing on questions involving representation, accountability and lawmaking. Prerequisite: L32 Pol Sci 101B Intro to American Politics. Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 342 The American Presidency
Consideration of part played by the president in American politics and public policy. The powers of the president; the staffing and organization of the executive office; the relations of the president with Congress, the bureaucracy and other participants in American politics; presidential elections. Recommended: Pol Sci 101B. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 3422 Americans and Their Presidents
How have Americans understood what it means to be President of the United States? This seminar uses that question as a point of departure for a multidisciplinary cultural approach to the presidency in the United States, examining the shifting roles of the chief executive from George Washington through Barack Obama. In addition to a consideration of the President’s political and policymaking roles, this course examines how the lived experiences of presidents have informed the ways Americans have conceived of public and private life within a broader political culture. In the process, this course uses the presidency as a means to explore topics ranging from electioneering to gender, foreign policy to popular media. Readings are drawn from a broad range of fields. Same as L98 AMCS 3422 Credit 3 units. A&S IQ: HUM BU: BA, HUM EN: H

L32 Pol Sci 3431 Constitutional Law
Introduction to constitutional law and practice in the United States. Emphasis on the role of the U.S. Supreme Court as an interpreter of the Constitution. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 344 Courts and Civil Liberties
This course focuses on constitutional law principles in the Bill of Rights, and examines how Supreme Court decisions influence these principles in everyday life. We explore how the courts, and particularly the Supreme Court, have interpreted these rights in light of changing times and emerging issues. Topics include the First Amendment; free exercise of religion and the establishment clause; freedom of speech, assembly and association; freedom of the press; the Fourth Amendment and the rights of those accused and convicted of crimes; the right to privacy, including reproductive freedom and the right to die; equal protection and civil rights, including race, gender, sexual orientation; immigrants’ rights and voting rights; and civil liberties after September 11. Recommended for the Liberal Arts and Business (LAB) Certificate. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH, HUM

L32 Pol Sci 3441 Defendant’s Rights
This course explores the operations of the American criminal justice system. Substantial emphasis on the constitutional rights accorded to the criminally accused. Readings consist primarily, but not exclusively, of Supreme Court cases. Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, ETH EN: S

L32 Pol Sci 3462 The Politics of Privacy in the Digital Age
This course explores the changing nature of privacy in contemporary society. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH EN: S UColl: PSA, PSC

L32 Pol Sci 349 Politics in Bureaucracies
Focuses on politics and political conflicts involving bureaucratic organizations, primarily but not exclusively those of the federal government. Attention given to the characteristics of bureaucratic organizations and their members; their relations with one another as well as with other participants in policymaking also considered. Major activities within bureaucracies — planning, program development, organizing, budgeting and service delivery — discussed with a view to clarifying their political implications and consequences; problems associated with controlling and changing bureaucracies. Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
L32 Pol Sci 3507 Legal Conflict in Modern American Society
Thousands of lawsuits are filed daily in the state and federal courts of the United States. The disputes underlying those lawsuits are as messy and complex as the human, commercial, cultural and political dynamics that trigger them, and the legal processes for resolving those disputes are expensive, time-consuming and, for most citizens, seemingly impenetrable. At the same time, law and legal conflict permeate public discourse in the United States to a degree that is unique in the world, even among the community of long-established democracies. The overarching objective of the course is to prepare our undergraduate students to participate constructively in that discourse by providing them with a conceptual framework for understanding both the conduct and resolution of legal conflict by American legal institutions, and the evolution of — and values underlying — the substantive law American courts apply to those conflicts. This is, at core, a course in the kind of legal or litigation “literate” that should be expected of the graduates of first-tier American universities. Some of the legal controversies that are used to help develop that “literate” include those surrounding the permissible use of lethal force in self-defense, the constitutionality of affirmative action in university admissions, contracts that are unconsciously one-sided, sexual harassment in the workplace, the duty of landlords to prevent criminal assaults on their tenants, groundwater pollution alleged to cause pediatric cancers, and warrantless searches of cellphone locator data by police.
Same as L38 AMCS 3507
Credit 3 units. A&S IQ: HUM; Arch: HUM; Art: HUM; BU: ETH, HUM EN: H

L32 Pol Sci 3561 Topics in Politics: Understanding Political Protest and Violence
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: IS EN: S

L32 Pol Sci 3575 U.S. Foreign Policy: Theory and Practice
In this class we focus on the procedures and institutions that shape U.S. foreign policy decisions. This is neither a course on international relations theory nor a history of U.S. foreign policy. Rather, this course examines the domestic politics surrounding U.S. foreign policy decisions. How do public opinion, electoral politics, and interest groups shape foreign policy? Which branch controls foreign policy — the president, Congress, the courts? Or is it ultimately the foreign affairs bureaucracy that pulls the strings? We examine these topics through reading and writing assignments, class discussion, and simulations to promote deeper understanding and build practical skills.
Same as L97 IAS 3575
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 3579 The Mathematics of Elections
Voting procedures provide the most common means of aggregating the preferences of individuals into societal outcomes. These procedures play an integral role in our daily lives, from having a show of hands to decide which type of pizza to order for a club meeting, to electing a president. This course examines the effects that different voting procedures have on how groups make decisions. We evaluate electoral systems mathematically, by considering the various properties that procedures may or may not satisfy. A classic example is Arrow’s Impossibility Theorem, which tells us that every electoral system must fail to satisfy one or more criteria of fairness or sensibility. In addition to Arrow’s claim, we examine other legislative paradoxes and learn why the choice of electoral procedure is critical to our understanding of how “good” and “bad” decisions can be made. We also discuss the comparative properties of electoral systems in operation, such as fairness, proportionality, representativeiveness and legitimacy.
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3610 Legislative Politics
This course is an introduction to the politics of the U.S. Congress and the federal lawmaking process. We focus on the behavior of individual legislators and the role they play in crafting federal legislation in policy areas such as health care, civil rights and the environment. In general we examine questions such as: Why do legislators behave as they do? Whose interests are being represented?
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3620 Politics and the Theory of Games
This course is intended to cover through analytical discussion and illustrations the basic concepts and major achievements of Game Theory in different subfields of research in the social sciences today. We discuss examples of the usefulness of cooperative and noncooperative game theory to the study of
human behavior in general and political science and political economy in particular.
Credit 3 units. A&S IQ: SSC, AN; Arch: SSC; Art: SSC; BU: BA; EN: S

L32 Pol Sci 363 Quantitative Political Methodology
This is an introduction to research methodology and quantitative analysis for social scientists. Students are introduced to the logic of social scientific inquiry, and to the basic statistical tools used to study politics. Students learn and apply the following to answer substantive questions: measurement, descriptive analysis, correlation, graphical analysis, hypothesis testing, confidence intervals, analysis of variance and regression analysis. Major components of the course include learning how to collect, manage and analyze data using computer software, and how to effectively communicate to others results from statistical analyses. Students work collaboratively on research projects in which they pose their own questions, design a study, collect and analyze the data, and present their findings in a research paper.
Credit 3 units. A&S IQ: SSC, AN; EN: S

This course presents an assessment of the Cold War from the perspective of its major participants. Topics include: the origins of the Cold War in Europe and Asia; the Korean War; the Stalin regime; McCarthyism and the Red Scare; the nuclear arms race; the conflict over Berlin; Cold War film and literature; superpower rivalry in Guatemala, Cuba, Vietnam, Africa, and the Middle East; the rise and fall of detente; the Reagan years and the impact of Gorbachev; the East European Revolutions; and the end of the Cold War.
Same as L22 History 3680
Credit 3 units. A&S IQ: HUM, LCD; Art: HUM; BU: HUM, IS; EN: S

L32 Pol Sci 3690 Politics of International Trade
In this course we study the relationship between international trade and domestic politics. We cover the basic models of international trade, the distributional consequences of international trade, the relationship between trade and economic development, an analysis of the trade protectionism (causes and consequences) and an analysis of international organizations related to international trade (special focus on the World Trade Organization). Prerequisite: Pol Sci 103B.
Credit 3 units. A&S IQ: LCD, SSC; Arch: SSC; Art: SSC; BU: BA; EN: S

L32 Pol Sci 373 International Political Economy
Analysis of the interplay of economics and politics in the world arena, focused primarily on the political basis of economic policies in both advanced and less-developed societies. Treating differing perspectives on the international economy, production, trade and finance, and international economic relations. Prerequisite: junior standing or permission of instructor.
Credit 3 units. BU: IS

L32 Pol Sci 374 Contemporary American Foreign Policy
This course surveys post-war American foreign policy in historical perspective. It begins by evaluating the rise of the United States as a world power during the 20th century, its current position of primacy and its consequences in the post-Cold War period, and the distinctive traditions and institutions shaping the making of American foreign policy. It then examines the origins of the strategy of containment in the early Cold War period before considering how these debates animated the changing course of American foreign policy through the various phases of the Cold War conflict. The course concludes by analyzing American foreign policy since the end of the Cold War, up to and including debates about the consequences of September 11, 2001, for the United States' position of primacy, the Bush Doctrine and the American-led intervention in and subsequent occupation of Iraq.
Credit 3 units. A&S IQ: LCD, SSC; Art: SSC; BU: BA; EN: S

L32 Pol Sci 3781 Topics in Politics: Israeli Politics
This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC; Art: SSC; BU: BA; EN: S

L32 Pol Sci 3782 Topics in Comparative Politics: Terrorism and Political Violence
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC; Arch: SSC; Art: SSC; BU: BA; EN: S

L32 Pol Sci 381 The Politics of Electoral Systems
It is impossible to appreciate the variety of electoral systems used to select legislative bodies without taking a comparative perspective. We begin this course with a brief consideration of what goals political founders and reformers are pursuing when they design an electoral system. Then we define the conceptual dimensions along which electoral rules can vary. With these basic concepts in hand, we then study specific national cases to assess the impact of electoral laws on party systems, legislator behavior, and interbranch relations. After completing a series of case studies, we return to a comparative perspective to discuss recent scholarly research in this field. This research conceives of electoral systems as incentive structures for voters, candidates, parties and politicians. To wrap up the course, we return to the question of what founders and reformers can hope to achieve when selecting electoral systems.
Credit 3 units. A&S IQ: SSC, WI; BU: BA; EN: S

L32 Pol Sci 389 Power, Justice and the City
This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by "privatism" in cities and their suburbs. In addition, the course devotes considerable attention to honoring students' writing skills, through class assignments that stress rewriting and revising, and also through four in-class writing workshops devoted to formulating a thesis and making an argument; revising and rewriting; writing with style; and peer consultation.
Credit 3 units. A&S IQ: SSC, SD, WI; Arch: SSC; Art: SSC; BU: BA; EN: S

L32 Pol Sci 389A Power, Justice and the City
This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and
L32 Pol Sci 391 History of Political Thought I: Justice, Virtue, and the Soul
This course offers a critical introduction to the main issues and debates in western political theory, including but not limited to the topics of justice, legitimacy, equality, democracy, liberty, sovereignty, and the role of history in the political and social world. This course is designed to be the first in a three-semester sequence on the history of political thought, and students are encouraged, but not required, to take the courses in chronological sequence. The first semester begins with ancient Greek political thought, and follows its development up to the early 16th century. Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S UColl: ML

L32 Pol Sci 391A Democracy and Citizenship Seminar II
What does it mean to be a citizen in a democratic society? What are the rights of citizenship and what are its responsibilities? How are the answers to these questions different for citizens of the United States of America, with its particular history, values and status in the world? Enrollment in this seminar is limited to freshmen who have been admitted to the Democracy and Citizenship Ampersand Program. Credit 1 unit.

L32 Pol Sci 392 History of Political Thought II: Legitimacy, Equality, and the Social Contract
Government is often justified as legitimate on the grounds that it is based on the consent of the governed. In History of Political Thought II: Legitimacy, Equality, and the Social Contract, we examine the origins of this view, focusing our attention on canonical works in the social contract tradition, by Thomas Hobbes (1588-1679), John Locke (1632-1704), Jean-Jacques Rousseau (1712-1778), David Hume (1711-1776), and Immanuel Kant (1724-1804). This course is the second in a three-semester sequence on the history of political thought. Students are encouraged but not required to take all three courses. Prerequisite: one previous course in political theory or political philosophy. Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 393 History of Political Thought III: Liberty, Democracy and Revolution
How, if at all, should the political institutions of the modern state express and secure the liberty and equality of citizens? What is the political significance of private property? Is world history to be understood as progress toward one best form of government — capitalist democracy, perhaps, or communism? What forces drive history? We address these and other timeless political questions through close reading and rigorous analysis of classic texts in the history of Western political thought. Authors studied include Kant, Hegel, Marx, Toqueville, John Stuart Mill and Nietzsche. Prerequisite: one previous course in political theory or political philosophy. The course is designed to be the third in a three-semester sequence on the history of political thought, and students are encouraged but not required to take the courses in chronological sequence. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 398 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests. Credit variable, maximum 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 4001 American Democracy and the Policymaking Process
This course is part of the Semester in DC Program. Credit 3 units. EN: S

L32 Pol Sci 4010 Pluralism, Liberalism and Education
How should liberal democratic states respond to religious and cultural pluralism? In what ways is pluralism different from mere disagreement, and what normative implications does pluralism have for public policy? How can liberal states justify using their coercive power against a background of pluralism and in ways that systematically disadvantage certain religious and cultural groups in society? In particular, what is to be done when religious parents and the liberal state make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? Readings are taken from contemporary political philosophy. Prerequisites: Pol Sci 106, Pol Sci 107, Phil 340 or permission of instructor. Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 4013 Negotiating Major Legislation in Congress
This course examines the outcomes of the legislative process in the United States. The first third of the course examines key concepts and major determinants of the negotiation process: majority rule instability, agenda control, political parties, the amendment process and the uncovered set. The rest of the course examines the negotiations that led to some of the most significant legislation in the past 100 years, from the Federal Reserve Act of 1913 through the Voting Rights Act of 1965 to the immigration bill of 2006. Along with other assignments, each student writes several drafts of a major research project on a major piece of legislation. Each research project examines the amendments offered, the strategic intentions of the amendments' sponsors, the agenda process and the role of party. Prerequisite: Pol Sci 101B. Credit 3 units. A&S IQ: SSC, WI EN: S

L32 Pol Sci 402 Topics in Political Thought
Credit 3 units. A&S IQ: SSC EN: S

The 21st century has brought with it new challenges to national security. Standard assumptions about nations and the borders that separate them have been brought into question, and one of the results of this is that the very meaning of national security is undergoing change. Instead of threats to security coming from outside national boundaries, they now often exist within and across borders. This course focuses on contemporary ideas about these issues. It includes a brief overview of current discussions of national security, but it is primarily devoted to examining the conceptual resources we have for making sense of national security in a new world. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S
L32 Pol Sci 4025 Experiments in Politics
This is a lab-style seminar in which we design, field and analyze an experimental study on political attitudes or political behavior. Our ultimate goal is to publish a scholarly article in a peer-reviewed journal in political science. Prerequisite: Pol Sci 363 Quantitative Political Methodology (can be taken concurrently). Credit 3 units.

L32 Pol Sci 4030 Political Theory of Education
This course explores issues of authority, legitimacy, citizenship, freedom and equality through contemporary readings in the political theory of education. What is to be done when parents, citizens and educational experts make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? How should public schools aim to equip their students for the responsibilities of citizenship in a diverse liberal democratic state? What do the concepts of equality and equality of opportunity mean in the context of education, and (how) should governments pursue these values through education policy? We explore these issues through contemporary works of political theory as well as through considering a number of important U.S. court cases, including those dealing with the schooling of children from minority religious and cultural groups, affirmative action in university admissions, and school desegregation plans. Prerequisite: one previous course in political theory or political philosophy. Credit 3 units. A&S IQ: SSC BU: ETH EN: S

L32 Pol Sci 4040 Capstone Seminar in International Politics: Public Policy Responses to Global Poverty
This course is designed for senior political science majors with a background in international politics (refer to prerequisites). In this course we examine the theoretical and empirical literature on the causes of global poverty and evaluate public policy responses from the international community. Topics include: foreign aid (including micro finance), debt relief, trade reform, global health initiatives and private-public partnerships. Students are expected to have a strong theoretical background in the tools and concepts in political science and a strong interest in development topics. As a capstone class, the teaching style focuses on a student-centered classroom, where students run the class and help moderate discussions with outside speakers. Prerequisites: Pol Sci 103B, one advanced course in international politics, and a second advanced course in either international or comparative politics. Credit 3 units. A&S IQ: SSC BU: ETH EN: S

L32 Pol Sci 4043 Public Policy Analysis, Assessment and Practical Wisdom
This course provides an introduction to the study, professional practice, ex-ante and ex-post assessment of public policy and the professional practice of public analysis. We rely heavily on David L. Weimer and Aidan R. Vining's text, Policy Analysis: Concepts and Practice. This course covers a series of critical concepts in the understanding of practicing, analyzing and assessing public policy. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 405 Topics in Political Thought
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 4050 Political Representation
In this class we study the concept of representation. Historically, how has representation been conceived? Conceptually, what should count as political representation, and must it always be democratic? As a normative problem, what should representatives do? And how should institutions be designed to foster these normative ends? Readings provide a broad overview of the subject and address enduring questions, including problems of minority representation, voting rights and redistricting. Prerequisite: Pol Sci 106 or Pol Sci 107. Credit 3 units. A&S IQ: SSC BU: ETH EN: S

L32 Pol Sci 406 Topics in Political Thought
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S

L32 Pol Sci 4070 Global Justice
This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course is of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally. Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 412 Directed Readings
This is a course of readings in political science taken under the direction of an instructor in the department. Credit variable, maximum 3 units.

L32 Pol Sci 413 Directed Research
Research activities or project in political science done under the direction of an instructor in the department. Credit variable, maximum 3 units.

L32 Pol Sci 4131 Intolerance and Prejudice
Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315. Same as L33 Psych 413 Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L32 Pol Sci 414 Directed Fieldwork
This course is a fieldwork project carried out under the direction of an instructor in the department. Credit variable, maximum 9 units.

L32 Pol Sci 415 Senior Thesis Research
Intensive research. To be conducted under the supervision and guidance of a faculty sponsor of the thesis. Credit 3 units.

L32 Pol Sci 419 Teaching Practicum in Political Science
This course is an opportunity for undergraduates to assist in course instruction, tutoring and preparation of problems, readings and exam materials with permission and under
supervision of instructor. This course counts toward up to 6 hours of credit in an advanced field for the political science major.
Credit variable, maximum 3 units.

L32 Pol Sci 4212 Elections
This course examines how politicians and policies are selected by citizens in democracies. The literature exploring the rules and procedures that govern elections is perhaps the most theoretically and empirically sophisticated body of knowledge in the study of politics. We explore how differences in these institutional rules across a variety of democracies shape the types of strategic choices voters make, the coalitions that legislators form, whose interests are represented, the structure of parties, the career paths of politicians, and the policies that governments pursue. We further investigate how, when and why electoral rules are changed with reference to several recent cases of electoral reform.
Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 4231 Contemporary Issues in Latin America
How do the institutional designs of contemporary democratic governments help us understand the nature and quality of representation? We concentrate on variations in the powers granted presidents by constitutions as well as the institutional determinants of whether executives are likely to find support for their policies in the legislature. In addition, we explore how incentives established by electoral laws influence the priorities of members of congress. Given all these variations in democratic institutional design, can voters go to the polls with the confidence that politicians will implement the economic policies for which their parties have long stood or which they promised in their campaigns?
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS

L32 Pol Sci 4241 Topics in American Politics: Race and Politics
From the moment enslaved Africans were brought to American shores, race and racism has been central to the American political project. In this class we examine how notions of race and racism inform conceptions of citizenship, the allocation of state resources, the development of political parties, and political participation. We also examine the way that race and racism influence public opinion.
Credit 3 units.

L32 Pol Sci 425 Law, Religion, and Politics
What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.
Same as L57 RelPol 425
Credit 3 units. A&S IQ: HUM EN: H

L32 Pol Sci 426 Topics in American Politics: Politics of the Civil Rights Movement
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests. Prerequisite: Pol Sci 101B.
Credit 3 units. A&S IQ: SSC, SD Art: SSC EN: S

L32 Pol Sci 4260 Writing about Civil Rights
The substantive goal of this course is to study the civil rights movement in order to learn more about the role of social movements, federalism, the legislative process, the presidency, political parties and the courts in American politics. This is a writing-intensive seminar, limited to 18 students, each of whom write three essays. Each student submits an early draft of each essay, which is edited and returned to the student for polishing. There are review sessions on grammar, punctuation, word usage and paragraph construction. The readings for the course include some of the best essays on the subject of civil rights by W.E.B. DuBois, Malcolm X, Martin Luther King Jr. and others. Prerequisite: Pol Sci 101B.
Credit 3 units. A&S IQ: SSC, SD, WI EN: S

L32 Pol Sci 4280 Political Intolerance in World Politics
This course is an investigation into the meaning, causes and consequences of political intolerance. Our goal is to expose students to contemporary research on: a) how political intolerance is conceptualized and understood, especially within the context of theories of democracy; b) how political intolerance can be measured, both at the level of the individual and the institution/society; c) where intolerance originates, both in terms of individual psychology and system-level politics; and d) what consequences flow from intolerance, especially in terms of legal and extra-legal political repression, as well cultural consequences (e.g., a “culture of conformity”). The course makes little distinction between American politics and politics in other parts of the world (although no knowledge of specific non-U.S. systems is required as a prerequisite).
Credit 3 units. A&S IQ: SSC Arch: SSP Art: SSP EN: S

L32 Pol Sci 4281 Comparative Political Parties
An introduction to theories and concepts used in the analysis of political parties in democratic regimes, with emphasis on the classic literature covering West European advanced industrial democracies and the more recent scholarship on Latin American party systems. The course illuminates the complex aims, consequences and characteristics of modern party politics.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 4291 Polarization in American Politics
This course examines the political polarization of the American political parties and explores its effects on the mass public and American democracy more generally. We examine what exactly is polarization, how it is measured, historical changes, potential causes, and its potential effects on the mass public and governance. Prerequisites: L32 Pol Sci 101B Intro to American Politics, L32 Pol Sci 363 Quantitative Political Methodology or equivalent.
Credit 3 units.

L32 Pol Sci 4331 Topics in Politics: The Two Dimensions of Electoral Politics
Credit 3 units. A&S IQ: SSC EN: S
L32 Pol Sci 4373 Immigration, Identity and the Internet
This class examines a critical issue in contemporary societies: How do changes in technology affect the process of immigration and how immigrant identity is shaped?
Credit 3 units. A&S IQ: LCD, SSC, SC, SD, WI Arch: SSC Art: SSC EN: S

L32 Pol Sci 4400 Advanced Social and Political Philosophy
A selective investigation of one or two advanced topics in the philosophical understanding of society, government and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism, communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism, and the rights of cultural minorities. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor.
Same as L30 Phil 4400
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L32 Pol Sci 4402 Topics in Political and Social Theory: Constitutionalism
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 440A Religion, Politics, and the University
This course explores in depth current issues related to pluralism, difference, and belonging in matters pertaining to religion and other important issues, with a particular focus on how these play out in the university context. The instructors, John Inazu and Eboo Patel, are two of the leading national commentators on these issues. Prerequisite: Students enrolling in this class must submit a brief statement of interest (http://law.wustl.edu/ COURSES/INAZU/seminar1/summaries) to Professor John Inazu.
Same as L57 RelPol 440
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L32 Pol Sci 4451 Contemporary Politics in India
This seminar examines current topics and controversies in contemporary Indian politics. The course has three main foci: the links between politics and economic liberalization over the past two decades; the links between ascriptive identities such as religion, caste and gender and contemporary political processes, including ethnic and gender quotas; and the changes in party politics at the national and state levels that have accompanied the decline of Congress party dominance. Specific topics include the role of caste and religion in contemporary politics; the rise of state parties and its effects on federal relations; the effects of economic reform and globalization on economy and society; urbanization and migration flows; the rise of modern Hindu nationalism; and the links between collective violence and electoral politics.
Credit 3 units. A&S IQ: LCD, SSC BU: IS EN: S

L32 Pol Sci 4500 Contemporary Democratic Theory
Contemporary debates in democratic theory have produced a number of challenging and provocative accounts of how democratic institutions can and should work. In this course we analyze a number of competing theories of democracy and assess the similarities and differences among them. Although the course focuses primarily on theoretical issues, special attention is given to how empirical research in the social sciences on democratic institutions and procedures informs and clarifies these debates.
Credit 3 units.

L32 Pol Sci 4505 American Political Parties
This seminar introduces students to core literature on political parties with a strong bias toward recent research.
Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 451 Topics in American Politics: Supreme Court
This seminar has two purposes: to introduce students to the state of the art in studies of the Supreme Court and to cover a series of particular topics with emphasis on the major controversies within the field of law and the courts.
Credit 3 units.

L32 Pol Sci 4513 Topics in Politics: Criminal Law and Criminal Justice: Homicide
Seminar investigates current controversies surrounding the homicide laws. Topics include the definitions of homicide and claims of self-defense, the controversies about admissions of evidence at various stages of prosecution, and the debates about the use of capital punishment (including the capital punishment of youths). Includes general academic readings, readings of recent court opinions, and guest discussants from the legal community.
Credit 3 units. A&S IQ: SSC WI Art: SSC BU: BA

L32 Pol Sci 4522 Topics in American Politics
This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.
Credit 3 units.

L32 Pol Sci 4552 Comparative Political Economy
This research seminar introduces the student to recent work on the political economy of democracy. We start with a historical account of the development of democratic institutions in Britain and the United States, and then continue with recent work on modeling elections. We compare elections in countries that make use of proportional electoral systems, such as Israel, with those like the United States and Britain that are highly majoritarian. Finally, we discuss the forces of democratization and globalization. The required work for the seminar is a research paper approximately 20 pages (double-spaced) in length.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 4552 Comparative Political Economy
This seminar introduces the student to aspects of social choice theory, applied to themes to do with the economic origins of democracy, democratization and the stability of social orders. We read and discuss a number of recent books: Aycaguer and Robinson on Economic Origins; North, Weingast and Wallis on Violence and Social Order; Przeworski on Democracy and Development; Ferguson on Money; Collier on Wars, Guns and Votes. If time permits, we discuss recent work by Stern on the Economics of Climate Change. Students are expected to work
on two short research papers, either empirically or theoretically based, and make a presentation of their work near the end of the semester.
Credit 3 units. A&S IQ: SSD Art: SSC EN: S

L32 Pol Sci 4621 Politics and the Theory of Games
This course covers basic primitives and more sophisticated tools of game theory as they are used in contemporary political science. It covers some issues of the forefront of contemporary research in game theory as the central analytical tool in studying the science of politics. The main substantive issues are the emergence of law and order in society, markets vs. political mechanisms, and the distinctive characteristics of parliamentary vs. presidential democratic systems. The course also includes some real case studies, basic experiments and, in general, a lot of fun.
Credit 3 units. A&S IQ: SSD Art: SSC

L32 Pol Sci 4625 Topics in Politics
Credit 3 units. A&S IQ: SSD Art: SSC EN: S

This course focuses on America’s involvement in Vietnam from the era of French colonialism through the collapse of United States intervention. Special attention is given to political, military, economic, and cultural aspects, as well as to international relationships, and the significance of the experience and subsequent developments upon both American and Vietnamese societies.
Same as L22 History 4894
Credit 3 units. A&S IQ: HUM, LCD EN: H

L32 Pol Sci 4730 Political Economy of Multinational Enterprises
In this class we explore the literature in political science and economics on the relationship between multinational enterprises and domestic governments. The four main themes of the course are: 1) defining and understanding multinational enterprises, 2) governments attracting and competing for multinationals, 3) the impact of multinationals on economic development and groups within society, and 4) attempts to regulate multinationals both domestically and internationally. Prerequisite: Pol Sci 102 or 103B.
Credit 3 units. A&S IQ: LCD, SSC BU: IS EN: S

L32 Pol Sci 4731 Global Political Economy
This course will borrow on the insights of international relations scholarship and economic theory to develop a broad understanding of international economic relations. Specifically, this course attempts to address the following two sets of questions: 1) How do global economic relations fit into the broader category of international relations? How do the existing theories in international relations (liberalism, realism and Marxism) help us understand international economic relations between nation-states? 2) What are the effects of these international economic forces (trade, finance and multinational production) on domestic governments and societies?
Credit 3 units. A&S IQ: LCD, SSC BU: IS EN: S

L32 Pol Sci 475 Topics in International Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSD Art: SSC BU: IS

L32 Pol Sci 4761 Politics of International Finance
In this course we examine the complex relationship between international finance, economic development, and domestic politics by drawing on the recent scholarly literature in economics, political science and finance. The focus is on the theoretical literature on both the determinants of international financial flows and its effects on domestic societies. Specially, we focus on five forms of international finance: (1) international equity markets (stocks), (2) flows of foreign direct investment (multinational corporations), (3) currency markets (with a special focus on currency crisis), (4) international debt and (5) international aid.
Credit 3 units. EN: S

L32 Pol Sci 480 Topics in International Politics: Growth and Development
Credit 3 units. A&S IQ: SSD Art: SSC EN: S

L32 Pol Sci 481 Seminar on American Election and Voting
Survey of major contributions to the study of American elections and voting behavior; patterns of voting through time as well as contemporary cross-sectional patterns.
Credit 3 units.

L32 Pol Sci 486 Politics of Regulation
Events such as the Gulf oil spill and the economic meltdown have dramatized the importance of regulation in the United States, and at the same time called into question the most fundamental beliefs about the nature of the regulatory process. This course reviews the notion of market failure as basic to understanding the rationale for government regulation; it also examines theories of governmental failure as a source of skepticism and concern regarding impediments to effective regulation. Much of the course reviews the development of regulatory machinery in the 20th century. We examine the political forces that have resulted in expansion of the institutions of regulation — interest groups, partisan conflict, legislative negotiation, and executive leadership. We examine these forces in detail in examining the political and legislative response to recent financial and environmental crises.
Credit 3 units. A&S IQ: SSD, WI EN: S

L32 Pol Sci 491 Collection and Analysis of Qualitative Data
This course covers basic techniques for collecting, interpreting and analyzing qualitative data. Students select a research project, collect appropriate qualitative data and conduct a preliminary analysis. Students learn how to gather several types of qualitative data, including participant observation and open- and closed-ended interviews. In addition, they evaluate and analyze primary data collected by others including oral histories, archival records, interview transcripts. We consider the advantages and disadvantages of non-randomly collected data, such as those gathered through ethnographic and archival methods. We assess the utility of building statistical datasets from such data, and students learn the basic techniques of using computer programs such as Nvivo and Atlas.ti for qualitative data. Biweekly assignments that focus on different aspects of
collection and analysis are designed to help students produce a research paper as a final project. Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 495 Research Design and Methods
This course provides an introduction to qualitative and quantitative research methods in political science. Topics address issues related to theory building as well as theory testing. Technical issues related to these methods are not the focus of this course, as are theoretical issues regarding the advantages and disadvantages of the different approaches. Ultimately, the goal of this course is twofold: (1) to instruct students to critically analyze scholarly articles with particular attention to research design; and (2) to guide students in how to design an original research project. Both the reading assignments, including methodological and applied readings, and the written assignments are directed toward these goals. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 496 Game Theory and Collective Choice
An introduction to models of collective choice important in political science, including game theory, the spatial voting model and axiomatic social choice theory. The course concentrates primarily on noncooperative game theory, whose main topics include: strategic and sequential forms, Nash equilibrium, solution by backward induction, imperfect information, repeated games; and applications to voting, campaigning, public goods, agenda design, bargaining and collective action. With noncooperative games as a foundation, the course then examines cooperative game theory (games in coalition form), voting as a social choice mechanism (including the median voter theorem and global cycling theorems), and social-choice possibility theorems (such as Arrow's Theorem). Prerequisite: Math 131 Calculus I or Pol Sci 5052 Mathematical Modeling, or equivalent. Credit 3 units. A&S IQ: SSC

L32 Pol Sci 49PK The Founding Fathers’ Government in an Electronic Age
This is a research seminar that examines how Americans sought to translate their notions of government into a realistic set of priorities and a functioning set of public institutions. Extending from 1789 through the 1820s, this course investigates how the federal government came into being, what it did, and who populated the civilian and military rank of American officialdom. This is also a course in digital history. Students create new knowledge through their own contributions to an ongoing digital project that seeks to reconstitute the early federal workforce. In the process, students learn a variety of digital techniques, ranging from encoding languages to electronic systems to software packages. Same as L22 History 49PK Credit 3 units. A&S IQ: HUM EN: H

L32 Pol Sci 5442 Political Psychology
Political psychology is a rapidly growing field of research located at the intersection of psychology and political science. Broadly, political psychology helps us understand how individuals think and feel about politics and how these psychological factors shape political behavior. This course is designed to examine the major areas of research on how psychological factors explain important political phenomena, such as political, vote choice, polarization, partisanship, media consumption, political knowledge, political communication, and policy preferences. This course will draw heavily on research in American politics, but it will extend to research across the subfields. Students will design and conduct independent research and engage in assignments geared toward professional development. Credit 3 units.

Portuguese
Portuguese is the sole official language of seven countries spanning three continents: Angola, Brazil, Cape Verde, Guinea-Bissau, Mozambique, Portugal, and São Tomé and Príncipe. In addition, Portuguese enjoys co-official language status in East Timor, Equatorial Guinea and Macau. It is the sixth most spoken language worldwide and the fifth most spoken on the internet.

Among the countries where Portuguese is an official language, Brazil stands out as a formidable emerging 21st-century economic power. With a population of more than 190 million people, it is one of the 10 largest markets in the world. Students learning Portuguese are often initially attracted by the array of vibrant Lusophone cultures, but the language is also appealing for pragmatic reasons to increasing numbers of business, economics, political science, anthropology and environmental studies majors. Many students are interested in Latin American Studies or globalization, or they are curious about Brazil's rich natural resources and booming technology industry.

Portuguese is an outstanding supplement to any student's education. For those already fluent in Spanish, Portuguese represents the chance to take a fast-paced course sequence and be fluent more quickly in multiple languages.

At Washington University, Portuguese classes are marked by the same joyful, positive environment that is characteristic of so many Lusophone cultures. Outside the classroom, students can improve their fluency at cultural events and Lusophone Movie Nights, in addition to choosing from study abroad programs affiliated with the university, either for the summer or for an entire semester.

Bem-vindos!

Faculty
For a list of affiliated faculty, please visit the Department of Romance Languages and Literatures faculty (p. 829) page.

Majors
The Department of Romance Languages and Literatures offers two years of intensive course work in Portuguese. Although there is not yet an official major in this area, students can
opt to include Portuguese as one of their three languages of concentration in the pursuit of a Romance languages major. For more information about this option, please email Dr. Valéria M. Souza (vsouza@wustl.edu).

**Minors**

The Department of Romance Languages and Literatures offers course work in Portuguese; however, there is not yet a minor in this area.

**Courses**

---

**L37 Portug 101 Portuguese I**

Introduction to Portuguese language. The course emphasizes acquisition of communicative ability. It also covers basic grammar points through reading and writing activities. Classes are taught entirely in Portuguese. No prior experience in the language is required.

Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L37 Portug 102A Portuguese II**

Introduction to Portuguese language. This second course in the Portuguese program emphasizes acquisition of communicative ability. It also covers basic grammar structures through reading and writing activities. Classes are taught entirely in Portuguese. Prerequisite: Portug 101 or permission of instructor.

Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L37 Portug 103 Portuguese for Spanish Speakers I**

Intensive and accelerated course especially designed to take advantage of students' knowledge of Spanish and to promote a more rapid learning of Portuguese. Classes are entirely taught in Portuguese and stress oral communication, basic use of grammar, reading and writing skills. Intermediate online placement exam in Spanish is required.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L37 Portug 104 Portuguese for Spanish Speakers II**

This course intends to offer a sequence in the learning process initiated in Portug 103. It is a fast-paced class, designated for Spanish speakers with the objective of improving conversational, writing and reading skills. Prerequisite: Portug 103 or permission of instructor.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L37 Portug 215 Reading and Conversation I**

The goal of this course is to review and enhance the content learned at the basic level. Through culturally relevant readings and related conversational activities, students are expected to enrich their vocabulary, gain fluency, and improve both reading comprehension and writing skills. Prerequisites: two college semesters of Portuguese or permission of instructor.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L37 Portug 220 Reading and Conversation II: Intermediate Portuguese**

This course is a continuation of Portug 215, therefore an intermediate level in the Portuguese section. Its main goal is to improve students' reading proficiency, as well as to provide a class environment in which conversational skills can be practiced and made into a solid foundation. In addition, the class provides tools to expand vocabulary and promote a cultural understanding of Brazil. Prerequisite: Portug 215 or permission of instructor.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

---

**L37 Portug 399 Undergraduate Independent Study**

Prerequisite: permission of the department.

Credit 3 units.

---

**L37 Portug 400 Independent Study**

Credit variable.

---

**Praxis**

The Praxis program provides an exciting opportunity to combine the analytical reading, writing and thinking skills of a liberal arts education with the marketable skills required in the 21st century to take students into career paths of their own design.

**Eligibility Requirements:** The Praxis program is only offered to students in Arts & Sciences. Students may apply after completing the first semester of their first year. Students must fill out an online application (https://forms.artsci.wustl.edu/praxisapplication) for the program and be accepted to enroll in Praxis courses. Applicants are accepted on a rolling basis throughout the first semester of their junior year if they have maintained a 3.0 grade-point average or higher. After the first semester of junior year, it becomes difficult to complete all Praxis program requirements before graduation.

**Faculty:** The Arts & Sciences faculty from a wide variety of backgrounds have helped to develop the Praxis program and are eager to teach, monitor and mentor the Praxis students. In addition, leaders in business, nonprofit organizations and government — many of whom discovered the foundation for their success in liberal arts studies — will be lecturers in the signature Praxis courses.

**Focused Workforce Curriculum:** The Praxis program does more than provide students with the foundation of a liberal arts education: the curriculum is designed specifically to provide students with many additional tools essential for their future in the world of work. In addition to being exposed to the specialized content of a particular field, Praxis students will be acquiring the expertise essential for their first jobs as well as for careers that may not yet exist:

- Analysis of multiple perspectives essential to the increasing globalization of our world
- Critical thinking
- Familiarity with quantitative analysis and methods
• Outstanding writing and speaking skills
• Foreign language literacy and culture
• Team and group work expertise and psychology
• Essential skills in traditional and emerging technology

Internships: The Praxis experience culminates in an internship that is normally taken at the end of the junior year. This allows students to synthesize the tools and theories they have learned and use them in the workplace. Locations for internships may include national and international sites.

Community: The success of our students is central to our program. The academic advisers and all Praxis faculty members assist students with tailoring their education to their own interests and goals. In particular, each student is assigned a faculty mentor who closely monitors that student’s progress. The faculty, the staff and all of the Praxis students form a supportive community that stimulates and encourages the highest standards of excellence in the students’ studies and in their chosen careers.

The Program

1. Leadership and group experience (3 units) (fall of sophomore year)
   Required: Praxis 201 Leaders in Context

2. Information technology skills (2 units) (fall of sophomore year)
   Required: Praxis 207 Fluency in Sociotechnology

3. Communication skills, both written and oral (3 units) (spring of sophomore year)
   Required: Praxis 285 Communication that Works

4. Analytic and problem-solving requirement (3 units)
   Required: Econ 1011 Introduction to Microeconomics

5. Quantitative skills (3 units)
   Required: A course in statistics (select one from below):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 1011</td>
<td>Introduction to Statistics</td>
<td>3</td>
</tr>
<tr>
<td>Math 2200</td>
<td>Elementary Probability and Statistics</td>
<td>3</td>
</tr>
<tr>
<td>Math 3200</td>
<td>Elementary to Intermediate Statistics and Data Analysis</td>
<td>3</td>
</tr>
<tr>
<td>Pol Sci 363</td>
<td>Quantitative Political Methodology</td>
<td>3</td>
</tr>
<tr>
<td>Psych 300</td>
<td>Introduction to Psychological Statistics</td>
<td>3</td>
</tr>
</tbody>
</table>

6. International perspective or experience (3 units)
   Required:
   The study of any language through the 300 level
   or
   Study abroad
   or
   One course in international economics or economic development (must be at the 300 level or above)

7. Internship (3 units)
   By allowing students to put into practice the skills and knowledge learned through the Praxis curriculum, the Praxis internship is conducted with the mentorship of a sponsoring Praxis faculty member and usually occurs by the end of the junior year. Students should contact the Praxis internship coordinator and have a faculty mentor in place before beginning the internship. It is not possible to fulfill the internship portion of the Praxis program with an internship that occurred before completing the majority of Praxis requirements. The internship should consist of 135 hours.
   Upon completion of the internship, there are two options available for students to fulfill the Praxis internship requirement. In conjunction with the approval of the faculty sponsor, the student submits a 10-page paper exploring the relevant issues and questions set by the sponsoring faculty. Depending on the topic, the nature of the internship, and the discretion of the sponsoring faculty, a daily journal may be submitted in lieu of the 10-page paper. For full details of the requirements of this internship, contact Dean Joy Kiefer (jkiefer@wustl.edu). This step is required for completion of the Praxis program.

Majors

The Praxis program is not a major program. It is designed for students entering their sophomore year, and it is available by application only. Students must apply online (http://college.artsci.wustl.edu/praxis). First-year students may apply to the program after their first semester, and applicants are accepted on a rolling basis through the first semester of their junior year.

Minors

The Praxis program is not a minor program. It is designed for students entering their sophomore year, and it is available by application only. Students must apply online (http://college.artsci.wustl.edu/praxis). First-year students may apply to the program after their first semester, and applicants are accepted on a rolling basis through the first semester of their junior year.

Courses

L62 Praxis 201 Leaders in Context
In this course we explore leadership both theoretically and practically. Focus is on understanding the concept of culture and how the cultural context informs a leader's style and effectiveness. This course also is designed to help students develop insights about leadership practice through readings, discussions, conversations with leaders, and group projects based on fieldwork. Students examine a wide variety of leaders and leadership styles in order to better understand how leaders mobilize followers within the constraints of their particular settings. Students also analyze the creation of institutional identity within organizations and corporate culture and explore effective leadership practices within these settings, as well as analyzing some cross-cultural examples of leadership. This course is limited only to students enrolled in the Praxis program.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L62 Praxis 207 Fluency in Sociotechnology
This course analyzes the fundamentals of technology and how that technology affects communication and processes. Students can expect to learn effective strategies for communicating through various platforms and the importance of content delivery in the proper context. Students will also interact with real-world practitioners through a series of guest speakers in addition to the weekly classroom discussion. The semester will culminate in a team-based project that puts students in contact with real nonprofit organizations in the St. Louis area. The students are tasked with applying the information learned in class to real workplace scenarios. This course is limited only to students enrolled in the Praxis program.
Credit 2 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L62 Praxis 285 Communication that Works
This course focuses on the communication forms and skills essential to contemporary living and working. Various forms of writing for different audiences and purposes: business letters, memorandums, proposals, reports, press releases, speeches as well as public speaking are practiced and critiqued. The use of technology common in public speaking is practiced and critiqued. The use of technology common in public presentations is expected. Course reading is supplemented with viewing and listening. Final grade is based on combination of quizzes, writing assignments and demonstration of speaking skills. This course is limited only to students enrolled in the Praxis program.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L62 Praxis 286 Entrepreneurship and the Liberal Arts
It is a little-known truth that more entrepreneurs come out of Arts & Sciences than any other college. This course begins by exploring why this is so, examining in particular the creative and innovative qualities developed in liberal arts that are crucial to the success of the entrepreneur. We then move on to examine entrepreneurs in action, hearing from those in the field and reading of others, learning how the liberal arts proved instrumental in various ways to their development and ultimate success as entrepreneurs.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L62 Praxis 367 Positive Psychology: The Science of Happiness
Reviews the relatively recent development in the field known as "Positive Psychology." Topics may include: happiness and life-satisfaction, positive self-esteem, creativity, caring relationships, love (passionate and otherwise), empathy, optimism, ambition, moral character development, attachment, compassion, forgiveness, helping, work ethics, and successful aging. Designed to take a sampling of those aspects of psychology that emphasize the positive side of human nature. Prerequisites: Psych 100B, junior or senior standing.
Same as L33 Psych 367
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

Psychological & Brain Sciences

Psychological & Brain Sciences allows students to examine in depth the study of behavior in the following areas:

- Aging and development
- Biological bases of behavior
- Clinical and abnormal psychology
- Cognition
- Cognitive neuroscience
- Learning and memory
- Personality
- Sensation and perception
- Social interactions

The Department of Psychological & Brain Sciences at Washington University has particular strengths in the following areas:

- Aging
- Behavioral economics
• Human development
• Diversity science
• Cognitive neuroscience
• Emotion
• Judgment and decision making
• Learning and operant conditioning
• Neuropsychology
• Personality and individual differences
• Adult psychopathology
• Sensory processes in vision and audition
• Social theories of self and social processes
• Human emotion

There are also many opportunities for undergraduates in this department:

• Research involvement with faculty members
• Supervised internships with community-service agencies
• Practicum in Applied Behavior Analysis: Autism Spectrum Disorder
• Study abroad
• Concentrations within the major
• Senior honors
• Membership in Psi Chi, the national honor society in psychology

The field of psychology encompasses a large and diverse area of study that is empirical, theoretical and practical. As the science concerned with the study of behavior, psychology includes such areas as the biological bases of behavior; brain-behavior interactions; learning; memory; cognition; motivation; emotion; sensation and perception; the study of social interactions, persuasion and attitudes; aging and development; personality; clinical, abnormal and health psychology; and leisure and work experiences. Psychology is a valuable multipurpose discipline in which to major. It has relevance for those considering careers in law, medicine, the health professions, education and business. In addition, it provides important skills and knowledge for those who may not be planning additional schooling.

Total units required: 34 units, of which at least 25 must be at the 300 level or above

Required courses:
- Psych 100B Introduction to Psychology is a prerequisite for all upper-level courses (300 level and above). Exemption from Psych 100B is possible in the following circumstances:
  - Completion of an equivalent course transferred from another institution, if approved by the director of undergraduate studies.
  - An Advanced Placement (AP) psychology test score of 5 or an International Baccalaureate (IB) score of 6 or 7. (Note: The AP or IB score earns an exemption from Psych 100B but no units of credit toward the major.)
- Psych 301 Experimental Psychology or Psych 3011 Experimental Psychology

Core requirements: At least one course from each of the following five categories:

### Social/Personality:

<table>
<thead>

</tr>
</tbody>
</table>

Note: If a course falls into two categories, it can only be used to fulfill one of those categories.

Elective courses: An additional 9 units of course work

6 Units Rule: No more than 6 units from the following categories may be used to satisfy the minimum requirements for the P&BS major:

- 100-/200-level courses (other than Psych 100B)
- Psych 333 Independent Study in Psychological & Brain Sciences
- Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences
- Psych 498 Study for Honors and Psych 499 Study for Honors
- Approved University College psychology classes
- Cross-listed courses not home-based in P&BS
- Transfer classes (students transferring from another college should refer to the Transfer Credit section below)

Additional Information

Transfer Credit: If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the director of undergraduate studies in the P&BS department for their applicability toward the major.

Senior Honors: The primary goal of the honors program in P&BS is to provide students who have achieved a superior academic record the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Have overall and P&BS grade-point averages of at least 3.65
- Complete both Psych 300 and Psych 301 (or Psych 3011)
- Have an approved honors research adviser

Concentrations in Psychological & Brain Sciences

To augment the broadly based P&BS major, the department offers concentrations for students who wish to engage more intensively with a specific area within the discipline. The concentrations are meant as an enrichment of the major, but the units for the concentrations may be part of the regular P&BS major requirements.

A concentration requires a minimum of 12 units, which include required and elective courses (one of which must be at the 400 level). In addition, to complete a concentration, students will have to undertake an approved research assistantship (Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences) or an approved internship, practicum or honors thesis.

A concentration will be a valuable experience for students planning on graduate study in psychology or related fields or for those who have a particular interest or want to gain expertise in one of the approved concentrations. Each concentration will have a member of the faculty as the contact person who will meet with advise students in the concentration.

Courses taken for a concentration may be used to fulfill no more than one of the core categories or distribution requirements of a P&BS major. None of the units for a concentration can be counted for any other major or minor (i.e., there is no double counting). For those doing the P&BS cognitive neuroscience major, the cognitive neuroscience concentration is not an option.

The Six Concentrations

Cognition in Children — This concentration allows students to acquire deeper knowledge of cognitive processes that occur during infancy and early childhood. The courses for this concentration consider child development more generally and then explore in more depth the development of cognitive, conceptual, linguistic and social abilities.

Adviser/coordinator: Professor Lori Markson

Course work required: Psych 321 Developmental Psychology

Electives (must include two classes, at least one of which is at the 400 level):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>Psych 4591</td>
<td>The Development of Social Cognition</td>
<td>3</td>
</tr>
</tbody>
</table>
Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper.

Relevant faculty: Pascal Boyer, Lori Markson, Rebecca Treiman and Desirée White

Cognitive Neuroscience — This concentration allows students to acquire deeper knowledge of the relationship between the mind and the brain. The courses for the concentration consider the neurobiological basis of psychological function at a more general level and then explore in greater depth specialized topics related to how higher cognitive processes (e.g., memory, attention, perception, emotion) emerge from brain function.

Adviser/coordinator: Professor Todd Braver

Course work required:

<table>
<thead>

</tbody>
</table>

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper.

Relevant faculty: Deanna Barch, Todd Braver, Ryan Bogdan, Ian Dobbins, Denise Head, Kathleen McDermot, Desirée White and Jeff Zacks

Reading, Language and Language Acquisition — This concentration provides students with a deep and broad knowledge of linguistic development. The courses take an in-depth look at the development of written and spoken language.

Adviser/coordinator: Professor Rebecca Treiman

Course work required: Ling 170D Introduction to Linguistics

Electives (must include two classes, at least one of which is at the 400 level):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Psych 234</td>
<td>Introduction to Speech and Hearing Sciences and Disorders</td>
<td>3</td>
</tr>
<tr>

<tr>
<td>Psych 433</td>
<td>Psychology of Language</td>
<td>3</td>
</tr>
<tr>
<td>Psych 4351</td>
<td>Reading and Reading Development</td>
<td>3</td>
</tr>
<tr>
<td>or Psych 4352</td>
<td>Reading and Reading Development (Writing Intensive)</td>
<td>3</td>
</tr>
</tbody>
</table>

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper.

Relevant faculty: Rebecca Treiman, David Balota, Lori Markson, Mitchell Sommers and Kristin Van Engen.

Lifespan Development — Many introductory courses in developmental psychology focus on the changes that occur from birth to adolescence. The concentration in lifespan development provides students with an understanding of the cognitive and physiological changes that occur over the lifespan, with a primary focus on older adulthood. A major goal of the concentration is to provide students with an understanding of the similarities and differences in development at different stages of the lifespan.

Adviser/coordinator: Professor Mitchell Sommers

Course work required:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Psych 326 &amp; Psych 427</td>
<td>Introduction to the Psychology of Aging and Social Gerontology</td>

<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Psych 321</td>
<td>Developmental Psychology</td>
<td>3</td>
</tr>
<tr>
<td>Psych 4301</td>
<td>Contemporary Topics in Cognitive Development</td>
<td>3</td>
</tr>
</tbody>
</table>

Research mentorship or internship experience: Students can complete this aspect of the concentration with either a prior approved research mentorship or an approved internship related to older adults. Successful completion of a paper is required in either case.

Relevant faculty for research mentorship: Mitchell Sommers, David Balota, Brian Carpenter, Sandra Hale, Denise Head and Lori Markson.
Possible internships: Work in an assisted-living facility or another community-based program designed to assist older adults. Other internships are available; contact Dr. Brian Carpenter for opportunities.

Experimental Psychopathology — This concentration allows students to acquire more advanced knowledge of the ways in which psychologists study mental disorders. Current research has demonstrated the importance of integrating psychological and biological variables to better understand the classification, etiology and treatment of a wide variety of mental disorders, including schizophrenia, mood disorders, anxiety disorders, substance use disorders and eating disorders. Students who pursue this concentration will develop a broadly-based appreciation for conceptual and methodological issues that are central to research in psychopathology.

Adviser/coordinator: Professor Deanna Barch

Course work required: Psych 354 Abnormal Psychology

Electives (must include two classes, at least one of which is at the 400 level):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Psych 345</td>
<td>Genes, Environment, and Human Behavior</td>
<td>3</td>

</tr>
</tbody>
</table>

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper

Relevant faculty: Deanna Barch, Ryan Bogdan, Josh Jackson, Tom Oltmanns, Tom Rodebaugh, Renee Thompson and Denise Wilfley

Personality and Individual Differences — This concentration allows students to acquire deeper knowledge of how and why individuals differ from one another and the ways in which individual (e.g., personality) and group (e.g., gender) differences influence behavior, emotion, experience, identity and psychopathology. The core course for the concentration (Psych 353) considers personality more generally. The seminars explore in depth specific aspects of personality and individual differences, including biological bases of individual differences (i.e., genetics), the interpersonal processes associated with personality and personality judgment, individual differences in self and identity, group differences and personality pathology.

Adviser/coordinator: Professor Tammy English

Course work required: Psych 353 Psychology of Personality

Electives (must include two classes, at least one of which is at the 400 level):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>

</table>

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper

Relevant faculty: Tammy English, Josh Jackson, Randy Larsen, Tom Oltmanns, Michael Strube and Renee Thompson

The Major in Cognitive Neuroscience

How does the brain think? Cognitive neuroscience refers to the scientific study of the linkage between mental functions and the operation of the brain and nervous system. The goal of cognitive neuroscience is to provide an understanding of psychological processes such as attention, memory, thinking and emotion in terms of physical principles and biological components. At the same time, it aims to provide an understanding of the psychological constraints on how the brain functions, computes and generates behavior. Students who pursue this undergraduate major in cognitive neuroscience will gain a strong foundation in how to study the brain and mind at various levels of analysis, including cellular biology, brain systems, cognitive and affective function, and neural computation. In addition, they will gain an appreciation of the relationship between healthy cognitive and brain function and its breakdown in various disease states and disorders. A cognitive neuroscience degree provides excellent preparation for a career in health and medical professions, scientific research, computer fields, education and law.

Total units required: 36-37 units/12 courses (plus prerequisites)

Prerequisites Outside of Psychological & Brain Sciences (7 units):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 132</td>
<td>Calculus II</td>
<td>3</td>
</tr>
<tr>
<td>Biol 2960</td>
<td>Principles of Biology I</td>
<td>4</td>
</tr>
</tbody>
</table>
Note: Each of these prerequisites has its own prerequisites: Math 132 requires Math 131; for Biol 2960, taking Chem 111A and Chem 112A (concurrently) is strongly recommended.

Note: These are Biology and Pre-Med prerequisites as well, and they are typically completed during a student’s first year. They may alternatively be satisfied through AP or any other already-approved mechanism from the respective department or the college.

Core Requirements (19 units):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Psych 100B</td>
<td>Introduction to Psychology</td>
<td>3</td>
</tr>
<tr>
<td>Psych 300</td>
<td>Introduction to Psychological Statistics</td>
<td>3</td>
</tr>
<tr>
<td>Psych 301</td>
<td>Experimental Psychology</td>
<td>4</td>
</tr>
<tr>
<td>or Psych 3011</td>
<td>Experimental Psychology</td>
<td></td>
</tr>
<tr>
<td>Psych 3401</td>
<td>Biological Psychology</td>
<td>3</td>
</tr>
<tr>
<td>or Psych 344</td>
<td>Principles of the Nervous System</td>
<td></td>
</tr>
<tr>
<td>Psych 360</td>
<td>Cognitive Psychology</td>
<td>3</td>
</tr>
<tr>
<td>Psych 3604</td>
<td>Cognitive Neuroscience</td>
<td>3</td>
</tr>
<tr>
<td>Total Units</td>
<td></td>
<td>19</td>
</tr>
</tbody>
</table>

Note: The first three requirements (i.e., Psych 100B, 300 and 301/3011) are the same as those for the regular P&BS major.

Note: L33 Psych 344 is home-based in Biology; students should register under the cross-listed Psych L33 course designation, not L41 Biol 3411.

Exemption from Psych 100B is possible in the following circumstances:

- Completion of an equivalent course transferred from another institution, if approved by the director of undergraduate studies.
- An AP psychology test score of 5 or an IB score of 6 or 7. (Note: The AP or IB score earns exemption from Psych 100B but no units of credit toward the major.)

Math 2200 or Math 3200 or both Marketing Statistics DAT 120 and DAT 121 may substitute for Psych 300 but earn no units of credit toward the major. No AP Math course can substitute for Psych 300.

Additional Biological & Cognitive Distributions: Two courses (one each from Groups A and B):

**Group A eligible courses:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Psych 330</td>
<td>Sensation and Perception</td>
<td>3</td>
</tr>
<tr>
<td>Psych 361</td>
<td>Psychology of Learning</td>
<td>3</td>
</tr>
<tr>
<td>Psych 380</td>
<td>Human Learning and Memory</td>
<td>3</td>
</tr>
</tbody>
</table>

**Group B eligible courses:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Biol 3058</td>
<td>Physiological Control Systems</td>
<td>2</td>
</tr>
<tr>
<td>Biol 3151</td>
<td>Endocrinology</td>
<td>3</td>
</tr>
<tr>
<td>Biol 328</td>
<td>Principles in Human Physiology</td>
<td>4</td>
</tr>
<tr>
<td>Biol 3421</td>
<td>Introduction to Neuroethology</td>
<td>3</td>
</tr>
<tr>
<td>Physics 350</td>
<td>Physics of the Brain</td>
<td>3</td>
</tr>
<tr>
<td>Psych 345</td>
<td>Genes, Environment, and Human Behavior</td>
<td>3</td>
</tr>
<tr>
<td>Psych 374</td>
<td>Drugs, Brain and Behavior</td>
<td>3</td>
</tr>
</tbody>
</table>

Computation Requirement (one course):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CSE 131</td>
<td>Introduction to Computer Science</td>
<td>3</td>
</tr>
<tr>
<td>Psych 4175</td>
<td>Applied Statistical Analysis with R</td>
<td>3</td>
</tr>
<tr>
<td>Psych 5007</td>
<td>Statistics and Data Analysis in MATLAB</td>
<td>2</td>
</tr>
</tbody>
</table>

With prior approval, another course involving a significant computational/programming component may be substituted.

Capstone/Depth requirement: 9 units (one each from Groups A, B, and C):

Note: None of these can be used to also fulfill any of the other requirements (i.e., no double counting).

**Group A eligible courses:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Psych 4046</td>
<td>Developmental Neuropsychology (Writing Intensive)</td>
<td>3</td>
</tr>
<tr>
<td>Psych 4182</td>
<td>Perception, Thought and Action</td>
<td>3</td>
</tr>
<tr>
<td>Psych 4413</td>
<td>Advanced Cognitive Neuroscience (Writing Intensive)</td>
<td>3</td>
</tr>
<tr>
<td>Psych 4450</td>
<td>Functional Neuroimaging Methods</td>
<td>3</td>
</tr>
<tr>
<td>Psych 4746</td>
<td>Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior</td>
<td>3</td>
</tr>
<tr>
<td>Psych 4765</td>
<td>Inside the Disordered Brain: Biological Bases of the Major Mental Disorders</td>
<td>3</td>
</tr>
<tr>
<td>Psych 488</td>
<td>The Cognitive Neuroscience of Film</td>
<td>3</td>
</tr>
</tbody>
</table>

or an appropriate 400-level course from outside of the department, such as the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Biol 4030</td>
<td>Biological Clocks</td>
<td>3</td>
</tr>
<tr>
<td>Biol 404</td>
<td>Laboratory of Neurophysiology</td>
<td>4</td>
</tr>
<tr>
<td>Biol 4580</td>
<td>Principles of Human Anatomy and Development</td>
<td>3</td>
</tr>
<tr>
<td>L30 Phil 4212</td>
<td>Philosophy of Neuroscience</td>
<td>3</td>
</tr>
</tbody>
</table>

791
Group B eligible courses (for capstone research/writing-intensive experience):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Psych 4046</td>
<td>Developmental Neuropsychology (Writing Intensive)</td>
<td>3</td>
</tr>
<tr>
<td>Psych 4413</td>
<td>Advanced Cognitive Neuroscience (Writing Intensive)</td>
<td>3</td>
</tr>
<tr>
<td>Psych 444B</td>
<td>Independent Study for the Major in Psychological &amp; Brain Sciences: Cognitive Neuroscience</td>
<td>3</td>
</tr>
<tr>
<td>Psych 498 &amp; Psych 499</td>
<td>Study for Honors and Study for Honors (Writing Intensive)</td>
<td>6</td>
</tr>
</tbody>
</table>

Group C eligible courses: An additional 3 units from Group A or B or, with prior approval, MBB 300 or Psych 333 (Note: All 3 units must be completed in one semester and in one lab to be considered for approval) or Psych 498/Psych 499.

Acceptance into the Psychological & Brain Sciences: Cognitive Neuroscience Major

Acceptance into the major is contingent upon an application and then approval by the major committee. As part of this application, the student will meet with an appropriate adviser, who will carefully review the requirements and oversee the student’s progress. A brief one-page statement from the student on why they feel that the cognitive neuroscience major is appropriate for them will be requested as part of the application.

Washington University students will be considered for admission to the cognitive neuroscience major no sooner than during their third semester (sophomore year). Decisions are based on the student’s statement and academic record as well as the interview with the major adviser.

Minors

The Minor in Psychological & Brain Sciences

Units required: 15

Required course: Psych 100B Introduction to Psychology

Elective courses:

Four additional courses (i.e., a minimum of 12 units of additional course work) in P&BS, all of which must be at the 300 level or above

Additional Information

Students may receive exemption from the Psych 100B requirement only if an AP psychology score of 5 or an IB score of 6 or 7 is received. For exemption, no credit will be given; therefore, five applicable courses must be completed. No more than 3 units of an approved cross-listed course originating outside of P&BS, an approved psychology course taken in University College, an approved psychology course taken at another university, or an independent study-type course (e.g., Psych 333) may count toward the minor. (Transfer students must complete at least 9 advanced units of home-based P&BS courses at Washington University.)

For those who have a broad or general interest in P&BS, we recommend taking several courses from the five core areas (i.e., Social/Personality; Abnormal/Affective Psychology; Biological/Neurological Bases of Behavior; Behavior and Cognition; and Lifespan Development).

For those students who want to concentrate in a more specialized area, courses can reflect such specialization. For example, a student interested in the helping professions or counseling may wish to select from such courses as Psych 353 Psychology of Personality, Psych 354 Abnormal Psychology, Psych 361 Psychology of Learning and Psych 321 Developmental Psychology. A student wishing to pursue a specialization in experimental psychology/neuroscientific bases of behavior may select from such classes as Psych 3401 Biological Psychology, Psych 361 Psychology of Learning, Psych 330 Sensation and Perception, Psych 360 Cognitive Psychology and Psych 3604 Cognitive Neuroscience and may also consider doing independent study (Psych 333).

Courses

L33 Psych 100B Introduction to Psychology

A survey and analysis of concepts, theories, and research covering the areas of learning, memory, social, abnormal, clinical, physiological and sensory psychology. This is a general survey course designed to introduce students to the diversity of areas, approaches, and theories that comprise the study of mind and behavior. Psych 100B is required of all majors and is prerequisite to all upper-level courses in Psychology. For freshman and sophomore students enrolled in Psych 100B who are interested in exploring controversial issues in psychology within a seminar format, see the companion course, Psych 102 First-Year Opportunity: Controversial Issues in Psychology. Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC BU: BA EN: S

L33 Psych 102 First-Year Opportunity: Contemporary Issues in Psychology

This seminar will enable students enrolled in Introduction to Psychology (Psych 100B) to explore in greater depth several of the ideas and concepts in contemporary psychology. Open to first-year students and sophomores who are concurrently enrolled in Psych 100B, and first-year students with AP/IB exemption. Sections are limited to 15 students. Credit 1 unit. A&S: FYO A&S IQ: SSC Art; SSC EN: S
L33 Psych 105 First-Year Opportunity: Psychology of Young Adulthood
This course will cover selected topics relevant to the developmental, social, personal, and cognitive issues that young adults confront during their college years. Material will be drawn mainly from the field of psychology, and the emphasis will be on the scientific basis of concepts and on empirically supported strategies for growth and development. The knowledge gained may contribute to academic success, personal development, and a more rewarding social and academic experience over the course of college and beyond. This 1-unit course is only open to first-year students. Credit/no credit only.
Credit 1 unit. A&S: FYO

L33 Psych 107 The Science of #Slaying It! in College
You have spent the last 12 or so years "slaying it" as a student. You likely have developed lots of effective strategies for succeeding in school. Recently, our understanding of what those successful strategies are has greatly expanded. But, how do we know what skills are particularly helpful to do well academically? From psychological research! In this class, students will learn about the psychological research that has illuminated which strategies are most helpful when studying, when in the classroom, and when asking for help. We will focus on how to most effectively study but will discuss other strategies as well. Students will also be asked to apply these skills in the other classes that they're taking this semester, with the hope that they develop and refine the skills they already have and continue slaying it as a student. Prerequisite: open only to freshmen and sophomores. Permission of instructor required. Credit/No Credit option only.
Credit 2 units.

L33 Psych 109 First-Year Opportunity: Research in Psychology
Weekly presentations by various members of the psychology faculty; introduces students to research areas and current issues. Attendance at all lectures required. Open to freshmen and sophomores only. Prerequisite: Psych 100B. Credit/no credit only.
Credit 1 unit. A&S: FYO A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 111 First-Year Opportunity: Mindfulness Science & Practice
Mindfulness is a term that is becoming increasingly used in popular culture to refer to a set of skills associated with increased attentional focus, successful stress-management, and improved health, sleep, and emotional well-being. This course will expose students to the various facets of mindfulness from both an applied and scientific perspective, both through the teaching of mindfulness skills through a set of easy-to-learn exercises and exercises, and through a survey of empirical research regarding mindfulness effects on cognition, emotion, brain function and health. The goal of the seminar will be to provide practical skills that can contribute to personal development, emotional well-being and academic success, while also developing critical thinking skills in learning how to read and evaluate primary scientific literature on mindfulness. Open to freshmen only.
Credit 1 unit. A&S: FYO

L33 Psych 212 Study Abroad: Experiences in Psychology
Prerequisite: enrollment in an approved Psychology study abroad program and prior permission of the director of undergraduate studies. Credit to be arranged. Credit/No Credit only.
Credit variable, maximum 3 units.

L33 Psych 219 The Infant Mind: Sophomore Seminar
What goes on inside the mind of an infant? In this course, we will explore a variety of hot topics concerning how babies experience the world around them. We will cover topics such as temperament (Do babies get mad?), language and communication (How do infants learn words? What if a baby is exposed to more than one language?), the effects of poverty on the developing brain (Does it matter?), social categories and relationships (Do babies notice differences across people?), and morality (Do babies have a sense of justice?). We will also discuss how to put child development research into practice, for example, by considering research relevant to policies concerning vaccination, early childhood education, and whether screen time is okay for babies. Students will have ample opportunity to interact with children at a local childcare center, where they can experience firsthand the research they are learning about in class. If you are curious about the developing mind or human nature or if you are considering a career in a field that involves children (e.g., education, medicine, public policy), this course is for you. This Sophomore Seminar is open to students from all majors. Enrollment is restricted to 20 sophomores or by permission of instructor.
Credit 3 units. A&S IQ: SSC BA: EN: S

L33 Psych 221 First-Year Seminar: Introduction to Memory Studies
This course focuses on memory not only as an individual phenomenon but also as the basis for the transmission of culture and the construction of collective identity. We will survey such topics as experimental methods and findings in the study of individual memory; questions of accuracy and vividness of memory and witness reports; repressed memories; transmission of cultural norms and identity through narratives; shared historical memories; individual trauma and historical upheaval; revision of the past and political usage of collective memory. Enrollment is restricted to 25 first-year students, or by permission of the instructor.
Credit 3 units. A&S: FYS A&S IQ: SSC Arch: SSC Art: SSC BA: EN: S

L33 Psych 225 Internship in Psychology
An opportunity to gain practical, applied experience in a nonacademic, community service agency. For a description of prerequisites, course goals, agency selection, registration policies, and course requirements, obtain a copy of "Internships in Psychology," available in room 207B in the Psychology & Brain Sciences website (http://psychweb.wustl.edu/undergraduate). This course can be taken only once, and it is open to junior and senior psychology & brain sciences majors only. Credit/no credit only. Permission of instructor required. CET (https://gephardtinstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching) course.
Credit 3 units.
L33 Psych 234 Introduction to Speech and Hearing Sciences and Disorders
Introduction to the fields of speech-language pathology, audiology, education of hearing-impaired children, and speech and hearing sciences. Normal speech and hearing processes are discussed, as well as communication disorders. Selected research topics in speech and hearing sciences are presented. Same as L12 Educ 234
Credit 3 units. BU: BA EN: S

L33 Psych 235 Practicum in Applied Behavior Analysis: Autism Spectrum Disorder
An opportunity to be trained in applied behavior analytic techniques and to work with a child with autism/pervasive developmental disorder. Training and supervision are arranged and coordinated by the family of the child and their consultant. To receive credit, students must undertake a year's work with the child, complete the minimum number of hours of training and therapy, and attend regular therapy meetings. In addition, students must meet with the practicum coordinator for discussion of assigned readings and presentations on autism and therapy. Completion of a paper also is required. For further information and petition form, pick up the Practicum brochure from the department. This course can be taken only once for credit. Credit/no credit only. Enrollment through the practicum coordinator only. CET (https://gephardtinstitute.wustl.edu/lor-faculty-and-staff/community-engaged-teaching) course. Credit 3 units.

L33 Psych 246 Mindfulness in Psychology and Eastern Philosophies: Sophomore Seminar
This course explores the concept of mindfulness in psychology and in Eastern philosophies. We will discuss the scientific literature on mindfulness, as well as mindfulness as presented by Buddhist scholars. We will engage in several different mindfulness practices throughout the semester. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L33 Psych 300 Introduction to Psychological Statistics
Descriptive statistics including correlation and regression. Inferential statistics including nonparametric and parametric tests of significance through two-way analysis of variance. Course emphasizes underlying logic and is not primarily mathematical, though knowledge of elementary algebra is essential. Psych 300 is required of all P&BS majors. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L33 Psych 301 Experimental Psychology
This course provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and the interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation, whereas the laboratory component provides an introduction to a range of psychological phenomena through hands-on experience in experimentation. Each student also completes an independent research project of their own design under the supervision of a faculty member. Enrollment limited to 15 students. Declared psychology & brain sciences majors will have priority. Prerequisites: Psych 100B and concurrent enrollment in Psych 300.
Credit 4 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA, SCI

L33 Psych 3011 Experimental Psychology
Psych 3011 is limited to students who have not taken Psych 300 and who want to enroll in Psych 300 and Experimental Psychology concurrently. Therefore, students who enroll in Psych 3011 must also register for Psychology 300. Psych 3011 fulfills the Psychology 301 requirement for the major. Topics in the two courses (i.e., Psych 300 and Psych 3011) will be coordinated in order to integrate the concepts from Statistics with those from Experimental Psychology. Experimental Psychology provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and the interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation, whereas the laboratory component provides an introduction to a range of psychological phenomena through hands-on experience in experimentation. Each student also completes an independent research project of their own design under the supervision of a faculty member. Enrollment limited to 15 students. Declared psychology & brain sciences majors will have priority. Prerequisites: Psych 100B and concurrent enrollment in Psych 300.
Credit 4 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA, SCI

L33 Psych 304 Educational Psychology
A course in psychological concepts relevant to education. Organized around four basic issues: how humans think and learn; how children, adolescents, and adults differ in their cognitive and moral development; the sense in which motivation and intention explain why people act as they do; and how such key human characteristics as intelligence, motivation, and academic achievement can be measured. Offered fall and spring semesters.
Same as L12 Educ 304
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 305 Health Psychology
Review and discussion of psychobiological approaches to health, as well as psychological aspects of physical illness. Topics: stress and coping, psychosocial factors in the etiology and progression of chronic illness, and psychological sequelae of chronic illness. There will be an emphasis on research methodology and results. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 315 Introduction to Social Psychology
Introduction to the scientific study of individual behavior in a social context. Topics: person perception; stereotyping and prejudice; attitudes; memory; and political psychology, among other issues. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 3195 Abnormal Child Psychology
This course familiarizes students with current perspectives on the nature, causes, assessment, treatment and prevention of child psychiatric disorders and related family dysfunction. Theoretical perspectives and research findings are discussed pertaining to anxiety, depression, conduct disorder, attention deficit/hyperactivity disorder, autism, learning impairments and parent-child conflict. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S
L33 Psych 3211 Music Cognition
An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.
Same as L27 Music 3221
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA EN: S

L33 Psych 325 Psychology of Adolescence
A broad introduction to adolescence as a developmental period of transition and change. The major topics include the fundamental changes of adolescence; the context of adolescence; and processes of psychological development. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 326 Introduction to the Psychology of Aging
Study of the processes of aging in the individual in terms of their behavioral effects. Age changes in biological functions, sensation, perception, intelligence, learning, memory and creativity are studied to understand the capacities and potentials of the mature and older person. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 330 Sensation and Perception
What's involved in seeing and hearing? This course covers perception from the physical stimuli (light and sound) that impinge upon the sensory receptors through the higher-level percepts that the stimuli generate. Demonstrations and illusions are used as we learn about the anatomy and physiology of the sensory systems and study the brain mechanisms that are involved in vision and audition. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA SCI

L33 Psych 333 Independent Study in Psychological & Brain Sciences
Prerequisites: Psych 100B and permission of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work. Credit to be arranged. A maximum of 6 units may be applied toward the major. The electronic Petition for Supervision of Independent Study form is available online (http://eyes.wustl.edu/psych333). Students will be enrolled only after their form is approved by the faculty supervisor and forwarded to the undergraduate coordinator. Credit/no credit only. Credit variable, maximum 3 units.

L33 Psych 3401 Biological Psychology
An introduction to biological mechanisms underlying behavior. Topics include the physiology of nerve cells; anatomy of the nervous system; control of sensory and motor activity, arousal and sleep; motivation; and higher mental processes. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: NSM Arch: NSM BU: SCI

L33 Psych 344 Principles of the Nervous System
This course will provide a broad introduction to neuroscience, starting at the level of cellular and molecular neuroscience and ultimately ending at systems and theoretical neuroscience, with emphasis on the organization of the mammalian central nervous system. Topics will include neuroanatomy, the action potential, information transmission between neurons, sensory/motor systems, emotion, memory, disease, drugs, behavior, and network dynamics. A fundamental goal of this course is to provide students with the ability to approach complex problems using the scientific method and to understand the limits of knowledge. This course will also expose students to some of the neuroscience community at Washington University. Prerequisites: Biol 2960 and Biol 2970 recommended; Biol 3058 recommended or Psych 3401 and permission of the instructor. Same as L41 Biol 3411
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L33 Psych 345 Genes, Environment, and Human Behavior
This class will examine how genetic influences impact various dimensions of human behavior, ranging from traits (e.g., personality) to psychiatric disorders. Topics to be covered include methods used to study genetic influence, how genetic predispositions interact with the environment, and ethical implications. Modern methods for gene-identification, such as genomewide association studies, polygenic risk scores and epigenetic experiments will be examined in detail. Emphasis will be placed on understanding core concepts (e.g., what is identity-by-descent) as well as application (e.g., calculate heritability, interpretation of results from published studies). Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 3501 Psychotherapy: Introduction to Practice and Research
This is an introductory course in psychotherapy: The treatment of psychological problems through the application of interventions grounded in psychological theory and focusing on behavior or mental processes. Students become familiar with the more popular schools of psychotherapy, including their historical context, characteristic techniques, theoretical underpinnings and current research support. Students also gain an appreciation of the problems and solutions in researching psychotherapy, as well as emerging variations on psychotherapy procedures. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: SCI

L33 Psych 353 Psychology of Personality
Review of basic theoretical orientations to the understanding of personality and complex human behavior. Overview of related techniques, procedures and findings of personality assessment and personality research. Discussion of critical issues in evaluation of personality theories. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S
L33 Psych 354 Abnormal Psychology
This is an introductory course in psychopathology or the scientific study of mental health disorders. The course includes definitions, theories, and classifications of abnormal behavior. Content focuses on symptoms, classification, prevalence, etiology, and treatment of mental health disorders, including mood, anxiety, eating, schizophrenia spectrum, substance use, and personality disorders. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 357 Introduction to Clinical Psychology
A survey of clinical psychology. Emphasis is placed on historical and recent developments in the field (e.g., managed care), as well as the consideration of the roles, functions, and techniques of clinical psychologists including psychological testing and psychotherapy. Prerequisites: Psych 100B and either Psych 353 or Psych 354.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L33 Psych 358 Language Acquisition
This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include: biological bases of language development; development of phonology, syntax, and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisites: Psych 100B and Ling 170D.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 358W Language Acquisition
This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include: biological bases of language development; development of phonology, syntax and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisites: Psych 100B and Ling 170D and junior or senior standing. Written-intensive.
Credit 3 units. A&S IQ: SSC, WI EN: S

L33 Psych 360 Cognitive Psychology
Introduction to the study of thought processing from an information-processing approach. Emphasis will be placed on theoretical models that are grounded in empirical support. Topics include pattern recognition, attention, memory, reasoning, language processes, decision making, and problem solving. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L33 Psych 3645 Understanding Emotions
This laboratory course is a supplement to the Psych 361 Psychology of Learning class. Students gain firsthand experience, via a virtual rat, of principles and procedures related to the acquisition and maintenance of behavior. Weekly lab meetings introduce Pavlovian and operant principles, which are then implemented as laboratory exercises with the virtual rat. Concurrent enrollment in Psych 361 required.
Credit 1 unit. A&S IQ: NSM

L33 Psych 3667 Positive Psychology: The Science of Happiness
Reviews the relatively recent development in the field known as "Positive Psychology." Topics may include: happiness and life-satisfaction, positive self-esteem, creativity, caring relationships, love (passionate and otherwise), empathy, optimism, ambition, moral character development, attachment, compassion, forgiveness, helping, work ethics, and successful aging. Designed to take a sampling of those aspects of psychology that emphasize the positive side of human nature. Prerequisites: Psych 100B, junior or senior standing.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 3674 Drugs, Brain and Behavior
This course involves information pertaining both to medications used to treat psychiatric disorders and to psychoactive drugs of abuse. By learning principles of pharmacology and mechanisms of action of these agents, students develop an enhanced knowledge of the brain mechanisms underlying abnormal human behavior. Prerequisites: Psych 100B and one of the following: Psych 354 or Psych 3401 or Psych 344.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L33 Psych 380 Human Learning and Memory
A survey of issues related to the encoding, storage and retrieval of information in humans. Topics include memory improvement strategies, people with extraordinary memories, memory illusions
and distortions, among other topics. Limited to 25 students. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L33 Psych 396 Psychological Dynamics of Empathy
In this course, students will explore the antecedents and consequences of empathic motivation, defined broadly. Along the way, we will consider answers to several interesting questions: Why are some people generally more empathic than others? Are there cultural differences in levels of this trait? To what extent is empathy an "emotional" or "cognitive" phenomenon? We will also consider the conditions under which empathy is associated with prosocial outcomes (e.g., to reduce racial prejudice) while recognizing that empathy has a "darker" side that can ironically exacerbate people’s preexisting biases. The approach to empathy will be highly interdisciplinary as students consider research and theory in several fields within psychology (e.g., social, personality, cognitive) as well as areas that draw from other scholarly disciplines (e.g., social neuroscience, social anthropology, theology, religious studies). Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L33 Psych 399 Living, Dying and Death: A Biopsychosocial Approach to Understanding the End of Life
This survey course examines dying and death from biological, psychological and social perspectives. Topics include theoretical and research approaches to studying dying and death; historical and cross-cultural attitudes; psychological understanding and coping with death over the life span; the process of dying and definitions of death; health care professionals and treatment approaches for the dying; assisted death and other ethical/legal issues, grief and bereavement, mass tragedy and public death, and planning for death. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 4046 Developmental Neuropsychology (Writing Intensive)
Discussion will focus on early development and disorders affecting the brain, such as cerebral palsy, sickle cell disease, and autism. Writing Intensive. Open only to advanced undergraduates, and declared psychology majors will be given preference. Limited to 15 students. Prerequisites: Psych 100B and one of the following: Psych 321, Psych 360, Psych 3604, Psych 4604, or Psych 3401.
Credit 3 units. A&S IQ: NSM, WI Art: NSM

L33 Psych 4075 Advanced Research Methods & Design
This course is an advanced foray into research design and methods used in psychological science. This course is project-based, writing-intensive, and will be supplemented heavily with readings and discussions of topics of broad importance to psychological research (e.g., reliability, validity, signal detection theory, philosophy of science). These readings will enhance students’ abilities to think critically about psychological research design and methods, as both a consumer and creator of psychological research. During the course of the semester they will complete two original research projects (e.g., an observation study and an experimental study). Together with their classmates they will devise research questions, design studies to test their research questions, collect data, and statistically analyze their results. Individually, students will write up, and then revise, each research project in an APA-style paper. The writing requirements for this course build on the skills students acquired in Experimental Psychology and will further their abilities to communicate scientific ideas more skillfully, clearly and accurately. Prerequisite: L33 Psych 301 or 3011.
Credit 3 units. A&S IQ: NSM, WI BU: BA

L33 Psych 4099 Human Evolutionary Psychology
How did evolution by natural selection shape the way human beings think and behave? Does evolution explain human cooperation and friendship, human morality, reproductive decisions and social interactions? What sex differences in cognition or behavior are caused by evolution? This course introduces the concepts and findings of evolutionary psychology, mostly through reading of primary sources — articles from psychology and biology journals — and discussion and presentation of empirical cases. Prerequisites: at least 6 units of Psychology level 300 or above, or Anthro 3383.
Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 413 Contemporary Topics in Social Psychology
Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L33 Psych 4175 Applied Statistical Analysis with R
This course is designed to introduce R as both a means of applied statistical analysis as well as a window into data organization and programming. The goal of the course is to teach the tools needed to take a raw dataset and not only perform a statistical test in R, but also to learn how to arrange the dataset to perform a variety of tests, to choose the appropriate test, and to visualize the results. Students gain practical knowledge of how to use statistics in research. Prerequisites: Psych 300, or Math 2200 or Math 3200, or other approved university statistics course; or graduate standing in psychology, or graduate standing in another department by permission.
Credit 3 units.

L33 Psych 4182 Perception, Thought and Action
This course focuses on current topics in visual perception, visual attention, and the control of action. Readings consist of recent journal articles. Class meetings emphasize presentation and discussion of the material in the readings. Limited to 15 students.
Prerequisites: Psych 100B and one of the following: Psych 301, Psych 330, Psych 3401, Psych 344, Psych 360, Psych 361, Psych 3604, Psych 380, Psych 433 or Psych 4604.
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L33 Psych 427 Social Gerontology
This course provides an introduction to aging and growing old, from an interdisciplinary perspective. Specific attention is paid to demographics, physical health and illness, mental health, interpersonal relations, work issues, living arrangements, ethics, and death and dying. Prerequisites: junior or senior standing and completion of 6 advanced units in Psych.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4301 Contemporary Topics in Cognitive Development
Cognitive Developmental topics include: Piagetian abilities (e.g., conservation, formal reasoning), basic cognitive abilities
L33 Psych 4302 Cognitive Psychology Applied to Education
This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning and comprehension with special focus on areas, theory and research that have potential application to education. Thus, the course provides selective coverage of theoretical and empirical work in cognitive psychology and its applications. Prerequisites: junior/senior status; 9 units in psychology and Psych 100B or junior/senior status; 9 units in Education and Psych 100B.
Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 4305 Psychological Science: Fact and Fiction
Skeptic analysis of psychological science as practiced and popularized in the media. Analysis of discrepancies between media and scientific claims regarding areas such as repressed memory, brain imaging, heritability and psychotherapy. Additional examination of scientific career demands such as peer review, journal publication and research funding. These topics are interwoven with a review of common errors in reasoning particularly with respect to probabilistic reasoning and the public misperception of the practice and principles of scientific psychology. Prerequisite: junior or senior standing and completion of 6 advanced units in psychology.
Credit 3 units. A&S IQ: SSC, WI Arch: HUM Art: SSC EN: S

L33 Psych 433 Psychology of Language
This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4351 Reading and Reading Development
This seminar surveys current research on reading and spelling skills and their development. Students read and discuss journal articles that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. Prerequisites: permission of instructor and previous course work in experimental psychology or psychology of language.
Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 4352 Reading and Reading Development (Writing Intensive)
This writing-intensive seminar surveys current research on reading and spelling skills and their development. Students read and discuss articles and chapters that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. Prerequisites: Psych 100B and Ling 170D and junior or senior standing.
Credit 3 units. A&S IQ: SD, WI EN: S

L33 Psych 4413 Advanced Cognitive Neuroscience (Writing Intensive)
An intensive, case-study-based approach to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis is placed on understanding and evaluating cutting-edge neuroscience research that has yielded new insights into the organization and structure of higher mental processes. Students develop critical thinking and writing skills via a strong class participation component and a writing-intensive format. Topics include perception, attention, memory, language, emotion and executive control. Writing Intensive. Declared psychology majors are given priority over others to enroll. Prerequisites: Psych 100B and either Psych 3401 or Psych 344/Biol 3411 or Psych 3604.
Credit 3 units. A&S IQ: NSM, WI Art: NSM

L33 Psych 444B Independent Study for the Major in Psychological & Brain Sciences: Cognitive Neuroscience
Prerequisite: acceptance into the Psychological & Brain Sciences (P&BS) cognitive neuroscience major. Permission of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work. In addition to the approved research in the area of cognitive neuroscience, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444B forms are available in the Psychology Building, room 207B. Students will be enrolled only after they have completed the petition and returned it to the undergraduate coordinator in Psychology 207B. Open only to P&BS:CN major, by prior approval only.
Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences
Prerequisites: acceptance into a concentration in Psychological & Brain Sciences. Written permission (Petition for Supervision of P&BS 444C) of a member of the faculty of the department (or another approved supervisor) who agrees to supervise the student's work is also required. In addition to the approved research for the concentration, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444C forms are available in the Psychology Building, room 207B. Students will be enrolled only after they have completed both the Petition for a Concentration in P&BS and the Petition for Supervision of P&BS 444C and returned them to the Undergraduate Coordinator in 207B. Open only to P&BS majors and by approval.
Credit 3 units.

L33 Psych 4450 Functional Neuroimaging Methods
In this class you will learn neuroimaging methods in the context of accurate, reproducible, and open science. There is no substitute for wrestling with data yourself, and so this is a hands-on course. You will need to bring a laptop on which to install Matlab and conduct analyses. Some background in neuroimaging or programming will be helpful, but is not required. Topics covered include experimental design, accounting for artifacts, single-subject models, and group models. By the end you will have used a computer script to analyze an fMRI dataset
and have a good understanding of preprocessing and statistical analyses in fMRI. Limited to 20 students. Prerequisites: Psych 100B and either Psych 3604 or Psych 4413, or graduate standing. Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L33 Psych 4535 Personality Judgment: How We Perceive Ourselves and Others
This course examines how we form judgments of people’s personalities. The central question is the accuracy of personality judgments. The readings examine theory and research concerning this topic, and class discussion focuses on critical evaluations of the readings and generation of new research questions. This course examines personality judgment from a scientific perspective and addresses such questions as: How should accuracy be measured? What do you have to know about a person to judge their personality accurately? Does accuracy increase with greater acquaintance? Who makes a good judge of personality? How well do relationship partners know each other’s personalities? How is our own personality similar to or different from judging others’ personalities? How accurate are our perceptions of our own personality? How can the accuracy of personality judgment be improved? Prerequisites: at least 6 units of home-based psychology courses and Psych 353. Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L33 Psych 4541 Personality and Psychopathology
This course is an advanced seminar in the study of personality disorders. It covers a range of conceptual and methodological issues involved in scientific efforts to understand ways in which pathological personality features disrupt people’s lives. Students learn about the similarities and distinctions between normal and pathological features of personality as well as the role that personality may play with regard to the causes and treatment of other kinds of mental disorder. A laboratory component of the class focuses on the development of practical skills in conducting research interviews designed to elicit information about personality and social adjustment. Prerequisites: Psych 354, junior or senior standing, and permission of the instructor. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4555 Emotion Regulation
The purpose of this course is to provide an introduction to the field of emotion regulation. We will discuss theoretical and empirical work on emotion regulation from various areas of psychology, including social, personality, developmental, clinical, and neuroscience. Example topics include definitional issues, goals and strategies, personal and interpersonal consequences, sociocultural influences, lifespan development, health and psychopathology. Prerequisites: Psych 100B and 9 units of advanced home-based psychology courses. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4557 Biopsychosocial Aspects of Eating Disorders and Obesity
This seminar examines the epidemiology, etiology, prevention, and treatment of body image, eating disorders, and obesity. An emphasis will be placed on understanding the characteristic symptoms of excessive dieting, body image disturbance, and binge eating, not only as formal psychiatric syndromes but also as a representation of dysregulatory processes reflecting social-cultural, psychological, and biological disturbances. Students will also learn about the clinical characteristics, medical sequelae, and physical aspects of eating disorders and obesity. Prerequisites: Psych 100B and junior/senior standing plus 6 units of advanced home-based psychology courses. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4591 The Development of Social Cognition
This course explores what is known about the development of social cognition. Our starting point is infants’ capacity to navigate the social world, for instance, detecting agents, identifying social partners and learning from those around us. We consider what happens when the human capacity to reason about others breaks down (as with autism), and what this can teach us about typical development. Class sessions are devoted to active discussion and debate about the content of the readings. Students are required to write a weekly reaction paper to the readings to promote class discussion and give an in-class presentation on a novel research topic at the end of the semester. Graduate students may have additional course requirements. Prerequisites: Psych 100B and one of the following: Psych 315 or Psych 321 or Psych 360. Credit 3 units. A&S IQ: SSC BU: BA EN: S

L33 Psych 4592 Development of Social Cognition (Writing Intensive)
This course explores current issues in social cognitive development. We will examine the critical issues in the field, beginning with the roots of attachment in infancy and the human propensity to connect with others. We will then consider contemporary research concerning infants’ ability to navigate the social world. We will also consider what happens when the human capacity to reason about others breaks down, as in autism. Additional topics will include children’s reasoning about social groups, the development of bias and prejudice, and aspects of morality. We will look at these issues in the context of innate knowledge and the effects of one’s environment on children’s development. Each week, we will cover a topic by reading a background chapter and a set of two journal articles. Class time will be devoted to the active discussion of these readings, with lecture and class activities as needed, to complement the readings and set the stage for class discussion. This is a writing intensive course, so it has a second goal of improving students’ writing. There will be several writing assignments of varying length, some of which will receive extensive feedback from the instructor before the student prepares an improved final version. Students will also give two presentations to the class: one that directly addresses writing and another on a research topic of their choice relevant to social cognitive development. Prerequisites: Psych 100B and either Psych 215, Psych 321, or Psych 360. Credit 3 units. A&S IQ: SSC, WI EN: S

L33 Psych 461 Seminar in Selected Topics in Learning & Memory: Collective Memory
This course provides an overview and analysis of phenomena of people remembering as part of a group — one’s country, one’s state, one’s university, one’s family. Collective memories are critical for one’s identity, for knowing who we are and how to interpret the world around us. We will consider narcissistic tendencies of group memories in specific contexts (e.g., the Russian vs. American interpretation of world events; views of Trump supporters vs. Clinton supporters on events in the U.S.). The course will range from humanistic, anthropological, psychological, and sociological perspectives on memory. Prerequisites: Psych 100B and a course on human memory or permission of the instructor.
L33 Psych 4615 The Science of Paying Attention
What processes underlie humans’ ability to “pay” attention? This course will introduce students to theories of attention and cognitive control. Students will develop an understanding of empirical approaches to studying the control of attention, and examine factors that facilitate and impair humans’ ability to pay attention. A final section will examine attention and cognitive control challenges that accompany aging and select psychological disorders such as ADHD, and applications of attention and cognitive control research to the classroom, driving, and other contexts. Prerequisites: Psych 100B and Psych 301.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 462 Psychology of Memory and Cognition
This course will explore the core readings that have shaped the way scientists tackle fundamental aspects of memory and cognition. These include cognitive methods, pattern recognition, attention, working memory, episodic memory, semantic memory, language acquisition and comprehension, decision making, problem solving, and expertise. Each week we will explore at least three “classic” readings on a given topic along with some more recent papers. The goal is to expose students to this foundational literature, and develop a better understanding of the zeitgeist that set the stage for these papers to change how researchers tackled specific problems. Prerequisite: Psych 360 or Psych 380.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4647 Ancient Madness
In this course we will ask what madness meant in Greek and Roman culture. We will find reading strategies that are sensitive both to ancient evidence and to the ethical demands of talking about, evaluating, and categorizing people treated as mad. While we will concentrate on literary (particularly tragic and epic), philosophical, and medical texts, we will also look at visual representations and evidence from ritual and cult. An important part of our project will involve tracing the afterlife of classical ideas: The history of melancholia will ground this part of the course. Finally, we will consider how antiquity informs psychoanalysis (Oedipus, Antigone, Narcissus), and how ancient madness might partake in a critique of contemporary understandings of mental illness.
Same as L08 Classics 4647
Credit 3 units. A&S IQ: HUM, LCD EN: H

L33 Psych 4651 History and Modern Systems of Psychology
An introduction to the history of psychology. This course begins with a brief consideration of forces leading to development of psychology in the mid-1800s. It then examines the birth of modern psychology in Germany and the schools of psychology that emerged early in the 20th century. Newer orientations and ideas are considered during the final segment of the course. We will also consider the impact of psychology on American public life during the 20th century. Prerequisites: Psych 100B, junior or senior standing, and 6 units of advanced home-based Psychology courses.
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L33 Psych 4746 Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior
This seminar will introduce students to methods and recent empirical literature evaluating links between genes, brain, and behavior. This research is beginning to illuminate specific biological pathways shaping risk for psychopathology. In particular, the course focuses on the design, analysis and interpretation of multimodal research (e.g., fMRI, PET, EEG, pharmacology, molecular genetics, environmental assessment/mutation) examining the biological underpinnings of behavior relevant to psychopathology. Primary journal articles, reviews, and book chapters are the readings for this seminar. Prerequisites: Psych 100B and Psych 345 or Psych 3401 or Biol 2970.
Credit 3 units. A&S IQ: NSM Arch: SSC Art: SSC EN: S

L33 Psych 4765 Inside the Disordered Brain: Biological Bases of the Major Mental Disorders
How do subtle disturbances in brain circuits lead to abnormal behavior and psychopathology? This course provides students with a working knowledge of our rapidly evolving understanding of brain circuits that create order in our social, emotional, and cognitive worlds and how disorder within these circuits leads to a broad range of psychopathology, including depression, anxiety, phobias, PTSD, OCD, addiction, schizophrenia, psychopathy, and violence. Prerequisites: Psych 100B and either Psych 3401, Psych 354, or a basic biology/neuroscience course.
Credit 3 units. A&S IQ: NSM Arch: SSC Art: SSC EN: S

L33 Psych 488 The Cognitive Neuroscience of Film
To understand complex events in real life depends on perception, action and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar uses results from psychology and neuroscience to try to better understand the experience of a movie viewer, and uses theory and practice to explore psychological hypotheses about perception. Prerequisite: Psych 360 or Psych 3604 or Psych 4604, or graduate standing in Psychology.
Credit 3 units. A&S IQ: NSM

L33 Psych 4891 The Science and Politics of Testing in the United States
Why do tests permeate American Society? Tests have been integral to the decision-making process in many venues of American culture—e.g., immigration opportunities, voting rights, college admissions, workforce considerations, special education placement, educational reform, and graduation requirements. The credibility of these decisions depends upon the claim that a particular test is a scientific instrument and relevant to the decision-making process. This claim is worthy of study. The purpose of this course is twofold. The first purpose is to examine how the nexus of science and politics influence testing practices in American society. The second purpose is explore how testing practices influence the culture of schools, civil liberties, the workplace, and public discourse about merit. Same as L12 Educ 4891
Credit 3 units. A&S IQ: SSC, SD EN: S

L33 Psych 494 Behavioral Psychology Readings Group
This weekly journal-style readings class provides the opportunity to read and discuss seminal as well as current papers on the conceptual aspects of behavioral psychology and relevant
The John C. Danforth Center on Religion and Politics serves as an ideologically neutral venue for fostering rigorous scholarship and informing broad academic and public communities about the intersections of religion and U.S. politics.

The Center's programs include the following:

- Public lectures, conferences and symposia relating to issues at the intersection of religion and U.S. politics
- Research colloquia on American religion, politics and culture, in which scholars and students discuss cutting-edge research
- Religion & Politics, an online journal engaging a diverse array of scholars, journalists and public leaders
- New courses on American religion and politics that contribute to an interdisciplinary undergraduate minor in religion and politics for Washington University students

As part of the program, students may examine any number of issues, including church-state relations, religion's role in shaping gender and sexuality debates, religion and electoral politics, public conflicts over the nexus of religion and science, religion's entwinings with reform movements (from abolition to environmentalism), and the confluences of religion and politics in national vocabularies, media and imagination.

• 12 additional units, 9 of which must be at the 300 or 400 level and 9 of which, at any level, must be taught by Center faculty.

Required activities:

Attendance at five events sponsored by the Center on Religion and Politics (e.g., lectures, colloquia, lunch discussions, film screenings) is required. Students must inform the director of undergraduate studies of the events they attend so that this information can be recorded.

Courses

L57 RelPol 102 Thinking About Religion

Nearly everyone has had some experience with something they would call “religion,” from at least a passing familiarity through the media to a lifetime of active participation in religious communities. But what do we actually mean when we use the word? What is a religion? What does it mean to call something a religion, or “religious”? And what does it mean to study religion, given the slipperiness of the concept itself? This course offers an introduction to the academic study of religion through a consideration of these questions: What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? We will also consider what is at stake in our investigation and inquiry into religion — for the inquirers, for the subjects of inquiry, and for society more broadly — and what kind of lens the study of religion offers us on ourselves, our neighbors, and society, in turn. To these ends, we will discuss major theoretical approaches to the study of religion and significant work on religions and religious phenomena, toward a better understanding of what “religion” might be and how it might be studied today. No prior knowledge or experience of religion, religions, or anything religious is expected or required. This course is required for religious studies majors and minors. Same as L23 Re St 102

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L57 RelPol 130 First-Year Seminar: The Ritual Landscape of Cahokia: Perspectives on the Politics of Religion & Chiefly Power

The purpose of this class is to engage and challenge freshman students in an open discussion about the prehistoric Mississippian community of Cahokia. The focus of this course is two-fold. The first is to study the way in which the archaeological evidence has been interpreted. The second is to examine other perspectives on Cahokia, especially from the Native
American descendants who consecrated this landscape nearly a millennium ago. An underlying tenet of this seminar in understanding Cahokia can also be achieved through the traditions and literature of Native Americans. In the end we want to understand the basis for Cahokia's organization as a prehistoric Native American community, and the role that ritual and religion played in the rather dramatic and dynamic history of this community and the surrounding region.

---

L57 RelPol 1711 First-Year Seminar: Literature, Spirituality, and Religion
Reading courses, each limited to 15 students. Topics: selected writers, varieties of approaches to literature, e.g., Southern fiction, the modern American short story, the mystery; consult course listings. Prerequisite: first-year standing. Same as L14 E Lit 171

---

L57 RelPol 201 Religion and American Society
This course explores religious life in the United States. We will focus our study on groups and movements that highlight distinctive ways of being both "religious" and "American," including the Americanization of global religions in the U.S. context. Major themes will include religious encounter and conflict; secularization, resurgent traditionalism, and new religious establishments; experimentalism, eclecticism, and so-called "spiritual" countercultures; the relationship between religious change and broader social and political currents (including clashes over race, class, gender and sexuality); and the challenges of religious multiplicity in the U.S. Students will: 1) acquire knowledge of the disparate religions practiced in North America during the 20th century and beyond; 2) examine some of the chief conflicts as well as alliances between religion and the American social order in a global context; and 3) develop interpretive tools for understanding religion's present and enduring role in the U.S. and the world.
Credit 3 units. A&S IQ: HUM, SC, SD BU: ETH EN: H

---

L57 RelPol 203 Religions of St. Louis: Communities of Faith and Action Across the Region
The St. Louis region is home to a diverse array of global religious communities. This course directly introduces students to some of that diversity by revolving around field trips to living institutions and meetings with religious leaders across traditions. In any given semester, our visits may include organizations that identify as Catholic, Pentecostal, evangelical, Jewish (Orthodox, Conservative, Reform, or Reconstructionist), Muslim, Hindu, Buddhist, Vedantist, Sientological, progressive Baptist, or secular humanist, among others. We will also visit the International Institute of St. Louis and study the politics of immigration and refugee resettlement that have helped shape the city and its religions as well as political multiplicity. Through our visits and conversations, the variety within each religious community will also become apparent as we encounter adherents across the political spectrum who embody different ethnicities and who are committed to different degrees of "orthodoxy" or traditional belief and practice. Students should emerge from the course with a fresh sense of the cultural and religious vitality of the St. Louis metropolitan area, which is illustrative of the United States as a whole. (All required site visits will take place during the regular class time.)
Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H

---

L57 RelPol 209 Scriptures and Cultural Traditions: America's Bible
When we think of the word "scripture" in antiquity, we might think of the texts that have been compiled in the different holy books that we currently have today. Yet the function of "scriptures" within a community, and the status given to different texts treated as "scriptural," has changed in different times and places. In this course, we will consider texts that would eventually come to be part of the Hebrew Bible, New Testament, and the Qu'ran as well as several of the exegetes and reading communities that shaped their various interpretations. We will explore how non-canonical sources played a role in the formation of the various canons we have today, comparing the authoritative status given to these texts to that given to other works from antiquity, such as the epics of Homer. Special attention will be played to the role of the receiving community in the development of "scripture," and the variety of the contexts in which scripture can function in the construction of and opposition to religious authority.

---

L57 RelPol 210 The Good Life Between Religion and Politics
What constitutes a life well lived? How do we imagine answers to that question? Who gets to answer that question for us? And do we ask it as an "us" or as individuals? This course considers the way religious and political thought has shaped considerations of the classical ethical question of how we should live and the way that ethics has often served to connect religion and politics in thought and practice. Do we need a religious basis to answer ethical questions, or can we determine how to live without religious sources of authority? Is ethics a project of an individual or of communities? If the latter, are these political communities, religious ones, or something else? On what basis or with what capacities can we imagine new answers to ethical questions, whether in community or on our own? We will discuss these questions and more through the consideration of a range of answers to the question of how we should live.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

---

L57 RelPol 215 Performing Religion, Ritualizing Gender
What's the difference between a wink and a blink? What the difference between graduation, a sacrament, and the electric slide? We make fine-grained distinctions every day in our own enactment and interpretation of these different kinds of practices. This class will introduce students to key academic approaches to "ritual," "practice" and "performance," and will ask whether these distinctions are important or arbitrary. Ritual studies (based in religious studies) also happens to center around the very same questions that gave birth to gender and queer studies (is gender a performance?), thus a parallel examination of ritual and performance studies necessarily brings religious identity into conversation with broader questions of identity (gender, race, class).
Credit 3 units. A&S: FYS A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: ETH EN: H

---

803
L57 RelPol 225 Religion and Politics in American History
The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic. These competing visions of the nation have created conflict throughout American history and have made the relationship between religion and politics quite contentious. This course surveys the complex entanglements of religion and public life from the colonial era through the contemporary landscape. Topics covered include: religious liberty and toleration, secularization, the rise of African-American churches, the Civil War, national identity and the Protestant establishment, the religious politics of women’s rights, religion and the presidency, the Cold War, the religious left and right, and debates over church-state separation.
Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L57 RelPol 230 Black-Jewish Relations in the United States
The relationship of blacks and Jews in the United States is at once intimate and strained, mutually beneficial and antagonistic. This course examines this uneasy alliance from a number of perspectives including anthropology, politics and identity, religion, history and class. Beginning with American anthropology’s Jewish founding father, Franz Boas, challenging the concept of race, the course traces the relations of blacks and Jews throughout the 20th century and in our contemporary moment. We will pay particular attention to the civil rights era, which is commonly upheld as the golden age of black-Jewish relations, as well as to this alliance’s unraveling in the post-civil rights era. The course then moves to a unit focused on more recent ruptures and collaborations including the 1991 Crown Heights race riots, during which Orthodox Jews clashed with their black neighbors, and Jewish involvement in the Black Lives Matter movement. The course concludes with a unit on identity and identity politics focused on the complexity and fluidity of the categories “white,” “black” and “Jewish.”
Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

L57 RelPol 235 Puritans and Revolutionaries: Religion and the Making of America
This course introduces students to the history of religion and politics in America from the English settlements of Virginia and Massachusetts Bay during the early 17th century through the constitutional debates of the 1780s. It pays attention to both formal legal issues regarding religious establishments and wider matters concerning political sentiments and their relationship to religious ideas or values. The course does not advocate a defining argument or single ideological “point,” but, rather, it facilitates a series of observations of how different positions on the role of religion in early America made sense in their respective historical contexts. Social, political, and intellectual variables made for shifting understandings of what religious ideas mattered to public life in America and how those ideas ought to shape civil affairs.
Credit 3 units. A&S IQ: HUM BU: BA EN: H

L57 RelPol 240 Jewish Political Thought
This course uses the concepts of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rule (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish community’s self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single “Jewish political thought” but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these questions through a range of materials that include both primary and secondary literature.
Credit 3 units. A&S IQ: HUM BU: BA EN: H

L57 RelPol 245 Love and Reason
Love often seems dramatically unreasonable, and reason can seem coldly rational in a way that excludes any emotion, passion, or affiliation even akin to love. The supposed opposition between love and reason has been used by Christian and secular thinkers throughout modernity to organize ways of knowing and judging, and to criticize claims of faith, belief, and desire. But are love and reason really so distinct? What does it mean to say so, and why might someone make this claim? Can love be reasoned, and even reasonable? Can reason be aided by love, and even driven by it? How might different answers to these questions affect our understanding of other possibly unreasoned categories like faith, belief, and piety? This course offers an introduction to modern Christian thought and Western philosophy through these questions and themes.
Credit 3 units. A&S IQ: HUM EN: H

L57 RelPol 250 Zionism
Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct “people,” has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different “Zionisms” that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L57 RelPol 255 Religion, Environmentalism, and Politics
This course explores the intersections of anthropology, theology, economic interests, and activism. We will draw on a range of sources including social-scientific theories about religion and ritual, discussions of disenchantment and re-enchantment, and indigenous claims to land. These theoretical frameworks will provide context for discussing contemporary religious responses to ecological disaster, including both environmentalist and anti-environmentalist movements.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: BA EN: H
This course introduces students to important themes in the history of African-American, and thus in American, religious history, among them slavery, emancipation, urbanization, migration, consumer culture, sexuality, politics and media technologies. Primary attention is given to Afro-Protestantism in North America and the cultural, social and religious practices and traditions of these black communities. However, students will also be introduced to specific expressions of religious diversity and varying religious traditions and practices in African-American communities.
Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L57 RelPol 280 African-American Religions
This course is an introduction to African-American religions that attends to the changes wrought in indigenous African religions by enslavement, the adoption of Christianity (and severe critiques of it) by slaves themselves, the building of African-American denominations, the rise of new black religious movements, and the role of religion in contemporary African-American life. At every stage of the course, religion is discussed with reference to key political developments in broader African-American history. The course proceeds in three parts. The course begins with a brief introduction to key themes and problems in the study of African-American religions. For example, is there such thing as a "black church"? How does the study of African-American religion differ from the study of other religious groups or traditions? The second part, which is the bulk of the course, moves chronologically and situates African and African-American religions in their shifting cultural and political contexts from the beginning of the European slave trade to the present. We will discuss African-Americans' practice of several religious traditions: indigenous African religions, Islam, Protestant and Catholic Christianity, and new religious movements. The final part of the course focuses on several key issues and debates that are informed by the study of African-American religions and that have important connections with contemporary American life.

L57 RelPol 305 Between Malcolm X and Martin Luther King, Jr.: Race, Religion, and the Politics of Freedom
This course focuses on the political and spiritual lives of Martin and Malcolm. We will examine their personal biographies, speeches, writings, representations, FBI Files, and legacies as a way to better understand how the intersections of religion, race and politics came to bare upon the freedom struggles of people of color in the U.S. and abroad. The course also takes seriously the evolutions in both Martin and Malcolm's political approaches and intellectual development, focusing especially on the last years of their respective lives. We will also examine the critical literature that takes on the leadership styles and political philosophies of these communal leaders, as well as the very real opposition and surveillance they faced from state forces like the police and FBI. Students will gain an understanding of what social conditions, religious structures and institutions, and personal experiences led to first the emergence and then the assassinations of these two figures. We will discuss the subtleties of their political analyses, pinpointing the key differences and similarities of their philosophies, approaches and legacies, and we will apply these debates of the mid-20th century to contemporary events and social movements in terms of how their legacies are articulated and what we can learn from them in struggles for justice and recognition in 21st-century America and beyond.

L57 RelPol 3081 City on a Hill: The Concept and Culture of American Exceptionalism
This course examines the concept, history, and culture of American exceptionalism — the idea that America has been specially chosen, or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we will re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture — a thesis our class will reassess with the help of modern critics. In the second part of this class, we will broaden our discussion to consider the wider (and newer) meanings of American exceptionalism, theorizing the concept while looking at the way it has been re-deployed and re-deployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan to the current day, ending with an analysis of Donald Trump and the rise of "America First." In the end, students will gain a firm grasp of the long history and continuing significance — the pervasive impact — of this concept in American culture.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L57 RelPol 310 Religion and Violence
Is religion intrinsically connected with violence or merely manipulated to justify political positions and incite supporters? How has religion been the motivation and justification behind violent conflict, aggression and persecution? Does religion have a greater power to make war or peace? People have debated these questions for centuries as believers waged war in the name of their god(s). We'll study several critical theories about religion and violence and test them on historical and recent "religious" conflicts. Our investigation will be organized around five types of violence: 1) martyrdom and redemptive suffering, 2) claims on sacred space, 3) the violence of social stratification and "othering," 4) war and 5) apocalyptic and spiritual warfare. Case studies ranging from early Christian martyrs and crusades to attacks on abortion clinics and Tokyo subways will help clarify patterns and types of religious violence.

L57 RelPol 315 Virtues, Vices, Values: Regulating Morality in Modern America
This course takes morality and the question of "what's right" seriously as a lens through which to understand and assess modern American history. "Morality" is, of course, a devilishly flexible rhetoric, a language invoked to tell people how to act and how to be good, or, conversely, to criticize and to shame. When the state or a community wants its citizens or members to be "good," it crafts laws and creates customs to encourage or inhibit behaviors. This class examines how state and non-state actors have attempted to regulate the lived experiences of Americans and the conflicts that emerge over what, exactly, is correct, or right, or good for individuals, society and the state.
interrogates what values the state impresses upon its citizens and what values citizens want the state to uphold. Credit 3 units. A&S IQ: HUM, SD BU: ETH EN: H

L57 RelPol 320 Religious Freedom in America
This interdisciplinary course, co-taught by a law school professor and an American historian, concerns the intersection of religion, liberty and law in American culture. It introduces students to the major texts and historical issues concerning religious liberty, using legal history and case law, intellectual and social history, and political philosophy. It will address issues of significant contemporary debate — from the role of religious groups on college campuses to bakers and gay weddings — along with the deep historical background, from English settlement of North America and the making of the Constitution, through the Civil War, to the Cold War and the recent political developments. Same as I50 INTER D 320
Credit 3 units. A&S IQ: HUM, SC, SD BU: BA, ETH EN: H

L57 RelPol 321 American Religion, Gender, and Sexuality
Religious beliefs about gender and sexuality have long played a vital role in American politics, vividly evident in debates over such issues as birth control, censorship, pornography, funding for AIDS research, abortion, contraceptive access, abstinence-only sex education, sexual harassment, same-sex marriage, and more. Educated citizens need to understand the impact of these religiously inflected debates on our political culture. This course explores the centrality of sex to religion and politics in the U.S., emphasizing Christianity (both Protestant and Catholic forms) and its weighty social and political role regulating the behavior of women and men, children and teens, as well as its uses in legal and judicial decisions. Alongside scholarly readings in gender and sexuality, we will discuss popular devotional texts — on chastity, marriage, and homosexuality — with a political bent. Students will leave the course able to analyze how religious beliefs about sex shape specific gender norms central to U.S. politics.
Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: ETH EN: H

L57 RelPol 330 Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs
This course surveys the history and historiography of how Native Americans, Europeans and Euro-Americans reacted and adapted to one another’s presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter — through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women’s and men’s duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.
Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM EN: H

L57 RelPol 360 Religion and the Modern Civil Rights Movement, 1954-1968
The modern Civil Rights Movement is a landmark event in the nation’s political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy “The Soul of the Nation.” This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.
Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

L57 RelPol 365 Slavery, Sovereignty, Security: American Religions and the Problem of Freedom
The goal of this course is to think critically about freedom as both an ideology and an institution. What does it mean to be free? What are the relationships among individual liberties, national sovereignty, and civil rights? In what ways has freedom been defined in relation to and materially depended on unfreedom? At the same time, this course will treat American “religions” in a similar critical fashion: as a historically contingent category that has been forged and inflected within the same context of White Christian settler empire. Religion and freedom have intertwined throughout American history, including in the ideal of religious freedom. Our critical interrogation of freedom should help us think carefully about power by working with but also beyond tropes of domination and resistance.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, ETH EN: H

L57 RelPol 368 Theories and Methods in the Study of Religion
What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? This course considers these questions through the investigation of significant attempts to study religion over the past century, paying particular attention to the methods, motivations, and aims of these works. Is the study of religion an effort to disprove or debunk it, or perhaps to support it? What would each mean? Is it an effort to describe the indescribable, or perhaps to translate complex beliefs and practices into a language in which they can be discussed by others? Why would such a translation be helpful, and to whom? Is the study of religion an investigation of a social phenomenon, an organization of communities, a specific formation of individuals, or perhaps a psychosis or illusion, evidence of the workings of power on our lives and the difficulty of bearing it? What is at stake in defining religion in these ways, and then in undertaking its study?
Same as L23 Re St 368
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, ETH EN: H

L57 RelPol 370 Religion and the Origins of Capitalism
This course explores the economic, cultural and social history of the origins of Anglo-American capitalism from 1500 to 1800. Throughout we will discuss the worldviews and day-to-day business decisions of the merchants who created England's transatlantic market order and empire. Rather than treat early capitalism only in terms of material or purely economic dynamics, it probes the intellectual constructs that combined with commercial innovations to form capitalism into a social system.
L57 RelPol 385 Jesus, Jazz, and Gin: The 1920s and the History of Our Current Times
This course is a historical survey of the dynamic relationship between religion and politics during the 1920s. The 1920s were a tipping point for a great deal of the fundamental issues that shaped the 20th century in the U.S. This course seeks to investigate how religious activism, evangelism, discourse, practice and reinvention contributed to and was shaped by such change.
Credit 3 units. A&S IQ: HUM BU: BA EN: H

L57 RelPol 390 Mormonism and the American Experience
The focus of this seminar is Mormonism, meaning, primarily, the Church of Jesus Christ of Latter-day Saints (or LDS Church), which is the largest religious body in the United States. Mormons in the United States have gone from being one of the most intensely persecuted religious groups in the country's history to the fourth largest religious body in the U.S. (by one count), with a reputation for patriotism and conservative family values. In addition to introducing who the Mormons are, their beliefs and religious practices, this seminar will explore issues raised by Mormonism's move toward the religious mainstream alongside its continuing distinctiveness. These issues include: What is the religious "mainstream" in the U.S.? How did conflicts over Mormonism during the 19th century, especially the conflict over polygamy, help define the limits of religious tolerance in this country? How have LDS teachings about gender and race, or controversies about whether or not Mormons are Christian, positioned and repositioned Mormons within U.S. society?
Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L57 RelPol 395 Topics in Religion and Politics
This course explores various topics in Religion and Politics. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L57 RelPol 407 Solidarity and Silence: Religious Strategies in the Political Sphere
Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of nonviolent resistance. This course considers the role of religious thought and practice in such movements in the 20th century. The history of these movements presents an apparent paradox: How can political action emerge from the supposedly "private" realm of religion in the modern era, particularly its most individualistic formations in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual and depoliticizing? With these questions animating our investigations, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King Jr., Simone Weil, and William Barber, as well as the history of movements associated with their work. Toward the end of the semester, we will turn to contemporary movements against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism.
Credit 3 units. A&S IQ: HUM BU: ETH EN: H

L57 RelPol 410 The FBI and Religion
This seminar examines the relationship between the Federal Bureau of Investigation (FBI) and religion (i.e., faith communities, clerics, and religious professionals) as a way to study and understand 20th-century religion and politics. The course will investigate the history of the FBI as well as the various ways in which the FBI and religious groups have interacted. The course will pay particular attention to what the professor calls the four interrelated "modes" of FBI/religious engagement: counternelligence and surveillance, coordination and cooperation, censorship and publicity, and consultation.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L57 RelPol 4121 American Religion, Politics, and Culture: Historical Foundations
This seminar offers a wide-ranging overview of the leading historical scholarship concerning the busy intersections of American religion and politics. Topics include: church-state relations, religion and foreign policy, religion and social justice, religion and the science wars, the rise of the Religious Right, and the role of religion in public life. Prerequisites: advanced undergraduate or graduate standing in a related field or permission of instructor.
Credit 3 units. A&S IQ: HUM EN: H

L57 RelPol 4122 American Religion, Politics & Culture: Commentary from Alexis de Tocqueville to Contemporary Pundits
This research-oriented seminar involves in-depth historiographical investigation of leading scholarship at the busy intersections of American religion, politics and culture. The second semester focuses on classic and contemporary commentaries on the American religious and political scene from Alexis de Tocqueville through today's leading pundits. Some sessions will include a visiting scholar engaged in cutting-edge research — a feature that will allow seminar members to work with important scholars from beyond the university. Possible topics include: church-state relations, religion and foreign policy, religion and civil rights, religion and the science wars, the rise of the Religious Right, and the role of religion in national elections. The seminar is taught under the auspices of the John C. Danforth Center on Religion and Politics and is offered in two complementary parts (though enrollment in either one of the two is certainly possible). Its ambition is to build up a community of inquirers engaged in the core questions that animate the Danforth Center. Prerequisites: advanced undergraduate or graduate standing in AMCS, History, or Religious Studies or permission of instructor.
Credit 3 units. A&S IQ: HUM

L57 RelPol 425 Law, Religion, and Politics
What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.
Credit 3 units. A&S IQ: HUM
L57 RelPol 430 Pilgrims and Seekers: American Spirituality from Transcendentalism to the New Age
This seminar focuses on the formation of “spirituality” in American culture, from the transcendentalist world of Ralph Waldo Emerson and Walt Whitman on through more recent expressions of the “spiritual-but-not-religious” sensibility. For the purposes of this course, “spirituality” is usefully placed in quotation marks in order to emphasize its peculiar construction as something positively distinct from “religion”; this is a reordering of American religious thought and experience that we will explore in historical and contemporaneous terms. The social and political consequences of this turn to the spiritual over the religious will also be explored: for example, the consecration of liberal individualism, the environmental vision of nature mysticism, the blessing of a “bourgeois bohemian” consumerism, and the negotiation of cultural pluralism. 
Credit 3 units. A&S IQ: HUM EN: H

L57 RelPol 440 Religion, Politics, and the University
This course explores in depth current issues related to pluralism, difference, and belonging in matters pertaining to religion and other important issues, with a particular focus on how these play out in the university context. The instructors, John Inazu and Eboo Patel, are two of the leading national commentators on these issues. Prerequisite: Students enrolling in this class must submit a brief statement of interest (http://law.wustl.edu/COURSES/INAZU/seminar1/summaries) to Professor John Inazu. 
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L57 RelPol 4491 American Unbelief from the Enlightenment to the New Atheism
This seminar examines American secularism, humanism and atheism from the Enlightenment forward to the present. Topics emphasized include: the relationship between believers and nonbelievers, the civil liberties of atheists, religion in the public schools, social radicalism and women’s rights, and the more recent growth of religious disaffiliation and public atheism. The course considers not only the intellectual dimensions of freethinking unbelief but also the broader politics of secularism in a nation routinely imagined as “under God.” Credit 3 units. A&S IQ: HUM Arch: SSP Art: SSP EN: H

L57 RelPol 4564 American Pragmatism
This course examines the history of American pragmatism through three of its primary founders, the philosophers Charles Peirce, William James and John Dewey. It considers pragmatism as a response to the experience of uncertainty brought on by modernity and contextualizes it amid late 19th- and early 20th-century thought and politics, namely, scientific methodology, evolutionary theory, the probabilistic revolution, Transcendentalism, the rise of secularism, slavery, Abolitionism and the Civil War. Major essays by each thinker are read as well as three intellectual biographies and one critical survey. Same as L22 History 4564. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L57 RelPol 480 Readings in African-American Religious History
This course is an introduction to the history and variety of African-American religions in the New World diaspora. The approach will be chronological, from the earliest years to the New World to contemporary expressions. We will also explore some of the major historiographical themes that have catalyzed current scholarship, the purpose and effectiveness of black nationalist movements, issues of class and gender, the persistence of African elements of New World religious practice, performance and popular culture. Credit 3 units. A&S IQ: HUM EN: H

L57 RelPol 485 Christian Nation, Secular Republic
The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic, and those conjoined framings have created recurrent conflict throughout American history. This seminar is designed to introduce advanced undergraduates and graduate students to current discussions of religion, secularism, and unbelief in American religious and political history. The course also places a complementary emphasis on close readings of crucial primary works, say, about the rise of deistic toleration or the persisting political power of Christianity-in textual particularities. The course takes as its starting point Charles Taylor’s monumental account A Secular Age and works from there through various episodes of the Enlightenment and its long aftermath. Credit 3 units. A&S IQ: HUM EN: H

L57 RelPol 495 Religion and the State: Global Mission, Global Empire
This course explores the complex intersections among U.S. political power on a global stage, and religious institutions and identities. Readings and discussions are organized around two very broad questions. First: How has this nation’s history been shaped by religious “others” both inside and outside its borders? Second: How have perceptions of those others in turn affected U.S. responses to circumstances of global consequence — including, for example, foreign policy and diplomacy, missionary activity, and economic practices? Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

Religious Studies
If I headed back to college today, I would major in comparative religions rather than political science.

John Kerry, “Religion and Diplomacy” (http://americamagazine.org/issue/religion-and-diplomacy)

Religion is a major source of inspiration, meaning and controversy in human societies. Fast-moving forces of globalization, migration and technology continue to bring diverse communities into closer proximity, often creating new religious forms in the process. The Religious Studies program at Washington University gives students the opportunity to learn about diverse religions as well as to study past and current events with a critical but open mind.

Religious Studies covers a wide range of subjects. It could include religion and American or international politics, religion and music, unbelief, religion and literature, issues of race or climate change, or scriptural studies. As such, Religious Studies embraces research in all its disciplinary and interdisciplinary complexity. Courses offered by our program are thus taught.
by faculty from a variety of disciplines and areas, including
the Danforth Center on Religion and Politics; Anthropology;
Classics; East Asian Languages and Cultures; English; History;
Jewish, Islamic, and Middle Eastern Studies; Music; and Political
Science.

Pursuing a major in Religious Studies will help students to
understand and appreciate the complex ways in which religious
traditions inform human thought and behavior. A double major or
a minor will also enhance a broad range of studies, from politics
and law to business and medicine. If a student is preparing for
the advanced academic study of religion, seeking to complement
another area of study, or simply feeling the need to acquire a
greater knowledge of religions, a major or minor in Religious
Studies is excellent preparation for living and working in a
pluralistic society and global culture.

Majors

The Major in Religious Studies

Total units required: 30 units; 24 must be 300-level or above

Required courses (6 units):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Re St 102</td>
<td>Thinking About Religion</td>
<td>3</td>
</tr>
<tr>
<td>Re St 368</td>
<td>Theories and Methods in the Study of Religion</td>
<td>3</td>
</tr>
</tbody>
</table>

Total Units: 6

Senior Capstone Experience (3 units): In their senior year, religious studies majors are required to take Re St 479 Senior Seminar in Religious Studies. Alternatively, students can fulfill the capstone requirement by writing a Senior Honors thesis.

Elective courses (21 units; 18 must be 300-level or above): All majors must take at least seven courses chosen in consultation with their major adviser and should fulfill the following:

A. Broad coverage of religious traditions: Majors explore various religions by taking at least one course in four different traditions (e.g., Judaism; History of Christianity; Islam; Buddhism; East Asian religions; South Asian religions; religion in the Americas).

B. Course concentrations: Majors focus their interests on a single religious tradition or theme by creating two course concentrations: a three-course series and a two-course series.

Note: An elective course can count toward the fulfillment of both A and B.

Additional Information

Senior Honors: Qualified majors are encouraged to apply for Senior Honors. Applications are available on the Religious Studies website (https://religiousstudies.wustl.edu/senior-honors) and are due prior to the end of the junior year. Students wishing to pursue this option need to meet the minimum honors requirements stated in this Bulletin and satisfactorily complete, during their last two semesters, Re St 498 Independent Work for Senior Honors I and Re St 499 Independent Work for Senior Honors II. Full guidelines are available on the Religious Studies website.

Transfer Credit: A maximum of 6 units of course work completed elsewhere, whether another college or university or through a Washington University-approved study abroad program, may be applied toward the major. Credit will be awarded only to those courses that have been approved by the Religious Studies program.

Minors

The Minor in Religious Studies

Total units required: 18 units; 12 must be 300-level or above

Required courses (6 units):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Re St 102</td>
<td>Thinking About Religion</td>
<td>3</td>
</tr>

</tbody>
</table>

Total Units: 6

Elective courses (12 units; 9 must be 300-level or above): Minors may choose their electives based on individual interest and in consultation with their minor adviser. At least three of the four courses must be numbered 300 or above.

Additional Information

Transfer Credit: A maximum of 3 units of course work completed elsewhere, whether another college or university or through a Washington University-approved study abroad program, may be applied toward the minor. Credit will be awarded only to those courses that have been approved by the Religious Studies program.

Courses

L23 Re St 102 Thinking About Religion

Nearly everyone has had some experience with something they would call "religion," from at least a passing familiarity through the media to a lifetime of active participation in religious communities. But what do we actually mean when we use the word? What is a religion? What does it mean to call something a religion, or "religious"? And what does it mean to study religion, given the slipperiness of the concept itself? This course offers an introduction to the academic study of religion through a consideration of these questions: What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? We will also consider what is at stake in our investigation and inquiry into religion — for the inquirers, for the subjects of inquiry, and for society more broadly — and what kind of lens the study of religion offers us on ourselves, our neighbors, and society, in turn. To these ends, we will discuss major theoretical approaches to the study of religion and significant work on religions and religious phenomena, toward a better understanding of what "religion" might be and how it might be studied today. No prior knowledge or experience of religion, religions, or anything religious is expected or required. This course is required for religious studies majors and minors. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H
L23 Re St 1550 Temple & Palace in World History: Approaches to Religion and Politics in the Middle East

This course aims to examine the ways in which temple and palace cooperated with and competed against each other in the Middle East from ancient to the present times. As sites of spiritual and political power, temples and palaces have played a major role in human history. They have been a source of cooperation and conflict by inspiring and regulating the spiritual and social lives of people, including how they enacted laws, developed cultures, established institutions, and interacted with each other as individuals, families and societies. The course will trace how their interactions produced various models of authority, law and social association and how they collectively and separately rationalized social hierarchy and diversity in human societies. Introductory course to the major and minor. Same as L22 History 1550
Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM BU: HUM, IS EN: H

L23 Re St 180 First-Year Seminar in Religious Studies

This course is for freshmen only. The topic varies from semester to semester. Recent topics include Miracles; Sexuality in Early Christianity; And The Self in Chinese Thought.

L23 Re St 207 Scriptures and Cultural Traditions: Text & Tradition

When we think of the word scripture in antiquity, we might think of the texts that have been compiled in the different holy books that we currently have today. Yet the function of "scriptures" within a community and the status given to different texts treated as "scriptural" have changed in different times and places. In this course, we will consider texts that would eventually come to be part of the Hebrew Bible, the New Testament, and the Qur'an as well as several of the exegetes and reading communities that shaped their various interpretations. We will explore how non-canonical sources played a role in the formation of the various canons we have today, comparing the authoritative status given to these texts to that given to other works from antiquity, such as the epics of Homer. Special attention will be paid to the role of the receiving community in the development of "scripture" and the variety of the contexts in which scripture can function in the construction of and opposition to religious authority.

L23 Re St 208F Introduction to Jewish Civilization: History and identity

The anthropologist Clifford Geertz once famously invoked Max Weber in writing that "man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs." The main goal of this course — designed as an introduction to Jewish history, culture, and society — is to investigate the "webs of significance" produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester, we focus on the following historical settings: seventh-century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period, we investigate the social and political conditions of Jewish life; identify the major texts that Jews possessed, studied, and produced; determine the non-Jewish influences on their attitudes and aspirations; and explore the efforts that Jews made to define what it meant to be part of a Jewish collective.

L23 Re St 210 The Good Life Between Religion and Politics

What constitutes a life well lived? How do we imagine answers to that question? Who gets to answer that question for us? And do we ask it as an "us" or as individuals? This course considers the way religious and political thought has shaped considerations of the classical ethical question of how we should live and the way that ethics has often served to connect religion and politics in thought and practice. Do we need a religious basis to answer ethical questions, or can we determine how to live without religious sources of authority? Is ethics a project of an individual or of communities? If the latter, are these political communities, religious ones, or something else? On what basis or with what capacities can we imagine new answers to ethical questions, whether in community or on our own? We will discuss these questions and more through the consideration of a range of answers to the question of how we should live.

L23 Re St 225 Religion and Politics in American History

The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic. These competing visions of the nation have created conflict throughout American history and have made the relationship between religion and politics quite contentious. This course surveys the complex entanglements of religion and public life from the colonial era through the contemporary landscape. Topics covered include: religious liberty and toleration, secularization, the rise of African-American churches, the Civil War, national identity and the Protestant establishment, the religious politics of
women's rights, religion and the presidency, the Cold War, the religious left and right, and debates over church-state separation. Same as L57 RePol 225

L23 Re St 2300 Black-Jewish Relations in the United States
The relationship of blacks and Jews in the United States is at once intimate and strained, mutually beneficial and antagonistic. This course examines this uneasy alliance from a number of perspectives including anthropology, politics and identity studies, history, religion and class. Beginning with American anthropology and the Jewish founding father, Franz Boas, challenging the concept of race, the course traces the relations of blacks and Jews throughout the 20th century and in our contemporary moment. We will pay particular attention to the civil rights era, which is commonly upheld as the golden age of black-Jewish relations, as well as to this alliance’s unraveling in the post-civil rights era. The course then moves to a unit focused on more recent ruptures and collaborations including the 1991 Crown Heights race riots, during which Orthodox Jews clashed with their black neighbors, and Jewish involvement in the Black Lives Matter movement. The course concludes with a unit on identity and identity politics focused on the complexity and fluidity of the categories "white," "black" and "Jewish." Same as L57 RePol 230
Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

L23 Re St 236F Introduction to East Asian Religions
This introductory course provides a basic, yet systematic, overview of certain major religious traditions that evolved in East Asia, particularly in China and Japan, but also in Korea. We begin with the classical Chinese traditions of Confucianism and Daoism, then turn our attention to Buddhism, which originated in India (ca. 500 BCE) and was later introduced into China (first century CE), Korea (fourth century CE) and Japan (sixth century CE). We then examine the Japanese tradition of Shinto, and focus more specifically upon the development of new Japanese forms of Buddhism. The course ends with a brief look at the coming of some of these religions to the West, and in particular the United States.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 2400 Jewish Political Thought
This course uses the tools of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rulin (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish community’s self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single “Jewish political thought” but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these questions through a range of materials that include both primary and secondary literature.

L23 Re St 2450 Love and Reason
Love often seems dramatically unreasonable, and reason can seem coldly rational in a way that excludes any emotion, passion, or affiliation even akin to love. The supposed opposition between love and reason has been used by Christian and secular thinkers throughout modernity to organize ways of knowing and judging, and to criticize claims of faith, belief, and desire. But are love and reason really so distinct? What does it mean to say so, and why might someone make this claim? Can love be reasoned, and even reasonable? Can reason be aided by love, and even driven by it? How might different answers to these questions affect our understanding of other possibly unreasoned categories like faith, belief, and piety? This course offers an introduction to modern Christian thought and Western philosophy through these questions and themes. Same as L57 RePol 245
Credit 3 units. A&S IQ: HUM EN: H

L23 Re St 2500 Zionism
Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct “people,” has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different “Zionisms” that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature, and government.
Same as L57 RePol 250
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L23 Re St 2550 Religion, Environmentalism, and Politics
This course explores the intersections of anthropology, theology, economic interests, and activism. We will draw on a range of sources including social-scientific theories about religion and ritual, discussions of disenchantment and re-enchantment, and indigenous claims to land. These theoretical frameworks will provide context for discussing contemporary religious responses to ecological disaster, including both environmentalist and anti-environmentalist movements.

L23 Re St 2600 Religion in the African-American Experience: A Historical Survey
This course introduces students to important themes in the history of African-American, and thus in American, religious history, among them slavery, emancipation, urbanization, migration, consumer culture, sexuality, politics and media technologies. Primary attention is given to Afro-Protestantism in North America and the cultural, social and religious practices and traditions of these black communities. However, students will also be introduced to specific expressions of religious diversity...
and varying religious traditions and practices in African-American communities.  
Same as L57 RePol 260  
Credit 3 units. A&S IQ: HUM, SC, SD BU: ETH EN: H

L23 Re St 280 African-American Religions  
This course is an introduction to African-American religions that attends to the changes wrought in indigenous African religions by enslavement, the adoption of Christianity (and severe critiques of it) by slaves themselves, the building of African-American denominations, the rise of new black religious movements, and the role of religion in contemporary African-American life. At every stage of the course, religion is discussed with reference to key political developments in broader African-American history. The course proceeds in three parts. The course begins with a brief introduction to key themes and problems in the study of African-American religions. For example, is there such thing as a “black church”? How does the study of African-American religion differ from the study of other religious groups or traditions? The second part, which is the bulk of the course, moves chronologically and situates African and African-American religions in their shifting cultural and political contexts from the beginning of the European slave trade to the present. We will discuss African-Americans’ practice of several religious traditions: indigenous African religions, Islam, Protestant and Catholic Christianity, and new religious movements. The final part of the course focuses on several key issues and debates that are informed by the study of African-American religions and that have important connections with contemporary American life.

L23 Re St 300 Introduction to the Hebrew Bible/Old Testament  
The Hebrew Bible is the foundational text of Judaism and Christianity. It is a complex compilation of materials, reflecting great diversity in ideology, literary expression, social and political circumstances, and theology. In this course, we shall read a significant amount of the Bible in English translation. We shall study the various approaches that have been taken by scholars in trying to understand the Bible in its historical context. We shall also study how the Bible was traditionally interpreted by Jews and Christians during the last two thousand years.

L23 Re St 3012 Biblical Law and the Origins of Western Justice  
This course will explore how law developed from the earliest periods of human history and how religious ideas and social institutions shaped law. The course will also illuminate how biblical law was influenced by earlier cultures and how the ancient Israelites reshaped the law they inherited. It will further analyze the impact of biblical law on Western culture and will investigate how the law dealt with those of different social classes and ethnic groups, and we will probe how women were treated by the law.

Credit 3 units. A&S IQ: HUM, LCD BU: ETH, HUM EN: H

L23 Re St 303 Daoist Traditions  
This course offers an introduction to the history, practices and worldviews that define the Daoist traditions. Through both secondary scholarship and primary texts, we consider the history of Daoism in relation to the continuities and discontinuities of formative concepts, social norms, and religious practices. Our inquiry into this history centers on consideration of the social forces that have driven the development of Daoism from the second century to the modern day. Special consideration is given to specific Daoist groups and their textual and practical traditions: the Celestial Masters (Tianshi), Great Clarity (Taoqing), Upper Clarity (Shangqing), Numinous Treasure (Lingbao), and Complete Perfection (Quanzhen). Throughout the semester we also reflect on certain topics and themes concerning Daoist traditions. These include constructions of identity and community, material culture, the construction of sacred space, and cultivation techniques.  
Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H

L23 Re St 3030 Love Songs and Laptops: Rediscovering Medieval Music in the Digital Age  
Using our laptops as portals into the past, students will gain first-hand experience as historical detectives. In this course, we will explore the world of medieval love — from the chivalrous and courtly to the bodily and obscene — as represented in books of songs from the 15th century. Scrumptiously decorated and preserved, five interrelated songbooks from central France, known as the “Loire Valley Chansonniers” contain the majority of love songs from this period. Working from digitized versions of the songbooks, online editions, and modern audio recordings, we will address the following questions: What do the songbooks tell us about the culture in which they were created? How do the graphic decorations that frame each song interact with its music and lyrics? Lastly, by contextualizing these digital sources with respect to the growing interest in the interface between the humanities and digital technology, we will discuss what we can gain from these developments and what — if anything — we stand to lose. (Ability to read music not required.)  
Same as L27 Music 3030  
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

L23 Re St 3031 Christianity in the Modern World  
Survey of Christianity since the Reformation. Focus on the divisions in Christianity, its responses to modern science, the rise of capitalism, and European expansion into Africa, Asia, and the Americas. Attention to ecumenism and the contemporary status of Christianity in the world.  
Credit 3 units. A&S IQ: HUM BU: ETH EN: H

L23 Re St 3033 Religion and Healing  
This course explores the relationship between religion and healing through historical and comparative study of Christian, Jewish and other religious traditions. We will examine how specific religious worldviews influence conceptions of the body and associated healing practices, how states of health and disease are identified and invested with religious significance, and how religious thought contributed to and coexisted alongside the growth of modern Western medicine. While much of the
course will draw on specific case studies, students will be encouraged to pursue their own interests in the area of religion and healing through final projects.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 3044 Humors, Pox, and Plague: Medieval and Early Modern Medicine
This course examines how people thought about, experienced, and managed disease in the medieval and early modern periods. Students will consider developments in learned medicine alongside the activities of a diverse range of practitioners — e.g., surgeons, empirics, quacks, midwives, saints, and local healers — involved in the business of curing a wide range of ailments. Significant attention will be paid to the experiences of patients and the social and cultural significance of disease. Major topics include: the rise and fall of humoral medicine; religious explanations of illness; diseases such as leprosy, syphilis, and plague; the rise of anatomy; herbs and pharmaceuticals; the experience of childbirth; and the emergence of identifiable "modern" institutions such as hospitals, the medical profession, and public health. The focus will be on Western Europe but we will also consider developments in the Islamic world and the Americas.

L23 Re St 3050 Between Malcolm X and Martin Luther King, Jr.: Race, Religion, and the Politics of Freedom
This course focuses on the political and spiritual lives of Martin and Malcolm. We will examine their personal biographies, speeches, writings, representations, FBI Files, and legacies as a way to better understand how the intersections of religion, race, and politics came to bare upon the freedom struggles of people of color in the U.S. and abroad. The course also takes seriously the evolutions in both Martin and Malcolm's political approaches and intellectual development, focusing especially on the last years of their respective lives. We will also examine the critical literature that takes on the leadership styles and political philosophies of these communal leaders, as well as the very real opposition and surveillance they faced from state forces like the police and FBI. Students will gain an understanding of what social conditions, religious structures and institutions, and personal experiences led to the emergence and then the assassinations of these two figures. We will discuss the subtleties of their political analyses, pinpointing the key differences and similarities of their philosophies, approaches, and legacies, and we will apply these debates of the mid-20th century to contemporary events and social movements in terms of how their legacies are articulated and what we can learn from them in struggles for justice and recognition in 21st-century America and beyond.

L23 Re St 3062 Islam, Culture and Society in West Africa
This course explores the introduction of Islam into West Africa between the 10th century and explore its expansion and development in the region, placing emphasis on the 19th century to present day. It focuses on the development of West African Muslim cultural, social, religious, and political life, to understand not only how the religion affected societies, but also how West African local societies shaped Islam. The course also aims to introduce students to a critical understanding of Islamic writing in West Africa. It also examines the organization of Muslim Sufi orders in West Africa through time and space. The course is organized around a series of lectures, readings, as well as print and visual media.

L23 Re St 3065 Voice, Language and Power: Late Medieval Religious Writing
In the later Middle Ages, there is a flowering throughout Christian Europe of religious writings that offer a new voice in which personal religious experience can be pursued and expressed. Their voices are mainly intended to be communal ones, to be contained within the Church and regulated by it. But in each case the fact that it is a voice may offer a mode of resistance, or of difference. Such writing is often aimed at lay people, sometimes exclusively at women; and sometimes the intended auditors become the authors, and propose a version of religious experience that claims a new and more intimate kind of power for its readers. This course looks at a wide range of such writing in vernacular languages read in translation (English, French and German), including the work of Meister Eckhart, Marguerite Porete, Margery Kempe, Julian of Norwich, Eleanor Hull, the anonymous writer of The Cloud of Unknowing and the perhaps pseudonymous William Langland, author of Piers Plowman.
Whether such writing seeks to be orthodox or conducive to heresy, it presents a challenge to the power of clergy — a challenge that is written in the vernacular language of lay people, rather than clerical Latin, and in doing so offers distinctively new voices for religious experience. The course will also look at ways in which such work might have been influenced, if only oppositionally or at times indirectly, by contact with Muslim and Jewish writing (including Jewish exegesis of the Psalms).
Credit 3 units. Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 307F Introduction to the New Testament
What can be known — from an historical perspective — about the life and teachings of Jesus and his earliest followers? How did Jesus see himself and how did his followers see him? How did the lives, teachings and deaths of Jesus and his followers come to form the heart of a new movement? If Jesus and the apostles were all Jews, how did Christianity emerge as a distinct "religion"? This course investigates these questions through a focus on the earliest sources for Jesus and his first followers, including and extending beyond the canonical books of the Christian New Testament. Our approach in this course is historical and literary, rather than theological or confessional: We ask what Jesus, his first followers, and their Jewish and "pagan" contemporaries did and believed, and we try to catch glimpses of the worlds in which they lived and the cultures which they took for granted.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM

L23 Re St 3080 City on a Hill: The Concept and Culture of American Exceptionalism
This course examines the concept, history, and culture of American exceptionalism — the idea that America has been specially chosen, or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational
L23 Re St 3082 From the Temple to the Talmud: The Emergence of Rabbinic Judaism
This course offers a survey of the historical, literary, social and conceptual development of Rabbinic Judaism from its emergence in late antiquity to the early Middle Ages. The goal of the course is to study Rabbinic Judaism as a dynamic phenomenon — as a constantly developing religious system. Among the topics explored are: How did Judaism evolve from a sacrificial cult to a text-based religion? How did the “Rabbis” emerge as a movement after the destruction of the Second Temple and how could they replace the old priestly elite? How did Rabbinic Judaism develop in its two centers of origin, Palestine (the Land of Israel) and Babylonia (Iraq), to become the dominant form of Judaism under the rule of Islam? How did Jewish ritual and liturgy develop under Rabbinic influence? How were the Rabbis organized and was there diversity within the group? What was the Rabbis’ view of women? How did they perceive non-Rabbinic Jews and non-Jews? As Rabbinic Literature is used as the main source to answer these questions, the course provides an introduction to the Mishnah, the Palestinian and Babylonian Talmuds, and the Midrash collections — a literature that defines the character of Judaism down to our own times. All texts are read in translation. Credit 3 units. A&S IQ: HUM; BU: HUM; EN: H

L23 Re St 3091 Confucian Thought
This course is designed to introduce students to the history and teachings of one of the world’s major religious traditions: Confucianism. We will examine how Confucianism developed in ancient China and afterwards spread throughout East Asia and beyond. In particular, we will pay attention to the issue of ritual and how Confucians attempted to ritualize social interactions and the world at large. In order to do so, we will engage in the writings of Confucius, Mengzi, and Xunzi, three early Chinese writers whose basic ideas about ritual heavily informed myriad cultural practices that are formative for large portions of East Asia today. Hence, this course on ancient thinkers not only introduces thoughts and practices prevalent throughout premodern China, Japan and Korea. It also functions as a catalyst that helps us understand some of the reasons and motivations behind these communities’ recent efforts to renegotiate and question “the colonialist flavor” of human rights and democracy. Credit 3 units. A&S IQ: HUM; BU: ETH; EN: H

L23 Re St 3080 Credit 3 units. A&S IQ: HUM; BU: HUM; EN: H

L23 Re St 3100 Religion and Violence
Is religion intrinsically connected with violence or merely manipulated to justify political positions and incite supporters? How has religion been the motivation and justification behind violent conflict, aggression and persecution? Does religion have a greater power to make war or peace? People have debated these questions for centuries as believers waged war in the name of their god(s). We’ll study several critical theories about religion and violence and test them on historical and recent “religious” conflicts. Our investigation will be organized around five types of violence: 1) martyrdom and redemptive suffering, 2) claims on sacred space, 3) the violence of social stratification and “othering,” 4) war and 5) apocalyptic and spiritual warfare. Case studies ranging from early Christian martyrs and crusades to attacks on abortion clinics and Tokyo subways will help clarify patterns and types of religious violence. Credit 3 units. A&S IQ: HUM Arch: HUM Art: FAAM, HUM BU: ETH; EN: H

L23 Re St 3101 The Problem of Evil: The Holocaust and Other Horrors
The question of how God can allow evil to occur to the righteous or innocent people has been a perennial dilemma in religion and philosophy. We study the classic statement of the problem in the biblical book of Job, the ancient Near Eastern literature on which Job is based, and traditional Jewish and Christian interpretation of Job. We study the major approaches to the problem of evil in Western philosophical and religious thought. Credit 3 units. A&S IQ: HUM; BU: HUM; EN: H

L23 Re St 3102 Defense Against the Dark Arts: An Anthropological Approach to the Study of Religion and Health
This class is a comparative survey of religion, magic, and witchcraft as they are related to concepts of the body, health, healing and death across cultures. As such, students in this class will be expected to simultaneously learn details from particular magical and healing traditions studied in class, as well as to relate these details to theories about within the discipline of Anthropology (medical, cultural, psychological) and the field of Religious Studies. Special themes addressed in the class are the reasonableness of belief in magic, religion and religious practice as “magical,” the body and definitions of health, healing, and illness and disease as symbolically, culturally, even magically constructed and experienced. Same as L48 Anthro 3100 Credit 3 units. A&S IQ: LCD, BU: BA, ETH; EN: S

L23 Re St 3105 American Holidays, Rituals, and Celebrations
This seminar examines a variety of holidays, festivals and rituals in American history and culture. Topics include: conflicts over Christmas, the sentiments of greeting cards, African-American emancipation celebrations, Roman Catholic festivals dedicated to the Virgin Mary, modern renderings of Jewish ritual (including Hanukkah), the masculinity embodied in fraternal lodge ceremonies, Neopagan festivals, and Halloween Hell Houses. Various interpretive approaches are explored, and the intent is to broach a wide range of questions about history and tradition, gender and race, public memory and civic ceremony, moral order and carnival, through this topical focus on ritual and performance. A major emphasis is also placed on original
research and writing, evident in the weight given the concluding seminar report and the final paper. Same as L98 AMCS 3105
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L23 Re St 311 Buddhist Traditions
This course examines the historical development of Buddhism from its origins in South Asia in the sixth to fifth century BCE, through the transmission of the teachings and practices to East Asia, Southeast Asia and Tibet, to contemporary transformations of the tradition in the modern West. In the first third of the course, we focus on the biographical and ritual expressions of the historical Buddha's life story, the foundational teachings attributed to the Buddha, and the formation and development of the Buddhist community. In the second third, we examine the rise of the Mahayana, the development of the Mahayana pantheon and rituals, and the spread of Mahayana in East Asia. In the final third, we explore the Theravada tradition in Sri Lanka and Thailand, then Tantric Buddhism in India, Tibet and East Asia. We close the course with an overview of Buddhism in the modern West.
Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H UColl: CD

L23 Re St 3110 Sacred Architecture of the Indian Subcontinent
This course will explore the architectural of sacred places in India, including the Hindu, Jain, and Buddhist Temples; the Islamic Mosque; the Sikh Gurudwara; the Zoroastrian Fire Temple; the Jewish Synagogue; and the Christian Church, as well as their evolution from the Vedic period to precolonial times. The similarities and differences between the design elements of these places of worship will be examined through the lens of cultural, regional, and political influences in India. The built structure remains a principal visible record to study the evolution of a civilization. Through readings, visuals, and discussions, students will learn about not only the architectural styles and motifs used in sacred buildings but also the ways in which diverse design principles reflect social, political, and cultural changes over time. This interdisciplinary study of culture, design, religion, and society will be of interest to students of architecture, archeology, art, art history, languages and cultures, preservation, religion, and South Asian culture, among other subjects.

Credit 3 units. A&S IQ: LCD BU: IS EN: H

L23 Re St 312 South Asian Religious Traditions
The Indian subcontinent is home to Hindu, Islamic, Buddhist, Jain, and Sikh traditions, among others. In this course we explore several traditions that are vital to life in India, Pakistan and beyond. We first encounter each tradition through narrative, with the support of visual media. We then explore how contemporary adherents make these traditions meaningful for themselves — in their everyday lives, in their struggles for social change, and in their political statements and contestations. Students will have the opportunity for creative projects or individual research.

L23 Re St 313C Islamic History 622-1200
The cultural, intellectual, and political history of the Islamic Middle East, beginning with the prophetic mission of Muhammad and concluding with the Mongol conquests. Topics covered include: the life of Muhammad; the early Muslim conquests; the institution of the caliphate; the translation movement from Greek into Arabic and the emergence of Arabic as a language of learning and artistic expression; the development of new educational, legal and pietistic institutions; changes in agriculture, crafts, commerce and the growth of urban culture; multiculturalism and inter-confessional interaction; and large-scale movements of nomadic peoples.

L23 Re St 314C Islamic History 1200-1800
An introduction to Islamic politics and societies from the Mongol conquests to the 13th century to the collapse and weakening of the colossal "gunpowder" empires of the Ottomans, Safavids and Mughals in the early 18th century. Broadly speaking, this course covers the Middle Period (1000-1800) of Islamic history, sandwiched between the Early and High Caliphal periods (600-100) on the one hand and the Modern Period (1800-present) on the other hand. Familiarity with the Early and High Caliphal periods is not assumed. The course is not a "survey" of this period but a series of "windows" that allows students to develop both an in-depth understanding of some key features of Islamic societies and a clear appreciation of the challenges (as well as the rewards!) that await historians of the Middle Period. Particular attention is given to the Mamluk and Ottoman Middle East, Safavid Iran and Mughal India.

L23 Re St 315 Virtues, Vices, Values: Regulating Morality in Modern America
This course takes morality and the question of "what's right" seriously as a lens through which to understand and assess modern American history. "Morality" is, of course, a devilishly flexible rhetoric, a language invoked to tell people how to act and how to be good, or, conversely, to criticize and to shame. When the state or a community wants its citizens or members to be "good," it crafts laws and creates customs to encourage or inhibit behaviors. This class examines how state and non-state actors have attempted to regulate the lived experiences of Americans and the conflicts that emerge over what, exactly, is correct, or right, or good for individuals, society and the state. It interrogates what values the state imposes upon its citizens and what values citizens want the state to uphold.

L23 Re St 3192 Modern South Asia
This course covers the history of the Indian subcontinent in the 19th and 20th centuries. We look closely at a number of issues including colonialism in India; anticolonial movements; the experiences of women; the interplay between religion and national identity; and popular culture in modern India. Political and social history are emphasized equally.

L23 Re St 320 Religious Freedom in America
This interdisciplinary course, co-taught by a law school professor and an American historian, concerns the intersection of religion, liberty and law in American culture. It introduces students to the major texts and historical issues concerning religious liberty, using legal history and case law, intellectual and social history,
and political philosophy. It will address issues of significant contemporary debate — from the role of religious groups on college campuses to bakers and gay weddings — along with the deep historical background, from English settlement of North America and the making of the Constitution, through the Civil War, to the Cold War and the recent political developments. Credit 3 units. A&S IQ: HUM, SC, SD BU: BA, ETH EN: H

L23 Re St 321 American Religion and the Politics of Gender and Sexuality
Religious beliefs about gender and sexuality have long played a vital role in American politics, vividly evident in debates over such issues as birth control, censorship, pornography, funding for AIDS research, abortion, contraceptive access, abstinence-only sex education, sexual harassment, same-sex marriage and more. Educated citizens need to understand the impact of these religiously inflected debates on our political culture. This course explores the centrality of sex to religion and politics in the U.S., emphasizing Christianity (both Protestant and Catholic forms) and its weighty social and political role regulating the behavior of women and men, children and teens, as well as its uses in legal and judicial decisions. Alongside scholarly readings in gender and sexuality, we will discuss popular devotional texts — on chastity, marriage and homosexuality — with a political bent. Students will leave the course able to analyze how religious beliefs about sex shape specific gender norms central to U.S. politics.

L23 Re St 323 Jews and Christians in the Premodern World
In modern times, it is common to think of Judaism and Christianity as two distinct, if historically connected, "religions." Increasingly, however, historians of ancient religions have thought more deeply about the implications of taking Christianity and Judaism in antiquity as more fluid and porous than we tend to think of them. In this upper-division course, we will explore the ways in which the boundaries that early Christians attempted to draw between Christianity and Judaism remained unstable and incomplete. While the various efforts to establish early Christian identity led to the production of a variety of hermeneutical representations of the Judaic texts, these literary representations nevertheless often reflected, to various degrees, engagement with actual historical Jews/Judeans, who shared political, economic, and intellectual worlds with Christians. We will consider how early Christian discourse about Jews and Judaism informed and was informed by intra-Christian disputes and their negotiations of their relationships with the wider Greco-Roman culture. We will explore how Christian efforts to establish both continuity and difference between Judaism played a role in the construction of “orthodoxy” and “heresy,” as well as the way in which Christians re-appropriated Jewish texts, rituals and ideas in their efforts to construct a Christian identity. We will also explore how this continued dynamic of difference and continuity continued into the Middle Ages.
Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H

L23 Re St 3262 The Early Medieval World 300-1000
This course begins with the crisis of the Roman Empire in the third century and the conversion of the Emperor Constantine to Christianity in 312. We will study the so-called “barbarian invasions” of the fourth and fifth centuries and the collapse of the Roman Empire in the East. The Roman Empire in the East (commonly known as the Byzantine Empire after the seventh century) survived intact, developing a very different style of Christianity than in the lands of the former Western Empire. In addition to examining Christianization in the deserts of Egypt and the chilly North Sea, we will discuss the phenomenon of Islam in the seventh century (especially after Prophet Muhammad’s death in 632) and the Arab conquests of the eastern Mediterranean and north Africa. Prerequisite: sophomore standing or permission of the instructor.
Same as L22 History 3262
Credit 3 units. A&S IQ: HUM, LCD BU: HUM, IS EN: H

L23 Re St 3277 Philosophy of Religion
This course focuses on debates concerning the existence of God as well as on special issues that arise within religion generally and also on some that arise within specific religious traditions. Topics include: the rationality of religious belief, the problem of evil, the coherence of theism, and the freedom-foreknowledge problem.
Same as L30 Phil 327
Credit 3 units. A&S IQ: HUM BU: ETH EN: H

L23 Re St 3293 Religion and Society
We take a broad and practice-oriented view of “religion,” including uttering spells, sacrificing to a god, healing through spirit possession, as well as praying and reciting scripture. We consider religious practices in small-scale societies as well as those characteristic of forms of Judaism, Islam, Christianity and other broadly based religions. We give special attention to the ways religions shape politics, law, war, as well as everyday life in modern societies.

L23 Re St 3300 Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs
This course surveys the history and historiography of how Native Americans, Europeans and Euro-Americans reacted and adapted to one another’s presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter — through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women’s and men’s duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.
Same as L57 RelPol 330
Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM EN: H

L23 Re St 334C Crusade, Conflict, and Coexistence: Jews in Christian Europe
This course will investigate some of the major themes in the history of the Jews in Europe, from the Middle Ages to the eve of the French Revolution. Jews constituted a classic, nearly continuous minority in the premodern Christian world — a world that was not known for tolerating dissent. Or was it? One of the main purposes of the course is to investigate the
phenomenon of majority/minority relations, to examine the ways in which the Jewish community interacted with and experienced European societies, cultures and politics. We will look at the dynamics of boundary formation and cultural distinctiveness; the limits of religious and social tolerance; the periodic eruption of persecution in its social, political, and religious contexts; and the prospects for Jewish integration into various European societies during the course of the Enlightenment era.

L23 Re St 3354 Vienna, Prague, Budapest: Politics, Culture, and Identity in Central Europe
The term Central Europe evokes the names of Freud and Mahler; Kafka and Kundera; Herzl, Lukács, and Konrád. In politics, it evokes images of revolution and counter-revolution, ethnic nationalism, fascism and communism. Both culture and politics, in fact, were deeply embedded in the structures of empire (in our case, the Habsburg Monarchy) — structures which both balanced and exacerbated ethnic, religious, and social struggles — in modern state formation, and in the emergence of creative and dynamic urban centers, of which Vienna, Budapest and Prague were the most visible. This course seeks to put all of these elements into play — empire, nation, urban space, religion and ethnicity — in order to illustrate what it has meant to be modern, creative, European, nationalist or cosmopolitan since the 19th century. It engages current debates and dislocations over this time — from innovation to revolution, from microcosmos to macrocosmos, reflecting social history, the status of women, and other aspects of daily life.

L23 Re St 3421 Childhood, Culture, and Religion in Medieval Europe and the Mediterranean World
From child saints to child scholars and from child crusaders to child casualties, the experience of childhood varied widely throughout the European Middle Ages. This course will explore how medieval Jews, Christians and Muslims developed some parallel and some very much divergent concepts of childhood, childrearing, and the proper cultural roles for children in their respective societies. Our readings will combine primary and secondary sources from multiple perspectives and multiple regions of Europe and the Mediterranean World, including a few weeks on the history and cultural legacy of the so-called Children's Crusade of 1312. We will conclude with a brief survey of medieval childhood and its stereotypes as seen through contemporary children's books and TV shows. This course fulfills the Language & Cultural Diversity requirement for Arts & Sciences.

L23 Re St 335C Becoming Modern: Emancipation, Antisemitism, and Nationalism in Modern Jewish History
This course offers a survey of the Jewish experience in the modern world by asking, at the outset, what it means to be — or to become — modern. To answer this question, we look at two broad trends that took shape toward the end of the 18th century — the Enlightenment and the formation of the modern state — and we track changes and developments in Jewish life down to the close of the 20th century with analyses of the (very different) American and Israeli settings. The cultural, social, and political lives of Jews have undergone major transformations and dislocations over this time — from innovation to revolution, exclusion to integration, calamity to triumphs. The themes that we will be exploring in depth include the campaigns for and against Jewish "emancipation;" acculturation and religious reform; traditionalism and modernism in Eastern Europe; the rise of political and racial antisemitism; mass migration and the formation of American Jewry; varieties of Jewish national politics; Jewish-Gentile relations between the World Wars; the destruction of European Jewry; the emergence of a Jewish nation-state; and Jewish culture and identity since 1945.

L23 Re St 336C History of the Jews in Islamic Lands
This course is a survey of Jewish communities in the Islamic world, their social, cultural, and intellectual life from the rise of Islam to the Imperial Age. Topics include: Muhammad, the Qur'an and the Jews; the legal status of Jews under Islam; the spread of Rabbinic Judaism in the Abbasid empire; the development of new Jewish identities under Islam (Karaites); Jewish traders and scholars in Fatimid Egypt; the flourishing of Jewish civilization in Muslim Spain (al-Andalus); and Sephardi (Spanish) Jews in the Ottoman empire. On this background, we will look closely at some of the major Jewish philosophical and poetic works originating in Islamic lands. Another important source to be studied will be documents from the Cairo Genizah, reflecting social history, the status of women, and other aspects of daily life.

Credit 3 units. A&S IQ: HUM, LCD BU: HUM BU: HUM, IS EN: H

L23 Re St 343C Europe in the Age of the Reformation
How should people act toward each other, toward political authorities and toward their God? Who decided what was the "right" faith: the individual? the family? the state? Could a community survive religious division? What should states do about individuals or communities who refused to conform in matters of religion? With Martin Luther's challenge to the Roman Catholic Church, the debates over these questions transformed European theology, society and politics. In this class we examine the development of Protestant and Radical theology, the Reformers' relations with established political authorities, the response of the Catholic Church, the development of new social and cultural expectations, the control of marginalized religious groups such as Jews, Muslims and Anabaptists, and the experiment of the New World.

L23 Re St 346 Topics in East Asian Religions
This course explores one of the various topics in East Asian Religions. Recent topics include: The Zhuangzi, A Daoist classic; Tantric Buddhism; and Death, Dying and the Afterlife in East Asian Religions.
L23 Re St 3461 Zen Buddhism
This course is designed to introduce students to the history, teachings, and practice of Zen Buddhism in China (Chan), Japan (Zen), Korea (Sŏn), and the United States. We will discuss how Zen's conception of its history is related to its identity as a special tradition within Mahayana Buddhism, as well as its basic teachings on the primacy of enlightenment, the role of practice, the nature of the mind, and the limitations of language. We will also look at Zen Buddhism and its relation to the arts, including poetry and painting, especially in East Asia. Finally, we will briefly explore the response of Zen teachers and practitioners to questions of war, bioethics, the environment and other contemporary issues. Prerequisites: Re St 203 or Re St 311. Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, IS EN: H

L23 Re St 3465 Islamic Law
This course presents a general overview of Islamic law and an introduction to the study of religious legal authority which values consensus. It then explores the formation of the major schools of law. Next it debates the notions of “ijtihad” and “taqlid” and discusses how open and independent legal decisions have been in the Islamic world. It also traces the transmission of legal knowledge in religious institutions across time and place by focusing on medieval Muslim societies and by closely examining the education of a modern-day Ayatollah. Same as L75 JIMES 348. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L23 Re St 3513 Muhammad in History and Literature
This course intends to examine the life and representations of the Prophet Muhammad from the perspective of multiple spiritual sensibilities as articulated in various literary genres from medieval to modern periods. The course is divided roughly into two parts. One part deals with the history of Muhammad and the related historiographical questions. The second part deals with the representations of Muhammad in juristic, theological, Sufi, etc., literature. Because of the availability of primary sources in English translation, there is a healthy dose of primary source reading and analysis throughout the semester. Those students with advanced Arabic (and Persian and Turkish) skills are encouraged to engage sources in their original language. Same as L75 JIMES 351. Credit 3 units. A&S IQ: HUM LCD Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 3540 Anthropological and Sociological Study of Muslim Societies
This course introduces students to anthropological and sociological scholarship on Muslim societies. Attention will be given to the broad theoretical and methodological issues which orient such scholarship. These issues include the nature of Muslim religious and cultural traditions, the nature of modernization and rationalization in Muslim societies, and the nature of sociopolitical relations between “Islam” and the “West.” The course explores the preceding issues through a series of ethnographic and historical case studies, with a special focus on Muslim communities in the Middle East, Southeast Asia, and Europe. Case studies address a range of specific topics, including religious knowledge and authority, capitalism and economic modernization, religion and politics, gender and sexuality, as well as migration and globalization. Same as L75 JIMES 359. Credit 3 units. A&S IQ: LCD, SSC, SC, SD BU: IS EN: S

L23 Re St 3554 Revolution with an Accent: The Haitian and French Revolutions, 1770-1805
How can politics enact fundamental changes? What make those changes a “revolution”? How do we judge the legitimacy of such changes? When these questions arise over the course of ordinary political arguments, the example of the French Revolution often looms large, casting a shadow tinted with blood and Terror. Much less present in the collective political imagination is the Haitian Revolution. These two events are complex and complicated, and are filled with fascinating, chilling, inspired characters, enflamed rhetoric and challenging questions. This course will examine both the unfolding of events and the rise and fall of protagonists within these two Revolutions and will explore the ways that issues such as religion, state finance, loyalty, race, slavery became politicized. Same as L22 History 3554. Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM BU: HUM, IS EN: H UColl: HEU, HSP, HTR

L23 Re St 359 Travelers, Tricksters, and Storytellers: Jewish Travel Narratives and Autobiographies
Jewish literature includes a number of highly fascinating travel accounts and autobiographies that are still awaiting their discovery by a broader readership. In this course, we will explore a broad range of texts originating from the Middle Ages to the 19th century. They were written by both Ashkenazi and Sephardi Jews hailing from countries as diverse as Spain, Italy, Germany, and the Ottoman Empire. Among the authors were pilgrims, rabbis, merchants, and one savvy business woman. We will read their works as responses to historical circumstances and as expressions of Jewish identity, in its changing relationship to the Christian or Muslim environment in which the writers lived or traveled. Specifically, we will ask questions such as: How do travel accounts and autobiographies enable their authors and readers to reflect on issues of identity and difference? How do the writers produce representations of an “other,” against which and through which they define a particular sense of self? To what extent are these texts reliable accounts of their authors’ personal experiences, and where do they serve their own self-fashioning? How do the writers portray Christians, Muslims and Jews from other cultural backgrounds than their own? How do they construe the role of women in a world dominated by men? How do they reflect on history, geography, and other fields of knowledge that were not covered by the traditional Jewish curriculum; and how do they respond to the challenges and opportunities of early modernity? This course is open to students of varying interests, including Jewish, Islamic, or Religious Studies, medieval and early modern history, European or Near Eastern literatures. All texts will be read in English translation. Same as L75 JIMES 359. Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

L23 Re St 3600 Religion and the Modern Civil Rights Movements, 1954-1968
The modern Civil Rights Movement is a landmark event in the nation’s political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches,
demonstrations and legislative rulings would redeem and/or destroy “The Soul of the Nation.” This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.

L23 Re St 3650 Slavery, Sovereignty, Security: American Religions and the Problem of Freedom
The goal of this course is to think critically about freedom as an ideology and institution. What does it mean to be free? What are the relationships among individual liberties, national sovereignty, and civil rights? In what ways has freedom been defined in relation to and materially depended on unfreedom? At the same time, this course will treat American “religions” in a similar critical fashion, as a historically contingent category that has been forged and inflected within the same context of the white Christian settler empire. Religion and freedom have intertwined throughout American history, including within the ideal of religious freedom. Our critical interrogation of freedom should help us think carefully about power, working with but also beyond tropes of domination and resistance.

L23 Re St 366 Approaches to the Qur’an
The place of the Qur’an in Islamic religion and society. Equal emphasis on text: the Qur’an’s history, contents, and literary features; and context: the place of the Qur’an in everyday life, its oral recitation, artistic uses, and scholarly interpretation. Knowledge of Arabic not required.

Credit 3 units. A&S IQ: HUM, LCD BU: ETH

L23 Re St 3660 The Sephardic Experience: 1492 to the Present
This course explores the history and culture of the Sephardic diaspora from the expulsion of Spanish and Portuguese Jewry at the end of the 15th century to the present. We will start with a brief introduction into the history of Iberian Jews prior to 1492, asking how this experience created a distinct subethnic Jewish group: the Sephardim. We will then follow their migratory path to North Africa, Italy, the Ottoman Empire, the Netherlands and the Americas. The questions we will explore include: In what sense did Jews of Iberian heritage form a transnational community? How did they use their religious, cultural, and linguistic ties to advance their commercial interests? How did they transmit and transform aspects of Spanish culture and create a vibrant Ladino literature? How did the Sephardim interact with Ashkenazi, Greek, North African, and other Jewish, Muslim, and Christian communities? How did Jewish emigres from Spain and Portugal become intermediaries between Christian Europe and the Ottoman Empire? What was the role of Sephardim in Europe’s transatlantic expansion? How did conversos (converts to Christianity) return to Judaism and continue to grapple with their ambiguous religious identity? How did Ottoman and North African Jews respond to European cultural trends and colonialism and create their own unique forms of modern culture? How did the Holocaust impact Sephardic Jewry? The course will end with a discussion of the Sephardic experience in America and Israel today.

Same as L75 JIMES 366

L23 Re St 3670 Gurus, Saints and Scientists: Religion in Modern South Asia
Many long-standing South Asian traditions have been subject to radical reinterpretation, and many new religious movements have arisen, as South Asians have grappled with how to accommodate their traditions of learning and practice to what they have perceived to be the conditions of modern life. In this course we consider some of the factors that have contributed to religious change in South Asia, including British colonialism, sedentarization and globalization, and new discourses of democracy and equality. We consider how new religious organizations were part and parcel with movements for social equality and political recognition; examine the intellectual contributions of major thinkers like Swami Vivekananda, Sayyid Ahmad Khan and Mohandas Gandhi; and explore how Hindu, Islamic and other South Asian traditions were recast in the molds of natural science, social science and world religion.

Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H

L23 Re St 368 Theories and Methods in the Study of Religion
What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? This course considers these questions through the investigation of significant attempts to study religion over the past century, paying particular attention to the methods, motivations, and aims of these works. Is the study of religion an effort to disprove or debunk it, or perhaps to support it? What would each mean? Is it an effort to describe the indescribable, or perhaps to translate complex beliefs and practices into a language in which they can be discussed by others? Why would such a translation be helpful, and to whom? Is the study of religion an investigation of a social phenomenon, an organization of communities, a specific formation of individuals, or perhaps a psychosis or illusion, evidence of the workings of power on our lives and the difficulty of bearing it? What is at stake in defining religion in these ways, and then in undertaking its study?

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H
L23 Re St 36CA Heroes and Saints in India: Religion, Myth, History
This course provides an introduction to the history of modern India and Pakistan through the voices of the Indian subcontinent's major thinkers. We will spend time in the company of saints, from the "great-souled" Mahatma Gandhi to the Sufi scholar Ashraf 'Ali Thanawi, and we will travel alongside the heroes of peasant politics, women's rights, and struggles for national and social freedom and equality. We will immerse ourselves in the rich narrative heritage of India as it has been challenged, reworked, and harnessed for present and future needs, from the 19th century through the present. Lecture and discussion format; prior knowledge of India or Pakistan not required.

L23 Re St 374 Of Dishes, Taste, and Class: History of Food in the Middle East
When the 13th century author Ibn al-Adim from the city of Aleppo, Syria, titled his book on food Reaching the Beloved through the Description of Delicious Foods and Perfumes, he was perhaps not concerned so much with simply how to satisfy hunger. Thinking through the title alone opens a window for us on all sorts of cultural, social, economic, and political questions about food and drink. Our history as humans with food is long and complicated. It extends from seeking basic nutrition to sustain our livelihood to contracting diseases. Food also plays a fundamental role in how humans organize themselves in societies, differentiate socially, culturally, and economically, establish values and norms for religious, cultural, and communal practices, and define identities of race, gender, and class. Food has been one of the most visible signs of social status in any given society and a vital part of many movements of political and social reform and transformation. Food has been a major question in trans-regional, international, and recently global cooperation and conflict as well. This course will cover the history of food and drink in the Middle East to help us understand our complex relation with food and look at our lives from perspectives we intuitively feel or by implication know, but rarely critically and explicitly reflect on. This course does not intend to spoil, so to speak, this undeniably one of the most pleasurable human needs and activities, but rather to make you aware of how food shapes who we are as individuals and societies. We will study the history of food and drink in the Middle East across the centuries until the present time, but be selective in choosing themes, geographic regions, and historical periods to focus on. Course work is geared toward increasing your ability to think about food and drink analytically as a socio-economic and cultural capital, noticeable marker of identity, and indicator of a political position. In a sense we will try to tease out in class why we are what we eat! Please consult the instructor if you have not taken any course in the humanities.

L23 Re St 374C Kings, Priests, Prophets and Rabbis: The Jews in the Ancient World
We trace Israelite and Jewish history from its beginnings in the biblical period (ca. 1200 BCE) through the rise of rabbinic Judaism and Christianity until the birth of Islam (ca. 620 CE). We explore how Israel emerged as a distinct people and why the rise of the imperial powers transformed the political, social and religious institutions of ancient Israel. We illuminate why the religion of the Bible developed into rabbinic Judaism and Christianity and how rabbinic literature and institutions were created.

L23 Re St 3750 In the Beginning: Creation Myths of the Biblical World
This course will study myths and epic literature from the Bible, ancient Egypt, the ancient Near East and ancient Greece about the birth of the gods, the creation of the world and of humanity, and the establishment of societies. These masterpieces of ancient literature recount the deeds of gods and heroes and humanity’s eternal struggle to come to terms with the world, supernatural powers, love, lust, and death. This course will examine how each culture borrows traditions and recasts them in a distinct idiom. The course will further examine different approaches to mythology and to the study of ancient cultures and the Bible.

L23 Re St 38C8 Religion and Politics in South Asia: Writing-Intensive Seminar
The relationship between religion, community and nation is a topic of central concern and contestation in the study of South Asian history. This course explores alternative positions and debates on such topics as: changing religious identities; understandings of the proper relationship between religion, community and nation in India and Pakistan; and the violence of Partition (the division of India and Pakistan in 1947). The course treats India, Pakistan and other South Asian regions in the colonial and postcolonial periods. Same as L22 History 38C8
Credit 3 units. A&S IQ: HUM, LCD, WI Arch: HUM Art: HUM EN: H

L23 Re St 3900 Mormonism and the American Experience
The focus of this seminar is Mormonism, meaning, primarily, the Church of Jesus Christ of Latter-day Saints (or LDS Church), which is the largest Mormon body. Mormons in the United States have gone from being one of the most intensely persecuted religious groups in the country's history to the fourth largest religious body in the U.S. (by one count), with a reputation for patriotism and conservative family values. In addition to introducing who the Mormons are, their beliefs and religious practices, this seminar will explore issues raised by Mormonism's move toward the religious mainstream alongside its continuing distinctiveness. These issues include: What is the religious "mainstream" in the U.S.? How did conflicts over Mormonism during the 19th century, especially the conflict over polygamy, help define the limits of religious tolerance in this country? How have LDS teachings about gender and race, or controversies about whether or not Mormons are Christian, positioned and repositioned Mormons within U.S. society? Same as L57 RelPol 390
Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 3921 Secular and Religious: A Global History
Recent years have seen a dramatic rethinking of the past in nearly every corner of the world as scholars revisit fundamental questions about the importance of religion for individuals, societies and politics. Is religion as a personal orientation in decline? Is Europe becoming more secular? Is secularism a European invention? Many scholars now argue that "religion" is a European term that doesn't apply in Asian societies. This course brings together cutting-edge historical scholarship on Europe and Asia in pursuit of a truly global understanding. Countries covered will vary, but may include Britain, France, Turkey, China, Japan, India and Pakistan. Same as L22 History 3921
Credit 3 units. A&S IQ: HUM, LCD, SD BU: HUM, IS EN: H
L23 Re St 393 Medieval Christianity
This course surveys the historical development of Christian doctrine, ecclesiastical organization, and religious practice between the fifth century and the 15th, with an emphasis on the interaction of religion, culture, politics and society. Topics covered include: the Christianization of Europe; monasticism; the liturgy; sacramental theology and practice; the Gregorian reform; religious architecture; the mendicant orders and the attack on heresy; lay devotions; the papal monarchy; schism and conciliarism; and the reform movements of the 15th century. Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L23 Re St 396 Islamic Philosophy, Mysticism, and Theology
How does an individual achieve access to knowledge and access to God? To what extent is such access dependent upon scripture? To what extent is such access dependent upon reason? Are there forms of truth and experience that only reveal themselves through mysticism? Questions of this sort are central to the interrelated disciplines of Islamic philosophy, Islamic theology, and Islamic mysticism (i.e., Sufism). This course examines how these three disciplines have shaped various aspects of social life within premodern Muslim communities. Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 3977 The Making of the Modern Catholic Church
This course examines the work of three church councils that put their stamp on the Catholic Church at key moments in its history, making it what it is today. The first section is dedicated to the Fourth Lateran Council (1215), which defined the high medieval church as an all-encompassing papal monarchy with broad powers over the lives of all Europeans, Christian and non-Christian alike. In the second section we turn our attention to the Council of Trent (1545-1563), which responded to the threat posed by the Protestant Reformation by reforming the Catholic Church, tightening ecclesiastical discipline, improving clerical education, and defining and defending Catholic doctrine. We conclude with a consideration of the largest church council ever, Vatican II (1962-1965), which reformed the liturgy and redefined the church to meet the challenges of the modern, multicultural, multi-confessional world. Credit 3 units. A&S IQ: HUM, LCD BU: ETH, IS EN: H

L23 Re St 4002 Capstone Seminar: Convivencia or Reconquista? Muslims, Jews, and Christians in Medieval Iberia
The capstone course for Jewish, Islamic, and Middle Eastern Studies majors, Arabic majors, and Hebrew majors. The course content is subject to change. Same as L75 JIMES 4001 Credit 3 units. A&S IQ: HUM EN: H

L23 Re St 403 Topics in East Asian Religion and Thought
Topics in East Asian Religions is a course for advanced undergraduate and graduate students on specific themes and methodological issues in East Asian religions. Credit 3 units. A&S IQ: HUM, LCD EN: H

L23 Re St 4041 Islam and Politics
Blending history and ethnography, this course covers politics in the Islamic world in historical and contemporary times. Topics include history of Islam, uniformity and diversity in belief and practice (global patterns, local realities), revolution and social change, women and veiling, and the international dimensions of resurgent Islam. Geographical focus extends from Morocco to Indonesia; discussion of other Muslim communities is included (Bosnia, Chechnya, sub-Saharan Africa, U.S.). Same as L48 Anthro 4041 Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS

L23 Re St 4060 Convivencia or Reconquista? Muslims, Jews and Christians in Medieval Iberia
Jewish, Islamic, and Middle Eastern Studies senior seminar. This seminar will provide an opportunity to explore in some depth various facets of the convivencia ("dwelling together"; coexistence) of Muslims, Jews, and Christians in medieval Iberia. While we will pick up the timeline with the emergence of an Ibero-Islamic society in the eighth century CE, the seminar's historical horizon stretches up to the turn of the 15th to the 16th century, when Spanish Jews and Muslims were equally faced with the choice between conversion to Christianity or expulsion. Until about the mid-11th century, Muslims dominated most of the Iberian Peninsula. From roughly the mid-11th through 15th centuries, Christians ruled much and eventually all of Spain and Portugal. Through a process termed, from a Christian perspective, as reconquista ("reconquest"), Catholic kingdoms acquired large Muslim enclaves. As borders moved, Jewish communities found themselves under varying Muslim or Christian dominion, or migrated from one realm to the other. Interactions between these three ethno-religious communities occurred throughout, some characterized by mutual respect and shared creativity and others by rivalry and strife. The course focuses on these religious and cultural contacts, placing them in various historical and geographic contexts. It will raise questions concerning the ambiguities of religious change and concerning the interplay of persecution and toleration. Methodologically, the seminar emphasizes the study of primary sources, including documentary, historiographical, literary and poetical texts. In the course of their study, attention will be paid to peculiarities of genre, and difficulties involved in formulating historical assessments. In this sense, we will also aim at developing critical reading skills in relation to secondary literature. Seniors in Jewish, Islamic, and Middle Eastern Studies will be given preference in admission. Advanced students in other fields are asked to contact the instructor prior to enrollment. Same as L75 JIMES 4060 Credit 3 units. A&S IQ: HUM, LCD EN: H

L23 Re St 407 Solidarity and Silence: Religious Strategies in thePolitical Sphere
Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of nonviolent resistance. This course considers the role of religious thought and practice in such movements in the 20th century. The history of these movements presents an apparent paradox: How can political action emerge from the supposedly "private" realm of religion in the modern era, particularly its most individualistic forms in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual and depoliticizing? With these questions animating our investigation, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King Jr., Simone Weil, and William Barber, as well as the
history of movements associated with their work. Toward the end of the semester, we will turn to contemporary movements against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism. CET (https://gephardtinstitute.wustl.edu/or-faculty-and-staff/community-engaged-teaching) course.

L23 Re St 408 Nuns
Nuns — women vowed to a shared life of poverty, chastity and obedience in a cloistered community — were central figures in medieval and early modern religion and society. This course explores life in the convent, with the distinctive culture that developed among communities of women, and the complex relations between the world of the cloister and the world outside the cloister. We look at how female celibacy served social and political, as well as religious, interests. We read works by nuns: both willing and unwilling; and works about nuns: nuns behaving well, and nuns behaving scandalously badly; nuns embracing their heavenly spouse, and nuns putting on plays; nuns possessed by the devil, and nuns managing their possessions; nuns as enraptured visionaries, and nuns grappling with the mundane realities of life in a cloistered community.

L23 Re St 4118 The Good Cause: Psychological Anthropology of Moral Crusades
Why do people join moral crusades? These are social movements based on powerful moral institutions, ranging from the abolitionist and suffragette movements to witch hunts, insurgency and ethnic riots. Such movements are extremely diverse, yet their unfolding and the dynamics of recruitment show remarkably common properties. We will examine a series of empirical cases, including recent events, and assess the relevance of models based on individual psychological dynamics, intuitive moral capacities, and human motivation for participation in collective action.

Same as L48 Anthro 4118
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L23 Re St 412 Islamic Theology
This course explores major themes of early Islamic theology as developed by the Mutazilite, Ash’arite, and Maturidi schools. Some attention is paid to defunct theological systems, the traces of which have remained in the heresiographical literature. Most readings are in primary sources in English translation, though the students are also introduced to some secondary literature on various themes. Some comparative theology with reference to the Judeo-Christian tradition is a regular feature of class discussion. Topics include (but are not limited to): debates over the createdness of the Qur’an; predetermination and foreknowledge; God’s attributes; the nature of language; the nature of the human soul; and creation and afterlife.

L23 Re St 4121 American Religion, Politics, and Culture: Historical Foundations
This seminar offers a wide-ranging overview of the leading historical scholarship concerning the busy intersections of American religion, politics and culture. The second semester focuses on classic and contemporary commentaries on the American religious and political scene from Alexis de Tocqueville through today’s leading pundits. Some sessions will include a visiting scholar engaged in cutting-edge research — a feature that will allow seminar members to work with important scholars from beyond the university. Possible topics include: church-state relations, religion and foreign policy, religion and civil rights, religion and the science wars, the rise of the Religious Right, and the role of religion in public life. Prerequisites: advanced undergraduate or graduate standing in a related field or permission of instructor.

Same as L57 RelPol 4121
Credit 3 units. A&S IQ: HUM EN: H

L23 Re St 4122 American Religion, Politics & Culture: Commentary from Alexis de Tocqueville to Contemporary Pundits
This research-oriented seminar involves in-depth historiographical investigation of leading scholarship at the busy intersections of American religion, politics and culture. The seminar is taught under the auspices of the John C. Danforth Center on Religion and Politics and is offered in two complementary parts (though enrollment in either one of the two is certainly possible). Its ambition is to build up a community of inquirers engaged in the core questions that animate the Danforth Center. Prerequisites: advanced undergraduate or graduate standing in AMCS, History, or Religious Studies or permission of instructor.

Credit 3 units. A&S IQ: HUM

L23 Re St 413 Topics in Islam
Fall 2017 Topic: History of Political Thought. This course aims to study political thought and practice in Islamic history (circa eighth through 13th centuries) through a close reading of a selection of primary sources in translation (and in their original language if language proficiency is satisfactory). Particular attention will be given to historical contexts in which thoughts are espoused and texts written. We plan to examine the development of political concepts and themes as articulated in diverse literary genres (legal, theological, political) from the eighth through the 13th century. We hope to engage various theoretical models to analyze the relationship between politics and religion and tease out the role of power in determining sociopolitical relations, distinctions and structures. We hope to have a better grasp on the historicity of ideas presented in timeless categories in political discourse. Prerequisite: advanced knowledge of Arabic preferred but not required.

L23 Re St 415 Topics in Judaism
Prerequisite: permission of instructor.
Same as L75 JIMES 415
Credit 3 units.
L23 Re St 418 Sexuality and Gender in East Asian Religions
In this course we will explore the role of women in the religious traditions of China, Japan and Korea, with a focus on Buddhism, Daoism, Shamanism, Shinto and the so-called “New Religions.” We will begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We will then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses, shamans and mediums, hermits and recluses, and ordinary laywomen — both historically and in more recent times. Class materials will include literary and religious texts, historical and ethnological studies, biographies and memoirs, and occasional videos and films. Prerequisites: This class will be conducted as a seminar, with minimal lectures, substantial reading and writing, and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, will need to obtain the instructor’s permission before enrolling.
Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch; HUM Art; HUM EN: H

L23 Re St 419 Of Zombies, Ghosts, and Ancestors:
Interactions of the Living and the Dead in Chinese Religions
This course introduces a basic aspect of the multifaceted history of Chinese religions, culture and civilization by centering on the practice of taking care of the dead. In particular, we will observe how various religious texts, short stories, and plays from China’s earliest times until the 16th century depict the interactions of the living and the dead. Despite the distinct genres, time periods and topics, one important aspect will regularly appear: Apparently people perceived the boundaries between the living and the dead to be quite porous in premodern China. In other words, the dead seemed to have played as much of a role in society and everyday life as living family members, friends and government officials. Credit 3 units. A&S IQ: HUM, LCD Arch; HUM Art; HUM EN: H

L23 Re St 4213 Sufism and Islamic Brotherhoods in Africa
Muslim societies are prevalent in Africa — from the Horn, the North, the East to the West, with smaller conclaves in Central and South Africa. Islam has played an influential role in these diverse societies, particularly through its Sufi form. Even though Sufism originated in the Arabian Peninsula, it has fit well with African beliefs and cultures. This course aims to explore Sufi beliefs, values and practices in Africa. It reconsiders the academic constructions of “African Islam” by exploring education, intellectual life, economics, gender roles, social inequalities and politics. The goal is to show that Africa is a dynamic part of the Muslim world and not a peripheral one, as it is most often portrayed by the international media or historically, through travelers and colonial accounts. African Muslim brotherhoods have served as political mediators between countries and people (i.e., the role of the Tijaniyya in the diplomatic rivalry between Morocco and Algeria, or its role in reconciliation of clan rivalries in Sudan). In addition, the course pays attention to hierarchy in particular tariqa. Finally, the course examines how African Sufi orders have shaped their teachings to fit transnational demands over the 20th and 21st century. We explore these issues through readings, current media, lectures and special guest speakers.
Same as L90 AFAS 4213
Credit 3 units. A&S IQ: HUM, LCD EN: H

L23 Re St 425 European Utopian Settlements in the American Midwest (1814-1864): Diversity and Antislavery
During the first part of the 19th century a number of utopian visionaries from Europe (Germany, France and England) tried to establish communities in the American Midwest. These colonies were based either on religious or philosophical/social ideals which could be traced back to interpretations of the Old and the New Testament or to Enlightenment principles of freedom and equality that had been propagated during the revolutions in Europe of 1789, 1830 and 1848 which in turn had been influenced by the American war of independence. These groups showed strong antislavery convictions. The Midwest was chosen since the areas in the vicinity of the confluence of the Mississippi and the Missouri were seen as open to new social experiments. Part of the seminar are field trips to the St. Louis-based Missouri History Library as well as to the St. Louis Public Library and one-day excursions to New Harmony in Indiana, Nauvoo in Illinois, and to small towns in Warren County, Missouri.
Same as L97 IAS 4225

L23 Re St 425 Zen Buddhism
This course is designed as an exploration of the history, teachings, practices and literature of Zen Buddhism in China (Chan), Korea (Sôn), Japan (Zen), and the United States. We discuss how Zen’s conception of its history is related to its identity as a special tradition within Mahayana Buddhism, as well as its basic teachings on the primacy of enlightenment, the role of practice, the nature of the mind, and the limitations of language. We also look at Zen Buddhism and its role in the arts, especially poetry and painting, in India, China and Japan. Finally, we briefly explore the response of Zen teachers and practitioners to questions of war, the environment and other contemporary issues. Open to seniors and graduate students. Prerequisites: L23 Re St 311 Buddhist Traditions or instructor’s permission.
Credit 3 units. A&S IQ: HUM, LCD EN: H

L23 Re St 4250 Law, Religion, and Politics
What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.
Same as L57 RelPol 425
Credit 3 units. A&S IQ: HUM EN: H

L23 Re St 432 Early Christianity and Classical Culture
This course explores the development of Early Christianity from the Apostolic fathers (late first century CE) to Augustine in the fifth century. We will be focused on contextualizing these early Christian communities within the classical Greek and Roman worlds through which they spread, examining their engagement with Greco-Roman models of rhetoric, philosophy and literature. Prerequisites: L23 307F Introduction to the New Testament or previous work in Classical Studies recommended but not required.
Credit 3 units. A&S IQ: HUM EN: H
L23 Re St 4357 The Holocaust in the Sephardic World
The course provides students with a comprehensive understanding of the Holocaust, its impact on the Sephardic world, and the ways in which these debates influence contemporary conflicts between Jews, Muslims, and Christians in Southern Europe and North Africa. We will turn to the history of these conflicts, and study the Sephardic diaspora by focusing on the consequences that the 1492 expulsion had within the Iberian Peninsula, in Europe, and in the Mediterranean world. We will study Sephardic communities in Europe and North Africa and their interactions with Christians and Muslims before World War II. Once we have examined the history of the Holocaust and its impact on the Sephardic world in a more general sense, our readings will focus on the different effects of the Holocaust’s “long reach” into Southeastern Europe, the Balkans, and North Africa, paying close attention to interactions among Jews, local communities, and the Nazi invaders. Finally, we will address the memory of the Sephardic experience of the Holocaust, and the role of Holocaust commemoration in different parts of the world. We will approach these topics through historiographies, memoirs, novels, maps, poetry, and film.
Same as L97 IAS 4357
Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM EN: H

L23 Re St 4380 Islam, Transnationalism, and the African Diaspora
This course is designed for students who are interested in religion among African immigrants and African diaspora communities living mostly, but not exclusively, in Europe and North America, especially during waves of migration to the Americas. We begin in the days of the transatlantic slave trade, where we examine how interactions, bricolage, and influences of Christianity, Judaism, African indigenous religions, and Islam have impacted the African diaspora living in the Americas. We equally examine how Islam served as a means of resistance to slavery and provided a spiritual connection with the motherland.

L23 Re St 4790 Advanced Seminar: Empire and Messianism in the Middle East

Senior Seminar: This course looks at imperial politics in its relations to monotheistic messianic movements and ideologies in the Islamic Mediterranean from the late antiquity to the 16th century. Messianic beliefs offered political hope, rallied opposition against the existing rule, defined and ordered lived reality for imperial subjects, presented a political leitmotiv for rulers, and advocated a just sociopolitical order to be realized in the immediate or indefinite future. Thus, this course attempts to see how politics became messianic by its very ability to promise a better future. Despite the chronological scope of the course, we examine only specific ideas, practices and movements as case studies to study in depth various facets of messianic movements and thought in their geographic and historical context. We use primary sources, which are the main methodological focus of the course, and secondary literature.

We aim to develop skills in identifying, reading, analyzing and dealing with primary sources in their variety and critically engaging modern scholarship on the political role of Messianism. Students write a term paper and several reports on preassigned readings, and make regular class presentations. Admission preference is given to graduating seniors in JIMES, but the course is open to all advanced students provided that they consult the instructor prior to enrolling. Knowledge of a relevant primary source language is highly desired but not required.

L23 Re St 486 Europe's "Jewish Question": Emancipation, Anti-Semitism and Jewish-Christian Confrontation

The so-called "Jewish Question" was a product of European modernity. It emerged in conjunction with the formation of modern states, Enlightenment projects for political reform, the decline of religious influence in society, and struggles over Jewish emancipation. In this seminar, students examine the unusual career of this obsession from the 16th through the 20th century by focusing selectively on a number of illustrative episodes: Christian Hebraism and the Reformation; the Enlightenment assault on religious power; European debates on Jewish emancipation; the emergence of the "Jewish Question" in the 19th century; anti-Semitism as a modern political phenomenon; the renewed discourse of Jewish "ritual murder" at the turn of the 20th century; Zionism and other forms of Jewish nationalism; and the question of anti-Zionism in the reformulation of the "Jewish Question" during the past half-century.

Credit 3 units.

L23 Re St 4993 Advanced Seminar in History: Women and Religion in Medieval Europe

This course explores the religious experience of women in medieval Europe and attempts a gendered analysis of the Christian Middle Ages. In it, we examine the religious experience of women in a variety of settings — from household to convent. In particular, we try to understand how and why women came to assume public roles of unprecedented prominence in European religious culture between the 12th century and the 16th, even though the institutional church barred them from the priesthood and religious precepts remained a principal source of the ideology of female inferiority.

L23 Re St 49JK Advance Seminar in History: Blood and Sacred Bodies: Ritual Murder and Host Desecration Accusations
This seminar follows the history of the ritual murder and Host desecration accusations from the origins in 12th- and 13th-century Europe to the 20th century. It pays close attention to the social and political functions of the narratives; their symbolic importance in Christianity’s salvific drama; attacks on such beliefs from both within and outside the community of the faithful; the suppression and decline of the ritual murder accusation; the integration of Jews into European societies in the 19th century; and the reappearance of the blood libel in the aftermath of emancipation.

Credit 3 units. A&S IQ: HUM, LCD EN: H

Romance Languages and Literatures
Romance Languages and Literatures offers vibrant programs in French, Italian, Portuguese and Spanish. Our language classes have long been popular with undergraduates, including those interested in international travel and those who anticipate a global dimension to their future careers. All of our classes focus on culture writ large: We study great texts, and we do so with an eye to gender roles, traditions, communities, individual freedom, social obligations and many other topics of critical importance today. We offer concentrations in French, Italian and Spanish, as well as applied linguistics and introductory Portuguese.

Our undergraduate programs in French, Italian and Spanish include a compelling series of language, literature, culture and civilization courses that introduce students to the global Hispanic, Francophone and Italoophone communities. The curriculum affords students the opportunity to become fluent in a foreign language, enrich their historical and cultural understanding, and acquaint themselves with influential intellectual, literary and artistic traditions.

Students also benefit from linguistic and cultural immersion opportunities through our many summer, semester and year-long study abroad programs. These programs offer unique possibilities to combine foreign language training with other interests, including participating in business internships in Paris; pursuing fieldwork in Camaroon; or studying art history in Italy, literature in Madrid, or Andean culture in Ecuador. These experiences lead to a variety of career paths, including international law, international business, medicine, journalism, and graduate studies in political science, international relations, history, anthropology, art history, comparative literature, French and film studies. To prepare our students to take full advantage of such opportunities, our faculty provides an innovative range of courses that combine the study of literature with contemporaneous developments in philosophy, science, music, art and theory.

For undergraduates interested in cross-language study, we offer two programs. First, students may elect to major in Romance languages and literatures. This major requires advanced course work in French, Italian and Spanish, with one of the three languages as the focus of primary emphasis. Second, they may minor in applied linguistics, studying the theoretical, empirical and practical foundations of teaching and learning languages. The minor is available to all majors on campus but is particularly suited to language majors.

The Major in Romance Languages and Literatures

Like our other majors, the Romance languages major requires a writing-intensive course and a capstone experience. Further
Total units required: A minimum of 42 units at the 300 and 400 level, distributed among French, Italian and Spanish.

Required courses:

- Language I: courses through the 400 level, including 307, 308, two literature surveys (French 325 and French 326, or Ital 323W and Ital 324W, or Span 335C and Span 336C), and two 400-level courses (in Italian, two literature courses; in French, either two literature courses or one literature course and French 411; in Spanish, either two literature courses or one literature and one linguistics course).

- Language II: courses through the 400 level, including 307, 308, at least two literature surveys (French 325 and French 326, or Ital 323W and Ital 324W, or Span 335C and Span 336C), and one 400-level course (in Italian and French, a literature course; in Spanish, either literature or linguistics).

- Language III: courses through and including one literature survey (307, 308, plus, depending on the language, French 325 or French 326, Ital 323W or Ital 324W, or Span 335C or Span 336C).

- One writing-intensive course in either Spanish or Italian or via French 411 (fall only).

- A capstone experience, either by completing Latin Honors or by completing a senior undergraduate seminar during the junior or senior year with a grade of B+ or better. We encourage students to consider doing an honors thesis, perhaps combining French and Spanish. The 6 units of 495 (honors) would be above and beyond the requirements listed above for each language.

Students need to take these classes for a letter grade and earn a B- or better, with a B average overall, per departmental requirements of all majors.

Students need approval from directors of undergraduate studies for Italian, French and Spanish for this major.

Additional Information

Students who plan to teach or pursue graduate study should consider taking a second foreign language, as well as linguistics courses. In all departmental courses for the major, the student must receive a grade of B- or better. Each student’s progress toward achieving the objectives of the major will be assessed on a regular basis and by a variety of means. More information is available in the departmental mission statement.

Spanish Honors in Linguistics: To qualify for Spanish Honors in Linguistics in the major by thesis, a student must complete linguistic research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. The honors thesis in linguistics may include scientific experiments conducted in Spanish. The written thesis will include several drafts, all of which will be written in Spanish.

Study Abroad: Students are encouraged to participate in a study abroad program. Programs are available in France, Italy, Spain, Ecuador, Mexico and Chile.

Senior Honors: Students who have maintained at least a 3.65 overall cumulative grade-point average through the end of the junior year are encouraged to work toward Latin Honors (cum laude, magna cum laude, or summa cum laude). To qualify for Latin Honors in the major by thesis, a student must complete special literary research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. To qualify for Latin Honors by course work, the student must complete four literature courses at the 400 level (including two in literature before 1800) and present two critical essays written for those courses to be judged by an honors faculty committee. Recommendations for honors are based on performance, the quality of the thesis or critical essays, and the cumulative GPA.

Russian Language and Literature

Students who want to achieve a high level of proficiency in the Russian language and study Russian literature in depth can pursue a minor in Russian language and literature. The program offers elementary through third-year language courses and a number of courses on 19th- and 20th-century Russian literature (in translation) on a wide variety of topics. Students are strongly encouraged to study abroad.
An independent minor, Russian language and literature (https://artsci.wustl.edu/russian-language-and-literature-minor) is administered by International and Area Studies (IAS). Students undertaking this minor are encouraged to consider a major in Eurasian studies (p. 602) (through IAS), comparative literature (p. 327) or history (p. 503), all of which can be pursued with a focus on Russia and the former Soviet Union.

Total Units 20

Regulations:

- Students can earn up to 6 credits from a semester or summer study abroad program, with the approval of the Russian language and literature adviser.
- All advanced units must be unique to the Russian language and literature minor (i.e., not counted toward any other major or minor).
- Students must earn at least a B- in language courses in order to continue to the next level. They must also maintain at least a B- average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course(s) in question or earn at least a B- in an approved equivalent course or courses (either during the summer or in a study abroad program).

Additional Information

Study Abroad: Students are strongly encouraged to participate in a Washington University study abroad program in St. Petersburg, Russia. Semester options include both language and area studies programs. Although the summer program is language-focused only, there are programs available for students at any language level, including beginning. The university's programs in St. Petersburg are conducted under the auspices of the Council for International Educational Exchange (CIEE), the longest running such program in Russia. Financial aid may be available for these programs through both Washington University and CIEE.
Courses

L39 Russ 101D Elementary Russian
Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary post-Soviet Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review and testing.
Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 102D Elementary Russian
Continuation of 101D. Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review and testing.
Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 211D Intermediate Russian
Designed to solidify students' command of Russian grammar and advance conversational, reading and writing skills. Includes video materials produced in Russia and conveying an up-to-the-minute picture of contemporary Russian life.
Credit 4 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 212D Intermediate Russian
Continuation of 211D. Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review and testing.
Credit 4 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 315 Selected Areas for Special Study I: Russian Music
Same as L27 Music 315
Credit 3 units. A&S IQ: HUM EN: H

L39 Russ 322D Third-Year Russian
Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts and write compositions.
Prerequisite: Russ 212D or equivalent.
Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 324D Third-Year Russian
Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts and write compositions.
Prerequisite: Russ 322D or equivalent.
Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 332 Russian Theater, Drama and Performance: From Swan Lake to Punk Prayer
This course explores performance in Russia from the wandering minstrels of medieval times to protest art of the present day. Genres include tragedy and comedy (Griboedov, Pushkin, Gogol), drama (Ostrovsky, Turgenev, Chekhov), experimental theater (Stanislavsky, Evreinov, Meyerhold), ballet (Imperial, Soviet, Ballets Russes), opera (Tchaikovsky, Mussorgsky, Shostakovich), and performance art (Futurists, Pussy Riot, Pavlovsky). We also consider performativity in rituals, public events, and everyday life. Our discussions center on the analysis of short and full-length plays, critical theory, specific productions and performers, and the role that performance has played in shaping Russian culture. All readings are in English translation. No prerequisites.
Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

L39 Russ 350C The 19th-Century Russian Novel (Writing Intensive)
The 19th-century "realistic" novel elevated Russian literature to world literary significance. In this course we do close readings of three major Russian novels: Alexander Pushkin's Eugene Onegin, Fyodor Dostoevsky's Crime and Punishment and Lev Tolstoy's Anna Karenina. While we consider a variety of formal and thematic concerns, special emphasis is placed on the social context and on questions of Russian cultural identity. Readings and discussions are supplemented by critical articles and film.
This is a writing-intensive course: workshops are required. All readings are in English translation. No prerequisites.
Credit 3 units. A&S IQ: HUM, LCD, SD, WI Arch: HUM Art: HUM BU: HUM EN: H

L39 Russ 3559 Socialist and Secular? A Social History of the Soviet Union
This class explores daily life and cultural developments in the Soviet Union, 1917 to 1999. Focusing on the everyday experience of Soviet citizens during these years, students learn about the effects of large-scale social and political transformation on the private lives of people. To explore daily life in the Soviet Union, this class uses a variety of sources and media, including scholarly analysis, contemporaneous portrayals, literary representations and films. Students receive a foundation in Soviet political, social and cultural history with deeper insights into select aspects of life in Soviet society.
Same as L22 History 3559
Credit 3 units. A&S IQ: HUM, LCD, SD BU: HUM, IS EN: H

L39 Russ 364 Anarchism: History, Theory, and Praxis
This course analyzes the origins, historical trajectories and influence of anarchism from its classical period (1860s-1930s) until the present. It examines the major personalities, complex ideas, vexing controversies and diverse movements associated with anarcho-collectivism, anarcho-communism, individualist anarchism, anarcho-syndicalism, anarchist feminism, green anarchism, lifestyle anarchism and poststructuralist anarchism. In doing so, it explores traditional anarchist concerns with state power, authority, social inequality, capitalism, nationalism, imperialism and militarism. It also analyzes anarchism's conception of individual and collective liberation, mutual aid, workers' organization, internationalism, direct democracy, education, women's emancipation, sexual freedom and social ecology. Special attention is given to past and contemporary
L39 Russ 372 Dostoevsky's Novels
In this discussion-based course we focus on two of Dostoevsky's major novels: Demons (also translated as The Possessed and Devils) and The Brothers Karamazov. Our close readings of the novels are enriched by literary theory and primary documents providing socio-historical context. All readings are in English translation. No prerequisites. Credit 3 units. A&S IQ: HUM, LCD, WI BU: IS EN: H

L39 Russ 375 Topics in Russian Lit and Culture: Madmen or Visionaries? (Writing Intensive)
Where is the borderline between "insanity" and the "visionary" experience? What is the correlation between madness and creativity? How does the Russian conception of madness compare to the Western one? In general, how do our cultural experiences shape our perception of madness? These are some of the questions we address in this course as we explore the role and representation of madness in Russian culture and literature. Class discussions focus on close readings of formative works by Pushkin, Gogol, Dostoevsky, Tolstoy, Chekhov, Gippius and Nijinsky. These primary literary texts are supplemented by critical and theoretical articles as well as film. This is a writing-intensive course: workshops are required. All readings are in English translation. No prerequisites. Credit 3 units. A&S IQ: HUM, LCD, WI BU: IS EN: H

L39 Russ 3866 Interrogating "Crime and Punishment"
Whether read as a psychological thriller, spiritual journey, or social polemic, Dostoevsky's 1866 novel Crime and Punishment has inspired diverse artistic responses around the world. From the 19th century to the present day, writers and filmmakers have revisited (and often subverted) questions that Dostoevsky's novel poses: What internal and external forces cause someone to "step over" into crime? What are the implications of a confession? To what extent can the legal system provide a just punishment? Are forgiveness and redemption possible, or even relevant? What role does grace — or luck — play in the entire process? This course begins with our close reading of Dostoevsky's novel and then moves on to short stories, novels, literary essays and movies that engage in dialogue with the Russian predecessor. A central concern of our intertextual approach is to explore the interplay between specific socio-historical contexts and universal questions. All readings are in English. No prerequisites. Same as L97 IAS 3750 Credit 3 units. A&S IQ: HUM, LCD, WI BU: IS EN: H

L39 Russ 396 Comintern: The Communist International’s Global Impact
The Communist International was the third of the global left-wing organizations aimed to develop communist organizations around the globe to aid the development of a proletarian revolution. Begun in 1919, hosted in Moscow, and closely tied to the developing USSR, the Comintern hosted seven World Congresses and 13 Enlarged Plenums before Stalin dissolved it in 1943. This course examines the history of the nearly 25 years of the Comintern, paying particular attention to engagement with countries outside of the Soviet sphere. Class texts provide a general historical overview and interrogate central ideological arguments/debates across several countries and political systems. Course materials look at the Comintern's engagement with Fascism and the Spanish Civil War, ideas of Nationalism and Internationalism, and Self-Determination in the Colonial World. Class units are designed to highlight regional similarities and differences, taking a global approach to the study of Communism. Students gain an understanding of the global political complexities developing after World War I and leading to World War II. Reflecting on the critique of imperialist capitalism offered by the Comintern, students explore liberation struggles and ideological dictatorships around the globe. Same as L97 IAS 396 Credit 3 units. A&S IQ: HUM EN: H

L39 Russ 404 Fourth-Year Russian
Further develops students' abilities in all spheres of the language: speaking, listening, reading, writing. Vocabulary building, conversation practice and student compositions based on materials from the Russian mass media, contemporary films and readings in modern Russian literature. Prerequisite: three years of college Russian or equivalent. Credit 3 units. A&S IQ: LCD, LS

L39 Russ 405 Fourth-Year Russian
Further develops students' abilities in all spheres of the language: speaking, listening, reading, writing. Vocabulary building, conversation practice and student compositions based on materials from the Russian mass media, contemporary films and readings in modern Russian literature. Prerequisite: three years of college Russian or equivalent. Credit 3 units. A&S IQ: LCD, LS

L39 Russ 419 Readings in Russian Literature, 1861 to 1917
A study of Jewish culture, society and politics in Poland-Lithuania; varieties of Jewish religious culture; Russian and Habsburg imperial policies toward the Jews; nationality struggles and anti-Semitism; Jewish national and revolutionary responses; Jewish experience in war and revolution; the mass destruction of East European Jewish life; and the transition from Cold War to democratic revolution. Same as L22 History 4442 Credit 3 units. A&S IQ: LCD

L39 Russ 4422 The Jewish Experience in Eastern Europe
A study of Jewish culture, society and politics in Poland-Lithuania, Hungary, the Czech lands, Russia, Romania and the Ukraine, from the 16th century through the 20th century. Among the topics covered are: economic, social and political relations in Poland-Lithuania; varieties of Jewish religious culture; Russian and Habsburg imperial policies toward the Jews; nationality struggles and anti-Semitism; Jewish national and revolutionary responses; Jewish experience in war and revolution; the mass destruction of East European Jewish life; and the transition from Cold War to democratic revolution. Same as L22 History 4442 Credit 3 units.

L39 Russ 4469 Reading War and Peace
What is it like to enter into a fictional world for a semester? In this course we read Leo Tolstoy's War and Peace in its entirety. Set during the Napoleonic wars (1805-1812), War and Peace takes the reader on a panoramic journey from the battlefield to the hay field, from the war room to the ballroom. It is a vivid portrayal of 19th-century Russian society as well as a penetrating examination of the causes and consequences of violence and the nature of love and family dynamics. In our discussions, we explore philosophies of history, issues of...
social injustice and gender inequality, the psychology of human suffering and joy, questions of literary form and genre, and the very experience of reading a long work of fiction. We begin with a selection of Tolstoy’s early works that laid the foundation for War and Peace and conclude with a few of Tolstoy’s late works that had an enormous influence on, among others, Mahatma Gandhi. Primary texts are supplemented with literary theory and film. All readings are in English.

Same as L97 IAS 4869
Credit 3 units.

A&S IQ: HUM, LCD, SD EN: H

Sociology

The Department of Sociology strives to understand the origins and reproduction of social inequality, especially as it relates to issues of pressing public concern. Our particular areas of focus include race/ethnicity, gender, the sociology of work and the workplace, immigration, social movements and economic inequality.

Sociological analysis begins from theoretical perspectives that explain how the structures that organize and govern social systems emerge and change. Our curriculum and research emphasize an understanding of social processes that is well grounded in empirical data on how societies actually function. We also seek to engage with social policies and social institutions to better understand the world in which we live and to help guide social change.

Re-established in 2015 after a hiatus of more than two decades, the department offers undergraduate major and minor programs with wide-ranging course offerings every semester. The curriculum provides students with research tools to examine critical social issues and to apply their understanding of sociology to activities outside the university.

Majors

The Major in Sociology

The major in sociology provides students with a rigorous understanding of the ways in which social relations and settings shape individual and group experiences and outcomes, with an emphasis on how various forms of inequality are created and propagated through time. Reflecting the diversity of social settings that motivate sociological inquiry, students will enroll in multiple introductory-level courses. We intend that these first courses will help students develop a sociological lens through which they can better understand the baseline determinants of inequality, social order and change. Because the discipline draws on diverse theoretical and methodological tools to engage with these core issues, required course work ensures that students develop expertise in classical and contemporary theoretical concepts as well as both quantitative and qualitative...
research methods. Upper-level seminars provide majors and minors with an opportunity to apply these substantive, theoretical and methodological perspectives to a focused and deep study of specific sociological topics. The major additionally features a capstone experience, enabling students to deploy sociological tools to undertake original work connected with a research project, internship or honors thesis. The sections that follow provide a detailed overview of the sociology major, with an emphasis on providing answers to many of the questions likely to arise at each stage as well as serving as a guide to related opportunities available to our majors and minors.

Requirements:
The major requires the successful completion of 10 courses, distributed as specified below. Courses that satisfy major requirements must be completed with a letter grade of C- or better. (Courses taken on a pass/fail basis do not satisfy requirements.)

a. Introductory requirement (6 credits total): Any two 200-level sociology courses (Students may substitute an upper-level sociology course for one of their two introductory courses with the written approval of their major adviser.)

b. Theory requirement (3 credits): SOC 3001 Social Theory

c. Methods requirement (6 credits): SOC 3030 Introduction to Research Methods and SOC 3050 Statistics for Sociology

Because SOC 3050 draws on specific sociological applications of statistical analyses, we strongly encourage students to enroll in our department's Sociological Statistics course. However, with the written approval of their major adviser, students may substitute Math 2200, Math 3200, or a disciplinary statistics course from another social science for SOC 3050. Majors who receive approval to fulfill this requirement with a course from another department or university are required to take an additional upper-level sociology course in lieu of SOC 3050.

d. Upper-level sociology electives (15 credits): Any five 300- or 400-level seminar courses. An independent learning course (i.e., independent research or an internship) can fulfill one of these five elective course requirements.

e. Sociology in action (non-credit bearing):

All majors are required to attend a minimum of five department-sponsored events. (This cocurricular requirement can be fulfilled at any point following a student's initial declaration as a sociology major.) We will maintain a list of qualifying events on our website, and our department administrator will coordinate a sign-in procedure to verify attendance at events.

f. Capstone: Majors will choose any one of the following options:

   i. Capstone paper tied to an upper-level course (1 credit):

Students electing this option may align the research paper with any upper-level sociology course taken during or prior to the semester in which they undertake this accompanying capstone paper. Capstone research papers typically are 10 to 15 pages in length and represent some application of course content to a related topic developed by the student in consultation with the instructor. Students interested in this option should register for the section of SOC 4900 Capstone Paper for Sociology Majors assigned to the relevant instructor, who will then do the following: (1) approve the capstone paper topic at the outset of the semester; (2) be available for consultation at all stages of the project; (3) assign a final grade for this 1-credit course; and (4) upon completion of the paper, certify the final product as fulfilling the capstone requirement. Students should schedule a meeting with the relevant instructor at the start of the semester (i.e., prior to the end of the add/drop period) to obtain the required approval for enrollment in SOC 4900 and to discuss the paper.

ii. Internship (2 credits): Students electing to complete a field internship are able, in consultation with their internship adviser, to identify and select a position with an organization of their choosing. For help identifying options in St. Louis, we recommend that students reference the Gephardt Center's internship opportunities listings (https://gephardtinstitute.wustl.edu/for-students) as well as the Career Center's CAREERlink database (https://careercenter.wustl.edu/tools/careerlink/Pages/Students.aspx). Over time, our department website will also provide resources for connecting with local organizations in need of student interns with a background in sociology. Capstone internships are intended to integrate and apply the knowledge gained in the classroom to community and organizational settings. As such, students are required to identify a faculty adviser of their choosing to approve and oversee the experience in consultation with the on-site internship manager. (Note that the internship adviser need not be the same as the student's major adviser.)

To receive credit for the internship, students should first obtain approval for the proposed experience in advance of the internship start date from their preferred internship adviser, who will then provide the required permission to enroll in the adviser's assigned section of SOC 4910 Internship in Sociology. Students should complete and file an Internship Learning Agreement (PDF) (https://wustl.box.com/s/em9gi5qc8arvoel37jig8wgapak42tyk) with the department no later than two weeks after the first day of the internship. The university stipulates 45 hours of work for each academic credit earned, so students will need to complete at least 135 internship hours — along with a series of reflective assignments arranged in consultation with their adviser — to fulfill the capstone requirement.
iii. Honors thesis (6 credits): Students who choose the thesis capstone option can apply 3 of their thesis credits toward their major elective requirement (part d in the list above). This means that, in addition to their thesis project, they would need to complete four (rather than five) additional 300- or 400-level seminar courses. To be eligible for Latin honors in Sociology, students must complete an Honors thesis. For more information about honors work in the department, please visit our Undergraduate FAQ & Policies page (https://sociology.wustl.edu/undergraduate-faq-policies).

Minors

The Minor in Sociology

Requirements:

a. Introductory requirement (3 credits total): One 100- or 200-level sociology course
b. Theory requirement (3 credits): SOC 3001 Social Theory (offered every year)
c. Methods requirement (3 credits): Either SOC 3030 Introduction to Research Methods or SOC 3050 Statistics for Sociology
d. Additional upper-level sociology electives (6 credits): Any two 300- or 400-level courses

Courses

L40 SOC 2020 Order and Change in Society
Identification and analysis of processes that create social order and forces that generate social change. What kinds of structures make social life coherent so that we all can navigate a wide range of social settings? How do societies sometimes mobilize to alter the status quo, and what kinds of barriers limit those efforts to change social systems? This course engages with such core issues through a sociological lens. Specific topics include: the emergence of social roles and status systems; how social networks matter in communities, schools and other groups; and the performance, reproduction and subversion of privilege and inequality. No prerequisites.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2030 Social Movements
Social movements are collective efforts to produce political, economic and/or cultural change. This course draws on a range of historical and contemporary case studies to analyze such collective actions by interrogating distinctive aspects of movements and their associated campaigns. Key questions include: When and where do movements occur, who participates and why, how do protest strategies and tactics develop, how do police and other movement targets react to challenges to the status quo, and how can we assess the direct and indirect impacts of contention? Introductory level, no prerequisites.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2110 Social Inequality in America
Americans face different challenges and opportunities that depend on a variety of characteristics, including race, class, gender and sexual orientation. This class examines these intersecting categories from a sociological perspective — not simply as ways to classify people, but as social constructions that help to explain social inequality. We examine these systems in a variety of institutional contexts, such as popular culture, family life, education, the criminal justice system and the labor force. Introductory level, no prerequisites.
Credit 3 units. A&S IQ: SSC, SC, SD BU: BA EN: S

L40 SOC 2510 Sociological Approaches to American Health Care
Exploration through the sociological lens of how health, illness, and health care delivery in the United States are influenced by the social structure in which they are embedded. With the backdrop of the ongoing crisis of health care in the United States and the controversy surrounding the Affordable Care Act, we focus on the intersection of diversity factors including such as race, social class, gender, sexuality that predict risks in navigating the health care system. Professionals representing a variety of health-oriented settings and serving the needs of a diverse constituency will share their perspectives. No prerequisites.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2520 Inequality By Design: Understanding Racial/ Ethnic Health Disparities
This course critically examines health status and health care disparities among racial/ethnic minority groups in the United States. The course will utilize sociological, demographic, epidemiological, and psychological concepts to introduce students to racial/ethnic health disparities research. Students will
have exposure to the descriptive demography and epidemiology of health indicators across population groups as well as to the theories used to understand and explain racial/ethnic-health disparities. In particular, the course will examine the ways in which multiple forms of interpersonal and institutional discrimination, neighborhood and community factors, and inequalities in socioeconomic status influence health behaviors, access to health care services, and health status outcomes across racial/ethnic groups. Concepts such as acculturation, patient preferences, provider congruence, and cultural competence will also be explored in this course. Finally, students will be challenged to use the theories and frameworks introduced in this course to develop and present policy approaches to address racial/ethnic disparities in health and health care in the United States.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2580 Families and Social Inequality
Families have changed dramatically in recent decades in the United States. Dual-earner families, single parents, cohabiting families, and blended families are now common in the contemporary family landscape. The prevalence of increasingly diverse and complex family configurations varies substantially by social class, race and ethnicity, and gender. Men’s and women’s work and family lives have also become more similar over time, but gender inequalities in child care remain significant. Drawing on insights from sociology, demography, and economics, this course aims to understand the causes and consequences of social inequalities in family life. We focus primarily on the contemporary U.S. context, but we will also explore historical and cross-national variations in families. The course also considers the role of social policy in affecting inequalities.
Credit 3 units. A&S IQ: SSC, SC BU: BA

L40 SOC 2710 First-Year Seminar: Beyond the Melting Pot: Life in Immigrant America
This course uses a sociological lens to explore contemporary immigration to the United States. The more than 43 million immigrants living in the United States today come from across the globe. Their reasons for migrating to the United States are complex, as are the laws, policies, and social structures they must navigate before and after their arrival. During the first half of the course, we will get to know Mexican immigrants who split their lives between Brooklyn and their small hometown in Mexico; fourth-generation Chinese Americans who are still asked, "Where are you from?"; and West Indian immigrants forced to confront a U.S. racial order in which they are defined by their Blackness. During the second half of the course, we will learn about Iranian-American youth navigating life in post-9/11 America and the challenges of becoming a young adult when you learn you lack any legal status. Who are these immigrants? Why and how did they come here? How well are they and their children integrating into American society? Reading will be drawn from sociological research that opens windows into the lives of immigrants in America. Students will also conduct their own hands-on research to better understand life in immigrant America.
Credit 3 units. A&S: FYS A&S IQ: LCD, SSC, SC EN: S

L40 SOC 2910 Alternative Facts: An Introduction to the Social Construction of Reality
Introduction to the concept of social construction — the idea that our "objective" reality is shaped by our social positions and through social interactions. Recent political events and social conflicts highlight deep divisions in American society, raising critical questions about the media and objectivity (e.g., alternative facts and "fake" news), networks and segregation (e.g., who talks to whom), who gets to decide what is viewed as "truth," and the role of researchers and academia in combating (or contributing to) misinformation. This course explores these questions with a sociological lens. We will use foundational sociological theories to learn how to recognize the existence of multiple realities, and consider the implications of social constructionism for key domains of everyday life, American politics, and the production of knowledge. We will also discuss the ways that cutting-edge technological innovations and academic research can — or cannot — help us distinguish facts from "alternative" facts. Introductory level, no prerequisites.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 301B Individual and Community
Same as L98 AMCS 301B
Credit 3 units. A&S IQ: SSC, SD BU: BA, ETH, IS EN: S

L40 SOC 3030 Introduction to Research Methods
Overview of research methods commonly used to investigate sociological phenomena including experiments, surveys, ethnographic field research, and analysis of existing data. The course explores general issues in sociological research, such as research design, conceptualization and measurement, reliability, validity, sampling and ethical conduct. We also review applications of research methods in specific sociological studies and analyze how research results are communicated. This is a core course in the study of sociology. It has no specific prerequisites, but students should be prepared for intensive study of challenging ideas and the application of these ideas in new contexts relevant to modern society.
Credit 3 units. A&S IQ: SSC, SC, SD BU: BA EN: S

L40 SOC 3050 Statistics for Sociology
Overview of major theoretical frameworks used by sociologists to understand social behavior and group patterns. Explores classical theories, including those developed by Marx, Weber, and Durkheim along with contemporary perspectives such as exchange and feminist theories. Class discussions and writing assignments emphasize application of theory to understand current social experiences and structures. The course has no specific prerequisites, but students should be prepared for intensive study of challenging ideas and the application of these ideas in new contexts relevant to modern society.
Credit 3 units. A&S IQ: SSC, SC, SD BU: BA EN: S

L40 SOC 3212 The Social Construction of Race
Examination of race, ethnicity and racism from a sociological perspective to understand race as a socially constructed
phenomenon manifested in a wide range of social institutions. The course focuses on how race and racism impact contemporary social problems and public policy issues including immigration, affirmative action, education, media representation and work. Application of sociological analysis to understand current race-related events. This course has no specific prerequisites but completion of an introductory course in sociology is recommended before enrollment.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

**L40 SOC 3310 The New Inequality**
Exploration of recent trends of economic inequality in the United States that have reached levels not seen since before the Great Depression. We examine factors that account for the decades-long increase in economic disparities, paying particular attention to patterns in educational attainment, political developments, and the role of technological change. We will also compare recent movements in economic inequality and macroeconomic performance in the U.S. with other advanced industrialized nations. This course has no specific prerequisites but completion of an introductory course in sociology is recommended before enrollment.
Credit 3 units. A&S IQ: SSC, SC, SD, WI Arch: SSC Art: SSC BU: BA EN: S

**L40 SOC 3350 Poverty and the New American City**
Exploration of structural changes that are transforming the American urban landscape, especially for low-income populations. We begin with a review of classic theories of urban poverty and consider their relevance in the modern context. We then analyze key political, economic, demographic and geographic shifts in how urban poverty is organized and reproduced, including gentrification, immigration, social policy reform and the credit crisis. Special attention will be devoted to exploring the social and political implications of changing urban policy approaches, as well as the "suburbanization" of poverty. We will conclude by discussing how urban poverty interfaces with broader social structures, including law, markets and the state. Prerequisite: an introductory course in sociology or consent of the instructor.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

**L40 SOC 3410 Gender in Society**
Introduction to the sociological study of gender. The primary focus is U.S. society, but we will also discuss gender in an international context. From the moment of birth, boys and girls are treated differently. Gender structures the experiences of people in all major social institutions, including the family, the workplace and schools. We will explore how gender impacts lives and life chances. The central themes of the course are historical changes in gender beliefs and practices; socialization practices that reproduce gender identities; how race/ethnicity, class and sexuality shape the experience of gender; and the relationship between gender, power and social inequality. Prerequisite: introductory course in sociology or consent of the instructor.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

**L40 SOC 351 Topics in Sociology**
Improving the health of the U.S. population and reducing disparities in health are national priorities. To reach these goals much research has sought to determine the factors that influence health status beyond health care quality and access. This course explores the broad area of study termed the "social determinants of health," while placing special emphasis on the exploration of health disparities in the United States. We will examine the social conditions that relate to the health of populations with particular attention to how patterns of health vary by social class, race/ethnicity and gender. We will also consider mechanisms that produce and maintain these differences. In addition to sociology, we will draw upon the work of multiple disciplines including public health, demography, anthropology, public policy, economics and medicine to understand what makes our populations sick and what might make them better. Prerequisite: introductory course in sociology or consent of the instructor.
Credit 3 units.

**L40 SOC 352 Topics in Sociology: Growing Up Poor Across America — An Application of Sociological Reasoning to Data**
Advanced seminar on poverty in America, with a special focus on exploring relevant data. The American Dream is built around the idea that anyone, regardless of his or her origins, can have a fair start in life. Yet recent research shows that the promise of the American Dream is uneven across the nation. Poor children growing up in San Jose, CA are three times more likely to escape poverty than those in Charlotte, NC. What might be driving these geographic differences in opportunities for low-income youth? We will investigate factors that might drive these differences by working with interesting data. We will explore cutting-edge research on poverty and mobility in America to develop our own research questions. We will also develop the computational and statistical skills to put our ideas into practice by learning to manipulate data and make graphs that communicate our findings effectively. The ultimate goal of this course is to learn to connect sociological reasoning and understanding of poverty and inequality with data analysis. Prerequisite: introductory course in sociology or consent of the instructor; Introduction to Research Methods (SOC 3030) and/or an introductory statistics course (SOC 3050 or equivalent) are encouraged.
Credit 3 units. BU: BA

**L40 SOC 3550 Sociology of Work**
Sociological understanding of work and, in particular, how work reduces or replicates inequality. Classic and contemporary sociological theories of work; how work in the U.S. has changed over time; and how workers are matched to "good" and "bad" jobs. Threaded through the course is the exploration of barriers to racial, gender, and class inclusion and advancement at work. We will explore how organizational structures, policies and practices can increase or decrease those barriers. Prerequisite: introductory course in sociology or consent of the instructor.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

**L40 SOC 3660 Social Conflict**
Comparative and historical examination of conflict between social groups, including groups defined by race, ethnicity and class. Readings combine classical and contemporary perspectives on collective conflict with in-depth analyses of historical and contemporary episodes. We discuss various
ways in which conflicts can manifest, including the formation and hardening of divisive attitudes, discriminatory lawmaking and criminal justice practices, riots and collective violence, residential segregation, and sustained social movement activity. Prerequisite: introductory course in sociology or consent of the instructor.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 3710 Sociology of Immigration
A review of theoretical and empirical research on how and why people migrate across international borders, and the consequences of international migration for immigrants and natives in the United States. While immigration is one of the most controversial issues in the contemporary United States, these contentious debates are not new. Americans once voiced the same concerns about the economic and social impact of Southern and Eastern European immigrants that today are aimed at immigrants from Latin America, Asia, Africa and the Caribbean. In this course we will compare historical (1880-1920) and contemporary (1965-present) waves of immigration to the United States. We will explore why and how people migrate, immigrant integration, the impact of immigration on native-born Americans, and how government policies — at the national, state, and local level — shape immigrant assimilation and what it means to be considered truly “American” in a social as well as a legal sense. Prerequisite: completion of an introductory sociology course or consent of the instructor.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 3910 Economic Realities of the American Dream
Exploration of the realities of economic life in the U.S. and how they correspond to the American Dream. Interdisciplinary perspectives from economics, sociology and other areas of social inquiry. Emphasis on the consistency between empirical data and different concepts of the American Dream. Specific topics to include sources of economic growth and changing living standards, unemployment, impact of globalization on U.S. citizens, economic mobility, poverty and inequality, and social justice. Prerequisites: Econ 1011 and Econ 1021, or consent of the instructors. Same as L11 Econ 348
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 3950 Culture and Identity: Urban Ethnography in St. Louis
Topics course focusing on instances of identity and culture within the American scope. Varies by semester, refer to course listings for description of current semester's offering. Same as L98 AMCS 330D
Credit 3 units. A&S IQ: HUM Arch: HUM Art: CPSC, HUM BU: BA; HUM EN: H

L40 SOC 4289 Neighborhoods, Schools, and Social Inequality
A major purpose of the course is to study the research and policy literature related to neighborhoods, schools and the corresponding opportunity structure in urban America. The course will be informed by theoretical models drawn from economics, political science, sociology, anthropology, education and law. A major focus is to gain greater understanding of the experiences and opportunity structure(s) of urban dwellers, in general, and urban youth, in particular. While major emphasis will be placed on data derived from the interface of urban environments and the corresponding institutions within them, the generational experiences of various ethnic groups will complement the course foci.
Same as L12 Educ 4289
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 4610 Seminar in Selected Topics in Learning & Memory: Collective Memory
This course provides an overview and analysis of phenomena of people remembering as part of a group — one's country, one's state, one's university, one's family. Collective memories are critical for one's identity, for knowing who we are and how to interpret the world around us. We will consider narcissistic tendencies of group memories in specific contexts (e.g., the Russian vs. American interpretation of world events; views of Trump supporters vs. Clinton supporters on events in the U.S.). The course will range from humanistic, anthropological, psychological, and sociological perspectives on memory.
Prerequisites: Psych 100B and a course on human memory or permission of the instructor.
Same as L33 Psych 461
Credit 3 units.

L40 SOC 4621 Politics of Education
Politics is interpreted broadly to include not just government, but any situation in which people have to solve a problem or come to a decision. This course focuses on schools and the processes through which certain stories, identities and practices are promoted, and others, not.
Same as L12 Educ 462
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC EN: S

L40 SOC 4810 Global Structures and Problems
This course examines social problems around the world and their relationship to globalization — that is, the increasing connectedness of social and economic life across borders. We will look at a range of problems — such as environmental degradation, labor exploitation, human rights abuses, ethnic conflict, poverty, and inequality — and their links to both personal experiences and larger social structures. The course is premised on the idea that to understand current global social problems, we have to understand the evolution of markets, states, civil society and social movements, gender hierarchies, ethnic categories, and global governance over the past century.
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: SSP IS EN: S

L40 SOC 4900 Capstone Paper for Sociology Majors
Independent work linked to the material covered by an associated 300- or 400-level class in sociology leading to completion of a research paper. Work is supervised by the faculty member teaching the associated class. Registration may be concurrent with the associated course or after the course is completed. Successful completion of this paper satisfies the capstone requirement for the sociology major. Students will normally receive 1 credit for this course, but students may register for up to 3 credits with the approval of their faculty supervisor. Open to sociology majors only; register for the section assigned to the faculty supervisor. Prerequisite: approval of faculty supervisor.
Credit variable, maximum 3 units.

L40 SOC 4901 Sociology Honors Thesis
Independent work linked to the sociology honors thesis. Successful completion of the thesis paper satisfies the capstone requirement for the sociology major. Open to sociology majors only; register for the section assigned to the faculty supervisor. Prerequisite: 3 credits of Sociology 4900 in the prior semester, with approval by the faculty supervisor to advance the thesis project. Credit 3 units. A&S IQ: SSC EN: S

L40 SOC 4910 Internship in Sociology
Students may receive up to 3 units of credit for an approved, faculty-sponsored internship that relates to the study and application of sociological material. Credit determined by the number of hours worked. Specific requirements are set by the faculty supervisor in consultation with the supervisor in the organization where the internship work is completed. Students should complete a learning agreement provided by the Career Center. Successful completion of an internship approved by the student’s major adviser satisfies the capstone requirement for the sociology major. Open to sociology majors and minors only; register for the section assigned to the faculty supervisor. Prerequisites: completion of the “Learning Agreement” provided by the Career Center and approval of faculty supervisor. Credit variable, maximum 3 units.

L40 SOC 4950 Research in Sociology
Independent research on a sociological topic directed by a faculty member from the Department of Sociology. The student and the supervising professor will agree in writing on the course goals, requirements, readings, assignments, meeting schedule, and evaluation criteria. The written agreement must be submitted to the department undergraduate administrator before registration will be authorized. Credit variable; maximum 3 units. May be repeated one time for credit with the approval of the supervising professor. Credit variable, maximum 3 units.

Spanish
Speaking Spanish is the key to unlocking the cultures, traditions and experiences of 20 different countries throughout the world. From the medieval knights and Don Quixote to the modern novels by prize-winning authors and the world of film, the Spanish faculty of the Department of Romance Languages and Literatures guides Spanish students into the unexpected territories of Europe and Latin America, which are as rich geographically as they are culturally. Students who major and minor in Spanish graduate with top-notch communication skills. Our students speak Spanish and they speak culture, both of which are valuable professional skills today. The exponential growth of the Spanish-speaking population in the United States, the constant presence of Latin America at the top of America’s political and business agenda, and the continued lure of Spain as a gateway to Europe and parts of Africa make speaking Spanish and the ability to interpret the cultures of Spanish-speaking countries two of the most profitable and enjoyable skills that one can acquire.

Study abroad opportunities complement our courses in St. Louis, and these include summer programs in Peru and Spain and semester programs in Chile and Spain. In addition, our Spanish program is linked to volunteer opportunities with the Latino community in St. Louis. For more information about the Spanish major and minor (https://rll.wustl.edu/spanish), visit our website.

Majors
The Major in Spanish

Required units: 27-30

The Spanish major requires a minimum of 30 units (second majors: 27 units) at the 300 level or above, of which 21 units must be taken in residence. Study within Washington University’s own programs in Spain or Chile is considered “in residence.”

Required Courses
The following courses must be included in the 30 units:

Advanced Grammar and Composition Courses (6 units)
- Span 307D Spanish Level IV: Grammar and Composition (or elective if placed in L38 Span 308E)
- Span 308E Advanced Reading and Writing (L38 Span 308E is now offered instead of L38 Span 308D)

Students who place out of L38 Span 307D through Washington University’s placement exam and consultation with the director of undergraduate studies receive back credits toward graduation but not toward the major. These students need to take another advanced (300- or 400-level) Spanish course to obtain the credits typically obtained through L38 Span 307D.

L38 Span 307D is a prerequisite for the 300-level literature surveys.

Students are strongly encouraged also to take L38 Span 308E before registering for the survey classes, but they may take 308E and their first 300-level survey (listed below) concurrently.
Three Literature Survey Courses (9 units)
Three of the following courses, including one Peninsular and one Spanish-American course:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Span 341</td>
<td>Literary and Cultural Studies in Spanish</td>
<td>3</td>
</tr>
<tr>

</tr>
<tr>
<td>Span 3341</td>
<td>Spanish Literature II in Chile/Spain (Spain)</td>
<td>3</td>
</tr>
<tr>
<td>Span 3361</td>
<td>Spanish-American Literature II in Chile/Spain (Spain/Chile)</td>
<td>3</td>
</tr>
</tbody>
</table>

Notes for students considering 400-level courses and study abroad:

- A minimum of two survey courses are prerequisites for all 400-level courses.
- One literature course taken in the Chile or Spain Romance Languages and Literatures semester programs, designated as an acceptable substitute, may be used as one of the three required 300-level survey courses. Students who still must fulfill a survey on campus after returning from study abroad may, with permission of the director of undergraduate studies in Spanish, petition to take an appropriate 400-level seminar in place of the remaining 300-level survey course. Otherwise, students may not take a 400-level course to replace a required 300-level survey course.

One Culture or Linguistics Survey Course (3 units)
Choose one from the following list:

<table>
<thead>
<tr>
<th>Code</th>

Two 400-Level Seminars (6 units)
Span 405W Major Seminar (selected topics)
Span 410 Major Seminar (selected topics)

Other 400-level class taught in Spanish

- **Beginning in the 2016-17 academic year, students may take 405W or 410 in any combination; 405W will fulfill the College’s Writing Intensive requirement for those who need it.**
- When offered, one of the following language seminars may be substituted for one of the two 400-level literature seminars: Span 417 Spanish Phonetics, Phonology and Dialectology or Span 411 Advanced Grammar and Syntax.
- Span 370 (or consent of the instructor) is a prerequisite for the 400-level linguistics courses taught in Spanish.

Study Abroad:

- One 400-level seminar taken on campus
- Approved 400-level course from the Madrid or Chile program (refer to the Study Abroad guidelines on our website)

Elective Courses (two for single majors; one for double majors)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>

</tr>
</tbody>
</table>

Any other advanced 300- or 400-level Spanish (L38) class taught by a Romance Languages and Literatures faculty member

- Only one elective course taught in English may be taken, when available, for the major.

Study Abroad:

- Span 322 Advanced Conversation in Spain
- Elective credit from semester programs in Santiago or Madrid
- Elective credit from Petitioned, Organization for Tropical Studies, School for International Training, or Comparative Literature programs (refer to the Study Abroad guidelines on our website)
- Spanish courses completed (and approved) from Study Abroad programs other than those offered at Washington University may be used for Spanish elective credit only.
• All Study Abroad credit requires authorization from the director of undergraduate studies.

Other Requirements

Prior to declaring a major, students are required to fill out a questionnaire about their previous preparation and objectives in studying Spanish. As seniors, they may fill out an optional survey about the major. Double-major seniors may elect to do their capstone experience in a 400-level course; single majors must do so. The capstone may be fulfilled through the completion of a 400-level class with a B+ or better or via Honors (refer to the Honors Requirements on our website). All qualified majors in the school of Arts & Sciences may elect to meet the requirements for honors. To be eligible to earn honors in Spanish, Spanish must be the student's prime major.

Recommended for prospective teachers:
1. A second language
2. Span 466, Span 467, Span 469, Span 413, Span 417 and Span 411
3. A semester or year in Spain or Chile

Recommended for prospective graduate students:
1. A second language related to the student's area of interest
2. Advanced work in other literatures, literary criticism and theory, and related course work in other literature or film programs
3. A year in Spain or Chile
4. Senior Honors by thesis or course work (refer to the Honors Requirements on our website). Students who have maintained a minimum cumulative grade-point average of at least of 3.65 through the end of the junior year are encouraged to work toward Latin Honors (cum laude, magna cum laude, summa cum laude).

Minors

The Minor in Spanish

Units required: 18

The Spanish minor includes 18 units, of which 12 must be taken in residence. Students must complete courses with a grade of B- or above and maintain a B average or better overall in Spanish. Courses taken on a pass/fail basis do not count toward the Spanish minor.

Required Courses

Advanced Grammar and Composition Courses (6 units)

• Span 307D Spanish Level IV: Grammar and Composition (or elective if placed in 308E). Spanish 307D is a prerequisite for the 300-level literature surveys.
• Span 308E Advanced Reading and Writing (Spanish 308E is now offered instead of 308D). Students are strongly encouraged to take Spanish 308E before registering for the 300-level survey classes, but they may take 308E and their first 300-level survey concurrently.

Two Literature and Culture Survey Courses (6 units)

Two of the following courses, including one Peninsular and one Spanish American course:

Notes for students studying abroad and/or students considering the major in Spanish:

• A minimum of two survey courses are prerequisites for all 400-level courses.
• One literature course taken in the Chile or Spain Romance Languages and Literatures semester programs, designated by the department as an acceptable substitute, may count as one of the three required 300-level surveys. Students who return from Study Abroad needing to complete one outstanding survey may, with permission of the director of undergraduate studies, petition to take an appropriate 400-level seminar in place of the remaining 300-level survey. Students who do not receive approval from the director of undergraduate studies may not take a 400-level course in place of a required 300-level survey course.

One Culture or Linguistics Survey Course (3 units)

One of the following courses:
to three hours of class, students complete weekly, assessed independent learning activities with multimedia resources. Prerequisite: Span 101D or placement by examination. Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L38 Span 201D Intermediate Spanish II
An accelerated intermediate-level grammar review taught by a team of instructors in a MWF grammar class and a T/TH literature/composition class. Reviews basic and some advanced skills intensively with increased emphasis upon reading, writing, culture, and vocabulary learning. Prerequisite: Span 102D or placement by examination. Students must register for both a T/TH and a MWF class. Credit 5 units. A&S IQ: LCD, LS BU: HUM

L38 Span 202 Intermediate Spanish II
The second half of a two-semester intermediate-level sequence. This class continues to review basic knowledge and to introduce advanced skills in grammar, reading, writing, culture and vocabulary. Prerequisite: Span 201E or placement by examination. Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L38 Span 223 Intermediate Spanish Conversation and Culture
Practice of spoken Spanish and expansion of vocabulary in a wide range of topics. Discussion and role play based on short readings, music and film. Use of the World Wide Web for up-to-date news and culture. Oral presentations and limited writing. Prerequisite: 201D or equivalent. Concurrent enrollment in Span 307D recommended. Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L38 Span 245 Women’s Fiction in Contemporary Spain
This course focuses on selected novels and short stories by 20th-century women writers in Spain, beginning with those writing during the post-Civil War years (1939-1975) and ending with the new generation of women writers who emerged after the end of the Franco dictatorship (post-1975). Discussions center on both political and aesthetic issues in the contexts of post-war and post-Franco Spain, including the effects of political repression and censorship; representations of gender and sexuality; and literature’s relationship to feminist and nationalist movements in Spain. When relevant, other cultural media, such as film and music, are used in conjunction with our reading and analysis of literary texts. The course is taught in English. Credit 3 units. Art: HUM BU: IS EN: H

L38 Span 246 First-Year Seminar: Latin American Women in History and Culture: Icons and Idols
In English. This class takes an in-depth look at various iconic female figures in the history of Latin America, examining their (self-) representation in history, literature, art and other cultural manifestations. We examine their lives, writings and art to learn more about the historical and cultural moment they

**Courses**

lived in; how this moment shaped their lives and how they, in turn, shaped their historical moment. We aim to draw the larger conclusions of how women in history, despite hostile circumstances, have managed to forge political, cultural and artistic identities and make an impact on the world around them. We study these women in a chronological fashion, showing how society’s attitudes changed toward women and how, in some ways, paradoxically, stayed the same. The women we study are all very different in terms of identity, historical period and sociocultural background but all are similar in terms of their desire to overcome convention and resist repression — sometimes with very tragic results. Figures we study include La Malinche, Sor Juana Inés de la Cruz, Manuela Saenz, Delmira Agustini, Frida Kahlo, Eva Perón, the Mothers of the Plaza de Mayo, Rigoberta Menchú and Ingrid Betancourt. Prerequisite: concurrent registration in individually appropriate level of Spanish language course is required. Credit 3 units. A&S: FYS A&S IQ: HUM, LCD BU: IS EN: H

L38 Span 247 First-Year Seminar
Same as WGSS 247. Taught in English. Small group seminar devoted to readings and study of other texts such as films, paintings, etc., active discussion, writing. Topics vary; interdisciplinary focus. Credit 3 units. A&S: FYS A&S IQ: HUM, LCD BU: ETH EN: H

L38 Span 251 Latin American Nomads and Travelers
Rites of passage and trespassing representing Latin American immigrants, nomads and travelers in narrative and film. This course is designed to map the multicultural context of travel, nomadism, displacement and immigration while studying narrative texts (Before Night Falls; Heading South, Looking North; Life on the Hyphen; Translated Woman: Crossing the Border With Esperanza’s Story) and films (El Norte, Gringuito, Old Gringo, Stand and Deliver) by Latin American and Latino authors. We look at the images, metaphors and myths that pervade current conceptualizations of the borderlands and explore the variety of ways in which postcolonial rites of passage and trespassing inform the aesthetics of contemporary Latin American cultural expression. In English. Credit 3 units. BU: IS

L38 Span 252 Introduction to Latino/a Studies: Exploring Memory
The course is an interdisciplinary introduction to Latino/a Studies, a discipline that studies the experiences and conditions of U.S. Latinos drawing from both the Social Sciences and Humanities. The course presents and analyzes works that include methodological strategies and analytical approaches to learning about U.S. Latinos. We analyze the social, political, and cultural forces that have affected the experiences of Latinos/as with particular attention to the ways in which historical, collective, family, and personal memories have shaped and continue to shape these experiences. We explore the intersections of history, place and identity through a selection of works, including literary and media studies, in order to understand the principle questions and concerns in the major fields of interest to U.S. Latino Studies. Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 299 Undergraduate Independent Study
Prerequisites: Span 201D and permission of the department. Credit variable, maximum 3 units.
guest lecturers. Conducted in Spanish. Requirements: two short papers, short reports in class of the news or a cultural activity students have attended, and participation in class discussions. Course includes an all-day cultural excursion on Saturday, which features a visit to one of Neruda's houses, a history museum, etc.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L38 Span 317 Advanced Spanish Language in Chile/Spain
Continued study of Spanish grammar and syntax at Washington University's program in Chile or Spain. A course designed for non-native speakers of Spanish to refine mastery of difficult uses and structures in all four skills. Prerequisite: placement by exam or program director.
Credit variable, maximum 4 units.

L38 Span 3181 Spanish Culture and Civilization
This course is intended to acquaint students with important aspects of Spanish culture, including history, civilization, society, politics and the arts, dating from the first invasions of the Peninsula to the present. Students gain an awareness of the ethnic, cultural and aesthetic diversity of Spain as a country of multiple autonomous regions, by working with written texts and other media and by visits to various locations. The broader aim of the course is to enable students to engage with and to analyze Spanish culture from an intellectually critical perspective and knowledge of its sociohistorical distinctiveness. Requirements include active participation within all classes and excursions, presentations and various written assignments. This course is taught in Madrid, as part of the Washington University Carlos III Program. Conducted in Spanish.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM BU: IS EN: H

L38 Span 322 Advanced Conversation in Spain
Designed to offer students with advanced skills in Spanish an opportunity to refine their ability to discuss a variety of topics. Various media such as films, television, newspapers and other modes of communication are used for oral presentations and some writing. Prerequisite: Span 301, 307D or 308E, or multiple 300-level courses.
Credit 3 units. A&S IQ: LCD EN: H

L38 Span 325 Exploration, Traveling and the Double Gaze: Mapping Geography and Identity in Colonial Spanish America
In this course we examine the geographical, cultural and ideological mapping as described in the travel/exploration chronicles of the 16th, 17th and 18th centuries. We focus on the Southern hemisphere (Peru) as well as the Northern Frontier (Mexico, New Mexico, La Florida, Colorado) while reading narrative texts such as Columbus' Diario, Cabeza de Vaca's Naufragios, Inca Garcilaso de la Vega's The Florida of the Inca, Francisco Vásquez de Coronado's Narratives of the Coronado Expedition, and Alonso Carrió de la Vandera's El Lazarillo de ciegos caminantes (guide for travelers in 18th-century Spanish America). We use art work and historical maps for our study of the cultural and ideological representations of alterity and of the geography of the colonial empire. In English.
Credit 3 units.

L38 Span 331 Hispanic Art/Arte Hispano
This course focuses on the most important movements, artistic expressions and its representatives of the art history of Latin America and Spain. From the Pre-Columbian art of the Mayas, Aztecs and Incas, to the syncretism of Postcolonial Latin American art, the Mexican Muralism and the self-reconstruction portraits of Mexican artist Frida Kahlo to the Chicano Art in the USA. From the Medieval paintings of religious Spain, to the criticism of the Spanish nobility by Diego Velazquez, the Spanish Civil War of Guernica by Pablo Picasso, to the Surrealism of Salvador Dalí and Antonio Gaudí. The students visit the St. Louis and the Kemper Art Museums. Prerequisite: Span 308E. May be used for elective credit in the Spanish major or minor. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L38 Span 3321 Spanish Film Studies in Spain
An introduction to contemporary Spanish film taught at Washington University's program in Spain. Prerequisite: approval of Washington University's program director.
Credit 3 units. BU: IS

L38 Span 3331 Spanish Literature I in Chile/Spain
Introductory survey of Spanish literature from its beginnings in the Middle Ages to the baroque period at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent.
Credit 3 units. Art: HUM

L38 Span 3332 Early Modern Spanish Texts: Whose Golden Age Do They Represent?
This course studies a series of work from 16th- and 17th-century Spain canonized by later readers as classics of national Spanish literature, that daringly experiment with the literary genres of their period to incorporate discourses from daily life, thereby revealing the decadence of imperial Spain and questioning the representation of this period as a "Golden Age." Includes the Lazarillo de Tormes, El Abencerraje, Fuenteovejuna, La vida es sueho, La dama boba and short narratives by Cervantes and María de Zayas. Prerequisites: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD, LS, SD BU: IS EN: H

L38 Span 3334 Medieval Iberia: A World with Many Faces, Through its Texts and Other Cultural Artifacts
This course offers a panoramic vision of the medieval literature of the Iberian Peninsula, from its beginnings until the end of the Middle Ages (11th to 15th centuries). We read student modernized and annotated versions of some of the most famous works of this period, originally written in Castilian: lyric and epic poetry, ballads, miracles and exemplary stories, and the first act of Celestina. This selection includes works written by Christian, Hispano-Arabic and Hispano-Hebrew authors, and also some works originally written in other languages of the Peninsula (Arabic, Hebrew, Portuguese and Latin), that were translated into Castilian during the Middle Ages and are now considered part of the corpus of Castilian literature, because they significantly influenced Castilian authors of this and later periods. We also use music, art, images of old manuscripts and books, and secondary readings that help us better understand the cultural context of this period. Our discussion of the texts include topics
such as the relations among the three main Cultures of the Peninsula: Arabic, Jewish and Christian, the role of the Christian Church in medieval society, the situation of minority and women, the presence of oral tradition in written texts, and the creation and spread of manuscripts and early printed books. Prerequisite: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. Credit 3 units. A&S IQ: HUM, LCD, LS, SD BU: HUM BU: IS

L38 Span 3341 Spanish Literature II in Chile/Spain
An introduction to key texts from Spanish literature in the 19th and 20th centuries at Washington University’s program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. Art: HUM

L38 Span 334C Spanish Literature II
An introduction to key texts from Spanish literature and culture in the 19th, 20th and 21st centuries in their specific historical contexts. Topics may include encounters between Arabs, Christians and Jews in the Iberian peninsula; issues of gender and sexuality; the modern city; discourses of nationalism; the Spanish Civil War; the Francoist dictatorship; transition to democracy; and contemporary challenges in an increasingly multicultural and multiracial society. Prerequisites: Span 307D; concurrent registration in Span 308E is allowed; completion of Span 308E is recommended. In Spanish. Credit 3 units. A&S IQ: HUM, LCD, LS Art: HUM BU: IS

L38 Span 3351 Spanish-American Literature I in Chile/Spain
A survey of major figures and literary trends in Spanish America from 1492 to Modernismo (1880); at Washington University’s program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. Art: HUM

L38 Span 3352 Spanish-American Literature of the Long 19th Century: From Empire to Nation
This survey examines the changing roles of literature and its creators during the period that saw the end of the powerful Spanish empire and the emergence of the political framework of independent nations we are familiar with today. Students are introduced to prominent themes such as independence writing, the experience of race in literature, romanticism, civilization vs. barbarism, the appeal of literature to popular classes, modernismo, the place of literature in nation building and in shaping national identity, and the idea of the past as present. Prerequisites: Span 307D or permission of instructor; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. In Spanish. Credit 3 units. A&S IQ: HUM, LCD, LS EN: H

L38 Span 335C Spanish-American Literature I
A survey of major figures and literary trends in Spanish America from 1492 to Modernismo (1880). Emphasis on the writings of either Colón or Columbus, Cortés, Bernal Díaz, Las Casas, Inca Garcilaso de la Vega; and Aztec reactions to the Conquest in the early period and on Sor Juana in colonial times. After the period of independence from Spain (1810–1824), the focus is on the literary representation of the making of the new nations and cultural autonomy. Readings include chapters of a picaresque novel, the representation of dictatorship, civilization vs. barbarism, the gaucho epic, and 19th-century fiction. Lectures and class discussions of the readings; exams, papers and short reports. Prerequisites: Span 307D; concurrent registration in Span 308E is allowed; completion of Span 308E is recommended. In Spanish. Credit 3 units. A&S IQ: HUM, LCD, LS Art: HUM BU: IS

L38 Span 3361 Spanish-American Literature II in Chile/Spain
A survey of major Spanish-American literary works from the end of the 19th century to the contemporary period at Washington University’s program in Chile or Spain. Prerequisite: Span 308E or the equivalent. Credit 3 units. Art: HUM

L38 Span 336C Spanish-American Literature II
A survey of major Latin American literary works focusing on canonical works of the 20th and 21st centuries in their cultural and historical contexts. The course includes discussions of major literary movements such as the avant-garde, the Boom and the post-Boom. Other topics may include the literary and cultural responses to revolution, dictatorship and the evolving definitions of Latin America. Authors may include Quiroga, Neruda, Guillén, Vallejo, Borges, Cortázar, Ruíz, Carpentier, García Márquez, Poniatowska, Fuentes, Ferré and others. Prerequisites: Span 307D; concurrent enrollment in Span 308E is allowed; completion of Span 308E is recommended. Credit 3 units. A&S IQ: HUM, LCD, LS Art: HUM BU: IS

L38 Span 337C The Chilean Short Story
In this course we trace the trajectory of the short story in Chile in the 20th century with special attention to such literary movements as realism, naturalism, vanguardism, surrealism and the new narrative, including the literature written during the dictatorship. The course tries to determine what specifically can be expressed about national identity through narrative, and is informed by historical, political and sociological analyses. The course includes several field trips to related sites and guest lectures by major Chilean writers and critics. Class requirements include a short essay, a long final essay and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. Conducted in Spanish. Credit 3 units. Art: HUM

L38 Span 340 Nationalism in Action: The Spanish-American War
We study nationalism as it was in evidence in the Spanish-American War in the United States and in Spain as an outgrowth of each country’s history. We read periodicals of the period and study caricatures and other artistic expressions, as well as writings by authors such as Stephen Crane, Galdós, Mark Twain, Fernando Ortiz, Ivan Musciant and others. Cuba, Puerto Rico and the Philippines are included in the scope of the course. Students are expected to present a book report orally and to write it formally; in addition, a term paper of about 15 pages on a topic chosen in consultation with the instructor serves as a final project. The course is conducted in English although students able to read other languages may do some of the readings in the original. May count as elective credit for the major if work is done in Spanish. Enrollment limited to 15 students. Credit 3 units.

L38 Span 341 Literary and Cultural Studies in Spanish
This course is an introduction to cultural and literary analysis within Iberian and Latin American cultures. The course covers a wide variety of materials that span different countries, historical
periods, and various cultural and literary forms. The main objective of the course is to introduce students to key historical, geographical and political aspects of these cultures, while at the same time applying different approaches of cultural analysis. The course is structured upon key central concepts as they are particularly related to the cultures of the Iberian Peninsula and Latin America, such as nation, colonialism/ postcolonialism; modernity and postmodernity; popular and visual media; gender, race, migration and social class. The course combines the reading of literary texts, films and other cultural forms, with the examination of introductory critical works related to the key concepts that are explored throughout the semester. Prerequisites: Span 308E or concurrent enrollment in 308E. Taught in Spanish.

Credit 3 units. A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

L38 Span 342 Iberian Literatures and Cultures

Which are the cultures that shape what Spain is today? This course explores the diversity of the Iberian Peninsula through its literatures and cultures. As part of both the Mediterranean and Western Europe, the Iberian Peninsula has been shaped through a dynamic of conflict and negotiation between various cultures, languages and religions. Students engage themes such as internal colonization, imperialism, multiculturalism, regional identities, nation formation, migration, media and popular culture, modernization, and gender and race relations, as they relate to our understanding of the country today. Focuses may include but are not limited to the following: multiculturalism of the Middle Ages, the Muslim and Jewish presence in Spain, identity narratives and power relations, stage and performance traditions, as well as authors and artists like Cervantes, Galdós, García Lorca, Picasso, Almodóvar. Prerequisites: Span 308E or concurrent enrollment in 308E. Taught in Spanish.

Credit 3 units. A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

L38 Span 343 Latin American Literatures and Cultures

How did Latin America become Latin America? This course explores the different inventions and reinventions of the region through its literatures and cultures. Beginning with the encounter of Europeans with America, students engage themes like colonization and colonialism, urban and rural cultures, nation formation, modernization, media and popular culture, as well as gender and race relations. Authors studied may include Colón, Sor Juana, Sarmiento, Neruda, Borges, García Márquez, or Morejón. Prerequisites: Spanish 308E or concurrent enrollment in 308E. Taught in Spanish.

Credit 3 units. A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

L38 Span 349 Don Quixote in Translation

Because Cervantes' masterpiece is considered to be the first modern novel, it is absolutely essential to any understanding of literature as a whole. By way of a close textual reading, this course focuses on all the ways Don Quixote recapitulates almost the entire Western tradition and how it anticipates so many of the later developments of the novel. Course conducted in English.

Credit 3 units. Art: HUM

L38 Span 350 Undergraduate Seminar in Spanish Literature and Culture

Taught in Spanish. Topics vary. Can be repeated for credit. This course can be counted as one of the three surveys required to obtain a Spanish major. Prerequisites: Span 307D; concurrent registration in Span 308E is recommended. Satisfies the 300-level literature survey requirement for the Spanish major and minor.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM

L38 Span 3501 Latin American Women Writers in Translation

Study of major 20th-century women writers in English translation. We read poems, plays, essays and short fiction by authors such as Agustini, Ocampo, Mistral, Bombal, Gambaro, Ferré, Valenzuela and others. Class conducted in English. Spanish majors do the readings and papers in Spanish. Enrollment limit 25.

Credit 3 units. Art: HUM BU: IS

L38 Span 3502 Spanish-American Short Novel

Credit 3 units. Art: HUM BU: HUM

L38 Span 3503 Fiction, Crime and Enigma: Clues to Detective Narrative from the Americas

Ever since the detective story took readers by storm during the last decades of the 19th century, the genre of detective fiction has continued to flourish while undergoing numerous transformations. Latin American literature is well known for the alternative re-readings of the crime fiction canon by well-established writers who broke canonical rules of classical and hard-boiled detective narrative and both parodied and politized the genre through endless experimentation. In this course, we focus on the intersection of action and enigma, clues and patterns of a crime, the unraveling of a puzzle and the solution of a mystery in narratives by Poe, Borges, Chandler, Hammett, Valenzuela, Piglia, García Márquez and others, as well as in selected films based on their works. In English.

Credit 3 units. Art: HUM

L38 Span 3504 The Spanish Short Story During the Past 50 Years

An explosion of storytellers: the rise and fall and rebirth of a genre. This course reviews a half century of short fiction in Spain, emphasizing the works written since 1970. We focus on the most significant, representative movements in relation to their historical and social contexts. Writers studied include Camilo José Cela, Miguel Delibes, Ignacio Aldecoa, Ana María Matute, Carmen Martín Gaite, Juan Benet, José María Merino, Luis Mateo Díez, Esther Tusquets, Cristina Fernández Cubas, Soledad Puértolas, Javier Marias, Antonio Muñoz Molina and Mariona Mayoral. Prerequisites: Span 307E; concurrent registration in Span 308D is recommended. Paper, midterm and final exams. In Spanish.

Credit 3 units. Art: HUM

L38 Span 3505 Borges in Translation

Comprehensive study of Borges' major works. Analysis of basic themes, philosophical implications and structural elements
present in Borges' poetry, essays and short stories. We also study a number of film adaptations of Borges' work, as well as a number of texts by writers he has influenced.
Credit 3 units. Art: HUM

L38 Span 3506 Women Writers of Early Modern Spain
This course analyzes early modern women's writings (both secular and religious) by considering sociohistorical context, genre studies (autobiography, convent narratives, short prose fiction, poetry and theater) and feminist criticism. Critical approaches included consider issues of self-representation and subjectivity; performance; mysticism; life writing; feminist and lesbian utopias; cross-dressing; the body and spirituality; and the role of the Inquisition and confessors in the collaborative process of confessional writing. Class conducted in English. Spanish majors do the readings and papers in Spanish.
Credit 3 units. Art: HUM

L38 Span 351 Business Spanish
Study of language and structures used in conducting business in the Hispanic world. We use actual materials from various businesses — advertising, marketing, real estate, accounting. Particular stress on speaking and writing. Prerequisite: Span 308E or permission of instructor.
Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L38 Span 353 Medical Spanish
Designed for future medical professionals, this course provides students with a complete vocabulary and cultural sensitivity necessary for treating Spanish-speaking patients. While the main focus is oral/aural, written exams, varied reading and some research are required. Volunteer work recommended for enrolled students. Advanced students are given priority. Prerequisite: Span 307D.
Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L38 Span 354 A View from the Southern Cone: Perspectives on Art, Literature and Culture
This course deals with current issues of cultural, social, political and literary importance related to the Southern Cone. We study selected texts from Argentina, Chile and Uruguay as well as contemporary films and drama productions. This course seeks to determine what specifically can be expressed about national identity, globalization and the environment as these countries face the 21st century. Course requirements include four short essays and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. May be repeated for credit. Conducted in Spanish.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L38 Span 355 Spanish for the Social Sciences
This is an advanced Spanish language course designed to develop conversational, writing and listening skills for students in the social sciences. Students will learn and use the language in a content-based format, guided by culturally sensitive readings, discussions and activities. Prerequisite: Spanish 307D. In Spanish.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

L38 Span 360 Literature Topics Course in Spain
Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prerequisite: approval of Washington University's Madrid Program director and Carlos III.
Credit variable, maximum 3 units. Art: HUM

L38 Span 3601 Cultural Studies Topics Course in Spain
Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prerequisite: approval of Washington University's Madrid Program director and Carlos III.
Credit variable, maximum 3 units.

L38 Span 370 Introduction to Hispanic Linguistics
An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax) and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages.
Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L38 Span 380 Topics in Hispanic Cultures
This course surveys cultures in specific contexts (Latin America and Spain) and in different historical periods, from the Middle Ages to the present. The course provides students with critical and methodological tools in order to carry out an articulate and informed cultural analysis. Prerequisites: Span 307D; concurrent registration in Span 308E is recommended. In Spanish. Topics vary from semester to semester. Consult section description for current offering.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L38 Span 400 Intensive Translation for Graduate Students I
Designed to help graduate students in the humanities, social and natural sciences fulfill their PhD language requirement, this is the first part of a two-semester course sequence in reading and translating Spanish. Non-graduate students may enroll with permission of the department. Must be followed by Span 401.
Credit 3 units. A&S IQ: LCD EN: H

L38 Span 401 Intensive Translation for Graduate Students II
Designed to help graduate students in the humanities, social and natural sciences fulfill their PhD language requirement, this is the second part of a two-semester course sequence in reading and translating Spanish. Non-graduate students may enroll with permission of the department. Credit for Span 400 is contingent on completion of Span 401.
Credit 3 units. A&S IQ: LCD EN: H

L38 Span 4013 Second-Language Acquisition and Technology
This seminar, for undergraduate and graduate students, transforms research and theory about second-language acquisition into practice while focusing on technology-driven
applications. The course fosters professional development as participants formulate critical skills for evaluating, creating and integrating technology into the language classroom. Course formats include readings, discussions and demonstrations with technologies. The course is now open to undergraduates. Graduate students can enroll whenever it suits their course planning. The course counts for the Graduate Certificate in Language Instruction and for the undergraduate minor in applied linguistics. This course carries the Social and Behavioral Sciences attribute and can be taken as an elective in several different programs.

Same as L12 Educ 4023
Credit 3 units. A&S IQ: SSC  EN: S

L38 Span 405W Major Seminar
An undergraduate seminar. Topics vary. This is a writing-intensive course, which requires a minimum of three papers of approximately four to five pages in length, with rewrites; 50 percent of the grade must come from written work. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L38 Span 406 The Spanish Symbiosis: Christians, Moors and Jews
This course explores the contributions of Christians, Muslims and Jews in the Spanish peninsula, which led to what historians have called a convivencia (the peaceful and productive coexistence of these groups in medieval Spain), albeit an arrangement that was often troubled and tested. Among the topics studied are the Visigothic kingdom, the "Golden Age" of Muslim and Jewish Spain, the reconquista (reconquest; a series of campaigns by Christian states to recapture territory from the Moors), the age of Alfonso X, the Inquisition, the conquest of the New World, the expulsion of the Jews and the Moriscos (Moors), and the formation of modern Spain. We read historical accounts by Vives, Américo Castro, Benassar. Literary texts in translation include some of the greatest works of the Spanish tradition: The Cid, The Celestina, Galdós' Compassion, Goytisolo's Count Julian, Ardisi's 1492 and excerpts from Fuentes' Terra Nostra, among others. Pertinent films are discussed in class. Prerequisite: reading knowledge of Spanish, Hebrew or Arabic, or permission of instructor.
Credit 3 units. Art: HUM

L38 Span 407 Seminar in Spain: Cultural Encounters
The Spanish, Latinos and non-Hispanic North American vis-a-vis "the Other." Designed to study the historical and ideological bases of attitudes and mutual perceptions that inform these three cultures' understanding of each other. Analysis of literary and extra-literary representations of the three identities in question teach students to think critically about the cultural, religious and political foundations of intercultural perceptions. Washington University students' experiences living in Spain provide a context for them to examine their own attitudes about "Hispanidad," as well as to learn about their own cultures (American, "Latino") as they are understood from abroad. Study of theoretical concepts of identity, ethnicity, minority, gender, culture and intercultural communication enables students to participate in practical discussions based on observation and experience with an objective, critical understanding of how they perceive and are perceived by others. Fulfills 400-level literature course requirement for the Spanish major. Prerequisites: Span 307D, Span 308E and two 300-level literature surveys or the equivalent in Spanish. Course taught in Madrid, Spain, through the Washington University Madrid Program.
Credit 3 units.

L38 Span 408 Topics in Medieval Literature and Culture
This is a writing-intensive course that requires a minimum of three papers of approximately four to five pages in length, with rewrites; 50 percent of the grade must come from written work. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. In Spanish.
Credit 3 units.

L38 Span 410 Major Seminar
An undergraduate seminar. Topics vary. Prerequisites: Span 307D and Span 308E and at least two 300-level literature surveys taught in Spanish. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L38 Span 411 Advanced Grammar and Syntax in Spain
This course presents a detailed study of Spanish syntax. Different theories (including generative theory) as well as the relationship between (morpho) syntax and other linguistic subsystems are considered. Special attention is also given to Spanish/English contrasts of particular interest to language learners and teachers. Prerequisites: 6 units of 300-level Spanish, or permission of instructor.
Credit 3 units. A&S IQ: LCD EN: H

L38 Span 4111 Advanced Grammar and Syntax in Spain
Detailed study of contemporary Spanish syntax. Special attention to fine points of grammar and syntax necessary for communication at the advanced level, taught at Washington University's Carlos III Program in Madrid. Prerequisite: placement by exam.
Credit variable, maximum 4 units.

L38 Span 4112 Bilingual Advanced Grammar and Syntax in Spain
Detailed study of contemporary Spanish syntax for bilingual students, taught at Washington University's Carlos III Program in Madrid. Prerequisite: placement by exam or program director.
Credit 3 units.

L38 Span 413 Linguistics and Language Learning
The course, taught in English, provides a critical survey of various components involved in the relationship between linguistics and language learning. The course emphasizes the language learner and explores dimensions of second-language acquisition. The course begins with an examination of linguistic theories and then highlights the influence of linguistic theories on L2 acquisition research. The course then moves to an exploration of research on language and the brain. With this foundation, the course covers both internal and external factors related to language acquisition, such as language aptitude, age, gender, memory, prior knowledge, etc. In summary, theoretical and research dimensions of both linguistics and language learning are treated. This course counts as a requirement for the Graduate Certificate in Language Instruction and for the undergraduate minor in applied linguistics. Prerequisite: Ling 170 is recommended but not required.
Same as L12 Educ 4111
L38 Span 416 Introduction to Hispanic Linguistics
An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages. Preceptorial for undergraduates only.
Credit 3 units. A&S IQ: LCD BU: IS EN: H

L38 Span 417 Spanish Phonetics, Phonology and Dialectology
This course, conducted in Spanish, explores the linguistic varieties of the 21 Spanish-speaking countries from both a historical and a synchronic perspective. The course begins with a traditional look at Spanish phonetics and phonology, with all students memorizing and utilizing the International Phonetic Alphabet. Course readings and discussions extend beyond the descriptive and include a search for the sources of language variation within the Spanish-speaking world. Particular attention is devoted to language contact and bilingualism. Students read in areas such as history, sociolinguistics, dialectology and sociology, as well as traditional linguistic studies, in designing their projects concerning phonetics, phonology and dialect diversification.
Credit 3 units. A&S IQ: LCD BU: IS EN: H

L38 Span 419 Feminist Literary and Cultural Theory
This course intends to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisites: advanced course work in WGSS or in literary theory (300-level and above) or permission of the instructor required.
Same as L77 WGSS 419
Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM EN: H

L38 Span 420 Captivity and Its Consequences: Horror, Desire and Nostalgia in Colonial Narratives
The objective of this course is to examine the formation and evolution of narratives of captivity in Latin American texts and their visual representations from the first indigenous and European contacts to the end of the colonial period. Prerequisite: Span 307D, Span 308E and at least two 300-level courses taught in Spanish; in Spanish.
Credit 3 units.

L38 Span 421 Argentinean Literature
Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 421 Spanish-American Literature of the Colonial Period
A selective survey of the literature of the three centuries between the first encounters of the European and American Indian cultures and independence from Spain. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units. Art: HUM

L38 Span 423 Trotaconventos, Celestina & Co.: Go-Betweens, Love, Witchcraft and Other Related Subjects
In this course we study how the literary figure known as the “go-between” evolved in Spanish literature, from its origins in Roman literature, the Cantigas and the Exempla, to its culmination in the Libro de buen amor and the Tragicomedia de Calisto y Melibea, also called Celestina. We also read a selection of texts that were influenced by Celestina and examine how their authors recreated Celestina’s characters and theme. Our analysis of the go-between leads us to a series of reflections about various related subjects, including the literary representation of love, the uses of language and magic as instruments of manipulation and power, and the ethical problems associated with such uses. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Preceptorial for undergraduates only; in Spanish.
Credit 3 units.

L38 Span 424 Latin American Literature and Theory: Reading the State, Culture and Desire
In this course, we pair literary and theoretical texts in order to hone a way of reading in which theory and literature are mutually informative, provocative and inspiring. The idea of these loose groupings is not to prescribe a particular relationship between given literary and theoretical texts but rather is a way to begin negotiating the necessarily multiple relationships of theory and literature. These pairings come to seem more artificial over the course of the semester as we trace a network of relations that begins to look more and more like the Borgesian map that covered up the entire territory it described. The object of the course is, thus, not to define or prioritize a particular set of relations but rather to practice a way of reading literature theoretically and theory literarily, by which the strengths of both are allowed to come to the forefront in their complexity. Thematically, the course has several nuclei: the triangulation of State, culture and art (Piglia/Foucault, Burman/Tolstoy, Borges/Bolaño/Zizek, Lispector/Lacan, Cixous, as well as the films Garage Olimpo and Historias mínimas). Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units. A&S IQ: HUM, LCD EN: H
L38 Span 425 Humanism, Magic and Rhetoric in 15th-Century Castilian Literature
This course offers a panoramic view of 15th-century Castilian literature. We study a selection of texts produced both in the Castilian court and in some centers of higher learning, especially the University of Salamanca. The secondary readings help us to better understand the cultural context of the time and deepen our knowledge of four subjects that were highly present in the minds of 15th-century authors: humanism, rhetoric, love and magic. Because some of the texts selected for this course were written by (or have been attributed to) "converso" authors, we also examine the phenomenon of "converso" literature.
Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. One hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 426 Latin American Theater
Survey of dramatic and theatrical currents from the late 19th century to the present. The course focuses on tracing the themes of nationalism, cultural identity, immigration, class displacement and the effects of consumerism in representative plays from the Rio de la Plata, Chile, Colombia and Mexico. The course studies manifestations of the sainete, the grotesco criollo, theater of the absurd, as well as the popular independent theater movements of the 1960s and '70s. Theoretical works studied include those of Brecht, Piscator, Esslin. Authors studied: Dragún, Payró, Cossa, Wolff, Sánchez, Díaz, Carballo, Gambaro, Buenaventura. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units.

L38 Span 4261 The Erotics of Violence in Latin America
The course is based on a combined analysis of theories on violence, nation and urban spaces, and the study of literary texts pertaining to the Latin American post-Boom. Some of the authors be studied are Ricardo Piglia, Fernando Vallejo, Joge Franco, Roberto Bolaño, Mario Mendoza, Laura Restrepo, Evelio Rosero, Santiago Roncaglilo, Alonso Cueto, Martin Kohan, Guillermo Arriaga, Daniel Alarcón, Paulo Lins, etc. The course is conducted in Spanish and focuses on the interconnections between sexuality, violence and political issues, and on the discursive strategies used for the representation of collective subjectivities and social conflict in Latin American societies.
Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 4281 Creative Difference: Reclaiming Spanish-American "Traditional" Novel
This class focuses on a selection of aesthetically and socially representative 19th- and early 20th-century Spanish-American novels. Integrating a wide range of sources (critical essays, paintings, film), we explore abolitionist issues in Sab (Cuba), the reinvention of Amerindian legacies in Aves sin nido (Peru), and the different facets of modernization and nation-building in Los de abajo (Mexico) and La vorágine (Colombia). Students should finish the course with a broader knowledge of Spanish-American literary history, a deeper understanding of textual representations of gender, class and multiethnic identities, and a sharper awareness of their potential as reader and critic. Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates; in Spanish.
Credit 3 units. Art: HUM

L38 Span 4282 Voice into Print: The Art of Storytelling in Spanish-American Short Story
The short story has been a central part of the extraordinary originality and vitality of Spanish-American writing, and it enjoys great popularity among scholars and the general public alike. Integrating a wide range of complementary sources (critical essays, paintings, film), this course brings together the best examples of the genre that span over a hundred years of the history of Spanish-American literature and exemplifies a variety of themes and forms: from the fantastic to the "magical-realist," from crime fiction to romance, from rural to urban. Special emphasis is placed on the topics of gender, ethnicity, religious syncretism, political resistance, and popular culture. Students familiar with the "canonical" works of Quiroga, Borges, Rufó, Fuentes, Cortázar, García Márquez or Valenzuela discover many more vibrant voices representing a variety of national literatures: Sommers and Roa Bastos (Paraguay), Ponte, Bobes and Padura (Cuba), Vega and Ferré (Puerto Rico), Onetti and Peri Rossi (Uruguay). Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites for undergraduate students: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units. Art: HUM

L38 Span 4291 The Politics and Poetics of Spanish-American New Novel
When Spanish-American writers gained acclaim in the world literary scene in the so-called "Boom" of the 1960s, their spectacular success was often linked with the so-called magical realism that draws upon the oral and written tradition of both European and regional heritage (African, Amerindian) and shapes them to forge a uniquely Latin American poetics. Through theoretically informed approach, this course offers an overview of the most acclaimed Spanish-American novels published between 1950 and 1970, with special attention given to the divergent cultural legacies and political uses of "magical realism." Specific notions of New World/Old World, modernization/tradition, nation building/otherness are explored in novels such as: Los pasos perdidos by Carpentier (Cuba), Pedro Páramo by Rufó (Mexico). La ciudad y los perros by Vargas Llosa (Peru), Los recuerdos del porvenir by Garro (Mexico), La traición de Rita Hayworth by Puig (Argentina), Cien años de soledad by García Márquez (Colombia). Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units. Art: HUM

L38 Span 430 Latin American Essay
Study of the principal movements and outstanding figures in the Spanish-American essay from the colonial period to the present. Sor Juana, Sarmiento, Alberdi, Marti, Rodo, Paz, Freire, Ortiz, Sabato, H.A. Muren. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only; in Spanish.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM
L38 Span 4301 Print and Power in 19th-Century Latin America
Open to advanced undergraduate and graduate students, this seminar covers one of the most fascinating periods in Latin American history and cultural production, spanning from the eve of the wars for independence to eve of the Mexican Revolution (1800-1910). Several reasons make this period and the connections between print media or print culture and power worthwhile. This long century was the most war-torn in the region’s history. Not only did writers engage issues of war on what was almost a daily basis, but war generated a wealth of new modes of literature. Debates on the slave trade and abolition also occurred during the 1800s, and largely in writing. And while places such as Lima, Peru and Mexico City were established printing centers during the Iberian occupation of the Americas, true printing revolutions were not widespread until during and after the wars for independence. One of the results to emerge during the first third of the century was that writing and print media gave legitimacy to incipient republican states, wedding print to power in new ways. And by the end of the century, educators and state bureaucrats teamed up to push for public primary education and literacy as components of progressive, “civilized” nations. Add to this the visual technologies and an overall surge in new forms of symbolic communication through print, and it is easy to see why this period offers such a rich backdrop for observing how print and power fit into the landscape we now know as Latin America. We pay special attention to themes including writing as a legitimizing force, writing and nation building, and the intersection of print with war, race, identity formation, modernity and ideologies. Readings include archival materials, wartime and popular poetry, novels by authors such as Jorge Isaacs and Ignacio Altamirano, writings by Simon Bolivar and Domingo Sarmiento, and modernista poetry and prose. Historical and theoretical selections guide our analysis of primary sources. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S IQ: HUM, LCD Art: HUM

L38 Span 4302 Print and Power in 20th-Century Latin America
Survey of contemporary Latin American poetry, “postmodernismo” to the present. Poets studied include Sor Juana, Caviedes, Avellaneda, Marti, Dario, Silva, Najera. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. Art: HUM

L38 Span 433 Spanish-American New Novel
This course offers a critical overview of the most acclaimed Spanish-American novels published between 1950 and 1970. The following texts are read critically with special attention given to the problems of canonicity and formal experimentation:

- Los pasos perdidos by Carpentier, Pedro Páramo by Rulfo, La ciudad y los perros by Vargas Llosa. Los recuerdos del porvenir by Garro, La traicion de Rita Hayworth by Puig and Cien años de soledad by García Márquez. Significant selections of pertinent criticism and theory are required of graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S IQ: HUM, LCD Art: HUM

L38 Span 434 The 19th-Century Spanish Novel
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. Art: HUM

L38 Span 435 Mediterranean Cultural Studies
This course is a cultural studies seminar for advanced undergraduate and graduate students. Taking a Mediterranean perspective as a background (and we certainly spend some time discussing what such a perspective entails), we investigate the different historical, political and cultural crossings that have been taking place and are taking place at the Iberian Peninsula. Rather than a historical or chronological survey, the different sections of the course focus on the questions and conflicts that arise in these different Mediterranean encounters. These appear articulated in a series of texts that include literature, film, historical documents, song and art. Even though we mainly concentrate on texts from the second part of the 20th century, the historical background, particularly regarding the Arab and Sephardic presence in Spain, is highlighted throughout the semester. The interdisciplinary approach of this course allows students to explore human and Mediterranean geography, analyze different genres, and, finally, discuss present problems and debates from a historical perspective. Some of the issues addressed include: the question of a Mediterranean perspective, Arab and Sephardic Spain, the Mediterranean during the Spanish Civil War and World War II, old and new migrations, sexuality, globalization, and tourism. Course requirements include short papers at the end of every section and a final paper for graduate students, a presentation on a related topic, and a research paper for graduate students. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units.

L38 Span 436 Spanish-American Fiction: 1970 to the Present
Study of Spanish-American narrative from the early 1970s to the present. Includes novels by writers both established before the 1970s (Vargas Llosa, García Márquez, Fuentes) and writers associated with the newest novelistic trends (Ellit, Fuquet, Martínez, Paz, Valenzuela). Prerequisite: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Credit 3 units. A&S IQ: HUM, LCD Art: HUM

L38 Span 437 Latin American Prose Fiction: 1975 to the Present
Study of Latin American narrative from the late 1970s to the present. Includes both recent novels of writers established before the 1970s (Vargas Llosa, García Márquez, Fuentes) and younger writers associated with the post-"Boom" phenomenon.
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. Art: HUM

L38 Span 442 Literature and Revolution
Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 443 The Inconvenient Indio: Imagining Indigenous Cultures in Peru and Bolivia
In the cultural history of the Andean nations, the Indio has always been a powerful yet perpetually unstable signifier, whose meaning is constantly redefined by non-Indians. An archaic residue for some, the bedrock of a new society for others, the Indio conjures contradictory imaginaries of articulation, combination, disjunction and metamorphosis that have shaped a wide range of debates: from assimilation and mestizaje in the context of nation-building and modernity, to the politicizing of ethnic identities in the context of immigration and globalization. Focusing on Peru and Bolivia, this course examines these cultural imaginaries and the debates in which they appear, as well as the models of community and identity they suggest. In doing so, we discuss topics such as the discourse of illness, indigenismo, transculturation, heterogeneity, violence and memory. Materials analyzed include poetry by César Vallejo and Carlos Oquendo de Amat; essays by José Carlos Mariátegui and Ángel Rama; José María Arguedas's novel Los ríos profundos; Jorge Sanjinés's film El Coraje del pueblo; and theatrical performances by Grupo Yuyachkani. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates; in Spanish.
Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 4471 Spanish-American Women Writers I
A study of women's writing from the turn of the century to 1970. Readings include novels, short stories, poetry, essays and autobiographical texts. Prerequisites: Span 307D, Span 308E and at least two 300-level literature course taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. Art: HUM

L38 Span 4472 Spanish-American Women Writers II
A study of contemporary women's writing from 1970 to the present within a feminist theoretical framework. Topics include the construction of gender, female subjectivity, love and power, women and politics, literary strategies, etc. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. Art: HUM

L38 Span 450 Special Topics in Hispanic Literature and Culture
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. May be repeated for credit.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM

L38 Span 4502 Latin American Narrative in Film
Analysis and discussion of a select group of films, focusing on their literary origins or their peculiar elaboration of critical conflicts in contemporary Latin American society. Films by Littin, Puenzo, Lombardi, Skarmeta, Solanas, Gutiérrez Alea, Lilenthal and others. Novels by Vargas Llosa, Carpentier, Amado, Puig, Skarmeta and Soriano. Course conducted in English. Does not fulfill 400-level literature requirement.
Credit 3 units.

L38 Span 4503 Latin American Film: Argentine Cinema
This course examines the development of cinema in Argentina, from the earliest attempts to codify a particularly Argentine perspective in Tango musicals to the present day. We explore the relationships between both film and nation building and film and revolution. We also study the role of cinema in national memory, using the cinema of the post-dictatorship as a case study. We read widely in film, cultural and political theory to enrich our study of the various films under consideration.
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Conducted in Spanish.
Credit 3 units. A&S IQ: HUM, LCD BU: IS

L38 Span 450C Advanced Seminar Abroad in Spanish and Latin American Literature
Credit 3 units.

L38 Span 451 Medieval Spanish Literature
Study of the development of the principal literary traditions of medieval Spain, emphasizing major genres, themes and styles. Consideration of various critical approaches and responses to medieval texts. Lectures, papers and class reports.
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM

L38 Span 453 Survey of 18th-Century Latin American Narrative
Exploring new ways of thinking; scientific observation and traveling; historiography; and the organization of knowledge. Analysis and discussion of a variety of 18th-century Latin American narratives such as conventual writing by women, memoirs, travel, scientific writing and newspaper articles, to understand how that century's attempts to compile, question, seek, build and reform came about. The narratives are regarded in their historical context and in a dialogue with some of the most recent literary studies about 18th-century Latin America.
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates.
Credit 3 units. Art: HUM

L38 Span 4533 Narratives of Fear: Violence in Latin American Literature
This course analyzes different representations of violence in Latin American literature. Based on a critical analysis of 19th- and early 20th-century texts, we study how the recognition and legitimation of violence occurs in the context of hierarchical relationships in the society. Also we study how the literary images of bandits, pirates, thieves and assassins become the counter-discourse of the views of progress sustained by the hegemonic powers. The role of power and ideology is discussed in texts that define different levels of violence as a cultural manifestation.
L38 Span 455 History of the Language
A study of the evolution of Spanish and its dialects from Latin to contemporary usage. Knowledge of Latin helpful but not required. Prerequisites: Span 307D and Span 308E. Credit 3 units.

L38 Span 456 Romance Philology
Study of the evolution of the major Romance languages from their common Latin origins. Knowledge of classical Latin not required, but acquaintance with phonetics of at least one Romance language extremely helpful. Conducted in English. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. Same as L34 French 456. Credit 3 units.

L38 Span 457 Exemplarity, the Writing of History and the Beginnings of Chivalry in Medieval Spain
This course is devoted to the study of exemplarity, historical discourse and chivalric fiction in medieval Iberia. It begins with an introductory selection of 13th-century texts that prepares students to better understand the development of Castilian identity, as shown in a selection of historical chronicles, and in some of the most canonical texts of the 15th century, such as El Libro del Conde Lucanor, El Libro de buen amor and El Libro del caballero Zifar. 
Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 458 Gender, Politics and Writing in Women's Fiction of the Post-Franco Era
This course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco's death and continue to write into the new century (Esther Tusquets, Cristina Fernández Cubas, Rosa Montero, Carmen Riera and Adelaida García Morales), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucía Etxebarria and Espido Freire). We consider the works of these women within their cultural, historical and political contexts, addressing issues such as the representation of gender and sexuality; the cultural impact of feminism, nationalism and globalization; and the influence of the publishing industry and the market on literary production. Whenever available, film adaptations of these literary works are used in conjunction with the readings. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One hour preceptorial for undergraduates only. In Spanish. Credit 3 units. Art: HUM

L38 Span 461 Cervantes: Don Quixote
Study of the famous work that launched the novel, giving voice to surprisingly different forms of experience and identity as it narrates the life of a crazed reader who attempts to rewrite his own history by becoming a knight errant. Includes Parts 1 and 2 of Cervantes' Don Quixote, a range of critical readings, and the use of visual media that reflect how this work has in subsequent centuries entered popular culture. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S IQ: HUM, LCD Art: HUM

L38 Span 462 16th- and 17th-Century Prose
Reading of works that are groundbreaking in the formal development of Golden Age Spanish literature and in the representation of ideas concerning national and individual identity during the imperial period. To include Diálogo de la lengua, Lazarillo de Tormes, Diana and selected works by Quevarta, Cervantes, Quevedo and Zayas. Seminar discussions and research paper. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. Art: HUM

L38 Span 463 16th- and 17th-Century Poetry
Classical Spanish poetry during the Renaissance and the baroque periods. Poets range from the Marques de Santillana and Garciase de La Vega to Luis de Gongora, San Juan de la Cruz and Francisco de Quevedo. Movements and trends explored include the tradition of courtly love, cultanalamismo, Spanish mysticism and conceptismo. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S IQ: HUM, LCD Art: HUM

L38 Span 464 Self-Representation and Picaresque Fiction in Early Modern Spain
This course investigates self-representation through the figure of the picaro and fictional autobiography in the representative works of the Spanish picaresque genre (Lazarillo, Guzmán de Alfarache and El buccinó). We also examine the figure of the picara in novels with female protagonists such as La lozana andaluza and La picara Justina (as well as a short story by María de Zayas) and consider the relation of the picara to women's roles in Spanish fiction and culture. This course considers aspects of gender, ethnicity, class and desire in the sociohistorical context of picaresque fiction as well as narratological approaches to these texts. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.

L38 Span 465 History of the Language
A study of the evolution of Spanish and its dialects from Latin to contemporary usage. Knowledge of Latin helpful but not required. Prerequisites: Span 307D and Span 308E. Credit 3 units.

L38 Span 466 Romance Philology
Study of the evolution of the major Romance languages from their common Latin origins. Knowledge of classical Latin not required, but acquaintance with phonetics of at least one Romance language extremely helpful. Conducted in English. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. Same as L34 French 456. Credit 3 units.

L38 Span 467 Exemplarity, the Writing of History and the Beginnings of Chivalry in Medieval Spain
This course is devoted to the study of exemplarity, historical discourse and chivalric fiction in medieval Iberia. It begins with an introductory selection of 13th-century texts that prepares students to better understand the development of Castilian identity, as shown in a selection of historical chronicles, and in some of the most canonical texts of the 15th century, such as El Libro del Conde Lucanor, El Libro de buen amor and El Libro del caballero Zifar. 
Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 468 Gender, Politics and Writing in Women's Fiction of the Post-Franco Era
This course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco's death and continue to write into the new century (Esther Tusquets, Cristina Fernández Cubas, Rosa Montero, Carmen Riera and Adelaida García Morales), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucía Etxebarria and Espido Freire). We consider the works of these women within their cultural, historical and political contexts, addressing issues such as the representation of gender and sexuality; the cultural impact of feminism, nationalism and globalization; and the influence of the publishing industry and the market on literary production. Whenever available, film adaptations of these literary works are used in conjunction with the readings. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One hour preceptorial for undergraduates only. In Spanish. Credit 3 units. Art: HUM

L38 Span 469 16th- and 17th-Century Drama
Study of early modern Spain's highly influential and innovative Comedias, from Lope de Vega's creation of new popular forms for public Corrales to the spectacles of court theater for elite audiences in the generation that followed. Includes study of selected plays, as both texts and performances. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM
Credit 3 units. Art: HUM

**L38 Span 465 The Spanish Trickster**
A study of Spain’s major picaresque novels in the Golden Age in the context of early modern Europe. Translations of works such as the Lazarillo and El buscón, as well as selected foreign imitations and parodies of the Spanish picaresque from the 17th and 18th centuries. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Does not fulfill the 400-level literature requirement for the Spanish major but is applicable to other credit required for the major. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. Art: HUM

**L38 Span 466 Second-Language Acquisition**
There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first- and second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners’ errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required. Same as L44 Ling 466
Credit 3 units. A&S IQ: HUM EN: H

**L38 Span 467 Grammar and Vocabulary Acquisition**
This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing; explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such as a learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices.
Credit 3 units. A&S IQ: LCD BU: BA EN: H

**L38 Span 468 Don Quijote**
A close reading of the English translation of Cervantes’ masterpiece, with special attention given to the European literary context. Conducted in English.
Credit 3 units. Art: HUM

**L38 Span 469 Reading and Writing in a Second Language**
This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second-language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in Applied Linguistics and an elective for the Graduate Certificate in Language Instruction.
Credit 3 units. A&S IQ: HUM, LCD

**L38 Span 4691 Second Language Reading and Writing: Theory, Research and Practice**
This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second-language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in applied linguistics and an elective for the Graduate Certificate in Language Instruction. This course carries the Social and Behavioral Sciences attribute.
Credit 3 units. A&S IQ: SSC EN: S

**L38 Span 471 Borges**
Comprehensive study of Borges’ major works. Analysis of basic themes, philosophical implications and structural elements present in Borges’ poetry, essays and short stories. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM

**L38 Span 472 19th-Century Novel**
Departing from writings on realism by both 19th-century European writers and more contemporary literary theorists, the course carries out a critical reappraisal of the notion of “realism” in the 19th-century Spanish novel. Texts covered include selected works of Benito Pérez Galdós, Leopoldo Alas (Clarín), and Emilia Pardo Bazán that represent different periods of their literary trajectory. Daily readings and discussions focus on issues such as: the “reality effect”; the poetics of detail; naturalism in the Spanish context; the aesthetics of beginnings and endings; gender and consumption; fin-de-siècle crisis of gender (“New Women” and emasculated men); the problem of modernity; and the intersections of gender, class and national identity. These critical issues are situated in the context of theoretical discussions on the complex, and often ambivalent, function of realist discourse in Spanish fin-de-siècle culture and society. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD

**L38 Span 473 Romanticism**
The origins of romanticism as a movement explored before reading and analyzing key works by the main Spanish romantic writers: Cadalso, El Duque de Rivas, Espronceda, Larra, Mesonero Romanos, Becquer, Campoamor and Zorilla.
Prerequisites: Span 307D, Span 308E and at least two 300-level
literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. Art: HUM

L38 Span 474 Mexican Film in the Age of NAFTA (1990-2010)
Starting in the 1990s, as NAFTA came into effect, Mexico revitalized its film industry and managed to produce not only a somewhat sustainable market within the country, but also a set of recognized figures in acting (Salma Hayek, Gael García, Diego Luna), directing (Guillermo del Toro, Alfonso Cuaron, Alejandro González Iñarritu), and moviemaking in general (Emmanuel Lubezki, Rodrigo Prieto, and others). This course explores the underlying processes that allowed for such a rebirth. The main focus of the course is to understand the contradictory impact of neoliberalism in film, understanding neoliberalism as the economic doctrine of unbridled free markets, and its social and cultural consequences. Paradoxically, neoliberalism allowed the industry to become financially and aesthetically viable, while becoming inaccessible to the lower classes in Mexico. The course mostly develops four of these processes: the undermining of nationalism as the main topic; the displacement of the target audience from the working classes, both rural and urban, to the urban middle class; the transformation of political cinema from the leftist films of the "70s to the conservative ideologies of neoliberal politics; and the intersection of Mexican film to the global market of so-called "art house cinema." Students compare films that have reached an international market with those viewed only within Mexico. In addition, students are introduced to critical approaches that allow them to appreciate these movies in the context of film aesthetics, social identities, and the relationship between film and economic development. Movies are shown outside of class in Spanish with English subtitles. The class is conducted in English. Written course work may be pursued in English or Spanish. No prerequisites.
Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 475 The Other in Contemporary Spanish Fiction
An examination of the various manifestations of "the other" in works of Delibes, Perez Reverte, Matute, Goytisolo, Riera, Atxaga. Aspects studied include history, culture, religion, language and gender. Ancillary readings treat theoretical as well as critical issues. Two or three short papers (two to three pages) and a longer paper with specific installations and revisions due during the semester (undergraduates, 15 pages; graduates, 20 pages). Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish.
Credit 3 units. Art: HUM

L38 Span 479 Generation of 1898: Theater and Poetry
Analysis of works by Azorín, Unamuno, Baroja, Maeztu and Valle-Inclán. Various approaches to each work encouraged, and the theory of "generations" questioned. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. Art: HUM

L38 Span 480 The Generation of '98
An analysis of the Spanish-American War, the warring parties, and particularly of the literature it created in Spain by authors such as Unamuno, Machado, Valle-Inclán, Azorín and Baroja, The "desastre" led to introspective analyses of philosophy, education, and history. It attempted to rediscover the Hispanic ethos, to re-create its landscape poetically, and to become European without losing its Spanish roots. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. Art: HUM

L38 Span 481 Modern Drama
Readings from 19th- and 20th-century playwrights such as Zorrilla, Benavente, Valle-Inclán, Lorca, Bueno-Vallejo. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. Art: HUM

L38 Span 482 Topics in 19th-Century Spanish Cultural Studies
Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 486 20th-Century Novel
A study of the novel in 20th-century Spain, focusing on the contemporary period. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM

L38 Span 487 Discourses on Gender in 19th- and 20th-Century Spain
This course focuses on discourses on gender, from the late 19th century to the present in the context of feminism in Spain. We explore the social, political and cultural role of Spanish women (writers) within their specific historical contexts, with a special attention to their struggle to construct a new female subjectivity through their writings. To this end, their narrative fiction (novels, short stories) are read in conjunction with nonfiction writings (essays, journalism, etc.). Authors studied include 19th-century proto-feminists such as Emilia Pardo Bazán and Concepción Arenal; early 20th-century writers such as Carmen de Burgos, Margarita Nelken, and other female activists of the Republican period; and women writers of the post-War and post-Franco eras. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduate students. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD SD EN: H

L38 Span 488 Narrating Mexico City
The city has been one of the central topics of modern Mexican literature. Ever since the emergence of the modern capital at the end of the 19th century, urban culture became one of the central concerns of Mexican and Latin American intellectuals across the continent. With the emergence of the megalopolis and the new centrality of questions of violence, postmodernity and urban experience, Mexican literature and film have contributed, in the past 20 years, new ways to approach, discuss and narrate the city. This class seeks to tackle different meanings of Mexico City in the cultural discourse of Mexico, by exploring novels (Carlos Fuentes, José Emilio Pacheco, Juan Villoro), poems (Manuel Mapes Arce, Vicente Quiroste, Fabio Morábito), urban chronicles (Carlos Monsiváis, Elena Poniatowska, José Joaquin
Credit 3 units. In Spanish. One-hour preceptorial for undergraduates only. In Spanish.

L38 Span 489 Cities of the Past Future: Literary Institutions & Peripheral Modernity in the Latin American Avant-Garde
This course proposes a study of the Latin American avant-garde as a phenomenon of "peripheral modernity" and as a critique of the "institutions literature" developed by 19th century and modernista liberalisms. This reading, rather than merely proposing a one-by-one reading of canonic texts, seeks to engage the avant-garde as a global cultural phenomenon with impact in literature, art, society and ideology. To achieve this, the class focuses on four regional contexts of the avant-garde. First, we visit post-Revolutionary Mexico, to understand the way in which the avant-garde redefined notions of literature in Latin America by carefully analyzing the stakes of groups such as the estridentistas or the contemporaneos. Second, we analyze the reinvention of Buenos Aires as a literary city in the 1920s and 1930s to understand the impact of "peripheral modernity" in the constitution of the avant-garde as a specifically Latin American phenomenon. Third, we discuss the impact of the semana de arte moderno of São Paulo, to understand how the idea of "antropophagia" created an articulation of the avant-garde with debates of cultural identity and transculturation. Finally, we go to the Andes to understand how avant-garde phenomena dealt with the questions of "divergent modernities." Authors discussed include Arqueses Vela, Manuel Maples Arce, Jorge Cuesta, Xavier Villalunia, Jorge Luis Borges, Oliverio Girondo, Roberto Arlt, Mario de Andrade, Oswaldo de Andrade, Manuel Bandeira, Cásar Vallejo, Pablo Palacio, César Moro and José Carlos Mariátegui. Scholarship includes Peter Bürger, Matei Calinescu, César Vallejo, Pablo Palacio, César Moro and José Carlos Mariátegui. Scholarship includes Peter Bürger, Matei Calinescu, Renato Poggioli, Rubén Gallo, Pedro Angel Palou, Beatriz Sarlo, Fernando Rosenberg, Haroldo de Campos, William Rowe and Roland Forgues. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 490 Spanish Women's Fiction on the Edge of the Millennium
The course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco's death and continue to write into the new century (Cristina Fernandez Cubas, Rosa Montero, Soledad Puertolas and Carme Riera), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucia Etxebarria, Belen Gopegui). We consider not only the aesthetic innovations of these writers, but also their preoccupation with the following sociopolitical and cultural issues: connections between gender, sexuality and writing; their response to feminist literary criticism and politics; and their relationship to the market and consumer society in the context of globalization. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. Credit 3 units. A&S IQ: HUM, LCD EN: H

L38 Span 491 18th- to 19th-Century Literature
Readings in various genres covering significant figures and works in neoclassicism, romanticism and realism. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. Credit 3 units. Art: HUM

L38 Span 492 19th-Century Poetry
Examines the development of the avant-garde in Spain during the two decades prior to the Spanish Civil War (1936-1939) from an interdisciplinary perspective, including poetry, the visual arts and cinema. We first study the development of the historical avant-garde through a study of four key avant-garde movements either developed by Spanish artists or taking place in Spain: Cubismo (Pablo Picasso, Juan Gris), Creacionismo (Vicente Huidobro, Gabriel Desimio), Ultraísmo (Gomez de la Serna, Cansinos-Assens, Pedro Salinas) and Surrealismo (Luis Buñuel, Salvador Dalí, Rafael Alberti, Luis Cernuda, Federico García Lorca and Joan Miró). We then analyze different connections with the historical avant-garde traceable in the work of a later generation of experimental Spanish poets and artists working under the strict censorship existing during Franco's fascist dictatorship, such as Jose Val del Omar, Joan Brossa, Antoni Tàpies, José Angel Valente, Pere Gimferrer, Jose Miguel Ullán and José Luis Guerín. We also incorporate in our discussion theoretical writings by various critics including Ortega y Gasset, Peter Burger, C. Brian Morris, and Román Gubern. Prerequisites: Span 307D, Span 308D and at least two 300-level literature/culture courses taught in Spanish. Credit 3 units. A&S IQ: LCD EN: H

L38 Span 493 20th-Century Poetry
Examination of 20th-century Spanish poetry from Machado and Juan Ramon Jimenez to the Generation of '27 and younger poets. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. Credit 3 units. Art: HUM

L38 Span 494 Honors
Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prerequisite: permission of director of undergraduate studies. Credit variable, maximum 3 units.

L38 Span 495 Honors
Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prerequisite: permission of director of undergraduate studies. Credit variable, maximum 3 units.

L38 Span 496 Honors
Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prerequisite: permission of director of undergraduate studies. Credit variable, maximum 3 units.

L38 Span 497 Honors
Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prerequisite: permission of director of undergraduate studies. Credit variable, maximum 3 units.

L38 Span 498 Contemporary Spanish Novel
A study of modern novels by established authors, such as Benet, Goysico and Martin Gaite, and new figures such as Landero, Millas and Puertolas. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. Credit 3 units.
L38 Span 499 Contemporary Spanish Novel II: 1965 to Present
A study of modern novels by established authors, such as Benet, Goytisolo and Martin Gaite, and new figures such as Landero, Millas and Puertolas. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates. In Spanish. Credit 3 units. Art: HUM

Speech and Hearing
The minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine, and it is designed for students interested in exploring topics related to typical and disordered human communication. The required course work provides an overview of the fields of hearing, deafness, language and speech, with opportunities to explore related topics in more depth. This minor is especially valuable for students in fields such as psychological and brain sciences, education, philosophy-neuroscience-psychology (PNP) and linguistics, but it has broad applicability for many fields of study. Courses completed as part of this minor can also be used to fulfill the total unit requirements for graduation and as prerequisites for graduate studies in audiology, deaf education and speech-language pathology; however, the minor may not be used as an Integration in Arts & Sciences Integrated Inquiry (IQ) curriculum and does not otherwise fulfill any Arts & Sciences distribution requirements.

Contact: William W. Clark

Majors
There is no major in this area. The minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (http://pacs.wustl.edu) at Washington University School of Medicine. The program also offers graduate study in the fields of audiology, deaf education, and speech and hearing sciences, which lead to the following degrees: Doctor of Audiology (AuD), Master of Science in Deaf Education (MSDE), and Doctor of Philosophy (PhD)—Speech and Hearing Sciences.

Additional Information

Because the minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine, it may not be used as an Integration and does not otherwise fulfill any Arts & Sciences distribution requirements.

This minor is composed of a minimum of 15 hours that focus on the study of speech, language, and hearing. Of these, at least 9 units must be at the 300 level or above. Courses to count toward the minor must be approved in advance by the minor adviser, and one or more elective courses must come from M89 PACS. Additional courses that are not listed here may be allowed, with advance approval of the minor adviser, based on the student’s individual areas of interest. Some courses may be subject to instructor approval in advance.

Special notes for students interested in continuing their studies in either the Doctor of Audiology (AuD) or Master of Science in Deaf Education (MSDE) program in PACS: Please consult the minor adviser for information on the appropriate course of study. In such cases, course work should focus upon applicable prerequisites courses, required introductory course work that can be waived during graduate enrollment, and other applicable requirements for professional certification. Completing other required course work prior to matriculation in one of the PACS graduate programs may impact a student’s full-time status, course of study, tuition, scholarship amount and other aspects of enrollment.

Courses

Visit online course listings to view offerings for M89 PACS (https://courses.wustl.edu/CourseInfo.aspx?sch=M&dept=M89).

M89 PACS 234 Introduction to Speech and Hearing Sciences and Disorders
Introduction to the fields of speech-language pathology, audiology, education of hearing-impaired children, and speech and hearing sciences. Normal speech and hearing processes are discussed, as well as communication disorders. Selected research topics in speech and hearing sciences are presented. Same as L12 Educ 234
Credit 3 units. BU: BA EN: S

M89 PACS 401 Anatomy and Physiology of Speech and Hearing
Introduction to anatomy and physiology of the peripheral hearing system and central nervous system, including functional descriptions of the systems and processes underlying speech and hearing function and dysfunction. Credit variable, maximum 3 units.

M89 PACS 4011 Behavior Management
Introduction to various behavior management systems effective in both individual and group environments. Behavior interventions, classroom management strategies, environmental controls, psychodynamic techniques, and biophysical interventions are discussed, observed and practiced. Focus is on working with children who are deaf or hard of hearing. Lectures and experience with children. Prerequisite: Permission of department required.
Credit 2 units.

M89 PACS 416 Evaluation Techniques for Children Who Are Deaf or Hard of Hearing
A basic introduction to psychometrics with emphasis on the selection, interpretation and evaluation of assessments. Specific techniques for evaluating intellectual, educational, and linguistic abilities and achievement in children who are deaf or hard of hearing, from infancy through adolescence, are discussed and demonstrated. Prerequisite: Permission of department required. Credit 3 units.

M89 PACS 421 Introduction to Electroacoustics
Introduction to the physics of sound. Topics include production, transmission and reception of sound and factors affecting human communication. Includes discussion, lectures, problems and lab. Credit 3 units.

M89 PACS 424 Speech and Hearing Sciences
Surveys a broad array of speech and hearing science topics. Focus is on how speech and hearing science research findings can be applied to the practice of deaf education. Credit 1 unit.

M89 PACS 4301 Sign Language I
Basics of American Sign Language are introduced, including vocabulary, grammatical structure, fingerspelling and cultural information about the deaf community. This is a highly interactive and participatory course. Credit 2 units.

M89 PACS 4302 Sign Language II
Continues development of American Sign Language with additional vocabulary, emphasis on expressive and receptive abilities, conversational skills, and knowledge of deaf culture. This is a highly interactive and participatory course. Prerequisite: PACS 4301-Sign Language I. Credit 2 units.

M89 PACS 434 Typical Language Development
Study of typical language development, including the phonologic, morphologic, semantic, syntactic and metalinguistic aspects. Interactions between linguistic and other areas of child development will be discussed. Contrast will be explored between typical and atypical child development to shed light on language learning processes. Credit 3 units.

M89 PACS 438 Early Literacy Development of Children Who Are Deaf or Hard of Hearing
Development of early print-recognition, reading and writing of children who are typically hearing and children who are deaf or hard of hearing. Focus is on the years leading up to kindergarten. An overarching theme is the interaction between early language and early literacy development. Evidence-based strategies for differentiated instruction will also be discussed. Permission of department required.
M89 PACS 444 Amplification Systems and Aural Rehabilitation for Children
This course will provide students with a broad understanding of amplification systems and principles and methods of aural rehabilitation as they apply to children who are deaf or hard of hearing. Amplification systems to be covered will include digital hearing aids, cochlear implants and a full range of assistive devices. Aural rehabilitation topics will emphasize patient management and will include communication strategies, conversation styles and speech recognition assessment. Students will be provided with videotapes, live demonstrations and in-class activities. Direct contact with children and technological devices will also be used to support lectures and discussions. Prerequisite: Permission of department required. Credit 3 units.

M89 PACS 4511 Practicum in Deaf Education
Study of typical language development, including the phonologic, morphologic, semantic, syntactic and metalinguistic aspects. Interactions between linguistic and other areas of child development will be discussed. Contrasts will be explored between typical and atypical child development to shed light on language learning processes. Prerequisite: Permission of department required. Credit 7 units.

M89 PACS 4512 Practicum in Deaf Education
Supervised practicum in education of children who are deaf or hard of hearing. Students will be placed in field experiences (early, mid-level and culminating levels) in a variety of educational settings with a variety of age ranges, using interventions in areas such as language, speech, auditory training, reading, math and other content areas. Prerequisite: Permission of department required. Credit 7 units.

M89 PACS 4515 Language Instruction for Children Who Are Deaf or Hard of Hearing
Principles and methods of developing competence in spoken English in children who are deaf or hard of hearing, birth to grade 12. Includes presentation of differentiated instructional techniques for teaching a diverse population of children who are deaf or hard of hearing English vocabulary, syntax and pragmatics, as well as techniques for auditory training. Evaluations and data-driven lesson planning/IEP/IFSP development will be discussed, as well as the role of families as engaged, educational partners in spoken language development. Prerequisite: Permission of department required. Credit 3 units.

M89 PACS 4525 Foundations of Literacy Theory and Instruction
Principles and methods of developing reading and writing competence in children who are typically hearing, with an emphasis on the stages of development and appropriate teaching sequences. Based on this foundation, strategies and methods will be presented for making appropriate differentiated learning adaptations and interventions for reading instruction with students who are deaf or hard of hearing who have language and reading deficits. Additional topics include the use of children's literature in instruction, the intersection of language and reading development, content literacy, and general language arts instruction. Prerequisite: Permission of department required. Credit 4 units.

M89 PACS 4515 Language Instruction for Children Who Are Deaf or Hard of Hearing II
A continuation of PACS 454. Principles and methods of teaching mathematics to students who are deaf or hard of hearing. Strategies for other content-area instruction (science, social studies), use of instructional technology, and strategies for improving content literacy will also be discussed, with an emphasis on techniques for working with children who are deaf or hard of hearing. Students will practice developing and implementing lesson plans that are aligned to state and national standards. Prerequisite: Permission of department required. Credit 3 units.

M89 PACS 4526 Literacy Lab: A Focus on Typical and Atypical Learners
Emphasizes observation and some practice planning and teaching reading and writing with students who are typical and atypical learners, including children who are deaf or hard of hearing and who struggle to develop appropriate literacy skills. Observations will focus on areas such as how teachers use differentiated learning strategies for diverse learners, the use of children's literature in instruction, the intersection of language and reading development, instruction in content literacy, and general language arts instruction. Prerequisite: Permission of department required. Credit 2 units.

M89 PACS 4545 Mathematics and Content-Area Instruction for Children Who Are Deaf or Hard of Hearing I
Principles and methods of teaching mathematics to students who are typically hearing and those who are deaf or hard of hearing. Strategies for other content-area instruction (science, social studies), use of instructional technology, and strategies for improving content literacy will also be discussed, with an emphasis on techniques for working with children who are deaf or hard of hearing. Students will practice developing and implementing lesson plans that are aligned to state and national standards. Prerequisites: PACS 454 and permission of department required. Credit 3 units.

M89 PACS 4546 Speech for Children Who Are Deaf or Hard of Hearing
Development, improvement and maintenance of speech skills for children who are deaf or hard of hearing through multisensory methods.
approaches. Articulation, voice and rhythm patterns are considered. Lectures, demonstrations and practice. Prerequisite: Permission of department required.
Credit 3 units.

M89 PACS 460 Audiology Staffing
Discussion and presentations of clinical cases and issues related to practice in clinical audiology. Prerequisite: Permission of department required.
Credit 1 unit.

M89 PACS 4611 Practicum in Audiology
Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 1 unit.

M89 PACS 4612 Practicum in Audiology
Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 1 unit.

M89 PACS 4613 Practicum in Audiology
Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 3 units.

M89 PACS 4621 Practicum in Audiology
Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 2 units.

M89 PACS 4622 Practicum in Audiology
Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 2 units.

M89 PACS 4623 Practicum in Audiology
Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 4 units.

M89 PACS 4631 Practicum in Audiology
Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 2 units.

M89 PACS 4632 Practicum in Audiology
Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 2 units.

M89 PACS 4633 Practicum in Audiology
Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 6 units.

M89 PACS 4641 Clinical Externship in Audiology
Clinical externship in audiology (on campus). Prerequisite: permission of department required.
Credit 9 units.

M89 PACS 4642 Clinical Externship in Audiology
Clinical externship in audiology (on campus). Prerequisite: permission of department required.
Credit 9 units.

M89 PACS 4651 Clinical Externship in Audiology
Clinical externship in audiology (off campus). Prerequisite: permission of department required.
Credit 9 units.

M89 PACS 4652 Clinical Externship in Audiology
Clinical externship in audiology (off campus). Prerequisite: permission of department required.
Credit 9 units.

M89 PACS 466 Rehabilitative Audiology
Principles and methods of aural rehabilitation with an emphasis on patient management. Topics include communication strategies and conversation styles, speech recognition assessment and hearing aid service provisions for adults, older persons, children and family members. Prerequisite: Permission of department required.
Credit 3 units.

M89 PACS 468 Pediatric Audiology
Fundamentals of audiologic assessment for infants and children. Behavioral and electrophysiologic procedures, and assessment of auditory processing abilities, are presented. Prerequisite: Permission of department required.
Credit 3 units.

M89 PACS 470 Business Practices
Issues relating to establishing a private practice including clinical management, small business and accounting practices, models of private practice, referrals and reimbursement, and managed care. Prerequisite: Permission of department required.
Credit 2 units.

M89 PACS 5001 Electrophysiologic Techniques I
Introduces basic concepts in administration and interpretation of physiologic and electrophysiologic measures, with focus on auditory evoked potentials (AEP). Content covers basic instrumentation, parameters and variables affecting the AEP, auditory brainstem response (ABR), middle (MLR) and late (LLR) evoked potentials, auditory steady state response (ASSR) and otoacoustic emissions (OAE). Prerequisite: Permission of department required.
Credit 3 units.

M89 PACS 5002 Electrophysiologic Techniques II
Advanced concepts related to the administration and interpretation of physiologic and electrophysiologic measures. Content includes in-depth study of ABR and other auditory evoked potentials, and the clinical application of these for the audiologist. Additional topics include study of electrocochleography (ECoGh), P300 auditory responses, and mismatched negativity (MMN). This course will include a thorough study of intraoperative monitoring including neurophysiology and anatomy review, cranial nerve
monitoring, spinal cord monitoring, and facial nerve monitoring. Prerequisites: Permission of department required. Credit 1 unit.

**M89 PACS 502 Pharmacology**
Includes basic information related to medications utilized for treating common hearing/balance disorders. Hearing and balance side effects of medications are discussed, as are ototoxic and preventative mechanisms related to pharmacology. Prerequisites: Permission of department required. Credit 2 units.

**M89 PACS 505 Auditory Neuroscience**
Development of an in-depth understanding of issues related to auditory neurophysiology from the auditory nerve to the cortex. Prerequisites: Permission of department required. Credit 2 units.

**M89 PACS 506 Genetics in Hearing Loss**
Study of the genetic causes of hearing loss and balance disorders, and syndromes affecting the auditory and vestibular systems. Prerequisites: Permission of department required. Credit 3 units.

**M89 PACS 507 Vestibular Disorders**
Comprehensive course covering the assessment, diagnosis and treatment of vestibular disorders. Prerequisites: Permission of department required. Credit variable, maximum 3 units.

**M89 PACS 510 Auditory Perception**
Study of how the listener perceives parameters of and differences in acoustical stimuli. Perception of the speech stimulus is also studied in detail, both for listeners who are typically-developing and those who are deaf or hard of hearing. Prerequisites: Permission of department required. Credit 3 units.

**M89 PACS 511 Hearing Conservation**
This course will cover topics related to hearing conservation, including effects of noise on hearing, environmental noise, classroom acoustics, federal regulations, interactions of noise and other agents, and ototoxicity. Additional topics may vary year-to-year. Prerequisites: Permission of department required. Credit 3 units.

**M89 PACS 517 Counseling for Audiology**
Examines the relationship between clinician and patient in audiology. Topics include counseling theory and practices, and principles and methods of effective interviewing and counseling across the lifespan. Prerequisites: Permission of department required. Credit 2 units.

**M89 PACS 519 Psychosocial and Educational Foundations of Deafness**
Examines psychological, social, educational, legal, historical, and cultural influences related to individuals who are deaf or hard of hearing. Additional topics include IEPs and interprofessional collaboration related to post-high-school transitions. Prerequisite: Permission of department required. Credit 2 units.

**M89 PACS 543 Survey of Speech and Language Disorders**
Surveys a broad range of speech and language disorders in terms of associated characteristics, assessment techniques and treatment considerations. Prerequisites: Permission of department required. Credit 2 units.

**M89 PACS 544 Clinical Observation and Methods in Speech-Language Pathology**
Provides students with an introduction to clinical methods and observation experiences in speech-language pathology. Prerequisites: Permission of department required. Credit 3 units.

**M89 PACS 551 Research Seminar**
A seminar of variable topics related to research in speech and hearing sciences. Each semester/section has its own specific area of focus, which may include an investigation of active areas of research, an overview of outcomes-based research and evidence-based practice for students' research projects, or thorough analysis and discussion of a specific area of active research. Refer to section description for information on specific topics by section. Prerequisite: Permission of department required. Credit variable, maximum 3 units.

**M89 PACS 554 Fundamentals of Early Intervention and Child Development**
Course provides information about general and exceptional child development, focusing on ages birth through five years. Course also discusses historical and philosophical tenets of early intervention practice, focusing on a collaborative coaching model, which views families as engaged partners in the child's education. Other topics include addressing needs of families from a variety of cultural and economic backgrounds, linking families to resources, and federal laws that govern special education services for children with disabilities including transitions in service provisions for children at the age of 3 years. Prerequisites: Permission of department required. Credit 1 unit.

**M89 PACS 555 Early Intervention: Serving Children Who Are Deaf or Hard of Hearing, Birth to Age 5**
This course provides an overview of early childhood development of children who are deaf or hard of hearing, birth to age 5, with particular focus on early speech and language development, intervention strategies, assessment techniques, instructional strategies, and aural rehabilitation. Course discusses the philosophical tenets of early intervention practice, which views families as engaged partners in the child's education, and respects cultural and linguistic diversity. Students will learn about IFSP and IEP development, as well as a variety of resources that can be provided to families. Prerequisite: Permission of department required. Credit 3 units.

**M89 PACS 558 Pre-Service Teacher Preparation**
This course is designed to help students in the deaf education teacher training program create a teaching portfolio that reflects their own teaching development. Students will demonstrate
their ability to reflect on and critique their own teaching practice, especially in relation to course planning, instructional strategies, differentiated learning, data-based decision making, tiered systems for supporting instruction, and classroom management. Professional issues, including developing a résumé and conducting interviews, will also be discussed. Prerequisite: permission of department required. Credit 1 unit.

M89 PACS 5601 Clinical Audiology I
An introduction to the field of clinical audiology. Covers the role of the audiologist in the diagnosis and treatment of hearing disorders; the administration and interpretation of audiologic test results; and amplification systems and assistive devices, such as DM/FM technology. Additional topics may include relevant calibration and instrumentation requirements, audiology as a career, aural rehabilitation, and legal and ethical issues in the field. Prerequisites: Permission of department required. Credit 3 units.

M89 PACS 5602 Clinical Audiology II
Covers hearing evaluation and diagnosis in clinical audiology from infancy through adulthood. Topics include auditory processing disorders, functional hearing loss, and other advanced measures. Prerequisites: Permission of department required. Credit 3 units.

M89 PACS 5651 Hearing Devices in Audiology I
Philosophical issues related to the selection and evaluation of hearing devices, including hearing aids and alternative devices. Means of adjusting hearing devices and measuring their function and benefit are covered. Credit 4 units.

M89 PACS 5652 Hearing Devices in Audiology II
Advanced issues related to the selection and evaluation of hearing aids. Means of adjusting hearing aids and measuring their function and benefit. Prerequisite: permission of department required. Credit 3 units.

M89 PACS 5653 Hearing Devices in Audiology III
Course covers a variety of topics related to selection, fitting and rehabilitation of cochlear implant patients. Lectures and practical experience in psychophysical testing, programming of the cochlear implant, and auditory training. Prerequisite: permission of department required. Credit 3 units.

M89 PACS 5659 Hearing Disorders
This course covers the nature and causes of hearing disorders, including outer and middle ear, cochlear, retrocochlear and central nervous system. Prerequisites: Permission of department required. Credit 2 units.

M89 PACS 570 Independent Study
Students engage in independent work on the Independent Study, which demonstrates advanced critical thinking and writing skills. Prerequisites: Permission of department required. Credit variable, maximum 6 units.

M89 PACS 5700 Capstone Project
Independent work on the Capstone Project. Prerequisites: Permission of department required. Credit variable, maximum 6 units.

M89 PACS 5701 Capstone Project Seminar
This weekly, joint meeting is intended to provide extra and preliminary support for initiation of the Capstone Project. Areas will include but are not limited to: journal article critique, scientific writing, overview of research design and methodologies, statistical review, support for graph and table construction, and others. Prerequisites: Permission of department required. Credit 1 unit.

M89 PACS 574 Statistics and Research Methods
Examines experimental and field research methods as they apply to audiology and communication sciences. Covers such methods as surveys, survey interviews, content analysis, and experimental design. Prerequisites: Permission of department required. Credit 3 units.

M89 PACS 575 Special Topics
Special topics in speech and hearing sciences, audiology and/or education of the deaf or hard of hearing. Contact the department for more information. Prerequisites: Permission of department required. Credit variable, maximum 4 units.

M89 PACS 577 Research in Speech and Hearing
Prerequisites: Permission of department required. Credit variable, maximum 12 units.

M89 PACS 587 Dissertation Research
Prerequisites: Permission of department required. Credit variable, maximum 12 units.

M89 PACS 597 Mentored Teaching Experience in Speech and Hearing
Mentored teaching experience as a graduate teaching assistant. Under faculty supervision, credit may be earned through instruction of undergraduate or graduate students in courses offered by PACS. Credit variable, maximum 12 units.

Urban Studies
The interdisciplinary major in urban studies is ideal for students drawn to serious examination of the profound issues confronting urban/metropolitan America. Urban Studies seeks to prepare students — who are indeed our nation's future leaders — for the challenge of solving these issues. We help students to research and investigate such issues as the evolving patterns of metropolitanism and the necessity for central city reconstruction; the problems associated with gentrification, urban sprawl and affordable housing; the crises confronting newly emerging immigrant communities and the social cleavages
of urban marginalized communities; unemployment and underemployment; law and justice; HIV/AIDS and issues of public health; the economic underdevelopment of poor communities; race and inequality; the paradox of declining welfare rolls amidst escalating poverty rates; underperforming urban schools; and the in-migration and out-migration of the city and its schools. All available social indices suggest that such domestic issues in our central cities will only increase in significance during the years ahead. The fact that many of the aforementioned issues are deeply embedded in the cities of the world allows students in the Urban Studies program to focus not just on domestic cities but on global cities as well.

Urban studies is a stand-alone major. Current students in the program are jointly pursuing study in pre-law, pre-medicine, political science, educational studies, environmental studies, economics, international and area studies, philosophy-neuroscience-psychology, architecture and comparative arts, among others. Our purpose is to prepare students to critically engage with the social, political and economic dilemmas facing the world's cities with intellectual rigor, integrity, sensitivity and compassion. The program draws faculty and course work from various academic units, including Arts & Sciences, the Brown School (Social Work and Public Health), the School of Law, and the College of Architecture at the Sam Fox School of Design & Visual Arts. To complement our course work, the Urban Studies program accepts internships that are based locally, nationally or internationally, with appropriate support documents.

The Major in Urban Studies

Total required units: 33 units, 21 of which must be 300-level or above. Of these 21 advanced units, no more than 6 units may be from independent study courses.

Required courses: URST 299 The Study of Cities and Metropolitan America; one introductory course in math or applied statistics; one 400-level independent study or an internship.
The Study of Cities and Metropolitan Units

Designed to complement any major field of study. Students are encouraged to pursue course work in companion with their major field of interest, that is distinctive yet complementary to the study of urbanization, which impacts all fields of inquiry. Courses must be selected in consultation with the program director/adviser in Urban Studies.

Elective courses: There are five subject area concentrations in Urban Studies: neighborhoods and community development; urban education; cities of the world; public policy/social policy; and public health. Once a student declares a major in urban studies, they will be assigned a major adviser who will help the student formulate the area concentration.

Because of the nature of the major and the requirements of the nonresidential components, majors are strongly encouraged to declare by their third semester in residency.

Additional Information

Study Abroad: The program offers study abroad opportunities in conjunction with the International Urban Scholars Study Abroad Program through Oxford University, the London School of Economics and Political Science, the University of Cape Town in South Africa, and Fudan University in Shanghai, China.

Senior Honors: Urban studies majors are encouraged to work for Senior Honors, for which they may apply during the junior year. Acceptance into the program is based on the student’s previous academic performance and a proposal to a core (not affiliated) faculty member in Urban Studies who agrees to supervise the honors research. The honors candidate must complete honors thesis research, which is evaluated by a three-member faculty committee.

Minors

The Minor in Urban Studies

Elective courses:

12 units at the 300 level or above. All courses for the minor must be taken for a letter grade, with a passing grade of C or better. These courses must be home-based in three different departments or programs and may not include courses in the student’s major field. A complete list of general courses that count toward the urban studies minor is published each semester in WUCRSL. No more than 3 units may be counted from among the following: directed readings, independent study, internships, University College, or credits from another institution, including study abroad.

Additional Information

The minor in urban studies facilitates the study of urbanization across the globe from multiple disciplinary perspectives. It is designed to complement any major field of study. Students are encouraged to pursue course work, in companion with their major field of interest, that is distinctive yet complementary to the study of urbanization, which impacts all fields of inquiry. Courses must be selected in consultation with the program director/adviser in Urban Studies.

Courses

L18 URST 101 First-Year Seminar: Introduction to Urban Studies

This course provides a survey of the field of urban studies, utilizing the City of St. Louis as a field site. The major purpose of the course is to gradually reveal how a city operates internally, and how it operates externally with its sister cities, surrounding metropolitan areas and neighboring states, amidst competing and often contradictory interests. Utilizing historical analysis as a guide, the course briefly revisits the experiences of previous waves of ethnic groups to the St. Louis metropolitan area, as a lens for understanding the current social, political and economic dilemmas that many urban dwellers in St. Louis now face. The course reveals to students the intricacies of social welfare issues and policies among high density populations, in St. Louis, that are homogeneous and heterogeneous, at the same time. Visits and discussions with various governmental and nongovernmental agencies, and how such agencies function or dysfunction for various constituencies allow students to ask crucial questions regarding equality of opportunity in a democratic society. Students also encounter diverse communities and neighborhoods and the intended and unintended consequences of social welfare policies designed to ameliorate urban dilemmas such as poverty and inequality, homelessness, educational underachievement, gentrification, migration and immigration, development, health care, fiscal issues, the informal economy, and issues concerned with crime and social justice, among others. Readings are reinforced and challenged through visits, interactions and observations with broad constituencies and institutions, ranging from city officials to community residents. As such, this course offers a survey discussion of the rich interdisciplinary field of urban studies for those who may be interested in pursuing a standalone major in the field of urban studies.

Credit 3 units. A&S: FYS A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L18 URST 163 Freedom, Citizenship, and the Making of American Culture

This course offers a broad survey of American history from the era before European settlement of North America to the late 20th century. The course explores the emergence and geographic expansion of the United States and addresses changes in what it meant to be an American during the nation's history. Tracing major changes in the nation’s economic structures, politics, social order and culture, the course chronicles, among other issues, changes in the meanings of freedom, citizenship and American identity. Introductory course to the major and minor.

Same as L22 History 163

Credit 3 units. A&S IQ: HUM, LCD, SD Art: CPSC, HUM BU: HUM EN: H
L18 URST 2020 The Immigrant Experience
This course explores the history and politics of immigrant groups in the 19th- and 20th-century United States. Topics include legislation, patterns of migration, comparisons of different waves of immigration, and changing social attitudes. This course is a core requirement for the ethnic studies concentration in American Culture Studies.

L18 URST 206B "Reading" Culture: How to Read Images: Visual Culture and Visual Literacy
Refer to section description.
Same as L98 AMCS 206
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L18 URST 2091 First-Year Seminar: The City in Early Modern Europe
From the city-states of Renaissance Italy to the 18th-century boomtowns of London and Paris, cities functioned as political, economic, and cultural centers, creating unique opportunities and challenges for their diverse inhabitants. Using a wide variety of primary and secondary sources, this course will examine how men and women, rich and poor, and established citizens and marginal groups tried to understand and manage life in the city. Their conflicting experiences and expectations created not only social and economic unrest but also a resilient social infrastructure, a tradition of popular participation in politics, and a rich legacy of cultural accomplishment. Topics studied include urban political and economic organization; the creation and use of public spaces; religion as a source of community and conflict; and urban crime and public punishment.
Same as L22 History 2091
Credit 3 units. A&S: FYS A&S IQ: HUM, LCD, SD BU: HUM, IS

L18 URST 230 Topics in Urban America: The Sensory Landscape of the American City
This course foregrounds the interpretive and analytical approaches used in the study of American cities. The city is a crucial frame for understanding the nation's cultural, economic, social, political and ecological concerns and evolution. Employing multiple perspectives, we interpret urban space as a product of culture, explore the city's importance in shaping American society, and investigate the ongoing evolution of the built environment. This course lays the basis for interdisciplinary thinking and research in American culture studies. The topic varies by semester. Please consult course listings for a description of the current offering. The course is ideal for AMCS majors and minors, but others are welcome. This course fulfills the introductory course requirement for AMCS students.
Same as L98 AMCS 230
Credit 3 units. BU: BA, HUM

L18 URST 233 Biomedical Ethics
A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.
Same as L30 Phil 233F
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L18 URST 258 Law, Politics and Society
This course is an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system (in contrast to legal mythology), as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law. Not open to students who have previously taken Pol Sci 258.
Same as L32 Pol Sci 258
Credit 3 units. A&S IQ: SSC EN: S

L18 URST 296 Practicum in Urban Studies
Practicum with an urban studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the urban studies adviser. Enrollment by permission of the instructor.
Credit variable, maximum 3 units.

L18 URST 299 The Study of Cities and Metropolitan America
This course serves as the introductory course analyzing the forces shaping America's cities and surrounding metropolitan areas. It examines strategies for dealing with many of the profound social issues affecting urban/metropolitan America. Emanating from a historical perspective, it examines the ways in which industrialization and deindustrialization shaped Northern American cities and the consequences of deindustrialization on urban citizenry. It further surveys the demographic and spatial transformation of American cities, examining the consequences of urban transformation on federal, state and local politics on society and on her institutions. Similarly, the course focuses on the origin and societal changes and emerging goals of urban development, gentrification and evolving patterns of metropolitanism and the necessity for central city as well as neighborhood reconstruction. The dynamics of racial residential segregation; crime and punishment; issues of academic achievement and under-achievement; and the social cleavages of urban marginalized communities, family structure, urban homelessness, urban sprawl and health care among others, are viewed from the perspective of social justice by exploring social, political, economic, racial and ethnic factors that impact on access, equity and care. Various theoretical perspectives and philosophies are introduced that have dominated the discourse on race and urban poverty. A field-based component complements the course work, and is designed to build interest, awareness and skills in preparation for outreach to urban communities. Prerequisite: sophomore standing.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: CPSC, SSC BU: BA EN: S
L18 URST 3025 Sports & Culture: Empire of Hoop: Basketball as American Culture
Topics course focusing on instances of identity and culture within the American scope. Varies by semester; refer to course listings for description of current semester's offering.
Same as L98 AMCS 3025
Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA, HUM EN: H

L18 URST 303 Independent Study in Urban Studies
Independent study with an urban studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the urban studies adviser. Enrollment by permission of the instructor.
Credit variable, maximum 3 units. EN: S

L18 URST 304 Educational Psychology
A course in psychological concepts relevant to education. Organized around four basic issues: how humans think and learn; how children, adolescents and adults differ in their cognitive and moral development; the sense in which motivation and intention explain why people act as they do; and how such key human characteristics as intelligence, motivation and academic achievement can be measured. Offered fall and spring semesters.
Same as L12 Educ 304
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L18 URST 3066 The American City in the 19th and 20th Centuries
This course will explore the cultural, political, and economic history of U.S. cities in the 19th and 20th centuries. The course will focus on New York, Chicago, St. Louis, Los Angeles and Atlanta, although other cities may be included. Students will conduct significant primary research on sections of St. Louis, developing a detailed history of one of the city's neighborhoods. Much of the course readings address broad themes such as immigration, industrialization, deindustrialization, and race and gender relations in American cities.
Same as L22 History 3066
Credit 3 units. A&S IQ: HUM, SD Arch: HUM BU: BA HUM

L18 URST 308 Human Variation
A survey of human biological diversity, considering its adaptive and taxonomic significance from the perspective of origins and distribution of traits and adaptation. Prerequisite: Anthro 150A or introductory biology.
Same as L48 Anthro 308A
Credit 3 units. A&S IQ: NSM, AN, SD Arch: NSM Art: NSM BU: SCI

L18 URST 3091 Poverty and Social Reform in American History
This course explores the history of dominant ideas about the causes of and solutions to poverty in American society from the early republic to the end of the 20th century. We will investigate changing economic, cultural, and political conditions that gave rise to new populations of impoverished Americans, and to the expansion or contraction of poverty rates at various times in American history. We will, however, focus primarily on how various social commentators, political activists and reformers defined poverty, explained its causes, and struggled to ameliorate its effects. The course aims to highlight changes in theories and ideas about the relationship between dependence and independence, personal responsibility and social obligation, and the state and the citizen.
Same as L22 History 3091
Credit 3 units. A&S IQ: HUM, SD BU: BA EN: H

L18 URST 3138 Education, Childhood, Adolescence and Society
An examination of childhood, child development, and education from different perspectives. Observation of children in a variety of settings, including classrooms. Through historical, sociological, psychological and political readings, students will clarify current ideas about children, investigate the nature of childhood, and begin to understand how and why childhood is constructed as it is.
Same as L12 Educ 3138
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L18 URST 3141 Sociolinguistics, Literacies, Schools, and Communities
The well-known "literacy crisis" has forced scholars from many nations to turn their attention to learning about linguistic, cultural and class diversity of students and what this means for learning in schools. In this course we will engage with the perceived disjuncture between homes, communities, and schools in an era of higher literacy standards, local literacies, and community knowledge. We will examine the contribution of sociolinguistics to what we know about language and literacy education, achievement, and how this relates to social transformation within and across communities. Students can expect theoretical and methodological conversations as we use critical discourse theories, systemic linguistic approaches, and empowerment theories as lenses to formulate, challenge and critique the existing status of language and literacy education.
Same as L12 Educ 314
Credit 3 units. A&S IQ: HUM, SD, BU: BA EN: H

L18 URST 315 Introduction to Social Psychology
Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory and political psychology, among other issues. Prerequisite: Psych 100B.
Same as L33 Psych 315
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L18 URST 3206 Global Gender Issues
This course compares the life experiences of women and men in societies throughout the world. We discuss the evidence regarding the universal subordination of women, and examine explanations that propose to situate women’s and men’s personality attributes, roles and responsibilities in the biological or cultural domains. In general, through readings, films and lectures, the class provides a cross-cultural perspective on ideas regarding gender and how gendered meanings, practices, performances serve as structuring principles in society.
Same as L48 Anthro 3206
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L18 URST 3211 Introduction to Colonial Latin America
This course surveys the history of Latin America from the pre-Columbian civilizations through the Iberian exploration and conquest of the Americas until the Wars of Independence
L18 URST 326 American Economic History
Basic theoretical concepts applied to analyze the changing structure and performance of the American economy from colonial times to the present. Prerequisites: Econ 1011 and Econ 1021.
Same as L11 Econ 326
Credit 3 units. A&S IQ: SSC  Arch: SSC  BU: BA EN: H

L18 URST 3283 Introduction to Global Health
This course provides a general introduction to the field of public health. It examines the philosophy, history, organization, functions, activities and results of public health research and practice. Case studies include infectious and chronic diseases, mental health, maternal and reproductive health, food safety and nutrition, environmental health, and global public health. Students are encouraged to look at health issues from a systemic and population-level perspective, and to think critically about health systems and problems, especially health disparities and health care delivery to diverse populations. No background in anthropology or public health is required.
Same as L48 Anthro 3283
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L18 URST 3319 Health, Healing and Ethics: Introduction to Medical Anthropology
A cross-cultural exploration of cultures and social organizations of medical systems, the global exportation of biomedicine, and ethical dilemmas associated with medical technologies and global disparities in health.
Same as L48 Anthro 3310
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: ETH EN: S

L18 URST 3331 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Same as L32 Pol Sci 333
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L18 URST 3352 China’s Urban Experience: Shanghai and Beyond
The course studies the history of Chinese cities from the mid-19th century to the late 20th century. It situates the investigation of urban transformation in two contexts: the domestic context of modern China’s reform and revolution; and the global context of the international flow of people, products, capitals and ideas. It chooses a local narrative approach and situates the investigation in one of China’s largest, complex, and most dynamic and globalized cities — Shanghai. The experience of the city and its people reveals the creative and controversial ways people redefined, reconfigured and reshaped forces such as imperialism, nationalism, consumerism, authoritarianism, liberalism, communism and capitalism. The course also seeks to go beyond the “Shanghai model” by comparing Shanghai with other Chinese cities. It presents a range of the urban experience in modern China.
Same as L03 East Asia 3352
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L18 URST 3361 Topics in Politics

Same as L32 Pol Sci 336
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA

L18 URST 3405 For Freedom’s Sake: The Civil Rights Movement in America
This course provides an introduction to the period of struggle in American history known as the Civil Rights Movement. Our primary task is to survey the major historical figures, organizations, locations, strategies and ideas that coalesced to make the history of the movement. The course broadly covers the years of the Black Freedom Struggle between 1945 and 1971, with a sharper focus on the pivotal years of 1954-1965. By placing the movement within a broader context, the course seeks to identify the historical developments and social realities that made the movement necessary and possible. The class also looks at the years following the movement, and the general transition from Civil Rights to Black Power.
Same as L90 AFAS 3405
Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: IS EN: S

L18 URST 343 Understanding the Evidence: Provocative Topics of Contemporary Women’s Health and Reproduction
Contemporary topics of women’s health and reproduction are used as vehicles to introduce the student to the world of evidence-based data acquisition. Selected topics span and cross a multitude of contemporary boundaries. Issues evoke moral, ethical, religious, cultural, political and medical foundations of thought. Students are provided introductory detail to each topic and subsequently embark on an independent critical review of current data and opinion to formulate their own said notions. Examples of targeted topics for the upcoming semester include, but are not limited to: Abortion, Human Cloning, Genetics, Elective Cesarean Section, Fetal Surgery, Hormone Replacement, Refusal of Medical Care, Medical Reimbursement, Liability Crisis and Gender Bias of Medical Care.
Same as L77 WGSS 343
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S
L18 URST 3472 Global Energy and the American Dream
This lecture course explores the historical, cultural and political relationship between America and global energy, focusing on oil, coal, natural gas, biofuels and alternatives. Through case studies at home and abroad, we examine how cultural, environmental, economic and geopolitical processes are entangled with changing patterns of energy-related resource extraction, production, distribution and use. America’s changing position as global consumer and dreamer is linked to increasingly violent contests over energy abroad while our fuel-dependent dreams of boundless (oil) power give way to uncertainties and new possibilities of nation, nature and the future. Assuming that technology and markets alone will not save us, what might a culturally, politically and socially minded inquiry contribute to understanding the past and future of global energy and the American dream?
Same as L48 Anthro 3472
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: CPSC, SSC BU: ETH, IS EN: S

L18 URST 348 Economic Realities of the American Dream
Exploration of the realities of economic life in the U.S. and how they correspond to the American Dream. Interdisciplinary perspectives from economics, sociology, and other areas of social inquiry. Emphasis on the consistency between empirical data and different concepts of the American Dream. Specific topics to include sources of economic growth and changing living standards, unemployment, impact of globalization on U.S. citizens, economic mobility, poverty and inequality, and social justice. Prerequisites: Econ 1011 and Econ 1021, or consent of the instructors.
Same as L11 Econ 348
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L18 URST 3551 The Welfare State and Social Policy in America
How can we understand the recent debate about fundamental health care reform? Should social security be partially or wholly privatized? Was the 1996 welfare reform a success? Contemporary political questions frequently focus on the American welfare state and the social policies that compose it. The first half of this course describes the American welfare state broadly construed, places it in a comparative context, and elucidates major political science explanations for the size and scope of American social policy. We touch on several areas of social policy while constructing the generalized lenses through which particular political outcomes can be understood. The second part of the course then focuses on three major aspects of the American welfare state: health care, old age pensions and policies related to work, poverty and inequality.
Same as L32 Pol Sci 3551
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L18 URST 360 Religion and the Modern Civil Rights Movement, 1954-1968
The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.
Same as L57 RelPol 360
Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

L18 URST 3612 Population and Society
This review of population processes and their social ramifications begins with an introduction to the basic terminology, concepts, and methods of population studies, followed by a survey of human population trends through history. The course then investigates biological and social dimensions of marriage and childbearing, critically examines family planning policies, deals with the social impacts of epidemics and population ageing, and looks at connections between population movements and sociocultural changes. The overall objective of the course is to understand how population processes are not just biological in nature, but are closely related to social, cultural, political, and economic factors.
Same as L48 Anthro 3612
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: IS EN: S

L18 URST 3613 City of Peace: Baghdad in Medieval Times
The subject of this course is an exploration of the city of Baghdad in medieval times from its foundation in the eighth century to its sack by the Mongols in the 13th. Starting from the background history of its location in Mesopotamia, we study the reasons of its foundation in that location and examine its topography, city planning and layout, institutions, citizens, neighborhoods, markets, libraries and workshops to discuss life in the city. Because Baghdad was the seat of the Abbasid caliphate at the time, we examine its role as the hub of the empire (in politics, administration, economy and literature), and its links to and rivalries with other provincial cities.
Same as L75 JIMES 361
Credit 3 units. A&S IQ: HUM EN: H

L18 URST 3626 Adventures in Nosology: The Nature and Meaning of Disease
What is a "disease" and how do you diagnose one? What are "medicines" and how, when, and for what purpose should they be used? These questions reflect universal human concerns, but the answers given to these questions have varied enormously in different times and places. The course considers the nature of health, illness, disease and its treatment, beginning with a detailed examination of the traditional ethnomedical system of the Hausa people of northern Nigeria. Using this West African medical system as a baseline for comparison, the course then explores the nature of "nosology" (the classification of diseases) and the underlying logic of different therapeutic systems in different times and cultures, including our own. The course draws on ethnography, the history of medicine, bioethics and human biology to understand how these questions are asked and answered in different societies, times and places.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: SCI EN: S

L18 URST 3632 The American Frontier: 1776-1848
This course will examine the nation's shifting frontier from independence through the Mexican-American War. It will...
consider people and places in flux as their nationality, demography and social order underwent dramatic changes. Students will make use of an extensive electronic archive of primary sources including period documents, historic maps and contemporary artwork, in order to consider how these sources confirm, reject or expand on the ideas they encounter in published scholarship.

Same as L22 History 3632
Credit 3 units. A&S IQ: HUM, LCD  Art: HUM BU: HUM

L18 URST 3670 The Long Civil Rights Movement
The Civil Rights Movement is known as a southern movement, led by church leaders and college students, fought through sit-ins and marches, dealing primarily with non-economic objectives, framed by a black and white paradigm, and limited to a single tumultuous decade. This course seeks to broaden our understanding of the movement geographically, chronologically and thematically. It pays special attention to struggles fought in the North, West and Southwest; it seeks to question binaries constructed around “confrontational” and “accommodationist” leaders; it reveals how Latinos, Native Americans and Asian Americans impacted and were impacted by the movement; and it seeks to link the public memory of this movement with contemporary racial politics.

Same as L22 History 3670
Credit 3 units. A&S IQ: HUM, SC, SD BU: BA, HUM EN: H

L18 URST 374 Drugs, Brain, and Behavior
This course will review information pertaining both to medications used to treat psychiatric disorders and to psychoactive drugs of abuse. By learning principles of pharmacology and mechanisms of action of these agents, students will develop an enhanced knowledge of the brain mechanisms underlying abnormal human behavior.

Prerequisites: Psych 100B and one of the following: Psych 354 or 3401 or 344.
Same as L33 Psych 374
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L18 URST 375 Topics in Urban Studies
Prerequisites: URST 299 and junior standing.
Credit 3 units.

L18 URST 3755 Disability, Quality of Life & Community Responsibility
The increasing prevalence of disability presents major challenges for American society. Social participation can be a challenge for people with disabilities, while resources to address these needs tend to be limited. This course will begin by critically analyzing concepts of disability, Quality of Life, health and social participation. We will construct a framework for examining social participation and community resources across the lifespan. Public health, educational and environmental theories and methods will be applied to programs and services that aim to enhance quality of life with disabilities. We will analyze ecological approaches to enhancing social participation. Upon completion of this course, students will be equipped to analyze challenges and prioritize resources for individual and population health.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: CPSC, SSC BU: BA EN: S

L18 URST 3798 Building St. Louis History: The City and Its Renaissance
This course aims to provide a national and local understanding of how Americans and St. Louisans dealt with the problems of racism, poverty and sexism from 1945 to the present. While history courses traditionally require that students analyze the credibility and subjectivity of each historical source, this course further challenges students to use the methods of oral history to compare evidence from oral historical memory with written texts.

By comparing St. Louis history with that of the rest of the nation, students analyze regional differences and understand the unique historical conditions that shaped this city.

Same as L22 History 3789
Credit 3 units. A&S IQ: HUM, SD EN: H

L18 URST 380 Applications in GIS
This introductory course in Geographic Information Systems (GIS) is designed to provide basic knowledge of GIS theory and applications using the existing state-of-the-art GIS software. The course is taught using a combination of lectures, demonstrations and hands-on, interactive tutorials in the classroom. The first week of the course provides a broad view of how students can display and query spatial data and produce map products. The remainder of the course focuses on applying spatial analytical tools to address questions and solve problems. As the semester develops, more tools are added to students’ GIS toolbox so that they can complete a final independent project that integrates material learned during the course. Students are encouraged to design individualized final projects using their own or other available data; however, some already-prepared final projects also are available.

Same as L82 EnSt 380
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L18 URST 3874 International Public Health
This course explores current topics in international public health using a case-study-based approach, emphasizing public health issues affecting low- and middle-income countries; introduction to the tools and methods of international public health research and programs; in-depth examination and critique of the roles of local and national governments, international agencies and third-party donors in international public health work; and the contributions of anthropology to the international public health agenda.

Same as L48 Anthro 3874
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L18 URST 389A Power, Justice and the City
This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by “privatism” in cities and their suburbs.

Same as L32 Pol Sci 389A
Credit 3 units. A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

L18 URST 400 Urban Education in Multiracial Societies
This course offers students an analysis of the historical development and contemporary contexts of urban education in English-speaking, multiracial societies. It examines legal
decisions, relevant policy decisions, and salient economic determinants that inform urban systems of education in Western societies including, but not limited to, the United States, Canada, Great Britain, and South Africa. The course draws on quantitative, qualitative, and comparative data as an empirical foundation to provide a basis for a cross-cultural understanding of the formalized and uniform system of public schooling characteristic of education in urban settings. Given the social and material exigencies that shape urban school systems in contemporary societies, special attention is given in this course to the roles of migration, immigration urbanization, criminal justice, industrialism, de-industrialism, and globalization in shaping educational outcomes for diverse students in the aforementioned settings. Prerequisite: junior standing or permission of instructor. Credit 3 units.

L18 URST 403 Directed Study in Urban Studies
Directed study with an urban studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the urban studies adviser. Enrollment by permission of the instructor. Credit variable, maximum 3 units.

L18 URST 4033 Video Microanalysis: Methods and Tools
The purpose of this course is to explore video microanalysis as a methodological tool for studying and valuing unconscious aspects of culturally diverse settings. Utilizing a social-cultural theoretical lens, this type of analysis reveals fleeting actions, subtle movements, peripheral events, and nonverbal communication that are not easily identified in real time viewing. Specifically we may look at facial expressions, direction of gaze, hand movements, body position, and use of material resources as micro techniques to expand our capacity to explore minute aspects and alternative interpretations of social interactions. Same as L12 Educ 4033 Credit 3 units. A&S IQ: SSC, SD Arch: SSC Art; SSC EN: S

L18 URST 404 Directed Readings in Urban Studies
This course consists of readings in urban studies that deal with a range of contemporary issues, focusing on cities and the surrounding metropolitan regions. It can be taken only under the direction of the director of the urban studies program. Prerequisite: permission of instructor. The student must be a declared major in urban studies. Consult program approval form. Credit 3 units.

L18 URST 4041 Islam and Politics
Blending history and ethnography, this course covers politics in the Islamic world in historical and contemporary times. Topics include history of Islam, uniformity and diversity in belief and practice (global patterns, local realities), revolution and social change, women and veiling, and the international dimensions of resurgent Islam. Geographical focus extends from Morocco to Indonesia; discussion of other Muslim communities is included (Bosnia, Chechnya, sub-Saharan Africa, U.S.). Same as L48 Anthro 4041 Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art; SSC BU: IS Western sociology including, but not limited to, the United States, Canada, Great Britain, and South Africa.

L18 URST 406 Sexual Health and the City: A Community-Based Learning Course
In this community-based learning course, students partner with a St. Louis AIDS service organization (ASO) or sexual health agency to explore how the interrelationships among gender, class, race/ethnicity and sexual identity shape sexual health decisions, outcomes and access to services. Students also examine the complex relationship between men’s and women’s life goals and constraints, on the one hand, and the public health management of sexual health, on the other. In collaboration with their community partner and its clients, students develop a project that addresses an identified need of the organization and the community it serves. Course readings draw from the fields of anthropology, public health, feminist studies and policy making. Prerequisite: PHealth 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics or permission from the instructor, which is determined based on past student’s experience in the fields of medical anthropology or sexual/reproductive health. Same as L90 AFAS 406 Credit 3 units. A&S IQ: SSC, SD Arch: SSC Art: CPSC, SSC EN: S

L18 URST 4070 Global Justice
This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course is of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally. Same as L32 Pol Sci 4070 Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L18 URST 4101 Metropolitan Finance
This course is an interdisciplinary examination of fiscal policies in metropolitan regions and the related public policies that can make them better or worse places for living and working. A particular focus is on the financial structures and arrangements — both public and private — that support or hinder quality of life in urban spaces. Core topics of study include the potential impact of decentralized governments on metropolitan economic development, determination of optimal arrangements for sharing fiscal responsibilities among levels of government, evaluation of local revenue and expenditure decisions, and assessment of prospects and options for intergovernmental fiscal reform. The course is consistent in its approach to policy. Drawing on literature in sociology, education, public finance, community development, political economy and other related fields, the course readings and experiences explore how fiscal policies can and do affect urban dwellers and their well-being. This is a departure from many public finance courses. Such an approach leads to very different questions: How do liquor zoning regulations influence minority and nonminority children in schools? Should whites be paid to move into minority neighborhoods or vice versa? This approach to the study of metropolitan finance puts an emphasis on topics such as child care, public transportation, minimum wage, housing codes, street behavior, homelessness, incarceration, alcohol, sports stadiums, illicit drugs, tax abatements, water service, garbage collection, schools, higher education, sprawl and technological change, with consideration given to political, institutional and cultural factors. Students are required to attend hearings, meetings and other relevant functions associated with the development of public financial policy. Prerequisites: URST 299 and either junior standing or permission of the instructor. Credit 3 units. A&S IQ: SSC EN: S
L18 URST 4102 Latin America and the Rise of the Global South
The rise of the global south — and the reordering of global geopolitics, economics and cultural imaginaries — is characterized by progressive change and intense conflict. Economic growth coincides with the impacts of global warming, the assault on natural resources, the rise of new consumers and the entrenchment of deep inequalities. We also see the emergence of cultural and political formations that range from the horrific to the inspiring. Latin America is a central node of the new global south. Here history takes unpredictable turns in the face of declining U.S. hegemony, the economic growth of Brazil, legacies of militarism and political violence, a feverish attack on nature, resurgent economic nationalism, and defiant "anti-globalization" movements. Through close reading of contemporary ethnographies of Latin America we explore emergent cultural and political-economic practices in the region; we consider south-south articulations (theoretical, cultural, political-economic) between Latin America, China, Africa and India; and we reflect on the changing role, meaning and relationships of the United States in the region.
Same as L48 Anthro 4102
Credit 3 units.
L18 URST 418 Studying the City: Approaches to Social Research
In this course we explore social science/social scientific research methods. The course is designed primarily for students majoring in urban studies. However, the research skills that students acquire can be applied to any substantive topic in the social sciences. The main goal of this course is that students develop the skills to independently design and execute high-quality social research, regardless of their substantive interests. To develop these skills we read about methods, assess published research from a methodological perspective, and complete original research projects.
Credit 3 units.
L18 URST 4211 New Media Literacy and Popular Culture in Education
At the closing of the 20th century, the "digital turn" began to shape how individuals learn, communicate and interact with one another. Current and emerging media technologies have continued to change how individuals (youth and adults alike) gather information; consume, produce and disseminate texts; and participate in both local and global communities through print- and screen-based platforms such as email, blog, podcast and mash-ups, among others. In this course, we explore what we mean by technology, the various types and uses of technology and the relationship of technology to literacy and education. We begin with characteristics of "new media" and consequences of the digital revolution. Then, we examine conceptualizations of literacy in a historical context-from literacy as reading and writing to literacy as multimodality, convergence and participation. Finally, we shift our inquiry to investigate how new media literacies and technologies are shaping (and are shaped by) different forms of popular culture in United States and international contexts, including parts of Asia, Australia, Europe, Africa and North and South America. We make explicit the connections to education and explore possible directions for research and practice, including copyright and fair use issues present in educational settings. Readings, discussions and activities online and in actual communities culminate in individual- and class-based new media productions. Prerequisite: at least junior standing or permission of the instructor.
Same as L12 Educ 4211
Credit 3 units.
L18 URST 4261 The Political Economy of Urban Education
Defining a political economy of urban education involves the examination of power and wealth and the manner in which they operate in urban settings. It requires analysis of the larger urban social and economic context and consideration of historical forces that have influenced and shaped urban education in the United States, drawing upon the extant literature on urban education and related social science disciplines to characterize and discuss them. A particular focus of this course is on the dynamic interrelationships among the political economy, urban education and social stratification.
Same as L12 Educ 4621
Credit 3 units.
L18 URST 4280 History of Urban Schooling in the United States
This reading colloquium examines the history of urban schooling and school policy in the United States. Readings focus on the growing literature in the history of urban schooling and on primary source material. We explore urban schooling in general and we examine particular primary source material as well as particular cities and their school districts. Such districts may include New York, Boston, Chicago, Detroit, St. Louis, Los Angeles, San Francisco, Atlanta and others. The course has two goals: to develop a strong contextual understanding of the conditions of urban schooling, the history of urban school reform, and the debates over the purposes of urban schools; and to examine the ways historians have explored urban schooling in the U.S. Students should expect to read a book a week as well as primary source materials and occasional articles.
Same as L12 Educ 4280
Credit 3 units.
L18 URST 4289 Neighborhoods, Schools, and Social Inequality
A major purpose of the course is to study the research and policy literature related to neighborhoods, schools and the corresponding opportunity structure in urban America. The course is informed by theoretical models drawn from economics, political science, sociology, anthropology, education and law. A major focus is to gain greater understanding of the experiences and opportunity structure(s) of urban dwellers, in general, and urban youth, in particular. While major emphasis is placed on data derived from the interface of urban environments and the corresponding institutions within them, the generational experiences of various ethnic groups complement the course foci.
Same as L12 Educ 4289
Credit 3 units.
L18 URST 4315 Culture, Language and the Education of Black Students
This course examines the communicative patterns of what is called variously African-American language, Pan-African linguistic systems and Ebonics within the context of public
school policy and practice. In addition to a review of the structural and pragmatic aspects of black speech, the course highlights relationships between controversies within the linguistic community, contrasting views of speech within black lay communities, public discourse, and educational policy. Students also conduct a field-based research project in accord with their particular interests.
Same as L12 Educ 4315
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L18 URST 4361 Culture, Power and the State
This seminar surveys anthropological theory and ethnography of the nation-state. We will discuss how culture and power are interrelated in the formation of state institutions and ideologies, governance and violence, social and spatial inequalities, and citizen identities, daily lives, and movements for change. We'll read key theoretical works (Weber, Marx, Foucault, Gramsci, liberal political theory, feminism, and post-structuralism, among others) and contemporary ethnographies of the state. Anthropology's place in public debates on "culture" and violent crises of the state — from Iraq to the U.S. heartland — will be addressed at the end of the semester.
Same as L48 Anthro 4361
Credit 3 units. A&S IQ: SSC EN: S

L18 URST 4511 Race, Ethnicity, and Culture: Qualitative Inquiry into Urban Education I
Drawing on traditional and recent advances in the field of qualitative studies, this course is the first in a series to examine ethnographic research at the interlocking domains of race, ethnicity, class, gender and culture. The emphasis in this course is on how these concepts are constructed in urban educational institutions. The course includes a field component that involves local elementary and/or middle schools.
Same as L90 AFAS 4511
Credit 3 units. A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

L18 URST 4512 Environmental Policy
Course examines the relationship between environmental economics and environmental policy. The course focuses on air pollution, water pollution and hazardous wastes, with some attention given to biodiversity and global climate change. The course examines critically two prescriptions that economics usually endorses: (1) "balancing" of benefits against costs (e.g., benefit-cost analysis) and the use of risk analysis in evaluating policy alternatives; and (2) use of market incentives (e.g., prices, taxes or charges) or "property rights" instead of traditional command-and-control regulations to implement environmental policy. Prerequisite: Econ 1011.
Same as L11 Econ 451
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH EN: S

L18 URST 455 Topics in Urban Studies
Prerequisites: URST 299 and senior standing.
Credit 3 units.

L18 URST 4601 Urban Economics
Economic function of the city and the role of the city in a national economy. Local decision-making; financing of local government expenditures. An analysis of selected urban problems, such as causes and effects of housing market segregation; decay and abandonment; landlord-tenant relations; crime; and urban transport systems. Prerequisite: Econ 4011.
Same as L11 Econ 460
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L18 URST 4608 The Education of Black Children and Youth in the United States
This course provides an overview of the education of Black children and youth in the United States. Covering both pre- and post-Brown eras, this course applies a deep reading to the classic works of DuBois and Anderson as well as the more recent works of Kozol, Delpit, and Foster. The social, political, and historical contexts of education, as essential aspects of American and African-American culture and life, are placed in the forefront of course inquiries.
Same as L12 Educ 4608
Credit 3 units. A&S IQ: HUM, SD, WI Art: HUM EN: H

L18 URST 461B Construction and Experience of Black Adolescence
This course examines the construct of black adolescence from the general perspectives of anthropology, sociology and psychology. It begins by studying the construct of black adolescence as an "invention" of the social and behavioral sciences. The course then draws upon narrative data, autobiography, literature and multimedia sources authored by black youth to recast black adolescence as a complex social, psychological, cultural and political phenomenon. This course focuses on the meaning-making experiences of urban-dwelling black adolescents and highlights these relations within the contexts of class, gender, sexuality and education.
Same as L90 AFAS 461B
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S UColl: ACS, SSC

L18 URST 462 Politics of Education
Politics is interpreted broadly to include not just government, but any situation in which people have to solve a problem or come to a decision. This course focuses on schools and the processes through which certain stories, identities and practices are promoted, and others, not.
Same as L12 Educ 462
Credit 3 units. A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

L18 URST 4622 Labor and Labor Movements in Global History
Focusing on the period from mid-19th century (industrial revolution) until the present neoliberal capitalist era, this course analyzes working class formation, organization, collective action, and politics on a worldwide scale. It seeks to explore the connections between historical and contemporary workers' movements in the global North and global South, eschewing national perspectives and global/local dichotomies. Special attention is given to Latin American workers and labor movements. In particular, it examines the influence of immigration, the role of export workers, the impact of radical ideologies, the development of labor relations systems, the nature of informal work, and recent struggles for workers' control.
The principal aim of this course is to introduce students to the key topics and themes pertaining to global labor history. These themes are varied and complex and range from workers' struggles.
Same as L97 IAS 4622
L18 URST 472 Topics in Growth and Development
This course highlights important empirical facts concerning growth and development in various countries at different development stages. Fundamental growth theory is then provided for explaining these facts systematically and for evaluating the consequences of commonly adopted development policies. Topics vary, but may include population, human capital and labor market development, R&D and innovation, finance and growth, modernization and industrial transformation, world income disparities and poverty problems, institutions and political economy issues, environmental and social factors, and international trade and economic integration. Prerequisites: Econ 4011 and Econ 4021. Same as L11 Econ 472
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L18 URST 476 The City in American Arts and Popular Culture, 1910-1940
From the mid-19th century forward, artists, writers, sociologists, and cultural critics have identified the city as the primary site of a vast array of historical changes associated with modernization. This course will explore the range of cultural responses to the new 20th-century city up to World War II. The American city was seen as both an incubator of difference, and of mass conformity and manipulation; a dynamic space in which to form fluid networks that catalyzed new forms of creativity, and a place of strangers and social alienation. We will trace the history of these polarized responses in the 20th-century arts and literature of the city, looking at the vibrant popular culture of film, vaudeville, and cross-dressing; new aesthetic forms such as collage and expressionism; and new urban subjects. Prerequisites: 300-level course in American 20th-century cultural history, American art, literature, or permission of instructor. Same as L01 Art Arch 475
Credit 3 units. A&S IQ: HUM Art: AH, CPSC, GFAH, HUM BU: HUM EN: H

L18 URST 482 Senior Thesis in Urban Studies
This course is required for students to complete the degree requirements in urban studies. Students discuss research methods and make regular research reports both to the instructor and for other students. Credit 3 units.

L18 URST 4872 Colonial Cities and the Making of Modernity
Massive urban growth has been a central result of the incorporation of many areas — both central and peripheral — into the global economy in the 19th and 20th centuries. Scholars have long theorized urbanization as a key component of modernity, but they have usually done so by looking at urbanization and modernization from the perspective of the West. This course investigates the character of cities in the colony and then uses these empirical and analytical entry points to examine critically some theories of modernity. The geographical focus of the course is primarily on cities in the Middle East, North Africa and South Asia. Same as L22 History 4872
Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

L18 URST 4883 The Political Economy of Health
This course reviews social science contributions to understanding health as a function of political and economic influences. Considers the ways in which personal health is affected by macrosocial processes. Examines effects of globalization, international development and political instability on the health of individuals. Examples drawn from the U.S. and international contexts. Prerequisite: junior standing or above. Same as L48 Anthro 4883
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L18 URST 4891 Education and Public Policy in the United States
This course takes a triangulated approach to the field of public policy as it relates to education and social problems. First, the course emphasizes theories of public policy that frame the field of policy studies. Major questions extending from this course feature include: What is public policy, policy behavior, its defining processes/features, and what social function does it serve? Second, the course emphasizes the skills related to the exercise of policy analysis. These skills include the crafting of technical documents within the field of public policy (e.g., a policy brief) and the application of scientific methods to the exploration of social problems/governmental actions. Likely issues related to this course feature include the use of scientific knowledge in political arenas, engagement with stakeholders and the intended/unintended consequences of policy science to political decision-making. Third, this course simulates the policy-making context through students' participation in mock congressional testimonies. These focal areas become central to an understanding of four social concerns: school desegregation following the Brown decisions; affirmative action in higher education; Head Start programs; and/or the ESEA Act of 1965, also known as No Child Left Behind. Educational opportunity, achievement inequality and social change are the primary interests that link these course features. Same as L12 Educ 489
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S UColl: ACS

L18 URST 4892 The Science and Politics of Testing in the United States
Why do tests permeate American Society? Tests have been integral to the decision-making process in many venues of American culture — e.g., immigration opportunities, voting rights, college admissions, workforce considerations, special education placement, educational reform and graduation requirements. The credibility of these decisions depends upon the claim that a particular test is a scientific instrument and relevant to the decision-making process. This claim is worthy of study. The purpose of this course is twofold. The first purpose is to examine how the nexus of science and politics influence testing practices in American society. The second purpose is to explore how testing practices influence the culture of schools, civil liberties, the work place and public discourse about merit. Same as L12 Educ 4891
Credit 3 units. A&S IQ: SSC, SD EN: S

L18 URST 498 Senior Capstone: Seminar in Urban Studies
Credit 3 units.
L18 URST 4981 Advanced Seminar: Historical Perspectives on Human Rights
This course offers a historical perspective on the modern international human rights regime, using materials drawn from diplomatic, legal, political, and cultural studies. Successful completion of this seminar involves designing, researching, and writing a 25-30 page paper on a historically oriented, human-rights-related topic of your choice. Same as L22 History 4981 Credit 3 units. A&S IQ: LCD, SC EN: H

L18 URST 499 Independent Work for Senior Honors
Credit variable, maximum 3 units. EN: S

L18 URST 4991 Senior Honors Thesis in Urban Studies
This course is required for students seeking college honors through urban studies. Students discuss research methods and make regular research reports, both to the instructor and for other students. Prerequisites: satisfactory standing as a candidate for senior honors and permission of thesis director. Credit 3 units. EN: S

L18 URST 4992 The Business of Us All: In/equality in Practice and Theory
This course uses a transdisciplinary approach to discuss in/equality and its interrelated topics of inequality, inequity and social justice. While the focus is on the U.S. predominantly, lessons learned from our global partners are important components of our discussions. The course will emphasize the implications of our findings for other ethnic/racial minorities around the world. Equality speaks to issues of priority, fairness and impartiality. On the other hand, inequity is defined as marked difference among individuals or groups of individuals in the distribution of social goods. Inequity, which considers bias, discrimination and injustice in distributive systems, pushes the discussion further. As the various forms of social, political and economic inequalities are mutually reinforced, we examine economic inequality, residential segregation and housing quality; dis/investment in neighborhoods and communities; resource allocation to low income, city and predominantly ethnic minority schools; academic underachievement of minority youth; access to and provision of appropriate health care; curtailment of social welfare programs; the presentation of stereotypical images of persons of color in the media and school curricula; morbidity, mortality, and longevity rates for persons of color; environmental hazards; the surge in incarceration related to substance abuse and escalating criminal prosecution, as well as discriminatory behavior of police and judges. All of the foregoing is made worse by race and gender status variables. Such factors cannot be considered inconsequential to social im/mobility and inequality in the larger society. The collateral damage borne by the intergenerational transfer of social im/mobility and in/equality to future generations are integral to course discussions. Same as I50 INTER D 4992 Credit 3 units. A&S IQ: LCD, SC EN: H

Women, Gender, and Sexuality Studies
Faculty and students in the Department of Women, Gender, and Sexuality Studies use an interdisciplinary approach to examine the construction of women, gender, and sexuality throughout the world. The interdisciplinary research and training in our department position people to be thought leaders and agents in addressing inequality in all of its forms. Our graduates have gone on to work in fields such as business, entertainment, law, medicine and social work. This community of scholars and activists is committed to doing the critical work of reimagining and producing a more inclusive future.

Among the first of its kind in the nation (est. 1972), the Department of Women, Gender, and Sexuality Studies at Washington University has emphasized the importance of gender and sexuality to such disciplines and interdisciplinary programs as philosophy, psychology, history, education, law, architecture, art history and archaeology, anthropology, political science, international studies, American culture studies, and studies in culture and languages.

Women, Gender, and Sexuality Studies students are often leaders in campus organizations that deal with issues concerning women, gender relations, sexuality and health. They also participate in a wide spectrum of cocurricular organizations available to undergraduates, including Students for Choice, Uncle Joe’s Peer Counseling, LIVE, Student Forum on Sexuality, SARAH, Pride Alliance WU, and the Representation Project.

**Majors**

**The Major in Women, Gender, and Sexuality Studies**

A Bachelor of Arts degree with a major or second major in Women, Gender, and Sexuality Studies (WGSS) requires a total of 27 credits, 21 of which must be taken in courses numbered 300 or above. At least 18 of the 21 upper-level credits required for the major may only count for the WGSS major and may not be double-counted toward another major. Courses that count for the major should be registered as WGSS courses (i.e., with the WGSS designation, L77). All courses taken for the major must be taken for a grade, and students must earn a grade of at least a C- or above.

The following six requirements must be fulfilled through WGSS home-based or cross-listed courses taken at Washington University. The theory and methods/service learning requirements must be completed at Washington University. Students requesting an exception and who wish to transfer credits in the theory or methods/service learning category may petition the WGSS director and the associate director, who will consider the request.

The following requirements apply starting with the Class of 2022. Students who declared the major prior to this time should meet with their advisers regarding the previous requirements.

1. 3 credits of an introductory-level course: WGSS 100B
   Introduction to Women, Gender, and Sexuality Studies.
   Students must file a copy of a paper from this course with the WGSS office (McMillan Hall, Room 210).

2. 3 credits of a theory course
3. 3 credits of a feminist research methods course or a service learning course. Note: Students who write an honors thesis must take WGSS 417W Feminist Research Methodologies and enroll in WGSS 499 Honors Thesis: Research and Writing to fulfill this requirement. Students who take L77 417W must submit a copy of their final paper from this course to the WGSS office (McMillan Hall, Room 210).

4. 6 credits at the 400 level or an honors thesis. (This requirement applied to students as of fall 2018; for those who declared the major prior to fall 2018, only 3 credits at the 400 level are required.) One of the 3-credit courses must be a home-based WGSS class; the second may be either home-based or cross-listed. Students should consult with their WGSS advisers for approval of their chosen courses and to ensure that one of the courses is home-based.

5. 3 credits of a historical context course. This is a course that is home-based or cross-listed in WGSS that examines gender in a historic context. Note: A course that satisfies one of the previous four requirement areas in this list may also fulfill this requirement.

6. 3 credits of an ethnic/global/racial context course. This is a course that is course home-based or cross-listed in WGSS that examines gender in an ethnic/global or racial context. Note: A course that satisfies one of the first four requirement areas in this list may also fulfill this requirement.

The WGSS program has four areas of focus around which courses are organized:

- Literature/theory/history
- Sexuality/the body/health
- Global and transnational feminist and gender studies
- Critical race in gender and sexuality studies

Students may choose to concentrate in one of these areas or to investigate all four.

We strongly encourage and support students who wish to study abroad and will accept up to 6 credits from approved programs. Please contact Barbara Baumgartner, WGSS Interim Study Abroad Supervisor, about this option.

Students transferring to Washington University who wish to complete a major in WGSS may transfer no more than 9 credits of WGSS course work taken elsewhere.

**Required Courses**

Individual programs are designed in consultation with an adviser in light of each student's interests and abilities, major course of study, and plans for the future. All courses must be home-based or cross-listed in WGSS.

**Courses**

---

**L77 WGSS 100B Introduction to Women, Gender, and Sexuality Studies**

This course will provide an introduction to the major and concepts in the interdisciplinary field of women, gender, and sexuality studies. We will examine the meanings attached to terms such as "man," "woman," "gay," and "sex." Topics discussed may include the history of feminist movements, masculinity, biological frameworks for understanding gender, intimate violence, sexual identities, and intersectionality. Five seats are reserved for freshmen, sophomores, juniors and seniors in each section. One section is reserved for freshman and sophomore students only. Attendance mandatory first day in order to reserve class enrollment.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA, HUM EN: H

**L77 WGSS 102 Women in Science: An Introduction**

Throughout the centuries, women were interested and involved in the sciences. Their scientific contributions, however, have often been overlooked and their abilities questioned. The 2005 proposition by Harvard's President Larry Summers that women's innate differences explain why fewer women succeed in math and science suggests that women continue to face assumptions about their scientific competence. In addition to examining the history of women's participation in science, this class explores the continuing cultural and economic barriers to women interested in science. Starting with a historical overview of women in science, we also explore whether women do science differently. This course is restricted to Women in Science Ampersand Program participants.

Credit 1 unit. Art: HUM EN: H
L77 WGSS 103 First-Year Seminar: Sex & Gender in the Gutter: An Introduction to Gender and Sexuality Studies Through Comics
This freshman seminar serves as an introduction to some of the history and concepts important in the field of gender and sexuality studies through graphic storytelling. Topics include the history of feminism in the United States, violence against girls and women, queer theory, intersectionality, and transnational feminism. Please be advised that while we will read comics — most of these texts are not for kids. We discuss traumatic issues and will look at some disturbing images. Please spend some looking at descriptions of the required texts and think about whether or not this class is for you.
Credit 3 units. A&S: FYS A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 1135 First-Year Seminar: The World of Cleopatra
Cleopatra, the last queen of ancient Egypt, captivated her contemporaries and has fascinated the Western world ever since her famous suicide by asp in 31 BCE. She was a woman of contrasts: Pharaoh of Egypt and Greco-Macedonian queen; seductive woman and shrewd political strategist; a ruthless monarch using every means available to consolidate her position in the face of the encroaching power of the Roman Empire. Through texts and material culture, the seminar seeks to understand Cleopatra in the context both of her native Egypt and of the wider Mediterranean world. We thus examine the traditions of Pharaonic Egypt; the historical events that brought Egypt under the control of the Macedonian Ptolemies (Cleopatra’s dynasty); the wider stage of East-West tension and conquest in which Cleopatra struggled to maintain her power; her relationships (political and personal) with famous men of her day (Caesar, Herod, Mark Antony); her capital city of Alexandria, the largest metropolis of its day; Cleopatra’s brilliant court and its luxury arts; and finally the many Cleopatras that have populated art and literature of later times. We emerge with a sense of Cleopatra, both as a unique individual and as a product of her time.

L77 WGSS 206 Sexuality and the State: Introduction to Sexuality Studies
Taking Michel Foucault’s idea of biopolitics as a starting point. This course examines the ways in which sexuality has been produced and regulated by the state. Drawing on history, theory, and literature, we will look at contemporary examples of the relationship between the state and sexuality. What assumptions lie behind our ideas of sexuality? How are bodies linked by the prevailing logic of sexuality? How does sexuality inform the contours of African-American history and culture. Still, close study of African-American women's history has burgeoned only within the past few decades as scholars continue to uncover the multifaceted lives of Black women. This course will explore the lived experiences of Black women in North America through a significant focus on the critical themes of violence and sexuality. We will examine African-American women as the perpetrators and the victims of violence, as the objects of sexual surveillance, as well as explore a range of contemporary debates concerning the intersections of race, class and gender, particularly within the evolving hip-hop movement. We will take an interdisciplinary approach through historical narratives, literature, biographies, films and documentaries.

L77 WGSS 2118 First-Year Seminar: Angels, Prostitutes and Chicas Modernas: Women in Latin America History
Women have been active players in the construction of Latin American nations. In the last two decades, leading scholars in the field have taken up the challenge of documenting women’s participation. This research explosion has produced fruitful results to allow for the development of specialized courses. This course looks at the nation-building process through the lens of Latin American women. Students will examine the expectations, responsibilities and limitations women confronted in their varied roles from the Wars of Independence to the social revolutions and dictatorial regimes of the 20th century. Besides looking at their political and economic lives, students will explore the changing gender roles and relations within marriage and the family, as well as the changing sexual and maternal mores.

L77 WGSS 240 Not Members of this Club: Women and Slaves in the Greco-Roman World
Both the Athenian Democracy and the Roman Senatorial Oligarchy were societies in which political power was the exclusive property of free, citizen males. With very few exceptions, the astounding accomplishments of those societies were also the creations of free, citizen males. This course examines the lives of two disparate but comparable groups of outsiders within Greek and Roman society. The status, rights and accomplishments of Athenian and Roman women are explored and placed in the context of other premodern societies. Likewise, the institution of slavery in Greece and Rome is explored and compared with other slave-holding societies, ancient and modern.

L77 WGSS 246A First-Year Seminar: Latin American Women in History and Culture: Icons and Idols
In English. This class takes an in-depth look at various iconic female figures in the history of Latin America, examining their (self-) representation in history, literature, art and other cultural manifestations. We examine their lives, writings and art to learn more about the historical and cultural moment they lived in; how this moment shaped their lives and how they, in turn, shaped their historical moment. We aim to draw the larger conclusions of how women in history, despite hostile circumstances, have managed to forge political, cultural and artistic identities and make an impact on the world around them. We study these women in a chronological fashion, showing how society's attitudes changed toward women and how, in some ways, paradoxically, stayed the same. The women we study are all very different in terms of identity, historical period and sociocultural background but all are similar in terms of their desire to overcome convention and resist repression — sometimes with very tragic results. Figures we study include La Malinche, Sor Juana Inés de la Cruz, Manuela Saenz, Delmira Avgustini, Frida Kahlo, Eva Perón, the Mothers of the Plaza de Mayo, Rigoberta Menchú and Ingrid Betancourt. Prerequisite: concurrent registration in individually appropriate level of Spanish language course is required. Same as L38 Span 246

L77 WGSS 253 Women's Fiction in Contemporary Spain
This course focuses on selected novels and short stories by 20th-century women writers in Spain, beginning with those writing during the post-Civil War years (1939-1975) and ending with the new generation of women writers who emerged after the end of the Franco dictatorship (post-1975). Discussions center on both political and aesthetic issues in the contexts of post-war and post-Franco Spain, including the effects of political repression and censorship; representations of gender and sexuality; and literature's relationship to feminist and nationalist movements in Spain. When relevant, other cultural media, such as film and music, are used in conjunction with our reading and analysis of literary texts. The course is taught in English. Same as L38 Span 245

L77 WGSS 2991 Undergraduate Teaching Assistant
In this course an advanced undergraduate can assist a faculty member in the teaching of an introductory-level Women, Gender, and Sexuality Studies course. Students can enroll in one course only after having obtained permission from a faculty member who is willing to supervise. Students do not engage in any grading but may serve in a variety of other capacities — as discussion leaders, in providing logistical support, or in otherwise assisting with the transmission of course material. Credit variable, maximum 3 units. Art: HUM

L77 WGSS 3002 Feminist Fire!: Radical Black Women in the 20th Century
Black women have been at the forefront of the Black radical tradition since its inception. Often marginalized in both the scholarship and popular memory, there exist a long unbroken chain of women who have organized around the principles of anti-sexism, anti-racism, and anti-capitalism. Frequently critical of heterosexist projects as well, these women have been the primary force driving the segment of the Black radical tradition that is commonly referred to as Black Feminism. Remaining cognizant of the fact that Black Feminist thought has also flourished as an academic enterprise-complete with its own theoretical interventions (ie. standpoint theory, intersectionality, dissemblance, etc.) and competing scholarly agendas-this course will think through the project of Black Feminism as a social movement driven by activism and vigorous political action for social change. Focusing on grassroots efforts at organizing, movement building, consciousness raising, policy reform, and political mobilization, Feminist Fire will center Black Feminists who explicitly embraced a critical posture towards capitalism as an untenable social order. We will prioritize the life and thought of 20th century women like Claudia Jones, Queen Mother Audley Moore, Frances Beal, Barbara Smith, Audre Lorde, Angela Davis and organizations like the Combahee River Collective, Chicago's Black Women's Committee, and the Third World Women's Alliance. At its core, the course aims to bring the social movement history back into the discourse around Black Feminism. Same as L90 AFAS 3002

L77 WGSS 3014 Queering Citizenship

"Queering Citizenship" explores the fundamental question: is queer citizenship possible? The contestation of citizenship in the U.S. and transnationally makes this question unavoidable for queer and feminist scholars. Provincializing European political history and Western liberal democracy, students will use queer theory to consider the costs of exclusion from, as well as inclusion in, citizenship. We will consider how ‘queerness’ as a concept and queer theory as a method of analysis can inform our understanding of nationalism, democratic formations, citizenship, transnational labor flows, colonialism and capitalism. Students will also get at questions of the cultural specificity of queer's anti-normative critique. Topics of discussion include the ways gender and sexuality constitute the role of the citizen; the relationship between citizenship and labor; how citizenship is "performed"; grassroots organizing through alternative citizenships; the politics of transgender recognition; homonationalism; and queer complicity in settler colonial state violence and the ascendency of global whiteness. We will also examine case studies of queer politics to compare different constructions of gender/sexuality/race across citizenship regimes. By the end of the course, students will be able to evaluate the strengths and weaknesses of citizenship regimes on multiple continents and identify political alternatives to existing, state-centric solutions to violence and marginalization. Pre-Requisite: L77 100B or consent of instructor. Credit 3 units. A&S IQ: LCD, SSC, SD Arch: SSC Art: SSC BU: BA EN: S

L77 WGSS 301A The Politics of Kanye West: Black Genius and Sonic Aesthetics

As a hip-hop artist Kanye West has had unprecedented impact on the sonic force of music, fashion, politics and videography. Coupling his controversial moments with his corpus of musical texts with special focus on sonic production, this course illuminates "Mr. West" as a case study for interrogating the interplay between fame, gender, sexuality and race. Mostly, we explore how racialized ways of doing iconography, complex ways of seeing, create a distorted or reductive frame through which we see the black and famous. Nonetheless, the course oscillates with entertaining these nuances, while being entertained by the decade-long catalogue of music and visual imagery. Together, we extract the "Politics of Mr. West" in his music and life, while also illuminating the importance of a politics of genius-making in the larger arc of black pop culture tradition. Same as L30 AFAS 3010. Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

L77 WGSS 301U Historical Methods — United States History

This is a small-group reading course in which students are introduced to the skills essential to the historian's craft. Emphasis will be on acquiring research skills, learning to read historical works critically, and learning to use primary and secondary sources to make a persuasive and original argument. Required for history majors. Preference given to history majors; other interested students welcome.
Same as L22 History 301U

L77 WGSS 3031 Queer Theory

This course provides students with an interdisciplinary examination of the history, politics and cultural expressions of gay and lesbian communities in American culture. It explores the ways lesbians, gay men, bisexual and transgendered people construct, participate in and resist various constructions of gender and sexuality. We question desire and social/cultural power, the nature and power of social change, etc. Particular attention is paid to examining the roots and effects of heterosexism and homophobia, the call for hate crime legislation, the ethics of " outing" and "passing," the impact of AIDS, partnership recognition and domestic violence on LGBT communities. Throughout the course students are encouraged to examine the intersections of gender, race, ethnicity and social class with sexual orientation.
Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 3041 Making Sex and Gender: Understanding the History of the Body

This course provides an overview of the history of the body from antiquity to modern times using an interdisciplinary approach. By exploring selections from medical texts, literature, fashion, art, accounts of "new world" exploration, legal records, self-help books and contemporary media representations of human bodies, we consider the changing historical perception of the body. The intersection of gender, race and class factor significantly in our discussions of how the body has been construed historically and how it is currently being constructed in contemporary American culture. This course also provides an introduction to feminist/gender methodologies that apply to understanding the history of the body. This course is not open to students who have taken WGSS 204. Prerequisite: any 100- or 200-level WGSS course or permission of instructor.

L77 WGSS 308 Masculinities

This course critically examines the subject of masculinity through a number of themes including history, society, politics, race, gender, sexuality, art and popular culture. Interdisciplinary readings are drawn from the fields of sociology, anthropology, literature, history, art history and cultural studies. We will examine the challenges presented to "masculinity" (and a variety of responses) by the late 20th-century emergency of gender studies. Our goal is to come to a working definition
of masculinity/ies and gain an understanding of some past, current and possible future masculine behaviors, mythologies, ideologies, experiences and identities. Previous course work in Women, Gender, and Sexuality Studies strongly recommended but not required. Attendance mandatory first day in order to reserve your class enrollment.

L77 WGSS 310 From Hysteria to Hysterectomy: Women's Health Care in America
This course examines issues surrounding women's health care in America. While the scope is broad, the major emphasis will be on the 19th and 20th centuries. Through an examination of popular writing, scientific/medical writing, letters, diaries and fiction, we will look at the changing perceptions and conceptions of women's bodies and health in America.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L77 WGSS 3101 An Intellectual History of Sex and Gender
When did sexuality begin? Is it safe to assume that gender constructions are universal and timeless? In this course, we engage with a broad range of readings that serve as primary texts in the history of sexuality and gender. Our aims are threefold: to analyze the literary evidence we have for sexuality and gender identity in Western culture, to survey modern scholarly approaches to those same texts and to consider the ways in which these modern theoretical frameworks have become the most recent set of "primary" texts on sexuality and gender.

L77 WGSS 3133 Service Learning: Feminist and Queer Youth Studies
Categorizing life experience into childhood and adolescence is a relatively new construct. The first part of the course will examine how the categories of early childhood and adolescence developed in social and medical discourses. The remainder of the course encourages students to draw connections between Feminist and Queer theoretical scholarship on children, and the practice of designing and implementing programming for children. Students will examine the relationship between the course readings and their experience working with various agencies in St. Louis. Important Note: This is a service-learning class, which means it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which will necessitate an additional 4-5 hours a week. Before beginning community service, students must complete required training and submit material for a background check. Prerequisite: Introduction to Women, Gender, and Sexuality Studies (L77 100B). CET (https://gephardtinstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching) course.
Credit 4 units. A&S IQ: SSC, SC, SD BU: BA EN: S

L77 WGSS 313A Topics in English & American Literature: Dreams
Called the "Age of Revolution," the Romantic Age of British literature, 1770-1830, witnessed the birth of new lyric forms, the effacement of traditional strictures on style and taste, and produced through poetic voice (and its quaverings and multiplications) what might be called, oversimply, the modern subject. Within a developing discourse of human rights and personal freedom, this growing assertion through poetry of individual expressivity allowed William Blake to construct in a single work a visual and verbal "Jerusalem." It encouraged William Wordsworth to write a pathbreaking investigation of the sources of his own creativity that challenged conventional restraints on what topics can, and cannot, be confessed in poetry. Beginning with these two poets, we consider the historical contexts, and the sometimes competing histories of ideas, that shaped the five major British Romantic poets: Blake, Wordsworth, Samuel Taylor Coleridge, Lord Byron, and John Keats. We follow an anthology for much of the poetry, including the poems and prose of influential contemporaries (female as well as male) who included the political philosopher Edmund Burke and Mary Wollstonecraft. Texts assigned also include Mary Shelley's Frankenstein and Byron's Don Juan.

L77 WGSS 3152 Sex and Gender in Greco-Roman Antiquity
Ideas about sex and gender have not remained stable over time. The ancient Greeks and Romans had their own ideas — ideas that strike us today as both deeply alien and strikingly familiar. This course will consider questions such as: What constituted "normal" sex for the Greeks and for the Romans? What sex acts did they consider to be problematic or illicit, and why? What traits did the Greeks and Romans associate with masculinity? With femininity? How did society treat those who did not quite fit into those categories? How did peoples of the ancient world respond to same-sex and other-sex relationships, and was there an ancient concept of "sexuality"? How did issues of class, ethnicity and age interact with and shape these concepts? How does an understanding of these issues change the way we think about sex and gender today? We will read an array of ancient texts in translation, consider various theoretical viewpoints, and move toward an understanding of what sex and gender meant in the ancient world.
Same as L08 Classics 3152
Credit 3 units. A&S IQ: HUM, LCD, SC, SD BU: BA EN: H

L77 WGSS 316 Contemporary Women's Health
We identify and study a broad range of health issues that are either unique to women or of special importance to women. The roles that women play as both providers and consumers of health care in the United States will be examined. The interface of gender, race, and class and their impact on an individual's access to and experience in the health care system will be central concerns. Topics are wide-ranging and include discussions of breast cancer, mental health, cardiovascular disease in women, women and eating (from anorexia to obesity), reproductive issues (from menstruation to fertility to menopause), as well as the politics of women's health, gender differences in health status, the effect of employment on health, the history of women's health research.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S
L77 WGSS 3171 Service Learning: Women and Prison
Since President Reagan declared a war on drugs in the 1980s, the numbers of women in prison has increased dramatically. Due to mandatory minimum sentencing requirements and increasingly punitive prisoners for nonviolent offenses, there are no more than 200,000 women incarcerated in the United States with more than 1 million on probation and parole. While women are the fastest growing population in prison, men still make up the vast majority of prisoners, and the system is largely geared toward men and their needs. In this course, we explore the historical and contemporary issues of girls and women who are convicted of a crime. Through readings, films, reflective writings and facility tours, we explore the impact of incarceration on women and their families. While our scope is national, we focus on the corrections system in Missouri. Prerequisite: Introduction to Women and Gender Studies or Introduction to Sexuality Studies. CET (https://gephardtinstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching) course. Credit 4 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: H

L77 WGSS 3172 Queer Histories
Queer history is a profoundly political project. Scholars and activists use queer histories to assert theories of identity formation, build communities and advance a vision of the meanings of sexuality in modern life and the place of queer people in national communities. This history of alternative sexual identities is narrated in a variety of settings — the internet as well as the academy, art and film as well as the streets — and draws upon numerous disciplines, including anthropology, geography, sociology, oral history, fiction and memoir, as well as history. This discussion-based course examines the sites and genres of queer history, with particular attention to moments of contestation and debate about its contours and meanings. Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: S

L77 WGSS 3173 Service Learning: Documenting the Queer Past in St. Louis
Around the U.S. and the world, grassroots LGBTQ history projects investigate the queer past as a means of honoring the courage of those who have come before, creating a sense of community today, and understanding the exclusions and divisions that shaped their communities and continue to limit them. In this course, we participate in this national project of history-making by helping to excavate the queer past in the greater St. Louis region. Course readings will focus on the ways that sexual identities and communities in the United States have been shaped by urban settings since the late 19th century, with particular attention to the ways that race, class and gender have structured queer spaces and communities. In their community service project, students will work with local LGBTQ groups, including the St. Louis LGBT History Project, to research St. Louis’s queer past. Each student will also conduct an oral history interview with an LGBTQ community member. Important Note: This is a service-learning class, which means it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which necessitates an additional 3-5 hours a week. Before beginning community service, students must complete required training. Prerequisite: Introduction to Women, Gender, and Sexuality Studies or Introduction to Queer Studies, or permission of instructor. L77 WGSS 3206 Global Gender Issues
This course compares the life experiences of women and men in societies throughout the world. We discuss the evidence regarding the universal subordination of women, and examine explanations that propose to situate women's and men's personality attributes, roles and responsibilities in the biological or cultural domains. In general, through readings, films and lectures, the class provides a cross-cultural perspective on ideas regarding gender and how gendered meanings, practices, performances serve as structuring principles in society. Same as L48 Anthro 3206 Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S

L77 WGSS 323 Selected American Writers: James Baldwin Now
Intensive study of one or more American writers. Consult course listings for offerings in any given semester. Same as L14 E Lit 323 Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: H

L77 WGSS 323A Sex Trafficking
Sex trafficking is a complex social problem with multiple contributing factors that are largely rooted in intersecting inequalities. Both in the United States and on a global level, interrelated inequities in gender, sex, sexual orientation, gender identity, power, class, opportunity, education, culture, politics, and race are among the social phenomena that contribute to sex trafficking/CSE victimization. In this course, we will examine the dynamics of sex trafficking on a local and global level from various feminist and political perspectives, with particular attention given to the sexed and gendered social and structural conditions that affect sex trafficking. This course will cover the extent and nature of the problem as well as current debates in the field, including demand, prevalence, experiences of survivors, types of sex trafficking, methods of traffickers, the role of weak social institutions, cultural dynamics, and global power dynamics. The course will also examine international, federal, and state legislation as well as organizational and grassroots efforts to prevent and respond to sex trafficking victimization. The aim of this course is to provide students with a holistic understanding of sex trafficking that is drawn from interdisciplinary sources and a variety of perspectives. Credit 3 units. L77 WGSS 330 German Literature II: Words & Works of Women
Credit 3 units.

L77 WGSS 330A Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs
This course surveys the history and historiography of how Native Americans, Europeans and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter — through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women’s and men’s duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

L77 WGSS 3312 Topics in Politics
Credit 3 units.

L77 WGSS 3313 Topics in Gender & Religion
This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we will examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category, and the relationship between gender, race, ethnicity and power. Second, we will study gender-based social movements, including the suffrage and women's rights movements, women’s participation in the civil rights movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement.
Third, we will examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we will examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights.

Credit 3 units. BU: BA, ETH

L77 WGSS 335 Feminist Theory
This course begins by examining the 19th- and early 20th-century historical context out of which contemporary feminist theory emerged. We then turn to the 1960s and the emergence of the “Second Wave” of feminism. We focus on some of the major theories that developed during the 1960s, 1970s and 1980s and the conflicts and internal problems these theories generated. We then examine some of the ways these problems were resolved in feminist theory of the 1990s. The last part of the course focuses on topics of concern to contemporary feminists — such as the family, sexuality and globalism — and the contributions feminist theory brings to these topics. Open to graduate students by enrolling in L77 WS 500; contact the Women, Gender, and Sexuality Studies office for details.

L77 WGSS 337 Women's Literature: Before Thelma and Louise: American Women's Adventure Stories
American literature is filled with adventurers and adventure stories. Some of the most exciting tales were written by women. Their adventures include Mary Rowlandson’s autobiography of her capture by and life with the Indians, E.D.E.N. Southworth’s story of a 19th-century heroine who rescues imprisoned maidens and fights duels, and Octavia Butler's science fiction account of a 20th-century black woman who is transported back through time to an antebellum plantation. Until recently, American women authors and their stories were largely dismissed because they were perceived to focus on domestic concerns, which were seen as narrow and trivial. But the works of many women authors are far different from sentimental domestic fiction. In addition to looking closely at the historical and cultural conditions in which the narratives were written, we examine the ways in which these writers conform to and rebel against cultural prescriptions about femininity. Finally, we read some contemporary and current criticism about these works and American women's writing and discuss the politics of canon formation.
Tentative Reading List: Mary Rowlandson, The Captivity and Restoration of Mrs. Mary Rowlandson (1682); The Journal of Madam Knight (1704); Catharine Maria Sedgwick, Hope Leslie (1827); E.D.E.N. Southworth, The Hidden Hand (1858); Zora Neale Hurston, Their Eyes Were Watching God (1937); Octavia Butler, Kindred (1979); Paule Marshall, Praisesong for the Widow (1983).
Writing-intensive.

L77 WGSS 338 Women and Technology
Examination of the effect of technology on women's lives and the power of technology from a feminist perspective. Focuses primarily on three areas: the effects of technology on women's experience in domestic and occupational settings, (e.g., housework technologies, the feminization of office work); the effects of reproductive technology on women, including artificial insemination, in-vitro fertilization, surrogate “motherhood,” and...
fetal sex selection; the effects of current and future technologies on the concepts of gender, sex, and relationships, including sex change/gender reassignment operations and prosthetics. Prerequisite: one course in women's studies, social thought and analysis, or philosophy, or permission of instructor. Credit 3 units.

L77 WGSS 340 Israeli Women Writers
Study of selected novels and shorter fiction by women. Attention to the texts as women's writing and as products of Israeli literature. No knowledge of Hebrew necessary; all readings in English translation. Same as L74 HBRW 340
Credit 3 units. A&S IQ: HUM, LCD, SC, SD, WI Art: HUM BU: HUM

L77 WGSS 3401 Performing Gender
This course investigates an array of contemporary performances to explore manifestations of and challenges to gender norms in American culture. An initial reading of crucial performance theories by Judith Butler, Jill Dolan and others help set the stage for our examination of a diverse collection of contemporary texts, including plays, solo performances, stand-up comedy and pop culture phenomenon. We raise questions about feminist performance strategies, butch/femme performance, camp, cross-dressing, feminist spectatorship, multimedia performances and the representation of lesbian desire. Prerequisite: any 100-level WGSS course.
Same as L15 Drama 3301

L77 WGSS 341 Constructing Masculinities
The course will demonstrate the social construction of masculinities and men's lives in specific social and historical circumstances in Europe and America. Attention to various disciplines' contributions to the study of masculinities. Prerequisite: either WS100B or WS208B or permission of instructor.
Credit 3 units. BU: BA

L77 WGSS 3410 Gender in Society
Introduction to the sociological study of gender. The primary focus is U.S. society, but we will also discuss gender in an international context. From the moment of birth, boys and girls are treated differently. Gender structures the experiences of people in all major social institutions, including the family, the workplace and schools. We will explore how gender impacts lives and life chances. The central themes of the course are historical changes in gender beliefs and practices; socialization practices that reproduce gender identities; how race/ethnicity, class and sexuality shape the experience of gender; and the relationship between gender, power and social inequality. Prerequisite: introductory course in sociology or consent of the instructor.
Same as L40 SOC 3410

L77 WGSS 3413 Women in Early Modern Europe
From the Renaissance to the Enlightenment, European women experienced tremendous change as Europe witnessed religious upheaval, economic retrenchment, political consolidation, and intellectual revolution. However, many of the core ideas about women's role and status remained remarkably stable during this period, and women continually struggled to create opportunity for themselves. We will examine both the changing and unchanging nature of women's lives through sources such as conduct manuals for women, biographies about women from different economic, social, and religious backgrounds, and the works of female authors. Same as L22 History 3413 Credit 3 units. A&S IQ: HUM, SD Art: HUM BU: BA

L77 WGSS 3416 War, Genocide and Gender in Modern Europe
This course explores the way in which gender and gender relations shaped and were shaped by war and genocide in 20th-century Europe. The course approaches the subject from various vantage points, including economic, social and cultural history, and draws on comparisons between different regions. Topics covered will include: new wartime tasks for women; soldiers' treatment of civilians under occupation, including sexual violence; how combatants dealt with fear, injury and the loss of comrades; masculine attributes of soldiers and officers of different nations and in different wartime roles; survival strategies and the relation to expectations with regard to people's (perceived) gender identity; the meanings of patriotism for women and men during war; and gender specific experiences of genocide. Same as L22 History 3416 Credit 3 units. A&S IQ: HUM, LCD, SC, SD BU: HUM, IS EN: H

L77 WGSS 345A Sexual Politics in Film Noir and Hardboiled Literature
Emerging in American films most forcefully during the 1940s, film noir is a cycle of films associated with a distinctive visual style and a cynical worldview. In this course, we explore the sexual politics of film noir as a distinctive vision of American sexual relations every bit as identifiable as the form's stylized lighting and circuitous storytelling. We explore how and why sexual paranoia and perversion seem to animate this genre and why these movies continue to influence "neo-noir" filmmaking into the 21st century, even as film noir's representation of gender and sexuality is inseparable from its literary antecedents, most notably, the so-called "hard-boiled" school of writing. We read examples from this literature by Dashiell Hammett, James Cain, Raymond Chandler and Cornell Woolrich, and discuss these novels and short stories in the context of other artistic and cultural influences on gendered power relations and film noir. We also explore the relationship of these films to censorship and to changing post-World War II cultural values. Films screened in complete prints or in excerpts likely include many of the following: The Maltese Falcon, Double Indemnity, Murder My Sweet, Phantom Lady, Strangers on a Train, The Big Sleep, The Killers, Mildred Pierce, The High Wall, Sudden Fear, The Big Combo, Laura, The Glass Key, The Big Heat, Kiss Me Deadly, The Crimson Kimono, Touch of Evil, Alphaville, Chinatown, Taxi Driver, Devil in a Blue Dress, The Bad Lieutenant and Memento. Required screenings.

L77 WGSS 347 Gender and Citizenship: Writing-Intensive Seminar
In this writing-intensive course we examine how ideas about gender have shaped the ways Americans understand what it
means to be a citizen. We focus on a variety of cases in the past and present to explore the means by which women and men have claimed the rights and responsibilities of citizenship. The types of questions that we ask include: What rights or duties devolve from the status of citizen? Who qualifies for citizenship and what qualifies them? What distinct models of citizenship have been available to Americans? How have individuals used notions of gender identity to make claims to political subjectivity? And finally, how do gendered claims to citizenship intersect or conflict with claims based on race, class, ethnicity or humanity? Prerequisite: previous course work in Women, Gender, and Sexuality Studies or permission of the instructor. Not open to students who have taken WGSS 210.
Credit 3 units. BU: BA EN: H

L77 WGSS 3506 Women Writers of Early Modern Spain
This course will analyze early modern women's writings (both secular and religious) by considering socio-historic context, genre studies (autobiography, convent narratives, short prose fiction, poetry and theater) and feminist criticism. Critical approaches included will consider issues of self-representation and subjectivity, performance, mysticism, life writing, feminist and lesbian utopias, cross-dressing, the body and spirituality, and the role of the Inquisition and confessors in the collaborative process of confessional writing. Class conducted in English. Spanish majors do the readings and papers in Spanish.

L77 WGSS 3560 Black Women Writers
When someone says "black woman writer," you may well think of Nobel Prize winner Toni Morrison. But not long ago, to be a black woman writer meant to be considered an aberration. When Thomas Jefferson wrote that Phillis Wheatley's poems were "beneath the dignity of criticism," he could hardly have imagined the emergence of mass feminist movements; the rise of the "new woman": women and war; and the cultural construction and social organization of gender. We will look at the lives of these women writers, we also explore questions about the canon of American literature: What makes literature "good"? What constitutes American literature? How does an author get in the canon and stay there? Finally, in this writing-intensive course, there are frequent writing assignments and a strong emphasis on the essential writing process of drafting and revising.
Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L77 WGSS 3561 Law, Gender, & Justice
This course (formerly called "Women and the Law") explores how social constructions of gender, race, class and sexuality have shaped traditional legal reasoning and American legal concepts, including women's legal rights. We will begin by placing our current legal framework, and its gender, race, sexuality, and other societal assumptions, in an historical and Constitutional context. We will then examine many of the questions raised by feminist theory, feminist jurisprudence, and other critical perspectives. For example, is the legal subject gendered male, and, if so, how can advocates (for women and men) use the law to gain greater equality? What paradoxes have emerged in areas such as employment discrimination, family law, or reproductive rights, as women and others have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? How do intersectionality and various schools of feminist thought affect our concepts of discrimination, equality and justice? The course is thematic, but we will spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women.
Over the years, this course has attracted WGSS students and pre-law students. This course is taught by law students under the supervision of a member of the School of Law faculty. Students who have taken L77 3561 Women and the Law can not take this class.

L77 WGSS 358 Scribbling Women: 19th-Century American Women Writers
In 1855, Nathaniel Hawthorne wrote to his publisher, William Tichnor, that "America is now wholly given over to a damned mob of scribbling women, and I should have no chance of success while the public taste is occupied with their trash." In this class, we examine works of those scribbling women of the 19th century. We read one of the best-selling novels of the century, one that created a scandal and ruined the author's literary reputation, along with others that have garnered more attention in our time than their own. In addition to focusing on these women writers, we also explore questions about the canon of American literature: What makes literature "good"? What constitutes American literature? How does an author get in the canon and stay there? Finally, in this writing-intensive course, there are frequent writing assignments and a strong emphasis on the essential writing process of drafting and revising.

L77 WGSS 360 Trans* Studies
Trans" Studies is an interdisciplinary course that was previously named Transgender Studies. The new course title represents the development of the field and the identity in U.S. culture.
In this course students engage with the following questions: When and why did the category gender emerge? What is the relationship between sex, sexuality and gender? How have the fields of medicine and psychology dealt with gender? How have approaches to “gender dysphoria” changed over time? Why is LGBT grouped together as a social movement? What are the advantages and disadvantages of this grouping? What are the legal obstacles faced by people who resist normative gender categories? What legal obstacles are faced by people who transition from one sex to another? To what extent do U.S. citizens have autonomy over defining their gender or sex? How are trans people represented in fiction? What does it mean to apply transgender theory to interpret fictional accounts of trans? Any of the following are suitable (but not required) courses to take before enrolling in this class: WGSS 106, WGSS 105, WGSS 205 or WGSS 3091.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 361 Women and Social Movements: Gender and Sexuality in U.S. Social Movements

This course examines the history of grassroots activism and the political engagement of women in the United States. By looking at social movements organized by women or around issues of gender and sexuality, class texts interrogate women’s participation in and exclusion from political life. Key movements organizing the course units include the Temperance Movement, Abolitionist Movements, the Women’s Suffrage Movements, Women’s Labor Movements, Women’s Global Peace Movements, and Recent Immigration Movements. Readings and discussions pay particular attention to the movements of women of color as well as to the critiques of women of color of dominant women’s movements. Course materials analyze how methods of organizing reflect traditional forms of “doing politics” but also strategies and tactics for defining problems and posing solutions particular to women. Prerequisites: any 100- or 200-level Women, Gender, and Sexuality Studies course or permission from the instructor.

Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

L77 WGSS 364 Gender, War, and Migration

This course will examine the forced transnational migration of war refugees and their resettlement in host societies. A central question that guides this course is: How does war impact and complicate belonging and influence the movement of people across borders and boundaries? With this question in mind, we will explore the dynamic relationships between specific groups of refugees and nation-states, while considering inseparable intersectional configurations of gender, race, sexuality, ethnicity, class, age, and religion as lenses through which to consider ideas of personhood and notions of national belonging. In the first part of the semester we will focus on transnational displacement because of conflict and deterritorialization. We will utilize readings in feminist theory, postcolonial theory, and cultural studies to examine historical processes of dislocation and relocation. The second part of the semester will examine ethnographic case studies of resettled refugees in different sites and their day-to-day practices to understand how displaced people earn a place in host societies. We will also explore how identity categories influence the architecture of personhood in nation-states. Lastly, we will analyze the multilayered ways in which diasporic subjects and nations rearticulate themselves virtually and digitally (via internet and social media). We will combine diverse readings and theoretical engagements, lectures, documentary films, discussion, and class-based activities to interrogate notions of subjectivity, alterity, and belonging across time, place, and space. Prerequisite: L77 100B or consent of instructor.

L77 WGSS 3666 Women and Film

The aim of this course is primarily to familiarize students with the work of prominent women directors over the course of the 20th century, from commercial blockbusters to the radical avant-garde. Approaching the films in chronological order, we consider the specific historical and cultural context of each filmmaker's work. In addition we discuss the films in relation to specific gender and feminist issues such as the status of women’s film genres, representations of men and women on screen, and the gender politics of film production. Required screenings. Same as L53 Film 366

Credit 3 units. A&S IQ: HUM, SD BU: HUM EN: H

L77 WGSS 369A Reading Sex in Premodern England

This course introduces students to the literary representation of gender and sexuality in England from the medieval period to the 18th century. To understand a tradition that addressed the intractable problem of human sexuality in terms very different from ours, we ask: how does premodern culture imagine gendered identities, sexual difference, and erotic desire? How do various contexts — medical, religious, social, private, public — inform the literary representation of gender and sexuality? What are the anatomies and economies of the body, the circuits of physical pleasure, and the disciplines of the self that characterize human sexuality? Students have the opportunity to study romances, saints’ lives, mystical writings, diaries, plays, sex guides, novels and scientific treatises. By learning how to “read sex” in premodern literature, students acquire a broad cultural and historical understanding of English sexualities before the desertion of modern sensibilities.

L77 WGSS 371 Confronting Capitalism: Feminism, Work and Solidarity

This course explores the relationship between gender, the ideological construction of work and workers, and feminist mobilizations against labor exploitation. To interrogate how conceptions of the "ideal worker" are gendered, sexualized, and racialized, we will engage scholarship on affective and emotional labor; domestic and reproductive labor; migrant domestic work; neoliberalism and service economies; feminism and racial capitalism; sex work; disability justice; and feminist anti-work politics. In addition, we will ask what is “new” about neoliberal capitalism and how the relationship between citizenship, the state, and the "ideal worker" has morphed in distinctly gendered and racialized ways over time. As part of this effort, we will engage feminist political theory that interrogates the relationship between radical democracy, justice, and the market, drawing from Marxist feminist, liberal feminist, radical feminist, decolonial feminist, and Black feminist thought. During the latter part of the semester, we will examine how these various feminist approaches to work have addressed issues such as solidarity and organizing; the legalisation of sex work; the wages for housework campaign; internationalism; anti-racism and anti-capitalism; labor outsourcing; alternative economies; and U.S. imperialism. Prerequisite: L77 100B.

L77 WGSS 384 Gender & Consumer Culture in U.S. Fiction of the Late 19th and Early 20th Century
The decades between the end of the Civil War and the 1930s saw the rise of a mass consumer culture that would dramatically reshape America. The fiction writers of this period, keen to capture the spirit of the age, helped to create the enduring idea that consumerism and an orientation toward material acquisition are at the heart of gendered concepts of American identity. Their stories documented, and sometimes celebrated, the emergence of recognizable “types” of American womanhood and manhood — such as self-made millionaires, ambitious “working girls,” bargain-hunting middle-class housewives, and the commercially minded women and men of the social and intellectual elite. At the same time, their stories articulated anxieties about U.S. consumer culture and its impact on the world. Students in this course will read, discuss and write about novels and short stories by writers such as Henry James, Mary Wilkins Freeman, Kate Chopin, Theodore Dreiser, Edith Wharton, Nella Larsen, Langston Hughes, and F. Scott Fitzgerald. Students in the course will also examine primary materials such as magazine advertisements, and will read and respond to relevant scholarship on the period. Writing Intensive course.

L77 WGSS 3884 Regulating Reproduction: Morality, Politics and (In)Justice
This course centers on the burgeoning corpus of anthropological scholarship on reproduction, with special attention to the regulation of reproductive behaviors and population management in cross-cultural perspective. Anthropologists and feminist scholars have shown how reproduction — which links individual bodies to the body politic — is a privileged site for processes of governance. Scholars have also shown how seemingly personal reproductive choices made in the micro units of families are always bound up with broader, if obscured, economic, national and political projects. In this course, we will cover how diverse entities, including the state, the Church, NGOs and feminist groups, seek to manage reproductive behaviors and politics across the world. We will discuss population control campaigns (such as China’s notorious one-child policy) and pronatalist population policies (like those seen in Israel) in order to underscore how the management of fertility becomes a crucial site for nationalist and state-building projects. In this course we examine processes of “reproductive governance” around topics including pregnancy and birth, family planning, abortion and adoption. We also examine how the global proliferation of Assisted Reproductive Technologies (such as in vitro, sonogram, abortifacient pills, amniocentesis) intersects with efforts to govern reproduction. Crucially, we take class and race as key axes through which reproduction is experienced and stratified in diverse contexts. At the end of this course students should have a solid grasp of key topics and themes in the anthropology of reproductive governance, as well as more in-depth knowledge of a particular controversial reproductive issue that they choose to focus on for their final research paper.

In this course, an advanced undergraduate can assist a faculty member in the teaching of an introductory-level WGSS course. Credit variable, maximum 3 units.

L77 WGSS 39F8 Gender and Sexuality in 1950s America: Writing-Intensive Seminar
Historians have recently begun to reconsider the dominant view of the 1950s as an era characterized by complacency and conformity. In this writing intensive seminar we will use the prism of gender history to gain a more complex understanding of the intricate relationship between conformity and crisis, domesticity and dissent that characterized the 1950s for both women and men. Same as L22 History 39F8 Credit 3 units. A&S IQ: HUM, SD, WI Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 39SC Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar
What is the connection between the appropriation of other people's resources and the construction of sexuality? Why is "race" essential to the sexual imperatives of imperialism? How has the nexus between "race," sexuality, and imperial entitlement reproduced itself despite the end of formal colonialism? By studying a variety of colonial documents, memoirs produced by colonized subjects, novels, films and scholarship on imperialism, we will seek to understand the history of imperialism's sexual desires and its continuation in our world today. Same as L22 History 39SC Credit 3 units. A&S IQ: HUM, LCD, WI BU: HUM, IS EN: H

L77 WGSS 4012 Advanced Queer Theory: The Intimacy of Precarity
This seminar uses precarity to produce a map of some trends in queer theory today in order to outline the stakes of this current intellectual work and ask how we can use this work to rethink sexuality. In outlining the current stakes of precarity, this seminar focuses on two main threads of queer theory — queer of color critique and public feelings — because both of these spaces have enabled complex theoretical and political discussions centered around precarity and both also introduce historical framings of queer theory. By orienting their contributions to queer studies around precarity, these scholars are asking both how one lives with this condition and what formations of knowledge have produced these conditions of liminality and vulnerability. Overall, this emphasis on precarity has made certain tensions surrounding the place of difference within queer theory visible and highlighted the role of structures, particularly neoliberalism, which is a particular nexus of collusion between the state and formations of capital, over the individual. Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 401A Transnational Queer Activism
This course explores the recent emergence of visible movements for sexual and gender minority across the globe. The course begins with an overview of theories of collective action, putting canonical texts in social movement studies in conversation with postcolonial, queer, and transnational feminist approaches to activism and resistance. The aim is to lay a theoretical foundation for transnational analysis that does not center Western experience. The second part of the course moves through some key issues in LGBTI organizing that are overlooked when focusing on Euro-America, including: the importance of democratic transition for social movements; the prevalence of human rights as frames for sexual rights in the global South; limitations of the term "homophobia"
when conceiving of hostility toward sexual minorities cross-
culturally; and the role of colonialism and neo-colonialism in the globalization of LGBTI identities. Students will read texts
attentive to the specificities of activism and resistance in the
global South such as Out in Africa: LGBT Organizing in Namibia
and South Africa. Queer Activism in India, and Mobilizing Gay
Course materials will also include primary source material from
translated interviews with Argentine transgender activists the
months before the passage of the "Gender Identity Law." Oral
presentations will compare a case of LGBTI activism discussed
in class to the work done by a St. Louis-based organization.
By the end of the course, the students will be able to explain
the important ways global Southern LGBTI movements differ
from their Northern counterparts, contextualize news reports of
events like the passage of the anti-homosexuality bill in Uganda,
craft research contributions based on global Southern case
studies. Prerequisite: Introduction to Women, Gender, and
Sexuality Studies (L77 100B) or permission of instructor.
Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC

L77 WGSS 402 Transnational Reproductive Health Issues:
Meanings, Technologies, Practices
This course covers recent scholarship on gender and
reproductive health, including such issues as reproduction
and the disciplinary power of the state, contested reproductive
relations within families and communities, and the implications
of global flows of biotechnology, population and information
for reproductive strategies at the local level. We also explore
how transnational migration and globalization have shaped
reproductive health, the diverse meanings associated with
reproductive processes, and decisions concerning reproduction.
Reproduction serves as a focus to illuminate the cultural politics
of gender, power and sexuality.
Same as L48 Anthro 4022
Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC
BU: BA EN: S

L77 WGSS 403 Race, Sex and Sexuality: Concepts of
Identity
This course examines changes in the meanings of three
concepts of identity — race, sex and sexuality — from the early
modern period to the present. The course begins by looking
at early modern constructions of these concepts in Western
Europe. We then focus on changes occurring during the course
of the 18th and 19th centuries in Europe and the United States
and at how such changes were similar and different among
these three concepts. We then examine 20th-century challenges
to 19th-century constructions. The course concludes by studying
the relationship between these challenges and 20th-century
identity political movements organized around these concepts.
Prerequisite: completion of at least one WGSS course or
permission of the instructor.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA

L77 WGSS 4031 Topics in Gender and Judaism: Gender and
Sexuality in Judaism
A critical inquiry into the Jewish sociocultural construction of
gender, past and present. Topics include the nature of the
Jewish convenantual community and male circumcision as a
sign of membership; the matrilineal principle of ancestry; genital
emissions and purity; marriage and divorce; and male and
female roles, including leadership roles. Documents by and
about Jewish women, their daily lives and their sacral lives, are
among the materials explored. JINE 208F is recommended.
Same as L75 JIMES 403
Credit 3 units.

L77 WGSS 406 Queering Theory: Collaborating, Solidarity,
and Working Together
This class aims to use theory to destabilize the concepts of
race, sexuality, gender, disability, and academic methodology.
This class will submerge you in some of the most influential
texts in queer theory. The selected readings range across
many disciplines, including biology, philosophy, anthropology,
sociology, history, and cultural studies. The core premise
of this class is that to queer something is to destabilize it.
Therefore, not all of the readings will specifically be about
gay, lesbian, bisexual, or transgender people. However, these
readings will help any scholar in their future work in queer
theory. Prerequisite: any 300-level WGSS class or equivalent or
permission from instructor.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L77 WGSS 406A Sexual Health and the City: A Community-
Based Learning Course
In this community-based learning course students will partner
with a St. Louis AIDS service organization (ASO) or sexual
health agency to explore how the interrelationships among
gender, class, race/ethnicity, and sexual identity shape sexual
health decisions, outcomes, and access to services. Students
will also examine the complex relationship between men's
and women's life goals and constraints, on the one hand, and
the public health management of sexual health, on the other.
In collaboration with their community partner and its clients,
students will develop a project that addresses an identified
need of the organization and the community it serves. Course
readings will draw from the fields of anthropology, public health,
feminist studies, and policy-making. The prerequisite for the
course is L48 4134 (The AIDS Epidemic) or permission from
the instructor, which will be determined based on past student's
experience in the fields of medical anthropology or sexual/
reproductive health.
Same as L90 AFAS 406

L77 WGSS 408A Nuns
Nuns — women vowed to a shared life of poverty, chastity and
obedience in a cloistered community — were central figures in
medieval and early modern religion and society. This course
explores life in the convent, with the distinctive culture that
developed among communities of women, and the complex
relations between the world of the cloister and the world outside
the cloister. We look at how female celibacy served social
and political, as well as religious, interests. We read works
by nuns: both willing and unwilling; and works about nuns:
nuns behaving well, and nuns behaving scandalously badly;
nuns embracing their heavenly spouse, and nuns putting on
plays; nuns possessed by the devil, and nuns managing their
possessions; nuns as enraptured visionaries, and nuns grappling
with the mundane realities of life in a cloistered community.

L77 WGSS 4106 Studies in Gender
Investigation of the constructions of gender in literary and other texts and their sociohistorical contexts, with particular attention to the gendered conditions of writing and reading, engendering of the subject, and indicators of gender. Topics and periods vary from semester to semester and include gender and genre, education, religion, politics, cultural and state institutions, science, sexuality, and human reproduction. Discussion, readings, and papers in German; some theoretical readings in English. May be repeated with different content. Prerequisites: German 302D and German 340C/34D or German 341/341D or German 342/342D.
Same as L21 German 4106
Credit 3 units. A&S IQ: HUM, LCD, SD, WI EN: H

L77 WGSS 4112 Body and Flesh: Theorizing Embodiment
This seminar explores a wide range of readings on “the body” as a site of theoretical analysis in social scientific and humanistic inquiry. Issues include: How do we think about the body as simultaneously material (flesh and bone) and constructed in and through social and political discourse? How do we think about the relationship between these contingent bodies and subjective experiences of “self” in various contexts? The course focuses upon the different ways in which these questions have been posed and engaged, and the implications of these formulations for the theorizing of human experience. Prerequisite: Anthro 3201 or permission of instructor.
Same as L48 Anthro 4112
Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L77 WGSS 414 Gender, Religion, Medicine and Science
Until recently the histories of science, medicine and religion were written by men and for men. These fields did not critically analyze gender or sexuality. Neither masculinity nor femininity were topics of interest in the studies of great scientists or famous theologians. Sexuality in scientific writing and religious thought were barely received more than a sentence or two in the writings of historians. What changed? Feminist/Queer theory made us rethink the way we learn about the history of medicine, science and religion. Despite these great strides, we are only beginning to explore the interplay between these fields from a feminist/queer perspective. In other words, while feminist/queer scholars have deepened our understandings of both science and religion, they have only recently begun to examine the relationship between these two fields. This course explores how feminist research has broadened our understanding of the interplay between the authority of religion, science and medicine in historical and contemporary studies. Some of the topics we explore include: conception and gestation, birth control, birthing, sexuality and aging. Prerequisites: Introduction to Women and Gender Studies and at least one 300-level WGSS course that addresses feminist and/or queer theory such as: Masculinities, Making Sex and Gender, Transgender Studies.
Credit 3 units. A&S IQ: HUM, SD EN: H

L77 WGSS 4140 Topics in Feminist Philosophy: Feminist Epistemology and Philosophy of Science

L77 WGSS 4146 The Politics of Pleasure
This 400-level seminar interrogates the concept of pleasure. Pleasure occupies a fraught space in feminist and queer theory. This course examines several ways that people have theorized pleasure as a space for politics, a space for conservatism, or a way to think about racialized difference. This course is not interested in defining what pleasure is, but it interrogates what the stakes of talking about pleasure have been within contemporary theory and culture. Beginning with an examination of pleasure in the context of early 20th-century sexology, this course looks at the sex wars of the 1970s, the turn toward pleasure as a space of protest, and ends by thinking of ways to imagine pleasure outside of current paradigms of sexuality. The course takes gender, race and sexuality as central analytic components to understand how pleasure is defined and who has access to it. Either Introduction to Sexuality Studies or Introduction to Women, Gender and Sexuality Studies are prerequisites.
Credit 3 units. A&S IQ: HUM, SC, SD EN: H

L77 WGSS 417W Feminist Research Methodologies
Research is the foundation of academic knowledge and of much knowledge produced outside of the academy in think tanks, nonprofit organizations, social service agencies, corporations, and many other venues of economic and social activity. Informed by theory, and shaped by specific methods, research can and does help to frame problems, contribute to policymaking, and evaluate the effectiveness of policies and programs. Research is employed in a variety of ways in the different disciplines within the academy and within different practices outside of the academy. This course examines the different ways in which research is conducted and examines the reasons for these differences and the ways in which they contribute to or hamper feminist goals. The course also explores the ways in which some research methods are privileged over others in hegemonic understandings of what counts as “research” and of what counts as “knowledge.” The course examines how gender theory and feminist politics shape the kinds of research questions researchers ask, the types of materials and other information researchers use, and the ways researchers define our relationships with our sources of data, evidence and other information. Students are expected to reflect on and engage with feminist approaches to research in this course in order to develop and complete a detailed research proposal. Prerequisite: At least two courses in WGSS, including Introduction to WGSS or Sexuality Studies at the 100 or 200
L77 WGSS 418C Sexuality and Gender in East Asian Religions
In this course we will explore the role of women in the religious traditions of China, Japan and Korea, with a focus on Buddhism, Daoism, Shamanism, Shinto and the so-called "New Religions." We will begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We will then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses, shamans and mediums, hermits and recluses, and ordinary laywomen — both historically and in more recent times. Class materials will include literary and religious texts, historical and ethnological studies, biographies and memoirs, and occasional videos and films. Prerequisites: This class will be conducted as a seminar, with minimal lectures, substantial reading and writing, and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, will need to obtain the instructor's permission before enrolling. Same as L23 Re St 418 Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM EN: H

L77 WGSS 419 Feminist Literary and Cultural Theory
This course is intended to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings cover a wide range of approaches and tendencies within feminism, among them: French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural and philosophical currents, the course explores feminist literary and cultural theory in an interdisciplinary context. Note: this course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisite: advanced course work in WGSS or in literary theory (300-level and above), or permission of the instructor required. Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM EN: H

L77 WGSS 4201 The Novel in the Feminine (Le Roman au Feminin)
Informed through feminist criticism (Beauvoir, Cixous, Kristeva), this course examines the deconstruction of the novel as a traditional genre by 20th-century women writers such as Colette, Nathalie Sarraute, Marguerite Duras, Marguerite Yourcenar, Annie Ernaux and Mariama Bâ. We place special emphasis on the representation of the writing woman in the text itself and on the issue of “écriture féminine” in its sociocultural context. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Same as L34 French 4201 Credit 3 units. Art: HUM

L77 WGSS 421 From Mammy to the Welfare Queen: African-American Women Theorize Identity
How do representations of identity affect how we see ourselves and the world sees us? African-American women have been particularly concerned with this question, as the stories and pictures circulated about black female identity have had a profound impact on their understandings of themselves and political discourse. In this course we look at how black feminist theorists from a variety of intellectual traditions have explored the impact of theories of identity on our world. We look at their discussions of slavery, colonialism, sexual identity, motherhood, citizenship, and what it means to be human. Credit 3 units. A&S IQ: HUM, SC, SD EN: H

L77 WGSS 4221 Topics in Women and French Literature
Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Same as L34 French 4221 Credit 3 units. Art: HUM

L77 WGSS 427 Technology and Feminist Practice: Gender Violence Prevention Tools
How can we best use technology, and the tools and insights of the Digital Humanities in particular, to promote effective approaches to addressing gender-based violence? What are the most effective ways to bridge the innovations of the research university with the everyday work of practitioners seeking to prevent violence or intervene in its aftermath? What are the ethics involved in constructing tools for public and professional use? Which interests should govern the choices in content, design and dissemination of information? This course will introduce students to the strategies and challenges of devising technological tools for violence prevention for use beyond the classroom. Class readings and discussions will be supplemented by hands-on project work with Washington University's Gender Violence Database and lab sessions that focus on skill-building in digital project construction. Prerequisite: For undergraduate students, L77 393 01 or previous work experience with the Gender Violence Database. Graduate students by permission of instructor. Same as L93 IPH 427 Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA, ETH EN: H

L77 WGSS 429 Feminist Political Theory
This course asks how feminist thinkers from various political and intellectual traditions critique, adopt and transform political theories of justice, citizenship, property and the state. To uncover how different feminist theories have been adopted in the struggle for political transformation and social justice, we will pursue two main lines of inquiry. The first asks how feminist thinkers from various traditions critique and engage the history of political thought within the social contract tradition. We will ask, in particular, how gender, class, slavery, colonialism and empire shape conceptions of citizenship and property. We will also examine transnational feminist critiques of the public/private
division in the Western political theory canon as it impacts the role of women and the social construction of women's bodies. During the second half of the semester, we will ask how various transnational social movements have engaged and adopted feminist theories in efforts to resist state violence, colonialism, labor exploitation and resource extraction. In following these lines of inquiry we will draw from postcolonial, decolonial, liberal, Black, radical, Marxist and Chicana feminist perspectives. Part of our goal will be to uncover how various feminist theories treat the relationship between politics and embodied experience, how gendered conceptions of family life affect notions of political power and how ideas about sexuality and sexual conquest intersect with empire-building. Prerequisite: L77 100B or consent of instructor.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 430A Divergent Voices: Italian Women Writers
This course engages the fictional and political works of Italian women writers from the 17th century to the present day. We will read one of the acclaimed Neapolitan novels of Elena Ferrante, who is considered by many to be the most important Italian fiction writer of her generation. We will examine a cloistered Venetian nun's defiant 1654 indictment of the misogynist society that forced her into the convent. We will confront the reality of a woman writer who in 1901 was compelled to choose between her child and her literary career. Among other contemporary writers, we will study the humorous and radical feminist one-acts of playwright Franca Rame. Taught in English. No Final. Same as L36 Ita/ 430

Credit 3 units. A&S IQ: HUM, LCD, SC, SD EN: H

L77 WGSS 432 Women Writers of the 20th Century
This course examines select novels, poetry and political writings by such noted authors as Sibilla Aleramo, Dacia Maraini, Luisa Muraro and Anna Banti. Special attention is paid to the historical, political and cultural contexts that influenced authors and their work. Textual and critical analysis focuses on such issues as historical revisionism in women's writing, female subjectivity and the origins and development of contemporary Italian feminist thought and practice. Taught in English. Same as L36 Ita 432

Credit 3 units. A&S IQ: HUM, LCD, SD Art: HUM

L77 WGSS 433 Feminist Theory
Advanced course in feminist theory. For specific content in a particular semester, consult course listings.

Credit 3 units.

L77 WGSS 431 Topics in Feminist Theory: Feminist Philosophy
Credit 3 units.

L77 WGSS 433 Women of Letters
We investigate the representation of women in 18th-century texts. Why did the novel and epistolary fiction become so closely associated with women as writers, heroines and readers in the course of the century? Why were women considered exemplary and yet, at the same time, a threat? The 18th century saw the last of the salons led by women well-versed in philosophy, literature, art and politics. It saw the reinforcement of the role of women and the social construction of women's bodies. How ideas about sexuality and sexual conquest intersect with empire-building. Prerequisite: L77 100B or consent of instructor.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 436 Black Sexual Politics
Borrowing from Patricia Hill Collins' perspective in Black Sexual Politics, this seminar examines the historic and popular understandings of black sexuality and how they maintain color line, as well as threaten to spread what Hill Collins refers to as a "new brand of racism." Particularly, this course engages questions about sexuality that have only begun to be discussed with African-American Studies and the larger public sphere. Taking the intersections of identities very seriously, this course interrogates the ways in which these constructions have affected black women, while also being attentive to how "others" are implicated within discourses of black sexuality. Similarly, we will also engage the various distortions of black men — depictions of the black and masculine as almost always violent, sexualizing and socially irresponsible, brutish, questionable and unfaithful. Together we will use various critical texts and media to better understand the impact and the importance of visual and material images in the interplay of race, sex and politics in contemporary America.

Credit 3 units. A&S IQ: SSC, SC, SD EN: S

L77 WGSS 437 Transnational Feminisms
This course engages contemporary feminist theories from diverse transnational contexts, as well as the social movements and local resistances they inspire. Through engagement with key works of feminist theory, political manifestos, and creative works of resistance, we will explore how transnational feminist alliances and coalitions have contested and responded to gendered and racialized forms of exploitation, navigating and reshaping territorial and social boundaries. We will engage with debates around the notion of a "global sisterhood": tensions between universal and local feminist practice; the role of difference, nationality and culture in navigating the possibility of solidarity; the role of the internet in forging cross-border alliances; human rights-based activism; "women’s" work; transgender inclusivity and transfeminisms. Part of our goal will be to ask how feminist theories from diverse geographical locations have influenced the politics of borders, movements for environmental justice, migrations and mobility, resistance to imperialism and the forging of alternative economies. We will also explore the gray areas existing in between binaries such as feminist/anti-feminist; local/global; home/away; global South/North; victim/agent; domination/dependency. Finally, we will ask how processes of knowledge-production take shape within different intellectual and political movements such as postcolonial feminism, decolonial and indigenous feminism, liberal and radical feminism, Marxist feminism and religiously-based feminisms.

Credit 3 units. A&S IQ: LCD, SSC, SD BU: BA EN: S
L77 WGSS 439 The Arab & Muslim Americas: Feminist Perspectives
Migratory movements from the Middle East and North Africa into the Americas were precipitated by multiple and intersecting factors. This course will examine the historical and contemporary waves of Arab and Muslim migrants and refugees into the Americas from the 19th to the 21st century. It will explore how empire, globalization, and war influenced and continue to influence the flow of people across borders and impact policies and ideas of belonging in receiving nation-states. We will examine Arab and Muslim identity in light of gendered, ethnoreligious, class, and national affiliations and investigate the racialization of Islam and the gendered-Orientalist constructions of Arabs and Muslims in Latin America (Brazil, Mexico, Argentina, Honduras, Cuba) and the U.S. Utilizing interdisciplinary texts in transnational feminist theory, cultural studies, and history, we will trace the ways that specific diasporic subjects have been incorporated into host nation-states and analyze, through a comparative framework, the receptions and rejections of Arabs and Muslims in the U.S. and Latin America. Credit 3 units. A&S IQ: LCD, SSC, SC, SD EN: S

L77 WGSS 440 Women in the History of Higher Education and Professions
An advanced seminar with readings exploring education, historical studies and feminist theory. Each student writes a paper, based on research in local archives and in other primary sources, on a topic related to women in higher education and/or professions. Prerequisites: junior standing or above; some background in American history. Same as L12 Edu 440 Credit 3 units.

L77 WGSS 441A Gender Analysis for International Affairs
For generations ignored in theory and practice, gender is a central but too often obscured dimension of the policy and practice of international affairs, relations, and development. In this interdisciplinary course, students take gender seriously as an analytical category and examine how masculinities, femininities, gender identities, and sexualities shape the construction, implementation, and outcomes of global governance, politics, economics, and interventions. Traversing both macro and micro levels, the course exposes students to diverse voices from around the world, which they utilize to conduct gender analyses on case studies relevant to their interests. Throughout, we will be mindful of (1) how gender functions in tandem with sexuality, class, race, religion, and ethnicity (intersectionality) and (2) how multidimensional identities morph historically, regionally, and culturally. The student builds a gender analysis toolkit and practices what Cynthia Enloe describes as “feminist curiosity,” exploring the relationship between gender and power in various aspects of international affairs. Same as L97 IAS 4414 Credit 3 units. A&S IQ: LCD, SSC, SC BU: BA, IS

L77 WGSS 4454 Irish Women Writers: 1800 to Present
Same as L14 E Lit 4454 Credit 3 units. Art: HUM

L77 WGSS 445A Japanese Fiction
A study of the themes, styles, and genres of Japanese fiction as revealed in representative works of major authors such as Soseki, Tanizaki, and Kawabata. Topics include the question of the Japanese literary canon, the varieties of Japanese literary selfhood, literature by and about women, and tradition versus modernity. All works read in English translation. Prerequisites: junior standing and 6 units of literature. Same as L05 Japan 445 Credit 3 units. A&S IQ: HUM, LCD, WI Art: HUM EN: H

L77 WGSS 4472 Spanish-American Women Writers II
A study of contemporary women’s writing from 1970 to the present within a feminist theoretical framework. Topics include the construction of gender, female subjectivity, love and power, women and politics, literary strategies, etc. Prerequisites: Span 307D, Span 308E and at least two 300-level literature courses taught in Spanish. One-hour preceptorial for undergraduates only. In Spanish. Same as L38 Span 4472 Credit 3 units. Art: HUM

L77 WGSS 4479 Senior Seminar in Religious Studies: Contemporary Approaches to the Study of Women and Religion
The topic for this seminar differs every year. Previous topics include Governing Religion; Saints and Society; Religion and the Secular: Struggles over Modernity; and Pilgrimage and Sacred Space in Antiquity. The seminar is offered every spring semester and is required of all religious studies majors, with the exception of those writing an honors thesis. The class is also open, with the permission of the instructor, to other advanced undergraduates with previous course work in Religious Studies. Same as L23 Re St 479 Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM BU: ETH EN: H

L77 WGSS 4494 Modern Japanese Women Writers
Japanese women have been scripted by Western (male) imagination as gentle, self-effacing creatures. From their (re)emergence in the late 19th century to their dominance in the late 20th, Japanese women writers have presented an image of their countrywomen as anything but demure. Struggling to define their voices against ever-shifting expectations and social contexts, the women they create in their fiction are valiant, if not at times violent. This course examines the various manifestations of the female image in female-authored modern Japanese fiction. Writers to be considered are Hirabayashi Taiko, Uno Chiyô, Enchi Fumiko, Yamada Eimi, and others. A selection of novels and shorter fiction will be available in English translation, and students need not be familiar with Japanese. Prerequisites: 6 units of literature/women’s studies and junior standing, or permission of the instructor. Writing Intensive course. Same as L05 Japan 449 Credit 3 units. A&S IQ: HUM, LCD, SD, WI EN: H

L77 WGSS 4496 Modern Japanese Women Writers
Japanese women have been scripting by Western (male) imagination as gentle, self-effacing creatures. From their (re)emergence in the late 19th century to their dominance in the late 20th, Japanese women writers have presented an image of their countrywomen as anything but demure. Struggling
to define their voices against ever-shifting expectations and social contexts, the women they create in their fiction are valiant, if not at times violent. This course examines the various manifestations of the female image in female-authored modern Japanese fiction. Writers considered are Higuchi Ichiyō, Hirabayashi Taiko, Uno Chiyo, Enchi Fumiko, Yamada Eimi, and others. A selection of novels and shorter fiction are available in English translation, and students need not be familiar with Japanese. Prerequisites: 6 units of literature/women's studies and junior standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM, LCD, SD EN: H

L77 WGSS 4502 Women and the Medieval French Literary Theory
The Middle Ages constitute a beginning — a period when new languages and literatures came into being, along with Romanesque book — illumination and stained glass, Gothic cathedrals, Gregorian chant, Troubadour song, Crusades for the Holy Land and quests for the Holy Grail. Medieval French Literature is therefore a new literature, defining itself against antique models and its own rich multilingual, highly visual and oral culture. This course provides an overview of this diverse and fascinating French literary tradition while focusing on the status of women in the literary production of the Middle Ages. Particular attention is given to women's role in the creation of texts as authors and patrons. We also examine how gender roles are constructed and challenged through the literary representation of female characters. Readings include examples from major genres: Marie de France's Lais, Chrétien de Troyes' Lancelot, Rutebeuf's Vie de Sainte Elysabel, the anonymous Aucassin et Nicolette, as well as Fabliaux, poetry of the Trouvères and Trobairitz, excerpts of the Roman de la Rose, and works by Christine de Pizan. All readings and discussions are in modern French. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates.

Same as L34 French 450
Credit 3 units. Art: HUM

L77 WGSS 455 Topics in Korean Literature and Culture: Gender in Korean Literature and Film
Varied topics in Korean literature and culture. Subject matter varies by semester; refer to current semester listings for topic.

Same as L51 Korean 455
Credit 3 units. A&S IQ: LCD EN: H

L77 WGSS 457 Gender and Modernity in Latin America
The purpose of this course is to introduce students to the particular forms modernity assumes in Latin American countries and to the ways in which national cultures, identity politics, and gender issues interweave during the 20th-century. The course will discuss three particular articulation of this topic: 1) Gender and the national question in Argentina: Eva Peron; 2) Gender and Visual Arts: Frida Kahlo; and 3) Gender and Ethnicity: Rigoberta Menchu. Through these iconic figures students will be introduced to the specific features that characterized three very different but representative cultural scenarios in Latin America.

In each case, the context for the emergence of these highly influential public figures will be studied from historical, social and cultural perspectives. In order to explore the cultural and political significance of Eva Peron, Frida Kahlo and Rigoberta Menchu, the course will utilize literary texts (speeches, letters, diaries, etc.), visual materials (photography, films, and paintings) and critical bibliography.

Same as L45 LatAm 457
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L77 WGSS 4581 Gender, Politics and Writing in Women’s Fiction of the Post-Franco Era
This course focuses on the narrative fiction of Spanish women of the post-Franco era: those who began to publish shortly after Franco’s death and continue to write into the new century (Esther Tusquets, Cristina Fernández Cubas, Rosa Montero, Carmen Riera and Adelaida García Morales), as well as the more recent crop of writers who emerged on the literary scene in the past decade (Nuria Amat, Lucia Etxebarria and Espido Freire). We consider the works of these women within their cultural, historical and political contexts, addressing issues such as the representation of gender and sexuality; the cultural impact of feminism, nationalism and globalization; and the influence of the publishing industry and the market on literary production. Whenever available, film adaptations of these literary works are used in conjunction with the readings. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One hour preceptorial for undergraduates only. In Spanish.

Same as L38 Span 458
Credit 3 units. Art: HUM

L77 WGSS 4601 Taboo: Contesting Race, Sexuality and Violence in American Cinema
Pushing the envelope or going too far? What is the boundary between films that challenge us and films that offend us? This is a course about films that crossed that boundary, most often by presenting images of race, sexuality and violence, images that could attract audiences as much as they offended moral guardians and courted legal sanctions. Because they were denied the First Amendment protection of free speech by a 1915 Supreme Court decision, movies more than any prior art form were repeatedly subject to various attempts at regulating content by government at federal, state, and even municipal levels. Trying to stave off government control, Hollywood instituted forms of self-regulation, first in a rigid regime of censorship and subsequently in the Ratings system still in use. Because taboo content often means commercial success, Hollywood could nonetheless produce films that pushed the envelope and occasionally crossed over in to more transgressive territory. While control of content is a top-down attempt to impose moral norms and standards of behavior on a diverse audience, it also reflects changing standards of acceptable public discourse. That topics once barred from dramatic representation by the Production Code — miscegenation, homosexuality and “lower forms of sexuality,” abortion, drug addiction — could eventually find a place in American movies speaks to changes in the culture at large. In trying to understand these cultural changes, this course explores films that challenged taboos, defied censorship, and caused outrage, ranging from films in the early 20th century that brought on the first attempts to control film content through to films released under the ratings system, which has exerted subtler forms of control. Required screenings.

Credit 3 units. A&S IQ: HUM, SC, SD Art: CPSC EN: H

L77 WGSS 461A Topics in English Literature I
Studies in special subjects, e.g., allegory and symbolism in the medieval period, the sonnet in English literature, English poetry and politics. Consult course listings.
L77 WGSS 4675 Beyond the Harem: Women, Gender, and Revolution in the Modern Middle East
This course examines the history and current situations of women in Middle Eastern societies. The first half of the course is devoted to studying historical changes in factors structuring women's status and their sociopolitical roles. The second half of the course will focus on several case studies of women's participation in broad anti-colonial social revolutions and how these revolutions affected the position of women in those societies.
Same as L22 History 4675
Credit 3 units. A&S IQ: HUM, LCD BU: BA, HUM EN: H

L77 WGSS 4711 Gender and Religion in China
In this course, we explore the images, roles and experience of women in Chinese religions: Confucianism, Daoism, Buddhism, and so-called "popular" religion. Topics discussed include: gender concepts, norms and roles in each religious tradition; notions of femininity and attitudes toward the female body; biographies of women in Confucian, Daoist, and Buddhist literature; female goddesses and deities; and the place of the Buddhist and Daoist nun and laywoman in Chinese society. All readings are in English or in English translation. Prerequisite: senior/graduate standing. Students with no previous background in Chinese religion, literature or culture need to obtain instructor's permission before enrolling.
Same as L23 Re St 4711
Credit 3 units. A&S IQ: HUM, LCD

L77 WGSS 4745 Reformers and Radicals: Feminist Thinking Through History
We focus on feminist thought in Western culture but also examine non-Western ideas about feminisms. We trace the relationship among emergent feminist ideas and such developments as the rise of scientific methodology, Enlightenment thought, revolutionary movements and the gendering of the political subject, colonialism, romanticism, socialism, and global feminisms. Readings are drawn from both primary sources and recent feminist scholarship on the texts under consideration. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: completion of at least one Women, Gender, and Sexuality Studies course or permission of the instructor. Students who have taken L77 475 Intellectual History of Feminism cannot take this class.
Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM EN: H

L77 WGSS 4755 Queering Sexual Cultures in Africa and the Diaspora
This course examines gender and sexuality in contemporary Africa and the diaspora. We will focus specifically on queerness as a category of analysis and will examine queer identities, practices, communities and cultures in Africa and the African diaspora. In recent years, many African countries have adopted harsh anti-homosexuality laws and much of the political and popular discourse frames expressions of same-sex desire as "un-African." However, there is a long history of non-normative sexualities in Africa, challenging the manner in which the continent is constructed as heterosexual by both local and global forces. Similarly, black communities across the African diaspora have relied on the regulation of gender and sexuality to demarcate the boundaries of blackness, and have traditionally sought belongingness to the nation through compulsory heterosexuality. Many scholars, artists and activists in the African diaspora continue to critique parochial definitions of Africanness and Blackness that rely on the exclusion of queer subjects. By drawing on historical, theoretical and visual texts, we will examine the debates concerning sexuality, citizenship and human rights on the African continent and the diaspora as well as their relationship to global issues around sexual citizenship and human rights. By focusing on the lived experiences of LGBTQ subjects in the African diaspora, we will interrogate the contested relationship between sexuality and politics. This reading-intensive, interdisciplinary course will familiarize students with the debates and issues of Queer African Studies, Black Queer Studies, and Black and African Feminist Thought.

L77 WGSS 487A Discourses on Gender in 19th- and 20th-Century Spain
This course focuses on discourses on gender, from the late 19th century to the present in the context of feminism in Spain. We explore the social, political and cultural role of Spanish women (writers) within their specific historical contexts, with a special attention to their struggle to construct a new female subjectivity through their writings. To this end, their narrative fiction (novels, short stories) are read in conjunction with nonfiction writings (essays, journalism, etc.). Authors studied include 19th-century proto-feminists such as Emilia Pardo Bazán and Concepción Arenal; early 20th-century writers such as Carmen de Burgos, Margarita Nelken, and other female activists of the Republican...
period; and women writers of the post-War and post-Franco eras. Prerequisites: Span 307D, Span 308E and at least two 300-level courses taught in Spanish. One-hour preceptorial for undergraduate students. In Spanish.
Same as L38 Span 487
Credit 3 units. A&S IQ: HUM, LCD, SD EN: H

L77 WGSS 4908 Advanced Seminar: Women in American Society: Women in Social Movements
In this course we will examine U.S. women's participation in diverse movements during the 19th and 20th centuries, ranging from suffrage and feminism, to the labor movement, civil rights activism, and conservative and queer movements. Among our questions: How does the social position of different groups of women shape their participation in social movements? Why are certain social movements successful, and how do we define success? What does looking at women's experience in particular tell us about social movements in general?
Same as L22 History 4907
Credit 3 units.

L77 WGSS 4918 Advanced Seminar: Sexuality in the United States
Does sex have a history, and if so, how can we study it? This seminar examines important themes in the history of sexuality: the relationship between sexual ideologies and practices; racial hierarchy and sexuality; the policing of sexuality; construction of sexual identities and communities; and sexual politics at the end of the century. Students will also spend time discussing theoretical approaches to the history of sexuality, as well as methodological issues, including problems of source and interpretation.
Same as L22 History 4918
Credit 3 units. A&S IQ: HUM Art: HUM

L77 WGSS 4974 Advanced Seminar in History: Gender and Property Law
This course aims to explore the intersections of gender relations, work and property in law, custom and culture from the colonial period to the late 20th century. We will read a wide range of articles and books, all of which in some way address the relationships among gender ideologies, social practices, and property relations in American society.
Same as L22 History 4974
Credit 3 units.

L77 WGSS 498 Supervised Reading and Research
This course is designed for students who are pursuing an independent study project as part of the department Honors Program. Students must apply to the department. May be repeated once. Prerequisite: senior standing and permission of the department.
Credit 3 units.

L77 WGSS 4982 Advanced Seminar: Women and Confucian Culture in Early Modern East Asia
This course explores the lives of women in East Asia during a period when both local elites and central states sought to Confucianize society. We will focus on Ming (1368-1644) and Qing (1644-1911) China, but will also examine these issues in two other early modern East Asian societies: Yi/Choson (1329-1910) Korea and Tokugawa (1600-1868) Japan.
Same as L22 History 4982
Credit 3 units.

L77 WGSS 499 Honors Thesis: Research and Writing
Enrollment in this course is limited to students accepted into the Honors Program. Petition for permission to enroll is available in the Women, Gender, and Sexuality Studies Office, McMillan Hall, Room 210.
Credit 3 units. EN: H

L77 WGSS 4990 Advanced Seminar: History of the Body
Do bodies have a history? Recent research suggests that they do. Historians have tapped a wide variety of sources — including vital statistics, paintings and photographs, hospital records, and sex manuals — to reconstruct changes in how humans have conceptualized and experienced their own bodies. We pay particular attention to the intersection of European cultural history and the history of medicine since 1500.
Same as L22 History 4990
Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art; HUM EN: H

L77 WGSS 4993 Advanced Seminar: Women and Religion in Medieval Europe
This course explores the religious experience of women in medieval Europe and attempts a gendered analysis of the Christian Middle Ages. In it, we will examine the religious experience of women in a variety of settings — from household to convent. In particular, we will try to understand how and why women came to assume public roles of unprecedented prominence in European religious culture between the 12th century and the 16th, even though the institutional church barred them from the priesthood and religious precepts remained a principal source of the ideology of female inferiority.
Same as L22 History 4993
Credit 3 units. A&S IQ: HUM, LCD EN: H

L77 WGSS 49MB Advanced Seminar: Women and Gender in Modern Caribbean History
This course will highlight women in the "making" of Caribbean history, and it will consider how "men" and "women" were made in the English-speaking Caribbean from emancipation (1838) to the present. We will explore women and gender issues within the context of significant political shifts including the transition from slavery to wage and indentured labor, the labor rebellions of the 1930s, the rise of labor unions and political parties, anti-colonial activism, decolonization and nationalism. The course will also situate the Caribbean within an international context, paying attention to migration, black internationalism and the Third World movement.
Same as L22 History 49MB
Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

Writing
The English department offers a full range of courses in the writing of poetry, fiction, drama and various forms of nonfiction, as well as advanced courses in expository writing.
An English major with a special interest in writing may complete a major in English literature with a concentration in creative
writing. Alternatively, a student may count up to 9 units of upper-division writing courses toward the English major.

The department also offers a minor in writing, which can be combined with any major, including the English major. In this latter case, students are advised to take English and American literature courses (designated L14 E Lit) exclusively for the English major and writing courses (designated L13 Writing) exclusively for the writing minor.

Except where noted, students are expected to receive a grade of C or better in each course.

Website: http://english.artsci.wustl.edu

Faculty

For a list of affiliated faculty, please visit the Department of English faculty (p. 408) page.

Majors

Although the English department does not offer a writing major, the department does offer the option of completing an English major with a creative writing concentration. To complete the major, students must take five creative writing courses, including at least three upper-division courses. Students will specialize in one particular genre — poetry, fiction or creative nonfiction — and ultimately take a three-course sequence in that genre (200-, 300- and 400-level courses); students will also take at least one course outside of the chosen genre. The concentration will not change the requirements of the English major and thus requires 6 additional credit hours as compared with the regular English major.

Students interested in majoring in English literature with a concentration in creative writing should visit the English (p. 409) page of this Bulletin for additional information.

Minors

The Minor in Writing

The writing minor is fulfilled by completing 15 units of writing courses, no more than 6 units of which can be taken at the 200 level. At least one of the five courses elected must be Writing 311 Exposition or Writing 312 Argumentation.

With department approval, up to 6 units of journalism courses in writing or editing offered by University College can be counted toward the minor. An off-campus internship (Writing 298 Journalism: Communications Internship) oriented toward writing may also be counted toward the minor. Regardless of level, at least 9 units counted toward the minor must be completed in regular courses home-based in writing.

For undergraduate scholars in the Howard Nemerov Program, two semesters of the 200-level Nemerov seminar (GeSt 211 Howard Nemerov Seminar I) may count as 3 units of 200-level work toward the writing minor. Two semesters of the 300-level Nemerov seminar may count as 3 units of 300-level work toward the writing minor. A maximum of 6 Howard Nemerov units may count toward the writing minor.

Students who wish to take a writing minor in addition to an English major are advised to take English and American literature courses (L14 E Lit) exclusively for the major and writing courses (L13) exclusively for the minor. (Please note: 100-level L13 classes do not normally count toward the writing minor.) Students who wish to combine writing with their English major are encouraged to consider an English major with a concentration in creative writing (p. 409).

Courses

Courses listed on this page include L13 Writing (p. 901) and L59 CWP (p. 906) (Writing Center). Please note: L59 classes and 100-level L13 classes do not normally count toward the writing minor.

Writing

L13 Writing 103 What is Justice?
This class seeks to develop the advanced reading, writing and research skills that students need in a university setting. It uses classical texts of the western tradition to investigate the question of justice and to develop arguable claims through the careful analysis of evidence.
Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 104 Writing Identity
Who are you? This simple question becomes ever more complicated the more closely you examine it. How should you define yourself? By ancestry, hometown, gender, cultural allegiance, ethnic background, nationality, sexual preference, social class, personal history, fashion sense, career aspirations, taste in music, or by some other category? This class will examine the complexities of identity as they have been expressed in a wide variety of modern literary (and some philosophical) writings, in order to develop the advanced reading, writing, and research skills that students need in a university setting. This course will satisfy the Writing 1 requirement.
Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 203 The Sentence in English
Though formal knowledge of English grammar is not always necessary for effective writing, learning it can help students understand how sentences are put together, and it can allow them to develop their own writing using a new set of skills. The Reed-Kellogg system of diagramming is a method of learning grammar by creating “pictures,” or maps, of sentences. These pictures show the logical relations between words, phrases and clauses, and they illustrate the choices writers are making as they craft individual sentences. Using a recent textbook by Eugene Moutoux, we learn to diagram sentences both famous and ordinary, both contemporary and of historical interest.
Our aims are (1) to learn both the "rules" and the peculiarities of English grammar, (2) to understand how the structure of a sentence can influence its meaning, and (3) to use this knowledge productively in crafting and revising our own prose. By the end of the course, students should be able to diagram just about any sentence in English, whatever the genre or time period, including their own. Extensive practice in writing and revising sentences gives students a consciousness of how grammar and syntax influence the meaning and effectiveness of their own writing.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L13 Writing 205 Writing the Visual World
Credit 3 units. A&S IQ: HUM Arch: HUM Art: CPSC, HUM BU: HUM EN: H

L13 Writing 211 Writing 2
This course invites students to pursue a writing project that centers on their own intellectual interests and that complicates their approaches to researched, creative and analytical work. Consult section description for details about specific class emphases. Limit: 12 students. Prerequisite: CWP 100 College Writing 1.
Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 221 Fiction Writing I
A course designed to introduce students to the fundamental craft elements involved in writing fiction. Prerequisite: CWP 100 College Writing 1.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 222 Poetry Writing I
A course designed to introduce students to the fundamental craft elements involved in writing poetry. Prerequisite: Writing 1.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 224 Playwriting
An introductory course in playwriting. Limited to 8 students. Prerequisites: CWP 100 College Writing 1 and permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 298 Journalism: Communications Internship
For students undertaking projects in newspaper or magazine journalism, in radio or television, or in business, government, foundations and the arts. The student must secure permission of the chair of the Undergraduate Committee, file a description of their project with the department and, at the end of the semester, submit a significant portfolio of writing together with an evaluation by the internship supervisor. Up to 3 units acceptable toward the writing minor, but cannot be counted toward the English major or literature minor. Prerequisite: CWP 100 College Writing 1. Must be taken credit/no credit.
Credit variable, maximum 3 units.

L13 Writing 305 Modern Humor Writing
This course will analyze and put into practice what makes good humor writing both good and humorous, from subject matter to the mechanics of setting up a punchline, from crafting an unexpected metaphor to perfecting the reversal.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 306W The Long Essay: Researched Writing
Credit 3 units. A&S IQ: HUM, WI BU: HUM EN: H

L13 Writing 307 Writing and Medicine
Credit 3 units. A&S IQ: HUM WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 309 Writing the Natural World
For students interested in the environment and natural sciences. This course brings together essays from a wide range of communities including biology, physics, medicine, environmental studies, creative writing and more. Readings and assignments are intended to enhance students' understanding of the relationship between writing and their experience/knowledge of the natural world. Major assignments allow students to follow, explore and write about their own unique interest in a
related subject, and include a personal essay, an expository essay, and a researched argumentative essay, as well as peer review workshops, oral presentations, and revision. Students record and explore their own experiences of nature in short creative assignments that prepare them for the major papers. Prerequisites: CWP 100 College Writing 1 and junior standing. Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 310 Guided Research in Composition: Theory and Pedagogy of One-to-One Writing Instruction
This course teaches theoretical and practical approaches to the tutoring of writing, specifically focusing on tutoring writing within the context of undergraduate courses. Students learn collaborative methods of tutoring writing, explore different approaches to writing comments on student work in various content areas, and examine the connections between writing and thinking. Students analyze their own writing processes and learn how to help others through the writing and revision process. Readings and discussions focus on writing theory and pedagogy, and students practice one-to-one methods in mock conferences and with sample essays. Assignments: two short essays, a longer research paper and presentation, and a journal. Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L13 Writing 311 Exposition
This advanced writing course considers style in relationship to audience and purpose, asking the writer to engage more consciously with writing conventions, and to explore strategies appropriate to various writing situations. Prerequisites: CWP 100 College Writing 1 and junior standing. A note for students and advisers: When registering refer to WebSTAC for updated information on section times and available seats. Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 3111 Exposition (Visual)
This advanced writing course emphasizes writing and visual analysis, asking students to examine important forms of visual media to develop a sophisticated sense of the strategies, techniques and the rhetoric of visual representation. Prerequisites: CWP 100 College Writing 1 and junior standing. Credit 3 units.

L13 Writing 3112 Exposition: Writing and Medicine
For students who have a particular interest in health, illness and medical care. Exposition is a course that considers style in relationship to audience and purpose, asking the writer to engage more consciously with writing conventions, and to explore strategies appropriate to various writing situations, from the more experimental and performative to the more formal and scholarly. The course involves frequent practice in analyzing and critiquing, with special attention to techniques of organization, argument and emphasis. Students in this special section of Exposition read essays, journalism and personal narratives about the experience of physicians and patients in the modern healthcare system. Students use expository writing to think critically and personally about their own experiences with illness and disease. Pre-medical students might use this opportunity to write and think about the anticipated rewards and challenges of the profession they hope to join. Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 312 Argumentation
This advanced writing course examines the strategies of argumentation, exploring such elements of argument as the enthymeme, the three appeals, claim types and fallacies. Prerequisites: CWP 100 College Writing 1 and junior standing. A note for students and advisers: When registering refer to WebSTAC for updated information on section times and available seats. Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 314 Topics in Composition
An advanced writing course focusing on selected topics related to writing. Topics chosen by department/instructor. Consult section description for details about specific class emphases. (Note: In some cases, this course may be cross-listed with other programs/departments and may satisfy the writing-intensive requirement.) Prerequisites: CWP 100 College Writing 1 and junior standing. Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 320 Creative Nonfiction Writing 2
This course is aimed at undergraduates who have taken Nonfiction Writing 1 and wish to pursue both their development as writers and the study of craft in the context of a more rigorous workshop. Prerequisites: CWP 100 College Writing 1, Writing 220 Creative Nonfiction Writing 1. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 321 Fiction Writing 2
This course is aimed at undergraduates who have taken Fiction Writing 1 and wish to pursue both their development as writers and the study of craft in the context of a more rigorous workshop. Prerequisites: Writing 220, Writing 221. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 321W Mellon Undergraduate Fellows Seminar
Credit 3 units. A&S IQ: HUM, WI EN: H

L13 Writing 322 Poetry Writing 2
This course is aimed at undergraduates who have taken Poetry Writing 1 and wish to pursue both their development as poets and the study of craft in the context of a more rigorous workshop. Prerequisites: Writing 220, Writing 222. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 322W Kling Undergraduate Honors Fellowship Seminar
Credit 3 units. A&S IQ: HUM, WI EN: H

L13 Writing 323 Fiction Writing: The Short-Short, Sudden Fiction, and Microfiction
This course is aimed at undergraduates who have taken Fiction Writing 1 or Poetry Writing 1 and wish to further explore the craft of fiction through the medium of the short-short story. The course
L13 Writing 324 Fiction Writing: Coming of Age in the Short Story
A fiction writing course that explores coming of age themes. Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L13 Writing 325 Poetry Writing: The Poetry of Travel
This course is offered for students who have taken Poetry 1 and are interested in further developing their craft. Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 326 Fiction Writing: Stories in the Suburbs
In the 1950s, the suburbs were still somewhat of a novelty in American culture — most people still lived in cities and small towns, or on the farm. Back then, Levitowns and the like were embraced with either gee-whiz optimism, or seen as sinister dystopias where youth, ideals and romance went to fester and die. But now that the American mainstream is stucco McMansions, strip malls and big box stores; now that the suburbs have become more ethnically diverse; now that literature is being generated from these places instead of just about them, how have stories set in the ‘burbs changed? We read short stories written from the 1950s until the present day exploring this particular setting, and, through a series of exercises, workshops and our own short fiction, we explore the milieu as writers (whether we happen to be from the suburbs or not), always on the lookout for the unexpected in these familiar places. Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L13 Writing 327 Creative Nonfiction: Personal Essay and Memoir
This is an intermediate course in writing creative nonfiction, with a concentration on personal essay and memoir. Prerequisite: Writing 220 Creative Nonfiction Writing 1. Credit 3 units. A&S IQ: HUM Arch: HUM BU: HUM EN: H

L13 Writing 330 Fiction Writing: Fiction and Obsession
Desire is at the heart of fiction, from the forces that drive the decisions characters make to the ways stories work on us as readers. Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 331 Fiction Writing: Historical Fiction
A literature/creative writing hybrid course, students read a number of contemporary historical fictions and then write one of their own. We consider the ways in which these fictions inhabit, depart from and reflect upon the historiography and history they’re built from — upon the indeterminacy of the historical record, and the limits of its reach — but we also discuss fiction’s responsibility to historical “facts” and documents, and the relevance of fictions among nonfictions in approaching an event or figure. Prerequisites: CWP 100 College Writing 1, Writing 221 Fiction 1. Credit 3 units. A&S IQ: HUM BU: HUM EN: H
### L13 Writing 401 Writing for Children and Young Adults
In this course we examine various genres of writing for young people: poetry, fiction and nonfiction.
Credit 3 units.

### L13 Writing 403 Dramaturgy Workshop
A laboratory course that investigates dramaturgy from four vantage points: New Play Dramaturgy, Institutional Dramaturgy, Dramaturgy of Classics, and Dramaturgical Approaches to Nontraditional and Devised Theater. This is a "hands-on" course where student dramaturgs not only pursue the study of dramaturgy, but work actively and collaboratively with playwrights, actors and each other.
Prerequisite: Drama 343.
Same as L15 Drama 403
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM

### L13 Writing 4131 Topics in Composition
Composition topics course — offerings vary from semester to semester.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM

### L13 Writing 417 Prose Style in English: History and Craft
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM

### L13 Writing 420 Advanced Nonfiction
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM

### L13 Writing 421 Advanced Fiction Writing
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM

### L13 Writing 422 Advanced Poetry Writing
For qualified students who wish to continue their creative writing and reading through immersion in an intensive poetry workshop. Students wishing to enroll must not only register but also submit a 15-page (double-spaced) fiction sample. The sample must include a cover page with: student’s name, the semester they took Fiction Writing 2, and the name of the Fiction Writing 2 instructor. Submit samples to the English Department mailbox of the L13 Writing 421 instructor no later than April 20. No one is officially enrolled in this class until contacted by the instructor.
Prerequisites: CWP 100 College Writing 1, Writing 221 Fiction Writing 1, and Reading through immersion in an intensive poetry workshop.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM

### L13 Writing 423 Proseminar in Writing: Nonfiction Prose
For students qualified to pursue their own projects in nonfiction prose; criticism by other members of the class and by the instructor. Limit: 12 students. Prerequisite: permission of instructor upon submission of writing samples.
Credit 3 units.

### L13 Writing 424 Poetry Tutorial
For students qualified to pursue their own projects in nonfiction prose; critic by other members of the class and by the instructor. Limit: 12 students. Prerequisite: permission of instructor upon submission of writing samples.
Credit 3 units.

### L13 Writing 425 Advanced Poetry and Fiction Writing
This course is intended for students who have already taken Writing 222 Poetry I and Writing 322 Poetry II. This is an opportunity for students who have already completed Writing 222 Advanced Poetry, or who are not able to take Advanced Poetry because of scheduling conflicts, to meet individually with the instructor to develop a portfolio of poems. During weekly meetings students explore various writing processes and revision techniques. There are directed readings and discussions of selected topics related to contemporary poetry and poetics.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM

### L13 Writing 431 Craft of Fiction: Experimental Traditions
A literature/creative writing hybrid course; students read a number of contemporary historical fictions — an increasingly important and innovative genre — and then write one of their own.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM

### L13 Writing 432 The Craft of Poetry
The purpose of this craft course is to contemplate poetry and prose as agonists, friends, lovers, and perhaps even servants of each other. Students will not be restricted to writing prose poetry, although that will account for a portion of the course work.
We will study the Symbolist origins of the prose poem, hazard alternate theories by reading beyond the anthological, and put conventional notions about the sentence, line, and prosody to the test. Indeed, we will even question the idea that prose is the "natural" form of language and poetry the "artificial." Readings include work by Etel Adnan, John Ashbery, Aimé Césaire, Don Mee Choi, and Layli Long Soldier, among others. Students will engage in a range of writing practices, from annotation and meditation to the incantatory and the subversive.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM

### L13 Writing 440 Critic as Writer
Credit 3 units. A&S IQ: HUM Art: HUM

### L13 Writing 4521 Advanced Screenwriting
This course is intended for students who have already taken Film 352 Introduction to Screenwriting. Building on past writing experiences, students explore the demands of writing feature-length screenplays, adaptations and experimental forms.
Particular attention is paid to the task of rewriting.
Same as L53 Film 452
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM

### L13 Writing 4731 Advanced Playwriting
This course explores the tendencies and relationship between each individual student writer and the page. Exercises dispel any lingering doctrine that presupposes a certain style of writing. A large part of the class centers around collaborations. The writers write scenes as a final project for an acting class, and also
work with two professional actors in an extended writing project that culminates in a script-in-hand presentation. The informal moments between collaborations look at the process beyond the first draft — i.e., the playground of language, nonverbal options, and the maintaining of "the work" through rewrites, readings, workshops and productions. Prerequisite: Drama 227 Introduction to Playwriting.
Same as L15 Drama 473

L13 Writing 490 Creative Writing Capstone Seminar
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

Writing Center Courses

L59 CWP 1001 Fundamentals of Academic Writing
A preparatory course required of some students before they take CWP 100 College Writing 1 (placement to be determined by the department). Particular attention is paid to reading comprehension, critical thinking, organization of ideas and grammar. In some cases, students may be required to enroll in a one-credit tutorial along with this course.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L59 CWP 111 College Writing: Ampersand Ireland
This College Writing course complements the two-semester program exploring the literary culture of modern Ireland.
Credit 3 units.

L59 CWP 112 College Writing: Citizen Scientist
Being a citizen of a modern democracy increasingly requires making decisions informed by our understanding of scientific consensus and the backing evidence. The stakes of these decisions range from the future of a warming planet to the benefits of vaccinations and GMOs to the persistence of racial bias and gender inequality. Even our daily diets are pushed and pulled by competing nutritional studies and their distortions in the media. Negotiating the volume of news and "fake news," the available academic research, and the influence of special interests can be daunting, particularly when we try to reflect on our own blind spots and knowledge gaps. Citizen Scientist uses these and other topics at the intersection of civic responsibility and academic research to introduce students to college writing. The course will teach students to analyze, research, and generate scholarly arguments as they deepen their understanding of the dynamic interaction between public opinion, government policy, political activism, science journalism, citizen science, and the research university.
Credit 3 units.

L59 CWP 113 College Writing: Dreams & Nightmares
This course is an opportunity to explore and experiment, to dwell in uncertainty and inquiry, and to entertain confusion before resolution. Whether their area of interest is the psychology of dreams, monsters, memory, desire, cognition and neuroscience, or the underbelly of the American Dream, students will find room to interrogate subjects, both real and imagined, as well as texts and theories that destabilize categories, embody possibilities, and threaten the established order.
Credit 3 units.

L59 CWP 114 College Writing: Writing Identity
Who are you? What defines you, and what will define who you become? This class will address how literature, art, and philosophy have attempted to characterize the complicated notion of identity. Relying on the foundational elements of college writing — analysis, argumentation, and research — we will investigate a diversity of views and voices that explore how identities are formed, how they intersect, and how they are negotiated. How is identity crafted out of the complex lives we live and the stories we tell about ourselves and others? How do authors represent and challenge our understanding of class, gender, race, sexuality, and other forces that help to shape us? Through a series of writing assignments, scholarly readings, and primary texts, we will examine together why the writing of identity matters to ourselves and to the lives we share, and, in the process, we will begin to build an understanding of our identities as writers.
Credit 3 units.

L59 CWP 115 College Writing: Literature & Justice
Credit 3 units.

L59 CWP 116 College Writing: Place & Perspective
Place & Perspective is a writing course featuring readings on the subject of our environments, whether social communities, physical spaces, or even virtual realities. As a class and as individuals, students will be asked to respond to these sources with writing of their own, practicing the academic traditions of interpreting, analyzing, criticizing, and researching. Most importantly, students will have the opportunity to write original works synthesizing and offering new views on what it means to live here in this world, to have a place in an ecosystem or in a city, a house, or a hospital. We will study our local community, from perspectives in our classroom to the wider conversations across the St. Louis region as we discover and write about our surroundings. We will foreground diversity in both in our class conversations and the writers that we read, from issues of inequality to concerns of access and the responsibilities of citizens. The class will feature multidisciplinary perspectives in conversations with our faculty as they reflect on their experiences writing within and about places. We will consider how place-based thinking thrives across academic fields, from design thinking in art to systems science in engineering and from environmental policy in business to ethnographic writing in anthropology, to name a few possibilities.
Credit 3 units.

L59 CWP 117 College Writing: Power & Commodity Culture
What does your steak order have to do with your politics? How might our taste in film relate to our taste in sneakers? How does writing itself contribute to larger media discourse? This course will explore how our choices as consumers, creators, and writers are mediated by broader cultural forces, such as film, foodways, music, television, art, and social media. "Commodity culture" refers to the aspects of culture that can be evaluated in terms of supposed "worth" or economic value. Here, students will think critically, draft, take risks, and revise to present work that has been elevated to college-level writing and argumentation. Readings will explore a range of cultural texts and topics, including the popularity of Grey Poupon in hip-hop

906
L59 CWP 118 College Writing: Writing Technology
Writing is a technology that allows one to read the thoughts of others across space and time. This course’s theme — technology — is the subject matter that we will be reading about to hone skills such as analysis, argumentation, and critical thinking. This does not mean that students must be budding technologists to succeed in this course, and the course will not cause such a transformation. Rather, this course treats “technology” in its broadest sense: from its root in the Greek word technē (which means “craftsmanship, craft, art, or rhetoric”) to its contemporary definition as the realm of knowledge that deals with the mechanical arts and applied sciences. In writing about technology, we will consider perspectives across the university curriculum in order to better comprehend our relationship with our tools and to scrutinize the dynamic interaction, communication, and interdependence of different kinds of tools for various means of communication and representation. We will strive to think critically about ourselves as part of larger communities and systems by attending closely to the ways we communicate with and about others through technologies such as writing, film, and social media. In writing creative, analytical, argumentative, and researched essays, we will address responsible uses of technology as well as the effects that technologies have on different communities and individuals. We will also try to answer questions like the following: How does technology affect us when we use it? How do technologies intersect and affect one another? What roles does technology play in our everyday lives? What roles do we want it to play in the future?

L59 CWP 119 College Writing: When I’m 64
Half of the current generation of college students will see their 100th birthdays. This astonishing shift in demographics is one that affects each of us as individuals, as members of families, and as citizens. This writing class takes aging as its theme, sharpening our critical thinking through such practices as analysis, argumentation, and research while asking the following questions: How will we negotiate the changing goals and life circumstances that accompany a century of life? How will new technologies change how we live as individuals and as a society? How will our experiences and those who go before us shift how we imagine the possibilities open to our future selves? We will read essayists, critics, and theorists who have tackled these problems, and, in turn, we will engage with our new, longer future through our own creative and critical responses.

L59 CWP 1511 Critical Reading and Analytical Writing
This course focuses on developing the reading and writing skills needed to excel at the college level. Students apply principles of logical argumentation in order to critically read argumentative writing. They then develop analytical essays in response to these arguments. Students write two drafts each of four main papers. At the same time, the course addresses the clarity and accuracy of students’ written English through ample written feedback, occasional lessons devoted to language issues common among course participants, and occasional individual tutorial meetings. Placement by examination or permission of the College Writing Program.

Credit 3 units.

L59 CWP 199 Language Support for English Composition
This course is designed to support students who are concurrently enrolled in L59 1001 Fundamentals of Academic Writing. Course activities are tailored to address language issues that arise in students’ writing for L59 1001. By raising students’ awareness of their individual strengths and weaknesses in written English and by teaching systematic approaches to editing their own writing, this course helps students to build independence in the production of more polished works of academic writing in English.

Credit 1 unit.

L59 CWP 200 Writing Tutorial
A tutorial in writing; may be taken for credit in one of two cases: (1) Students may be required to enroll in the tutorial for concentrated practice in writing fundamentals under the guidance of a tutor in addition to taking CWP 100 College Writing 1. In these cases, satisfying the first-year writing requirement means receiving a satisfactory grade in CWP 100 and receiving a passing grade in the tutorial. Students enroll in CWP 200 for 1 credit hour. Tutorials taken concurrently with CWP 100 must be taken pass/fail. (2) Students may be required to take the tutorial for 3 credit hours after taking CWP 100 in order to satisfy the first-year writing requirement. In this case, the tutorial is taken for credit. Direct all questions to Writing 1 office: 314-935-4899.

Credit 1 unit.

L59 CWP 201 Writing Workshop
An intensive workshop focusing on selected topics related to writing. Topics chosen by the department/instructor. Must be taken for credit. Consult course and section descriptions in online course listings for details about workshop emphases.

Credit 1 unit. A&S IQ: HUM Arch: HUM Art: HUM EN: H

Degree Requirements
The faculty of the College of Arts & Sciences believes each student should strive toward breadth and depth of study, as represented in the formal requirements. The faculty also believes that the primary responsibility for the selection of an academic program rests with the student, in consultation with academic advisers. This freedom of choice carries with it a corresponding responsibility for the consequences of such choices, and students are therefore expected to familiarize themselves with and meet the requirements detailed below.

Planning
The degree requirements for the Bachelor of Arts degree in Arts & Sciences are designed to provide students with strong and sustained training in writing and numerical applications; to enable students to construct a coherent program in which
courses reinforce each other in challenging and productive ways; and to take advantage of two distinctive features of the academic environment at Washington University: the strong tradition of cooperation among faculty working in different disciplines and the fact that teaching and learning at Washington University draw energies from an environment of vigorous and creative research.

The College of Arts & Sciences regards active student engagement in curricular planning as central to successful student learning. Each semester, students' advisers will help them project a personalized academic plan that responds to what they have already learned about the university, about the structure and aims of intellectual disciplines, and about themselves.

By the end of the sophomore year, students must have declared a major and constructed and nominated a preliminary online curricular plan that will satisfy all the following General Education requirements:

**Basic Skills**

A. **College Writing I (3 units):** Students demonstrate proficiency in reading and writing English and begin to develop mature skills in framing and revising arguments by completing course work determined by the College Writing Program with grades of C- or better. This requirement should be completed during the first year.

B. **Applied Numeracy (3 units):** Students develop their skills in numerical applications by completing one of an approved list of “AN” courses with a grade of C- or better. Students often find that there is an AN course in their major field of interest. This course may also satisfy other degree requirements.

C. **Social Contrasts (3 units):** For students matriculating in 2017 and beyond. Students take one course with primary emphasis on the formation, maintenance or impact of social categories such as race, ethnicity, gender, class, sexual orientation, religious affiliation, ability status or other categories. This course, which may be taken credit/no credit, must be selected from an approved list of “SC” courses; it may also satisfy other requirements.

D. **Writing-Intensive Course (3 units):** To consolidate their written communication skills, students must take a writing-intensive course, preferably in their major field. The course, selected from an approved list of "WI" courses, must be completed with a C- or better; it may also satisfy other requirements.

**Area Requirements**

A. Students must complete course work in each of the following academic areas:
1. Humanities (HUM): three courses totaling at least 9 units
2. Natural Sciences and Mathematics (NSM): three courses totaling at least 9 units
3. Social Sciences (SSC): three courses totaling at least 9 units
4. Linguistic and Cultural Diversity (LCD): either three sequenced courses of at least 3 units each in a single foreign language or at least four courses designated “LCD” of at least 3 units each

Up to 12 units of the area requirements may be taken credit/no credit.

B. To achieve depth and coherence, students must complete three integrations in at least two of the four areas of study (HUM, NSM, SSC, LCD). There are four types of integrations:
   - Majors, second majors and minors
   - Ampersand programs
   - Designated study away programs
   - Integrated inquiries

For a detailed list of Integrations, visit the Course Listings website (https://acadinfo.wustl.edu/CourseListings/IQ/Integrations.aspx).

**The Major**

Students must complete a major of no fewer than 18 units of courses numbered 300 or above with grades of C- or better. Degree completion is based on the primary major of record. At least half of the units for the major must be completed in residence. Students are strongly encouraged to complete a capstone experience in their major as a way of culminating their undergraduate education.

For more details regarding majors — including information about second majors, special majors and majors across schools — visit the main Arts & Sciences (p. 136) section of this Bulletin. For more information regarding specific departments’ major requirements, visit the Majors pages (p. 915) of this Bulletin.

**Additional Requirements**

A. Students must complete 120 units with at least 30 units in advanced courses (numbered 300 or above). The 30 units in advanced courses may include the number of advanced units required for the major.

B. Students must have an overall grade-point average of at least 2.0.

C. Students must earn the final 30 units toward the degree at Washington University while enrolled in the College of Arts & Sciences. Students pursuing 3-2 degrees should follow the requirements laid out by their master’s programs.

D. Students must be recommended by the College of Arts & Sciences to the Board of Trustees.
Regulations

A. No more than 24 units may be earned using the credit/no credit option, and no more than 12 of the 24 credit/no credit units may be for area distribution requirements.

B. No more than 15 units of pre-matriculation credit may be counted toward the degree. Pre-matriculation sources include Advanced Placement (AP), International Baccalaureate (IB), British Advanced (A) Levels, and course credit earned by proficiency (i.e., back credit). For the classes matriculating in the fall of 2016 and beyond, pre-matriculation sources also include college courses taken after the sophomore year in high school but not applied toward the high school diploma; for the classes entering prior to fall 2016, such courses may be included only if they were taken after the junior year in high school. Credits earned via the High School Summer Scholars or High School College Access programs through University College are considered to be pre-matriculation units and are subject to the same regulation.

C. Students may not earn more than 12 units toward the bachelor's degree in group and/or individual performance courses. Exceptions may be made for students majoring in departments that require a large number of performance courses for the major, such as dance, drama and music.

D. No more than 12 units of work may be taken outside the College of Arts & Sciences during the first and sophomore years. Thereafter, additional work may be taken with the approval of the adviser, provided that the student earns at least 90 units of credit in Arts & Sciences course work.

E. No more than 18 units of credit in independent study may be applied to the AB; no more than 6 units of independent study may be attempted in a single semester.

F. No more than 6 units of internship credit may be applied to the AB; no more than 3 units of internship credit may be attempted in a single semester.

G. A student may receive no more than a total of two majors and one minor or one major and two minors.

Transfer Students

Transfer students will follow the requirements of the Integrated Inquiry Curriculum, outlined above. Where appropriate, previous course work may be applied to the distribution requirements based on the following guidelines:

A. Transfer students who have not taken a college writing course at their prior school will take College Writing 1 during their first year at Washington University. Students who have taken such a course may be eligible to submit a writing portfolio to the College Writing Program for evaluation. The program director will review the portfolio to determine if the College Writing 1 requirement has been satisfied or if the student must complete additional writing course work.

B. The transfer advisers will evaluate a student's transcript on an individual basis. Generally speaking, a student transferring after one year at another school may count the other institution's course work toward the college's area requirements; however, the three required integrations must be completed through courses taken in residence.

C. Transfer students must be enrolled for at least four consecutive full-time semesters to satisfy the residency requirement. They must complete a minimum number of units at Washington University and a minimum number of units in the College of Arts & Sciences, according to the following table. No more than 3 units per semester may be taken on a credit/no credit basis.

Finalization of the Transcript

Conferral of the degree finalizes the student's academic record at Washington University. No changes can be made to the student's academic record after May 31 for a spring degree, October 31 for a summer degree, or January 31 for a fall degree. All students are strongly advised to obtain a copy of their final transcript, available for order from the Office of the University Registrar via WebSTAC (http://webstac.wustl.edu).

Academic Honors & Awards

Dean's List: At the end of each semester, in recognition of exceptional scholarship, the college compiles a list of those students whose work has been particularly worthy of commendation. Students will be cited on the Dean's List if they complete a minimum of 14 units of graded work while achieving a grade-point average of 3.6 for the semester. No incomplete or "N" grades may be outstanding as part of the semester record. All work must be completed and grades posted by the first day of the following semester in order to be considered for Dean's List. For spring semester courses, all work must be completed by the beginning of Summer Session II (typically mid-June).

College Honors: Upon assessment by the College Office, the AB with College Honors will be awarded to any student who achieves collegewide academic excellence as measured by a cumulative GPA of 3.6 or better throughout eight semesters and who does not receive Latin Honors.

Latin Honors: To be eligible for Latin Honors, the student must have maintained a 3.65 GPA through the sixth semester and must be accepted for candidacy by the relevant department or program. Latin Honors candidates must enroll in such courses...
as their department or program may require, satisfactorily complete a significant project appropriate to the nature of the discipline, and pass such written and/or oral examinations as the department or program may set. To earn such honors, candidates must also have maintained the minimum 3.65 GPA through the final semester.

Upon certification by the department that the Honors program has been satisfactorily completed, the student may be awarded the AB cum laude, magna cum laude, or summa cum laude according to the following proportions: The top 15 percent in overall GPA of the full cohort of Latin Honors candidates who complete the necessary requirements of their major departments will graduate summa cum laude; the next 35 percent magna cum laude; and the next 50 percent cum laude.

To be eligible for Latin Honors, transfer students must have earned a minimum of 48 letter-graded Washington University units prior to the final semester. Grades earned at other institutions do not figure in the calculation of minimum averages required for eligibility for Latin Honors.

**Phi Beta Kappa:** For more than 200 years, election to Phi Beta Kappa has been a distinctive recognition of intellectual accomplishment in the liberal arts and sciences. The Washington University chapter, Beta of Missouri (established in 1913), strives to enhance worthy intellectual endeavors and to recognize individual achievement.

Candidates for Phi Beta Kappa should have demonstrated both superior scholarship and breadth and depth of interest in the liberal arts. Study of a foreign language and of mathematics, while not required, strongly enhances candidacy. Extensive study in pre-professional fields detracts from candidacy.

Students do not apply for Phi Beta Kappa; rather, each year the Washington University chapter elects students into membership from the College of Arts & Sciences. The chapter also gives the annual Burton M. Wheeler Book Award for distinguished achievement during the first year. Selection committees are composed of Washington University faculty who are members of Phi Beta Kappa.

**Departmental Prizes and Awards**

Several departments recognize the superior achievement of graduating seniors with election to the honor societies of their major fields. These honor societies include Sigma Gamma Epsilon for earth and planetary sciences students, Omicron Delta Epsilon for economics students, Delta Phi Alpha for German students, Phi Alpha Theta for history students, Sigma Iota Rho for international and area studies students, Pi Mu Epsilon for mathematics students, Mu Phi Epsilon for music students, Pi Sigma Alpha for political science students, and Psi Chi for psychological & brain sciences students.

Departments may recognize work a student has accomplished within the major by awarding the major with highest distinction, high distinction, or distinction.

In a number of academic fields, special recognition is given to students whose accomplishments have been exceptionally noteworthy. The majority of such awards carry modest monetary prizes and include the following, listed alphabetically by department:

- **Best essay on any subject related to African-American culture and life in the United States** (African and African-American Studies)
- **Henry Hampton Prize for Best Civil Rights Essay**
- **James Baldwin Essay Prize for Best Essay on African-American Culture and Life in the United States**
- **Julius Nyerere Essay Prize for Best Essay on African Culture and Life**
- **Louis Lomax Journalism Prize in African and African-American Studies**
- **Ralph Bunche Prize for Best Political Science Essay about Africans or African Americans**
- **Sylvia Wynter Essay Prize for Best Essay on African Culture and Life Outside of the United States**
- **Lynne Cooper Harvey Undergraduate Writing Prize in American Culture Studies**
- **John W. Bennett Prize to the Outstanding Graduating Senior in Anthropology**
- **Mark S. Weil Prize for Distinction in Art History and Museum Practice**
- **Murphy Family Prize for Outstanding Honors Thesis in Art History and Archaeology**
- **Yale Book Prize for Distinction in Art History and Archaeology**
- **Harrison D. Stalker Prize in Biology**
- **Marian Smith Spector Prize for Outstanding Graduate in Biology**
- **John C. Snowden Prize for Outstanding Senior in Chemistry**
- **The Hemholtz Award in Chemistry**
- **The Lipkin Award in Chemistry**
- **The Wahl Award in Chemistry**
- **The Weissman Award in Chemistry**
- **Stanley Spector Memorial Award for Outstanding Paper in East Asian Languages and Cultures**
- **Ansehl Prize for Excellence in Chinese**
- **Yukiko Takahashi Prize for Excellence in Japanese**
- **Carl Conrad Prize for Excellence in Classical Studies**
- **Eugene Tavenner Prize for Excellence in the Study of Classics**
- **Edward Weltin Award for Excellence in the Study of Ancient History**
• Liselotte Dieckmann Prize for Excellence in Comparative Literature
• William H. Matheson Prize for Excellence in Comparative Literature
• A.E. Hotchner Playwriting Competition Award
• Annelise Mertz Memorial Award for Outstanding Achievement in Modern Dance
• Ian D.W. Cramer Prize for Outstanding Achievement in Dance
• John J. Jutkowitz Memorial Prize for Outstanding Contributions in Performing Arts
• Margaret Ewing Memorial Prize for Outstanding Achievement in Acting

• Greg Delos Prize for Undergraduate Research in Physics
• Robert N. Varney Prize for Excellence in Introductory Physics
• Antoinette Frances Dames Prizes for Lower-Division Paper in Political Science
• Antoinette Frances Dames Prizes for Upper-Division Paper in Political Science
• Antoinette Frances Dames Prizes for Best Senior Honors Thesis in Political Science
• Arnold J. Lien Prize for Outstanding Graduate in Political Science
• Grossman-Alexander Prize for Outstanding Graduate in American Politics
• Robert H. Salisbury Prize for Initiative, Leadership, and Service in Political Science
• Todd Lewis Friedmann Memorial Prize for Outstanding Work in Comparative or International Politics
• William Benton Parshall Prize for Outstanding Paper on Women in Politics
• Hyman Meltzer Memorial Award for Undergraduate Research in Psychology
• John A. Stern Award for Undergraduate Research in Psychology
• Louis G. Zelson Prize for Study Abroad in Spain
• Sherman Eoff Prize for Excellence in Spanish
• Helen Power Women, Gender, and Sexuality Studies Award for Scholarship and Service

**Academic Regulations**

**Attendance**

Successful education at the college level depends to a large extent on regular attendance at classes and laboratories. The College of Arts & Sciences has no fixed rules for “cuts” or “excused absences” but leaves to the judgment of each
department or instructor the number of absences of any kind
a student may have and still expect to pass a course. The
faculty expects each instructor to give reasonable consideration
to unavoidable absences and to the feasibility of making up
missed work. The student is expected to explain to instructors
the reasons for such absences and to discuss the possibility of
completing missed assignments.

Units and Grades
The grading system used by the College of Arts & Sciences
assumes that evaluation is useful to effective learning and that
grades provide an indicator of accomplishment to the student,
to advisers and the College Office, to graduate and professional
schools, and to employers to whom the student chooses to
submit them. Grades are symbols of achievement in a particular
endeavor and should not be confused either with achievement
itself or with personal worth.

Grades are important, particularly for students with pre-
professional interests, but the student whose concern for grades
is primary may lose sight of the total educational process.

Grades earned in physical education courses are not included
when calculating the student's grade-point average.

Auditing a Course
In any semester, a full-time student may register for one course
as an auditor, which entitles the student to all of the privileges
of a regularly enrolled member of the class; however, courses
taken for audit do not earn credits and thus do not count toward
the degree. Consult the instructor regarding the requirements
of a successful audit, as unsatisfactory performance results in a
grade of Z. A successful audit results in a grade of L.

Incomplete Grades
If a student experiences medical or personal problems that make
the satisfactory completion of course work difficult or unlikely,
they may request a grade of Incomplete (I) from one or more
instructors. In such a situation, the student should take the
following steps:

1. Meet with the instructor before the final examination or due
date for the final paper to discuss the request.
2. If the instructor consents, agree on the work remaining to
complete the course and on a date when it will be submitted.

If these steps are not followed, the instructor is under no
obligation to award a grade of I. Failure to submit completed
work by the last day of classes of the next full semester will
result in the I grade being changed automatically to a grade of F.
For spring semester courses, this will be the last day of summer
classes, typically mid-August.

By action of the faculty of the College of Arts & Sciences and
the ArtSci Council, the college limits the number of accrued
grades of Incomplete (I). The policy is intended to protect the
student from building an overwhelming burden of unfulfilled
course work. The regulation reads as follows: “Students who
accrue three or more Incompletes will not be permitted to enroll
for any subsequent semester until the number is reduced to two
or fewer.” Should students have too many Incompletes, they will
be declared ineligible for subsequent semesters until they have
complied with the regulation. Compliance is normally achieved
by the posting of grades online, but it also may be achieved by
the professor(s) confirming to the College Office that the student
has turned in all requisite assignments for the relevant class(es).

Pass/Fail Option
To encourage students to enroll in courses they might not
otherwise take, the faculty has established the credit/no credit
option under which a student may register for courses and
receive a grade of credit (CR) or no credit (NCR). During any
semester, a full-time student may enroll in one course under the
credit/no credit option. A maximum of 24 units earned under this
option may be applied toward the AB degree. Students must
designate which course is to be taken under the credit/no credit
option each semester at the time of registration. No change into
or out of the option may be made after the dates designated in
the dates and deadlines calendar, which is published online in
the Course Listings (https://courses.wustl.edu) each semester.
No more than 12 of the 24 units allowed for the credit/no credit option may be applied to area distribution requirements.

It is the student's responsibility to discuss with the faculty member what constitutes a successful pass/credit in a particular course. Although the pass mark is generally a C-, instructors have the discretion to set the pass mark higher in their individual courses.

The first-year writing course, the writing-intensive course, the applied numeracy course, and courses in the major and minor are excluded from the credit/no credit option. Pre-professional and prospective graduate students should also consider seriously the strong probability that professional schools may seek more definite grades than CR in courses that are required or strongly recommended for admission to professional or graduate study.

A few courses particularly designated by departments may require enrollment on a credit/no credit basis. When so required, students are permitted to elect an additional course to be taken credit/no credit but should consider carefully the consequences of that choice.

Reading Days and Final Examination Period

When registering for classes at Washington University, students commit to all course requirements, including the examination procedures chosen and announced by the course instructor.

When selecting courses, students are advised to take note of all final exam information. Students anticipating conflicts in their final examination schedule should seek to resolve them with the relevant instructors before enrolling. Students should not register for courses that result in three or more final examinations on one day. If a student does so, the instructors are not obligated to offer an alternative exam.

Final exam days and times are subject to change. The most current final exam schedule information can be found on the Course Listings (https://courses.wustl.edu) website.

Minimum and Maximum Course Loads

The average course load necessary to fulfill the required 120 units for the bachelor's degree in a timely fashion is 15 units — typically five courses — in each semester. Except for students approved for a reduced course load through Disability Resources, students must attempt a minimum of 12 units to be considered full-time. Students may not enroll for more than 21 units without permission and an additional per-unit tuition charge. Any enrollment between 12 and 17 units is considered typical.

Courses in the college that require more preparation and class time than average — for example, foreign languages, mathematics and science — may carry 4 or 5 units of credit. When enrolled in these and other demanding courses, students should consider taking fewer than 15 units of academic work in a particular semester and then balancing such intensive semesters with a modestly increased number of units in subsequent semesters.

Repeating a Course

Students whose performance in a course has not met their expectations are permitted to retake the course, receive a second grade, and have the letter R (denoting the retake) placed next to the grade for the first enrollment. All registrations will show on the transcript; however, only the grade and units of the final enrollment will be used to calculate the GPA.

Note: This procedure is not pedagogically sound and should be avoided in all but serious cases, such as a grade of D in a course required for the major.

Regulations: Although courses initially taken credit/no credit (pass/fail) may be retaken for a letter grade, courses initially taken for a letter grade must be retaken for a letter grade. Credit earned in the original enrollment will not be revoked should a failing grade be earned in the second or subsequent enrollments. Except in the case of a retake of an unsuccessful audit, the retake policy will not be invoked if the grade option for any of the enrollments is audit.

Academic Probation and Suspension

Students are expected to maintain the highest level of scholarship during their time at Washington University. At a minimum, students must meet the standards set by the faculty as well as those mandated by the U.S. Department of Education. Those who do not complete at least 12 units or achieve a semester GPA of 2.0 or better for each semester may be placed on probation or, in extreme cases of poor academic performance, may be required to take a break in enrollment. In certain cases, students who have completed at least 12 units and have a semester GPA of at least 2.0 for each semester may still receive an academic warning or be placed on probation if the Committee on Academic Progress identifies areas of significant concern about a student's progress (e.g., failure to complete College Writing 1 or its equivalent by the end of the first year, failure to make demonstrable progress toward an Arts & Sciences major).

Students must be on pace to complete their program by attempting no more than 150 percent of the credits required. Anytime students fall below completing two-thirds or fewer of the credits they have attempted overall, they are considered to not be achieving satisfactory academic progress (SAP). The college will work with those students to develop a plan to help them achieve an acceptable pace within a set period of semesters. In addition, if it is determined that a student cannot complete their program within the 150 percent maximum credits, the
student may not continue their program of study at Washington University.

In the event of academic probation, the student will be matched with a progress counselor for the following semester. The student must complete an academic agreement with the progress counselor to map out how improvement will be achieved. Failure to attend class or complete work in a timely manner may result in termination of enrollment for that semester.

In order to be eligible for a return to good academic standing, a student on academic action must address the academic concerns identified by the Committee on Academic Progress. Students who fail to adequately address those concerns may be required to take a break in their enrollment. Such students may return to the College of Arts & Sciences only when they demonstrate, under the conditions set for each individual case, a capacity to work productively at the level required by the college curriculum.

Leaves of Absence

Undergraduates in good standing at the completion of a term are eligible to take a leave of absence (LOA) by completing an LOA request. Students on LOA are assured reinstatement for the next two years. Before returning, students are asked to notify the College Office and submit a Reinstatement Form at least six weeks prior to the beginning of the appropriate term. The forms for requesting an LOA and reinstatement are available on the College’s Policies & Procedures webpage (http://artsci.wustl.edu/resources/policies-procedures).

A student wishing to take a medical leave of absence (MLOA) must have a recommendation from Habif Health and Wellness Center and a completed MLOA request submitted to the appropriate dean in the College Office. A student wishing to return from an MLOA must have a recommendation from Habif Health and Wellness Center and a completed MLOA reinstatement request submitted to the appropriate dean in the College Office. Upon reviewing the recommendations from Habif Health and Wellness Center and the student's file, the dean in the College Office will decide whether or not to grant the request for the MLOA and/or for re-enrollment. The required forms for an MLOA and reinstatement after an MLOA are available through Habif Health and Wellness Center (https://shs.wustl.edu/FormsAndResources/Pages/Medical-Leave-of-Absence.aspx).

Transfer Credit

With preapproval, courses from accredited colleges and universities can be transferred to Washington University and will count toward a student's 120 units required for the Bachelor of Arts degree; such courses may also serve as prerequisites to advanced courses and may count, with prior departmental approval, toward a student's major or minor. They do not, however, substitute in Integrations or count toward other Arts & Sciences distribution requirements. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity Policy.

For further information pertaining to transfer credit, matriculating first-year students should visit the Pre-Matriculation Credit (p. 136) section in this Bulletin; transfer students should visit the Transfer Students (p. 907) section in this Bulletin.

Military Training

Army and Air Force ROTC programs are available at Washington University.

ROTC courses numbered I25 MILS 301C, MILS 302C, MILS 401C and MILS 402C and AFROTC courses numbered I02 MAIR 301, MAIR 302, MAIR 401 and MAIR 402 will be granted full credit toward the AB degree, for a total of 12 units. The courses do not count toward the 90 minimum Arts & Sciences units required for the Bachelor of Arts degree but will instead be categorized in the 30 maximum units that students may earn in courses taken from Olin Business School, the McKelvey School of Engineering, University College, or the Sam Fox School. These courses are letter graded and will count toward the GPA, as do courses from University College and the professional schools listed above.

ROTC courses numbered I25 MILS 101C, MILS 102C, MILS 201C and MILS 202C and AFROTC courses numbered I02 MAIR 101, MAIR 102, MAIR 201 and MAIR 202 will be granted 1 credit each for the Physical Training component, as commensurate with performance courses currently receiving credit toward the Bachelor of Arts degree, including courses listed under L28 Physical Education. Such courses will not count toward the GPA.

University College Courses

Students in the College of Arts & Sciences may enroll in course work offered by University College (http://ucollege.wustl.edu) as long as they do not exceed one course per semester and a maximum total of 24 units. University College courses are subject to the degree requirement that stipulates only 30 units from any of the other schools of the university may be applied to the Bachelor of Arts degree. University College courses do not fulfill distribution requirements and can only count for a major or minor with approval from the relevant department. Students in the College of Arts & Sciences do not receive credit for online courses offered by University College.

Business

About Olin Business School

At Washington University’s Olin Business School, students learn to look beyond the bottom line and make thoughtful decisions that benefit business and society. Our global-mindedness — coupled with a values-based, data-driven approach to decision making — prepares students to tackle the greatest challenges of our day and to change the world, for good.

As a leading research-oriented business school, Olin has a network of partners on campus, in the St. Louis community and around the world. Students are able to apply what they’ve learned in the classroom to real-world situations through experiential learning opportunities that include student consulting, internships, case competitions and study abroad programs, among others. Students also develop an entrepreneurial mindset that allows them to act nimbly and quickly in the constantly changing business landscape.

Olin is a welcoming community that allows for a deeper level of interaction, participation and program customization. Students can rely on support from faculty, staff and their peers while feeling accomplished in the rigorous course work.

Bachelor of Science in Business Administration (BSBA)

Olin Business School offers a full-time Bachelor of Science in Business Administration (BSBA) degree program of instruction. Undergraduate students at Olin may choose to major in one or two professional fields in business as part of their degrees. Our BSBA students enroll in business courses during their first year, and the curriculum covers the core functional areas of business. At least one major course of study in a field of business and at least 40 percent of the course work must be in nonbusiness fields — from fine arts to science — allowing students to pursue individual careers and ensuring a well-rounded educational experience.

Majors

Students in the BSBA program are offered the option to focus their studies in a specific field of business. Although a business student is not required to declare a business major, almost all of our business students earn at least one professional major. A student may pursue one or two majors from the list below:

- Accounting
- Economics and Strategy
- Entrepreneurship
- Finance
- Financial Engineering (This is offered to any BSBA student as a second major option only.)

- Health Care Management
- Marketing
- Operations and Supply Chain Management
- Organization and Strategic Management

Specific requirements for each major can be found in the Majors for BSBA Degree Candidates (p. 930) section of this page.

Combined Majors

Business students have the option to major in more than one field of study. BSBA students can earn a total of two majors, either both in business or one in business and one from outside of Olin. For example, a student could earn a BSBA degree with a major in finance and a major in English literature from the College of Arts & Sciences. Students must complete the specific courses required for the second major, but they are not required to complete the general requirements for the second degree. Students should consult with their academic advisers for additional information. Upon completion, the student’s transcript would show a BSBA degree along with the earned second major. A diploma is awarded for the degree, with reference to any major(s) appearing on the official transcript.

Minors

Many departments and schools in the university offer minors. Business students also can pursue a minor outside of Olin Business School in any recognized academic discipline offered within the university by satisfactorily completing all of the requirements for both the BSBA degree and the minor. Required courses for a minor outside of the business school may range from 15 to 27 units, depending on the specific regulations of the academic department. A business student who applies for a minor and completes all of the requirements will have the award of the minor noted on the official transcript. A student must be approved for admission to a minor program by the department offering the minor.

Business students typically may not minor in a business subject. However, BSBA students may choose the business of sports minor, business of entertainment minor, business of social impact minor, or the international business minor offered through the Olin Business School. Additional information as well as information for students from other schools of Washington University who wish to pursue business minors can be found in the Minors for Non-BSBA Degree Candidates (p. 937) section of this page.

Combined Degrees

A student also can earn two undergraduate degrees simultaneously: a BSBA degree and another undergraduate degree offered at the university. The student must be admitted to the other degree-granting program, and they must meet specific degree requirements for both schools. Typically, this option requires additional time to complete all requirements. For example, if a student combines a business degree with a
degree from the College of Arts & Sciences, the student must complete a minimum of 150 units between the two disciplines. Of the 150 units, at least 90 units must be from the College of Arts & Sciences, and at least 60 units must be from Olin Business School. Some courses may be used to satisfy both degree requirements simultaneously. Because requirements for a second degree vary from discipline to discipline, students should talk with their primary adviser to plan their program.

**Joint Undergraduate and Business Master's Degrees**

**Bachelor of Science in Business and Computer Science**

The Bachelor of Science in Business and Computer Science degree program provides an integrated educational experience that involves both the Olin Business School and the McKelvey School of Engineering. The objectives of this program are to provide students with the fundamental knowledge and perspectives of computer science and business and to expose them to the unique opportunities created by combining these disciplines. As one of the only such joint programs in the country, the Bachelor of Science in Business and Computer Science features unique curricular and cocurricular elements that help to create a distinctive program.

Please visit the Bachelor of Science in Business and Computer Science page (p. 1002) of this Bulletin for more information.

**Master of Business Administration (MBA)**

A special five-year program combining an undergraduate degree with the Master of Business Administration degree is available to a select number of undergraduates. Often referred to as the 3+2 program, it combines three years of undergraduate study and two years of MBA study for the completion of both degrees in five years. Joint programs include the AB/MBA degrees offered with the College of Arts & Sciences, the BS/MBA degrees offered with the McKelvey School of Engineering, and the BSBA/MBA degrees offered through Olin Business School.

Admission to the 3+2 program is extremely competitive. The student must have a superior academic record, an outstanding performance on the Graduate Management Admission Test (GMAT) or the Graduate Record Exam (GRE), and substantive summer internship experience in a related field.

Students apply during the winter of their junior year and begin the full-time MBA program during the fall semester. They must complete at least 90 units of undergraduate course work before entering Olin’s MBA program and then complete an additional 67 units of graduate-level courses. Students should consult their academic adviser during their sophomore year regarding specific degree requirements. If a student’s undergraduate major is in the McKelvey School of Engineering or the College of Arts & Sciences, up to 15 units of remaining undergraduate courses will apply toward the 67 units required for the MBA program. If a student’s undergraduate major is in Olin Business School, up to 6 units of remaining undergraduate course work will apply toward the 67 units required for the MBA program. Visit the MBA Joint Degrees (http://www.olin.wustl.edu/EN-US/academic-programs/ full-time-MBA/academics/joint-degrees/Pages/default.aspx) webpage for more information, including additional requirements for Arts & Sciences candidates.

To apply, contact the Graduate Programs Office in Knight Hall, Room 310, or email Olin Graduate Admissions (OlinGradAdmissions@wustl.edu).

**Specialized Master's Programs**

A specialized master's degree is highly concentrated and singular in focus, providing intensive education in one business discipline. Olin Business School offers a variety of specialized master's programs. Visit our Specialized Master's Programs (http://olin.wustl.edu/SMP) website for details. Further information is available in the Graduate Programs Office in Knight Hall, Room 310, or by emailing the programs using the contact information below.

Undergraduate students interested in pursuing a specialized master's degree should contact the Graduate Programs Office as early as possible. Combined Program General Principles and Guidelines are as follows:

1. Undergraduate students should apply to a specialized master’s program (SMP) during their junior year (as defined by credit hours) in order to allow sufficient lead time for an admissions decision and for academic planning.
2. Undergraduate students who have been admitted to a combined SMP will be limited to taking a maximum of 21 graduate credit hours during their senior year while still officially coded as an undergraduate student.
3. Students must enroll for at least one full-time semester (fall, spring or summer) while coded and registered as a graduate student.
4. Tuition for the graduate semester will be applied at the full-time graduate program rate for the specific degree program the student is pursuing.
5. If the student needs additional course work beyond the immersive graduate semester, they will be charged the full-time or part-time graduate tuition rate — whichever applies based on the number of credit hours.

For students at Washington University, the GMAT/GRE requirement and $100 application fee are waived.

**Master of Accounting (MACC)**

For career interests in public or corporate accounting, consulting or financial services, the Master of Accounting (MACC) program will prepare students for an exciting and challenging future. This program requires 33 graduate-level credit units in addition to the
course work requirements for an undergraduate degree. Course work is included to help meet eligibility requirements to sit for the CPA exam in states with the "150-hour rule." It is strongly preferred that students have completed Intermediate Financial Accounting before beginning the program.

Visit the Master of Accounting (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/master-of-accounting/Pages/default.aspx) website or email Olin Graduate Admissions (OlinGradAdmissions@wustl.edu).

**Master of Science in Business Analytics (MSA)**

The MSA program provides students with the tools needed to become analytics-driven business managers who are well prepared to guide firms in the emerging era of big data and data-driven decision-making. Washington University’s Olin Business School, McKelvey School of Engineering, and the College of Arts & Sciences have partnered to create a curriculum that will help students formulate and implement analytics-driven approaches to business. Tracks are available in customer analytics, fintech, healthcare, and the supply chain.

Completion of the degree requires a minimum of 39 credits of graduate-level (500-level) structured course work in addition to the course requirements for an undergraduate degree.

Applicants to the MSA program should have completed at least two courses in calculus (or equivalent course work) and one course in statistics.

Visit the MS in Business Analytics (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/ms-in-business-analytics/Pages/default.aspx) website or email Olin Graduate Admissions (OlinGradAdmissions@wustl.edu).

**Master of Science in Finance (MSF)**

Graduates of the Olin School’s Master of Science in Finance (MSF) develop highly targeted skills by selecting the curriculum track best suited to their career aspirations. These rigorous and comprehensive graduate programs offer in-depth training in securities research, asset management, derivative pricing, fixed income and corporate finance for students pursuing specialized finance careers:

- The Corporate Finance and Investments track (https://olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MS-finance/Pages/Corporate-Finance-and-Investments-Curriculum.aspx) and the Wealth and Asset Management track (https://olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MS-finance/Pages/wealth-and-asset-management-curriculum.aspx) require 30.5 graduate-level credit units in addition to the course requirements for an undergraduate degree. These prepare students for careers in asset management, sales and trading, industry finance, investment banking, private wealth management and consulting.

- The Quantitative Finance track (https://olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MS-finance/Pages/Quantitative-Finance-Curriculum.aspx) requires 39 graduate-level credit units in addition to the course requirements for an undergraduate degree. It prepares students for careers in credit risk analysis, derivative pricing, risk management modeling and financial software development.

- The Global Master of Finance (https://olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/Pages/default.aspx) features combine the Olin MS in Finance degree with study at the campuses of prestigious international universities:
  - Singapore Management University (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/SMU-MAF/Pages/default.aspx)
  - Yonsei University in South Korea (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/Yonsei-MBA/Pages/default.aspx)
  - IDC Herzliya in Israel (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners(IDC-MSF/Pages/default.aspx)
  - WHU Otto Beisheim School of Management in Germany (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/WHU/Pages/default.aspx)
  - Universitat Pompeu Fabra, Barcelona School of Management in Spain (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MSFDD/partners/UPF/Pages/default.aspx)

Applicants to the MSF program must have taken microeconomics, statistics and calculus.

Visit the MS in Finance (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MS-finance/Pages/default.aspx) website or email Olin Graduate Admissions (OlinGradAdmissions@wustl.edu).

**Master of Science in Supply Chain Management (MSSCM)**

Exceptional management of the production and delivery of a firm’s products and services — its supply chain — is essential. The Master of Science in Supply Chain Management degree equips graduates to stand out in this challenging and critically important career field. This program provides students with comprehensive preparation in all areas relevant to the sophisticated management of a company’s supply chain, whether the company is engaged in manufacturing or in the delivery of complex services.
Completion of the degree requires a minimum of 36 graduate-level credit hours in addition to the course requirements for an undergraduate degree.

Visit the MS in Supply Chain Management (http://www.olin.wustl.edu/EN-US/academic-programs/specialized-masters-programs/MS-supply-chain-management/Pages/default.aspx) website or email Olin Graduate Admissions (OlinGradAdmissions@wustl.edu).

Special Opportunities

Center for Experiential Learning

The Center for Experiential Learning (CEL) is an educational center at Olin Business School. The CEL facilitates real-world experiential learning opportunities for students via live consulting engagements. Each year, the CEL oversees 100+ student-driven projects with more than 500 Washington University students under the auspices of dozens of expert advisers and faculty. The CEL’s partners include startups, nonprofits, multinational enterprises, and NGOs in St. Louis, across the country and around the globe. Visit the Center for Experiential Learning (http://www.olin.wustl.edu/CEL/Pages/default.aspx) website for more information.

Entrepreneurship

Olin Business School fosters an entrepreneurial spirit in students, encouraging them to pioneer innovation that opens the door to positive, sustainable progress. The Hatchery, a business consulting course, is an example of this, as are the consulting services for entrepreneurs through Center for Experiential Learning programs including the Metrics Clinic, CELect entrepreneurial consulting, and Olin's International Impact Initiative, which works with NGOs in developing markets around the globe. In addition, there are many universitywide resources, including the Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship. Learn more about entrepreneurship opportunities (http://www.olin.wustl.edu/EN-US/academic-programs/bs-business-administration/academics/Pages/entrepreneurship.aspx) on the BSBA website.

Independent Study

Independent study under the direction of a faculty member is available on a selective basis. The purpose of independent study is to provide an opportunity for students to pursue subject matter beyond the specific course offerings found in the business school. Projects may be done for 1 to 6 units, but normally no more than 3 units will be granted in any one semester. For more information, please refer to the Olin Business School’s Undergraduate Student Handbook.

Students may apply a maximum of 6 units of independent study in business and 6 units from outside of Olin toward the 120-unit degree requirement.

Internship for Credit Opportunities

Olin Business School first-year students and sophomores who have a summer internship can enroll in MGT 450A for academic credit. This online course is designed to deepen a student’s overall learning gained from an internship. Students enroll in this 1.5-credit course on a pass/fail basis. Although this course will be listed on a student’s academic transcript, it will not count toward the 120 units needed for graduation.

Olin Business School juniors and seniors who have completed the core requirements and one advanced elective in the appropriate major field may apply to receive credit for internship experience. Students must work under the direction of a faculty member to complete an academic paper/project. The Internship Petition Form must be submitted to the student’s academic adviser by the end of the second week of the academic semester. A maximum of 6 units of internship course work may be applied toward the BSBA degree.

Study Abroad

Upon graduation, students are working at some of the top institutions across the globe. This is why Olin has chosen to integrate meaningful, purposeful and impactful global experiences into its academics. Having an international experience signals to employers that our students are in possession of valuable traits such as adaptability, comfort in ambiguity, and global leadership. All students have the opportunity to study abroad, providing they meet the eligibility requirements.

Options include the following:

- **Olin International Internship Programs** (https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/global-programs/Pages/international-internships.aspx) combine classroom learning with a full-time internship placement of approximately 10 to 12 weeks. Students complete a significant research project in conjunction with the internship experience.

- **Olin Semester Study Abroad Opportunities** (https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/global-programs/Pages/study-abroad.aspx) are offered across the globe in Asia, Europe and South America. Students choose courses on offer at local universities or study centers in the areas of business, language and general studies. Some programs require intensive language courses, although most are taught in English.

A unique aspect of many of our semester programs are the Academic Study Tours. Academic Study Tours are a required academic component for several of our study abroad programs, and students earn business credit for this experience. These tours are designed to develop research, analysis and presentation skills in an experiential format to allow students to apply theory, concepts and skills gained at Olin to consulting-
type exercises abroad. They also allow students the opportunity to explore the business and culture of the region in which they are studying. Information about programs that participate in the Academic Study Tours (https://olin.wustl.edu/EN-US/partners-resources/Center-for-Experiential-Learning/Pages/default.aspx) as well as the comparative consulting-type projects in Madrid and Sarajevo (https://sa.wustl.edu/index.cfm?FuseAction=Programs.ViewProgram&Program_ID=10505) and the Israel Summer Business Academy (ISBA) (https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/global-programs/israel-summer-business-academy/Pages/default.aspx).

Israel Summer Business Academy (ISBA)

Students may participate in the Israel Summer Business Academy (ISBA), which is administered by Washington University in St. Louis and open to students from all institutions. This unique opportunity, open to undergraduate students of all faiths and beliefs, allows students to study and immerse themselves in the Israeli business environment. They will learn about entrepreneurship, innovation and startup consulting through course work, speakers, company visits and consulting while earning 6 units of academic credit. ISBA is a collaboration between Olin Business School at Washington University in St. Louis and the Interdisciplinary Center (IDC) in Herzliya, Israel. Students learn firsthand about business in Israel, a country that has built itself around entrepreneurship. For more information, visit the Israel Summer Business Academy (https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/global-programs/israel-summer-business-academy/Pages/default.aspx) website.

Other Study Abroad Options

Students with second majors outside of business may consider study abroad programs sponsored by Overseas Programs (http://overseas.wustl.edu) in the College of Arts & Sciences to earn credit toward their non-business major.

Detailed information and eligibility requirements for study abroad are available on the Olin Global Programs (https://olinwustl.campusgroups.com/bsbaglobal/about) website or in the BSBA Programs office.

Student Assistants to Professors

In this challenging program, outstanding students are chosen to assist various professors with their course development work or research efforts. Students may conduct library research, perform computer programming, develop new learning materials for class, assist other students with their writing skills, or tutor in various areas of the curriculum.

Participation as an assistant to a professor is voluntary and may begin as early as the first year. As a participant, students are paid the going rate for undergraduate student assistants. This experience also impresses company recruiters.

Academic Support Services

Academic Advising

Olin Business School provides students with expert academic advising and support. BSBA Student Services has 10 academic advisers who serve as professional advisers to all undergraduate students on procedural matters, course planning, registration and other academic matters.

The Olin School Peer Ambassadors

In the Olin School Peer Ambassadors program, undergraduate business students who are familiar with the university and with the business school's programs and policies help incoming students make a smooth transition to the university by providing informal peer advising services throughout new students’ first year at the university.

Weston Career Center

To provide students with personalized career planning and job search services, Olin Business School operates its own career center in Knight and Bauer Halls. The Weston Career Center (WCC) delivers a variety of career management programs and services to Olin undergraduate and graduate students. Each student works one-on-one with a dedicated career coach throughout their time at Olin. In addition, students have access to industry specialists who provide insight and direction on specific industries. Other WCC career support includes workshops and professional development seminars, company information sessions, mock interviews, self-assessments, written and spoken communication coaching, résumé and cover letter writing and networking — in other words, all of the tools needed for an effective job search.

On-campus interviews take place in the Bauer Hall Interview Suite or the Danforth University Center throughout the academic year. Business students are encouraged to meet with the WCC’s staff early in the school year to discuss their career and professional goals. For more information, visit the Weston Career Center website (http://olincareers.wustl.edu/EN-US/Pages/default.aspx), or contact the WCC by phone at 314-935-5950 or by email at wcc@olin.wustl.edu.

Majors for BSBA Degree Candidates

In addition to the 42 core professional units required, which are listed on the Degree Requirements (p. 959) page of this Bulletin, a BSBA degree candidate must complete at least 18 professional elective units. Students may apply these professional electives toward a specific professional major. Majors in the business curriculum are offered the option to focus their studies in a specific field of business. All major courses must be taken in residence. Course work from an approved Washington University study abroad program will count as in-residence work. However, only one course per major may be taken through a study abroad experience.
Students may select a major from the following disciplines:

* Accounting (p. 931)
* Economics and Strategy (p. 931)
* Entrepreneurship (p. 931)
* Finance (p. 932)
* Financial Engineering (p. 932)*
* Health Care Management (p. 932)
* Marketing (p. 933)
* Operations and Supply Chain Management (p. 933)
* Organization and Strategic Management (p. 933)

* The financial engineering major is offered to any undergraduate day division student as a second major option only.

Class of 2023 Degree Requirements:

For a comprehensive view of our degree program, please review the requirements on our BSBA website (http://www.olin.wustl.edu/EN-US/academic-programs/bs-business-administration/academics/Pages/curriculum.aspx).

The Major in Accounting

Total units required: 15

* Accounting Core: 6 units
  - ACCT 3610 Intermediate Financial Accounting Theory I
  - ACCT 3620 Intermediate Financial Accounting II
* Accounting Electives: 9 units

</tbody>
</table>
**Second Majors for Non-BSBA Candidates**

Students in other undergraduate divisions of the university may choose to complete a second major or a minor in a business discipline.

Any non-BSBA degree student may earn a second major in a specific major discipline offered through Olin Business School. This opportunity allows students to combine their academic interests between two schools. If students wish to pursue a second major in business, they are required to follow the degree requirements for their primary school/major along with a set of core business requirements and 12 to 15 units of professional electives.

### Core Business Requirements:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACCT 2610</td>
<td>Principles of Financial Accounting</td>
<td>3</td>
</tr>
<tr>
<td>ACCT 2620</td>
<td>Principles of Managerial Accounting</td>
<td>3</td>
</tr>
<tr>
<td>Math 132</td>
<td>Calculus II</td>
<td>3</td>
</tr>
<tr>
<td>MGT 100</td>
<td>Individual in a Managerial Environment</td>
<td>3</td>
</tr>
<tr>
<td>or MGT 380</td>
<td>Business Strategy</td>
<td>3</td>
</tr>
<tr>
<td>MEC 290</td>
<td>Microeconomics</td>
<td>3</td>
</tr>
<tr>
<td>or Econ 4011</td>
<td>Intermediate Microeconomic Theory</td>
<td></td>
</tr>
<tr>
<td>MEC 292</td>
<td>Global Economy</td>
<td>3</td>
</tr>
<tr>
<td>or Econ 1021</td>
<td>Introduction to Macroeconomics</td>
<td></td>
</tr>
</tbody>
</table>

### Regulations:

1. Second majors are required to complete a minimum of 24 business units through Olin Business School.
2. All courses for any business major must be taken for a grade.
3. An overall 2.0 grade-point average must be achieved in course work taken as part of the business major.
4. All major courses must be taken in residence. Course work from an approved Washington University study abroad program will be considered as satisfying this residency policy. However, second majors may only take one core course and one major course through a study abroad experience.
5. Students may not count one course toward two majors.
6. University College courses will not count toward any business major.
7. Advanced Placement credit for Math 2200 will not serve as a substitute for the DAT 120 requirement. All second majors must complete DAT 120.
8. Students must declare their second major online through WebSTAC by the end of their junior year. A second major will not be awarded to a student unless proper declaration is made.
9. **Economics and strategy majors must take MEC 290 since Econ 1011 will not satisfy the prerequisite requirement for MEC 370.**
10. Engineering students who have taken ESE 326 and who are majoring in finance will not be required to take DAT 120 or

---

### Elective Choices (at least 3 units required):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MGT 380</td>

Minors

Minors for Non-BSBA Degree Candidates

Non-BSBA degree students are eligible to pursue a minor in one of the specific fields of business listed below:

- Accounting (p. 938)
- Business of Analytics (p. 938)*
- (p. 938)Business of the Arts (p. 939)*
- Business Economics (p. 939)
- Business of Entertainment (p. 939)*
- Business of Social Impact (p. 940)*
- Business of Sports (p. 940)*
- Entrepreneurship (p. 941)
- Finance (p. 941)
- General Business (p. 941)
- Health Care Management (p. 941)
- International Business (p. 941)*
- Marketing (p. 942)
- Operations and Supply Chain Management (p. 942)
- Organization and Strategic Management (p. 942)
- (p. 942)Strategy (p. 942)
* Any undergraduate day division student — including students in the BSBA programs — can earn the business of analytics minor, the business of the arts minor, the business of entertainment minor, the business of social impact minor, the business of sports minor, or the international business minor as part of their undergraduate degree.

For more information, please refer to Fulfilling the Business Minor (p. 943) below.

**Prerequisites for the Business Minor:**
The following prerequisites are required for most minors:

- Math 132 Calculus II
- Math 2200 Elementary Probability and Statistics
  - or Math 3200 Elementary to Intermediate Statistics and Data Analysis
  - or ESE 326 Probability and Statistics for Engineering
  - or Pol Sci 363 Quantitative Political Methodology
  - or DAT 120 Managerial Statistics I*
- Econ 1011 Introduction to Microeconomics or MEC 290 Microeconomics**
- DAT 121 is also a prerequisite for minors in finance and general business.
- ACCT 2610 is a prerequisite for the OSCM minor.

For the marketing minor, the prerequisites are as follows if the student selects MKT 470N for their core choice:

- Math 131 Calculus I
- Econ 1011 Introduction to Microeconomics or MEC 290 Microeconomics
- Math 2200 Elementary Probability and Statistics
  - or Math 3200 Elementary to Intermediate Statistics and Data Analysis
  - or ESE 326 Probability and Statistics for Engineering
  - or Pol Sci 363 Quantitative Political Methodology
  - or DAT 120 Managerial Statistics I*

* Advanced Placement credit for Math 2200 will satisfy this prerequisite. This exemption applies only to non-BSBA students earning a business minor.

** Minors in managerial economics, the business of entertainment, general business, and the strategy minors must take MEC 290, because Econ 1011 is not a prerequisite for the core course requirements for any of these minors.

Engineering students who have taken ESE 326 and who are minoring in finance will not be required to take DAT 120 or DAT 121, providing they successfully complete the online Lynda.com coursework on multiple regression.

Notes:
- Students minoring in international business can take either MKT 477, MKT 477L or MKT 477S. In addition, they can take either MEC 292, MEC 292C or MEC 292S.
- BSBA students minoring in international business may take two courses through an Olin Study Abroad Program for the international business minor. They may not double count more than one course (3 units) toward their business major.

The Minor in Strategy

Total units required: 15

- Required Courses:
Fulfilling the Business Minor

All non-BSBA students pursuing any business minor must do the following:

- Declare their minor online through WebSTAC no later than the end of their sixth semester.
- Satisfy all prerequisites. (It is preferred that prerequisites be completed at Washington University. Courses taken in University College or at another university do not satisfy the requirements for any of the five required courses.)
- Take all 15 units of required courses at Olin Business School. (Non-BSBA students may take one minor course through the Overseas Study Abroad program for each minor.)
- Take all 15 units of required courses for grades (i.e., no pass/fail).
- Achieve no less than a 2.0 grade-point average in all business minor course work.
- Receive permission from the academic adviser and the Olin Business School to declare a second business minor.
- 15 additional units would be required to earn two business minors, as double counting is not allowed.

Courses

Courses include the following:

- B50 ACCT (Accounting) (p. 943)
- B52, B62 FIN (Finance) (p. 945)
employees and governmental bodies are examined. An in-depth understanding of applicable generally accepted accounting principles is developed by examining the strengths and weaknesses of these principles and alternative accounting practices. Prerequisite: ACCT 3610. Credit 3 units.

B50 ACCT 400A Analysis of Financial Institutions & Financial Instruments
The main goal of the course is to give you an in-depth understanding of how financial reports provide unusually accurate and detailed (but not perfect) information about the risks and performance of firms in the financial services industries. These firms' financial statements increasingly are based on fair value accounting and their financial reports typically include extensive risk and estimation sensitivity disclosures. Both fair value accounting and risk and estimation sensitivity disclosures are necessary ingredients for financial reports to convey the risk and performance of financial services firms in today's world of complex, structured, and risk-partitioning financial instruments and transactions. While financial services firms often apply fair value accounting and risk and estimation sensitivity disclosures imperfectly (or worse), careful joint analysis of the information they do provide invariably yields important clues about their risks and performance. Prerequisite: ACCT 3620. Credit 1.5 units.

B50 ACCT 400C Not-For-Profit Accounting
Students will gain an understanding of the unique facets of not-for-profit accounting, including understanding not-for-profit financial statements, differences in not-for-profit GAAP, and the IRS Form 990. Prerequisite: ACCT 2610. Credit 1.5 units.

B50 ACCT 400M Ethical Decision Making in Accounting I
This course is designed to help the student understand ethical reasoning and behavior, and it will help them to define their own moral compass using case studies as the primary source of instruction. The primary goal is to make the student a role model for others in ethical behavior. Students will learn not just how to determine the proper ethical choice; more importantly, they will learn how to effectively implement the behavioral changes required to achieve solutions to ethical dilemmas. To quote (while paraphrasing) the authors of the textbook, "We strive in [these courses] not only to educate accounting students to be future leaders in the accounting profession but to stimulate [the student’s] ethical perception and cultivate virtue thereby awakening [their] sense of duty and obligation to the public interest." Prerequisite: ACCT 2610. Credit 1.5 units.

B50 ACCT 400N Ethical Decision Making in Accounting II
This course is designed to develop in students a deeper understanding of ethical behavior, including dealing with fraud in financial statements, legal obligations of auditors, Wall Street expectations and earnings management, and what it takes to be an ethical leader. To quote the author, "...it comes down to one's sense of right and wrong and willingness to voice values to positively impact [the] auditor responsibility." This second segment of Ethical Decision Making in Accounting is offered for the purpose of creating ethical leaders in the accounting and auditing profession as well as the business community and society at large while at the same time instilling a sense of right and wrong and the eagerness to put ethics into action. Prerequisite: ACCT 400M. Credit 1.5 units.

B50 ACCT 464 Auditing
This course deals with the professional service industry of auditing. The auditing industry provides the service of objectively obtaining, evaluating, and communicating evidence regarding managerial assertions about economic events. Specifically, auditing ascertains the degree of correspondence between managerial assertions and established criteria. The course is organized around the basic categories of: (1) the economic role of external corporate auditing in securities markets, (2) the composition of the firms in the auditing industry, (3) the regulatory environment of auditing, (4) litigation issues facing the accounting/auditing industry, and (5) the requirements for conducting audits. Topics included in the last area include a consideration of the scope and application of Generally Accepted Auditing Standards (GAAS) and the general technology of auditing which are some general auditing topics typically covered on the CPA exam. Grading is based on homework, a group-based project, and two exams. Prerequisite: ACCT 3620. Credit 3 units.

B50 ACCT 466 Financial Statement Analysis
Designed to enhance students' understanding of the process of evaluating financial statement information. Requires a basic familiarity with financial accounting and the assumptions underlying measurements reported in financial statements, an understanding of the economic and regulatory forces underlying corporate disclosure of financial statement information and their effects on financial statement information, and familiarity with data sources and analytical tools to extract and evaluate this data. Objectives are to develop familiarity with this type of analysis and to gain an appreciation for its limitations. Topics: profitability and risk analysis, credit risk models, forecasting and valuation. Prerequisite: ACCT 3610. Credit 3 units.

B50 ACCT 467 Income Tax Fundamentals
This course provides an introduction to federal income taxation with primary emphasis on the tax implications of business transactions. The objectives of the course are to develop a basic understanding of federal income tax laws and to provide a framework for integrating income tax planning into the decision-making process. The course is of value to all students who need to recognize the important tax consequences of many common business transactions and is not intended solely for accounting majors or those students interested in becoming tax specialists. Prerequisite: ACCT 2610. Credit 3 units.

B50 ACCT 4680 Advanced Financial Accounting Problems
Examination of the nature and financial reporting aspects of various business transactions: corporate acquisitions, mergers and the formation of other strategic alliances. Topics: accounting for business combinations and consolidations, joint ventures and foreign currency translation, accounting and financial reporting issues facing government entities. Prerequisite: ACCT 3620. Credit 3 units.
Finance

Visit online course listings to view semester offerings for B52 FIN (https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B52&crsLv1=1:4). For B62 FIN (p. 947), please refer to the course listed below.

B52 FIN 340 Capital Markets and Financial Management
Students will learn how the decisions of a company affect shareholder value and what decisions can increase it. To understand the perspectives of shareholders, we will study basic principles of investing: time value of money, valuation of debt and equity securities, discounted cash flow as a foundation for stock prices, the impact of diversification and leverage on portfolio risk, the relationship between risk and expected return in securities markets, and capital market efficiency. We will use these principles to analyze capital investment decisions by estimating cash flows and discounting them at the appropriate cost of capital. We will also study how shareholder value is affected by a firm’s financing decisions, such as the choice of using debt or equity capital. Prerequisites: Math 132, ACCT 2610, MEC 290 or Econ 1011, QBA 120 and completion or concurrent enrollment in QBA 121.
Credit 1.5 units. EN: S

B52 FIN 343 Personal Finance
Examines issues underlying decision making regarding personal investments. Topics: present value concepts, financial markets and instruments, portfolio theory, bond and equity valuations, mutual funds, mortgages, taxes, and personal financial planning. BSBA students may enroll in this course but it will not count towards your degree nor towards your GPA. Prerequisite: Junior standing.
Credit 3 units.

B52 FIN 400L Private Equity — Methods
This course will provide the student with an understanding of the basic terminology, due diligence, and analytical methodologies critical to evaluating private equity investments. The course will also cover the history of private equity and the different roles of private equity, including growth capital, LBO/MBO, roll-up, and so on in the evolution of the firm. Private equity funds in the context of the overall market (i.e., strategic vs. financial acquirers) will be discussed as will be the role of leveraged lending and bank financing of financial sponsors. Private equity as an investment and its role in portfolio construction will also be analyzed. Finally, the legal structure of private equity funds in the context of firm control and governance will be reviewed. Prerequisite: FIN 448.
Credit 1.5 units.

B52 FIN 400J Advanced Valuation
This course covers advanced topics in valuation. Main topics covered will be the valuation of private firms and young businesses, and the valuation of financial services firms such as banks and insurance companies. The course applies both theory and practical valuation methods through the analysis of cases and real world examples. Prerequisite: FIN 448.
Credit 1.5 units.

B52 FIN 400K Public Equity Investments
This hands-on course provides a learning platform for how to invest in public equities like a bottoms-up, fundamental, buy-side analyst. The course focuses on the process of how many “Tiger Cubs” invest, but will also cover other investing approaches and styles as well. Learning objectives of the course include mastering three-statement modeling; developing the research process for an investment idea in public equities; interactions with real buy-side analysts and portfolio managers on their experience at hedge funds in NYC/SF; and concludes with students pitching an investment idea to a group of buy-side analysts and select number of portfolio managers. Ultimately, this course will provide a solid foundation on which students can successfully build as a buy-side analyst. Students must submit an application for approval to enroll in this course. See Campus Groups for application under Registration. Prerequisites: FIN 448 and instructor approval.
Credit 3 units.

B52 FIN 400M Private Equity — Practice
This course is the capstone for students interested in pursuing careers in private equity. Students will develop practical skills for investing in private companies. Students will partner with professionals in the St. Louis community to perform various activities, including transaction sourcing, evaluating investment opportunities, and, where appropriate, negotiating, arranging financing, and closing investments. The course also relies heavily on bringing in professionals from the local community to provide real-world perspectives on private equity investing. Prerequisites: FIN 448 and FIN 400L.
Credit 1.5 units.

B52 FIN 400W Venture Capital Methods
Students are exposed to the process of analyzing, valuing and structuring potential equity investments in privately held, entrepreneurial, venture-stage businesses. The goal is to develop critical thinking skills for evaluating potential investments and understanding the dynamics of various risk factors predominant in such investments, including market risk, execution risk and technology risk. The classes will be a combination of individual readings, case learning, presentations and panel discussions by industry experts in addition to experiential learning in a team format. Classes will be case-study driven and will focus on company- and fund–specific situations. Guest lecturers will be used extensively and will provide content that is integral to the course. The final sessions of the class
will be conducted as a presentation and analysis of a potential investment. Prerequisite: FIN 340. Credit 1.5 units.

B52 FIN 420 International Economics and Finance
Analysis of a global financial center and the current financial crisis, its origins and how the global markets are affected. Initially, the course looks at the rise of London (Section 1) or the Asian Markets (Section 2) to become one of the world's financial centers, outlining the historical developments and regulatory changes. Then, it focuses in more details on the role of the government in setting policy which affects financial services domestically and internationally. The course continues to look at specific functional areas — hedge funds, private equity, structures products, liquidity and central banks. The module discusses in different sessions the current financial crises and what role different financial institutions and products played in its development. Prerequisite: admission to either the London Internship Program or the Asia Pacific Internship Program. Credit 3 units.

B52 FIN 442 Investments Praxis
Students serve as managers of a portfolio, the Investment Praxis Fund, which is owned by the university. Students analyze investment opportunities in various industries and present recommendations to the class for possible purchases or sales of stocks, consistent with the style and objectives of the fund. Valuation tools, financial statement analysis and investment techniques are emphasized as part of a thorough analysis. The course focus is on developing and implementing investment ideas. Prerequisite: FIN 448. Credit 3 units.

B52 FIN 441 Investments
Introduces the theory and practice of investments from the point of view of an investment/portfolio manager. We will begin with a review of asset classes, financial history, and preferences for risk. Next, we will have a brief review of statistics and finance and we will review matrix algebra. We will then apply these tools to examine the trade-off between risk and return and to develop and implement Modern Portfolio Theory. The major topics covered will include the Capital Asset Pricing Model (CAPM), Markowitz optimization, performance evaluation, market efficiency, and Arbitrage Pricing Theory (APT). The last portion of the course will be devoted to fixed income securities including interest rates, bond valuation, and bond immunization. Prerequisites: FIN 340, MATH 132, MEC 290 or ECON 1011, QBA 120 and QBA 121. Credit 3 units.

B52 FIN 443 International Finance
Provides a framework for making financial decisions in an international context. Topics include: relevant features of financial markets and instruments (such as foreign exchange, currency futures and options, swaps); exchange rates; corporate risk management; international investing and capital budgeting issues. Prerequisite: FIN 340. Credit 3 units.

B52 FIN 447 Information, Intermediation, and Financial Markets
Examines the organization and function of financial markets from the corporate perspective with an emphasis on investment banking activities. Topics: design, issuance and trading of corporate securities, risk management and corporate control transactions. Develop familiarization with current practices while building a conceptual framework for understanding and anticipating change in the institutions that make up the financial markets. Prerequisite: FIN 340. Credit 3 units.

B52 FIN 448 Advanced Financial Management
Advanced study of corporate financial management. A major focus is the relationship between the internal decisions of the corporation and the valuation of the firm in the capital market. Topics: capital budgeting systems, capital structure, debt policy, cash and working capital management, short- and long-term financial planning. Prerequisites: FIN 340 and QBA 121. Credit 3 units.

B52 FIN 450F Financial Technology: Methods and Practice
This course will provide an overview of financial technology and cover specific topics in this area. Topics covered include data-driven credit modeling, cryptocurrencies, digital wallets and block chains, robo advising, high-frequency trading, crowd funding, and peer-to-peer lending. The course will also discuss the regulatory aspects of fintech. The course will cover different methods as well as practical applications. Prerequisite: FIN 340. Credit 3 units.

B52 FIN 451 Options, Futures and Derivative Securities
Examines the theory and practical application of derivative securities such as futures, options and swaps. Central to the theory of derivative security pricing is arbitrage and payoff replication. In practice, derivative securities provide a principal route to manage and, in particular, hedge financial risk. Futures, options and swaps on different types of underlying assets are examined with emphasis on pricing and application. Prerequisite: FIN 340. Credit 3 units.

B52 FIN 452 Advanced Derivative Securities
This course focuses on implementation of models for pricing and hedging derivative securities in the equity, currency, and fixed-income markets. Students will learn to write programs in a programming environment such as MATLAB to implement the Black-Scholes model, binomial models, Monte-Carlo methods and finite-difference methods. The derivatives studied include exotic equity and currency derivatives and caps, floors and swaptions. The goals of the course are to learn more about the various instruments that are traded, the various assumptions and methods that may be chosen in modeling them, and the importance of the assumptions in determining the prices and hedges that are chosen. The course will be especially useful to students pursuing careers in sales and trading who will interact with research departments and students pursuing careers in asset management. Prerequisite: FIN 451. Credit 3 units.

B52 FIN 470A Research Methods in Finance
The course is designed to prepare students for independent research in finance by exploring methods and techniques in a manner that will allow the students to implement them correctly and efficiently. The curriculum will emphasize practical applications of empirical methods used in financial research and how to implement them. Students in the course will learn
embrace empirical methods in corporate finance and asset pricing; obtain basic knowledge and familiarity of the databases used in common finance research; get exposure to recent research in finance which applies the methods covered; and learn how to implement the methods covered using relevant programming languages. Note: There will be significant overlap in the course tools used in both MEC 471 and FIN 470A. However, the applications and papers for each class will be entirely different. Prerequisites: QBA 120, QBA 121 and FIN 340. Credit 3 units.

**B62 FIN 549H Special Topics: Real Estate Finance**
This course provides a broad introduction to real estate finance and investments. Topics include both equity and debt. We begin with an overview of real estate markets in the United States. On the equity side students will be introduced to the fundamentals of real estate financial analysis, including pro forma analysis and cash flow models, and elements of mortgage financing and taxation. Ownership structures, including individual, corporate, partnerships and REITS will also be covered. On the debt side, we examine a number of financing tools in the context of the evolution of the secondary mortgage market, both residential and commercial. Those wishing to pursue more advanced topics in real estate finance could follow this course with Fixed Income and Mortgage-Backed Securities. Prerequisites: FIN 340 and approval of Graduate Programs Offices for undergraduates. Credit 1.5 units.

**Human Resources Management**

**B56 HRM 325A Personnel/Human Resources Management**
Emphasis on development of attitudes and skills of managers and supervisors in solving human problems and in building and maintaining effective employer-employee relations. Major topic areas include: selection and placement, training, and compensation. Other topics include legal aspects of employment policies, labor relations, and other aspects of human resources management. Prerequisite: junior standing. Credit 3 units.

**International Business**

**B99 INTL 300A Planning for International Learning**
The primary focus of this course is preparation for the study abroad/internship experience. Topics include the following: what does a global firm look for in a globally competent recruit; development of goals and objectives for international experience; develop a working knowledge of host country key features such as businesses, culture and politics; overview of logistics for study abroad, including timeline expectations, visa, housing, travel, contact with Olin, and registration for return semester; Career Services resources on how to use study abroad/internship to obtain a summer job/internship. Prerequisite: admission to one of Olin’s study abroad or international internship programs. Credit 0.5 units.

**B99 INTL 300B Applying International Experiences**
Focus is on strengthening student experiences while on a study abroad/internship experience. Topics include the following: minimalizing impact of culture shock and new academic programming though participation in on-site orientations; maximizing academic advising services while abroad; identifying opportunities to engage with the local culture; connecting student's individual personal and professional goals by revisiting actions and outcomes. Prerequisite: enrolled in current Olin Study Abroad program. Credit 0.5 units.

**B99 INTL 320 Business, Innovation and Entrepreneurship in Israel**
Israel is an innovation and entrepreneurial hub with more listings on the NASDAQ than any country other than the US, more patents per capita and more entrepreneurial events occurring in Israel in both the commercial and social arena than anywhere else in the world. Students will learn about the Israel economy, different industries, Israeli culture and politics along with the critical business challenges and opportunities that face Israel. This course includes a required immersion experience to Israel and contains an additional lab fee for the immersion. Credit 3 units. EN: S

**B99 INTL 420 Business Research Internship**
This is the capstone course for overseas internship programs where students learn to apply rigorous statistical and analytical approaches to research questions in business, but not limited to questions relating to marketing, management, finance and economics, operations and policy. Students identify a research topic and present this topic to faculty supervisors for approval. The goal is to capitalize on the practical knowledge gained while interning abroad and apply that to a research question in the area in which a student is interning. Students are required to review the current literature on their topic, formulate their own research questions, identify potential data sources they can use to address these questions, and make recommendations to add to the body of knowledge on their chosen subject. Prerequisite: admission to one of Olin’s International Internship Programs. Credit 3 units.

**Management**

**B53 MGT 100 Individual in a Managerial Environment**
An introduction to the foundations of business. The course covers four major themes: (1) how markets work; (2) motivating and managing people; (3) business strategy and firm performance; (4) ethics and corporate social responsibility. In the fall semester, MGT 100 is only open to incoming BSBA freshmen, and students must be concurrently enrolled in MGT 150A. Spring semester enrollments are open to any freshman and sophomore.
B53 MGT 150A Foundations of Business
Provides first-semester business students with an introduction to each of the functional areas of business as well as the entrepreneurial function. As they work to design their own enterprise, students will build skills in teamwork, communication, critical thinking, and an understanding of the complex interplay of business functions. Prerequisites: Fall semester enrollment is only open to incoming business freshmen, and students must be concurrently enrolled in MGT 100.
Credit 2 units.

B53 MGT 200A Business Fundamentals for Non-Business Students
This course is intended to help successfully position arts and sciences, engineering, and design majors for careers in organizations such as nonprofits, entrepreneurial ventures, and corporations, among others. Students learn key technical and professional skills that are valued and often required by employers. Topics addressed include working in teams, data-driven decision making, financial and business analysis, concepts for organizational strategy, professional communication, and career strategies. The course uses a combination of lectures, exercises, projects and cases to introduce participants to these topics. The class is designed for Washington University undergraduates in Arts & Sciences, Engineering, and Design and Visual Arts who are preparing for internships or jobs. Recommended for sophomores and juniors. Business students cannot receive credit.
Credit 3 units. EN: S

B53 MGT 200B Global Perspectives
We examine the economic, political, cultural, and social bases of business in Cuba from a global perspective. These bases are explored to understand how business in Cuba is conducted and how it relates to the global economy. We examine these bases in their historical context, in how they relate to current changes in Cuba, and in how they may affect future prospects. The normalization of relations between the United States and Cuba will be studied in terms of its impact on business for U.S. and Cuban firms. An immersion experience covering the topics of the course occurs on a one-week trip to Cuba during spring break. Enrollment limited to 16. Prerequisites: MGT 100 or permission of instructor; online application.
Credit 3 units.

B53 MGT 200C Venture Creation
Venture Creation is designed for students who are interested in exploring the venture creation process, or the undertaking of creating a new business from scratch. The course allows students to experience entrepreneurship in a unique and innovative manner by integrating theory and practice in an interactive learning by doing process. The goal of the course is to assist and support students in the realization of a business vision from inception of an idea to fruition of a company producing value.
Credit 3 units.

B53 MGT 201 Management Communication
Managers who write and speak effectively excel in business leadership. Persuasive and authentic communication is not only useful in advancing a business career; business employers also consider communication skills to be the most important attribute in people they hire. Effective communication involves more than managing technical writing and presentation skills. Successful communicators use critical thinking to assess business scenarios and the audience who will hear or read a message; they craft communication in order to attain targeted results. This course gives students the opportunity to become more polished communicators as they work toward the following goals: applying rhetorical principles to management communication; using critical thinking to analyze the audience, the organizational environment and problems before choosing communication strategies; implementing principles of plain language and effective design; collaborating with colleagues to create effective group projects; representing a company or product in a “crisis communication” press conference. Priority for enrollment is given to BSBA students. CET (https://gephardtinstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching) course.
Credit 4 units.

B53 MGT 301 Legal Environment of Business Management
Surveys the various areas of law that make up the legal environment of business. Develops a basic understanding of law as it relates to business, with traditional emphasis on private law and business transactions. This study of the micro law of business reviews the detailed substantive rules in the areas of contracts, sales, product liability, agency, corporations and partnership. In addition, a summary review of contemporary legal problems such as insider trading, discrimination in employment, sexual harassment and ethics may be discussed, if time permits. Case studies are analyzed in order to give the student an understanding of how various laws apply to actual situations. Prerequisite: sophomore standing.
Credit 3 units.

B53 MGT 308 Introduction to International Business
Focus on the aspects of management of a business enterprise that are necessary to compete in the global marketplace. The course begins with a survey of the environmental context in which international companies operate (economic systems and cultural factors). This is followed by a review of International Trade Theory and Economics. This forms a basis for concentration in the second half of the course on strategies and structure for global operations. The course deals with the situations in Europe, Japan, Latin America and China through case studies and discussion of current topics and their relation to the fundamental aspects of global business management. Prerequisite: junior standing or permission of instructor.
Credit 3 units.

B53 MGT 320 Olin Grand Rounds: The Business and Practice of Medicine
Grand rounds in medical schools are a forum for presenting new and challenging clinical problems and cases. The goal of Olin Grand Rounds is to focus on the challenges and solutions facing the business of medicine. The course therefore provides an introduction to the current issues facing the health care sector that integrates management tools and clinical knowledge. The objective is to provide students new insights into how modern management tools can be combined with scientific and clinical knowledge to manage health care organizations more efficiently and practice medicine more effectively.
Credit 3 units. EN: S
B53 MGT 321 Health Economics and Policy
The basic tenets of health economics are covered. This course places a unique emphasis on incorporating materials from three broad source categories: textbook elements, "lay" press and media, and academic journal publications with the aim to foster application of rigorous, critical thought to media presentations of health care economics and policy issues. Credit 3 units.

B53 MGT 322 Health Care Management
The goal of the course is to develop facility in applying basic tenets of general management to actual situations and dilemmas that might be faced by health care managers, consultants, financiers, investors, innovators or providers in the course of their work. Issues addressed include but are not limited to financial issues, management challenges and conduct of operations. The first phase covers the basic background on the structure and financing of the health care industry to include very brief reviews of critical topics such as insurance and government-provided health care. A few basic frameworks are then developed for students to apply to course topics moving forward, such as cost/benefit analysis and evaluation of risk. The remainder of the course involves critical analyses of health care cases involving varied subjects and management challenges. Sessions emphasize student-led discussions. Credit 3 units.

B53 MGT 380 Business Strategy
The course adopts the perspective of the general manager — the individual charged with developing and implementing the long-term strategy of a business. The course develops basic tools and concepts in strategy formulation, including competitive advantage, value creation and capture, industry analysis, capability assessment, competitive positioning, and strategy implementation. The course is designed to develop students' skills in both analyzing observed strategies and in formulating and implementing new ones. Prerequisite: MEC 290. Credit 3 units.

B53 MGT 400S International Business Environment
What is the relationship between the dominance of the financial interests centered in the City of London and the competitive performance of British industry? How does Britain reconcile an advanced capitalist economy alongside a traditional social and political structure? How great is the tension between domestic forces that seek economic and political integration with Europe and those pushing for greater engagement with Britain's former English-speaking colonies? Is British foreign policy driven more by economic than national security? This course addresses these and other important questions regarding British political economy by contextualizing current issues within the wider evolution of the country's political, economic and social systems since 1945. Prerequisite: admission to the London Internship Program. Credit 3 units. BU: IS

B53 MGT 401 CEL Practicum
The CEL offers students the opportunity to gain experience in a CEL Practicum. The CEL Practicum partners with regional, national, and international businesses, whereas the SBI partners with local small businesses. Students work in a four- to six-person team on consulting projects, applying insights from their course work to real-world business problems under faculty supervision. Each student is expected to spend a minimum of 150 hours during the semester on the project. Students' grades are based on deliverables throughout the semester, including the final written and oral report at the conclusion of the project. Credit 3 units.

B53 MGT 401M Sustainable Development and Conservation Through Entrepreneurial Collaboration: Madagascar
This course focuses on sustainable development in rural subsistence economies, using Madagascar as case study. Students from diverse disciplines are challenged to develop and assess the feasibility of projects that can have positive impact on communities constrained by poverty traps. The span of projects includes topics such as forest conservation and use, nutrition, health, food security, clean water, education, and bottom-up economic growth. Students in humanities, social sciences, business, design, engineering, physical sciences, law, social work, economics, political science, public health and other areas use their different perspectives to search for answers. Teamwork and peer teaching are central to this course. Competitively evaluated projects will be field tested in Madagascar. Student teams travel to Madagascar in May and work with the Missouri Botanical Garden Community Conservation Program to adapt projects to conflicting environmental, cultural, economic, and political factors. Lab fee: Project teams selected to go to Madagascar will be assessed a lab fee at the time that their participation in the trip is confirmed and travel arrangements have been made. The lab fee covers the cost of airfare, in-country transportation, and approximately three weeks of in-country lodging and food. Prerequisite: Students submit their application for consideration to the CEL. Students are notified when the application is available. There is limited enrollment. If accepted, the CEL will formally enroll students in this course. Poster sessions for students taking the trip occur during the following fall term. Students may not withdraw from this course after the third week of February. Credit 3 units.

B53 MGT 401S Small Business Initiative
The CEL offers students the opportunity to gain SBI experience. The SBI partners with local small businesses. Students work in a four- to six-person team on consulting projects, applying insights from their course work to real-world business problems under faculty supervision. Each student is expected to spend a minimum of 150 hours during the semester on the project. Students' grades are based on deliverables throughout the semester, including the final written and oral reports at the conclusion of the project. Credit 3 units.

B53 MGT 402 Ethical Issues in Managerial Decision Making
This course considers not only what ethical behavior means for a business entity, but how to: (i) balance competing ethical concerns against each other; and (ii) implement and sustain this balance across an organization. Readings and classwork zero in on the issues and situations most likely to put a manager in jail and the company in bankruptcy. Classes include Socratic discussion, simulations, analysis of video clips, and team tasks. The emphasis is on practical frameworks and tools managers can apply in the real world. Prerequisite: senior standing. Credit 1.5 units.

B53 MGT 405A Asian Study Tour
Individual and team research, writing, presentation, and participation in Olin's Asian Study Tour. Includes required
attestation and expected professional contributions to all corporate and government visits and briefings and other required individual and group activities. Prerequisite: admission to the Asia Pacific Internship Program.
Credit 1.5 units.

B53 MGT 405S International Business Environment — Sydney
The aim of this course is to internalize and develop multicultural competency applied within personal, organizational and business contexts. Reaching this goal includes developing personal awareness, understanding of important concepts and developing multicultural skills. The ability to recognize and overcome common pitfalls that prevent people from operating effectively within, and actually benefiting from, multicultural contexts will be explored. Prerequisite: admission to the Asia Pacific Internship Program.
Credit 3 units.

B53 MGT 418 International Business: A Euro Perspective
Examines the economic and institutional setting of Europe from a general business perspective. The economic and political structures of major countries are studied. The role of the European Economic Community examined as well as that of some major international organizations such as GATT and OECD. The primary emphasis is with countries of western Europe. Other topics: theory of customs, unions, monetary and economic integration, and multiculture policy integration. Opportunities for and problems of doing business in Europe examined from both an overall strategic perspective and from the perspective of the different functional areas. Prerequisite: admission to the London Internship Program.
Credit 3 units. BU: IS

B53 MGT 420 Research in Health Care Management
This is the capstone course for the Health Management major where students learn to apply rigorous statistical and analytical approaches to research questions in health services, but not limited to questions relating to management, finance and economics, operations and policy. Faculty identify several available research project options and present these options in class. The goal is to capitalize on the strength of the university medical school and affiliated medical centers, in addition to capitalizing on existing relationships between Olin and health care firms to identify the student research projects. Students also are encouraged to formulate their own research questions and to identify potential data sources they could use to address these questions, if they so desire. Students work in teams of 3-4, using the approach developed for the Practicum and Hatchery courses.
Credit 3 units.

B53 MGT 421 Introduction to Entrepreneurship
Through case studies, frequent guest speakers, and the professor's own experience, the real world of entrepreneurship will be brought into the classroom to provide a context for students to learn the fundamentals of founding, operating, and exiting a startup business. Students will learn new perspectives that will teach them to think like an entrepreneur. Those who are interested in the general study of entrepreneurship, those who want to be entrepreneurs, and those who would like to leverage entrepreneurial principles in other career paths are all good candidates for the course. This course can only be taken for a grade. Prerequisite: sophomore, junior, or senior standing in any school or college. Students can either enroll in either MGT 421 or MGT 460L. They can't receive credit for both courses.
Credit 3 units. EN: S

B53 MGT 424 Business Planning for New Enterprises (The Hatchery)
In this course, students form teams to pursue their own or an outside entrepreneur's commercial or social venture. The first session will feature a "Team Formation" event where students and community members pitch their ideas and opportunities to the class. During the semester, the teams are supported and advised by the instructor, executive coach, and mentor(s) as they research and develop startup plans. Academic deliverables include two presentations to a world of investors, a complete business plan for commercial ventures or sustainability plan for social ventures. The course is open to students from all disciplines and degree programs. Most of the work will be done outside the classroom with the support of the coaches, mentors, advisers and instructor. Classes will be held once per week for the first half of the semester. Workshops and rehearsals will be required in the second part of the term. Prerequisite: junior standing. BSBA or entrepreneurship major recommended. CET (https://gephardtinstitute.wustl.edu/or-faculty-and-staff/community-engaged-teaching) course.
Credit 3 units.

B53 MGT 440 Sports Management
This course examines business and management issues involved in the sports industry. This industry is very diverse, ranging from global sports events (such as the Olympic Games, World Cup Soccer, etc.) to major national competitions (such as the National Football League, Major League Baseball, etc.). Engaged in this industry are many different players, including franchises, governing leagues, sponsors, media, stadium owners, government, fans, and so forth. This course will take a practical look at the world of sports management and administration, with an eye on extracting key lessons for corporate management and administration.
Credit 1.5 units.

B53 MGT 450A Internship in Business
This is an online course designed to deepen the overall learning students gain from an internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin business curriculum, the value of the internship will be markedly increased, for both students and employers. Internship in Business is a 1.5-credit pass/fail course for Olin Business School undergraduates. The course, credit, and pass/fail grading are transcript notations, but the hours earned for MGT 450A do not count toward the 120 hours minimum needed for graduation nor does the grade count toward the student's GPA. Students must submit an application for approval to the Weston Career Center. Prerequisite: approval from Weston Career Center.
Credit 1.5 units.

B53 MGT 450D Honors Thesis I: Research and Analysis
The Olin BSBA Honors Thesis challenges motivated students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. Senior BSBA degree students in good standing with a cumulative grade point average of 3.70 or higher have the opportunity to develop an intensive research project, which extends far beyond the limits of the material in a single course during a single semester. In the two-
semester honors thesis sequence, research and analysis are the foci of the first semester and, upon successful progress, the student writes, presents and defends the research in the subsequent semester. Prerequisites: senior standing and faculty permission.
Credit 3 units.

B53 MGT 450E Honors Thesis II: Writing and Presentation
The Olin BSBA Honors Thesis challenges motivated students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. Senior BSBA degree students in good standing with a cumulative grade point average of 3.70 or higher have the opportunity to develop an intensive research project, which extends far beyond the limits of the material in a single course during a single semester. In the two-semester honors thesis sequence, research and analysis are the foci of the first semester and, upon successful progress, the student writes, presents and defends the research in the subsequent semester. Prerequisite: MGT 450D.
Credit 3 units.

B53 MGT 450G The Business of Sports
This course provides an overview of the major aspects of the sports business industry, including but not limited to the following: (1) the primary revenues and expenditures of pro and college sports; (2) collective bargaining agreements; (3) sports media rights; (4) facility financing; (5) sports sponsorships and athlete endorsements; (6) the role that sports commissions play within communities; and (7) current events that affect the growth and evolution of the sports business industry.
Credit 3 units.

B53 MGT 450I International Internship in Business
The online course deepens the overall learning a student gains from an international internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin business curriculum, the value of the internship increases markedly — for student and employers. Prerequisite: admission to one of Olin’s International Internship Programs.
Credit 1.5 units.

B53 MGT 450R Business & Government: Understanding and Influencing the Regulatory Environment
The United States, as well as many of the world’s governments, has entered a new episode with respect to the interaction of business and government. Now, more than ever, government regulations are attempting to spur job growth and the economy on one hand, but also are intruding into many aspects of business and the markets on the other hand. Business students must not only understand the shifting business government landscape, but also how to engage government officials and legislators to help shape policies that affect their firms and industries. As an introductory course, student will learn from business and government leaders how to interact with and affect the processes of regulation. Prerequisite: online application (http://sa.wustl.edu/).
Credit 1.5 units.

B53 MGT 450V Defining Moments: Lessons in Leadership & Character From the Top
Most successful leaders can point to a handful of “defining moments” in their careers — key choice points that defined the trajectory of their character, their career, and/or their company. How can aspiring business leaders prepare themselves to face these defining moments with insight and integrity? How do leaders achieve business performance without sacrificing character or integrity? This course examines these questions by learning from notable leaders who exemplify both business excellence and personal character. Top executives from leading companies will sit down with us to talk about their “defining moments” and to engage with us in considering these questions. These conversations will be supplemented with contemporary cases and readings on leadership and character. Prerequisites: senior status or juniors with permission of instructor.
Credit 1.5 units.

B53 MGT 450X CEL Entrepreneurial Consulting Team
Early stage companies provide a unique environment for students to make a meaningful impact on the future trajectory of a growing organization. CELect is an experiential learning course that matches teams of Washington University students with St. Louis area start-up ventures to perform defined management consulting projects. In addition to the required day-long orientation and concluding sessions taught at the T-REx incubator downtown, students will work directly with the professor and with their client company on a consistent, but variable, schedule depending on the needs over the course of the semester. In addition to being embedded on a project for an early stage company, students will have the opportunity to engage with other entrepreneurship support organizations such as local accelerators, venture capital firms, and incubators. Enrollment is limited. Prerequisite: Application required. Once accepted, students may not drop this class. Please note: There is a required orientation session that will be held on the second Friday of the graduate business semester.
Credit 3 units.

B53 MGT 450Z European Study Tour
Individual and team research, writing, presentation and participation in Olin’s European Study Tour (EST), including Mock Parliament. Includes required attendance and expected professional contributions to all EST corporate and government visits and briefings and other EST individual and group activities. Prerequisite: admission to one of Olin’s European International Programs.
Credit 1.5 units.

B53 MGT 460G Critical Thinking and Complex Problem Solving for Business
The course introduces students to rigorous techniques for critical and strategic thinking, problem formulation and problem solving, advancing their ability to provide valuable advice to organizations and preparing them for management consulting company interviews by exploring methods to engage in case analysis, understand, and analyze the key elements that make up a problem. Various cognitive biases that can emerge as a problem is being formulated and analyzed, such as the use of inappropriate analogies, confirmation bias, self-serving bias, conflation of correlation and causation, etc.
Credit 1.5 units.

B53 MGT 460H Corporate and Global Strategy
Business-level strategy involves a firm’s choices regarding how to compete in a particular single industry or market. Corporate strategy, on the other hand, involves choices about which sets of different industries or markets to compete in, and how to do so. It also involves choices about which kinds of activities to undertake
within the firm, and which to organize through contracts or alliances with other firms. Global strategy is a particular type of corporate strategy that involves choices about which geographic regions or national markets to compete in and how.

Credit 3 units.

B53 MGT 460I Sports Business Analytics
This course introduces students to business analytics through sports-themed applications, academic research pertaining to sports topics, class readings, and guest lecturers from industry. Objectives for students include: 1) learning estimation and forecasting skills/trends used in sports; and 2) developing critical thinking skills necessary to assist managerial decision making to augment the performance of sports teams, leagues or companies. Prerequisite: MEC 290 or Econ 4011. Credit 1.5 units.

B53 MGT 460J Legal Issues in Sports
This course introduces the fundamentals of sports law. It teaches the basic tenets of a variety of legal disciplines through the lens of sport. It focuses on legal issues that have a direct relationship to sport with an emphasis on current legal sports issues in the news. In the tort arena, we will explore the potential liability of athletes for reckless violent actions toward their competitors, of sports teams and leagues for failing to adequately protect the health of participants (e.g., concussion lawsuits), of coaches, trainers and medical personnel at all levels for failing to properly train, monitor and assess athletes, of product manufacturers for injuries caused by defective sports equipment, and of teams for injuries to spectators, among other potential liabilities.

Credit 1.5 units.

B53 MGT 460K Taylor Community Consulting
Students work in four-person teams on consulting projects, applying insights from their course work to real-world business problems under faculty supervision. Each student is expected to spend about 150 hours on the project. Grades are based on the quality of the final written and oral reports, as determined by the faculty supervisor. Students are paid a small gratuity, the amount, depending on the quality of the work. Students are only eligible to participate in one Taylor Course per semester, if selected. Prerequisite: Students must apply for Taylor projects. Students are notified when projects are available.

Credit 3 units.

B53 MGT 460L Introduction to Social Entrepreneurship
The course is designed for students who are interested in how to create positive social change through market based strategies. Social entrepreneurship refers to the practice of combining innovation, resourcefulness and opportunity to address critical social and environmental challenges. Social entrepreneurs focus on transforming systems and practices to enable human potential and to create sustainable systems change. We will learn how social entrepreneurs have responded to social challenges through creating companies. What are the strengths and weaknesses of this approach compared to “traditional” nonprofit management, activism, and SR? Students will learn the basics of entrepreneurship, and focus on ways to understand and define a social problem and test various approaches to work with others on systems change. Students will learn to think like an entrepreneur, looking for opportunities and leverage, to create (social) value without many formal resources. This semester, selected students will also have the opportunity to work closely with community social entrepreneurs shortlisted from the Social Entrepreneurship and Innovation Competition, to write cases to make their business and impact models clearer and contribute to the knowledge-base of social entrepreneurship. Students may take either MGT 421 or this course.

Credit 3 units. EN: S

B53 MGT 460M Business of Social Impact
This course is designed for students interested in understanding how social change and social impact can be achieved, borrowing tools and approaches from a broad spectrum of disciplines by asking the following questions: What is social impact and what is social change? How has the concept of social impact developed, where did it come from, and how is it useful? How can social impact be meaningfully measured? What examples exist for cooperation and mutual support in the achievement of social impact? What role do for-profit organizations play in creating and promoting social impact? How do CSR, PPP and BOP achieve social impact? The course is based around social impact as a concept, measuring social impact and building institutions, and partnerships around social impact. It will be taught with a practical bent using examples from existing social impact organizations, including those of the professor. Guest speakers will provide case studies of social impact approaches from the local area.

Credit 1.5 units.

B53 MGT 460N Laboratory for Defense and Corporate Cybersecurity Innovation
As a joint entrepreneurial lab between Saint Louis University and Washington University in St. Louis, this non-traditional class focuses on ideating and developing entrepreneurial solutions for real-world problems by applying flipped classroom, experiential, and team-based learning methodologies. Students will be guided by joint instructors with extensive experience in entrepreneurship and the Department of Defense, as well as have the opportunity to interact with senior executives from corporate America and the Department of Defense. Student-developed viable solutions may be implemented in real application beyond the course. Classes will be held off campus in the Cortex Innovation Community.

Credit 3 units.

B53 MGT 460O Business of Arts
This course will build on the business basics students learn in MGT 200A or MGT 100. The intent of the course is to provide students in art-related fields with a skill set that enables them to pursue their artistic vision and ambitions while simultaneously having enough commercial success to make their career viable. Furthermore, the course provides students within business fields the opportunities to apply their technical skills to unique opportunities within creative fields. The course will be a blend of learning a set of appropriate business skills (organized by activities rather than functions), interaction with people from art businesses, and student/team research and presentations. The content will be geared toward an art business (as opposed to fashion or architecture), with the subfields included in the discussion. Prerequisite: MGT 200A or MGT 100.

Credit 3 units.

B53 MGT 471 Venture Consulting
Students who complete the course will gain a deep understanding of the issues of both operational management and investment management of startup firms. Students will learn the fundamental strategies and tactics employed by private equity and venture capital firms as well as aid in the
development of business strategies for the companies in which they invest. Additionally, students will learn how to take into account the macroeconomic, political, and cultural issues that affect startup businesses that are both operating internationally and raising capital internationally. Furthermore, students will learn of the subtleties in the complex relationship between the investment firm and the entrepreneur and will understand both their shared and disparate motivations and objectives. Students who complete the course will develop competency in the research and writing of professional consulting reports and will gain a more sophisticated understanding of both venture capital and entrepreneurship management and strategy. Students will better understand the interpersonal dynamics between the relevant stakeholders, will become proficient in the terminology of private equity investing, and will learn how to create structure to unstructured problems thus improving their ability for critical thinking. Participants will be given the opportunity to apply their efforts beyond their basic functional business skills, and toward issues of relationship management and strategy. Credit 3 units.

B53 MGT 490 Honors Seminar I
The first of a two-course honors seminar. Students have the opportunity to investigate current issues in business using an interdisciplinary approach to their research. Seminar content varies from year to year. Prerequisites: senior standing and faculty invitation. Credit 3 units.

B53 MGT 491 Honors Seminar II
The second of a two-course honors seminar. Students have the opportunity to investigate current issues in business utilizing an interdisciplinary approach to their research. Seminar content varies from year to year. Prerequisite: MGT 490. Credit 3 units.

Managerial Economics

B54 MEC 290 Microeconomics
Provides a rigorous analysis of the behavior of consumers and firms in competitive and monopoly markets; oligopoly markets are introduced. Consumer topics include preferences and utility, budget constraints, consumer optimal choice and demand curves. Firm topics include technology, cost minimization and profit maximization. The course concludes with price determination in monopoly and competitive markets, and an introduction to oligopoly and game theory. The focus of the course is on microeconomics as a decision-making tool for consumers and managers. Prerequisite: completion of Math 131 or concurrent enrollment in Math 132 or Math 233. Credit 3 units. EN: S

B54 MEC 292 Global Economy
Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal, and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; and global economic competition and business strategy. Prerequisites: MEC 290 or Econ 1011, and QBA 120. Credit 3 units. EN: S

B54 MEC 292C Global Economy — South America
This course introduces the fundamentals of international economic analysis. It provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal, and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; and global economic competition and business strategy. Prerequisites: MEC 290 or Econ 1011, QBA 120, and admission to the Emerging Economies South American Program. Credit 3 units.

B54 MEC 292S Global Economy — Australia
Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal, and institutional factors that influence international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; and global economic competition and business strategy. Prerequisites: MEC 290 or Econ 1011, QBA 120, and admission to the Asia Pacific Internship Program. Credit 3 units.

B54 MEC 370 Game Theory for Business
Provides students with a methodological framework to analyze strategic business situations. Building on a background in microeconomics and statistics, this course includes such topics as the following: modeling strategic problems, games with sequential moves, games with simultaneous moves, strategies and the derivation of optimal strategies, general classes of games, uncertainty and information, strategy and voting, auctions, bargaining. Prerequisite: MEC 290. Credit 3 units. EN: S

B54 MEC 391 Economics of Human Resource Management
Key to a firm's success is whether it can develop a firm organization and a human resource management system that reinforce the firm's strategic position. This course covers topics in managing work forces and organizations that are of fundamental importance to all managers, and teaches how organizational design and human resource policies interact with the firm's market strategy and production environment. We look
at how management can motivate executive and employee performance, screen and attract appropriate workers, and improve the way information is processed and decisions are made within organizations. This course combines economic analysis with case discussions to address topics including hiring policy, turnover, training, variable pay, promotions, evaluation, job design, teams, worker empowerment, hierarchy, and organizational structure like centralization and decentralization. Prerequisite: MEC 290. Credit 3 units.

B54 MEC 400K Research Analysis in Industry
Research in Industry Analysis will build on the materials taught in MEC 370 (Game Theory) MEC 470 (Market Competition and Value Appropriate) and MEC 471 (Empirical Techniques in Industry Analysis), integrating them with methods of industry analysis used in practice and applying them to companies. Prerequisites: MEC 370, MEC 470 and MEC 471. Credit 3 units.

B54 MEC 460 Economics of Entertainment
This course focuses on the unusual economics of the entertainment industry and the associated management challenges. The sessions cover the basic economics of entertainment, then focus specifically on the music and movie industries, plus one other that varies from year to year. Classes consist of lecture and discussion, as well as speakers from the relevant industries. The primary student deliverable is a 20-minute documentary-style production in which student teams present findings of their research into specific industries within the broader industries studied in class, e.g., rock, classical or rap within music, blockbusters within music, etc. Prerequisite: MEC 290 or Econ 4011. Credit 3 units.

B54 MEC 470 Market Competition and Value Appropriation
Provides students with frameworks and capabilities for making intelligent decisions in evolving markets. Course begins with general game theory concepts, which form the basis for two main topics: models of competition in markets and value appropriation. Students learn the basic framework and apply it in the context of a detailed industry study. Specific topics may include firm interactions in stable and evolving market environments, industry life cycles, the evolution of new product markets, and strategic decision-making in developing markets. Prerequisite: MEC 370. Credit 3 units.

B54 MEC 471 Empirical Techniques for Industry Analysis
Students will learn how to use data to answer a wide variety of questions regarding the incentives and behavior that generate market activity. We emphasize inference about the strategic decisions of firms and consumers. Students are introduced to new statistical and econometric tools by examining the application of these tools to current research in economics. Among the topics considered are the empirical implications of: strategic bidding in auctions, price discrimination and dispersion, differences across products, and the internal organization of firms. Prerequisites: MEC 290, QBA 120 and QBA 121. Credit 3 units. EN: S

B54 MEC 494 Business and the Environment
This course will examine the relationship between environmental economics and environmental policy. The course will focus on air pollution, water pollution, and hazardous wastes, with some attention given to biodiversity and global climate change. The course will critically examine two prescriptions that economics usually endorses: (1) the "balancing" of benefits against costs (e.g., benefit-cost analysis) and the use of risk analysis in evaluating policy alternatives; and (2) the use of market incentives (e.g., prices, taxes, charges) or "property rights" instead of traditional command-and-control regulations to implement environmental policy. Prerequisite: Econ 1011. Same as L11 Econ 451. Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, ETH EN: S

Marketing

B55 MKT 370 Principles of Marketing
Marketing is the window to the customer, making the function a critical component of any successful organization. Through a mixture of lectures, case discussions and classroom exercises, this course gives students an overview of the best theories and practices in marketing management today. Specific topics include: how to segment the customer base and choose target markets, how to create perceived value both from an economic and psychological perspective, how to differentiate a product or service from a competitor's offering, how to build and maintain a strong brand, and how to employ different marketing tools such as advertising, pricing, product design, service and location. The class also provides students with some basic tools for evaluating the financial impact of marketing activities. Prerequisites: sophomore standing and MEC 290 or Econ 1011 or MGT 100. Credit 3 units. EN: S

B55 MKT 377 Consumer Behavior
Psychological, sociological and social psychological principles as they apply to consumer response to product offerings, media communications, personal influence and other environmental factors. Consumer buying behavior is analyzed from theoretical, empirical and applied perspectives. Current applications of concepts employed by marketers are discussed in the context of both consumer and industrial marketing situations. Prerequisite: MKT 370. Credit 3 units. EN: S

B55 MKT 378 Marketing Research
The four P's of marketing are product, place, price, and promotion. Using these decision variables, firms seek to maximize profits. Making these decisions requires market information. Marketing research is the process of actively collecting, assimilating, and analyzing market information to support management decision making. Teaches the nuts and bolts of market research. Students may not receive credit for both MKT 370N and this course. Prerequisites: MKT 370, QBA 120 and QBA 121 or concurrent enrollment in QBA 121. Credit 3 units.
B55 MKT 400E Elements of Sales: Tools and Techniques
This course will provide students with a thorough understanding of the sales function in a managerial context as well as the process of selling from prospecting through solution selling and account maintenance. Specific topics addressed include sales force structure, salesperson selection, evaluation, and compensation. Students will study sales technique, strategic selling, and key account management. Prerequisite: MKT 370. Credit 3 units.

B55 MKT 400F Brand Management
A brand is a promise, and this promise is often the most valuable asset of a firm. In this class, students will examine the creation and building of brand equity to create long-term profit for the firm. The class will examine what we know about brand management and brand theory from years of rigorous scientific research in the area. While learning the foundations of brand management, students will develop the skills needed to create a meaningful brand, position a brand, develop brand names and logos, promote a brand, leverage brand equity, extend a brand, and communicate brand meaning via traditional and social media. Students will learn some of the day-to-day skills performed by brand managers and interact with brand managers via guest speakers from top branding firms. Prerequisite: MKT 370, QBA 200A and either completion or concurrent enrollment in MKT 378 or MKT 470N. Credit 3 units.

B55 MKT 400G Digital Marketing and Analytics
The aim of this course is to provide a rigorous and comprehensive introduction to technology and methods of conducting marketing activities online and analyzing the data that inform and result from those activities. Prerequisite: MKT 370 and either QBA 120, Math 2200, Math 3200 or ESE 326. Credit 3 units.

B55 MKT 400I Business & Marketing Innovation
Innovation is a major strategic activity for most firms, as success is vital to face the rapid increase in competition and ever-changing customer demands. However, innovation is risky, and most new solutions fail in the marketplace. Thus, expertise in the development and marketing of new solutions is a critical skill for all managers. This course is about generating innovative opportunities and designing new solutions. The emphasis on solutions rather than the narrower focus on products is intentional, as this course is more about business innovation and somewhat less about new product design specifically; however, new product design will be covered. In addition, while the course does overlap with entrepreneurship, the focus will be on innovation in both small and large companies. The follow-up course will focus more on how to mark an innovation once it is ready to go to market. It will focus on key business and marketing innovations, such as the following. Business innovations: components of a successful innovation strategy and how to manage effectively; approaches and frameworks for uncovering unmet (and future) customer needs; tools to focus on market-creation vs. market-competition; tools and techniques for analyzing the validity and potential of new opportunities; how to forecast new product adoption and diffusion outcomes; how to manage the threat of disruptive innovation; how to design solutions that include functional, social, and emotional components; the attributes of great product and solution design. Marketing innovations: attributes of a successful product launch strategy; customer segmentation and uncovering what “causes” those customers to buy; first mover advantages and disadvantages (when and how to enter new markets); matching innovations with the right monetization strategy; concept and market testing; experimentation methods for developing and launching new solutions (lean start-up); business model innovation and how to compete through business models; innovative marketing techniques; data-driven marketing that integrates channels and personalizes the customer experience. Prerequisite: MKT 370. Credit 3 units.

B55 MKT 400L Causal Inference
This course introduces students to causal inference. Advances in information technology provide an enormous amount of valuable data to business. Good data-driven decision making often goes beyond discovering correlations in the data. Making the right prescriptive decisions often requires managers to tease out the causal relationship(s) between the prescriptions and outcomes of interest. Mastering causal inference is likely to become more rewarding over time as AI continues to complement human judgement with quick data analyses at a low cost. Throughout the course, we will go over many examples of why understanding causal relationships is important. Course goals include identifying proper statistical tools to tease out the deterministic processes that have generated the data in the presence of randomness; identifying alternative data-generating processes that could have generated the same data; understanding that observational data come from agents’ decisions and that these decisions could lead to biased samples; understanding omitted variable bias and reverse causality; designing and implementing various statistical and experimental methods of addressing the basic causal-inference problem using statistical software; digging deeper into the mechanisms (decision trees) that yield the causal relations; and articulating analyses in presentations. Prerequisite: QBA 120. Credit 3 units.

B55 MKT 400M Sports Marketing
In this introduction to sports marketing, students will learn the difference between marketing of sports and marketing through sports. In addition to studying the basics of sports marketing, we will examine the following: (1) the special nature of sports marketing; (2) the sport consumer; (3) the sport product and the key issues in developing a sport product strategy; (4) sport property branding; and (5) sport marketing decision making and ticket pricing. Prerequisite: MKT 370. Credit 3 units.

B55 MKT 450F Luxury Goods and a Dash of Fashion
This course focuses on the structure, strategies and business models of the global personal luxury apparel and accessory market. We study brands such as Burberry, Moncler, Louis Vuitton, Chanel and other industry leaders. The course is divided into two major segments. The first part is an on-campus 12-class segment which concludes with a final exam and a team report. The next segment is a spring break field trip to New York where we will visit the headquarters and showrooms of luxury brands and fashion retailers and meet with their executive leadership teams. Students will apply to take the course, and enrollment will be capped at 15 students. Contact instructor or BSBA Office for questions. Prerequisite: completion or concurrent enrollment in MKT 370 and instructor permission. Credit 3 units.
B55 MKT 465 Retail Management
Explains the fundamental factors that are critical to the success of most retailers: merchandising, store design and display, personal selling, advertising and promotion, pricing and location. A wide variety of retailers — department stores, specialty stores, wholesale clubs, direct marketers, franchisers, food retailers, discounters and others — are studied. Through case methodology, the role that managers play in problem solving and development of strategies are studied. Topics include: positioning for success; retailing organizations; retail economics; pricing strategy; and entrepreneurial retailing. Prerequisite: MKT 370. Credit 3 units.

B55 MKT 470E Pricing Strategies
This course equips students with the concepts, techniques, and latest thinking on assessing and formulating pricing strategies. Through lectures, in-class discussions, case studies, group project/presentations, and pricing simulation games, students learn to use the fundamental analytical tools, theories and conceptual frameworks to formulate proactive pricing strategies improving the firm's profitability. Topics of discussion include incremental contribution analysis, EVC analysis, segmentation and price customization, competitive pricing strategy, pricing innovative products, price promotion, psychological/behavioral issues in pricing, dynamic pricing, pricing and market making on the internet, and pricing of digital products and services. Prerequisite: MKT 370. Credit 3 units.

B55 MKT 470N Applied Marketing Research
This course is designed to provide you with an appreciation of the role of marketing research (MR) in the formulation and solution of marketing problems. In this course, you will be developing an understanding of the marketing research process, and understand how to read reports and use output from marketing research to make managerial decisions. While the course will cover the process of engaging in marketing research, the emphasis is on understanding how to interpret output from marketing research so that you can gain greater mileage from marketing research reports that are run for your company, and on understanding what types of information can be collected so you will understand what types of information you can commission once you step into a managerial role. BSBA students can't enroll in this course. Students may not receive credit for both MKT 378 and this course. Prerequisite: MKT 370, Math 131 and Math 2220. Credit 3 units.

B55 MKT 477 International Marketing
Addresses three fundamental decisions confronting a company whose operations extend beyond the domestic market: (1) choosing which foreign markets to penetrate; (2) determining the mode of market entry; and (3) devising the international marketing plan. Topics include: global marketing planning; environmental and cultural influences on international marketing decisions; organizational and control issues in international marketing decisions; global marketing intelligence; foreign risk and feasibility studies; and issues of ethics in other countries. Prerequisite: MKT 370. Credit 3 units. EN: S

B55 MKT 477L International Marketing London
Many companies, large & small, prepare a business environmental analysis for each country in which they do business. The analysis assesses the (consumer, industrial or organizational) demand in a particular country for merchandise like the company markets as well as the company's ability & willingness to supply that merchandise to that country. Students will prepare a marketing environmental analysis for some merchandise (either a new or existing service or product) of their choice from a company of their choice in London. Prerequisites: MKT 370 and admission to the London Internship Program. Credit 3 units.

B55 MKT 477S International Marketing Sydney
Many companies, large & small, prepare a business environmental analysis for each country in which they do business. The analysis assesses the (consumer, industrial or organizational) demand in a particular country for merchandise like the company markets as well as the company's ability & willingness to supply that merchandise to that country. Students will prepare a marketing environmental analysis for some merchandise (either a new or existing service or product) of their choice from a company of their choice in Australia. Prerequisites: MKT 370 and admission to the Asia Pacific Internship Program. Credit 3 units.

B55 MKT 478 New Product Management
In a rapidly changing business environment in which product life cycles are shortening and competition is intensifying, creating new products has become the most significant and most risky activity within a firm. This course aims to develop an understanding of the "state-of-the-art" strategies, processes and methods used when developing new products. The course focuses on key new product issues, including the generation and assessment of ideas, value creation in competitive markets, the impact of disruptive technologies on mainstream industries, the diffusion of innovative new products and services, business model innovation, marketing mix decisions for new products (the four Ps), concept and market testing, first mover dis/advantage, and expanding the product portfolio. This is a case-based course, where students participate in a dynamic and interactive group environment to develop the capacity to use the information learned to make informed new product decisions. Prerequisite: Completion of or concurrent enrollment in MKT 378 or MKT 470N. Credit 3 units.

B55 MKT 480 Marketing Strategy
Successful business plans are dependent on well-defined and carefully crafted marketing strategies. In this course, students will explore the interconnections between business strategy and marketing strategy through a series of lectures, case discussions, and participation in an online marketing simulation exercise. The course also places heavy emphasis on the discussion of topical marketing issues faced by companies in the current environment. Students are required to read the relevant business press and bring real world issues into the class for brainstorming and interactive discussion. Through this process, students will become astute observers of the strategic trends in marketing across a variety of industries. Prerequisite: MKT 370 and completion or concurrent enrollment in QBA 121. Credit 3 units.
B55 MKT 481 Advertising and Promotions
This course focuses on an Integrated Marketing Communications (IMC) approach to advertising and other forms of commercial communications. The purpose is to provide future managers and practitioners with a foundation in communications theory, based on understanding the target's role in the demand chain for goods and services, as well as "hands on" experience in developing marketing communications plans. A practical understanding is provided of each of the range of marketing communications vehicles: consumer and business-to-business advertising, sales promotion/incentives, direct marketing, public relations, events and sponsorships, as well as online/interactive communications. Copy strategy, creative development, media planning, promotion strategy, and the evaluation of these programs are all addressed in this course. Industry experts will give guest lectures. We will have four companies in different industry sectors for which the class will develop marketing communications plans during the course. Prerequisite: MKT 370. Credit 3 units.

Operations and Supply Chain Management

B58 OSCM 356 Operations Management
Introduces a variety of common operations issues that are frequently dealt with in both manufacturing and service industries and that affect other functions of the business. Specific topics include: process design and control; quality; waiting line models; inventory systems; and supply chain management. Prerequisites: ACCT 2610, MEC 290 and completion of QBA 200A or concurrent enrollment in QBA 200A. Credit 3 units.

B58 OSCM 400C Analytics for Operational Excellence
This course is an introduction to data science in Python, which assumes no prior programming experience. The course is broken down into two units. In the first unit, students will be introduced to the basics of Python as a programming language. The second unit of the course is devoted to data analytics: students will use Python to explore and visualize real-world data sets from various industries including finance, sports, and technology. Prerequisite: Completion or concurrent enrollment in OSCM 356. Credit 3 units. EN: TU

B58 OSCM 400D Supply Chain Management
A supply chain is a network of all firms and relationships that get a product to market, including the original acquisition of raw materials, production of the item at a manufacturing facility, distribution to a retailer, sale of the finished item to the customer, and any installation, repair, or service activities that follow the sale. How to effectively manage the supply chain is a central issue for all levels of management, regardless of industry. More demanding customers, the internet and digital technology, growing competitive pressures, and globalization create new opportunities and challenges on how supply chains should be configured and managed. Many innovations and new business models have emerged, arising from application of information technology and reconfiguration of the supply chain network. Prerequisite: OSCM 356. Credit 3 units.

B58 OSCM 458 Operations Analytics
Examines the concepts and techniques essential for effective operations planning and control in various manufacturing and service organizations. The course builds on the knowledge and skills acquired in core operations management and quantitative method courses, and covers key topics including inventory management, linear and nonlinear programming, aggregate planning, Markov chain models. The course introduces students to the major trade-offs and issues in operations planning and control, as well as important tools and techniques available for helping operations managers to make analysis and decisions. Prerequisite: OSCM 356. Credit 3 units.

Organizational Behavior

B66 OB 360 Organization Behavior Within the Firm
Provides a toolbox of skills that are necessary to be an effective team member and manager. Focuses on behavior at the individual, group, and organizational levels to provide a broad picture of management in organizations. Ongoing themes include motivation, team dynamics, organizational design, and corporate culture. Assignments, experiential exercises, and course materials are designed to build skills in team management, organization, and communication that will be useful for other group assignments as well as work experiences. Prerequisite: MGT 100 or sophomore standing. Credit 3 units. EN: S

B66 OB 400C Women in Leadership
Using a multifaceted approach to learn about women and leadership. To better prepare students to lead in organizations, we will learn from notable leaders who will share their experiences and advice with the class. These conversations will be supplemented with cases and readings of women leaders pulled from a range of organizations as well as a review the current state of empirical evidence about the status of women as leaders. Finally, there will be time to engage in deep reflection about what students expect from their careers, as well as a chance to consider the pathways they must take to become effective and inclusive leaders in increasingly diverse organizations. Credit 3 units. EN: TU

B66 OB 400D Thinking Creatively and Leading Creative Teams
This course is designed for students who want to improve their ability to develop creative solutions to tough business problems and to be able to inspire creativity in others. In a world of rapid change and increasing complexity, existing approaches simply won’t do it anymore — at least not for long. Thus, the ability not only to update and refresh existing products and services but also to generate ideas for new-to-the world offerings becomes indispensable. Students who have mastered the skills
of creative thinking and doing and can foster those skills in others are therefore in a position to add tremendous value to their firms and, ultimately, to society. This course is designed to help students understand and begin to master those skills. Prerequisite: OB 360.
Credit 1.5 units.

B66 OB 400E Talent Analytics
Finding, developing, and retaining the best talent has always been the key to sustained success in business. Organizations today have potential access to far more useful information about people than ever before, but most struggle to access and use it effectively. In a highly competitive global market, rigorously analyzing data to enable timely strategic decisions about talent provides a critical edge. In this course, students will learn how to use analytics to bring data and rigorous modelling to bear on people-related issues, such as recruiting, performance evaluation, leadership development and succession, job design, and compensation. Together, these can help organizations achieve long-range strategic goals rather than simply serving as an administrative support function. Prerequisites: OB 360 and QBA 200A.
Credit 1.5 units.

B66 OB 400F People Metrics
Since metrics are at the core of people analytics, this course introduces students to the foundations of assessing behavior in organizations using novel measurement approaches and large datasets. Through classroom discussions and real-world applications, this course will enable you to add value to organizations through the development, use, and interpretation of innovative people metrics. Specifically, after taking this course, you will be able to develop a clear and logical conceptual measurement model. A conceptual measurement model is the foundation of creating novel and useful new approaches for assessing intrapersonal characteristics (e.g., personality) and interpersonal behavior (e.g., knowledge sharing, teamwork). Prerequisites: OB 360 and QBA 200A.
Credit 1.5 units.

B66 OB 461 Negotiation
Skillful negotiation is an important aspect of management. Designed to improve a student’s skills in analyzing and conducting negotiations in a variety of settings. Topics include two-party bargaining, multiparty bargaining, arbitration and coalition formation. Prerequisite: OB 360.
Credit 3 units.

B66 OB 462 Leadership in Organizations
This course is designed to fulfill three broad objectives for students. The first is to provide a useful overview of the primary leadership perspectives, focusing on how each framework links individual leadership to organizational outcomes. The second objective involves students in self-assessment of strengths and weaknesses in relation to the abilities and skills that are predictive of leadership effectiveness. Third, the course is designed to enable participants to articulate an effective strategic plan for individual leadership development. Course topics include perspectives on individual leadership effectiveness, leadership and motivation, developing subordinates, leading groups and teams, leading the resolution of conflict, and leading organizational change. Prerequisite: sophomore standing.
Credit 3 units.

Data Analytics

B59 DAT 120 Managerial Statistics I
The first of a two-course sequence in business applications of statistics, focused on descriptive statistics, probability and distributions, inferential statistics, and linear regression. Approximately, the first quarter of the course is about descriptive statistics and applications of covariance. The second quarter is devoted to probability: basic rules, conditional probabilities, Bayes’ theorem, expected values, and probability distributions. This work is followed by an introduction to sampling distributions and inferential statistics. Confidence intervals and hypothesis testing are introduced to make inferences about parameters. The last one-fourth of the course focuses on simple linear regression. Throughout the course, functions, data analysis, VBA, and solver features of Excel are introduced. Prerequisite: completion or concurrent enrollment in MATH 132.
Credit 3 units.

B59 DAT 121 Managerial Statistics II
The second of a two-course sequence in business applications of statistics, focused on forecasting. The course is devoted to the use of linear regression models in business, and ways to deal with problems of collinearity, outliers, non-linear relationships, and heteroscedasticity. Advanced topics including time series regression and logistic models are covered as time permits. There are quizzes and group projects in addition to a midterm and final. Prerequisites: DAT 120 or approved equivalent; MATH 132; and MEC 290 or ECON 1011.
Credit 3 units.

B59 DAT 200A Analytics and Modelling for Business Decisions
The primary goal of the course is to help students become effective problem solvers, smart consumers of data, and intelligent business decision makers in various management situations. The course utilizes structured problem-solving approaches that heavily rely on data for defining the problem, uncovering useful relationships between critical variables and outcomes, defining measures for evaluating alternatives, modeling underlying conceptual relationships and constraining resources, and proposing via a rigorous search process of exploration and exploitation “best fitting and robust” solutions for the given environment and its underlying uncertainties. Applications of those analytic tools will be illustrated using examples from various business functional areas, finance, marketing, operations, economics and strategy. Prerequisites: DAT 120 and completion or concurrent enrollment in DAT 121.
Credit 3 units.

B59 DAT 220 Analytics and Modelling for Business Decisions
The primary goal of the course is to help students become effective problem solvers, smart consumers of data, and intelligent business decision makers in various management situations. The course utilizes structured problem-solving approaches that heavily rely on data for defining the problem,
uncovering useful relationships between critical variables and outcomes, defining measures for evaluating alternatives, modeling underlying conceptual relationships and constraining resources, and proposing via a rigorous search process of exploration and exploitation "best fitting and robust" solutions for the given environment and its underlying uncertainties. Applications of those analytic tools will be illustrated using examples from various business functional areas, finance, marketing, operations, economics and strategy. Prerequisites: DAT 120 and completion or concurrent enrollment in DAT 121. Credit 3 units.

**Degree Requirements**

The Bachelor of Science in Business Administration degree is awarded to students by recommendation of the faculty. Standards established by the faculty for recommendation are as follows:

1. Satisfactory completion of requirements regarding required and elective courses, accumulation of a minimum of 120 units of course work, and satisfactory fulfillment of other requirements established in accordance with the rules and regulations of the Olin Business School.

2. Completion of the last 30 units in residence at Washington University for entering first-year students. Transfer students must complete a minimum of 60 units in residence at Washington University.

**General Requirements (a minimum of 48 units)**

Each student must complete a minimum of 48 units outside of the Olin School to include the following specific requirements:

A. **College Writing (3 units):** Students must demonstrate proficiency in reading and writing the English language by satisfactorily completing one College Writing Program themed writing course with a grade of C- or better.

B. **Calculus (3-6 units):** Students must complete Math 131–Math 132 or other calculus courses approved by the Olin Business School.

C. **Distribution Requirements (18 units):** Students must complete 3 units of physical and life sciences, 3 units of humanities, 6 units of international studies, 3 units of behavioral analysis, and 3 units of ethics and values. Approved course selections are available in the university's Course Listings.

D. **Advanced Electives (12 units):** Students must complete at least 12 graded units of advanced course work. Advanced electives are defined as any course numbered 300 or above that is offered as any day division course. Advanced electives may also satisfy a distribution requirement.

**Professional Requirements (a minimum of 60 units)**

A. **Core Requirements (42 units):**

**Total Units** 42

* Transfer students entering Olin Business School must take MGT 100 or MGT 380 to satisfy this requirement.

B. **Professional Electives (a minimum of 18 units)**

Professional electives are non-required business courses offered by the Olin Business School that may or may not lead toward a specific business major. Additional information about the specific requirements for each business major is available on our Majors (p. 930) page.

**Electives (units will vary)**

Students must take enough electives to earn the minimum of 120 units.

**Typical Four-Year Curriculum for a BSBA Student**

Typically, students must earn 30 units per year to stay on target with a four-year graduation plan.

*120 credits minimum*

Notes:

* Students may enroll in a higher level of calculus providing their academic preparation suggests a different level of calculus.

** BSBA students are assigned to enroll in their College Writing Program course in the fall or spring semester of their first year. Some students may start at a different level of English preparation and may take their writing course as late as sophomore year.

Additional Requirements

A. Students must complete a minimum of 120 units, including 48 units outside of the Olin School and 60 units from the Olin School. Students who substitute a non-business course for a business requirement will still be required to enroll in another business course, as a minimum of 60 credits must be earned in Olin Business School.

B. Students must earn a minimum of 2.0 overall grade-point average and 2.0 GPA in all professional course work taken at Olin Business School.

C. Students must earn the final 30 units (60 units for an external transfer) toward the degree at Washington University.

D. Students must be recommended by the Olin Business faculty for degree confirmation by the Board of Trustees.

Regulations

A. A maximum of 15 units of pre-matriculation credit may be counted toward graduation. Pre-matriculation sources include Advanced Placement (AP), International Baccalaureate (IB), British Advanced (A) Levels and college courses taken after the junior year in high school. These units will count toward the 120 credits but will not satisfy any distribution, statistics or advanced education requirements. If a student takes a course in residence in which AP credit has already been awarded, the AP credit will be removed from the student's record.

B. BSBA students may earn a maximum of two majors to include two professional majors or one professional major and one major outside of the Olin School.

C. BSBA students may earn one or two minors, depending on the number of majors they pursue. The options are two majors and one minor or one major and two minors. Most of our minors are offered outside of Olin Business School.

D. Distribution requirements and advanced general electives (12 credits) must be taken for a grade. However, if a student completed a distribution/advanced course on a pass/fail basis prior to transferring to Olin Business School, then this course would count toward that requirement.

E. All business courses must be taken for a grade, with the exception of MGT 450A and FIN 343.

F. BSBA students may enroll in one physical education course per semester.

G. BSBA students may enroll in one pass/fail course each semester. These credits will count only as general education electives.

H. BSBA students may enroll in one University College course per semester. However, these credits will not count toward the 120 units needed for their BSBA degree. The grade from this course will not be factored into the GPA.

I. The Olin School does not accept any online course work for transfer credit.

J. BSBA students may transfer up to 6 credits per summer toward their BSBA degree requirements.

K. BSBA students must complete 54 of the 60 professional units in residence. Course work taken as part of an approved Washington University international program will satisfy this residency policy.

L. BSBA students must complete all professional courses for each business major in residence. Course work taken as part of an approved Washington University international program will satisfy this residency policy.

M. BSBA students may double count only one course in a business major. For example, if a BSBA student is majoring in both
marketing and entrepreneurship, they could not count B55 MKT 378 and B55 MKT 465 toward both majors.

N. ROTC units numbered 300 or above will count toward the student's 120 units required for graduation. These credits may count toward the advanced non-business requirements providing the course is taken for a grade.

O. Students are obligated to requirements and policies at the time of matriculation into the BSBA program. However, faculty has and reserves the right to make changes to degree requirements, policies and procedures, including modifying or adding new requirements, policies and procedures at any time.

Academic Honors & Awards

Scholars in Business Program: The Scholars in Business program allows alumni, corporations and friends of Olin Business School to provide scholarship funds to students of high academic promise who require financial support to attend the university. Students are considered for this award when they apply for financial aid in the fall of each year. Donors and students meet each other at the annual Scholars in Business dinner.

Dean's List: Dean’s List honors are awarded to undergraduates who have completed a minimum of 14 graded units and achieved a semester grade-point average of 3.6 or above. No Incomplete or “N” grades may be outstanding as part of the student’s semester record.

Beta Gamma Sigma Honor Society: The top 7 percent of the junior class and the top 10 percent of the senior class will be considered for membership in Beta Gamma Sigma, provided that the student's cumulative GPA is in the top 7 percent or top 10 percent of their respective graduating class. A student’s cumulative GPA will include their course work at Washington University as well as any course work taken out of residence. The student must have completed a minimum of 30 units at Washington University to be eligible.

Latin Honors: Graduating seniors in the top 5 percent of the class, based on overall university academic records, graduate summa cum laude. Seniors in the top 6 to 15 percent of the class graduate magna cum laude. These designations are recorded on the official university transcripts. All candidates for the BSBA degree in August, December or May will be considered as one group for purposes of final honors. Honors are determined in May for all graduates.

Honors in Management: The Honors in Management (HIM) Seminar is a two-semester sequence course that gives students the opportunity to work with senior-level faculty in a specialized format. In the fall semester, the HIM course will be team taught with various faculty members. For the spring semester, students will form teams to develop substantial research projects under the direction of one of the participating faculty for the remainder of the academic year. HIM students must successfully complete both MGT 490 and MGT 491 in order to receive the Honors in Management designation at graduation.

Honors Thesis: The Olin BSBA Honors Thesis challenges students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. The Honors Thesis is a two-semester sequence in which the student engages in research and analysis during the first semester; with successful progress, the student writes, presents and defends their research during the subsequent semester. Students must apply and be approved to participate in this experience. All applicants must be senior BSBA degree students in good standing with a cumulative GPA of 3.7 or above.

Academic Regulations

Attendance

Olin Business School allows each instructor of a course to decide how many absences the student may have and still pass the course. The Olin Business School expects faculty to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their instructors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

Enrollment

BSBA students must be enrolled in a minimum of 12 units to a maximum of 21 units each semester. Olin undergraduates will be assessed a full-time tuition charge for their course of study through eight semesters of enrollment.

Units and Grades

A unit is a measure of quantity given for one hour of lecture or recitation course a week for one semester. The Olin Business School employs the following grading system for evaluating student performance:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Points Per Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
</tr>
<tr>
<td>D-</td>
<td>0.7</td>
</tr>
<tr>
<td>F</td>
<td>0.0</td>
</tr>
</tbody>
</table>
Grade points per course are calculated by multiplying the number of units of a course by the grade points earned. A student may retake a course if a higher grade is required or desired. The initial grade received in the course remains on the student’s record, along with an R to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing the student’s grade-point average.

### Auditing a Course

Students may not audit a business course. However, a student may take nonbusiness courses for audit with the approval of the professor. An audited course does not count toward the student's degree requirements. A grade of L indicates the satisfactory completion of an audit; unsatisfactory completion results in a grade of Z. Fees for auditing a course are assessed at the same rate as for all other courses.

### Incomplete Grades

A student may be given an I (incomplete) when extenuating circumstances preclude the satisfactory completion of course work during the semester in which a particular course is taken. While an incomplete grade is sometimes appropriate, a student should make every effort to avoid the accumulation of incomplete grades. Incomplete grades are expected to be finished. Failure to finish an incomplete grade by the following semester will result in a failing grade.

### Pass/Fail Option

A student may take a maximum of one course per semester on a pass/fail basis. A grade of P# (pass) indicates that credit has been awarded but the work was not subject to finer evaluation. No required or business course work may be taken on a pass/ fail basis. This option is provided so that a student may take nonbusiness courses in subject areas with which they may have little familiarity.

### Minimum and Maximum Course Loads

In Olin, business students are required to enroll in a minimum of 12 units to a maximum of 21 units each semester at Washington University. A minimum 2.0 GPA in all course work taken at the university and a 2.0 GPA in all professional course work taken at Olin must be achieved to satisfy BSBA graduation requirements.

### Repeating a Course

A student may retake a course if a higher grade is required or desired. The initial grade received in the course remains on the student's record. An R will be placed next to the course with the lower grade to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing the student's grade-point average.

### Academic Probation and Suspension

Approximately three weeks after the end of a semester, the Academic Review Committee reviews the record of each enrolled student. Students must attain and maintain a minimum 2.0 GPA in professional (business) and general courses to be in good academic standing. Failure to achieve minimum standards may result in the student being placed on academic probation or becoming ineligible for future registration in Olin Business School. Failure on the part of a student to meet the conditions of probation during the following semester may result in dismissal from the school.

Another cause for probationary action or dismissal is failure on the part of a student to complete professional requirements within a reasonable time period. Students who fall behind in completing requirements should make an appointment to see their primary adviser to work out a plan for making up the work at the earliest possible time. Registration is restricted to a maximum of 15 credits for students on academic probation.

### Leave of Absence Process

If a student is an undergraduate in good standing at the completion of a term, they are eligible to apply to take a leave of absence from the Olin Business School. The student should first contact their academic adviser to discuss the situation. Students must submit a request for a leave of absence to their four-year academic adviser. A student on an approved leave of absence should submit a Reinstatement Form by March 1 for a fall semester return or October 1 for a spring semester return.

A student wishing to take a medical leave of absence (MLOA) should first talk with a representative from Habif Health and Wellness Center (http://shs.wustl.edu). Then, the student should submit the MLOA petition to Habif Health and Wellness Center. A student’s request for the MLOA or re-enrollment from an approved MLOA will be reviewed by Habif Health and Wellness Center once the recommendations are received. The decision of whether or not to grant the request for an MLOA or re-enrollment will be communicated to the student by the BSBA Programs Office. A student considering an MLOA should first contact Habif Health and Wellness Center to initiate this leave.
In either case, the student must complete the Leave of Absence or the Medical Leave of Absence form and submit it to the appropriate office for consideration.

A student who wishes to formally withdraw from the university should meet with their business school adviser to file a Withdrawal Petition. In the event that a student wishes to return after formally withdrawing from Olin, that student must re-apply for admission if they wish to return to the university.

**Transfer Credit**

Students who are enrolled at Olin and wish to receive transfer credit for course work subsequently taken at another institution must receive approval from their adviser prior to the time the course is to be taken. General guidelines are as follows:

- The institution must meet accreditation requirements.
- No course work may be taken at a two-year institution after a student has accumulated 60 credit hours of work.
- Credit will not be given for course work taken at another institution during a student's last 30 credit hours.
- A catalog description for each course must be submitted with the petition for review.
- No credit will be granted for course work taken online through another university.
- A maximum of 6 units may be taken during a summer program from another university.
- 54 of the 60 professional units must be taken in residence.
- All business major course work must be taken in residence. While major course work can be taken through an approved study abroad program, only one course will be counted for each business major.
- No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Conduct Code or Academic Integrity policy.

The Olin School expects that all business courses will be taken at Washington University. Under certain circumstances, permission may be granted for a student to take a business course from another university with accreditation from Association to Advance Collegiate Schools of Business (AACSB) International. For consideration to be given, a syllabus showing text used must be submitted. However, a BSBA student must still complete 54 of their 60 business units in residence. Any course counting toward a business major must also be taken in residence.

No transfer credit (including course work taken through a Washington University approved study abroad program) will be accepted with less than a C grade.

**University College Courses**

BSBA students may enroll in one University College course per semester. However, these units will not count toward the 120 units needed for the BSBA degree nor toward a student’s GPA.

**Pre-Matriculation Units**

Pre-matriculation units are earned before the student’s enrollment at Washington University as a first-year student. These units would include Advanced Placement (AP) examinations, International Baccalaureate (IB) programs, British Advanced (A) Levels, and college credit earned after the student's junior year in high school. These units will be noted on the student's transcript. The maximum number of pre-matriculation units awarded is 15. These pre-matriculation credits will transfer as general elective course work and will not satisfy any distribution requirement. All BSBA students and second majors will be required to take DAT 120 Managerial Statistics I, even when AP credit is earned for Math 2200 Elementary Probability and Statistics.

**Administration**

Mark Taylor (https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=mark.p.taylor)
Dean
PhD, Birbeck College, University of London

Kelly Bean, MS
Senior Associate Dean and Charles F. Knight Distinguished Director of Executive Education

Sam Chun, PhD
Assistant Dean and Director of Executive Education

Paula A. Crews, MBA
Associate Dean and Director, Marketing and Communications

Brent Jenson, MBA
Senior Associate Dean of Finance

Steven J. Malter, PhD
Senior Associate Dean and Director of Programs

Jessica R. Martin — Chief of Staff

Director of the PhD Program, Director of the Institute for Innovation and Growth, and Director of the Center for Finance and Accounting Research

Nancy Barter
Executive Director of Development
Majors (directory)

Below is a list of majors offered by the Olin Business School. Visit the Majors section of the Olin Business School page (p. 930) in this Bulletin to view more information about a specific major:

• Accounting
• Business of Analytics*
• Business of the Arts*
• Business Economics
• Business of Entertainment*
• Business of Social Impact*
• Business of Sports*
• Entrepreneurship
• Finance
• General Business
• Health Care Management
• International Business*
• Marketing
• Operations and Supply Chain Management
• Organization and Strategic Management
• Strategy

* BSBA students can earn the business of analytics, business of arts, business of entertainment, business of social impact, business of sports, or the international business minor as part of their undergraduate degree.

Minors (directory)

Non-BSBA students are eligible to pursue a minor in one of the specific fields of business listed below. Visit the Minors section of the Olin Business School page (p. 937) in this Bulletin to view more information about a specific minor:
Engineering

Mission Statement
The mission of the McKeelv School of Engineering at Washington University in St. Louis is to serve society as a center for learning in engineering, science and technology. It is our duty to disseminate and create knowledge through teaching, research, publications and the transfer of important ideas and research into the development of new products and technologies. We strive to provide an environment that nurtures critical thinking and the education of innovators and leaders for the future.

Undergraduate Degree Programs
The McKeelv School of Engineering offers four-year, full-time programs of instruction leading to various bachelor of science degrees. Bachelor of science degrees are available in the fields of biomedical engineering, chemical engineering, computer science, computer engineering, electrical engineering, environmental engineering, mechanical engineering, and systems science and engineering.

If a student is interested in an academic program broadly based on the engineering sciences, the McKeelv School of Engineering offers the Bachelor of Science (BS) Major in Applied Science degree with several options, including chemical engineering, computer science + math, electrical engineering, mechanical engineering, and systems science & engineering. These degree options provide more flexibility for students who do not intend to become licensed engineers and want to select their course work according to their personal educational objectives. For example, some students use this flexibility to gain technical background and training while pursuing or preparing for professional training in medicine, business or law. However, although the flexibility exists to do so, it is not necessary to combine an applied science degree program with another major or degree. Students can also use this added flexibility to achieve a well-rounded undergraduate education by selecting courses from across the university while pursuing a degree in the McKeelv School of Engineering.

BS in Engineering (Individually Designed Major)
The requirements to be admitted to an individually designed major (IDM) are more stringent than those for our other engineering degree programs. The IDM will not be available to students when they first enter Washington University, so it will not be listed on the admissions application as an option.

Students applying for an IDM should meet the following requirements:

- Have already completed at least one semester at Washington University
- Apply before the beginning of the junior year
- Have at least a 3.5 cumulative grade-point average at Washington University and be maintaining good standing in the McKeelv School of Engineering
- Find an Engineering faculty member who will agree to serve as their IDM adviser (The student and adviser will design a plan of study, which lists the courses that must be successfully completed to earn the IDM. That plan must include at least 42 engineering units of credit.)
- Satisfy all other general engineering degree requirements
- Present (with the help of their adviser) the plan to a standing engineering committee (normally the Engineering Undergraduate Studies Committee), which will then assess the proposed plan and approve or deny the request

Combined Majors and/or Multiple Degrees

Multiple Majors in Engineering
All undergraduate divisions at Washington University allow students to pursue majors and degrees in more than one division. The following options are available:

Second Degrees. A student in any undergraduate division of the university may be allowed by another division to pursue a second bachelor's degree. For this, the student must satisfactorily complete all of the degree requirements for both degrees in order to earn two diplomas. These requirements may include a “residency” requirement. For engineering majors, this residency requirement is described elsewhere on this page. In addition, the College of Arts & Sciences requires any student earning an AB degree and a bachelor's degree from another division to earn a minimum of 150 total units. If the additional residency and units requirement for a second degree are incompatible with a student's plan, then the student should consider a second major as a more convenient and equally viable alternative.

Second Majors. A student pursuing a bachelor's degree in engineering may also pursue second majors offered by other undergraduate divisions. There are four second majors offered by the McKeelv School of Engineering: computer science, electrical engineering science, financial engineering and systems science. In addition, there are second majors offered by the College of Arts & Sciences and the School of Business. Students may declare a second major online via WebSTAC (https://acadinfo.wustl.edu/WebSTAC.asp) up until the time they have filed an Intent to Graduate. Upon completion of the requirements, the student's transcript will show an engineering degree and all earned second majors. Only one diploma is granted; no reference to the second major is noted on the diploma.
Minors. Undergraduate students are allowed to pursue minors offered by any undergraduate division of the university. A minor usually requires five to six courses. The minor program's home division sets the requirements for admission to and completion of the minor program. Students may declare a minor online via WebSTAC (https://acadinfo.wustl.edu/WebSTAC.asp) up until the time they have filed an Intent to Graduate. An engineering student who completes all of the requirements will have the award of the minor noted on the official transcript; no reference to the minor is noted on the diploma.

Residency Rule for Engineering Minors: No more than 6 units of credit transferred from another institution (outside of Washington University) can be used to meet the requirements of any minor offered by the McKelvey School of Engineering. The remaining units (up to the amount required for the minor) must be applicable units from Washington University. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

Bachelor's/Master's Program in Engineering

This program provides students who enter Washington University as undergraduates in day-school programs the opportunity to earn McKelvey School of Engineering master's degrees; this includes Henry Edwin Sever Institute master's degrees. Interested students are encouraged to discuss the program with faculty advisers by the end of their junior year in order to best develop a plan for their master's study.

Students must meet the admission requirements and application deadlines stipulated by McKelvey School of Engineering and the department of interest. A minimum 3.0 GPA is required for admission, but some programs may have higher GPA requirements. Each McKelvey School of Engineering department has the option to participate as well as to decide which master's programs to offer students. Students must be admitted to a degree program in Engineering at least one semester prior to their anticipated graduation semester.

Scholarship support may be available to students during their master's year of study. Full-time student status is typically required to be eligible for scholarship support. For more information regarding scholarships and financial aid in the final master's year of study, please visit the Bachelor's/Master's Program (https://engineering.wustl.edu/prospective-students/graduate-admissions/Pages/bs-ms.aspx) website.

Engineering Undergraduates

The Bachelor's/Master's Program for current McKelvey School of Engineering undergraduate students normally takes one additional year to complete and requires participants to complete at least 150 total units. Up to 6 units of the 150 total units can be used to satisfy requirements for both degrees; however, at least 150 units must still be completed, and all stipulated degree requirements for both programs must be satisfied.

To satisfy residency for both degrees, all participants must complete a minimum of 84 applicable Washington University units, which includes a combination of at least 60 in-residence units counted for the engineering undergraduate degree and at least 30 in-residence units counted for the engineering master's degree, with a total of 6 units from undergraduate course work double-counting toward the requirements for both degrees.

The cumulative GPA used to determine undergraduate final Latin honors will include all undergraduate and graduate course work completed up until the time Latin honors are officially determined in May of each year. This means that master's courses will also be included in the calculations if a student defers earning the BS degree until the master's degree is also earned.

Non-Engineering Undergraduates

Students from other undergraduate divisions at Washington University are also eligible to participate in the Bachelor's/Master's Program. These students must complete their undergraduate degrees before they are designated as being primary McKelvey School of Engineering master's students. Admitted students may take longer than one year to complete the requirements for a master's degree. Part-time graduate enrollment might be possible with prior permission, but students will be required to maintain Satisfactory Academic Progress (SAP) standards connected to financial aid in order to maintain scholarship and financial aid support. Scholarship support can be applied to "E" courses taken at Washington University during the summer if those courses count toward fulfilling the requirements of the master's degree. Scholarship support used during a summer session will count as one of the total semesters of scholarship support available to the student.

A reasonable number of required prerequisite courses as defined by the department may be taken while the student is admitted to the master's program, but these courses will not be counted toward the McKelvey School of Engineering master's degree if they are courses not normally counted toward its requirement. Prerequisite courses will count in the student's GPA when determining probation/suspension eligibility and SAP standards. Poor performance (i.e., earning less than B- grades) in these courses can be grounds for removal from the program by the department.

A minimum of 24 units of residency counted for the Engineering master's degree is required for all students. When approved by the department, up to 6 units can be used to satisfy requirements for both the non-Engineering undergraduate degree and the Engineering master's degree.

Other Bachelor's/Master's Programs

These programs allow engineering undergraduates to earn master's degrees outside of the McKelvey School of Engineering. Students in these 3/2 programs will pay the
standard full-time undergraduate tuition rate for the fourth year, except for those in the MBA program, which charges a premium above the undergraduate tuition rate. Students will receive financial aid for the fourth year based on their eligibility for undergraduate financial aid awards, including Pell grants.

There is no commitment for undergraduate financial aid beyond the fourth year of study; students in 3/2 programs may apply to the professional programs for graduate student financial aid for study in the professional program beyond the fourth year.

This policy applies to the current 3/2 programs involving bachelor's/master's programs in engineering, social work and business and to any future Washington University 3/2 programs.

**BS/MBA Program**

The McKelvey School of Engineering and the Olin Business School offer a five-year program leading to the Bachelor of Science engineering degree and the Master of Business Administration degree. The purpose of the program is to provide students with the opportunity to develop an educational background particularly in demand by industry.

Students should apply to this joint program by April 1 of their junior year. They must complete the application for admission to the Olin Business School, which is available through the business school. There is no GPA requirement, but students must take the Graduate Management Admission Test (GMAT). Registration materials for the test may be obtained through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and personal interviews.

The BS/MBA student's fourth-year curriculum is composed largely of business courses. The fifth-year curriculum is divided almost evenly between business and engineering courses. Because the merging of the two curricula results in very tight scheduling, it is possible that course overloads may be necessary to complete both programs in 10 semesters. Students are strongly urged to meet with their advisers to plan the remaining years of the program.

**Dual Degree Program**

The McKelvey School of Engineering offers a dual degree program with numerous other affiliated liberal arts colleges and universities (http://engineering.wustl.edu/prospective-students/dual-degree/Pages/affiliated-schools.aspx). Qualified students earn both a non-engineering baccalaureate from the first school and a Washington University bachelor's degree in engineering by attending the affiliated institution for three or four years, then completing the program with two years of concentrated engineering study at Washington University.

If students are enrolled at an affiliated institution, they may apply for admission to dual degree study under this program, provided they are recommended by an official representative of their college or university and will receive or have received the non-engineering baccalaureate. For more information, please visit the Dual Degree Program website (http://engineering.wustl.edu/DualDegreeProgram.aspx).

**Engineering Undergraduate Degree (Undergraduate 2-Year Option)**

Students enter as undergraduate students and complete a liberal arts degree from their current school and an engineering undergraduate degree from Washington University. Participants are undergraduate students who commonly follow a 3/2 or a 4/2 schedule, entering Washington University after their junior or senior year. Please note that all students earning an undergraduate engineering degree are required to complete a minimum of 60 course units taken at Washington University.

**Engineering Undergraduate & Graduate Degrees (Graduate 3-Year Option)**

Students enter as graduate students and complete both a liberal arts degree from their current school and then an engineering undergraduate degree and engineering master's degree in three years at Washington University. The engineering master's degree and the undergraduate degree can be in different areas. Participants commonly follow a 3/3 or 4/3 schedule, entering Washington University after their junior or senior year. Please note that all students earning both an undergraduate and graduate degree are required to complete a minimum of 84 course units at Washington University. The GRE is not required for admission.

**Study Abroad and International Experiences**

Students in the McKelvey School of Engineering can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience. These opportunities enable students to become global citizens who are better able to address current issues.

For information about these programs, please visit the McKelvey School of Engineering website (https://engineering.wustl.edu/current-students/ outside-classroom/Pages/study-abroad.aspx).

**Cooperative Education and Internships**

The Engineering Cooperative (Co-op) Program is coordinated through the Career Center. It offers students a unique opportunity to gain in-depth engineering experience prior to graduation. Co-op students learn about a field of engineering by working alongside practicing engineers on extensive projects of the sort that are typically undertaken by entry-level engineers. This type of experience gives students a chance to preview a career path and employment options, to gain career clarification, to improve communication and team project skills, and to enhance their marketability with future employers.
The cooperative education experience is typically completed over the course of a semester and a summer term, but it may be extended for a maximum of one year with faculty adviser approval.

In addition, the Career Center provides resources for students searching for summer internships and/or part-time fall or spring internships with local companies while enrolled in courses.

For more information about co-ops and internships, please visit the Career Center website (http://careercenter.wustl.edu) or call 314-935-5930.

Pre-Medical Education

The McKelvey School of Engineering makes available, as options within its undergraduate degree programs, curricula that prepare students for entry into medical, dental or veterinary school while they pursue the undergraduate degree.

These curricula were formulated in recognition of the increasing importance of medicine in the methods and subject matter of the basic engineering sciences. The student who successfully completes one of the curricula will be well prepared for the study of medicine and will have, in addition, a solid background in engineering. Moreover, the student who decides not to go on to medical school will have an exceptionally wide selection of options, including not only those commonly open to the graduate in engineering but also to those who have completed graduate study in biomedical engineering. In accordance with the recommendations of the school’s Pre-Medicine Committee, all curricula include — in addition to the normal degree requirements — the following courses:

- Biology: Biol 2960, Biol 2970
- Biochemistry: Biol 451
- General Chemistry: two semesters with lab
- Organic Chemistry: two semesters with lab
- General Physics: two semesters with lab
- Psychology: Psych 100B
- Sociology: SOC 2510

Many medical schools have other assorted prerequisites, which can be found in the AMCAS Instruction Manual. Students may download the manual from the Association of American Medical Colleges (AAMC) website (http://www.aamc.org).

If students are interested in attending medical or dental school, they must consult and register with the Pre-Medicine Committee before the end of their sophomore year. Engineering students should contact the pre-medical adviser in Engineering Undergraduate Student Services (https://engineering.wustl.edu/current-students/student-services/Pages/premedicine.aspx), Lopata Hall, Room 303.

There is extensive detailed information concerning the Medical College Admission Test, the choice of advanced biology or chemistry courses, and the choice of medical school that should be discussed prior to the beginning of the junior year. Students requesting a cover letter from the Pre-Medicine Committee must complete the Pre-Health Application Institutional Review (PIR) by April of the year in which they apply.

Engineering Summer School

The McKelvey School of Engineering offers a variety of engineering courses each summer. Class times are varied to accommodate both traditional daytime students and those with full- or part-time employment. The engineering summer school calendar comprises one full eight-week evening session as well as several accelerated sessions of shorter duration.

If students are interested in enrolling in an engineering summer course, they can obtain further information in Lopata Hall, Room 303, or by phone at 314-935-6100.

Student Services

Engineering Undergraduate Student Services

Engineering Undergraduate Student Services, which located in Lopata Hall, Room 303, has three main areas: Admissions, Advising Support, and Registrar. Our admissions officers work closely with the university Admissions Office to provide current and useful information to students and parents who are learning about our university, our community, and the opportunities available in the McKelvey School of Engineering. The advising staff has a comprehensive knowledge of all campus resources and can help with such items as tutoring, international studies, assistance with the registration process, and general advising. The registrar handles class scheduling, transfer and AP credit, course registration, graduation eligibility, and other student-records–related processes. Engineering Undergraduate Student Services (https://engineering.wustl.edu/current-students/student-services/Pages/default.aspx) serves all students, faculty and staff. For an appointment, call 314-935-6100.

Engineering Communication Center

The Engineering Communication Center offers all engineering students, faculty and postdocs free help with their engineering communication needs. The faculty who staff the center work with individuals to define audiences and purposes, develop and organize ideas, create effective graphics and page design, and sharpen self-editing skills. Help is offered for résumés and employment correspondence, proposals, formal reports, lab reports, graduate program application statements, and presentations. For an appointment, call 314-935-4902 or email the Engineering Communication Center (ecc@seas.wustl.edu).

The Career Center

The Career Center helps engineering students prepare for a lifetime of career management by offering innovative approaches to help prepare them for a successful co-op, internship and
job search. The Career Center offers a variety of services and resources for engineering undergraduate and graduate students. Whether students are looking for a summer internship, a co-op experience, or a full-time job, the center is here to help. The Career Center offers a breadth of resources, including CareerLink: an online job, co-op and internship database; the Engineering Mentoring Program; ENSGroups: Engineering Careers Interest Groups; special events; skill-building workshops; career fairs and on-campus interviews; and résumé referrals for job opportunities.

The Career Center offers one-on-one career guidance to students at any stage of their career-planning process. Students are encouraged to meet with a career adviser early in their academic career and at least once each year to build a relationship. To schedule an advising appointment, please call 314-935-5930, email the Career Center (careers@wustl.edu), or visit the Career Center website (http://careercenter.wustl.edu).

Course Descriptions
For administrative purposes, the McKelvey School of Engineering is subdivided into five academic departments: Biomedical Engineering (E62); Computer Science & Engineering (E81); Electrical & Systems Engineering (E35); Energy, Environmental & Chemical Engineering (E44); and Mechanical Engineering & Materials Science (E37). Each department may offer courses leading to one or more bachelor's, master's or doctoral degrees.

The courses of instruction are numbered according to the following system:
- 100 to 199 are primarily for first-year students.
- 200 to 299 are primarily for sophomores.
- 300 to 399 are primarily for juniors.
- 400 to 499 are primarily for juniors and seniors, although certain courses may carry graduate credit.
- 500 and above are offered to graduate students and to juniors and seniors who have met all stated requirements. If there are no stated requirements, juniors and seniors should obtain permission of the instructor.

One unit of credit is given for each hour of lecture, and one unit is given for each two and one-half hours of laboratory. Each course description shows the course's credit. A table of all engineering courses (PDF) (https://engineering.wustl.edu/current-students/student-services/Documents/Engineering_Course_Attributes_Feb%2028_2017.pdf) and, for each course, the division of its topics units is available and frequently updated on the school's website.

First-Year Program
First-Year Program is offered as a starting point for beginning students and their advisers when planning each student's individual course schedule. A typical first-year course load totals 14 to 16 units for each semester. It may be that a load of less than 14 units is desirable, but students are advised not to enroll in more than 16 units during the first semester. Students should enroll in the following courses:

- **Calculus:** Beginning engineering students with previous calculus course work usually start with Math 132 Calculus II. Students with a strong mathematics background may be ready for Math 233 Calculus III or even Math 217 Differential Equations.
- **Physics and/or Chemistry:** If biomedical engineering or chemical engineering is a likely major, chemistry and physics should be completed during the first year; for other majors, physics is the recommended choice.
- **Other Courses:** Most first-year engineering students also enroll in one or more humanities/social sciences courses, engineering courses at the 100 level, and perhaps a computer science course. If students have a major or are strongly leaning toward a major, they should follow the recommendations for that major.
- **English Proficiency:** The English proficiency requirement must be completed as soon as possible. Refer to the Engineering Degree Requirements (http://bulletin.wustl.edu/undergrad/engineering/requirements) for further details on this requirement.

Suggested Courses for First Semester

**Required for Biomedical Engineering, Chemical Engineering and Pre-Medicine students during the second semester.**

## Recommended Courses

The following list recommends course sequences for each engineering major.

- **Biomedical Engineering**: BME 140 first semester; Biol 2960 second semester
- **Chemical Engineering**: EECE 101
- **Computer Engineering**: CSE 131 first semester; CSE 132 second semester
- **Computer Science**: CSE 131–CSE 132 first and second semester; CSE 240 second semester
- **Electrical Engineering**: CSE 131 and ESE 105 first semester; ESE 260 second semester
- **Environmental Engineering**: EECE 101 first semester; EECE 210 second semester
- **Mechanical Engineering**: MEMS 202 first semester
- **Systems Science and Engineering**: CSE 131 and ESE 105 first semester; ESE 205 second semester.

## Fields of Study

- **Biomedical Engineering** (p. 970)
- **Computer Science & Engineering** (p. 983)
- **Electrical & Systems Engineering** (p. 1006)
- **Energy, Environmental & Chemical Engineering** (p. 1031)
- **Mechanical Engineering & Materials Science** (p. 1046)
- **University of Missouri-St. Louis/Washington University Joint Undergraduate Engineering Program** (p. 1064)

## Biomedical Engineering

### About Biomedical Engineering

Biomedical engineering is an interdisciplinary field in which the concepts, methods and techniques of engineering are applied to solving problems in biology and medicine. It applies quantitative, analytically and integrative methods from the molecular level to that of the whole organism to further our understanding of basic biological processes and to develop innovative approaches for the prevention, diagnosis and treatment of disease.

A student majoring in biomedical engineering will have the opportunity to participate in the world-class research activities of engineering and medical faculty in biomaterials, imaging, cardiovascular engineering, cell and tissue engineering, molecular cellular and systems engineering, and neural engineering. All students in biomedical engineering are encouraged to join and be active in the Biomedical Engineering Society [https://www.bmes.org](https://www.bmes.org).

## Mission Statement

Our departmental mission is to serve society as a center for learning and knowledge creation in engineering and science for the purpose of advancing biology and medicine.

Our overall educational objective is to prepare those receiving a bachelor’s degree in biomedical engineering for a variety of career paths. To that end, our undergraduate curriculum is designed to provide technical proficiency as well as communication and other professional skills so that our graduates will be able to do the following:

- Pursue careers in the biomedical engineering industry or related fields
- Undertake advanced study (e.g., MS, PhD) in biomedical engineering or a related field in preparation for careers utilizing this further training
- Complete professional degrees (e.g., in medicine, dentistry, law or business) in preparation for careers utilizing those degrees

## Academic Programs

The Bachelor of Science in Biomedical Engineering (BS–BME) is designed to prepare graduates for the practice of engineering at a professional level. It is accredited by the Engineering Accreditation Commission of ABET [http://www.abet.org](http://www.abet.org).

The curriculum is structured around a basic core of 80 credits. In addition, a complementary set of courses totaling at least 40 credits completes the degree requirements.

In order to satisfy ABET [http://www.abet.org](http://www.abet.org) requirements, all professional engineering curricula at the baccalaureate level must include the equivalent of one and one-half years of engineering topics, including engineering sciences and engineering design appropriate to biomedical engineering. The BS–BME degree at Washington University requires 47 credits of engineering topics. The basic core curriculum includes 32 engineering topics credits. Therefore, students pursuing a BS–BME degree will need 15 additional engineering topics credits beyond the basic core curriculum. They also may receive up to 6 credits of academic credit for a research or design project by registering for BME 400, BME 400A, BME 400B or BME 400C Independent Study. In addition, their course program must include sufficient laboratory experience to ensure competence in experimental design, data collection and data analysis. For more information regarding engineering topics credit requirements, please refer to the Undergraduate Curriculum [http://bme.wustl.edu/undergraduate/pages/undergraduate-curriculum.aspx](http://bme.wustl.edu/undergraduate/pages/undergraduate-curriculum.aspx) webpage.
Bachelor's/Master's (BS/MS) Program in Engineering

This program allows current BME undergraduate students to earn a master's degree with only one additional year of study. Interested engineering students should discuss the program with their BME academic and Engineering Undergraduate Student Services advisers by the end of their junior year in order to best develop a plan for their senior year leading into their master's year. With adviser and departmental approval, up to 6 graduate-level credits can be shared between the BS and MS degrees; however, the combined program still requires students to complete a minimum of 150 units in total.

Double Majors

An option available to students majoring in biomedical engineering is the double major, which leads to a second professional Bachelor of Science degree in one of the other engineering disciplines in four years. A degree in biomedical engineering combined with a professional degree in one of the traditional engineering disciplines can be expected to enhance employment options in industry. Depending upon the second major chosen, total unit requirements may range from 140 to 148 (or less if the student enters with advanced placement credits). Hence, some summer work may be necessary in order to complete a double major within four academic years. To determine the specific requirements to be satisfied for both degrees, students are urged to consult with an adviser in the second department as early as possible.

Premedical Preparation

Biomedical engineering is also excellent preparation for various professional schools, particularly medical schools. Many students complete their premedical requirements while obtaining their BME degrees. Premedical preparation is not a major; rather, it allows students to fulfill the requirements needed for entry to medical school. Further information can be obtained by visiting the Premedicine (https://engineering.wustl.edu/current-students/student-services/Pages/premedicine.aspx) webpage and by contacting the McKelvey School of Engineering's Health Professions Adviser, Ron Laue, at ron.laue@wustl.edu.

Cooperative Experience

Cooperative experience is available to upper-level students at numerous life science/technology companies both in the St. Louis area and nationwide. This experience is particularly valuable for students who wish to enter industry. However, since most companies ask that students spend the equivalent of one semester and a summer participating in these experiences, it may be difficult to complete the degree requirements in eight semesters, unless students enter with sufficient advanced placement credits and/or take summer courses.

Please visit our website for the most current and up-to-date information.

Faculty

Chair

Lori A. Setton (https://engineering.wustl.edu/Profiles/Pages/Lori-Setton.aspx)
Lucy and Stanley Lopata Distinguished Professor of Biomedical Engineering
PhD, Columbia University
Biomaterials for local drug delivery; tissue regenerations specific to the knee joints and spine

Endowed Professors

Rohit V. Pappu (https://engineering.wustl.edu/Profiles/Pages/Rohit-Pappu.aspx)
Edwin H. Murty Professor of Engineering
PhD, Tufts University
Macromolecular self assembly and function; computational biophysics

Yoram Rudy (https://engineering.wustl.edu/Profiles/Pages/Yoram-Rudy.aspx)
Fred Saigh Distinguished Professor of Engineering
PhD, Case Western Reserve University
Cardiac electrophysiology; modeling of the cardiac system

Professors

Jianmin Cui (https://engineering.wustl.edu/Profiles/Pages/Jianmin-Cui.aspx)
PhD, State University of New York–Stony Brook
Ion channels; channel structure-function relationship; biophysics

Daniel Moran (https://engineering.wustl.edu/Profiles/Pages/Daniel-Moran.aspx)
PhD, Arizona State University
Motor control; neural engineering; neuroprosthetics; movement biomechanics

Quing Zhu (https://engineering.wustl.edu/Profiles/Pages/Quing-Zhu.aspx)
PhD, University of Pennsylvania
Biophotonics and multimodality ultrasound and optical imaging

Associate Professors

Dennis L. Barbour (https://engineering.wustl.edu/Profiles/Pages/Dennis-Barbour.aspx)
MD, PhD, Johns Hopkins University
Auditory physiology; sensory cortex neurocircuitry; novel perceptual diagnostics and therapeutics
Assistant Professors

Hong Chen (https://engineering.wustl.edu/Profiles/Pages/Hong-Chen.aspx)
PhD, University of Washington
Physical acoustics; therapeutic ultrasound and ultrasound imaging

Nate Huebsch (https://bme.wustl.edu/faculty/Pages/faculty.aspx?bio=114)
PhD, Harvard University
Cell-material Interactions, iPSC-based tissue modeling to study cardiac development and disease

Abhinav Kumar Jha (https://bme.wustl.edu/faculty/Pages/faculty.aspx?bio=125)
PhD, University of Arizona
Development of computational-imaging solutions for diagnosing and treating diseases

Jai S. Rudra (https://engineering.wustl.edu/Profiles/Pages/Jai-Rudra.aspx)
PhD, Louisiana Tech University
Peptide-based biomaterials; immunoengineering; immunology of nanoscale aggregates; development of vaccines and immunotherapies

Michael D. Vahey (https://bme.wustl.edu/faculty/Pages/faculty.aspx?bio=113)
PhD, Massachusetts Institute of Technology
Biophysical mechanisms of infectious disease; fluorescence microscopy; microfluidics

Senior Professor

Larry Taber (https://bme.wustl.edu/faculty/Pages/Larry-Taber.aspx)
PhD, Stanford University
Mechanics of growth and development; cardiac mechanics

Senior Lecturer

Patricia Widder (https://bme.wustl.edu/faculty/Pages/Patricia-Widder.aspx)
MS, Washington University

Lecturer

Noah Ledbetter (https://bme.wustl.edu/faculty/Pages/Noah-Ledbetter.aspx)
PhD, University of Utah

Senior Emeritus Professor

Frank Yin (https://bme.wustl.edu/faculty/Pages/Frank-Yin.aspx)
MD, PhD, University of California, San Diego

Majors

The Major in Biomedical Engineering

The BS in Biomedical Engineering requires completion of the courses in the Core Curriculum as well as five upper-level Tier courses beyond the Core, as described below. Students must meet all McKelvey School of Engineering and Washington University requirements, including the English Composition requirement (please refer to the Engineering Degree Requirements page). They must also satisfy ABET requirements for a professional degree, which require the accrual of 47 engineering topics units over their course work. A list of Topics Units - Engineering Courses is available on the Engineering Student Services website.

The Basic Core

The Biomedical Engineering Core Curriculum consists of 80 credits, outlined below.

<table>
<thead>
<tr>
<th>Courses</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physical Sciences</td>
<td></td>
</tr>
<tr>
<td>General Chemistry (Chem 111A, Chem 112A)</td>

Quantitative Physiology I, II (BME 301A, BME 301B) 8
Bioengineering Thermodynamics (BME 320B) 3
Transport Phenomena in BME (BME 366) 3
Senior Design A, B (BME 401A, BME 401B) 4

Other
Engineering Practice and Professional Values (Engr 4501, Engr 4502 and Engr 4503) 3
Technical Writing (Engr 310) 3

Total Basic Core 80

Students must complete five upper-level Tier engineering courses (15 units), five humanities and social sciences courses (15 units), and three general electives courses (minimum 10 units) beyond the Core Curriculum to complete the major and to prepare for particular fields of employment or education beyond the baccalaureate degree. At least two of the five Tier electives need to be drawn from the Tier I course list below; the remaining three can be chosen from Tier I or Tier II. Students must complete a minimum of 120 units to meet the degree requirements.

Tier II

All upper-level (300-500) engineering and physics courses that carry 3 engineering topics units (with the exception of required courses such as BME 301A, BME 301B, BME 320B, and so on) count as Tier II electives.

Note: Courses in the Tier I list that are marked with a (#) are offered every other year or less. The most up-to-date Tier lists (https://bme.wustl.edu/undergraduate/pages/undergraduate-curriculum.aspx) can be found on the BME website.

Minors

A number of undergraduate engineering students pursue a minor in engineering or in another discipline, such as business. For biomedical engineering (BME) majors, there are four engineering minors that are easily obtainable within the typical four-year BME curriculum. These recommended minors require four or fewer additional classes, most of which count toward the electives within the BME major.

Recommended Engineering Minors for Biomedical Engineering Majors

- Bioinformatics: Bioinformatics is a joint program of the Department of Computer Science & Engineering in the McKelvey School of Engineering and the Department of Biology in the College of Arts & Sciences. Mindful of the emerging opportunities at the interface of biology and computer science, the departments of Biology and of Computer Science & Engineering are sponsoring a bioinformatics minor that will serve students from both
departments as well as other students from the natural
sciences and engineering with an interest in this field.
• Computer Science: Because computing drives innovation in
nearly all industries, the Department of Computer Science &
Engineering offers a minor in computer science to provide a
basic foundation in software and computer science.
• Electrical Engineering: This program covers classes in
several fields of science and engineering by encompassing
electronics, solid-state devices, applied electromagnetics,
radiofrequency and microwave technology, fiber-optic
communication, applied optics, nanophotonics, sensors, and
medical and biological imaging technology.
• Mechanical Engineering: The minor in mechanical
engineering complements studies in a field related to
mechanical engineering, such as biomedical engineering,
electrical engineering, physics, chemistry or architecture.
The minor is intended to provide students with a credential
that could enhance their opportunities for employment or
graduate study.

McKelvey School of Engineering offers additional minors;
however, they typically require 15 units or more of course work
outside the standard BME curriculum. Students who enter with
significant transfer credit and/or advanced placement credit may
be able to complete these minors in the standard four years.
Otherwise, students will typically require a summer semester or
two to complete these minors.

Engineering Minors Requiring Advanced Placement or
Summer Effort for Biomedical Engineering Majors

• Aerospace Engineering (p. 1060)
• Energy Engineering (p. 1044)
• Environmental Engineering Science (p. 1043)
• Mechatronics (p. 1063)
• Nanoscale Science & Engineering (p. 1045)
• Robotics (p. 1063)
• Systems Science & Engineering (p. 1030)

Courses
Visit online course listings to view semester offerings for
E62 BME (https://courses.wustl.edu/CourseInfo.aspx?
sch=E&dept=E62&crslvl=1:5).

E62 BME 140 Introduction to Biomedical Engineering
An introduction to the vast and diverse field of biomedical
engineering (BME), this very challenging course has two main
purposes. One is to teach students — via lectures, reading
assignments, homework and exams — to think on their own,
to solve problems, and to know how engineering principles
are applied to the areas of bioelectricity, biomechanics,
biomolecules, biotechnology and bioimaging. The second is to
introduce students — via guest lectures by School of Medicine
and engineering faculty — to some of the fascinating and
challenging ongoing research in these areas. The course is
challenging because students at this early stage, by and large,
lack the knowledge base to understand either the engineering/
biological aspects of the topical areas or the research being
presented. Nevertheless, because future success depends on
such, emphasis throughout is placed on developing self-learning
as well as quantitative and analytical problem-solving skills, but
at an appropriate level. By the end of the course, it is hoped that
students will have begun to acquire the skills and approaches
necessary to succeed in the engineering curriculum as well
as a much more in-depth and informed perspective of BME.
Credit 3 units. EN: TU

E62 BME 240 Biomechanics
Principles of static equilibrium and solid mechanics applied to
the human anatomy and a variety of biological problems. Statics
of rigid bodies with applications to the musculoskeletal system.
Mechanics of deformable media (stress, strain; stretching,
torsion, and bending) with introduction to nonlinear behavior,
viscoelasticity, and growth in living tissue. Applications to cells,
bone, muscle, arteries, the heart, and the cochlea. Prerequisite:
Phys 197.
Credit 3 units. EN: TU

E62 BME 240L Biomechanics Laboratory
This course will consist of hands-on laboratory experiments in
topics relevant to bioengineering mechanics such as statics
of rigid bodies, viscoelasticity, and stress/strain analysis of
biological materials. A focus of the course will be extending
fundamental mechanical principles to biological applications
through experimentation. The course is designed to follow and
enhance the material covered in BME 240. Additionally, students
will have the opportunity to design their own experiments,
explore topics of special interest, and present their findings.
Prerequisites: concurrent or completed BME 240.
Credit 1 unit. EN: TU

E62 BME 301A Quantitative Physiology I
A course (lectures, recitation and supervised laboratory sections)
designed to elaborate the physiological background necessary
for advanced work in biomedical engineering. A quantitative
model-oriented approach to physiological systems is stressed.
Topics include bioinstrumentation, eye movement, muscle
mechanics, action potentials, sensory systems, neuroprosthetics.
Prerequisites: BME 140, CSE 131, ESE 230, Biol 3058
(previously Biol 3050 or 3059), ESE 319, or permission of
instructor.
Credit 4 units. EN: TU

E62 BME 301B Quantitative Physiology II
A course (lecture and supervised laboratory sessions) designed
to elaborate the physiological background necessary for
advanced work in biomedical engineering. A quantitative model-
oriented approach to physiological systems is stressed. Topics
include electrocardiography; heart contractility and molecular
bases; cell signaling, pulse wave propagation in arteries;
pulmonary function; renal function; imaging, and systems
biology, Immune system; drug delivery. Prerequisites: BME
140, CSE 131, ESE 230, ESE 319, Biol 3058, or permission of
instructor.
Credit 4 units. EN: TU
E62 BME 320B Bioengineering Thermodynamics
This course covers the foundations of thermodynamics with strong emphasis on concepts and the translation of concepts. Topics to be covered include the first and second laws of thermodynamics, probabilistic descriptions of entropy, consequences of the first and second laws in ideal and non-ideal single- and multi-component systems, free energies as descriptors of equilibria in laboratory and biological systems, chemical equilibria, phase equilibria, treatment of aqueous solvents and mixtures, colloigative properties, thermodynamics of protein folding, and protein binding equilibria. The material, the lectures, and the homework emphasize learning that enables the translation of concepts into mathematical analysis. A strong background in differential calculus of multiple variables and differential equations (Math 217) is required. Emphasis is placed on regular homework and working in collaborative groups. The main textbook for the course will be "Molecular Driving Forces: Statistical Thermodynamics in Chemistry and Biology," 2nd edition, by Ken A. Dill and Sarina Bromberg and published by Garland Science. The lectures and course notes will also draw on other sources, including the classical book by Herbert Callen. A weekly recitation section, BME 320A, is also offered. Students are strongly urged to attend lectures and the recitation section. Credit 3 units. EN: TU

E62 BME 329 Biothermodynamics in Practice
This course will include hands-on, laboratory experiments in topics relevant to bioengineering thermodynamics, such as heat transfer, relationships involving temperature and pressure, equilibrium, mixing, and solution chemistry. A focus of the course will be extending fundamental scientific principles to biological applications. Students will have the opportunity to design their own experiments, explore topics of special interest, and present their findings. Prerequisites: Chem 111A and 151; Physics 117A, 118A or 197, 198.
Credit 3 units. EN: TU

E62 BME 366 Transport Phenomena in Biomedical Engineering
Many processes of importance in biology and medicine involve the transfer of mass, heat or momentum. Through the use of the differential control volume approach, the fundamental transport equations will be derived. Systematic derivation of differential equations appropriate for different types of transport problems will be explored. Solutions of the resulting differential equations for simple chemical/biological systems will then be sought. Macroscopic descriptions of fluid flow will be applied to the design of blood pumps for the heart. Unsteady mass transfer with diffusion, advection and chemical reactions will also be applied to the transport of proteins, metabolites and therapeutics throughout the body. Prerequisites: BME 240, Math 217, ESE 318 and ESE 319, BME 320B.
Credit 3 units. EN: TU

E62 BME 400 Independent Study
Independent investigation on topic of special interest. This course has no engineering topics units. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee. Credit variable, maximum 6 units.

E62 BME 400A Independent Study
Independent investigation on a topic of special interest. This course has 1 unit of engineering topics. The student and mentor must justify the number of engineering topic units being requested; and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.
Credit 1 unit. EN: TU

E62 BME 400B Independent Study
Independent investigation on a topic of special interest. This course has 2 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested; and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.
Credit 2 units. EN: TU

E62 BME 400C Independent Study
Independent investigation on a topic of special interest. This course has 3 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested; and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.
Credit 3 units. EN: BME T, TU

E62 BME 401A Senior Capstone Design A
A hands-on design experience to provide students practical application of engineering. Working in small teams, students will either meet with possible clients to discern a biomedical problem, or bring an original idea of their own to the class. The students will work on an original design or redesign of a component or system of biomedical engineering significance. The students will be taught how to craft a project scope with the required design specifications. The design experience will require application of knowledge and skills acquired in earlier course work; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401A will be a descriptive paper design of their solution. Prerequisite: BME senior standing.
Credit 2 units. EN: TU

E62 BME 401B Senior Capstone Design B
A hands-on design experience to provide students practical application of engineering. Working in small teams, students will work toward building a prototype of the student design which was a product of 401A. The students will be expected to design a verification and validation plan to test the prototype built. The design experience will require application of knowledge and skills acquired in earlier course work and lab experiences; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401B will be a prototype, and a descriptive paper describing their solution documenting how the prototype satisfies
E62 BME 410 International Community Service Learning Project
This pass/fail course is a two-week summer international experience in conjunction with the faculty and students of our partner, The Biomedical Engineering Institute of Hong Kong Polytechnic University. Students first attend an orientation at HKPU to learn about functional electrical stimulation (FES) and treating cerebral palsy with orthotic devices. The entire group then goes to a clinic in mainland China where they put into practice what they have learned, the former in patients who have suffered strokes and the latter in children with cerebral palsy — working in teams to diagnose, fit and fabricate orthotic devices. A written summary of the experience is the final product. Academic credits are awarded at the end of the fall semester following the summer experience. Prerequisites: completion of junior year, BME 301A. Enrollment: Students must apply by Feb. 1 each spring. Enrollment is restricted to 10 of the applicants. Credit 2 units.

E62 BME 432 Physics of Biopolymers and Bioinspired Polymers
This course will cover physics concepts from the statistical physics of polymers and polymer solutions to describe proteins, nucleic acids, and bioinspired polymers. Topics include statistical physics concepts, theoretical and numerical descriptions of polymers, applying these descriptions to biopolymers, the thermodynamics of polymer solutions, concepts of polymer dynamics, descriptions of polymeric materials, and advanced topics in phase transitions and molecular design. The material will be fast-paced and involve rigorous mathematical descriptions, experimental design, interpretations of experimental data, and some numerical simulations. The course will be heavy on individual homework and team-based project work. Direct connections between concepts and modern topics in biology and biomaterials will be emphasized. Prerequisites: BME 320B or equivalent and a first course in clinical therapeutics/diagnostics, biosensing, bioimaging, and biocatalysis. Students will learn material through lecture, reading, homework, scientific publications, and molecular visualization tools. Students will work individually or in pairs/groups to develop and lead discussions on engineering biomacromolecules and molecular characterization techniques. Prerequisites: basic knowledge of genes and cloning. Credit 3 units. EN: TU

E62 BME 442 Biomacromolecules Design and Engineering
Biological macromolecules (i.e., carbohydrates, lipids, proteins, and nucleic acids) are important components of the cell and its supporting matrix that perform a wide array of functions. This course will introduce the principles and recent advances in nucleic acid/gene engineering, protein/peptide engineering, and chemical/enzymatic conjugation technologies; it will also discuss the application of engineered biomacromolecules in clinical therapeutics/diagnostics, biosensing, bioimaging, and biocatalysis. Students will learn material through lecture, reading, homework, scientific publications, and molecular visualization tools. Students will work individually or in pairs/groups to develop and lead discussions on engineering biomacromolecules and molecular characterization techniques. Prerequisites: basic knowledge of genes and cloning. Credit 3 units. EN: TU

E62 BME 444 Biomedical Instrumentation
This course will include operational and instrumentation amplifiers for bioelectric event signal conditioning, interfacing, and processing; instrumentation noise analysis and filter design; A/D converters and hardware and software principles as related to sampling, storing, processing, and display of biosignals; modeling, analysis, and operation of transducers, sensors, and electrodes for physiological and imaging systems; and an introduction to ultrasound, X-ray, and optical imaging systems. In addition, students will be involved in three projects of designing and building instrumentation amplifier and filter systems, ultrasound systems, and optical systems. Prerequisites: BME 301A and BME 301B. Credit 3 units. EN: TU

E62 BME 450 Numerical Methods for Computational Modeling in Biomedicine
Advanced computational methods are required for the creation of biological models. Students will be introduced to the process of model development from beginning to end, which includes model formulation, how to solve and parameterize equations, and how to evaluate model success. To illustrate the potential of these methods, participants will systematically build a model to simulate a "real-life" biological system that is applicable to their research or interest. A mechanistic appreciation of the methods will be gained by programming the methods in a low-level language (C++) in a Linux environment. While extensive programming knowledge is not required, participants are likely to find that some programming background will be helpful. Students enrolled in the 550 graduate class will be required to complete a final project that incorporates the methods taught in class. Prerequisites: introductory programming course similar to E81 CSE 131. Credit 3 units. EN: TU

E62 BME 459 Intermediate Biomechanics
This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity, and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle, and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing. Prerequisites: BME 240 and ESE 318 and ESE 319 or equivalent, or permission of instructor. Same as E62 BME 559. Credit 3 units. EN: TU

E62 BME 464 Orthopaedic Biomechanics — Cartilage/Tendon
Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on the design specifications, with the validation and verification results. Prerequisites: BME 401A. Credit 2 units. EN: TU
soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Note: BME 590Z (BME 463/563) Orthopaedic Biomechanics — Bones and Joints is not a prerequisite. 
Same as E37 MEMS 5564
Credit 3 units. EN: TU

E62 BME 465 Biosolid Mechanics
Introduction to the mechanical behaviors of biological tissues of musculoskeletal, cardiac and vascular systems. Topics to be covered include static force analysis and nonlinear optimization theory; linearly elastic models for stress-strain analysis and solutions to relevant problems in bielasticity; models of active structures (e.g., muscles); strain energy methods and nonlinear tissue behaviors; and introductory theory for finite element analysis. Emphasis will be placed on modeling stress-strain relations with relevance to biological tissues. Prerequisites: BME 240 or equivalent and ESE 318 and ESE 319.
Credit 3 units. EN: TU

E62 BME 470 Mathematics of Imaging Science
This course will expose students to a unified treatment of the mathematical properties of images and imaging. This will include an introduction to linear vector space theory, operator theory on Hilbert spaces, and concepts from applied functional analysis. Concepts from generalized functions, Fourier analysis, and Radon transform will also be discussed. These tools will be applied to conduct deterministic analyses of imaging systems that are described as continuous-to-continuous, continuous-to-discrete, and discrete-to-discrete mappings from object properties to image data. In addition, imaging systems will be analyzed in a statistical framework in which stochastic models for objects and images will be introduced. Prerequisite: senior standing or instructor permission.
Same as E62 BME 570
Credit 3 units.

E62 BME 471 Bioelectric Phenomena
This course is a quantitative introduction to the origins of bioelectricity with an emphasis on neural and cardiac electrophysiology. Topics include electric fields and current flow in volume conductors; cell membrane channels and their role in generating membrane potentials; action potentials and their propagation in myelinated and unmyelinated axons as well as cardiac tissue. Minor topics of discussion include both skeletal muscle and nonhuman (e.g., electric fish) sources of bioelectricity. Prerequisite: ESE 330.
Credit 3 units. EN: TU

E62 BME 472 Biological Neural Computation
This course considers the computations performed by the biological nervous system with a particular focus on neural circuits and population-level encoding/decoding. Topics include Hodgkin-Huxley equations, phase-plane analysis, reduction of Hodgkin-Huxley equations, models of neural circuits, plasticity and learning, and pattern recognition and machine learning algorithms for analyzing neural data. Note: Graduate students in psychology or neuroscience who are in the cognitive, computational and systems neuroscience curriculum pathway may register in Biol 5657 for 3 credits. For non-BME majors, conceptual understanding and selection/application of right neural data analysis technique are stressed. Hence homework assignments/examinations for the two sections are different, however all students are required to participate in a semester-long independent project as part of the course. Prerequisites: calculus, differential equations, basic probability and linear algebra. Undergraduates need permission of the instructor. Biol 5657 prerequisites: permission from the instructor.
Same as E62 BME 572
Credit 3 units. EN: TU

E62 BME 4902 Cellular Neurophysiology
This course will examine the biophysical concepts of synaptic function, with focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information coding, mechanisms of learning and memory, function of synapses in sensory systems, and models of synaptic disease states such as Parkinson’s and Alzheimer’s diseases. In addition, a set of lectures will be devoted to modern electrophysiological and imaging techniques as well as modeling approaches to study synapses and neural circuits. Prerequisite: senior or graduate standing.
Same as E62 BME 5902
Credit 3 units. EN: TU

E62 BME 4904 Interfaces and Attachments in Natural and Engineered Structures
Attachment of dissimilar materials in engineering and surgical practice is a challenge. Biomaterial attachment sites are common locations for injury and mechanical failure. Nature presents several highly effective solutions to the challenge of biomaterial attachment that differ from those found in engineering practice. This course bridges the physiologic, surgical, and engineering approaches to connecting dissimilar materials. Topics in this course are: natural bimaterial attachments; engineering principles underlying attachments; analysis of the biology of attachments in the body; mechanisms by which robust attachments are formed; concepts of attaching dissimilar materials in surgical practice and engineering; and bioengineering approaches to more effectively combine dissimilar materials.
Same as E37 MEMS 5560
Credit 3 units. EN: BME T, TU

E62 BME 494 Ultrasound Imaging
Introduction to basic principles of ultrasound imaging, diagnostic ultrasound imaging systems, clinical applications, and emerging technologies in industry. Prerequisite: ESE 351.
Credit 3 units. EN: TU

E62 BME 501C BME Doctoral Seminar Series
This is a 1-unit credit option for BME students who attend regularly scheduled BME seminars (or approved substitute seminars). A satisfactory grade is obtained by submission of a two-page peer-reviewed paper written by one of the regularly scheduled BME seminar speakers whose seminar you attended. Papers are to be submitted to the graduate student administrator for review by the director of doctoral studies. Prerequisites:
Students must be current BME students in their second year or beyond in order to register.
Credit 1 unit.

E62 BME 506 Seminar in Imaging Science and Engineering
This seminar course consists of a series of tutorial lectures on Imaging Science and Engineering with emphasis on applications of imaging technology. Students are exposed to a variety of imaging applications that vary depending on the semester, but may include multispectral remote sensing, astronomical imaging, microscopic imaging, ultrasound imaging, and tomographic imaging. Guest lecturers come from several parts of the university. This course is required of all students in the Imaging Science and Engineering program; the only requirement is attendance. This course is graded pass/fail. Prerequisite: admission to Imaging Science and Engineering program. Same as E53 ESE 596
Credit 1 unit.

E62 BME 507 Radiological Physics and Dosimetry
This class is designed to construct a theoretical foundation for imaging radiation dose calculations and measurements in a medical context and prepare graduate students for proper scientific presentations in the field of x-ray imaging and radiation therapy. Specifically, a student completing this course will be able to do the following: 1. Understand and apply key concepts specific to energy deposition for both ionizing photon interactions and transport in matter and for energetic charged particle interactions and transport in matter. Radiation sources include radioactivity, x-ray tubes, and linear accelerators. 2. Understand the theoretical details of ion-chamber based dosimetry and of both cavity-theory based (TG-21) and Monte-Carlo based (TG-51) clinical protocols. 3. Perform and present real-world style research projects as a group, and present these projects in a typical professional scientific format and style. 4. Achieve an appreciation of the history and potential future developments in ionizing radiation detection and dosimetry. Prerequisites: BS in physics or engineering and instructor approval.
Credit 3 units.

E62 BME 5071 Radiobiology
Effects of ionizing radiations on living cells and organisms, including physical, chemical, and physiological bases of radiation cytotoxicity, mutagenicity and carcinogenesis. Textbook: Radiobiology for the Radiologist, Eric Hall and Amato Giaccia.
Two lectures per week. Prerequisites: graduate student standing and one year each of biology, physics and organic chemistry, or approval of instructor.
Credit 2 units.

E62 BME 5072 Radiation Therapy Physics
Ionizing radiation use in radiation therapy to cause controlled biological effects in cancer patients. Physics of the interaction of the various radiation modalities with body-equivalent materials, and physical aspects of clinical applications. Lecture and lab. Prerequisites: graduate student standing or permission of instructor.
Credit 3 units.

E62 BME 5073 Radiation Protection and Safety
This course will introduce concepts of radiation protection and safety. The focus will be on how to protect humans and environment from ionizing radiation. Special emphasis will be on radiological protection in clinics. Prerequisite: graduate student standing or permission of the instructor.
Credit 2 units.

E62 BME 523 Biomaterials Science
An understanding of the interactions between biological systems and artificial materials is of vital importance in the design of medical devices. This course will introduce the principles of biomaterials science, unifying knowledge from the fields of biology, materials science, surface science, and colloid science. The course will be taught from the primary scientific literature, focusing on the study of protein/surface interactions and hydrogel materials.
Credit 3 units. EN: TU

E62 BME 524 Design of Artificial Organs
Medical devices that replace the function of one of the major organs in the body must usually interface with flowing blood. Examples include total artificial hearts, left ventricular assist devices, membrane oxygenators, hemodialysis systems and encapsulated endocrine cells. The design of these devices relies on integration of knowledge from a variety of fields, in particular computational fluid dynamics and blood rheology. We will study the process by which a concept for a device eventually leads to a functioning, blood-contacting medical device, with most of the focus on the design of left ventricular assist devices. Students will learn to use CAD to design blood pumping devices, test their designs via computational fluid dynamics, and 3D print and test their pumps with water. Prerequisites: BME 366 or equivalent course in transport phenomena (including momentum and mass transfer).
Credit 3 units. EN: TU

E62 BME 525 Translational Regenerative Medicine
This course provides students with an opportunity to connect basic research with applications in translation for several tissues/disease models. Course sessions will alternate between literature on basic mechanisms of development/stem cell biology and applications led by researchers or clinicians working in each area. Areas of focus will include cardiovascular development/ congenital heart disease and arrhythmia, lung, endocrinology/diabetes, gut/intestinal disorders, musculoskeletal, neural (peripheral and brain), liver, hematology and eye. Emphasis on how discovery can be translated will be a major focus of the course. Students will be expected to review and present on primary literature in the field. Graduate standing is required. Prerequisites: graduate standing Engineering or DBBBS.
Credit 3 units.
E62 BME 530A Molecular Cell Biology for Engineers
This course is designed for upper-level undergraduates and first-year graduate students with a background in engineering. This course covers the biology of cells of higher organisms: protein structure and function; cellular membranes and organelles; cell growth and oncogenic transformation; cellular transport, receptors, and cell signaling; and the cytoskeleton, the extracellular matrix, and cell movement. Emphasis will be placed on examples relevant to biomedical engineering. The course will include two lectures per week and one discussion section. In the discussion section, the emphasis will be on experimental techniques used in cell biology and the critical analysis for primary literature. Note that this course does not count for engineering topics credits and is meant to fulfill a life science requirement for engineering or physical sciences graduate students. Prerequisites: Biol 2960 and Biol 2970 or graduate standing.
Credit 3 units.

E62 BME 532 Physics of Biopolymers and Bioinspired Polymers
This course will cover physics concepts from the statistical physics of polymers and polymer solutions to describe proteins, nucleic acids, and bioinspired polymers. Topics include statistical physics concepts, theoretical and numerical descriptions of polymers, applying these descriptions to biopolymers, the thermodynamics of polymer solutions, concepts of polymer dynamics, descriptions of polymeric materials and advanced topics in phase transitions and molecular design. The material will be fast-paced and involve rigorous mathematical descriptions, experimental design, interpretations of experimental data, and some numerical simulations. The course will be heavy on individual homework and team-based project work. Direct connections between concepts and modern topics in biology and biomaterials will be emphasized.
Prerequisites: BME 320B or equivalent and a first course in life science requirement for engineering or physical sciences graduate students. Prerequisites: Biol 2960 and Biol 2970 or graduate standing.
Credit 4 units.

E62 BME 533 Biomedical Signal Processing
Course designed for graduate students with little or no background in signal processing. Continuous-time and discrete-time application of signal processing tools to a variety of biomedical problems. Course topics include review of linear signals and systems theory, frequency transforms, sampling theorem, basis functions, linear filtering, feature extraction, parameter estimation and biological system modeling. Special emphasis will be placed on signal transduction and data acquisition. Additional topics include noise analysis of real-world biosignals, biological system identification, stochastic/chaotic/fractal/nonlinear processes in biological systems. Concepts learned in class will be applied using software tools to 1D biomedical signals such as biological rhythms, chemical concentrations, blood pressure, speech, EMG, EEG.
Prerequisites: graduate standing or consent of instructor.
Credit 3 units.

E62 BME 534 Molecular and Cellular Engineering
The ability to engineer biological function at the cellular level holds tremendous potential for both basic and applied science. This course aims to provide knowledge and practical proficiency in the methods available for measuring and controlling the molecular organization of eukaryotic cells. Topics to be covered include genome engineering using viral- and CRISPR-Cas systems; spatial and temporal control of proteins and their interactions; methods for characterizing and engineering post-translational modifications; and the relationship between cellular organization and function in migration, immune cell target recognition, and differentiation. Examples from recent scientific literature will provide the foundation for these topics.
Prerequisites: BME 432.
Credit 3 units.

E62 BME 538 Cell Signal Transduction
This course will cover the elements of cell signal transduction important to human development, homeostasis and disease. Lectures will be combined with primary literature review to cover canonical signaling and current topics within the field. Spatial, time and dose-dependent aspects of signaling will be of particular focus. Topics include G-protein–coupled receptors, receptor tyrosine kinases, adhesion signaling, the MAPK cascade, lipid signaling, the DNA damage response, and autocrine, paracrine and juxtacrine signaling.
Prerequisites: BME 530A or BME 5068.
Credit 3 units.

E62 BME 542 Biomacromolecules Design and Engineering
Biological macromolecules (i.e., carbohydrates, lipids, proteins, and nucleic acids) are important components of the cell and its supporting matrix that perform a wide array of functions. This course will introduce the principles and recent advances in nucleic acid/gene engineering, protein/peptide engineering, and chemical/enzymatic conjugation technologies. It will also discuss the application of engineered biomacromolecules in clinical therapeutics/diagnostics, biosensing, bioimaging, and biocatalysis. Students will learn material through lecture, reading, homework, scientific publications, and molecular visualization tools. Students will work individually or in pairs/groups to develop and lead discussions on engineering biomacromolecules and molecular characterization techniques. Prerequisites: basic knowledge of genes and cloning.
Prerequisites: BME 5068.
Credit 3 units.

E62 BME 543 Molecular and Cellular Engineering
Course for graduate students with little or no background in signal processing. Continuous-time and discrete-time application of signal processing tools to a variety of biomedical problems. Course topics include review of linear signals and systems theory, frequency transforms, sampling theorem, basis functions, linear filtering, feature extraction, parameter estimation and biological system modeling. Special emphasis will be placed on signal transduction and data acquisition. Additional topics include noise analysis of real-world biosignals, biological system identification, stochastic/chaotic/fractal/nonlinear processes in biological systems. Concepts learned in class will be applied using software tools to 1D biomedical signals such as biological rhythms, chemical concentrations, blood pressure, speech, EMG, EEG. Prerequisites: graduate standing or consent of instructor.
Credit 3 units.

E62 BME 544 Computational Molecular Biology
This course is a survey of algorithms and mathematical methods in biological sequence analysis (with a strong emphasis on probabilistic methods) and systems biology. Sequence analysis topics include introduction to probability, probabilistic inference in missing data problems, hidden Markov models (HMMs), profile HMMs, sequence alignment, and identification of transcription-factor binding sites. Systems biology topics include the discovery of gene regulatory networks, the quantitative modeling of gene regulatory networks, synthetic biology, and (in some years) the quantitative modeling of metabolism. Prerequisite: CSE 131 or CSE 501N.
Same as E81 CSE 587A
Credit 3 units.

E62 BME 550 Biomedical Instrumentation
This course will include operational and instrumentation amplifiers for bioelectric event signal conditioning, interfacing, and processing; instrumentation noise analysis and filter design; A/D converters and hardware and software principles as related to sampling, storing, processing, and display of biosignals; modeling, analysis, and operation of transducers, sensors, and electrodes for physiological and imaging systems; and an
E62 BME 550 Numerical Methods for Computational Modeling in Biomedicine
Advanced computational methods are required for the creation of biological models. Students will be introduced to the process of model development from beginning to end, which includes model formulation, how to solve and parameterize equations, and how to evaluate model success. To illustrate the potential of these methods, participants will systematically build a model to simulate a "real-life" biological system that is applicable to their research or interest. A mechanistic appreciation of the methods will be gained by programming the methods in a low-level language (C++) in a Linux environment. While extensive programming knowledge is not required, participants are likely to find that some programming background will be helpful. Students enrolled in the 550 graduate class will be required to complete a final project that incorporates the methods taught in class.
Prerequisites: introductory programming course similar to E81 CSE 131.
Same as E62 BME 450
Credit 3 units. EN: TU

E62 BME 5565 Mechanobiology of Cells and Matrices
At the interface of the cell and the extracellular matrix, mechanical forces regulate key cellular and molecular events that profoundly affect aspects of human health and disease. This course offers a detailed review of biomechanical inputs that drive cell behavior in physically diverse matrices. In particular, cytoskeletal force-generating machineries, mechanical roles of cell-cell and cell-matrix adhesions, and regulation of matrix deformations are discussed. Also covered are key methods for mechanical measurements and mathematical modeling of cellular response. Implications of matrix-dependent cell motility in cancer metastasis and embryonic development are discussed.
Prerequisite: graduate standing or permission of the instructor.
Same as E37 MEMS 5565
Credit 3 units. EN: BME T, TU

E62 BME 559 Intermediate Biomechanics
This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle, and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing.
Prerequisites: BME 240 and ESE 318 and ESE 319 or equivalent, or permission of instructor.
Credit 3 units. EN: TU

E62 BME 562 Mechanics of Growth and Development
This course applies the fundamental principles of solid mechanics to problems involving growth, remodeling and morphogenesis of cells, tissues and organs. Introduction to developmental biology, nonlinear elasticity, viscoelasticity and active contraction. Particular topics include cellular morphogenetic mechanisms, growth and development of the cardiovascular system, and adaptive remodeling of bone.
Prerequisites: BME 240 or MEMS 241 or equivalent.
Credit 3 units. EN: BME T, TU

E62 BME 564 Orthopaedic Biomechanics — Cartilage/Tendon
Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisite: BME 240 or equivalent. Note: BME 5902 (BME 463/563) Orthopaedic Biomechanics — Bones and Joints is not a prerequisite.
Same as E37 MEMS 5564
Credit 3 units. EN: TU

E62 BME 565 Biosolid Mechanics
Introduction to the mechanical behaviors of biological tissues of musculoskeletal, cardiac and vascular systems. Topics to be covered include static force analysis and nonlinear optimization theory; linearly elastic models for stress-strain analysis and solutions to relevant problems in bioelasticity; models of active structures (e.g., muscles); strain energy methods and nonlinear tissue behaviors; and introductory theory for finite element analysis. Emphasis will be placed on modeling stress-strain relations with relevance to biological tissues.
Prerequisites: BME 240 or equivalent and ESE 318 and ESE 319.
Same as E62 BME 465
Credit 3 units. EN: TU

E62 BME 570 Mathematics of Imaging Science
This course will expose students to a unified treatment of the mathematical properties of images and imaging. This will include an introduction to linear vector space theory, operator theory on Hilbert spaces, and concepts from applied functional analysis. Further, concepts from generalized functions, Fourier analysis, and Radon transform will be discussed. These tools will be applied to conduct deterministic analyses of imaging systems that are described as continuous-to-continuous, continuous-to-discrete, and discrete-to-discrete mappings from object properties to image data. In addition, imaging systems will be analyzed in a statistical framework where stochastic models for objects and images will be introduced. Prerequisite: senior standing or instructor permission.
Credit 3 units.

E62 BME 5702 Application of Advanced Engineering Skills for Biomedical Innovators
Students will work in small teams to apply core engineering skills covered in BME 5701 such as FEM, CAD, microcontroller programming, circuit design, data informatics, and app development to particular clinical needs or processes chosen by the instructing staff. Prerequisites: BME 5701 or permission of instructor.
Credit 3 units.
E62 BME 5711 Ideation of Biomedical Problems and Solutions
This course is part one of the year-long master's design sequence for the BME Master of Engineering. The course will begin with a boot camp primer of HIPAA certification, HIPAA, clinical etiquette, medical law, and intellectual property law. This will be followed by a rotation period of guided shadowing of clinicians. Following each rotation, students will review and present their findings, with a view toward problem solving and project generation. Three-fourths of the way through the course, students will form into teams, choose a master's project, and begin intensive study of their chosen problem or process. The final weeks of the course will focus on problem scope and definition, identification of creative alternatives, and consultation with experts in the field. Prerequisite: acceptance into the Master of Engineering program.
Credit 3 units.

E62 BME 5712 Implementation of Biomedical Solutions
This course is part two of the year-long master's design sequence for the BME Master of Engineering. Students will work in small groups to begin to design a solution to the problem identified in BME 5711. Options and alternatives will be evaluated and a best-choice solution will be chosen, based on an in-depth study of constraints upon the problem, including engineering materials, economic, safety, social, manufacturing, ethical, sustainability, and other requirements. Core skills such as FEM, CAD, circuit design, microcontroller programming, and 3-D printing will be applied to create first an alpha mockup for proof of concept, followed by a full working prototype by the end of the semester. Prerequisites: BME 5711 or permission of instructor.
Credit 3 units.

E62 BME 5713 Translation of Biomedical Solutions to Products
This course is the third and final part of the year-long master's design course sequence. Through a repeated sequence of iteration, fabrication and verification, design teams will refine and optimize their master's design project, bringing it to completion. Prerequisites: BME 5712 or permission of instructor.
Credit 4 units.

E62 BME 5722 Feasibility Evaluation of Biomedical Products
This is the second course of the Master of Engineering - Biomedical Innovation sequence in product development. Students will practice the steps in biomedical product development, including medical need validation, brainstorming initial solutions, market analysis, solution evaluation, regulatory, patent, and intellectual property concerns, manufacturability, risk assessment and mitigation, and global considerations. The course will focus on applying product development techniques to several real unmet medical needs; students will thus perform analysis and create reports and presentations for several different product solutions. Peer and faculty evaluations will provide feedback to improve individual technique. Local biomedical entrepreneurs will also visit to share their expertise and experiences. Prerequisite: admission to the Master of Engineering program.
Credit 2 units.

E62 BME 5723 Realization of Biomedical Products in the Marketplace
This course is the third in the MEng-BMI Biomedical Product Development sequence, focusing on the final stages of analysis to bring forth a leading solution concept. Solution concepts are screened for killer risks in the areas of intellectual property, regulatory, reimbursement, business models, and technical feasibility to identify viable concepts. From there, manufacturability and product specifications are evaluated against user and design requirements to select a concept that offers the highest value with lowest risk. Throughout the course, students will practice effective communication of risk factors through pitch presentations and executive summary reports. In addition, specialists from the St. Louis entrepreneurial community will share their experiences as guest speakers. Prerequisites: BME 5722; MEng-BMI candidates only.
Credit 1 unit.

E62 BME 5731 Business Foundations for Biomedical Innovators
For medical innovators, a successful translation from product to market will require careful strategy and an understanding of the steps needed to form and fund a biotech business, either as a new startup or as an extension of the product line of an existing company. This course will provide a first look at the steps in this process, including intellectual property concerns, R&D, clinical strategy, regulatory issues, quality management, reimbursement, marketing strategy, sales and distribution, operating plans, and approaches to funding. Prerequisites: MEng program.
Credit 2 units.

E62 BME 5732 Entrepreneurship for Biomedical Innovators
This course will apply the concepts covered in BME 5731 in an interactive process that will provide practical experience. Topics of intellectual property, R&D, clinical strategy, regulatory issues, quality management, reimbursement, marketing strategy, sales and distribution, operating plans, and approaches to funding will be covered. Along with practical exercises, access to specialists and experts in these topics from the St. Louis entrepreneurial community will be provided as an integral part of the course. Prerequisites: BME 5731; MEng-BMI candidates only.
Credit 2 units.
E62 BME 574 Quantitative Bioelectricity and Cardiac Excitation
Action potential generation, action potential propagation, source-field relationships in homogeneous and inhomogeneous media, models of cardiac excitation and arrhythmia, quantitative electrocardiography. Prerequisites: differential equations, Laplace transform, electromagnetic field theory (undergraduate level). Credit 3 units. EN: TU

E62 BME 575 Molecular Basis of Bioelectrical Excitation
Ion channels are the molecular basis of membrane excitability in all cell types, including neuronal, heart and muscle cells. This course presents the structure and the mechanism of function of ion channels at the molecular level. It introduces the basic principles and methods in the ion channel study as well as the structure-function relation of various types of channels. Exemplary channels that have been best studied are discussed to illustrate the current understanding. Prerequisites: knowledge of differential equations, electrical circuits and chemical kinetics. Credit 3 units. EN: TU

E62 BME 5771 Biomedical Product Development
Advances in science and technology have opened the health care field to innovation now more than any other time in history. Engineers and inventors can make real and rapid improvements to patient treatments, length of hospital stay, procedure time, cost containment, and accessibility to treatment. However, a successful transition from idea to implementation requires careful market analysis and strategy planning. This course will address the steps in this process, including personal and team strength assessment, medical need validation, brainstorming initial solutions, market analysis, solution evaluation, regulatory, patent and intellectual property concerns, manufacturability, risk assessment and mitigation, and global considerations. Students will be expected to review resource material prior to coming to class in order to facilitate active class discussion and team-based application of the material during class; regular attendance will be key to course success. The course will focus on applying product development techniques to several real unmet medical needs; students will thus perform analysis and create reports and presentations for several different product solutions. Peer and faculty evaluations will provide feedback to improve individual technique. In addition, throughout the semester, local biomedical entrepreneurs will visit to share their expertise and experiences. Prerequisites: graduate or professional student standing or permission of the instructor. Credit 3 units.

E62 BME 5772 Biomedical Business Development
For medical innovators, a successful translation from product to market will require careful strategy and an understanding of the steps needed to form and fund a biotech business, either as a new startup or as an extension of the product line of an existing company. This course will address the steps in this process, including intellectual property concerns, R&D, clinical strategy, regulatory issues, quality management, reimbursement, marketing strategy, sales and distribution, operating plans, and approaches to funding. Prerequisites: graduate or professional student standing or permission of the instructor. Credit 3 units.

E62 BME 5799 Independent Study for Candidates in the Master of Engineering Program
Independent investigation on a topic of special interest. The student and mentor must justify the requested number of units. The MEng program director must approve the requested number of units. Credit variable, maximum 6 units.

E62 BME 5820 Fundamentals and Applications of Modern Optical Imaging
Analysis, design, and application of modern optical imaging systems, with emphasis on biological imaging. The first part of the course will focus on the physical principles underlying the operation of imaging systems and their mathematical models. Topics include ray optics (speed of light, refractive index, laws of reflection and refraction, plane surfaces, mirrors, lenses, aberrations), wave optics (amplitude and intensity, frequency and wavelength, superposition and interference, interferometry), Fourier optics (space-invariant linear systems, Huygens-Fresnel principle, angular spectrum, Fresnel diffraction, Fraunhofer diffraction, frequency analysis of imaging systems), and light-matter interaction (absorption, scattering, dispersion, fluorescence). The second part of the course will compare modern quantitative imaging technologies, including but not limited to digital holography, computational imaging, and super-resolution microscopy. Students will evaluate and critique recent optical imaging literature. Prerequisites: ESE 318 and ESE 319 or their equivalents; ESE 330 or Physics 421 or equivalent. Same as E35 ESE 582. Credit 3 units. EN: BME T, TU

E62 BME 589 Biological Imaging Technology
This class develops a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section examines how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure and function, image formation methods and diffraction limited imaging. The math section examines image decomposition using basis functions (e.g., Fourier transforms), synthesis of measurement data, image analysis for feature extraction, reduction of multidimensional imaging datasets, multivariate regression and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology are critiqued. Same as E35 ESE 589. Credit 3 units. EN: BME T, TU

E62 BME 5901 Integrative Cardiac Electrophysiology
Quantitative electrophysiology of the heart, integrating from the molecular level (ion channels, regulatory pathways, cell signaling) to the cardiac cell (action potential and calcium transient), multicellular tissue (cell-cell communication) and the whole heart. Prerequisite: permission of instructor. Credit 3 units. EN: BME T, TU

E62 BME 5902 Cellular Neurophysiology
This course will examine the biophysical concepts of synaptic function, with a focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course
Combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information coding, mechanisms of learning and memory, function of synapses in sensory systems, and models of synaptic disease states such as Parkinson's and Alzheimer's diseases. In addition, a set of lectures will be devoted to modern electrophysiological and imaging techniques as well as modeling approaches to study synapses and neural circuits. Prerequisite: senior or graduate standing.

Credit 3 units. EN: TU

**E62 BME 591 Biomedical Optics I: Principles**

This course covers the principles of optical photon transport in biological tissue. Topics include a brief introduction to biomedical optics, single-scatterer transport, modeling of photon transport, convolution for broad-beam responses, radiative transfer equation and diffusion theory, hybrid Monte Carlo method and diffusion theory, and sensing of optical properties and spectroscopy. Prerequisite: differential equations.

Credit 3 units. EN: TU

**E62 BME 5911 Cardiovascular Biophysics Journal Club**

This journal club is intended for beginning graduate students, advanced undergraduates and MSTP students with a background in the quantitative sciences (engineering, physics, math, chemistry, etc.). The subjects covered are inherently multidisciplinary. We review landmark and recent publications in quantitative cardiovascular physiology, mathematical modeling of physiologic systems and related topics such as chaos theory and nonlinear dynamics of biological systems. Familiarity with calculus, differential equations and basic engineering/thermodynamic principles is assumed. Knowledge of anatomy/physiology is optional.

Credit 1 unit.

**E62 BME 5913 Molecular Systems Biology: Computation & Measurements for Understanding Cell Physiology and Disease**

Systems-level measurements of molecules in cells and tissues harbor the promise of identifying the ways in which tissues develop, maintain, age, and become diseased. This class will introduce the systems-level measurement techniques for capturing molecular information and the mathematical and computational methods for harnessing the information from these measurements to improve our understanding of cell physiology and disease. This is a practical class, which involves implementation of the concepts in MATLAB and will be applied to existing, real data from published journal articles. Molecular topics will include gene expression, microRNA, proteins, post-translational modifications, drugs, and splicing. Computational/mathematical topics covered will include statistical inference, dimensionality reduction techniques, unsupervised and supervised machine learning, and graph-based techniques.

Prerequisites: A working knowledge of molecular biology, linear algebra, and statistics is required.

Credit 3 units. EN: TU

**E62 BME 594 Ultrasound Imaging**

This course will introduce basic principles of ultrasound imaging, diagnostic ultrasound imaging system, clinical applications, and emerging technologies in industry. Prerequisite: ESE 351.

Same as E62 BME 494

Credit 3 units. EN: TU

**Computer Science & Engineering**

**About Computer Science & Engineering**

The field of computer science and engineering studies the design, analysis, implementation and application of computation and computer technology. Computing plays an important role in virtually all fields, including science, medicine, music, art, business, law and human communication; hence, the study of computer science and engineering can be interdisciplinary in nature. Whether a student's goal is to become a practitioner or to take a few courses to develop a basic understanding of computing for application to another field, the Department of Computer Science & Engineering at Washington University is committed to helping students gain the background they need.

People are attracted to the study of computing for a variety of reasons. Consequently, the department offers a wide variety of academic programs, including a five-course minor, a second major, five undergraduate degrees, combined undergraduate and graduate programs, and several undergraduate research opportunities. Each academic program can be tailored to a student's individual needs.

The breadth of Computer Science & Engineering may be best understood in terms of the general areas of applications, software systems, hardware and theory.

**Applications** are the ways in which computer technology is applied to solve problems, often in other disciplines. Most applications courses provide background not only in the applications themselves but also in how the applications are designed and implemented. Examples of application areas include artificial intelligence, computer graphics, game design and computational biology.

**Software systems** are collections of interacting software components that work together to support the needs of computer applications. Courses in this area help students gain a solid understanding of how software systems are designed and implemented. During the process, students develop their own software systems. Examples include operating systems, which manage computational resources; network protocols, which are responsible for the delivery of information; programming languages, which support the construction of software systems and applications; and compilers, which translate computer programs into executable form.

**Hardware** is the term used to describe the physical and mechanical components of a computer system. Courses in this area provide background in logic circuits, which carry out
basic computations; computer architecture, which defines the organization of functional components in a computer system; and peripheral devices such as disks, robot arms that are controlled by the computer system, and sensor systems that gather the information that computer systems use to interact with the physical world.

**Theory** is the study of the fundamental capabilities and limitations of computer systems. A knowledge of theory helps students choose among competing design alternatives on the basis of their relative efficiency and helps them to verify that their implementations are correct. Theory courses provide background in algorithms, which describe how a computation is to be carried out; data structures, which specify how information is to be organized within the computer; analytical techniques to characterize the time or space requirements of an algorithm or data structure; and verification techniques to prove that solutions are correct.

A well-rounded study of computing includes training in each of these areas. However, depending on a student's educational goals, the student may prefer to concentrate on certain areas for greater depth of knowledge. To help students balance their elective courses, most upper-level departmental courses are classified into one of the following categories: S for software systems, M for machines (hardware), T for theory, or A for applications. If a student's interests are concentrated in the first two areas, a computer engineering degree might be best. Students are encouraged to meet with a faculty advisor in the Department of Computer Science & Engineering to discuss their options and develop a plan consistent with their goals.

**Undergraduate Programs**

The Department of Computer Science & Engineering (CSE) offers an array of courses that can be taken as requirements or electives for any of the undergraduate degree programs. We offer a Bachelor of Science in Computer Science (BSCS), a Bachelor of Science in Computer Engineering (BSCoE), a Bachelor of Science in Business and Computer Science (CS+Business), a Bachelor of Science in Computer Science + Mathematics (CS+Math), a Bachelor of Science in Computer Science + Economics (CS+Econ), a Second Major in Computer Science. In addition to these six programs, CSE offers a pre-medical option and combined undergraduate/graduate programs. As a part of our program, each student is assigned an adviser, who can help design an individualized program, monitor a student's progress, and consult about curriculum and career options. Additional information can be found on our CSE website (http://cse.wustl.edu), or any of the CSE faculty (https://cse.wustl.edu/faculty/Pages/default.aspx) can offer further guidance and information about our programs.

**BSCS:** The computer science (https://cse.wustl.edu/undergraduate/programs/Pages/bs-in-computer-science.aspx) major is designed for students planning a career in computing.

**BSCoE:** The computer engineering (https://cse.wustl.edu/undergraduate/programs/Pages/bs-in-computer-engineering.aspx) major encompasses studies of hardware, software and systems issues that arise in the design, development and application of computer systems.

**CS+Business:** This joint major (https://cse.wustl.edu/undergraduate/programs/Pages/bs-business-computer-science.aspx) provides students with the fundamental knowledge and perspectives of computer science and business and of the unique opportunities created by combining them.

**CS+Econ:** This applied science (p. 1001) major allows students interested in both economics and computer science to combine these two complementary disciplines efficiently.

**CS+Math:** This applied science (https://cse.wustl.edu/undergraduate/programs/Pages/bs-in-computer-science-math.aspx) major efficiently captures the intersection of the complementary studies of computer science and math.

**Second Major in Computer Science:** The second major (https://cse.wustl.edu/undergraduate/programs/Pages/second-major.aspx) provides an opportunity to combine computer science with another degree program. A second major in computer science can expand a student's career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major is also well suited for students planning careers in medicine, law, business, architecture and fine arts.

**Pre-Medical Option within Computer Science:** Students may pursue a pre-medicine curriculum in conjunction with either the BS degree or the second major in computer science programs. Students interested in the pre-medical option should refer to the McKelvey School of Engineering (p. 968) Bulletin page for details.

**Combined Undergraduate and Graduate Study**

The Department of Computer Science & Engineering offers in-depth graduate study in many areas. Students entering the graduate programs require a background in computer science fundamentals. Washington University undergraduates seeking admission to the graduate degree program to obtain a master's degree in computer science or computer engineering do not need to take the Graduate Record Examination (GRE). For more information, contact the department office by email at admissions@cse.wustl.edu or by phone at 314-935-6132.

**The Joint Bachelor's/Master's Program**

This five-year program that leads to both the bachelor's and master's degrees offers the student an excellent opportunity to combine undergraduate and graduate studies in an integrated curriculum. The combination of the two programs extends the flexibility of the undergraduate curriculum to more advanced
Undergraduate Courses

Course requirements for the minor and majors may be fulfilled by CSE 131 Introduction to Computer Science, CSE 132 Introduction to Computer Engineering, CSE 240 Logic and Discrete Mathematics, CSE 247 Data Structures and Algorithms, CSE 347 Analysis of Algorithms, and CSE courses with a letter suffix in any of the following categories: software systems (S), hardware (M), theory (T) and applications (A). In addition, with approval of the instructor, up to 6 units of CSE 400E Independent Study can be used toward the CSE electives of any CSE degree. Other CSE courses provide credit toward graduation but not toward the CSE elective requirements for the second major or the BSCS, BSCoE, CS+Math or CS+Business degrees. Undergraduates are encouraged to consider 500-level courses. If a student is interested in taking a course but is not sure if they have the needed prerequisites, the student should contact the instructor.

Broadening Experiences

If a student wants to become involved in computer science or computer engineering research or gain experience in industry while they are an undergraduate, there are many opportunities to do so. A few of these are listed below.

Co-op: The Cooperative Education Program allows a student to get valuable experience working in industry while an undergraduate. A co-op experience can give students another perspective on their education and may lead to full-time employment. Numerous companies participate in this program. More information is available from the Engineering Co-op and Internship Program (https://careercenter.wustl.edu/items/engineering-co-op-program) that is part of the Career Center in the Danforth University Center, Suite 110.

Research: Participating in undergraduate research (https://cse.wustl.edu/undergraduate/Pages/undergraduate-research.aspx) is a great way to learn more about a specific area. Research projects are available either for pay or for credit through CSE 400E Independent Study.

Study Abroad: Students in the McKelvey School of Engineering can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience. These opportunities will help students become global citizens who are better able to address current issues.

The study of computer science and engineering is especially well suited and popular for study abroad. Students from our department routinely study abroad in Europe, the UK, Australia, Israel and many other places. Our department works closely with students to identify courses suitable for computer science credit.

For more information about these programs, please visit the McKelvey School of Engineering website (https://engineering.wustl.edu/our-school/initiatives/Pages/global.aspx).
Research Opportunities

The Department of Computer Science & Engineering actively promotes a culture of strong undergraduate participation in research. Many undergraduates work in research labs with state-of-the-art equipment that provides them the opportunity to take part in computer science and computer engineering research. Sensor networks, high-speed routers, specialized FPGA hardware, wireless devices, RF tags, digital cameras, robots, large displays and multiprocessors are just a few of the hardware devices undergraduates often use in their projects. Opportunities for exploring modern software development techniques and specialized software systems further enrich the range of research options and help undergraduates sharpen their design and programming skills.

Advanced Placement/Proficiency

Students receiving a 4 or 5 on the AP Computer Science A exam are awarded credit for CSE 131 Introduction to Computer Science. Any student can take the CSE 131 proficiency exam, and a suitable score will waive CSE 131 as a requirement. Upon request, the computer science department will evaluate a student for proficiency for any of our introductory courses. If a student is determined to be proficient in a given course, that course will be waived (without awarding credit) in the student's degree requirements, and the student will be offered guidance in selecting a more advanced course. Questions should be directed to the associate chair at associatechair@cse.wustl.edu.

Faculty

Chair

Roch Guérin (https://engineering.wustl.edu/Profiles/Pages/Roch-Gu%C3%A9rin.aspx)
Harold B. and Adelaide G. Welge Professor of Computer Science
PhD, California Institute of Technology
Computer networks and communication systems

Professors

Sanjoy Baruah (https://engineering.wustl.edu/Profiles/Pages/Sanjoy-Baruah.aspx)
PhD, University of Texas at Austin
Real-time and safety-critical system design, cyber-physical systems, scheduling theory, resource allocation and sharing in distributed computing environments

Aaron Bobick (https://engineering.wustl.edu/Profiles/Pages/Aaron-Bobick.aspx)
James M. McKelvey Professor and Dean
PhD, Massachusetts Institute of Technology
Computer vision, graphics, human-robot collaboration

Michael R. Brent (https://engineering.wustl.edu/Profiles/Pages/Michael-Brent.aspx)
Henry Edwin Sever Professor of Engineering
PhD, Massachusetts Institute of Technology
Systems biology, computational and experimental genomics, mathematical modeling, algorithms for computational biology, bioinformatics

Jeremy Buhler (https://engineering.wustl.edu/Profiles/Pages/Jeremy-Buhler.aspx)
PhD, Washington University
Computational biology, genomics, algorithms for comparing and annotating large biosequences

Roger D. Chamberlain (https://engineering.wustl.edu/Profiles/Pages/Roger-Chamberlain.aspx)
DSc, Washington University
Computer engineering, parallel computation, computer architecture, multiprocessor systems

Yixin Chen (https://engineering.wustl.edu/Profiles/Pages/Yixin-Chen.aspx)
PhD, University of Illinois at Urbana-Champaign
Mathematical optimization, artificial intelligence, planning and scheduling, data mining, learning data warehousing, operations research, data security

Patrick Crowley (https://engineering.wustl.edu/Profiles/Pages/Patrick-Crowley.aspx)
PhD, University of Washington
Computer and network systems, network security

Ron K. Cytron (https://engineering.wustl.edu/Profiles/Pages/Ron-Cytron.aspx)
PhD, University of Illinois at Urbana-Champaign
Programming languages, middleware, real-time systems

Christopher D. Gill (https://engineering.wustl.edu/Profiles/Pages/Christopher-Gill.aspx)
DSc, Washington University
Parallel and distributed real-time embedded systems, cyber-physical systems, concurrency platforms and middleware, formal models and analysis of concurrency and timing

Raj Jain (https://engineering.wustl.edu/Profiles/Pages/Raj-Jain.aspx)
Barbara J. & Jerome R. Cox Jr. Professor of Computer Science
PhD, Harvard University
Network security, blockchains, medical systems security, industrial systems security, wireless networks, unmanned aircraft systems, internet of things, telecommunications networks, traffic management
Tao Ju (https://engineering.wustl.edu/Profiles/Pages/Tao-Ju.aspx)
PhD, Rice University
Computer graphics, visualization, mesh processing, medical imaging and modeling

Chenyang Lu (https://engineering.wustl.edu/Profiles/Pages/Chenyang-Lu.aspx)
Fullgraf Professor in the Department of Computer Science & Engineering
PhD, University of Virginia
Internet of things, real-time, embedded, and cyber-physical systems, cloud and edge computing, wireless sensor networks

Neal Patwari (https://engineering.wustl.edu/Profiles/Pages/Neal-Patwari.aspx)
PhD, University of Michigan
Application of statistical signal processing to wireless networks, and radio frequency signals

Weixiong Zhang
PhD, University of California, Los Angeles
Computational biology, genomics, machine learning and data mining, and combinatorial optimization

Assistant Professors

Ayan Chakrabarti (https://engineering.wustl.edu/Profiles/Pages/Ayan-Chakrabarti.aspx)
PhD, Harvard University
Computer vision computational photography, machine learning

Roman Garnett (https://engineering.wustl.edu/Profiles/Pages/Roman-Garnett.aspx)
PhD, University of Oxford
Active learning (especially with atypical objectives), Bayesian optimization, and Bayesian nonparametric analysis

Chien-Ju Ho (https://engineering.wustl.edu/Profiles/Pages/Chien-Ju-Ho.aspx)
PhD, University of California, Los Angeles
Design and analysis of human-in-the-loop systems, with techniques from machine learning, algorithmic economics, and online behavioral social science

Brendan Juba (https://engineering.wustl.edu/Profiles/Pages/Brendan-Juba.aspx)
PhD, Massachusetts Institute of Technology
Theoretical approaches to artificial intelligence founded on computational complexity theory and theoretical computer science more broadly construed

Ulubek Kamilov (https://engineering.wustl.edu/Profiles/Pages/Ulugbek-Kamilov.aspx)
PhD, Ecole Polytechnique Fédérale de Lausanne, Switzerland
Computational imaging, image and signal processing, machine learning and optimization

Brian Kocoloski (https://cse.wustl.edu/faculty/Pages/faculty.aspx?bio=115)
PhD, University of Pittsburgh
Scalable parallel computing, cloud computing, operating systems, virtualization

Angelina Lee (https://engineering.wustl.edu/Profiles/Pages/I-Ting-Angelina-Lee.aspx)
PhD, Massachusetts Institute of Technology
Designing linguistics for parallel programming, developing runtime system support for multithreaded software, and building novel mechanisms in operating systems and hardware to efficiently support parallel abstractions

Alvitta Ottley (https://cse.wustl.edu/faculty/Pages/faculty.aspx?bio=109)
PhD, Tufts University
Designing personalized and adaptive visualization systems, including information visualization, human-computer interaction, visual analytics, individual differences, personality, user modeling and adaptive interfaces

Associate Professors

Kunal Agrawal (https://engineering.wustl.edu/Profiles/Pages/Kunal-Agrawal.aspx)
PhD, Massachusetts Institute of Technology
Parallel computing, cyber-physical systems & sensing, theoretical computer science

Sanmay Das (https://engineering.wustl.edu/Profiles/Pages/Sanmay-Das.aspx)
PhD, Massachusetts Institute of Technology
Design of algorithms for complex environments, computational social science, machine learning

Caitlin Kelleher (https://engineering.wustl.edu/Profiles/Pages/Caitlin-Kelleher.aspx)
Hugo F. & Ina Champ Urbauer Career Development Associate Professor
PhD, Carnegie Mellon University
Human-computer interaction, programming environments, and learning environments

William D. Richard (https://engineering.wustl.edu/Profiles/Pages/William-Richard.aspx)
PhD, University of Missouri-Rolla
Ultrasonic imaging, medical instrumentation, computer engineering

Yevgeniy Vorobeychik (https://cse.wustl.edu/faculty/Pages/faculty.aspx?bio=185)
PhD, University of Michigan
Artificial intelligence, machine learning, computational economics, security and privacy, multi-agent systems
William Yeoh (https://engineering.wustl.edu/Profiles/Pages/William-Yeoh.aspx)
PhD, University of Southern California
Artificial intelligence, multi-agent systems, distributed constraint optimization, planning and scheduling

Miaomiao Zhang (https://cse.wustl.edu/faculty/Pages/faculty.aspx?bio=183)
PhD, University of Utah
Medical image analysis, statistical modeling, and machine learning

Ning Zhang (https://cse.wustl.edu/faculty/Pages/faculty.aspx?bio=182)
PhD, Virginia Polytechnic Institute and State University
System security, software security

Professor of the Practice
Dennis Cosgrove (https://cse.wustl.edu/faculty/Pages/Dennis-Cosgrove.aspx)
BS, University of Virginia
Programming environments and parallel programming

Lecturers
Steve Cole, Senior Lecturer
PhD, Washington University in St. Louis
Parallel computing, accelerating streaming applications on GPUs

Marion Neumann (https://cse.wustl.edu/faculty/Pages/Marion-Neumann.aspx), Senior Lecturer
PhD, University of Bonn, Germany
Machine learning with graphs; solving problems in agriculture and robotics

Jonathan Shidal (https://cse.wustl.edu/faculty/Pages/Jon-Shidal.aspx), Lecturer
PhD, Washington University
Computer architecture and memory management

Douglas Shook (https://cse.wustl.edu/faculty/Pages/Doug-Shook.aspx), Lecturer
MS, Washington University
Imaging sensor design, compiler design and optimization

William Siever (https://cse.wustl.edu/faculty/Pages/Bill-Siever.aspx), Principal Lecturer
PhD, Missouri University of Science and Technology
Computer architecture, organization, and embedded systems

Todd Sproull (https://cse.wustl.edu/faculty/Pages/Todd-Sproull.aspx), Senior Lecturer
PhD, Washington University
Computer networking and mobile application development

Senior Professors
Jerome R. Cox Jr.
ScD, Massachusetts Institute of Technology
Computer system design, computer networking, biomedical computing

Jonathan S. Turner
PhD, Northwestern University
Design and analysis of internet routers and switching systems, networking and communications, algorithms

Professors Emeriti
Takayuki D. Kimura
PhD, University of Pennsylvania
Communication and computation, visual programming

Seymour V. Pollack
MS, Brooklyn Polytechnic Institute
Intellectual property, information systems

 Majors
Please visit the following pages for information about computer science and engineering majors:

- Bachelor of Science in Computer Engineering (p. 999)
- Bachelor of Science in Computer Science (p. 1000)
- Bachelor of Science in Computer Science + Economics (p. 1001)
- Bachelor of Science in Computer Science + Mathematics (p. 1002)
- Bachelor of Science in Business and Computer Science (p. 1002)
- Second Major in Computer Science (p. 1004)
- Second Major in Computer Science + Mathematics

 Minors
Please visit the following pages for information about computer science and engineering minors:

- Minor in Computer Science (p. 1005)
- Minor in Bioinformatics (p. 1005)
- Minor in Human-Computer Interaction (p. 1006)

 Courses
Visit online course listings to view semester offerings for E81 CSE (https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E81&crslvl=1:5).
Prerequisites are advisory in our course listings, but students are cautioned against taking a course without the necessary background. Note that if one course mentions another as its prerequisite, the prerequisites of the latter course are implied to be prerequisites of the former course as well. Students in doubt
of possessing the necessary background for a course should correspond with the course's instructor.

**E81 CSE 131 Introduction to Computer Science**
An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation and object-oriented programming. Recursion, iteration and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: Comfort with algebra and geometry at the high school level is assumed. Patience, good planning and organization promote success. This course assumes no prior experience with programming. Credit 3 units. BU: SCI EN: TU

**E81 CSE 131R Seminar: Computer Science I**
A seminar and discussion session that complements the material studied in CSE 131. Provides background and breadth for the disciplines of computer science and computer engineering. Features guest lectures and highly interactive discussions of diverse computer science topics. Highly recommended for majors and for any student seeking a broader view of computer science or computer engineering. Pass/Fail only. Credit 1 unit.

**E81 CSE 132 Introduction to Computer Engineering**
CSE 132 introduces students to fundamental concepts in the basic operation of computers, ranging from desktops and servers to microcontrollers and handheld devices. Subjects include digital and analog input/output, sensing the physical world, information representation, basic computer architecture and machine language, time-critical computation, machine-to-machine communication and protocol design. Students will use both desktop systems and handheld microcontrollers for laboratory experiments. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisite: CSE 131. Credit 3 units. BU: SCI EN: TU

**E81 CSE 204A Web Development**
This course explores elementary principles for designing, creating, and publishing effective websites and web application front-ends. Topics include page layout concepts, color theory, design principles, search engine optimization, HTML, CSS, JavaScript, front-end frameworks like Angular and React, and other development tools. Students apply the topics by creating a series of websites that are judged based on their design and implementation. Prerequisite: CSE 131 or equivalent experience. Credit 3 units. EN: TU

**E81 CSE 217A Introduction to Data Science**
This course provides an introduction to data science and machine learning, and it focuses on the practical application of models to real-world supervised and unsupervised learning problems. We will discuss methods for linear regression, classification, and clustering and apply them to perform sentiment analysis, implement a recommendation system, and perform image classification or gesture recognition. One of the main objectives of the course is to become familiar with the data science workflow, from posing a problem to understanding and preparing the data, training and evaluating a model, and then presenting and interpreting the results. We will also touch on concepts such as similarity-based learning, feature engineering, data manipulation, and visualization. The course uses Python, which is currently the most popular programming language for data science. Prerequisites: CSE 131, MATH 233, and CSE 247 (can be taken concurrently). Credit 3 units. EN: TU

**E81 CSE 222S Internet of Things**
For a very long time, the things in our world have lived relatively lonely and single-purposed lives. With the advent of the "internet of things," we can address, control, and interconnect these formerly isolated devices to create new and interesting applications. In this course, we use Wi-Fi — one of the fundamental networking technologies behind internet of things devices — and appcessories, which include smart watches, health monitors, toys, and appliances. In addition to learning about internet of things stacks, students gain hands-on experience developing multiplatform solutions that control and communicate with things using an accompanying web app. Students apply their knowledge and skill to develop a project of their choosing using topics from the course. Prerequisite: CSE 132. Credit 3 units. EN: TU

**E81 CSE 231S Introduction to Parallel and Concurrent Programming**
This course explores concepts, techniques, and design approaches for parallel and concurrent programming. We study how to write programs that make use of multiple processors for responsiveness and that share resources reliably and fairly. Parallel programming concepts include task-level, functional, and loop-level parallelism. Concurrent programming concepts include threads, synchronization, and locks. We cover how to adapt algorithms to achieve determinism and avoid data races and deadlock. Concepts and skills are acquired through the design and implementation of software projects. Prerequisite: CSE 131. Credit 3 units. EN: TU

**E81 CSE 232 Programming Skills Workshop**
This course provides an overview of practical implementation skills. Topics include compilation and linking, memory management, pointers and references, using code libraries, testing and debugging. Prerequisite: CSE 247. Credit 1 unit.

**E81 CSE 240 Logic and Discrete Mathematics**
Introduces elements of logic and discrete mathematics that allow reasoning about computational structures and processes. Generally, the areas of discrete structures, proof techniques, probability and computational models are covered. Topics typically include propositional and predicate logic; sets, relations, functions and graphs; proof by contradiction, induction and reduction; finite state machines and regular languages; and introduction to discrete probability, expected value and variance. Prerequisite: CSE 131. Credit 3 units. EN: TU
E81 CSE 247 Data Structures and Algorithms
This course involves the study of fundamental algorithms, data structures, and their effective use in a variety of applications. It emphasizes the importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Prerequisite: CSE 131. Credit 3 units. EN: TU

E81 CSE 247R Seminar: Data Structures and Algorithms
The content of this seminar will vary by semester, but it will generally complement the material taught in CSE 247 Data Structures and Algorithms. Corequisite: CSE 247. Credit 1 unit. EN: TU

E81 CSE 260M Introduction to Digital Logic and Computer Design
Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisites: CSE 131. Credit 3 units. EN: TU

E81 CSE 311A Introduction to Intelligent Agents Using Science Fiction
The course uses science-fiction movies to motivate and introduce fundamental principles and techniques in intelligent agent systems. Topics covered include game theory, decision theory, machine learning, distributed algorithms, and ethics. Prerequisite: CSE 247. Credit 3 units. EN: BME T, TU

E81 CSE 316A Social Network Analysis
This course looks at social networks and markets through the eyes of a computer scientist. We will look at questions including, "Why are acquaintances rather than friends more likely to get us job opportunities?" and, "Why do the rich get richer?" We begin by studying graph theory (allowing us to study the structure) and game theory (allowing us to study the interactions) of social networks and market behavior at the introductory level. Among other topics, we will study auctions, epidemics, and the structure of the internet (including web searches). This course examines the intersection of computer science, economics, sociology, and applied mathematics. Prerequisites: CSE 240 and CSE 247. Credit 3 units. EN: BME T, TU

E81 CSE 330S Rapid Prototype Development and Creative Programming
This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a website from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ various web frameworks, and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: after the formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131. Credit 3 units. EN: BME T, TU

E81 CSE 332S Object-Oriented Software Development Laboratory
Intensive focus on practical aspects of designing, implementing and debugging software, using object-oriented, procedural, and generic programming techniques. The course emphasizes familiarity and proficiency with a wide range of C++ language features through hands-on practice completing studio exercises and lab assignments, supplemented with readings and summary presentations for each session. Prerequisites: CSE 247. Credit 3 units. EN: BME T, TU

E81 CSE 341T Parallel and Sequential Algorithms
This course aims to teach how to design, analyze and implement parallel algorithms. The emphasis is on teaching fundamental principles and design techniques that easily transfer over to parallel programming. These techniques include divide and conquer, contraction, the greedy method, etc. Prerequisite: CSE 247. Credit 3 units. EN: BME T, TU

E81 CSE 347 Analysis of Algorithms
Introduces techniques for the mathematical analysis of algorithms, including randomized algorithms and non-worst-case analyses such as amortized and competitive analysis. Introduces the standard paradigms of divide-and-conquer, greedy, and dynamic programming algorithms, as well as reductions. Also provides an introduction to the study of intractability and techniques to determine when good algorithms cannot be designed. Prerequisite: CSE 247. Credit 3 units. EN: BME T, TU

E81 CSE 361S Introduction to Systems Software
Introduction to the hardware and software foundations of computer processing systems. This course provides a programmer's perspective of how computer systems execute programs and store information. The course material aims to enable students to become more effective programmers, especially in dealing with issues of performance, portability and robustness. It also serves as a foundation for other system courses, such as compilers, networks, and operating systems, where a deeper understanding of systems-level issues is required. Topics covered include: machine-level code and its generation by optimizing compilers, performance evaluation and optimization, computer arithmetic, memory organization and management, and supporting concurrent computation. Prerequisites: CSE 132. Credit 3 units. EN: BME T, TU

E81 CSE 362M Computer Architecture
This course explores the interaction and design philosophy of hardware and software for digital computer systems. Topics include: processor architecture, instruction set architecture, Assembly Language, memory hierarchy design, l/
O considerations, and a comparison of computer architectures. Prerequisite: CSE 260M. Credit 3 units. EN: BME T, TU

E81 CSE 365S Elements of Computing Systems
All computers are made up of 0s and 1s. However, the conceptual gap between the 0s and 1s and the day-to-day operation of modern computers is enormously wide. This fast-paced course aims to bridge the divide by starting with simple logic gates and building up the levels of abstraction until one can create games like Tetris. There is no specific programming language requirement, but some experience with programming is needed. Prerequisite: CSE 247. Credit 3 units. EN: BME T, TU

E81 CSE 400 Independent Study
This course involves the investigation of a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement (PDF) must be filed in the departmental office. This course carries university credit, but it does not count toward a CSE major or minor. To arrange for CSE major or minor credit for independent study, a student must enroll in CSE 400E instead of CSE 400. Consult also: CSE 400E. Credit variable, maximum 6 units.

E81 CSE 400E Independent Study
Investigation of a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement (PDF) must be filed in the departmental office. Credit earned for CSE 400E can be counted toward a student's major or minor program, with the consent of the student's advisor. Consult also: CSE 400. Credit variable, maximum 6 units.

E81 CSE 411A AI and Society
AI has made increasing inroads in a broad array of applications, many of which have socially significant implications. This course will study a number of such applications, focusing on issues such as AI used for social good, fairness and accountability of AI, and potential security implications of AI systems. Prerequisite: CSE 247. Credit 3 units.

E81 CSE 416A Analysis of Network Data
This course examines complex systems through the eyes of a computer scientist. We will use the representative power of graphs to model networks of social, technological, or biological interactions. Network analysis provides many computational, algorithmic, and modeling challenges. We begin by studying graph theory, allowing us to quantify the structure and interactions of social and other networks. We will then explore how to practically analyze network data and how to reason about it through mathematical models of network structure and evolution. We will also investigate algorithms that extract basic properties of networks in order to find communities and infer node properties. Finally, we will study a range of applications including robustness and fragility of networks such as the internet, spreading processes used to study epidemiology or viral marketing, and the ranking of webpages based on the structure of the webgraph. This course combines concepts from computer science and applied mathematics to study networked systems using data mining. Prerequisites: CSE 247, ESE 326, MATH 309, and programming experience. (Note: We will parse data and analyze networks using Python.) Credit 3 units. EN: BME T, TU

E81 CSE 417T Introduction to Machine Learning
The field of machine learning is concerned with the question of how to construct computer programs that automatically improve with experience. This course is a broad introduction to machine learning, covering the foundations of supervised learning and important supervised learning algorithms. Topics to be covered are the theory of generalization (including VC-dimension, the bias-variance trade-off, validation, and regularization) and linear and nonlinear learning models (including linear and logistic regression, decision trees, ensemble methods, neural networks, nearest-neighbor methods, and support vector machines). Prerequisites: CSE 247 (can be taken concurrently), ESE 326 (or Math 3200), Math 233, and Math 309 (can be taken concurrently). Credit 3 units. EN: BME T, TU

E81 CSE 422S Operating Systems Organization
This course involves a hands-on exploration of core OS abstractions, mechanisms and policies in the context of the Linux kernel. Readings, lecture material, studio exercises, and lab assignments are closely integrated in an active-learning environment in which students gain experience and proficiency with OS code, as well as tracing and evaluating OS operations via user-level programs and kernel-level monitoring tools. Topics include: system calls, interrupt handling, kernel modules, concurrency and synchronization, proportional and priority-based scheduling of processes and threads, I/O facilities, memory management, virtual memory, device management, and file system organization. Prerequisite: CSE 361S. Credit 3 units. EN: BME T, TU

E81 CSE 425S Programming Systems and Languages
A systematic study of the principles, concepts and mechanisms of computer programming languages: their syntax, semantics and pragmatics; the processing and interpretation of computer programs; programming paradigms; and language design. Illustrative examples are selected from a variety of programming language paradigms. Prerequisites: CSE 332S. Credit 3 units. EN: BME T, TU

E81 CSE 427S Cloud Computing with Big Data Applications
This course provides a comprehensive introduction to applied parallel computing using the MapReduce programming model facilitating large-scale data management and processing. There will be an emphasis on hands-on experience working with the Hadoop architecture, an open-source software framework written in Java for distributed storage and processing of very large data sets on computer clusters. Further, we will make use of related big data technologies from the Hadoop ecosystem of tools, such as Hive, Impala, and Pig in developing analytics and solving problems faced by enterprises today. Prerequisites: CSE 131, CSE 247, and CSE 330.
Credit 3 units. EN: BME T, TU

E81 CSE 431S Translation of Computer Languages
The theory of language recognition and translation is introduced in support of compiler construction for modern programming languages. Topics include syntactic and semantic analysis, symbol table management, code generation, and runtime libraries. A variety of parsing methods is covered, including top-down and bottom-up. Machine problems culminate in the course project, for which students construct a working compiler. Prerequisites: CSE 240 and CSE 247. Credit 3 units. EN: BME T, TU

E81 CSE 432S Pattern-Oriented Software Design and Development
Intensive focus on design and implementation of software using design patterns. Particular emphasis on successive refinement based on identification of unresolved design forces at each step of the design process and on the application of patterns to guide design refinement. Design implementations will be conducted in a team setting, with weekly presentations and critiques of design and implementation decisions and outcomes throughout the course. Prerequisite: CSE 332S. Credit 3 units. EN: TU

E81 CSE 433S Introduction to Computer Security
Secure computing requires the secure design, implementation, and use of systems and algorithms across many areas of computer science. Fundamentals of secure computing such as trust models and cryptography will lay the groundwork for studying key topics in the security of systems, networking, web design, machine learning algorithms, mobile applications, and physical devices. Human factors, privacy, and the law will also be considered. Hands-on practice exploring vulnerabilities and defenses using Linux, C, and Python in studios and lab assignments is a key component of the course. Prerequisites: CSE 247 and either CSE 361 or CSE 332. Credit 3 units. EN: TU

E81 CSE 437R Technical Interviewing
Students will study, give, and receive technical interviews in this seminar course. The focus will be on improving student performance in a technical interview setting, with the goal of making our students as comfortable and agile as possible with technical interviews. Professionals from the local and extended Washington University community will mentor the students in this seminar. Credit 2 units.

E81 CSE 437S Software Engineering Workshop
An introduction and exploration of concepts and issues related to large-scale software systems development. Areas of exploration include technical complexities, organization issues, and communication techniques for large-scale development. Students participate through teams emulating industrial development. The projects cover the principal system development life-cycle phases from requirements analysis, to software design, and to final implementation. Issues relating to real-time control systems, human factors, reliability, performance, operating costs, maintainability and others are addressed and resolved in a reasonable manner. Prerequisite: junior or senior standing. Credit 3 units. EN: BME T, TU

E81 CSE 438S Mobile Application Development
Learn how to create iOS apps in the Swift programming language. This course covers a variety of topics in the development of modern mobile applications, with a focus on hands-on projects. Students will create multiple fully-functional apps from scratch. The course emphasizes object-oriented design patterns and real-world development techniques. Time is provided at the end of the course for students to work on a project of their own interest. Prerequisite: CSE 247. Credit 3 units. EN: BME T, TU

E81 CSE 450A Video Game Programming
This course teaches the core aspects of a video game developer's toolkit. Students work in groups and with a large game software engine to create and playtest a full-featured video game. Students will explore topics around the design of games through analysis of current games. Students have the opportunity to explore additional topics including graphics, artificial intelligence, networking, physics, and user interface design through their game project. Prerequisite: CSE 3xS or 4xxS. Credit 3 units. EN: BME T, TU

E81 CSE 452A Computer Graphics
Introduction to computer graphics. The course covers fundamental concepts, data structures and algorithms related to the construction, display and manipulation of three-dimensional objects. Topics include scan-conversion, basic image processing, transformations, scene graphs, camera projections, local and global rendering, fractals, and parametric curves and surfaces. Students develop interactive graphics programs using C++ language. Prerequisites: CSE 332S and Math 309. Credit 3 units. EN: BME T, TU

E81 CSE 457A Introduction to Visualization
Disciplines such as medicine, business, science, and government are producing enormous amounts of data with increasing volume and complexity. In this course, students will study the principles related to transforming abstract data into useful information visualizations. They will learn about the state of the art in visualization research and development and gain hands-on experience with designing and developing interactive visualization tools for the web. They will also learn how to critique existing visualizations and how to evaluate the systems they build. Topics include design, data mapping, visual perception, and interaction. Prerequisite: CSE 330S. Credit 3 units. EN: TU

E81 CSE 460T Switching Theory
Advanced topics in switching theory as employed in the synthesis, analysis and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits, and built-in self-test techniques. Prerequisite: CSE 260M. Credit 3 units. EN: BME T, TU
E81 CSE 462M Computer Systems Design
Introduction to modern design practices, including FPGA and PCB design methodologies. Student teams use Xilinx Vivado for HDL-based FPGA design and simulation; they also perform schematic capture, PCB layout, fabrication, and testing of the hardware portion of a selected computation system. The software portion of the project uses Microsoft Visual Studio to develop a user interface and any additional support software required to demonstrate final projects to the faculty during finals week. Prerequisites: CSE 361S and 362M from Washington University in St. Louis or permission of the instructor.
Credit 3 units. EN: TU

E81 CSE 465M Digital Systems Laboratory
Hardware/software co-design; processor interfacing; procedures for reliable digital design, both combinational and sequential; understanding manufacturers’ specifications; use of test equipment. Several single-period laboratory exercises, several design projects, and application of microprocessors in digital design. One lecture and one laboratory period a week. Prerequisites: ESE 260. Same as E35 ESE 465
Credit 3 units. EN: BME T, TU

E81 CSE 468T Introduction to Quantum Computing
This course introduces students to quantum computing, which leverages the effects of quantum-mechanical phenomena to solve problems. The course begins with material from physics that demonstrates the presence of quantum effects. Mathematical abstractions of quantum gates are studied with the goal of developing the skills needed to reason about existing quantum circuits and to develop new quantum circuits as required to solve problems. Students will develop a quantum-computer simulator and make use of open simulators as well as actual devices that can realize quantum circuits on the internet. Prerequisites: CSE247, Math 309, and either Math 3200 or ESE 326.
Credit 3 units.

E81 CSE 469S Security of the Internet of Things and Embedded System Security
This course presents a deep dive into the emerging world of the “internet of things” from a cybersecurity perspective. With billions of internet-enabled devices projected to impact every nook and cranny of modern existence, the concomitant security challenge portends to become dazzlingly complex. Students will learn the fundamentals of internet of things architecture and operations from a layered perspective and focus on identifying, assessing, and mitigating the threats and vulnerabilities therein. Through a blend of lecture and hands-on studios, students will gain proficiency in the range of approaches, methods, and techniques required to address embedded systems security and secure the internet of things using actual devices from both hardware and software perspectives and across a range of applications.
Credit 3 units. EN: TU

E81 CSE 473S Introduction to Computer Networks
A broad overview of computer networking. Topics include history, protocols, Hyper Text Transfer Protocol (HTTP), File Transfer Protocol (FTP), Simple Mail Transfer Protocol (SMTP), Domain Name System (DNS), peer-to-peer (P2P), transport layer design issues, transport layer protocols, Transmission Control Protocol (TCP), User Datagram Protocol (UDP), TCP congestion control, network layer, Internet Protocol version 4 (IPv4), Internet Control Message Protocol (ICMP), Internet Protocol version 6 (IPv6), routing algorithms, routing protocols, Open Shortest Path First (OSPF), Routing Information Protocol (RIP), Border Gateway Protocol (BGP), datalink layer and local area networks carrier sense multiple access with collision detection (CSMA/CD), Ethernet, virtual local area networks (VLANs), Point-to-Point Protocol (PPP), Multi-Protocol Label Switching, wireless and mobile networks, multimedia networking, security in computer networks, cryptography, and network management. Prerequisite: CSE 247; CSE 132 is suggested but not required.
Credit 3 units. EN: BME T, TU

E81 CSE 483M Introduction to Electronic Instrumentation Design
This course covers the principles underlying the design of electronic instrumentation systems. As a case study we will design and analyze a complete instrumentation amplifier integrated circuit and discuss topics related to signal conditioning, amplification, filtering, biasing, data conversion, interface design, mixed-signal layout and mixed-signal simulation. Students are expected to work with state-of-the-art circuit simulation and layout tools for their homework and project assignments. Prerequisites: CSE 260 and ESE 232.
Credit 3 units. EN: BME T, TU

E81 CSE 497 Senior Project I
Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving the exploration and extension of theoretical structures, or they may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or the community. In either case, the project serves as a focal point for crystallizing the concepts, techniques, and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal form (PDF) for approval by the department during the spring semester of the junior year. Prerequisite: senior standing.
Credit 3 units.

E81 CSE 498 Senior Project II
Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving the exploration and extension of theoretical structures, or they may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or the community. In either case, the project serves as a focal point for crystallizing the concepts, techniques, and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal form (PDF) for approval by the department during the spring semester of the junior year. Prerequisite: senior standing.
Credit 3 units.
E81 CSE 499 Undergraduate Honors Thesis
Working closely with a faculty member, the student investigates an original idea (algorithm, model technique, etc.), including a study of its possible implications, its potential application and its relationship to previous related work reported in the literature. Contributions and results from this investigation are synthesized and compiled into a publication-quality research paper presenting the new idea. Prerequisites: a strong academic record and permission of instructor.
Credit 3 units.

E81 CSE 500 Independent Study
Proposal form can be located at https://cse.wustl.edu/undergraduate/PublishingImages/Pages/undergraduate-research/Independent%20Study%20Form%20400.pdf
Credit variable, maximum 3 units.

E81 CSE 501N Introduction to Computer Science
An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation, and object-oriented programming. Recursion, iteration, and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: Comfort with algebra and geometry at the high school level is assumed. Patience, good planning, and organization will promote success. This course assumes no prior experience with programming.
Same as E81 CSE 131
Credit 3 units. BU: SCI EN: TU

E81 CSE 502N Data Structures and Algorithms
This course involves the study of fundamental algorithms, data structures, and their effective use in a variety of applications. It emphasizes the importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Prerequisite: CSE 131.
Same as E81 CSE 247
Credit 3 units. EN: TU

E81 CSE 503S Rapid Prototype Development and Creative Programming
This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a website from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ various web frameworks, and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: after the formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131.
Same as E81 CSE 330S
Credit 3 units. EN: BME T, TU

E81 CSE 504N Object-Oriented Software Development Laboratory
Intensive focus on practical aspects of designing, implementing and debugging software, using object-oriented, procedural, and generic programming techniques. The course emphasizes familiarity and proficiency with a wide range of C++ language features through hands-on practice completing studio exercises and lab assignments, supplemented with readings and summary presentations for each session. Prerequisites: CSE 247.
Same as E81 CSE 332S
Credit 3 units. EN: BME T, TU

E81 CSE 505N Introduction to Digital Logic and Computer Design
Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisite: CSE 131.
Same as E81 CSE 260M
Credit 3 units. EN: TU

E81 CSE 507A Technology Entrepreneurship
This is a course for students who plan to be or to work with entrepreneurs. An entrepreneurial mindset is needed to create or grow economically viable enterprises, be they new companies, new groups within companies, or new university laboratories. This course aims to cultivate an entrepreneurial perspective, with particular emphasis on information technology (IT)-related activities. The course is jointly offered for business and CSE students, allowing for acculturation between these disciplines. In addition to an introductory treatment of business and technology fundamentals, course topics will include business ethics, opportunity assessment, team formation, financing, intellectual property, and technology transfer. The course will feature significant participant and guest instruction from experienced practitioners.
Credit 3 units.

E81 CSE 511A Introduction to Artificial Intelligence
The discipline of artificial intelligence (AI) is concerned with building systems that think and act like humans or rationally on some absolute scale. This course is an introduction to the field, with special emphasis on sound modern methods. The topics include knowledge representation, problem solving via search, game playing, logical and probabilistic reasoning, planning, dynamic programming, and reinforcement learning. Programming exercises concretize the key methods. The course targets graduate students and advanced undergraduates. Evaluation is based on written and programming assignments, a midterm exam and a final exam. Prerequisites: CSE 247, ESE 326, Math 233.
Credit 3 units.
E81 CSE 513T Theory of Artificial Intelligence and Machine Learning
Mathematical foundations for Artificial Intelligence and Machine Learning. An introduction to the PAC-Semantics ("Probably Approximately Correct") as a common semantics for knowledge obtained from learning and declarative sources, and the computational problems underlying the acquisition and processing of such knowledge. We emphasize the design and analysis of efficient algorithms for these problems, and examine for which representations these problems are known or believed to be tractable. Prerequisite: CSE 347. Credit 3 units. EN: BME T, TU

E81 CSE 514A Data Mining
With the vast advancement in science and technology, data acquisition in large quantities are routinely done in many fields. Examples of large data include various types of data on the internet, high-throughput sequencing data in biology and medicine, extraterrestrial data from telescopes in astronomy, and images from surveillance cameras in security. Mining a large amount of data through data mining has become an effective means to extracting knowledge from data. This course introduces the basic concepts and methods for data mining and provides hands-on experience for processing, analyzing and modeling structured and unstructured data. Homework problems, exams and programming assignments will be administrated throughout the course to enhance learning. Prerequisites: CSE 247 and ESE 326 (or Math 3200). Credit 3 units. EN: BME T, TU

E81 CSE 515T Bayesian Methods in Machine Learning
This course will cover machine learning from a Bayesian probabilistic perspective. Bayesian probability allows us to model and reason about all types of uncertainty. The result is a powerful, consistent framework for approaching many problems that arise in machine learning, including parameter estimation, model comparison, and decision making. We will begin with a high-level introduction to Bayesian inference, then proceed to cover more-advanced topics. These will include inference techniques (exact, MAP, sampling methods, the Laplace approximation, etc.), Bayesian decision theory, Bayesian model comparison, Bayesian nonparametrics, and Bayesian optimization. Prerequisites: CSE 417T. Credit 3 units. EN: BME T, TU

E81 CSE 516A Multi-Agent Systems
This course introduces the fundamental techniques and concepts needed to study multi-agent systems, in which multiple autonomous entities with different information sets and goals interact. We will study algorithmic, mathematical, and game-theoretic foundations, and how these foundations can help us understand and design systems ranging from robot teams to online markets to social computing platforms. Topics covered may include game theory, distributed optimization, multi-agent learning and decision-making, preference elicitation and aggregation, mechanism design, and incentives in social computing systems. Prerequisites: CSE 347 (may be taken concurrently), ESE 326 (or Math 3200), and Math 233 or equivalents. Some prior exposure to artificial intelligence, machine learning, game theory, and microeconomics may be helpful, but is not required. Credit 3 units. EN: BME T, TU

E81 CSE 517A Machine Learning
This course assumes a basic understanding of machine learning and covers advanced topics at the frontier of the field in-depth. Topics to be covered include kernel methods (support vector machines, Gaussian processes), neural networks (deep learning), and unsupervised learning. Depending on developments in the field, the course will also cover some advanced topics, which may include learning from structured data, active learning, and practical machine learning (feature selection, dimensionality reduction). Prerequisites: CSE 417T. Credit 3 units. EN: TU

E81 CSE 518A Human-in-the-Loop Computation
This course is an exploration of the opportunities and challenges of human-in-the-loop computation, an emerging field that examines how humans and computers can work together to solve problems neither can yet solve alone. We will explore ways in which techniques from machine learning, game theory, optimization, online behavioral social science, and human-computer interactions can be used to model and analyze human-in-the-loop systems such as crowdsourcing markets, prediction markets, and user-generated content platforms. We will also look into recent developments in the interactions between humans and AIs, such as learning with the presence of strategic behavior and ethical issues in AI systems. Prerequisites: CSE 247, ESE 326, Math 233, and Math 309. Credit 3 units. EN: TU

E81 CSE 519T Advanced Machine Learning
This course provides a close look at advanced machine learning algorithms — their theoretical guarantees (computational learning theory) and tricks to make them work in practice. In addition, this course focuses on more specialized learning settings, including unsupervised learning, semi-supervised learning, domain adaptation, multi-task learning, structured prediction, metric learning and learning of data representations. Learning approaches may include graphical models, non-parametric Bayesian statistics, and technical topics such as sampling, approximate inference and non-linear function optimization. Mathematical maturity and general familiarity of machine learning is required. Prerequisites: CSE 517A, CSE 511A, and CSE 571A. Credit 3 units. EN: TU

E81 CSE 520S Real-Time Systems
This course covers software systems and network technologies for real-time applications such as automobiles, avionics, industrial automation and the "internet of things." Topics include real-time scheduling, real-time operating systems and middleware, quality of service, industrial networks and real-time cloud computing. Prerequisite: CSE 422S. Credit 3 units. EN: BME T, TU

E81 CSE 521S Wireless Sensor Networks
Dense collections of small sensors networked to form self-configuring pervasive computing systems provide a basis for a new computing paradigm that challenges many classical approaches to distributed computing. Naming, wireless networking protocols, data management and approaches to dependability, real-time, security and middleware services all fundamentally change when confronted with this new environment. Embedded sensor networks and pervasive computing are among the most exciting research areas with many open research questions. This class studies a large
number of research papers that deal with various aspects of wireless sensor networks. Students perform a project on a real wireless sensor network composed of tiny devices each consisting of sensors, a radio transceiver and a microcontroller. Prerequisite: CSE 422S. Credit 3 units. EN: BME T, TU

E81 CSE 522S Advanced Operating Systems
This course offers an in-depth hands-on exploration of core OS abstractions, mechanisms and policies, with an increasing focus on understanding and evaluating their behaviors and interactions. Readings, lecture material, studio exercises, and lab assignments are closely integrated in an active-learning environment in which students gain experience and proficiency writing, tracing, and evaluating user-space and kernel-space code. Topics include: inter-process communication, real-time systems, memory forensics, file-system forensics, timing forensics, process and thread forensics, hypervisor forensics, and managing internal or external causes of anomalous behavior. Prerequisite: CSE 422S. Credit 3 units. EN: BME T, TU

E81 CSE 523S Systems Security
This course examines the intersection between computer design and information security. While performance and efficiency in digital systems have improved markedly in recent decades, computer security has worsened overall in this time frame. To understand why, we will explore the role that design choices play in the security characteristics of modern computer and network systems. Students will use and write software to illustrate mastery of the material. Projects will include identifying security vulnerabilities, exploiting vulnerabilities, and detecting and defending against exploits. Prerequisite: CSE 361S. Credit 3 units. EN: BME T, TU

E81 CSE 530S Database Management Systems
A study of data models and the database management systems that support these data models. The design theory for databases is developed and various tools are utilized to apply the theory. General query languages are studied and techniques for query optimization are investigated. Integrity and security requirements are studied in the context of concurrent operations on a database, where the database may be distributed over one or more locations. The unique requirements for engineering design databases, image databases, and long transaction systems are analyzed. Prerequisite: CSE 247. Credit 3 units.

E81 CSE 532S Advanced Multiparadigm Software Development
Intensive focus on advanced design and implementation of concurrent and distributed system software in C++. Topics covered include concurrency and synchronization features and software architecture patterns. Prerequisites: CSE 332S or graduate standing and strong familiarity with C++; and CSE 422S. Credit 3 units. EN: BME T, TU

E81 CSE 538T Modeling and Performance Evaluation of Interconnected Computer Systems
Modern computing systems consist of multiple interconnected components, which all influence performance. The focus of this course is on developing modeling tools aimed at understanding how to design and provision such systems to meet certain performance or efficiency targets, and the trade-offs involved. The course covers Markov chains and their applications to simple queues, and proceeds to explore more complex systems including server farms and how to optimize their performance through scheduling and task assignment policies. The course includes a brief review of the necessary probability and mathematical concepts. Prerequisite: ESE 326. Credit 3 units. EN: BME T, TU

E81 CSE 539S Concepts in Multicore Computing
Nowadays, the vast majority of computer systems are built using multicore processor chips. This fundamental shift in hardware design impacts all areas of computer science — one must write parallel programs in order to unlock the computational power provided by modern hardware. The goal of this course is to study concepts in multicore computing. We will examine the implications of the multicore hardware design, discuss challenges in writing high performance software, and study emerging technologies relevant to developing software for multicore systems. Topics include memory hierarchy, cache coherence protocol, memory models, scheduling, high-level parallel language models, concurrent programming (synchronization and concurrent data structures), algorithms for debugging parallel software, and performance analysis. Prerequisites: CSE 332S and CSE 361S. Credit 3 units. EN: BME T, TU

E81 CSE 541T Advanced Algorithms
Provides a broad coverage of fundamental algorithm design techniques, with a focus on developing efficient algorithms for solving combinatorial and optimization problems. The topics covered include the review of greedy algorithms, dynamic programming, NP-completeness, approximation algorithms, the use of linear and convex programming for approximation, and online algorithms. Throughout this course, there is an emphasis on correctness proofs and the ability to apply the techniques taught to design efficient algorithms for problems from a wide variety of application areas. Prerequisite: CSE 347. Credit 3 units. EN: BME T, TU

E81 CSE 543S Advanced Secure Software Engineering
The aim of this course is to provide students with broader and deeper knowledge as well as hands-on experience in understanding security techniques and methods needed in software development. Students complete an independent research project which will involve synthesizing multiple software security techniques and applying them to an actual software program or system. Credit 3 units. EN: TU

E81 CSE 543T Algorithms for Nonlinear Optimization
The course will provide an in-depth coverage of modern algorithms for the numerical solution of multidimensional optimization problems. Unconstrained optimization techniques including Gradient methods, Newton's methods, Quasi-Newton methods, and conjugate methods will be introduced. The emphasis is on constrained optimization techniques: Lagrange theory, Lagrangian methods, penalty methods, sequential quadratic programming, primal-dual methods, duality theory, nondifferentiable dual methods, and decomposition methods. The course will also discuss applications in engineering systems and use of state-of-the-art computer codes. Special topics may
include large-scale systems, parallel optimization, and convex optimization. Prerequisites: Calculus I and Math 309. Credit 3 units.

E81 CSE 544T Special Topics in Computer Science Theory
The material for this course varies among offerings, but this course generally covers advanced or specialized topics in computer science theory. Credit 3 units. EN: BME T, TU

E81 CSE 546T Computational Geometry
Computational geometry is the algorithmic study of problems that involve geometric shapes such as points, lines, and polygons. Such problems appear in computer graphics, vision, robotics, animation, visualization, molecular biology, and geographic information systems. This course covers data structures that are unique to geometric computing, such as convex hull, Voronoi diagram, Delaunay triangulation, arrangement, range searching, KD-trees, and segment trees. Also covered are algorithms for polygon triangulation, path planning, and the art gallery problem. Prerequisite: CSE 347. Credit 3 units.

E81 CSE 547T Introduction to Formal Languages and Automata
An introduction to the theory of computation, with emphasis on the relationship between formal models of computation and the computational problems solvable by those models. Specifically, this course covers finite automata and regular languages; Turing machines and computability; and basic measures of computational complexity and the corresponding complexity classes. Prerequisites: CSE 240 and CSE 247. Credit 3 units.

E81 CSE 549T Theory of Parallel Systems
The course covers various aspects of parallel programming such as algorithms, schedulers and systems from a theoretical perspective. We will cover both classic and recent results in parallel computing. Topics include parallel algorithms and analysis in the work/span model, scheduling algorithms, external memory algorithms and their analysis, cache-coherence protocols, etc. The focus will be on design and analysis. Prerequisite: CSE 247. Credit 3 units. EN: BME T, TU

E81 CSE 554A Geometric Computing for Biomedicine
With the advance of imaging technologies deployed in medicine, engineering, and science, there is a rapidly increasing amount of spatial data sets (e.g., images, volumes, point clouds) that need to be processed, visualized, and analyzed. This course will focus on a number of geometry-related computing problems that are essential to the knowledge discovery process in various spatial-data-driven biomedical applications. These problems include visualization, segmentation, mesh construction and processing, and shape representation and analysis. The course consists of lectures that cover theories and algorithms as well as a series of hands-on programming projects using real-world data collected by various imaging techniques (e.g., CT, MRI, electron cryomicroscopy). Prerequisites: CSE 247 and CSE 332 (or proficiency in programming in C++, Java, or Python). Credit 3 units. EN: BME T, TU

E81 CSE 555A Computational Photography
Computational Photography describes the convergence of computer graphics, computer vision, and the internet with photography. Its goal is to overcome the limitations of traditional photography using computational techniques to enhance the way we capture, manipulate and interact with visual media. In this course we study intersting, recent image-based algorithms and implement them to the degree that is possible. Topics may include: cameras and image formation, human visual perception, image processing (filtering, pyramids), image blending and compositing, image retargeting, texture synthesis and transfer, image completion/inpainting, super-resolution, deblurring, demosaicing, image-based lighting and rendering, high dynamic range, depth and defocus, flash/no flash photography, coded aperture photography, single/multiview reconstruction, photo quality assessment, non-photorealistic rendering, modeling and synthesis using internet data, and others. Prerequisites: CSE 452A, CSE 554A, or CSE 559A. Credit 3 units. EN: BME T, TU

E81 CSE 556A Human-Computer Interaction Methods
An introduction to user centered design processes. The course covers a variety of HCI techniques for use at different stages in the software development cycle, including techniques that can be used with and without users. Students will gain experience using these techniques through in-class exercises and then apply them in greater depth through a semester long interface development project. Students who enroll in this course are expected to be comfortable with building user interfaces in at least one framework and be willing to learn whatever framework is most appropriate for their project. Over the course of the semester, students will be expected to present their interface evaluation results through written reports and in class presentations. Prerequisites: 3xxS or 4xxS. Credit 3 units. EN: BME T, TU

E81 CSE 557A Advanced Visualization
We are in an era in which it is possible to have all of the world's information at our fingertips. However, the more information we can access, the more difficult it is to obtain a holistic view of the data or to determine what's important to make decisions. Computer-based visualization systems provide the opportunity to represent large or complex data visually to aid comprehension and cognition. In this course, we learn about the state of the art of visualization research and gain hands-on experience with the research pipeline. We also learn how to critique existing work and how to formulate and explore research questions. We cover advanced visualization topics, including user modeling, adaptation, personalization, perception, and visual analytics for non-experts. Prerequisites: CSE 457A or permission of the instructor. Credit 3 units. EN: BME T, TU

E81 CSE 559A Computer Vision
This course introduces the fundamentals of designing computer vision systems that can "look at" images and videos and reason about the physical objects and scenes they represent. Topics include image restoration and enhancement; estimation of color, shape, geometry, and motion from images; and image segmentation, recognition, and classification. The focus of the course will be on the mathematical tools and intuition underlying algorithms for these tasks, models for the physics and geometry of image formation, and statistical and machine learning-based
techniques for inference. Prerequisites: Math 309/ESE 318 and CSE 247.
Credit 3 units. EN: BME T, TU

E81 CSE 560M Computer Systems Architecture I
An exploration of the central issues in computer architecture: instruction set design, addressing and register set design, control unit design, microprogramming, memory hierarchies (cache and main memories, mass storage, virtual memory); pipelining, and bus organization. The course emphasizes understanding the performance implications of design choices, using architecture modeling and evaluation using VHDL and/or instruction set simulation. Prerequisites: CSE 361S and CSE 260M.
Credit 3 units. EN: BME T, TU

E81 CSE 566S High Performance Computer Systems
Many applications make substantial performance demands upon the computer systems upon which those applications are deployed. In this context, performance is frequently multidimensional, including resource efficiency, power, execution speed (which can be quantified via elapsed run time, data throughput, or latency), and so on. Modern computing platforms exploit parallelism and architectural diversity (e.g., co-processors such as graphics engines and/or reconfigurable logic) to achieve the desired performance goals. This course addresses the practical aspects of achieving high performance on modern computing platforms. This includes questions ranging from how the computing platform is designed to how are applications and algorithms expressed to exploit the platform’s properties. Particular attention is given to the role of application development tools. Prerequisite: familiarity with software development in Linux preferred, graduate standing or permission of instructor.
Credit 3 units. EN: BME T, TU

E81 CSE 567M Computer Systems Analysis
A comprehensive course on performance analysis techniques. The topics include common mistakes, selection of techniques and metrics, summarizing measured data, comparing systems using random data, simple linear regression models, other regression models, experimental designs, 2**k experimental designs, factorial designs with replication, fractional factorial designs, one factor experiments, two factor full factorial design w/o replications, two factor full factorial designs with replications, general full factorial designs, introduction to queueing theory, analysis of single queues, queueing networks, operational laws, mean-value analysis, time series analysis, heavy tailed distributions, self-similar processes, long-range dependence, random number generation, analysis of simulation results, and art of data presentation. Prerequisites: CSE 260M.
Credit 3 units. EN: BME T, TU

E81 CSE 569S Advanced IoT, Real-Time, and Embedded Systems Security
The aim of this course is to provide students with knowledge and hands-on experience in understanding the security techniques and methods needed for IoT, real-time, and embedded systems. Students complete an independent research project which will involve synthesizing multiple security techniques and applying them to an actual IoT, real-time, or embedded system or device.
Credit 3 units. EN: TU

E81 CSE 570S Recent Advances in Networking
This course covers the latest advances in networking. The topics include networking trends, data center network topologies, data center Ethernet, carrier IP, Multiprotocol Label Switching (MPLS), carrier Ethernet, virtual bridging, LAN extension and virtualization using Layer 3 protocols, virtual routing protocols, the “internet of things,” data link layer and management protocols for the internet of things, networking layer protocols for the internet of things, 802.11, RPL, messaging protocols for the internet of things, MQTT, OpenFlow, software-defined networking (SDN) network function virtualization (NFV), big data, networking issues for big data, network configuration, and data modeling, NETCONF, YIN, YANG, BEEP, and UML. Prerequisite: CSE 473S or equivalent.
Credit 3 units. EN: BME T, TU

E81 CSE 571S Network Security
This course covers principles and techniques in securing computer networks. Real world examples will be used to illustrate the rationales behind various security designs. There are three main components in the course, preliminary cryptography, network protocol security and network application security. Topics include IPSec, SSL/TLS, HTTPS, network fingerprinting, network malware, anonymous communication, and blockchain. The class project allows students to take a deep dive into a topic of choice in network security. Prerequisite: CSE 473S.
Credit 3 units. EN: BME T, TU

E81 CSE 574S Wireless and Mobile Networking
First course in wireless networking providing a comprehensive treatment of wireless data and telecommunication networks. Topics include recent trends in wireless and mobile networking, wireless coding and modulation, wireless signal propagation, IEEE 802.11a/b/g/n/ac wireless local area networks, 60 GHz millimeter wave gigabit wireless networks, vehicular wireless networks, white spaces, IEEE 802.22 regional area networks, Bluetooth and Bluetooth Smart, wireless personal area networks, wireless protocols for the “internet of things,” ZigBee, cellular networks: 1G/2G/3G/LTE, LTE-Advanced, and 5G. Prerequisites: CSE 473S or permission of the instructor.
Credit 3 units. EN: BME T, TU

E81 CSE 581T Approximation Algorithms
Numerous optimization problems are intractable to solve optimally. The intractability of a problem could come from the problem’s computational complexity, for instance the problem is NP-Hard, or other computational barriers. To cope with the inability to find an optimal algorithm, one may desire an algorithm that is guaranteed to return a solution that is comparable to the optimum. Such an algorithm is known as an approximation algorithm. Approximation algorithms are a robust way to cope with intractability, and they are widely used in practice or are used to guide the development of practical heuristics. The area of approximation algorithms has developed a vast theory, revealing the underlying structure of problems as well as their different levels of difficulty. The majority of this course will focus on fundamental results and widely applicable algorithmic and analysis techniques for approximation algorithms. Prerequisite: CSE 347.
Credit 3 units. EN: BME T, TU
E81 CSE 584A Algorithms for Biosequence Comparison
This course surveys algorithms for comparing and organizing discrete sequential data, especially nucleic acid and protein sequences. Emphasis is on tools to support search in massive biosequence databases and to perform fundamental comparison tasks such as DNA short-read alignment. These techniques are also of interest for more general string processing and for building and mining textual databases. Algorithms are presented rigorously, including proofs of correctness and running time, where feasible. Topics include classical string matching, suffix array string indices, space-efficient string indices, rapid inexact matching by filtering (including BLAST and related tools), and alignment-free algorithms. Students complete written assignments and implement advanced comparison algorithms to address problems in bioinformatics. This course does not require a biology background. Prerequisites: CSE 347 or instructor permission.
Credit 3 units. EN: BME T, TU

E81 CSE 585T Sparse Modeling for Imaging and Vision
Sparse modeling is at the heart of modern imaging, vision, and machine learning. It is a fascinating new area of research that seeks to develop highly effective data models. The core idea in sparse modeling theory is a novel redundant transform, where the number of transform coefficients is larger compared to the original data dimension. Together with redundancy comes an opportunity of seeking the sparsest possible representation, or the one with the fewest non-zeros. This core idea leads to a series of beautiful theoretical and practical results with many applications such as regression, prediction, restoration, extrapolation, compression, detection, and recognition. In this course, we will explore sparse modeling by covering theoretical as well as algorithmic aspects with applications in computational imaging and computer vision. Prerequisites: ESE 318, Math 233, Math 309, and Math 429, or equivalents. Coding with MATLAB or Python.
Credit 3 units. EN: BME T, TU

E81 CSE 586A Analysis of Imaging Data
This course focuses on an in-depth study of advanced topics and interests in image data analysis. Students will learn about hardcore imaging techniques and gain the mathematical fundamentals needed to build their own models for effective problem solving. Topics of deformable image registration, numerical analysis, probabilistic modeling, data dimensionality reduction, and convolutional neural networks for image segmentation will be covered. The main focus might change from semester to semester. Prerequisites: Math 309, ESE 326, CSE 247.
Credit 3 units.

E81 CSE 587A Algorithms for Computational Biology
This course is a survey of algorithms and mathematical methods in biological sequence analysis (with a strong emphasis on probabilistic methods) and systems biology. Sequence analysis topics include introduction to probability, probabilistic inference in missing data problems, hidden Markov models (HMMs), profile HMMs, sequence alignment, and identification of transcription-factor binding sites. Systems biology topics include discovery of gene regulatory networks, quantitative modeling of gene regulatory networks, synthetic biology, and (in some years) quantitative modeling of metabolism. Prerequisite: CSE131 or CSE501N.
Credit 3 units. EN: TU

E81 CSE 591 Introduction to Graduate Study in CSE
Introduces students to the different areas of research conducted in the department. Provides an introduction to research skills, including literature review, problem formulation, presentation, and research ethics. Lecture and discussion are supplemented by exercises in the different research areas and in critical reading, idea generation, and proposal writing.
Credit 3 units.

E81 CSE 598 Master's Project
Students electing the project option for their master's degree perform their project work under this course. In order to successfully complete this course, students must defend their project before a three-person committee and present a 2-3 page extended abstract. Prerequisite: permission of adviser and submission of a research proposal form.
Credit variable, maximum 6 units.

E81 CSE 599 Master's Research
Students electing the thesis option for their master's degree perform their thesis research under this course. In order to successfully complete a master's thesis, students must enroll in this course, produce a written thesis, and defend the thesis before a three-person committee. Prerequisite: permission of adviser and submission of a research proposal form.
Credit variable, maximum 6 units.

Bachelor of Science in Computer Engineering

Computer engineering encompasses studies of hardware, software and systems issues that arise in the design, development and application of computer systems. Computer engineers are particularly well suited to address the particular challenges that exist as computing systems interact with the real, physical world. This includes sensing, actuation, timing, security and computing systems with widely varying form factors that range from servers to mobile devices to the "internet of things."

Students working toward a Bachelor of Science in Computer Engineering (BSCoE) degree must meet all requirements for an engineering degree (p. 1064) from the McKelvey School of Engineering. Required courses and technical electives cannot be taken on a pass/fail basis.

• Common Studies Program Requirements:

Computer engineering students must meet the common studies program requirements, which are required of all students pursuing an engineering degree. These requirements, as they pertain to BSCoE students specifically, are described below:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 131</td>
<td>Calculus I</td>
<td>3</td>
</tr>
<tr>
<td>Math 132</td>
<td>Calculus II</td>
<td>3</td>
</tr>
<tr>
<td>Math 217</td>
<td>Differential Equations</td>
<td>3</td>
</tr>
</tbody>
</table>
Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics and statistics department's back credit policy (http://college.artsci.wustl.edu/policies/placement_credit/backcredit).

The natural sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. These courses must be completed with a grade of C- or better.

For information about how to fulfill the school’s English proficiency requirement, please visit the Degree Requirements page (p. 1065).

The College Writing Program, humanities and social sciences requirements are those required of all students in the McKelvey School of Engineering.

• **Computer Engineering Core Requirements:**

The following courses are required of all computer engineering students:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CSE 131</td>
<td>Introduction to Computer Science</td>
<td>3</td>
</tr>
<tr>
<td>CSE 132</td>
<td>Introduction to Computer Engineering</td>
<td>3</td>
</tr>
<tr>
<td>ESE 230</td>
<td>Introduction to Electrical and Electronic Circuits</td>
<td>4</td>
</tr>
<tr>
<td>ESE 232</td>
<td>Introduction to Electronic Circuits</td>
<td>3</td>
</tr>
<tr>
<td>CSE 240</td>
<td>Logic and Discrete Mathematics or Math 310</td>
<td>3</td>
</tr>
<tr>
<td>CSE 247</td>
<td>Data Structures and Algorithms</td>
<td>3</td>
</tr>
<tr>
<td>CSE 260M</td>
<td>Introduction to Digital Logic and Computer Design</td>
<td>3</td>
</tr>
<tr>
<td>ESE 326</td>
<td>Probability and Statistics for Engineering or Math 3200</td>
<td>3-6</td>
</tr>
<tr>
<td>or DAT 120 &amp; DAT 121</td>
<td>Managerial Statistics I and Managerial Statistics II</td>
<td>3</td>
</tr>
<tr>
<td>or Psych 300</td>
<td>Introduction to Psychological Statistics</td>
<td>3</td>
</tr>
</tbody>
</table>

Total Units: 37-40

Each of these core courses must be passed with a grade of C- or better.

• **Computer Engineering Technical Electives:**

In addition to the core courses, students must take at least 18 units of technical electives drawn from either of the following areas:

- CSE courses with the suffix S, M, T or A
- ESE courses at the 300 level or higher

The above can include courses at the graduate level; however, they must still meet one of the two criteria above. Up to 6 units of Independent Study (CSE 400E, CSE 497-CSE 499, ESE 400 or ESE 497) can count toward technical electives. There is no limit as to how many independent study courses can count toward the general 120 units.

**Bachelor of Science in Computer Science**

The Bachelor of Science in Computer Science (BSCS) is designed for students planning a career in computing. Students working toward a BSCS degree must meet all requirements for an applied science degree (p. 1064) from the McKelvey School of Engineering. In addition, there are the following departmental course requirements:

• **Computer Science Core Requirements**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CSE 131</td>
<td>Introduction to Computer Science</td>
<td>3</td>

</tr>
<tr>
<td>CSE 347</td>
<td>Analysis of Algorithms</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>Total Units</td>
<td>18</td>
</tr>
</tbody>
</table>

Each of these core courses must be passed with a grade of C- or better.

• **Computer Science Technical Elective Requirements:**

In addition to the core courses, at least 24 additional units in computer science or computer science-related courses
with an S, M, T or A suffix must be taken, of which at least one must be a systems (S) course and at least one must be a machine (M) or application (A) course. Students may use up to 6 units of approved independent work (CSE 400E, CSE 497-CSE 499) as part of their computer science electives. Such independent work can be classified as S, M, T or A, with approval.

- Math Requirements:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 131</td>
<td>Calculus I</td>
<td>3</td>
</tr>

<td></td>
</tr>
<tr>
<td>Humanities and social sciences electives</td>
<td>18</td>
<td></td>
</tr>
<tr>
<td>Natural sciences electives</td>
<td>8</td>
<td></td>
</tr>
</tbody>
</table>

Total Units: 32

The College Writing Program, humanities and social sciences requirements are those required of all students in the McKelvey School of Engineering. For information about how to fulfill the school's English proficiency requirement, please visit the Degree Requirements page (p. 1065).

The natural sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. The College Writing Program and natural sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/fail basis.

**Bachelor of Science in Computer Science + Economics**

The College of Arts & Sciences and McKelvey School of Engineering developed a new major that allows students interested in both economics and computer science to combine these two complementary disciplines efficiently, without having to pursue them as two separate majors.

**Course Requirements**

<table>
<thead>
<tr>
<th>Code</th>

</tbody>
</table>

Total Units: 31-33

**Electives**

Six upper-level approved courses from Economics and Computer Science & Engineering (CSE) are required: three from economics and three from CSE. Students who satisfied the Econ 1011 and/or Econ 1021 requirements with AP credits can take instead electives in either department and add at most one course from outside of both departments.
Bachelor of Science in Computer Science + Mathematics

The McKeelvey School of Engineering and the College of Arts & Sciences (A&S) developed a new major that efficiently captures the intersection of the complementary studies of computer science and math.

McKeelvey Engineering students who declare this major must fulfill the core course requirements listed below and all other requirements for the Applied Science degree (p. 1064) in the McKeelvey School of Engineering. They must also complete Engr 310 Technical Writing and 8 units of courses designated as NSM (Natural Sciences & Math) from Anthro (L48), Biol (L41), Chem (L07), E&P (L19), Phys (L31) or EnSt (L82).

A&S students who declare this major must fulfill the distribution requirements and all other requirements for an AB degree (p. 907) in addition to the specific requirements listed below.

Electives

Eight upper-level courses from Math or CSE can be chosen from an approved list (https://docs.google.com/spreadsheets/d/1nVxiw2jVScJ7tpwTtw50Q6vPiljGmyAi19QR3Q/edit? #gid=0), with the following caveats:

- No fewer than three courses can be chosen from each department.
- Up to two preapproved courses from outside both departments can be selected.

Bachelor of Science in Business and Computer Science

The Bachelor of Science in Business and Computer Science degree program provides an integrated educational experience that involves both the Olin Business School and the McKeelvey School of Engineering. The objectives of this program are to provide students with the fundamental knowledge and perspectives of computer science and business and to expose them to the unique opportunities created by combining these disciplines. As one of the only such joint programs in the country, the Bachelor of Science in Business and Computer Science features unique curricular and cocurricular elements that help to create a distinctive program.

General Degree Requirements

- Complete at least 120 applicable units
- Earn at least a C (2.0 cumulative grade-point average) in all applicable courses taken at Washington University
- Earn at least a C (2.0 GPA) in each separate school of study
- Complete a minimum of 60 units at Washington University (at least 30 units must be "B" courses and at least 30 units must be "E" courses)

Foundation Course Requirements (30 units)

Total Units 31

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics
and statistics department's back credit policy (http://college.artsci.wustl.edu/policies/placement_credit/backcredit).

The Natural Sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. These courses must be completed with a grade of C- or better.

The school's English proficiency requirement is satisfied only by a grade of C- or better in one of the themed college writing courses (https://collegewriting.wustl.edu/themed-course-options) developed by the College Writing Program (https://collegewriting.wustl.edu).

**Breadth/Free Elective Course Requirements (24 units)**

- Humanities and Social Sciences (15 units): Any course with A&S attributes of Humanities (HUM), Language and Cultural Diversity (LCD), or Social and Behavioral Sciences (SSC). These courses must be taken with the credit grade option only (not pass/fail). At least one course must be an ethics course from the list of approved ethics courses (PDF) (http://bulletin.wustl.edu/undergrad/engineering/computerscience/bs-business-computer-science/Ethics_Courses_for_BS_in_Business_and_Computer_Science.pdf).
- Free Electives (9 units): Any course from any day-school division, including prematriculation credit (e.g., AP credit). The free elective courses may be taken with the pass/fail grade option.

**Capstone/Integrated Learning Experience Requirements (6 units)**

- Six units of course work jointly approved by the faculty curriculum oversight committees of both Business and Engineering

**Major Course Requirements (60 units)**

- Business Course Requirements (30 units) as listed in the section below
- Computer Science Course Requirements (30 units) as listed in the section below

**Business Course Requirements (30 total units)**

Choose one of the two clusters below:
The Second Major in Computer Science

The second major provides an opportunity to combine computer science with another degree program. A second major in computer science can expand a student's career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major is also well suited for students planning careers in medicine, law, business, architecture and fine arts. The requirements are as follows. There are no additional distribution or unit requirements for the second major.

- Computer Science Core Requirements:

<table>
<thead>
<tr>

<td>Object-Oriented Software Development Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>CSE 347</td>
<td>Analysis of Algorithms</td>
<td>3</td>
</tr>
</tbody>
</table>

Total Units: 18

Each of these core courses must be passed with a grade of C- or better.

- Computer Science Technical Elective Requirements:

In addition to the core courses, students must complete at least 24 additional units in computer science or computer science-related courses with an S, M, T or A suffix; at least one must be a systems (S) course, and at least one must be a machine (M) or application (A) course. Students may use up to 6 units of approved independent work (CSE 400E, CSE 497-CSE 499) as part of their computer science electives. Such independent work can be classified as S, M, T or A with approval.

- Math Requirement:

Calculus (Math 131) and probability (ESE 326, Math 3200, or the sequence DAT 120-DAT 121).

The Second Major in Computer Science + Mathematics

The McKelvey School of Engineering and the College of Arts & Sciences have developed a new second major that efficiently captures the intersection of the complementary studies of computer science and math.

- Core Requirements:
The Minor in Computer Science

If a student’s goal is a basic foundation in computer science for application to another field but they are not planning a career as a practicing computer scientist, the minor in computer science is a good choice. The minor consists of five CSE courses: two core courses and three electives. The core courses provide an introduction to computer science concepts and problem-solving techniques. The electives offer flexibility to integrate computer science studies with a major area. Students select the courses that are most important to them, whether their interests are in fine arts, linguistics, psychology, philosophy, law, business, medicine, the natural sciences or anything else.

Units required: 15

Required courses:

</tr>
<tr>
<td></td>
<td>Total Units</td>
<td>6</td>
</tr>
</tbody>
</table>

Elective courses:

Any three additional CSE courses selected from CSE 132 Introduction to Computer Engineering, CSE 240 Logic and Discrete Mathematics, CSE 347 Analysis of Algorithms, or any CSE course with a T, S, M or A suffix.

Additional Information

All courses used for the computer science minor must be taken for a grade, and the student must earn a C- or better. Should the student decide to go further in the field, all courses in the computer science minor can be used toward a second major in computer science or a degree in computer science or computer engineering.

The Minor in Bioinformatics

Mindful of the emerging opportunities at the interface of biology and computer science, the Department of Biology and the Department of Computer Science & Engineering have fashioned the minor in bioinformatics. This program serves students from both departments as well as other students from the natural sciences and engineering with an interest in this field.

Units required: 23-24 units, as described below

Core courses:

<table>
<thead>
<tr>
<th>Code</th>

Computer Science & Engineering elective: Choose one of the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CSE 514A</td>
<td>Data Mining</td>
<td>3</td>
</tr>
<tr>
<td>CSE 584A</td>
<td>Algorithms for Biosequence</td>
<td>3</td>
</tr>
</tbody>
</table>
Additional Information

It is anticipated that, for those students majoring in biology or computer science & engineering (CSE), some portion of the introductory sequence will overlap with the courses required for the major and that these courses will be applicable to both the major and the minor. Upper-level courses in biology and CSE used to fulfill the minor requirements may not be used to fulfill the requirements of another major or minor in Arts & Sciences. A minimum grade of C- is required for all courses to count toward the minor.

The Minor in Human-Computer Interaction

The human-computer interaction (HCI) minor is designed to give any undergraduate student at Washington University a multidisciplinary understanding of the principles and applications of HCI. This minor will introduce students to the techniques necessary to create effective user interfaces: requirements gathering, ideation, prototyping, visual design and evaluation. Students will explore these ideas in a variety of application contexts.

The HCI minor is intended for students who are interested in the design of user-centered interactive technologies and those desiring jobs that include user interface creation, product design, UX/UI design, app development, virtual and augmented realities, and so on. This minor should appeal to students in the College of Art — particularly designers and computationally inclined artists — who are interested in gaining a more in-depth knowledge of back-end development skills. It will also be of interest to engineering students looking for more experience with aesthetics and front-end design skills. In addition to being useful for these primary audiences, this minor allows students from other departments on campus to support their studies with a clear track in a hybrid pursuit of design and programming.

Course Work:

Students must complete two pillar courses, one integration course and three approved electives. Courses listed below are considered approved elective offerings between the Sam Fox School and the McKelvey School of Engineering.

• Pillar Courses (6 units):

<table>
<thead>
<tr>

Electrical & Systems Engineering

About Electrical & Systems Engineering

The mission of our undergraduate programs is to instill in students the knowledge and perspective — appropriate for both a professional career and the pursuit of advanced degrees — of fields that rely on key electrical engineering and systems principles and practices. Such principles and practices include rigorous quantitative reasoning and robust engineering design. This mission is accomplished by ensuring that students achieve both depth and breadth of knowledge in their studies and by maintaining a high degree of flexibility in the curriculum. Our programs also seek to provide good preparation for life, including the ability to communicate in written and oral forms and a desire to continue learning throughout life. In addition, these programs aim to provide the opportunity and training necessary for students to acquire the skills and attitudes to become leaders.

The department offers courses of study leading to degrees in both electrical engineering and systems science and engineering. Opportunities for study and research currently available in the department include semiconductor theory and devices, optoelectronics, nanophotonics, communication theory and systems, information theory, signal and image processing, tomographic imaging, linear and nonlinear dynamics and control, robotics, identification and estimation, multisensor fusion and navigation, computational mathematics, optimization, optimal control, autonomous systems, operations research and financial engineering. Students are encouraged to participate in
research activities as soon as they have received training in the fundamentals appropriate for a given research area.

Electrical engineering is the profession for those intrigued with electrical phenomena and eager to contribute their skills to a society increasingly dependent on electricity and sophisticated electronic devices. It is a profession of broad scope, with many specialty careers designed for engineers who seek an endless diversity of career paths on the cutting edge of technology. The Institute of Electrical and Electronics Engineers publishes transactions on about 60 different topics, from aerospace and electronic systems to visualization and computer graphics. This is a breadth so great that no single electrical engineering department can hope to span it. Moreover, those fields themselves encompass still more fascinating specialties. We provide the basics; the future is the student's to shape.

Systems science and engineering is based on an approach that views an entire system of components as an entity rather than simply as an assembly of individual parts; each component is designed to fit properly with the other components rather than to function by itself. The engineering and mathematics of systems is a rapidly developing field. It is one of the most modern segments of applied mathematics as well as an engineering discipline. It is concerned with the identification, modeling, analysis, design and control of systems that are potentially as large and complex as the U.S. economy or as precise and vital as a space voyage. Its interests run from fundamental theoretical questions to the implementation of operational systems. It draws on the most modern and advanced areas of mathematics. A very important characteristic of the systems field is that its practitioners must, of necessity, interact within a wide interdisciplinary environment, not only with various engineers and scientists but also with economists, biologists and sociologists. Such interaction is both emphasized and practiced in the programs.

Our Department of Electrical & Systems Engineering offers a challenging basic curriculum, a broadly qualified faculty, and modern facilities so that students can receive a contemporary preparation for a career in electrical or systems engineering.

**Undergraduate Degree Programs**

The Department of Electrical & Systems Engineering (ESE) offers four undergraduate degree programs: two professional degrees and two applied science degrees. The two professional degrees are the Bachelor of Science in Electrical Engineering (BSEE) and the Bachelor of Science in Systems Science & Engineering (BSSSE). These two programs are accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). The two applied science degrees are the Bachelor of Science in Applied Science (Electrical Engineering) and the Bachelor of Science in Applied Science (Systems Science & Engineering). All programs have flexible curricula as well as specific requirements, and students may elect programs of study tailored to individual interests and professional goals.

In the professional BSEE curriculum, there are required courses in electrical circuits, signals and systems, digital systems and electromagnetic fields, along with laboratory and design courses, which provide students with a common core of experience. Subsequently, the student may orient the program toward breadth so that many disciplines within the profession are spanned or toward a specialty with more emphasis on depth in one or more disciplines. Areas of specialization include modern electronics, applied physics, telecommunications, control systems, and signal and image processing.

Students in the professional BSSSE degree program take required courses in engineering mathematics, signals and systems, operations research, and automatic control systems, along with laboratory and design courses. This program emphasizes the importance of real-world applications of systems theory; accordingly, students are required to take a concentration of courses in one of the traditional areas of engineering or science. There are numerous elective courses in control theory and systems, signal processing, optimization, robotics, probability and stochastic processes, and applied mathematics.

Students enrolled in any of the ESE undergraduate degree programs have a variety of opportunities to augment their educational experience at Washington University. Students may participate in the Pre-Medical Engineering program or in the Cooperative Education program. Some students pursue double majors, in which two sets of degree requirements — either within or outside the ESE department — are satisfied concurrently.

Students who seek a broad undergraduate education in electrical engineering or systems science and engineering but who plan on careers outside of engineering may pursue the applied science degrees: Bachelor of Science in Applied Science (Electrical Engineering) and Bachelor of Science in Applied Science (Systems Science & Engineering). These programs of study are appropriate for students planning to enter medical, law or business school and who desire a more technical undergraduate experience than what otherwise may be available to them.

The ESE department also offers a variety of educational opportunities for students enrolled in other departments. These include the second major in systems science and the second major in electrical engineering science, which are open to students inside as well as outside of the McKelvey School of Engineering, such as the College of Arts & Sciences and the School of Business. They also include the minor in applied physics & electrical engineering, the minor in electrical engineering, the minor in energy engineering, the minor in mechatronics, the minor in robotics, and the minor in systems science & engineering.
BS–Master’s Programs in Electrical & Systems Engineering

Students enrolled in any of the undergraduate degree programs in the McKelvey School of Engineering may choose to extend their educational experience by enrolling in a five-year BS–Master’s program. The Master of Science in Electrical Engineering (MSEE), Master of Science in Systems Science and Mathematics (MSSSM), Master of Control Engineering (MCE), Master of Engineering in Robotics (MER), and Master of Science in Engineering Data Analytics and Statistics (MSDAS) degrees are participating graduate degrees, and these may be combined with any undergraduate degree that provides the appropriate background.

General requirements for the BS–Master’s programs include the residency and other applicable requirements of the university and the McKelvey School of Engineering, which are found elsewhere in this Bulletin. In summary, students must complete all of the degree requirements for both the undergraduate and graduate degrees (at least 120 units plus 30 units for a total of 150 units), but they are not required to complete all of the undergraduate degree requirements first.

Phone: 314-935-5565  
Website: http://ese.wustl.edu

Faculty

Chair
Bruno Sinopoli  
Professor PhD, University of California, Berkeley  
Cyberphysical systems, analysis and design of networked embedded control systems, with applications to sensor actuators networks

Endowed Professors

Arye Nehorai  
Eugene and Martha Lohman Professor of Electrical Engineering  
PhD, Stanford University  
Statistical signal processing, machine learning, imaging, biomedicine

Joseph A. O’Sullivan  
Samuel C. Sachs Professor of Electrical Engineering  
Dean, UMSL/WashU Joint Undergraduate Engineering Program  
PhD, Notre Dame University  
Information theory, statistical signal processing, imaging science with applications in medicine and security, and recognition theory and systems

Lan Yang  
Edward H. & Florence G. Skinner Professor of Engineering  
PhD, California Institute of Technology  
Nano/micro photonics, ultra high-quality optical microcavities, ultra-low-threshold microlasers, nano/micro fabrication, optical sensing, single nanoparticle detection, photonic molecules, photonic materials

Professors

Shantanu Chakrabarty  
PhD, Johns Hopkins University  
New frontiers in unconventional analog computing techniques using silicon and hybrid substrates, fundamental limits of energy efficiency, sensing and resolution by exploiting computational and adaptation primitives inherent in the physics of devices

Jr-Shin Li  
Das Family Distinguished Career Development Professor  
PhD, Harvard University  
Mathematical control theory, optimization, quantum control, biomedical applications

Hiro Mukai  
PhD, University of California, Berkeley  
Theory and computational methods for optimization, optimal control, systems theory, electric power system operations, differential games

Neal Patwari  
PhD, University of Michigan  
Intersection of statistical signal processing and wireless networking for improving wireless sensor networking and radiofrequency sensing

Heinz Schaettler  
PhD, Rutgers University  
Optimal control, nonlinear systems, mathematical models in biomedicine

Associate Professors

ShiNung Ching  
Das Family Distinguished Career Development Assistant Professor  
PhD, University of Michigan  
Systems and control in neural medicine, nonlinear and constrained control, physiologic network dynamics, stochastic control
Jung-Tsung Shen (https://engineering.wustl.edu/Profiles/Pages/Jung-Tsung-Shen.aspx)
Das Family Distinguished Career Development Assistant Professor
PhD, Massachusetts Institute of Technology
Theoretical and numerical investigations on nanophotonics, optoelectronics, plasmonics, metamaterials

Assistant Professors
Ulubek Kamilov (https://ese.wustl.edu/faculty/Pages/default.aspx?bio=120)
PhD, École Polytechnique Fédérale de Lausanne, Switzerland
Computational imaging, signal processing, biomedical imaging

Matthew D. Lew (https://engineering.wustl.edu/Profiles/Pages/Matthew-Lew.aspx)
PhD, Stanford University
Microscopy, biophotonics, computational imaging, nano-optics

Chuan Wang (https://ese.wustl.edu/faculty/Pages/default.aspx?bio=123)
PhD, University of Southern California
Flexible electronics, stretchable electronics, printed electronics, nanomaterials, nanoelectronics, optoelectronics

Shen Zeng (https://ese.wustl.edu/faculty/Pages/default.aspx?bio=121)
PhD, University of Stuttgart
Systems and control theory, data-based analysis and control of complex dynamical systems, inverse problems, biomedical applications

Xuan "Silvia" Zhang (https://engineering.wustl.edu/Profiles/Pages/Xuan-%28Silvia%29-Zhang.aspx)
PhD, Cornell University
Robotics, cyber-physical systems, hardware security, ubiquitous computing, embedded systems, computer architecture, VLSI, electronic design automation, control optimization, and biomedical devices and instrumentation

Senior Professors
Paul S. Min (https://ese.wustl.edu/faculty/Pages/Min.aspx)
PhD, University of Michigan
Routing and control of telecommunication networks, fault tolerance and reliability, software systems, network management

DSc, Washington University in St. Louis
Computer engineering, lower-power VLSI design, computer architecture, signal processing, microprocessors systems design

William F. Pickard (https://ese.wustl.edu/faculty/Pages/William-Pickard.aspx)
PhD, Harvard University
Biological transport, electrophysiology, energy engineering

Daniel L. Rode (https://ese.wustl.edu/faculty/Pages/Daniel-Rode.aspx)
PhD, Case Western Reserve University
Optoelectronics and fiber optics, semiconductor materials, light-emitting diodes and lasers, semiconductor processing, electronics

Ervin Y. Rodin (https://ese.wustl.edu/faculty/Pages/Ervin-Rodin.aspx)
PhD, University of Texas at Austin
Optimization, differential games, artificial intelligence, mathematical modeling

Barbara A. Shrauner (https://ese.wustl.edu/faculty/Pages/Barbara-Shrauner.aspx)
PhD, Harvard University (Radcliffe)
Plasma processing, semiconductor transport, symmetries of nonlinear differential equations

Donald L. Snyder (https://ese.wustl.edu/faculty/Pages/Donald-Snyder.aspx)
PhD, Massachusetts Institute of Technology
Communication theory, random process theory, signal processing, biomedical engineering, image processing, radar

Barry E. Spielman (https://ese.wustl.edu/faculty/Pages/Barry-Spielman.aspx)
PhD, Syracuse University
High-frequency/high-speed devices, radiofrequency and microwave integrated circuits, computational electromagnetics

Tzyh Jong Tarn (https://ese.wustl.edu/faculty/Pages/TJ-Tarn.aspx)
DSc, Washington University
Quantum mechanical systems, bilinear and nonlinear systems, robotics and automation, life science automation

Professors of Practice
Dedric Carter (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=149)
PhD, Nova Southeastern University
MBA, MIT Sloan School of Management

Dennis Mell (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=150)
MS, University of Missouri-Rolla
Industrial automation, robotics and mechatronics, product design and development with design-for-manufacturability emphasis, prototyping, manufacturing

Ed Richter (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=151)
MS, Washington University
Signal processing applications implemented on a variety of platforms, including ASIC, FPGA, DSP, microcontroller and desktop computers
Jason Trobaugh (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=152)
DSc, Washington University
Ultrasound imaging, diffuse optical tomography, image-guided therapy, and ultrasonic temperature imaging

Senior Lecturer
Martha Hastings (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=156)
PhD, Saint Louis University
Mathematics education

James Feher (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=155)
PhD, Missouri University of Science and Technology

Lecturers
Randall Brown (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=154)
PhD, Washington University

Randall Hoven (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=157)
MS, Johns Hopkins University

Vladimir Kurenok (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=158)
PhD, Belarus State University (Minsk, Belarus)
Probability and stochastic processes, stochastic ordinary and partial differential equations, financial mathematics

Tsitsi Madziwa-Nussinov (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=159)
PhD, University of California, Los Angeles

Jinsong Zhang (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=160)
PhD, University of Miami
Modeling and performance analysis of wireless sensor networks, multi-source information fusion, ambiguous and incomplete information processing

Professors Emeriti
R. Martin Arthur
Newton R. and Sarah Louisa Glasgow Wilson Professor of Engineering
PhD, University of Pennsylvania
Ultrasonic imaging, electrocardiography

David L. Elliott
PhD, University of California, Los Angeles
Mathematical theory of systems, nonlinear difference, differential equations

Minors
Please visit the following pages for more information about our minors:
- Minor in Applied Physics & Electrical Engineering (p. 1028)
- Minor in Electrical Engineering (p. 1029)
- Minor in Mechatronics (p. 1029)
- Minor in Robotics (p. 1030)
- Minor in Systems Science & Engineering (p. 1030)

Courses

E35 ESE 103 Introduction to Electrical Engineering
A hands-on introduction to electrical engineering to put the fun into the electrical engineering fundamentals. Experiments are designed to be easy to conduct and understand. Some of the technologies explored are used in a variety of applications including ultrasound imaging, computed tomography, DC motors, analog to digital converters and credit card readers. Students work in groups of two in the newly renovated Urbauer 115 laboratory. Each station is equipped with modern electronic test equipment and a computer with an integrated Data Acquisition system. Using this lab equipment, students design and build solutions to the exercises. The students also learn to program in LabVIEW to control the Data Acquisition system and process the acquired signals. Also, throughout the semester, presentations are given by the ESE faculty about their research. Credit 1 unit. EN: TU

E35 ESE 105 Introduction to Electrical and Systems Engineering
This course will offer students a rigorous introduction to fundamental mathematical underpinnings of ESE and their relationship to a number of contemporary application areas. Major emphasis will be placed on linear algebra and associated numerical methods, including the use of MATLAB. Topics covered will include vector spaces, linear transformations, matrix manipulations and eigenvalue decomposition. Students will learn how this mathematical theory is enacted in ESE through the completion of four case studies spanning application areas: (i) Dynamical Systems and Control, (ii) Imaging, (iii) Signal Processing, and (iv) Circuits. Credit 3 units. EN: TU
E35 ESE 141 Introductory Robotics
A hands-on introduction to robotics. Project-oriented course where students build and program a robot guided by upper-division students. Friendly competition at the end of semester. Students will gain electrical lab experience, programming experience, and a guided introduction into the field of robotics. Recommended to freshmen and sophomores. This is a pass/fail only course. Credit 1 unit. EN: TU

E35 ESE 205 Introduction to Engineering Design
This is a hands-on course in which students, divided into groups of two or three, will creatively develop projects and solve problems throughout the semester using tools from electrical and systems engineering. The groups will work under the supervision of an academic team consisting of faculty and higher-level students. Project objectives will be set by the academic team in collaboration with each student group. Evaluation will consider the completion of these objectives as well as the originality and innovation of the projects. Weekly 90-minute lab sessions with the academic team are required. Prerequisites: CSE131, Phy197 or equivalent. Credit 3 units. EN: TU

E35 ESE 230 Introduction to Electrical and Electronic Circuits

E35 ESE 232 Introduction to Electronic Circuits
Analysis and design of linear and nonlinear electronic circuits. Detailed analysis of operational amplifier circuits, including non-ideal characteristics. Terminal characteristics of active semiconductor devices. Incremental and DC models for diodes, metal-oxide-semiconductor field effect transistors (MOSFETs), and bipolar junction transistors (BJTs). Design and analysis of single- and multi-stage amplifiers. Introduction to CMOS logic as well as static and dynamic memory circuits. Students will be required to design, analyze, build and demonstrate several of the circuits studied, including frequency response analysis and use of simulation tools. Prerequisite: ESE 230. Credit 3 units. EN: TU

E35 ESE 260 Introduction to Digital Logic and Computer Design
Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisite: OSE 131. Same as E81 CSE 260M. Credit 3 units. EN: TU

E35 ESE 318 Engineering Mathematics A
Laplace transforms; matrix algebra; vector analysis; eigenvalues and eigenvectors; vector differential calculus and vector integral calculus in three dimensions. Prerequisites: Math 233 and Math 217 or their equivalents. Credit 3 units.

E35 ESE 319 Engineering Mathematics B
Power series and Frobenius series solutions of differential equations; Legendre's equation; Bessel's equation; Fourier series and Fourier transforms; Sturm-Liouville theory; solutions of partial differential equations; wave and heat equations. Prerequisites: Math 233 and Math 217 or their equivalents. Credit 3 units.

E35 ESE 326 Probability and Statistics for Engineering
Study of probability and statistics together with engineering applications. Probability and statistics: random variables, distribution functions, density functions, expectations, means, variances, combinatorial probability, geometric probability, normal random variables, joint distribution, independence, correlation, conditional probability, Bayes theorem, the law of large numbers, the central limit theorem. Applications: reliability, quality control, acceptance sampling, linear regression, design and analysis of experiments, estimation, hypothesis testing. Examples are taken from engineering applications. Prerequisites: Math 233 or equivalent. Credit 3 units. EN: TU

E35 ESE 330 Engineering Electromagnetics Principles
Electromagnetic theory as applied to electrical engineering: vector calculus; electrostatics and magnetostatics; Maxwell's equations, including Poisson's theorem and boundary conditions; uniform plane-wave propagation; transmission lines, TEM modes, including treatment of general lossless lines, and pulse propagation; introduction to guided waves; introduction to radiation and scattering concepts. Prerequisites: Physics 198 and ESE 318 En Math A. Corequisite: ESE 319 En Math B. Credit 3 units. EN: BME T, TU

E35 ESE 331 Electronics Laboratory
Laboratory exercises provide students with a combination of hands-on experience in working with a variety of real instruments and in summarizing measurement results in written reports that clearly communicate laboratory results. A sequence of lab experiments provide hands-on experience with grounding and shielding techniques, signal analysis, realistic operational amplifier (op amp) characterization, op amp based active filter design and characterization, measurement of pulses propagating on a transmission line with various terminations, experience with FM modulation using phase locked loops and...
microwave techniques based on the vector network analyzer (VNA). Students will gain experience working with: sampling oscilloscopes to make measurements in the time and frequency domains, signal generators, digital multimeter and frequency measurements, microwave VNA measurements of directional coupler and antenna scattering parameters, and in creating circuits and making connections on contemporary circuit boards. The course concludes with a hands-on project to design, demonstrate and document the design of an electronic component. Prerequisite: ESE 232; Corequisite: ESE 330. Credit 3 units. EN: BME T, TU

E35 ESE 332 Power, Energy and Polyphase Circuits
Fundamental concepts of power and energy; electrical measurements; physical and electrical arrangement of electrical power systems; polyphase circuit theory and calculations; principal elements of electrical systems such as transformers, rotating machines, control and protective devices, their description and characteristics; elements of industrial power system design. Prerequisite: ESE 230. Credit 3 units. EN: BME T, TU

E35 ESE 337 Electronic Devices and Circuits

E35 ESE 351 Signals and Systems

E35 ESE 362 Computer Architecture
This course explores the interaction and design philosophy of hardware and software for digital computer systems. Topics include: Processor architecture, Instruction Set Architecture, Assembly Language, memory hierarchy design, I/ O considerations, and a comparison of computer architectures. Prerequisite: CSE 260M. Same as E81 CSE 362M. Credit 3 units. EN: BME T, TU

E35 ESE 400 Independent Study
Opportunities to acquire experience outside the classroom setting and to work closely with individual members of the faculty. A final report must be submitted to the department. Not open to first-year or graduate students. Consult adviser. Hours and credit to be arranged. Credit variable, maximum 3 units.

E35 ESE 401 Fundamentals of Engineering Review
A review and preparation of the most recent NCEES Fundamentals of Engineering (FE) Exam specifications is offered in a classroom setting. Exam strategies will be illustrated using examples. The main topics for the review include engineering mathematics, statics, dynamics, thermodynamics, heat transfer, mechanical design and analysis, material science, and engineering economics. A discussion of the importance and responsibilities of professional engineering licensure along with ethics will be included. Same as E37 MEMS 4001. Credit 1 unit.

E35 ESE 403 Operations Research
Application of operations research techniques to real-world problems. Emphasis is given to integer linear programming and computational methods. Real-world examples of integer programs will be studied in areas such as network flow, facility location, partitioning, matching, and transportation. Special emphasis will be placed on techniques used to solve integer programs. Prerequisites: ESE 403 and CSE 131. Credit 3 units. EN: BME T, TU

E35 ESE 404 Applied Operations Research
An integrated analysis of reliability and quality control function in manufacturing. Statistical process control, acceptance sampling, process capability analysis, reliability prediction, design, testing, failure analysis and prevention, maintainability, availability, and safety are discussed and related. Qualitative and quantitative aspects of statistical quality control and reliability are introduced in the context of manufacturing. Prerequisite: ESE 326 or equivalent. Credit 3 units. EN: BME T, TU

E35 ESE 405 Reliability and Quality Control
An integrated analysis of reliability and quality control function in manufacturing. Statistical process control, acceptance sampling, process capability analysis, reliability prediction, design, testing, failure analysis and prevention, maintainability, availability, and safety are discussed and related. Qualitative and quantitative aspects of statistical quality control and reliability are introduced in the context of manufacturing. Prerequisite: ESE 326 or equivalent. Credit 3 units. EN: BME T, TU

E35 ESE 407 Analysis and Simulation of Discrete Event Systems
Study of the dynamic behavior of discrete event systems and techniques for analyzing and optimizing the performance of such systems. Covers both classical and recent approaches. Classical topics include Markov chains, queueing theory, networks of queues, related algorithms, and simulation methods. Recent approaches include decomposition and aggregation, approximation, and perturbation analysis of nonclassical
systems. Applications are drawn from various areas, including
dermanufacturing systems. Prerequisites: Math 217, ESE 326 or
equivalent, programming experience such as CSE 31.
Credit 3 units. EN: BME T, TU

E35 ESE 415 Optimization
This course gives a rigorous and comprehensive introduction to
fundamentals of nonlinear optimization theory and computational
methods. Topics include unconstrained and constrained
optimization, quadratic and convex optimization, numerical
optimization methods, optimality conditions, and duality theory.
Algorithmic methods include Steepest Descent, Newton’s
method, Conjugate Gradient methods as well as exact and
inexact line search procedures for unconstrained optimization.
Constrained optimization methods include penalty and multiplier
methods. Applications range from engineering and physics to
economics. Moreover, generalized programming, interior point
methods, and semi-definite programming will be discussed if
time permits. Prerequisites: ESE 131, Math 309 and ESE 318 or
permission of instructor.
Credit 3 units. EN: BME T, TU

E35 ESE 425 Random Processes and Kalman Filtering
Probability and random variables; random processes,
autocorrelation, power spectral density; transient and steady-
state analysis of linear dynamic systems and random inputs,
filters, state-space, discretization; optimal estimation; the
discrete Kalman filter; linearization and the extended Kalman
filter for nonlinear dynamic systems; related MATLAB exercises.
Prerequisite: ESE 326 and ESE 351 or equivalent.
Credit 3 units. EN: BME T, TU

E35 ESE 427 Financial Mathematics
This course is a self-contained introduction to financial
mathematics at the undergraduate level. Topics to be covered
include pricing of the financial instruments such as options,
forwards, futures and their derivatives along with basic hedging
techniques and portfolio optimization strategies. The emphasis
is put on using of discrete, mostly binary models. The general,
continuous case including the concepts of Brownian motion,
stochastic integral, and stochastic differential equations, is
explained from intuitive and practical point of view. Among major
results discussed are the Arbitrage Theorem and Black-Scholes
differential equations and their solutions. Prerequisites: ESE 318
and ESE 326 or the consent of the instructor.
Credit 3 units. EN: BME T, TU

E35 ESE 429 Basic Principles of Quantum Optics and
Quantum Information
This course provides an accessible introduction to quantum
optics and quantum engineering for undergraduate students.
It will cover the following topics: concept of photons, quantum
mechanics for quantum optics, radiative transitions in atoms,
lasers, photon statistics (photon counting, sub-/super-
Poissonian photon statistics, bunching, anti-bunching, theory
of photodetection, shot noise), entanglement, squeezed
light, atom-photon interactions, cold atoms, and atoms in
cavities. The course will also provide an overview for quantum
information processing, including quantum computing, quantum
cryptography, and teleportation. Prerequisite: ESE 318 or
equivalent.
Credit 3 units. EN: BME T, TU

E35 ESE 431 Introduction to Quantum Electronics
Describing the flow of electrical current in nanodevices
involves a lot more than just quantum mechanics; it requires
an appreciation of some of the most advanced concepts of
non-equilibrium statistical mechanics. In the past decades,
electronic devices have been shrinking steadily to nanometer
dimensions, and quantum transport has accordingly become
increasingly important to not only physicists but also electrical
engineers. Traditionally, these topics are spread out over
many physics, chemistry, and engineering courses that take
many semesters to cover. The main goal of this course is to
condense the essential concepts into a one-semester course
that is accessible to both senior-level undergraduate and junior-
level graduate students. The only background assumed for
the students interested in taking this course is knowledge of
the Elvis II platform. Prerequisites: ESE 230 and 351.
Credit 3 units. EN: BME T, TU

E35 ESE 433 Radio Frequency and Microwave Technology
for Wireless Systems
Focus is on the components and associated techniques
employed to implement analog and digital radio frequency (RF)
and microwave (MW) transceivers for wireless applications,
including: cell phones; pagers; wireless local area networks;
global positioning satellite-based devices; and RF identification
systems. A brief overview of system-level considerations is
provided, including modulation and detection approaches for
analog and digital systems; multiple-access techniques and
wireless standards; and transceiver architectures. Focus is on
RF and MW: transmission lines; filter design; active component
modeling; matching and biasing networks; amplifier design; and
mixer design. Prerequisite: ESE 330.
Credit 3 units. EN: BME T, TU

E35 ESE 434 Solid-State Power Circuits and Applications
Study of the strategies and applications power control using
solid-state semiconductor devices. Survey of generic power
electronic converters. Applications to power supplies, motor
drives and consumer electronics. Introduction to power diodes,
thyristors and MOSFETs. Prerequisites: ESE 232, ESE 351.
Credit 3 units. EN: BME T, TU

E35 ESE 435 Electrical Energy Laboratory
Experimental studies of principles important in modern electrical
energy systems. Topics include: AC power measurements,
electric lighting, photovoltaic cells and arrays, batteries, DC-
DC and DC-AC converters, brushed and brushless DC motors
and three-phase circuits. Each experiment requires analysis,
simulation with MultiSim, and measurement via LabVIEW and
the Elpis II platform. Prerequisites: ESE 230 and 351.
Credit 3 units. EN: BME T, TU

E35 ESE 436 Semiconductor Devices
This course covers the fundamentals of semiconductor
physics and the operation principles of modern solid-state
devices, such as homojunction and heterojunction diodes,
solar cells, inorganic/organic light-emitting diodes, bipolar
junction transistors, and metal-oxide-semiconductor field-
effect transistors. These devices form the basis for today's
semiconductor and integrated circuit industry. In addition to
device physics, semiconductor device fabrication processes, new materials, and novel device structures will also be briefly introduced. At the end of this course, students will be able to understand the characteristics, operation, limitations and challenges faced by state-of-the-art semiconductor devices. This course will be particularly useful for students who wish to develop careers in the semiconductor industry. Prerequisite: ESE 232. 

Credit 3 units. EN: TU

E35 ESE 437 Sustainable Energy Systems

We will survey the field of sustainable energy and explore contributions within electrical and systems engineering. Topics include introductory electric power systems, smart grids, and the roles of heat engines, photovoltaics, wind power, and energy storage, as well as analysis and optimization of energy systems. The course will include review and discussion of literature, problem sets, exams, and student projects. Prerequisites: ESE 318 or 319 and ESE 230 or ESE 351 or permission of instructor. Credit 3 units. EN: BME T, TU

E35 ESE 438 Applied Optics

Topics relevant to the engineering and physics of conventional as well as experimental optical systems and applications explored. Items addressed include geometrical optics, Fourier optics such as diffraction and holography, polarization and optical birefringence such as liquid crystals, and nonlinear optical phenomena and devices. Prerequisite: ESE 330 or equivalent. Credit 3 units. EN: BME T, TU

E35 ESE 439 Introduction to Quantum Communications

This course covers the following topics: quantum optics, single-mode and two-mode quantum systems, nonlinear optics, and quantum systems theory. Specific topics include the following: Dirac notation quantum mechanics; harmonic oscillator quantization; number states, coherent states, and squeezed states; direct, homodyne, and heterodyne detection; linear propagation loss; phase insensitive and phase sensitive amplifiers; entanglement and teleportation; field quantization; quantum photodetection; phase-matched interactions; optical parametric amplifiers; generation of squeezed states, photon-twin beams, non-classical fourth-order interference, and polarization entanglement; optimum binary detection; quantum precision measurements; and quantum cryptography. Prerequisites: ESE 330 or Physics 421; Physics 217 or equivalent. Credit 3 units. EN: TU

E35 ESE 441 Control Systems

Introduction to the theory and practice of automatic control for dynamical systems. Dynamical systems as models for physical and observed phenomena. Mathematical representation of dynamical systems, such as state-space differential and difference equations, transfer functions, and block diagrams. Analysis of the time evolution of a system in response to control inputs, steady-state and transient responses, equilibrium points and their stability. Control via linear state feedback, and estimation using Leunberger observers. Relating the time response of a system to its frequency response, including Bode and Nyquist plots. Input-output stability and its relation to the stability of equilibrium points. Simple frequency-based controllers, such as PID and lead-lag compensators. Exercise involving the use of MATLAB/Simulink (or equivalent) to simulate and analyze systems. Prerequisites: CSE 131, and either ESE 351 or MEMS 431. Credit 3 units. EN: BME T, TU

E35 ESE 444 Sensors and Actuators

This course provides students with basic understanding of two of the main components of any modern electrical or electromechanical system: sensors as inputs and actuators as outputs. The covered topics include transfer functions, frequency responses and feedback control; component matching and bandwidth issues; performance specification and analysis; sensors: analog and digital motion sensors, optical sensors, temperature sensors, magnetic and electromagnetic sensors, acoustic sensors, chemical sensors, radiation sensors, torque, force and tactile sensors; actuators: stepper motors, DC and AC motors, hydraulic actuators, magnet and electromagnetic actuators, acoustic actuators; introduction to interfacing methods: bridge circuits, A/D and D/A converters, and microcontrollers. This course is useful for those students interested in control engineering, robotics and systems engineering. Prerequisites: one of the following four conditions: (1) prerequisite of ESE 230 and corequisite of ESE 351; (2) prerequisites of ESE 230, ESE 318 and MEMS 255 (Mechanics II); (3) prerequisite of ESE 351; or (4) permission of instructor. Credit 3 units. EN: BME T, TU

E35 ESE 446 Robotics: Dynamics and Control

Homogeneous coordinates and transformation matrices. Kinematic equations and the inverse kinematic solutions for manipulators, the manipulator Jacobian and the inverse Jacobian. General model for robot arm dynamics, complete dynamic coefficients for six-link manipulator. Synthesis of manipulation control, motion trajectories, control of single- and multiple-link manipulators, linear optimal regulator. Model reference adaptive control, feedback control law for the perturbation equations along a desired motion trajectory. Design of the control system for robotics. Prerequisites: ESE 351, knowledge of a programming language, and ESE 318; Corequisite: ESE 441. Credit 3 units. EN: BME T, TU

E35 ESE 447 Robotics Laboratory

Introduces the students to various concepts such as modeling, identification, model validation and control of robotic systems. The course focuses on the implementation of identification and control algorithms on a two-link robotic manipulator (the so-called pendubot) that will be used as an experimental testbed. Topics include: introduction to the mathematical modeling of robotic systems; nonlinear model, linearized model; identification of the linearized model; input-output and state-space techniques; introduction to the identification of the nonlinear model; energy-based techniques; model validation and simulation; stabilization using linear control techniques; a closer look at the dynamics; stabilization using nonlinear control techniques. Prerequisite: ESE 351 or MEMS 431. Corequisites or Prerequisites: ESE 441 and 446. Credit 3 units. EN: BME T, TU

E35 ESE 448 Systems Engineering Laboratory

Experimental study of real and simulated systems and their control. Identification, input-output analysis, design and implementation of control systems. Noise effects. Design and implementation of control laws for specific engineering problems.
Corequisites: ESE 441 and knowledge of a programming language.
Credit 3 units. EN: BME T, TU

E35 ESE 449 Digital Process Control Laboratory
Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics, and process control. Exercises in data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature, and pressure control. Term project. Prerequisite: ESE 441 or EECE 401 or equivalent. Same as E44 EECE 424
Credit 3 units. EN: BME T, TU

E35 ESE 455 Quantitative Methods for Systems Biology
Application of computational mathematical techniques to problems in contemporary biology. Systems of linear ordinary differential equations in reaction-diffusion systems, hidden Markov models applied to gene discovery in DNA sequence, ordinary differential equation and stochastic models applied to gene regulation networks, negative feedback in transcription and metabolic pathway regulation. Prerequisites: (1) Math 217 Differential Equations and (2) a programming course and familiarity with MATLAB.
Credit 3 units. EN: BME T, TU

E35 ESE 460 Switching Theory
Advanced topics in switching theory as employed in the synthesis, analysis, and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits, and built-in self-test techniques. Prerequisite: CSE 260M.
Same as E81 CSE 460T
Credit 3 units. EN: BME T, TU

E35 ESE 461 Design Automation for Integrated Circuit Systems
Integrated circuit systems provide the core technology that power today's most advanced devices and electronics: smart phones, wearable devices, autonomous robots, and cars, aerospace or medical electronics. These systems often consist of silicon microchips made up by billions of transistors and contain various components such as microprocessors, DSPs, hardware accelerators, memories, and I/O interfaces, therefore design automation is critical to tackle the design complexity at the system level. The objectives of this course is to 1) introduce transistor-level analysis of basic digital logic circuits; 2) provide a general understanding of hardware description language (HDL) and design automation tools for very large scale integrated (VLSI) systems; 3) expose students to the design automation techniques used in the best-known academic and commercial systems. Topics covered include device and circuits for digital logic circuits, digital IC design flow, logic synthesis, physical design, circuit simulation and optimization, timing analysis, power delivery network analysis. Assignments include homework, mini-projects, term paper and group project. Prerequisites: ESE 232; ESE 280.
Credit 3 units. EN: BME T, TU

E35 ESE 462 Computer Systems Design
Introduction to modern design practices, including FPGA and PCB design methodologies. Student teams use Xilinx Vivado for HDL-based FPGA design and simulation and do schematic capture, PCB layout, fabrication, and testing of the hardware portion of a selected computation system. The software portion of the project uses Microsoft Visual Studio to develop a user interface and any additional support software required to demonstrate the project to the faculty during finals week. Prerequisites: CSE 361S and 362M from Washington University in St. Louis or permission of the instructor. Revised: 2019-02-22
Same as E81 CSE 462M
Credit 3 units. EN: TU

E35 ESE 465 Digital Systems Laboratory
Hardware/software co-design; processor interfacing; procedures for reliable digital design, both combinational and sequential; understanding manufacturers’ specifications; use of test equipment. Several single-period laboratory exercises, several design projects, and application of microprocessors in digital design. One lecture and one laboratory period a week. Prerequisites: ESE 260.
Credit 3 units. EN: BME T, TU

E35 ESE 471 Communications Theory and Systems
Introduction to the concepts of transmission of information via communication channels. Amplitude and angle modulation for the transmission of continuous-time signals. Analog-to-digital conversion and pulse code modulation. Transmission of digital data. Introduction to random signals and noise and their effects on communication. Optimum detection systems in the presence of noise. Elementary information theory. Overview of various communication technologies such as radio, television, telephone networks, data communication, satellites, optical fiber and cellular radio. Prerequisites: ESE 351 and ESE 326.
Credit 3 units. EN: BME T, TU

E35 ESE 474 Introduction to Wireless Sensor Networks
This is an introductory course on wireless sensor networks for senior undergraduate students. The course uses a combination of lecturing, reading, and discussion of research papers to help each student to understand the characteristics and operations of various wireless sensor networks. Topics covered include sensor network architecture, communication protocols on Medium Access Control and Routing, sensor network operation systems, sensor data aggregation and dissemination, localization and time synchronization, energy management, and target detection and tracking using acoustic sensor networks. Prerequisite: ESE 351 (Signals and Systems).
Credit 3 units. EN: BME T, TU

E35 ESE 482 Digital Signal Processing
Credit 3 units. EN: BME T, TU

E35 ESE 488 Signals and Communication Laboratory
Laboratory exercises in digital signal processing, data conversion and communications using modern laboratory techniques and apparatus based on National Instruments LabVIEW and ELVIS II workstations. A laboratory course designed to complement the traditional ESE course offerings in signal processing and communication theory. Signals and systems fundamentals: continuous-time and discrete-time linear time-invariant systems, frequency response, oversampled and noise-shaped A/D conversion. Digital signal processing: FIR and IIR digital filter design, application of the Fast Fourier Transform. Communication theory: baseband, digital communication, amplitude modulation, phase modulation, bandpass digital communication. Laboratory experiments involve analog and digital electronics. Computer workstations and modern computational software used extensively for system simulation and real-time signal processing. Prerequisite: ESE 351.
Credit 3 units. EN: BME T, TU

E35 ESE 497 Undergraduate Research
Undergraduate research under the supervision of a faculty member. The scope and depth of the research must be approved by the faculty member prior to enrollment. A written final report and a webpage describing the research are required. Credit variable, maximum 3 units.

E35 ESE 498 Electrical Engineering Capstone Design Projects
Capstone design project supervised by the course instructor. The project must use the theory, techniques, and concepts of the student's major: electrical engineering or systems science & engineering. The solution of a real technological or societal problem is carried through completely, starting from the stage of initial specification, proceeding with the application of engineering methods, and terminating with an actual solution. Collaboration with a client, typically either an engineer or supervisor from local industry or a professor or research scholar in university laboratories, is encouraged. A proposal, an interim progress update, and a final report are required, each in the forms of a written document and oral presentation, as well as a webpage on the project. Weekly progress reports and meetings with the instructor are also required. Prerequisite: ESE senior standing and instructor’s consent. Note: This course will meet at the scheduled time only during select weeks. If you cannot attend at that time, you may still register for the course. Credit 3 units. EN: BME T, TU

E35 ESE 500 Independent Study
Opportunities to acquire experience outside the classroom setting and to work closely with individual members of the faculty. A final report must be submitted to the department. Prerequisite: Students must have the ESE Research/Independent Study Registration Form (PDF) [https://ese.wustl.edu/research/areas/Documents/Independent%20Study%20Form_1.pdf] approved by the department. Credit variable, maximum 3 units.

E35 ESE 501 Mathematics of Modern Engineering I
Matrix algebra: systems of linear equations, vector spaces, linear independence and orthogonality in vector spaces, eigenvalues and eigenvectors; vector calculus: gradient, divergence, curl, line and surface integrals, theorems of Green, Stokes, and Gauss; Elements of Fourier analysis and its applications to solving some classical partial differential equations, heat, wave, and Laplace equation. Prerequisites: ESE 318 and ESE 319 or equivalent or consent of instructor. This course will not count toward the ESE doctoral program. Credit 3 units. EN: BME T, TU

E35 ESE 502 Mathematics of Modern Engineering II
Fourier series and Fourier integral transforms and their applications to solving some partial differential equations, heat and wave equations; complex analysis and its applications to solving real-valued problems; analytic functions and their role; Laurent series representation; complex-valued line integrals and their evaluation, including the residual integration theory, conformal mappings and their applications. Prerequisite: ESE 318 and ESE 319 or equivalent or consent of instructor. This course will not count toward the ESE doctoral program. Credit 3 units. EN: BME T, TU

E35 ESE 513 Convex Optimization and Duality Theory
Graduate introduction to convex optimization with emphasis on convex analysis and duality theory. Topics include: convex sets, convex functions, convex cones, convex conjugates, Fenchel-Moreau theorem, convex duality and biconjugation, directional derivatives, subgradients and subdifferentials, optimality conditions, ordered vector spaces, Hahn-Banach theorem, extension and separation theorems, minimax theorems, and vector and set optimization. Prerequisites: ESE 415, Math 4111. Credit 3 units.

E35 ESE 515 Nonlinear Optimization
Nonlinear optimization problems with and without constraints and computational methods for solving them. Optimality conditions, Kuhn-Tucker conditions, Lagrange duality; gradient and Newton's methods; conjugate direction and quasi-Newton methods; primal and penalty methods; Lagrange methods. Use of MATLAB optimization techniques in numerical problems. Prerequisites: CSE 131, Math 309 and ESE 318 or permission of instructor. Credit 3 units. EN: TU
E35 ESE 516 Optimization in Function Space
Credit 3 units.

E35 ESE 517 Partial Differential Equations
Linear and nonlinear first order equations. Characteristics. Classification of equations. Theory of the potential linear and nonlinear diffusion theory. Linear and nonlinear wave equations. Initial and boundary value problems. Transform methods. Integral equations in boundary value problems. Prerequisites: ESE 318 and 319 or equivalent or consent of instructor.
Credit 3 units. EN: BME T, TU

E35 ESE 518 Optimization Methods in Control
The course is divided in two parts: convex optimization and optimal control. In the first part we cover applications of Linear Matrix Inequalities and Semi-Definite Programming to control and estimation problems. We also cover Multiparametric Linear Programming and its application to the Model Predictive Control and Estimation of linear systems. In the second part we cover numerical methods to solve optimal control and estimation problems. We cover techniques to discretize optimal control problems, numerical methods to solve them, and their optimality conditions. We apply these results to the Model Predictive Control and Estimation of nonlinear systems. Prerequisites: ESE 551, and ESE 415 or equivalent.
Credit 3 units. EN: TU

E35 ESE 519 Convex Optimization
Credit 3 units.

E35 ESE 520 Probability and Stochastic Processes
Review of probability theory; models for random signals and noise; calculus of random processes: noise in linear and nonlinear systems; representation of random signals by sampling and orthonormal expansions; Poisson, Gaussian, and Markov processes as models for engineering problems. Prerequisite: ESE 326.
Credit 3 units. EN: BME T, TU

E35 ESE 523 Information Theory
Discrete source and channel model, definition of information rate and channel capacity, coding theorems for sources and channels, encoding and decoding of data for transmission over noisy channels. Corequisite: ESE 520.
Credit 3 units. EN: BME T, TU

E35 ESE 524 Detection and Estimation Theory
Credit 3 units. EN: BME T, TU

E35 ESE 526 Network Science
This course focuses on fundamental theory, modeling, structure, and analysis methods in network science. The first part of the course includes basic network models and their mathematical principles. Topics include a review of graph theory, random graph models, scale-free network models and dynamic networks.
The second part of the course includes structure and analysis methods in network science. Topics include network robustness, community structure, spreading phenomena and clique topology. Applications of the topics covered by this course include social networks, power grid, internet, communications, protein-protein interactions, epidemic control, global trade, neuroscience, etc. Prerequisites: ESE 520 (Probability and Stochastic Processes), Math 429 (Linear Algebra) or equivalent.
Credit 3 units.

E35 ESE 531 Nano and Micro Photonics
This course focuses on fundamental theory, design, and applications of photonic materials and micro/nano photonic devices. It includes review and discussion of light-matter interactions in nano and micro scales, propagation of light in waveguides, nonlinear optical effect and optical properties of nano/micro structures, the device principles of waveguides, filters, photodetectors, modulators and lasers. Prerequisite: ESE 330.
Credit 3 units. EN: BME T, TU

E35 ESE 532 Introduction to Nano-Photonic Devices
Introduction to photon transport in nano-photonic devices. This course focuses on the following topics: light and photons, statistical properties of photon sources, temporal and spatial correlations, light-matter interactions, optical nonlinearity, atoms and quantum dots, single- and two-photon devices, optical devices, and applications of nano-photonic devices in quantum and classical computing and communication. Prerequisites: ESE 330 and Physics 217, or permission of instructor.
Credit 3 units. EN: BME T, TU

E35 ESE 534 Special Topics in Advanced Electrodynamics
This course covers advanced topics in electrodynamics. Topics include electromagnetic wave propagation (in free space, confined waveguides, or along engineered surfaces); electromagnetic wave scattering (off nano-particles or molecules); electromagnetic wave generation and detection (antenna and nano-antenna); inverse scattering problems; and
numerical and approximate methods. Prerequisites: ESE 330, or Physics 421 and Physics 422.
Credit 3 units. EN: BME T, TU

E35 ESE 536 Introduction to Quantum Optics
This course covers the following topics: quantum mechanics for quantum optics, radiative transitions in atoms, lasers, photon statistics (photon counting, sub-/super-Poissonian photon statistics, bunching, anti-bunching, theory of photodetection, shot noise), entanglement, squeezed light, atom-photon interactions, cold atoms, and atoms in cavities. If time permits, the following topics will be selectively covered: quantum computing, quantum cryptography, and teleportation. Prerequisites: ESE 330 and Physics 217 or Physics 421
Credit 3 units. EN: BME T, TU

E35 ESE 538 Advanced Electromagnetic Engineering
The course builds on undergraduate electromagnetics to systematically develop advanced concepts in electromagnetic theory for engineering applications. The following topics are covered: Maxwell's equations; fields and waves in materials; electromagnetic potentials and topics for circuits and systems; transmission-line essentials for digital electronics and for communications; guided wave principles for electronics and optoelectronics; principles of radiation and antennas; and numerical methods for computational electromagnetics.
Credit 3 units.

E35 ESE 543 Control Systems Design by State Space Methods
Advanced design and analysis of control systems by state-space methods: classical control review, Laplace transforms, review of linear algebra (vector space, change of basis, diagonal and Jordan forms), linear dynamic systems (modes, stability, controllability, state feedback, observability, observers, canonical forms, output feedback, separation principle and decoupling), nonlinear dynamic systems (stability, Lyapunov methods). Frequency domain analysis of multivariable control systems. State space control system design methods: state feedback, observer feedback, pole placement, linear optimal control. Design exercises with CAD (computer-aided design) packages for engineering problems. Prerequisite: ESE 351 and ESE 441, or permission of instructor.
Credit 3 units. EN: BME T, TU

E35 ESE 544 Optimization and Optimal Control
Constrained and unconstrained optimization theory. Continuous time as well as discrete-time optimal control theory. Time-optimal control, bang-bang controls and the structure of the reachable set for linear problems. Dynamic programming, the Pontryagin maximum principle, the Hamiltonian-Jacobi-Bellman equation and the Riccati partial differential equation. Existence of classical and viscosity solutions. Application to time optimal control, regulator problems, calculus of variations, optimal filtering and specific problems of engineering interest. Prerequisites: ESE 551, ESE 552.
Credit 3 units. EN: BME T, TU

E35 ESE 545 Stochastic Control
Credit 3 units. EN: BME T, TU

E35 ESE 546 Dynamics & Control in Neuroscience & Brain Medicine
This course provides an introduction to systems engineering approaches to modeling, analysis and control of neuronal dynamics at multiple scales. A central motivation is the manipulation of neuronal activity for both scientific and medical applications using emerging neurotechnology and pharmacology. Emphasis is placed on dynamical systems and control theory, including bifurcation and stability analysis of single neuron models and population mean-field models. Synchronization properties of neuronal networks are covered, and methods for control of neuronal activity in both oscillatory and non-oscillatory dynamical regimes are developed. Statistical models for neuronal activity are also discussed. An overview of signal processing and data analysis methods for neuronal recording modalities is provided toward the development of closed-loop neuronal control paradigms. The final evaluation is based on a project or research survey. Prerequisites: ESE 553 (or equivalent); ESE 520 (or equivalent); ESE 351 (or equivalent).
Credit 3 units. EN: BME T, TU

E35 ESE 547 Robust and Adaptive Control
Graduate-level control system design methods for multi-input multi-output systems. Linear optimal-based methods in robust control, nonlinear model reference adaptive control. These design methods are currently used in most industry control system design problems. These methods are designed, analyzed and simulated using MATLAB. Linear control theory (review), robustness theory (Mu Analysis), optimal control and the robust servomechanism, H-infinity optimal control, robust output feedback controls and population mean-field models. Linear quadratic gaussian with loop transfer recovery, the Loop Transfer Recovery method of Lavretsky, Mu synthesis, Lyapunov theory (review), LaSalle extensions, Barbalat's Lemma, model reference adaptive control, artificial neural networks, online parameter estimation, convergence and persistence of excitation. Prerequisites: ESE 543 or ESE 551 or equivalent.
Credit 3 units. EN: BME T, TU

E35 ESE 551 Linear Dynamic Systems I
Input-output and state-space description of linear dynamic systems. Solution of the state equations and the transition matrix. Controllability, observability, realizations, pole-assignment, observers and decoupling of linear dynamic systems. Prerequisite: ESE 351.
Credit 3 units.

E35 ESE 552 Linear Dynamic Systems II
Credit 3 units. EN: TU
E35 ESE 553 Nonlinear Dynamic Systems
State space and functional analysis approaches to nonlinear systems. Questions of existence, uniqueness and stability; Lyapunov and frequency-domain criteria; w-limits and invariance, center manifold theory and applications to stability, steady-state response and singular perturbations. Poincare-Bendixon theory, the van der Pol oscillator, and the Hopf Bifurcation theorem. Prerequisite: ESE 551.
Credit 3 units. EN: TU

E35 ESE 554 Advanced Nonlinear Dynamic Systems
Credit 3 units.

E35 ESE 555 Hybrid Dynamic Systems
Theory and analysis of hybrid dynamic systems, which is the class of systems whose state is composed by continuous-valued and discrete-valued variables. Discrete-event systems models and language descriptions. Models for hybrid systems. Conditions for existence and uniqueness. Stability and verification of hybrid systems. Optimal control of hybrid systems. Applications to cyber-physical systems and robotics. Prerequisite: ESE 551.
Credit 3 units. EN: BME T, TU

E35 ESE 556 Analog Integrated Circuits
This course focuses on fundamental and advanced topics in analog and mixed-signal VLSI techniques. The first part of the course covers graduate-level materials in the area of analog circuit synthesis and analysis. The second part of the course covers applications of the fundamental techniques for designing analog signal processors and data converters. Several practical aspects of mixed-signal design, simulation and testing are covered in this course. This is a project-oriented course, and it is expected that the students apply the concepts learned in the course to design, simulate and explore different circuit topologies. Prerequisites: CSE 260 and ESE 232.
Credit 3 units.

E35 ESE 557 Hybrid Dynamic Systems
Credit 3 units. EN: TU
E35 ESE 571 Transmission Systems and Multiplexing
Transmission and multiplexing systems are essential to providing efficient point-to-point communication over distance. This course introduces the principles underlying modern analog and digital transmission and multiplexing systems and covers a variety of system examples.
Credit 3 units. EN: TU

E35 ESE 572 Signaling and Control in Communication Networks
The operation of modern communications networks is highly dependent on sophisticated control mechanisms that direct the flow of information through the network and oversee the allocation of resources to meet the communication demands of end users. This course covers the structure and operation of modern signaling systems and addresses the major design trade-offs that center on the competing demands of performance and service flexibility. Specific topics covered include protocols and algorithms for connection establishment and transformation, routing algorithms, overload and failure recovery and networking dimensioning. Case studies provide concrete examples and reveal the key design issues. Prerequisites: graduate standing and permission of instructor.
Credit 3 units. EN: BME T, TU

E35 ESE 575 Fiber-Optic Communications
Introduction to optical communications via glass-fiber media. Pulse-code modulation and digital transmission methods, coding laws, receivers, bit-error rates. Types and properties of optical fibers; attenuation, dispersion, modes, numerical aperture. Light-emitting diodes and semiconductor laser sources; device structure, speed, brightness, modes, electrical properties, optical and spectral characteristics. Prerequisites: ESE 330, ESE 336.
Credit 3 units. EN: BME T, TU

E35 ESE 582 Fundamentals and Applications of Modern Optical Imaging
Analysis, design, and application of modern optical imaging systems with emphasis on biological imaging. The first part of the course will focus on the physical principles underlying the operation of imaging systems and their mathematical models. Topics include ray optics (speed of light, refractive index, laws of reflection and refraction, plane surfaces, mirrors, lenses, aberrations), wave optics (amplitude and intensity, frequency and wavelength, superposition and interference, interference), Fourier optics (space-invariant linear systems, Huygens-Fresnel principle, angular spectrum, Fresnel diffraction, Fraunhofer diffraction, frequency analysis of imaging systems), and light-matter interaction (absorption, scattering, dispersion, fluorescence). The second part of the course will compare modern quantitative imaging technologies, including but not limited to digital holography, computational imaging, and super-resolution microscopy. Students will evaluate and critique recent optical imaging literature. Prerequisites: ESE 318 and ESE 319 (or their equivalents); ESE 330 or PHY 421 (or equivalent).
Credit 3 units. EN: BME T, TU

E35 ESE 584 Statistical Signal Processing for Sensor Arrays
Methods for signal processing and statistical inference for data acquired by an array of sensors, such as those found in radar, sonar and wireless communications systems. Multivariate statistical theory with emphasis on the complex multivariate normal distribution. Signal estimation and detection in noise with known statistics, signal estimation and detection in noise with unknown statistics, direction finding, spatial spectrum estimation, beam forming, parametric maximum-likelihood techniques. Subspace techniques, including MUSIC and ESPRIT. Performance analysis of various algorithms. Advanced topics may include structured covariation estimation, wideband array processing, array calibration, array processing with polarization diversity, and space-time adaptive processing (STAP). Prerequisites: ESE 520, ESE 524, linear algebra, computer programming.
Credit 3 units. EN: TU

E35 ESE 585A Sparse Modeling for Imaging and Vision
Sparse modeling is at the heart of modern imaging, vision, and machine learning. It is a fascinating new area of research that seeks to develop highly effective data models. The core idea in sparse modeling theory is a novel redundant transform, where the number of transform coefficients is larger compared to the original data dimension. Together with redundancy comes the opportunity to seek the sparsest possible representation or the one with the fewest nonzeros. This core idea leads to a series of beautiful theoretical and practical results with many applications, such as regression, prediction, restoration, extrapolation, compression, detection, and recognition. In this course, we will explore sparse modeling by covering theoretical as well as algorithmic aspects with applications in computational imaging and computer vision. Prerequisites: ESE 318, Math 233, Math 309, and Math 429 or equivalents; coding with MATLAB or Python.
Credit 3 units. EN: BME T, TU

E35 ESE 586 Quantitative Image Processing
Credit 3 units. EN: BME T, TU

E35 ESE 589 Biological Imaging Technology
This class develops a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section examines how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure and function, image formation methods, and diffraction limited imaging. The math section examines image decomposition using basis functions (e.g., Fourier transforms), synthesis of measurement data, image analysis for feature extraction, reduction of multidimensional imaging datasets, multivariate regression, and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology are critiqued.
Credit 3 units. EN: BME T, TU
E35 ESE 590 Electrical & Systems Engineering Graduate Seminar
This pass/fail course is required for the MS, DSc and PhD degrees in Electrical & Systems Engineering. A passing grade is required for each semester of enrollment and is received by attendance at regularly scheduled ESE seminars. MS students must attend at least three seminars per semester. DSc and PhD students must attend at least five seminars per semester. Part-time students are exempt except during their year of residency. Any student under continuing status is also exempt. Seminars missed in a given semester may be made up during the subsequent semester.

E35 ESE 596 Seminar in Imaging Science and Engineering
This seminar course consists of a series of tutorial lectures on Imaging Science and Engineering with emphasis on applications of imaging technology. Students are exposed to a variety of imaging applications that vary depending on the semester, but may include multispectral remote sensing, astronomical imaging, microscopic imaging, ultrasound imaging and tomographic imaging. Guest lecturers come from several parts of the university. This course is required of all students in the Imaging Science and Engineering program; the only requirement is attendance. This course is graded pass/fail. Prerequisite: admission to Imaging Science and Engineering program. Same as CSE 596 (when offered) and BME 506.
Credit 1 unit.

E35 ESE 599 Master's Research
Prerequisite: Students must have the ESE Research/Independent Study Registration Form (PDF) approved by the department.
Credit variable, maximum 3 units.

Bachelor of Science in Electrical Engineering
This professional degree program is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

Educational Objectives of the Bachelor of Science in Electrical Engineering (BSEE) Degree Program
A. Our graduates will be engaged as practicing professionals in a broad range of careers in industry or government or will pursue advanced degrees in academic graduate education in engineering or a related field.
B. Our graduates will function effectively as members of teams demonstrating sensitivity to professional and societal contexts, integrity and versatility.

Student Outcomes
Graduates of the BSEE program are expected to know or have the following:

a. An ability to apply knowledge of mathematics, science and engineering
b. An ability to design and conduct experiments as well as to analyze and interpret data
c. An ability to design a system, component or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability
d. An ability to function on multidisciplinary teams
e. An ability to identify, formulate and solve engineering problems
f. An understanding of professional and ethical responsibility
g. An ability to communicate effectively
h. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental and societal context
i. A recognition of the need for and an ability to engage in lifelong learning
j. A knowledge of contemporary issues
k. An ability to use the techniques, skills and modern engineering tools necessary for engineering practice

BSEE Degree Requirements
To obtain the degree Bachelor of Science in Electrical Engineering, students must complete a minimum of 120 units consistent with the residency and other applicable requirements of Washington University and the McKelvey School of Engineering and subject to the following program requirements:

1. Common Studies program of the McKelvey School of Engineering: This includes courses in engineering, mathematics, chemistry, humanities, social sciences and technical writing. The required chemistry sequence is Chem 111A – Chem 151, although Chem 111A – Chem 112A – Chem 151 – Chem 152 is recommended. Chem 111A is preferred, but Chem 105 will be allowed.

2. Engr 4501 Engineering Ethics and Sustainability (1 unit).

3. Two of the following three computer science courses: CSE 131 Introduction to Computer Science (3 units), CSE 132 Introduction to Computer Engineering (3 units) or CSE 247 Data Structures and Algorithms (3 units).

4. Engineering and science breadth requirements: 9 units in engineering or science outside of electrical engineering. These units must be taken in the following areas: biomedical engineering, chemical engineering, computer science and engineering, mechanical engineering, systems science and...
engineering, economics, mathematics, physics, biology, chemistry, earth and planetary sciences, and pre-medicine. These units must be at the 200 level or higher and cannot be used to satisfy the Common Studies requirements (item 1 above) or the computer science requirement (item 3). Courses in other fields can be arranged with special departmental approval.

5. 31 units of required ESE courses:

6. Two upper-level laboratory courses (6 units) from the following list: ESE 331, ESE 435, ESE 447, ESE 448, ESE 465 and ESE 488. The selection must contain at least one course from ESE 331, ESE 435, ESE 465 and ESE 488.

7. 15 units of elective ESE courses in electrical engineering subjects, from the following list: ESE 330–399, ESE 400, ESE 405, ESE 407, ESE 415, ESE 425, ESE 429–497 and ESE 503–589. The selection must contain at least two courses from ESE 431, ESE 436, ESE 438, ESE 441, ESE 461, ESE 471 and ESE 482.

8. The entire course sequence for the BSEE containing engineering topics of at least 45 units. The numbers of engineering topic units assigned to undergraduate courses in the McKelvey School of Engineering vary from none (0) to the number of credits given to the course. For the precise number for each course, please refer to the table of Topics Units — Engineering Courses provided by Engineering Undergraduate Student Services (http://engineering.wustl.edu/current-students/student-services/Pages/default.aspx).

9. Limitations. No more than 3 credits of 500-level courses may be applied toward the EE elective requirement (item 7).

10. Limitations. No more than 6 units of the combined units of ESE 400 Independent Study and ESE 497 Undergraduate Research (including ESE 497A and ESE 497B) may be applied toward the EE elective requirement (item 7) of the BSEE degree. The balance of combined units, if there are any left, are allowed as free electives to satisfy the requirement for the total number of units.

11. The courses taken to satisfy the following BSEE degree requirements must be taken for a letter grade and not on a pass/fail basis: item 5 (required ESE courses), item 6 (upper-level laboratory courses) and item 7 (elective ESE courses).

## Electrical Engineering Sample Curriculum

Most students acquire more than 120 credit units. For a typical sequence of subjects for the BSEE degree, please refer to the following table:

### Bachelor of Science in Systems Science & Engineering

This professional degree program is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

#### Key Points
- Systems Engineering: how to integrate different components in engineering systems
- Operations Research: mathematical solutions to business problems
- Pre-Financial Engineering: the best preparation for the MS in Financial Engineering
- Applied Mathematics
- Control Engineering: how to control jet airplanes, electric power grids, and the nation’s economy
- Ideal for students strong in math and physics
- Ideal for students interested in engineering and business
- Ideal for students interested in a second degree
- The most mathematical program in the McKelvey School of Engineering
- The most flexible professional program in the McKelvey School of Engineering

The Bachelor of Science in Systems Science & Engineering (BSSSE) program educates students in the engineering and science of systems. Graduates are expected to have mathematical competence and knowledge of systems analysis, control, design methods, numerical methods, differential equations, dynamic systems theory, automatic control theory, system stability, estimation, optimization, modeling, identification, simulation and basic computer programming. Graduates will have an engineering outlook and engineer’s competence of their own and be able to interact fully with other engineers. They will also possess sufficient proficiency in computer use to design algorithms for simulation, estimation, control and optimization.

The engineering departments of high-technology industries are staffed by large numbers of engineers with this type of expertise. However, graduates are by no means restricted to careers in traditional industry or in high-technology industries. Within the outlined framework, a salient feature of the program is its flexibility and interdisciplinary nature. It is possible for students to orient their study toward preparation for systems science and engineering work in large, complex systems, such as transportation and power; communications networks; societal systems like the economy, ecology and cities; and biological systems. Students may wish to prepare for work along theoretical or professional lines. There is ample room in the program structure to accommodate all of these interests and to make preparation at the BS level ideally suited for a student’s future plans and interests.

For more information about the BS in Electrical Engineering curriculum (https://ese.wustl.edu/undergraduate/degreeprograms/Pages/electrical-engineering.aspx), please visit the ESE website.
Educational Objectives of the Bachelor of Science in Systems Science & Engineering (BSSSE) Degree Program

A. Our graduates will be engaged as practicing professionals in a broad range of careers in industry and government, or they will pursue advanced degrees in academic graduate education in engineering or a related field.

B. Our graduates will function effectively as members of teams demonstrating sensitivity to professional and societal contexts, integrity and versatility.

Student Outcomes

Graduates of the BSSSE program are expected to know or have the following:

a. An ability to apply knowledge of mathematics, science and engineering
b. An ability to design and conduct experiments as well as to analyze and interpret data
c. An ability to design a system, component or process to meet desired needs within realistic constraints, such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability
d. An ability to function on multidisciplinary teams
e. An ability to identify, formulate and solve engineering problems
f. An understanding of professional and ethical responsibility
g. An ability to communicate effectively
h. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental and societal context
i. A recognition of the need for and an ability to engage in lifelong learning
j. A knowledge of contemporary issues
k. An ability to use the techniques, skills and modern engineering tools necessary for engineering practice

BSSSE Degree Requirements

The course sequence designed to achieve the type of education outlined above requires at least 120 units, satisfies the residency and other applicable requirements of Washington University and the McKelvey School of Engineering, and meets the following program requirements:

1. Common Studies program of the McKelvey School of Engineering: This includes courses in engineering, mathematics, physics, chemistry, humanities, social sciences and technical writing. The required chemistry sequence is Chem 11A-Chem 151 (recommended) or Chem 105-Chem 151.

2. Engr 4501 Engineering Ethics and Sustainability (1 unit)
3. Required courses in systems science and engineering: ESE 105 Introduction to Electrical and Systems Engineering (3 units); ESE 205 Introduction to Engineering Design (3 units); ESE 318 Engineering Mathematics A (3 units) and ESE 319 Engineering Mathematics B (3 units); ESE 326 Probability and Statistics for Engineering (3 units); ESE 351 Signals and Systems (3 units); ESE 403 Operations Research (3 units); ESE 441 Control Systems (3 units); ESE 448 Systems Engineering Laboratory (3 units); and ESE 499 Systems Science and Engineering Capstone Design Project (3 units)

4. Two of the following three computer science courses: CSE 131 Introduction to Computer Science (3 units); CSE 247 Data Structures and Algorithms (3 units); and CSE 132 Introduction to Computer Engineering (3 units). Students are encouraged to take CSE 131 and CSE 247. The other possible sequence is CSE 131 and CSE 132.

5. One of the following two laboratory courses: ESE 447 Robotics Laboratory (3 units) or ESE 488 Signals and Communication Laboratory (3 units)

6. 12 units in elective courses in systems science and engineering are required: ESE 400 through 428; ESE 437; ESE 440 through 459; ESE 470 through 497; ESE 497; ESE 502 through 529; ESE 540 through 559; SWCD 5660 Designing Sustainable Social Policies & Programs: A System Dynamics Approach. Up to 3 units of the following business courses may be part of the 12 units of systems science and engineering electives: OSCM 356 Operations Management, OSCM 458 Operations Analytics, OMM 576 Foundations of Supply Chain Management, and OMM 577 Information Technology and Supply Chain Management.

7. 12 units in engineering concentration outside of systems science and engineering are required. These units must all be taken in one of the following engineering areas: Biomedical Engineering, Chemical Engineering, Computer Science & Engineering, Electrical Engineering (ESE 102; ESE 230 through 239; ESE 260 through 290; ESE 330 through 339; ESE 360 through 390; ESE 429 through 439; ESE 460 through 469; 490 through 496; ESE 498; ESE 530 through 539; ESE 560 through 589), or Mechanical Engineering & Materials Science. Of the 12 units, 9 units must be at the 200 level or higher. Sequences for concentrations in economics, mathematics, physics, pre-medicine and other fields can be arranged with special departmental approval to meet a student's specific needs. When a non-engineering discipline is chosen as the outside concentration, the student needs to pay special attention to the engineering topics unit requirement and make sure that enough engineering content is obtained from the other courses. The use of basic required courses to fulfill the requirement for an outside concentration is not permitted.
8. The entire course sequence for the BSSSE, containing engineering topics of at least 45 units, must be completed. The number of engineering topics units assigned to undergraduate courses in the McKelvey School of Engineering vary from none (0) to the number of credits given to the course. For the precise number for each course, please refer to the table of Topics Units — Engineering Courses (http://engineering.wustl.edu/current-students/student-services/Pages/default.aspx) provided by Engineering Undergraduate Student Services.

9. Limitations: No more than 6 units of the combined units of ESE 400 Independent Study and ESE 497 Undergraduate Research (including 497A and 497B) may be applied toward the SSE elective requirement (item 6) of the BSSSE degree. Any remaining combined units are allowed as free electives to satisfy the requirement for the total number of units.

10. The courses taken to satisfy the following BSSSE degree requirements must be taken for a letter grade and not on a pass/fail basis: item 3 (required ESE courses), item 5 (elective laboratory course) and item 6 (elective ESE courses).

**Systems Science & Engineering Sample Curriculum**

The program requirements for the BSSSE allow for a double major with another department. Changes in the program to accommodate such double majors may be made with departmental approval. For a sample program for the BSSSE, please refer to the following table:

Bachelor of Science in Applied Science (Electrical Engineering)

Students who do not plan to pursue a career in electrical engineering but who seek a strong foundation in the principles of electrical engineering may choose the Bachelor of Science in Applied Science (Electrical Engineering). The program ensures that the student learns the foundations of electrical engineering through breadth requirements. In addition, there is flexibility in selecting upper-level courses to meet the student’s individual objectives. This program also may be attractive for students interested in obtaining multiple degrees, because the requirements are less strict than for the BSEE degree. Historically, students have matched a degree in electrical engineering with degrees in other engineering disciplines, in the natural sciences, in music, in history and in business; other combinations are possible. This also may be an attractive option for students planning graduate studies in a variety of disciplines, including medicine, law or business. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

The degree requirements include the residency and general requirements of the university and the McKelvey School of Engineering as well as the following:

Total: 120

The program must include at least 48 units at the 300 level or higher.

The above program assumes the completion of the following courses:

- Math 132 Calculus II
- Math 233 Calculus III
- Math 217 Differential Equations
- Physics 197 Physics I
- Physics 198 Physics II
- ESE 318 Engineering Mathematics A
- ESE 319 Engineering Mathematics B
- ESE 326 Probability and Statistics for Engineering

Bachelor of Science in Applied Science (Systems Science & Engineering)

This program provides the student with the opportunity to prepare their academic career with maximum flexibility but also with enough organization to ensure substantive, consistent training in systems science methodology and outlook. This program is recommended if students wish to pursue a program that does not follow conventional lines. It is an especially advantageous degree for a double major in association with mathematics, physics, economics or another engineering discipline. The program can be planned to provide a desirable background for graduate work in biological, medical or management fields. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

The degree requirements include the residency and general requirements of the university and the McKelvey School of Engineering as well as the following:

<table>

Total: 120

The program must include at least 48 units at the 300 level or higher.

The above program assumes completion of the following courses:

- Math 132 Calculus II
- Math 233 Calculus III
- Math 217 Differential Equations
- Physics 197 Physics I
- Physics 198 Physics II
- ESE 318 Engineering Mathematics A
- ESE 319 Engineering Mathematics B
- ESE 326 Probability and Statistics for Engineering
The Second Major in Electrical Engineering

A second major in electrical engineering is ideal for students majoring in many areas, such as mathematics, physics, chemistry and biology. Students in the McKeelv School of Engineering as well as the other undergraduate divisions at Washington University now have the opportunity to pursue a second major in electrical engineering. Students are not allowed to add this second major to either the BS in Electrical Engineering or the BS in Applied Science (Electrical Engineering).

The requirements for a second major in electrical engineering are as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESE 105</td>
<td>Introduction to Electrical and Systems Engineering</td>
<td>3</td>
</tr>
<tr>
<td>ESE 230</td>
<td>Introduction to Electrical and Electronic Circuits</td>
<td>4</td>
</tr>
<tr>
<td>ESE 232</td>
<td>Introduction to Electronic Circuits</td>
<td>3</td>
</tr>
<tr>
<td>ESE 260</td>
<td>Introduction to Digital Logic and Computer Design</td>
<td>3</td>
</tr>
<tr>
<td>ESE 330</td>
<td>Engineering Electromagnetics Principles</td>
<td>3</td>
</tr>
<tr>
<td>ESE 351</td>
<td>Signals and Systems</td>
<td>3</td>
</tr>
<tr>
<td>CSE 131</td>
<td>Introduction to Computer Science</td>
<td>3</td>
</tr>
</tbody>
</table>

In addition, students must select 18 units of ESE electives from the following list:

- ESE 330-399
- ESE 400
- ESE 405
- ESE 407
- ESE 425
- ESE 429-499
- ESE 503-589

The above program assumes completion of the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 132 &amp; Math 233</td>
<td>Calculus II and Calculus III</td>
<td>6</td>
</tr>
<tr>
<td>Math 217</td>
<td>Differential Equations</td>
<td>3</td>
</tr>
<tr>
<td>ESE 318</td>
<td>Engineering Mathematics A</td>
<td>3</td>
</tr>
<tr>
<td>ESE 319</td>
<td>Engineering Mathematics B</td>
<td>3</td>
</tr>
<tr>
<td>ESE 326</td>
<td>Probability and Statistics for Engineering</td>
<td>3</td>
</tr>
<tr>
<td>Physics 197 &amp; Physics 198</td>
<td>Physics I &amp; Physics II</td>
<td>4</td>
</tr>
</tbody>
</table>

Students may petition to substitute electrical science-oriented courses from other disciplines in Arts & Sciences (e.g., certain courses in physics or applied mathematics) for up to two of the above required courses. Within this second major in electrical engineering, areas of concentration are possible in devices and circuits, applied physics, signals and imaging, and control systems.

For more information, please contact the director of the program, Martin Arthur.[1](https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=67)

The Second Major in Systems Science & Engineering

A second major in systems science and engineering is ideal for study in many areas, including physics, chemistry, economics, finance, supply chain management and computational biology. Students in the McKeelv School of Engineering as well as the other undergraduate divisions at Washington University have the opportunity to pursue a second major in systems science and engineering in the Preston M. Green Department of Electrical & Systems Engineering in the McKeelv School of Engineering. Students are not allowed to add this second major to either the BS in SSE or the BS in Applied Science (SSE).

The requirements for a second major in systems science and engineering are as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESE 105</td>
<td>Introduction to Electrical and Systems Engineering</td>
<td>3</td>
</tr>
<tr>
<td>ESE 351</td>
<td>Signals and Systems</td>
<td>3</td>
</tr>
<tr>
<td>ESE 403</td>
<td>Operations Research</td>
<td>3</td>
</tr>
<tr>
<td>ESE 441</td>
<td>Control Systems</td>
<td>3</td>
</tr>
<tr>
<td>CSE 131</td>
<td>Introduction to Computer Science</td>
<td>3</td>
</tr>
</tbody>
</table>

In addition, 18 units of ESE courses in the systems area are to be chosen from the following list:

- ESE 205
- ESE 400 through 428
- ESE 437
- ESE 440 through 459
- ESE 470 through 499
- ESE 502 through 529
- ESE 540 through 559
- SWCD 5660

Students may petition to substitute systems-oriented courses from other disciplines in Arts & Sciences for two of these six courses (for example, courses in computational physics, econometrics or computational mathematics).
The above program assumes completion of the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 132</td>
<td>Calculus II &amp; Calculus III</td>
<td>6</td>
</tr>
<tr>
<td>Math 217</td>
<td>Differential Equations</td>
<td>3</td>
</tr>
<tr>
<td>ESE 318</td>
<td>Engineering Mathematics A</td>
<td>3</td>
</tr>
<tr>
<td>ESE 319</td>
<td>Engineering Mathematics B</td>
<td>3</td>
</tr>
<tr>
<td>ESE 326</td>
<td>Probability and Statistics for Engineering</td>
<td>3</td>
</tr>
<tr>
<td>Physics 197</td>
<td>Physics I</td>
<td>4</td>
</tr>
<tr>
<td>Physics 198</td>
<td>Physics II</td>
<td>4</td>
</tr>
</tbody>
</table>

Within this second major in systems science and engineering, areas of concentration are possible in robotics, control systems and operations research.

For more information, contact the director of the program, Shen Zeng (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=121).

The Second Major in Financial Engineering

A second major in financial engineering is ideal for students who are interested in careers or graduate school in financial engineering, quantitative finance or related fields. This program covers classes in engineering, computer science and business.

Background Course Work: 18 units

<table>

</table>

Financial Mathematics (ESE 427) is to be taken after Capital Markets and Financial Management (FIN 340) and before the 6 credit hours of FIN 500+.

Students must have a 3.0 or higher grade-point average to pursue this second major, which includes the cumulative GPA, the Business GPA, and the Engineering GPA.

For students earning undergraduate degrees from the McKelvey School of Engineering, a maximum of 12 units may be double-counted for this second major and an engineering or computer science undergraduate degree (this does not include the background course work).

The Minor in Applied Physics & Electrical Engineering

Units required: 19

The minor in applied physics & electrical engineering provides students with course work that will enhance their background, knowledge and skills in the topical area of applied physics and electrical engineering. This program covers classes in several fields of science and engineering, encompassing electronics, solid-state devices, applied electromagnetics, radiofrequency and microwave technology, fiber-optic communication, applied optics, nanophotonics, sensors, and medical and biological imaging technology.

This program consists of six courses total: one required course, two core courses and three electives. At least three of these six courses must be ESE courses taught by the ESE department and not taught by other departments by means of cross-listing.
Students who complete the requirements in Applied Physics & Electrical Engineering subjects at Washington University as specified below may be awarded a minor in applied physics & engineering.

**Target students:** Students who are interested in applied physics and electrical engineering applications.

**Prerequisite:** ESE 318 Engineering Mathematics A or its equivalent is recommended.

**Course Requirements**

**Required course:**
- ESE 230 Introduction to Electrical and Electronic Circuits

**One core lab course** from the following list:
- ESE 331 Electronics Laboratory or Physics 321 Electronics Laboratory
- ESE 435 Electrical Energy Laboratory

**One core course** from the following list:
- ESE 232 Introduction to Electronic Circuits
- ESE 330 Engineering Electromagnetics Principles or Physics 421 Electricity and Magnetism
- ESE 337 Electronic Devices and Circuits
- ESE 444 Sensors and Actuators
- Physics 471 Quantum Mechanics

**Three electives** from the following list. These three courses (i) must exclude the course selected in requirement (3) above and (ii) must include at least one physics course:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESE 232</td>
<td>Introduction to Electronic Circuits</td>
<td>3</td>
</tr>
<tr>
<td>ESE 330</td>
<td>Engineering Electromagnetics Principles</td>
<td>3</td>
</tr>
<tr>
<td>ESE 332</td>
<td>Power, Energy and Polyphase Circuits</td>
<td>3</td>
</tr>
<tr>
<td>ESE 337</td>
<td>Electronic Devices and Circuits</td>
<td>3</td>
</tr>
<tr>
<td>ESE 433</td>
<td>Radio Frequency and Microwave Technology for Wireless Systems</td>
<td>3</td>
</tr>
<tr>
<td>ESE 434</td>
<td>Solid-State Power Circuits and Applications</td>
<td>3</td>
</tr>
<tr>
<td>ESE 438</td>
<td>Applied Optics</td>
<td>3</td>
</tr>
<tr>
<td>ESE 444</td>
<td>Sensors and Actuators</td>
<td>3</td>
</tr>
<tr>
<td>ESE 531</td>
<td>Nano and Micro Photonics</td>
<td>3</td>
</tr>
<tr>
<td>ESE 532</td>
<td>Introduction to Nano-Photonic Devices</td>
<td>3</td>
</tr>
<tr>
<td>ESE 534</td>
<td>Special Topics in Advanced Electrodynamics</td>
<td>3</td>
</tr>
<tr>
<td>ESE 575</td>
<td>Fiber-Optic Communications</td>
<td>3</td>
</tr>
<tr>
<td>Physics 463</td>
<td>Statistical Mechanics and Thermodynamics</td>
<td>3</td>
</tr>
</tbody>
</table>

**Total Units:** 16

**Electives:** Students must select two electrical engineering elective courses from the following list:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESE 232</td>
<td>Introduction to Electronic Circuits</td>
<td>3</td>
</tr>
<tr>

<tr>
<td>ESE 425</td>
<td>Random Processes and Kalman Filtering</td>
<td>3</td>
</tr>
<tr>
<td>ESE 429–499; ESE 503-589</td>
<td></td>
<td>3</td>
</tr>
</tbody>
</table>

For more information, please contact the program director, Jung-Tsung Shen (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=79).

**The Minor in Electrical Engineering**

This minor consists of fundamental courses in core electrical engineering areas of devices and circuits, applied physics, and signals and systems. Elective choices allow further depth in advanced devices, optics, signal processing, and control systems or greater breadth within electrical engineering.

**Units required:** 16

**Required courses:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESE 230</td>
<td>Introduction to Electrical and Electronic Circuits</td>
<td>4</td>
</tr>
<tr>
<td>ESE 330</td>
<td>Engineering Electromagnetics Principles</td>
<td>3</td>
</tr>
<tr>
<td>ESE 351</td>
<td>Signals and Systems</td>
<td>3</td>
</tr>
</tbody>
</table>

**Total Units:** 10

**Electives:** Students must select two electrical engineering elective courses from the following list:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESE 232</td>
<td>Introduction to Electronic Circuits</td>
<td>3</td>
</tr>
<tr>
<td>ESE 260</td>
<td>Introduction to Digital Logic and Computer Design</td>
<td>3</td>
</tr>
<tr>
<td>ESE 330–399</td>
<td></td>
<td></td>
</tr>
<tr>
<td>ESE 400</td>
<td>Independent Study</td>
<td>max 3</td>
</tr>
<tr>
<td>ESE 405</td>
<td>Reliability and Quality Control</td>
<td>3</td>
</tr>
<tr>
<td>ESE 407</td>

</tr>
<tr>
<td>ESE 425</td>
<td>Random Processes and Kalman Filtering</td>
<td>3</td>
</tr>
<tr>
<td>ESE 429–499; ESE 503-589</td>
<td></td>
<td>3</td>
</tr>
</tbody>
</table>

For more information, contact the director for the minor, Martin Arthur (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=67).

**The Minor in Mechatronics**

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role for "smart" systems, which combine electronic and mechanical
components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

**Four required courses:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MEMS 255</td>
<td>Dynamics (Dynamics)</td>
<td>3</td>
</tr>
<tr>
<td>MEMS 411</td>
<td>Mechanical Engineering Design Project (Mechatronics project)</td>
<td>3</td>
</tr>
<tr>
<td>ESE 444</td>
<td>Sensors and Actuators</td>
<td>3</td>
</tr>
<tr>
<td>ESE 446</td>
<td>Robotics: Dynamics and Control</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td><strong>Total Units</strong></td>
<td><strong>12</strong></td>
</tr>
</tbody>
</table>

**Two electives from the following:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MEMS 4301</td>
<td>Modeling, Simulation and Control</td>
<td>3</td>
</tr>
<tr>
<td>or ESE 441</td>
<td>Control Systems</td>
<td></td>
</tr>
<tr>
<td>MEMS 4310</td>
<td>Dynamics and Vibrations</td>
<td>3</td>
</tr>
<tr>
<td>ESE 337</td>
<td>Electronic Devices and Circuits</td>
<td>3</td>
</tr>
<tr>
<td>ESE 482</td>
<td>Digital Signal Processing</td>
<td>3</td>
</tr>
</tbody>
</table>

**Prerequisite:**

Basic programming course: CSE 131 Introduction to Computer Science

For more information, contact the director of the minor, Dennis Mell (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=150).

**The Minor in Robotics**

Robotic systems have a wide range of applications in modern technology and manufacturing. Robots can vary in complexity and use, from the microrobots used for surgical procedures to the moderate-size robots common in manufacturing and undersea exploration to the macrorobots used for the disposal of nuclear wastes and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in the design and use of robots.

**Units required:** 18

**Prerequisites:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 217</td>
<td>Differential Equations</td>
<td>3</td>
</tr>
<tr>

<td>Robotics: Dynamics and Control</td>
<td>3</td>
</tr>
<tr>
<td>ESE 447</td>
<td>Robotics Laboratory</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td><strong>Total Units</strong></td>
<td><strong>12</strong></td>
</tr>
</tbody>
</table>

Two additional courses must be chosen with the approval of the director of the program for a minor in robotics. Suggested courses are as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CSE 417T</td>
<td>Introduction to Machine Learning</td>
<td>3</td>
</tr>
<tr>
<td>CSE 452A</td>
<td>Computer Graphics</td>
<td>3</td>
</tr>
<tr>
<td>CSE 546T</td>
<td>Computational Geometry</td>
<td>3</td>
</tr>
<tr>
<td>ESE 407</td>
<td>Analysis and Simulation of Discrete Event Systems</td>
<td>3</td>
</tr>
<tr>
<td>ESE 435</td>
<td>Electrical Energy Laboratory</td>
<td>3</td>
</tr>
<tr>
<td>ESE 441</td>
<td>Control Systems</td>
<td>3</td>
</tr>
<tr>
<td>or MEMS 4301</td>
<td>Modeling, Simulation and Control</td>
<td></td>
</tr>
<tr>
<td>MEMS 3110</td>
<td>Machine Elements</td>
<td>3</td>
</tr>
</tbody>
</table>

For more information, contact the director of the minor, Dennis Mell (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=150).

**The Minor in Systems Science & Engineering**

This minor consists of fundamental courses in control systems and operations research. In the area of control systems, students will be introduced to design techniques for controlling engineering and socioeconomic systems such as airplanes, automobiles, nuclear reactors, ecological systems, communication networks, the nation’s economy and biological systems. In the area of operations research, students are introduced to techniques for optimally managing business
resources and controlling business networks such as supply chains.

Requirements:

Students who complete 15 units of course work in Systems Science & Engineering at Washington University as specified below may be awarded a minor in systems science & engineering.

The required courses for the minor are as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESE 351</td>
<td>Signals and Systems</td>
<td>3</td>
</tr>
<tr>
<td>ESE 403</td>
<td>Operations Research</td>
<td>3</td>
</tr>
<tr>
<td>ESE 441</td>
<td>Control Systems</td>
<td>3</td>
</tr>
</tbody>
</table>

Students must also select 6 units of Systems Science & Engineering electives from the following list: ESE 400 through 425; ESE 437; ESE 440 through 459 (except 449); and ESE 470 through 499.

For more information, contact the director for the minor, Shen Zeng (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=121).

# Energy, Environmental & Chemical Engineering

## About Energy, Environmental & Chemical Engineering

Our department focuses on environmental engineering, energy systems engineering and chemical engineering. We provide integrated and multidisciplinary programs of scientific education. Our mission is accomplished by instilling a tradition of lifelong learning; offering a curriculum of fundamental education coupled with applications in advanced focal areas and strengthened by our breadth in other disciplinary areas; participating in cutting-edge research with faculty and industrial partners; and providing access to state-of-the-art facilities and instrumentation. Most undergraduate students in the department will pursue the BS in Chemical Engineering degree, accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org), or the BS in Environmental Engineering degree (launched spring 2019). Other students may pursue the BS in Applied Science degree with a major in chemical engineering. The department offers a minor in environmental engineering science, and, in collaboration with other engineering departments, we co-sponsor a minor in energy engineering and a minor in nanoscale science and engineering. Graduate degrees (Master of Engineering, Master of Science and Doctor of Philosophy) in Energy, Environmental & Chemical Engineering are also offered by the department.

Chemical engineers are involved in the transfer of scientific discoveries to modern technologies and novel products that benefit society and minimize the impact on the environment. They deal with multiscale aspects of generating clean energy, producing novel and superior materials, and utilizing the biological revolution to manufacture new products. They are involved in the development and manufacture of consumer products as well as in the design, operation and control of processes in a variety of industries (e.g., petroleum, petrochemical, chemical, consumer products, food, feed, pharmaceuticals). Their broad training in basic sciences (e.g., chemistry, physics, biology, mathematics) coupled with a strong foundation in chemical engineering principles (e.g., thermodynamics, mass and energy balances, transport phenomena, kinetics, separations, reaction engineering, control, product development, process design) makes them invaluable team members and leaders in any engineering enterprise. It also prepares them well for graduate studies in biochemical, biomedical, chemical, environmental and materials engineering. In addition, the BS in Chemical Engineering is a great starting point for pursuing a degree in business, law or medicine.

Environmental engineers apply scientific and engineering principles to assess, manage and design sustainable systems for the protection of human and ecological health. The designs and technologies that they develop provide safe and sufficient public water supplies, enable effective and efficient treatment and resource recovery from wastewater and other wastes, and control pollutant releases that protect water, soil and air quality. Environmental engineers also seek to understand the effect of technological advances on the environment and to identify opportunities to improve the environmental sustainability of new technologies. Environmental engineers have broad training in basic sciences, mathematics and computational approaches as well as an engineering foundation that includes mass and energy balances, thermodynamics, transport phenomena, and chemical, physical and biological treatment processes. The training of environmental engineers also includes natural science and environmental social science and the humanities. This training prepares environmental engineers to apply technological solutions within specific environmental and societal contexts. Environmental engineering graduates are prepared to enter professional practice and to pursue graduate study in environmental engineering and allied fields.

The curricula are planned to provide students with a strong background in basic engineering concepts while allowing students individual latitude to emphasize study in a specialized area or to obtain added breadth both within and outside of chemical or environmental engineering.

## Mission Statement

The mission of the department is to teach energy, environmental and chemical engineering principles and their application in an inspiring learning environment; to prepare students for engineering careers by developing the skills of critical thinking, analysis and communication proficiency; and to instill a sense of professional ethics and societal responsibility.
Advising
The department takes pride in its mentoring of undergraduate students. Each student who declares chemical or environmental engineering as a (potential) major is assigned an academic adviser from the full-time department faculty. Typically, the same adviser follows the student’s academic progress and serves as a mentor from the first year through graduation.

Faculty

Chair and Endowed Professor
Pratim Biswas (https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx)
Lucy and Stanley Lopata Professor
PhD, California Institute of Technology
Aerosol science and engineering, air quality and pollution control, nanotechnology, environmentally benign energy production

Endowed Professors
Richard L. Axelbaum (https://engineering.wustl.edu/Profiles/Pages/Richard-Axelbaum.aspx)
Stifel and Quinette Jens Professor
PhD, University of California, Davis
Combustion, advanced energy systems, clean coal, aerosols, nanoparticle synthesis, rechargeable battery materials, thermal science

Milorad P. Dudukovic (https://engineering.wustl.edu/Profiles/Pages/Milorad-Dudukovic.aspx)
Laura and William Jens Professor
PhD, Illinois Institute of Technology
Chemical reaction engineering, multiphase reactors, visualization of multiphase flows, tracer methods, environmentally benign processing

Daniel E. Giammar (https://engineering.wustl.edu/Profiles/Pages/Daniel-Giammar.aspx)
Walter E. Browne Professor of Environmental Engineering
PhD, California Institute of Technology
Aquatic chemistry, environmental engineering, water quality, water treatment

Vijay Ramani (https://eece.wustl.edu/faculty/Pages/faculty.aspx?bio=108)
Director of Graduate Studies
Roma B. and Raymond H. Witcoff Distinguished University Professor
PhD, University of Connecticut
Electrochemical engineering, energy conversion

Professors

Young-Shin Jun (https://engineering.wustl.edu/Profiles/Pages/Young-Shin-Jun.aspx)
PhD, Harvard University
Aquatic processes, molecular issues in chemical kinetics, environmental chemistry, surface/physical chemistry, environmental engineering, biogeochemistry, nanotechnology

Randall Martin (https://engineering.wustl.edu/news/Pages/Martin-to-join-EECE-faculty-.aspx)
PhD, Harvard University
Characterizing atmospheric composition to inform effective policies surrounding major environmental and public health challenges ranging from air quality to climate change

Palghat A. Ramachandran (https://engineering.wustl.edu/Profiles/Pages/Palghat-Ramachandran.aspx)
PhD, University of Bombay
Chemical reaction engineering, applied mathematics, process modeling, waste minimization, environmentally benign processing

Yinjie Tang (https://engineering.wustl.edu/Profiles/Pages/Yinjie-Tang.aspx)
PhD, University of Washington, Seattle
Metabolic engineering, bioremediation

Jay R. Turner (https://engineering.wustl.edu/Profiles/Pages/Jay-Turner.aspx)
Vice Dean for Education
DSc, Washington University
Air quality planning and management; aerosol science and engineering, green engineering

Jian Wang (https://eece.wustl.edu/faculty/Pages/faculty.aspx?bio=126)
PhD, California Institute of Technology
Aerosol properties and processes, nucleation and new particle formation, aerosols in the marine environment, effects of aerosols on cloud microphysical properties and macrophysical struct

Associate Professors

Marcus Foston (https://engineering.wustl.edu/Profiles/Pages/Marcus-Foston.aspx)
PhD, Georgia Institute of Technology
Utilization of biomass resources for fuel and chemical production, renewable synthetic polymersure, and development of advanced aerosol instruments

Tae Seok Moon (https://engineering.wustl.edu/Profiles/Pages/Tae-Seok-Moon.aspx)
PhD, Massachusetts Institute of Technology
Metabolic engineering and synthetic biology
Brent Williams (https://engineering.wustl.edu/Profiles/Pages/Brent-Williams.aspx)
Raymond R. Tucker Distinguished InCEES Career Development Associate Professor

PhD, University of Florida
wastewater, sustainable development, environmental engineering, and engineering education

Joint Faculty

Doug Allen
PhD, Purdue University
USDA Research Scientist, Danforth Plant Sciences Center
Metabolic networks of oilseed plants

Nathan Ravi
PhD, Virginia Polytechnic Institute
Cataract, ocular biomaterials

Adjunct Faculty

Robert Heider
MME, Washington University
Process control and process design

Gary Moore
MS, Missouri University of Science and Technology
Environmental management

Nicholas J. Nissing
BS, Washington University
Product development and process design

Keith Tomazi
PhD, University of Missouri-Rolla
Process development engineering
Majors

Please visit the following pages for information about energy, environmental and chemical engineering majors:

- Bachelor of Science in Chemical Engineering (p. 1039)
- Bachelor of Science in Environmental Engineering (p. 1041)
- Bachelor of Science in Applied Science (Chemical Engineering) (p. 1043)
- Double Majors and the Pre-Medical Program (p. 1043)

Minors

Please visit the following pages for information about the EECE minors:

- Minor in Environmental Engineering Science (p. 1043)
- Minor in Energy Engineering (p. 1044)
- Minor in Nanoscale Science & Engineering (p. 1045)

Courses

Visit online course listings to view semester offerings for E44 EECE (https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E44&crslvl=1:5).

E44 EECE 100 Independent Study

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: freshman standing. Credit variable, maximum 3 units.

E44 EECE 101 Introduction to Energy, Environmental and Chemical Engineering

Key technical issues that face our society and some of the emerging technologies that hold promise for the future are examined and discussed. Relationship to chemical engineering principles is emphasized. Credit 3 units. EN: TU

E44 EECE 103 Topics in Energy, Environmental and Chemical Engineering

Key technical issues that face our society and some of the emerging technologies that hold promise for the future are examined and discussed. This course provides a broader context for content delivered in concurrent core chemical and environmental engineering courses. Credit 1 unit.

E44 EECE 112 Earth's Future: Causes and Consequences of Global Climate Change

Earth's Future: Causes and Consequences of Global Climate Change examines 1) the physical basis for climate change; 2) how climates are changing and how we know and assess that climates are changing; and 3) the effects of climate change on natural and human systems. The course is team-taught and will involve participation by scholars across the university with expertise in specific subjects. This is a broad, introductory course for first year students and presumes no special subject matter knowledge on the part of the student. Same as I50 INTER D 101
Credit 3 units. A&S: FYBB A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

E44 EECE 200 Independent Study

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: sophomore standing. Credit variable, maximum 3 units.

E44 EECE 202 Computational Modeling in Energy, Environmental and Chemical Engineering

Computational tools to solve engineering, design and scientific problems encountered in thermodynamics, transport phenomena, separation processes and reaction kinetics. Introduction to programming skills in MATLAB and use of various MATLAB toolboxes. Theory and application of numerical methods for solution of common problems, including methods for root-finding/optimization, curve fitting (regression, interpolation, and spline), integration, differentiation, and ordinary differential equations and boundary value problems. Illustrative application examples. Prerequisites: Math 233 and Math 217, or permission of instructor. Credit 3 units. EN: TU

E44 EECE 204 Thermodynamics II in EECE

Molecular motions, kinetic theory of gases, kinetic theory of dense phases, chemical kinetics. Prerequisite: EECE 203. Credit 3 units. EN: TU

E44 EECE 205 Process Analysis and Thermodynamics

This course is an introduction to the use of mathematics and methods of engineering in the analysis of chemical and physical processes. It will address the use of balances (mass, energy, entropy) to describe processes with and without chemical reaction in both transient and steady state conditions as well as classical thermodynamics focused on processes, first and second laws, and properties of pure substances. Prerequisites: Chem 112A and Math 233. Corequisite: Math 217.
E44 EECE 210 Introduction to Environmental Engineering
The objective of this course is to introduce students to the
field of environmental engineering. The course will emphasize
basic principles of mass and energy conservation which govern
physical, chemical and biological processes. Applications include
the estimation of contaminant concentrations and the design of
environmental controls. Prerequisites: Chem 112A and Math 233
Credit 3 units. EN: TU

E44 EECE 300 Independent Study
Independent investigation on topic of special interest. Interested
students are encouraged to approach and engage faculty to
develop a topic of interest. A form declaring the agreement
must be filed in the departmental office. Petitions are generally
considered in the semester preceding the independent study
experience. Prerequisite: junior standing.
Credit variable, maximum 3 units.

E44 EECE 301 Transport Phenomena I: Basics and Fluid
Mechanics
Engineering principles involved in the exchange of heat and
matter in chemical processes. Laws governing the flow of liquids
and gases in laboratory and plant equipment. Corequisite:
EECE 202; Prerequisites: EECE 203, Math 217, ESE 318, or
permission of instructor.
Credit 3 units. EN: BME T, TU

E44 EECE 302 Transport Phenomena II: Mass Transfer
Engineering principles involved in the exchange of heat and
matter in chemical processes. Laws governing the flow of liquids
and gases in laboratory and plant equipment. Prerequisite:
EECE 301
Credit 3 units. EN: BME T, TU

E44 EECE 303 Transport Phenomena III: Energy Transfer
Processes
Introductory treatment of the principles of heat transfer by
conduction, convection, or radiation. Mathematical analysis of
steady and unsteady conduction along with numerical methods.
Analytical and semi empirical methods of forced and natural
convection systems. Boiling and condensation heat transfer.
Radiation between black-body and real surfaces. Radiation
network analysis. Corequisite: EECE 302 or equivalent.
Credit 3 units. EN: BME T, TU

E44 EECE 304 Mass Transfer Operations
Stagewise and continuous mass transfer operations, including
distillation, gas absorption, humidification, leaching, liquid
extraction, and membrane separations. Prerequisites: Math 217,
EECE 201 and EECE 203.
Credit 3 units. EN: BME T, TU

E44 EECE 305 Materials Science
Introduces the chemistry and physics of engineering materials.
Emphasis on atomic and molecular interpretation of physical
and chemical properties, the relationships between physical
and chemical properties, and performance of an engineering
material. Prerequisite: Math 217, Chem 111A.
Credit 3 units. EN: BME T, TU

E44 EECE 309 Environmental Engineering Fate and
Transport
The objective of this course is to introduce students to the
fundamental processes that control contaminant fate and
transport in the natural and built environment. The course will
highlight mass transport and transformation in surface water, soil
and groundwater, and atmosphere. Students will be introduced
to environmental transport modeling software to solve applied
problems. Prerequisites: EECE 210 and EECE 301.
Credit 3 units. EN: TU

E44 EECE 311 Green Engineering
Strategies and methods for waste minimization and pollutant
Environmental transport and fate modeling. Design of heat
and mass exchange networks for energy and waste reduction.
Prerequisite: EEC E 203 or permission of instructor.
Credit 3 units. EN: BME T, TU

E44 EECE 314 Air Quality Engineering with Lab
Introduction to air quality and pollution control. Pollutant
emissions, atmospheric chemistry, and fate. Air pollution
meteorology and atmospheric dispersion. Application of
chemistry, thermodynamics, and fluid mechanics in the selection
and design of air pollution control equipment. Labs to measure
air quality and demonstrate control principles.
Credit 4 units. EN: TU

E44 EECE 400 Independent Study
Independent investigation on topic of special interest. Interested
students are encouraged to approach and engage faculty to
develop a topic of interest. A form declaring the agreement
must be filed in the departmental office. Petitions are generally
considered in the semester preceding the independent study
experience. Prerequisite: senior standing.
Credit variable, maximum 6 units.

E44 EECE 401 Chemical Process Dynamics and Control
A state-of-the-art industrial virtual plant is used for
the development of dynamic simulations, selection of
instrumentation, statistical analysis of variability, and
implementation of process control to improve process operation
and efficiency. Prerequisite: Math 217 and EECE 201.
Credit 3 units. EN: BME T, TU

E44 EECE 402 ChE Capstone
Application of engineering science and design, fundamentals of
process and product development, computational techniques
and economic principles to design of chemical and biological
processes and procedures. A design project and/or an AIChE
national design contest is included. Prerequisites: EECE 203,
301, 302, 304 and 403.
Credit 3 units. EN: BME T, TU

E44 EECE 403 Chemical Reaction Engineering
Introduction to chemical reaction engineering principles and
applications in process and product development. Evaluation
of reaction rates from mechanisms and experimental data,
quantification of pertinent transport effects and application to
reactor and product design. Prerequisites: EECE 201, 203, 204,
301.
E44 EECE 405 Unit Operations Laboratory
Laboratory projects focused on the application of chemical engineering principles (transport, thermodynamics, separations, etc.). Student teams design multi-week experiments utilizing unit operations equipment to solve realistic engineering problems. Includes analysis of safety and instrumentation. One laboratory period each week with supplemental lecture sessions. Emphasis on independent learning, teamwork, and technical communication skills. Prerequisites: EECE 301, 304; Corequisite: EECE 403.
Credit 3 units. EN: BME T, TU

E44 EECE 407 Environmental Biotechnology
This course aims to provide students with a background in current environmental biotechnology and to stimulate ideas about future potential new technologies. Students will gain qualitative and quantitative skills related to bioreactor designs in environmental applications (e.g., activated sludge, anaerobic digestion, membrane bioreactors). Special focus will be placed on the application of mathematical models that are currently widely used in wastewater engineering, such as the International Water Association models. Hands-on experience with biological water treatment process modelling will be provided. Finally, students will be encouraged to explore links between environmental biotechnologies and a "one health" approach to public health. Prerequisites: Biol 2960 or EECE 306, ESE 326, EECE 204, EECE 210.
Credit 3 units. EN: TU

E44 EECE 411 International Experience in EECE
This course will provide undergraduate students with an international experience related to energy, environmental and/or chemical engineering. The country visited will vary from year to year, with one or more EECE faculty members developing the program in collaboration with McDonnell Global Energy and Environment Partnership (MAGEEP) universities. Example activities include conducting field or laboratory research, attending short courses taught by MAGEEP university faculty members, and visiting attractions relevant to the course focus (e.g., industrial facilities). Students will also gain an understanding of the local culture and history of the country visited. Course content will include a seminar series in the spring semester prior to the international experience, a two- to three-week visit to the location of study, and a follow-up student project and presentations during the fall semester that draw upon the experience. Students will enroll in EECE 411 for the fall semester following the trip.
Credit 3 units. EN: BME T, TU

E44 EECE 412 Sustainability Exchange: Community and University Practicums
The Sustainability Exchange will bring together students working in transdisciplinary teams to tackle real-world energy, environmental, and sustainability problems through an experiential form of education. Students will participate in projects with clients and partners on- or off-campus, developed with and guided by faculty advisers drawn from across the university, with the intention of delivering an applicable end-product that explores "wicked" problems requiring innovative methods and solutions. These projects matter to the client or partner. The team-based project will be complemented by a seminar that will explore the field of design and design thinking through problem solving strategies and methodologies drawn from a wide range of creative practices, including design, engineering and science, as well as contemporary topics in energy, environment and sustainability. Students will draw on these topics to influence their projects. This course is open to all undergraduate juniors and seniors. An application is required; students will be accepted off the wait list following the application process. Same as I50 INTER D 405
Credit 3 units. A&S IQ: SSC Arch: SSC Art: CPSC, SSC EN: S

E44 EECE 413 Energy Conversion and Storage
This course takes a thermodynamics perspective to analyzing electricity production and distribution systems, which are imperative to modern society. The course contains a hands-on laboratory component. Traditional and advanced heat engine cycles will be discussed. Opportunities and challenges with renewable energy technologies will be covered. Essential to the widespread adoption of renewable electricity sources and also to increasing energy efficiency are smart grid and smart building technologies. The goal is to give the student a quantitative overview while focusing in on the details of a few important technological examples. Prerequisites: E44 203 and E44 301.
Credit 3 units. EN: BME T, TU

E44 EECE 414 New Product and Process Development
An overview of product development, innovative solutions to technical problems, designed experimentation, evaluation of abstract data, product design, and the basics of intellectual property. Prerequisites: junior standing and Chem 251, EECE 203 or permission of the instructor.
Credit 3 units. EN: TU

E44 EECE 423 Senior Thesis
Research project to be selected by the student with the permission and recommendation of a faculty supervisor and the approval of the department chair. At conclusion of project, student prepares a report in the form of a senior thesis.
Credit variable, maximum 6 units.

E44 EECE 424 Digital Process Control Laboratory
Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics, and process control. Exercises in data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature, and pressure control. Term project. Prerequisite: ESE 441 or EECE 401 or equivalent.
Credit 3 units. EN: BME T, TU

E44 EECE 425 Environmental Engineering Laboratory
Laboratory experiments to illustrate the application of engineering fundamentals to environmental systems. Applications of experimental design and data analysis principles. Introduction to relevant analytical instrumentation and laboratory techniques. Laboratory work supported by theoretical analysis and modeling as appropriate. Prerequisite: consent of instructor.
Credit 3 units. EN: BME T, TU
E44 EECE 426 ChE Honors Design Project for AIChE Student Contest Problem
Application of engineering science and design, fundamentals of process and product development, computational techniques and economic principles to design of chemical and biological processes and procedures in solving the AIChE national student contest problem. Up to two single and up to two group (2-3 per group) solutions may be chosen for national competition. Corequisites: EECE 402, 403. Prerequisites: EECE 203, 301, 302, 304. Credit 1 unit. EN: TU

E44 EECE 500 Independent Study
Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: graduate-level standing. Credit variable, maximum 9 units.

E44 EECE 501 Transport Phenomena in EECE
The aim of the course is for students to develop skills in applying principles of momentum, heat and mass transport in a unified manner to problems encountered in the areas of energy, environmental and chemical processes. A systems approach will be followed so that the general principles can be grasped, and the skills needed to develop mathematical models of seemingly different processes will be emphasized. This provides the students with general tools that they can apply later in their chosen field of research. Credit 3 units.

E44 EECE 502 Advanced Thermodynamics in EECE
The objective of this course is to understand classical thermodynamics at a deeper level than is reached during typical undergraduate work. Emphasis will be placed on solving problems relevant to chemical engineering materials science. Prerequisite: E44 203 or equivalent. Credit 3 units.

E44 EECE 503 Mathematical Methods in EECE
The course will introduce students to mathematical principles essential for graduate study in any engineering discipline. Applied mathematical concepts will be demonstrated by applications to various areas in energy, environmental, biomedical, chemical, mechanical, aerospace, electrical and civil engineering. Credit 3 units.

E44 EECE 504 Aerosol Science and Technology

E44 EECE 505 Aquatic Chemistry
Aquatic chemistry governs aspects of the biogeochemical cycling of trace metals and nutrients, contaminant fate and transport, and the performance of water and wastewater treatment processes. This course examines chemical reactions relevant to natural and engineered aquatic systems. A quantitative approach emphasizes the solution of chemical equilibrium and kinetics problems. Topics covered include chemical equilibrium and kinetics, acid-base equilibria and alkalinity, dissolution and precipitation of solids, complexation of metals, oxidation-reduction processes, and reactions on solid surfaces. A primary objective of the course is to be able to formulate and solve chemical equilibrium problems for complex environmental systems. In addition to solving problems manually to develop chemical intuition regarding aquatic systems, software applications for solving chemical equilibrium problems are also introduced. Prerequisite: senior or graduate-level standing. Credit 3 units. EN: BME T, TU

E44 EECE 506 Bioprocess Engineering I: Fundamentals & Applications
The course covers the fundamentals and provides the basic knowledge needed to understand and analyze processes in biotechnology in order to design, develop and operate them efficiently and economically. This knowledge is applied to understand various applications and bioprocesses, such as formation of desirable bio and chemical materials and products, production of bioenergy, food processing and waste treatment. The main objective of the course is to introduce the essential concepts and applications of bioprocessing to students of diverse backgrounds. An additional project is required to obtain graduate credit. Prerequisites: L41 Biol 2960 or equivalent or permission of instructor. Credit 3 units. EN: BME T, TU

E44 EECE 507 Kinetics and Reaction Engineering Principles
This course is aimed at a modern multiscale treatment of kinetics of chemical and biochemical reactions and the application of these fundamentals to analyze and design reactors. Application of reaction engineering principles in areas related to energy generation, pollution prevention, chemical and biochemical processes will be studied and illustrated with case studies and computer models. Description of the role of mass and heat transport in reacting systems is also provided, with numerous examples. Credit 3 units.

E44 EECE 508 Research Rotation
First-year doctoral students in EECE should undertake Research Rotation as a requirement prior to choosing a permanent research adviser. The rotation will require the student to work under the guidance of a faculty member.

E44 EECE 509 Seminar in Energy, Environmental, and Chemical Engineering
All graduate students in EECE should attend the Departmental Seminar Series to gain exposure to various diverse fields of research. Students are also expected to participate in journal clubs and other discussion formats to discuss topical research areas. This course is required of all graduate students every semester of residency in the program. Credit 1 unit.
E44 EECE 510 Advanced Topics in Aerosol Science & Engineering
This course will be focused on the discussion of advanced topics in aerosol science and engineering and their applications in a variety of fields, including materials science, chemical engineering, mechanical engineering, and environmental engineering. Prerequisite: EECE 504. Credit 3 units. EN: BME T, TU

E44 EECE 512 Combustion Phenomena
This course provides an introduction to fundamental aspects of combustion phenomena, including relevant thermochemistry, fluid mechanics, and transport processes as well as the interactions among them. Emphasis is on elucidation of physico-chemical processes, problem formulation and analytic techniques. Topics covered include non-premixed and premixed flames, deflagrations and detonations, particle combustion, flame extinction, flame synthesis, pollutant formation, and methods of remediation. Contemporary topics associated with combustion are discussed throughout. Prerequisites: graduate standing or permission of instructor. Credit 3 units. EN: BME T, TU

E44 EECE 514 Atmospheric Science and Climate
This course will cover current research topics in atmospheric chemistry and climate change. Topics include atmospheric composition, chemistry, transport, dynamics, radiation, greenhouse gases, natural and anthropogenic primary pollution sources and secondary aerosol production, and measurement techniques. Focus will be placed on how our atmosphere and climate are altered in a world of changing energy production and land use. Prerequisites: Chemistry 112A, Physics 198, and junior or higher standing. Credit 3 units. EN: BME T, TU

E44 EECE 516 Measurement Techniques for Particle Characterization
The purpose of this course is to introduce students to the principles and techniques of particle measurement and characterization. Practical applications of particle technology include air pollution measurement, clean manufacturing of semiconductors, air filtration, indoor air quality, particulate emission from combustion sources and so on. The course will focus on the following: (1) integral moment measurement techniques; (2) particle sizing and size distribution measuring techniques; and (3) particle composition measurement techniques. Related issues such as particle sampling and transportation, instrument calibration, and particle standards will also be covered. Credit 3 units. EN: BME T, TU

E44 EECE 531 Environmental Organic Chemistry
Fundamental, physical-chemical examination of organic molecules (focused on anthropogenic pollutants) in aquatic (environmental) systems. Students learn to calculate and predict chemical properties that are influencing the partitioning of organic chemicals within air, water, sediments and biological systems. This knowledge will be based on understanding intermolecular interactions and thermodynamic principles. Mechanisms of important thermochemical, hydrolytic, redox, and biochemical transformation reactions are also investigated, leading to the development of techniques (such as structure-reactivity relationships) for assessing environmental fate or human exposure potential. Prerequisites: EECE 210, Chem 112A, Chem 261. Credit 3 units. EN: BME T, TU

E44 EECE 533 Physical and Chemical Processes for Water Treatment
Water treatment is examined from the perspective of the physical and chemical unit processes used in treatment. The theory and fundamental principles of treatment processes are covered and are followed by the operation of treatment processes. Processes covered include gas transfer, adsorption, precipitation, oxidation-reduction, flocculation, sedimentation, filtration, and membrane processes. Prerequisites: EECE 201; EECE 204; EECE 210 or equivalents Credit 3 units. EN: BME T, TU

E44 EECE 534 Environmental Nanochemistry
This course involves the study of nanochemistry at various environmental interfaces, focusing on colloid, nanoparticle, and surface reactions. The course also (1) examines the thermodynamics and kinetics of nanoscale reactions at solid-water interfaces in the presence of inorganic or organic compounds and microorganisms; (2) investigates how nanoscale interfacial reactions affect the fate and transport of contaminants; (3) introduces multidisciplinary techniques for obtaining fundamental information about the structure and reactivity of nanoparticles and thin films and the speciation or chemical form of environmental pollutants at the molecular scale; and (4) explores connections between environmental nanochemistry and environmental kinetic analysis at larger scales. This course will help students attain a better understanding of the relationship between nanoscience/technology and the environment, specifically how nanoscience could potentially lead to better water treatments, more effective contaminated-site remediation, or new energy alternatives. Credit 3 units. EN: BME T, TU

E44 EECE 551 Metabolic Engineering and Synthetic Biology
Synthetic Biology is a transformative view of biology from "observation approach" to "synthesis approach." It is new "engineering" discipline and aims to make the engineering of new biological function predictable, safe, and quick. It will pave a wide range of applications to transform our views on production of sustainable energy and renewable chemicals, environmental problems, and human disease treatments. The field intersects with Metabolic Engineering in areas such as the design of novel pathways and genetic circuits for product generation and toxic chemical degradation. In this course, the field and its basis are introduced. First, relevant topics in biology, chemistry, physics, and engineering are covered. Second, students will participate in brain-storming and discussion on new biology-based systems. Last, students will design and present new synthetic biology systems to solve real-world problems. No prerequisite. Both undergrad and graduate students can take this course. Credit 3 units. EN: BME T, TU

E44 EECE 552 Biomass Energy Systems and Engineering
This course offers background in the organic chemistry, biology and thermodynamics related to understanding the conversion of biomass. In addition includes relevant topics relating to biomass feedstock origin, harvest, transportation, storage, processing and pretreatment along with matters concerning thermo- and bio-chemical conversion technologies required to produce fuels, energy, chemicals, and materials. Also, various
issues with respect to biomass characterization, economics and environmental impact will be discussed. The main objective of the course is to introduce concepts central to a large-scale integrated biomass bioconversion system.
Credit 3 units. EN: BME T, TU

E44 EECE 554 Molecular Biochemical Engineering
This course is set for junior-level graduate students to bridge the gap between biochemical engineering theory and academic research in biochemical engineering. It will cover common molecular biotechnologies (molecular biology, microbiology, recombinant DNA technology, protein expression, etc.), biochemical models (enzyme catalysis, microbial growth, bioreactor, etc.) and bioengineering methodologies (protein engineering, expression control systems, etc.). These theories and technologies will be introduced in a manner closely related to daily academic research or biochemical industry. Areas of application include biofuel and chemical production, drug discovery and biosynthesis, bioremediation, and environmental applications. This course also contains a lab section (~20-30%) that requires students to apply the knowledge learned to design experiments, to learn basic experimental skills, and to solve current research problems. Prerequisites: EECE 101, Bio 2960, Bio 4810.
Credit 3 units. EN: BME T, TU

E44 EECE 572 Advanced Transport Phenomena
Credit 3 units. EN: BME T, TU

E44 EECE 574 Electrochemical Engineering
This course will teach the fundamentals of electrochemistry and the application of the same for analyzing various electrochemical energy sources/devices. The theoretical frameworks of current-potential distributions, electrode kinetics, porous electrode and concentrated solution theory will be presented in the context of modeling, simulation and analysis of electrochemical systems. Applications to batteries, fuel cells, capacitors, and copper deposition will be explored. Pre/corequisites: EECE 501-502 (or equivalent) or permission of instructor.
Credit 3 units.

E44 EECE 576 Chemical Kinetics and Catalysis
This course reflects the fast, contemporary progress being made in decoding kinetic complexity of chemical reactions, in particular heterogeneous catalytic reactions. New approaches to understanding relationships between observed kinetic behaviour and reaction mechanism will be explained. Present theoretical and methodological knowledge will be illustrated by many examples taken from heterogeneous catalysis (complete and partial oxidation), combustion and enzyme processes. Prerequisite: senior or graduate student standing, or permission of instructor.
Credit 3 units. EN: BME T, TU

E44 EECE 597 EECE Project Management
An introduction to the theory and practice of engineering project management, with an emphasis on projects related to environmental protection and occupational health and safety. Topics include project definition and justification; project evaluation and selection; financial analysis and cost estimation; project planning, including scheduling, resourcing and budgeting; project oversight, auditing and reporting; and effective project closure. Students will be introduced to commonly used project management tools and systems, such as work breakdown structures, network diagrams, Gantt charts, and project management software. Topics will also include project management in different organizational structures and philosophies; creating effective project teams; and managing projects in international settings. Prerequisites: enrolled in MEng program; senior or higher standing.
Credit 3 units.

E44 EECE 599 Master’s Research
Credit variable, maximum 9 units.

Bachelor of Science in Chemical Engineering
The Bachelor of Science in Chemical Engineering (BSChE) degree program is designed to provide students with comprehensive training in chemical engineering fundamentals. This degree program is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). The BSChE degree requires the satisfactory completion of a minimum of 126 units as indicated in the BSChE Requirements table below. Of the courses listed in that table, the humanities and social sciences courses (except Engr 450X courses) may be taken pass/fail. A sample year-by-year BSChE curriculum is also shown below.

The program of study consists of 25 units of physical and biological sciences (i.e., biology, chemistry and physics); 24 units of mathematics and engineering computing; 38 units of core chemical engineering courses; 21 units of humanities, social sciences and technical writing; and 18 units of chemical engineering electives. The chemical engineering electives permit students to tailor their studies toward specific goals such as obtaining more depth in a chemical engineering subdiscipline (e.g., materials) or increasing breadth by choosing courses from different subdisciplines. Some of these 18 units may be taken in other engineering departments or in the natural sciences or physical sciences. Students, in collaboration with their advisers, design a course of study (subject to certain requirements) for the chemical engineering electives. Consult the EECE department website (https://eece.wustl.edu/undergraduate/programs) for more details, including the requirements that must be satisfied by these chemical engineering electives.

BSChE Sample Curriculum

The curriculum is designed to provide opportunities for students to explore areas of interest within chemical engineering. In addition to offering the accredited BS in Chemical Engineering, the department offers students the option to pursue the course of study leading to the BS in Applied Science with a major in chemical engineering.

* Students intending to pursue medical school should take BIOL 2960: Principles of Biology (4 units) in place of EECE 306: Biology in EECE.

## Program Educational Objective

The Program Educational Objective for the BSChE degree program is that, within a few years of graduation, graduates will do the following:

1. Engage in professional practice in chemical engineering or their chosen field, and/or
2. Attain advanced knowledge through graduate education or professional training in chemical engineering or their chosen field.

All students will use their knowledge, skills and abilities to serve society and pursue activities that promote professional growth and fulfillment.

## Bachelor of Science in Environmental Engineering

The Bachelor of Science in Environmental Engineering (BSEnvE) degree program is designed to provide students with comprehensive training in environmental engineering fundamentals. The program has been designed with the goal of receiving accreditation by the Engineering Accreditation Commission of ABET (http://www.abet.org). Accreditation can be sought once the program has had its first graduates; the program was launched at the start of the 2018-19 spring semester. The EnvE degree requires satisfactory completion of a minimum of 126 units as indicated in the BSEnvE Requirements table below. Of the courses listed in that table, the humanities and social sciences courses (except Engr 450X courses) may be taken pass/fail. A sample year-by-year BSEnvE curriculum is also shown below.

The program of study consists of 26 units of physical and biological sciences (i.e., biology, chemistry and physics); 21 units of mathematics and engineering computing; 43 units of core environmental engineering courses; 21 units of humanities, social sciences and technical writing; and 15 units of environmental engineering and science electives. The environmental engineering electives permit students to tailor their studies toward specific goals. Some of these 15 units may be taken in other engineering departments, and one course is explicitly required to be chosen from a set of natural science options. Students, in collaboration with their advisers, design a course of study (subject to certain requirements) for the environmental engineering and science electives. Consult the EECE department website (https://eece.wustl.edu/undergraduate/programs) for more details, including the requirements that must be satisfied by these environmental engineering and science electives.

| Environmental Engineering Capstone (EECE 404) | 3 | — |
| **Double Majors and the Pre-Medical Program** | 16 | 16 | 0 |

This degree serves students who wish to be exposed to key chemical engineering principles yet seek a more flexible curriculum. The BS in Applied Science (Chemical Engineering) requires 18 units of 300-level or higher chemical engineering core courses. Consult the EECE department website (https://eece.wustl.edu/undergraduate/programs) for the specific requirements that must be fulfilled to earn this degree.

The rules for combining majors in engineering and multiple majors involving other university divisions are described in the Combined Majors and/or Multiple Degrees (p. 965) section of the McKelvey School of Engineering Bulletin.

Traditionally, the department's undergraduate degrees have been popular with students interested in medicine because the curriculum automatically satisfies many of the pre-medical requirements. Many of the additional needed courses can be taken as electives.

**The Minor in Environmental Engineering Science**

The EECE department sponsors an undergraduate minor in environmental engineering science. This 21-unit program prepares the student to seek an entry-level position as an environmental engineer, scientist or analyst. The minor also provides a solid foundation for undertaking graduate study in environmental engineering. Visit the EECE department (https://eece.wustl.edu) website for more information.

**Units required:** 21

**Required courses:**

Select from the following menus:

1. **Introduction** (3 units):
The Minor in Energy Engineering

Objective: The goal is to provide students a course work experience that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor covers classes in several fields of science and engineering which encompass the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science.

A minor in energy engineering requires the completion of 18 units selected from the following menus. It is open to any undergraduate student pursuing an engineering major, students from the sciences (biology, chemistry, physics) in Arts & Sciences, and the environmental studies major.

Interested departments should expose students to energy and related concepts in their introductory courses.

Basic and Applied Sciences (fundamental content) (two courses):

<table>

<tr>
<td>ESE 332</td>
<td>Power, Energy and Polyphase Circuits (spring)</td>
<td>3</td>
</tr>
</tbody>
</table>

Social Science/Policy/Economics Elective (one course):

1 First-year students potentially interested in majoring in chemical engineering should take EECE 101; all other students working toward the minor in environmental engineering science should take EECE 210.

2 Students taking both environmental chemistry courses can count one of them toward the environmental engineering electives.
Committee to Oversee Energy Engineering Minor

Pratim Biswas (https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx) (EECE, Coordinator); Jason Trobaugh (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=152) (ESE); David Peters (https://engineering.wustl.edu/Profiles/Pages/David-Peters.aspx) (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program be cohesive.

The Minor in Nanoscale Science & Engineering

Nanotechnology deals with materials, structures and devices with dimensions that are in the 1- to 100-nm length scale. These entities have properties (physical, chemical and biological) that are very different from their bulk counterparts, and they can be tuned to obtained novel and desired functionalities. The goal of this minor is to enhance the student's background, knowledge and skills in the topical area of nanotechnology. The minor covers classes in several fields of science and engineering; it encompasses all of the departments in the McKelvey School of Engineering and several in Arts & Sciences. It is open to undergraduate students pursuing an engineering degree or a related Arts & Sciences major (e.g., chemistry, physics, biology, environmental studies, pre-med).

The minor in nanoscale science and engineering involves the following components. Starting with courses covering the fundamentals, students gain knowledge in synthesis and applications as well as characterization, structure and modeling. Two additional requirements are the cleanroom lab class (MEMS 5801 Micro-Electro-Mechanical Systems I) and the completion of a faculty-supervised independent study project over the course of at least two semesters. The mix of classes should provide the student with a significant background in nanotechnology, and it should promote independent thinking through the student's work on a research or educational project.

Units required: 18

Independent Study Project (required):

Students should sign up for at least two semesters of independent study and work on a project related to nanotechnology under the supervision of a faculty member. A list of projects with potential faculty mentors will be circulated during the spring semester each year. Before completing the independent study project, students must be registered for the Nanoscale Science and Engineering Minor Committee and a faculty mentor.

The classes listed above will count for elective credit for all Engineering majors; however, students should check with their major advisers to confirm this.

Committee to Oversee Nanoscale Science and Engineering Minor

Visit the EECE website (https://eece.wustl.edu/undergraduate/programs/Pages/minors.aspx) for more information.

Mechanical Engineering & Materials Science

About Mechanical Engineering & Materials Science

The Department of Mechanical Engineering & Materials Science (MEMS) offers the Bachelor of Science in Mechanical Engineering (BSME) and the Bachelor of Science in Applied Science (Mechanical Engineering). In addition, minors in aerospace engineering, energy engineering, environmental engineering science, materials science & engineering, nanoscale science & engineering, robotics, mechatronics, and mechanical engineering as well as in related scientific and engineering fields are available to students.

The MEMS curriculum emphasizes the core principles of mechanics (i.e., the study of forces, materials and motion) that underlie mechanical engineering. The common curriculum during the student’s early academic development encourages breadth of understanding, interdisciplinary thinking and creativity. During their first, sophomore and early junior years, students are focused on learning fundamental concepts in statics, dynamics, fluid mechanics and thermodynamics. During the junior and senior years, students choose electives that emphasize their specific interests and prepare them for a particular professional or academic career. The undergraduate curriculum for the BSME degree provides MEMS students with a strong base in fundamental mathematics, science and engineering. It exposes the students to diverse applications of mechanics and materials, and it provides them with the flexibility to explore creative ideas through undergraduate research and project-based courses.

Mechanical engineering is critical to a variety of important emerging technologies. Mechanical engineers design and develop artificial organs, prosthetic limbs, robotic devices, adaptive materials, efficient propulsion mechanisms, high-performance aerospace structures, and advanced renewable energy systems. The core concepts of mechanics, thermal systems and materials science are at the heart of these technologies.

Mission Statement

The MEMS faculty is committed to providing the best possible undergraduate mechanical engineering education possible. We strive to nurture the intellectual, professional and personal development of the students, to continually improve the curriculum, to be professionally current, and to maintain state-of-the-art facilities for teaching and learning.

We seek to prepare students for professional practice with a scientifically grounded foundation in the major topics of mechanical engineering: solid mechanics, mechanical design, dynamics and vibrations, systems control, fluid mechanics, thermal science and materials science.

Graduate Programs

The department offers programs for graduate study at both the master’s and doctoral levels. All programs are designed to direct advanced study into an area of specialization and original research that includes recent scientific and technological advances.

A graduate degree can provide significant advantages and rewards to a mechanical engineer, including increased income and a wider range of career options. Graduate programs
include professional, course-option master's degrees (MS and MEng) as well as research-based master's (MS) and doctoral (PhD) degrees. The undergraduate curriculum provides an excellent foundation for graduate study, and a careful selection of electives during the third and fourth years can facilitate the transition to graduate work. The master's degrees can be pursued on a part-time or full-time basis, whereas the PhD degrees are typically pursued by full-time students.

PhD, Stanford University
Mechanical behavior of structural materials

David A. Peters (Mechanical Engineering) (https://mems.wustl.edu/faculty/Pages/default.aspx?bio=92)
McDonnell Douglas Professor of Engineering
PhD, Stanford University
Aeroelasticity, vibrations, helicopter dynamics and aerodynamics

Endowed Professors

Ramesh K. Agarwal (https://engineering.wustl.edu/Profiles/Pages/Ramesh-Agarwal.aspx)
William Palm Professor of Engineering
PhD, Stanford University
Computational fluid dynamics and computational physics

Guy M. Genin (https://engineering.wustl.edu/Profiles/Pages/Guy-Genin.aspx)
Harold & Kathleen Faught Professor of Mechanical Engineering
PhD, Harvard University
Solid mechanics, fracture mechanics

Mark J. Jakiela (https://engineering.wustl.edu/Profiles/Pages/Mark-Jakiela.aspx)
Lee Hunter Professor of Mechanical Design
PhD, University of Michigan
Mechanical design, design for manufacturing, optimization, evolutionary computation

Shankar M.L. Sastry (https://engineering.wustl.edu/Profiles/Pages/Shankar-Sastry.aspx)
Christopher I. Byrnes Professor of Engineering
PhD, University of Toronto
Materials science, physical metallurgy

Professors

Jianjun Guan (https://engineering.wustl.edu/Profiles/Pages/Jianjun-Guan.aspx)
PhD, Zhejiang University
Biomimetic biomaterials synthesis and scaffold fabrication

Srikanth Singamaneni (https://engineering.wustl.edu/Profiles/Pages/Srikanth-Singamaneni.aspx)
PhD, Georgia Institute of Technology
Microstructures of cross-linked polymers

Associate Professors

Spencer P. Lake (https://engineering.wustl.edu/Profiles/Pages/Spencer-Lake.aspx)
PhD, University of Pennsylvania
Soft tissue biomechanics

Jessica E. Wagenseil (https://engineering.wustl.edu/Profiles/Pages/Jessica-Wagenseil.aspx)
DSc, Washington University
Arterial biomechanics

Assistant Professors

Damena D. Agonafer (https://mems.wustl.edu/faculty/Pages/default.aspx?bio=110)
PhD, University of Illinois at Urbana-Champaign
Computational fluid dynamics and computational physics

J. Mark Meacham (https://engineering.wustl.edu/Profiles/Pages/Mark-Meacham.aspx)
PhD, Georgia Institute of Technology
Micro-/nanotechnologies for thermal systems and the life sciences

Rohan Mishra (https://engineering.wustl.edu/Profiles/Pages/Rohan-Mishra.aspx)
PhD, Ohio State University
Computational materials science

Amit Pathak (https://engineering.wustl.edu/Profiles/Pages/Amit-Pathak.aspx)
PhD, University of California, Santa Barbara
Cellular biomechanics

Patricia B. Weisensee (https://mems.wustl.edu/faculty/Pages/default.aspx?bio=112)
PhD, University of Illinois at Urbana-Champaign
Thermal fluids
Professors of the Practice

Harold J. Brandon
DSc, Washington University
Energetics, thermal systems

Swami Karunamoorthy (https://mems.wustl.edu/faculty/Pages/Swami-Karunamoorthy.aspx)
DSc, Washington University
Helicopter dynamics, engineering education

Teaching Professor

Emily J. Boyd (https://engineering.wustl.edu/Profiles/Pages/Emily-Boyd.aspx)
PhD, University of Texas at Austin
Thermofluids

Joint Faculty

Richard L. Axelbaum (EECE) (https://engineering.wustl.edu/Profiles/Pages/Richard-Axelbaum.aspx)
Stifel & Quintette Jens Professor of Environmental Engineering Science
PhD, University of California, Davis
Combustion, nanomaterials

Elliott L. Elson (Biochemistry and Molecular Biophysics) (http://dbbs.wustl.edu/faculty/Pages/faculty_bio.aspx?SID=188)
Professor Emeritus of Biochemistry & Molecular Biophysics
PhD, Stanford University
Biochemistry and molecular biophysics

Michael D. Harris (Physical Therapy, Orthopaedic Surgery and MEMS) (https://pt.wustl.edu/faculty-staff/faculty/mike-harris-phd)
PhD, University of Utah
Whole body and joint-level orthopaedic biomechanics

Kenneth F. Kelton (Physics) (https://physics.wustl.edu/people/kenneth-f-kelton)
Arthur Holly Compton Professor of Arts & Sciences
PhD, Harvard University
Study and production of titanium-based quasicrystals and related phases

MD, University of Pennsylvania School of Medicine
Neurological surgery

Lori Setton (BME) (https://bme.wustl.edu/faculty/Pages/faculty.aspx?bio=105)
Lucy and Stanley Lopata Distinguished Professor of Biomedical Engineering
PhD, Columbia University
Biomechanics for local drug delivery: tissue regenerations specific to the knee joints and spine

Matthew J. Silva (Orthopaedic Surgery) (http://www.orthoresearch.wustl.edu/content/Laboratories/2963/Matthew-Silva-Silva-Lab/Overview.aspx)
Julia and Walter R. Peterson Orthopaedic Research Professor
PhD, Massachusetts Institute of Technology
Biomechanics of age-related fractures and osteoporosis

Simon Tang (Orthopaedic Surgery, BME) (http://www.orthoresearch.wustl.edu/content/Laboratories/3043/Simon-Tang/Tang-Lab/Overview.aspx)
PhD, Rensselaer Polytechnic Institute
Biological mechanisms

Senior Professors

Phillip L. Gould
PhD, Northwestern University
Structural analysis and design, shell analysis and design, biomechanical engineering

Kenneth L. Jerina
DSc, Washington University
Materials, design, solid mechanics, fatigue and fracture

Salvatore P. Sutera
PhD, California Institute of Technology
Viscous flow, bioengineering

Barna A. Szabo
PhD, State University of New York–Buffalo
Numerical simulation of mechanical systems, finite-element methods

Lecturers

Sharniece Holland
PhD, University of Alabama
Additive manufacturing and mathematics

Jeffery Krampf
MS, Washington University in St. Louis
Fluid mechanics, modeling, and design

J. Jackson Potter
PhD, Georgia Institute of Technology
Senior design

H. Shaun Sellers
PhD, Johns Hopkins University
Mechanics and materials

Louis G. Woodhams
BS, University of Missouri-St. Louis
Computer-aided design

Senior Research Associate

Ruth J. Okamoto
DSc, Washington University
Biomechanics, solid mechanics
Adjunct Instructors

Ricardo L. Actis
DSc, Washington University
Finite element analysis, numerical simulation, aircraft structures

Robert G. Becnel
MS, Washington University
FE Review

John D. Biggs
MEng, Washington University
Thermal science

Andrew W. Cary
PhD, University of Michigan
Computational fluid dynamics

Dan E. Driemeyer
PhD, University of Illinois
Thermosciences

Richard S. Dyer
PhD, Washington University
Propulsion, thermodynamics, fluids

John M. Griffith
BS, Washington University
Manufacturing

Richard R. Janis
MS, Washington University
Building environmental systems

Rigoberto Perez
PhD, Purdue University
Fatigue and fracture

Dale M. Pitt
DSc, Washington University
Aeroelasticity

Gary D. Renieri
PhD, Virginia Polytechnic Institute and State University
Structural applications, composite materials

Matthew J. Watkins
MS, Washington University
Finite elements

Michael C. Wendl
DSc, Washington University
Mathematical theory and computational methods in biology and engineering

Laboratory and Design Specialist

Chiamaka Asinugo
MS, Washington University
Mechanical Engr. design

Professor Emeritus

Wallace B. Diboll Jr.
MSME, Rensselaer Polytechnic Institute
Dynamics, vibrations, engineering design

Majors

Please visit the following pages for more information about our undergraduate programs:

• Bachelor of Science in Mechanical Engineering (p. 1058)
• Bachelor of Science in Applied Science (Mechanical Engineering) (p. 1060)

Minors

Please visit the following pages for information about our minors:

• Minor in Aerospace Engineering (p. 1060)
• Minor in Energy Engineering (p. 1044)
• Minor in Environmental Engineering Science (p. 1043)
• Minor in Materials Science & Engineering (p. 1061)
• Minor in Mechanical Engineering (p. 1062)
• Minor in Mechatronics (p. 1063)
• Minor in Nanoscale Science & Engineering (p. 1045)
• Minor in Robotics (p. 1063)

Courses

Visit online course listings to view semester offerings for E37 MEMS (https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E37&crslvl=1:5).

E37 MEMS 1001 Machine Shop Practicum
Operation of basic machine tools including: lathe, drill press, grinder and mill. Machine tool use and safety are covered. Student shop privilege requires completion of this practicum. Credit 1 unit. EN: TU

E37 MEMS 1003 Mechanical Engineering Design and Build
The course provides an introduction to design and fabrication. Students formulate designs, build prototypes and compete in engineering exploration-based creative design projects. Emphasis is placed on producing working hardware and prototypes in response to design needs. Specialized learning modules focus on the knowledge required to complete projects, such as introductory topics in shop skills, machine elements, electronics, design, visualization and communication. Enrollment limited to engineering freshmen. Credit 1 unit.

E37 MEMS 101 Introduction to Mechanical Engineering and Mechanical Design
Mechanical engineers face new challenges in the areas of energy, materials and systems. This course introduces students to these areas through team-based, hands-on projects that emphasize engineering design, analysis and measurement skills. The course is strongly recommended for mechanical
E37 MEMS 103 Computer-Aided Design — AutoCAD
AutoCAD is the most used two-dimensional drawing software for architectural and engineering production drawings. Introduction to AutoCAD, title blocks, drawing setup, absolute and relative coordinates, drawing entities, layers, drafting geometry, dimensioning, plotting drawings to scale, sectional and other special views, isometric pictorial views. Class work involves typical drawings from industry.
Credit 1 unit. EN: TU

E37 MEMS 201 Numerical Methods and Matrix Algebra
This course provides students with computational tools for solving mechanical, structural, and aerospace engineering problems. An introduction to MATLAB will be presented that will include data input/output, program flow control, functions, and graphics. Topics covered include matrices, determinants, rank, vector spaces, solutions of linear systems, interpolation and curve fitting, numeric differentiation and integration, eigenvalue and initial-value problems, nonlinear equations, and optimization. Each topic will be treated in the context of a typical engineering application. Prerequisite: Math 217.
Credit 3 units. EN: TU

E37 MEMS 202 Computer-Aided Design
An introduction to computer-aided engineering design in the context of mechanical and structural engineering. Students learn the fundamentals of spatial reasoning and graphical representation. Freehand sketching skills, including pictorial and orthographic views, are applied to the design process. Computer modeling techniques provide accuracy, analysis, and visualization tools necessary for the design of structures, devices and machines. Topics include: detailing design for production, fasteners, dimensioning, tolerancing, creation of part and assembly drawings, computer-aided design, analysis and optimization of parts and assemblies; solid modeling of complex surfaces, assembly modeling, assembly constraints, and interference checking.
Credit 2 units. EN: TU

E37 MEMS 203 Advanced CAD
Computer-aided design, analysis and optimization of parts and assemblies; solid modeling of complex surfaces, creation of detail drawings, dimensioning and tolerancing; assembly modeling, assembly constraints, interference checking; motion constraints, force and acceleration analysis, thermal analysis; part optimization for weight, strength and thermal characteristics using SOLIDWORKS software. Prerequisite: MEMS 202 or equivalent.
Credit 3 units. EN: TU

E37 MEMS 205 Mechanics and Materials Science Laboratory
Laboratory experiments and exercises focusing on mechanical properties of engineering materials: metallography; heat treatment; beam deflection; stress and strain measurement; properties and structure of engineering materials; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data. Prerequisite: MEMS 253. Corequisite: MEMS 3610.
Credit 2 units. EN: TU

E37 MEMS 253 Statics and Mechanics of Materials
Credit 3 units. EN: TU

E37 MEMS 255 Dynamics
Credit 3 units. EN: TU

E37 MEMS 301 Thermodynamics
This course of classical thermodynamics is oriented toward mechanical engineering applications. It includes properties and states of a substance, processes, cycles, work, heat, and energy. Steady-state and transient analyses utilize the First and Second Laws of Thermodynamics for closed systems and control volumes, as well as the concept of exergy. Prerequisites: Chem 105 or 111A, Math 132, Physics 197.
Credit 3 units. EN: BME T, TU

E37 MEMS 305 Fluid Mechanics and Heat Transfer Laboratory
Laboratory experiments and exercises focusing on fluid properties, flow phenomena, thermal science and heat transfer phenomena; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data. Prerequisite: MEMS 3410. Corequisite: MEMS 3420.
Credit 2 units. EN: TU

E37 MEMS 3110 Machine Elements
This course includes weekly lectures and a bi-weekly lab. Lectures introduce the engineering design process, review stresses and failure theories, and present a variety of machine elements (such as bearings, shafts, gears, belts, springs, etc.) and their governing equations. In lab, students use a commercial CAD package (SolidWorks) to create and constrain models of machine assemblies, analyze stresses in machine components, and create animations to demonstrate machine motion. Course material is presented in the context of a semester-long engineering design problem that culminates in a final group project. Student teams generate their own design concept to embody in CAD and characterize it with engineering and analytical models. Prerequisite: MEMS 253. Corequisite: MEMS 3610.
Credit 3 units. EN: BME T, TU
E37 MEMS 3410 Fluid Mechanics
Fundamental concepts of fluids as continua. Topics include: viscosity, flow fields, velocity, vorticity, streamlines, fluid statics, hydrostatic forces, manometers, conservation of mass and momentum, incompressible inviscid flow, dimensional analysis and similitude, flow in pipes and ducts, flow measurement, boundary-layer concepts, flow in open channels. Corequisite: MEMS 255. Prerequisites: Math 233 and Math 217.
Credit 3 units. EN: BME T, TU

E37 MEMS 3420 Heat Transfer
Introductory treatment of the principles of heat transfer by conduction, convection, or radiation; analysis of steady and unsteady conduction with numerical solution methods; analytical and semi-empirical methods of forced and natural convection; boiling and condensation heat transfer; and radiation heat transfer. Prerequisites: MEMS 3410 and 301, ESE 319, and MEMS 201 or ESE 318.
Credit 3 units. EN: BME T, TU

E37 MEMS 350 Solid Mechanics
A continuation of MEMS 253 containing selected topics in the mechanics of deformable solids, presented at a level intermediate between introductory strength of materials and advanced continuum mechanics. Lectures will discuss elastic and elasto-plastic response, failure criteria, composites, beams, and structural stability as well as provide an introduction of the tensorial formulation of stress and strain and the governing equations of 3D linear elasticity. Mathematical methods from calculus, linear algebra and linear differential equations will be used. Computer problems form a significant part of the class. MEMS 255 not required. Prerequisite: MEMS 253. Corequisite: MEMS 201 or ESE 318.
Credit 3 units. EN: BME T, TU

E37 MEMS 3601 Materials Engineering
The application of fundamental materials science principles in engineering disciplines. Topics include: design of new materials having unique property combinations, selection of materials for use in specific service environment, prediction of materials performance under service conditions, development of processes to produce materials with improved properties, structural and functional use of metals, polymers, ceramics and composites.
Credit 3 units. EN: BME T, TU

E37 MEMS 3610 Materials Science
Introduction to properties, chemistry and physics of engineering materials; conduction, semiconductors, crystalline structures, imperfections, phase diagrams, kinetics, mechanical properties, ceramics, polymers, corrosion, magnetic materials, and thin films; relationship of atomic and molecular structure to physical and chemical properties; selection of materials for engineering applications; relationships between physical properties, chemical properties and performance of engineering materials. Prerequisite: Chem 105 or 111A and 151.
Credit 3 units. EN: BME T, TU

E37 MEMS 400 Independent Study
Independent investigation on topic of special interest. Prerequisites: junior or senior standing and permission of department chair. Students must complete the Independent Study Approval form available in the department office.

E37 MEMS 4001 Fundamentals of Engineering Review
A review and preparation of the most recent NCEES Fundamentals of Engineering (FE) Exam specifications is offered in a classroom setting. Exam strategies will be illustrated using examples. The main topics for the review include engineering mathematics, statics, dynamics, thermodynamics, heat transfer, mechanical design and analysis, material science and engineering economics. A discussion of the importance and responsibilities of professional engineering licensure along with ethics will be included.
Credit 1 unit.

E37 MEMS 405 Vibrations and Machine Elements Laboratory
Laboratory experiments and exercises focusing on vibration of mechanical systems; kinematic response, dynamic response, and design of mechanisms and machine components; displacements, velocities, and accelerations in mechanical systems and components; response to static and dynamic forces; transient and steady state response; design of mechanical components for power transmission; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports and presentation of data. Prerequisite: MEMS 3110. Corequisite: MEMS 4310.
Credit 2 units. EN: TU

E37 MEMS 4101 Manufacturing Processes
Manufacturing processes and machinery are explained and described. Topics include: analytical tools of machine science, heat transfer, vibrations and control theory are applied to the solution of manufacturing problems, analytical development and application of engineering theory to manufacturing problems, machine tools and automated production equipment.
Credit 3 units. EN: BME T, TU

E37 MEMS 411 Mechanical Engineering Design Project
Student groups work on an open-ended mechanical design problem and finish the semester by presenting a physical prototype and a formal report to an external review board. Groups are guided through the engineering design process by completing a set of project deliverables. The quality of these deliverables provides a basis for evaluation of individual and team performance. This course emphasizes the importance of user-centric design, communication and presentation skill, consideration of real-world constraints, sketching and creativity, prototyping, and data-driven decision making using engineering models and analyses. Prerequisites: MEMS 3110 & MEMS 3420.
Credit 3 units. EN: BME T, TU

E37 MEMS 412 Design of Thermal Systems
Analysis and design of advanced thermo-fluid systems. Student teams participate in the design process, which could involve research, design synthesis, codes, standards, engineering economics, a design project report, and formal presentations. Topics include thermo-fluid systems and components such as power, heating and refrigeration systems; pumps, fans, compressors, combustors, turbines, nozzles, coils, heat exchangers and piping. Prerequisite: MEMS 301 Thermodynamics.
E37 MEMS 424 Introduction to Finite Element Methods in Structural Analysis
Application of finite element methods to beams, frames, trusses and other structural components. Modeling techniques for different types of structural engineering problems. Topics in stress analysis, applied loads, boundary conditions, deflections and internal loads, matrix methods, energy concepts, structural mechanics and the development of finite element modeling methods. Prerequisites: MEMS 253 and MEMS 350. Credit 3 units. EN: BME T, TU

E37 MEMS 4301 Modeling, Simulation and Control
Introduction to simulation and control concepts. Topics include: block diagram representation of single- and multiloop systems; control system components; transient and steady-state performance; stability analysis; Nyquist, Bode and root locus diagrams; compensation using lead, lag and lead-lag networks; design synthesis by Bode plots and root-locus diagrams; state-variable techniques; state-transition matrix; state-variable feedback. Prerequisites: MEMS 255, ESE 319 and ESE 319. Credit 3 units. EN: BME T, TU

E37 MEMS 4310 Dynamics and Vibrations
Introduction to the analysis of vibrations in single-degree and multidegree of freedom systems; free and forced vibration of multidegree of freedom and distributed parameter mechanical systems and structures; methods of Laplace transform; complex harmonic balance; matrix formulation; Fourier series; and transient response of continuous systems by partial differential equations. Prerequisites: MEMS 255, ESE 319, and MEMS 201 or ESE 318. Credit 3 units. EN: BME T, TU

E37 MEMS 4401 Combustion and Environment
Introduction to combustion and its application in devices. Topics include: chemical thermodynamics and kinetics; ignition and explosion; deflagration and detonation waves; transport phenomena and the governing equations for heat and mass transfer in chemically reacting flows; laminar and turbulent flame propagation; non-premixed flames; the emission of combustion-generated pollutants and subsequent interaction with the environment; toxic-waste incineration; and practical combustion devices. Prerequisites: MEMS 251, MEMS 342 or equivalent. Credit 3 units. EN: TU

E37 MEMS 463 Nanotechnology Concepts and Applications
The aim of this course is to introduce to students the general meaning, terminology and ideas behind nanotechnology and its potential application in various industries. The topics covered will include nanoparticles (properties, synthesis and applications); carbon nanotubes (properties, synthesis and applications); ordered and disordered nanostructured materials and their applications, quantum wells, wires and dots, catalysis and self-assembly, polymers and biological materials, nanoelectronics and nanophotonics, nanomanufacturing and functional nanodevices, health effects and nanotoxicity, and so on. Prerequisite: none. Students with a background in general physics, chemistry and biology should be able to comprehend the material. Credit 3 units.

E37 MEMS 500 Independent Study
Independent investigation on topic of special interest. Prerequisites: graduate standing and permission of the department chair. Students must complete the Independent Study Approval Form available in the department office. Credit variable, maximum 6 units.

E37 MEMS 5001 Optimization Methods in Engineering
Analytical methods in design. Topics include: mathematical methods; linear and nonlinear programming; optimality criteria; fully stressed techniques for the design of structures and machine components; topological optimization; search techniques; and genetic algorithms. Prerequisites: calculus and computer programming. Credit 3 units. EN: BME T, TU

E37 MEMS 501 Graduate Seminar
This is a required pass/fail course for master's and doctoral degrees. A passing grade is required for each semester of full-time enrollment. A passing grade is received by attendance at the weekly seminars.

E37 MEMS 5102 Materials Selection in Design
Analysis of the scientific bases of material behavior in the light of research contributions of the past 20 years. Development of a rational approach to the selection of materials to meet a wide range of design requirements for conventional and advanced applications. Although emphasis is placed on mechanical properties, acoustical, optical, thermal and other properties of interest in design are discussed. Credit 3 units. EN: BME T, TU

E37 MEMS 5104 CAE-Driven Mechanical Design
An introduction to the use of computer-aided engineering (CAE) tools in the mechanical design process. Topics include: integrating engineering analysis throughout the process; multidisciplinary optimization; and computer-aided design directed toward new manufacturing processes. Students will work with commercial and research software systems to complete several projects. Students should have experience and familiarity with a CAD tool, optimization and the finite element method. Prerequisite: MEMS 202 Computer-Aided Design or equivalent. Credit 3 units. EN: BME T, TU

E37 MEMS 5301 Nonlinear Vibrations
In this course, students are introduced to concepts in nonlinear dynamics and vibration and application of these concepts to nonlinear engineering problems. Specific topics include: modeling of lumped and continuous nonlinear systems (strings, beams and plates); vibrations of buckled structures; perturbation and other approximate analytical methods; the use and limitations of local linearization; properties of nonlinear behavior, such as dimension and Lyapunov exponents; stability of limit cycles; bifurcations; chaos and chaotic vibrations; experimental methods and data analysis for nonlinear systems. Concepts are reinforced with a number of examples from recently published research. Applications include aeroelastic flutter, impact dynamics, machine-tool vibrations, cardiac arrhythmias and control of chaotic behavior. Credit 3 units. EN: BME T, TU
E37 MEMS 5302 Theory of Vibrations
Analytical methods in vibrations. Topics include: Duhamel's integral, Laplace and Fourier transforms and Fourier series with applications to transient response, forced response and vibration isolation; Lagrange's equations for linear systems, discrete systems, degrees of freedom, reducible coordinates, holonomic constraints and virtual work; matrix methods and state variable approach with applications to frequencies and modes, stability and dynamic response in terms of real and complex modal expansions; dynamic response of continuous systems by theory of partial differential equations. Rayleigh-Ritz and Galerkin energy methods, finite difference and finite element algorithms.
Credit 3 units. EN: BME T, TU

E37 MEMS 5401 General Thermodynamics
General foundations of thermodynamics valid for small and large systems, and for equilibrium and nonequilibrium states. Topics include: definitions of state, work, energy, entropy, temperature, heat interaction and energy interaction. Applications to simple systems; phase rule; perfect and semi-perfect gas; bulk-flow systems; combustion, energy and entropy balances; availability analysis for thermo-mechanical power generation; and innovative energy-conversion schemes. Prerequisite: graduate standing or permission of instructor.
Credit 3 units. EN: BME T, TU

E37 MEMS 5402 Radiation Heat Transfer
Formulation of the governing equations of radiation heat transfer. Topics include: electromagnetic theory of radiation; properties of ideal and real surfaces; techniques for solutions of heat transfer between gray surfaces; radiation in absorbing, emitting and scattering media.
Credit 3 units. EN: BME T, TU

E37 MEMS 5403 Conduction and Convection Heat Transfer
This course examines heat conduction and convection through various fundamental problems that are constructed from the traditional conservation laws for mass, momentum and energy. Problems include the variable-area fin, the unsteady Dirichlet, Robbins and Rayleigh problems, multidimensional steady conduction, the Couette flow problem, duct convection and boundary layer convection. Though some numerics are discussed, emphasis is on mathematical technique and includes the extended power series method, similarity reduction, separation of variables, integral transforms, and approximate integral methods.
Credit 3 units. EN: BME T, TU

E37 MEMS 5404 Combustion Phenomena
Introduction to fundamental aspects of combustion phenomena, including relevant thermochemistry, fluid mechanics and transport processes, and the coupling between them. Emphasis is on elucidation of the physico-chemical processes, problem formulation and analytic techniques. Topics covered include nonpremixed and premixed flames, deflagrations and detonations, particle combustion, flame extinction, flame synthesis, pollutant formation and methods of remediation. Contemporary topics associated with combustion are discussed throughout. Prerequisites: graduate standing or permission of instructor.
Same as E44 EECE 512
Credit 3 units. EN: BME T, TU

E37 MEMS 5410 Fluid Dynamics I
Formulation of the basic concepts and equations governing a Newtonian, viscous, conducting, compressible fluid. Topics include: transport coefficients and the elements of kinetic theory of gases, vorticity, incompressible potential flow; singular solutions; flow over bodies and lifting surfaces; similarity method; viscous flow, boundary layer, low Reynolds number flows, laminar and turbulent flows.
Credit 3 units. EN: BME T, TU

E37 MEMS 5411 Fluid Dynamics II
Governing equations and thermodynamics relations for compressible flow. Topics include: kinetic theory of gases; steady, one-dimensional flows with friction and heat transfer; shock waves; Rankine-Hugoniot relations; oblique shocks; reflections from walls and flow interfaces, expansion waves, Prandtl-Meyer flow, flow in nozzles, diffusers and inlets, two- and three-dimensional flows; perturbation methods; similarity rules; compressible laminar and turbulent boundary layers; acoustic phenomena. Emphasis is relevant to air vehicles.
Credit 3 units. EN: BME T, TU

E37 MEMS 5412 Computational Fluid Dynamics
Computational fluid dynamics relevant to engineering analysis and design. Topics include: fundamentals of finite-difference, finite-volume and finite-element methods; numerical algorithms for parabolic, elliptic and hyperbolic equations; convergence, stability and consistency of numerical algorithms; application of numerical algorithms to selected model equations relevant to fluid flow, grid-generation techniques and convergence acceleration schemes. Prerequisite: senior or graduate standing or permission of the instructor.
Credit 3 units. EN: BME T, TU

E37 MEMS 5413 Advanced Computational Fluid Dynamics
Credit 3 units. EN: TU

E37 MEMS 5414 Aeroelasticity and Flow-Induced Vibrations
This course deals with the interactions between aerodynamics, dynamics and structures in aerospace systems. Topics covered include unsteady aerodynamics, finite-state aerodynamic models, classical fixed-wing flutter, rotary-wing aeroelasticity and experimental methods in aeroelasticity. Emphasis is given to the prediction of flutter and limit cycles in aeroelastic systems.
Credit 3 units.

E37 MEMS 5420 HVAC Analysis and Design I
Fundamentals of heating, ventilating, and air conditioning — moist air properties, the psychrometric chart, classic moist
air processes, design procedures for heating and cooling systems. Design of HVAC systems for indoor environmental comfort, health, and energy efficiency. Heat transfer processes in buildings. Development and application of techniques for analysis of heating and cooling loads in buildings, including the use of commercial software. Course special topics can include LEED rating and certification, cleanrooms, aviation, aerospace, and naval applications, ventilation loads, animal control facilities, building automation control, and on-site campus tours of state-of-the-art building energy and environmental systems.

Credit 3 units. EN: BME T, TU

**E37 MEMS 5421 HVAC Analysis and Design II**

Fundamentals of heating, ventilating, and air conditioning — energy analysis and building simulation, design procedures for building water piping systems, centrifugal pump performance, design of building air duct systems, fan performance, optimum space air diffuser design for comfort, analysis of humidification and dehumidification systems, and advanced analysis of refrigeration systems. HVAC analytical techniques will include the use of commercial software. Course special topics can include LEED rating and certification, management for energy efficiency, energy auditing calculations, aviation, aerospace, and naval applications, ventilation loads, building automation control, and on-site campus tours of state-of-the-art building energy and environmental systems.

Credit 3 units. EN: BME T, TU

**E37 MEMS 5422 Solar Energy Thermal Processes**

Fundamentals of radiation heat transfers and solar radiation, including basic terminology, atmospheric scattering and absorption, radiation interactions with surfaces, and selective surfaces. Components, cycles, and materials of concentrating solar power plants, including parabolic trough and solar towers. Overview over thermal storage, other solar thermal technologies and photovoltaics. This course includes a final project. Prerequisite: MEMS 3420 or equivalent.

Credit 3 units. EN: BME T, TU

**E37 MEMS 5423 Sustainable Environmental Building Systems**

Sustainable design of building lighting and HVAC systems considering performance, life cycle cost and downstream environmental impact. Criteria, codes and standards for comfort, air quality, noise/vibration and illumination. Life cycle and other investment methods to integrate energy consumption/conservation, utility rates, initial cost, system/component longevity, maintenance cost and building productivity. Direct and secondary contributions to acid rain, global warming and ozone depletion.

Credit 3 units. EN: BME T, TU

**E37 MEMS 5424 Thermo-Fluid Modeling of Renewable Energy Systems**

Overview of sustainable energy systems. Fundamentals of energy conversion. Renewable energy sources and energy conversion from wind, biomass, solar-thermal, geothermal and ocean/waves. Applications to energy storage, fuel cells, green air and ground transportation, energy-efficient buildings. Energy-economics modeling, emissions modeling, global warming and climate change.

Credit 3 units. EN: BME T, TU

**E37 MEMS 5425 Thermal Management of Electronics**

As the demand for higher performance electronics continues its exponential growth, transistor density doubles every 18 to 24 months. Electronic devices with high transistor density generate heat and thus require thermal management to improve reliability and prevent premature failure. Demanding performance specifications result in increased package density, higher heat loads and novel thermal management technology. This course gives an overview of thermal management for micro/power electronics systems and helps engineers to develop a fundamental understanding of emerging thermal technologies. This course will include the following topics: background of electronics packaging; thermal design of heat sinks; single phase and multiphase flow in thermal systems; two-phase heat exchange devices for portable and high powered electronic systems; computational fluid dynamics for design of thermal systems. Prerequisites: senior or graduate standing.

Credit 3 units. EN: BME T, TU

**E37 MEMS 5500 Elasticity**

Credit 3 units. EN: BME T, TU

**E37 MEMS 5501 Mechanics of Continua**

A broad survey of the general principles governing the mechanics of continuous media. Topics include general vector and tensor analysis, rigid body motions, deformation, stress and strain rate, large deformation theory, conservation laws of physics, constitutive relations, principles of continuum mechanics and thermodynamics, and two-dimensional continua. Prerequisite: ESE 501/502 or instructor's permission.

Credit 3 units. EN: BME T, TU

**E37 MEMS 5502 Plates and Shells**

Introduction to the linear theory of thin elastic plates and shells. The emphasis is on application and the development of physical intuition. The first part of the course focuses on the analysis of plates under various loading and support conditions. The remainder of the course deals mainly with asymmetrical deformation of shells of revolution. Asymptotic methods are used to solve the governing equations. Applications to pressure vessels, tanks, and domes. Prerequisites: BME 240 or MEMS 253; ESE 318 and ESE 319 or equivalent.

Credit 3 units. EN: BME T, TU

**E37 MEMS 5506 Experimental Methods in Solid Mechanics**

Current experimental methods to measure mechanical properties of materials are covered. Lectures include theoretical principles, measurement considerations, data acquisition and analysis techniques. Lectures are complemented by laboratory sections using research equipment such as biaxial testing machines, pressure myographs, indentation devices for different scales, and viscometers.

Credit 3 units. EN: BME T, TU
E37 MEMS 5507 Fatigue and Fracture Analysis
The course objective is to demonstrate practical methods for computing fatigue life of metallic structural components. The course covers the three major phases of metal fatigue progression: fatigue crack initiation, crack propagation and fracture. Topics include: stress vs. fatigue life analysis, cumulative fatigue damage, linear elastic fracture mechanics, stress intensity factors, damage tolerance analysis, fracture toughness, critical crack size computation and load history development. The course focus is on application of this technology to design against metal fatigue and to prevent structural failure.
Credit 3 units. EN: BME T, TU

E37 MEMS 5510 Finite Element Analysis
Theory and application of the finite element method. Topics include: basic concepts, generalized formulations, construction of finite element spaces, extensions, shape functions, parametric mappings, numerical integration, mass matrices, stiffness matrices and load vectors, boundary conditions, modeling techniques, computation of stresses, stress resultants and natural frequencies, and control of the errors of approximation. Prerequisite: graduate standing or permission of instructor.
Credit 3 units. EN: TU

E37 MEMS 5515 Numerical Simulation in Solid Mechanics I
Solution of 2D and 3D elasticity problems using the finite element method. Topics include: linear elasticity; laminated material; stress concentration; stress intensity factor; solution verification; J integral; energy release rate; residual stress; multi-body contact; nonlinear elasticity; plasticity; and buckling. Prerequisites: MEMS 424 Finite Elements or MEMS 5704 Aircraft Structures and MEMS 5500 Elasticity or MEMS 5501 Mechanics of Continua and graduate standing or permission of instructor.
Credit 3 units.

E37 MEMS 5516 Numerical Simulation in Solid Mechanics II
Solution of 2D and 3D elasticity problems using the finite element method. Topics include: laminates and composite materials; nonlinear elasticity; plasticity; incremental theory of plasticity; residual stress; geometric nonlinearity; membrane and bending load coupling; multi-body contact; stress intensity factor; interference fit; and buckling analysis. Prerequisite: graduate standing or permission of instructor.
Credit 3 units.

E37 MEMS 5520 Advanced Analytical Mechanics
Lagrange’s equations and their applications to holonomic and nonholonomic systems. Topics include: reduction of degrees of freedom by first integrals, variational principles, Hamilton-Jacobi theory, general transformation theory of dynamics, applications such as theory of vibrations and stability of motion, and use of mathematical principles to resolve nonlinear problems. Prerequisite: senior or graduate standing or permission of instructor.
Credit 3 units. EN: TU

E37 MEMS 5560 Interfaces and Attachments in Natural and Engineered Structures
Attachment of dissimilar materials in engineering and surgical practice is a challenge. Bimaterial attachment sites are common locations for injury and mechanical failure. Nature presents several highly effective solutions to the challenge of bimaterial attachment that differ from those found in engineering practice. This course bridges the physiologic, surgical and engineering approaches to connecting dissimilar materials. Topics in this course are: natural bimaterial attachments; engineering principles underlying attachments; analysis of the biology of attachments in the body; mechanisms by which robust attachments are formed; concepts of attaching dissimilar materials in surgical practice and engineering; and bioengineering approaches to more effectively combine dissimilar materials.
Credit 3 units. EN: BME T, TU

E37 MEMS 5561 Mechanics of Cell Motility
A detailed review of biomechanical inputs that drive cell motility in diverse extracellular matrices (ECMs). This class discusses cytoskeletal machineries that generate and support forces, mechanical roles of cell-ECM adhesions, and regulation of ECM deformations. Also covered are key methods for cell level mechanical measurements, mathematical modeling of cell motility, and physiological and pathological implications of mechanics-driven cell motility in disease and development.
Credit 3 units.

E37 MEMS 5562 Cardiovascular Mechanics
This course focuses on solid and fluid mechanics in the cardiac and cardiovascular system. Cardiac and cardiovascular physiology and anatomy. Solid mechanics of the heart, heart valves, arteries, veins and microcirculation. Flow through the heart chambers and blood vessels. Prerequisites: graduate standing or permission of instructor.
Credit 3 units. EN: BME T, TU

E37 MEMS 5564 Orthopaedic Biomechanics—Cartilage/Tendon
Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Note: BME 590Z (463/563) Orthopaedic Biomechanics—Bones and Joints is not a prerequisite.
Credit 3 units. EN: TU

E37 MEMS 5565 Mechanobiology of Cells and Matrices
At the interface of the cell and the extracellular matrix, mechanical forces regulate key cellular and molecular events that profoundly affect aspects of human health and disease. This course offers a detailed review of biomechanical inputs that drive cell behavior in physically diverse matrices. In particular, cytoskeletal force-generation machineries, mechanical roles of cell-cell and cell-matrix adhesions, and regulation of matrix deformations are discussed. Also covered are key methods for mechanical measurements and mathematical modeling of cellular response. Implications of matrix-dependent cell motility in cancer metastasis and embryonic development are discussed. Prerequisite: graduate standing or permission of the instructor.
Credit 3 units. EN: BME T, TU
E37 MEMS 5566 Engineering Mechanobiology
Engineering Mechanobiology is a new paradigm for understanding and manipulating the biological function of plants, animals, and their cells. Mechanical force has emerged as a critical component of all biological systems, providing mechanisms to sculpt plants and animals during morphogenesis, to enable cell migration, polarization, proliferation, and differentiation in response to physical changes in the environment, and to modulate the function of single molecules. This course provides a foundation for understanding these factors across plant and animal cells. The course begins with an introduction to plant and animal cell biology and principles of signaling, then progresses to an overview of the cell wall and ECM and an introduction to the mechanics and statistical mechanics of solid, viscoelastic, and fibrous continua. The course then focuses on the questions of how do cells feel, how do cells converse with the ECM and wall, and how do cells remember? Prerequisites: undergraduate calculus and physics. Credit 3 units. EN: BME T, TU

E37 MEMS 5603 Materials Characterization Techniques I
An introduction to the basic theory and instrumentation used in transmission electron, scanning electron and optical microscopy. Practical laboratory experience in equipment operations, experimental procedures and material characterization. Credit 3 units. EN: BME T, TU

E37 MEMS 5604 Materials Characterization Techniques II
Introduction to crystallography and elements of X-ray physics. Diffraction theory and application to materials science including following topics: reciprocal lattice concept, crystal-structure analysis, Laue methods, rotating crystal methods, powder method, and laboratory methods of crystal analysis. Credit 3 units. EN: BME T, TU

E37 MEMS 5606 Soft Nanomaterials
Soft nanomaterials, which range from self-assembled monolayers (SAMs) to complex 3D polymer structures, are gaining increased attention owing to their broad-range applications. The course introduces the fundamental aspects of nanotechnology pertained to soft matter. Various aspects related to the design, fabrication, characterization and application of soft nanomaterials are discussed. Topics covered include but are not limited to SAMs, polymer brushes, layer-by-layer assembly, responsive polymers structures (films, capsules), polymer nanocomposites, biomolecules as nanomaterials and soft lithography. Credit 3 units. EN: BME T, TU

E37 MEMS 5607 Introduction to Polymer Science and Engineering
The course covers topics in multicomponent polymer systems (polymer blends and polymer composites) such as: phase separation and miscibility of polymer blends, surfaces and interfaces in composites, microstructure and mechanical behavior, rubber toughened plastics, thermoplastic elastomers, block copolymers, fiber reinforced and laminated composites, techniques of polymer processing with an emphasis on composites processing, melt processing methods such as injection molding and extrusion, solution processing of thin films, selection of suitable processing methods and materials selection criteria for specific applications. Advanced topics include: nanocomposites such as polymer/CNT composites, biointerfaces, bioinspired nanomaterials, and current research challenges. Prerequisite: MEMS 3610 or equivalent or permission of instructor. Credit 3 units. EN: BME T, TU

E37 MEMS 5608 Introduction to Polymer Science and Engineering
Topics covered in this course are: the concept of long-chain or macromolecules, polymer chain structure and configuration, microstructure and mechanical ( rheological) behavior, polymer phase transitions (glass transition, melting, crystallization), physical chemistry of polymer solutions (Flory-Huggins theory, solubility parameter, thermodynamics of mixing and phase separation), polymer surfaces and interfaces, overview of polymer processing (extrusion, injection molding, film formation, fiber spinning) and modern applications of synthetic and bio-polymers. Credit 3 units. EN: BME T, TU

E37 MEMS 5612 Atomistic Modeling of Materials
This course will provide a hands-on experience using atomic scale computational methods to model, understand and predict the properties of real materials. It will cover modeling using classical force-fields, quantum-mechanical electronic structure methods such as density functional theory, molecular dynamics simulations, and Monte Carlo methods. The basic background of these methods along with examples of their use for calculating
properties of real materials will be covered in the lectures. Atomistic materials modeling codes will be used to calculate various material properties. Prerequisites: MEMS 3610 or equivalent or permission of instructor.
Credit 3 units. EN: BME T, TU

E37 MEMS 5613 Biomaterials Processing
Biomaterials with 3D structures are important for tissue regeneration. The goal of this class is to introduce various types of biomaterials and fabrication approaches to create 3D structures. The relationship between material properties, processing methods, and design will be the primary focus. The topics include degradable biomaterials for scaffold fabrication, processing of tissue engineering scaffolds, processing of tissue engineering hydrogels, processing of drug delivery systems, and scaffold surface modification.
Credit 3 units. EN: TU

E37 MEMS 5614 Polymeric Materials Synthesis and Modification
Polymer is a class of widely used material. Polymer performance is highly dependent on its chemical properties. The goal of this class is to introduce methods for the synthesis and modification of polymers with different chemical properties. The topics include free radical polymerization, reversible addition-fragmentation chain transfer polymerization, atom transfer radical polymerization, step growth polymerization, cationic polymerization, anionic polymerization, ring-opening polymerization, and bulk and surface modification of polymers.
Credit 3 units. EN: TU

E37 MEMS 5700 Aerodynamics
Fundamental concepts of aerodynamics, equations of compressible flows, irrotational flows and potential flow theory, singularity solutions, circulation and vorticity, Kutta-Joukowski theorem, thin airfoil theory, finite wing theory, slender body theory, subsonic compressible flow and Prandtl-Glauert rule, supersonic thin airfoil theory, introduction to performance, basic concepts of airfoil design. Prerequisite: graduate standing or permission of instructor.
Credit 3 units. EN: BME T, TU

E37 MEMS 5701 Aerospace Propulsion
Propeller, jet, ramjet and rocket propulsion. Topics include: fundamentals of propulsion systems, gas turbine engines, thermodynamics and compressible flow, one-dimensional gas dynamics, analysis of engine performance, air breathing propulsion system, the analysis and design of engine components, and the fundamentals of ramjet and rocket propulsion.
Credit 3 units. EN: BME T, TU

E37 MEMS 5703 Analysis of Rotary-Wing Systems
This course introduces the basic physical principles that govern the dynamics and aerodynamics of helicopters, fans and wind turbines. Simplified equations are developed to illustrate these principles, and the student is introduced to the fundamental analysis tools required for their solution. Topics include: harmonic balance, Floquet theory and perturbation methods.
Credit 3 units. EN: BME T, TU

E37 MEMS 5704 Aircraft Structures
Basic elements of the theory of elasticity; application to torsion of prismatic bars with open and closed thin-wall sections; the membrane analogy; the principle of virtual work applied to 2D elasticity problems. Bending, shear and torsion of open and closed thin-wall section beams; principles of stressed skin construction, structural idealization for the stress analysis of wings, ribs and fuselage structures. Margin of safety of fastened connections and fittings. Stability of plates, thin-wall section columns and stiffened panels. Application of the finite element method for the analysis of fastened connections, structural fittings and problems of local stability of aircraft structural components.
Credit 3 units.

E37 MEMS 5705 Wind Energy Systems
A comprehensive introduction to wind energy systems, a practical means of extracting green and sustainable energy. Topics include: a historical perspective of wind turbines; horizontal axis and vertical axis wind turbines; the basic parameters such as power rating and efficiency; the structural components ranging from blade and hub to nacelle and tower; wind turbine aerodynamics, aeroelasticity and control systems; blade fatigue; statistical wind modeling; unsteady airfoil aerodynamics and downstream wake; and environmental considerations such as noise and aesthetics. Prerequisite: senior or graduate standing in engineering or permission of the instructor.
Credit 3 units. EN: BME T, TU

E37 MEMS 5706 Aircraft Performance
This course introduces the principles and applications of aerodynamics to determine the performance of typical jet engine and propeller airplanes. The performance calculations include flight conditions of takeoff, climb, level flight, and landing. The topics covered also include range and endurance computation, turning flight, flight envelope, constraint analysis and design process. The knowledge and skill gained in this course can be readily applied in the preliminary design of an airplane. Prerequisite: senior or graduate standing in engineering, or permission of the instructor.
Credit 3 units. EN: BME T, TU

E37 MEMS 5801 Micro-Electro-Mechanical Systems I
Introduction to MEMS: Microelectromechanical systems (MEMS) are ubiquitous in chemical, biomedical and industrial (e.g., automotive, aerospace, printing) applications. This course covers important topics in MEMS design, micro-/nanofabrication, and their implementation in real-world devices. The course includes discussion of fabrication and measurement technologies (e.g., physical/chemical deposition, lithography, wet/dry etching, and packaging), as well as application of MEMS theory to design/fabrication of devices in a cleanroom. Lectures cover specific processes and how those processes enable the structures needed for accelerometers, gyro, FR filters, digital mirrors, microfluidics, micro total-analysis systems, biomedical implants, etc. The laboratory component allows students to investigate those processes first-hand by fabricating simple MEMS devices.
Credit 3 units. EN: BME T, TU

E37 MEMS 5912 Biomechanics Journal Club
This journal club is intended for graduate students and advanced undergraduates with an interest in biomechanics. We review landmark and recent publications in areas such as brain,
cardiovascular and orthopedic biomechanics, discussing both experimental and modeling approaches. This course meets once weekly at a time to be arranged. Credit 1 unit. EN: TU

E37 MEMS 597 MEMS Research Rotation
Independent research project that will be determined jointly by the doctoral student and the instructor. Assignments may include background reading, presentations, experiments, theoretical, and/or modeling work. The goal of the course is for the doctoral student to learn the background, principles and techniques associated with research topics of interest and to determine a mutual fit for the student's eventual doctoral thesis laboratory. Credit 3 units.

E37 MEMS 598 Energy Analysis and Design Project
The Energy Analysis and Design Project is designed to provide mechanical engineering skills in energy applications, renewable energy, and technologies related to energy which can involve heat transfer, thermodynamics, and fluid mechanics. The project topic can be chosen by the student or can be developed by both the student and faculty sponsor. The subsequent research and analysis, conducted under the guidance and direction of the faculty sponsor, results in a final project report that is approved by the faculty sponsor. The course is normally completed over one or two semesters. Recent projects have included: Energy Modeling and Efficiency Improvements; A Comparison of TRACE 700 and eQuest, Analysis of Hydroelectric Power, Optimization of Residential Solar Thermal Heating in the United States, Analysis of Ocean Thermal Energy Conversion Systems, Laboratory Plug Load Analysis and Case Study, Modeling and Optimizing Hydronic Radiant Heating and Cooling Systems using Comsol Multiphysics, CFD Analysis in HVAC Applications, Energy Analysis of Waste Disposal Methods, CFD Analysis of Containment Solutions for Data Center Cooling, Energy Recovery Ventilation, Comparative Study of Green Building Rating Systems, Grid Energy Storage, Protection of Permafrost Under the Qinghai-Tibet Railway by Heat Pipe Technology, Investing in Residential Solar Photovoltaic Systems, How Piping Layout Effects Energy Usage, and Comparison of Building Energy Savings Between China and the United States. Credit variable, maximum 6 units.

E37 MEMS 599 Master's Research
Credit variable, maximum 6 units.

**Bachelor of Science in Mechanical Engineering**

The mission of the undergraduate program in mechanical engineering is to prepare students within the broad and evolving field of mechanical engineering. The program instills in students a capacity for creative design through critical and analytical thought. The Bachelor of Science in Mechanical Engineering (BSME) is the first step toward a career in industry, academia or government; it encourages a commitment to independent, lifelong learning and professional development. In addition to their technical studies, students learn to communicate their ideas clearly and to conduct themselves in an ethical and socially responsible manner.

**Program Educational Objectives**

Program educational objectives are broad statements that describe what graduates are expected to attain within a few years of graduation. These objectives are based on the needs of the program's constituencies.

Within a few years of graduation, graduates of the BSME program are expected to do the following:

- Engage in professional practice and/or advanced study
- Further their knowledge and skills through education and/or professional development
- Serve society by using and communicating their knowledge and values

**Student Outcomes**

The Mechanical Engineering program has the following student outcomes that describe what students are expected to know and be able to do by the time of graduation. These relate to the knowledge, skills and behaviors that students acquire as they progress through the program.

The student outcomes of the BSME program are as follows:

- An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- An ability to communicate effectively with a range of audiences
- An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
- An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

**Curriculum**

The curriculum is a four-year program leading to the first professional degree, the BSME, which is accredited by the
Engineering Accreditation Commission of ABET (http://www.abet.org). The curriculum prepares the student for professional practice or postgraduate education in a broad spectrum of mechanical and other engineering or professional fields. It provides critical knowledge in solid mechanics, fluid mechanics, thermodynamics and heat transfer, materials science, dynamics and control, and design. It includes 34 units of mathematics and basic sciences, 58 units of engineering topics, and 28 units of general education for a total degree requirement of 120 units. The general education requirement includes 18 units of social science and humanities.

Core courses must be taken for credit (i.e., for a grade). The social science and humanities courses may be taken on a pass/fail basis. The undergraduate program provides the necessary foundations in these areas and the opportunity to specialize in topics of particular interest. Specialization is accomplished via the judicious choice of engineering electives taken as 300-, 400- or 500-level courses approved by the student's adviser. At the end of the four-year program, the student is ready to go on to graduate education or into research or professional practice.

Bachelor of Science in Applied Science (Mechanical Engineering)

The Bachelor of Science in Applied Science (Mechanical Engineering) program provides substantive and consistent training in mechanical engineering with maximum flexibility. This program is advantageous if a student wishes to pursue a more flexible program than the accredited Bachelor of Science in Mechanical Engineering (BSME) degree program.

Students who do not desire to become licensed engineers but who seek to acquire analytical engineering thinking skills may choose to pursue this program. The added degree flexibility allows these students to pursue additional second majors and/or minors and to increase their ability to participate in programs such as study abroad. It is especially suitable for a double major in combination with mathematics, physics, chemistry, biology, economics or another engineering discipline. The program can be planned to provide a background for graduate work in biological, medical or management fields. The Bachelor of Science in Applied Science is a nonprofessional degree; it is not accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

The degree requirements include the residency and general requirements of the university and the school. The Bachelor of Science in Applied Science (Mechanical Engineering) degree requirements are as follows:

- Complete a total of at least 120 applicable units
- Complete a minimum of 60 units at Washington University
- Complete at least 42 units at the 300 level or higher
- Complete at least 48 units in mathematics, natural science and engineering
- Complete at least 30 units of mechanical engineering (MEMS) courses
- Satisfy the McKelvey School of Engineering English composition requirement
- Satisfy the McKelvey School of Engineering humanities and social sciences requirement
- Satisfy the residency requirement of 30 units of 200-level or higher engineering courses
- Earn at least a 2.0 cumulative grade-point average in all applicable courses taken at Washington University
- Earn at least a 2.0 cumulative GPA in all engineering courses

Pre-Medical Option

Research and practice in the biological and medical sciences increasingly involves advanced technology, including mechanical engineering. For those interested in a career in medicine, the pre-medical option in MEMS makes it possible to obtain an accredited Bachelor of Science while simultaneously meeting the admission requirements of most medical and dental schools. The program also provides a foundation for graduate study and research in biomedical engineering. The essential requirements of the pre-medical option are two semesters of general biology (Biol 2960, Biol 2970); two semesters of general chemistry with a laboratory; two semesters of organic chemistry with a laboratory (Chem 111A, Chem 151, Chem 112A, Chem 152, Chem 261, Chem 262); and one semester of biochemistry (Biol 451). Psychology (Psych 100B) and sociology are highly recommended. One semester of organic chemistry may be counted as an upper-level MEMS elective; the student must take 6 units of other upper-level mechanical engineering electives to complete the 9-unit requirement. The pre-medical option is easier for those who have a high school background in biology or, by reason of advanced placement in math/science, have reduced requirements in the Common Studies portion of the curriculum. For additional information about the pre-medical option, please refer to the Pre-Medical Education (p. 968) section of this Bulletin, which is located in the introduction to the McKelvey School of Engineering’s Undergraduate Programs. Interested individuals may also contact the pre-health adviser, Ron Laue, at ron.lauw@wustl.edu for additional information.

The Minor in Aerospace Engineering

Whether students are intent on a career in aviation or simply enthusiastic about space and flight, a minor in aerospace engineering can satisfy their scientific curiosity, prepare them for a job, or uncover opportunities for technical contributions. The minor in aerospace engineering is available to all undergraduates, but it is most attractive to those pursuing a degree in mechanical engineering. The minor in aerospace engineering requires a minimum of 15 units of courses selected from the list below; it is possible to earn the minor without increasing the number of units (120) required for the Bachelor of Science in Mechanical Engineering (BSME).

Aerospace engineering deals with the analysis, design and performance of flight vehicles such as transport and military aircraft, helicopters, missiles and launch vehicles, and spacecraft. Students learn about aerospace engineering by taking courses in aerodynamics, aircraft flight dynamics and control, aerospace propulsion, aerospace structures and aerospace vehicle design. Students may also have the opportunity to gain experience in aerospace engineering design through collaborative programs with local companies such as Boeing. Aerospace engineers from industry teach courses as adjunct instructors at Washington University, and many Washington University faculty members have extensive aerospace industry experience.

Units required: 15

Required courses:
Electives (3-6 units):

Any course from the aerospace MS concentration list (https://mems.wustl.edu/graduate/programs/Pages/MS-In-Aerospace-Engineering.aspx) (found on the MS in Aerospace Engineering webpage) can be used as an aerospace minor elective.

To find out more about this minor, contact the department chair or the adviser for the minor in aerospace engineering or visit the Minors webpage (http://mems.wustl.edu/undergraduate/programs/Pages/minors.aspx#aerospace).

The Minor in Materials Science & Engineering

Materials science and engineering (MSE) is an interdisciplinary field that applies the fundamental knowledge of the physical sciences to create engineering innovations. In general, the term engineering refers to actively designing a system for a given application; MSE enables the design of systems from the atoms up. MSE focuses on the interrelationship between a material's structure (from the subatomic level to the macro scale) and the properties or behaviors that the material exhibits. Materials synthesis and processing techniques enable engineers to control and change the material structure in order to obtain the desired properties. Understanding the structure–properties–processing relationship requires a fundamental knowledge of the underlying chemistry and physics; this is key to obtaining materials with the desired performance for engineering applications in a wide variety of fields, from computing to medicine to energy.

The minor in MSE builds upon the fundamental insights into material structure and properties gained through required introductory courses in chemistry and materials science. Students then select at least two courses from specialization "pick lists" to gain depth in a particular application area. A free elective provides the opportunity to gain additional depth in the fundamentals or exposure to another application area.

Students will be approved for the minor after discussing appropriate course selection with the adviser for the minor. Some courses have prerequisites.

### Requirements

**Units required: 17**

**Courses**

- Three required courses: 8
- Two courses from specialization "pick lists": 6
- One free elective: 3
- **Total**: 17

**Required courses**:

**Total Units**: 8

* Students majoring in geology, geophysics, geochemistry or environmental earth science may substitute EPSc 352 Earth Materials for the required combination of Chem 111A and Chem 151. In this case, EPSc 352 may not be used to fulfill the specialization pick list or free elective requirements.

**Specialization "Pick Lists"**

Students should select at least two courses from any one of the following categories.

#### Structural Materials:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>

</tbody>
</table>

For more information, email Professor Katharine Flores (floresk@wustl.edu), adviser for the minor in materials science and engineering (MEMS).

**The Minor in Mechanical Engineering**

The minor in mechanical engineering complements a major in a field related to mechanical engineering, such as biomedical engineering, electrical engineering, physics, chemistry or architecture. The minor is intended to provide students with a credential that could enhance their opportunities for employment or graduate study. Completion of the minor demonstrates that the student has pursued a structured program approved by the faculty of the Department of Mechanical Engineering & Materials Science.

Students pursuing the minor in mechanical engineering must complete a total of 18 units of course work as described below. Courses selected for the minor program may count toward program requirements of the student’s major. The subjects selected for a minor in mechanical engineering are expected to constitute a coherent program within the field of mechanical engineering. Courses taken under the pass/fail grading option cannot be used for a minor program.

**Required courses:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MEMS 253</td>
<td>Statics and Mechanics of Materials</td>
<td>3</td>

To find out more about this minor, contact the department chair or the adviser for the minor in mechanical engineering or visit the Minors webpage (http://mems.wustl.edu/undergraduate/programs/Pages/minors.aspx#mechanical).
The Minor in Mechatronics

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role for "smart" systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

**Four required courses:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MEMS 255</td>
<td>Dynamics (Dynamics)</td>
<td>3</td>

<tr>
<td>ESE 337</td>
<td>Electronic Devices and Circuits</td>
<td>3</td>
</tr>
<tr>
<td>ESE 482</td>
<td>Digital Signal Processing</td>
<td>3</td>
</tr>
</tbody>
</table>

Prerequisite:
Basic programming course: CSE 131 Introduction to Computer Science

For more information, contact the director of the minor, Dennis Mell (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=150).

The Minor in Robotics

Robotic systems have a wide range of applications in modern technology and manufacturing. Robots can vary in complexity and use, from the microrobots used for surgical procedures to the moderate-size robots common in manufacturing and undersea exploration to the macrorobots used for the disposal of nuclear wastes and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in the design and use of robots.

**Units required:** 18

**Prerequisites:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math 217</td>
<td>Differential Equations</td>
<td>3</td>

<tr>
<td>MEMS 3110</td>
<td>Machine Elements</td>
<td>3</td>
</tr>
</tbody>
</table>

For more information, contact the director of the minor, Dennis Mell (https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=150).
University of Missouri-St. Louis/
Washington University Joint
Undergraduate Engineering
Program

In 1993, Washington University and the University of Missouri-
St. Louis held the first classes in the Joint Undergraduate
Engineering Program. This partnership, the first of its kind
in the United States, offers University of Missouri-St. Louis
students the opportunity to benefit from the engineering program
at Washington University and its century-long tradition of
excellence. Effective in October 1999, the three bachelor's
degrees (civil, electrical and mechanical engineering) offered
in our joint program were accredited by the Engineering
Accreditation Commission of ABET (http://www.abet.org). In
addition to being the first undergraduate engineering degrees
offered in a public/private partnership, these are also the first
such degrees to receive ABET accreditation.

The courses are organized for both full-time students and
part-time students with daytime commitments who need to
attend classes in the evening. Students who enter the program
take about half their course work — mathematics, physics,
chemistry, humanities and social sciences — on the campus
of the University of Missouri-St. Louis. The remaining half of
the degree program, which consists of upper-level engineering
courses and laboratories, is taken on the Washington University
campus. Students may choose civil, electrical or mechanical
engineering. Students receive their undergraduate engineering
degrees from the University of Missouri.

For information about this program, please contact the University
of Missouri-St. Louis Joint Undergraduate Engineering Program
at 314-516-6800 or the Washington University McKelvey School
of Engineering at 314-935-6510.

Student Services
Mary E. McManus
MEd, University of Missouri-St. Louis

Degree Requirements

Undergraduate Bachelor of Science (BS) degrees awarded by
the McKelvey School of Engineering include two categories:
engineering/computer science degrees and applied science
degrees.

Engineering/computer science degrees include the
following:

- BS in Biomedical Engineering
- BS in Business and Computer Science
- BS in Chemical Engineering
- BS in Computer Engineering
- BS in Computer Science
- BS in Computer Science + Mathematics
- BS in Computer Science + Economics
- BS in Electrical Engineering
- BS in Environmental Engineering
- BS in Mechanical Engineering
- BS in Systems Science & Engineering

Applied science degrees include the following:

- BS Major in Applied Science (Chemical Engineering)
- BS Major in Applied Science (Electrical Engineering)
- BS Major in Applied Science (Mechanical Engineering)
- BS Major in Applied Science (Systems Science &
  Engineering)

Engineering Bachelor of Science
Degrees

To earn the BS in Biomedical Engineering, BS in Chemical
Engineering, BS in Computer Engineering, BS in Electrical
Engineering, BS in Mechanical Engineering, or BS in Systems
Science & Engineering, a student must satisfy all of the following
general distribution requirements:

1. Complete the engineering Common Studies courses outlined
   below:
   a. Calculus (Math 131, Math 132, Math 217 and Math 233)
   b. Physics I (Physics 191) and Physics II (Physics 192)
   c. Chemistry (Chem 111A or Chem 105 and Chem 151)

Note 1: Some programs also require Chem 112A or
Chem 106 and Chem 152.
Note 2: The BS in Computer Engineering program permits alternate science courses to satisfy this requirement.

Note 3: Chem 111A is required for Biomedical Engineering students; Chem 151 is required with Chem 111A and Chem 105.

d. Technical Writing (Engr 310)

2. Satisfy the specific degree requirements of one of the engineering degree programs, as outlined in other sections of this Bulletin.

3. Satisfy the requirements listed under All Undergraduate Degrees below.

Applied Science Bachelor of Science Degrees

To earn the BS in Applied Science (Chemical Engineering), BS in Applied Science (Electrical Engineering), BS in Applied Science (Mechanical Engineering), BS in Applied Science (Systems Science & Engineering), BS in Computer Science, BS in Computer Science + Mathematics, or BS in Computer Science + Economics, a student must satisfy all of the following general distribution requirements:

1. Complete at least 120 applicable units.
2. Complete at least 48 units of the 120 in mathematics, natural sciences and engineering.
3. Complete at least 42 units of the total 120 units at the 300 level or higher.
4. Satisfy the specific degree requirements of one of the applied science degree programs, as outlined in other sections of this Bulletin.
5. Satisfy the requirements outlined under All Undergraduate Degrees below.

Note: Diplomas for Applied Science degrees state "Bachelor of Science" and do not indicate the major on the diploma. The major (e.g., Chemical Engineering) is posted on the official transcript.

All Undergraduate Degrees

To earn any undergraduate degree in the McKelvey School of Engineering, a student must accomplish all of the following:

1. Earn at least a C (2.0) cumulative grade-point average in all applicable courses taken at Washington University.
2. Earn at least the minimum total number of units specified for the particular degree. All degrees require students to complete at least 120 applicable units.
3. Earn at least a C (2.0) GPA in all engineering courses taken.
4. Satisfy all of the following residency requirements:

a. Complete a minimum of 30 units of 200-level or higher courses from the school while matriculated at Washington University in a degree program. An engineering course transferring from an exchange program sanctioned by the McKelvey School of Engineering may be counted as a school equivalent course for the purpose of satisfying this requirement.

b. Complete a minimum of 60 units at Washington University while matriculated at Washington University in a degree program. Exchange program courses sanctioned by the school may be counted toward this requirement.

c. For students who pursue multiple engineering BS degrees, for each additional BS degree from the school, students must complete an additional 15 resident units of 200-level or higher courses from the school, which are in addition to the 30 units of 200-level or higher engineering courses that are listed in 4a above. No more than two BS degrees from the McKelvey School of Engineering may be earned by the same student.

5. Complete the English proficiency requirement as well as the humanities and social sciences requirement of the McKelvey School of Engineering.

English Proficiency Requirement

Every student must demonstrate proficiency in the reading and writing of the English language. Students are considered proficient if they have earned a 5 on the Advanced Placement (AP) English Language or Literature Examination of the College Board. First-year Engineering students who have not earned a 5 on the AP English exam are given an opportunity to take a writing placement exam during the summer before they arrive on campus. Proficiency can be demonstrated by satisfactory performance on this writing placement exam during the summer before they arrive on campus. Waivers of the English proficiency requirement via AP scores or the writing placement exam do not carry degree credit.

Students who do not demonstrate satisfactory proficiency via AP scores or on the writing placement exam are required to enroll in a course or sequence of courses specified by the test's administrator. The school's English proficiency requirement is then satisfied only by a grade of C- or better in one of the themed college writing courses (https://collegewriting.wustl.edu/themed-course-options) developed by the College Writing Program (https://collegewriting.wustl.edu). Courses taken at other institutions to satisfy the English proficiency requirement must be approved by the school's English proficiency coordinator. If the course is so approved, the student must pass with a grade of C- or better.

Before enrolling in one of the College Writing Program themed courses, some students may be required to complete
CWP 1511 Critical Reading and Analytical Writing, CWP 1001 Fundamentals of Academic Writing or CWP 200 Writing Tutorial.

Courses taken at other institutions to satisfy the English proficiency requirement must be approved by the school’s English proficiency coordinator. If the course is so approved, the student must pass with a grade of C- or better.

**Humanities and Social Sciences Requirement**

To earn any bachelor’s degree from the McKelvey School of Engineering, students must complete the school’s humanities and social sciences requirement:

1. **Minimum units:** At least 18 units of humanities and social sciences courses must be completed with passing grades. Humanities and social sciences courses (other than transfer courses) may be taken for pass/fail credit.
2. **Breadth:** At least 6 units of the 18 must be in the humanities and at least 6 units must be in the social sciences.
3. **Upper-level courses:** At least 3 units of the 18 units completed must be from one or more courses numbered 300 or higher.

Washington University courses labeled with the EN:H or EN:S attribute in the semester course listings will count, respectively, toward the humanities or social sciences requirement for engineering degrees. As a convenience, preapproved listings of humanities and social sciences courses are provided for Architecture (http://registrar.seas.wustl.edu/EVALS/evals.asp?school=WASHINGTON%20UNIV-DESIGN%20AND%20VISUAL%20ARTS-ARCHITECTURE) and Business (http://registrar.seas.wustl.edu/EVALS/evals.asp?school=WASHINGTON%20UNIV-OLIN%20COURSES%20Reviewed-H%20SS%20EN%20Topics). In general, most art courses (F10 and F20) will count toward the engineering school’s humanities requirement, even if they do not have the specific EN:H designation. Some upper-level art courses are open only to students with an open art program.

Transfer courses must be approved through Engineering Undergraduate Student Services as acceptable transfer credit (http://engineering.wustl.edu/current-students/student-services/Pages/transfer-course-credit.aspx) and as applicable humanities or social sciences courses. All transfer courses must be taken for credit (i.e., not pass/fail), and students must earn a C- or better in transfer courses for the credit to transfer to the school. Grades do not transfer.

Advanced Placement (AP) credit and International Baccalaureate (IB) credit approved through Engineering Undergraduate Student Services may be used to satisfy all or part of the breadth requirement (i.e., the humanities 6-unit requirement and/or the social science 6-unit requirement); however, AP and IB credit may not be used to satisfy the 18 minimum units needed to satisfy the school’s overall humanities and social sciences requirement. Students may individually petition Engineering Undergraduate Student Services to have their AP or IB credit counted toward the humanities 6-unit requirement and/or the social sciences 6-unit requirement. Petitions will be reviewed to determine if they conform to guidelines established for awarding humanities and social sciences credit. Guidelines are approved by the Engineering Undergraduate Studies Committee.

**Engineering Topics Units**

Bachelor degree programs accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org) require that the program require a minimum of one and one-half years of engineering topics.

One and one-half years is defined as three-eighths of the total number of units required for the particular degree, with a maximum of 48 units. The number of engineering topics units assigned to a course is the sum of the course’s engineering science units and engineering design units: engineering topics units = engineering design units + engineering science units. A course carrying engineering topics units will be marked in the Course Listings (https://courses.wustl.edu/Semester/Listing.aspx) with the EN:TU attribute.

**Engineering Topics/Design Component**

Engineering design is the process of devising a system, component or process to meet desired needs. It is a decision-making process (often iterative) in which basic sciences, mathematics and engineering sciences are applied to convert resources optimally to meet a stated objective. Among the fundamental elements of the design process are the establishment of objectives and criteria, synthesis, analysis, construction, testing and evaluation. The engineering design component of a curriculum must include most of the following features: development of student creativity, use of open-ended problems, development and use of modern design theory and methodology, formulation of design problem statements and specifications, consideration of alternative solutions, feasibility considerations, production processes, concurrent engineering design and detailed system descriptions. Further, it is essential to include a variety of realistic constraints, such as economic factors, safety, reliability, aesthetics, ethics and social impact.

**Engineering Topics/Science Component**

The engineering sciences have their roots in mathematics and basic sciences but carry knowledge further toward creative application. These studies provide a bridge between mathematics and basic sciences on the one hand and engineering practice on the other. Such subjects include mechanics, thermodynamics, electrical and electronic circuits, materials science, transport phenomena and computer science (other than computer programming skills), along with other subjects, depending on the discipline. Although it is recognized that some subject areas may be taught from the standpoint
of either basic sciences or engineering sciences, the ultimate determination of the engineering science content is based on the extent to which there is extension of knowledge toward creative application. In order to promote breadth, the curriculum must include at least one engineering course outside of the major disciplinary area.

**ABET Mathematics and Basic Science Requirement**

Bachelor degree programs accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org) require that the program require a minimum of one year of a combination of college-level mathematics and basic sciences (some with experimental experience) appropriate to the discipline. The basic sciences are defined as biology, chemistry and physics.

**Applicable Undergraduate Engineering Degree Requirements**

Undergraduate engineering students are required to satisfy the engineering degree requirements that are published in the online undergraduate Bulletin (p. 6) in effect at the time they first enroll at the university as degree-seeking undergraduate students.

Undergraduate engineering students must complete all undergraduate degree requirements and graduate within 10 consecutive years of enrolling as degree-seeking undergraduate students at the university.

A student who does not graduate within 10 consecutive years will be required to satisfy the degree requirements that are in the most recently published online undergraduate Bulletin and to retake courses identified by the chair of the department in which the student is seeking the degree.

- When a student wishes to return to complete course work and earn a degree after the 10-year time period has passed, the most recent online undergraduate Bulletin is defined as the catalog in effect when the student re-enrolls in the Mckelvey School of Engineering as an undergraduate student seeking a degree.
- When a student has left the university and wishes to complete course work at another university to then transfer back and graduate from the Mckelvey School of Engineering and when more than 10 years have elapsed since the student was first enrolled as an undergraduate engineering degree-seeking student, the most recent online undergraduate Bulletin is defined as the catalog in effect when the student files an intent to graduate for an engineering undergraduate degree. The course work that the student intends to complete and transfer back to the Mckelvey School of Engineering must be approved by the school before the student enrolls in the course work.

**Definition of Class Levels**

For classification purposes, a student's undergraduate class level is defined according to the year in which they intend to graduate.

**Academic Honors & Awards**

**Dean's List:** The Dean's List is composed of first-year, sophomore, junior and senior engineering students who, for the preceding semester, have achieved a 3.6 or higher grade-point average based on a minimum of 12 units of applicable courses taken for grades (not pass/fail). An appropriate entry is added to their official transcripts.

No "I" (incomplete) or "N" (no grade reported) grades may be a part of the semester's record. For a student to be eligible for the fall Dean's List, all final grades must be posted by the first day of the spring semester. For the spring semester, all final grades must be posted by the beginning of Summer Session II for a student to be considered.

**Latin Honors:** For students graduating with undergraduate engineering degrees, Latin Honors from the school will be awarded based on the cumulative Washington University GPA. In June, the GPA cutoffs used to select Latin Honors for the upcoming year will be assigned by calculating cumulative averages from the three most recent graduation years. For the upcoming graduating class, the three-year average of the top 10 percent will determine which students are awarded summa cum laude; the three-year average of the next top 10 percent will determine which students are awarded magna cum laude; and the three-year average of the next top 10 percent will determine which students are awarded cum laude. Latin Honors will be awarded to students whose cumulative GPAs at time of graduation meet the predefined three-year average GPA cutoffs, which are determined in June of the prior year.

**Valedictorians:** Valedictorians are selected from graduating seniors who entered as first-years (not transfer students). Candidates must have earned a 4.0 cumulative GPA at Washington University with no repeated courses.

**Academic Regulations**

**Attendance**

Each professor in the Mckelvey School of Engineering decides how many absences a student may have and still pass the course. Professors are expected to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their professors the reasons for any absences and to discuss with them the possibility of making up missed assignments.
Units and Grades

A credit unit is the equivalent of one recitation or lecture hour a week for one semester or one laboratory of two and one-half hours a week for one semester. A student’s work is rated in terms of the following system of grades and grade points:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Points per Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>

Note that T courses taken by engineering undergraduate students will not count toward graduation requirements. Physical Education (L28) courses will count toward earned units, but the grade will not be calculated in the grade-point average. Please see the University College Courses (p. 1071) section below for information regarding undergraduate enrollment in University College courses.

Auditing a Course

A student may register for a specific course as an auditor. The criteria for a successful audit are determined by the course instructor, and the student should work with the instructor to ensure that these criteria are understood. Generally speaking, the completion of homework and the taking of exams are not required. The grade L signifies a successful audit, and the grade Z signifies an unsuccessful audit. Neither grade affects a student’s GPA, nor do the course’s units contribute to the student’s total cumulative degree-seeking units. Audit courses do not count toward any degree; however, audit units do count toward full-time status determination and tuition. Class attendance is required to earn a grade of L; unsatisfactory attendance will result in a grade of Z. Computer science courses do not allow students with auditor status.

Incomplete Grades

The grade I (incomplete) indicates that the work of a student has been generally acceptable but that extenuating circumstances led to certain requirements not having been met. The grade of X is recorded when a student is absent from a midterm or final examination because of illness or another unavoidable reason, provided the work has been otherwise satisfactory.

Grades of X and I must be removed no later than the close of the next full semester that a student is in residence. On failure to make up for an X or I grade, the student will not receive credit for the course, and the grade will be changed to F unless the student has been explicitly excused by the associate dean.

A student should initiate the request for an incomplete grade, and such request should be made by the last class meeting. Incomplete grades should be issued only when there is an agreement in place with the student as to the nature of the outstanding work and the timeline for completion. It is the student’s responsibility to be in communication with the instructor regarding these details.

A student should not re-enroll in a class to complete an I grade. Enrolling in the class a second time invokes the Retake Policy.

Pass/Fail Option

All undergraduate engineering students are eligible to register each semester for up to 6 units with the pass/fail option, for up to a maximum of 18 units attempted. Some departments require students to take certain courses pass/fail; credits in these courses do not count toward either the semester limit of 6 units or the cumulative limit of 18 units. Other than these courses, only elective courses may be taken with this option, including courses in other divisions of the university but that are still contingent upon and subject to departmental requirements. Humanities, social sciences and some technical electives specifically allowed by individual engineering programs, as well as some engineering courses (both undergraduate and graduate that are not specifically required for the student’s major program), may be taken with the pass/fail option. Some programs do not allow any courses (either required or elective) to be taken with the pass/fail option. Graduate courses taken on a pass/fail basis cannot be transferred later for credit toward a graduate degree.

Changes from the regular grade basis to pass/fail or vice versa may not be made after the last dates specified in the current Course Listings (https://courses.wustl.edu/Semester/Listing.aspx). The normal regulations for withdrawal or change to auditor status also apply to pass/fail courses.
It is the student's responsibility to discuss with the faculty member what constitutes a pass in a particular course. Although the general pass mark is a C-, instructors have the discretion to set the pass mark higher in their course(s).

A final grade of P# (pass) will earn degree credit where applicable. A final grade of F# (fail) will not earn degree credit. Neither P# nor F# will affect the GPA.

Minimum and Maximum Course Loads

Undergraduate engineering students must take a minimum of 12 units of credit to be considered full-time. Students may not enroll in more than 21 units without special permission. An additional per-unit tuition charge will be assessed for any units over the 21-unit limit.

Course Retake Policy

If an engineering student repeats a course at Washington University, only the second grade is included in the calculation of the GPA. Both enrollments and grades are shown on the student's official transcript. The symbol R next to the first enrollment's grade indicates that the course was later retaken. Credit toward the degree is allowed for the latest enrollment only.

If an engineering student repeats a course elsewhere (i.e., as a preapproved transfer course from another university), the student must take the course for credit and earn a C- or better for the units to transfer to Washington University. After an official transcript showing the final grade for the repeated course is received, the symbol R next to the first enrollment's grade indicates that the course was later retaken. The original grade will no longer figure into the student's GPA, nor will the transfer course grade figure into the GPA. The grade for the transfer course does not display on the student's Washington University record, but the units for the transfer course will count toward the degree program.

Academic Probation and Suspension

A student whose work is of unsatisfactory quality is placed on academic probation and is classified as not being in good academic standing. If a student on probation does not improve their academic record after a reasonable time, probation is followed by suspension.

Academic probation represents a warning that things are not going well academically. Students placed on academic probation may continue to stay enrolled in their degree programs, but they are required to meet with their advisers to discuss what they might do to improve their grades.

Academic suspension represents being dismissed from the school. Students placed on academic suspension are not eligible to enroll or continue their degree programs; however, suspended students may apply for re-enrollment at a future time. Students in this situation will need to show that they have successfully completed challenging full-time course work at a different institution (generally, for at least one year), that they have been employed in a full-time position (generally, for at least one year), or a combination of the two (i.e., they have been both in school and working). There is no guarantee that students who have been suspended will be allowed to return.

The regulations governing probation and suspension are as follows:

1. At the close of each semester, each student's semester GPA is computed as the total grade points earned during the semester divided by the total credit units attempted. At the same time, the cumulative GPA is computed as the quotient of the cumulative total of grade points over the cumulative total of credit units attempted. The computations are made on the basis of the grade-point scale indicated in the section on Units and Grades (p. 1068). Courses taken on a pass/fail basis are not included in these calculations.

2. At the close of each semester, each student's semester and cumulative GPAs are reviewed. If either is below 2.0, the probation rules stated below apply, and the student is notified of any academic probation or suspension action.

3. At the end of a semester, any student who in the judgment of the associate dean is not making adequate academic progress is required to meet with their adviser before enrollment is allowed for the following semester.

4. A student who is suspended may, if they desire to continue, present a written statement setting forth reasons why they believe the situation should be reconsidered. This statement should be addressed to the Undergraduate Academic Standards Committee and forwarded via the associate dean (Lopata Hall, Room 303).

Probation and Suspension Rules

Probation follows any semester during which either the student's semester or cumulative GPA is less than 2.0, the student has three I (incomplete) grades at the end of the semester, or the student drops below full-time student status and is not achieving adequate progress toward the degree.

A student placed on academic probation may have a hold placed on their record and must complete the steps below in order to have the hold removed:

1. Within two weeks of receiving a probation notification, the student must contact their Engineering Undergraduate Student Services (Lopata Hall, Room 303) four-year adviser and schedule a meeting. The scheduled meeting must take place before the end of first week of classes for the upcoming semester.

2. The student must prepare a written statement with two sections. In the first section, the student will provide a clear explanation of the circumstances that caused the grades...
received the previous semester. In the second section, the student will describe their plan to improve their grades in the future. The written statement should be sent to the four-year adviser before the scheduled meeting takes place so that the four-year adviser has an opportunity to review it before the meeting.

3. The student must meet with the four-year adviser at the scheduled date and time. The meeting is designed for the student to determine whether they are receiving appropriate and adequate help. The four-year adviser may recommend that routine meetings take place throughout the semester.

If applicable, the hold will be removed after the student meets with the four-year adviser.

If a student has been on academic probation twice previously, suspension may follow the next time the student is eligible for probation.

Suspension may result if a student becomes eligible for probation during two sequential semesters.

Suspension may result if any course is failed twice.

Suspension may result if a student was enrolled in credit courses and earns no degree credit at the end of a semester.

**First Academic Probation**

The first time a student qualifies for probation, they are placed on “First Academic Probation.” Students placed on First Academic Probation status are sent an email notification of this action.

**Second Academic Probation**

The second time a student qualifies for probation, they are placed on “Second Academic Probation.” Students placed on Second Academic Probation status are sent an email notification of this action.

**Special Academic Probation**

Special Academic Probation means that a student was eligible for suspension but was not suspended. Students placed on Special Academic Probation status are sent an email notification of this action.

**Academic Suspension**

The third time a student qualifies for probation, becomes eligible for probation for the second semester in a row, fails the same course twice, or was enrolled in credit courses and earns no degree credit at the end of a semester, they are eligible for suspension from the university. Students placed on academic suspension status are sent a letter informing them of the suspension action and will have a notation placed on their record. Students who wish to appeal are instructed to prepare a written statement that informs the Academic Standards Committee of the decision to appeal; they also must explain why the unsatisfactory academic performance occurred and, if they are allowed to return, what they would do differently. The student must then attend an appeal hearing. The student’s academic record, written appeal and any other factors the student may wish to discuss are considered by the committee. When the discussion ends, the student leaves the hearing room, and the committee immediately makes a decision regarding the student’s appeal. Engineering Undergraduate Student Services then informs the student of the committee’s decision. The committee’s decision is final (no other appeals are possible). If the appeal is successful, the student is placed on Special Academic Probation and allowed to enroll in classes. If the appeal is unsuccessful, the student’s program will be closed and the student will be dropped from any course registrations for the next semester.

If a student is placed on academic suspension status and chooses not to appeal or appeals and the appeal is denied, the student is not allowed to enroll in any classes in any division at Washington University. A student placed on academic suspension is classified as not being in good academic standing. If a suspended student would like to return to the university at a future time, the student must apply for reinstatement to the McKelvey School of Engineering.

**Satisfactory Academic Progress and Title IV Financial Aid**

Federal regulations require that students receiving federal Title IV financial aid maintain satisfactory academic progress. Satisfactory academic progress is evaluated annually at the end of the spring semester. In order to be considered to be maintaining satisfactory academic progress and thus be eligible for federal financial aid, a student must maintain minimum requirements for cumulative GPA (2.0) and pace (credit earned for at least 67 percent of the credits attempted). The degree must also be completed within the maximum time frame allowed for the program (no more than 180 credits). Students who are not maintaining progress will be notified by Engineering Undergraduate Student Services and, barring an approved appeal, are ineligible for aid for future semesters.

Additional information about Satisfactory Academic Progress (https://sfs.wustl.edu/resources/Pages/Satisfactory-Academic-Progress.aspx) is available from Student Financial Services.

**Full-Time and Part-Time Enrollment**

Undergraduate degree programs are full-time programs. All students designated with full-time status will automatically be charged the full-time tuition. Part-time enrollment is not allowed unless serious documented health problems prevent a student from being enrolled full-time.

Part-time enrollment and partial tuition charges are allowed for seniors who must enroll for an extra semester. For students who enroll as first-year students, this status is allowed after their eighth semester. For dual-degree students, part-time status is allowed after the fourth semester. (Note: Summer semesters
are not counted as academic semesters.) Part-time students take 1 to 11 units and are charged for part-time tuition, along with the standard undergraduate fees. Scholarship support is not normally available for part-time students.

Special note to senior-level undergraduate students: Senior-level students (those in their eighth semester) will automatically be designated as having full-time enrollment status if they are taking 6 or more units; students are charged full tuition if enrolled in 1 to 21 units.

Leaves of Absence

Engineering students may petition to take a leave of absence. For a leave of absence, students in good standing are assured re-enrollment within the next two years. Before returning, the student is to notify the McKelvey School of Engineering and submit a Reinstatement Form at least six weeks prior to the beginning of the appropriate term. A student wishing to take a medical leave of absence must have a recommendation for the medical leave of absence from Habif Health and Wellness Center submitted to the appropriate dean in the McKelvey School of Engineering prior to leaving and prior to re-enrollment. The dean will decide whether or not to grant the request for the medical leave of absence and re-enrollment upon reviewing the recommendations from the Habif Health and Wellness Center and the student's file.

Transfer Credit

A student must get prior approval before taking a course at another university. After completing the course, the student must have an official copy of the transcript sent to the McKelvey School of Engineering for evaluation. If the credit is accepted, the course will show on the transcript with the units but not the grade. Only units of credit for courses with a grade of C- or better will transfer. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or the Academic Integrity policy. The transfer course approval process (http://engineering.wustl.edu/current-students/student-services/Pages/transfer-course-credit.aspx) is outlined on the McKelvey School of Engineering website.

University College Courses

Engineering students may only enroll in a limited number of University College courses that have been approved by the Engineering Undergraduate Studies Committee. The approved courses listed below will display on official transcripts, and the course units will count toward engineering degree requirements, but the grade will not be calculated in the students' GPAs. Approved courses must be taken for a letter grade, and students must earn a minimum grade of C- for the course units to count toward engineering degree requirements.

Current approved courses, which may be needed by students seeking admission into medical school, include the following:

- U29 Bio 204 Nutrition
- U29 Bio 322 Introduction to Anatomy and Physiology I
- U29 Bio 323 Introduction to Anatomy and Physiology II (With Lab)
- U29 Bio 406 Introduction to Biochemistry
- U29 Bio 4170 Endocrine Physiology
- U29 Bio 4241 Immunology

Undergraduate engineering students in their final year of study may enroll in one University College course (not listed above) each semester. These course units will not count toward graduation requirements.

Military Training

Army and Air Force ROTC programs are available at Washington University.

A student in the McKelvey School of Engineering who takes an ROTC course will have the course name, number, credit units and grade entered on their official transcript. If the course is numbered 100 through 299, the course's units and grade will not apply toward the student's degree requirements; if the course is numbered 300 through 499 and the grade is D- or better, the course's units will apply toward the student's degree requirements (as a free elective), and the grade will be counted in the student's cumulative and semester GPAs. Credit may be awarded for no more than one course per semester, for a maximum of 16 units.

Course descriptions for Air Force ROTC and Army ROTC (p. 1080) can be found in the appropriate sections of this Bulletin.

Physical Education

Students in the McKelvey School of Engineering may enroll in physical education courses, and the units will count toward the 120 units needed for graduation. The grades will not be calculated in the students’ GPAs.

Minors (directory)

Residency Rule for Engineering Minors

No more than 6 units of credit transferred from another institution (outside Washington University) can be used to meet the requirements of any minor offered by the McKelvey School of Engineering. The remaining units (up to the amount required for the minor) must be applicable units from Washington University. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

Minors

Below is a list of minors offered by the McKelvey School of Engineering. Visit the following sections of this Bulletin for more information about a specific minor. Students must log into WebSTAC (https://acadinfo.wustl.edu/WebSTAC.asp) and select the Major Programs link under Academics to declare a minor online.

- Aerospace Engineering (p. 1060)
- Applied Physics & Electrical Engineering (p. 1028)
- Bioinformatics (p. 1005)
- Computer Science (p. 1005)
- Electrical Engineering (p. 1029)
- Energy Engineering (p. 1044)
- Environmental Engineering Science (p. 1043)
- Materials Science & Engineering (p. 1061)
- Mechanical Engineering (p. 1062)
- Mechatronics (p. 1029)
- Nanoscale Science & Engineering (p. 1045)
- Robotics (p. 1030)
- Systems Science & Engineering (p. 1030)

Majors (directory)

Below is a list of majors offered by the McKelvey School of Engineering. Visit the following sections of this Bulletin for more information about a specific major. Students must log into WebSTAC (https://acadinfo.wustl.edu/WebSTAC.asp) and select the Major Programs link under Academics to switch their major program within Engineering or to declare a second major or minor online.

- Applied Science (Chemical Engineering) (p. 1043)
- Applied Science (Electrical Engineering) (p. 1026)
- Applied Science (Mechanical Engineering) (p. 1060)
- Applied Science (Systems Science & Engineering) (p. 1026)
- Biomedical Engineering (p. 972)
- Business and Computer Science (p. 1002)
- Chemical Engineering (p. 1039)
- Computer Engineering (p. 999)
- Computer Science (p. 1000)
- Computer Science + Economics (p. 1001)
- Computer Science + Math (p. 1002)
- Double Majors and the Pre-Medical Program (EECE) (p. 1043)
- Electrical Engineering (p. 1021)
- Environmental Engineering (p. 1041)
- Individually Designed Major (p. 965)
- Mechanical Engineering (p. 1058)
- Systems Science & Engineering (p. 1023)
- Second Major in Computer Science (p. 1004)
- Second Major in Computer Science + Mathematics (p. 1004)
- Second Major in Electrical Engineering (p. 1027)
- Second Major in Financial Engineering (p. 1028)
- Second Major in Systems Science & Engineering (p. 1027)
Beyond Boundaries Program

Students accepted into the Beyond Boundaries Program will have opportunities to explore topics — from climate change to aging to creativity — from multiple disciplinary perspectives. This two-year program, with the option to continue for two more years, equips students to make a difference in a complicated world. By allowing students to enter Washington University unaffiliated with any one school (for their first year), the program allows them to address challenges that do not reside within the territory of a single discipline.

Beyond Boundaries is a framework of classes and resources that allows students to understand issues in an interdisciplinary way. Faculty from the School of Medicine, Olin Business School, Brown School, School of Law, McKelvey School of Engineering, Sam Fox School of Design & Visual Arts, and Arts & Sciences collaborate in the Beyond Boundaries Program to produce an interdisciplinary curriculum rich with possibilities for students with interests that do not fit within the confines of traditional subject matter.

Beyond Boundaries aims to bring a student’s different interests into conversation with each other in order to approach the big social and intellectual problems of tomorrow. This is a different approach than having two majors, which indicates an interest in two separate fields of study. Many students in the program may have two majors, but this is not a requirement of the program.

Requirements

Beyond Boundaries spans the first two years of a student’s time at Washington University, with the option to continue into the third and fourth years. At the beginning of their second year, Beyond Boundaries students matriculate into their chosen school and declare a major during the spring semester.

- Students who participate in both the first and second years of the Beyond Boundaries Program will receive a milestone notation on their transcripts.
- Students who complete years three and four of the program, regardless of whether they entered during their first or third year, will receive a milestone notation on their transcripts.
- Those who complete all four years of the program will receive an Interdisciplinary Certificate upon graduation.

The curriculum (p. 1073) of years one and two includes College Writing, multiple Beyond Boundaries courses (p. 1074), a first-year 1-credit seminar (fall semester for Beyond Boundaries students only), a first-year course in collaborative problem-solving (spring semester for Beyond Boundaries students only), and a host of lectures, seminars and community-building events (https://beyondboundaries.wustl.edu/calendar) that count toward program requirements.

Students participating in Beyond Boundaries can still complete their graduation requirements in four years.

Who Should Apply

Students who are talented, self-initiated and self-motivated and who wish to pursue their own broad interdisciplinary interests through a unique education experience that requires collaboration across academic disciplines and perspectives should consider applying to this program (https://beyondboundaries.wustl.edu/apply).

Who Should Not Apply

Students interested in pursuing degrees in biomedical engineering and chemical engineering may not be able to participate in the program due to specific track-based requirements. These students are invited to apply for year three of the Beyond Boundaries Program, which spans the student’s third and fourth years and includes a fourth-year capstone experience.

Simone Picker
Phone: 314-935-8874
Email: simonepicker@wustl.edu
Website: http://beyondboundaries.wustl.edu

Curriculum

Year One (13 required credits)

Year one requirements include an introductory sequence that teaches writing, the framework of interdisciplinary study, and collaborative problem-solving as well as multiple Beyond Boundaries courses.

- College Writing (3 credits; fall)
- Beyond Boundaries seminar (1 credit, Beyond Boundaries students only; fall)
- First-year Bear Bridge course (3 credits, Beyond Boundaries students only; spring)
- Beyond Boundaries courses (3 credits each semester for 6 credits total; fall and spring)

Year Two (point-based system)

During their second year, students will matriculate into their chosen school and declare a major in the spring, as is typical of undergraduate students. Beyond Boundaries students will take a majority of their classes within their academic division during their second year, but they will also be involved in the second year of the program, which involves a less-structured curriculum to ensure that they are able to fulfill their major and school-specific requirements.
Components of year two will include several selections from the following options:

- Interdisciplinary courses (within the student’s chosen school)
- Weekend topic-based problem-solving seminars
- Co-curricular service opportunities
- Lecture series (university-wide offerings that include prominent scholars, businesspersons, and advocates)
- Spring-break opportunities
- Networking and community-building events
- Discussion participation (as part of interdisciplinary lectures on campus)

These various opportunities are designed to allow students the flexibility to achieve their academic and co-curricular goals outside of the program while keeping them connected to the program community.

Students who complete years one and two of the Beyond Boundaries Program receive a milestone notation on their transcript. Students may opt to continue this program into their third and fourth years.

Students accepted into the Beyond Boundaries Program prior to matriculation at Washington University can automatically continue into years three and four of the program.

**Year Three (point-based system)**

Year three will also be open to incoming third-year students who did not start their time at Washington University as a part of the Beyond Boundaries Program. These students must apply to join the program at this point, and they will be selected for participation based on their demonstrated interest in interdisciplinary study and problem-solving.

Year three is flexible, and it is similar to year two with its requirement-based system. Students can fulfill these requirements through a combination of multiple selections from the following options:

- Upper-level interdisciplinary course work
- Select courses in the graduate and professional schools
- Co-curricular service and community-building activities
- Meaningful study-abroad opportunities

The program offers students exposure to information about career and educational paths that they may be interested in pursuing after graduation.

**Year Four**

Year four of the Beyond Boundaries Program involves an interdisciplinary or collaborative capstone project that will be co-advised by two faculty members. This allows students to offer multidisciplinary perspectives on their work and to benefit from close faculty mentorship.

---

**Courses**

**Year One Courses for Beyond Boundaries Students**

**Beyond Boundaries Seminar (1 credit)**

Led by Beyond Boundaries Program Director Rob Morgan and Special Assistant to the Provost Jill Stratton, this course will cover selected relevant topics, including interdisciplinary projects and lectures, collaboration, ideation exercises, and college student development. It is an interactive seminar in which each program participant will participate in prototyping futures, mind-mapping, salon-type discussions, dialogue, reflection, and related activities. There will be opportunities to meet and hear from faculty representing all seven schools at Washington University. The knowledge gained is designed to contribute to academic success, personal development, and a more rewarding social and academic experience over the course of the college experience. This is a pass/fail course, and students will earn 1 credit for it during the fall semester.

**College Writing (3 credits)**

During the fall semester, students will take a 3-unit common College Writing course. This course will focus on basic writing skills and communication across disciplines, and it will meet three days per week. The course will be taught by a faculty member of the program in sections of 12 students. It will include various contributions from faculty in other departments and from across divisions through lecture series, class visits, panels, and interviews. The courses will be grouped into eight themes — Citizen Scientist, Dreams & Nightmares, Writing Identity, Literature & Justice, Place & Perspective, Power & Commodity Culture, Writing Technology, and When I’m 64 — into which students will self-select.

**First-Year Bear Bridge Courses (3 credits)**

In the spring semester, students in the Beyond Boundaries cohort have the opportunity to apply their interdisciplinary knowledge to important social and intellectual questions via one of two Bear Bridge courses.

Bear Bridge courses are intended to do the following:

- Apply knowledge and experience from team-taught Beyond Boundaries courses in a project-based, applied context.
- Reinforce cohort experiences within the Beyond Boundaries program. Students enrolled in the Beyond Boundaries program will have additional curricular and co-curricular cohort-building, and Bear Bridge courses will reinforce these connections.
- Prepare students for ongoing interdisciplinary approaches during their following three years on campus. Bear Bridge courses offer students a set of tools that can be used to...
apply interdisciplinary approaches, including informing their choice of major, their approach to their capstone project, and their self-identity as a scholar.

**Bear Bridge: Empathy First: Creating Solutions with Heart**

Decisions that impact the daily lives of people are often made without consideration of the lived experience of those being affected, often resulting in harm and eroded trust. Empathy is a critical tool for understanding the lived experience of others and for creating improved quality of life for all people. This class will introduce the integration of empathy into decisions through the methods, processes and approaches used in design and social work. Students will examine how empathy is incorporated into the development and implementation of new solutions to complex problems through conversations with experts in health, law and business; community-based team projects; and reflection and discussion. Course activities will build cohort connections. Credit 3 units.

**Bear Bridge: Law, Race, and Design: Examining the St. Louis Story**

This interdisciplinary course focuses on the intersection of law and race in St. Louis. From Dred Scott to Ferguson, St. Louis has served as a focal point for some of the most important issues in our country’s long and still unfinished work toward racial equality. The law has played an important role in these developments; judicial opinions, city ordinances and commission reports have shaped how we understand questions of race and equality. But the law is not simply the written word: it involves people, practices, places, and the stories we tell about them. How we communicate our stories ultimately affects how we understand those stories and how we understand ourselves. This course situates the law within such stories and equips students to communicate those stories in ways that draw from a range of methodological tools. Using human-centered design, students will be challenged to connect the words of legal documents with the experiences of those whose lives are situated by them. Credit 3 units.

**Beyond Boundaries Courses (3 credits each semester for 6 credits total)**

In addition to the 7-credit introductory series listed above, first-year students in the Beyond Boundaries Program will be required to complete two Beyond Boundaries courses (one in the fall and one in the spring).

Beyond Boundaries courses, which are funded by the Office of the Provost, are designed to prepare students for a rapidly evolving world characterized by social, political, scientific and economic problems that cannot be solved using knowledge from a single discipline. These courses are taught by faculty from different schools across Washington University, and they offer a window into how scholars from different disciplines approach big, critical topics like our aging population, the nature of creativity, the phenomenon of climate change and the evolving art of medicine.

These courses will offer students in the Beyond Boundaries program tangible examples from interdisciplinary approaches to these topics, including those of faculty from across schools participating in collaborative exploration. Some courses within the different schools that have been predesignated by the faculty lead team as meeting the requirements of interdisciplinary courses may also count toward this requirement during the spring semester.

**Beyond Boundaries: Earth’s Future: Causes and Consequences of Global Climate Change (fall)**

Earth’s Future: Causes and Consequences of Global Climate Change examines the following: (1) the physical basis for climate change; (2) how climates are changing and how we know and assess that climates are changing; and (3) the effects of climate change on natural and human systems. The course is team-taught and will involve participation by scholars across the university with expertise in specific subjects. This is a broad, introductory course for first-year students and presumes no special subject matter knowledge on the part of the student. For first-year and non-transfer students only. Credit 3 units.

**Beyond Boundaries: When I’m 64: Transforming Your Future (fall)**

Whether you know it or not, you are living in the midst of a revolution — a revolution that is going to change your personal and professional lives. Although old age may seem a long way off, you will likely live to age 80 or beyond, with a 50% chance of seeing your 100th birthday. The demographic revolution you are going to live through will change the health care you receive, the house you live in, the car you drive, the jobs you do, and the relationships you have. This class will give you a competitive edge in understanding how you can harness what is happening to shape your career and lifestyle. In class, you will be introduced to leaders and ideas from many fields of study, including health, architecture, law, business, business, art and psychology — that are focused on the issues of our aging society. There will also be opportunities to tailor the class to your interests through events on and off campus, including movies, lectures, performances, field trips and community projects. Each week, we will gather for lectures and also break into small groups for discussion. This course will set you on a path to leading the aging revolution and transforming the society of tomorrow. For first-year and non-transfer students only. Credit 3 units.

**Beyond Boundaries: The Art of Medicine (spring)**

This interdisciplinary, cross-school course at the intersection of history and the visual arts offers students a singular encounter with Western medicine, from ancient times to the present day. In tandem with the history of medicine, the course examines the capacity of the arts to frame medical practice, to raise questions, and to influence perceptions — both positively and negatively — of medical advancements. For first-year and non-transfer students only. Credit 3 units.
Beyond Boundaries: Gender, Youth, and Global Health (spring)
Through in-depth case studies, this course provides an introduction to gender-specific issues in the context of childhood and adolescence, poverty and global health. Students will learn to identify the ways in which gender and gender differences affect conditions of life in the areas of reproductive health, nutrition, conflict, access to healthcare, and the social determinants of health, especially for young people. Students will learn to analyze health conditions and disparities in relation to both the microdynamics of local worlds and the macrodynamics of large-scale social forces in the postcolonial global field. In addition, they will come to understand the current challenges that global health practitioners and institutions confront as they strive to achieve gender equity and the current efforts being made toward reaching this goal. These learning objectives will be achieved using lectures, discussion-based sessions, and Skype-based interactions with NGOs and experts who are currently working in the field. For first-year and non-transfer students only. Credit 3 units.

Beyond Boundaries: Designing Creativity: Innovation Across Disciplines (fall and spring)
From "ah-ha!" epiphanies to slow-developing discoveries, the creative process has been employed by innovators and artists in virtually every corner of the globe for centuries. Designing Creativity is a course that will explore the study and practice of the creative process across many disciplines, with input from prominent thinkers and practitioners in the areas of medicine, neuroscience, law, engineering, architecture, human-centered design, business, stage design and the performing arts. The course will also incorporate the practice of design thinking and creativity techniques via a lab component that will allow students to explore the development of innovative ideas in collaborative teams followed by project presentations to core faculty and classmates. For first-year and non-transfer students only. Credit 3 units.

Beyond Boundaries: Morality and Markets (spring)
What does it look like to live a moral life in today’s market system? We know all too well what it does not look like. The news is filled with the moral failures of leaders and executives at top firms. We like to believe that we would behave differently, but what kind of pressures inform our moral choices? What pulls us, what pushes us, and what persuades us to act one way rather than another? These are the questions that a course combining business and literature can address in unique ways, since the world of fiction helps us to explore the ethical dilemmas of the market we inhabit everyday. In this course, we use great books, classics of film and modern television, and the tools of modern psychology and business strategy to think critically about what is involved in living a moral life in the midst of the modern market. For first-year and non-transfer students only. Credit 3 units.

Beyond Boundaries: To Sustainability and Beyond: People, Planet, Prosperity (P3) (spring)
To Sustainability and Beyond: People, Planet, Prosperity is a course designed for first-year students that combines interdisciplinary instruction with applied project work. Students will be introduced to global concepts in sustainability and examine how they relate to specific issues in the greater St. Louis community, learning what it means to be civic-minded stewards of social and ecological systems. In addition, they will work on developing the critical "soft" skills needed for success on the job, such as effective communication techniques, project management and leadership. Students will emerge from the course with a systems-level understanding of sustainability, a working knowledge of the fundamentals of community engagement, and an appreciation for values-based civic stewardship. Experience in this course will prepare students for applied project-based work in other courses or internships, regardless of academic discipline. For first-year and non-transfer students only. Credit 3 units.
Interdisciplinary Opportunities

Washington University offers courses through interdisciplinary programs that include studies in a variety of disciplines that cross traditional academic boundaries and support academic areas outside of the schools.

- Courses in the Gephardt Institute for Civic and Community Engagement (p. 1077) are all cross-listed with specific schools and departments.
- A limited opportunity for some Washington University students to enroll in courses at Saint Louis University and the University of Missouri-St. Louis is available through the Inter-University Exchange Program (p. 1078).
- ROTC (p. 1079) courses are offered in conjunction with the U.S. Air Force and U.S. Army.
- The Skandalaris Center (p. 1082) offers co-curricular programming and practical, hands-on training and funding opportunities to students and faculty in all disciplines and schools.

Gephardt Institute for Civic and Community Engagement

Community-Engaged Teaching is embraced by schools and departments across Washington University and used in many of our courses.

Sometimes referred to as service-learning, the experiences offered by these courses provide assignments and targeted learning activities in a community context. They integrate classroom theory with practice in the real world.

We have identified more than 80 undergraduate- and graduate-level courses for academic year 2019-20 that are enhanced by community-engaged teaching and learning at Washington University. These courses enable students of all disciplines, from business to art, to engage communities through service, projects and observation.

To nurture growth in this area, the Gephardt Institute for Civic and Community Engagement offers technical assistance, community partnership facilitation, and course-based funding opportunities through the Civic Engagement Fund.

## Inter-University Exchange Program

The Inter-University Exchange (IE) program between Washington University, Saint Louis University (SLU) and the University of Missouri-St. Louis (UMSL) began in 1976 as an exchange agreement encouraging greater inter-institutional cooperation at the graduate level. Over time, this program has evolved to include undergraduate education. The basic provisions of the original agreement are still in place today, and participation continues to be at the discretion of each academic department or unit.

At Washington University, there are several schools that **do not participate** in this program (i.e., degree-seeking students in these schools are not eligible to participate in the IE program, and courses offered in these schools are not open to SLU and UMSL students attending Washington University through the IE program). They are the School of Law, the School of Medicine, University College and the Summer School. The Washington University schools that are open to participation in the IE program may have specific limitations or requirements for participation; details are available in those offices.

The following provisions apply to all course work taken by Washington University students attending SLU or UMSL through the IE program:

- Such courses can be used for the fulfillment of degree or major requirements. (Students should consult with their dean's office for information about how IE course work will count toward their grade-point average, units and major requirements.)
- Such courses are not regularly offered at Washington University.
- Registration for such courses requires preliminary approval of the student's major/department adviser, the student's division office or dean, and the academic department of the host university.
- Students at the host institution have first claim on course enrollment (i.e., a desired course at SLU or UMSL may be
fully subscribed and unable to accept Washington University students).

- Academic credit earned in such courses will be considered as resident credit, not transfer credit.
- Tuition for such courses will be paid to Washington University at the prevailing Washington University rates; there is no additional tuition cost to the student who enrolls in IE course work on another campus. However, students are responsible for any and all fees charged by the host school.
- Library privileges attendant on enrolling in a course on a host campus will be made available in the manner prescribed by the host campus.

Instructions

Washington University students must be enrolled full-time in order to participate in the IE program and have no holds, financial or otherwise, on their academic record at Washington University or at the host institution.

1. The student must complete the IE program application form. Forms are available from the Office of the University Registrar and on its website (link below).
2. The student must provide all information requested in the top portion of the form and indicate the course in which they wish to enroll.
3. The student must obtain the approval signature of the professor teaching the class or the department chair at SLU or UMSL, preferably in person.
4. The student also must obtain the approval signatures of their major adviser at Washington University and the appropriate individual in their dean’s office.
5. Completed forms must be submitted to the Office of the University Registrar in the Women’s Building a minimum of one week before the start of the term.

Course enrollment is handled administratively by the registrars of the home and host institutions. Washington University students registered for IE course work will see these courses on their class schedule and academic record at WebSTAC under departments I97 (SLU) and I98 (UMSL). Final grades are recorded when received from the host institution. The student does not need to obtain an official transcript from SLU or UMSL to receive academic credit for IE course work at Washington University.

Reserve Officers Training Corps (ROTC)

Air Force ROTC — Aerospace Studies

Professor

Russell T. Montante
Lieutenant Colonel, U.S.A.F.

Military Aerospace Science. Our Core Values: Integrity First, Service Before Self, Excellence In All We Do. Air Force operations are currently conducted in the technologically demanding environments of air, space and cyberspace.

Air Force ROTC (AFROTC) is an officer development program, producing the leaders of tomorrow’s Air Force. The program’s purpose is to train and develop outstanding college students to earn commissions as U.S. Air Force Officers. Numerous Washington University students have participated in AFROTC and gone on to distinguish themselves as Air Force aviators, engineers, lawyers, physicians and astronauts.

In AFROTC, Washington University students have the opportunity to be challenged within a unique leadership environment, with the potential to earn a commission as a second lieutenant. Participation in AFROTC is available to undergraduate and graduate Washington University students and will not obligate a student to serve in the U.S. Air Force.

AFROTC attracts the very best and brightest college students. The categorization of officer candidates within AFROTC is based on competitive selection criteria.

For more information, contact AFROTC:

- Detachment 207 in St. Louis
  314-977-8230
- Detachment 207 website (https://www.slu.edu/parks/air-force-rotc)
- U.S. Air Force ROTC
  888-4-AFROTC
- AFROTC website (http://www.afrotc.com)

For AFROTC scholarship information, refer to the Scholarship Funds (p. 32) section of this Bulletin.

Army ROTC

Military Science. The Army ROTC program is designed to develop leaders for life. In doing so, it develops leadership, management and training skills, regardless of a student’s career plans. Those who successfully complete the program earn commissions and serve as second lieutenants in the U.S. Army, Army Reserve or Army National Guard.

All students are eligible to participate in Army ROTC courses. Introductory courses are designed to develop a student's
confidence, self-esteem and motivation. The intent is to develop and refine the student's leadership traits and skills to ensure their future success in military and nonmilitary environments. Instruction also includes the role of the military in national defense strategy. The number of ROTC credits that may be counted toward graduation requirements depends upon the student's program of study. ROTC students should consult with their academic adviser to determine if or how ROTC course work satisfies graduation requirements. Once a student accepts a scholarship or enters the advanced ROTC courses (300 and 400 levels), they incur a military obligation.

For more information, contact the Military Science Department, Washington University in St. Louis, 700 Rosedale Ave., Suite 1120, St. Louis, MO 63112; call 314-935-5521; visit the Washington University Army ROTC website (http://rotc.wustl.edu); or contact the Army ROTC Scholarships and Enrollment Officer, Lee Rodriguez (lee.e.rodriguez@wustl.edu).

For Army ROTC scholarship information, refer to the Financial Support section (p. 32) of this Bulletin.

Air Force ROTC — Aerospace Studies

Visit online course listings to view semester offerings for I02 MAIR (https://courses.wustl.edu/CourseInfo.aspx?sch=I&dept=I02&crslvl=1:4).

I02 MAIR 101 Heritage and Values of the United States Air Force I

A survey course designed to introduce students to the U.S. Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and an introduction to communication skills. Leadership Laboratory is mandatory for AFROTC cadets, and it complements this course by providing students with followership experiences and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the United States Air Force and the opportunities available as an officer.

I02 MAIR 102 Foundations of the United States Air Force II

A survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and an introduction to communication skills. Leadership Laboratory is mandatory for Air Force ROTC cadets, and it complements this course by providing students with followership experiences and prepares them for field training.

Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the United States Air Force and the opportunities available as an officer.

I02 MAIR 201 Team and Leadership Fundamentals

A survey course concerned with the beginnings of manned flight and the development of aerospace power in the United States, including the employment of air power in WWI, WWII, Korea, Vietnam, the Gulf War and the peaceful employment of U.S. air power in civic actions, scientific missions and support of space exploration. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing cadets with their first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the United States Air Force and the opportunities available as an officer.

I02 MAIR 202 Evolution of USAF Air and Space Power II

A survey course concerned with the beginnings of manned flight and the development of aerospace power in the United States, including the employment of air power in WWI, WWII, Korea, Vietnam, the Gulf War and the peaceful employment of U.S. air power in civic actions, scientific missions and support of space exploration. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing them with their first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint cadets with the United States Air Force and the opportunities available as an officer.
enables. Cadets deal with actual problems and complete projects associated with planning and managing the Leadership Laboratory. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving cadets opportunities to apply leadership and management principles of this course. Classroom activity, three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.  

I02 MAIR 401 National Security Studies and Preparation for Active Duty I  
Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets study topics that prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.  

I02 MAIR 402 National Security Studies and Preparation for Active Duty II  
Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets study topics that prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.  

EN: S

Army ROTC  

I25 MILS 101C Introduction to Leadership I  
Students examine the challenges and competencies that are critical for effective leadership. Students learn how the personal development of life skills such as cultural understanding, goal setting, time management, mental/physical resiliency, and stress management relate to leadership, officerhip, and the U.S. Army profession. MILS 101C is open to all students, and enrollment does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 2 units display on their transcripts; however, the units will not count toward their degree program. Credit 2 units.  

I25 MILS 102C Introduction to Leadership II  
Students investigate leadership fundamentals such as problem solving, listening, presenting briefs, providing feedback, and using effective writing skills. Students explore dimensions of leadership attributes and core leader competencies in the context of practical, hands-on, and interactive exercises. Students also learn fundamental military concepts and explore the Army’s leadership philosophy. Aspects of personal motivation and team building are practiced by planning, executing and assessing team exercises. MILS 102C is open to all students, and enrollment does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 2 units display on their transcripts; however, the units will not count toward their degree program. Credit 2 units.  

I25 MILS 201C Innovative Team Leadership  
Students explore the dimensions of creative and innovative tactical leadership strategies and styles by examining team dynamics and leadership theories. The course continues to build on developing knowledge of leadership attributes and core leader competencies through the understanding of Army rank, structure and duties as well as broadening knowledge of land navigation and squad tactics. Enrollment in MILS 201C does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program. Credit 3 units.  

I25 MILS 202C Foundations of Tactical Leadership  
Students develop greater self-awareness as they assess their leadership styles and practice communication and team building skills. Students examine and practice the challenges of leading teams in complex operational environments, and study dimensions of terrain analysis, patrolling, and operation orders. Further study of the theoretical basis of the Army Leadership Requirements Model explores the dynamics of adaptive leadership in the context of military operations. Case studies give insight into the importance and practice of teamwork and tactics in real-world scenarios. Enrollment in MILS 202C does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program. Credit 3 units.  

I25 MILS 301C Adaptive Team Leadership  
This is an academically challenging course where students will study, practice, and apply the fundamentals of leadership, Army values and ethics, and small unit tactics using the service learning model in leadership labs and assigned leadership roles. Cadets receive systematic and specific feedback on their leadership attributes and actions. Based on such feedback, as well as their own self-evaluations, cadets continue to develop their leadership and critical thinking abilities as well
as their physical fitness and ability to manage stress. At the conclusion of this course students will be capable of planning, coordinating, navigating, motivating and leading a platoon in the execution of tactical missions during classroom practical exercises, leadership labs, and during military situational training exercises in field environments. Prerequisite for this course is the successful completion of MILS 101C through 202C; or attendance at the Army ROTC Basic Camp. Engineering students may petition Engineering Student Services (Lopata Hall 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.

Credit 3 units.

I25 MILS 302C Applied Team Leadership

Students will continue to learn and apply the fundamentals of Army leadership, officership, Army values and ethics as they hone their leadership abilities in a variety of environments including classroom instruction, leadership labs, assigned leadership roles while utilizing the service learning model. At the conclusion of this course, students will be capable of planning, coordinating, navigating, motivating and leading a platoon in the execution of tactical missions during classroom practical exercises, leadership labs, and during military situational training exercises in field environments. Successful completion of MILS 302C will help prepare students for success at the Army ROTC Advanced Camp which cadets will attend during the summer at Fort Knox, Kentucky. Cadets will receive systematic and specific feedback on their leadership attributes, values and core leader competencies from instructors, other ROTC cadre, and senior cadets. Prerequisite for this course is the successful completion of MILS 301C or permission of the professor of military science. Engineering students may petition Engineering Student Services (Lopata Hall 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.

Credit 3 units.

I25 MILS 401C Adaptive Leadership

The MILS 401C course transitions the focus of student learning from being trained, mentored and evaluated as a military science 3 cadet to learning how to train, mentor and evaluate underclass cadets. This course focuses on practical application using the service learning model to gain knowledge of adaptive leadership. Students are assigned key battalion leadership roles and are responsible for the daily operation, assessment, and development of the cadet battalion. Throughout the semester, students will learn the duties and responsibilities of an Army staff officer, apply the principles of training and management, utilize the military decision making process, design and employ a comprehensive fitness program, mentor underclass cadets, and use effective verbal and written communication. Students will study ethics, the law of war, risk management, counseling, and the Army officer’s role in the Uniform Code of Military Justice. Cadets will also learn about the special trust reposed to Army Officers by the U.S. Constitution—a special confidence given to no other civilian profession. Prerequisite for this course is the successful completion of the ROTC Advanced Camp or permission of the professor of military science. Engineering students may petition Engineering Student Services (Lopata Hall 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.

Credit 3 units.

I25 MILS 402C Leadership in a Complex World

This course builds on the lessons of MILS 401C. Students will continue to use the service learning model to gain leadership experience and knowledge while serving in assigned key battalion leadership roles and will be responsible for the daily operation and development of the cadet battalion. MILS 402C explores the dynamics of leading soldiers in full spectrum operations in the current operating environment. Students examine military customs and courtesies, military law, principles of war, and rules of engagement in a complex environment against an adaptive enemy. Students will also explore aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support. Military science 4 cadets will develop and present a battle analysis and participate in a Staff Ride to Pilot Knob, an historic military site. The course also places significant emphasis on preparing cadets for their first unit of assignment. It uses case studies and exercise scenarios to prepare cadets to face the complex ethical and practical demands of leading as commissioned officers in the United States Army. Prerequisite for this course is the successful completion of MILS 401C or permission of the professor of military science. Engineering students may petition Engineering Student Services (Lopata Hall 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.

Credit 3 units.

I25 MILS 403 Advanced Military Science

A practical application of adaptive leadership. Throughout the semester, students are assigned the duties and responsibilities of an Army staff officer and must apply the fundamentals of principles of training, training management, the Army writing style, and the military decision making to weekly training meetings. During weekly training meetings, students will plan, execute, and assess ROTC training and recruiting events.

Credit 3 units. EN: S

Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship

The Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship (http://skandalaris.wustl.edu) is the place on campus Where Creative Minds Connect.

Mission

The Skandalaris Center aims to inspire and develop creativity, innovation, and entrepreneurship at Washington University in St. Louis.

Who We Serve

Our initiatives serve all Washington University students, alumni, faculty, staff, and, on occasion, the community. We call this the SC Network.

Our Initiatives

Our initiatives are divided into three parts:
1. Get Connected (p. 1083)
2. Get Trained (p. 1083)
3. Get Funded (p. 1083)
Get Connected

A great way to get started in creativity, innovation, and entrepreneurship at Washington University is to get connected with peers and various resources:

Join a Student Group or Fellowship

There are 14 student organizations committed to various aspects of creativity, innovation, and entrepreneurship. Some are limited to undergraduate or graduate student participation, and some support all.

Join the Skandalaris Center Email List

The email newsletter is the most up-to-date and complete record of upcoming opportunities.

- Join the email list (https://skandalaris.wustl.edu/get-connected/stay-connected-with-skandalaris).

Get Trained

The Skandalaris Center offers many programs that provide real-world, practical training in creativity, innovation, and entrepreneurship. Below are a few program examples:

1. Summer Entrepreneurial Internship Program (http://skandalaris.wustl.edu/training/internship)
   This 10-week summer program offers undergraduate students in any school the opportunity to experience entrepreneurship in a real-world setting through a paid internship at an early stage startup. Each week on Wednesdays, students participate in unique activities, including site visits to startups or co-working spaces, panel discussions, and visits to St. Louis neighborhoods. Applications generally run from early January to early February each year.

2. Student Entrepreneurial Program (StEP) (http://skandalaris.wustl.edu/training/step)
   StEP provides a unique opportunity for students to own and operate a business on or off campus. Student owners can supplement the valuable business and entrepreneurial skills they learn in the classroom while gaining real-world experience as they manage and lead their own businesses.

3. IdeaBounce® (https://skandalaris.wustl.edu/training/ideabounce)
   IdeaBounce® is both an online platform and an event for sharing venture ideas and making connections. This is an opportunity for participants to pitch their idea (no matter how "fresh"), get feedback on it, and make connections. In-person events happen around twice per semester.

4. The Hatchery (http://skandalaris.wustl.edu/training/hatchery)
   Various schools at Washington University offer entrepreneurial training for credit. One such course is The Hatchery (Business Planning for New Enterprises). It is offered by the Olin Business School in both the fall and spring semesters, and it is open to all students at the university.
   Students form teams around a commercial or social venture idea proposed by a student or community entrepreneur.
   The deliverables for the course include two presentations to a panel of judges and a complete business plan. The deliverables in the course are similar to the deliverables in the Skandalaris Center's business plan competitions and can be a valuable first step toward competitions and funding for a new venture.

Get Funded

The Skandalaris Center offers the following business plan competitions for Washington University students:

- The Suren G. Dutia and Jas K. Grewal Global Impact Award (GIA) (http://skandalaris.wustl.edu/funding/global-impact-award)
  The GIA awards scalable, impactful, quick-to-market Washington University-affiliated startups.
  - Who Can Apply: Washington University students, postdocs, residents, and recent alumni
  - Award: Up to $50K

- Skandalaris Venture Competition (SVC) (https://skandalaris.wustl.edu/funding/skandalaris-venture-competition)
  The SVC provides expert mentorship to new ventures and startups to ready them for commercializing their idea, launching, and pitching to investors.
  - Who Can Apply: Current Washington University students
  - Award: Up to $15K

Learn More

Please contact the Skandalaris Center (https://skandalaris.wustl.edu/contact-us) for additional information about all programs. We’re excited to hear from you!
